Surveillance System, a unique source of longitudinal information on U.S. mines and their employees. Its purpose will be to: (1) Track changes and emerging trends over time; (2) provide current data to guide research and training activities; (3) provide updated demographic and occupational data for the mining workforce; and (4) provide denominator data to help understand the risk of work-related injuries, disease, and fatalities in specific demographic and occupational subgroups. The goal of the proposed project is to improve its surveillance capability related to the occupational risks in mining. NIOSH is requesting a three-year approval for this data collection.

NIOSH is planning to use the Mining Industry and Workforce Survey (MIWS) to collect data for the Mining Industry Surveillance System. Data will be collected through surveys conducted on a rotating basis in mining sectors aligned with national mining association. In Phase 1 of the project, the MIWS will be conducted in the stone/sand and gravel mining sector in year 1, the metal/nonmetal mining sector in year 2, and the coal mining sector in year 3. Data from this survey will provide denominator data so that accident, injury, and illness reports can be evaluated in relation to the population at risk.

Additionally, NIOSH cannot separately determine the number of contractor employees working in metal, nonmetal, stone, or sand and gravel mines. The survey will collect mine-level data on contractor employees to allow NIOSH to determine the quantity of contract labor that mine operators use and the type of work these employees perform. NIOSH will also use the MIWS to collect mine-level data that will provide a valuable picture of the current working environment (work schedules and shift work practices) used in the U.S. mining industry.

Agency Forms Undergoing Paperwork  
Reduction Act Review

The Centers for Disease Control and  
Prevention (CDC) has submitted the  
following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The notice for the proposed information collection is published to obtain comments from the public and affected agencies.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address any of the following: (a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) Enhance the quality, utility, and clarity of the information to be collected; (d) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and (e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570 or send an email to omb@cdc.gov. Written comments and/or suggestions regarding the items contained in this notice should be directed to the Attention: CDC Desk Officer, Office of Management and Budget, Washington, DC 20503 or by fax to (202) 395–5806. Written comments should be received within 30 days of this notice.
Proposed Project

National Disease Surveillance Program—Case Reports—Revision—National Center for Emerging and Zoonotic Infectious Disease (NCEZID), Centers for Disease Control and Prevention (CDC)

Background and Brief Description

Surveillance of the incidence and distribution of disease has been an important function of the US Public Health Service (PHS) since an 1878 Act of Congress, which authorized the PHS to collect morbidity reports. After the Malaria Control in War Areas Program had fulfilled its original 1942 objective of reducing malaria transmission, its basic tenets were carried forward and broadened by the formation of the Communicable Disease Center (CDC) in 1946. CDC was conceived of as a well-equipped, broadly staffed agency used to translate facts about analysis of morbidity and mortality statistics on communicable diseases and through field investigations.

The surveillance emphasis has shifted as certain diseases have declined in incidence, national emergencies have prompted involvement in new areas, and other diseases have taken on new aspects. Surveillance for the following diseases was approved three years ago: Creutzfeldt-Jakob Disease (CJD), Acute Flaccid Myelitis, Kawasaki Syndrome, and Human Services (HHS).

Centers for Disease Control and Prevention

[60Day–16–0821; Docket No. CDC–2015–0114]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTIONS: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing efforts to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed revision of an information collection request entitled...
