production forecasting activities and order management support of Levi Strauss’ production of clothing and apparel. The reconsideration application concludes that both activities drive production and has been shifted to a foreign country.

Information obtained during the investigation confirmed that Levi Strauss & Co. does not produce articles within the United States. The investigation confirmed that all production of articles for the Levi Strauss & Co. brand is done by another firm not covered under the definition of a “firm” in 29 CFR 90.2.

Therefore, after careful review of the request for reconsideration, the Department determines that 29 CFR 90.18(c) has not been met.

Conclusion

After careful review, I determine that the requirements of Section 222 of the Act, 19 U.S.C. 2272, have not been met and, therefore, deny the petition for group eligibility of Levi Strauss & Company, Eugene, Oregon, to apply for adjustment assistance, in accordance with Section 223 of the Act, 19 U.S.C. 2273.

Signed in Washington, DC, on this 22nd day of April, 2015.

Michael W. Jaffe,
Certifying Officer, Office of Trade Adjustment Assistance.

In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1205–0464.

The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. Title 30 CFR 57.22401 sets forth the safety requirements for using a retort to extract oil from shale in underground metal and nonmetal I–A and I–B mines (those that operate in a combustible ore and either liberate methane or have the potential to liberate methane based on the history of the mine or the geological area in which the mine is located). At present, this applies only to underground oil shale mines. The standard requires that prior to ignition of underground retorts; mine operators must submit a written ignition operation plan to the appropriate MSHA District Manager which contains site-specific safeguards and safety procedures for the underground areas of the mine which are affected by the retorts.
