

habitats under the ESA. Quinlorac has also not yet been evaluated under the EDSP. Therefore, the Agency's final registration review decision is dependent upon the results of the evaluation of risks to threatened and endangered species and of potential endocrine disruptor risk. Pending the outcome of these actions, EPA is issuing an interim registration review decision for quinlorac this time.

*Triflumizole*. Interim Decision (EPA-HQ-OPP-2006-0115). Triflumizole is a broad spectrum, imidazole fungicide (group 3) that inhibits ergosterol biosynthesis in fungi, acting as a systemic fungicide. Triflumizole is registered for application to a number of food and non-food crops, including ornamentals in greenhouses/shade houses, interior scapes, and Christmas trees/conifers on nurseries and plantations. It is also used as a preplant seed piece treatment on pineapples. EPA conducted a quantitative human health risk assessment and identified occupational handler and post-application exposure risks of concern for several use scenarios. To mitigate the occupational handler risks of concern when applying triflumizole with open cab air blast equipment to apple, pear, and cherry, the technical registrant Chemtura agreed to require additional personal protective equipment of a chemical resistant hat. To address occupational post-application risks of concern, the registrant agreed to increase re-entry intervals (REIs) for grapes (table and raisin) to 1-day and hops to 3 days. The ecological risk assessment identified potential risks to listed mammals, birds, herpatofauna, freshwater fish, and aquatic estuarine/marine invertebrates. To mitigate potential chronic risk to non-listed mammals, the registrant agreed to label changes reducing the number of applications per year for certain crops and increasing the retreatment interval (RTI) to reflect typical usage. EPA published a proposed interim registration review decision for triflumizole in the **Federal Register** on September 24, 2014. The document includes the various label changes to mitigate risks detailed previously. Only one comment from the Center for Biological Diversity was received on the proposed interim decision; this comment did not change the conclusions of the decision or the proposed mitigation to address the risks. At this time in registration review, it is premature to make an endangered species effects determination for federally listed species and their designated critical habitats under the

ESA. Also, triflumizole has not yet been evaluated under the EDSP. Therefore, the Agency's final registration review decision is dependent upon the results of the evaluation of risks to threatened and endangered species and of potential endocrine disruptor risk. Pending the outcome of these actions, EPA is issuing an interim registration review decision for triflumizole at this time.

Pursuant to 40 CFR 155.58(c), the registration review case docket for fluazinam (case 7013), flumetsulam (case 7229), flutolanil (case 7010), hexaflumuron (case 7413), iron salts (case 4058), piperalin (case 3114), quinlorac (case 7222), and triflumizole (case 7003) will remain open until all actions required in the final/interim decision have been completed.

Background on the registration review program is provided at: [http://www.epa.gov/opsrdr1/registration\\_review](http://www.epa.gov/opsrdr1/registration_review). Links to earlier documents related to the registration review of these pesticides are provided at: <http://www2.epa.gov/pesticide-reevaluation/individualpesticides-registration-review>.
