BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND
HUMAN SERVICES

Centers for Disease Control and
Prevention

[60Day–15–15AEP; Docket No. CDC–2015–
0029]

Proposed Data Collection Submitted
for Public Comment and
Recommendations

AGENCY: Centers for Disease Control and
Prevention (CDC), Department of Health
and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease
Control and Prevention (CDC), as part of
its continuing efforts to reduce public
burden and maximize the utility of
government information, invites the
genral public and other Federal
agencies to take this opportunity to
comment on proposed and/or
continuing information collections, as
required by the Paperwork Reduction
Act of 1995. This notice invites
comment on two information
collections titled “Persistence of Ebola
Virus in Body Fluids of Ebola Virus
Disease (EVD) Survivors in Sierra
Leone” and “Assessment of Public
Knowledge, Attitudes, and Practices
(KAPs) Relating to EVD Prevention and
Medical Care in Guinea.” The purpose
of these information collections is to
gather the necessary information for the
CDC and the international community
to begin the activities necessary to reach
the goal of zero new EVD cases
throughout West Africa. Once that goal
is reached, the 42-day countdown to
declare West Africa Ebola-free can
begin. Similar requests for public
comment will be published as new
information collections are proposed in
the effort to meet the international goal
of zero new EVD cases.

DATES: Written comments must be
received on or before July 6, 2015.

 ADDRESSES: You may submit comments,
identified by Docket No. CDC–2015–
0029 by any of the following methods:
• Federal eRulemaking Portal:
Regulations.gov. Follow the instructions
for submitting comments.
• Mail: Leroy A. Richardson,
Information Collection Review Office,
Centers for Disease Control and
Prevention, 1600 Clifton Road, NE.,
MS–D74, Atlanta, Georgia 30329.

 Instructions: All submissions received
must include the agency name and
Docket Number. All relevant comments
received will be posted without change to
Regulations.gov, including any
personal information provided. For
access to the docket to read background
documents or comments received, go to
Regulations.gov.

 Please note: All public comment should be
submitted through the Federal eRulemaking
portal (Regulations.gov) or by U.S. mail to the
address listed above.

FOR FURTHER INFORMATION CONTACT: To
request more information on the
proposed project or to obtain a copy of the
information collection plan and
instruments, contact the Information
Collection Review Office, Centers for
Disease Control and Prevention, 1600
Clifton Road NE., MS–D74, Atlanta,
Georgia 30329; phone: 404–639–7570;
Email: amb@cdc.gov.

SUPPLEMENTARY INFORMATION: Under the
Paperwork Reduction Act of 1995 (PRA)
(44 U.S.C. 3501–3520), Federal agencies
must obtain approval from the Office of
Management and Budget (OMB) for each
collection of information they conduct
or sponsor. In addition, the PRA also
requires Federal agencies to provide a
60-day notice in the Federal Register
concerning each proposed collection of
information, including each new
proposed collection, each proposed
extension of existing collection of
information, and each reinstatement of
previously approved information
collection before submitting the
collection to OMB for approval. To
comply with this requirement, we are
publishing this notice of a proposed
data collection as described below.

Comments are invited on: (a) Whether
the proposed collection of information
is necessary for the proper performance
of the functions of the agency, including
whether the information shall have
practical utility; (b) the accuracy of the
agency’s estimate of the burden of the
proposed collection of information; (c)
ways to enhance the quality, utility, and
clarity of the information to be
collected; (d) ways to minimize the
burden of the collection of information
on respondents, including through the
use of automated collection techniques
or other forms of information
technology; and (e) estimates of capital
or start-up costs and costs of operation,
maintenance, and purchase of services
provided to obtain the information.
Burden means the total time, effort, or
financial resources expended by persons
to generate, maintain, retain, disclose or
provide information to or for a Federal
agency. This includes the time needed
to review instructions; to develop,
acquire, install and utilize technology
and systems for the purpose of
collecting, validating and verifying
information, processing and
maintaining information, and disclosing
and providing information to train
personnel and to be able to respond to
a collection of information, to search
data sources, to complete and review
the collection of information; and to
transmit or otherwise disclose the
information.

Proposed Projects

A Study of Viral Persistence in Ebola
Virus Disease (EVD) Survivors and an
Assessment of Public Knowledge,
Attitudes, and Practices Relating to EVD
Prevention and Medical Care—New—
National Center for Emerging and
Zoonotic Infectious Diseases (NCEZID),
Centers for Disease Control and
Prevention (CDC).

Background and Brief Description

Much progress has been made in the
year since the CDC first responded to
the Ebola outbreak in West Africa, but
the agency’s efforts must continue until
there are zero new cases of Ebola virus
disease (EVD). As the CDC’s 2014 Ebola
The research study will be comprised of three modules based on the body fluids to be studied: A pilot module of adult males (semen) and two full modules: Module A of adult men and women repeating collections and questionnaires every two weeks (semen, vaginal secretions, and saliva, tears, sweat, urine, rectal swab), and Module B of lactating adult women repeating collections and questionnaires every three days (sweat and breast milk). Participants for each module will be recruited by trained study staff from Ebola treatment units (ETUs) and survivor registries. Participants will be followed up at study sites in government hospitals.

Specimens will be tested for EBOV ribonucleic acid (RNA) by reverse transcription polymerase chain reaction test (RT–PCR) in Sierra Leone at the CDC laboratory facility in Bo. All positive RT–PCR samples will be sent to CDC Atlanta for virus isolation. Each body fluid will be collected until two negative RT–PCR results are obtained. Participants will be followed until all their studied body fluids are negative. They will receive tokens of appreciation for their participation at the initial visit and again at every subsequent follow-up visit [e.g., 120,000 Leones (approximately $28 US dollars) and a supply of condoms]. For Module A, men and women will be recruited in equal numbers for this study until more information on gender effects of viral persistence is available. A trained study data manager will collect test results for all participants in a laboratory results form.

Results and analyses are needed to update relevant counseling messages and recommendations from the Sierra Leone Ministry of Health (MoH), WHO, and CDC. The study will provide the most current information that is critical to the development of public health measures, such as recommendations about sexual activity, breastfeeding, and other routine activities and approaches to evaluation of survivors to determine whether they can safely resume sexual activity. These approaches in turn are expected to reduce the risk of Ebola resurgence and mitigate stigma for thousands of survivors. The information is likewise critical to reducing the risk that Ebola would be introduced in a location that has not previously been affected.

The second data collection, titled “Assessment of Public Knowledge, Attitudes, and Practices (KAPs) Relating to EVD Prevention and Medical Care in Sierra Leone,” is urgently needed to inform the rapid development of an up-to-date national, evidence-based strategy for health promotion and social mobilizations to assist the Guinea MoH achieve its goal of zero new cases. This will be a nationally representative assessment of community-specific KAPs designed to reduce prevailing barriers to EVD prevention and control efforts. Despite dissemination of basic EVD prevention messages through radio, billboards, community meetings, and other means, resistance to EVD prevention and control measures continues in many communities. Some believe that EVD is transmitted by witchcraft, “outsiders,” or health workers. Some lack understanding or confidence in control measures. Reports of potential resistance include hiding of ill and deceased persons, unsafe burial practices, and violence against health workers.

For this effort, the CDC and the Guinea MoH will work with well-established African organizations that specialize in household health surveys and health promotion. They will collect information from representative samples of household members and community leaders living in villages and neighborhoods in eight Guinean regions (Conakry, Kindia, Boké, Mamou, Labé, Faranah, Kankan, N’zérékoré). No tokens of appreciation will be offered to participants in this assessment.

Previously, a UNICEF-funded EVD-related KAP assessment was conducted which did not address perceptions of health education activities; reasons for resistance to prevention and control efforts; or stigma and discrimination faced by EVD cases, survivors, or contacts. For this reason, the CDC Director stressed after his March 2015 Guinea visit that this new CDC-funded community KAP assessment was critical to inform international efforts to get to zero cases in Guinea.

Both information collections will be one-time efforts in these participating countries under the authority of Section 301 of the Public Health Service Act (42 U.S.C. 241).

The total burden hours requested for the research study in Sierra Leone is 2,474 hours incurred by 530 participants, and for the KAP assessment in Guinea, 5,184 hours incurred by 5,248 participants. There are no other costs to the respondent other than their time.

STUDY OF THE “PERSISTENCE OF EBOLA VIRUS (EBOV) IN BODY FLUIDS OF EVD SURVIVORS IN SIERRA LEONE”
**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

Centers for Disease Control and Prevention

[60-Day 15–15AFJ; Docket No. CDC–2015–0027]

Proposed Data Collection Submitted for Public Comment and Recommendations

**AGENCY:** Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

**ACTION:** Notice with comment period.

**SUMMARY:** The Centers for Disease Control and Prevention (CDC), as part of its continuing efforts to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. This notice invites comment on the proposed information collection entitled The Green Housing Pilot Study (New Orleans).

**DATES:** Written comments must be received on or before July 6, 2015.

**ADDRESSES:** You may submit comments, identified by Docket No. CDC–2015–0027 by any of the following methods:

- Federal eRulemaking Portal: Regulation.gov. Follow the instructions for submitting comments.
- Mail: Leroy A. Richardson, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; Email: omb@cdc.gov.

**SUPPLEMENTARY INFORMATION:** Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search existing data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

**Proposed Project**

The Green Housing Pilot Study (New Orleans)—New—National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC).

**Background and Brief Description**

The Centers for Disease Control and Prevention (CDC) is seeking a new three-year regular OMB approval for a pilot study of additional components to be tested in a single study site (New Orleans) for the Green Housing Study (OMB No. 0920–0906, Expiration Date 10/31/2017). The goal of the Green Housing pilot study (New Orleans) is to apply environmental sample collection methods and novel approaches to study exposures to various indoor pollutants (both chemical and biological agents) in children (0–12 yrs.).

The information collected will help scientists better understand time-activity patterns of young children (0–12 years) that affect exposures to...
