Abstract: The New Source Performance Standards (NSPS) for Metal Coil Surface Coating (40 CFR part 60, subpart TT) were: Proposed on January 5, 1981; promulgated on November 1, 1982; and amended on June 24, 1986 and October 17, 2000. These regulations apply to the following surface coating lines in the metal coil surface coating industry: Each prime coat operation; each finish coat operation; and each prime and finish coat operation cured simultaneously, where the finish coat is applied wet-on-wet over the prime coat. These regulations apply to facilities commencing construction, modification, or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR part 60, subpart TT.

In general, all NSPS standards require initial notification reports, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NSPS.

Any owner/operator subject to the provisions of this part shall maintain a file of these measurements, and retain the file for at least two years following the date of such measurements, maintenance reports, and records. All reports are sent to the delegated state or local authority. In the event that there is no such delegated authority, the reports are sent directly to the U.S. Environmental Protection Agency (EPA) regional office.

Respondent's obligation to respond: Mandatory (40 CFR part 60, subpart TT).

Estimated number of respondents: 158 (total).

Abstract: The NESHAP for Iron and Steel Foundry Area Sources applies to either owners or operators of any existing or new iron or steel foundry that is an area source of hazardous air pollutant (HAP) emissions. Research and development facilities are not covered by the rule. Foundries covered by the rule would not be required to obtain a Title V operating permit. Small iron and steel foundries are required to comply with pollution prevention management practices for scrap materials, the removal of mercury switches, and binder formulations. Large iron and steel foundries are required to comply with the same pollution prevention management practices as small foundries in addition to emissions limitations for melting furnaces and foundry operations. Owners or operators must submit an initial notification report that the facility is subject to the rule, notification of performance test, notification of compliance status (including results of performance tests and other initial compliance demonstrations), and the semiannual compliance report.
