

for drugs. Dr. Ruth Day, a social scientist researcher at Duke University, has worked as a special government employee on the labeling for drugs. Ron Charnock is CEO of Kwikpoint, which is

a visual language developer for instructions for use. His company worked on a Cooperative Research and Development Agreement with the Center for Devices and Radiological

Health to determine if visual language could be used in lieu of words on certain portions of device labeling.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN

Type of respondent	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours ¹	Capital costs
Screener	60	1	60	0.08	5
Health care professionals participating at a hospital	24	1	24	1.5	36
Health care professionals participating at FDA	12	1	12	3.5	42	\$240
Total	83	\$240

¹ Numbers have been rounded.

We plan to screen approximately 60 potential respondents prior to being included in the study. The screener will be done using email. We estimate that the screener will only take approximately 5 minutes per person.

We will conduct the studies at three different sites including two area hospitals using their devices, existing labeling, and HCPs. We expect that the maximum time for testing will be 1.5 hours. Given a sample of 6 devices with 2 different labeling types, there will be 12 different labeling types to be tested. We plan to have 24 people test each type of the labeling.

We will also conduct the studies on FDA's campus using medical devices received from medical device industry representatives through a material transfer agreement. To account for travel time we have included 2 additional hours per response in the burden estimate for the 12 health care professionals participating at FDA.
