

PacifiCorp's existing Threemile Knoll Substation to connect the new line to the regional transmission grid; and (4) required ancillary facilities such as access roads.

The new Hooper Springs Substation will be constructed as a 138/115-kV substation, meaning that it will include a transformer capable of converting 138-kV electricity to 115-kV electricity. BPA will acquire 100-foot-wide right-of-way for the length of the 115-kV line. Approximately 174 new double-circuit 115-kV steel structures, ranging in height from 55 to 120 feet with an average span length between structures of 730 feet, will be installed in this new right-of-way. The BPA connection facility will be located about two miles southeast of the intersection of Blackfoot River Road and Diamond Creek Road and will consist of overhead line disconnect switches to connect the new 115-kV line to the existing LVE line. For the single-circuit 138-kV transmission line, two wood, H-frame structures approximately 80 to 85 feet tall will be installed within a new 125-foot-wide right-of-way. A fiber optic cable also will be installed along the 138-kV transmission line. About 14 miles of new access roads will be constructed and about 2.4 miles of existing access roads will be improved or reconstructed. All mitigation measures identified in the EIS are adopted.
