

Total estimated burden: 80,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$8,020,000 (per year), includes no annualized capital or operation & maintenance costs.

Changes in the Estimates: There is an adjustment decrease in the total estimated respondent labor burden as currently identified in the OMB Inventory of Approved Burdens. This decrease is not due to any program changes. Rather, it was due to a discrepancy identified in the previous renewal, in which the number of by-product plants conducting daily leak inspections and bypass/bleeder stack/flare system inspections was overestimated. EPA has revised the estimates in this ICR to reflect the appropriate number of by-product plants. The net result of this adjustment was a decrease in respondent burden hours. There is also a small adjustment increase in the number of responses due to a correction. The previous ICR did not account for the notification of reconstruction, notification of battery closure, and malfunction report in calculating the number of responses.

Abstract: The U.S. Environmental Protection Agency (EPA) adopted requirements for marine vessels operating in and around U.S. territorial waters to use reduced-sulfur diesel fuel. This requirement does not apply for steamships, but it would apply for steamships that are converted to run on diesel engines. A regulatory provision allows vessel owners to qualify for a waiver from the fuel-use requirements for a defined period for such converted vessels. EPA uses the data to oversee compliance with regulatory requirements, including communicating with affected companies and answering questions from the public or other industry participants regarding the waiver in question.
