k. *Description of Request*: The licensee is requesting a temporary

Article 401 requires the licensee to maintain Queens Creek Lake within one foot above and two feet below the reservoir's normal full operating pool level of 3,017.0 feet mean sea level (msl) (or 2,895.0 feet Nantahala Datum (ND)). The licensee requests to begin lowering Queens Creek Lake on October 1, 2015, to reach a target reservoir elevation of approximately 2,985.2 feet msl by November 1, 2015. The drawdown would allow the licensee to make required repairs to the headgate screens and draft tube for the Queens Creek Hydroelectric Station. The drawdown would also provide safe access for divers to install a bulkhead to allow the licensee to drain and replace leaking penstock piping components and valves. Once the reservoir level reaches the target elevation of 2,985.2 feet msl the bulkhead would be installed, closing the intake structure, and the lake would begin refilling to the normal range required by Article 401. The licensee would maintain a minimum flow of one cubic feet per second in the bypassed reach during the drawdown and repairs; which the licensee plans to complete by November 30, 2015.
