

immunization information, smoking cessation, oral health, as well as parental depression, domestic violence and substance use counseling. Pediatricians would be asked about the frequency with which they inquire about, use formal screening instruments, treat/manage, and refer patients for various problems/conditions. These various problems/conditions may include maternal depression, parental alcohol/drug use, divorce, illiteracy,

domestic violence exposure, physical or sexual abuse, neglectful parenting, and food and housing insecurity. Findings from the AAP national survey of pediatricians, in conjunction with findings from other data sources and ongoing surveys of home visitors, would inform MCHB's understanding of what is needed to best strengthen the home visitors' and pediatricians' collaborations for at-risk families to support healthy development and to

address the toxic stress and social determinants that drive health and developmental disparities for young children.
