Written comments should be received within 30 days of this notice.

Proposed Project

Occupational Safety and Health Program Elements in the Wholesale Retail Trade Sector—Extension—National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

For the current study, the National Institute for Occupational Safety and Health (NIOSH) and the Ohio Bureau of Workers Compensation (OBWC) have been collaborating to examine the association between survey-assessed Occupational Safety and Health (OSH) program elements (organizational

policies, procedures, practices) and workers compensation (WC) injury/illness outcomes in a stratified sample of OBWC-insured wholesale/retail trade (WRT) firms. Crucial OSH program elements with particularly high impact on WC losses will be identified in this study and disseminated to the WRT sector.

There are expected to be up to 4,404 participants per year. Surveys are being administered twice to the same firms in successive years (e.g. from January–December 2014 and again from January–December 2015). An individual responsible for the OSH program at each firm is being asked to complete a survey that includes a background section related to respondent and company demographics and a main section where individuals are being asked to evaluate organizational metrics related to their firm's OSH program. The firm-level survey data will be linked to five years of retrospective injury and illness WC claims data and two years of prospective injury and illness WC claims data from OBWC to determine which organizational metrics are related to firm-level injury and illness WC claim rates. A nested study is asking multiple respondents at a subset of 60 firms to participate by completing surveys. A five-minute interview will be conducted with a 10% sample of non-responders (up to 792 individuals).

In order to maximize efficiency and reduce burden, a Web-based survey is proposed for the majority (95%) of survey data collection. Collected information will be used to determine whether a significant relationship exists between self-reported firm OSH elements and firm WC outcomes while controlling for covariates. Once the study is completed, benchmarking reports about OSH elements that have the highest impact on WC losses in the WRT sector will be made available through the NIOSH–OBWC Internet sites and peer-reviewed publications.

In summary, this study will determine the effectiveness of OSH program elements in the WRT sector and enable evidence-based prevention practices to be shared with the greatest audience possible. NIOSH expects to complete data collection in 2018. There is no cost to respondents other than their time.
