This proposed measure addresses the NQS Patient Safety domain. The measure reports the percent of HCP who receive the influenza vaccination.[295] The numerator includes HCP in the denominator population who during the time from October 1 (or when the vaccine became available) through March 31 of the following year, either: (a) Received an influenza vaccination administered at the facility, or reported in writing (paper or electronic) or provided documentation that the influenza vaccination was received elsewhere; (b) were determined to have a medical contraindication or history of Guillain-Barré Syndrome within 6 weeks after a previous influenza vaccination; (c) declined the influenza vaccination; or (d) had an unknown vaccination status.[296] The denominator includes the number of HCP who are working in the health care facility for at least 1 working day between October 1 and March 31 of the following year, regardless of clinical responsibility or patient contact, and includes: (a) Employees; (b) licensed independent practitioners; and (c) adult students/trainees and volunteers.[297] [298] Numerators and denominators are collected separately for each of the specified groups.

We believe it is important to collect data on this measure in order to ensure the highest quality of care for cancer patients in our effort to support one of the Healthy People 2020 goals of immunizing 90 percent of health care personnel nationally by 2020.[299] Overall, final 2013–14 influenza vaccination coverage among HCP was 75.2 percent, similar to coverage of 72.0 percent in the 2012–13 season.[300] We aim to increase patient protection and safety and at the same time prevent adverse outcomes (for example, transmitting influenza to patients, specifically high risk cancer patients, and premature death due to influenza) in the PCH setting.

We believe that this measure is applicable to the PCH setting based on CDC guidelines that patients who currently have cancer or who have had certain types of cancer in the past (such as lymphoma or leukemia), are at high risk for complications from influenza, including hospitalization and death.[301] The involvement of HCP in influenza transmission has been a longstanding concern.[302] [303] Vaccination is an effective preventive measure against influenza, and can prevent many illnesses, deaths, and losses in productivity.[304]

By proposing this measure in the PCHQR Program, we aim to not only provide a common mechanism (CDC NHSN) for all hospitals, including PCHs, to uniformly report the measure data, but also to inform their clinicians of the impact of targeted prevention efforts. In addition, and most importantly, we believe that collecting this measure data in the PCH setting is necessary to support our effort to prevent unnecessary additional or prolonged hospitalizations (and associated costs), and to decrease premature death among cancer patients.

We invited public comments on our proposal to add the CDC NHSN HCP Measure to the PCHQR Program beginning with the FY 2018 program.

Comment: Many commenters supported inclusion of the CDC NHSN HCP Measure in the PCHQR Program, specifically citing the clinical significance of this measure.

Response: We thank these commenters for their support.

Comment: One commenter supported this measure, but recommended against comparing PCH measure rates to those with a different patient population when this measure is applied across programs.

Response: We thank the commenter for the comment. We believe that PCHs should not be compared with other settings if critical components of care, including measure population, severity of illness and vulnerability to infections, significantly differ across settings of care and cannot be reliably adjusted through risk adjustment and other statistical modeling techniques. We note that PCHQR data are displayed separate from data reported by other settings. However, influenza is extremely prevalent and highly contagious,[305] and we believe that PCH settings are as susceptible to this disease as other settings where individuals with cancer or trauma (for example, burn patients) are treated. Therefore, we believe this measure could be applied to all settings and used to improve patient care. We also are fully committed to decreasing influenza rates and support the HHS' National Action Plan to Prevent Healthcare Associated Infections and Healthy People 2020 initiatives.

Comment: One commenter recommended providing more specific direction for healthcare workers that decline and/or are medically excluded from influenza vaccination and have contact with patients. The commenter suggested refinement to the measure specifications to address clinical guidelines for health care workers who are excluded.

Response: For clarification purposes, the measure specification does address HCP who decline vaccination and have medical conditions that would prevent them from receiving influenza vaccine. In addition, it further defines the time from October 1 (or when the vaccine became available) through March 31 of the following year, during which HCP either: (a) Received an influenza vaccination administered at the facility, or reported in writing (paper or electronic) or provided documentation that the influenza vaccination was received elsewhere; (b) were determined to have a medical contraindication or history of Guillain-Barré Syndrome within 6 weeks after a previous influenza vaccination; (c) declined the influenza vaccination; or (d) had an unknown vaccination status.[306]

The CDC provides guidance on influenza infection control posted to their ''Infection Control in Health Care Facilities'' Web page, which is located at *http://www.cdc.gov/flu/professionals/infectioncontrol/*. These resources can be utilized for HCP with medical contraindications to influenza vaccine or decline influenza vaccination.

After consideration of the public comments we received, we are finalizing our proposal to add the CDC NHSN HCP Measure to the PCHQR Program beginning with the FY 2018 program.

In summary, we are finalizing the addition of three new measures for reporting beginning with the FY 2018 program and removing six SCIP measures beginning with Q4 2015 discharges. The PCHQR measure set will consist of 16 measures beginning with the FY 2018 program. Our policies regarding the form, manner, and timing of data collection for these measures are discussed in section VIII.B.7. of the preamble to this final rule.

The table below lists all adopted measures as well as the new measures we are finalizing for the PCHQR Program beginning with the FY 2018 program.

Topic	Summary of adopted and newly finalized PCHQR program measures beginning with the FY 2018 program
Safety and Healthcare-Associated Infection—HAI.	• CDC NHSN Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139)*. • CDC NHSN Catheter-Associated Urinary Tract Infections (CAUTI) Outcome Measure (NQF #0138)*. • Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure * [currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery] (NQF #0753)*. • CDC NHSN Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717)**. • CDC NHSN Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716)**. • CDC NHSN Influenza Vaccination Coverage Among Healthcare Personnel [HCP] (NQF #0431)**.
Clinical Process/Cancer-Specific Treatments.	• Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis to Patients Under the Age of 80 with AJCC III (lymph node positive) Colon Cancer (NQF #0223)*. • Combination Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (NQF #0559)*. • Adjuvant Hormonal Therapy (NQF #0220)*.
Clinical Process/Oncology Care Measures.	• Oncology: Radiation Dose Limits to Normal Tissues (NQF #0382)*. • Oncology: Plan of Care for Pain (NQF #0383)*. • Oncology: Pain Intensity Quantified (NQF #0384)*. • Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Patients (NQF #0390)*. • Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low-Risk Patients (NQF #0389)*.
Patient Engagement/Experience of Care.	• HCAHPS [Hospital Consumer Assessment of Healthcare Providers and Systems Survey] (NQF #0166)*.
Clinical Effectiveness Measure.	

[305] CDC. Healthcare Associated Infections (HAIs). Available at: *http://www.cdc.gov/HAI/surveillance/index.html*.

[306] NQF Quality Positioning System, Available at: *http://www.qualityforum.org/QPS/0431*.

Topic	Summary of adopted and newly finalized PCHQR program measures beginning with the FY 2018 program
	• External Beam Radiotherapy for Bone Metastases (NQF #1822)*.

*Previously finalized measures.
** Adopted beginning with the FY 2018 program in this final rule.

4. Possible New Quality Measure Topics for Future Years

Future quality measure topics and quality measure domain areas are discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50280). In addition, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24593), we welcomed public comment and specific suggestions for measure topics addressing the following CMS Quality Strategy domains: making care affordable; communication and coordination; and working with communities to promote best practices of healthy living.

Comment: Several commenters recommended that CMS give priority to developing outcome and quality-of-life measures that are most important to patients, including patient-reported outcome measures instead of process measures.

Response: We thank the commenters for their recommendation and will consider it in future years.

Comment: One commenter suggested considering the following three issues in the PCHQR Program: (1) Use of multiple data sources; (2) continuing research in areas of concern that demonstrate gaps in clinical care; and (3) efforts to develop core metrics given the variation between cancer patients (diagnoses, conditions, and priorities).

Response: We recognize and acknowledge the burden in extracting data from multiple sources (for example, administrative data and chart abstraction). However, we believe that our quality improvement effort (for example, improving quality of care and increasing life expectancy among cancer patients) outweighs the burden associated with data abstraction in selecting the most appropriate measures for the program. We will continue to engage and partner with all stakeholders in collaborating and corroborating on issues that address gaps in clinical care and developing core metrics specific to cancer treatment and care (for example, diagnoses, conditions, and priorities).

Comment: One commenter supported measure development to address cancer measurement gaps in care coordination, functional status, patient safety, patient and caregiver experience of care, population/community health, and efficiency. The commenter agreed that quality measurement strategies should be aligned with the three aims of the National Quality Strategy: better care; healthy people/healthy communities; and affordable care.

Response: We thank the commenter for this support.

Comment: Several commenters recommended that measures considered for the PCHQR Program be evaluated and risk-adjusted, prior to adoption.

Response: We thank the commenters for the recommendation. During our measure development and testing, we assess for necessity of risk-adjustment. Furthermore, measures that are not developed by CMS are also assessed for necessity of risk-adjustment when they undergo NQF endorsement and re-endorsement.

Comment: Some commenters expressed the concern that measures that are not tested in the PCH environment may result in invalid measurement due to lack of a sufficient population for statistical significance and the lack of exclusions for this complex patient population.

Response: We thank the commenters for their input. Historically, we have adopted measures across settings. Whenever feasible, we have also tested all measures for the applicable environment. We agree that a small number of cases or lack of a sufficient population could result in erroneous and misleading results. We also agree that data collection is not only necessary but crucial for quality improvement purposes. We will continue to work on ensuring that measures are appropriate, reliable, and valid for the PCH setting prior to adopting them in the PCHQR Program.

Comment: One commenter recommended that CMS consider the following three measures for the PCHQR Program: (1) Post breast conservation surgery irradiation (E0219), (2) At least 12 regional lymph nodes are removed and pathologically examined for resected colon cancer (E0225), and (3) Needle biopsy to establish diagnosis of cancer precedes surgical excision/resection (E0221).

Response: We thank the commenter for this recommendation. These measures were submitted and reviewed by the MAP in December 2014. The MAP agreed to conditionally support these measures pending inclusion of these measures in the Hospital IQR Program for general acute care hospitals. The Workgroup also noted that these measures have extremely high levels of performance (that is, they are nearly topped out) for the PCHs.[307] Due to this reason (that they are nearly topped out in the PCH setting), we did not to propose these measures for the PCHQR Program.

Comment: One commenter recommended that CMS exercise greater caution in the future when considering additional measures for PCHQR Program to avoid the undue burden associated with requiring PCHs to develop infrastructure to report for only a short time, such as with the SCIP measures.

Response: We thank the commenter for this recommendation. We will continue to try to avoid and reduce burden in future years.

Comment: Several commenters requested that CMS outline specific guidelines for determining when measures are ''topped out'' for the PCHQR Program.

Response: We thank the commenter for this comment and will provide some guidance on topped out criteria in future rulemaking.

Comment: One commenter recommended that CMS collaborate with the PCHs in developing PCHQR Program policies in the future.

Response: We thank the commenter for this suggestion. As with all of our programs, we are fully committed to engaging and partnering with all stakeholders to ensure success and most importantly to improve quality of care.

5. Maintenance of Technical Specifications for Quality Measures

We maintain technical specifications for the PCHQR Program measures, and we periodically update those specifications. The specifications may be found on the QualityNet Web site at: *https://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228774479863*.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50281), we described a policy under which we use a subregulatory process to make nonsubstantive updates to measures

[307] NQF. Spreadsheet of MAP 2015 Final Recommendations. Available at *http://www.qualityforum.org/map/*.

used for the PCHQR Program. We did not propose any changes to this policy in the proposed rule.

6. Public Display Requirements

a. Background

Section 1866(k)(4) of the Act requires the Secretary to establish procedures for making the data submitted under the PCHQR Program available to the public. Such procedures must ensure that a PCH has the opportunity to review the data that are to be made public with respect to the PCH prior to such data being made public. Section 1866(k)(4) of the Act also provides that the Secretary must report quality measures of process, structure, outcome, patients' perspective on care, efficiency, and costs of care that relate to services furnished in such hospitals on the CMS Web site.

In order to meet these requirements, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53562 through 53563), we finalized our policy to publicly display PCHQR Program data on the *Hospital Compare* Web site (*http://www.hospitalcompare.hhs.gov/*) and established a preview period of 30 days prior to making such data public.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50847 through 50848), we finalized our proposal to display publicly in 2014 and subsequent years the data for two measures. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50282), we finalized our proposal to display publicly in 2015 and subsequent years the data for one measure and our proposal to display publicly no later than 2017 the data for two additional measures. In summary, we have finalized proposals to publicly display five PCHQR measures on *Hospital Compare,* including three Cancer Specific Treatment measures and two CDC NHSN HAI measures.

SUMMARY OF FINALIZED PUBLIC DISPLAY REQUIREMENTS

Measures	Public reporting
• Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis to Patients Under the Age of 80 with AJCC III (lymph node positive) Colon Cancer (NQF #0223).	2014 and subsequent years.
• Combination Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (NQF #0559).	
• Adjuvant Hormonal Therapy (NQF #0220)	2015 and subsequent years.
• CDC NHSN Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139)	2017 and subsequent years.
• CDC NHSN Catheter-Associated Urinary Tract Infections (CAUTI) Outcome Measure (NQF #0138).	

b. Additional Public Display Requirements

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24594), we proposed to publicly display six additional PCHQR measures beginning in 2016 and for subsequent years:

- Oncology: Radiation Dose Limits to Normal Tissues (NQF #0382)
- Oncology: Plan of Care for Pain (NQF #0383)
- Oncology: Pain Intensity Quantified (NQF #0384)
- Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Patients (NQF #0390)
- Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low-Risk Patients (NQF #0389)
- HCAHPS (NQF #0166)

We invited public comment on these proposals.

Comment: Several commenters supported the display of these measures to improve public awareness and beneficiary choice. Some of these commenters also noted the benefits of alignment across programs in publicly reporting these data.

Response: We thank the commenters for their support.

Comment: One commenter recommended that CMS delay public reporting of the CDC NHSN CAUTI measure until this measure has been revised by the CDC to account for all cancer-specific risks and exclude all infections unrelated to catheter placement.

Response: We are collaborating, and will continue to collaborate, with the CDC to explore the best approach to account for all heterogeneous patient populations that are monitored and tracked using the NHSN, cancer patients being one of many such populations. As indicated in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50282), we have delayed public reporting of CAUTI until no later than 2017 so that reliable baseline estimates and expected rates can be determined. We agree with the commenter and believe this delay is necessary in order to provide meaningful and reliable data available for consumers to make informed health care decisions. For more information, we refer readers to that final rule.

Comment: One commenter expressed concerns regarding how CAUTI is defined in the measure specifications because currently the measure specification does not address conditions that are critical to PCHs, such as cancer patients with multiple instruments in the genitourinary tract, urine collection obtained from different sources, long-term catheter use, cancer patients with neobladders, and cancer patients with neutropenic fever. The commenter also stated that the measure does not exclude patients with bladder fistulas between the gastrointestinal and reproductive tracts.

Response: We thank the commenter for this input. For more information about this measure, we refer readers to the CDC's measure specifications at the CDC's Web site (*http://www.cdc.gov/nhsn/acute-care-hospital/CAUTI/*).

For clarification purposes, in consultation with the CDC, we learned that the CAUTI definition working group (WG) (comprised of internal and external subject-matter experts (for example, infection preventionists, microbiologists, and hospital epidemiologists and infection disease physicians)) takes into consideration all patients (including cancer patients) when they review the NHSN CAUTI surveillance measure. While the WG agreed that these patients may be at an increased risk of Urinary Tract Infection (UTI), they also agreed that information used to identify these patients and to exclude them from surveillance is often difficult to ascertain because of shortcomings in clinical documentation of presence and timing of instrumentation.

In addition, removing these patients from CAUTI surveillance would mean omitting their UTIs and their urinary catheter days. Separating these patients and excluding their data from surveillance would be labor intensive and beyond what is logistically feasible for many, if not most, PCHs. We note that only in the case that a concomitant urine culture collected from the urethral

catheter is negative, a positive urine culture from a nephrostomy tube will be excluded from surveillance for CAUTI in the NHSN. Such a scenario would suggest that the infection was not an ascending infection of the urinary tract, that is, not from the level of the urinary catheter, but rather is occurring from another source. This exclusion is feasible for surveillance because it only requires those performing surveillance to identify nephrostomy tubes when there is an infection, rather than requiring that they identify all patients with both nephrostomy tube and urethral catheter and remove any catheter days associated with those patients from CAUTI surveillance. For further information on this measure, we refer readers to the CDC's Web site (*http://www.cdc.gov/nhsn/acute-care-hospital/CAUTI/*).

Comment: One commenter recommended that the CMS delay public reporting of the CDC NHSN CLABSI measure until this measures has been revised by the CDC to account for all cancer-specific risks and exclude all infections unrelated to central-line placement.

Response: We thank the commenter for this input. We are collaborating, and will continue to collaborate, with the CDC to explore the best approach to account for all heterogeneous patient populations that are monitored and tracked using the NHSN, cancer patients being one of many such populations. As indicated in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50282), we have delayed public reporting of CLABSI until no later than 2017 so that reliable baseline estimates and expected rates can be determined. We agree with the commenter and believe this delay is necessary in order to provide meaningful and reliable data available for consumers to make informed health care decisions. For more information, we refer readers to the referenced page.

Comment: One commenter expressed specific concerns regarding how CLABSI is defined in the measure specifications because currently the measure specifications do not address conditions that are critical to PCHs. The commenter did not believe the exclusion criteria excluded cancer patients with mucosal barrier injury laboratory-confirmed bloodstream infections (MBI–LCBI) or excluded organisms that are part of the normal gastrointestinal (GI) flora, but said that cancer patients who are receiving cancer treatments (either of these combinations—chemotherapy or radiation or transplant) are at high risk of mucosal injury and highly susceptible to infection even from normal GI flora that normally are benign in healthy individuals.

Response: We thank the commenter for this input. For more information about this measure, we refer readers to the CDC's measure specifications at the CDC's Web site (*http://www.cdc.gov/nhsn/acute-care-hospital/clabsi/*).

For clarification purposes, in consultation with the CDC, we learned that the expert panel that the CDC worked with to develop the MBI–LCBI criteria developed the list of organisms which would be associated with MBI–LCBI events. This list was not intended to represent every organism that is common to the human gut, but rather to include only those which, when cultured from the bloodstream, were clinically most likely due to mucosal barrier injury rather than some other cause. Some organisms which are common to the human intestine are more commonly identified in the bloodstream due to other causes, including being associated with the presence of a central line. These organisms, for instance Pseudomonas spp., were intentionally excluded from the list for this reason. As experience with MBI–LCBI surveillance continues, the MBI–LCBI list will be reconsidered.

In addition, excluding patients from developing a CLABSI simply because they have any of the symptoms listed in the measure specification manual could result in a CLABSI measure that is tremendously insensitive. The symptoms listed are often poorly defined; variation exists in the ways that clinicians identify them and rate them. They are therefore not good candidates for inclusion in surveillance definitions and protocols. For further information on this measure, we refer readers to the CDC's Web site (*http://www.cdc.gov/nhsn/acute-care-hospital/clabsi/index.html*).

Comment: One commenter recommended that when CDC NHSN CLABSI and CDC NHSN CAUTI are publicly reported, the data be aggregated to report rates as ICU and non-ICU only versus at the inpatient unit level.

Response: We received a similar comment last year and we continue to believe our response in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50282) applies regarding this issue. We continue to collaborate with the CDC to account for all heterogeneous patient populations that are monitored and tracked using the NHSN, cancer patients being one of many such populations. We refer readers to the referenced final rule page for further discussion of this issue.

Comment: Several commenters requested that prior to requiring public reporting, CMS clarify whether the Radiation Dose Limits to Normal Tissues (NQF 0382) measure applies only to lung and pancreas cancer patients, or if breast and rectal cancer patients should be included, since this cohort expansion was submitted by the measure steward in the November 2014 for measure maintenance and update to NQF.

Response: At this time, this measure, which was finalized in FY 2014 IPPS/LTCH PPS final rule (78 FR 50842 through 50842), does not include patients with breast or rectal cancer. However, we intend to address the expanded cohort issue in next year's rulemaking to include breast and rectal cancer patients after we receive recommendations from the MAP.

Comment: One commenter requested that prior to publicly reporting, CMS clarify the sampling protocol for the Plan of Care for Pain (NQF 0383) and Pain Intensity Quantified (NQF 0384) measures because it appears that this sampling protocol may require oversampling for the Pain Intensity Quantified (NQF 0384) measure.

Response: Because these are two ''paired'' measures, cancer patients that are sampled for the Pain Intensity Quantified (NQF 0384) measure for the numerator case count are also sampled to account for the Plan of Care for Pain (NQF 0383) measure (denominator case count). This means that for any cancer patients that are reporting pain and their pain are quantified (for example, assessed for severity on a scale of one to ten), these cancer patients should have a care plan for pain management. We do not believe this approach is ''oversampling'' but rather a step toward improving quality of care by monitoring, managing, and controlling pain throughout the life cycle of cancer treatment. We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50285) for further guidance on sampling these measures.

Currently, we have in place outreach and education materials (for example, tools, Webinars, among others) to assist PCHs in their data abstraction (including sampling). Information on this outreach is available on our QualityNet Web site at: (*https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228774479863*). We also have established a dedicated PCHQR Help Desk hotline to assist PCHs in data abstraction (*https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228772864236*). However, we will continue to work with our

support contractor in providing additional education materials, including Webinars, on sampling for these measures.

After consideration of the public comments we received, we are finalizing our proposal to publicly display these six additional PCHQR measures beginning in 2016 and for subsequent years. A summary of previously adopted and newly finalized public display policies is listed in the table below.

SUMMARY OF PREVIOUSLY ADOPTED AND NEWLY FINALIZED PUBLIC DISPLAY REQUIREMENTS

Measures	Public reporting
• Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis to Patients Under the Age of 80 with AJCC III (lymph node positive) Colon Cancer (NQF #0223).	2014 and subsequent years.
• Combination Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (NQF #0559).	
• Adjuvant Hormonal Therapy (NQF #0220).	2015 and subsequent years.
• Oncology: Radiation Dose Limits to Normal Tissues (NQF #0382).	
• Oncology: Plan of Care for Pain (NQF #0383).	
• Oncology: Pain Intensity Quantified (NQF #0384).	
• Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Patients (NQF #0390).	
• Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Patients (NQF #0389).	2016 and subsequent years.
• HCAHPS (NQF #0166).	
• CDC NHSN Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139).	
• CDC NHSN Catheter-Associated Urinary Tract Infections (CAUTI) Outcome Measure (NQF #0138).	2017 and subsequent years.

7. Form, Manner, and Timing of Data Submission

a. Background

Section 1866(k)(2) of the Act requires that, beginning with the FY 2014 PCHQR Program, each PCH must submit to the Secretary data on quality measures specified under section 1866(k)(3) of the Act in a form and manner, and at a time, as specified by the Secretary.

Data submission requirements and deadlines for the PCHQR Program are generally posted on the QualityNet Web site at: *http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228772864228*.

b. Reporting Requirements for New Measures: CDC NHSN CDI (NQF #1717), CDC NHSN MRSA (NQF #1716), and CDC NHSN HCP (NQF #0431) Measures

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24594 through 24595), we proposed that PCHs submit CDC NHSN CDI, MRSA, and HCP measure data for all patients to the CDC through the NHSN database. This is the same procedural/reporting mechanism used for the CDC NHSN CLABSI and CAUTI measures that we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53563 through 53564) and for the CDC SSI measure that we finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50848 through 50850). The data submission and reporting procedures have been set forth by the CDC for NHSN participation in general and for submission of the CDC NHSN CDI, MRSA, and HCP measures to NHSN. We refer readers to the CDC's Web site (*http://www.cdc.gov/nhsn/cms/index.html*) for detailed data submission and reporting procedures.

We proposed to adopt a quarterly submission process for the CDC NHSN CDI and MRSA measures as shown in the table below. We have successfully implemented this reporting mechanism in the Hospital IQR Program (77 FR 53539), and we strongly believe that this type of data submission is the most feasible option because PCHs are currently reporting the CDC NHSN CAUTI, CLABSI, and CDC SSI measures to the CDC NHSN this way.

PROPOSED CDC NHSN CDI (NQF #1717) AND CDC NHSN MRSA (NQF #1716) MEASURES REPORTING PERIODS AND SUBMISSION TIMEFRAMES BEGINNING WITH THE FY 2018 PROGRAM

Program year (FY)	Reporting periods (CY)	Data submission deadlines (CY)
2018	Q1 2016 events (January 1, 2016–March 31, 2016)	August 15, 2016.
	Q2 2016 events (April 1, 2016–June 30, 2016)	November 15, 2016.
	Q3 2016 events (July 1, 2016–September 30, 2016)	February 15, 2017.
	Q4 2016 events (October 1, 2016–December 31, 2016)	May 15, 2017.
Subsequent Years	Q1 events (January 1–March 31 of year 2 years before the program year).	August 15 of year two years before the program year.
	Q2 events (April 1–June 30 of year 2 years before the program year).	November 15 of year 2 years before the program year.
	Q3 events (July 1–September 30 of year 2 years before the program year).	February 15 of year 1 year before the program year.
	Q4 events (October 1–December 31 of year 2 years before the program year).	May 15 of year 1 year before the program year.

For the CDC NHSN HCP measure, we proposed that data be submitted annually by May 15 of the applicable year as shown in the table below. The vaccination period runs from October through March. The proposed reporting period for FY 2018 will include Q4 2016 and Q1 2017 counts submitted by May 15, 2017.

PROPOSED CDC NHSN HCP (NQF #0431) MEASURE REPORTING PERIODS AND SUBMISSION TIMEFRAMES BEGINNING WITH THE FY 2018 PROGRAM

Program year (FY)	Reporting periods (CY)	Data submission deadlines (CY)
2018	Q4 2016 counts (October 1, 2016–December 31, 2016). Q1 2017 counts (January 1, 2017–March 31, 2017)..	May 15, 2017.
Subsequent Years	Q4 counts (October 1–December 31 of year 2 years before the program year). Q1 counts (January 1–March 31 of year 1 year before the program year)..	May 15 of year 1 year before the program year.

We invited public comments on these proposals.

Comment: One commenter expressed support for the proposal to report the CDC NHSN MRSA and CDC NHSN CDI measures quarterly via CDC NHSN and the CDC NHSN HCP measure annually through the same process.

Response: We thank this commenter for the support.

After consideration of the public comments we received, we are finalizing our proposals for the form, manner, and timing of the CDC NHSN CDI, MRSA, and HCP measures.

As specified by CDC, the CDC NHSN CDI, MRSA, and HCP measures are reported on a facility-wide basis.[308] [309] Accordingly, we did not propose a sampling methodology for these measures because CDC requirements are to collect data on all patients or HCP in the facility. However, measures specifications could be technically updated by the measure steward (CDC). We refer readers to the CDC Web site for technical changes and/or updates (*http://www.cdc.gov/nhsn/acute-care-hospital/index.html*).

We also intend to issue guidance to PCHs that will provide additional information regarding the specific data submission deadlines that we previously finalized for certain PCHQR measures. This guidance will be issued through the QualityNet Web site.

C. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

1. Background and Statutory Authority

Section 3004(a) of the Affordable Care Act amended section 1886(m)(5) of the Act, requiring the Secretary to establish the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). This program applies to all hospitals certified by Medicare as LTCHs. Beginning with the FY 2014 payment determination and subsequent years, the Secretary is required to reduce any annual update to the standard Federal rate for discharges occurring during such fiscal year by 2 percentage points for any LTCH that does not comply with the requirements established by the Secretary.

The Act requires that, for the FY 2014 payment determination and subsequent years, each LTCH submit data on quality measures specified by the Secretary in a form and manner, and at a time, specified by the Secretary. The Secretary is required to specify quality measures that are endorsed by the entity with a contract under section 1890(a) of the Act. This entity is currently the NQF. Information regarding the NQF is available at: *http://www.qualityforum.org/Measuring_Performance/Measuring_Performance.aspx*. The Act authorizes an exception under which the Secretary may specify non-NQF-endorsed quality measures in the case of specified areas or medical topics determined appropriate by the Secretary for which a feasible or practical measure has not been endorsed by the NQF, as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286) for a detailed discussion of the history of the LTCH QRP.

In addition, section 1206(c) of the Pathway for SGR Reform Act of 2013 added section 1886(m)(5)(D)(iv) of the Act, which requires the Secretary to establish, not later than October 1, 2015, a functional status quality measure under the LTCH QRP for change in mobility among inpatients requiring ventilator support. We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50298 through 50301) for a detailed discussion of the Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital Patients Requiring Ventilator Support (NQF #2632, endorsed on 7/23/15), which we adopted in the LTCH QRP for the FY 2018 payment determination and subsequent years to meet the requirements of section 1886(m)(5)(D)(iv) of the Act.

Finally, the Improving Medicare Post-Acute Care Transformation Act of 2014 (Pub. L. 113–185) (the IMPACT Act) amended the Act in ways that affect the LTCH QRP. Specifically, section 2(a) of the IMPACT Act added section 1899B of the Act, and section 2(c)(3) of the IMPACT Act amended section 1886(m)(5) of the Act.

New section 1899B of the Act is titled Standardized Post-Acute Care (PAC) Assessment Data for Quality, Payment and Discharge Planning. Under section 1899B(a)(1) of the Act, the Secretary must require post-acute care (PAC) providers (defined in section 1899B(a)(2)(A) of the Act to include HHAs, SNFs, IRFs, and LTCHs) to submit standardized patient assessment data in accordance with section 1899B(b) of the Act, data on quality measures required under section 1899B(c)(1) of the Act, and data on resource use and other measures required under section 1899B(d)(1) of the Act. The Act also sets out specified application dates for each of the measures. The Secretary must specify the quality, resource use, and other measures not later than the applicable specified application date defined in section 1899B(a)(2)(E) of the Act.

Section 1899B(b) of the Act describes the standardized patient assessment data that PAC providers are required to submit in accordance with section 1899B(b)(1) of the Act; requires the Secretary, to the extent practicable, to match claims data with standardized patient assessment data in accordance with section 1899B(b)(2) of the Act; and requires the Secretary, as soon as practicable, to revise or replace existing patient assessment data to the extent that such data duplicate or overlap with standardized patient assessment data, in accordance with section 1899B(b)(3) of the Act.

Sections 1899B(c)(1) and (d)(1) of the Act direct the Secretary to specify

[308] CDC Multidrug–Resistant Organism & *Clostridium difficile* Infection (MDRO/CDI) Module. Available at: *http://www.cdc.gov/nhsn/PDFs/pscManual/12pscMDRO_CDADcurrent.pdf.*

[309] CDC HCP Vaccination Module. Available at: *http://www.cdc.gov/nhsn/PDFs/HPS-manual/vaccination/HPS-flu-vaccine-protocol.pdf.*

measures that relate to at least five stated quality domains and three stated resource use and other measure domains. Section 1899B(c)(1) of the Act provides that the quality measures on which PAC providers, including LTCHs, are required to submit standardized patient assessment data and other necessary data specified by the Secretary must be with respect to at least the following domains:

- Functional status, cognitive function, and changes in function and cognitive function;
- Skin integrity and changes in skin integrity;
- Medication reconciliation;
- Incidence of major falls; and
- Accurately communicating the existence of and providing for the transfer of health information and care preferences of an individual to the individual, family caregiver of the individual, and providers of services furnishing items and services to the individual when the individual transitions (1) from a hospital or CAH to another applicable setting, including a PAC provider or the home of the individual, or (2) from a PAC provider to another applicable setting, including a different PAC provider, hospital, CAH, or the home of the individual.

Section 1899B(c)(2)(A) of the Act provides that, to the extent possible, the Secretary must require such reporting through the use of a PAC assessment instrument and modify the instrument as necessary to enable such use.

Section 1899B(d)(1) of the Act provides that the resource use and other measures on which PAC providers, including LTCHs, are required to submit any necessary data specified by the Secretary, which may include standardized assessment data in addition to claims data, must be with respect to at least the following domains:

- Resource use measures, including total estimated Medicare spending per beneficiary;
- Discharge to community; and
- Measures to reflect all-condition risk-adjusted potentially preventable hospital readmission rates.

Sections 1899B(c) and (d) of the Act indicate that data satisfying the eight measure domains in the IMPACT Act is the minimum data reporting requirement. Therefore, the Secretary may specify additional measures and additional domains.

Section 1899B(e)(1) of the Act requires that the Secretary implement the quality, resource use, and other measures required under sections 1899B(c)(1) and (d)(1) of the Act in phases consisting of measure specification, data collection, and data analysis; the provision of feedback reports to PAC providers in accordance with section 1899B(f) of the Act; and public reporting of PAC providers' performance on such measures in accordance with section 1899B(g) of the Act. Section 1899B(e)(2) of the Act generally requires that each measure specified by the Secretary under section 1899B of the Act be NQF-endorsed, but authorizes an exception under which the Secretary may select non-NQF-endorsed quality measures in the case of specified areas or medical topics determined appropriate by the Secretary for which a feasible or practical measure has not been endorsed by the NQF, as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. Section 1899B(e)(3) of the Act provides that the pre-rulemaking process required by section 1890A of the Act applies to quality, resource use, and other measures specified under sections 1899B(c)(1) and (d)(1) of the Act, but authorizes exceptions under which the Secretary may (1) use expedited procedures, such as ad hoc reviews, as necessary in the case of a measure required with respect to data submissions during the 1-year period before the applicable specified application date, or (2) alternatively, waive section 1890A of the Act in the case of such a measure if applying section 1890A of the Act (including through the use of expedited procedures) would result in the inability of the Secretary to satisfy any deadline specified under section 1899B of the Act with respect to the measure.

Section 1899B(f)(1) of the Act requires the Secretary to provide confidential feedback reports to PAC providers on the performance of such PAC providers with respect to quality, resource use, and other measures required under sections 1899B(c)(1) and (d)(1) of the Act beginning 1 year after the applicable specified application date.

Section 1899B(g) of the Act requires the Secretary to establish procedures for making available to the public information regarding the performance of individual PAC providers with respect to quality, resource use, and other measures required under sections 1899B(c)(1) and (d)(1) of the Act beginning not later than 2 years after the applicable specified application date. The procedures must ensure, including through a process consistent with the process applied under section 1886(b)(3)(B)(viii)(VII) of the Act for similar purposes, that each PAC provider has the opportunity to review and submit corrections to the data and information that are to be made public with respect to the PAC provider prior to such data being made public.

Section 1899B(h) of the Act sets out requirements for removing, suspending, or adding quality, resource use, and other measures required under sections 1899B(c)(1) and (d)(1) of the Act.

Section 1899B(i) of the Act requires that not later than January 1, 2016, and periodically thereafter (but not less frequently than once every 5 years), the Secretary must promulgate regulations to modify the Medicare conditions of participation (CoP) and subsequent interpretative guidance applicable to PAC providers, hospitals, and CAHs to, among other things, take into account quality, resource use, and other measures in the discharge planning process.

Section 1899B(j) of the Act requires the Secretary to allow for stakeholder input, such as through town halls, open door forums, and mailbox submissions, before the initial rulemaking process to implement section 1899B of the Act.

Section 2(c)(3) of the IMPACT Act amended section 1886(m)(5) of the Act to address the payment consequences for LTCHs with respect to the additional data which LTCHs are required to submit under section 1899B of the Act. This section added new sections 1886(m)(5)(F) and (G) to the Act and made conforming changes. New section 1886(m)(5)(F) of the Act requires LTCHs (other than a hospital classified under section 1886(d)(1)(B)(iv)(II)) of the Act) to submit the following additional data: (1) For the fiscal year beginning on the applicable specified application date and subsequent years, data on the quality, resource use, and other measures required under sections 1899B(c)(1) and (d)(1) of the Act; and (2) for FY 2019 and subsequent years, the standardized patient assessment data required under section 1899B(b)(1) of the Act. Such data must be submitted in the form and manner, and at the time, specified by the Secretary. Finally, new section 1886(m)(5)(G) of the Act generally provides that to the extent that the additional data required under section 1886(m)(5)(F) of the Act duplicates other data required under section 1886(m)(5)(C) of the Act, submission of the former must be in lieu of submission of the latter.

As stated above, the IMPACT Act adds a new section 1899B to the Act that imposes new data reporting requirements for certain PAC providers, including LTCHs. Sections 1899B(c)(1) and 1899B(d)(1) of the Act collectively require that the Secretary specify quality measures and resource use and other

measures with respect to certain domains not later than the specified application date that applies to each measure domain and PAC provider setting. Section 1899B(a)(2)(E) of the Act delineates the specified application dates for each measure domain and PAC provider. The IMPACT Act also amends various other sections of the Act, including section 1886(m)(5) of the Act, to require the Secretary to reduce the otherwise applicable PPS payment to a PAC provider that does not report the new data in a form and manner, and at a time, specified by the Secretary. For LTCHs, amended section 1886(m)(5)(A)(i) of the Act requires the Secretary to reduce the payment update for any LTCH that does not satisfactorily submit the new required data.

Under the current LTCH QRP, the general timeline and sequencing of measure implementation occurs as follows: specification of measures; proposal and finalization of measures through notice-and-comment rulemaking; LTCH submission of data on the adopted measures; analysis and processing of the submitted data; notification to LTCHs regarding their quality reporting compliance with respect to a particular rate year; consideration of any reconsideration requests; and imposition of a payment reduction in a particular rate year for failure to satisfactorily submit data with respect to that rate year. Any payment reductions that are taken with respect to a rate year begin approximately one year after the end of the data submission period for that rate year and approximately two years after we first adopt the measure.

To the extent that the IMPACT Act could be interpreted to shorten this timeline so as to require us to reduce an LTCH's PPS payment for failure to satisfactorily submit data on a measure specified under section 1899B(c)(1) or (d)(1) of the Act beginning with the same rate year as the specified application date for that measure, such a timeline would not be feasible. The current timeline discussed above reflects operational and other practical constraints, including the time needed to specify and adopt valid and reliable measures, collect the data, and determine whether an LTCH has complied with our quality reporting requirements. It also takes into consideration our desire to give LTCHs enough notice of new data reporting obligations so that they are prepared to timely start reporting the data. Therefore, we intend to follow the same timing and sequence of events for measures specified under sections 1899B(c)(1) and (d)(1) of the Act that we currently follow for other measures specified under the LTCH QRP. We intend to specify each of these measures no later than the specified application dates set forth in section 1899B(a)(2)(E) of the Act and, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24597), we proposed to adopt them consistent with the requirements in the Act and Administrative Procedure Act. To the extent that we finalize a proposal to adopt a measure for the LTCH QRP that satisfies an IMPACT Act measure domain, we intend to require LTCHs to report data on the measure for the rate year that begins two years after the specified application date for that measure. Likewise, we intend to require LTCHs to begin reporting any other data specifically required under the IMPACT Act for the rate year that begins two years after we adopt requirements that would govern the submission of that data.

We received several public comments regarding the IMPACT Act, which we summarize and respond to below.

Comment: One commenter stated that its LTCH has been exempted from other CMS regulations due to unique circumstances of being located in an underserved, small community/geographic area. The commenter stated that previous exemptions have allowed their LTCH to remain open and provide critical long-term care for the patients in the community and suggested that an exemption for LTCHs with grandfathered status from the previously finalized and proposed LTCH QRP requirements described in the FY 2016 IPPS/LTCH PPS proposed rule would help ensure that critical medical care is available for patients in their communities.

Response: In the FY 2016 IPPS/LTCH PPS proposed rule, we did not propose to adopt an exception from the LTCH QRP requirements due to an LTCH being located in an underserved or small community/geographic area. Therefore, we consider this comment to be outside the scope of the proposed rule. We note that in section VIII.C.9.b. of the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24606), we proposed that a new LTCH must begin reporting quality data under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter. If a hospital is classified as an LTCH for purposes of Medicare payments (as denoted by the last four digits of its six-digit CMS Certification Number [CCN] in the range of 2000–2299), it is subject to the requirements of the LTCH QRP. There is no statutory exemption from the LTCH QRP requirements due to an LTCH being located in an underserved or small community/geographic area, nor have we proposed any such exception in rulemaking.

Comment: Several commenters recommended that CMS develop a comprehensive plan for implementation of the IMPACT Act across all settings. The commenters stated that a comprehensive implementation plan would give PAC providers an opportunity to plan for the potential impacts to their operations and enable all stakeholders to understand CMS' approach to implementing the IMPACT Act across care settings. The commenters requested that CMS describe an overall strategy for identifying cross-cutting measures, timelines for data collection, and timelines for reporting. One commenter requested that CMS communicate its plans as soon as possible and that CMS develop setting-specific communications to facilitate understanding of the IMPACT Act requirements.

Response: We appreciate the request for a comprehensive plan to allow PAC providers to plan for the implementation of the IMPACT Act, as well as the need for stakeholder input, the development of reliable, accurate measures, clarity on the level of standardization of items and measures, and avoidance of unnecessary burden on PAC providers. Our intent has been to comply with these principles in the implementation and rollout of the QRPs in the various settings and we will continue to adhere to these principles as the agency moves forward with implementing IMPACT Act requirements.

We will use the rulemaking process to communicate timelines for implementation, including timelines for the replacement of items in PAC assessment tools, timelines for implementation of new or revised quality measures, and timelines for public reporting. As described more fully above, the IMPACT Act requires us to specify measures that relate to at least five stated quality domains and three stated resource use and other measure domains.

In addition, we must follow all processes in place for adoption of measures including the Measure Applications Partnership (MAP) and the notice and comment rulemaking process, subject to certain exceptions under section 1899B(e)(3) of the Act for expedited procedures or, alternatively, waiver of section 1890A of the Act. In our selection and specification of measures, we employ a transparent

process in which we seek input from stakeholders and national experts and engage in a process that allows for pre-rulemaking input on each measure, as required by section 1890A of the Act. This process is based on a private-public partnership and it occurs via the MAP. The MAP is composed of multi-stakeholder groups convened by the NQF, our current contractor under section 1890 of the Act, to provide input on the selection of quality and efficiency measures described in section 1890(b)(7)(B) of the Act. The NQF must convene these stakeholders and provide us with the stakeholders' input on the selection of such measures. We, in turn, must take this input into consideration in selecting such measures. In addition, the Secretary must make available to the public by December 1 of each year a list of such measures that the Secretary is considering under Title XVIII of the Act. In addition, proposed measures and specifications are to be announced through the rulemaking process in which proposed rules are published in the **Federal Register** and are available for public review and comment.

Comment: Commenters asked for more opportunities for stakeholder input into various aspects of the measure development process. The commenters requested opportunities to provide input early and ongoing input into measure development. One commenter requested opportunities for input prior to the development of proposed measure specifications. Another commenter requested that CMS establish an advisory committee of PAC providers to meet on a frequent and regular basis to help develop measure specifications.

One commenter noted that CMS did provide opportunities for input into listening sessions and open door forums. However, the commenter expressed concern that these events did not provide an opportunity for substantive input. For example, the commenter noted that the open door forum call did not provide measure specifications for public input and that the listening sessions did not include a discussion of the proposed measures. One commenter specifically noted an appreciation for the listening sessions held by CMS thus far, but also requested opportunities for more extensive collaboration.

Response: It is our intent to move forward with IMPACT Act implementation in a manner in which the measure development process continues to be transparent, and includes input and collaboration from experts, the PAC provider community, and the public at large. It is of the utmost importance to CMS to continue to engage stakeholders, including patients and their families, throughout the measure development lifecycle through their participation in our measure development public comment periods; the pre-rulemaking process; participation in the TEPs provided by our measure development contractors, as well as open door forums and other opportunities. We have already provided multiple opportunities for stakeholder input, which include the following activities: our measure development contractor(s) convened a TEP that included stakeholder experts on February 3, 2015; we convened two separate listening sessions on February 10th and March 24, 2015; we heard stakeholder input during the February 9th 2015 ad hoc MAP meeting provided for the sole purpose of reviewing the measures adopted in response to the IMPACT Act. In addition, we implemented a public mail box for the submission of comments in January 2015, *PACQualityInitiative@cms.hhs.gov*, which is listed on our post-acute care quality initiatives Web site at *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014-and-Cross-Setting-Measures.html*, and we held a Special Open Door Forum to seek input on the measures on February 25, 2015. The slides from the Special Open Door Forum are available at *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014-and-Cross-Setting-Measures.html*.

Comment: Several commenters requested more information regarding the timing of the development of the IMPACT Act measures, the development of associated data elements, data collection and reporting. One commenter noted the considerable time constraints under which the Secretary is required to implement the provisions of the IMPACT Act. One commenter urged CMS to first specify the standardized patient assessment data being used across all PAC settings and requested that measures be developed from standardized patient assessment data that cut across PAC assessment instruments. A few commenters requested that CMS communicate estimated implementation timelines for all data collection and reporting requirements. Some commenters urged CMS to move quickly towards changes so as to reduce burden on duplicative data collection and to allow for better cross-setting comparisons, as well as the evolution of better quality measures. However, other commenters stated that efforts had been made to move too quickly to implement IMPACT Act measures, potentially resulting in the inability to compare measures across settings. One commenter requested that CMS provide more information in the rule about the timing and sequencing of the specification of a common assessment tool, the replacement of existing data elements in the PAC assessment tool with the proposed common assessment tool, and the endorsement of quality measures. One commenter noted specifically the difficulty of the timing of specification of measures through rulemaking prior to NQF endorsement, noting that the NQF endorsement process typically resulted in changes in measure specifications.

Response: We believe that the commenter is requesting information pertaining to specific milestones related to our efforts to meet the statutory timelines which are specified within the IMPACT Act, as well as in the final rule. We intend to use the rulemaking process to establish and communicate timelines for implementation. In addition to using the rulemaking process to establish and communicate timelines for implementation, we will continue to provide ongoing education and outreach to stakeholders through Special Open Door Forums and periodic training sessions. We will also provide information about the measures at this Web site: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014-and-Cross-Setting-Measures.html.*

Because the IMPACT Act requires us to utilize the rulemaking process, prior notice of timeline and sequencing outside of the rulemaking process is not feasible. However, it should also be noted the IMPACT Act specifies a general timeline for standardization of patient assessment data. For example, the IMPACT Act specifies that LTCHs shall submit standardized patient assessment data to the Secretary for FY 2019 and for each subsequent fiscal year.

Also, as a part of the rulemaking process, we have made additional details regarding standardization of patient assessment data and the cross-setting measure specifications available at the following Web site: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*. We plan to continue

to update this information as additional measures are specified.

Comment: Several commenters expressed concerns about the reliability and accuracy of the proposed cross-setting measures. Commenters supported the use of NQF-endorsed measures, while some of the commenters expressed concern that two of the proposed measures for FY 2018 lacked NQF endorsement as proposed. A few commenters requested that CMS only use measures that had been endorsed by NQF, while one commenter strongly recommended that CMS use only NQF-endorsed measures which are specified and NQF-endorsed for the specific PAC setting in which they will be used. One commenter expressed concern that the current interpretation of the IMPACT Act could allow potential circumvention of the NQF endorsement process. Another commenter expressed concern that the due consideration process allowing CMS to select quality measures which are not NQF-endorsed is not well defined. Commenters suggested that, in the absence of NQF endorsement, to fulfill IMPACT Act requirements, CMS should implement measures that are fully supported by the MAP and a technical expert panel (TEP) that includes LTCH community input. One commenter further requested that additional consideration be given to quality measures that are proposed for implementation in the LTCH setting. The commenter stated that as the patient population in this particular setting is very different due to their medical complexity, it is of particular importance to determine whether the measure is appropriate for the LTCH setting, and if it should be modified for the LTCH setting.

Response: We intend to consider and propose appropriate measures that meet the requirements of the IMPACT Act measure domains and that have been adopted or endorsed by a consensus organization, whenever possible. However, when this is not feasible because there is no NQF-endorsed measure that meets all the requirements for a specified IMPACT Act measure domain, we intend to rely on the exception authority given to the Secretary in section 1899B(e)(2)(B)of the Act. This statutory exception, allows the Secretary to specify a measure for the LTCH QRP setting that is not NQF-endorsed where, as here, we have not been able to identify other measures on the topic that are endorsed or adopted by a consensus organization. With respect to the proposed measures for the LTCH QRP, we sought MAP review, as well as expert opinion, on the validity and reliability of those measures. Finally, we will take the variations in patient populations treated in the different type of PAC settings into consideration when selecting cross-setting measures and assessment items.

Comment: Several commenters remarked on the level of standardization among PAC settings as required by the IMPACT Act. Most commenters recognized the need to have as much standardization of measures and data collection across PAC settings as possible, while recognizing that some variations among settings may be necessary. One commenter urged CMS to work for full standardization across measures adopted for PAC settings to allow for comparison.

Another commenter asked that CMS more clearly define the subregulatory process criteria for determining what constitutes a nonsubstantive change. In addition, the commenter requested that CMS consider any potential impacts that measure numerator or denominator changes would have on the relative ranking of LTCH providers on the measure. The commenter further noted that while a change may appear to be nonsubstantive, it might adversely affect an LTCH facility ranking.

Response: We agree that standardization is important, but would like to clarify that while the IMPACT Act requires the enablement of interoperability through the use of standardized data, there will be instances where some provider types may need more or fewer standardized items than other provider types. We will work to ensure that core items are standardized.

We believe that it is important to have in place a subregulatory process to incorporate nonsubstantive updates made by the NQF into the measure specifications so that the measures remain up-to-date. For example, we could use the CMS Web site as a place to announce changes. As noted in the proposed rule, the subregulatory process proposed is the same process as we have adopted for the Hospital IQR Program and which has been used successfully in that program. We believe that the criteria for what constitutes a non-substantive change could vary widely and is best described by examples, as we have done in the proposed rule. As noted, what constitutes a substantive versus a nonsubstantive change is determined on a case-by-case basis.

Comment: Commenters requested that CMS consider minimizing the burden for PAC providers when available and avoid duplication in data collection efforts. Several commenters stated the need for improved risk adjustment. One commenter requested that CMS support an additional study to develop and improve upon existing risk adjustment methods for IMPACT Act quality and resource use measures so that the newly developed methods could be used to compare outcomes across PAC settings.

Response: We appreciate the importance of avoiding undue burden and will continue to evaluate and consider any burden the IMPACT Act and the LTCH QRP places on LTCHs. In implementing the IMPACT Act thus far, we have taken into consideration the new burden that our requirements place on PAC providers, and we believe that standardizing patient assessment data will allow for the exchange of data among PAC providers in order to facilitate care coordination and improve patient outcomes.

We also will continue to assess current risk adjustment methods for IMPACT Act quality and resource use measures. As a part of measure development and maintenance, CMS supports the ongoing evaluation of risk adjustment which includes obtaining expert input, the review of relevant literature for identification of appropriate risk adjusters and appropriate testing through data analysis. We will continue these processes to promote appropriate utilization of measures in PAC settings.

Comment: One commenter requested that CMS develop a plan to revise the CoPs for hospitals to meet the IMPACT Act in an effort to align quality metrics and discharge information from inpatient settings.

Response: We recognize the necessity of a streamlined and efficient regulatory framework in order to allow the healthcare system to promote economic growth and innovation. As a part of an ongoing process, we review hospital CoPs to reduce any burden or inefficiencies imposed by actions resulting from the implementation of the IMPACT Act.

Comment: One commenter requested that CMS make data from the PAC PRD study publicly available to facilitate stakeholder analysis and input. The commenter suggested data could be made available through a research identifiable file (RIF) data request process, similar to the current process to obtain RIF data. In addition, the commenter stated the data, which would be used to develop payment recommendations, should be made available to stakeholders in a timely way.

Response: We appreciate the request for PAC PRD data to be made publicly available. Currently, we make claims and routinely collected PAC setting

assessment data available to researchers via ResDAC. We will review the feasibility of making PAC PRD data available and will ensure that data released to the public is available in a timely manner.

We thank the commenters for their views, and we will consider them as we develop quality measures and future quality measure proposals for the LTCH QRP and other PAC settings, including those that are developed and proposed in order to meet the requirements of the IMPACT Act.

2. General Considerations Used for Selection of Quality, Resource Use, and Other Measures for the LTCH QRP

We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286 through 50287) for a detailed discussion of the considerations we use for the selection of LTCH QRP quality measures. In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24597), we applied the same considerations to the selection of quality, resource use, and other measures required under section 1899B of the Act for the LTCH QRP, in addition to the considerations discussed below.

The quality measures we proposed and are finalizing address some of the measure domains that the Secretary is required to specify under sections 1899B(c)(1) and (d)(1) of the Act. The totality of the measures considered to meet the requirements of the IMPACT Act will evolve, and additional measures will be proposed over time as they become available.

To meet the first specified application date applicable to LTCHs under section 1899B(a)(2)(E) of the Act, which is October 1, 2016, we have focused on measures that:

- Correspond to a measure domain in section 1899B(c)(1) or (d)(1) of the Act and are setting-agnostic: For example, falls with major injury and the incidence of pressure ulcers;
- Are currently adopted for one or more of our PAC quality reporting programs that are already either NQF-endorsed and in place or finalized for use, or already previewed by the MAP with support;
- Minimize added burden on LTCHs;
- Minimize or avoid, to the extent feasible, revisions to the existing items in assessment tools currently in use (for example, the LTCH CARE Data Set);
- Avoid, where possible, duplication of existing assessment items.

In our selection and specification of measures, we employ a transparent process in which we seek input from stakeholders and national experts and engage in a process that allows for pre-rulemaking input on each measure, as required by section 1890A of the Act. This process is based on a private-public partnership, and it occurs via the MAP. The MAP is composed of multi-stakeholder groups convened by the NQF, our current contractor under section 1890 of the Act, to provide input on the selection of quality and efficiency measures described in section 1890(b)(7)(B) of the Act. The NQF must convene these stakeholders and provide us with the stakeholders' input on the selection of such measures. We, in turn, must take this input into consideration in selecting such measures. In addition, the Secretary must make available to the public by December 1 of each year a list of such measures that the Secretary is considering under title XVIII of the Act.

As discussed in section VIII.C.1. of the preamble of this final rule, section 1899B(e)(3) of the Act provides that the pre-rulemaking process required by section 1890A of the Act applies to the measures required under section 1899B of the Act, subject to certain exceptions for expedited procedures or, alternatively, waiver of section 1890A of the Act.

We initiated an Ad Hoc MAP process for the review of the quality measures under consideration for proposal in preparation for adoption of those quality measures into the LTCH QRP that are required by the IMPACT Act, and which must be specified by October 1, 2016. The List of Measures under Consideration (MUC List) under the IMPACT Act was made available to the public for comment during the MAP Meeting on February 9, 2015 (*http://www.meeting-support.com/downloads/703163/4524/PACLTC%20Ad%20Hoc%20Slides.pdf*). Under the IMPACT Act, these measures must be standardized so they can be applied across PAC settings and must correspond to measure domains specified in sections 1899B(c)(1) and (d)(1) of the Act. The specific cross-setting application of the measures under consideration for each such measure is discussed in the MAP Off-Cycle Deliberations 2015: Measures under Consideration to Implement Provisions of the IMPACT Act: Final Report available at: *http://www.qualityforum.org/Setting_Priorities/Partnership/MAP_Final_Reports.aspx*. The MAP reviewed each IMPACT Act -related quality measure proposed in the proposed rule for the LTCH QRP, in light of its intended cross-setting use. We refer readers to section VIII.C.6. of the preamble of this final rule for more information on the MAP's recommendations.

As discussed in section VIII.C.1. of the preamble of this final rule, section 1899B(j) of the Act requires that we allow for stakeholder input as part of the pre-rulemaking process. To meet this requirement, we provided the following opportunities for stakeholder input: (1) Our measure development contractor convened a TEP that included stakeholder experts and patient representatives on February 3, 2015; (2) we provided two separate listening sessions on February 10, 2015 and March 5, 2015; (3) we sought public input during the February 2015 Ad Hoc MAP process provided for the sole purpose of reviewing the measures we proposed in reaction to the IMPACT Act; and (4) we sought public comment as part of our NQF measure maintenance submissions. In addition, we implemented a mailbox for the submission of comments in January 2015, *PACQualityInitiative@cms.hhs.gov*, which is accessible from our PAC quality initiatives Web site: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014-and-Cross-Setting-Measures.html*, and held a National Stakeholder Special Open Door Forum to seek input on the measures on February 25, 2015.

For measures that do not have NQF endorsement, or which are not fully supported by the MAP for the LTCH QRP, we proposed measures that most closely align with the national priorities discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286 through 50287), and for which the MAP supports the measure concept. Further discussion as to the importance and high-priority status of these measures in the LTCH setting is included under each quality measure proposal in the preamble of this final rule. In addition, for measures not endorsed by the NQF, we have sought, to the extent practicable, to adopt measures that have been endorsed or adopted by a national consensus organization, recommended by multi-stakeholder organizations, and/or developed with the input of providers, purchasers/payers, and other stakeholders.

While we did not solicit comments specifically regarding the general considerations used for selecting quality, resource use, and other measures for the LTCH QRP, we received several comments, most notably on the NQF MAP pre-rulemaking process and MAP review process, which are addressed under the comments and responses portion of section VIII.C.1. of the preamble of this final rule.

3. Policy for Retention of LTCH QRP Measures Adopted for Previous Payment Determinations

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614 through 53615), for the LTCH QRP, we adopted a policy that once a quality measure is adopted, it will be retained for use in subsequent years, unless otherwise stated. For the purpose of streamlining the rulemaking process, when we initially adopt a measure for the LTCH QRP for a payment determination, this measure will be automatically adopted for all subsequent years or until we propose to remove, suspend, or replace the measure. For further information on how measures are considered for removal, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614 through 53615).

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24598), we did not propose any changes to this policy for retaining LTCH QRP measures adopted for previous payment determinations.

4. Policy for Adopting Changes to LTCH QRP Measures

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53615 through 53616), we finalized a policy that if the NQF updates an endorsed measure that we have adopted for the LTCH QRP in a manner that we consider to not substantively change the nature of the measure, we will use a subregulatory process to incorporate those updates to the measure specifications that apply to the LTCH QRP. Substantive changes will be proposed and finalized through rulemaking. We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53615 through 53616) for further information on what constitutes substantive and nonsubstantive changes to a measure. In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24598), we did not propose any changes to the policy for adopting changes to LTCH QRP measures.

5. Previously Adopted Quality Measures

a. Previously Adopted Quality Measures for the FY 2015 and FY 2016 Payment Determinations and Subsequent Years

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53624 through 53636), for the FY 2014 payment determination and subsequent years, we adopted updated versions of National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138) and the NHSN Central Line-Associated Blood Stream Infection (CLABSI) Outcome Measure (NQF #0139). For the FY 2015 payment determination and subsequent years, we retained the application of Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure to the LTCH setting (initially adopted in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51745 through 51750)). We also adopted two new quality measures for the LTCH QRP for the FY 2016 payment determination and subsequent years, in addition to the three previously adopted measures (the CAUTI measure, CLABSI measure, and Pressure Ulcer measure): (1) Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680); and (2) Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) (77 FR 53624 through 53636).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50861 through 50863), we adopted the NQF-endorsed version of the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure for the LTCH QRP for the FY 2015 payment determination and subsequent years.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50289 through 50305), we revised the data collection and submission period for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure.

Set out below are the quality measures, both previously adopted measures retained in the LTCH QRP and measures adopted in FY 2013 and FY 2014 IPPS/LTCH PPS final rules, for the FY 2015 and FY 2016 payment determinations and subsequent years.

LTCH QRP Quality Measures Previously Adopted for the FY 2015 and FY 2016 Payment Determinations and Subsequent Years

NQF Measure ID	Measure title	Payment determination
NQF #0138	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure.	FY 2015 and Subsequent Fiscal Years.
NQF #0139	National Healthcare Safety Network (NHSN) Central Line-Associated Blood Stream Infection (CLABSI) Outcome Measure.	FY 2015 and Subsequent Fiscal Years.
NQF #0678	Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay).	FY 2015 and Subsequent Fiscal Years.
NQF #0680	Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay).	FY 2016 and Subsequent Fiscal Years.
NQF #0431	Influenza Vaccination Coverage Among Healthcare Personnel	FY 2016 and Subsequent Fiscal Years.

b. Previously Adopted Quality Measures for the FY 2017 and FY 2018 Payment Determinations and Subsequent Years

In the FY 2014 IPPS/LTCH PPS final rule, we adopted three additional measures—National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716), National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717), and All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) (this measure was not NQF-endorsed at the time of its initial adoption)—for the FY 2017 payment determination and subsequent years (78 FR 50863 through 50874) and one additional measure, an application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674), for the FY 2018 payment determination and subsequent years (78 FR 50874 through 50877).

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50289 through 50305), we: (1) Revised the data collection and submission period for one measure, an application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674); and (2) adopted three new quality measures—Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), Functional Status Outcome

Measure: Change in Mobility Among Long-Term Care Hospital Patients Requiring Ventilator Support (NQF #2632; endorsed on 7/23/15), and National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure—for the FY 2018 payment determination and subsequent years.

These measures are set out in the table below.

LTCH QRP QUALITY MEASURES PREVIOUSLY ADOPTED FOR THE FY 2017 AND FY 2018 PAYMENT DETERMINATIONS AND SUBSEQUENT YEARS

NQF Measure ID	Measure title	Payment determination
NQF #1716	National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure.	FY 2017 and Subsequent Years.
NQF #1717	National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure.	FY 2017 and Subsequent Years.
NQF #2512	All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals.	FY 2018 and Subsequent Years.
Application of NQF #0674	Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay).	FY 2018 and Subsequent Years.
NQF #2631*	Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function.	FY 2018 and Subsequent Years.
NQF #2632*	Functional Status Outcome Measure: Change in Mobility Among Long-Term Care Hospital Patients Requiring Ventilator Support.	FY 2018 and Subsequent Years.
Not NQF endorsed	National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.	FY 2018 and Subsequent Years.

*Endorsed on July 23, 2015. We refer readers to: *http://www.qualityforum.org/ProjectMeasures.aspx?projectID=73867*, NQF #2631 and NQF #2632.

6. Previously Adopted LTCH QRP Quality Measures Finalized for the FY 2018 Payment Determination and Subsequent Years

For the FY 2018 payment determination and subsequent years, in addition to the measures we are retaining under our policy described in VIII.C.3. of the preamble of this final rule, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24599 through 24605), we proposed four quality measures in order to reflect the NQF endorsement of one measure (NQF #2512) and three measures (NQF #0678; application of NQF #0674; application of NQF #2631; endorsed on 07/23/2015) to meet the requirements of the IMPACT Act. Specifically, we proposed the following measures: (a) All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) to reflect NQF endorsement; (b) Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) to meet the requirements of the IMPACT Act; (c) an application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) to meet the requirements of the IMPACT Act; and (d) an application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) to meet the requirements of the IMPACT Act. These quality measures are discussed in more detail below.

a. Finalized Measure To Reflect NQF Endorsement: All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge From LTCHs (NQF #2512)

The All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) was adopted for use in the LTCH QRP in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50868 through 50874). In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24600), we proposed to adopt this measure to reflect that it is NQF-endorsed for use in the LTCH setting as of December 2014. Current specifications of this NQF-endorsed measure are available for download on the NQF Web site at: *http://www.qualityforum.org/QPS/2512*.

As adopted in the FY 2014 IPPS/LTCH PPS final rule, this is a Medicare FFS claims-based measure, and LTCHs are not required to report any additional data to CMS. Because we would calculate this measure based on claims data that are already reported to the Medicare program for payment purposes, we believe there would be no additional data collection burden on LTCHs resulting from our implementation of this measure as part of the LTCH QRP. In the FY 2014 IPPS/LTCH PPS final rule, we stated that we will calculate this measure using claims data beginning with FY 2013 and FY 2014 and provide initial feedback to LTCHs prior to public reporting of this measure. However, the NQF-endorsed measure (NQF #2512) is based on 2 consecutive calendar years of Medicare FFS claims data. Therefore, in addition to our proposal to adopt the NQF-endorsed version of this measure, we proposed that the initial calculation of the measure and feedback to LTCHs, prior to public reporting of this measure, would be based on CY 2013 and CY 2014 Medicare FFS claims data related to readmissions post-LTCH discharge.

The description of this measure provided in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50868 through 50874) noted this measure is the ratio of the number of risk-adjusted predicted unplanned readmissions for each LTCH, including the estimated facility effect, to the average number of risk-adjusted predicted unplanned readmissions for the same patients if treated at a facility with the average effect on readmissions. This ratio is referred to as the standardized risk ratio or SRR. The NQF-endorsed specifications compute the risk-standardized readmission rate (RSRR) for this measure. The RSRR is the SRR multiplied by the overall national raw readmission rate for all LTCH stays; it is expressed as a percentage rate rather than a ratio.

This measure, which was developed to harmonize with the Hospital-Wide All-Cause Unplanned Readmission

Measure (NQF #1789) that is currently in use in the Hospital IQR Program, continues to use the CMS Planned Readmission Algorithm as the main component for identifying planned readmissions. This algorithm was refined in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50211 through 50216). The All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) for the LTCH QRP will utilize the most recently updated version of the algorithm. A complete description of the CMS Planned Readmission Algorithm, which includes lists of planned diagnoses and procedures, can be found on the CMS Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html*. The additional PAC planned readmission types specified for this measure remain the same as when first adopted through the FY 2014 IPPS/LTCH PPS final rule. Documentation on the additional PAC planned readmissions for this measure is available at: *http://www.qualityforum.org/ProjectTemplateDownload.aspx?SubmissionID=2512*.

We invited public comments on: (1) Our proposal to adopt the NQF-endorsed version of All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) for the LTCH QRP and (2) our proposal that the initial feedback to LTCHs, prior to public reporting of this measure, would be based on CY 2013 and CY 2014 Medicare FFS claims data related to readmissions post-LTCH discharge.

Comment: One commenter supported the proposal to require continued reporting on this measure as part of LTCH QRP.

Response: We appreciate the commenter's support of CMS proposal of this measure as a quality measure for the LTCH QRP.

Comment: Several commenters expressed concerns over the lack of risk adjustment for sociodemographic status (SDS) factors among LTCH patients, such as community factors including access to primary care, medications, and appropriate food. One commenter recommended using proxy data on these factors such as census-derived data on income and the proportion of facilities patients that are dually eligible for Medicare and Medicaid.

Response: While we appreciate these comments and the importance of the role that sociodemographic status plays in the care of patients, we continue to have concerns about holding providers to different standards for the outcomes of their patients of low sociodemographic status because we do not want to mask potential disparities or minimize incentives to improve the outcomes of disadvantaged populations. We routinely monitor the impact of sociodemographic status on facilities' results on our measures.

NQF is currently undertaking a 2-year trial period in which new measures and measures undergoing maintenance review will be assessed to determine if risk-adjusting for sociodemographic factors is appropriate for each measure. For 2 years, NQF will conduct a trial of a temporary policy change that will allow inclusion of sociodemographic factors in the risk-adjustment approach for some performance measures. At the conclusion of the trial, NQF will determine whether to make this policy change permanent. Measure developers must submit information such as analyses and interpretations as well as performance scores with and without sociodemographic factors in the risk adjustment model.

Furthermore, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) is conducting research to examine the impact of socioeconomic status on quality measures, resource use, and other measures under the Medicare program as directed by the IMPACT Act. We will closely examine the findings of these reports and related Secretarial recommendations and consider how they apply to our quality programs at such time as they are available.

Comment: One commenter asked whether all LTCH cases would be included in the LTCH QRP measures (including the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512)) or only cases that qualify as site neutral cases.

Response: We appreciate this commenter's inquiry. At this time, all LTCH patients that meet the sample inclusion criteria for this measure are included in this All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512). The inclusion criteria for this measure do not distinguish whether LTCH cases meet the site neutral qualification.

Comment: One commenter indicated that this measure was proposed to meet the requirements for the IMPACT Act and expressed concern that it does not meet all the statutory requirements, regarding quality measures, measure specifications, standardized patient assessments, and NQF endorsement.

Response: We appreciate this commenter's feedback. However, we would like to clarify that we did not propose the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) to meet the requirements of the IMPACT Act. This measure was not NQF-endorsed at the time of our initial adoption of the measure for the LTCH QRP in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50868 through 50874). Rather, we proposed this previously adopted measure in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24600) to reflect its NQF endorsement status.

Comment: One commenter noted that CMS had provided conflicting information on the date for the payment determination for this measure, noting that the year for the payment determination is reported as both FY 2017 and FY 2018 in the proposed rule.

Response: We appreciate this commenter's concern, and appreciate the opportunity to provide a clarification. We refer readers to our adoption of non-NQF-endorsed version of this measure for the LTCH QRP for FY 2017 payment determination in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50868 through 50874), related to the use of the measure as it relates to FY 2017. We note that the discrepancy in the FY 2016 IPPS/LTCH PPS proposed rule regarding the applicable FY related to the endorsed version of this measure was a technical error, and the measure is effective relative to FY 2018.

After consideration of the public comments we received, we are finalizing our proposal to adopt the NQF-endorsed version of the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) for the LTCH QRP effective with the FY 2018 payment determination. We are also finalizing our proposal that the initial calculation of the measure and feedback to LTCHs, prior to public reporting of this measure, would be based on CY 2013 and CY 2014 Medicare FFS claims data related to readmissions post-LTCH discharge.

b. Finalized Measure To Address the IMPACT Act: Quality Measure Addressing the Domain of Skin Integrity and Changes in Skin Integrity: Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)

Section 1899B(c)(1) of the Act directs the Secretary to specify quality measures on which PAC providers are required under the applicable reporting provisions to submit standardized patient assessment data and other necessary data specified by the Secretary with respect to five quality domains, one of which is skin integrity and changes in skin integrity. The

specified application date by which the Secretary must specify quality measures to address this domain for IRFs, SNFs, and LTCHs is October 1, 2016, and for HHAs is January 1, 2017. To satisfy these requirements, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24600 through 24601), we proposed to adopt the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure, that we have already adopted for the LTCH QRP, as a cross-setting quality measure that satisfies the domain of skin integrity and changes in skin integrity. The reporting of data for this measure would affect the FY 2018 payment determination and subsequent years. In the LTCH setting, the measure assesses the percent of patients with Stage 2 through Stage 4 pressure ulcers that are new or worsened since admission.

As described in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51754 through 51756), pressure ulcers are high-cost adverse events and are an important measure of quality. For information on the detailed rationale for relevance, evidence, appropriateness, importance, and applicability of this quality measure in the LTCH QRP, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51754 through 51756) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50861 through 50863). Measure specifications are available on the NQF Web site at: *http://www.qualityforum.org/QPS/0678*.

The IMPACT Act requires the implementation of quality measures and resource use and other measures that are standardized and interoperable across PAC settings as well as the reporting of standardized patient assessment data and other necessary data specified by the Secretary. This requirement is in line with the NQF Steering Committee report, which stated, ''to understand the impact of pressure ulcers across settings, quality measures addressing prevention, incidence, and prevalence of pressure ulcers must be harmonized and aligned.'' [310] The Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure is NQF-endorsed and has been successfully implemented using a harmonized set of data elements in three PAC settings (LTCHs, IRFs, and SNFs). As discussed in section VIII.C.6.b. of the preamble of this final rule, above, an application of this measure was adopted for the LTCH QRP in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51753 through 51756) for the FY 2014 payment determination, and the current NQF-endorsed version of the measure was adopted in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50861 through 50863) for the FY 2015 payment determination and subsequent years. The measure has been in use in the LTCH QRP since October 1, 2012, and LTCHs are currently submitting data for this measure using the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set.

The Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure was adopted for use in the IRF QRP in the FY 2012 IRF PPS final rule (76 FR 47876 through 47878) for the FY 2014 payment determination and subsequent years and has been successfully submitted by IRFs using the Inpatient Rehabilitation Facility—Patient Assessment Instrument (IRF–PAI) since October 2012. It has also been implemented in the CMS Nursing Home Quality Initiative, using the Minimum Data Set (MDS) Version 3.0 since 2011, and is currently publicly reported on CMS' *Nursing Home Compare* at: *http://www.medicare.gov/nursinghomecompare/search.html*.

A TEP convened by our measure development contractor in February 2015, provided input on the technical specifications of this quality measure, as well as the applicability of this measure as a cross-setting measure across PAC settings, including the LTCH setting, to meet the requirements of the IMPACT Act. The TEP supported the applicability of this measure as a cross-setting measure across PAC settings and also supported our efforts to standardize items for data collection and submission of this measure as well as our efforts to standardize the measure for cross-setting development. In addition, on February 9, 2015, the MAP met to provide input to CMS on the measure. The MAP supported the use of Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure in the LTCH QRP as a cross-setting quality measure. More information about the MAP's recommendations for this measure is included in: The MAP Off-Cycle Deliberations 2015: Measures under Consideration to Implement Provisions of the IMPACT Act: Final Report which is available at: *http://www.qualityforum.org/Setting_Priorities/Partnership/MAP_Final_Reports.aspx*.

We proposed that data collection for this measure continue to occur through the LTCH CARE Data Set submitted through the CMS Quality Improvement and Evaluation System (QIES) Assessment Submission and Processing (ASAP) system. LTCHs have been submitting data on the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure through the LTCH CARE Data Set since October 2012. By building on the existing reporting and submission infrastructure for LTCHs, we intend to minimize the administrative burden related to data collection and submission for this measure under the LTCH QRP. For more information on LTCH QRP reporting using the QIES ASAP system, we refer readers to our Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html*.

We proposed that data collected using standardized items through the LTCH CARE Data Set would continue to be used to calculate this quality measure. LTCH CARE Data Set items used to identify new or worsened pressure ulcers consist of: M0800A [311] (Worsening in Pressure Ulcer Status Since Prior Assessment, Stage 2); M0800B [312] (Worsening in Pressure Ulcer Status Since Prior Assessment, Stage 3); and M0800C [313] (Worsening in Pressure Ulcer Status Since Prior Assessment, Stage 4). In addition, we proposed to continue to use items from the LTCH CARE Data Set to risk-adjust this quality measure. These items consist of: GG0160C [314] (Functional Mobility; Lying to Sitting on Side of Bed), H0400 (Bowel Continence); I0900 (Peripheral Vascular Disease (PVD) or Peripheral Arterial Disease (PAD); I2900 (Diabetes Mellitus), K0200A (Height); and K0200B (Weight). More information about the LTCH CARE Data Set items is available in the LTCH QRP Manual available at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-*

[310] National Quality Forum. National voluntary consensus standards for developing a framework for measuring quality for prevention and management of pressure ulcers. April 2008. Available at: *http://www.qualityforum.org/Projects/Pressure_Ulcers.aspx*.

[311] For the April 1, 2016 release of the LTCH CARE Data Set version 3.00, item M0800A will be revised to Worsening in Pressure Ulcer Status Since Admission, Stage 2.

[312] For the April 1, 2016 release of the LTCH CARE Data Set version 3.00, item M0800B will be revised to Worsening in Pressure Ulcer Status Since Admission, Stage 3.

[313] For the April 1, 2016 release of the LTCH CARE Data Set version 3.00, item M0800C will be revised to Worsening in Pressure Ulcer Status Since Admission, Stage 4.

[314] For the April 1, 2016 release of LTCH CARE Data Set version 3.00, this item (GG0160C) will be renumbered to GG0170C.

Assessment-Instruments/LTCH-Quality-Reporting/index.html.

The specifications and data elements for the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure for LTCHs are available in the LTCH QRP Manual at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html*.

We invited public comment on our proposal to adopt the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure for the FY 2018 payment determination and subsequent years to fulfill the requirements of the IMPACT Act.

Comment: Several commenters supported the proposal to implement the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) to fulfill the requirements of the IMPACT Act. Commenters noted that this measure is NQF-endorsed for the LTCH setting, data have been collected by LTCHs as part of the LTCH QRP since October 2012, and the NQF MAP supported the use of this measure in the LTCH QRP to meet the requirements of the IMPACT Act.

Response: We thank these commenters for their support of our proposal.

Comment: One commenter supported the proposal to implement this measure to fulfill the requirements of the IMPACT Act and stated that the implementation of this measure would not add any additional burden for LTCHs, because there are already mechanisms in place to collect and submit the pressure ulcer data. The commenter sought clarification regarding the coding instructions for the new or worsened unstageable pressure ulcer items added to Section M of the LTCH CARE Data Set version 3.00.

Response: We thank the commenter for its support of our proposal and recognition that the implementation of this measure does not add additional data collection and reporting burden for LTCHs. Regarding the commenter's request related to coding the LTCH CARE Data Set version 3.00 new items, we are committed to providing additional guidance to support and allow LTCHs to accurately interpret and complete quality reporting items, including the new or worsened unstageable pressure ulcer items included in Section M of the LTCH CARE Data Set version 3.00. Similar to training and outreach efforts that we have conducted in the past, we will make available an updated LTCH QRP Manual Version 3.0 at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html*. We also have made available the technical submission specifications for the LTCH CARE Data Set version 3.00 at *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html*.

In fall 2015, prior to the implementation of new quality measures and new items of LTCH CARE Data Set version 3.00, we intend to offer free trainings to LTCH providers and interested stakeholders. This training is part of our ongoing strategy to ensure successful implementation of the LTCH QRP. In addition, we will continue to maintain and provide guidance through the LTCH help desk via *LTCHQualityQuestions@cms.hhs.gov*. We invite LTCHs to submit specific inquires related to LTCH CARE Data Set version 3.00 via email at the address provided.

Comment: Several commenters supported the intent of this measure, but provided recommendations regarding risk adjustment of the pressure ulcer measure. Commenters suggested modifications, including risk adjustment for patients with multiple-organ failure, for patients on dialysis, and for patients with morbid obesity. One commenter recommended ongoing evaluation of the risk adjustment methodology to ensure it is appropriate for standardized cross-setting risk adjustment purposes.

Another commenter was concerned that the measure is limited to only high risk patients or residents, and that the denominator size is decreased by excluding individuals who are low risk. The commenter indicated that that pressure ulcers do develop in low-risk individuals and that this exclusion will impact each PAC setting differently because the prevalence of low risk individuals varies across settings. The commenter suggested that CMS use a logistic regression model for risk adjustment to allow for an increase in the measure sample size by including all admissions, take into consideration low-volume providers, and capture the development of pressure ulcers in low-risk individuals. This commenter expressed concern that the current risk factors for this measure were selected for the SNF setting and are therefore inappropriate for the LTCH setting, and recommended use of an ordinal scale related to an increasing number and severity of risk factors rather than grading risk dichotomously (for example, high risk vs. low risk). The commenter further recommended additional risk stratification and expanding the list of risk factors to better capture variation across different PAC settings. Finally, the commenter noted that the TEP that evaluated this cross-setting pressure ulcer measure recommended that CMS consider modifying the risk adjustment model and either excluding or risk adjusting for Hospice patients and patients receiving end-of-life care.

Response: We thank the commenters for their support of this measure and for their specific recommendations to inform and improve risk adjustment for this measure. Section 1899B(c)(3)(B) of the IMPACT Act states that quality measures shall be risk-adjusted, as determined appropriate by the Secretary.

In regard to the commenter who recommended we risk adjust using a logistic regression model and incorporate low risk patients into the measure, we believe that this commenter may have submitted comments regarding the wrong quality measure. Their comments apply to the quality measure, Percent of High Risk Residents with Pressure Ulcers (Long Stay) (NQF #0679), which is not the measure that we proposed for the LTCH QRP. The proposed measure is Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (NQF #0678). This measure is currently risk-adjusted using a logistic regression model and includes low-risk patients. In the model, patients are categorized as either high or low risk for four risk factors: functional limitation, bowel incontinence, diabetes or peripheral vascular disease (PVD)/peripheral arterial disease (PAD), and low body mass index (BMI). Low-risk patients are included in the measure calculation. An expected score is calculated for each patient or resident using that patient or resident's risk level on the four risk factors described above. The patient/resident-level expected scores are then averaged to calculate the facility-level expected score, which is compared to the facility-level observed score to calculate the adjusted score for each facility. Additional detail regarding risk adjustment for this measure is available in the measure specifications, available at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/Downloads/Long-Term-Care-Hospital-Quality-Reporting-Program-Specifications-for-the-Quality-Measures-Proposed-through-the-Fiscal-Year-2016-*

Notice-of-Proposed-Rule-Making-report.pdf.

We have determined that the current risk-adjustment methodology is appropriate for this measure and have developed and implemented the risk adjustment model for this measure. To arrive at this determination, we rely on ongoing measure development and measure maintenance activities undertaken by our measure development contractor, RTI International. These activities include a review of the relevant literature, careful analyses to examine the appropriateness of current and additional risk factors using facility-level data submitted by over 400 LTCHs nationwide by means of the LTCH CARE Data Set as part of the LTCH QRP, input from a LTCH-setting-specific TEP, input from a cross-setting TEP, and advisement and clinical guidance of subject matter experts and other stakeholders to examine current risk factors and to identify additional risk factors.

We recognize that it is important to continue to examine additional risk-adjustment factors to ensure valid and reliable quality measures and to consider further improvement of the risk adjustment model for our quality measures for the LTCH QRP. To this end, we will take into consideration the TEP discussion and these commenters' thoughtful feedback to inform our ongoing assessment of risk factors and future risk adjustment and stratification model for the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure, including consideration of the recommendation to exclude or adjust for hospice patients and patients receiving end-of-life care. We remain committed to conducting ongoing testing and measure development activities in an effort to improve the risk adjustment of quality measures implemented through the quality reporting programs. These activities will ensure that this quality measure remains valid and reliable and provides usable information to inform quality improvement activities within the LTCH setting as well as other PAC settings, and to fulfill the public reporting goals of the CMS quality reporting programs, including the LTCH QRP.

Comment: One commenter asked CMS to clarify how discharges paid under the LTCH PPS standard Federal payment rate versus the LTCH PPS site neutral rate will be included in the quality metrics in the future years. This commenter noted that if there is no differentiation in the quality metrics for the two different types of payment methodologies, it is likely that the quality metrics could become skewed. The commenter also asked CMS whether the metrics can be reported separately for discharges that are paid under the LTCH PPS standard Federal payment rate versus the LTCH PPS site neutral rate and further recommended that all LTCH appropriate metrics should be risk-adjusted.

Response: We refer readers to our response to the preceding comment regarding current and future risk adjustment for this measure. At this time, all LTCH patients that meet the sample inclusion criteria for this measure, irrespective of payer source and payment methodology, are included in this measure. We will take commenter's recommendations regarding analysis and separate reporting for discharges that are paid under the LTCH PPS standard Federal payment rate versus the LTCH PPS site neutral rate under advisement to inform future analyses of the data for the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure.

Comment: Several commenters expressed concern regarding the reliability and validity of this measure across the different PAC settings. The commenters were concerned that the reliability and validity testing for this measure were only conducted in the SNF setting. One commenter stated that the populations in which the data collection tools are used and risk factors in LTCH, IRF, and SNF settings are not similar. The commenter highlighted differences in LTCH clinical characteristics and susceptibility to pressure ulcers amongst LTCH patients as compared to IRF and SNF patient/resident populations, stating that these differences make the application of reliability testing results from the SNF resident population to the LTCH and IRF patient populations inaccurate. The commenter encouraged CMS to conduct additional testing on the reliability and validity of this quality measure using data from LTCHs, IRFs, and SNFs to accurately assess the appropriate use of MDS 3.0 items across settings.

Response: We appreciate the commenters' concern that the LTCH, IRF and SNF populations are not identical and that some differences may exist in the reliability and validity of the measure across settings. We are working towards standardizing data across PAC settings as mandated in the IMPACT Act. As such, we continue to conduct measure development and testing to explore the best way to standardize quality measures, while ensuring reliability and validity for the measures to appropriately account for the unique differences in populations across PAC settings.

The application of this quality measure for use in the LTCH QRP and IRF QRP was established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51745 through 51750) and the IRF PPS FY 2012 (76 FR 47876 through 47878) when this quality measure was finalized for use in the LTCH QRP and IRF QRP, respectively. The NQF endorsement was expanded to the LTCH and IRF settings in 2012. The expanded measure was finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50861 through 50863) and the FY 2014 IRF PPS final rule (78 FR 47911 through 47912) for use in the LTCH and IRF QRP, respectively. As part of NQF endorsement maintenance for this measure, CMS and our measure contractor will continue to perform reliability and validity testing. Findings from early data analyses have shown that the measure continues to be valid and reliable for LTCH and IRF settings in addition to the SNF/NH setting.

Comment: One commenter was concerned that the pressure ulcer measure is not standardized across PAC settings. The commenter stated that although the measure appears meets the goals and the intent of the IMPACT Act, it does not use a single data assessment tool.

The commenter specifically mentioned the frequency of assessments, highlighting the fact that the LTCH and IRF versions of the measure are calculated using data from assessments conducted at two points in time (admission and discharge), while the SNF version uses assessments at more than two points in time. The commenter expressed concern that the higher frequency of assessments for the MDS could potentially result in higher rates of pressure ulcer counts for SNFs. Another commenter voiced particular concerns regarding differences in the look back periods, for the items used on the IRF, SNF and LTCH assessments (MDS = 7-day assessment period; IRF = 3-day assessment period; LTCH = 3-day assessment period) and suggested that this would result in different rates of detection of new or worsened ulcers. Commenters encouraged CMS to address all of these discrepancies, and suggested that CMS should switch to using only an admission and discharge assessment in the SNF version of the measure.

Response: We appreciate the commenters' review of the measure specifications across the post-acute care settings. We wish to clarify that while

the IMPACT Act requires the modification of PAC assessment instruments to revise or replace certain existing patient assessment data with standardized patient assessment data as soon as practicable, it does not require a single data collection tool. We intend to modify the existing PAC assessment instruments as soon as practicable to ensure the collection of standardized data. While we agree that it is possible that within the PAC assessment instruments certain sections could incorporate a standardized assessment data collection tool, for example, the Brief Interview for Mental Status (BIMS), we have not yet concluded whether this kind of modification of the PAC assessment instruments is necessary.

As to the concern that the pressure ulcer measure calculation is based on more frequent assessments in the SNF setting than in the LTCH and IRF settings, we wish to clarify that result of the measure calculation for all three PAC providers is the same. For all three PAC providers, the measure calculation ultimately shows the difference between the number of pressure ulcers present on admission and the number of new or worsened pressure ulcers present on discharge. While SNF measure calculation arrives at that number differently than does the measure calculation in the IRF and LTCH settings, ultimately all three settings report the same result—as noted, the difference between the number of pressure ulcers present on admission and the new or worsened pressure ulcers at discharge. To explain, in IRFs and LTCHs, pressure ulcer assessment data is obtained only at two points in time—on admission and on discharge. Therefore, the calculation of the measure includes all new or worsened pressure ulcers since admission. In contrast, in SNFs, pressure ulcer assessment data is obtained on admission, at intervals during the stay (referred to as ''interim assessments''), and at discharge. Each interim assessment and the discharge assessment only look back to whether there were new or worsened pressure ulcers since the last interim assessment. The sum of number of new or worsened pressure ulcers identified at each interim assessment and at the time of discharge yields the total number of new or worsened pressure ulcers that occurred during the stay and that were present on discharge. In other words, the collection of pressure ulcer data in LTCHs and IRFs is cumulative, whereas in SNFs, data collection is sequential. In both cases the calculation reaches the same result—the total number of new or worsened pressured ulcers between admission and discharge. Thus, this is the same result of the measure calculation for SNFs as is obtained for IRFs and LTCHs.

We interpret the commenter's concern related to a higher frequency of assessments for the MDS potentially resulting in higher rates of pressure ulcer counts pertains to the potential inclusion of wounds that are new or worsened and are identified on such interim assessments but actually heal by the time of discharge. We wish to clarify that, as with the LTCH and IRF measure calculation that does not include pressure ulcers that heal, we will calculate the quality measure such that any new or worsened pressure ulcer wounds found on interim assessments but have healed will not be included.

In regard to the commenter's concern about different look-back periods, we acknowledge that although the LTCH CARE Data Set and IRF–PAI allow up to the third day starting on the day of admission as the assessment period and the MDS allows for an assessment period of admission up to day 7, we note that the training manuals for SNFs, LTCHs and IRFs provide specific and equivalent-coding instructions related to the items used to calculate this measure (found in Section M—skin conditions for all three assessments). These instructions ensure that the assessment of skin integrity occurs at the initiation of patients' or residents' PAC stays regardless of setting. All three manuals direct providers to complete the skin assessment for pressure ulcers present on admission as close to admission as possible, ensuring a harmonized approach to the timing of the initial skin assessment. Regardless of differences in the allowed assessment periods, providers across PAC settings should adhere to best clinical practices, established standards of care, and the instructions in their respective training manuals, to ensure that skin integrity information is collected as close to admission as possible. Although the manual instructions are harmonized to ensure assessment at the beginning of the stay, based on the commenter's feedback, we will take into consideration the incorporation of uniform assessment periods for this section of the assessments.

Comment: One commenter expressed concern that this measure is NQF-endorsed for the SNF setting and suggested that CMS delay implementing the cross-setting measure until it is NQF-endorsed across all PAC settings. The commenter urged CMS to request formal NQF review, using the Consensus Development Process rather than ''time-limited review'' of the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure for the LTCH setting before adopting the measure for the LTCH QRP. The commenter also encouraged CMS to convene a TEP that includes representatives from the LTCH setting to review the applicability of this measure to the LTCH setting, and noted that the NQF MAP only conditionally supported this quality measure for the LTCH QRP. In addition, the commenter expressed concern that the specifications available on the NQF Web site are dated October 2013.

Response: Although the proposed pressure ulcer measure was originally developed for the SNF/nursing home populations, it has been respecified for the LTCH and IRF settings, underwent review for expansion to the LTCH and IRF settings by the NQF Consensus Standards Approval Committee (CSAC) on July 11, 2012 [315] and was subsequently ratified by the NQF Board of Directors for expansion to the LTCH and IRF settings on August 1, 2012.[316] As reflected on the NQF Web site, the endorsed settings for this measure include Post-Acute/Long Term Care Facility: Inpatient Rehabilitation Facility, Post-Acute/Long Term Care Facility: Long Term Acute Care Hospital, Post-Acute/Long Term Care Facility: Nursing Home/Skilled Nursing Facility.[317] NQF endorsement of this measure for the LTCH setting indicates that NQF supports the use of this measure in the LTCH and IRF settings, as well as in the SNF setting. This measure was fully supported by the MAP for cross-setting use at its meeting of February 9, 2015. With regard to the comment regarding the measure specifications posted on the NQF Web site, we note that the most up-to-date version of the measure specifications were posted for stakeholder review at the time of the proposed rule on the CMS Web site at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/Downloads/Long-Term-Care-Hospital-Quality-Reporting-Program-Specifications-for-the-Quality-Measures-Proposed-through-the-Fiscal-Year-2016-*

[315] Nation Quality Forum, Consensus Standardbreds Approval Committee. Meeting Minutes, July 11, 2012. 479–489.

[316] National Quality Forum, Consensus Standards Approval Committee. Meeting Minutes, July 11, 2012. 479–489.

[317] National Quality Forum. Percent of Residents or Patients with Pressure Ulcers that are New or Worsened (Short Stay). Available: *http://www.qualityforum.org/QPS/0678*.

Notice-of-Proposed-Rule-Making-report.pdf. The specifications posted on the NQF Web site for the quality measure, the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) during the comment period are computationally equivalent and have the same measure components as those posted on the CMS Web site at the time of the proposed rule. However, we provided more detail in the specifications posted with the proposed rule, in an effort to more clearly explain aspects of the measure that were not as clear in the NQF specifications. In addition, we clarified language to make phrasing more parallel across settings, and updated item numbers and labels to match the 2016 data sets (MDS 3.0, LTCH CARE Data Set, and IRF–PAI). We are working closely with NQF to make updates and ensure that the most current language and clearest version of the specifications are available on the NQF Web site.

In addition to NQF review, this measure has been reviewed by several TEPs, which included representatives from the LTCH setting. In June and November 2013, our measure development contractor convened a cross-setting pressure ulcer TEP, which included representatives from the LTCH setting and provided detailed input regarding the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678).[318] An additional cross-setting TEP, which also included representatives from the LTCH setting, was convened in February 2015 and provided input on the technical specifications of this quality measure, as well as the applicability of this measure as a cross-setting measure applied across PAC settings, including the LTCH setting, to meet the requirements of the IMPACT Act.[319] Finally, an LTCH-specific TEP provided recommendations regarding this measure in January [320] and September 2011.[321]

As noted, this measure was fully supported by the MAP at their meeting on February 9, 2015 for use in the LTCH QRP as a cross-setting quality measure.[322] The MAP noted that this measure is NQF-endorsed for, and already implemented in, the LTCH QRP. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51748 through 51750) for details on our efforts to solicit and engage technical experts from the LTCH setting as part of our adoption of this measure for the LTCH QRP. We also refer readers to our earlier response on our measure developer's ongoing efforts to further develop this measure and note that we remain committed to soliciting ongoing input and working closely with LTCH, IRF, SNF/nursing home and cross-setting stakeholders and clinical experts as part of our ongoing measure development and maintenance efforts.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure for the FY 2018 payment determination and subsequent years to fulfill the requirements of the IMPACT Act.

c. Finalized Measure To Address the IMPACT Act: Quality Measure Addressing the Domain of Incidence of Major Falls: Application of Percent of Residents Experiencing One or More Falls With Major Injury (Long Stay) (NQF #0674)

Section 1899B of the Act directs the Secretary to specify quality measures on which PAC providers are required under the applicable reporting provisions to submit standardized patient assessment data and other necessary data specified by the Secretary with respect to five quality domains, one of which is the incidence of major falls. The specified application date by which the Secretary must specify quality measures to address this domain for IRFs, SNFs, and LTCHs is October 1, 2016, and for HHAs is January 1, 2019. To satisfy these requirements, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24601 through 24602), we proposed to adopt an application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure in the LTCH QRP as a cross-setting quality measure that addresses the domain of incidence of major falls. The purpose of our proposal was to establish this measure's use as a cross-setting measure that satisfies the required adoption of such a measure under the domain of falls with major injury. There is no difference between this measure and the measure we previously adopted, beyond the proposed intent to use the measure to satisfy the requirements of the IMPACT Act. Data collection would start on April 1, 2016. The reporting of data for this measure would affect the payment determination for FY 2018 and subsequent years.

For the LTCH setting, this measure would report the percentage of patients who experienced one or more falls with major injury during the LTCH stay. This measure was developed by CMS and is NQF-endorsed, currently for long-stay residents of nursing facilities. It was adopted for the LTCH QRP in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50874 through 50877). In the FY 2015 IPPS/LTCH PPS final rule, we adopted a revised start for data collection of April 1, 2016 and affecting FY 2018 payment determination, and we adopted data collection and submission timelines for the FY 2018 payment determination and subsequent years. For information on the detailed rationale for relevance, evidence, appropriateness, importance, and applicability of this quality measure in the LTCH QRP, we refer readers to these final rules.

Measure specifications are available on the NQF Web site at: *http://www.qualityforum/QPS/0674*.

The IMPACT Act requires the implementation of quality measures and resource use and other measures that are standardized and interoperable across PAC settings as well as the reporting of standardized patient assessment data and other necessary data specified by the Secretary. The Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure is NQF-endorsed for long-stay residents of nursing facilities and has been successfully implemented in such settings. The NQF-endorsed measure has been in use as part of the CMS Nursing Home Quality Initiative since

[322] National Quality Forum; Measure Application Partnership (MAP). February 2015. MAP PAC–LTC Programmatic Deliverable—Final. Available: *https://www.qualityforum.org/Publications/2015/02/MAP_PAC-LTC_Programmatic_Deliverable_-_Final_Report.aspx*.

2011. In addition, the measure is currently reported on the CMS *Nursing Home Compare* Web site at: *http://www.medicare.gov/nursinghomecompare/search.html*. As noted previously, this measure was adopted for use in the LTCH QRP in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50874 through 50877). In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50290 through 50291), we revised the data collection start date for this measure with data collection to begin starting April 1, 2016, and we adopted data collection and submission timelines for the FY 2018 payment determination and subsequent years.

We reviewed the NQF's consensus endorsed measures and did not identify any NQF-endorsed cross-setting quality measures focused on falls with major injury applicable to multiple PAC settings. We are unaware of any other cross-setting quality measures for falls with major injury that have been endorsed or adopted by another consensus organization. Therefore, we proposed an application of the measure, the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure under the Secretary's authority to select non-NQF-endorsed measure.

A TEP convened by our measure development contractor provided input on the measure specifications, as well as the feasibility and clinical appropriateness of implementing the measure across PAC settings, including the LTCH setting. The TEP supported the implementation of this measure across PAC settings and also supported CMS' efforts to standardize this measure for cross-setting development. In addition, the MAP met on February 9, 2015, and provided input to CMS on the measure. The MAP conditionally supported the use of an application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure in the LTCH QRP as a cross-setting quality measure. More information about the MAP's recommendations for this measure is included in The MAP Off-Cycle Deliberations 2015: Measures under Consideration to Implement Provisions of the IMPACT Act: Final Report which is available at: *http://www.qualityforum.org/Setting_Priorities/Partnership/MAP_Final_Reports.aspx*.

More information on the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure can be found on the NQF Web site at: *http://www.qualityforum.org/QPS/0674*. Updated specifications and details regarding the changes made to further harmonize this measure across PAC settings are located at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html*.

We proposed that data for this proposed quality measure be collected using the LTCH CARE Data Set, with submission through the QIES ASAP system. For more information on LTCH QRP reporting through the QIES ASAP system, we refer readers to the CMS Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html*. Data collected through a revised LTCH CARE Data Set would be used to calculate this quality measure. Consistent with the LTCH CARE Data Set reporting requirements, the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure would apply to all patients discharged from LTCHs. Data items in the revised LTCH CARE Data Set version 3.00 would include: J1800, Any Falls Since Admission; and J1900, *Number of Falls Since Admission*.

The calculation of the proposed application of the measure would be based on item J1900C, *Number of Falls with Major Injury Since Admission*. The measure specifications for the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure are available at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html*. We refer readers to section VIII.C.9.b. of the preamble of this final rule for more information on the data collection and submission timeline for this proposed quality measure.

We invited public comment on our proposal to adopt an application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure, with data collection beginning on April 1, 2016 for the FY 2018 payment determination and subsequent years to fulfill the requirements in the IMPACT Act.

Comment: One commenter supported the proposal to implement an application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure to fulfill the requirements of the IMPACT Act.

Response: We thank the commenter for their support of our proposal.

Comment: Several commenters supported the Application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure in concept, but suggested that risk adjustment is necessary to ensure reliable and valid comparisons across settings and to account for factors outside of the control of providers for public reporting purposes. One commenter stated that risk adjustment is important when discussing and analyzing falls risk factors in other PAC settings. The commenters also noted that the NQF MAP conditionally supported the falls measure if risk-adjustment were performed.

Response: We appreciate the commenters' concerns that the proposed application of the quality measure, the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) should be risk-adjusted. The application of risk adjustment, as stated by the IMPACT Act, is ''as determined appropriate by the Secretary'' under section 1899B(c)(3)(B) of the Act.

While we acknowledge that patient characteristics that elevate the risk for falls with major injury vary across the LTCH population, a TEP convened in 2009 by the measurement development contractor asserted that risk adjustment of this quality measure concept was inappropriate because it is each facility's responsibility to take steps to reduce the rate of injurious falls, especially since such events are considered to be ''never events.'' We note that the PAC PRD did not analyze falls with major injury, as falls with major injury was not an assessment item that was tested. However, as the commenter pointed out, the prevalence of a history of falls prior to the PAC admission did vary across post-acute settings (as assessed by Item B7 from the CARE tool: ''History of Falls. Has the patient had two or more falls in the past year or any fall with injury in the past year?''). Nonetheless, we believe that as part of best clinical practice, LTCHs should assess residents for falls risk and take steps to prevent future falls with major injury.

A TEP of LTCH experts convened in 2011 agreed that falls with major injury are very important to track in LTCHs and did not recommend risk adjustment for this measure. The numerator, denominator, and exclusions definitions provided to the TEP in 2015 are virtually identical to the specifications we proposed to adopt for this measure, and did not include risk adjustment. Two out of 11 members of the 2015 TEP supported risk adjustment of the falls measure. For more information on the 2015 TEP, please visit *http://*

www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/SUMMARY-OF-FEEDBACK-FROM-THE-TECHNICAL-EXPERT-PANEL-TEP-REGARDING-CROSS-SETTING-MEASURES-ALIGNED-WITH-THE-IMPACT-ACT-OF-2014-Report.pdf.

We believe factors that increase the risk of falling, such as cognitive impairment, should be included by facilities in their risk assessment to support proper care planning. As cited in the proposed rule, research suggests that 78 percent of falls are anticipated falls, occurring in individuals who could have been identified as at-risk for a fall using a risk-assessment scale. Risk adjusting for falls with major injury could unintentionally lead to insufficient risk prevention by the provider. As required by the DRA, the Hospital Acquired Conditions-Present On Admission (HAC–POA) Indicator Reporting provision requires a quality adjustment in the Medicare Severity-Diagnosis Related Groups (MS–DRG) payments for certain Hospital Acquired Conditions (HACs), which include falls and trauma, and these payment reductions are not risk adjusted. The need for risk assessment, based on varying risk factors among patients, does not remove the obligation of providers to minimize that risk.

With regard to the MAP recommendation to risk adjust this measure cited by the commenter, the MAP feedback regarding risk adjustment for this quality measure applied to the home health setting, not to the SNF setting. We also refer readers to a more recent Cochrane review of 60 randomized controlled trials, which found that within care facilities, multifactorial interventions have the potential to reduce rates of falls and risk of falls.[323]

Comment: One commenter stated that data collection and abstraction from the medical record for this measure would pose a burden on LTCHs because of separate systems for gathering data for such events.

Response: We appreciate the concerns related to any undue burden, including data collection, documentation, and reporting and we take such concerns under consideration when selecting measures for the LTCH QRP. The Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure includes the following two data elements in the LTCH CARE Data Set version 3.00: J1800, *Any Falls Since Admission,* and J1900, *Number of Falls Since Admission.* If the provider answers ''No'' to J1800, *Any Falls Since Admission,* then J1900, *Number of Falls Since Admission,* may be skipped. Based on evidence and rationale we presented in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50874 through 50877) to support our selection and finalization of our proposal to adopt this measure for the LTCH QRP, we believe the impact this measure could have on quality of care and patient outcomes in the LTCH setting justifies additional resources needed for measure data collection and data submission.

In addition, we note that this measure was previously finalized for use in the LTCH QRP through the FY 2014 IPPS/LTCH PPS final rule (78 FR 50874 through 50877), and our proposal of this previously adopted measure to establish its cross-setting use, in order to address the domain of incidence of major falls to meet the requirements of the IMPACT Act, does not add any additional burden for LTCHs.

Comment: Several commenters recommended re-specifying and testing the measure in the LTCH setting and obtaining NQF endorsement specifically for the LTCH setting prior to implementation in the LTCH QRP.

Response: We appreciate the commenters' recommendations regarding NQF endorsement in the LTCH setting and recognize that it is an important step in the measure development process. However, because falls with major injury is an important patient safety concern in LTCHs, and because of the lack of availability of NQF-endorsed measures for the LTCH setting or measures endorsed by any other consensus organizations, we proposed this measure under the exception authority provided in section 1899B(e)(2)(B) of the Act, which allows us to apply a measure to the LTCH setting that is not NQF-endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization.

There is no difference between this measure and the measure we previously adopted through the FY 2014 IPPS/LTCH PPS final rule (78 FR 50874 through 50877).

We also are clarifying that while this measure is currently endorsed for the nursing home setting, we believe the data collection items, measure definition, and measure specifications are applicable across multiple PAC settings, including the LTCH setting (78 FR 50876). With regard to the adequacy of the measure's testing, the item-level testing during the development of the MDS 3.0 (data elements in the LTCH CARE Data Set were adapted from MDS 3.0) showed near-perfect inter-rater reliability for the MDS item (J1900C) used to identify falls with major injury. The NQF measure evaluation criteria do not require measure-level reliability if item reliability is high. However, we believe that, given the overlap in the populations and item-level testing results, the application of this measure for LTCH patients will be reliable. In addition, we intend to test the measure for the LTCH setting once data collection begins as part of LTCH QRP and as part of ongoing maintenance of the measure for NQF endorsement.

In addition, our measure development contractor convened a TEP in 2011 that supported the importance of a quality measure to address falls with a major injury in the LTCH setting. This measure on reports falls with major injuries which is an important patient safety concern for LTCH patients. For the reasons listed above, we have concluded that this measure is appropriate for LTCH patients.

Comment: One commenter stated that the falls measure is not fully specified as a cross-setting measure. This commenter suggested that CMS needs to more clearly specify the numerator, denominator and exclusions, including risk adjustment for this quality measure. Therefore, this measure should not be implemented as proposed since the specifications in the proposed rule differ from those in referenced documents, NQF applications for the measures, and the IRF and SNF proposed rules.

Response: This quality measure was proposed and specified as a cross-setting measure for LTCH, IRF, and SNF settings. The Application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure is the same measure for each setting. Additional details on the measure specifications for the application of this measure to the LTCH setting in order to harmonize this measure across LTCH, IRF, and SNF settings to meet the IMPACT Act requirements are available for download at: *http://cms.hhs.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html*.

With regard to the measure specifications posted on the NQF Web site, the most up-to-date version of the measure specifications were posted for stakeholder review at the time of the

[323] Cameron ID, Gillespie LD, Robertson MC, Murray GR, Hill KD, Cumming RG, Kerse N. Interventions for preventing falls in older people in care facilities and hospitals. *Cochrane Database of Systematic Reviews* 2012, Issue 12. Art. No.: CD005465. DOI: 10.1002/14651858.CD005465.pub3.

proposed rule on the CMS Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/NursingHomeQualityInits/Downloads/Skilled-Nursing-Facility-Quality-Reporting-Program-Quality-Measure-Specifications-for-FY-2016-Notice-of-Proposed-Rule-Making-report.pdf*. The specifications currently posted on the NQF Web site are computationally equivalent and have the same measure components as those posted on the CMS Web site at the time of the proposed rule. However, we provided more detail in the specifications posted with the proposed rule, in an effort to more clearly explain aspects of the measure that were not as clear in the NQF specifications. In addition, we clarified language to make phrasing more parallel across settings, and updated item numbers and labels to match the 2016 data sets (MDS 3.0, LTCH CARE Data Sets, and IRF–PAI). We are working closely with NQF to make updates and ensure that the most current language and clearest version of the specifications are available on the NQF Web site.

After consideration of the public comments we received, we are finalizing our proposal to adopt the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure, with data collection beginning on April 1, 2016, for the FY 2018 payment determination and subsequent years to fulfill the requirements in the IMPACT Act.

d. Finalized Measure To Address the IMPACT Act: Quality Measure Addressing the Domain of Functional Status, Cognitive Function, and Changes in Function and Cognitive Function: Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015)

Section 1899B(c)(1) of the Act directs the Secretary to specify quality measures on which PAC providers are required under the applicable reporting provisions to submit standardized patient assessment data and other necessary data specified by the Secretary with respect to five quality domains, one of which is functional status, cognitive function, and changes in function and cognitive function. The specified application date by which the Secretary must specify quality measures to address this domain for IRFs and SNFs is October 1, 2016, for LTCHs is October 1, 2018, and for HHAs is January 1, 2019. To satisfy these requirements, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24602 through 24605), we proposed to adopt an application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan that Addresses Function (NQF #2631; endorsed on 07/23/2015) measure that we have already adopted in the LTCH QRP as a cross-setting quality measure that addresses the domain of functional status, cognitive function, and changes in function and cognitive function. The reporting of data for this measure would affect the payment determination for FY 2018 and subsequent years. This quality measure reports the percent of patients with both an admission and a discharge functional assessment and a goal that addresses function.

The National Committee on Vital and Health Statistics, Subcommittee on Health,[324] noted: ''[i]nformation on functional status is becoming increasingly essential for fostering healthy people and a healthy population. Achieving optimal health and well-being for Americans requires an understanding across the life span of the effects of people's health conditions on their ability to do basic activities and participate in life situations, in other words, their functional status.'' This statement is supported by research showing that patient functioning is associated with important patient outcomes, such as discharge destination and length of stay in inpatient settings,[325] as well as the risk of nursing home placement and hospitalization of older adults living in the community.[326] Functioning is important to patients and their family members.[327] [328] [329]

The majority of patients who receive PAC services, such as care provided by SNFs, HHAs, IRFs and LTCHs, have functional limitations, and many of these patients are at risk for further decline in function due to limited mobility and ambulation.[330] The patient and resident populations treated by SNFs, HHAs, IRFs and LTCHs vary in terms of their functional abilities at the time of the PAC admission and their goals of care. For IRF patients and many SNF residents, treatment goals may include fostering the patient's ability to manage his or her daily activities so that the patient can complete self-care and/or mobility activities as independently as possible, and, if feasible, return to a safe, active, and productive life in a community-based setting. For HHA patients, achieving independence within the home environment and promoting community mobility may be the goal of care. For other HHA patients, the goal of care may be to slow the rate of functional decline in order to allow the person to remain at home and avoid institutionalization.[331]

Lastly, in addition to having complex medical care needs for an extended period of time, LTCH patients often have limitations in functioning because of the nature of their conditions, as well as deconditioning due to prolonged bed rest and treatment requirements (for example, ventilator use). The clinical practice guideline Assessment of Physical Function [332] recommends that clinicians should document functional status at baseline and over time to validate capacity, decline, or progress. Therefore, assessment of functional status at admission and discharge and establishing a functional goal for discharge as part of the care plan (that is, treatment plan) is an important aspect of patient care in all of these PAC settings.

Given the variation in patient and resident populations across the PAC settings, the functional activities that are typically assessed by clinicians for each type of PAC provider may vary. For example, the activity of rolling left and right in bed is an example of a functional activity that may be most relevant for low-functioning patients or residents who are chronically critically

ill. Managing a full flight of stairs may be assessed for higher functioning patients or residents. However, certain functional activities, such as eating, oral hygiene, lying to sitting on the side of the bed, toilet transfers, and walking or wheelchair mobility, are important activities for patients in each PAC setting.

Although functional assessment data are currently collected by SNFs, HHAs, IRFs and LTCHs, this data collection has employed different assessment instruments, scales, and item definitions. The data collected cover similar topics, but are not standardized across PAC settings. Further, the different sets of functional assessment items are coupled with different rating scales, making communication about patient functioning challenging when patients transition from one type of setting to another. Collection of standardized functional assessment data across SNFs, HHAs, IRFs and LTCHs, using common data items, would establish a common language for patient functioning, which may facilitate communication and care coordination as patients transition from one type of provider to another. The collection of standardized functional status data may also help improve patient or resident functioning during an episode of care by ensuring that basic daily activities are assessed at the start and end of each episode of care with the aim of determining whether at least one functional goal has been established.

The functional assessment items included in the proposed functional status quality measure were originally developed and tested as part of the Post-Acute Care Payment Reform Demonstration (PAC PRD) version of the Continuity Assessment Record and Evaluation (CARE) Item Set, which was designed to standardize the assessment of patients' status across acute care and PAC settings, including SNFs, HHAs, IRFs and LTCHs. The functional status items on the CARE Item Set are daily activities that clinicians typically assess at the time of admission and/or discharge in order to determine patients' or residents' needs, evaluate patient progress and prepare patients or residents and families for a transition to home or to another setting.

The development of the CARE Item Set and a description and rationale for each item is described in a report entitled ''The Development and Testing of the CARE Item Set: Final Report on the Development of the CARE Item Set: Volume 1 of 3.'' [333] Reliability and validity testing were conducted as part of CMS' PAC PRD, and we concluded that the functional status items have acceptable reliability and validity. A description of the testing methodology and results are available in several reports, including the report entitled ''The Development and Testing of the CARE Item Set: Final Report On Reliability Testing: Volume 2 of 3'' [334] and the report entitled ''The Development and Testing of The CARE Item Set: Final Report on Care Item Set and Current Assessment Comparisons: Volume 3 of 3.'' [335] The reports are available on our Post-Acute Care Quality Initiatives Web page at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/CARE-Item-Set-and-B-CARE.html*.

The cross-setting function quality measure we proposed to adopt for the FY 2018 payment determination and subsequent years to meet the IMPACT Act requirements is a process measure that is an application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure. This quality measure was developed by the CMS. It reports the percent of patients with both an admission and a discharge functional assessment and a treatment goal that addresses function. The treatment goal provides documentation that a care plan with a goal has been established for the patient.

We proposed to use the data that will be collected and submitted using the LTCH CARE Data Set version 3.00 for the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure starting April 1, 2016 in order to calculate this cross-setting application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) quality measure. The items in the cross-setting application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure are a subset of the items included in the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure, which was finalized in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50291 through 50298). Therefore, the adoption of this quality measure to satisfy the requirements of the IMPACT Act would not result in the addition of new items to the LTCH CARE Data Set version 3.00 and, therefore, would not result in additional burden for data collection and data submission to LTCHs.

This process measure requires the collection of functional status admission and discharge assessment data using standardized clinical assessment items, or data elements that assess specific functional activities, that is, self-care, mobility activities. The self-care and mobility function activities on the LTCH CARE Data Set version 3.00 are coded using a 6-level rating scale that indicates the patient's level of independence with the activity; higher scores indicate more independence. For this quality measure, documentation of a goal for one of the function items reflects that the patient's care plan addresses function. The function goal is recorded at admission for at least one of the standardized self-care or mobility function items using the 6-level rating scale.

To the extent that a patient had an incomplete stay (for example, for the purpose of being admitted to an acute care facility), collection of discharge functional status data might not be feasible. Therefore, for patients with incomplete stays, admission functional status data and at least one treatment goal would be required; however, discharge functional status data would not be required to be reported.

A TEP convened by our measure development contractor provided input on the technical specifications of this quality measure, as well as the feasibility of implementing the measure across PAC settings, including the LTCH setting. The TEP supported the implementation of this measure across PAC settings and also supported our efforts to standardize this measure for cross-setting use.

In addition, the MAP met on February 9, 2015, and provided input to CMS on the measure. The MAP conditionally supported the use of an application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure for use in the LTCH QRP as the cross-setting measure. The conditions stated

[333] Barbara Gage et al: ''The Development and Testing of the Continuity Assessment Record and Evaluation (CARE) Item Set: Final Report on the Development of the CARE Item Set'' (RTI, International, 2012).

[334] Ibid.

[335] Ibid.

by the MAP included that the measure should be endorsed by the NQF. Finally, the MAP reiterated its support for adding measures addressing function, noting the group's special interest in this PAC/LTC core concept. More information about the MAP's recommendations for this measure is discussed in The MAP Off-Cycle Deliberations 2015: Measures under Consideration to Implement Provisions of the IMPACT Act: Final Report which is available at: *http://www.qualityforum.org/Setting_Priorities/Partnership/MAP_Final_Reports.aspx*.

The measure we proposed is an Application of the Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan that Addresses Function (NQF #2631: endorsed on 07/23/2015). The proposed measure is derived from the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan that Addresses Function quality measure. The specifications are available for review at the LTCH QRP Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*.

We reviewed the NQF's consensus endorsed measures and were unable to identify any NQF-endorsed cross-setting quality measures focused on assessment of function for PAC patients. We are also unaware of any other cross-setting quality measures for functional assessment that have been endorsed or adopted by another consensus organization. Therefore, we proposed to adopt this functional assessment measure for use in the LTCH QRP for the FY 2018 payment determination and subsequent years under the Secretary's authority to select non-NQF-endorsed measures.

As discussed previously, we proposed that this cross-setting quality measure use a subset of data collected for Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) using the LTCH CARE Data Set, with submission through the QIES ASAP system. For more information on LTCH QRP reporting through the QIES ASAP system, we refer readers to the CMS Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html*.

We described the measure calculation algorithm for this measure in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24605).

This measure is calculated at two points in time, at admission and discharge (we refer readers to section VIII.C.9.b. of the preamble of this final rule, Form, Manner and Timing of Quality Data Submission, for more information on the proposed data collection and submission timeline for this proposed quality measure).

The items would assess specific self-care and mobility activities, and would be based on functional items included in the PAC PRD version of the CARE Item Set. The items have been developed and tested for reliability and validity in SNFs, HHAs, IRFs, and LTCHs. More information pertaining to item testing is available on our Post-Acute Care Quality Initiatives Web page at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/CARE-Item-Set-and-B-CARE.html*.

We invited public comments on our proposal to adopt the Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure that we have already adopted in the LTCH QRP as a cross-setting quality measure that addresses the domain of functional status, cognitive function, and changes in function and cognitive function to satisfy the requirement of the IMPACT Act, with data collection starting on April 1, 2016, for the FY 2018 payment determination and subsequent years. Further, we invited public comments on our proposal to use a subset of data collected for the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure to meet the requirements for this cross-setting quality measure that addresses the domain of functional status, cognitive function, and changes in function and cognitive function to satisfy the requirement of the IMPACT Act.

Comment: MedPAC did not support the adoption of the function process measure in the LTCH QRP, NQF #2631; endorsed on 07/23/2015 and urged CMS to adopt outcomes measures focused on changes in patient physical and cognitive functioning while under a provider's care.

Response: We appreciate MedPAC's preference for moving toward the use of functional outcome measures in order to assess the patient's physical and cognitive functioning under a provider's care. We believe that the use of this process measures at this time will give us the data we need to develop a more robust outcome-based quality measure on this topic in the future. The proposed function quality measure, an Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), has attributes to enable outcomes-based evaluation by the provider. Such attributes include the assessment of functional status at two points in time, admission and discharge, enabling the provider to identify, in real time, changes, improvement or decline, as well as maintenance. In addition, the proposed quality measure requires that the provider indicate at least one functional goal associated with a functional activity, and the provider can calculate the percent of patients who meet goals. Such real time use enables providers to engage in person-centered goal setting and the ability to use the data for quality improvement efforts.

In addition, we note that for the LTCH QRP, in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50301), we adopted an outcome measure, Functional Outcome Measure: Change in Mobility Among LTCH Patients Requiring Ventilator Support (NQF #2632; endorsed on 07/23/2015), for implementation starting April 1, 2016.

Comment: One commenter supported inclusion of the quality measure an Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015). The commenter noted that this cross-setting measure, which is focused on function, addresses measure shortcomings in the LTCH QRP and other QRPs.

Response: We appreciate the commenter's support of this measure. We agree that patient functioning is an important area of quality in PAC settings, including the LTCH setting.

Comment: Several commenters expressed concern related to undue burden associated with data documentation for the functional status quality measure, an Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015).

Response: We appreciate the concerns related to any undue burden, including documentation, and take such concerns under consideration when selecting measures for the LTCH QRP. We aim to adopt quality measures that rely on data

that is already collected in clinical practice.

To reduce potential burden associated with collecting additional items, we have included several mechanisms in Section GG of the LTCH CARE Data Set that allow the clinician to skip questions in the data set that are not appropriate for an individual patient in order to reduce burden. We have instituted skip options so that the final number of items assessed per patient is limited depending on their complexity and capabilities. Therefore, although all of the items are available for assessment, we have built in mechanism that enables the assessor to include assessment information as, and when, appropriate.

We further note that there is no new burden associated with this process measure since it will utilize data elements in the LTCH CARE Data Set that are already collected for the previously adopted measure, Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015).

Comment: Several commenters noted that the measure, an Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), does not capture functional outcomes. One commenter encouraged CMS to propose functional outcome measures for LTCHs, SNFs and HHAs in future rulemaking for quality of care and payment.

Response: We recognize stakeholder concerns for the development of outcome-based quality measures. We point out that we previously adopted the functional outcome measure Functional Status Outcome Measure: Change in Mobility Among LTCH Patients Requiring Ventilator Support (NQF #2632; endorsed on 07/23/2015) in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50301), and data collection for this outcome measure begins on April 1, 2016.

Further, as discussed above, the measure has attributes within the assessment and data collection that enables outcomes-based evaluation by the provider.

As discussed above, this function quality measure, NQF #2631; endorsed on 07/23/2015, has attributes within the assessment and data collection that enables outcomes-based evaluation by the provider.

The IMPACT Act specifically mentions goals of care as an important aspect of the use of standardized assessment data, quality measures, and resource use to inform discharge planning and incorporate patient preference. We are currently developing functional outcome measures, specifically self-care and mobility quality measures, which may be considered in the future for use in the LTCH setting as part of the LTCH QRP. These outcome function quality measures are being designed to use the same standardized functional assessment items that are included in the cross-setting person and family-centered function process measure in order to capitalize on the data collected for this process measure (that is, an Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015)), which will inform further development, while allowing for the consideration of limited additional burden.

Comment: One commenter noted that the measure, an Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), includes reporting of only one goal, even though patients often have multiple functional goals. The commenter indicated that goals may be to improve function or to maintain function.

Response: The quality measure requires a minimum of one goal per patient stay; however, clinicians can report goals for each self-care and mobility item included in Section GG of the LTCH CARE Data Set version 3.00.

We believe that assessing patient function goals should be part of clinical care and builds upon the conditions of participation (CoPs) for LTCH providers. The IMPACT Act also specifically mentions goals of care as an important aspect of the use of standardized assessment data, quality measures, and resource use to inform discharge planning and incorporate resident preference. We agree that, for many PAC patients, the goal of therapy is to improve function, and we also recognize that, for some patients, delaying decline may be the goal. We believe that individual, person-centered goals exist in relation to individual preferences and needs. We will provide instructions about reporting of goals in a training manual and in training sessions to better clarify that goals set at admission may be focused on improvement of function or maintenance of function.

Comment: One commenter noted that goal data was not included in the PAC PRD and expressed concerns about reliability and validity of these items. The commenter requested clarification on how CMS plans to use goal data.

Response: The function measure calls for documentation of a goal as evidence that there is a care plan with a goal in place for each patient. CMS will use the variable of patient goals for data collection and monitoring. By using the data collected in this quality measure, LTCHs can internally monitor functional outcomes, specifically the percent of patients who meet or exceed their discharge functional status goals, as established at admission in conjunction with the patient and family.

Comment: Several commenters expressed concern regarding the use of the CARE Tool (Item Set) as the data source for the functional status quality measures due to limited testing in LTCHs and reliability testing results. The commenters noted that several self-care and mobility items have Kappa statistics categorizing inter-rater reliability as ''fair'' or ''moderate,'' and were based on a small sample of 46 LTCH patients. The commenters stated that ''fair'' or ''moderate'' reliability, while acceptable for exploratory studies or internal quality improvement efforts, is insufficient for national use in the LTCH QRP. Commenters recommended that CMS explain the low Kappa statistics and/or re-test these items in significantly more LTCHs to address reliability issues. The commenters noted that measure testing should be oriented towards the intended setting of use of the measure and suggested additional testing in the LTCH setting be conducted.

Response: The reliability study results mentioned by these commenters were only one of several reliability analyses conducted as part of the PAC PRD. The referenced result was a reflection of the small sample size available for analysis. In addition to the inter-rater reliability study mentioned by these commenters, we also examined: (1) Inter-rater reliability of the CARE items using videotaped case studies, which included 114 LTCH assessments from three LTCHs; and (2) internal consistency of the function data, which included more than 7,700 assessments from 28 LTCHs. The results of these analyses indicate moderate to substantial agreement on the CARE Tool (Item Set) items. The report describing these additional analyses and an interpretation of the Kappa statistics results is available at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/The-Development-and-Testing-of-the-*

Continuity-Assessment-Record-and-Evaluation-CARE-Item-Set-Final-Report-on-Reliability-Testing-Volume-2-of-3.pdf.

In addition to the PAC PRD analyses, as part of the NQF application process, we conducted additional analyses focused on the six submitted IRF and LTCH function quality measures, including item-level, scale-level and facility-level analyses testing the reliability and validity of the CARE function data. The members of this panel reviewed this measure and concluded that the measure does meet the scientific acceptability requirements at a moderate level. A description of the analyses and the results are available on the NQF Web site's Person- and Family-Centered Care project at: *http://www.qualityforum.org/ProjectMeasures.aspx?projectID=73867*. Therefore, given the overall findings of the reliability and validity analysis, we believe these CARE items provide a scientifically sound set to measure quality for the LTCH QRP.

We understand the importance of education in assisting providers to collect accurate data, and we have worked in the past with public outreach including training sessions, training manuals, Webinars, open door forums and help desk support. Further, we note that, as part of the LTCH QRP, we intend to evaluate the national-level data for this quality measure submitted by LTCHs to CMS. These data will inform ongoing measure development and maintenance efforts, including further analysis of reliability and validity of the data elements and the quality measure. Finally, we agree that ongoing reliability and validity testing is critical for all items used to calculate quality measures.

Comment: One commenter suggested that several of the functional status assessment items had low or nonresponse rates and missing data when used as part of PAC PRD. The commenter requested that CMS provide additional information on how the measure has been updated to address these low response rates.

Response: With respect to the comments that some items had low response rates (defined as the utilization of coding responses for when a patient does not or cannot attempt a daily activity, the activity did not occur), the assessor appropriately reported a code indicating the reason that the activity was not attempted (for example, due to a medical condition or due to patient refusal). This is a good practice to ensure that bias is not introduced through missing data not otherwise specified. With some populations, there was a high use of the letter codes indicating that the activity was not able to be coded or collected at the time of the assessment due to patient condition, but there was a very low percentage of missing data.

While activities such as ''toileting hygiene'' and ''walking'' may have high rates of ''activity not attempted'' codes at the time of admission for LTCH patients, these activities are completed more often at discharge. Assessment of these activities is particularly important to assess for LTCH patients returning to their home. Using national Medicare FFS claims data from 2010 through 2013, we examined the percentage of LTCH patients who were admitted from an acute hospital and discharged home. The national percentage of LTCH patients discharged home was 40.1 percent in 2010, 39.5 percent in 2011, 38.4 percent in 2012, and 37.5 percent in 2013. These findings demonstrate that a large proportion of LTCH patients are discharged home directly from the LTCH setting. These data strongly support the importance of functional assessment in the LTCH setting, and ensuring patient safety from a functional perspective prior to discharge. Assessment of a patient's level of independence and safety in performing functional activities such as walking is critical for a safe patient transition from the LTCH to the home setting.

Public input and a TEP in 2013 provided feedback to CMS pertaining to the pattern of scores including that of letter codes. TEP members included experts from LTCHs, as well as IRFs and SNFs. A report summarizing recent TEP meetings focused on functional status quality measures titled ''Summary of Feedback from TEP on the Development of Cross-Setting Functional Status Quality Measures'' is available at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/*. The functional status quality measure development built on work conducted as part of a project funded by ASPE, and that project also included a cross-setting function quality measure TEP, which was held on August 15, 2012. A report summarizing that meeting is available at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/ASPE-Report-Analysis-of-Crosscutting-Medicare-Functional-Status-Quality-Metrics-Using-the-Continuity-and-Assessment-Record-and-Evaluation-CARE-Item-Set-Final-Report.pdf*.

Comment: A few commenters noted that the proposed quality measure is an application of the LTCH measure under review at NQF, and that fewer functional assessment items are in the proposed measure when compared to the LTCH process measure. Therefore, the commenters believe the items in the LTCH CARE Data Set are limited, and functional issues addressed by clinicians may not be represented in this data set.

Response: The quality measure under NQF review, the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), was adopted for FY 2018 payment determination and subsequent years as part of the LTCH QRP in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50298). In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24602 through 24605), we proposed *an application* of this previously adopted quality measure. That is, the quality measure, *an Application* of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), is a cross-setting measure that is standardized across multiple settings (LTCHs, IRFs, SNFs). This quality measure includes only selected function items from the previously adopted quality measure.

We believe that standardization of assessment items across the spectrum of PAC settings is an important goal. In the cross-setting process measure, there is a common core subset of function items that will allow tracking of patients' functional status across settings. We recognize that there are some differences in patients' clinical characteristics, including medical acuity, across the LTCH, SNF and IRF settings, and that certain functional items may be more relevant for certain patients. Decisions regarding item selection for each quality measure were based on our review of the literature, input from a TEP convened by our measure contractor, our experiences and review of data in each setting from the PAC PRD, and public comments.

To clarify which specific items are included in each function measure for each QRP, we added a table to the document entitled, LTCH QRP: Specifications of Quality Measures Adopted in the FY 2016 Final Rule, which identifies which functional assessment items are used in the cross-setting process measure, as well as the setting-specific IRF and LTCH outcome quality measures. The document is available for download at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-*

Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html.

Comment: Several commenters noted that only a few standardized assessment items were proposed by CMS in Section GG of the LTCH CARE Data Set version 3.00 and that the items proposed deviated from the original set of CARE items tested in the PAC PRD. One of these commenters noted the importance of consistent items and assessment instructions across the settings. The commenters also were concerned that the items proposed for IRFs, SNFs and LTCHs were not the same set of items. Some of the commenters questioned the validity of including only a subset of items from the CARE Tool (Item Set) tested in the PAC PRD, diminishing the comparability of the data.

Response: For this quality measure, a core set of function items are included in Section GG of the LTCH CARE Data Set version 3.00 for LTCHs. This core set of function items are also included in Section GG of the IRF–PAI for IRFs and Section GG of the MDS 3.0 for SNFs, respectively. This core set of items selected for cross-setting use were chosen for their applicability across all PAC settings, guided by the TEP convened by our measure development contractor. The core set of items nested in the Section GG were chosen from the set of function-related items tested in the PAC PRD.

The PAC PRD tested a range of items, some of which were duplicative, to identify the best performing items in each domain. Select items were removed from the item set where testing results and clinician feedback suggested the need for fewer items to be included in a particular measure or scale. We also received feedback on the items from a cross-setting TEP convened by our measure development contractor, RTI International. The measure is based on analyses which are available on our Web site at: *http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Reports/Research-Reports-Items/PAC_Payment_Reform_Demo_Final.html*.

We chose from this subset of data items to develop the function-based CARE measures, such as the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure. Additional function items are included on the LTCH CARE Data Set due to the adoption of additional outcome-based quality measure (Functional Status Outcome Measure: Change in Mobility Among LTCH Patients Requiring Ventilator Support, NQF #2632; endorsed on 07/23/2015) in the LTCH setting. Therefore, we believe that the core set of items in Section GG are standardized to one another by item and through the use of the standardized 6-level rating scale. Further, we will continue to work to harmonize the assessment instructions to better guide the coding of the assessment, as we believe that this will lead to accurate and reliable data, allowing us to compare the data within each setting. We also believe that the assessment of these activities is part of routine clinical care at a minimum at the start of care and at the end of care.

We recognize that there are some differences in patients' clinical characteristics, including medical acuity across the SNF, LTCH and IRF settings, and that certain functional items may be more relevant for certain patients. For example, one item, ''Wash Upper Body'' is included in the LTCH quality measure, Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), but is not included in the IRF outcome measures or the cross-setting measure, an Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), because this item overlaps with the item ''Bathe/Shower Self,'' which focused on washing the entire body. For the LTCH setting, where patients are chronically critically ill, bathing the upper body is more likely to occur than washing the entire body. In IRFs and SNFs, clinicians typically assess showering or bathing of the entire body.

To clarify which function items are included in each function measure for each QRP, we added a table to the document entitled, LTCH QRP: Specifications of Quality Measures Adopted in the FY 2016 Final Rule, which identifies which functional assessment items are used in the cross-setting process measure, as well as the setting-specific IRF and LTCH outcome quality measures. The document is available at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*.

Comment: One commenter noted there may be a challenge in determining the baseline cognitive function of LTCH patients, which is one of the items needed for the quality measure, Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015).

Response: We appreciate the commenter's feedback pertaining to the quality measure, an Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015). We are clarifying that the Confusion Assessment Method (CAM©), which includes the item focused on baseline cognitive function, is not required as part of this cross-setting measure. It is required as part of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), which was adopted into the LTCH QRP in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50298). We have added a table entitled ''Long-Term Care Hospital Quality Reporting Program—Specifications for the Quality Measures Adopted through the FY 2016 IPPS/LTCH PPS final rule'' to the CMS Web site to clarify which items are required for each functional quality measure, which is available at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*.

We have addressed similar concerns with training in the past with public outreach including training sessions, training manuals, Webinars, open door forums, help desk support, and a Web site that hosts training information (*http://www.youtube.com/user/CMSHHSgov*). We plan to conduct such activities to support the April 1, 2016 implementation for the new items included in the LTCH CARE Data Set version 3.00.

Comment: Several commenters expressed concern about the lack of risk-adjustment of this measure.

Response: The function quality measure, an Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), is a process measure that focuses on the clinical process of completion of functional assessments and a care plan addressing function. Although the IMPACT Act requires that the cross-setting quality measures be risk-adjusted as determined appropriate by the Secretary, it does not limit the Secretary to adopting outcome measures. Some process measures are

risk adjusted.[336] In the development of an application of the measure, the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan that Addresses Function (NQF #2631; awaiting NQF endorsement), the TEP considered, but did not recommend, the application of a risk adjustment model. We agree with that conclusion because the completion of a functional assessment, which includes the use of ''activity not attempted'' codes, is not affected by the medical and functional complexity of the resident. Therefore, we believe that risk adjustment of this quality measure is not warranted.

Comment: One commenter was concerned that the measure, an Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) was not NQF-endorsed.

Response: We agree that the NQF endorsement is an important part of measure development process. We have proposed an application of the quality measure, the Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function. This quality measure has been has been endorsed by NQF on July 23, 2015. We have a rigorous process of construct testing and measure selection, guided by the TEPs, public comments from stakeholders, and recommendations by the PAC/LTC MAPs.

Comment: Several commenters expressed concern that the proposed function process measure, an Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), does not meet the requirements of the IMPACT Act, because measures must be outcome-based. One commenter asserted that the proposed measure did not satisfy the specified IMPACT Act domain, as the measure is not able to report on changes in function, and one other commenter claimed that the measure does not satisfy the reporting of data on functional status. One commenter suggested that the measure does not meet the mandate, as the measure does not have appropriate numerator, denominator, and exclusions specifications, it lacks NQF endorsement, the proposed quality measure fails to be based on a common standardized assessment tool, and the proposed quality measure lacks evidence that associates the measure with improved outcomes. One commenter claimed that because the specifications for the proposed measure are inconsistent with the measure specifications posted by the NQF for the measure that is under endorsement review, CMS failed to meet the requirements under the IMPACT Act to provide measure specifications to the public, further asserting that one cannot determine the specifications that are associated with the proposed measure, which is an application of the NQF version of the measure. Response: We agree that the use of outcome measures is important. We believe that the proposed function measure meets the requirements of the IMPACT Act. The statute requires, among other things, the submission of data on the quality measures specified in at least the domains identified in the Act, but does not require a particular type of measure (for example, outcome or process) for each measure domain. Further, as discussed above, the measure has attributes within the assessment and data collection that enables outcomes-based evaluation by the provider.

We also disagree with the comment that we failed to provide the specifications to the proposed measure. The proposed function process quality measure is an application of the measure, the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan that Addresses Function (NQF #2631; endorsed on 7/23/2015). The quality measure was endorsed by NQF on July 23, 2015 and was proposed and finalized in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50291 through 50298) for adoption in the LTCH QRP. An application of this measure was proposed in the FY 2016 SNF QRP proposed rule, and similarly it was proposed in the FY 2016 IPPS/LTCH PPS proposed rule and the FY 2016 IRF PPS proposed rule. We proposed the cross-setting version, an application of the LTCH QRP quality measure, based on guidance from multiple TEPs convened by our measure contractor, RTI International. The specifications for this measure are located on the LTCH Quality Reporting Program Measures Information Web page at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*. These specifications were posted at the time we issued the proposed rule.

As discussed in section VIII.C.6.c. of the preamble of this rule, prior to our consideration to propose this measure's use in the LTCH QRP, we reviewed the NQF's endorsed measures and were unable to identify any NQF-endorsed, cross-setting or standardized quality measures focused on assessment of function for PAC patients/residents. We were also unaware of any other cross setting quality measures for functional assessment that have been endorsed or adopted by another consensus organization. Therefore, we proposed a modified version of the quality measure, the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan that Addresses Function (NQF #2631; endorsed on 7/23/2015), with such modifications to allow for its cross-setting application in the LTCH QRP for the FY 2018 payment determination and subsequent years under the Secretary's authority to select a non-NQF-endorsed measure. Since the cross-setting measure is not identical to the measure recommended for NQF-endorsement, it is considered an application of the measure.

Comment: One commenter was concerned that the measure specifications posted with the FY 2016 IPPS/LTCH PPS proposed rule differ from those posted with the IRF and SNF proposed rules and that the public would be unable to determine which specifications CMS intends to use. The commenter also was concerned that these differences in specifications, including differences in the measure denominator would impede interoperability across settings. This commenter suggested measures include all patients across all settings, regardless of payer.

Response: As mentioned previously, the quality measure being proposed as a cross-setting measure for LTCH, IRF, and SNF settings, an Application of the Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), is the same measure for each setting. Additional function items are included on the IRF–PAI and LTCH CARE Data Set due to the proposal or adoption of various other outcome-based quality measures in those specific settings. The final specifications for this cross-setting measure are posted on the CMS Web

[336] For example, in the NQF-endorsed process measure Percent of Residents Who Have/Had a Catheter Inserted and Left in Their Bladder (long stay) (NQF#0686) for which we are the steward, resident-level limited covariates (Frequent bowel incontinence, or always incontinent on prior assessment; and Pressure ulcers at stages II, III, or IV on prior assessment) are used in a logistic regression model to calculate a resident-level expected quality measure score.

site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*. In the cross-setting process measure, there is a common core subset of function items that will allow tracking of patients' functional status across settings that are identical across the settings. We have updated the specifications to include a table indicating which functional assessment items are used in the cross-setting process measure, as well as the setting-specific outcome measures.

We appreciate the commenters' views pertaining to the differences in the function quality measure denominators by payer type across the IRF, SNF and LTCH settings. We also appreciate the commenters' suggested expansion of the population used to calculate all measures to include payer sources beyond Medicare PPS and agree that quality measures that include all persons treated in a facility are better able to capture the health outcomes of that facility's patients or residents, and that quality reporting on all patients or residents is a worthy goal. We believe that quality care is best represented through the inclusion of all patient data regardless of payer source and we agree that consistency in the data would reduce confusion in data interpretation and enable a more comprehensive evaluation of quality. We appreciate the commenter's concerns and, although we had not proposed all payer data collection through this current rulemaking, we will take into consideration the expansion of the LTCH QRP to include all payer sources through future rulemaking.

Finally, we are clarifying that while the IMPACT Act requires the enablement of interoperability through the use of standardized data, there will be instances whereby some provider types may need more or less standardized items than other provider types.

Comment: One commenter was concerned that no data was provided clearly linking improved outcomes to this process measure.

Response: The NQF requirement for endorsing process measures is that the process should be evidence-based, such as processes that are recommended in clinical practice guidelines. As part of the NQF process, we submitted to the NQF several such clinical practice guidelines [337] [338] [339] to support this measure and referenced another cross-cutting clinical practice guideline in the proposed rule. Due to this, we believe that there is evidence that this is a best practice based on several clinical practice guidelines. The clinical practice guideline Assessment of Physical Function[340] recommends that clinicians should document functional status at baseline and over time to validate capacity, decline, or progress. Therefore, assessment of functional status at admission and discharge and establishing a functional goal for discharge as part of the care plan (that is, treatment plan) is an important aspect of patient/resident care for all of these PAC providers.

Comment: One commenter suggested that the PAC PRD data was collected only by therapists, and expressed concern that the items had not been tested using other care providers. In addition, this commenter had specific questions about scoring different assessments during the time frame proposed. The commenter also asked CMS to specify which clinicians may complete function items in Section GG.

Response: We wish to clarify that during the PAC PRD, data were collected by clinicians from many different disciplines, including nurses, occupational therapists (OTs), physical therapists (PTs), speech-language pathologists (SLPs), and registered nurses (RNs). The reliability testing included testing by discipline, as well as testing by setting.

The items were developed with the input with who would be performing the assessments, which included OTs, PTs, SLPs, and RNs. Regarding the questions about scoring assessments and staff that will be trained to complete functional assessments, we have historically provided training for providers. As we prepare for this type of training, we have this type of information available to the public to increase transparency and readiness.

Comment: Several commenters encouraged CMS to provide standardized education to all providers that will be using the CARE items throughout the transition period. In addition, several commenters raised concerns about the scoring of Section GG of the LTCH CARE Data Set, and who would be trained to collect the items in Section GG, and how ''usual performance'' in the proposed Section GG is defined. The commenters also asked for CMS' transparency through this process.

Response: We understand the importance of education and have worked in the past with public outreach including training sessions, training manuals, Webinars, open door forums, help desk support, and a Web site that hosts training information (*http://www.youtube.com/user/CMSHHSgov*). We plan to conduct such activities for the new items.

Comment: Several commenters encouraged CMS to continue ongoing stakeholder engagement as the function quality measures evolve and as new function measures, including additional concepts for cognition and mobility, are considered.

Response: We thank the commenters for the suggestion, and appreciate the continued involvement of stakeholders in all phases of measure development and implementation. We will continue to engage stakeholders as we implement the IMPACT Act.

Comment: One commenter expressed concern about items related to cognitive functioning, including communication and swallowing, being included only as risk-adjustors. The commenter recommended that CMS engage stakeholders to develop future outcome measures in the area of cognitive function.

Response: We are clarifying that the proposed LTCH process measure, an Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), is not risk adjusted. We agree that future development of outcome measurement should include other areas of function, such as cognition, expression, and swallowing. We will continue to engage stakeholders as we develop quality measures to meet the requirements of the IMPACT Act.

After consideration of the public comments we received, we are finalizing our proposal to adopt the application of the Percent of LTCH Patients with an Admission and

Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) measure for the FY 2018 payment determination and subsequent years to fulfill the requirements of the IMPACT Act.

7. LTCH QRP Quality Measures for the FY 2019 Payment Determination and Subsequent Years

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24605), we did not propose any additional LTCH QRP quality measures for the FY 2019 payment determination and subsequent years. Under our policy discussed in section VIII.C.3. of the preamble of this final rule, we will retain all previously adopted quality measures and, the additional finalized measures in this FY 2016 IPPS/LTCH PPS final rule for the FY 2019 payment determination and subsequent years.

8. LTCH QRP Quality Measures and Concepts Under Consideration for Future Years

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24605), we invited public comments on importance, relevance, appropriateness, and applicability of each of the quality measures and quality measure concepts listed in the table below for future years in the LTCH QRP. Specifically, we invited public comments regarding the clinical importance to the LTCH patient population and the feasibility of data collection and implementation in the LTCH setting for these measures and measure concepts in order to inform and improve quality of care delivered to LTCH patients.

FUTURE MEASURES AND MEASURE CONCEPTS UNDER CONSIDERATION FOR THE LTCH QRP

National Quality Strategy (NQS) Priority: Patient Safety
Ventilator Weaning (Liberation) Rate
Compliance with ventilator process Elements during LTCH Stay
Venous Thromboembolism Prophylaxis
Medication Reconciliation *
NQS Priority: Effective Communication and Coordination of Care
Transfer of health information and care preferences when an individual transitions *
All-Condition Risk-Adjusted Potentially Preventable Hospital Readmission Rate *
NQS Priority: Patient- and Caregiver-Centered Care
Discharge to community *
Patient Experience of Care
Percent of Patients with Moderate to Severe Pain
Advance Care Plan
NQS Priority: Affordable Care
Medicare Spending per Beneficiary *

* Indicates that this is a cross-setting measure domain listed in the IMPACT Act.

Comment: One commenter supported most of the measures and measure concepts under consideration for the LTCH QRP, as they are applicable to an LTCH population, clinically important, and potentially feasible to collect.

Response: We appreciate the commenter's support of these future measures and measure concepts under consideration.

Comment: Some commenters provided recommendations about the Ventilator Weaning (Liberation) Rate measure. One commenter urged CMS to utilize the TEP in fully testing the ventilator weaning measure before it is considered for inclusion in the LTCH QRP. Another commenter stated that this measure is an appropriate quality measure for LTCHs; however, it will be important to carefully specify the inclusion and exclusion criteria and appropriately risk adjust. This commenter also noted examples where patients enter an LTCH without an expectation of successfully weaning, such as patients with spinal cord injuries or ALS, and stated that, for some patients, terminal weaning is an appropriate outcome.

Response: We appreciate the commenters' support and suggestions for this measure. We will take these into consideration to inform our ongoing measure development efforts. Our measure development contractor, RTI International, will continue to engage members of a TEP originally convened in April 2014 through a national call for TEP members. This TEP is providing ongoing advisement to our measure development contractor on all aspects, including this measure's denominator, numerator, inclusion and exclusion criteria, risk adjustment, as well as development and feasibility of data elements.

Comment: One commenter expressed concerns that CMS is proposing Discharge to the Community, Medicare Spending per Beneficiary (MSPB), and All-Condition Risk-Adjusted Potentially Preventable Hospital Readmission Rate Hospital Readmissions as cross-cutting measures to fulfill the requirements of the IMPACT Act.

Response: We are clarifying that we did not propose these measures in the FY 2016 IPPS/LTCH PPS proposed rule. Rather, we included these measures and measure concepts as measures under consideration and measures under development for future years of the LTCH QRP to fulfill the requirements of the IMPACT Act. We and our measure development contractors are in the early stages of development of these quality measures to meet the requirements of the IMPACT Act.

Comment: One commenter expressed concern for the All-Condition Risk-Adjusted Potentially Preventable Hospital Readmission Rate since LTCH patients are at a much higher severity level and, thus, have higher risk of readmission than other PAC settings. The commenter stated that to make valid comparison across settings, it is important to adequately risk adjust this measure. The commenter noted that CMS currently uses diagnosis information on claims to risk adjust its readmission measures, and the ability of claims data to fully capture the severity of the patient populations treated by LTCHs is limited as demonstrated by a number of studies showing the importance of controlling for risk factors that do not appear on the claim when assessing the performance of LTCHs relative to other providers. In conclusion, the commenter noted that it is important to assess the value of incorporating assessment data for risk adjustment before using this measure to assess performance across settings.

Response: We thank the commenter for its comments and suggestions. We agree with these comments and agree it is important to carefully examine and identify risk factors for the All-

Condition Risk-Adjusted Potentially Preventable Hospital Readmission Rate measure before using this measure to assess and report on performance of LTCHs as part of LTCH QRP as well as for valid and reliable comparisons across settings. We will take these comments under advisement as we develop the All-Condition Risk-Adjusted Potentially Preventable Hospital Readmission Rate measure. We will also seek input from a panel of experts to inform our identification of risk factors and approach to risk adjustment for this measure. We agree with the commenter's suggestion that we consider differences LTCH and other providers, and the implications of those differences on measure specification and intend to do so in our development of this measure, as well as for all future measures, for the LTCH QRP.

Comment: One commenter expressed concerns regarding the Discharge to Community measure, particularly if used to compare PAC settings. The commenter noted that many LTCH patients, given their severity and conditions, are not appropriate for returning to the community upon discharge but are, appropriately, transferred to a lower-level of care (such as a Skilled Nursing Facility). The commenter recommended that sufficient risk adjustment approaches that would standardize adequately for patient differences across settings to permit fair comparisons on this quality measure across PAC settings need to be developed. The commenter stated that, at a minimum, this measure needs to be carefully assessed for validity and reliability in all PAC settings. The commenter stated that risk adjustment should include not only information available from claims data but also information from assessment data, including functional status, and that it may be necessary to stratify patients based on condition and/or functional status rather than grouping all patients together. The commenter recommended that CMS move cautiously in developing and adopting a discharge to the community measure that covers all PAC settings.

This commenter also commented on the MSPB measure. The commenter expressed similar concerns on this measure as with the hospital readmission measure and discharge to the community measure. In addition, the commenter noted that a 30-days post-discharge episode is not sufficiently long to capture the consequences of receiving care in an LTCH. The commenter noted the importance of assessing an alternative definition of MSPB and the value of incorporating assessment data for risk adjustment before using this measure to assess performance across settings.

Response: We thank the commenter for the detailed recommendations to inform our efforts to develop a valid, reliable, and usable measure of Discharge to Community and Medicare Spending per Beneficiary measure for PAC settings. We agree with the commenter's suggestion that we consider differences across PAC providers, and the implications of those differences on measure specifications and intend to do so in our development of these two measures, as well as for all future measures. We are at early stages of development of these measures and appreciate this commenter's timely inputs to inform our measure development processes. We remain committed to employing an environmental scan and engaging a TEP to identify findings from prior work for the LTCH setting as well as other PAC settings to inform our development of resource use measures, including the development of the MSPB measure and the Discharge to Community measure, for the LTCH setting and other PAC settings in order to meet the requirements of the IMPACT Act. We also remain committed to following the same rigorous measure development process as the other publicly reported measures included in our current Quality Reporting Programs and will involve extensive input by stakeholders and clinical experts as well as follow the same scientific approach to evaluate this measure prior to public reporting to ensure meaningful and valid comparisons across settings.

Comment: One commenter encouraged CMS to consider implementing palliative care-related measures into the LTCH QRP. The commenter suggested that priority should be given to NQF-endorsed palliative care measures that address pain, dyspnea, patient values and goals, and care direction and coordination. The commenter noted that existing measures should be revisited and expanded to include a broader population of sick patients across healthcare settings. The commenter also urged CMS to drive the development of patient-centered measures for shared accountability for care coordination through transitions, advance care planning and goals of care conversations and structural/process measures related to access to quality palliative care, utilization of quality of palliative care, and integration/continuity of palliative care across settings.

Another commenter recommended the implementation of a malnutrition quality measure because malnutrition is a patient safety issue which can negatively impact patient outcomes across healthcare settings. The commenter noted that early identification of patients at-risk for malnutrition, prompt nutrition intervention, and implementation of a care plan for patients diagnosed as malnourished or at-risk for malnutrition are critical to improve outcomes and patient safety by reducing complications, such as infections, falls, and pressure ulcers.

Response: We thank the commenters for the comments and suggestions and will take these into consideration as we develop future measures for the LTCH QRP and other quality reporting programs. We agree with the commenter's recommendation and rationale for consideration of malnutrition is an important quality measure concept for the LTCH setting. Further, we agree that palliative care-related measures could be considered for the LTCH QRP and will examine the applicability, usability, feasibility, validity and reliability of existing quality measures and need for new measures of palliative care for the LTCH QRP.

Comment: One commenter noted additional areas of function that are key to patients, including cognition, communication, and swallowing. The commenter encouraged CMS to consider cognition and expressive and receptive language and swallowing as items of function, and offered its expertise to CMS for discussions and to develop goals. The commenter recommended that CMS engage stakeholders to develop future outcome measures in the area of cognitive function.

Response: We thank the commenter for its suggestions and expertise to inform our measure development efforts. We agree that future development of outcome measures should include other areas of function, such as cognition, communication, and swallowing, are important aspects of functional assessment and improvement for patients who receive care in PAC settings, including LTCHs. We will continue to engage stakeholders as we develop and implement quality measures to meet the requirements of the IMPACT Act. We will take these quality measure concepts into consideration for future measure selections and measure development activities for the LTCH QRP.

We thank the commenters for their views and we will consider them as we develop future measures and future proposals.

9. Form, Manner, and Timing of Quality Data Submission for the FY 2016 Payment Determination and Subsequent Years

a. Background

Section 1886(m)(5)(C) of the Act requires that, for the FY 2014 payment determination and subsequent years, each LTCH submit to the Secretary data on quality measures specified by the Secretary. In addition, section 1886(m)(5)(F) of the Act requires that, for the fiscal year beginning on the specified application date, as defined in section 1899B of the Act, and each subsequent year, each LTCH submit to the Secretary data on measures specified by the Secretary under section 1899B of the Act. The data required under section 1886(m)(5)(C) and (F) of the Act must be submitted in a form and manner, and at a time, specified by the Secretary. As required by section 1886(m)(5)(A)(i) of the Act, for any LTCH that does not submit data in accordance with section 1886(m)(5)(C) of the Act with respect to a given rate year, any annual update to the standard Federal rate for discharges for the LTCH during the rate year must be reduced by 2 percentage points.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50857 through 50861 and 50878 through 50881), we finalized the data submission timelines and submission deadlines for measures for the FY 2016 and FY 2017 payment determinations. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a more detailed discussion of these timelines and deadlines. Specifically, we refer readers to the table at 78 FR 50878 of the FY 2014 IPPS/LTCH PPS final rule for the data collection period and submission deadlines for the FY 2016 payment determination and the tables at 78 FR 50881 of that final rule for the data collection timelines and submission deadlines for the FY 2017 payment determination.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50307 through 50311), we:

- Revised the previously adopted data collection period and submission deadlines for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure for the FY 2016 payment determination and subsequent years;
- Adopted data submission mechanisms for the FY 2018 payment determination and subsequent years for new LTCH QRP quality measures and for revisions to previously adopted quality measures;
- Adopted data collection periods and submission deadlines for certain measures under the LTCH QRP for the FY 2018 payment determination;
- Revised data collection timelines and submission deadlines for the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure for the FY 2018 payment determination and subsequent years; and
- Adopted data collection timelines and submission deadlines under the LTCH QRP for the FY 2019 payment determination and subsequent years.

b. Timing for New LTCHs to Begin Reporting Data to CMS for the FY 2017 Payment Determination and Subsequent Years

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24606), beginning with the FY 2017 payment determination, we proposed that a new LTCH be required to begin reporting quality data under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its (CCN) notification letter. For example, if an LTCH's CCN notification letter is dated March 15, then the LTCH would be required to begin reporting quality data to CMS beginning on July 1 (March 15 + 30 days = April 14 (quarter 2)). The LTCH would be required to begin collecting quality data on the first day of the quarter subsequent to quarter 2, which is quarter 3, or July 1. The collection of quality data would begin on the first day of the calendar year quarter identified as the start date, and would include all LTCH admissions and subsequent discharges beginning on, and subsequent to, that day; however, submission of quality data would be required by previously finalized or newly proposed quarterly deadlines.

In order to determine which quality measure data an LTCH would need to begin submitting, we refer readers to section VIII.C.9.c. of the preamble of this final rule, below, as it will vary depending upon the timing of the CY quarter identified as a start date. We also proposed to codify this requirement for the timing of new LTCHs to begin reporting for purposes of the LTCH QRP at new proposed § 412.560(a). We invited public comment on our proposals to add and codify this requirement for the timing of new LTCHs to begin reporting for purposes of the LTCH QRP.

We did not receive any public comments on these proposals. Therefore, we are finalizing our proposals regarding the timing for new LTCHs to being reporting quality data under the LTCH QRP for the FY 2017 payment determination and subsequent years.

c. Revisions to Previously Adopted Data Submission Timelines Under the LTCH QRP for the FY 2017 and FY 2018 Payment Determinations and Subsequent Years and Proposed Data Collection and Data Submission Timelines for Quality Measures Finalized in This Final Rule

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53636 through 53637), we finalized new quarterly quality data submission deadlines for LTCHs. We contracted the deadlines from the original 4.5-months post-CY quarter submission deadlines, to 1.5 months (approximately 45 days) deadlines. In order to align the data submission and correction deadlines with the IRF QRP and Hospital IQR Program as we near public reporting, and to meet the requirements of the IMPACT Act, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24606 through 24608), we proposed to revise the data submission and correction deadlines for quality measures previously adopted for the LTCH QRP for the FY 2017 and FY 2018 payment determinations and subsequent years.

We proposed to adopt new deadlines that allow 4.5 months (approximately 135 days) after the end of each calendar year quarter for quality data submission, beginning with quarter 4 2015 (October 2015 through December 2015). Under this new policy, LTCHs will have approximately 135 days following the end of each calendar year quarter, during which to submit, review, and correct their quality data for that CY quarter. We also proposed data collection and data submission timelines for quality measures that we proposed for the FY 2018 payment determination and subsequent years. Further, for the measures proposed in the proposed rule, and finalized within this final rule—Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674), and the application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015)—we proposed that the data collection and data submission timelines align with the proposed data collection and data submission timelines for each respective measure starting with April 1, 2016. Because the All-Cause Unplanned Readmission Measure for 30 Days Post-

Discharge from LTCHs (NQF #2512) is a Medicare FFS claims-based measure, the data collection and submission timelines are not applicable to this measure. In addition, we note that upon further consideration of how this policy affects the required reporting of quality measures under the LTCH QRP, that the application of this extended deadline to the measure Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431), is not feasible. Data for this measure is only collected between the dates of October 1st and March 31st, and is only required to be submitted to CMS via the CDC's NHSN once per year. Allowing the extended deadline of 135 days beyond the end of the data collection period for this measure would not allow the application of the appropriate FY APU determination, as previously finalized. Because of this, we are finalizing this policy with the exception of its application to the measures Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431).

The tables below present the data collection period and data submission timelines for quality measures affecting the FY 2017 payment determination, as well as the revisions to the data collection period and data submission timelines for quality measures for the FY 2018 payment determination and subsequent years.

We would like to note that the tables below, as displayed in the proposed rule, contained technical errors with respect to the measure Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431). In the FY 2016 IPPS/LTCH PPS proposed rule, we accidentally omitted this measure from the first table below, which refers to measures affecting the FY 2017 payment determination. We have added this measure (NQF #0431) back to the first table below, including the correct submission deadlines, as they related to our decision to refrain from applying this policy to this measure. In the proposed rule we also listed the data submission deadlines as they pertain to this same measure (NQF #0431) related to the FY 2018 payment determination and subsequent years, but note that the data submission deadlines in table two have been corrected to reflect our decision to finalize this policy with exception of this measure.

DETAILS ON DATA COLLECTION PERIOD AND DATA SUBMISSION TIMELINE FOR QUALITY MEASURES AFFECTING THE FY 2017 PAYMENT DETERMINATION

Quality measure	NQF ID#	Submission method	Data collection period	Proposed data submission deadlines	APU Determination affected
Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay).	#0678	LTCH CARE Data Set/QIES ASAP system.

DETAILS ON DATA COLLECTION AND SUBMISSION TIMELINE FOR QUALITY MEASURES AFFECTING THE FY 2018 PAYMENT DETERMINATION AND SUBSEQUENT YEARS—Continued

Quality measure	NQF ID#	Submission method	Data collection period	Proposed data submission deadlines	APU Determination affected
			Quarterly for each subsequent calendar year.	Quarterly approximately 135 days after the end of each quarter for subsequent years.	Subsequent Years.

* This measure will not be used in determining compliance for the LTCH QRP because it is a claims-based measure and LTCHs do not report additional data to CMS.

** We are finalizing the proposed policy to extend the current quarterly data submission deadlines from 45 days to 135 days with the exception of this quality measure. We refer readers to section VIII.C.9.c.of the preamble of this final rule for further information.

We invited public comments on our proposals.

Comment: Several commenters supported the proposal to extend the data submission timeframes for the LTCH QRP measures from 45 days (1.5 months) to 4.5 months (approximately 135 days) from the end of a calendar year quarter for the FY 2017 and FY 2018 payment determinations and subsequent years. The commenters agreed that this change would align data submission and correction deadlines with other quality reporting programs and facilitate public reporting.

Response: We appreciate commenters' support of this proposal.

After consideration of the public comments we received, we are finalizing our proposal to revise the data submission and correction timelines for the FY 2017 and FY 2018 payment determinations and subsequent years for all measures except the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431). For the reasons stated above, for the measure Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431), we are retaining previously finalized data submission timelines for the FY 2017 and FY 2018 payment determinations and subsequent years. We refer readers to FY 2014 IPPS/LTCH PPS final rule (78 FR 50858 through 50858) for data submission deadlines for FY 2017 payment determination for the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431). We refer readers to FY 2014 IPPS/LTCH PPS final rule (78 FR 50882 through 50883) for data submission deadlines for FY 2018 payment determination for the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431). We refer readers to FY 2015 IPPS/LTCH PPS final rule ((79 FR 50311)) for data submission deadlines for FY 2019 payment determination for the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431).

10. Previously Adopted LTCH QRP Data Completion Thresholds for the FY 2016 Payment Determination and Subsequent Years

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50311 through 50314), we finalized specific LTCH QRP thresholds for completeness of LTCH data submissions. To ensure that LTCHs are meeting an acceptable standard for completeness of submitted data, we finalized the policy that, beginning with the FY 2016 payment determination and for each subsequent year, LTCHs must meet or exceed two separate data completeness thresholds: One threshold set at 80 percent for completion of quality measures data collected using the LTCH CARE Data Set and submitted through the QIES ASAP system; and a second threshold set at 100 percent for quality measures data collected and submitted using the CDC NHSN.

In addition, we stated that we would apply the same thresholds to all measures adopted as the LTCH QRP expands and LTCHs report data on the finalized measure sets. That is, as we finalize new measures through the regulatory process, LTCHs will be held accountable for meeting the previously finalized data completion threshold requirements for each measure until such time that updated threshold requirements are proposed and finalized through a subsequent regulatory cycle.

Further, we finalized the requirement that a LTCH must meet or exceed both thresholds in order to avoid receiving a 2-percentage point reduction to their annual payment update for a given fiscal year, beginning with FY 2016 and for all subsequent payment updates. In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24608), we did not propose any changes to these policies. We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50311 through 50314) for a detailed discussion of the finalized data completion requirements of the LTCH QRP.

11. Future LTCH QRP Data Validation Process

Historically, we have built consistency and internal validation checks into our data submission specifications to ensure that the data elements of the LTCH CARE Data Set assessments conform to requirements such as proper format and facility information. These internal consistency checks are automated and occur during the LTCH data entry and submission process, and help ensure the integrity of the data submitted by LTCHs by rejecting submissions or issuing warnings when LTCH data contain logical inconsistencies. These internal consistency checks are referred to as ''system edits'' and are further outlined in the LTCH Data Submission Specifications version 1.01, which are available for download on the LTCH Quality Reporting Technical Information Web page at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html*.

Validation is intended to provide added assurance of the accuracy of the data that will be reported to the public as required by sections 1886(m)(5)(E) and 1899B(g) of the Act. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28275 through 28276), we proposed, for the FY 2016 payment determination and subsequent years, to validate the data elements submitted to CMS for quality purposes. We also proposed policies regarding the application of the 2-percentage point reduction for LTCHs that failed to meet the data accuracy threshold.

However, in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50314 through 50316), we decided to further explore suggestions from commenters before finalizing the LTCH data validation process that we proposed. Therefore, we did not finalize the data validation proposals.

At this time, we are continuing to explore data accuracy validation methods and threshold policies that will limit the amount of burden and cost to LTCHs, while allowing us to establish estimations of the accuracy of LTCH QRP data. Therefore, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24608), we did not propose any new policies related to data accuracy validation, but we plan to do so in future rulemaking cycles.

While we did not solicit comments specifically regarding our policies related to data accuracy validation, we received a comment, which we summarize and respond to below.

Comment: One commenter supported CMS' decision to continue to explore data validation methods that take provider burden into account.

Response: We thank the commenter for its support. We will take this comment into consideration in future rulemaking.

12. Public Display of Quality Measure Data for the LTCH QRP

Section 1886(m)(5)(E) of the Act requires the Secretary to establish procedures for making the LTCH QRP data available to the public. In so doing, the Secretary must ensure that LTCHs have the opportunity to review any such data with respect to the LTCH prior to its release to the public. Section 1899B(g) of the Act requires the Secretary to establish procedures for making available to the public information regarding the performance of individual PAC providers with respect to the measures required under section 1899B of the Act beginning not later than 2 years after the applicable specified application date. The procedures must ensure, including through a process consistent with the process applied under section 1886(b)(3)(B)(viii)(VII) of the Act for similar purposes, that each PAC provider has the opportunity to review and submit corrections to the data and information that are to be made public with respect to the PAC provider prior to such data being made public.

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24608 through 24610), we proposed to display performance data related to the LTCH QRP quality measures, as applicable, required by the LTCH QRP by fall 2016 on a CMS Web site, such as the *Hospital Compare* Web site (*http://www.hospitalcompare.hhs.gov*), after a 30-day preview period. Additional information about preview report content and delivery will be announced on the LTCH QRP Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html.* LTCHs would be notified via CMS listservs, CMS mass emails and memorandums, LTCH QRP Web site announcements and Medicare Learning Network announcements regarding the release of preview reports, as well as the timing of the posting of provider data.

The *Hospital Compare* Web site is an interactive Web tool that assists beneficiaries by providing information on hospital quality of care to those who need to select a hospital. It further serves to encourage beneficiaries to work with their hospital to discuss the quality of care provided to patients, thereby providing an additional incentive to hospitals to improve the quality of care that they furnish. As we have done on some of the other CMS *Compare* Web sites, we will, at some point in the future, report public data using a quality rating system that gives each LTCH a rating of between one and five stars. Initially, however, we will not use the 5-star methodology, until such time that we are publicly reporting a sufficient number of quality metrics to allow for variation and the differentiation among LTCHs using this methodology. Decisions regarding how the rating system will determine an LTCH's star rating and methods used for calculations, as well as a proposed timeline for implementation, will be announced via regular LTCH communication channels, including listening sessions, memos, email notification, provider association calls, open door forums, and Web postings.

The initial display of information would contain performance data on four quality measures: (1) NHSN CAUTI Outcome Measure (NQF #0138); (2) NHSN CLABSI Outcome Measure (NQF #0139); (3) Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678); and (4) All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512). We proposed to publicly report data beginning with data collected on these measures for the first quarter of 2015, or discharges beginning January 1, 2015, with exception of the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512). Rates would be displayed based on four (4) rolling quarters of data and would use discharges from January 1, 2015 through December 31, 2015 (CY 2015), for calculation, with exception of the measure All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512). With respect to LTCH performance related to the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512), proposed to publicly report readmission rates beginning with Medicare FFS claims data for patient discharges starting with January 1, 2013. Readmission rates will be calculated using Medicare FFS claims data for two consecutive years (for example, readmission rates will be calculated using Medicare FFS claims data for January 1, 2013 through December 31, 2014 (CY 2013 and CY 2014)) and displayed on a calendar year basis.

Calculations for the CAUTI and CLABSI measures adjust for differences in the characteristics of hospitals and patients using a Standardized Infection Ratio (SIR). The SIR is a summary measure that takes into account differences in the types of patients that a hospital treats. The SIR may take into account the type of patient care location, laboratory methods, hospital affiliation with a medical school, bed size of the hospital, patient age, and American Society of Anesthesiologists' classification of physical health. It compares the actual number of HAIs in a facility or State to a national benchmark based on previous years of reported data and adjusts the data based on several factors. A confidence interval with a lower and upper limit is displayed around each SIR to indicate that there is a high degree of confidence that the true value of the SIR lies within that interval. A SIR with a lower limit that is greater than 1.0 means that there were more HAIs in a facility or State than were predicted, and the facility is classified as ''Worse than the U.S. National Benchmark.'' If the SIR has an upper limit that is less than 1, the facility had fewer HAIs than were predicted and is classified as ''Better than the U.S. National Benchmark.'' If the confidence interval includes the value of 1, there is no statistical difference between the actual number of HAIs and the number predicted, and the facility is classified as ''No Different than U.S. National Benchmark.'' If the number of predicted infections is less than 1, the SIR and confidence interval cannot be calculated.

Calculations for the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (NQF #0678) would be risk-adjusted. Resident- or patient-level covariate risk adjustment is performed. Resident- or patient-level covariates are used in a logistic regression model to calculate a resident- or patient-level expected quality measure (QM) score (the probability that the resident or patient will evidence the outcome, given the presence or absence of patient

characteristics measured by the covariates). Then, an average of all resident- or patient-level expected QM scores for the facility is calculated to create a facility-level expected QM score. The final facility-level adjusted QM score is based on a calculation which combines the facility-level expected score and the facility level observed score. Additional information about the covariates can be found at: *http://www.qualityforum.org/QPS/0678*.

Finally, calculation for performance on the measure All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) will also be risk-adjusted. The risk adjustment methodology is available, along with the specifications for this measure, on our LTCH Quality Reporting Measures Information Web page at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*.

We are currently developing reports that will allow providers to view the data that is submitted to CMS via the QIES ASAP system and the CDC's NHSN (Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), the NHSN CAUTI Outcome Measure (NQF #0138) and the NHSN CLABSI Outcome Measure (NQF #0139), respectively). These reports, although not initially, will also include provider performance on any currently reported quality measure that is calculated based on CMS claims data that we plan on publicly reporting (All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512)). Although real time results will not be available, the report will refresh all of the data submitted at least once a month.

We proposed a process to give providers an opportunity to review and correct data submitted to the QIES ASAP system or to the CDC's NHSN by utilizing that report. Under this proposed process, providers would to have the opportunity to review and correct data they submit on all assessment-based measures. Providers can begin submitting data on the first admission of any reporting quarter. Providers are encouraged to submit data early in the submission schedule so that they can identify errors and resubmit data before the quarterly submission deadline. The data would be populated into reports that are updated at least once a month with all data that have been submitted. That report would contain the provider's performance on each measure calculated based on assessment submissions to the QIES ASAP system or CDC NHSN. We believe that the submission deadline timeframe, which we proposed in the proposed rule to extend from the current 1.5 month policy to 4.5 months beyond the end of each calendar year quarter, is sufficient time for providers to be able to submit, review data, make corrections to the data, and view their data. We proposed that once the provider has an opportunity to review and correct quarterly data related to measures submitted via the QIES ASAP system or CDC NHSN, we would consider the provider to have been given the opportunity to review and correct this data. We would not allow patient-level data correction after the submission deadline or for previous years. This is because we must set a deadline to ensure timely computation of measure rates and payment adjustment factors. Before we display this information, providers will be permitted 30 days to review their information as recorded in the QIES ASAP system or CDC NHSN.

We invited public comment on these proposals.

Comment: Several commenters supported the proposal to publicly report LTCH quality data beginning in fall 2016, although some urged that CMS allow for correction of LTCH data during the 30-day preview period. Other commenters supported the proposal but recommended that CMS set up a separate *LTCH Compare* Web site so that LTCHs are only compared to other LTCHs and the public can make an informed comparison without unnecessary confusion.

Response: We thank the commenters for their comments and support of our proposal to publicly report LTCH quality data beginning in fall 2016. In our proposal we note that we have extended the post-calendar year (CY) quarter submission deadlines from the current 45 days beyond the end of each quarter to 135 days beyond the end of each quarter. We believe that this timeframe allows LTCHs sufficient time to submit, review, and correct their data prior to public reporting of that data. We have designed and will be issuing provider reports immediately following the end of each CY quarter, which will allow LTCHs to see the data they have submitted to CMS to date. LTCHs will then have the additional 135 days beyond the end of each CY quarter to correct any data they feel has been submitted in error, or is missing. While many LTCHs use the current post-CY quarter timeframe as an extended submission timeframe, the original intent of the post-CY quarter timeframe was to allow LTCHs to review and correct any data they had submitted for that particular CY quarter.

We have continually urged LTCHs to submit their quality data as soon as possible, thus allowing ample time for review and correction. We will not allow any correction of patient-level data during the 30-day preview period. We will issue a preview report at the beginning of this period that contains provider performance data, and LTCHs will have 30 days during which to refute any quality measure calculations they feel have been made in error. This policy aligns with that of the Hospital IQR Program and the IRF QRP. Allowing for patient level data correction at this time would have the effect of negating our data submission deadlines.

Regarding the comment that we should develop a separate *LTCH Compare* Web site, as opposed to posting LTCH QRP performance data on *Hospital Compare,* we would like to clarify that should we choose to post this data on *Hospital Compare,* it would be under its own separate tab/Web page, and would be clearly separate from acute care hospital data. Because we have not made any final decision regarding this issue, we will take this comment into consideration as we move forward with the development of the Web site.

After consideration of the public comments we received, we are finalizing our proposals to display performance data for the quality beginning in fall 2016 on a CMS Web site, such as the *Hospital Compare* Web site (*http://www.hospitalcompare.hhs.gov*), after a 30-day preview period, and to give providers an opportunity to review and correct data submitted to the QIES ASAP system or to the CDC NHSN.

In addition to our proposal to publicly display LTCH performance data on the required quality measures under the LTCH QRP, we also proposed to publish a list of LTCHs that successfully meet the reporting requirements for the applicable payment determination on the LTCH QRP Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/*. We proposed to update the list after reconsideration requests are processed on an annual basis. We proposed to codify the policy to publish a list of compliant LTCHs on the LTCH QRP Web site at new proposed § 412.560(d)(3).

We invited public comment on these proposals.

We did not receive any public comments on our proposals to publish a list of LTCHs that successfully meet

the reporting requirements for each applicable payment determination on the LTCH QRP Web site, update the list after reconsideration requests are processed on an annual basis, and codify the policy to publish a list of compliant LTCHs on the LTCH QRP Web site at new proposed § 412.560(d)(3). Therefore, we are finalizing these proposals.

13. Previously Adopted and Finalized LTCH QRP Reconsideration and Appeals Procedures for the FY 2017 Payment Determination and Subsequent Years

At the conclusion of each fiscal year reporting cycle, we review the data received from each LTCH to determine if the LTCH met the reporting requirements set forth for that reporting cycle. LTCHs that are found to be noncompliant will receive a reduction in the amount of 2 percentage points to their annual payment update for the applicable fiscal year. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50317 through 50318), we described and adopted an updated process that enables an LTCH to request a reconsideration of our initial noncompliance decision in the event that an LTCH believes that it was incorrectly identified as being subject to the 2-percentage point reduction to its annual payment due to noncompliance with the LTCH QRP reporting requirements for a given reporting period.

We are clarifying that any LTCH that wishes to submit a reconsideration request must do so by submitting an email to CMS containing all of the requirements listed on the LTCH QRP Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Exception-and-Extension.html*. Email sent to *LTCHQRPReconsiderations@cms.hhs.gov* is the only form of submission that will be accepted from an LTCH provider requesting reconsideration. Any reconsideration requests received through another channel, including the U.S. Postal Service (USPS) or telephone, will not be considered as a valid reconsideration request.

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24610 through 24611), we proposed to continue using the LTCH QRP reconsideration and appeals procedures that were adopted in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50317 through 50318) and that have been posted on the LTCH QRP Web site for the FY 2017 payment determination and subsequent years, with an exception regarding the way in which noncompliant LTCHs are notified of this determination.

Previously, only LTCHs found to be noncompliant with the reporting requirements set forth for a given payment determination received a notification of this finding along with instructions for requesting reconsideration in the form of a certified letter via the USPS. In an effort to communicate as quickly, efficiently, and broadly as possible with LTCHs regarding annual compliance, we proposed changes to our communications method regarding annual notification of reporting compliance in the LTCH QRP. In addition to sending a letter via regular USPS mail, beginning with the FY 2016 payment determination and for subsequent fiscal years, we proposed the QIES ASAP system as a mechanism to communicate to LTCHs regarding their compliance with the reporting requirements for the given reporting cycle.

We note that all LTCHs have been required to use the QIES ASAP system in order to report on required LTCH QRP measures since October 1, 2012. Therefore, we proposed that all Medicare-certified LTCH compliance letters be uploaded into the QIES ASAP system for each LTCH to access. Instructions to download files from QIES ASAP system may be found on the Web site at: *https://www.qtso.com/LTCH.html*. We proposed to disseminate communications regarding the availability of compliance reports in LTCHs' QIES ASAP system files through routine channels to LTCHs and vendors, including, but not limited to, issuing memos, emails, Medicare Learning Network announcements, and notices on the LTCH QRP Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/*.

The purpose of the compliance letter is to notify an LTCH that it has been identified as either being compliant or noncompliant with the LTCH QRP reporting requirements for the given reporting cycle. If the LTCH is determined to be noncompliant, the notification would indicate that the LTCH is scheduled to receive a 2 percentage point reduction to its upcoming annual payment update and that it may file a reconsideration request if it disagrees with this finding. LTCHs may request a reconsideration of a noncompliance determination through the CMS reconsideration request process.

We also proposed that the notification of our decision regarding received reconsideration requests will be made available through the QIES ASAP system. We did not propose to change the process or requirements for requesting reconsideration, and we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50317 through 50318) for a discussion of the LTCH QRP reconsideration and appeals procedures.

We also proposed to publish a list of LTCHs that successfully meet the reporting requirements for the applicable payment determination on the LTCH QRP Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/*. We proposed updating the list after reconsideration requests are processed on an annual basis.

We proposed to codify the LTCH QRP reconsideration and appeal procedures at new proposed §§ 412.560(d) and (e).

We invited public comment on the proposals to change the communication mechanism to the QIES ASAP system for the dissemination of compliance notifications and reconsideration decisions, to publish a list of compliant LTCHs on the LTCH QRP Web site, and to codify these processes at new proposed §§ 412.560(d)(1) and (d)(3).

Comment: A few commenters supported the proposal to codify the reconsideration and appeals policy, although stated that CMS should clarify the exact requirements LTCHs need to meet to be in compliance with the LTCH QRP.

Response: We thank the commenters for their comments and support. While we appreciate the commenters' concern that the requirements be listed in one place, we note that the reconsideration and appeals policy will be codified and that additional technical details will be listed on our LTCH QRP Web site, on which we post guidance documents that are updated regularly. LTCHs can access the CMS LTCH QRP Web site at *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html?redirect=/LTCH-Quality-Reporting/*.

After consideration of the public comments we received, we are finalizing our proposals to change the communication mechanism to the QIES system for the dissemination of compliance notifications and reconsideration decisions, to publish a list of compliant LTCHs on the LTCH QRP Web site, to update the list after reconsideration requests are processed on an annual basis, and to codify the requirements for reconsideration and appeals, as proposed.

14. Previously Adopted and Proposed LTCH QRP Submission Exception and Extension Requirements for the FY 2017 Payment Determination and Subsequent Years

We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50883 through 50885) and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50316 through 50317) for a detailed discussion of the LTCH QRP Submission Exception and Extension requirements. In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24611), for the FY 2017 payment determination and subsequent years, we did not propose any changes to the LTCH QRP requirements that we adopted in these final rules. However, we proposed to codify the LTCH QRP Submission Exception and Extension Requirements at new §§ 412.560(c) and (d).

We remind readers that, in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50316 through 50317), we stated that LTCHs must submit request an exception or extension by submitting a written request along with all supporting documentation to CMS via email to the LTCH mailbox at *LTCHQRPReconsiderations@cms.hhs.gov*. We further stated that exception or extension requests sent to CMS through any other channel would not be considered as a valid request for an exception or extension from the LTCH QRP's reporting requirements for any payment determination. In order to be considered, a request for an exception or extension must contain all of the requirements as outlined on our Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html*.

We invited public comments on our proposal to codify the LTCH QRP submission exception and extension requirements.

We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal to codify the LTCH QRP submission exception and extension requirements at new §§ 412.560(c) and (d).

D. Clinical Quality Measurement for Eligible Hospitals and Critical Access Hospitals (CAHs) Participating in the EHR Incentive Programs in 2016

1. Background

The HITECH Act (Title IV of Division B of the ARRA, together with Title XIII of Division A of the ARRA) authorizes incentive payments under Medicare and Medicaid for the adoption and meaningful use of certified electronic health record (EHR) technology (CEHRT). Eligible hospitals and CAHs may qualify for these incentive payments under Medicare (as authorized under sections 1886(n) and 1814(l) of the Act, respectively) if they successfully demonstrate meaningful use of CEHRT, which includes reporting on clinical quality measures (CQMs) using CEHRT.

Sections 1886(b)(3)(B) and 1814(l) of the Act also establish downward payment adjustments under Medicare, beginning with FY 2015, for eligible hospitals and CAHs that are not meaningful users of CEHRT for certain associated reporting periods. Section 1903(a)(3)(F)(i) of the Act establishes 100 percent Federal financial participation (FFP) to States for providing incentive payments to eligible Medicaid providers (described in section 1903(t)(2) of the Act) to adopt, implement, upgrade and meaningfully use CEHRT.

Under sections 1886(n)(3)(A) and 1814(l)(3)(A) of the Act and the definition of ''meaningful EHR user'' under 42 CFR 495.4, eligible hospitals and CAHs must report on CQMs selected by CMS using CEHRT, as part of being a meaningful EHR user under the Medicare EHR Incentive Program. The set of CQMs from which eligible hospitals and CAHs will report under the EHR Incentive Program beginning in FY 2014 is listed in Table 10 of the EHR Incentive Program Stage 2 final rule (77 FR 54083).

In the EHR Incentive Program Stage 3 proposed rule [341] (80 FR 16769), to further our alignment goal among CMS quality reporting programs for eligible hospitals and CAHs and avoid redundant or duplicative reporting among hospital programs, we stated our intent to address CQM reporting requirements for the Medicare and Medicaid EHR Incentive Program for eligible hospitals and CAHs for 2016, 2017, and future years in the IPPS rulemaking. We further stated our belief that receiving and reviewing public comments for various CMS quality programs at one time and finalizing the requirements for these programs simultaneously would allow us to better align these programs for eligible hospitals and CAHs, allow more flexibility into the Medicare and Medicaid EHR Incentive Programs, and add overall value and consistency by providing us the opportunity to address public comments that affect multiple programs at one time.

ONC, in its 2015 Edition proposed rule (80 FR 16844), also indicated that it intends to propose certification policy for the reporting of CQMs for eligible hospitals and CAHs in or with annual IPPS rulemaking to better align with the reporting goals of other CMS programs.

2. CQM Reporting for the Medicare and Medicaid EHR Incentive Programs in 2016

a. Background

In the EHR Incentive Program Stage 2 final rule, we outlined the CQMs available for use in the EHR Incentive Programs beginning in 2014 for eligible hospitals and CAHs in Table 10 at 77 FR 54083 through 54087, as well as the form and method for submission at 77 FR 54087 through 54089. In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24611 through 24613), for CQM reporting for the EHR Incentive Programs in 2016, we proposed to maintain the existing requirements established in earlier rulemaking for the reporting of CQMs, unless indicated otherwise in the proposed rule. These requirements include reporting on 16 CQMs covering at least 3 NQS domains for eligible hospitals and CAHs (77 FR 54079).

As we expand the current measures to align with the National Quality Strategy and the CMS Quality Strategy [342] and incorporate updated standards and terminologies in current CQMs, including updating the electronic specifications for these CQMs, and creating de novo CQMs, we plan to expand the set of CQMs available for reporting under the EHR Incentive Programs in CY 2017 and subsequent years. We will continue to engage stakeholders to provide input on future proposals for CQMs as well as requesting comment on future electronic specifications for new and updated CQMs.

b. CQM Reporting Period for the Medicare and Medicaid EHR Incentive Programs in CY 2016

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50319 through 50321), we began to shift CQM reporting to a calendar year basis for eligible hospitals and CAHs for the Medicare EHR Incentive Program. We established that, for eligible hospitals and CAHs that submit CQMs electronically in 2015, the reporting period is one calendar quarter

[341] Medicare and Medicaid Programs: Electronic Health Record Incentive Program—Stage 3; proposed rule (80 FR 16731 through 16804) (''EHR Incentive Program Stage 3 proposed rule'').

[342] Available at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/CMS-Quality-Strategy.html*.

from Q1, Q2, or Q3 of CY 2015 (79 FR 50321). Section 1886(n)(3)(B)(iii) of the Act requires that, in selecting measures for eligible hospitals and CAHs for the Medicare EHR Incentive Program, and establishing the form and manner for reporting measures, the Secretary shall seek to avoid redundant or duplicative reporting with reporting otherwise required, including reporting under section 1886(b)(3)(B)(viii) of the Act, the Hospital IQR Program.

In the Electronic Health Record Incentive Program—Modifications to Meaningful Use in 2015 Through 2017 proposed rule (80 FR 20353), beginning in 2015, we proposed to change the definition of ''EHR reporting period'' in § 495.4 for EPs, eligible hospitals, and CAHs such that the EHR reporting period would begin and end in relation to a calendar year. In connection with that proposal, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24611 through 24612), we proposed that the reporting period for CQMs in 2016 for eligible hospitals and CAHs for the Medicare and Medicaid EHR Incentive Programs also would be based on the calendar year. We stated that we believe it is important to continue our goal of aligning the EHR Incentive Program with the Hospital IQR Program because alignment of these programs will serve to reduce hospital reporting burden and encourage the adoption and meaningful use of CEHRT by eligible hospitals and CAHs.

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24581 through 24582), we proposed to require quarterly reporting and submission periods of CQMs for the 3rd and 4th CY quarters of 2016 (for the FY 2018 payment determination) of the Hospital IQR Program. We also stated that we believe it is important for us to maintain our goal of alignment between the Hospital IQR and EHR Incentive Programs. Therefore, we proposed to align the reporting period in CY 2016 for eligible hospitals and CAHs that report CQMs electronically for the Medicare EHR Incentive Program with that of the Hospital IQR Program and require quarterly reporting and submission periods for CQMs in the 3rd and 4th CY quarters. We refer readers to section VIII.A.8.c. of the preamble of this final rule for further discussion of the proposals and our finalized policies for the Hospital IQR Program.

In addition, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24587 through 24588), we proposed to change the Hospital IQR Program's submission period for CQMs from annual to quarterly submission, and proposed to change the submission deadline from November 30, 2015 to ending 2 calendar months after the close of the reporting CY quarter (for CY 2016/FY 2018 payment determination, the proposed deadlines are November 30, 2016 for Q3 and February 28, 2017 for Q4). We refer readers to the Hospital IQR Program discussion in section VIII.A.10.d.(3) of the preamble of this final rule for more information about these proposals. Therefore, to coincide with the submission period in the Hospital IQR Program, we also proposed to align the Medicare EHR Incentive Program submission period for CY 2016 with the submission period proposed for the Hospital IQR Program.

We proposed the following CQM reporting periods and submission deadlines for eligible hospitals and CAHs participating in the Medicare EHR Incentive Program in CY 2016:

- Eligible hospitals and CAHs Reporting CQMs by Attestation

++ For eligible hospitals and CAHs demonstrating meaningful use for the first time in 2016, any continuous 90-day reporting period within CY 2016; or one full calendar year reporting period for CY 2016. Attestation by February 28, 2017.

++ For eligible hospitals and CAHs that demonstrated meaningful use in any year prior to 2016, one full calendar year reporting period for CY 2016. Attestation by February 28, 2017.

- Eligible hospitals and CAHs Reporting CQMs Electronically —Two full quarters of data (Q3 and Q4 of CY 2016) submitted via electronic reporting within 2 months after the close of each quarter (Q3 by November 30, 2016; Q4 by February 28, 2017).

We also proposed that the CQM reporting period for eligible hospitals and CAHs participating in the Medicaid EHR Incentive Program would be any continuous 90-day reporting period within CY 2016 for eligible hospitals and CAHs demonstrating meaningful use for the first time; and one full calendar year reporting period of CY 2016 for eligible hospitals and CAHs that demonstrated meaningful use in any year prior to 2016. Providers should refer to their State Medicaid program for requirements on submission methods and deadlines.

We note that, beginning in CY 2017 and in subsequent years, we proposed in the EHR Incentive Program Stage 3 proposed rule (80 FR 16739 through 16740) to require a reporting period of one full calendar year for CQM reporting for all providers participating in the EHR Incentive Programs, with a limited exception for Medicaid providers demonstrating meaningful use for the first time.

We invited public comment on these proposals.

Comment: A few commenters supported the proposal to maintain the existing CQM requirement to report on 16 CQMs covering at least 3 NQS domains. Many commenters expressed concern that hospitals are not prepared to submit electronic CQMs. Several commenters noted that electronic CQM reporting is difficult for hospitals due to the complexities involved in implementing EHRs. As a result of these concerns, many commenters requested an extension in the roll-out of this requirement, if finalized, in order to allow hospitals time to prepare to meet reporting requirements and to allow more time to overcome the challenges associated with electronic reporting. Many of these commenters supported CMS' goal to move towards electronic reporting, but specifically requested that CMS delay a requirement for hospitals to report CQMs electronically until CY 2018, in order to align with the EHR Incentive Program proposals in the Stage 3 proposed rule. Some commenters recommended that CMS require electronic CQM reporting no sooner than CY 2017.

Response: We appreciate the commenters' support of our proposal to maintain the existing CQM requirement to report on 16 CQMs covering at least 3 NQS domains. In addition, we recognize the challenges associated with electronic reporting and appreciate the comments we received. In this final rule, we are modifying the proposed requirement for electronically submitted CQMs for the reporting period in CY 2016. In an effort to align with the Hospital IQR Program and reduce the burden for hospitals, rather than reporting on a minimum of 16 CQMs covering at least 3 NQS domains as proposed, we are requiring hospitals that submit CQMs electronically for the Medicare EHR Incentive Program to report on a minimum of 4 CQMs for the reporting period in 2016 with no NQS domain distribution requirement. This reduction from a minimum of 16 CQMs to a minimum of 4 CQMs and the elimination of the NQS domain distribution requirement only apply for hospitals that choose to report CQMs through electronic submission. Hospitals that choose to report CQMs by attestation for the reporting period in 2016 are required to report on a minimum of 16 CQMs covering at least 3 NQS domains. Further, we are modifying our proposed requirement for hospitals reporting CQMs through electronic submission to report two full quarters of data (Q3 and Q4 of CY 2016) within 2 months after the close of each

quarter. Instead, we are requiring only one full quarter of data (either Q3 or Q4 of CY 2016), with a submission deadline of February 28, 2017, to allow more time for hospitals to implement their EHR programs and overcome the challenges associated with electronic reporting of CQMs. We believe electronic reporting of CQMs is an important next step in the meaningful use of certified EHR technology, and anticipate that this lower reporting threshold and extended submission deadline for electronically submitted CQMs will reduce burden and encourage eligible hospitals and CAHs to report electronically for 2016. We also anticipate increasing this number in future rules to retain the 16 measure requirement. We believe that a full year should be adequate time for hospitals to address their mapping issues and that it is important to continue to make progress towards electronic reporting.

We refer readers to the Hospital IQR Program discussion in section VIII.A.8.c. of the preamble of this final rule for further discussion of these and other related comments and our responses.

Comment: Several commenters supported the proposal to base the reporting period on the calendar year. Other commenters supported the proposal to require quarterly reporting and submission periods for electronically submitted CQMs as well as to change the submission period for CQMs from annual to quarterly submission. The commenters generally supported the alignment efforts between the EHR Incentive Program and the Hospital IQR Program. One commenter suggested that the submission timeline be extended to one full quarter instead of the proposed 2 calendar months.

Response: We refer readers to the Hospital IQR Program discussion in section VIII.A.10.d.(3) of the preamble of this final rule for further discussion of these and other related comments and our responses.

After consideration of the public comments we received, and with further consideration of the discussion in sections VIII.A.8.c. and VIII.A.10.d.(3) of the preamble of this final rule, we are aligning our reporting periods and requirements for electronically submitted CQMs for the Medicare EHR Incentive Program with the reporting periods and requirements for electronically submitted CQMs for the Hospital IQR Program. Specifically, we are not finalizing our proposals to require 16 CQMs across three NQS domains reported quarterly for Q3 and Q4 of 2016. Instead, for hospitals that choose to report CQMs electronically for the Medicare EHR Incentive Program for the reporting period in CY 2016, we are requiring a minimum of 4 electronically submitted CQMs in either Q3 or Q4 of CY 2016, with a submission deadline of February 28, 2017. We note that this final policy does not change the reporting periods or requirements for the meaningful use objectives and associated measures under 42 CFR part 495 or apply for CQMs that are reported by attestation via the Registration and Attestation System. We further note that providers should refer to their State Medicaid program for requirements on submission methods and deadlines for the Medicaid EHR Incentive Program.

c. CQM Reporting Form and Method for the Medicare EHR Incentive Program in 2016

In the EHR Incentive Program Stage 2 final rule (77 FR 54087 through 54089), we finalized the reporting methods for eligible hospitals and CAHs for the Medicare EHR Incentive Program, which included reporting electronically or by attestation. We finalized that eligible hospitals and CAHs that are beyond their first year of meaningful use will be required to electronically submit the selected 16 CQMs. Subsequent to the Stage 2 final rule, we determined that electronic submission of aggregate-level data using QRDA–III would not be feasible in 2014 and 2015, and thus, eligible hospitals and CAHs would have the option to continue to report aggregate CQM results through attestation for the reporting periods in 2014 and 2015 (78 FR 50904 through 50905; 79 FR 50321 through 50322).

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24612 through 24613), we proposed to continue our existing policy that eligible hospitals and CAHs in any year of participation in the Medicare EHR Incentive Program in 2016 may report CQMs by attestation or electronically using the options previously outlined for electronic reporting either for single program participation in the Medicare EHR Incentive Program, or for participation in multiple programs if the requirements of the aligned quality program are met. The options for CQM submission for eligible hospitals and CAHs in the Medicare EHR Incentive Program are as follows:

- Eligible hospital and CAH options for Medicare EHR Incentive Program participation *(single program participation)*

++ Option 1: Attest to CQMs through the EHR Registration & Attestation System.

++ Option 2: Electronically report CQMs through QualityNet Portal.

- Eligible hospital and CAH options for electronic reporting for multiple programs *(for example: EHR Incentive Program plus Hospital IQR Program participation)*—Electronically report through QualityNet Portal.

For the Medicaid EHR Incentive Program, States will continue to be responsible for determining whether and how electronic reporting of CQMs would occur, or if they wish to allow reporting through attestation. Any changes that States make to their CQM reporting methods must be submitted through the State Medicaid Health IT Plan (SMHP) process for CMS review and approval prior to being implemented.

We proposed to continue our policy that electronic submission of CQMs will require the use of the most recent release of the CQM version for each CQM to which the EHR is certified. For electronic reporting in 2016, this means eligible hospitals and CAHs would be required to use the Spring 2015 release of the CQMs available at the CMS eCQM Library (*http://cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQM_Library.html*). We noted that an EHR certified for CQMs under the 2014 Edition certification criteria does not need to be recertified each time it is updated to a more recent version of the CQMs. (For further information on CQM reporting, we refer readers to the EHR Incentive Program Web site where guides and tip sheets are available for each reporting option (*www.CMS.gov/ehrincentiveprograms*).) However, we stated that we encourage EHR developers to test any updates, including any changes to the CQMs and changes to the CMS reporting requirements based on the CMS QRDA implementation guide, on an annual basis.

The form and method of electronic submission are further explained in subregulatory guidance and the certification process. For example, the following documents are updated annually to reflect the most recent CQM electronic specifications: The CMS QRDA Implementation Guide; program specific performance calculation guidance; and CQM electronic specifications and guidance documents. These documents are located on the CMS eCQM Library (*http://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQM_Library.html*).

We invited public comments on this proposal.

Comment: Several commenters supported the proposal to allow eligible hospitals and CAHs to report CQMs by

attestation or electronically. A few commenters stated that they would prefer to attest to their CQMs than to submit them electronically.

Response: We appreciate the commenters' support of our proposal.

Comment: Some commenters noted that the Hospital IQR Program is not required for CAHs, and requested clarification on how the alignment between the Hospital IQR Program and the EHR Incentive Program for electronically submitted CQMs and the method of reporting would impact CAHs seeking to electronically submit their CQM data.

Response: We agree that the Hospital IQR Program is not required for CAHs. Only subsection (d) hospitals are subject to the requirements and payment reductions of the Hospital IQR Program. For the EHR Incentive Program, CAHs may continue to report their CQM data by attestation in CY 2016. However, we encourage CAHs to submit their CQMs electronically through the QualityNet portal. We believe electronic submission of CQMs is an important next step in the meaningful use of certified EHR technology, and encourage CAHs to begin submitting CQMs electronically in 2016. We further note that, in the Stage 3 proposed rule (80 FR 16770), CMS has proposed to require electronic submission of CQMs starting in 2018 and thus encourage CAHs to begin electronically reporting CQMs as soon as feasible.

Comment: Several commenters expressed concerns regarding the timing of the annual update cycle for CQMs and stated that EHR vendors need more time to update their EHRs. Some commenters suggested that updates be minimal, or that the new specifications for CQMs be released well in advance of their implementation.

Response: We appreciate the commenters' concerns, and note that the CQM electronic specifications are posted at least 6 months prior to the reporting period. We believe it is important to reflect the most recent clinical guidance in CQMs, and therefore seek to find an appropriate balance between the timing of the posting of CQM electronic specifications and the reporting period for those CQMs.

Comment: Several commenters again requested clarification as to whether vendors would be required to recertify their EHRs when CQMs are updated. A few commenters suggested that recertification be required with each update to the CQMs.

Response: We appreciate this feedback and note that, under our policy stated in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50323), an EHR certified for CQMs under the 2014 Edition certification criteria does not need to be recertified each time it is updated to a more recent version of the CQMs. However, we encourage EHR developers to test any updates, including any changes to the CQMs and changes to the CMS reporting requirements based on the CMS QRDA implementation guide, on an annual basis.

After consideration of the public comments we received, we are finalizing our proposals to allow eligible hospitals and CAHs in any year of participation in the Medicare EHR Incentive Program in 2016 to report CQMs by attestation or electronically, and to continue our policy that electronic submission of CQMs will require the use of the most recent release of the CQM version. We note that an EHR certified for CQMs under the 2014 Edition certification criteria does not need to be recertified each time it is updated to a more recent version of the CQMs.

Several commenters sought clarification regarding the requirement to submit QRDA–I data, and asking whether the QRDA–III option would be available to eligible hospitals and CAHs for reporting to the EHR Incentive Program and the Hospital IQR Programs. We note that, in the EHR Incentive Program Stage 3 proposed rule (80 FR 16771), we proposed to remove the QRDA–III option for eligible hospitals and CAHs. Therefore, we refer readers to that proposed rule for further discussion of this proposal. Due to the timing of the expected publication of the Stage 3 final rule and the questions raised concerning this topic in the public comments on the FY 2016 IPPS/LTCH PPS proposed rule, we are addressing our proposal to remove the QRDA–III option in this FY 2016 IPPS/LTCH PPS final rule instead of in the upcoming Stage 3 final rule. We note the public comment period for the Stage 3 proposed rule ended on May 29, 2015 (80 FR 16732). Below is a summary of the public comments we received in response to our proposal in the Stage 3 proposed rule to remove the QRDA–III option, as well as comments received on this topic in response to the FY 2016 IPPS/LTCH PPS proposed rule.

Comment: Many commenters stated concerns over patient privacy using the QRDA–I submission method and stated that no personally identifiable information should be collected for quality reporting purposes.

Response: While we appreciate the commenters' concerns, we believe patient privacy is protected through the security precautions put in place to collect QRDA–I data. With the QualityNet Secure Portal's release in July 2014, CMS complied with OMB Memorandum 04–04, which requires all Federal systems that collect Protected Health Information (PHI) and are accessed electronically to implement identity management processes, which include both identity proofing and user authentication. Identity proofing and user authentication also are requirements of the Federal Information Security Management Act (FISMA) and National Institute of Standards and Technology (NIST), as well as the HIPAA Security Rule. In addition, the system is required to have multi-factor authentication which provides unambiguous identification of users by means of the combination of two different components. The use of two-factor authentication (a type of multifactor authentication) to prove one's identity is based on the premise that an unauthorized actor is unlikely to be able to supply both factors required for access. If, in an authentication attempt, at least one of the components is missing or supplied incorrectly, the user's identity is not established with sufficient certainty and access to the asset (for example, data) being protected by two-factor authentication then remains blocked.

Comment: Several commenters were concerned about the complexity of coding and build efforts of the QRDA–I functionality. The commenters stated that the development and implementation effort of the QRDA–I was more complex than QRDA–III. Some commenters stated that EHR vendors were not prepared to produce QRDA–I files. Some commenters requested that CMS maintain the QRDA–III format for hospital quality reporting. A few commenters outlined the benefits of the QRDA–III format, and stated that it is easier to implement than QRDA–I, less time-consuming to submit, provides transparency, and is a more mature standard.

Response: We understand and appreciate that some commenters prefer the QRDA–III over the QRDA–I. However, the QRDA–I provides patient-centric data and measure calculations independent of the EHR Incentive Program, which allows CMS to verify the data for future use in the Hospital VBP Program.

After consideration of the public comments we received, and in consideration of the limitations outlined above, we are finalizing our proposal to remove the QRDA–III as an option for reporting under the Medicare EHR Incentive Program. For 2016 and future

years, we are requiring QRDA–I for CQM electronic submissions for the Medicare EHR Incentive Program. We note that QRDA–I data are essential for data verification for the Hospital VBP Program, and are protected by CMS privacy standards. We also note that States would continue to have the option, subject to our prior approval, to allow or require QRDA–III for CQM reporting.

3. ''CQMs—Report'' Certification Criterion in ONC's 2015 Edition Proposed Rule

In the 2015 Edition proposed rule (80 FR 16814), ONC proposed a 2015 Edition certification criterion for ''CQMs—report'' [343] at proposed new 45 CFR 170.315(c)(3) as part of the proposed 2015 Edition of certification criteria that would require a certified Health IT Module to enable a user to electronically create a data file for transmission of clinical quality measurement data using the ''base'' HL7 (that is, industry-wide, non-program-specific) QRDA Category I and Category III standards, at a minimum. ONC also proposed to allow optional certification for EHRs according to the CMS ''form and manner'' requirements defined in CMS' QRDA Implementation Guide [344] as part of this proposed criterion. We reiterate that this proposed certification criterion would apply to EPs, eligible hospitals, and CAHs.

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24613 through 24614), for the requirements for the 2015 Edition certification criteria, ONC proposed the following at proposed new § 170.315(c)(3) for clinical quality measurement to state that technology certified to the 2015 Edition must enable a user to electronically create a data file for transmission of clinical quality measurement data which is:

- At a minimum, in accordance with the standards specified in § 170.205(h) and § 170.205(k); and
- Optionally, can be electronically accepted by CMS.

As detailed in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24613 through 24614), ONC solicited public comment on the versions of the Quality Reporting Document Architecture—Category I standard that should be adopted under § 170.205(h) and the versions of the Quality Reporting Document Architecture—Category III standard that should be adopted under § 170.205(k) for individual patient level and aggregate level reports, respectively. In order to give full consideration to the public comments received on the versions of the standards that should be adopted under § 170.205(h) and (k), we are not finalizing the ''CQMs-report'' certification criterion in this FY 2016 IPPS/LTCH PPS final rule. We anticipate finalizing both the certification criterion and the versions of the standards that should be adopted for this criterion in a subsequent final rule later this year. We also intend to address public comments received on both the proposed ''CQMs-report'' certification criterion and the versions of the standards that should be adopted for this criterion in that same rule.

4. CQM Development and Certification Cycle

We stated in the EHR Incentive Program Stage 2 final rule (77 FR 54055) that we do not intend to use notice-and-comment rulemaking as the means to update or modify CQM specifications. Given the necessity to update CQM specifications after they have been published to ensure their continued clinical relevance, accuracy, and validity, we publish annual updates to the electronic specifications for EHR submission. Although we require eligible hospitals and CAHs to submit the most updated versions of CQMs when reporting electronically, CEHRT is not required to be recertified on annual basis. CMS and ONC understand that standards for electronically representing CQMs continue to evolve, and believe there may be value in retesting certified Health IT Modules (including CEHRT) periodically to ensure that CQMs are being accurately calculated and represented, and that they can be reported to CMS in the ''form and manner'' required for the Hospital IQR Program and EHR Incentive Program. As mentioned previously, CMS and ONC encourage health IT developers to retest their certified technology annually, and solicited public comments on the appropriate frequency for requiring retesting and recertification to the most updated versions of CQMs and most recent ''form and manner'' reporting requirements.

However, given the continuing evolution of technology and clinical standards, as well as the need for a predictable cycle from measure development to provider data submission, CMS intends to publish a request for information (RFI) on the establishment of an ongoing cycle for the introduction and certification of new measures, the testing of updated measures, and the testing and certification of submission capabilities. We encourage readers to submit their insights and recommendations for our consideration upon publication of that RFI.

Comment: Several commenters noted the upcoming RFI and stated their intention to comment further when that RFI becomes available.

Response: We look forward to the comments submitted via the upcoming RFI, and note that we will consider all comments before proposing a change to our policies.

Comment: Some commenters expressed concern with the timing of the annual update, stating that the publication date of the IPPS final rule in late summer, with an implementation date of the updates of January 1, does not allow adequate time to implement the CQM changes in the annual update. Some commenters stated that there should be a minimum of 18 months between the time of the annual update and when the updates need to be implemented. Some commenters suggested that CQMs changes in the annual update be limited only to nonsubstantive changes and those changes that do not require a change to provider work flows.

Response: We appreciate these comments and feedback. CQMs are updated routinely to account for changes, including, but not limited to, changes in billing and diagnosis codes and changes in medical practices. In order for CQMs to remain current and clinically valid, the specifications must be updated on a regular basis. We note that CQM electronic specifications are posted at least 6 months prior to the start of the reporting period, and well in advance of the submission window. While we understand that this does not allow the suggested 18 months for vendors to update their EHR products, we believe this timeframe allows an adequate amount of time to make those updates while ensuring that the CQMs are still current and clinically valid once implemented.

Comment: Several commenters suggested that use of the most recent CQM electronic specifications not be required unless EHR vendors also are required to update and recertify their EHR products.

Response: We appreciate the commenters' feedback. However, we note that it is not technically feasible for CMS to accept multiple versions of the

[343] As noted in the 2015 Edition proposed rule, ONC proposed to title proposed new § 170.315(c)(3) ''CQMs—report'' to better align with the use of the term ''report'' throughout the 2015 Edition. Also, ONC proposed to discontinue to reference ''electronic'' in the title of certification criteria as it is assumes that all functions performed by certified health IT are done electronically. See 80 FR 16844.

[344] The CMS QRDA Implementation Guide can be accessed at *http://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQM_Library.html*.

CQM specifications. In addition, we note that the most recent version of the CQM electronic specifications is required to ensure that the most current and clinically valid version of the CQM is being implemented and used. We also have received feedback from stakeholders regarding the difficulty and expense of having to test and recertify CEHRT products to the most recent version of the electronic specifications for the CQMs. While we still believe that vendors should test and certify their products to the most recent version of the electronic specifications for the CQMs when feasible, we understand the burdens associated with this requirement and therefore do not require that CEHRT products be recertified to the most recent version of the electronic specifications for the CQMs with the annual update.

IX. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have reviewed MedPAC's March 2015 ''Report to the Congress: Medicare Payment Policy'' and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule. MedPAC recommendations for the IPPS for FY 2016 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653–7226, or visit MedPAC's Web site at: *http://www.medpac.gov*.

X. Other Required Information

A. Requests for Data From the Public

In order to respond promptly to public requests for data related to the prospective payment system, we have established a process under which commenters can gain access to raw data on an expedited basis. Generally, the data are now available on compact disc (CD) format. However, many of the files are available on the Internet at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. We listed the data files and the cost for each file, if applicable, in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24615 through 24616).

Commenters interested in discussing any data used in constructing this final rule should contact Chioma Obi at (410) 786–6050.

B. Collection of Information Requirements

1. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24616 through 24621), we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

2. ICRs for Add-On Payments for New Services and Technologies

Sections II.I.1. of the preambles of the proposed rule (80 FR 24418 through 24463) and this final rule discuss add-on payments for new services and technologies. Specifically, this section states that applicants for add-on payments for new medical services or technologies for FY 2017 must submit a formal request. A formal request includes a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement. In addition, the request must contain a significant sample of the data to demonstrate that the medical service or technology meets the high-cost threshold.

We believe the burden associated with this requirement is exempt from the PRA under 5 CFR 1320.3(c), which defines the agency collection of information subject to the requirements of the PRA as information collection imposed on 10 or more persons within any 12-month period. This information collection does not impact 10 or more entities in a 12-month period. For FYs 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, and 2016, we received 1, 4, 5, 3, 3, 5, 5, 7, and 9 applications, respectively. We note that two of the nine applications received for FY 2016 were withdrawn after publication of the proposed rule, as indicated in section III.I. of the preamble of this final rule.

We did not receive any public comments regarding this information collection.

3. ICRs for the Occupational Mix Adjustment to the FY 2016 Wage Index (Hospital Wage Index Occupational Mix Survey)

Sections III.E. and F. of the preambles of the proposed rule (80 FR 24465 through 24467) and this final rule discuss the occupational mix adjustment to the proposed and final FY 2016 wage index, respectively. While the preambles of these rules do not contain any new ICRs, we note that there is an OMB approved information collection request associated with the hospital wage index.

Section 304(c) of Public Law 106–554 amended section 1886(d)(3)(E) of the Act to require CMS to collect data at least once every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program in order to construct an occupational mix adjustment to the wage index. We collect the data via the occupational mix survey.

The burden associated with this information collection requirement is the time and effort required to collect and submit the data in the Hospital Wage Index Occupational Mix Survey to CMS. The aforementioned burden is subject to the PRA; it is currently approved under OMB control number 0938–0907.

We did not receive any public comments regarding this information collection.

4. Hospital Applications for Geographic Reclassifications by the MGCRB

Sections III.J.2. of the preambles of the proposed rule (80 FR 24470 through 24471) and this final rule discuss proposed and finalized changes to the wage index based on hospital reclassifications, respectively. As stated in those sections, under section 1886(d)(10) of the Act, the MGCRB has the authority to accept short-term IPPS hospital applications requesting geographic reclassification for wage

index and to issue decisions on these requests by hospitals for geographic reclassification for purposes of payment under the IPPS.

The burden associated with this application process is the time and effort necessary for an IPPS hospital to complete and submit an application for reclassification to the MGCRB. The burden associated with this requirement is subject to the PRA. It is currently approved under OMB control number 0938–0573.

We did not receive any public comments regarding this information collection.

5. Simplified Cost Allocation Methodology for Hospitals

In sections IV.H. of the preamble of the proposed rule (80 FR 24514 through 24515), we discussed our proposal to amend the regulations at 42 CFR 412.302(d)(4) to limit a hospital's ability to elect the simplified cost allocation methodology under the terms and conditions provided in the instructions for CMS Form 2552 to cost reporting periods beginning before October 1, 2015. After consideration of the public comments we received, we are not finalizing our proposal to limit the election of the simplified cost allocation methodology in this final rule. Instead, we are retaining the simplified cost allocation methodology with some modifications to afford hospitals using the simplified cost allocation methodology flexibility to obtain approval from their MACs to use dollar value as an alternative statistical basis to square footage for capital-related moveable equipment. Based on FY 2013 HCRIS data, less than 100 hospitals have elected to use the simplified cost allocation methodology.

Although we are not finalizing our proposal to eliminate the simplified cost allocation methodology for hospitals, but instead are affording hospitals greater flexibility to obtain approval from their MAC to use dollar value as an alternative statistical basis to square footage for capital related moveable equipment, we believe the currently approved burden estimates for the Hospital and Health Care Complex Cost Report (OMB control number 0938–0050) are still applicable to hospitals completing the Hospital and Health Care Complex Cost Report. The time required to address this revision will be subsumed in the total burden estimate for an entity to comply with all of the requirements in the cost report.

We did not receive any public comments regarding this information collection.

6. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

The Hospital IQR Program (formerly referred to as the Reporting Hospital Quality Data for Annual Payment (RHQDAPU) Program) was originally established to implement section 501(b) of the MMA, Public Law 108–173. This program expanded our voluntary Hospital Quality Initiative. The Hospital IQR Program originally consisted of a ''starter set'' of 10 quality measures. The collection of information associated with the original starter set of quality measures was previously approved under OMB control number 0938–0918. All of the information collection requirements previously approved under OMB control number 0938–0918 have been combined with the information collection request previously approved under OMB control number 0938–1022. We no longer use OMB control number 0938–0918.

We added additional quality measures to the Hospital IQR Program and submitted the information collection request to OMB for approval. This expansion of the Hospital IQR Program measures was part of our implementation of section 5001(a) of the DRA. Section 1886(b)(3)(B)(viii)(III) of the Act, added by section 5001(a) of the DRA, requires that the Secretary expand the ''starter set'' of 10 quality measures that were established by the Secretary as of November 1, 2003, to include measures that the Secretary determines to be appropriate for the measurement of the quality of care furnished by hospitals in inpatient settings. The burden associated with these reporting requirements is currently approved under OMB control number 0938–1022.

In section VIII.A.6. of the preamble of this final rule, we are finalizing modified versions of our proposed refinements to expand the measure cohorts for: (1) The Hospital 30-Day All-Cause, Risk-Standardized Mortality Rate (RSMR) following Pneumonia Hospitalization measure (NQF #0468); and (2) the Hospital 30-Day All-Cause, Risk-Standardized Readmission Rate (RSRR) following Pneumonia Hospitalization measure (NQF #0506). Expanding the measure cohorts to include a broader population of patients adds a large number of patients, as well as additional hospitals, to these measures. However, this expansion will not affect the hospitals' burden because these measures are claims-based and, therefore, require no additional effort on hospitals' part to submit the required data.

In section VIII.A.7. of the preamble of this final rule, we are finalizing seven of the eight additional proposed measures to the Hospital IQR Program measure set. The seven new measures are: (1) Hospital Survey on Patient Safety Culture (structural); (2) Kidney/UTI Clinical Episode-Based Payment (claims-based); * (3) Cellulitis Clinical Episode-Based Payment (claims-based); * (4) Gastrointestinal Hemorrhage Clinical Episode-Based Payment (claims-based); * (5) Hospital-Level, Risk-Standardized Payment Associated with an Episode-of-Care for Primary Elective THA/TKA (claims-based); (6) Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction (claims-based); and (7) Excess Days in Acute Care after Hospitalization for Heart Failure (claims-based). We are not finalizing our proposal to add the Lumbar Spine Fusion/Refusion Clinical Episode-Based Payment (claims-based) measure. Four of these seven measures are being finalized for the FY 2018 payment determination and subsequent years as proposed; however, the other three measures, addressing clinical episode-based payments and denoted with an (*), are being finalized for the FY 2019 payment determination and subsequent years—a modification to what was proposed.

One new measure is structural; the remaining six new measures are claims-based. The burden associated with collecting information on the structural measure we are finalizing, Hospital Survey on Patient Safety Culture, is expected to be minimal, as it involves filling out a one-time form to report on this measure for a given performance period; therefore, its addition will not result in a significant burden increase. In total, we estimate a burden of 15 minutes per hospital to complete other forms such as the ECE and Measure Exception form, and to report structural measures. The estimate of 15 minutes includes all previously finalized and newly required structural measures. Because the remaining measures we are finalizing are claims-based measures and can be calculated based on data that are already reported to the Medicare program for payment purposes, we believe no additional information collection will be required from the hospitals for the six newly finalized claims-based measures.

We also are finalizing our proposals to remove nine measures. We believe that there will be a reduction in collection of information burden for hospitals due to our removal of seven of these nine measures, which are chart-abstracted: (1) STK–01 Venous Thromboembolism

Prophylaxis (NQF #0434); (2) STK–06: Discharged on Statin Medication ** (NQF #0439); (3) STK–08: Stroke Education ** (NQF endorsement removed); (4) VTE–1: Venous Thromboembolism Prophylaxis ** (NQF #0371); (5) VTE–2: Intensive Care Unit Venous Thromboembolism Prophylaxis ** (NQF #0372); (6) VTE–3: Venous Thromboembolism Patients with Anticoagulation Overlap Therapy ** (NQF #0373); and (7) AMI–7a Fibrinolytic Therapy Received Within 30 Minutes of Hospital Arrival ** (NQF #0164). (A double asterisk (**) indicates that we finalized our proposal to retain the measure as an electronic clinical quality measure for the FY 2018 payment determination and subsequent years in section VIII.A.8. of the preamble of this final rule.) Due to the burden associated with the collection of chart-abstracted data, we estimate that the removal of AMI–7a will result in a burden reduction of approximately 219,000 hours across all hospitals. In addition, we estimate that the removal of 6 VTE and STK chart-abstracted measures will result in an information collection burden reduction of approximately 522,000 hours across all hospitals.

The remaining two of the nine measures finalized for removal have been previously suspended from the Hospital IQR Program. Therefore, their removal will not affect information collection burden to hospitals. These measures are: IMM–1 Pneumococcal Immunization (NQF #1653); and SCIP-Inf-4 Cardiac Surgery Patients with Controlled Postoperative Blood Glucose (NQF #0300). The suspension of IMM–1 is currently reflected under OMB control number 0938–1022. The suspension of SCIP-Inf-4, which was formalized on January 9, 2015,[345] will be reflected in the PRA package being submitted this year under OMB control number 0938–1022. In total, we estimate that the removal of 9 measures will result in a total information collection burden reduction of approximately 741,000 hours for the FY 2018 payment determination across all hospitals.

For the FY 2018 payment determination, we also are finalizing a modification of our proposals regarding electronic clinical quality measures. Instead of requiring hospitals to report 16 electronic clinical quality measures, we are requiring a minimum of 4 electronic clinical quality measures. Under this modified policy, no NQS domain distribution will be required. In addition, for the FY 2018 payment determination, instead of requiring two quarters of data, we are requiring that hospitals submit only one quarter of eCQM data (either Q3 or Q4) of CY 2016, by February 28, 2017. We also anticipate increasing the number of required electronic clinical quality measures in future rules to propose a 16 measure requirement. We believe that a full year should be enough time for hospitals to address their mapping issues and that it is important to continue to make progress towards electronic reporting.

Lastly, in response to comments suggesting that QRDA I be required and other comments requesting clarification on our QRDA requirement, we are finalizing a modification of our proposal modifying our electronic clinical quality measure reporting requirements to include the a policy requirement that hospitals must report via QRDA I. We believe the delayed reporting period and submission deadlines finalized will provide hospitals with adequate time to prepare to report using QRDA I.

We believe that the total information collection burden associated with the electronic clinical quality measure reporting proposal can be drawn from the burden outlined for hospitals in the EHR Incentive Program Stage 2 final rule (77 FR 54126 through 54133). In that final rule, the burden estimate for a hospital to attest and report 16 electronic clinical quality measures is 2 hours and 40 minutes per quarter (77 FR 54132). In total, we expect the burden associated with our finalized policy to require hospitals to report 4 electronic clinical quality measures for one quarter of data to be 40 minutes per hospital, and 2,200 hours total across the approximately 3,300 hospitals participating in the Hospital IQR Program. We do not anticipate any observed change in burden as it relates to the reporting via QRDA I.

We estimate that reporting these electronic clinical quality measures can be accomplished by staff with a mean hourly wage of $16.42 per hour.[346] Under OMB Circular A–76, in calculating direct labor, agencies should not only include salaries and wages, but also ''other entitlements'' such as fringe benefits.[347] This Circular provides that the civilian position full fringe benefit cost factor is 36.25 percent. Therefore, using these assumptions, we estimate an hourly labor cost of $22.37 ($16.42 base salary + $5.95 fringe) and a total cost of $49,214 (2,200 hours × $22.37 per hour) across approximately 3,300 hospitals participating in the Hospital IQR Program to report 4 electronic clinical quality measures for either Q3 or Q4 of CY 2016.

We are finalizing our proposal to change the requirements for population and sampling such that hospitals will be required to submit population and sample size data only for those measures that a hospital submits as chart-abstracted measures under the Hospital IQR Program. We believe this finalized proposal will result in a minimal decrease in information collection burden as hospitals will not have to report population and sample size if they electronically report any of the measures that can be reported either as an electronic clinical quality measure or via chart-abstraction.

We also are finalizing our proposal to modify the existing processes for validation of chart-abstracted Hospital IQR Program data to remove one stratum. We anticipate that if there is any affect, it will be that this modification will minimally reduce hospital burden regarding the collection of information. For validation of chart-abstracted data for the FY 2018 payment determination and subsequent years, we require hospitals to provide 72 charts per hospital per year (with an average page length of 1,500), including 40 charts for HAI validation and 32 charts for clinical process of care validation, for a total of 108,000 pages per hospital per year. We reimburse hospitals at 12 cents per photocopied page (79 FR 50346) for a total per hospital cost of $12,960. For hospitals providing charts digitally via a re-writable disc, such as encrypted CD–ROMs, DVDs, or flash drives, we will reimburse hospitals at a rate of 40 cents per disc. We do not believe any additional burden is associated with data submitting this information via Web portal or PDF.

Under OMB number 0938–1022, we estimated that the total burden associated with collection of information and with other activities such as sampling and validation for the FY 2017 payment determination was 1,781 hours per hospital and 5.9 million hours across approximately 3,300 hospitals participating in the Hospital IQR Program. Using data on chart-abstracted measures from the 3rd quarter in 2013 through the 2nd quarter in 2014, we have revised our burden estimate to include updates to the number of records reported per measure set, as well as the time associated with

[345] QualityNet. Available at: *https://www.qualitynet.org/dcs/BlobServer?blobkey=id&blobnocache=true&blobwhere=1228890406532&blobheader=multipart%2Foctet-stream&blobheadername1=Content-Disposition&blobheadervalue1=attachment%3Bfilename%3D2015-02-IP.pdf&blobcol=urldata&blobtable=MungoBlobs.*

[346] *http://www.bls.gov/ooh/healthcare/medical-records-and-health-information-technicians.html.*

[347] *http://www.whitehouse.gov/omb/circulars_a076_a76_incl_tech_correction.*

data collection. Considering the proposals finalized in this final rule, as well as our updated estimates for the number of records reported and the time associated with data reporting activities, we estimate a total burden of 2,289 hours per hospital and 7.6 million hours across approximately 3,300 hospitals participating in the Hospital IQR Program for the FY 2018 payment determination. Of the 7.6 million hours estimated for the total burden, 7.4 million hours are associated with collection of information activities and 0.2 million hours are associated with other activities such as population and sampling, and validation. This burden estimate includes the full measure set finalized for the Hospital IQR Program FY 2018 payment determination and accounts for burden changes associated with all newly finalized measures as well as measures finalized for removal, as discussed above in this section.

This burden estimate accounts for other activities such as population and sampling, reviewing reports for claims-based measure sets, HAI validation templates, as well as all other forms and structural measures. The estimate excludes the burden associated with the NHSN and HCAHPS measures, both of which are submitted under separate information collection requests and are approved under OMB control numbers 0920–0666 and 0938–0981, respectively. The burden estimates in this final rule are the estimates for which we are requesting OMB approval.

7. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

As discussed in sections VIII.B. of the preambles of the proposed rule (80 FR 24590) and this final rule, section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year.

In section VIII.B.3. of the preamble of this final rule, we are finalizing our policy that PCHs must submit data on three additional measures beginning with the FY 2018 program: (1) CDC NHSN Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716); (2) CDC NHSN Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717); and (3) CDC NHSN Influenza Vaccination Coverage Among Healthcare Personnel (HCP) Measure (NQF #0431). In conjunction with finalizing our policy in section VIII.B.2. of the preamble of this final rule to remove the six SCIP measures from the PCHQR Program beginning with fourth quarter (Q4) 2015 discharges and for subsequent years, the PCHQR measure set will consist of 16 measures beginning with the FY 2018 program.

With respect to finalizing our policy to add three measures beginning with the FY 2018 program, this estimate excludes the burden associated with two of these measures (the CDC NHSN MRSA measure and the CDC NHSN CDI measure), both of which are submitted under separate information collection requests and are approved under a separate OMB control number (0920–0666).[348] Using the same methodology as the FY 2015 IPPS/LTCH PPS final rule,[349] for the third finalized new measure (CDC NHSN HCP measure), we estimate that it will take 10 minutes annually per PCH, or an additional 1.83 hours for all PCHs annually to report the measure.[350]

Our finalized policy to remove six SCIP measures will reduce the burden experienced by PCHs. We estimate a reduction in hourly burden of 6,468 [351] hours per year beginning with Q4 2015 and for subsequent program years across the 11 PCHs.

In summary, as a result of our finalized policies, we estimate a reduction of 6,466.17 [352] hours of burden per year associated with the reporting for all 11 PCHs beginning with the FY 2018 program. Coupled with our estimated salary costs,[353] we estimate that these changes will result in a reduction in annual labor costs of $426,767.22 beginning with the FY 2018 PCHQR Program.

Comment: One commenter supported CMS' efforts to reduce reporting burden. However, the commenter stated that CMS had not considered the total burden associated with data collection for the hospital-wide surveillance efforts, the development of technical infrastructure, and resources to ensure consistent application of measures specifications.

Response: We appreciate the commenter's support. Because we are leveraging the CDC NHSN system in data collection, we confirmed with the CDC that all burden associated with the three measures (CDC NHSN MRSA, CDC NHSN CDI, and CDC NHSN HCP measures) that we are finalizing, including the burden associated with the activities mentioned by the commenter, has been accounted for under the OMB control number 0920–0666.

8. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In sections IV.F. of the preamble of the proposed rule (80 FR 24498 through 24509) and this final rule, we discuss requirements for the Hospital VBP Program. Specifically, in this final rule, we are finalizing our proposal to adopt one new measure beginning with the FY 2018 program year, the 3-Item Care Transition Measure (CTM–3) (NQF #0228). We also are finalizing our proposal to adopt one new measure beginning with the FY 2021 program year, the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization Measure (NQF #1893) (MORT–30–COPD).

As required under section 1886(o)(2)(A) of the Act, both of these additional measures are required for the Hospital IQR Program. Therefore, their inclusion in the Hospital VBP Program does not result in any additional burden because the Hospital VBP Program uses data that are required for the Hospital IQR Program.

9. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

As discussed in sections VIII.C.5.a and VIII.C.5.b. of the preamble of this final rule, we are retaining the following 12 previously finalized quality measures for use in the LTCH QRP:

---

[348] OMB Control Number History. Available at: *http://www.reginfo.gov/public/do/PRAOMBHistory?ombControlNumber=0920-0666*.

[349] FY 2015 IPPS/LTCH PPS final rule (79 FR 50443 through 50444).

[350] Ibid.

[351] [(49 cases per measure × 4 quarters) + 0.5 (abstraction/training time)] × 11 PCHs = 6,468 hours per year.

[352] 6,468 hours − 1.83 hours = 6,466.17 hours.

[353] 6,466.17 hours * $66/hour. [We are now estimating an hourly salary of $33 (*http://swz.salary.com/salarywizard/Staff-Nurse-RN-Hourly-Salary-Details.aspx*). After accounting for employee benefits and overhead, this results in a total cost of $66 per labor hour].

LTCH QRP QUALITY MEASURES PREVIOUSLY ADOPTED FOR THE FY 2015 AND FY 2016 PAYMENT DETERMINATIONS AND SUBSEQUENT YEARS

NQF ID	Measure title	Payment determination	Final rule(s) in which measure was finalized
NQF #0138	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure.	FY 2015 payment determination and subsequent years.	FY 2012 IPPS/LTCH PPS final rule; updated in FY 2013 IPPS/LTCH PPS final rule.
NQF #0139	National Healthcare Safety Network (NHSN) Central Line-Associated Blood Stream Infection (CLABSI) Outcome Measure.	FY 2015 payment determination and subsequent years.	FY 2012 IPPS/LTCH PPS final rule; updated in FY 2013 IPPS/LTCH PPS final rule.
NQF #0678	Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay).	FY 2015 payment determination and subsequent years*.	FY 2012 IPPS/LTCH PPS final rule; updated in FY 2014 IPPS/LTCH PPS final rule.
NQF #0680	Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay).	FY 2016 payment determination and subsequent years.	FY 2015 IPPS/LTCH PPS final rule.
NQF #0431	Influenza Vaccination Coverage Among Healthcare Personnel.	FY 2016 payment determination and subsequent years.	FY 2015 IPPS/LTCH PPS final rule.

*Adopted in this FY 2016 IPPS/LTCH PPS final rule for the FY 2018 payment determination and subsequent years

LTCH QRP QUALITY MEASURES PREVIOUSLY ADOPTED FOR THE FY 2017 AND FY 2018 PAYMENT DETERMINATIONS AND SUBSEQUENT YEARS

NQF ID	Measure title	Payment determination	Final rule(s) in which measure was finalized
NQF #1716	National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure.	FY 2017 and Subsequent Years.	FY 2014 IPPS/LTCH PPS final rule.
NQF #1717	National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure.	FY 2017 payment determination and subsequent years.	FY 2014 IPPS/LTCH PPS final rule.
NQF #2512	All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals**.	FY 2017 payment determination and subsequent years**.	FY 2014 IPPS/LTCH PPS final rule.
Application of NQF #0674.	Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay).	FY 2018 payment determination and subsequent years**.	FY 2014 IPPS/LTCH PPS final rule.
NQF #2631*	Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function.	FY 2018 payment determination and subsequent years.	FY 2015 IPPS/LTCH PPS final rule.
NQF #2632*	Functional Status Outcome Measure: Change in Mobility Among Long-Term Care Hospital Patients Requiring Ventilator Support.	FY 2018 payment determination and subsequent years.	FY 2015 IPPS/LTCH PPS final rule.
Not NQF endorsed.	National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.	FY 2018 payment determination and subsequent years.	FY 2015 IPPS/LTCH PPS final rule.

*Endorsed on July 23, 2015. We refer readers to: *http://www.qualityforum.org/ProjectMeasures.aspx?projectID=73867,* NQF #2631 and NQF #2632.

**Adopted in this FY 2016 IPPS/LTCH PPS final rule for the FY 2018 payment determination and subsequent years.

As discussed in sections VIII.C.6.a. through c. of the preamble of this final rule, we are finalizing our proposal to use three previously finalized quality measures in the LTCH QRP for the FY 2018 payment determination and subsequent years. We are finalizing our proposal to use two of these measures in order to establish their use as cross-setting measures that satisfy the required addition of quality measures under the domains of skin integrity and incidence of major falls, as mandated by section 1899B of the Act, as added by the IMPACT Act: Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and an Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674). We are finalizing our proposal to use a third previously finalized measure, All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge From LTCHs (NQF #2512), in order to establish the newly NQF-endorsed status of this measure.

Finally, as discussed in sections VIII.C.6.d. of the preamble of this final rule, for the FY 2018 payment determination and subsequent years, we are finalizing our proposal to add one new cross-setting functional status process measure quality measure to the LTCH QRP: An application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015). This measure satisfies the addition of a quality measure under the third initially

required domain of functional status, as mandated by section 1899B of the Act as added by the IMPACT Act.

Six of the measures being retained in this FY 2016 IPPS/LTCH PPS final rule are currently collected via the CDC NHSN. The NHSN is a secure, Internet-based HAI tracking system maintained and managed by the CDC. NHSN data collection occurs via a Web-based tool hosted by the CDC and provided free of charge to facilities. In this final rule, we have not adopted any new quality measures that are collected via the CDC's NHSN. Therefore, at this time, there is no additional burden related to this submission method. Any burden related to NHSN-based quality measures we have retained in this final rule, has been previously discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50443 through 50445), and has been previously approved under OMB control number 0920–0666, with an expiration date of November, 31, 2016.

The All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512), which we have finalized in this final rule, is a Medicare FFS claims-based measure. Because claims-based measures can be calculated based on data that are already reported to the Medicare program for payment purposes, we believe no additional information collection will be required from the LTCHs.

The remaining 6 measures will be collected utilizing the LTCH CARE Data Set. The LTCH CARE Data Set, in its current form (version 2.01), has been approved under OMB control number 0938–1163. Version 2.01 of the LTCH CARE Data Set contains data elements related to patient demographic data, various voluntary questions, as well as data elements related to the following quality measures:

- Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)
- Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680)

The LTCH CARE Data Set Version 3.00 is available for download at *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html* and contains those data elements included in version 2.01, as well as additional data elements in order to allow for the collection of data associated with the following quality measures:

- Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) (previously finalized in the FY 2015 IPPS/LTCH PPS final rule)
- Application of Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015) (previously finalized in the FY 2015 IPPS/LTCH PPS final rule)
- Functional Status Outcome Measure: Change in Mobility Among LTCH Patients Requiring Ventilator Support (NQF #2632, endorsed on 07/23/2015) (previously finalized in the FY 2015 IPPS/LTCH PPS final rule)

Each time we add new data elements to the LTCH CARE Data Set related to newly proposed or finalized LTCH QRP quality measures, we are required by the Paperwork Reduction Act (PRA) to submit the expanded data collection instrument to OMB for review and approval. Section 1899B(m) of the Act, as added by IMPACT Act, provides that the PRA requirements do not apply to section 1899B of the Act and the sections referenced in subsection 1899B(a)(2)(B) of the Act that require modifications in order to achieve the standardization of patient assessment data. We believe that version 3.00 of the LTCH CARE Data Set falls under the PRA provisions in 1899B(m) of the Act. We believe that all additional data elements added to version 3.00 of the LTCH CARE Data Set are for the purpose of standardizing patient assessment data, as required under section 1899B(a)(1)(B) of the Act.

A comprehensive list of all data elements included in version 3.00 of the LTCH CARE Data Set will be made available in the LTCH QRP Manual, as will be a change table outlining the differences between version 2.01 and version 3.00 of the LTCH CARE Data Set. The LTCH QRP Manual is accessible on the following LTCH Quality Reporting Measures Information Web page: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html*. For a discussion of burden related to version 3.00 of the LTCH CARE Data Set, we refer readers to section I.M. of Appendix A of this final rule.

While the reporting of quality measures is an information collection, the PRA does not apply in accordance with the amendments to the Act made by IMPACT Act. More specifically, section 1899B(m) of the Act provides that the PRA requirements do not apply to section 1899B of the Act and the sections referenced in subsection 1899B(a)(2)(B) of the Act that require modifications in order to achieve the standardization of patient assessment data.

We did not receive public comments specific to this section of the FY 2016 IPPS/LTCH PPS proposed rule. However, we did receive several public comments related to the burden associated with specific proposed quality measures. Those comments and our responses are found in sections VIII.C.6.a. through VIII.C.6.d. of the preamble of this final rule.

10. ICRs for the Electronic Health Record (EHR) Incentive Program and Meaningful Use

In section VIII.D. of the preamble of this final rule, we discuss our proposals to align the Medicare EHR Incentive Program reporting and submission timelines for electronically submitted clinical quality measures for eligible hospitals and CAHs with the Hospital IQR Program's reporting and submission timelines for 2016. Because these proposals for data collection which we are finalizing in this final rule will align with the reporting requirements in place for the Hospital IQR Program and eligible hospitals and CAHs still have the option to submit their clinical quality measures via attestation for the Medicare EHR Incentive Program, we do not believe there is any additional burden for this collection of information.

List of Subjects in 42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

For the reasons stated in the preamble, the Centers for Medicare & Medicaid Services is amending 42 CFR Chapter IV as set forth below:

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 1. The authority citation for part 412 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh), sec. 124 of Public Law 106–113 (113 Stat. 1501A–332), sec. 1206 of Public Law 113–67, and sec. 112 of Public Law 113–93.

■ 2. Section 412.23 is amended by—
■ a. In paragraph (e)(3)(i), removing the cross-reference ''paragraphs (e)(3)(ii) through (v)'' wherever it appears and adding in its place the cross-reference ''paragraphs (e)(3)(ii) through (vi)''.
■ b. Adding new paragraph (e)(3)(vi).
■ c. Revising paragraph (e)(6)(ii) introductory text.

The addition and revision reads as follows:

§ 412.23 Excluded hospitals: Classifications.

* * * * *

(e) * * *

(3) * * *

(vi) For cost reporting periods beginning on or after October 1, 2015, the Medicare inpatient days and discharges that are paid at the site neutral payment rate specified at § 412.522(c)(1) or paid under a Medicare Advantage plan (Medicare Part C) will not be included in the calculation of the Medicare inpatient average length of stay specified under paragraph (e)(2)(i) of this section. The provisions of this paragraph (e)(3)(vi) only apply to a hospital that is classified as of December 10, 2013, as a long-term care hospital (as defined in this section) for purposes of determining whether the requirements of paragraph (e)(2)(i) or (e)(2)(ii) of this section are met.

* * * * *

(6) * * *

(ii) *Exception.* The moratorium specified in paragraph (e)(6)(i) of this section is not applicable to the establishment and classification of a long-term care hospital that meets the requirements of paragraphs (e) introductory text and (e)(1) through (e)(5) of this section, or a long-term care hospital satellite facility that meets the requirements of § 412.22(h), if the long-term care hospital or long-term care satellite facility meets one or more of the following criteria on or before December 27, 2007, or prior to April 1, 2014, as applicable:

* * * * *

■ 3. Section 412.64 is amended by revising paragraphs (d)(1)(vi), (h)(4) introductory text, and (h)(4)(vi) introductory text, to read as follows:

§ 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.

* * * * *

(d) * * *

(1) * * *

(vi) For fiscal years 2015 and 2016, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraphs (d)(2) and (3) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.2 percentage point.

* * * * *

(h) * * *

(4) For discharges on or after October 1, 2004 and before October 1, 2016, CMS establishes a minimum wage index for each all-urban State, as defined in paragraph (h)(5) of this section. This minimum wage index value is computed using the following methodology:

* * * * *

(vi) For discharges on or after October 1, 2012 and before October 1, 2016, the minimum wage index value for the State is the higher of the value determined under paragraph (h)(4)(iv) of this section or the value computed using the following alternative methodology:

* * * * *

■ 4. Section 412.101 is amended by revising paragraphs (b)(2)(i), (b)(2)(ii), (c)(1), (c)(2) introductory text, and (d) to read as follows:

§ 412.101 Special treatment: Inpatient hospital payment adjustment for low-volume hospitals.

* * * * *

(b) * * *

(2) * * *

(i) For FY 2005 through FY 2010 and FY 2018 and subsequent fiscal years, a hospital must have fewer than 200 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, and be located more than 25 road miles (as defined in paragraph (a) of this section) from the nearest ''subsection (d)'' (section 1886(d) of the Act) hospital.

(ii) For FY 2011 through FY 2017, a hospital must have fewer than 1,600 Medicare discharges, as defined in paragraph (a) of this section, during the fiscal year, based on the hospital's Medicare discharges from the most recently available MedPAR data as determined by CMS, and be located more than 15 road miles, as defined in paragraph (a) of this section, from the nearest ''subsection (d)'' (section 1886(d) of the Act) hospital.

* * * * *

(c) * * *

(1) For FY 2005 through FY 2010 and FY 2018 and subsequent fiscal years, the adjustment is an additional 25 percent for each Medicare discharge.

(2) For FY 2011 through FY 2017, the adjustment is as follows:

* * * * *

(d) *Eligibility of new hospitals for the adjustment.* For FYs 2005 through 2010 and FY 2018 and subsequent fiscal years, a new hospital will be eligible for a low-volume adjustment under this section once it has submitted a cost report for a cost reporting period that indicates that it meets discharge requirements during the applicable fiscal year and has provided its Medicare administrative contractor with sufficient evidence that it meets the distance requirement, as specified under paragraph (b)(2) of this section.

■ 5. Section 412.106 is amended by revising paragraph (g)(1)(iii)(C) to read as follows:

§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *

(g) * * *

(1) * * *

(iii) * * *

(C) For fiscal years 2014 and 2015, CMS will base its estimates of the amount of hospital uncompensated care on the most recent available data on utilization for Medicaid and Medicare SSI patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (b)(4) of this section. For fiscal year 2016, CMS will base its estimates of the amount of hospital uncompensated care on utilization data for Medicaid and Medicare SSI patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (b)(4) of this section, using data on Medicaid utilization from 2012 or 2011 cost reports from the most recent HCRIS database extract, the 2012 cost report data submitted to CMS by IHS hospitals, and the most recent available data on Medicare SSI utilization.

* * * * *

§ 412.108 [Amended]

■ 6. In § 412.108, paragraph (a)(1) introductory text and paragraph (c)(2)(iii) introductory text, remove the date ''April 1, 2015'' and add in its place the date ''October 1, 2017''.

■ 7. Section 412.503 is amended by adding a definition of ''Subsection (d) hospital'' in alphabetical order, to read as follows:

§ 412.503 Definitions.

* * * * *

Subsection (d) hospital means, for purposes of § 412.526, a hospital defined in section 1886(d)(1)(B) of the Social Security Act and includes any hospital that is located in Puerto Rico and that would be a subsection (d) hospital as defined in section 1886(d)(1)(B) of the Social Security Act if it were located in one of the 50 States.

* * * * *

■ 8. Section 412.507 is revised to read as follows:

§ 412.507 Limitation on charges to beneficiaries.

(a) *Prohibited charges.* Except as provided in paragraph (b) of this section, a long-term care hospital may not charge a beneficiary for any covered

services for which payment is made by Medicare, even if the hospital's costs of furnishing services to that beneficiary are greater than the amount the hospital is paid under the prospective payment system. If Medicare has paid at the full LTCH prospective payment system standard Federal payment rate, that payment applies to the hospital's costs for services furnished until the high-cost outlier threshold is met. If Medicare pays less than the full LTCH prospective payment system standard Federal payment rate and payment was not made at the site neutral payment rate, that payment only applies to the hospital's costs for those costs or days used to calculate the Medicare payment. If Medicare has paid at the full site neutral payment rate, that payment applies to the hospital's costs for services furnished until the high-cost outlier is met.

(b) *Permitted charges.* (1) A long-term care hospital that receives a payment at the full LTCH prospective payment system standard Federal payment rate or the site neutral payment rate may only charge the Medicare beneficiary for the applicable deductible and coinsurance amounts under §§ 409.82, 409.83, and 409.87 of this chapter, and for items and services as specified under § 489.20(a) of this chapter.

(2) A long-term care hospital that receives a payment at less than the full LTCH prospective payment system standard Federal payment rate for a short-stay outlier case, in accordance with § 412.529 (which would not include any discharge paid at the site neutral payment rate), may only charge the Medicare beneficiary for the applicable deductible and coinsurance amounts under §§ 409.82, 409.83, and 409.87 of this chapter, for items and services as specified under § 489.20(a) of this chapter, and for services provided during the stay that were not the basis for the short-stay adjusted payment.

■ 9. Section 412.517 is amended by adding paragraph (c) to read as follows:

§ 412.517 Revision of LTC–DRG group classifications and weighting factors.

* * * * *

(c) Beginning in FY 2016, the annual recalibration of the weighting factors described in paragraph (a) of this section is determined using long-term care hospital discharges described in § 412.522(a)(2) (or that would have been described in such section had the application of the site neutral payment rate been in effect at the time of the discharge).

■ 10. Section 412.521 is amended by revising paragraph (a)(2) to read as follows:

§ 412.521 Basis of payment.

(a) * * *

(2) Except as provided for in § 412.526, the amount of payment under the prospective payment system is based on either the long-term care hospital prospective payment system standard Federal payment rate established in accordance with § 412.523, including adjustments described in § 412.525, or the site neutral payment rate established in accordance with § 412.522(c), or, if applicable during a transition period, the blend of the LTCH PPS standard Federal payment rate and the applicable site neutral payment rate described in § 412.522(c)(3).

* * * * *

■ 11. Section 412.522 is added to read as follows:

§ 412.522 Application of site neutral payment rate.

(a) *General.* For discharges in cost reporting periods beginning on or after October 1, 2015—

(1) Except as provided for in paragraph (b) of this section, all discharges are paid based on the site neutral payment rate as determined under the provisions of paragraph (c) of this section.

(2) Discharges that meet the criteria for exclusion from site neutral payment rate specified in paragraph (b) of this section are paid based on the standard Federal prospective payment rate established under § 412.523.

(b) *Criteria for exclusion from the site neutral payment rate*—(1) *General.* A discharge that meets the following criteria is excluded from the site neutral payment rate specified under this section.

(i) The discharge from the long-term care hospital does not have a principal diagnosis relating to a psychiatric diagnosis or to rehabilitation based on the LTC–DRG assignment of the discharge under § 412.513; and

(ii) The admission to the long-term care hospital was immediately preceded by a discharge from a subsection (d) hospital and meets either the intensive care unit criterion specified in paragraph (b)(2) of this section or the ventilator criterion specified in paragraph (b)(3) of this section. In order for an admission to a long-term care hospital to be considered immediately preceded for purposes of this section, the patient discharged from the subsection (d) hospital must be directly admitted to the long-term care hospital.

(2) *Intensive care unit criterion.* In addition to meeting the requirements of paragraph (b)(1) of this section, the discharge from the subsection (d) hospital that immediately preceded the admission to the long-term care hospital includes at least 3 days in an intensive care unit (as defined in § 413.53(d) of this chapter), as evidenced by at least one of the revenue center codes on the claim for the discharge that indicate such services were provided for the requisite number of days during the stay.

(3) *Ventilator criterion.* In addition to meeting the requirements of paragraph (b)(1) of this section, the discharge from the long-term care hospital is assigned to a LTC–DRG based on the patient's receipt of ventilator services of at least 96 hours, as evidenced by the procedure code on the discharge bill indicating such services were provided during the stay.

(c) *Site neutral payment rate*—(1) *General.* Subject to the provisions of paragraph (c)(2) of this section, the site neutral payment rate is the lower of—

(i) The inpatient hospital prospective payment system comparable per diem amount determined under § 412.529(d)(4), including any applicable outlier payments specified in § 412.525(a); or

(ii) 100 percent of the estimated cost of the case determined under the provisions of § 412.529(d)(2). The provisions for cost-to-charge ratios at § 412.529(f)(4)(i) through (iii) apply to the calculation of the estimated cost of the case under this paragraph.

(2) *Adjustments.* CMS adjusts the payment rate determined under paragraph (c)(1) of this section to account for—

(i) Outlier payments, by applying a reduction factor equal to the estimated proportion of outlier payments under § 412.525(a) payable for discharges from a long-term care hospital described in paragraph (a)(1) of this section to total estimated payments under the long-term care hospital prospective payment system to discharges from a long-term care hospital described in paragraph (a)(1) of this section. The adjustment under this paragraph (c)(2)(i) does not include the portion of the blended payment rate described in paragraph (c)(3)(ii) of this section.

(ii) A 3-day or less interruption of a stay and a greater than 3-day interruption of a stay, as provided for in § 412.531. For purposes of the application of the provisions of § 412.531 to discharges from a long-term care hospital described under paragraph (a)(1) of this section, the long-term care hospital prospective payment system

standard Federal payment-related terms, such as ''LTC–DRG payment,'' ''full Federal LTC–DRG prospective payment,'' and ''Federal prospective payment,'' mean the site neutral payment rate calculated under paragraph (c) of this section.

(iii) The special payment provisions for long-term care hospitals-within-hospitals and satellite facilities of long-term care hospitals specified in § 412.534.

(iv) The special payment provisions for long-term care hospitals and satellite facilities of long-term care hospitals that discharged Medicare patients admitted from a hospital not located in the same building or on the same campus as the long-term care hospital or satellite facility of the long-term care hospital, as provided in § 412.536.

(3) *Transition.* For discharges in cost reporting periods beginning on or after October 1, 2015 and on or before September 30, 2017, payment for discharges under paragraph (c)(1) of this section are made using a blended payment rate, which is determined as—

(i) 50 percent of the site neutral payment rate amount for the discharge as determined under paragraph (c)(1) of this section; and

(ii) 50 percent of the standard Federal prospective payment rate amount for the discharge as determined under § 412.523.

(d) *Discharge payment percentage.* (1) For purposes of this section, the discharge payment percentage is a ratio, expressed as a percentage, of Medicare discharges that meet the criteria for exclusion from the site neutral payment rate as described under paragraph (a)(2) of this section to total Medicare discharges paid under this subpart during the cost reporting period.

(2) CMS will inform each long-term care hospital of its discharge payment percentage, as determined under paragraph (d)(1) of this section, for each cost reporting period beginning on or after October 1, 2015.

■ 12. Section 412.523 is amended by adding paragraph (c)(3)(xii) and revising paragraph (d)(1) to read as follows:

§ 412.523 Methodology for calculating the Federal prospective payment rates.

* * * * *

(c) * * *

(3) * * *

(xii) *For long-term care hospital prospective payment system fiscal year beginning October 1, 2015, and ending September 30, 2016.* The LTCH PPS standard Federal payment rate for the long-term care hospital prospective payment system beginning October 1, 2015, and ending September 30, 2016, is the standard Federal payment rate for the previous long-term care hospital prospective payment system fiscal year updated by 1.7 percent, and further adjusted, as appropriate, as described in paragraph (d) of this section.

* * * * *

(d) * * *

(1) *Outlier payments.* CMS adjusts the LTCH PPS standard Federal payment rate by a reduction factor of 8 percent, the estimated proportion of outlier payments under § 412.525(a) payable for discharges described in § 412.522(a)(2).

* * * * *

■ 13. Section 412.525 is amended by revising paragraphs (a)(1), (2), and (3) and adding paragraph (a)(5), to read as follows:

§ 412.525 Adjustments to the Federal prospective payment.

(a) * * *

(1) CMS provides for an additional payment to a long-term care hospital if its estimated costs for a patient exceed the applicable long-term care hospital prospective payment system payment plus an applicable fixed-loss amount. For each long-term care hospital prospective payment system payment year, CMS annually establishes a fixed-loss amount that is the maximum loss that a long-term care hospital would incur under the long-term care hospital prospective payment system for a case with unusually high costs before receiving an additional payment.

(2) The fixed-loss amount for discharges from a long-term care hospital described under § 412.522(a)(2) is determined for the long-term care hospital prospective payment system payment year, using the LTC–DRG relative weights that are in effect at the start of the applicable long-term care hospital prospective payment system payment year.

(3) The additional payment equals 80 percent of the difference between the estimated cost of the patient's care (determined by multiplying the hospital-specific cost-to-charge ratio by the Medicare allowable covered charge) and the sum of the applicable long-term care hospital prospective payment system payment and the applicable fixed-loss amount.

* * * * *

(5) For purposes of this paragraph (a)—

(i) *Applicable long-term care hospital prospective payment system payment* means—

(A) The site neutral payment rate established under § 412.522(c) for long-term care hospital discharges described under § 412.522(a)(1);

(B) The standard Federal prospective payment rates established under § 412.523 for long-term care hospital discharges described under § 412.522(a)(2); or

(C) The standard Federal prospective payment rates established under § 412.523 for discharges occurring on or after October 1, 2015, in a long-term care hospital cost reporting period that begins before October 1, 2015.

(ii) *Applicable fixed-loss amount* means—

(A) For long-term care hospital discharges described under § 412.522(a)(1), the fixed-loss amount established for such cases as provided at § 412.522(c)(2)(i);

(B) For long-term care hospital discharges described under § 412.522(a)(2), the fixed-loss amount established for such cases as provided at § 412.523(e); or

(C) For discharges occurring on or after October 1, 2015 in a long-term care hospital cost reporting period that begins before October 1, 2015, the fixed-loss amount payable to discharges described under § 412.522(a)(2) as set forth in paragraph (a)(5)(ii)(B) of this section.

* * * * *

■ 14. Section § 412.560 is added to subpart O to read as follows:

§ 412.560 Participation, data submission, and other requirements under the Long-Term Care Hospital Quality Reporting (LTCHQR) Program.

(a) *Participation in the LTCHQR Program.* A long-term-care hospital must begin submitting quality data under the LTCHQR Program by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter.

(b) *Submission of data requirements and payment impact.* (1) Except as provided in paragraph (c) of this section, a long-term care hospital must submit to CMS data on measures specified under sections 1886(m)(5)(D), 1899B(c)(1), and 1899B(d)(1) of the Act, as applicable, in a form and manner, and at a time, specified by CMS.

(2) A long-term care hospital that does not submit data in accordance with sections 1886(m)(5)(C) and 1886(m)(5)(F) of the Act with respect to a given fiscal year will have its annual update to the standard Federal rate for discharges for the long-term care hospital during the fiscal year reduced by 2 percentage points.

(c) *Exception and extension request requirements.* Upon request by a long-term care hospital, CMS may grant an exception or extension with respect to

the quality data reporting requirements, for one or more quarters, in the event of certain extraordinary circumstances beyond the control of the long-term care hospital, subject to the following:

(1) A long-term care hospital that wishes to request an exception or extension with respect to quality data reporting requirements must submit its request to CMS within 30 days of the date that the extraordinary circumstances occurred.

(2) A long-term care hospital must submit its request for an exception or extension to CMS via email. Email is the only form that may be used to submit to CMS a request for an exception or an extension.

(3) The email request for an exception or extension must contain the following information:

(i) The CCN for the long-term care hospital.

(ii) The business name of the long-term care hospital.

(iii) The business address of the long-term care hospital.

(iv) Contact information for the long-term care hospital's chief executive officer or designated personnel, including the name, telephone number, title, email address, and physical mailing address. (The mailing address may not be a post office box.)

(v) A statement of the reason for the request for the exception or extension.

(vi) Evidence of the impact of the extraordinary circumstances, including, but not limited to, photographs, newspaper articles, and other media.

(vii) The date on which the long-term care hospital will be able to again submit quality data under the LTCHQR Program and a justification for the proposed date.

(4) CMS may grant an exception or extension to a long-term care hospital that has not been requested by the long-term care hospital if CMS determines that—

(i) An extraordinary circumstance affects an entire region or locale; or

(ii) A systemic problem with one of CMS' data collection systems directly affected the ability of the long-term care hospital to submit quality data.

(d) *Reconsiderations of noncompliance decisions*—(1) *Written notification of noncompliance decision.* CMS will send a long-term care hospital written notification of a decision of noncompliance with the quality data reporting requirements for a particular fiscal year. CMS also will use the Quality Improvement and Evaluation system (QIES) Assessment Submission and Processing (ASAP) System to provide notification of noncompliance to the long-term care hospital.

(2) *Request for reconsideration of noncompliance decision.* A long-term care hospital may request a reconsideration of CMS' decision of noncompliance no later than 30 calendar days from the date of the written notification of noncompliance. The reconsideration request by the long-term care hospital must be submitted to CMS via email and must contain the following information:

(i) The CCN for the long-term care hospital.

(ii) The business name of the long-term care hospital.

(iii) The business address of the long-term care hospital.

(iv) Contact information for the long-term care hospital's chief executive officer or designated personnel, including each individual's name, title, email address, telephone number, and physical mailing address. (The physical address may not be a post office box.)

(v) CMS's identified reason(s) for the noncompliance decision from the written notification of noncompliance.

(vi) The reason for requesting reconsideration of CMS' noncompliance decision.

(vii) Accompanying documentation that demonstrates compliance of the long-term care hospital with the quality reporting requirements. This documentation must be submitted electronically at the same time as the reconsideration request as an attachment to the email. Any reconsideration request that fails to provide sufficient evidence of compliance will not be reviewed.

(3) *CMS decision on reconsideration request.* CMS will notify the long-term care hospital, in writing, of its final decision regarding any reconsideration request. CMS also will use the QIES ASAP System to provide notice of its final decision on the reconsideration request.

(e) *Appeals of reconsideration requests.* A long-term care hospital that is dissatisfied with a decision made by CMS on its reconsideration request may file an appeal with the Provider Reimbursement Review Board under Part 405, Subpart R, of this chapter.

Dated: July 27, 2015.

Andrew M. Slavitt,

Acting Administrator, Centers for Medicare & Medicaid Services.

Dated: July 29, 2015.

Sylvia M. Burwell,

Secretary, Department of Health and Human Services.

Note: The following Addendum and Appendixes will not appear in the Code of Federal Regulations.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective With Cost Reporting Periods Beginning On or After October 1, 2015, and Payment Rates for LTCHs Effective for Discharges Occurring On or After October 1, 2015

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2016 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2016. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that are effective for cost reporting periods beginning on or after October 1, 2015.

In addition, we are setting forth a description of the methods and data we used to determine the standard Federal rate that will be applicable to Medicare LTCHs for FY 2016.

In general, except for SCHs, MDHs, and hospitals located in Puerto Rico, for FY 2016, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (including, as discussed in section IV.D. of the preamble of this final rule, uncompensated care payments under section 1886(r)(2) of the Act); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge.

We note that section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16,

2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017).

Under section 1886(d)(5)(G) of the Act, MDHs historically were paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever was higher. However, section 5003(a)(1) of Public Law 109–171 extended and modified the MDH special payment provision that was previously set to expire on October 1, 2006, to include discharges occurring on or after October 1, 2006, but before October 1, 2011. Under section 5003(b) of Public Law 109–171, if the change results in an increase to an MDH's target amount, we must rebase an MDH's hospital-specific rates based on its FY 2002 cost report. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital-specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor.

For hospitals located in Puerto Rico, the payment per discharge is based on the sum of 25 percent of an updated Puerto Rico-specific rate based on average costs per case of Puerto Rico hospitals for the base year and 75 percent of the Federal national rate. (We refer readers to section II.D.2. of this Addendum for a complete description.)

As discussed in section II. of this Addendum, we are making changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2016. In section III. of this Addendum, we discuss our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2016. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2016. In section V. of this Addendum, we discuss policy changes for determining the standard Federal rate for LTCHs paid under the LTCH PPS for FY 2016. The tables to which we refer in the preamble of this final rule are listed in section VI. of this Addendum and are available via the Internet on the CMS Web site.

II. Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2016

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under 42 CFR 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under 42 CFR 412.211 and 412.212. Below we discuss the factors we are using for determining the prospective payment rates for FY 2016.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts and Puerto Rico-specific standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2016, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section IV.A. of the preamble of this final rule for a complete discussion on the FY 2016 inpatient hospital update. Below is a table with these four options:

FY 2016	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase	2.4	2.4	2.4	2.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.6	−0.6
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−1.2	0.0	−1.2
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.5	−0.5	−0.5	−0.5
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	−0.2	−0.2	−0.2	−0.2
Applicable Percentage Increase Applied to Standardized Amount	1.7	0.5	1.1	−0.1

- An update of 1.7 percent to the Puerto Rico-specific standardized amount (that is, the FY 2016 estimate of the market basket rate-of-increase of 2.4 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point), in accordance with section 1886(d)(9)(C)(i) of the Act, as amended by section 401(c) of Public Law 108–173, which sets the update to the Puerto Rico-specific standardized amount equal to the applicable percentage increase set forth under section 1886(b)(3)(B)(i) of the Act.
- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to ensure the wage index changes are budget neutral, as

provided for under section 1886(d)(3)(E)(i) of the Act. We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62 percent labor-related share in certain circumstances) had not been enacted.

- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2015 budget neutrality factor and applying a revised factor.
- As discussed below and in section III.G. of the preamble of this final rule, an adjustment to offset the cost of the 3-year hold harmless transitional wage index provisions provided by CMS as a result of the implementation of the new OMB labor market area delineations (beginning with FY 2015).
- An adjustment to ensure the effects of the rural community hospital demonstration program required under section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years, are budget neutral as required under section 410A(c)(2) of Public Law 108–173.
- An adjustment to remove the FY 2015 outlier offset and apply an offset for FY 2016, as provided for under section 1886(d)(3)(B) of the Act.
- As discussed below and in section II.D. of the preamble of this final rule, a recoupment to meet the requirements of section 631 of the ATRA to adjust the standardized amount to offset the estimated amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

For FY 2016, consistent with current law, we are applying the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State level rural floor budget neutrality adjustment to the wage index, we are applying a uniform, national budget neutrality adjustment to the FY 2016 wage index for the rural floor. We note that, in section III.G.2.b. of the preamble to this final rule, we are extending the imputed floor policy (both the original methodology and alternative methodology) for another year, through September 30, 2016. Therefore, for FY 2016, in this final rule, we are continuing to include the imputed floor (calculated under the original and alternative methodologies) in calculating the uniform, national rural floor budget neutrality adjustment, which are reflected in the FY 2016 wage index.

A. Calculation of the Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. For Puerto Rico hospitals, the Puerto Rico-specific standardized amount is based on per discharge averages of adjusted target amounts from a base period (section 1886(d)(9)(B)(i) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d)(9) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS. The September 1, 1987 final rule (52 FR 33043 and 33066) contains a detailed explanation of how the target amounts were determined and how they are used in computing the Puerto Rico rates.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2016, we are continuing to use the national and Puerto Rico-specific labor-related and nonlabor-related shares (which are based on the FY 2010-based hospital market basket) that were used in FY 2015. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the ''labor-related share.'' For FY 2016, as discussed in section III. of the preamble of this final rule, we are continuing to use a labor-related share of 69.6 percent for the national standardized amounts, and 63.2 percent for the Puerto Rico-specific standardized amount, if the hospital has a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals whose wage index values are less than or equal to 1.0000. For all IPPS hospitals whose wage indexes are greater than 1.0000, we are applying the wage index to a labor-related share of 69.6 percent of the national standardized amount.

For FY 2016, all Puerto Rico hospitals have a wage index value that is less than 1.0000 because the average hourly rate of every hospital in Puerto Rico divided by the national average hourly rate (the sum of all salaries and hours for all hospitals in the 50 United States and Puerto Rico) results in a wage index that is below 1.0000. However, when we divide the average hourly rate of every hospital located in Puerto Rico by the Puerto Rico-specific national average hourly rate (the sum of all salaries and hours for all hospitals located only in Puerto Rico), the result is a Puerto Rico-specific wage index value for some hospitals that is either above, or below 1.0000, depending on the hospital's location within Puerto Rico. Therefore, for hospitals located in Puerto Rico, we are applying a labor-related share of 63.2 percent if its Puerto Rico-specific wage index is greater than 1.0000. For hospitals located in Puerto Rico whose Puerto Rico-specific wage index values are less than or equal to 1.0000, we are applying a labor share of 62 percent.

The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the Internet on the CMS Web site.

2. Computing the National Average Standardized Amount and Puerto Rico-Specific Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. Section 1886(d)(9)(A)(ii)(II) of the Act equalizes the Puerto Rico-specific urban and rural area rates. Accordingly, we are calculating the FY 2016 national average standardized amount and Puerto Rico-specific standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount and Puerto Rico-Specific Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, in this final rule, we are using the revised and rebased FY 2010-based IPPS operating and capital market baskets for FY 2016 (which replaced the FY 2006-based IPPS operating and capital market baskets in FY 2014). As discussed in section IV.A. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are reducing the FY 2016 applicable percentage increase (which is based on IHS Global Insight, Inc.'s (IGI's) second quarter 2015 forecast of the FY 2010-based IPPS market basket) by the MFP adjustment (the 10-year moving average of MFP for the period ending FY 2016) of 0.5 percentage point, which is calculated based on IGI's second quarter 2015 forecast.

In addition, in accordance with section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are further updating the standardized amount for FY 2016 by the estimated market basket percentage increase less 0.2 percentage point for hospitals in all areas. Sections 1886(b)(3)(B)(xi) and (xii) of the Act, as added and amended by sections 3401(a) and 10319(a) of the Affordable Care Act, further state that these adjustments may result in the applicable percentage increase being less than zero. The percentage increase in the market basket reflects the average change in the price of goods and services comprising routine, ancillary, and special care unit hospital inpatient services.

Based on IGI's 2015 second quarter forecast of the hospital market basket increase (as discussed in Appendix B of this final rule), the most recent forecast of the hospital market basket increase for FY 2016 is 2.4 percent. As discussed above, for FY 2016, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that could be applied to the standardized amount. We refer readers to section IV.A. of the preamble of this final rule for a complete discussion on the FY 2016 inpatient hospital update to the standardized amount. We also refer readers to the table above for the four possible applicable percentage increases that are applied to update the national standardized amount. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the Internet on the CMS Web site reflect these differential amounts.

Section 401(c) of Public Law 108–173 amended section 1886(d)(9)(C)(i) of the Act and states that, for discharges occurring in a fiscal year (beginning with FY 2004), the Secretary shall compute an average standardized amount for hospitals located in any area of Puerto Rico that is equal to the average standardized amount computed under subclause (I) for FY 2003 for hospitals in a large urban area (or, beginning with FY 2005, for all hospitals in the previous fiscal year) increased by the applicable percentage increase under subsection (b)(3)(B) for the fiscal year involved. Therefore, the update to the Puerto Rico-specific operating standardized amount is subject to the applicable percentage increase set forth under section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act (that is, the same update factor as for all other hospitals subject to the IPPS). Accordingly, we are establishing an applicable percentage increase to the Puerto Rico-specific standardized amount of 1.7 percent for FY 2016.

Although the update factors for FY 2016 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2016 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our proposed recommendations in the **Federal Register** for public comment. Our recommendation on the update factors is set forth in Appendix B of this final rule.

4. Other Adjustments to the Average Standardized Amount

As in the past, we are adjusting the FY 2016 standardized amount to remove the effects of the FY 2015 geographic reclassifications and outlier payments before applying the FY 2016 updates. We then apply budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on finalized FY 2016 payment policies.

We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

In order to appropriately estimate aggregate payments in our modeling, we make several inclusions and exclusions so that the appropriate universe of claims and charges are included. We discuss IME Medicare Advantage payment amounts, fee-for-service only claims, and charges for anti-hemophilic blood factor and organ acquisition below.

Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total ''operating DRG payments,'' which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

In addition, consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is a fee-for-service claim).

Finally, consistent with our methodology established in the FY 2011

IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field for the budget neutrality adjustments. We also removed organ acquisition charges from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS.

The Bundled Payments for Care Improvement (BPCI) initiative, developed under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of four broadly defined models of care, which link payments for multiple services beneficiaries receive during an episode of care. Under the BPCI initiative, organizations enter into payment arrangements that include financial and performance accountability for episodes of care. On January 31, 2013, CMS announced the first set of health care organizations selected to participate in the BPCI initiative. Additional organizations were selected in 2014. For additional information on the BPCI initiative, we refer readers to the CMS Center for Medicare and Medicaid Innovation's Web site at: *http://innovation.cms.gov/initiatives/Bundled-Payments/index.html*.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343), for FY 2013 and subsequent fiscal years, we finalized a methodology to treat hospitals that participate in the BPCI initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process (which includes recalibration of the MS–DRG relative weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis) without regard to a hospital's participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative). For FY 2016, we are continuing to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations.

The Affordable Care Act established the Hospital Readmissions Reduction Program and the Hospital VBP Program which adjust payments to certain IPPS hospitals beginning with discharges on or after October 1, 2012. Because the adjustments made under these programs affect the estimation of aggregate IPPS payments, in this final rule, consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for these programs within our budget neutrality calculations. We discuss the treatment of these two programs in the context of budget neutrality adjustments below.

Section 1886(q) of the Act establishes the ''Hospital Readmissions Reduction Program'' effective for discharges from an ''applicable hospital'' beginning on or after October 1, 2012, under which payments to those hospitals under section 1886(d) of the Act are reduced to account for certain excess readmissions. Under the Hospital Readmissions Reduction Program, for discharges beginning on October 1, 2012 discharges from an ''applicable hospital'' are paid at an amount equal to the product of the ''base operating DRG payment amount'' and an ''adjustment factor'' that accounts for excess readmissions for the hospital for the fiscal year plus any applicable add-on payments. We refer readers to section IV.E. of the preamble of this final rule for full details of our FY 2016 policy changes to the Hospital Readmissions Reduction Program. We also note that the Hospital Readmissions Reduction Program provided for under section 1886(q) of the Act is not budget neutral.

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which, for discharges beginning on October 1, 2012, value-based incentive payments are made in a fiscal year to eligible subsection (d) hospitals based on their performance on measures established for a performance period for that fiscal year. As specified under section 1886(o)(7)(B)(i) of the Act, these value-based incentive payments are funded by a reduction applied to each eligible hospital's base-operating DRG payment amount, for each discharge occurring in the fiscal year. As required by section 1886(o)(7)(A) of the Act, the total amount of allocated funds available for value-based incentive payments with respect to a fiscal year is equal to the total amount of base-operating DRG payment reductions, as estimated by the Secretary. In a given fiscal year, hospitals may earn a value-based incentive payment amount for a fiscal year that is greater than, equal to, or less than the reduction amount, based on their performance on quality measures under the Hospital VBP Program. Thus, the Hospital VBP Program is estimated to have no net effect on overall payments. We refer readers to section IV.F. of the preamble of this final rule for details regarding the Hospital VBP Program.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations. For example, when we calculate the budget neutrality factor for MS–DRG reclassification and recalibration of the relative weights, we compare aggregate payments estimated using the prior year's GROUPER and relative weights to estimated payments using the new GROUPER and relative weights. (We refer readers to section II.A.4.a. of this Addendum for details.) Other factors, such as the DSH and IME payment adjustments, are the same on both sides of the comparison because we are only seeking to ensure that aggregate payments do not increase or decrease as a result of the changes of MS–DRG reclassification and recalibration.

In order to properly determine aggregate payments on each side of the comparison, as we did for FY 2014 and FY 2015, for FY 2016 and subsequent years, we are continuing to apply the hospital readmissions payment adjustment and the hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). That is, we are applying the readmissions payment adjustment factor and the hospital VBP payment adjustment factor on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

For the purpose of calculating the FY 2016 readmissions payment adjustment factors, we are using excess readmission ratios and aggregate payments for excess readmissions based on admissions from the prior fiscal year's applicable period because hospitals have had the opportunity to review and correct these data before the data were made public under the policy we adopted regarding the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act. For FY 2016, in this final rule, we are calculating the readmissions payment adjustment factors using excess readmission ratios and aggregate payments for excess readmissions based on admissions from the finalized applicable period for FY 2016 as hospitals have had the opportunity to review and correct these data under our

policy regarding the reporting of hospital-specific readmission rates consistent with section 1886(q)(6) of the Act. We discuss our policy regarding the reporting of hospital-specific readmission rates for FY 2016 in section IV.E.3.f. of the preamble of this final rule. (For additional information on our general policy for the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53399 through 53400).)

In addition, for FY 2016, in this final rule, for the purpose of modeling aggregate payments when determining all budget neutrality factors, we are using proxy hospital VBP payment adjustment factors for FY 2016 that are based on data from a historical period because hospitals have not yet had an opportunity to review and submit corrections for their data from the FY 2016 performance period. (For additional information on our policy regarding the review and correction of hospital-specific measure rates under the Hospital VBP Program, consistent with section 1886(o)(10)(A)(ii) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53578 through 53581), the CY 2012 OPPS/ASC final rule with comment period (76 FR 74544 through 74547), and the Hospital Inpatient VBP final rule (76 FR 26534 through 26536).)

The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments will receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured and an additional statutory adjustment, will be available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2016 (as we did for FY 2014 and FY 2015), we are including estimated empirically justified Medicare DSH payments that will be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we consider estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

We note that, when calculating total payments for budget neutrality, to determine total payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section IV.D. of the preamble to this final rule and below, we are continuing the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we include estimated uncompensated care payments in this comparison.

Similarly, for MDHs, as discussed in section IV. of the preamble to this final rule, when computing payments under the Federal national rate plus 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate, we are continuing to take into consideration uncompensated care payments in the computation of payments under the Federal rate and the hospital-specific rate for MDHs.

In addition, we are including an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2016. We did not include this adjustment for FY 2015 because that was the first year hospitals experienced a reduction to their applicable percentage increase due to whether they are meaningful EHR users and data were not available at that time. However, we believe it is appropriate to include this adjustment for FY 2016 because FY 2016 is the second year for which hospitals will experience this reduction and data on the prior year's performance are now available. Payments for hospitals are estimated based on the applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2016.

a. Recalibration of MS–DRG Relative Weights and Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.H. of the preamble of this final rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage

indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2016, we are adjusting 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.E. of the preamble of this final rule.

For FY 2016, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the Puerto Rico standardized amount and the hospital-specific rates, we used FY 2014 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2015 labor-related share percentages, the FY 2015 relative weights, and the FY 2015 pre-reclassified wage data, and applied the FY 2016 hospital readmissions payment adjustments and estimated FY 2016 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2015 labor-related share percentages, the FY 2016 relative weights, and the FY 2015 pre-reclassified wage data, and applied the same FY 2016 hospital readmissions payment adjustments and estimated FY 2016 hospital VBP payment adjustments applied above.

Based on this comparison, we computed a budget neutrality adjustment factor equal to 0.998399. As discussed in section IV. of this Addendum, we also are applying the MS–DRG reclassification and recalibration budget neutrality factor of 0.998399 to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2015.

In order to meet the statutory requirements that we do not take into account the labor-related share of 62 percent when computing wage index budget neutrality adjustment factor, it was necessary to use a three-step process to comply with the requirements that MS–DRG reclassification and recalibration of the relative weights and the updated wage index and labor-related share have no effect on aggregate payments for IPPS hospitals. Under the first step, we determined an MS–DRG reclassification and recalibration budget neutrality adjustment factor of 0.998399 (by using the same methodology described above to determine the MS–DRG reclassification and recalibration budget neutrality factor for the Puerto Rico standardized amount and hospital-specific rates). Under the second step, to compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes we used FY 2014 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2016 relative weights and the FY 2015 pre-reclassified wage indexes, applied the FY 2015 labor-related share of 69.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the FY 2016 hospital readmissions payment adjustment and the estimated FY 2016 hospital VBP payment adjustment; and
- Aggregate payments using the FY 2016 relative weights and the FY 2016 pre-reclassified wage indexes, applied the labor-related share for FY 2016 of 69.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same FY 2016 hospital readmissions payment adjustments and estimated FY 2016 hospital VBP payment adjustments applied above.

In addition, we applied the MS–DRG reclassification and recalibration budget neutrality adjustment factor (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2015 to FY 2016. By applying this methodology, we determined a budget neutrality adjustment factor of 0.998749 for changes to the wage index. Finally, we multiplied the MS–DRG reclassification and recalibration budget neutrality adjustment factor of 0.998399 (derived in the first step) by the budget neutrality adjustment factor of 0.998749 for changes to the wage index (derived in the second step) to determine the MS–DRG reclassification and recalibration and updated wage index budget neutrality adjustment factor of 0.997150.

b. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2016, we used FY 2014 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2016 labor-related share percentages, FY 2016 relative weights, and FY 2016 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the FY 2016 hospital readmissions payment adjustments and the estimated FY 2016 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2016 labor-related share percentages, FY 2016 relative weights, and FY 2016 wage data after such reclassifications, and applied the same FY 2016 hospital readmissions payment adjustments and the estimated FY 2016 hospital VBP payment adjustments applied above.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this final rule, which is available via the Internet on the CMS Web site. This table reflects reclassification crosswalks for FY 2016, and applies the policies explained in section III. of the preamble to this final rule. Based on these simulations, we calculated a budget neutrality adjustment factor of 0.987905 to ensure that the effects of these provisions are budget neutral, consistent with the statute.

The FY 2016 budget neutrality adjustment factor was applied to the standardized amount after removing the effects of the FY 2015 budget neutrality adjustment factor. We note that the FY 2016 budget neutrality adjustment reflects FY 2016 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of the final rule.

c. Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) and the imputed floor under § 412.64(h)(4) are equal to the aggregate prospective payments that would have

been made in the absence of such provisions. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.H. of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural and imputed floor is a national adjustment to the wage index.

As noted above and as discussed in section III.H.2. of the preamble of this final rule, in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51594), we extended the imputed floor calculated under the original methodology through FY 2013. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53368 through 53369), we established an alternative methodology for calculating the imputed floor and established a policy that the minimum wage index value for an all-urban State would be the higher of the value determined under the original methodology or the value computed using the alternative methodology. Consistent with the methodology for treating the imputed floor, similar to the methodology we used in the FY 2013 IPPS/LTCH PPS final rule, we included this alternative methodology for computing the imputed floor index in the calculation of the uniform, national rural floor budget neutrality adjustment for FY 2014. For FY 2015, as discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 49969 through 49971), we extended the imputed floor for another year using the higher of the value determined under the original methodology or the alternative methodology. As discussed in section III.H.2. of the preamble of this final rule, we are extending the imputed floor using the higher of the value determined under the original methodology or the alternative methodology for FY 2016. Therefore, in order to ensure that aggregate payments to hospitals are not affected, similar to prior years, we follow our policy of including the imputed floor in the rural floor budget neutrality adjustment to the wage index.

Under the new OMB labor market area delineations adopted beginning with the FY 2015 wage indexes, New Jersey, Rhode Island, and Delaware are all-urban States. Therefore, for FY 2016, the imputed floor was applied to the wage index for hospitals located in these three States.

Similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), for FY 2016, we are calculating a national rural Puerto Rico wage index (used to adjust the labor-related share of the national standardized amount for hospitals located in Puerto Rico which receive 75 percent of the national standardized amount) and a rural Puerto Rico-specific wage index (which is used to adjust the labor-related share of the Puerto Rico-specific standardized amount for hospitals located in Puerto Rico that receive 25 percent of the Puerto Rico-specific standardized amount). Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2016 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous (share a border with) to the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the new OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the FY 2016 rural Puerto Rico wage index is calculated based on the average of the FY 2016 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660), San German, PR (CBSA 41900) and San Juan-Carolina-Caguas, PR (CBSA 41980).

To calculate the national rural floor and imputed floor budget neutrality adjustment factors and the Puerto Rico-specific rural floor budget neutrality adjustment factor, we used FY 2014 discharge data to simulate payments and the post-reclassified national and Puerto Rico-specific wage indexes and compared the following:

- The national and Puerto Rico-specific simulated payments without the national rural floor and imputed floor and Puerto Rico-specific rural floor applied; and
- The national and Puerto Rico-specific simulated payments with the national rural floor and imputed floor and Puerto Rico-specific rural floor applied.

Based on this comparison, we determined a national rural budget neutrality adjustment factor of 0.990298 and the Puerto Rico-specific budget neutrality adjustment factor of 0.987646. The national adjustment was applied to the national wage indexes to produce a national rural floor budget neutral wage index and the Puerto Rico-specific adjustment was applied to the Puerto Rico-specific wage indexes to produce a Puerto Rico-specific rural floor budget neutral wage index.

d. Wage Index Transition Budget Neutrality

As discussed in section III.G. of the preamble of this final rule, in the past, we have provided for transition periods when adopting changes that have significant payment implications, particularly large negative impacts.

Similar to FY 2005, for FY 2015, we determined that the transition to using the new OMB labor market area delineations would have the largest impact on hospitals that were located in an urban county that became rural under the new OMB delineations or hospitals deemed urban where the urban area became rural under the new OMB delineations. To alleviate the decreased payments associated with having a rural wage index, in calculating the area wage index, similar to the transition provided in the FY 2005 IPPS final rule, we finalized a policy to generally assign these counties the urban wage index value of the CBSA to which they are physically located in for FY 2014 for FYs 2015, 2016, and 2017. Fiscal year 2016 is the second year of this 3-year transition policy. We note that the 1-year blended wage index transitional policy for all hospitals that would experience any decrease in their wage index value expires in FY 2015.

As discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50372 through 50373), in the past, CMS has budget neutralized transitional wage indexes. We stated that because we established a policy that allows for the application of a transitional wage index only when it benefits the hospital, we believe that it would be appropriate to ensure that such a transitional policy does not increase aggregate Medicare payments beyond the payments that would be made had we simply adopted the OMB delineations without any transitional provisions. Therefore, as we did for FY 2015, for FY 2016, we are using our exceptions and adjustments authority under section 1886(d)(5)(I)(i) of the Act to make an adjustment to the national and Puerto Rico-specific standardized amounts to ensure that total payments for the effect of the 3-year transitional wage index provisions will equal what payments would have been if we had fully adopted the new OMB delineations without providing these transitional provisions. To calculate the transitional wage index budget neutrality factor for FY 2016, we used FY 2014 discharge data to simulate payments and compared the following:

- Aggregate payments using the OMB delineations for FY 2016, the FY 2016 relative weights, the FY 2016 wage data after such reclassifications under

sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, application of the rural floor budget neutrality adjustment factor to the wage index, and application of the FY 2016 hospital readmissions payment adjustments and the estimated FY 2016 hospital VBP payment adjustments; and

• Aggregate payments using the OMB delineations for FY 2016, the FY 2016 relative weights, the FY 2016 wage data after such reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, application of the rural floor budget neutrality adjustment factor to the wage index, application of the 3-year transitional wage indexes, and application of the same FY 2016 hospital readmissions payment adjustments and the estimated FY 2016 hospital VBP payment adjustments applied above.

Based on these simulations, we calculated a budget neutrality adjustment factor of 0.999996. Therefore, for FY 2016, we applied a transitional wage index budget neutrality adjustment factor of 0.999996 to the national average and Puerto Rico-specific standardized amounts to ensure that the effects of these transitional wage indexes are budget neutral.

We note that the budget neutrality adjustment factor calculated above is based on the increase in payments in FY 2016 that would result from the second year of the 3-year transitional wage index policies. Therefore, we applied this budget neutrality adjustment factor as a one-time adjustment to the FY 2016 national and Puerto Rico-specific standardized amounts in order to offset the increase in payments in FY 2016 as a result of this second year of the 3-year transitional wage index. For subsequent fiscal years, we will not take into consideration the adjustment factor applied to the national and Puerto Rico-specific standardized amounts in the previous fiscal year's update when calculating the current fiscal year transitional wage index budget neutrality adjustment factor (that is, this adjustment will not be applied cumulatively).

e. Case-Mix Budget Neutrality Adjustment

(1) Background

Below we summarize the recoupment adjustment to the FY 2016 payment rates, as required by section 631 of ATRA, to account for the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. We refer readers to section II.D. of the preamble of this final rule for a complete discussion regarding our policies for FY 2016 in this final rule and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

(2) Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA) to the National Standardized Amount

Section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment totaling $11 billion by FY 2017. Our actuaries estimated that if CMS were to fully account for the $11 billion recoupment required by section 631 of the ATRA in FY 2014, a one-time −9.3 percent adjustment to the standardized amount would be necessary. It is often our practice to delay or phase-in payment rate adjustments over more than 1 year, in order to moderate the effect on payment rates in any 1 year. Therefore, consistent with the policies that we have adopted in many similar cases, for FY 2014 and FY 2015, we applied a −0.8 percent adjustment to the standardized amount. For FY 2016, as we proposed, we are applying a −0.8 percent adjustment to the standardized amount. We note that, as section 631 of the ATRA instructs the Secretary to make a recoupment adjustment only to the standardized amount, this adjustment does not apply to the Puerto Rico-specific standardized amount and hospital-specific payment rates.

f. Rural Community Hospital Demonstration Program Adjustment

As discussed in section IV.L. of the preamble of this final rule, section 410A of Public Law 108–173 originally required the Secretary to establish a demonstration program that modifies reimbursement for inpatient services for up to 15 small rural hospitals. Section 410A(c)(2) of Public Law 108–173 requires that, in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented.

Sections 3123 and 10313 of the Affordable Care Act extended the demonstration program for an additional 5-year period, and allowed up to 30 hospitals to participate in 20 States with low population densities determined by the Secretary. (In determining which States to include in the expansion, the Secretary is required to use the same criteria and data that the Secretary used to determine the States for purposes of the initial 5-year period.) In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50141 through 50145), in order to achieve budget neutrality, we adjusted the national IPPS payment rates by an amount sufficient to account for the added costs of this demonstration program as described in section IV.L. of that final rule. In other words, we applied budget neutrality across the payment system as a whole rather than merely across the participants of this demonstration program, consistent with past practice. We stated that we believe the language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented, but does not identify the range across which aggregate payments must be held equal.

For FY 2016, we are calculating a budget neutrality offset amount, according to the methodology set forth in section IV.I. of the preamble of this final rule, to account for the estimated additional costs of the demonstration program for FY 2016. In addition, as explained in section IV.I. of the preamble of this final rule, we are subtracting from this budget neutrality offset amount the following: (1) The amount by which the budget neutrality offset that was finalized in the FY 2009 IPPS final rule exceeded the actual costs of the demonstration for FY 2009 (as shown in finalized cost reports for hospitals that participated in FY 2009 and had cost reporting periods beginning in FY 2009), and (2) the amount by which the budget neutrality offset that was finalized for FY 2010 to account for the demonstration costs in FY 2010 (as set forth in the FY 2010 and 2011 IPPS final rules) exceeded the actual costs of the demonstration for FY 2010 (as shown in finalized cost reports for hospitals that participated in FY 2010 and had cost reporting periods beginning in FY 2010). The total budget neutrality offset amount for which the adjustment to the FY 2016 IPPS rates is calculated is $12,835,618. Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2016, we have computed a factor of 0.999861 for the rural community hospital

demonstration program budget neutrality adjustment that will be applied to the IPPS standard Federal payment rate.

g. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for ''outlier'' cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the DRG, any IME and DSH payments, any new technology add-on payments, and the ''outlier threshold'' or ''fixed-loss'' amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the DRG, any IME and DSH payments, any new technology add-on payments, and the outlier threshold as the outlier ''fixed-loss cost threshold.'' To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital's CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2016 is 80 percent, the same marginal cost factor we have used since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the 5.1 percent target by dividing the total operating outlier payments by the total operating DRG payments plus outlier payments. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. Similarly, section 1886(d)(9)(B)(iv) of the Act requires the Secretary to reduce the average standardized amount applicable to hospitals located in Puerto Rico to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.html.*

(1) FY 2016 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for detailed discussion of the changes.

For FY 2016, we proposed to continue to use the same methodology that we used in FY 2015. As we have done in the past, to calculate the proposed FY 2016 outlier threshold, we simulated payments by applying proposed FY 2016 payment rates and policies using cases from the FY 2014 MedPAR file. Therefore, in order to determine the proposed FY 2016 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2014 to FY 2016. As discussed in the FY 2014 IPPS/LTCH PPS final rule, we believe a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case because our prior methodology used a 6-month measure, which inherently uses fewer claims than a 1-year measure and makes it more susceptible to fluctuations in the average charge per case as a result of any significant charge increases or decreases by hospitals.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50375), we stated that commenters were concerned that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule. In response to those comments, we stated that, consistent with our longstanding policy since FY 2005, we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. We also stated we would consider how best to provide additional information on the charge inflation factor for future years. In response to those comments, in the proposed rule, we provided the following table that displays covered charges and cases by quarter in the periods used to calculate the charge inflation factor.

Quarter	Covered charges (January 1, 2013, through December 31, 2013)	Cases (January 1, 2013, through December 31, 2013)	Covered charges (January 1, 2014, through December 31, 2014)	Cases (January 1, 2014, through December 31, 2014)
1	$126,534,546,428	2,640,744	$125,988,476,809	2,480,809
2	118,741,812,697	2,507,483	121,297,544,913	2,433,390
3	115,745,380,133	2,425,636	116,785,744,335	2,321,731
4	119,331,676,066	2,406,770	89,923,763,220	1,764,002
Total	480,353,415,324	9,980,633	453,995,529,277	8,999,932

Under this new methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2016, we proposed to compare the average covered charge per case of $48,129 ($480,353,415,324/9,980,633) from the second quarter of FY 2013 through the first quarter of FY 2014 (January 1, 2013, through December 31, 2013) to the average covered charge per case of $50,444 ($453,995,529,277/8,999,932) from the second quarter of FY 2014 through the first quarter of FY 2015 (January 1, 2014, through December 31, 2014). This rate-of-change was 4.8 percent (1.048116) or 9.8 percent (1.098547) over 2 years.

Comment: Many commenters were concerned that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule. One commenter requested that CMS add the claims data used to compute the charge inflation factor to the list of limited data set (LDS) files that can be ordered through the usual LDS data request process. Another commenter who was also focusing on replicating the charge inflation factor stated that it was unable to match the figures in the table from the proposed rule with publicly available data sources. The commenter further stated

that CMS has not made the necessary data available, or any guidance that describes whether and how it edited such data to arrive at the total of quarterly charges and charges per case it used to measure charge inflation. Consequently, the commenter stated that the table provided in the proposed rule is not useful in assessing the accuracy of the charge inflation figure that CMS used in the proposed rule to calculate the outlier threshold. In the absence of such data and how it was edited by CMS to arrive at the totals used in its charge inflation calculation, the commenter asserted that CMS has violated a principal tenet of the Administrative Procedure Act by not providing adequate notice to allow for meaningful comment.

Response: As stated in last year's rule, we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. The commenters did not suggest that CMS use charge data from a different period to compute the charge inflation factor. If we computed the charge inflation factor using the latest data available to the public at the time of issuance of this final rule, we would need to compare charge data from FY 2013 (October 2012–September 2013) to FY 2014 (October 2013–September 2014), data which would be at least 10 months old compared to the charge data we currently use, which is 4 months old. Furthermore, we note that, with regard to CCRs (as summarized below), the commenters suggested that CMS use the most recent data available when it calculates the outlier threshold. We share the commenters' view. Therefore, we are continuing to use the most recent charge data available to us at the time of this final rule to compute the charge inflation factor.

With respect to commenters who expressed concern that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule, the information we provided in the proposed rule was sufficient for meaningful comment on our proposal and balances the commenter's requests that we use the latest claims data to compute the charge inflation factor with the current limitations of the LDS file. We note that we responded to similar comments on the replication of the charge inflation factor in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50375) and refer readers to that final rule.

Nevertheless, in response to the request for additional information, we are taking two actions. For the quarterly charge data table, we grouped claims data by quarter in order that the public would be able to replicate the claims summary for the claims with discharge dates through September 30, 2014, that are available under the current LDS structure. In order to provide even more information in response to the commenters' request, we will make available on the CMS Web site at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* (click on the link on the left titled ''FY 2016 IPPS Final Rule Home Page'' and then click the link ''FY 2016 Final Rule Data Files'') a more detailed summary table by provider with the monthly charges that were used to compute the charge inflation factor. The second action we will take is to work with our systems teams and privacy office to explore expanding the information available in the current LDS, perhaps through the provision of a supplemental data file for future rulemaking.

In response to the commenters who requested additional detail on our calculation, we note that section II.A.4. of this Addendum describes the inclusion and exclusion of claims and charges used in the outlier calculation and charge inflation calculation. As we have done in the past, in the FY 2016 IPPS/LTCH PPS proposed rule, we proposed to establish the FY 2016 outlier threshold using hospital CCRs from the December 2014 update to the Provider-Specific File (PSF)—the most recent available data at the time of the proposed rule. We also proposed that if more recent data became available, we would use that data to calculate the final FY 2016 outlier threshold. For FY 2016, we also proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we did for FY 2014 and FY 2015, we proposed to adjust the CCRs from the December 2014 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the December 2013 update of the PSF to the national average case-weighted operating CCR and capital CCR from the December 2014 update of the PSF. We note that, in the proposed rule, we used total transfer-adjusted cases from FY 2014 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology above, for the proposed rule, we calculated a December 2013 operating national average case-weighted CCR of 0.288792 and a December 2014 operating national average case-weighted CCR of 0.280581. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2013 operating national average case-weighted CCR from the December 2014 operating national average case-weighted CCR and then dividing the result by the December 2013 national operating average case-weighted CCR. This resulted in a proposed national operating CCR adjustment factor of 0.971568.

We used the same methodology proposed above to adjust the capital CCRs. Specifically, for the proposed rule we calculated a December 2013 capital national average case-weighted CCR of 0.025014 and a December 2014 capital national average case-weighted CCR of 0.024500. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2013 capital national average case-weighted CCR from the December 2014 capital national average case-weighted CCR and then dividing the result by the December 2013 capital national average case-weighted CCR. This resulted in a proposed national capital CCR adjustment factor of 0.979474.

Consistent with our methodology used in the past and as stated in the FY 2009 IPPS final rule (73 FR 48763), we continue to believe that it is appropriate to apply only a 1-year adjustment factor to the CCRs. On average, it takes approximately 9 months for a MAC to tentatively settle a cost report from the fiscal year end of a hospital's cost reporting period. The average ''age'' of hospitals' CCRs from the time the fiscal intermediary or the MAC inserts the CCR in the PSF until the beginning of FY 2016 is approximately 1 year. Therefore, as stated above, we believe a 1-year adjustment factor to the CCRs is appropriate.

As stated above, for FY 2016, we applied the FY 2016 payment rates and

policies from the proposed rule using cases from the FY 2014 MedPAR files in calculating the outlier threshold.

As discussed above, for FY 2016, we are applying the second year of the 3-year transitional wage index because of the adoption of the new OMB labor market area delineations. Also, as discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.H.3. of the preamble of this final rule, in accordance with section 10324(a) of the Affordable Care Act, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We note that the frontier State floor adjustments are calculated and applied after rural and imputed floor budget neutrality adjustments are calculated for all labor market areas, in order to ensure that no hospital in a frontier State receives a wage index less than 1.0000 due to the rural and imputed floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment will not be subject to budget neutrality, and will only be extended to hospitals geographically located within a frontier State. However, for purposes of estimating the proposed outlier threshold for FY 2016, it was necessary to apply the 3-year transitional wage indexes and adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2016. If we did not take the above into account, our estimate of total FY 2016 payments would be too low, and, as a result, our proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2016 outlier payments, we proposed not to make any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement. We stated that we continue to believe that, due to the policy implemented in the June 9, 2003 Outlier final rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We note that we have instructed MACs to identify for CMS any instances where (1) a hospital's actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed; and (2) the total outlier payments for the hospital exceeded $500,000.00 for that period. Our simulations assume that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, we proposed not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

Comment: Commenters were concerned with CMS' decision not to consider outlier reconciliation in developing the outlier threshold and stated that it has not provided objective data concerning the number of hospitals that have been subjected to reconciliation and the amounts recovered during this process. The commenters' views were similar to comments received and responded to in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50376 through 50377).

Another commenter submitted the same comment as last year and cited CMS' response from the FY 2015 IPPS/LTCH PPS final rule (79 FR 50377). The commenter questioned CMS' response with the following comments: The commenter asked what is the basis for CMS' claim ''that the CCRs will reflect low costs and high charges that the commenter referred to, and when applied to the charges on the claim will result in less outlier payments for such cases because the costs of the case will be lower when compared to the total MS–DRG payments excluding outlier payments.'' The commenter cited the 2013 OIG Report and stated that the report seems to state the opposite of CMS' position when it states that ''high-outlier hospitals charged Medicare substantially more for the same MS–DRGs, yet had similar average lengths of stay and CCRs.'' The commenter further cited the same 2013 OIG report which stated ''that high-outlier hospitals had similar average CCRs, compared to all other hospitals, which means that the higher charges by the hospitals directly resulted in larger and more frequent outlier payments. As mentioned, Medicare applies a hospital's CCR to the covered charges on a claim to determine the estimated cost of services covered by the claim. The amount of the estimated cost determines whether Medicare makes an outlier payment and the amount received. In 2008, the average CCR at high-outlier hospitals was the same as the average CCR for all other hospitals, 0.35. CCRs declined, on average, during 2008–2011, to 0.30 at high-outlier hospitals and to 0.33 at all other hospitals. Although the high-outlier hospitals had higher charges, their CCR (that is, 0.30) was not significantly lower than the CCR of all other hospitals (that is, 0.33). Therefore, the higher charges led Medicare to calculate higher estimated costs for the high-outlier hospitals, and paying larger, more frequent outlier payments.''

The commenter concluded that it is neither consistent with the outlier statute nor reasonable for CMS, in modeling outlier payments for the upcoming fiscal year, to include outlier payments that were based on excessively high charges for particular MS–DRGs and not based on truly unusually high costs. The commenter suggested that, if CMS claims that such payments will not be recouped because they do not trigger reconciliation under current criteria, CMS explain how it plans to address the matter in setting the outlier fixed-loss cost threshold. The commenter suggested the following possibilities: Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual authorizes CMS to ''direct Medicare contractors to use an alternative CCR if CMS believes this will result in a more accurate CCR'' or a Medicare contractor ''may specify an alternative CCR if it believes that the CCR being applied is inaccurate.''

Response: We responded to similar comments in the FY 2015 IPPS/LTCH final rule (79 FR 50376 through 50377) and refer readers to that final rule. With regard to the OIG report that the commenter believed contradicted our statement in last year's final rule, we note that the OIG report used CCRs from 2008–2011. The CCRs are updated in the PSF at the time the MAC tentatively settles the hospital cost report, which is approximately 6 to 7 months after the cost report has been submitted. Thus, there is a lag in CCRs with the possibility that a CCR may be 18 months old from the time the cost report is submitted by the provider to the MAC until it is updated at the following tentative settlement. Because hospitals typically increase their charges, over time CCRs will decrease but, due to the lag these lower CCRs will not be reflected in the PSF until the following tentative settlement. Thus, it is possible that the PSF will reflect CCRs that are similar for hospitals with high and low outlier payments. In addition, providers determine what they will charge for items, services, and procedures provided to patients, and these charges are the amount that the providers bill for an item, service, or procedure. Moreover, different hospitals can have similar lengths of stay but different

CCRs. We encourage transparency with respect to hospital charges and have posted hospital charge data on the CMS Web site at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Medicare-Provider-Charge-Data*. In addition, as the commenter noted, there are mechanisms to avoid outlier overpayments or underpayments as CMS and the MACs have the authority to specify an alternative CCR. Also, in addition to the examples cited by the commenter, as we note in every proposed and final rule, hospitals can also request alternative CCRs. Therefore, if hospitals make these requests, these CCRs would be reflected in the PSF which would be used to compute the fixed-loss threshold.

As described in sections IV.H. and IV.I., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We noted that, to the extent section 1886(r) of the Act modifies the existing DSH payment methodology under section 1886(d)(5)(F) of the Act, the new uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we did for FY 2014 and FY 2015, for FY 2016, we proposed to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We stated that we continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally. Furthermore, we stated that we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used in FY 2014 and FY 2015 to calculate the outlier fixed-loss cost threshold, for FY 2016, we proposed to include estimated FY 2016 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we proposed an outlier fixed-loss cost threshold for FY 2016 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus $24,485.

In the proposed rule, we noted that the proposed FY 2016 fixed-loss cost threshold is lower than the FY 2015 final outlier fixed-loss cost threshold of $24,626. We stated that we believe that the decrease in the charge inflation factor (compared to the FY 2015 charge inflation factor) contributed to a lower outlier fixed-loss threshold for FY 2016. As charges decrease, so does the amount of outlier payments. As a result, it was necessary for us to lower the proposed outlier fixed-loss cost threshold to increase the amount of outlier payments expended in order to reach the 5.1 percent target.

Comment: One commenter believed that it is important that CMS accurately calculate prior year actual payment comparisons to the 5.1 percent target. The commenter asserted that it is not possible for CMS to appropriately modify its methodology to achieve an accurate result if it is not aware of, or misinformed about, inaccuracies resulting from prior the prior year methodology. The commenter cited the FY 2014 IPPS/LTCH PPS proposed rule as an example where CMS indicated that using partial year data for FY 2013 demonstrated that outlier payments would equal about 5.17 percent of overall payments, while in the FY 2015 IPPS/LTCH PPS final rule, CMS indicated that, for FY 2013, outlier payments would equal about 4.81 percent of MS–DRG payments. The commenter stated that this demonstrates that CMS' early estimate for FY 2013 was too high, as has often been the case. The commenter also cited the FY 2015 IPPS/LTCH PPS final rule correction notice (79 FR 59681) as another example where using the FY 2013 MedPAR file, CMS estimated actual FY 2014 outlier payments would be approximately 5.68 percent of actual total MS–DRG payments, while the current estimate, using available FY 2014 claims data, is that actual outlier payments for FY 2014 were approximately 5.34 percent of actual total MS–DRG payments.

The commenter stated that it was concerned that CMS believed it was over shooting its target amount for FY 2014 by 0.58 percent and this motivated CMS to dramatically increase the threshold for FY 2015, only to learn this year that its estimate was grossly overstated. The commenter concluded that it is critical that CMS not allow the use of incomplete data from prior years to affect its calculation of current period thresholds.

Another commenter noted that the final outlier threshold established by CMS is always significantly lower than the threshold set forth in the proposed rule. The commenter believed the decline is most likely due to the use of updated CCRs or other data in calculating the final threshold. The commenter stated that this emphasizes that CMS must use the most recent data available when it calculates the outlier threshold. The commenter cited as an example that, in the proposed rule, CMS used data from the December 2014 PSF file, but at the time the proposed rule was issued, the March 2015 PSF file was available.

Response: We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50378 through 50379) and refer the reader to that rule for our response.

Comment: One commenter stated CMS' explanation of why the threshold decreased from FY 2015 to FY 2016 conflicts with its historical adjustments

to the outlier fixed-loss cost threshold. The commenter noted that, from FY 2013 to FY 2014, CMS decreased the outlier fixed-loss cost threshold even though the charge inflation factor increased compared to the previous year. Moreover, the commenter stated that CMS is incorrect that its model assumes that charges will decrease in FY 2016 when compared to FY 2015 for several reasons. First, the average charge per case from the FY 2014 MedPAR file (used to calculate the FY 2016 outlier fixed-loss cost threshold) is approximately 5 percent higher than the average charge per case from the FY 2013 MedPAR file (used to calculate the FY 2015 outlier fixed-loss cost threshold; 79 FR 50375 and 50379). Second, the proposed rule establishes a 1-year charge inflation factor of 4.8116 percent, which is only 0.2801 percent lower than the FY 2015 1-year charge inflation factor of 5.0917 percent (80 FR 24632 and 79 FR 50379). Accordingly, the commenter stated that the proposed rule is proposing to lower the outlier fixed-loss cost threshold even though charges are projected to increase (that is, net charge inflation) in FY 2016 (when compared to FY 2015). The commenter requested that CMS explain this reduction because the proposed reduction in the outlier fixed-loss cost threshold cannot be attributed to a decrease in charges (because charges increased).

Response: In our description comparing the proposed FY 2016 outlier threshold to the FY 2015 final threshold, we stated that the decrease in charges contributed to a lower threshold. We did not state that this was the only reason. When we conduct our modeling to determine the outlier threshold, we factor in all payments and policies that would affect actual payments for the upcoming fiscal year in order to estimate that outlier payments are 5.1 percent of total MS–DRG payments. As a result, there are many components of the payment system that can contribute to the increase and decrease of outlier payments. Also, we believe the commenter, by only comparing the 1-year change, is inadvertently distorting the variance of the charge inflation factor. For FY 2016, we are using claims from FY 2014, which requires a 2-year inflation factor. The actual variance in the charge inflation factor from FY 2015 to FY 2016 is 0.5880 percent (FY 2015 IPPS/LTCH PPS final rule 2-year inflation factor of 1.104427 minus FY 2016 IPPS/LTCH PPS proposed rule 2-year inflation factor 1.098547).

Comment: One commenter believed that the outlier threshold should be further reduced because outlier payments this year are on target to fall below the 5.1 percent target. The commenter suggested that CMS consider calculating the threshold with a target of 5.5 percent of inpatient spending in order to ensure that the final total of outlier payment is between the statutory requirements of 5 to 6 percent of total payments.

Another commenter recommended that that threshold be maintained at the FY 2014 level of $21,748 until CMS develops a more reliable methodology for meeting the 5.1 percent target. One other commenter also noted that CMS' estimate of FY 2015 outlier payments in the proposed rule was 4.88 percent, which is below the 5.1 percent target. The commenter believed that the proposed FY 2016 threshold was understated. As a result, the commenter suggested that CMS apply the following formula to compute the FY 2016 outlier threshold: Step 1—FY 2015 Difference = (5.1 percent Target − 4.88 percent estimate from FY 2015 = 0.22 percent)/ 4.88 percent estimate from FY 2015 = 4.51 percent; Step 2—Suggested FY 2016 Threshold = Threshold from FY 2015 of $24,626 * (100 − 4.51 from Step 1 = 95.49 percent) = $23,515.

Response: As we responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (78 FR 50379), section 1886(d)(5)(A)(iv) of the Act requires outlier payments to be not less than 5 percent nor more than 6 percent of total estimated or projected payments in that year. Therefore, we cannot adopt the commenters' suggestions of using a target of 5.5 percent, maintaining the threshold at the FY 2014 level, or using a forecast correction to compute the outlier threshold. When we calculate the threshold, we use the latest data that are available at the time of the development of the proposed and final rules in order to estimate that outlier payments are 5.1 percent of total payments.

Comment: One commenter was concerned that CMS constantly misses the 5.1 percent target. The commenter recommended that CMS conduct additional analysis to evaluate the methodology for incorporating uncompensated care and DSH payment into the outlier threshold calculation.

Response: As discussed above, we include uncompensated care payments in our calculation of the fixed-loss outlier threshold. Without additional information or data analysis, we are unsure what exactly the commenter is referencing when the commenter stated that CMS should further evaluate the methodology for incorporating uncompensated care and DSH payments into the outlier threshold calculation.

After consideration of the public comments we received, we are not making any changes to our methodology in this final rule for FY 2016. Therefore, we are using the same methodology we proposed to calculate the final outlier threshold.

As described above, we used the latest claims data from the MedPAR file to compute the charge inflation factor. Similar to the table provided in the proposed rule, for this final rule, we are providing the following table that displays covered charges and cases by quarter in the periods used to calculate the charge inflation factor.

Quarter	Covered charges (April 1, 2013, through March 31, 2014)	Cases (April 1, 2013, through March 31, 2014)	Covered charges (April 1, 2014, through March 31, 2015)	Cases (April 1, 2014, through March 31, 2015)
1	$126,565,555,412	2,486,502	$100,567,278,074	1,932,720
2	118,792,100,497	2,505,875	121,989,001,463	2,444,426
3	115,796,137,233	2,424,262	118,516,052,865	2,351,444
4	119,439,461,865	2,405,925	122,175,830,268	2,396,231
Total	480,593,255,007	9,822,564	463,248,162,670	9,124,821

Under our current methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2016, based on the data from the table above, we compared the average covered charge per case of $48,927 ($480,593,255,007/9,822,564) from the third quarter of FY 2013 through the second quarter of FY 2014 (April 1, 2013, through March 31, 2014) to the average covered charge per case of $50,768 ($463,248,162,670/9,124,821)

from the third quarter of FY 2014 through the second quarter of FY 2015 (April 1, 2014, through March 31, 2015). This rate-of-change is 3.7 percent (1.037616) or 7.7 percent (1.076647) over 2 years.

As we have done in the past, we are establishing the FY 2016 outlier threshold using hospital CCRs from the March 2015 update to the Provider-Specific File (PSF)—the most recent available data at the time of development of this final rule. For FY 2016, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below). In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we did for FY 2014 and for FY 2015, we are adjusting the CCRs from the March 2015 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the March 2014 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2015 update of the PSF. We note that we used total transfer-adjusted cases from FY 2014 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison as this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the methodology above, we calculated a March 2014 operating national average case-weighted CCR of 0.287139 and a March 2015 operating national average case-weighted CCR of 0.278565. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2014 operating national average case-weighted CCR from the March 2015 operating national average case-weighted CCR and then dividing the result by the March 2014 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 0.970141.

We also used the same methodology above to adjust the capital CCRs. Specifically, we calculated a March 2014 capital national average case-weighted CCR of 0.024879 and a March 2015 capital national average case-weighted CCR of 0.024243. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the March 2014 capital national average case-weighted CCR from the March 2015 capital national average case-weighted CCR and then dividing the result by the March 2014 capital national average case-weighted CCR. This resulted in a national capital CCR adjustment factor of 0.974442.

Consistent with our methodology in the past and as stated in the FY 2009 IPPS final rule (73 FR 48763), we continue to believe that it is appropriate to apply only a 1-year adjustment factor to the CCRs. On average, it takes approximately 9 months for a MAC to tentatively settle a cost report from the fiscal year end of a hospital's cost reporting period. The average ''age'' of hospitals' CCRs from the time the fiscal intermediary or the MAC inserts the CCR in the PSF until the beginning of FY 2016 is approximately 1 year. Therefore, as stated above, we believe a 1-year adjustment factor to the CCRs is appropriate.

As stated above, for FY 2016, we applied the FY 2016 payment rates and policies using cases from the FY 2014 MedPAR files in calculating the outlier threshold.

As discussed above, for FY 2016, we are applying the second year of the 3-year transitional wage index because of the adoption of the new OMB labor market area delineations. Also, as discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.H.3. of the preamble of this final rule, in accordance with section 10324(a) of the Affordable Care Act, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We note that the frontier State floor adjustments are calculated and applied after rural and imputed floor budget neutrality adjustments are calculated for all labor market areas, in order to ensure that no hospital in a frontier State receives a wage index less than 1.0000 due to the rural and imputed floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment will not be subject to budget neutrality, and will only be extended to hospitals geographically located within a frontier State. However, for purposes of estimating the outlier threshold for FY 2016, it was necessary to apply the 3-year transitional wage indexes and adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2016. If we did not take the above into account, our estimate of total FY 2016 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), as we proposed and for the reasons discussed above, in our projection of FY 2016 outlier payments, we are not making any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement.

As described in sections IV.E. and IV.F. respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we excluded the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the new uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we did for

FYs 2014 and 2015, we also for FY 2016 allocated an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold best approximates the amount we will pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we will be making estimated per-discharge uncompensated care payments to all cases equally. Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used in FYs 2014 and 2015 to calculate the outlier fixed-loss cost threshold, for FY 2016, we included estimated FY 2016 uncompensated care payments in the computation of the outlier fixed-loss cost threshold. Specifically, we used the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we calculated a final outlier fixed-loss cost threshold for FY 2016 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payments, and any add-on payments for new technology, plus $22,544.

(2) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a lower percentage of outlier payments for capital-related costs than for operating costs. We project that the thresholds for FY 2016 will result in outlier payments that will equal 5.1 percent of operating DRG payments and 6.35 percent of capital payments based on the Federal rate.

In accordance with section 1886(d)(3)(B) of the Act, we reduced the FY 2016 standardized amount by the same percentage to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that were applied to the standardized amount based on the FY 2016 outlier threshold are as follows:

	Operating standardized amounts	Capital Federal rate
National	0.949000	0.936519
Puerto Rico	0.935042	0.919230

We applied the outlier adjustment factors to the FY 2016 payment rates after removing the effects of the FY 2015 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.21 or capital CCRs greater than 0.175, or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available only via the Internet on the CMS Web site) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the above range. Effective for discharges occurring on or after October 1, 2015, these statewide average ratios will replace the ratios posted on our Web site at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY-2014-IPPS-Final-Rule-Home-Page-Items/FY-2014-IPPS-Final-Rule-CMS-1599-F-Tables.html*. Table 8B listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B will be used during FY 2016 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted above. Table 8C listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that we published a manual update (Change Request 3966) to our outlier policy on October 12, 2005, which updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update covered an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in Change Request 3966. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR ratio at any time as long as the guidelines of Change Request 3966 are followed. In addition, we published an additional manual update (Change Request 7192) to our outlier policy on December 3, 2010, which also updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update outlines the outlier reconciliation process for hospitals and Medicare contractors. To download and view the manual instructions on outlier reconciliation, we refer readers to the CMS Web site: *http://www.cms.hhs.gov/manuals/downloads/clm104c03.pdf*.

(3) FY 2014 and FY 2015 Outlier Payments

In the FY 2015 IPPS/LTCH PPS final rule correction notice (79 FR 59681), we stated that, based on available data, we estimated that actual FY 2014 outlier payments would be approximately 5.68 percent of actual total MS–DRG payments. This estimate was computed based on simulations using the FY 2013 MedPAR file (discharge data for FY 2013 claims). That is, the estimate of actual outlier payments did not reflect actual FY 2014 claims, but instead reflected the application of FY 2014 payment rates and policies to available FY 2013 claims.

Our current estimate, using available FY 2014 claims data, is that actual outlier payments for FY 2014 were approximately 5.38 percent of actual total MS–DRG payments. Therefore, the data indicate that, for FY 2014, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2014. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2014 are equal to 5.1 percent of total MS–DRG payments.

We currently estimate that, using the latest CCRs from the March 2015 update of the PSF, actual outlier payments for FY 2015 will be approximately 4.65 percent of actual total MS–DRG payments, approximately 0.45 percentage point lower than the 5.1 percent we projected when setting the outlier policies for FY 2015. This estimate of 4.65 percent is based on simulations using the FY 2014 MedPAR file (discharge data for FY 2014 claims).

Comment: One commenter requested that CMS clarify its methodology used to calculate historical outlier payments. The commenter noted that CMS used FY 2014 claims data to model the total estimated actual outlier payments for FY 2014. The commenter stated that commenters have repeatedly noted that CMS' model overestimates the amount of total outlier payments, as compared to using actual claims data. The commenter further stated that in the FYs 2013 and 2014 IPPS/LTCH PPS final rules (77 FR 53698 and 78 FR 50983, respectively), one commenter used cost report data from the HCRIS to analyze the historical actual outlier payout from 2003 through 2010 and 2012 through 2014, which demonstrated that total outlier payments as a percentage of total MS–DRG payments are substantially lower than what CMS has ''modeled.''

The commenter stated that actual outlier payment estimates should be objectively calculated independent of HHS's ''modeling'' methodology. The commenter further stated that, in setting the fixed-loss cost threshold, CMS considers prior fiscal years' outlier payments and therefore it is important to have an accurate tally of those payments. The commenter concluded that CMS' estimates are unreliable and commenters have demonstrated far more reliable methods.

Response: As stated above, we do not rely upon historical actual outlier payments to determine the fixed-loss cost threshold. When we calculate the threshold, we use the latest data that are available at the time of the proposed and final rule in order to estimate that outlier payments are 5.1 percent of total payments. With regard to the remainder of the commenter's views, we have responded to similar comments in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51796) and refer readers to that final rule.

Comment: One commenter asked if CMS can confirm if calculations of historical actual outlier payments based on HCRIS data produce lower total outlier payments than CMS' methodology. The commenter stated that the correct calculation of actual outlier payments is important because CMS relies upon historical actual outlier payments to determine the fixed-loss cost threshold and general IPPS payments. The commenter noted that, in the proposed rule (80 FR 24665), CMS stated that ''The impact of moving from our estimate of FY 2015 outlier payments, 4.9 percent, to the proposed estimate of FY 2016 outlier payments, 5.1 percent, would result in an increase of 0.2 percent in FY 2016 payments relative to FY 2015.'' Based on this statement, the commenter stated that if the estimate of FY 2015 outlier payments was lower than 4.9 percent, CMS would need to make a corresponding upward adjustment in FY 2016 payments relative to FY 2015. The commenter further stated that if CMS' modeling efforts to calculate historical outlier payments have consistently underestimated actual outlier payments, CMS should adjust FY 2016 payments to compensate for the miscalculation of historical outlier payments. The commenter believed that such a correction would not be retroactive per se as CMS would simply be making the adjustment for upcoming fiscal year payments.

Response: Contrary to the commenter's statement, as stated above, we do not rely upon historical actual outlier payments to determine the fixed-loss cost threshold. When we calculate the threshold, we use the latest data that are available at the time of the proposed and final rule in order to estimate that outlier payments are 5.1 percent of total payments. For purposes of impacts and assessing whether or not potential changes to the outlier methodology may be warranted, we estimate outlier payments from the preceding fiscal year. However, this estimate does not impact the calculation of the fixed-loss threshold for the upcoming fiscal year. With regard to using HCRIS data to measure actual outlier payments, hospitals' cost reporting periods do not match the period of the Federal fiscal year. For example, many hospitals submit cost reports based on a calendar year (January 1 through December 31), while the Federal fiscal year runs from October 1 through September 30. Outlier payments are reported in the aggregate on the cost report, and it is currently not possible to break out outlier payments from the cost report to a Federal fiscal year if the cost report submitted by the provider is using a different reporting period.

5. FY 2016 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2016. The Puerto Rico-specific amounts are shown in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 69.6 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage will result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we will apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2016.

Under section 1886(d)(9)(A)(ii) of the Act, the Federal portion of the Puerto Rico payment rate is based on the

discharge-weighted average of the national large urban standardized amount (this amount is set forth in Table 1A). The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2016 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). This table also includes the Puerto Rico-specific standardized amounts. The labor-related share applied to the Puerto Rico-specific standardized amount is the labor-related share of 63.2 percent, or 62 percent, depending on which provides higher payments to the hospital. (Section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.)

The following table illustrates the changes from the FY 2015 national standardized amount to the FY 2016 national standardized amount. The second through fifth columns display the changes from the FY 2015 standardized amounts for each applicable FY 2016 standardized amount. The first row of the table shows the updated (through FY 2015) average standardized amount after restoring the FY 2015 offsets for outlier payments, demonstration budget neutrality, geographic reclassification budget neutrality, new labor market delineation wage Index transition budget neutrality and the retrospective documentation and coding adjustment under section 7(b)(1)(B) of Public Law 110–90. The MS–DRG reclassification and recalibration and wage index budget neutrality adjustment factors are cumulative. Therefore, those FY 2015 adjustment factors are not removed from this table.

B. Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the Internet on the CMS Web site), contain the labor-related and nonlabor-related shares that we used to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2016. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national and Puerto Rico prospective payment rates, respectively, to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. In section III of the preamble of this final rule, we discuss the data and methodology for the FY 2016 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make such adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology

(77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively).

For FY 2014, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule.

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we are continuing to use the same COLA factors in FY 2016 that were used in FY 2015 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. Below is a table listing the COLA factors for FY 2016.

FY 2016 COST-OF-LIVING ADJUSTMENT FACTORS: ALASKA AND HAWAII HOSPITALS

Area	Cost of living adjustment factor
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.23
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.23
City of Juneau and 80-kilometer (50-mile) radius by road	1.23
Rest of Alaska	1.25
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.19
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, the next update to the COLA factors for Alaska and Hawaii will occur in FY 2018.

C. Calculation of the Prospective Payment Rates

General Formula for Calculation of the Prospective Payment Rates for FY 2016

In general, the operating prospective payment rate for all hospitals paid under the IPPS located outside of Puerto Rico, except SCHs and MDHs, for FY 2016 equals the Federal rate (which includes uncompensated care payments).

We note that section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017).

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (which, as discussed in section IV.D. of the preamble of this final rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2016 equals the higher of the applicable Federal rate, or the hospital-specific rate as described below. The prospective payment rate for MDHs for FY 2016 equals the higher of the Federal rate, or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described below. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987 or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

The prospective payment rate for hospitals located in Puerto Rico for FY 2016 equals 25 percent of the Puerto Rico-specific payment rate plus 75 percent of the applicable national rate.

1. Federal Rate

The Federal rate is determined as follows:

Step 1—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described above.

Step 2—Multiply the labor-related portion of the standardized amount by the applicable wage index for the geographic area in which the hospital is located or the area to which the hospital is reclassified.

Step 3—For hospitals located in Alaska and Hawaii, multiply the nonlabor-related portion of the standardized amount by the applicable cost-of-living adjustment factor.

Step 4—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount (adjusted, if applicable, under Step 3).

Step 5—Multiply the final amount from Step 4 by the relative weight corresponding to the applicable MS–DRG (Table 5 listed in section VI. of this Addendum and available via the Internet on the CMS Web site).

The Federal payment rate as determined in Step 5 may then be further adjusted if the hospital qualifies for either the IME or DSH adjustment. In addition, for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b), the payment in Step 5 would be increased by a specified formula. The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Finally, we add the uncompensated care payment to the total claim payment amount. We note that, as discussed above, we take uncompensated care payments into consideration when calculating outlier payments.

2. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate (which, as discussed in section IV.D. of the preamble of this final rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per

discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

As noted above, section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). As discussed previously, currently MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the greater of the updated hospital-specific rates based on either FY 1982, FY 1987 or FY 2002 costs per discharge.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082). We also refer readers to section IV.D. of the preamble of this final rule for a complete discussion on empirically justified Medicare DSH and uncompensated care payments.

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2016

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

FY 2016	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase	2.4	2.4	2.4	2.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.6	−0.6
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−1.2	0.0	−1.2
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.5	−0.5	−0.5	−0.5
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	−0.2	−0.2	−0.2	−0.2
Applicable Percentage Increase Applied to Hospital−specific rate	1.7	0.5	1.1	−0.1

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section IV.A. of the preamble of this final rule.

In addition, because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS–DRG classifications and the recalibration of the MS–DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, a SCH's and MDH's hospital-specific rate is adjusted by the proposed MS–DRG reclassification and recalibration budget neutrality factor of 0.998399, as discussed in section III. of this Addendum. The resulting rate is used in determining the payment rate that an SCH and an MDH will receive for its discharges beginning on or after October 1, 2015. We note that, in this final rule, for FY 2016, we are not making a documentation and coding adjustment to the hospital-specific rate. We refer readers to section II.D. of the preamble of this final rule for a complete discussion regarding our finalized policies and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

3. General Formula for Calculation of Prospective Payment Rates for Hospitals Located in Puerto Rico Beginning on or After October 1, 2015, and Before October 1, 2016

Section 1886(d)(9)(E)(iv) of the Act provides that, effective for discharges occurring on or after October 1, 2004, hospitals located in Puerto Rico are paid based on a blend of 75 percent of the national prospective payment rate and 25 percent of the Puerto Rico-specific rate.

a. Puerto Rico-Specific Rate

The Puerto Rico-specific prospective payment rate is determined as follows:

Step 1—Select the applicable average standardized amount considering the applicable wage index (obtained from Table 1C published in section VI. of this Addendum and available via the Internet on the CMS Web site).

Step 2—Multiply the labor-related portion of the standardized amount by the applicable Puerto Rico-specific wage index.

Step 3—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount.

Step 4—Multiply the amount from Step 3 by the applicable MS–DRG relative weight (obtained from Table 5 listed in section VI. of this Addendum and available via the Internet on the CMS Web site).

Step 5—Multiply the result in Step 4 by 25 percent.

b. National Prospective Payment Rate

The national prospective payment rate is determined as follows:

Step 1—Select the applicable national average standardized amount.

Step 2—Multiply the labor-related portion of the national average

standardized amount by the applicable wage index for the geographic area in which the hospital is located or the area to which the hospital is reclassified.

Step 3—Add the amount from Step 2 and the nonlabor-related portion of the national average standardized amount.

Step 4—Multiply the amount from Step 3 by the applicable MS–DRG relative weight (obtained from Table 5 listed in section VI. of this Addendum and available via the Internet on the CMS Web site).

Step 5—Multiply the result in Step 4 by 75 percent.

The sum of the Puerto Rico-specific rate and the national prospective payment rate computed above equals the prospective payment rate for a given discharge for a hospital located in Puerto Rico. This payment rate is then further adjusted if the hospital qualifies for either the IME or DSH adjustment.

Finally, we add the uncompensated care payment to the total claim payment amount. We note that, as discussed above, we take uncompensated care payments into consideration when calculating outlier payments.

III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2016

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. Effective with that cost reporting period, over a 10-year transition period (which extended through FY 2001) the payment methodology for Medicare acute care hospital inpatient capital-related costs changed from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. Below we discuss the factors that we used to determine the capital Federal rate for FY 2016, which is effective for discharges occurring on or after October 1, 2015.

The 10-year transition period ended with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002). Therefore, for cost reporting periods beginning in FY 2002, all hospitals (except ''new'' hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. For FY 1992, we computed the standard Federal payment rate for capital-related costs under the IPPS by updating the FY 1989 Medicare inpatient capital cost per case by an actuarial estimate of the increase in Medicare inpatient capital costs per case. Each year after FY 1992, we update the capital standard Federal rate, as provided at § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for blended payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to hospitals located in Puerto Rico using the same methodology used to compute the national Federal rate for capital-related costs. In accordance with section 1886(d)(9)(A) of the Act, under the IPPS for acute care hospital operating costs, hospitals located in Puerto Rico are paid for operating costs under a special payment formula. Effective October 1, 2004, in accordance with section 504 of Public Law 108–173, the methodology for operating payments made to hospitals located in Puerto Rico under the IPPS was revised to make payments based on a blend of 25 percent of the applicable standardized amount specific to Puerto Rico hospitals and 75 percent of the applicable national average standardized amount. In conjunction with this change to the operating blend percentage, effective with discharges occurring on or after October 1, 2004, we also revised the methodology for computing capital payments made to hospitals located in Puerto Rico to be based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the national capital Federal rate (69 FR 49185).

A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2016. In particular, we explain why the FY 2016 capital Federal rate increases approximately 0.85 percent, compared to the FY 2015 capital Federal rate. As discussed in the impact analysis in Appendix A to this final rule, we estimate that capital payments per discharge will increase approximately 2.3 percent during that same period. Because capital payments constitute about 10 percent of hospital payments, a percent change in the capital Federal rate yields only about a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

a. Description of the Update Framework

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate-of-increase as appropriate each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The update factor for FY 2016 under that framework is 1.3 percent based on the best data available at this time. The update factor under that framework is based on a projected 1.3 percent increase in the FY 2010-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a forecast error correction of 0.0 percentage point. As discussed below in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2016 CIPI projection in that same section of this Addendum. Below we describe the policy adjustments that we are applying in the update framework for FY 2016.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an

equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons:

- The average resource use of Medicare patients changes (''real'' case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (''coding effects''); and
- The annual DRG reclassification and recalibration changes may not be budget neutral (''reclassification effect'').

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts as discussed in section II. of Appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2016, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase will equal 0.5 percent for FY 2016. The net adjustment for change in case-mix is the difference between the projected real increase in case-mix and the projected total increase in case-mix. Therefore, as we proposed, the net adjustment for case-mix change in FY 2016 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, we have data available to evaluate the effects of the FY 2014 DRG reclassification and recalibration as part of our update for FY 2016. We estimate that FY 2014 DRG reclassification and recalibration resulted in no change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, as we proposed, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2016.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage point or more. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. A forecast error of 0.0 percentage point was calculated for the FY 2014 update, for which there is historical data. That is, current historical data indicate that the forecasted FY 2014 CIPI (1.2 percent) used in calculating the FY 2014 update factor was equal to the actual realized price increases (also 1.2 percent). Therefore, as we proposed, we are not making an adjustment for a forecast error in the update for FY 2016.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculated this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflected how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity increases that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual increase is due to each of these factors. The capital update framework thus provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this final rule, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2016 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2016, we are using an intensity measure that is based on an average of cost per discharge data from the 5-year period beginning with FY 2009 and extending through FY 2013. Based on these data, we estimated that case-mix constant intensity declined during FYs 2009 through 2013. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimate that intensity declined during that 5-year period, we believe it is appropriate to continue to apply a zero intensity adjustment for FY 2016. Therefore, as we proposed, we are making a 0.0 percentage point adjustment for intensity in the update for FY 2016.

Above, we described the basis of the components used to develop the 1.3 percent capital update factor under the capital update framework for FY 2016 as shown in the table below.

CMS FY 2016 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	1.3
Intensity	0.0
Case-Mix Adjustment Factors:	
Real Across DRG Change	0.5
Projected Case-Mix Change	0.5
Subtotal	1.3
Effect of FY 2014 Reclassification and Recalibration	0.0
Forecast Error Correction	0.0
Total Update	1.3

*The capital input price index is based on the FY 2010-based CIPI.

b. Comparison of CMS and MedPAC Update Recommendation

In its March 2015 Report to Congress, MedPAC did not make a specific update recommendation for capital IPPS

payments for FY 2016. (We refer readers to MedPAC's Report to the Congress: Medicare Payment Policy, March 2015, Chapter 3, available on the Web site at: *http://www.medpac.gov*.)

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A single set of thresholds is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier thresholds are set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments.

For FY 2015, we estimated that outlier payments for capital would equal 6.18 percent of inpatient capital-related payments based on the capital Federal rate in FY 2015. Based on the thresholds as set forth in section II.A. of this Addendum, we estimate that outlier payments for capital-related costs will equal 6.35 percent for inpatient capital-related payments based on the capital Federal rate in FY 2016. Therefore, we are applying an outlier adjustment factor of 0.9365 in determining the capital Federal rate for FY 2016. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2016 will be higher than the percentage for FY 2015.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2016 outlier adjustment of 0.9365 is a − 0.18 percent change from the FY 2015 outlier adjustment of 0.9382. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2016 is 0.9982 (0.9365/0.9382). Thus, the outlier adjustment will decrease the FY 2016 capital Federal rate by 0.18 percent compared to the FY 2015 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes. Because we implemented a separate GAF for Puerto Rico, we apply separate budget neutrality adjustments for the national GAF and the Puerto Rico GAF. We apply the same budget neutrality factor for DRG reclassifications and recalibration nationally and for Puerto Rico. Separate adjustments were unnecessary for FY 1998 and earlier because the GAF for Puerto Rico was implemented in FY 1998.

To determine the factors for FY 2016, we compared (separately for the national capital rate and the Puerto Rico capital rate) estimated aggregate capital Federal rate payments based on the FY 2015 MS–DRG classifications and relative weights and the FY 2015 GAF to estimated aggregate capital Federal rate payments based on the FY 2015 MS–DRG classifications and relative weights and the FY 2016 GAFs. To achieve budget neutrality for the changes in the national GAFs, based on calculations using updated data, we are applying an incremental budget neutrality adjustment factor of 0.9979 for FY 2016 to the previous cumulative FY 2015 adjustment factor of 0.9884, yielding an adjustment factor of 0.9864 through FY 2016. For the Puerto Rico GAFs, we are applying an incremental budget neutrality adjustment factor of 0.9993 for FY 2016 to the previous cumulative FY 2015 adjustment factor of 1.0082, yielding a cumulative adjustment factor of 1.0075 through FY 2016.

We then compared estimated aggregate capital Federal rate payments based on the FY 2015 MS–DRG relative weights and the FY 2016 GAFs to estimated aggregate capital Federal rate payments based on the cumulative effects of the FY 2016 MS–DRG classifications and relative weights and the FY 2016 GAFs. The incremental adjustment factor for DRG classifications and changes in relative weights is 0.9994 both nationally and for Puerto Rico. The cumulative adjustment factors for MS–DRG classifications and changes in relative weights and for changes in the GAFs through FY 2016 are 0.9858 nationally and 1.0069 for Puerto Rico. (We note that all the values are calculated with unrounded numbers.) The GAF/DRG budget neutrality adjustment factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the MS–DRG relative weights. Under the capital IPPS, there is a single GAF/DRG budget neutrality adjustment factor (the national capital rate and the Puerto Rico capital rate are determined separately) for changes in the GAF (including geographic reclassification) and the MS–DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification has on the other payment parameters, such as the payments for DSH or IME.

The cumulative adjustment factor of 0.9973 (the product of the incremental national GAF budget neutrality adjustment factor of 0.9979 and the incremental DRG budget neutrality adjustment factor of 0.9994) accounts for the MS–DRG reclassifications and recalibration and for changes in the GAFs. It also incorporates the effects on the GAFs of FY 2016 geographic reclassification decisions made by the MGCRB compared to FY 2015 decisions. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2016

For FY 2015, we established a capital Federal rate of $434.97 (79 FR 59684). We are establishing an update of 1.3 percent in determining the FY 2016 capital Federal rate for all hospitals. As a result of this update and the budget neutrality factors discussed above, we are establishing a national capital Federal rate of $438.65 for FY 2016. The national capital Federal rate for FY 2016 was calculated as follows:

- The FY 2016 update factor is 1.013, that is, the update is 1.3 percent.
- The FY 2016 budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS–DRG classifications and relative weights and changes in the GAFs is 0.9973.
- The FY 2016 outlier adjustment factor is 0.9365.

(We note that, as discussed in section VI.C. of the preamble of this final rule,

we are not making an additional MS–DRG documentation and coding adjustment to the capital IPPS Federal rates for FY 2016.)

Because the FY 2016 capital Federal rate has already been adjusted for differences in case-mix, wages, cost-of-living, indirect medical education costs, and payments to hospitals serving a disproportionate share of low-income patients, we are not making additional adjustments in the capital Federal rate for these factors, other than the budget neutrality factor for changes in the MS–DRG classifications and relative weights and for changes in the GAFs.

We are providing the following chart that shows how each of the factors and adjustments for FY 2016 affects the computation of the FY 2016 national capital Federal rate in comparison to the FY 2015 national capital Federal rate. The FY 2016 update factor has the effect of increasing the capital Federal rate by 1.3 percent compared to the FY 2015 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.27 percent. The FY 2016 outlier adjustment factor has the effect of decreasing the capital Federal rate by 0.18 percent compared to the FY 2015 capital Federal rate. The combined effect of all the changes will increase the national capital Federal rate by approximately 0.85 percent compared to the FY 2015 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2015 CAPITAL FEDERAL RATE AND FY 2016 CAPITAL FEDERAL RATE

	FY 2015	FY 2016	Change	Percent change
Update Factor [1]	1.0150	1.0130	1.0130	1.3
GAF/DRG Adjustment Factor [1]	0.9993	0.9973	0.9973	−0.27
Outlier Adjustment Factor [2]	0.9382	0.9365	0.9982	−0.18
Capital Federal Rate	$434.97	$438.65	1.0085	0.85

[1] The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rates. Thus, for example, the incremental change from FY 2015 to FY 2016 resulting from the application of the 0.9973 GAF/DRG budget neutrality adjustment factor for FY 2016 is a net change of 0.9973 (or −0.27 percent).

[2] The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2016 outlier adjustment factor is 0.9365/0.9382, or 0.9982 (or −0.18 percent).

In this final rule, we also are providing the following chart that shows how the final FY 2016 capital Federal rate differs from the proposed FY 2016 capital Federal rate as presented in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24640).

COMPARISON OF FACTORS AND ADJUSTMENTS: PROPOSED FY 2016 CAPITAL FEDERAL RATE AND FINAL FY 2016 CAPITAL FEDERAL RATE

	Proposed FY 2016	Final FY 2016	Change	Percent change
Update Factor	1.0130	1.0130	1.0000	0.00
GAF/DRG Adjustment Factor	0.9976	0.9973	0.9997	−0.30
Outlier Adjustment Factor	0.9357	0.9365	1.0008	0.08
Capital Federal Rate	438.40	438.65	1.0006	0.06

5. Special Capital Rate for Puerto Rico Hospitals

Section 412.374 provides for the use of a blended payment system for payments made to hospitals located in Puerto Rico under the PPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to hospitals located in Puerto Rico using the same methodology used to compute the national Federal rate for capital-related costs. Under the broad authority of section 1886(g) of the Act, beginning with discharges occurring on or after October 1, 2004, capital payments made to hospitals located in Puerto Rico are based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the capital Federal rate. The Puerto Rico capital rate is derived from the costs of Puerto Rico hospitals only, while the capital Federal rate is derived from the costs of all acute care hospitals participating in the IPPS (including Puerto Rico).

To adjust hospitals' capital payments for geographic variations in capital costs, we apply a GAF to both portions of the blended capital rate. The GAF is calculated using the operating IPPS wage index, and varies depending on the labor market area or rural area in which the hospital is located. We use the Puerto Rico wage index to determine the GAF for the Puerto Rico part of the capital-blended rate and the national wage index to determine the GAF for the national part of the blended capital rate.

Because we implemented a separate GAF for Puerto Rico in FY 1998, we also apply separate budget neutrality adjustment factors for the national GAF and for the Puerto Rico GAF. However, we apply the same budget neutrality adjustment factor for MS–DRG reclassifications and recalibration nationally and for Puerto Rico. The budget neutrality adjustment factors for the national GAF and for the Puerto Rico GAF and the budget neutrality factor for MS–DRG reclassifications and recalibration (which is the same nationally and for Puerto Rico) are discussed in section III.A.3. of this Addendum.

In computing the payment for a particular Puerto Rico hospital, the Puerto Rico portion of the capital rate (25 percent) is multiplied by the Puerto Rico-specific GAF for the labor market area in which the hospital is located, and the national portion of the capital rate (75 percent) is multiplied by the national GAF for the labor market area in which the hospital is located (which is computed from national data for all hospitals in the United States and Puerto Rico).

For FY 2015, the special capital rate for hospitals located in Puerto Rico was $209.45 (79 FR 59683). With the changes we are making to the factors used to determine the capital Federal rate, the FY 2016 special capital rate for hospitals in Puerto Rico is $212.56.

B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2016

For purposes of calculating payments for each discharge during FY 2016, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year. Section 412.312(c) provides for a single set of thresholds to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier thresholds for FY 2016 are in section II.A. of this Addendum. For FY 2016, a case would qualify as a cost outlier if the cost for the case plus the (operating) IME and DSH payments (including both the empirically justified Medicare DSH payment and the estimated uncompensated care payment, as discussed in section II.A.4.g.(1) of this Addendum) is greater than the prospective payment rate for the MS–DRG plus the fixed-loss amount of $22,544.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

We periodically update the base year for the operating and capital input price indexes to reflect the changing composition of inputs for operating and capital expenses. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50603 through 50607), we rebased and revised the CIPI to a FY 2010 base year to reflect the more current structure of capital costs in hospitals. For a complete discussion of this rebasing, we refer readers to the FY 2014 IPPS/LTCH PPS final rule.

2. Forecast of the CIPI for FY 2016

Based on the latest forecast by IHS Global Insight, Inc. (second quarter of 2015), we are forecasting the FY 2010-based CIPI to increase 1.3 percent in FY 2016. This reflects a projected 1.8 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 2.6 percent increase in other capital expense prices in FY 2016, partially offset by a projected 1.4 percent decline in vintage-weighted interest expense prices in FY 2016. The weighted average of these three factors produces the forecasted 1.3 percent increase for the FY 2010-based CIPI as a whole in FY 2016.

IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2016

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are made on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount as defined in § 413.40(a) of the regulations) is set for each hospital based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage. (We note that, in accordance with § 403.752(a), RNHCIs are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

As discussed in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24641), the FY 2016 rate-of-increase percentage for updating the target amounts for the 11 cancer hospitals, children's hospitals, the short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs is the estimated percentage increase in the IPPS operating market basket for FY 2016, in accordance with applicable regulations at § 413.40. Based on IHS Global Insight, Inc.'s 2015 first quarter forecast, we estimated that the FY 2010-based IPPS operating market basket update for FY 2016 would be 2.7 percent (that is, the estimate of the market basket rate-of-increase). However, we proposed that if more recent data became available for the final rule, we would use them to calculate the IPPS operating market basket update for FY 2016. Therefore, based on IHS Global Insight, Inc.'s 2015 second quarter forecast, with historical data through the first quarter of 2015, we estimate that the FY 2010-based IPPS operating market basket update for FY 2016 is 2.4 percent (that is, the estimate of the market basket rate-of-increase). For children's hospitals, the 11 cancer hospitals, hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs, the FY 2016 rate-of-increase percentage that will be applied to the FY 2015 target amounts in order to determine the final FY 2016 target amounts is 2.4 percent.

The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VII. of the preamble of this final rule and section V. of the Addendum to this final rule for the update changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2016. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

V. Updates to the Payment Rates for the LTCH PPS for FY 2016

A. LTCH PPS Standard Federal Payment Rate for FY 2016

1. Background

In section VII. of the preamble of this final rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2016.

Under § 412.523(c)(3)(ii) of the regulations, for LTCH PPS rate years beginning RY 2004 through RY 2006, we

updated the standard Federal rate annually by a factor to adjust for the most recent estimate of the increases in prices of an appropriate market basket of goods and services for LTCHs. We established this policy of annually updating the standard Federal rate because, at that time, we believed that was the most appropriate method for updating the LTCH PPS standard Federal rate for years after the initial implementation of the LTCH PPS in FY 2003. Therefore, under § 412.523(c)(3)(ii), for RYs 2004 through 2006, the annual update to the LTCH PPS standard Federal rate was equal to the previous rate year's Federal rate updated by the most recent estimate of increases in the appropriate market basket of goods and services included in covered inpatient LTCH services.

In determining the annual update to the standard Federal rate for RY 2007, based on our ongoing monitoring activity, we believed that, rather than solely using the most recent estimate of the LTCH PPS market basket update as the basis of the annual update factor, it was appropriate to adjust the standard Federal rate to account for the effect of documentation and coding in a prior period that was unrelated to patients' severity of illness (71 FR 27818). Accordingly, we established under § 412.523(c)(3)(iii) that the annual update to the standard Federal rate for RY 2007 was zero percent based on the most recent estimate of the LTCH PPS market basket at that time, offset by an adjustment to account for changes in case-mix in prior periods due to the effect of documentation and coding that were unrelated to patients' severity of illness. For RY 2008 through FY 2011, we also made an adjustment to account for the effect of documentation and coding that was unrelated to patients' severity of illness in establishing the annual update to the standard Federal rate as set forth in the regulations at §§ 412.523(c)(3)(iv) through (c)(3)(vii). For FYs 2012, 2013, 2014, and 2015, we updated the standard Federal rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by section 1886(m)(3)(A) of the Act as set forth in the regulations at §§ 412.523(c)(3)(viii) through (c)(3)(ix).

Section 1886(m)(3)(A) of the Act, as added by section 3401(c) of the Affordable Care Act, specifies that, for rate year 2010 and each subsequent rate year, any annual update to the standard Federal rate shall be reduced:

- For rate year 2010 through 2019, by the other adjustment specified in section 1886(m)(3)(A)(ii) and (m)(4) of the Act; and
- For rate year 2012 and each subsequent year, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (which we refer to as ''the multifactor productivity (MFP) adjustment'') as discussed in section VII.D.2. of the preamble of this final rule.

Section 1886(m)(3)(B) of the Act provides that the application of paragraph (3) of section 1886(m) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VII.D.2.a. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.)

For FY 2015, consistent with our historical practice, we established an update to the LTCH PPS standard Federal rate based on the full estimated LTCH PPS market basket increase of 2.9 percent and the 0.7 percentage point reductions required by sections 1886(m)(3)(A)(i) and 1886(m)(3)(A)(ii) with 1886(m)(4)(E) of the Act. Accordingly, at § 412.523(c)(3)(xi) of the regulations, we established an annual update of 2.2 percent to the standard Federal rate for FY 2015 (79 FR 50391through 50392).

For FY 2016, as discussed in greater detail in section VII.D.2. of the preamble of this final rule, we are establishing an annual update to the LTCH PPS standard Federal payment rate based on the full estimated increase in the LTCH PPS market basket, less the MFP adjustment consistent with section 1886(m)(3)(A)(i) of the Act, and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. In addition, as discussed in greater detail in section VII.D.2. of the preamble of this final rule, the annual update is further reduced by 2.0 percentage points for LTCHs that fail to submit quality reporting data in accordance with the requirements of the LTCH QRP under section 1886(m)(5) of the Act.

Specifically, in this final rule, consistent with our proposal and based on the best available data, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 1.7 percent, which is based on the full estimated increase in the LTCH PPS market basket of 2.4 percent, less the MFP adjustment of 0.5 percentage point consistent with section 1886(m)(3)(A)(i) of the Act, and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. For LTCHs that fail to submit the required quality reporting data for FY 2016 in accordance with the LTCH QRP, the annual update is further reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act (as discussed in greater detail in section VII.D.2.c. of the preamble of this final rule). Accordingly, we are establishing an annual update to the LTCH PPS standard Federal payment rate of -0.3 percent for LTCHs that fail to submit the required quality reporting data for FY 2016. This -0.3 percent update was calculated based on the full estimated increase in the LTCH PPS market basket of 2.4 percent, less a MFP adjustment of 0.5 percentage point, less an additional adjustment of 0.2 percentage point required by the statute, and less 2.0 percentage points for failure to submit quality reporting data as required by section 1886(m)(5) of the Act.

2. Development of the FY 2016 LTCH PPS Standard Federal Payment Rate

We continue to believe that the annual update to the LTCH PPS standard Federal payment rate should be based on the most recent estimate of the increase in the LTCH PPS market basket, including any statutory adjustments. Consistent with our historical practice, for FY 2016, we are applying the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the LTCH PPS standard Federal payment rate for FY 2016, we also are making certain regulatory adjustments, consistent with past practices. Specifically, in determining the FY 2016 LTCH PPS standard Federal payment rate, as we proposed, we are applying a budget neutrality adjustment factor for the changes related to the area wage adjustment (that is, changes to the wage data and labor-related share) in accordance with § 412.523(d)(4). We also, as proposed, used more recent data to determine the update to the LTCH PPS standard Federal payment rate for FY 2016 in this final rule.

For FY 2015, we established an annual update to the LTCH PPS standard Federal rate of 2.2 percent for FY 2015 based on the full estimated LTCH PPS market basket increase of 2.9 percent, less the MFP adjustment of 0.5 percentage point consistent with section 1886(m)(3)(A)(i) of the Act and less the 0.2 percentage point required by

sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. Accordingly, at § 412.523(c)(3)(xi), we established an annual update to the standard Federal rate for FY 2015 of 2.2 percent. That is, we applied an update factor of 1.022 to the FY 2014 Federal rate of $40,607.31 to determine the FY 2015 standard Federal rate. The standard Federal rate for FY 2015 was further adjusted by an adjustment factor of 0.98734 for FY 2015 under the final year of the 3-year phase-in of the one-time prospective adjustment at § 412.523(d)(3)(ii). We also applied an area wage level budget neutrality factor for FY 2015 of 1.0016703 to the standard Federal rate to ensure that any changes to the area wage level adjustment would not result in any change in estimated aggregate LTCH PPS payments. Consequently, we established a standard Federal rate for FY 2015 of $41,043.71 (calculated as $40,607.31 × 1.022 × 0.98734 × 1.001670) (79 FR 50392).

In this final rule, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 1.7 percent, which was determined consistent with our proposal and using the methodology previously described. Accordingly, under § 412.523(c)(3)(xii), we are applying a factor of 1.017 to the FY 2015 standard Federal rate of $41,043.71 to determine the FY 2016 LTCH PPS standard Federal payment rate. These factors are based on IGI's second quarter 2015 forecast, which are the best available data at this time. For LTCHs that fail to submit quality reporting data for FY 2016 under the LTCH QRP, under § 412.523(c)(3)(xii), applied in conjunction with the provisions of § 412.523(c)(4), we are reducing the annual update to the LTCH PPS standard Federal payment rate by an additional 2.0 percentage points consistent with section 1886(m)(5) of the Act. In those cases, the LTCH PPS standard Federal payment rate is updated by -0.3 percent (that is, a update factor of 0.997) for FY 2016 for LTCHs that fail to submit the required quality reporting data for FY 2016 as required under the LTCH QRP. Consistent with § 412.523(d)(4), we also are applying an area wage level budget neutrality factor to the FY 2016 LTCH PPS standard Federal payment rate of 1.000513, which was determined using the methodology previously described. We are applying this area wage level budget neutrality factor to the FY 2016 LTCH PPS standard Federal payment rate to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Accordingly, we are establishing a LTCH PPS standard Federal payment rate of $41,762.85 (calculated as $41,043.71 × 1.017 × 1.000513) for FY 2016. For LTCHs that fail to submit quality reporting data for FY 2016 in accordance with the requirements of the LTCHQRP under section 1886(m)(5) of the Act, we are establishing a LTCH PPS standard Federal payment rate of $40,941.55 (calculated as $41,043.71 × 0.997 × 1.000513) for FY 2016. We note, as discussed in section VII.B. of the preamble of this final rule, under our application of the site neutral payment rate required under section 1886(m)(6) of the Act, this LTCH PPS standard Federal payment rate will only be used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate).

B. Adjustment for Area Wage Levels for the LTCH PPS Standard Federal Payment Rate for FY 2016

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

When we implemented the LTCH PPS, we established a 5-year transition to the full area wage level adjustment. The area wage level adjustment was completely phased-in for cost reporting periods beginning in FY 2007. Therefore, for cost reporting periods beginning on or after October 1, 2006, the applicable LTCH area wage index values are the full LTCH PPS area wage index values calculated based on acute care hospital inpatient wage index data without taking into account geographic reclassification under section 1886(d)(8) and section 1886(d)(10) of the Act. For additional information on the phase-in of the area wage level adjustment under the LTCH PPS, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56015 through 56019) and the RY 2008 LTCH PPS final rule (72 FR 26891).

2. Geographic Classifications (Labor Market Areas) for the LTCH PPS Standard Federal Payment Rate

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an ''urban area,'' or a ''rural area,'' as defined in § 412.503. Under § 412.503, an ''urban area'' is defined as a Metropolitan Statistical Area (MSAs) (which includes a Metropolitan division, where applicable), as defined by the Executive OMB and a ''rural area'' is defined as any area outside of an urban area.

The CBSA-based geographic classifications (labor market area definitions) currently used under the LTCH PPS, effective for discharges occurring on or after October 1, 2014, are based on the new OMB labor market area delineations based on the 2010 Decennial Census data. We made these revisions because we believe that these OMB delineations are based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believe that these OMB delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We noted that this policy was consistent with the IPPS policy adopted in FY 2015 under § 412.64(b)(1)(ii)(D) of the regulations (79 FR 49951 through 49963). (For additional information on the CBSA-based labor market area (geographic classification) delineations currently used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).)

In general, it is our historical practice to update the CBSA-based labor market area delineations annually based on the most recent updates issued by OMB. At the time of the development of this proposed rule, OMB had not issued any further updates subsequent to OMB Bulletin No. 13–01, which was dated February 28, 2013, and established

revised delineations based on 2010 Census Bureau data that were subsequently adopted in the FY 2015 IPPS/LTCH PPS final rule. (The OMB bulletins are available on the OMB Web site at: *http://www.whitehouse.gov/omb*. Go to ''Information For Agencies'' and click on ''Bulletins''.) Therefore, for FY 2016, as proposed, we are continuing to use the CBSA-based labor market area delineations currently used under the LTCH PPS (as adopted in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185)). We believe that these CBSA-based labor market area delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas.

3. Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's PPS Federal prospective payment is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs (Wages and Salaries; Employee Benefits; Professional Fees Labor-Related, Administrative and Business Support Services; and All-Other: Labor-Related Services) and a labor-related portion of capital costs using the applicable LTCH PPS market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS and the development of the RPL market basket can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we revised and rebased the market basket used under the LTCH PPS by adopting the newly created FY 2009-based LTCH-specific market basket. In addition, we determined the labor-related share for FY 2013 as the sum of the FY 2013 relative importance of each labor-related cost category of the FY 2009-based LTCH-specific market basket. For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479). Consistent with our historical practice, in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50393 through 50394), we determined the LTCH PPS labor-related share for FY 2015 based on the FY 2015 relative importance of each labor-related cost category, which reflected the different rates of price change for these cost categories between the base year (FY 2009) and FY 2015. Specifically, based on IGI's second quarter 2014 forecast of the FY 2009-based LTCH-specific market basket, we established a labor-related share under the LTCH PPS for FY 2015 of 62.306 percent.

For FY 2016, we are establishing a labor-related share for the LTCH PPS standard Federal payment rate payments based on IGI's second quarter 2015 forecast of the FY 2009-based LTCH-specific market basket. Consistent with our historical practice, as proposed, we also are using more recent data to determine the final FY 2016 labor-related share. In addition, as proposed, we are specifying the labor-related share to one decimal place, which is consistent with the IPPS labor-related share and the LTCH market basket update. The following table shows the FY 2016 labor-related share relative importance using IGI's second quarter 2015 forecast of the FY 2009-based LTCH-specific market basket. The sum of the relative importance for FY 2016 for operating costs (Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related, Administrative and Business Support Services; and All Other: Labor-Related Services) is 57.9 percent. We are establishing that the portion of capital-related costs that is influenced by the local labor market would continue to be estimated to be 46 percent. Because the relative importance for capital-related costs would be 9.0 percent of the FY 2009-based LTCH-specific market basket in FY 2016, we are taking 46 percent of 9.0 percent to determine the labor-related share of capital-related costs for FY 2016, which would result in 4.1 percent (0.46×9.0). We then added that 4.1 percent for the capital-related cost amount to the 57.9 percent for the operating cost amount to determine the total labor-related share for FY 2016. Therefore, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are establishing a labor-related share under the LTCH PPS for FY 2016 of 62.0 percent. Consistent with our proposal, this labor-related share is determined using the same methodology as used in calculating all previous fiscal years LTCH labor-related shares.

FY 2016 LABOR-RELATED SHARE RELATIVE IMPORTANCE BASED ON THE FY 2009-BASED LTCH-SPECIFIC MARKET BASKET

	FY 2016 Labor-related share relative importance
Wages and Salaries	44.6
Employee Benefits	8.1
Professional Fees: Labor-Related	2.2
Administrative and Business Support Services	0.5
All Other: Labor-Related Services	2.5
Subtotal	57.9
Labor-Related Portion of Capital Costs (46 percent)	4.1
Total Labor-Related Share	62.0

4. Wage Index for FY 2016 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the ''urban'' or ''rural'' designation of any related or affiliated provider.

In the FY 2015 LTCH PPS final rule (79 FR 50394 through 50396), we calculated the FY 2015 LTCH PPS area wage index values using the same data used for the FY 2015 acute care hospital IPPS (that is, data from cost reporting periods beginning during FY 2011), without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act, as these were the most recent complete data available at that time. In that same final rule, we indicated that we computed the FY 2015 LTCH PPS area wage index values consistent with the urban and rural geographic classifications (labor market areas) that were in place at that time, and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining payments under the LTCH PPS). As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also continued to use our existing policy for determining area wage index values for

areas where there are no IPPS wage data.

Consistent with our historical methodology, to determine the applicable area wage index values for the FY 2016 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, as we proposed, we are using wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2012, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act. We are using FY 2012 wage data because these data are the most recent complete data available. We also note that these are the same data used to compute the FY 2016 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this final rule. We are computing the FY 2016 LTCH PPS standard Federal payment rate area wage index values consistent with the ''urban'' and ''rural'' geographic classifications (that is, labor market area delineations, as previously discussed in section V.B.2. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS, as we proposed. We also are, as we proposed, continuing to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, under our methodology for determining the FY 2016 LTCH PPS standard Federal payment rate area wage index values, as we proposed, we are continuing to use our existing policy for determining area wage index values for areas where there are no IPPS wage data.

Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data would be determined by using an average of all of the urban areas within the State and the LTCH PPS wage index value for rural areas with no IPPS wage data would be determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2012 IPPS wage data that we are using to determine the FY 2016 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent with the methodology discussed above, we calculated the FY 2016 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12060, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 40660, 42340, 46660 and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site). We note that, as IPPS wage data are dynamic, it is possible that urban areas without IPPS wage data will vary in the future.

Based on the FY 2012 IPPS wage data that we are using to determine the FY 2016 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no rural areas without IPPS hospital wage data. Therefore, it is not necessary to use our established methodology to calculate a LTCH PPS standard Federal payment rate wage index value for rural areas with no IPPS wage data for FY 2016. We note that, as IPPS wage data are dynamic, it is possible that the number of rural areas without IPPS wage data will vary in the future. The FY 2016 LTCH PPS standard Federal payment rate wage index values that are applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2015, through September 30, 2016, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site.

5. Budget Neutrality Adjustment for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage-level adjustment budget neutrality factor that will be applied to the standard Federal rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we apply an area wage level adjustment budget neutrality factor in determining the standard Federal rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

In this final rule, for FY 2016 LTCH PPS standard Federal payment rate cases, in accordance with § 412.523(d)(4), as we proposed, we are applying an area wage level adjustment budget neutrality factor to adjust the standard Federal rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using a methodology that is consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). Specifically, as we proposed, we are determining an area wage level adjustment budget neutrality factor that will be applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2016 using the following methodology:

Step 1—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2015 wage index values, including the 50/50 blended area wage index values, as applicable, and the FY 2015 labor-related share of 62.306 percent (as established in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50393 and 50397).

Step 2—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2016 wage index values (as shown in Tables 12A and 12B listed in the Addendum to this final rule and available via the Internet on the CMS Web site) and the FY 2016 labor-related share of 62.0 percent (based on the latest available data as previously discussed previously in this Addendum).

Step 3—We calculated the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2015 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the FY 2016 area wage level adjustments (calculated in Step 2) to determine the area wage level adjustment budget

neutrality factor for FY 2016 LTCH PPS standard Federal payment rate payments.

Step 4—We then applied the FY 2016 area wage level adjustment budget neutrality factor from Step 3 to determine the FY 2016 LTCH PPS standard Federal payment rate after the application of the FY 2016 annual update (discussed previously in section V.A.2. of this Addendum).

We note that, with the exception of cases subject to the transitional blend payment rate provisions in the first 2 years, under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) will be paid based on the LTCH PPS standard Federal payment rate. Because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, we only used data from claims that would have qualified for payment at the LTCH PPS standard Federal payment rate if such rate were in effect at the time of discharge to calculate the FY 2016 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor described above. (For additional information on our application of site neutral payment rate required under section 1886(m)(6) of the Act, we refer readers to section VII.B. of the preamble of this final rule.)

For this final rule, using the steps in the methodology described above, we determined a FY 2016 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 1.000513. Accordingly, in section V.A.2. of the Addendum to this final rule, to determine the FY 2016 LTCH PPS standard Federal payment rate, we are applying an area wage level adjustment budget neutrality factor of 1.000513, in accordance with § 412.523(d)(4). The FY 2016 LTCH PPS standard Federal payment rate shown in Table 1E of the Addendum to this final rule reflects this adjustment factor.

C. LTCH PPS Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels described above.

Under our current methodology, we update the COLA factors for Alaska and Hawaii every 4 years (at the same time as the update to the labor-related share of the IPPS market basket) (77 FR 53712 through 53713). This methodology is based on a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also includes a 25-percent cap on the CPI-updated COLA factors. (For additional details on our current methodology for updating the COLA factors for Alaska and Hawaii, we refer readers to section VII.D.3. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53481 through 53482).)

We continue to believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii. Under our current policy, we update the COLA factors using the methodology described above every 4 years; the first year began in FY 2014 (77 FR 53482). Therefore, in this final rule, as we proposed, for FY 2016, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are continuing to use the COLA factors based on the 2009 OPM COLA factors updated through 2012 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as established in the FY 2014 IPPS/LTCH PPS final rule. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50998) for a discussion of the FY 2014 COLA factors.) Consistent with our historical practice and as we proposed, we are establishing that the COLA factors shown in the following table will be used to adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii under § 412.525(b).

COST-OF-LIVING ADJUSTMENT FACTORS FOR ALASKA AND HAWAII HOSPITALS UNDER THE LTCH PPS FOR FY 2016

Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.23
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.23
City of Juneau and 80-kilometer (50-mile) radius by road	1.23
All other areas of Alaska	1.25
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.19
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

D. Adjustment for LTCH PPS High-Cost Outlier (HCO) Cases

1. Overview

a. Background

Under the broad authority conferred upon the Secretary by section 123 of the BBRA as amended by section 307(b) of the BIPA, in the regulations at § 412.525(a), we established an adjustment for additional payments for outlier cases that have extraordinarily high costs relative to the costs of most discharges. We refer to these cases as high cost outliers (HCOs). Providing additional payments for outliers strongly improves the accuracy of the LTCH PPS in determining resource costs at the patient and hospital level. These additional payments reduce the financial losses that would otherwise be incurred when treating patients who require more costly care and, therefore, reduce the incentives to underserve these patients. Under our current HCO policy at § 412.525(a), we set the outlier threshold before the beginning of the applicable rate year so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS.

Under the current HCO policy, we make outlier payments for any discharges if the estimated cost of a case exceeds the adjusted payment under the LTCH PPS standard Federal payment rate plus a fixed-loss amount. Specifically, in accordance with existing § 412.525(a)(3), we make an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the patient case and the outlier threshold, which is the sum of the adjusted payment under the

LTCH PPS standard Federal payment rate and the fixed-loss amount. The fixed-loss amount is the amount used to limit the loss that a hospital incurs under the outlier policy for a case with unusually high costs before the LTCH will receive any additional payments. This results in Medicare and the LTCH sharing financial risk in the treatment of extraordinarily costly cases. Under the current LTCH PPS HCO policy, the LTCH's loss is limited to the fixed-loss amount and a fixed percentage of costs above the outlier threshold (the adjusted LTCH PPS standard Federal payment rate payment plus the fixed-loss amount). The fixed percentage of costs is called the marginal cost factor. We calculate the estimated cost of a case by multiplying the Medicare allowable covered charge by the hospital's overall hospital cost-to-charge ratio (CCR).

Under the current HCO policy at § 412.525(a), we determine a fixed-loss amount, that is, the maximum loss that an LTCH can incur under the LTCH PPS for a case with unusually high costs before the LTCH will receive any additional payments. We calculate the fixed-loss amount by estimating aggregate payments with and without an outlier policy. The fixed-loss amount results in estimated total outlier payments being projected to be equal to 8 percent of projected total LTCH PPS payments. Currently, MedPAR claims data and CCRs based on data from the most recent Provider-Specific File (PSF) (or from the applicable statewide average CCR if an LTCH's CCR data are faulty or unavailable) are used to establish a fixed-loss threshold amount under the LTCH PPS.

b. Application of the Site Neutral Payment Rate

Section 1206 of Public Law 113–67 establishes a new dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges, beginning in FY 2016. To implement this statutory change, as discussed in section VII.B. of the preamble of this final rule, we will pay hospitals for LTCH discharges that meet the criteria for exclusion from site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) based on the LTCH PPS standard Federal payment rate, which includes HCO payments determined under existing § 412.525(a). Furthermore, we are establishing that the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4) (including any applicable adjustments, such as outlier payments), or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2), consistent with the statute.

Under the new dual rate LTCH PPS payment structure, as discussed in section VII.B.7.b. of the preamble of this final rule, as we proposed, we are establishing two separate HCO targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases. We are revising the regulations by making changes to the HCO policy to account for the new dual rate LTCH PPS payment structure by revising paragraphs (a)(1), (a)(2), and (a)(3), and adding a new paragraph (a)(4) to existing § 412.525 of the regulations. Under our HCO policy revised in accordance with the new dual rate LTCH PPS payment structure, we are establishing a fixed-loss amount and target for LTCH PPS standard Federal payment rate cases using the current LTCH PPS HCO policy, but limiting the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes had been in effect at the time of those discharges. Therefore, we are not making any modifications to the HCO methodology as it applies to LTCH PPS standard Federal payment rate cases other than determining a fixed-loss amount using only data from LTCH PPS standard Federal payment rate cases. Specifically, under our finalized policy, LTCH PPS standard Federal payment rate cases will receive an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the case and the HCO threshold, which is the sum of the LTCH PPS payment for the LTCH PPS standard Federal payment rate case and the fixed-loss amount for such cases. The fixed-loss amount for LTCH PPS standard Federal payment rate cases will continue to be determined so that estimated HCO payments would be projected to be equal to 8 percent of estimated total LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

Furthermore, as we proposed, we are revising the HCO policy under existing § 412.525(a) to provide for high-cost outlier payments under the site neutral payment rate. Specifically, we are establishing that site neutral payment rate cases will receive an additional payment for HCOs that is equal to 80 percent of the difference between the estimated cost of the case and the HCO threshold for site neutral payment rate discharges, which we are establishing as the sum of site neutral payment rate for the case and the IPPS fixed-loss amount. In addition, in order to maintain budget neutrality, as we proposed and as discussed in section VII.B.7.b. of the preamble of this final rule, we are making the HCO payments for site neutral payment rate cases budget neutral by applying a budget neutrality factor to the LTCH PPS payments for those site neutral payment rate cases. (Additional details on the calculation of the budget neutrality adjustment for HCO payments to site neutral payment rate cases is discussed subsequently in section V.D.4. of this Addendum.)

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

The following is a discussion of CCRs that are used in determining payments for HCO cases under § 412.525(a), SSO cases paid under the LTCH PPS in accordance with § 412.529, and site neutral payment rate cases paid in accordance with proposed § 412.522(c) (as discussed in section VII.B.4. of the preamble of this final rule). Although this section is specific to HCO cases, because CCRs and the policies and methodologies pertaining to them are used in determining payments for HCO, SSO, and site neutral payment rate cases (to determine the estimated costs of these cases), we are discussing the determination of CCRs under the LTCH PPS for these three types of cases simultaneously in this section.

In determining HCO payments in accordance with § 412.525(a), SSO payments in accordance with § 412.529 and site neutral payment rate payments in accordance with § 412.522(c), we calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. In general, we use the LTCH's overall CCR, which is computed based on either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period, in accordance with § 412.525(a)(4)(iv)(B), for HCOs, § 412.529(f)(4)(ii) for SSOs, and § 412.522(c)(1)(ii) for site neutral payment rate cases. (We note that, in some instances under the provisions of the regulations at § 412.525(a)(4)(iv) and § 412.529(f)(4), and § 412.522(c)(1)(ii), we may use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or that is requested by the hospital.) Under the LTCH PPS, a single prospective payment per discharge is made for both inpatient operating and capital-related costs. Therefore, we compute a single ''overall'' or ''total'' LTCH-specific CCR based on the sum of LTCH operating and capital costs (as described in

Section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total charges. Specifically, an LTCH's CCR is calculated by dividing an LTCH's total Medicare costs (that is, the sum of its operating and capital inpatient routine and ancillary costs) by its total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges).

b. LTCH Total CCR Ceiling

Generally, an LTCH is assigned the applicable statewide average CCR if, among other things, an LTCH's CCR is found to be in excess of the applicable maximum CCR threshold (that is, the LTCH CCR ceiling). This is because CCRs above this threshold are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases. Therefore, under our established policy, generally, if an LTCH's calculated CCR is above the applicable ceiling, the applicable LTCH PPS statewide average CCR is assigned to the LTCH instead of the CCR computed from its most recent (settled or tentatively settled) cost report data.

In this final rule, using our established methodology for determining the LTCH total CCR ceiling, based on IPPS total CCR data from the March 2015 update of the PSF, we are establishing a total CCR ceiling of 1.335 under the LTCH PPS for FY 2016 in accordance with § 412.525(a)(4)(iv)(C)(*2*) for HCOs, § 412.529(f)(4)(iii)(B) for SSOs, and § 412.522(c)(1)(ii) for site neutral payment rate cases. We also are, as proposed, using more recent data to determine the LTCH PPS CCR ceiling for this FY 2016 final rule.

c. LTCH Statewide Average CCRs

Our general methodology established for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling (described above) because it is based on ''total'' IPPS CCR data. Under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(C) the SSO policy at § 412.529(f)(4)(iii), and the site neutral payment rate policy at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (for this purpose, consistent with current policy, a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose CCR is in excess of the LTCH CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data and as we proposed, in this final rule, using our established methodology for determining the LTCH statewide average CCRs, based on the most recent complete IPPS ''total CCR'' data from the March 2015 update of the PSF, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that will be effective for discharges occurring on or after October 1, 2015 through September 30, 2016, in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet). We also, as proposed, are using more recent data to determine the LTCH PPS statewide average total CCRs for FY 2016.

Under the current LTCH PPS labor market areas, all areas in Delaware, the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, although Connecticut and Massachusetts have areas that are designated as rural, there are no short-term, acute care IPPS hospitals or LTCHs located in those areas as of March 2015. Therefore, consistent with our existing methodology and as we proposed, we are using the national average total CCR for rural IPPS hospitals for rural Connecticut and Massachusetts in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet). In addition, consistent with our existing methodology as we proposed, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, we are continuing to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are using this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

d. Reconciliation of HCO and SSO Payments

Under the HCO policy at § 412.525(a)(4)(iv)(D) and the SSO policy at § 412.529(f)(4)(iv), the payments for HCO and SSO, cases are subject to reconciliation. Specifically, any reconciliation of payments is based on the CCR that is calculated based on a ratio of cost-to-charge data computed from the relevant cost report determined at the time the cost report coinciding with the discharge is settled. (As discussed section VII.B.4.a. of the preamble of this final rule, after consideration of public comments we received, we are not finalizing our proposal to establish a reconciliation process for site neutral payment rate payments. However, we are finalizing the portion of our proposal to apply the existing HCO reconciliation policy to the HCO payments made to site neutral payment rate cases. For additional information on the existing reconciliation policy, we refer readers to sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4) as added by Change Request 7192 (Transmittal 2111; December 3, 2010) and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821).

3. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. Establishment of the LTCH PPS Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2016

When we implemented the LTCH PPS, under the broad authority of section 123 of the BBRA as amended by section 307(b) of BIPA, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS (67 FR 56022 through 56026). To determine the fixed-loss amount, we estimate outlier payments and total LTCH PPS payments for each case using claims data from the MedPAR files. Specifically, we estimate the cost of the

case by multiplying the Medicare covered charges from the claim by the LTCH's CCR. Under the HCO policy at § 412.525(a), if the estimated cost of the case exceeds the outlier threshold, we make an outlier payment equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (that is, the sum of the adjusted standard Federal rate payment and the fixed-loss amount).

As noted above and as discussed in greater detail in section VII.B.7.b. of the preamble of this final rule, under the new dual rate LTCH PPS payment structure, we are establishing two separate HCO targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases. Under this finalized policy, for LTCH PPS standard Federal payment rate cases, we are establishing a fixed-loss amount and target using the current LTCH PPS HCO policy, but to limit the data used under that policy to LTCH cases that would have been paid as LTCH PPS standard Federal payment rate cases, if that payment rate had been in effect at the time of those discharges. Therefore, as we proposed, we are not making any modifications to the existing LTCH PPS HCO payment methodology as it applies to LTCH PPS standard Federal payment rate cases, other than determining a fixed-loss amount using only data from LTCH PPS standard Federal payment rate cases (or cases that would have been LTCH PPS standard Federal payment rate cases had the new dual rate LTCH PPS payment structure been in effect at the time of those discharges). As such, LTCH PPS standard Federal payment rate cases will continue to receive an additional payment for any HCO case that is equal to 80 percent of the difference between the estimated cost of the case and the HCO threshold, which is the sum of the LTCH PPS payment for the LTCH PPS standard Federal payment rate case and the fixed-loss amount. The fixed-loss amount for LTCH PPS standard Federal payment rate cases will continue to be determined so that estimated HCO payments would be projected to equal 8 percent of estimated total LTCH PPS standard Federal payment rate cases, and a budget neutrality factor will continue to be applied to LTCH PPS standard Federal payment rate cases to offset that 8 percent so that HCO payments for LTCH PPS standard Federal payment rate cases will be budget neutral. Below we present our calculation of the LTCH PPS fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2016, which is consistent with the methodology used to establish the FY 2015 LTCH PPS fixed-loss amount. (Additional discussion of our HCO payment policy proposals for site neutral payment rate cases is discussed subsequently in section V.D.4. of this Addendum.)

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50399 through 50400), we presented our policies regarding the methodology and data we used to establish a fixed-loss amount of $14,972 for FY 2015, which was calculated using our existing methodology (based on the data and the rates and policies presented in that final rule) in order to maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments. Consistent with our historical practice of using the best data available, in determining the fixed-loss amount for FY 2015, we used the most recent available LTCH claims data and CCR data, that is, LTCH claims data from the March 2014 update of the FY 2013 MedPAR file and CCRs from the March 2014 update of the PSF, as these data were the most recent complete LTCH data available at that time.

In this final rule, as we proposed, we are continuing to use our existing methodology to calculate a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2016 using the best available data that will maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the rates and policies for these cases presented in this final rule). Specifically, based on the most recent complete LTCH data available (that is, LTCH claims data from the March 2015 update of the FY 2014 MedPAR file and CCRs from the March 2015 update of the PSF), we determined a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2016 that will result in estimated outlier payments projected to be equal to 8 percent of estimated FY 2016 payments for such cases. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we are establishing a fixed-loss amount of $16,423 for LTCH PPS standard Federal payment rate cases for FY 2016. We also will continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted LTCH PPS standard Federal payment rate payment and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of $16,423).

We note that the fixed-loss amount of $16,423 for FY 2016 for LTCH PPS standard Federal payment rate cases is lower than the proposed FY 2016 fixed-loss amount for LTCH PPS standard Federal payment rate cases of $18,768. This decrease is primarily a result of updated data used to calculate the fixed-loss amount in this final rule, such as the most recent available LTCH claims data in the MedPAR file, CCRs in the PSF, and the estimate of the LTCH market basket increase. We also note that the fixed-loss amount of $16,423 for LTCH PPS standard Federal payment rate cases for FY 2016 is higher than the FY 2015 fixed-loss amount of $14,792. This increase is largely attributable to the implementation of the new dual rate LTCH PPS payment structure, under which we have established separate HCO target amounts for LTCH PPS standard Federal payment rate cases and site neutral payment rate cases. The FY 2015 fixed-loss amount was determined based on data from all LTCH cases—both those that would have been paid as site neutral payment rate cases and those that would have been paid as LTCH PPS standard Federal payment rate cases if the new dual rate LTCH PPS payment structure had been in effect at that time. However, under our finalized policy, the fixed-loss amount of $16,423 for FY 2016 will only be used to determine HCO payments made for LTCH PPS standard Federal payment rate cases. We currently estimate that the FY 2015 fixed-loss amount of $14,972 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases of approximately 8.1 percent of total estimated FY 2015 LTCH PPS payments to those cases, which exceeds the 8 percent target. Therefore, we believe that it is necessary and appropriate to increase the fixed-loss amount to maintain that, for LTCH PPS standard Federal payment rate cases, estimated HCO payments would equal 8 percent of estimated total LTCH PPS payments for those cases as required under the revisions to § 412.525(a). (For further information on the existing 8 percent HCO ''target'' requirement, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56022 through 56024).) Maintaining the fixed-loss amount at the current level would result in HCO payments that are more than the current regulatory 8-percent target that we are applying to total payments for LTCH PPS standard Federal payment rate cases because a lower fixed-loss amount would result in more cases

qualifying as outlier cases, as well as higher outlier payments for qualifying HCO cases because the maximum loss that an LTCH must incur before receiving an HCO payment (that is, the fixed-loss amount) would be smaller.

b. Application of the High-Cost Outlier Policy to SSO Cases

Under our finalized policies to implement the new dual rate LTCH PPS payment structure required by statute, we are establishing that LTCH PPS standard Federal payment rate cases (that is, LTCH discharges that meet the criteria for exclusion from the site neutral payment rate) will continue to be paid based on the LTCH PPS standard Federal payment rate, and will include all of the existing payment adjustments under § 412.525(d), such as the adjustments for SSO cases under § 412.529. (For additional information on our payments for LTCH PPS standard Federal payment rate cases, we refer readers to section VII.B.4.c. of the preamble of this final rule.) Under some rare circumstances, an LTCH discharge can qualify as an SSO case (as defined in the regulations at § 412.529 in conjunction with § 412.503) and also as an HCO case, as discussed in the August 30, 2002 final rule (67 FR 56026). In this scenario, a patient could be hospitalized for less than five-sixths of the geometric average length of stay for the specific MS–LTC–DRG, and yet incur extraordinarily high treatment costs. If the estimated costs exceeded the HCO threshold (that is, the SSO payment plus the fixed-loss amount), the discharge is eligible for payment as an HCO. Therefore, for an SSO case in FY 2016, the HCO payment will be 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the fixed-loss amount of $16,423 and the amount paid under the SSO policy as specified in § 412.529).

4. High-Cost Outlier Payments for Site Neutral Payment Rate Cases

Under the new dual rate LTCH PPS payment structure, the statute establishes two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, as discussed in section VII.B. of the preamble of this final rule, we will pay for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) based on the LTCH PPS standard Federal payment rate. In addition, consistent with the statute, we are establishing that the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a); or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). Furthermore, we are establishing two separate HCO targets-one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases.

For site neutral payment rate cases, as we proposed, we are establishing that such cases will receive an additional HCO payment for costs that exceed the HCO threshold that is equal to 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold. We are establishing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed-loss amount. As discussed in section II.A.4.g.(1) of this Addendum, we are establishing a fixed-loss amount of $22,544 under the IPPS for FY 2016. Accordingly, under our finalized policies, for FY 2016 we will calculate HCO payments for site neutral payment rate cases with costs that exceed the HCO threshold amount, which is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of site neutral payment rate payment and the fixed-loss amount for site neutral payment rate cases of $22,544). (We note that, as discussed in section VII.B.7.b. of the preamble of this final rule, in light of our HCO policies and in accordance with our implementation of the new dual rate LTCH PPS payment structure, any site neutral payment rate case that is paid 100 percent of the estimated cost of the case (because that amount is lower than the IPPS comparable per diem amount) will not be eligible to receive a HCO payment because, by definition, the estimated costs of such cases would never exceed the IPPS comparable per diem amount by any threshold.)

Furthermore, under our finalized policy, after consideration of public comments as discussed in section VII.B.7.b. of the preamble of this final rule, we are establishing that HCO payments for site neutral payment rate cases will be budget neutral, such that the site neutral payment rate HCO payments will not result in any change in estimated aggregate LTCH PPS payments (For additional details on our HCO policy for site neutral payment rate cases, we refer readers to section VII.B.7.b. of the preamble of this final rule.) In order to achieve this, in the proposed rule (80 FR 24648 through 24649), under proposed new § 412.522(c)(2)(i), we proposed to apply a budget neutrality factor to the payments for all site neutral payment rate cases, which would be established on an estimated basis. In addition, in order to estimate the magnitude a budget neutrality adjustment for HCO payments for site neutral payment rate cases, we relied on the assumption by our actuaries that site neutral payment rate cases would have lengths of stay and costs comparable to IPPS cases assigned to the same MS–DRG. Because site neutral payment rate cases are expected to have lengths of stay and costs comparable to IPPS cases assigned to the same MS DRG, we project that our policy to use the IPPS fixed-loss threshold for the site neutral payment rate cases will result in HCO payments for site neutral payment rate cases that are similar in proportion as is seen in IPPS cases assigned to the same MS–DRG; that is, 5.1 percent. Therefore, under new § 412.522(c)(2)(i), we proposed to adjust all payments for site neutral payment rate cases by a budget neutrality factor so that the estimated HCO payments payable for site neutral payment rate cases do not result in any increase in aggregate LTCH PPS payments. That is, for FY 2016 we proposed to apply a budget neutrality adjustment for estimated HCO payments for site neutral payment rate cases to *both* the site neutral payment rate and the LTCH PPS standard Federal payment rate portions of the FY 2016 transitional blended rate paid to site neutral payment rate cases. (We refer readers to section VII.B.7.b. of this preamble for our discussion of the public comments we received, our responses to those comments, and our finalized policy for a budget neutrality requirement for site neutral payment rate cases' HCO payments.) Because the statutory LTCH PPS payment changes required by section 1886(m)(6) of the Act (that is, the application of the site neutral payment rate) are effective for LTCH PPS discharges occurring in cost reporting periods beginning on or after October 1, 2015, in the proposed rule, our site neutral payment rate case HCO budget neutrality calculations also included a proposed approach to account for when LTCHs' first cost reporting period begins on or after October 1, 2015.

Under our proposed approach (summarized above and described in more detail in section V.D.4. of the Addendum of the proposed rule (80 FR 24649)) and based on the site neutral payment rate LTCH cases in our database from the FY 2014 MedPAR files (that is, cases that would have met

the new criteria had they been in effect at the time of the discharge), we estimated that site neutral payment rate HCO payments would be approximately 2.3 percent of total LTCH PPS payments for site neutral payment rate cases in FY 2016. Accordingly, we proposed to applying a budget neutrality factor of 0.976996 to all payments for site neutral payment rate cases in FY 2016 so that the estimated HCO payments payable to those cases would not result any increase in aggregate LTCH PPS payments.

Comment: Several commenters disagreed with our proposed approach of adjusting *all* payments for site neutral payment rate cases in FY 2016 (that is, *both* the site neutral payment rate and the LTCH PPS standard Federal payment rate portions of the transitional blended rate payment) by a budget neutrality factor for estimated HCO payments payable to site neutral payment rate cases. The reasons for the commenters' opposition to this proposal include: The LTCH PPS standard Federal payment rate portion under transitional blended rate would be lower than the LTCH PPS standard Federal payment rate used to pay cases that are excluded from the site neutral payment rate; and the comingling of site neutral payment rate and LTCH PPS standard Federal payment rate elements unnecessarily convolutes the proposed site neutral payment rate HCO calculations. Consequently, these commenters recommended that, if CMS finalizes its proposal to apply a budget neutrality factor to account for estimated site neutral payment case HCO payments, the site neutral payment rate and the LTCH PPS standard Federal payment rate portions of the transitional blended rate should be treated separately. That is, the budget neutrality adjustment for estimated HCO payments to site neutral payment rate cases should only be applied to the site neutral payment rate portion of the transitional blended rate payment (and not applied to the LTCH PPS standard Federal payment rate portion of the transitional blended rate payment).

Furthermore, some commenters stated that the description of the calculation of the estimated percentage of site neutral payment rate case HCO payments for FY 2016 was too brief, and requested that CMS provide additional details on the steps used to calculate the budget neutrality adjustment for estimated HCO payments to site neutral payment rate cases. In addition, commenters believed that our proposed calculation of our estimate in the proposed rule of HCO payments to site neutral payment rate cases includes a technical error. That is, the commenters stated that the calculation of the percentage of estimated site neutral payment rate case HCO payments for FY 2016 of 2.3 percent appears to be based on estimated HCO payments for site neutral payment rate cases *before* applying the transitional blended rate payment (rather than only 50 percent, consistent with the calculation of the transitional blended rate that is comprised of only 50 percent of the site neutral payment rate payment amount). Lastly, some commenters agreed with the proposed approach to account for when LTCHs' first cost reporting period begins on or after October 1, 2015 in estimating site neutral payment rate payments in FY 2016.

Response: We agree that the approach recommended by commenters would lessen the complexity and increase the transparency of the calculation of the site neutral payment rate HCO payment budget neutrality adjustment. Such an approach simplifies the calculation because the adjustment to account for additional HCO payments to site neutral payment rate cases would only be applied to the portion of the blended rate payment that is based on the site neutral payment rate calculation under new § 412.522(c)(1). Therefore, after consideration of public comments we received, we are modifying our proposal by adopting the commenters' recommended approach of applying the budget neutrality adjustment for estimated HCO payments for site neutral payment rate cases only to the site neutral payment rate portion of the transitional blended rate payment. As a result of this modification, we are making conforming changes to our proposed codification of this policy under new § 412.522(c)(2)(i) to specify that the site neutral payment rate HCO budget neutrality adjustment does not include the portion of the blended payment rate described in new § 412.522(c)(3)(ii).

This modification to our proposed approach for applying the budget neutrality adjustment to the site neutral payment rate portion of the transitional blended rate payment eliminates the need to perform any calculation of the site neutral payment rate cases HCO payment budget neutrality adjustment under our finalized policy. This is, as discussed above and in greater detail in section VII.B.7.b. of the preamble of this final rule, because based on our actuarial assumptions we project that our finalized policy to use the IPPS fixed-loss threshold for the site neutral payment rate cases will result in HCO payments for those cases that are similar in proportion as is seen in IPPS cases assigned to the same MS–DRG; that is, 5.1 percent. In other words, we estimated that HCO payments for site neutral payment rate cases will be 5.1 percent of the site neutral payment rate payments. As noted above, payments to site neutral payment rate cases in FY 2016 will be paid under the blended transitional rate. As such, estimated HCO payments for site neutral payment rate cases in FY 2016 under our finalized policies are equal to 5.1 percent of the portion of the blended rate payment that is based on the estimated site neutral payment rate payment amount (and does not include the LTCH PPS standard Federal payment rate payment amount, as we proposed). Therefore, to ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2016 do not result any increase in estimated aggregate FY 2016 LTCH PPS payments, it is necessary to reduce the site neutral payment rate portion of the blended rate payment by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2016. In order to achieve this, under § 412.522(c)(2)(i) for FY 2016, we are applying a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as 1.0–5.1/100 = 0.949). (We note, because this adjustment is intended to ensure that estimated HCO payments payable to site neutral payment rate cases are budget neutral (that is, do not result in any increase in aggregate LTCH PPS payments), the magnitude of the reduction is larger than it would be under our proposed approach as the adjustment is now only being applied to half of the transitional blended rate payment (rather than the whole transitional blended rate payment as it was under our proposal).

Upon review of our calculation in the proposed rule of the estimated percentage of site neutral payment rate case HCO payments for FY 2016, we determined that our calculation of the proposed budget neutrality adjustment for estimated HCO payments for site neutral payment rate cases inadvertently contained the technical error pointed out by the commenters. We appreciate the commenters bringing that inadvertent error to our attention, and we have included the necessary correction in the calculation of our estimate of HCO payments for site neutral payment rate cases, which we discuss in the regulatory impact analyses presented in section I.J. of Appendix A of this final rule. (We note, as explained above, the modification to the proposed approach for applying the

budget neutrality adjustment for estimated HCO payments for site neutral payment rate cases that we are adopting in this final rule eliminates the need for calculation of the budget neutrality adjustment under our finalized policy.)

We appreciate the commenters' support of our proposed approach to account for the fact that LTCHs whose cost reporting periods begin on or after October 1, 2015, will receive the LTCH PPS standard Federal payment rates for all of their LTCH PPS cases, including their cases that would be site neutral payment rate cases, until the start of their next cost reporting period when estimating site neutral payment rate payments in FY 2016. Because we are adopting a different, more direct approach in this final rule (as discussed above), in the applying the budget neutrality requirement for estimated HCO payments payable to site neutral payment rate cases in for FY 2016, it is no longer necessary to account for when LTCHs' first cost reporting period begins on or after October 1, 2015 (as we did to calculate the budget neutrality adjustment under our proposed approach). We note, however, for purposes of the impact analyses presented in section I.J. of Appendix A of this final rule, to estimate site neutral payment rate payments for FY 2016, it is still necessary to account for when LTCHs' first cost reporting period begins on or after October 1, 2015. Accordingly, in this final rule, when estimating total LTCH PPS site neutral payment rate payments in Federal FY 2016, as we proposed, we are applying an adjustment to account for the varying effective dates of the new dual rate LTCH PPS payment structure. We describe our application of this approach for purposes of the impact analyses presented in this final rule in section I.J. of Appendix A of this final rule. (For a description of our proposed approach to account for the statutory rolling effective date of the revisions to the LTCH PPS, we refer readers to section V.D.4. of the Addendum of the proposed rule (80 FR 24649).)

In summary, after consideration of public comments we received, for the reasons discussed above, we are modifying our proposed application of the site neutral payment rate HCO payment budget neutrality adjustment. In this final rule, we are adopting an approach under which the budget neutrality adjustment for estimated HCO payments to site neutral payment rate cases will be applied to the site neutral payment rate portion of the transitional blended rate payment in FY 2016 (and will not applied to the LTCH PPS standard Federal payment rate portion of the transitional blended rate payment). Accordingly, to ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2016 do not result any increase in estimated aggregate FY 2016 LTCH PPS payments, we are reducing the site neutral payment rate portion of the blended rate payment in FY 2016 by 5.1 percent. In order to achieve this, we are applying a budget neutrality factor of 0.949 to the site neutral payment rate portion of the blended rate payment in FY 2016, in accordance with new § 412.522(c)(2)(i).

E. Update to the IPPS Comparable/ Equivalent Amounts to Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule, we established a policy for reflecting the changes to the Medicare IPPS DSH payment adjustment methodology provided for by section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' under the SSO policy at § 412.529 and the ''IPPS equivalent amount'' under the 25-percent threshold payment adjustment policy at § 412.534 and § 412.536. Historically, the determination of both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' includes an amount for inpatient operating costs ''for the costs of serving a disproportionate share of low-income patients.'' Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under the age of 65 who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all IPPS hospitals that receive Medicare DSH payments.

To reflect the statutory changes to the Medicare DSH payment adjustment methodology in the calculation of the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS, we stated that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating DSH payment amount that has historically been reflected in the LTCH PPS payments that is based on IPPS rates). We also stated that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. As explained in the FY 2014 IPPS/LTCH PPS final rule (79 FR 50766 through 50767), we believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50400 through 50401), we discussed that, for FY 2015, based on the latest data available at that time, we projected that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the proposed payments for uncompensated care under section 1886(r)(2) of the Act, would result in overall Medicare DSH payments equaling 85.26 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of amendments made by the Affordable Care Act. Therefore, the calculation of the ''IPPS comparable amount'' under § 412.529 and the ''IPPS equivalent amount'' under § 412.534 and § 412.536 for FY 2015 includes an applicable operating Medicare DSH payment amount that would be equal to 85.26 percent of the operating Medicare DSH payment amount based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act.

For FY 2016, as discussed in greater detail in section IV.D.3.d.(2) of the preamble of this final rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare

DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 63.69 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount of uncompensated care payments that will be made to eligible IPPS hospitals in FY 2016. In other words, Medicare DSH payments prior to the amendments made by the Affordable Care Act will be adjusted to 47.77 percent (the product of 75 percent and 63.69 percent) and the resulting amount will be used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2016, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 72.77 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of amendments made by the Affordable Care Act (that is, 25 percent + 47.77 percent = 72.77 percent).

As we proposed and consistent with our historical practice of using the most recent data available, in this final rule, for FY 2016, we are establishing that the calculation of the ''IPPS comparable amount'' under § 412.529 and the ''IPPS equivalent amount'' under § 412.534 and § 412.536 will include an applicable operating Medicare DSH payment amount that is equal to 72.77 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula but for the amendments made by the Affordable Care Act.

F. Computing the Adjusted LTCH PPS Federal Prospective Payments for FY 2016

Section 412.525 sets forth the adjustments to the LTCH PPS standard Federal payment rate. Under the new dual rate LTCH PPS payment structure that begins in FY 2016, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate will be paid based on the LTCH PPS standard Federal payment rate (as discussed in section VII.B. of the preamble of this final rule). Under § 412.525(c), the LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages by multiplying the labor-related share of the LTCH PPS standard Federal payment for a case by the applicable LTCH PPS wage index (FY 2016 values are shown in Tables 12A through 12B listed in section VI. of the Addendum of this final rule and are available via the Internet). The LTCH PPS standard Federal payment is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the FY 2016 factors are shown in the chart in section V.D. of this Addendum) in accordance with § 412.525(b). In this final rule, we are establishing an LTCH PPS standard Federal payment rate for FY 2016 of $41,762.85, as discussed in section V.A.2. of the Addendum to this final rule. We illustrate the methodology to adjust the LTCH PPS standard Federal payment rate for FY 2016 in the following example:

Example:

During FY 2016, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in Chicago, Illinois (CBSA 16974). The FY 2016 LTCH PPS wage index value for CBSA 16974 is 1.0401 (obtained from Table 12A listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The Medicare patient case is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2016 of 0.91548 (obtained from Table 11 listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The LTCH submitted quality reporting data for FY 2016 in accordance with the LTCHQRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted Federal prospective payment for this Medicare patient case in FY 2016, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted FY 2016 LTCH PPS standard Federal payment rate ($41,762.85) by the labor-related share (62.0 percent) and the wage index value (1.0401). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted LTCH PPS standard Federal payment rate (38.0 percent; adjusted for cost of living, if applicable) to determine the adjusted LTCH PPS standard Federal payment rate, which was then multiplied by the MS–LTC–DRG relative weight (0.9148) to calculate the total adjusted LTCH PPS standard Federal prospective payment for FY 2016 ($39,154.50). The table below illustrates the components of the calculations in this example.

LTCH PPS Standard Federal Prospective Payment Rate.	$41,762.85
Labor-Related Share	× 0.620
Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate.	= $25,892.97
Wage Index (CBSA 16974) ..	× 1.0401
Wage-Adjusted Labor Share of LTCH PPS Standard Federal Payment Rate.	= $26,931.28
Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate ($41,762.85 × 0.380).	+ $15,869.88
Adjusted LTCH PPS Standard Federal Payment Amount.	= $42,801.16
MS–LTC–DRG 189 Relative Weight.	× 0.9148
Total Adjusted LTCH PPS Standard Federal Prospective Payment.	= $39,154.50

VI. Tables Referenced in This Final Rule and Available Only Through the Internet on the CMS Website

This section lists the tables referred to throughout the preamble of this final rule and in this Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2015, for the FY 2016 rulemaking cycle, the IPPS and LTCH tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be available only through the Internet. Specifically, all IPPS tables listed below, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E will be available only through the Internet. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

As discussed in section III.I. of the preamble to this final rule, we proposed to streamline and consolidate the wage index tables for FY 2016 and subsequent fiscal years. In previous fiscal years, the wage index tables have consisted of the following 12 tables: Table 2 (acute care hospitals' case-mix indexes; hospital wage indexes; hospital average hourly wages, and 3-year average of hospital average hourly wages); Table 3A (relevant fiscal year and 3-year average hourly wage for acute care hospitals in urban areas by CBSA); Table 3B (relevant fiscal year and 3-year average hourly wage for acute care hospitals in rural areas by CBSA); Table 4A (wage index and capital geographic adjustment factor (GAF) for acute care hospitals in urban areas by CBSA and by State); Table 4B (wage index and capital GAF for acute care hospitals in rural areas by CBSA and by State); Table 4C (wage index and capital GAF for acute care hospitals that are reclassified by CBSA and by State); Table 4D (States designated as frontier, with acute care hospitals receiving at a minimum the frontier State floor wage index; urban areas with acute care hospitals receiving

the statewide rural floor or imputed rural floor wage index); Table 4E (urban CBSAs and constituent counties for acute care hospitals); Table 4F (Puerto Rico wage index and capital GAF for acute care hospitals by CBSA); Table 4J (out-migration adjustment for acute care hospitals); Table 9A (hospital reclassifications and redesignations); and Table 9C (hospitals redesignated as rural under section 1886(d)(8)(e) of the Act). With the exception of Table 4E, we proposed to consolidate the information from the 11 other tables listed above into 2 new tables. The wage index tables provided in previous fiscal years either display information by CMS Certification Number (CCN) or by CBSA number. The new Table 2 contains information by CCN and information from the following tables that have been provided in previous fiscal years: Tables 2, 4J, 9A, and 9C. The new Table 3 contains information by CBSA and information from the following tables that have been provided in previous fiscal years: Tables 3A, 3B, 4A, 4B, 4C, 4D, and 4F. We believe these two new tables will be easier for the public to navigate and find all the relevant data and information from the tables provided in previous fiscal years. Finally, in previous fiscal years, Table 4E provided a list of urban CBSAs and constituent counties. Because of formatting technicalities, we found it difficult to consolidate the information from Table 4E into the two new tables. Therefore, we proposed to provide the data previously published as Table 4E for each annual proposed and final rule as one of our data files on our Web page (the same Web page where the county to CBSA crosswalk is posted).

We did not receive any public comments on our proposals for the tables. Therefore, we are finalizing our proposals to streamline and consolidate the wage index tables for FY 2016 and subsequent fiscal years by consolidating the information from the 11 tables listed above (excluding Table 4E) into 2 new tables. The new Table 2 contains information by CCN and information from the following tables that have been provided in previous fiscal years: Tables 2, 4J, 9A, and 9C. The new Table 3 contains information by CBSA and information from the following tables that have been provided in previous fiscal years: Tables 3A, 3B, 4A, 4B, 4C, 4D, and 4F. We are providing the data previously published as Table 4E for each annual proposed and final rule as one of our data files on the CMS Web page.

As discussed in sections II.G.3.e., II.G.10.a., II.G.11., and II.G.13. of the preamble of this final rule, we developed the following ICD–10–CM and ICD–10–PCS code tables for FY 2016: Table 6B—New Procedure Codes; Table 6I—Complete MCC List; Table 6J—Complete CC List; Table 6K—Complete List of CC Exclusions; Table 6L—Principal Diagnosis Is Its Own MCC List; Table 6M—Principal Diagnosis Is Its Own CC List; Table 6M.1—Additions to the Principal Diagnosis Is Its Own CC List; and Table 6P—ICD–10–PCS Code Translations for MS–DRG Changes. Table 6P contains multiple tables 6P.1a through 6P.2a that list the ICD–10–PCS code translations relating to specific MS–DRG changes. In addition, under the HAC Reduction Program established by section 3008 of the Affordable Care Act, a hospital's total payment may be reduced by 1 percent if it is in the lowest HAC performance quartile. However, as discussed in section IV.G. of the preamble of this final rule, we are not providing the hospital-level data as a table associated with this final rule. The hospital-level data for the FY 2016 HAC Reduction Program will be made publicly available once it has undergone the review and corrections process.

Finally, a hospital's Factor 3 is the proportion of the uncompensated care amount that a DSH eligible hospital will receive under section 3133 of the Affordable Care Act. Factor 3 is the hospital's estimated number of Medicaid days and Medicare SSI days relative to the estimate of all DSH hospitals' Medicaid days and Medicare SSI days. Table 18 associated with this final rule contains the FY 2016 Medicare DSH uncompensated care payment Factor 3 for all hospitals and identifies whether or not a hospital is projected to receive DSH and, therefore, eligible to receive the additional payment for uncompensated care for FY 2016.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified below should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this FY 2016 final rule are available only through the Internet on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled, ''FY 2016 IPPS Final Rule Home Page'' or ''Acute Inpatient—Files for Download''.

Standard Federal Rate	$41,762.85	$40,941.55

* For LTCHs that fail to submit quality reporting data for FY 2016 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Introduction

We have examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995, Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year).

We have determined that this final rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the final changes for FY 2016 acute care hospital operating and capital payments will redistribute amounts in excess of $100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, will result in an estimated $378 million increase in FY 2016 operating payments (or 0.4 percent change) and an estimated $187 million increase in FY 2016 capital payments (or 2.3 percent change). These changes are

relative to payments made in FY 2015. The impact analysis of the capital payments can be found in section I.I. of this Appendix. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience a decrease in payments by $250 million in FY 2016 relative to FY 2015.

Our operating impact estimate includes the −0.8 percent documentation and coding adjustment applied to the IPPS standardized amount, which represents part of the recoupment required under section 631 of the ATRA. In addition, our operating payment impact estimate includes the 1.7 percent hospital update to the standardized amount (which includes the estimated 2.4 percent market basket update less 0.5 percentage point for the multifactor productivity adjustment and less 0.2 percentage point required under the Affordable Care Act). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule will affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget has reviewed this final rule.

B. Statement of Need

This final rule is necessary in order to make payment and policy changes under the Medicare IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS payment system.

C. Objectives of the IPPS

The primary objective of the IPPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of the prospective payment systems are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2016, on various hospital groups. We estimate the effects of individual proposed policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital-related costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 32 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short-term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland All-Payer Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of July 2015, there were 3,369 IPPS acute care hospitals included in our analysis. This represents approximately 56 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,334 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, 11 cancer hospitals, and 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2016 is discussed in section I.J. of this Appendix.

F. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of July 2015, there were 98 children's hospitals, 11 cancer hospitals, 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa, and 18 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, 251 rehabilitation hospitals and 884 rehabilitation units, and approximately 429 LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and 495 psychiatric hospitals and 1,122 psychiatric units are paid the Federal per diem amount under the IPF PPS. As stated above, IRFs and IPFs are not affected by the rate updates discussed in this rule. The impacts of the changes on LTCHs are discussed in section I.J. of this Appendix.

For children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2016 percentage increase in the IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. As discussed in section IV. of the preamble of the FY 2014 IPPS/LTCH PPS final rule, we rebased the IPPS operating market basket to a FY 2010 base year. Therefore, we are using the percentage increase in the FY 2010-based IPPS operating market basket to update the target amounts for FY 2016 and subsequent fiscal years for children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs that are paid based on reasonable costs subject to the rate-of-increase limits. Consistent with current law, based on IHS Global Insight, Inc.'s second quarter 2015 forecast of the FY 2010-based market basket increase, we are estimating that the FY 2016 update based on the IPPS operating market basket is 2.4 percent (that is, the current estimate of the market basket rate-of-increase). However, the Affordable Care Act requires an adjustment for multifactor productivity (currently estimated to be 0.5 percentage point for FY 2016) and a 0.2 percentage point reduction to the market basket update resulting in a 1.7 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section IV.A. of the preamble of this final rule. Children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNCHIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the percentage increase in the FY 2016 IPPS operating market basket, estimated at 2.4 percent, without the reductions described above under the Affordable Care Act.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that will not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit, or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

G. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this final rule, we are announcing final policy changes and final payment rate updates for the IPPS for FY 2016 for operating costs of acute care hospitals. The FY 2016 updates to the capital payments to acute care hospitals are discussed in section I.I. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2016 operating payments will increase by 0.4 percent compared to FY 2015. In addition to the applicable percentage increase, this amount reflects the FY 2016 recoupment adjustment for documentation and coding described in section II.D. of the preamble of this final rule of -0.8 percent to the IPPS national standardized amounts. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which will also affect overall payment changes.

We have prepared separate impact analyses of the changes to each system. This section deals with the changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that will allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented below are taken from the FY 2014 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2014 MedPAR file, we simulated payments under the operating IPPS given various combinations of payment parameters. As described above, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, or the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2016 are discussed in section I.I. of this Appendix.

We discuss the following changes below:

- The effects of the application of the documentation and coding adjustment and the applicable percentage increase (including the market basket update, the multifactor productivity adjustment, and the applicable percentage reduction in accordance with the Affordable Care Act) to the standardized amount and hospital-specific rates.
- The effects of the changes to the relative weights and MS–DRG GROUPER.
- The effects of the changes in hospitals' wage index values reflecting updated wage data from hospitals' cost reporting periods beginning during FY 2012, compared to the FY 2011 wage data, to calculate the FY 2016 wage index.
- The combined effects of the recalibration of the MS–DRG relative weights as required by section 1886(d)(4)(C) of the Act and the wage index (including the updated wage data and the continued implementation of the new OMB labor market area delineations), including the wage and recalibration budget neutrality factors.
- The effects of the geographic reclassifications by the MGCRB (as of publication of this final rule) that will be effective for FY 2016.
- The effects of the rural floor and imputed floor with the application of the national budget neutrality factor to the wage index.
- The effects of the second year of the 3-year transition for urban hospitals that were located in an urban county that become rural under the new OMB delineations or hospitals deemed urban where the urban area became rural under the new OMB delineations.
- The effects of the frontier State wage index adjustment under the statutory provision that requires that hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.
- The effects of the implementation of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. This provision is not budget neutral.
- The total estimated change in payments based on the FY 2016 policies relative to payments based on FY 2015 policies that include the applicable percentage increase of 1.7 percent (or 2.4 percent market basket update with a reduction of 0.5 percentage point for the multifactor productivity adjustment, and a 0.2 percentage point reduction, as required under the Affordable Care Act).

To illustrate the impact of the FY 2016 changes, our analysis begins with a FY 2015 baseline simulation model using: The FY 2015 applicable percentage increase of 2.2 percent and the documentation and coding recoupment adjustment of −0.8 percent to the Federal standardized amount; the FY 2015 MS–DRG GROUPER (Version 32); the FY 2015 CBSA designations for hospitals based on the new OMB definitions; the FY 2015 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS–DRG and outlier payments for modeling purposes.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Public Law 109–171, as amended by section 4102(b)(1)(A) of the ARRA (Pub. L. 111–5) and by section 3401(a)(2) of the Affordable Care Act (Pub. L. 111–148), provides that, for FY 2007 and each subsequent year through FY 2014, the update factor will include a reduction of 2.0 percentage points for any subsection (d) hospital that does not submit data on measures in a form and manner and at a time specified by the Secretary. Beginning in FY 2015, the reduction is one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2016, we are establishing that hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act will receive an applicable percentage increase of 1.1 percent. At the time that this impact was prepared, 26 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2015 because they failed the quality data submission process or did not choose to participate. For purposes of the simulations shown below, we modeled the payment changes for FY 2016 using a reduced update for these 26 hospitals. However, we do not have enough information at this time to determine which hospitals will not receive the full update factor for FY 2016.

For FY 2016, in accordance with section 1886(b)(3)(B)(ix) of the Act, a hospital that has been identified as not an meaningful EHR user will be subject to a reduction of one-half of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act. Therefore, for FY 2016, we are establishing that hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of 0.5 percent. At the time that this impact analysis was prepared, 153 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2015 because they are identified as not meaningful EHR users that do submit quality information under section 1886(b)(3)(B)(viii) of the Act. For purposes of the simulations shown below, we modeled the payment changes for FY 2016 using a reduced update for these 153 hospitals. We did not include these hospitals in the model for estimation

purposes for FY 2015 because that was the first year hospitals experienced a reduction to their applicable percentage increase due to whether they are meaningful EHR users and data were not available at that time. However, we believe it is appropriate to include these 153 hospitals for estimation purposes in FY 2016 because FY 2016 will be the second year in which hospitals will experience this reduction and data on the prior year's performance are now available. For purposes of the simulations shown below, we modeled the payment changes for FY 2016 using a reduced update for these 153 hospitals. However, we do not have enough information at this time to determine which hospitals will not receive the full update increase for FY 2016.

Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of −0.1 percent, which reflects a one-quarter reduction of the market basket update for failure to submit quality data and a one-half reduction of the market basket update for being identified as not a meaningful EHR user. At the time that this impact was prepared, 24 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2016 because they are identified as not meaningful EHR users that do not submit quality data under section 1886(b)(3)(B)(viii) of the Act. We did not include these hospitals in the model for estimation purposes for FY 2015 because that was the first year hospitals experienced a reduction to their applicable percentage increase due to whether they are meaningful EHR users and data were not available at that time. However, we believe it is appropriate to include these 24 hospitals for estimation purposes in FY 2016 because FY 2016 will be the second year in which hospitals will experience this reduction and data on the prior year's performance are now available. For purposes of the simulations shown below, we modeled the payment changes for FY 2016 using a reduced update for these 24 hospitals. However, we do not have enough information at this time to determine which hospitals will not receive the full update increase for FY 2016.

Each policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2016 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our final comparison illustrates the percent change in payments per case from FY 2015 to FY 2016. Three factors not discussed separately have significant impacts here. The first factor is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2016 using an applicable percentage increase of 1.7 percent. This includes our forecasted IPPS operating hospital market basket increase of 2.4 percent with a reduction of 0.5 percentage point for the multifactor productivity adjustment and a 0.2 percentage point reduction as required under the Affordable Care Act. Hospitals that fail to comply with the quality data submission requirements and are meaningful EHR users will receive an update of 1.1 percent. This update includes a reduction of one-quarter of the market basket update for failure to submit these data. Hospitals that do comply with the quality data submission requirements but are not meaningful EHR users will receive an update of 0.5 percent, which includes a reduction of one-half of the market basket update. Furthermore, hospitals that do not comply with the quality data submission requirements and also are not meaningful EHR users will receive an update of −0.1 percent. Under section 1886(b)(3)(B)(iv) of the Act, the update to the hospital-specific amounts for SCHs and MDHs also are equal to the applicable percentage increase, or 1.7 percent if the hospital submits quality data and is a meaningful EHR user. In addition, we are updating the Puerto Rico-specific amount by an applicable percentage increase of 1.7 percent.

A second significant factor that affects the changes in hospitals' payments per case from FY 2015 to FY 2016 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2015 that are no longer reclassified in FY 2016. Conversely, payments may increase for hospitals not reclassified in FY 2015 that are reclassified in FY 2016.

A third significant factor is that we currently estimate that actual outlier payments during FY 2015 will be 4.6 percent of total MS–DRG payments. When the FY 2015 IPPS/LTCH PPS final rule was published, we projected FY 2015 outlier payments would be 5.1 percent of total MS–DRG plus outlier payments; the average standardized amounts were offset correspondingly. The effects of the lower than expected outlier payments during FY 2015 (as discussed in the Addendum to this final rule) are reflected in the analyses below comparing our current estimates of FY 2015 payments per case to estimated FY 2016 payments per case (with outlier payments projected to equal 5.1 percent of total MS–DRG payments).

2. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2016. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,369 acute care hospitals included in the analysis.

The next four rows of Table I contain hospitals categorized according to their geographic location: all urban, which is further divided into large urban and other urban; and rural. There are 2,533 hospitals located in urban areas included in our analysis. Among these, there are 1,393 hospitals located in large urban areas (populations over 1 million), and 1,140 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 836 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2016 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,476; 1,386; 1,090; and 893, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 2,326 nonteaching hospitals in our analysis, 794 teaching hospitals with fewer than 100 residents, and 249 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next three rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, RRCs, and MDHs). There were 189 RRCs, 327 SCHs, 150 MDHs, 126 hospitals that are both SCHs and RRCs, and 13 hospitals that are both MDHs and RRCs.

The next series of groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2013 or FY 2012 Medicare cost reports.

The next two groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGCRB for FY 2016. The second grouping shows the MGCRB rural reclassifications. The final category shows the impact of the policy changes on the 14 cardiac hospitals.

TABLE I—IMPACT ANALYSIS OF CHANGES TO THE IPPS FOR OPERATING COSTS FOR FY 2016

	Number of hospitals [1]	Hospital rate update and documentation and coding adjustment (1) [2]	FY 2016 weights and DRG changes with application of recalibration budget neutrality (2) [3]	FY 2016 wage data under new CBSA designations with application of wage budget neutrality (3) [4]	FY 2016 DRG, rel. wts., wage index changes with wage and recalibration budget neutrality (4) [5]	FY 2016 MGCRB reclassifications (5) [6]	Rural and imputed floor with application of national rural and imputed floor budget neutrality (6) [7]	Application of the frontier wage index and out-migration adjustment (7) [8]	All FY 2016 changes (8) [9]
All Hospitals	3,369	0.9	0	0	0	0	0	0.1	0.4
By Geographic Location:

Specialty Hospitals:									

Cardiac specialty Hospitals	14	0.9	0.2	−0.9	−0.6	−1.1	0	0.9	0.7

[1] Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2014, and hospital cost report data are from reporting periods beginning in FY 2013 and FY 2012.

[2] This column displays the payment impact of the hospital rate update and the documentation and coding adjustment including the 1.7 percent adjustment to the national standardized amount and hospital-specific rate (the estimated 2.4 percent market basket update reduced by the 0.5 percentage point for the multifactor productivity adjustment and the 0.2 percentage point reduction under the Affordable Care Act) and the −0.8 percent documentation and coding adjustment to the national standardized amount.

[3] This column displays the payment impact of the changes to the Version 33 GROUPER, the changes to the relative weights and the recalibration of the MS–DRG weights based on FY 2014 MedPAR data in accordance with section 1886(d)(4)(C)(iii) of the Act. This column displays the application of the recalibration budget neutrality factor of 0.998399 in accordance with section 1886(d)(4)(C)(iii) of the Act.

[4] This column displays the payment impact of the update to wage index data using FY 2012 cost report data and the OMB labor market area delineations based on 2010 Decennial Census data. This column displays the payment impact of the application of the wage budget neutrality factor, which is calculated separately from the recalibration budget neutrality factor, and is calculated in accordance with section 1886(d)(3)(E)(i) of the Act. The wage budget neutrality factor is 0.998749.

[5] This column displays the combined payment impact of the changes in Columns 2 through 3 and the cumulative budget neutrality factor for MS–DRG and wage changes in accordance with section 1886(d)(4)(C)(iii) of the Act and section 1886(d)(3)(E) of the Act. The cumulative wage and recalibration budget neutrality factor of 0.997150 is the product of the wage budget neutrality factor and the recalibration budget neutrality factor.

[6] Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB) along with the effects of the continued implementation of the new OMB labor market area delineations on these reclassifications. The effects demonstrate the FY 2016 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2016. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.987905.

[7] This column displays the effects of the rural floor and imputed floor based on the continued implementation of the new OMB labor market area delineations. The Affordable Care Act requires the rural floor budget neutrality adjustment to be 100 percent national level adjustment. The rural floor budget neutrality factor (which includes the imputed floor) applied to the wage index is 0.990298. This column also shows the effect of the 3-year transition for hospitals that were located in urban counties that became rural under the new OMB delineations or hospitals deemed urban where the urban area became rural under the new OMB delineations, with a budget neutrality factor of 0.999996.

[8] This column shows the combined impact of the policy required under section 10324 of the Affordable Care Act that hospitals located in frontier States have a wage index no less than 1.0 and of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are nonbudget neutral policies.

[9] This column shows the changes in payments from FY 2015 to FY 2016. It reflects the impact of the FY 2016 hospital update and the adjustment for documentation and coding. It also reflects changes in hospitals' reclassification status in FY 2016 compared to FY 2015. It incorporates all of the changes displayed in Columns 1, 4, 5, 6, and 7, (the changes displayed in Columns 2 and 3 are included in Column 4). The sum of these impacts may be different from the percentage changes shown here due to rounding and interactive effects.

a. Effects of the Hospital Update and Documentation and Coding Adjustment (Column 1)

As discussed in section II.D. of the preamble of this final rule, this column includes the hospital update, including the 2.4 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction in accordance with the Affordable Care Act. In addition, this column includes the FY 2016 documentation and coding recoupment adjustment of −0.8 percent on the national standardized amount as part of the recoupment required by section 631 of the ATRA. As a result, we are making a 0.9 percent update to the national standardized amount. This column also includes the 1.7 percent update to the hospital-specific rates which includes the 2.4 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction in accordance with the Affordable Care Act.

Overall, hospitals will experience a 0.9 percent increase in payments primarily due to the combined effects of the hospital update and the documentation and coding adjustment on the national standardized amount and the hospital update to the hospital-specific rate. Hospitals that are paid under the hospital-specific rate, namely SCHs, will experience a 1.6 percent increase in payments; therefore, hospital categories with SCHs paid under the hospital-specific rate will experience increases in payments of more than 0.9 percent.

b. Effects of the Changes to the MS–DRG Reclassifications and Relative Cost-Based Weights with Recalibration Budget Neutrality (Column 2)

Column 2 shows the effects of the changes to the MS–DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we are calculating a recalibration budget neutrality factor to account for the changes in MS–DRGs and relative weights to ensure that the overall payment impact is budget neutral.

As discussed in section II.E. of the preamble of this final rule, the FY 2016 MS–DRG relative weights will be 100 percent cost-based and 100 percent MS–DRGs. For FY 2016, the MS–DRGs are calculated using the FY 2014 MedPAR data grouped to the Version 33 (FY 2016) MS–DRGs. The methodology to calculate the relative weights and the reclassification changes to the GROUPER are described in more detail in section II.H. of the preamble of this final rule.

The ''All Hospitals'' line in Column 2 indicates that changes due to the MS–DRGs and relative weights will result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor of 0.998399 on to the standardized amount. Hospital categories that generally treat more surgical cases than medical cases will experience increases in their payments under the relative weights. Rural hospitals will experience a 0.2 percent decrease in payments because rural hospitals tend to treat fewer surgical cases than medical cases, while teaching hospitals with more than 100 residents will experience an increase in payments by 0.2 percent as those hospitals treat more surgical cases than medical cases.

c. Effects of the Wage Index Changes (Column 3)

Column 3 shows the impact of updated wage data using FY 2012 cost report data, with the application of the wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical standards used in FY 2016 are based on OMB standards published on February 28, 2013 (75 FR 37246 and 37252), and 2010 Decennial Census data (OMB Bulletin No. 13–01). (We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963) for a full discussion on our adoption of the OMB labor market area delineations based on the 2010 Decennial Census data, effective beginning with the FY 2015 IPPS wage index).

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for acute care hospitals for FY 2016 is based on data submitted for hospital cost reporting periods beginning on or after October 1, 2011 and before October 1, 2012. The estimated impact of the updated wage data using the FY 2012 cost report data and the OMB labor market area delineations on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the percentage change in payments when going from a model using the FY 2015 wage index, based on FY 2011 wage data, the labor-related share of 69.6 percent, under the OMB delineations and having a 100-percent occupational mix adjustment applied, to a model using the FY 2016 pre-reclassification wage index based on FY 2012 wage data with the labor-related share of 69.6 percent, under the OMB delineations, also having a 100-percent occupational mix adjustment applied, while holding other payment parameters such as use of the Version 33 MS–DRG GROUPER constant. The FY 2016 occupational mix adjustment is based on the CY 2013 occupational mix survey.

In addition, the column shows the impact of the application of the wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2016, we are calculating the wage budget neutrality factor to ensure that payments under updated wage data and the labor-related share of 69.6 percent are budget neutral without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The FY 2016 wage budget neutrality factor is 0.998749, and the overall payment change is 0.0 percent.

Column 3 shows the impacts of updating the wage data using FY 2012 cost reports. Overall, the new wage data and the labor-related share, combined with the wage budget neutrality adjustment, will lead to no change for all hospitals as shown in Column 3.

In looking at the wage data itself, the national average hourly wage increased 1.03 percent compared to FY 2015. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the national 1.03 percent increase in average hourly wage. Of the 3,328 hospitals with wage data for both FYs 2015 and 2016, 1.594 or 47.9 percent will experience an average hourly wage increase of 1.03 percent or more.

The following chart compares the shifts in wage index values for hospitals due to changes in the average hourly wage data for FY 2016 relative to FY 2015. Among urban hospitals, 5 will experience a decrease of 10 percent or more, and 13 urban hospitals will experience an increase of 10 percent or more. One hundred and forty-four urban hospitals will experience an increase or decrease of at least 5 percent or more but less than 10 percent. Among rural hospitals, 9 will experience a decrease of at least 5 percent but less than 10 percent, but no rural hospitals will experience an increase of greater than or equal to 5 percent but less than 10 percent. No rural hospital will experience increases or decreases of 10 percent or more. However, 809 rural hospitals will experience increases or decreases of less than 5 percent, while 2,341 urban hospitals will experience increases or decreases of less than 5 percent. Seven urban hospitals will not experience a change in their wage index, and all rural hospitals will experience a change in their wage indexes. These figures reflect changes in the ''pre-reclassified, occupational mix-adjusted wage index,'' that is, the wage index before the application of geographic reclassification, the rural and imputed floors, the out-migration adjustment, and other wage index exceptions and adjustments. (We refer readers to sections III.G.2. through III.I. of the preamble of this final rule for a complete discussion of the exceptions and adjustments to the wage index.) We note that the ''post-reclassified wage index'' or ''payment wage index,'' which is the wage index that includes all such exceptions and adjustments (as reflected in Tables 2 and 3 associated with this final rule, which are available via the Internet on the CMS Web site) is used to

adjust the labor-related share of a hospital's standardized amount, either 69.6 percent or 62 percent, depending upon whether a hospital's wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the pre-reclassified wage index figures in the chart below may illustrate a somewhat larger or smaller change than will occur in a hospital's payment wage index and total payment.

The following chart shows the projected impact of changes in the area wage index values for urban and rural hospitals.

FY 2016 percentage change in area wage index values	Number of hospitals	
	Urban	Rural
Increase 10 percent or more	13	0
Increase greater than or equal to 5 percent and less than 10 percent	64	0
Increase or decrease less than 5 percent	2,341	809
Decrease greater than or equal to 5 percent and less than 10 percent	80	9
Decrease 10 percent or more	5	0
Unchanged	7	0

d. Combined Effects of the MS–DRG and Wage Index Changes (Column 4)

Section 1886(d)(4)(C)(iii) of the Act requires that changes to MS–DRG reclassifications and the relative weights cannot increase or decrease aggregate payments. In addition, section 1886(d)(3)(E) of the Act specifies that any updates or adjustments to the wage index are to be budget neutral. We computed a wage budget neutrality factor of 0.998749 and a recalibration budget neutrality factor of 0.998399 (which is also applied to the Puerto Rico-specific standardized amount and the hospital-specific rates). The product of the two budget neutrality factors is the cumulative wage and recalibration budget neutrality factor. The cumulative wage and recalibration budget neutrality adjustment is 0.997150, or approximately 0.3 percent, which is applied to the national standardized amounts. Because the wage budget neutrality and the recalibration budget neutrality are calculated under different methodologies according to the statute, when the two budget neutralities are combined and applied to the standardized amount, the overall payment impact is not necessarily budget neutral. However, in this final rule, we are estimating that the changes in the MS–DRG relative weights and updated wage data with wage and budget neutrality applied will result in a 0.0 percent change in payments.

e. Effects of MGCRB Reclassifications (Column 5)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located). The changes in Column 5 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2016.

By spring of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital's reclassification request for the purpose of using another area's wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals have 45 days from publication of the IPPS proposed rule in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year.

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are applying an adjustment of 0.987905 to ensure that the effects of the reclassifications under section 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this final rule). Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification will increase payments to rural hospitals by an average of 1.4 percent. By region, all the rural hospital categories will experience increases in payments due to MGCRB reclassifications.

New Table 2 listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site reflects the reclassifications for FY 2016.

f. Effects of the Rural and Imputed Floor, Including Application of National Budget Neutrality (Column 6)

As discussed in section III.B. of the preamble of the FY 2009 IPPS final rule, the FY 2010 IPPS/RY 2010 LTCH PPS final rule, the FYs 2011, 2012, 2013, 2014, and 2015 IPPS/LTCH PPS final rules, and this final rule, section 4410 of Public Law 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index received by rural hospitals in the same State. We apply a uniform budget neutrality adjustment to the wage index. The imputed floor, which is also included in the calculation of the budget neutrality adjustment to the wage index, was extended in FY 2012 for 2 additional years and in FY 2014 and FY 2015 for 1 additional year. Prior to FY 2013, only urban hospitals in New Jersey received the imputed floor. As discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53369), we established an alternative temporary methodology for the imputed floor, which resulted in an imputed floor for Rhode Island for FY 2013. For FY 2014 and FY 2015, we extended the imputed rural floor, as calculated under the original methodology and the alternative methodology. Due to the adoption of the new OMB labor market area delineations in FY 2015, the State of Delaware also became an all-urban state and thus eligible for an imputed floor. For FY 2016, we are extending the imputed rural floor for 1 year, as calculated under the original methodology and the alternative methodology. As a result, New Jersey, Rhode Island, and Delaware are able to receive an imputed floor. In New Jersey, 21 out of 64 hospitals will receive the imputed floor, and 4 out of 11 hospitals in Rhode Island will receive the imputed floor for FY 2016. For FY 2016, no hospitals will benefit from the imputed floor in Delaware because the CBSA wage index for each CBSA in Delaware under the new OMB delineations is equal to or higher than the imputed rural floor.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally, and the imputed floor is part of the rural floor budget neutrality factor applied to the wage index nationally. We have calculated a FY 2016 rural floor budget neutrality factor to be applied to the wage index of 0.990298, which will reduce wage indexes by 0.99 percent.

Column 6 shows the projected impact of the rural floor and imputed floor with the national rural floor budget neutrality factor applied to the wage index based on the OMB labor market area delineations. The column compares the post-reclassification FY 2016 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2016 wage index of providers with the rural floor and imputed floor adjustment based on the OMB labor market area delineations. Only urban hospitals can benefit from the rural and imputed floors. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment that is applied nationally to their wage index.

We estimate that 371 hospitals will benefit from the rural and imputed floors in FY 2016, while the remaining 2,998 IPPS hospitals in our model will have their wage index reduced by the rural floor budget neutrality adjustment of 0.990298 (or 0.99 percent). We project that, in aggregate, rural hospitals will experience a 0.2 percent decrease in payments as a result of the application of the rural floor budget neutrality because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly adjusted to ensure that the application of the rural floor is

budget neutral overall. We project hospitals located in urban areas will experience no change in payments because increases in payments by hospitals benefitting from the rural floor offset decreases in payments by nonrural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the New England region will experience a 1.6 percent increase in payments primarily due to the application of the rural floor in Massachusetts. Thirty-nine urban providers in Massachusetts are expected to receive the rural floor wage index value, including the rural floor budget neutrality of 0.990298, increasing payments overall to Massachusetts by an estimated $98 million. We estimate that Massachusetts hospitals will receive approximately a 3.1 percent increase in IPPS payments due to the application of the rural floor in FY 2016.

Urban Puerto Rico hospitals are expected to experience a 0.1 percent change in payments as a result of the application of the Puerto Rico rural floor with the application of the Puerto Rico rural floor budget neutrality adjustment. We are applying a rural floor budget neutrality factor to the Puerto Rico-specific wage index of 0.987646 or 1.2 percent. The Puerto Rico-specific wage index adjusts the Puerto Rico-specific standardized amount, which represents 25 percent of payments to Puerto Rico hospitals. The increases in payments experienced by the urban Puerto Rico hospitals that benefit from a rural floor are offset by the decreases in payments by the urban Puerto Rico hospitals that do not benefit from the rural floor that have their wage indexes downwardly adjusted by the rural floor budget neutrality adjustment. As a result, overall, urban Puerto Rico hospitals will experience a 0.1 percent change in payments due to the application of the rural floor with rural floor budget neutrality.

There are 21 hospitals out of the 64 hospitals in New Jersey that will benefit from the extension of the imputed floor and will receive the imputed floor wage index value under the OMB labor market area delineations, including the rural floor budget neutrality of 0.990298 which we estimate will increase payments to those imputed floor hospitals by $27 million (overall, the State will receive an increase of $9 million in payments due to the other hospitals in the State that will experience decreases in payments due to the rural floor budget neutrality adjustment). Four Rhode Island hospitals will benefit from the imputed rural floor calculated under the alternative methodology and will receive an additional $4.5 million (overall, the State will receive an additional $2.6 million). While some hospitals in Delaware are geographically located in CBSAs that are assigned the imputed floor, none of these hospitals benefit from the imputed floor since they are reclassifying to CBSAs with a higher wage index than the imputed floor.

Column 6 also shows the projected effects of the second year of the 3-year hold harmless provision for hospitals that were located in an urban county that became rural under the new OMB delineations or hospitals deemed urban where the urban area became rural under the new OMB delineations. As discussed in section III.G.2. of the preamble of this final rule, under this transition, hospitals that were located in an urban county that became rural under the new OMB delineations will generally be assigned the urban wage index value of the CBSA in which they are physically located in FY 2014 for a period of 3 fiscal years (that is, FYs 2015, 2016, and 2017). In addition, as discussed in section III.G.3. of the preamble of this final rule, under this transition, hospitals that were deemed urban where the urban area became rural under the new OMB delineations will generally be assigned the area wage index value of hospitals reclassified to the urban CBSA (that is, the attaching wage index, if applicable) to which they were designated in FY 2014. For FY 2016, we are applying the 3-year transition wage index adjustments in a budget neutral manner, with a budget neutrality factor of 0.999996.

In response to a public comment addressed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593), we are providing the payment impact of the rural floor and imputed floor with budget neutrality at the State level. Column 1 of the table below displays the number of IPPS hospitals located in each State. Column 2 displays the number of hospitals in each State that will receive the rural floor or imputed floor wage index for FY 2016. Column 3 displays the percentage of total payments each State will receive or contribute to fund the rural floor and imputed floor with national budget neutrality. The column compares the post-reclassification FY 2016 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2016 wage index of providers with the rural floor and imputed floor adjustment. Column 4 displays the estimated payment amount that each State will gain or lose due to the application of the rural floor and imputed floor with national budget neutrality.

FY 2016 IPPS Estimated Payments Due to Rural Floor and Imputed Floor With National Budget Neutrality

State	Number of hospitals (1)	Number of hospitals that will receive the rural floor or imputed floor (2)	Percent change in payments due to application of rural floor and imputed floor with budget neutrality (3)	Difference (in millions) (4)
Alabama	86	3	−0.4	$−6.72

g. Effects of the Application of the Frontier State Wage Index and Out-Migration Adjustment (Column 7)

This column shows the combined effects of the application of section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage-index of 1.00 for all hospitals located in ''frontier States,'' and the effects of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. These two wage index provisions are not budget neutral and increase payments overall by 0.1 percent compared to the provisions not being in effect.

The term ''frontier States'' is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, 4 States (Montana, North Dakota, South Dakota, and Wyoming) are considered frontier States and 48 hospitals located in those States will receive a frontier wage index of 1.0000. Nevada is also, by definition, a frontier State and was assigned a frontier floor value of 1.0000 for FY 2012, but since then and including in this final rule, its rural floor value has been greater than 1.0000 so it has not been subject to the frontier wage index. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately $60 million. Rural and urban hospitals located in the West North Central region will experience an increase in payments by 0.3 and 0.8 percent, respectively, because many of the hospitals located in this region are frontier State hospitals.

In addition, section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are an estimated 336 providers that will receive the out-migration wage adjustment in FY 2016. Rural hospitals generally qualify for the adjustment, resulting in a 0.1 percent increase in payments. This provision appears to benefit Section 401 hospitals and RRCs in that they will experience a 1.4 percent and 0.6 percent increase in payments, respectively. This out-migration wage adjustment also is not budget neutral, and we estimate the impact of these providers receiving the out-migration increase will be approximately $45 million.

h. Effects of All FY 2016 Changes (Column 8)

Column 8 shows our estimate of the changes in payments per discharge from FY 2015 and FY 2016, resulting from all changes reflected in this final rule for FY 2016. It includes combined effects of the previous columns in the table.

The average increase in payments under the IPPS for all hospitals is approximately 0.4 percent for FY 2016 relative to FY 2015. As discussed in section II.D. of the preamble of this final rule, this column includes the FY 2016 documentation and coding recoupment adjustment of −0.8 percent on the national standardized amount as part of the recoupment required under section 631 of the ATRA. In addition, this column includes the annual hospital update of 1.7 percent to the national standardized amount. This annual hospital update includes the 2.4 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction under section

3401 of the Affordable Care Act. Hospitals paid under the hospital-specific rate will receive a 1.7 percent hospital update described above. As described in Column 1, the annual hospital update with the documentation and coding recoupment adjustment for hospitals paid under the national standardized amount combined with the annual hospital update for hospitals paid under the hospital-specific rate will result in a 0.9 percent increase in payments in FY 2016 relative to FY 2015. The impact of moving from our estimate of FY 2015 outlier payments, 4.6 percent, to the estimate of FY 2016 outlier payments, 5.1 percent, will result in an increase of 0.4 percent in FY 2016 payments relative to FY 2015. There also might be interactive effects among the various factors comprising the payment system that we are not able to isolate. For these reasons, the values in Column 8 may not equal the sum of the estimated percentage changes described above.

Overall payments to hospitals paid under the IPPS due to the applicable percentage increase and changes to policies related to MS–DRGs, geographic adjustments, and outliers are estimated to increase by 0.4 percent for FY 2016. Hospitals in urban areas will experience a 0.4 percent increase in payments per discharge in FY 2016 compared to FY 2015. Hospital payments per discharge in rural areas are estimated to increase by 0.2 percent in FY 2016.

3. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2016 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2015 with the estimated average payments per discharge for FY 2016, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 8 of Table I.

TABLE II—IMPACT ANALYSIS OF CHANGES FOR FY 2016 ACUTE CARE HOSPITAL OPERATING PROSPECTIVE PAYMENT SYSTEM

[Payments per discharge]

	Number of hospitals	Estimated average FY 2015 payment per discharge	Estimated average FY 2016 payment per discharge	FY 2016 changes
	(1)	(2)	(3)	(4)
All Hospitals	3,369	11,329	11,370	0.4
By Geographic Location:				
Urban hospitals	2,533	11,680	11,724	0.4

H. Effects of Other Policy Changes

In addition to those policy changes discussed above that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule. Generally, we have limited or no specific data available with which to estimate the impacts of these changes. Our estimates of the likely impacts associated with these other changes are discussed below.

1. Effects of Policy on MS–DRGs for Preventable HACs, Including Infections

In section II.F. of the preamble of this final rule, we discuss our implementation of section 1886(d)(4)(D) of the Act, which requires the Secretary to identify conditions that are: (1) High cost, high volume, or both; (2) result in the assignment of a case to an MS–DRG that has a higher payment when present as a secondary diagnosis; and (3) could reasonably have been prevented through application of evidence-based guidelines. For discharges occurring on or after October 1, 2008, hospitals will not receive additional payment for cases in which one of the selected conditions was not present on admission, unless, based on data and clinical judgment, it cannot be determined at the time of admission whether a condition is present. That is, the case will be paid as though the secondary diagnosis were not present. However, the statute also requires the Secretary to continue counting the condition as a secondary diagnosis that results in a higher IPPS payment when doing the budget neutrality calculations for MS–DRG reclassifications and recalibration. Therefore, we will perform our budget neutrality calculations as though the payment provision did not apply, but Medicare will make a lower payment to the hospital for the specific case that includes the secondary diagnosis. Thus, the provision results in cost savings to the Medicare program.

We note that the provision will only apply when one or more of the selected conditions are the only secondary diagnosis or diagnoses present on the claim that will lead to higher payment. Medicare beneficiaries will generally have multiple secondary diagnoses during a hospital stay, such that beneficiaries having one MCC or CC will frequently have additional conditions that also will generate higher payment. Only a small percentage of the cases will have only one secondary diagnosis that would lead to a higher payment. Therefore, if at least one nonselected secondary diagnosis that leads to higher payment is on the claim, the case will continue to be assigned to the higher paying MS–DRG and there will be no Medicare savings from that case. In addition, as discussed in section II.F.3. of the preamble of this final rule, it is possible to have two

severity levels where the HAC does not affect the MS–DRG assignment or for an MS–DRG not to have severity levels. In either of these circumstances, the case will continue to be assigned to the higher paying MS–DRG and there will be no Medicare savings from that case.

As discussed in section II.F. of the preamble of this final rule, for FY 2016, we are not adding or removing any categories of HACs for FY 2016.

The HAC payment provision went into effect on October 1, 2008. Our savings estimates for the next 5 fiscal years are shown below:

Year	Savings (in millions)
FY 2016	28
FY 2017	29
FY 2018	31
FY 2019	32
FY 2020	34

2. Effects of Policy Relating to New Medical Service and Technology Add-On Payments

In section II.I. of the preamble to this final rule, we discuss six applications (Blinatumomab (BLINCYTO™), DIAMONDBACK® 360 Coronary Orbital Atherectomy System, CRESEMBA® (Isavuconazonium), LUTONIX® Drug Coated Balloon (DCB) Percutaneous Transluminal Angioplasty (PTA) and IN.PACT™Admiral™ Pacliaxel Coated Percutaneous Transluminal Angioplasty (PTA) Balloon Catheter, VERASENSE™ Knee Balancer System (VKS), and WATCHMAN® Left Atrial Appendage Closure Technology) for add-on payments for new medical services and technologies for FY 2016, as well as the status of the new technologies that were approved to receive new technology add-on payments in FY 2015. We note that two of the applications (the Angel Medical Guardian® Ischemia Monitoring Device and Ceftazidime Avibactam (AVYCAZ)) discussed in the proposed rule withdrew their applications prior to the publication of this final rule. In addition, Idarucizumab did not receive FDA approval by July 1, 2015 in accordance with the regulations under § 412.87(c) and, therefore, is ineligible for consideration for new technology add-on payments for FY 2016.

As explained in the preamble to this final rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed in section II.I.4. of the preamble of this final rule, we are approving two of the six applications (BLINCYTO™ and LUTONIX® DCB PTA and IN.PACT™Admiral™ Pacliaxel Coated PTA Balloon Catheter) for new technology add-on payments for FY 2016. As we proposed, in this final rule, we also are continuing to make new technology add-on payments in FY 2016 for Kcentra™, Argus® II Retinal Prosthesis System, the CardioMEMS™ HF (Heart Failure) Monitoring System, MitraClip® System, and the Responsive Neurostimulator (RNS®) System (because all of these technologies are still within the 3-year anniversary of the product's entry onto the market). We note that new technology add-on payments per case are limited to the lesser of: (1) 50 percent of the costs of the new technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard MS–DRG payment for the case. Because it is difficult to predict the actual new technology add-on payment for each case, our estimates below are based on the increase in add-on payments for FY 2016 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment. Based on the applicant's estimate for FY 2014, we currently estimate that new technology add-on payments for Kcentra™ will increase overall FY 2016 payments by $5,449,888. Based on the applicant's estimate for FY 2014, we currently estimate that new technology add-on payments for the Argus® II Retinal Prosthesis System will increase overall FY 2016 payments by $3,601,437. Based on the applicant's estimate for FY 2015, we currently estimate that new technology add-on payments for the CardioMEMS™ HF Monitoring System will increase overall FY 2016 payments by $11,315,625. Based on the applicant's estimate for FY 2015, we currently estimate that new technology add-on payments for the MitraClip® System will increase overall FY 2016 payments by $27,000,000. Based on the applicant's estimate for FY 2015, we currently estimate that new technology add-on payments for the RNS® System will increase overall FY 2015 payments by $12,932,500. Based on the applicant's estimate for FY 2016, we currently estimate that new technology add-on payments for BLINCYTO™ will increase overall FY 2016 payments by $4,593,034 (maximum add-on payment of $27,017.85 * 170 patients). Based on the weighted cost average for FY 2016 described in section II.I.4. of the preamble to this final rule, we currently estimate that new technology add-on payments for LUTONIX® DCB PTA and IN.PACT™Admiral™ Pacliaxel Coated PTA Balloon Catheter will increase overall FY 2016 payments by $36,120,735 (maximum add-on payment of $1,035.72 * 8,875 patients for LUTONIX® DCB PTA Balloon Catheter; maximum add-on payment of $1,035.72 * 26,000 patients for IN.PACT™Admiral™ Pacliaxel Coated PTA Balloon Catheter).

3. Effects of the Changes to Medicare DSH Payments for FY 2016

As discussed in section IV.D. of the preamble of this final rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the former statutory formula for Medicare DSH payments. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of individuals under age 65 who are uninsured and additional statutory adjustments (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. Each Medicare DSH hospital will receive an additional payment based on its estimated share of the total amount of uncompensated care for all Medicare DSH hospitals. The uncompensated care payment methodology has redistributive effects based on the proportion of a Medicare DSH hospital's low-income insured patient days (sum of Medicaid patient days and Medicare SSI patient days) relative to the low-income insured patient days for all Medicare DSH hospitals (Factor 3). The reduction to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this FY 2016 IPPS/LTCH PPS final rule, we are establishing the amount to be distributed as uncompensated care payments to DSH eligible hospitals, which for FY 2016 is $6,406,145,534.04, or 75 percent of what otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 63.69 percent; for FY 2015, the amount available to be distributed for uncompensated care was $7,647,644,885.18, or 75 percent of what otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 76.19 percent. To calculate Factor 3 for FY 2016, we are using Medicaid days from the more recent of hospitals' full year 2012 or full year 2011 cost reports from the March 2015 update of the HCRIS database (that is, we are holding constant the 2012 and 2011 cost report years used in the FY 2015 IPPS/LTCH PPS final rule, but using updated cost report data from a later extract of the HCRIS), Medicaid days from 2012 cost report data submitted to CMS by IHS hospitals, and SSI days from the 2013 SSI ratios. This is in contrast to FY 2015, when we used Medicaid days from the hospitals' full year 2012 or 2011 cost reports from the March 2014 update of the HCRIS database, Medicaid days from 2012 cost report data submitted to CMS by IHS hospitals, and SSI days from the 2012 SSI ratios to calculate Factor 3. The uncompensated care payment methodology is discussed in more detail in section IV.D. of the preamble of this final rule.

To estimate the impact of the combined effect of reductions in the percent of individuals under age 65 who are uninsured and additional statutory adjustments (Factor 2) and changes in Medicaid and SSI patient days (components of Factor 3) on the calculation of Medicare DSH payments, including both empirically justified Medicare DSH payments and uncompensated care payments, we compared total DSH payments estimated in the FY 2015 IPPS/LTCH PPS final rule and correction notice to total DSH payments estimated in this FY 2016 IPPS/LTCH PPS final rule. For FY 2015, for each hospital, we calculated the sum of (I) 25 percent of the estimated amount of what would have been paid as Medicare DSH in FY 2015 in the absence of section 3133 of the Affordable Care Act and (II) 75 percent of the estimated amount of what would have been paid as Medicare DSH payments in the absence of section 3133, adjusted by a Factor 2 of 76.19 percent and multiplied by a Factor 3 as stated in the FY 2015 IPPS/LTCH PPS final rule and correction notice. For FY 2016, we calculated the sum of (I) 25 percent of the estimated amount of what would be paid as Medicare DSH payments in FY 2016 absent

section 3133 and (II) 75 percent of the estimated amount of what would have been paid as Medicare DSH payments absent section 3133, adjusted by a Factor 2 of 63.69 percent and multiplied by a Factor 3 as stated above.

Our analysis included 2,418 hospitals that are projected to be eligible for DSH in FY 2016. It did not include hospitals in the Rural Community Hospital Demonstration, hospitals that departed the Medicare program as of July 7, 2015, Maryland hospitals, and SCHs that are expected to be paid based on their hospital-specific rates. In addition, low-income insured days from merged or acquired hospitals were combined into the surviving hospital's CCN, and the nonsurviving CCN was excluded from the analysis. The estimated impact of changes in Factors 1, 2, and 3 across all FY 2016 DSH eligible hospitals, by hospital characteristic, is presented in the table below.

MODELED DISPROPORTIONATE SHARE HOSPITAL PAYMENTS FOR ESTIMATED FY 2016 DSH HOSPITALS BY HOSPITAL TYPE: MODEL DSH $ (IN MILLIONS) FROM FY 2015 TO FY 2016

	Number of estimated FY 2016 DSH hospitals	FY 2015 estimated DSH $*	FY 2016 estimated DSH $*	Percentage change**

SOURCE: Dobson DaVanzo analysis of 2011–2012 Hospital Cost Reports, 2015 Provider of Services File, FY 2015 IPPS Final Rule CN Impact File, and FY 2016 NPRM Impact File.

* Dollar DSH calculated by [0.25 * estimated section 1886(d)(5)(F) payments] + [0.75 * estimated section 1886(d)(5)(F) payments * Factor 2 * Factor 3]. When summed across all hospitals projected to receive DSH payments, the Model DSH is $10,993 million in FY 2015 and $9,733 million in FY 2016.

** Percentage change is determined as the difference between Medicare DSH payments modeled for the FY 2016 IPPS/LTCH PPS final rule (column 3) and Medicare DSH payments modeled for the FY 2015 IPPS/LTCH final rule (column 2) divided by Medicare DSH payments modeled for the FY 2015 final rule (column 3) 1 times 100 percent.

The impact analysis found that changes from the FY 2015 IPPS/LTCH PPS final rule were primarily driven by three components: (1) A reduction in Factor 2 from 76.19 percent in the FY 2015 IPPS/LTCH PPS final rule to 63.69 percent in this FY 2016 IPPS/LTCH PPS final rule, (2) changes in the number of Medicaid days for 2012 (or 2011) obtained from the March 2014 HCRIS update of providers' Medicare cost report (used in the FY 2015 IPPS/LTCH PPS final rule) to the number of Medicaid days reported in the March 2015 HCRIS update of providers' Medicare cost report (used in this FY 2016 final rule); and (3) changes in SSI days from 2012 (used in the FY 2015 IPPS/LTCH PPS final rule and correction notice) to 2013 (used in this FY 2016 IPPS/LTCH PPS final rule). The change in the percentage of individuals who are uninsured is a national estimate affecting all hospitals equally, while the change in Medicaid days and SSI days is hospital-specific and drives the change in the Factor 3 computed for each hospital. Additionally, we note that several hospitals had a change in at least one of their payment or geographic characteristics from FY 2015 to FY 2016. Therefore, the number of hospitals within a given hospital characteristic may have changed from the FY 2015 final rule and correction notice. These changes also impact the distribution of Medicare DSH payments.

The impact analysis table above shows that across all DSH-eligible hospitals, FY 2016 DSH payments, including both empirically justified DSH payments and uncompensated care payments, are estimated at approximately $9.733 billion, or a decrease of approximately 11.5 percent from FY 2015 DSH payments ($10.993 billion). As a result, we project that payments for FY 2016 to hospitals paid under the IPPS will be reduced by 1.0 percent overall as compared to overall payments to hospitals paid under the IPPS in FY 2015.

Percent reductions greater than 11.5 percent in column 4 of the table above indicate that hospitals within the specified category are projected to experience a greater reduction in DSH payments, on average, relative to all of the FY 2016 DSH hospitals included in this analysis. Likewise, reductions less than 11.5 percent indicate that hospitals within each category, on average, are projected to receive a smaller reduction in DSH payments relative to all FY 2016 DSH hospitals. The variation in DSH payment reductions by hospital characteristic, as shown in column 4, is largely dependent on the change in a given hospital's number of SSI and Medicaid days, as well as variations in hospital characteristics or classification between FY 2015 and FY 2016 and the number of DSH-eligible hospitals. On average across all hospitals, the number of SSI days increased by 0.026 percent from FY 2015. On average across all hospitals, the number of Medicaid days increased by 0.621 percent from FY 2015. In conjunction with this FY 2016 IPPS/LTCH PPS final rule, we will publish an impact table as well as a supplemental data file that can be used to further analyze the distribution of DSH payments and variation in DSH payment reductions.

4. Effects of Reduction Under the Hospital Readmissions Reduction Program

In section IV.E. of the preamble of this final rule, we discuss our policies for FY 2016 for the Hospital Readmissions Reduction Program (established under section 3025 of the Affordable Care Act), which requires a reduction to a hospital's base operating DRG payments to account for excess readmissions. For FY 2016, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for five applicable conditions: acute myocardial infarction, heart failure, pneumonia, total hip and total knee arthroplasty and chronic obstructive pulmonary disease. This provision is not budget neutral. A hospital's readmission adjustment is the higher of a ratio of the hospital's aggregate payments for excess readmissions to their aggregate payments for all discharges, or a floor, which has been defined in the statute as 0.97 (or a 3.0 percent reduction). A hospital's base operating DRG payment (that is, wage-adjusted DRG payment amount, as discussed in section IV.E. of the preamble of this final rule) is the portion of the IPPS payment subject to the readmissions payment adjustment (DSH, IME, outliers and low-volume add-on payments are not subject to the readmissions adjustment). In this final rule, we estimate that 2,666 hospitals will have their base operating DRG payments reduced by their proxy FY 2016 hospital-specific readmissions adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program will save approximately $420 million in FY 2016, an increase of $6 million over the estimated FY 2015 savings.

5. Effects of Changes Under the FY 2016 Hospital Value-Based Purchasing (VBP) Program

In section IV.F. of the preamble of this final rule, we discuss the Hospital VBP Program under which the Secretary makes value-based incentive payments to hospitals based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2016 through a reduction to the FY 2016 base operating DRG payment for each discharge of 1.75 percent, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2017 and subsequent years is 2 percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary.

We estimate the available pool of funds for value-based incentive payments in the FY 2016 program year, which, in accordance with section 1886(o)(7)(C)(iv) of the Act, will be 1.75 percent of base operating DRG payments, or a total of approximately $1.50 billion. This estimated available pool for FY 2016 is based on the historical pool of hospitals that were eligible to participate in the FY 2015 program year and the payment information from the March 2015 update to the FY 2014 MedPAR file.

The estimated impacts of the FY 2016 program year by hospital characteristic, found in the table below, are based on historical TPSs. We used the FY 2015 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the March 2015 update to the FY 2014 MedPAR file. The proxy adjustment factors can be found in Table 16A associated with this final rule (available via the Internet on the CMS Web site).

The impact analysis shows that, for the FY 2016 program year, the number of hospitals that will receive an increase in base operating DRG payment amount is higher than the number of hospitals that will receive a decrease. Among urban hospitals, those in the New England, South Atlantic, East North Central, East South Central, West North Central, West South Central, Mountain, and Pacific regions will have an increase, on average, in the base operating DRG payment amount. Urban hospitals in the Middle Atlantic region will receive an average decrease in the base operating payment amount. Among rural hospitals, those in all regions will have an increase, on average, in base operating DRG payment amounts.

On average, hospitals that receive a higher percent of DSH payments will receive decreases in the base operating DRG payment amount. With respect to hospitals' Medicare utilization (MCR), those hospitals with an MCR above 65 percent will have the largest increase, on average, in base operating DRG payment amounts.

Nonteaching hospitals will have an average increase, and teaching hospitals will experience an average decrease, in the base operating DRG payment amount.

Actual FY 2016 program year's TPSs will not be reviewed and corrected by hospitals until after this FY 2016 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2015 program year are used for the updated impact analysis in this final rule.

6. Effects of Changes to the HAC Reduction Program for FY 2016

In section IV.G. of the preamble of this final rule, we discuss the changes to the HAC Reduction Program for FY 2016. We note that section 3008 of the Affordable Care Act added section 1886(p) to the Act to provide an incentive for certain hospitals to reduce the incidence of HACs. Section 1886(p) of the Act requires the Secretary to make an adjustment to payments to ''applicable hospitals'' effective beginning on October 1, 2014 and for subsequent program years. We refer readers to section V.I.1.a. of the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50708) for a general overview of the HAC Reduction Program. For a further description of our policies for the HAC Reduction Program, we refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50729) and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50087 through 50104). These policies describe The general framework for implementation of the HAC Reduction Program including: (a) The relevant definitions applicable to the program; (b) the payment adjustment under the program; (c) the measure selection and conditions for the program, including a risk-adjustment and scoring methodology; (d) performance scoring; (e) the process for making hospital-specific performance information available to the public, including the opportunity for a hospital to review the information and submit corrections; and (f) limitation of administrative and judicial review. We are not making any changes to these policies for the implementation of the FY 2016 HAC Reduction Program.

We note that hospitals received a payment reduction for the first time in FY 2015. The table and analysis that we are presenting

below are a simulation of the FY 2016 HAC Reduction Program using historical data. We note that, as described earlier in this final rule, because scores will undergo 30-day review and correction by the hospitals that will not conclude until after the publication of this final rule, we are not providing hospital-level data or a hospital-level payment impact in conjunction with this FY 2016 IPPS/LTCH PPS final rule.

For FY 2016, we note that we finalized a Total HAC Score methodology in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50087 through 50104) that assigns weights for Domain 1 and Domain 2 at 25 percent and 75 percent, respectively. The table below presents data on the estimated proportion of hospitals in the worst-performing quartile of the Total HAC Score by hospital characteristic, based on this methodology.

To estimate the impact of the FY 2016 HAC Reduction Program, we used AHRQ Patient Safety Indicator (PSI) 90 measure results based on Medicare fee-for-service (FFS) discharges from July 2012 through June 2014 and version 4.5a of the AHRQ software. For CDC Central Line-Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection (CAUTI), and Surgical Site Infection (SSI) measure results, we used standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2013 and December 31, 2014. To analyze the results by hospital characteristic, we used the FY 2016 Proposed Rule Impact File. Of the 3,272 hospitals included in this analysis, 3,269 hospitals had information for geographic location, region, bed size, DSH percent, and teaching status; 3,256 had information for ownership; and 3,137 had information for MCR percent. These differences in the number of hospitals listed for each characteristic are due to the source of the hospital characteristic data. Maryland hospitals and hospitals without a Total HAC score are not included in the identification of the worst-performing quartile for the HAC Reduction Program in FY 2016, and therefore are not represented in the table below. (For a discussion of the program's applicability to Maryland hospitals, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50089.)

The third column in the table (Percent) indicates the percent of hospitals in each category of the specified characteristic. For example, within geographic location, 40.5 percent of hospitals (or 1,323 hospitals) are characterized as large urban, 33.9 percent of hospitals (or 1,109 hospitals) are characterized as other urban, and 25.6 percent of hospitals (or 837 hospitals) are characterized as rural. The fifth column in the table (Percent with characteristic) indicates the proportion of hospitals for each characteristic that we estimate will be in the worst-performing quartile of Total HAC Scores and will receive a payment reduction under the FY 2016 HAC Reduction Program. For example, with regards to geographic location, 27.4 percent of hospitals (or 362 hospitals) characterized as large urban will be subject to a payment reduction; 25.2 percent of hospitals (or 279 hospitals) characterized as other urban will be subject to a payment reduction; and 19.5 percent of hospitals (or 163 hospitals) characterized as rural will be subject to a payment reduction.

ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORE FOR THE FY 2016 HAC REDUCTION PROGRAM

[by hospital characteristic]

Hospital characteristic	Number of hospitals [a]	Percent [b]	Number of hospitals in the worst-performing quartile	Percent of hospitals in the worst-performing quartile [c]
Total [d]	3,272	100.0	807	24.4
By Geographic Location				
All hospitals:				
Large urban [e]	1,323	40.5	362	27.4
Other urban	1,109	33.9	279	25.2
Rural	837	25.6	163	19.5
Urban hospitals:				
1–99 beds	619	25.5	140	22.6

25–49	2,081	66.3	465	22.3
50–64	328	10.5	55	16.8
65 and over	91	2.9	18	19.8

SOURCE: Scores are based on AHRQ PSI 90 data from July 2012 through June 2014 and CLABSI, CAUTI, and SSI results from January 2013 to December 2014. Hospital Characteristics are based on the FY 2016 Proposed Rule Impact File.

[a] The total number of non-Maryland hospitals with a Total HAC Score and hospital characteristic data (3,269 for geographic location, bed size, and teaching status; 3,256 for type of ownership; and 3,137 for MCR) does not add up to the total number of non-Maryland hospitals with a Total HAC Score for the FY 2016 HAC Reduction Program (3,272) because 3 hospitals are not included in the FY 2016 Proposed Rule Impact File and not all hospitals have data for all characteristics.

[b] This column is the percent of all non-Maryland hospitals with each characteristic that have a Total HAC Score for the FY 2016 HAC Reduction Program and are included in the FY 2016 Proposed Rule Impact File. Percentages may not sum to 100 due to rounding.

[c] This column is the percent of hospitals within each characteristic that we estimate would be in the worst-performing quartile.

[d] Total excludes the 47 Maryland hospitals and 36 hospitals without a Total HAC Score for FY 2016.

[e] Large urban hospitals are hospitals located in large urban areas (populations over 1 million).

[f] A hospital is considered to be a DSH hospital if it has a DSH patient percentage greater than zero.

[g] A hospital is considered to be a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

7. Effects of Modification of the Simplified Cost Allocation Methodology Used by Hospitals

In section IV.H. of the preamble of this final rule, we discuss our modification of the simplified cost allocation methodology set forth in CMS Pub. 15–2, Chapter 40, Section 4020. In the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24514 through 24515), we had proposed to limit the election of the simplified cost allocation methodology to cost reporting periods beginning before October 1, 2015, because the allocation of the costs of capital-related movable equipment using this methodology yields less precise calculated CCRs. After consideration of the public comments we received, we are not finalizing the proposal to limit the election of the simplified cost allocation methodology. Instead, we are retaining the simplified cost allocation methodology with some modifications to afford hospitals using the simplified cost allocation methodology flexibility to obtain approval from their MACs to use dollar value as an alternative statistical basis to square footage for capital-related moveable equipment. Based on FY 2013 HCRIS data, less than 100 hospitals are using the simplified cost allocation methodology. Hospitals using the simplified cost allocation methodology (that is, hospitals using each and every statistical basis within the list of cost centers under the simplified cost allocation methodology) may continue their use of these statistical bases, with the added flexibility to request approval from their MACs to use the dollar value statistical basis for capital-related moveable equipment in accordance with the instructions set forth in CMS Pub. 15–1, Section 2313. In this regard, hospitals using the simplified cost allocation methodology will no longer be required to use the square footage statistical basis for capital-related moveable equipment but will be provided greater flexibility to request approval to use the statistical basis of dollar value, which may be better suited to their cost allocation needs. With this modification, we believe there will be no disruption of cost reporting practices for hospitals, regardless of whether or not they use the simplified cost allocation methodology. Hospitals using one or more, but not all, of the statistical bases under the simplified cost allocation methodology are not considered to be using the simplified cost allocation methodology. Rather, they are considered to be using the standard cost-finding methodology with approved alternative bases. These hospitals may continue to use these previously approved statistical bases, consistent with current manual instructions set forth in CMS Pub. 15–1, Section 2313. We believe that these finalized changes will not have a significant impact on the operations of a substantial number of small rural hospitals. We also do not believe that the finalized changes will affect beneficiary access to care, as affected hospitals will continue to be paid for services provided to Medicare beneficiaries.

8. Effects of Implementation of Rural Community Hospital Demonstration Program

In section IV.I. of the preamble of this final rule, for FY 2016, we discuss our

implementation of section 410A of Public Law 108–173, as amended, which requires the Secretary to conduct a demonstration that would modify reimbursement for inpatient services for up to 30 rural community hospitals. Section 410A(c)(2) requires that in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented. As discussed in section IV.I. of the preamble of this final rule, in the IPPS final rules for each of the previous 11 fiscal years, we have estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration. In order to achieve budget neutrality, we are adjusting the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we are applying budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented but does not identify the range across which aggregate payments must be held equal.

We are adjusting the national IPPS rates according to the methodology set forth in section IV.I.2. of the preamble of this final rule. We note that the phase-out of the demonstration has begun with the 7 ''pre-expansion'' participating hospitals that were selected for the demonstration during 2004 and 2008 concluding their participation during FY 2015. Therefore, we have not included the financial experience of these hospitals in the estimated demonstration cost for FY 2016. Of the 15 hospitals that entered the demonstration in 2011 and 2012 under the Affordable Care Act expansion, 11 hospitals are scheduled to end their participation in the demonstration during FY 2016. Eight of these 11 hospitals are scheduled to end their participation in the demonstration prior to September 30, 2016. For each of these 8 hospitals, we estimate the reasonable cost amount and the amount that would otherwise be paid without the demonstration for FY 2016 on a prorated basis, multiplying the estimated amounts for each hospital (as derived from ''as submitted'' cost reports for cost reporting periods ending in CY 2013) by the fraction of the number of months that it will participate in the demonstration during FY 2016 in relation to the total 12-month period. Accordingly, the budget neutrality offset amount used to determine the adjustment to the national IPPS rates to account for estimated demonstration costs for FY 2016 for these 15 hospitals is $26,044,620. In addition, in this final rule, we are subtracting from the budget neutrality offset amount for FY 2016 the following: (1) The amount by which the budget neutrality offset amount that was finalized in the FY 2009 IPPS/LTCH PPS final rule exceeded the actual costs of the demonstration for FY 2009 (as shown in the finalized cost reports for hospitals that participated in FY 2009 and had cost reporting periods beginning in FY 2009) ($8,457,452); and (2) the amount by which the budget neutrality offset amount that was finalized for FY 2010 to account for the demonstration costs in FY 2010 (as set forth in the FY 2010 and 2011 IPPS final rules) exceeded the actual costs of the demonstration during FY 2010 (similarly as shown in the finalized cost reports for hospitals that participated in FY 2010 and had for cost reporting periods beginning in 2010). This amount is $4,751,550. Therefore, the resulting total ($12,835,618) is the amount for which an adjustment to the IPPS rates for FY 2016 is calculated.

9. Effects of the Changes to MS–DRGs Subject to the Postacute Care Transfer Policy and the Special Payment Policy

In section IV.J. of the preamble to this final rule, we discuss changes to the list of MS–DRGs subject to the postacute care transfer policy and the DRG special payment policy. As reflected in Table 5 listed in section VI. of the Addendum to this final rule (which is available via the Internet on the CMS Web site), using criteria set forth in regulations at § 412.4, we evaluated MS–DRG charge, discharge, and transfer data to determine which MS–DRGs qualify for the postacute care transfer and DRG special payment policies. We note that we are not making any changes in these payment policies in this FY 2016 final rule. We are including two new MS–DRGs on the list of MS–DRGs subject to the postacute care transfer policy and the DRG special payment policy as a result of our revisions of the MS–DRG classifications for FY 2016. Specifically, we are establishing that two new MS–DRGs will qualify for the postacute care transfer policy and the DRG special payment policy in FY 2016. Column 4 of Table I in this Appendix A shows the effects of the changes to the MS–DRGs and the relative payment weights and the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate DRG classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The analysis and methods for determining the changes due to the MS–DRGs and relative payment weights account for and include changes in the status of MS–DRG postacute care transfer and special payment policies. We refer readers to section I.G. of this Appendix A for a detailed discussion of payment impacts due to MS–DRG reclassification policies.

I. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented below, we used data from the March 2015 update of the FY 2014 MedPAR file and the March 2015 update of the Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2015 update of the most recently available hospital cost report data (FYs 2012 and 2013) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described below.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2015 update of the FY 2014 MedPAR file, we simulated payments under the capital IPPS for FY 2015 and FY 2016 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (for example, Indian Health Service hospitals and hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2016 is as follows:

(Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's case-mix. We then added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case-mix index will increase by 0.5 percent in both FYs 2015 and 2016.
- We estimate that Medicare discharges will be approximately 11.3 million in FY 2015 and 11.2 million in FY 2016.
- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1.a. of the Addendum to this final rule, the update is 1.3 percent for FY 2016.
- In addition to the FY 2016 update factor, the FY 2016 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9973 and an outlier adjustment factor of 0.9365. As discussed in section VI.C. of the preamble of this final rule, we are not making an additional MS–DRG documentation and coding adjustment to the capital IPPS Federal rates for FY 2016.

2. Results

We used the actuarial model described above to estimate the potential impact of our changes for FY 2016 on total capital payments per case, using a universe of 3,369 hospitals. As described above, the individual hospital payment parameters are taken from the best available data, including the March 2015 update of the FY 2014 MedPAR file, the March 2015 update to the PSF, and the most recent cost report data from the March 2015 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2015 and estimated total payments per case for FY 2016 based on the FY 2016 payment policies. Column 2 shows estimates of payments per case under our model for FY 2015. Column 3 shows estimates of payments per case under our model for FY 2016. Column 4 shows the total percentage change in payments from FY 2015 to FY 2016. The change represented in Column 4 includes the 1.3 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2016 are expected to increase as compared to capital payments per case in FY 2015. This expected increase is due to the approximately 0.85 percent increase in the capital Federal rate for FY 2016 as compared to the FY 2015 capital Federal rate and, to a lesser degree, changes to the MS–DRG reclassifications and recalibrations and changes in outlier payments. (For a discussion of the determination of the capital Federal rate, we refer readers to section III.A. of the Addendum to this final rule.) The increase in capital payments per case due to the effects of changes to the MS–DRG reclassifications and recalibrations is expected to be slightly greater for urban hospitals, as are the increases in capital payments per case due to changes in outlier payments. However, half of the urban areas and most of the rural areas are expected to experience a somewhat smaller projected increase in capital payments per case due to the effects of changes to the GAFs. These regional effects of the changes to the GAFs on capital payments are consistent with the projected changes in payments due to changes in the wage index (and policies affecting the wage index) as shown in Table I in section I.G. of this Appendix.

The net impact of these changes is an estimated 2.3 percent change in capital payments per case from FY 2015 to FY 2016 for all hospitals (as shown below in Table III).

The geographic comparison shows that, on average, hospitals in all classifications (urban and rural) will experience an increase in capital IPPS payments per case in FY 2016 as compared to FY 2015. Capital IPPS payments per case for hospitals in ''large urban areas'' have an estimated increase of 2.5 percent, while hospitals in rural areas, on average, are expected to experience a 1.4 percent increase in capital payments per case from FY 2015 to FY 2016. Capital IPPS payments per case for ''other urban hospitals'' are estimated to increase 2.1 percent. The primary factor contributing to the difference in the projected increase in capital IPPS payments per case for urban hospitals as compared to rural hospitals is the changes in the GAFs. Rural hospitals in all but two rural regions are projected to experience a decrease in capital payments due to the effect of changes in the GAFs, while hospitals in only half of the urban regions are projected to experience a decrease in capital payments due to the effect of the changes in the GAFs.

The comparisons by region show that the estimated increases in capital payments per case from FY 2015 to FY 2016 in urban areas range from a 3.1 percent increase for the Pacific urban region to a 1.1 percent increase for the New England urban region. For rural regions, the Pacific rural region is projected to experience the largest increase in capital IPPS payments per case of 3.0 percent; the West South Central rural region is projected to experience the smallest increase in capital IPPS payments per case of 0.1 percent. The change in the GAFs is the main factor for the West South Central rural region experiencing the smallest projected increase in capital IPPS payments among rural regions, and it is also the main contributor for the smallest projected increase in capital IPPS payments for the New England urban region. However, the changes in the GAFs have the opposite effect for both the Pacific urban and Pacific rural regions where they are a primary contributor to the expected larger than average increase in capital IPPS payments per case.

Hospitals of all types of ownership (that is, voluntary hospitals, government hospitals, and proprietary hospitals) are expected to experience an increase in capital payments per case from FY 2015 to FY 2016. The increase in capital payments for voluntary and proprietary hospitals is estimated to be 2.3 percent. For government hospitals, the increase is estimated to be 2.4 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2016. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this final rule for FY 2016, we show the average capital payments per case for reclassified hospitals for FY 2016. Urban reclassified hospitals are expected to experience an increase in capital payments of 2.8 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 2.2 percent. The estimated percentage increase for rural reclassified hospitals is 1.8 percent, and for rural nonreclassified hospitals, the estimated percentage increase is 1.1 percent.

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE

[FY 2015 Payments Compared to FY 2016 Payments]

	Number of hospitals	Average FY 2015 payments/case	Average FY 2016 payments/case	Change
By Geographic Location:				
All hospitals	3,369	871	890	2.3
Large urban areas (populations over 1 million)	1,393	963	987	2.5
Other urban areas (populations of 1 million of fewer)	1,140	833	851	2.1
Rural areas	836	591	599	1.4
Urban hospitals	2,533	904	925	2.3
0–99 beds	668	736	750	1.9
100–199 beds	778	788	805	2.2
200–299 beds	445	825	844	2.3
300–499 beds	428	920	943	2.4
500 or more beds	214	1,080	1,106	2.4
Rural hospitals	836	591	599	1.4
0–49 beds	329	490	497	1.5
50–99 beds	297	549	557	1.6
100–149 beds	121	591	598	1.2
150–199 beds	48	645	652	1.0
200 or more beds	41	706	715	1.3
By Region:				
Urban by Region	2,533	904	925	2.3
New England	120	996	1,008	1.1

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE—Continued

[FY 2015 Payments Compared to FY 2016 Payments]

	Number of hospitals	Average FY 2015 payments/case	Average FY 2016 payments/case	Change

J. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VII. of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2016. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify those policies, and present rationales for our final decisions as well as alternatives that were considered. In this section of Appendix A to this final rule, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 419 LTCHs included in this impacts analysis, which includes data for 78 nonprofit (voluntary ownership control) LTCHs, 326 proprietary LTCHs, and 15 LTCHs that are government-owned and operated. (We note that, although there are currently approximately 430 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2016 MS–LTC–DRG relative weights (discussed in section VII.C.3.c. of the preamble of this final rule)). In the impact analysis, we used the payment rate, factors, and policies presented in this final rule, including the application of the new site neutral payment rate required by section 1886(m)(6)(A) of the Act (discussed in section VII.B. of the preamble of this final rule), the 1.7 percent annual update to the LTCH PPS standard Federal payment rate in accordance with section 1886(m)(5)(C) of the Act (which is based on the full estimated increase of the LTCH PPS market basket and the reductions required by sections 1886(m)(3) and (m)(4) of the Act), the update to the MS–LTC–DRG classifications and relative weights for the LTCH PPS standard Federal payment rate cases, the update to the wage index values and labor-related share for the LTCH PPS standard Federal payment rate cases, and the best available claims and CCR data to estimate the change in payments for FY 2016.

Under the new dual rate LTCH PPS payment structure, there will be two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, as discussed in section VII.B. of the preamble of this final rule, we provide payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) based on the LTCH PPS standard Federal payment rate. In addition, consistent with the statute, we are establishing that the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a); or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, under our finalized policies, there are two separate HCO targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases. The statute also establishes a transitional payment method for cases that will be paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017. As discussed more fully in section VII.B.4.b. of the preamble of this final rule, the transitional payment amount for site neutral payment rate cases is a blended payment rate, which will be calculated as 50 percent of the applicable site neutral payment rate amount for the discharge as determined under new § 412.522(c)(1) and 50 percent of the applicable LTCH PPS standard Federal payment rate for the discharge determined under § 412.523.

Based on the best available data for the 419 LTCHs in our database that were considered in the analyses used for this final rule, we estimate that overall LTCH PPS payments in FY 2016 will decrease by approximately 4.6 percent (or approximately $250 million). This projection takes into account estimated payments for LTCH cases that would have met the new patient-level criteria and been paid the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of the discharge, and estimated payments for LTCH cases that would not have met those new patient-level criteria and been paid under the site neutral payment rate if that rate had been in effect at the time of the discharge described below.

Because the statute specifies that the site neutral payment rate effective date for a given LTCH is determined based on the date on which that LTCH's cost reporting period begins on or after October 1, 2015, our estimate of FY 2016 LTCH PPS payments for site neutral payment rate cases includes an adjustment to account for this rolling effective date. Our approach, applied to the FY 2014 data that were used for the analyses in this final rule, accounts for the fact that LTCHs with cost reporting periods that begin after October 1, 2015, will continue to be paid for all discharges (including those that do not meet the patient-level criteria for exclusion from the site neutral payment rate) at the LTCH PPS standard Federal payment rate until the start of their first cost reporting period beginning after October 1, 2015. Therefore, in order to estimate total LTCH PPS payments for site neutral payment rate cases in FY 2016, we first identified LTCHs with cost reporting periods that would begin in the first quarter of FY 2016 (that is, October through December 2015), and modeled those LTCHs estimated FY 2016 site neutral payment rate payments based on the transitional blended payment rate. We then modeled the estimated first quarter FY 2016 payments to LTCHs with cost reporting periods that would begin after the first quarter of FY 2016 using the LTCH PPS standard Federal payment rate. We then identified the LTCHs with cost reporting periods that would begin in each of the remaining three quarters of FY 2016, and applied an analogous analysis to estimate payments in each respective quarter of FY 2016. (For full details on our method of estimating payments under our finalized policies for FY 2016, we refer readers to the description presented in section V.D.4. of the Addendum to the proposed rule.) We believe that this approach is a reasonable means of taking the rolling effective date into account when estimating FY 2016 payments. Based on the fiscal year start dates recorded in the March update of the Provider Specific File, of the 419 LTCHs in our database of LTCH claims from the March 2015 update of the FY 2014 MedPAR files used for this final rule, the following percentages apply in the approach described above: 11.24 percent of site neutral payment rate cases are from LTCHs whose cost reporting periods begin in the first quarter of FY 2016; 29.88 percent of site neutral payment rate cases are from LTCHs whose cost reporting periods begin in the second quarter of FY 2016; 10.73 percent of site neutral payment rate cases are from LTCHs whose cost reporting periods begin in the third quarter of FY 2016; and 48.15 percent of site neutral payment rate cases are from LTCHs whose cost reporting periods begin in the fourth quarter of FY 2016.

Based on the FY 2014 LTCH cases that were used for the analyses in this final rule, approximately 46 percent of LTCH cases would have been classified as site neutral payment rate cases if the site neutral payment rate had been in effect in FY 2014 (that is, 46 percent of such LTCH cases would not have met the patient-level criteria for exclusion from the site neutral payment rate). Our Office of the Actuary estimates that the percent of LTCH PPS cases that will be paid at the site neutral payment rate in FY 2016 will not change significantly from the historical data. Taking into account the transitional blended payment rate and other policies applicable to the site neutral payment rate cases in FY 2016, and our approach to account for the rolling effective date for the new site neutral payment rate, we estimate that aggregate LTCH PPS payments for these site neutral payment rate cases will decrease by approximately 14.8 percent (or approximately $300 million).

Approximately 54 percent of LTCH cases are expected to meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2016, and will be paid based on the LTCH PPS standard Federal payment rate for the full year. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2016 will increase approximately 1.5 percent (or approximately $50 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2016 is primarily a result of the 1.7 percent annual update to the LTCH PPS standard Federal payment rate for FY 2016 (discussed in section V.A. of the Addendum to this final rule) and an estimated decrease in HCO payments for these cases.

Based on the 419 LTCHs that were represented in the FY 2014 LTCH cases that were used for the analyses in this final rule, we estimate that aggregate FY 2016 LTCH PPS payments will be approximately $5.150 billion, as compared to estimated aggregate FY 2015 LTCH PPS payments of approximately $5.400 billion, resulting in an estimated overall decrease in LTCH PPS payments of approximately $250 million. Because the combined distributional effects and estimated payment changes exceed $100

million, this final rule is a major economic rule. We note that this estimated $250 million decrease in LTCH PPS payments in FY 2016 (which includes estimated payments for LTCH PPS standard Federal payment rate cases and site neutral payment rate cases) does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of what is in this rule.

The LTCH PPS standard Federal payment rate for FY 2015 is $41,043.71. For FY 2016, we are establishing a LTCH PPS standard Federal payment rate of $41,762.85, which reflects the 1.7 percent annual update to the LTCH PPS standard Federal payment rate and the area wage budget neutrality factor of 1.000513 to ensure that the changes in the wage indexes and labor-related share do not influence aggregate payments. For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are establishing an LTCH PPS standard Federal payment rate of $40,941.55. This reduced LTCH PPS standard Federal payment rate reflects the updates described above as well as the required 2.0 percentage point reduction to the annual update for failure to submit data to the LTCH QRP. We note that the factors described above to determine the FY 2016 LTCH PPS standard Federal payment rate are applied to the FY 2015 LTCH PPS standard Federal rate set forth under § 412.523(c)(3)(xi) (that is, $41,762.85).

Table IV (column 6) shows that the estimated change attributable solely to the annual update to the LTCH PPS standard Federal payment rate is projected to result in an increase of 1.4 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016, on average, for all LTCHs. In addition to the annual update to the LTCH PPS standard Federal payment rate for FY 2016, this estimated increase in aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases of 1.4 percent shown in column 6 of Table IV also includes estimated payments for SSO cases that will be paid using special methodologies that are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the penalty that is applied to the annual update of LTCHs that do not submit the required LTCH QRP data. Therefore, for all hospital categories, the projected increase in payments based on the LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases is somewhat less than the 1.7 percent annual update for FY 2016.

As discussed in section V.B. of the Addendum to this final rule, we are updating the wage index values for FY 2016 based on the most recent available data, and we are continuing to use labor market areas based on the OMB CBSA delineations. In addition, we are slightly lowering the labor-related share from 62.306 percent to 62.0 percent under the LTCH PPS for FY 2016, based on the most recent available data on the relative importance of the labor-related share of operating and capital costs based on the FY 2009-based LTCH-specific market basket. We also are applying an area wage level budget neutrality factor of 1.000513 to ensure that the changes to the wage data and labor-related share do not result in a change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases, which increases the LTCH PPS standard Federal payment rate by approximately 0.095 percent.

We currently estimate total HCO payments for LTCH PPS standard Federal payment rate cases are projected to decrease from FY 2015 to FY 2016. Using the FY 2014 LTCH cases that were used for the analyses in this final rule, we estimate that the FY 2015 HCO threshold of $14,972 (as established in the FY 2015 IPPS/LTCH PPS final rule) will result in estimated HCO payments for LTCH PPS standard Federal payment rate cases in FY 2015 that are above the estimated 8 percent target. Specifically, we currently estimate that HCO payments for LTCH PPS standard Federal payment rate cases will be approximately 8.1 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2015. Combined with our estimate that FY 2016 HCO payments for LTCH PPS standard Federal payment rate cases would be 8.0 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2016, this results in the estimated decrease of approximately 0.1 percent between FY 2015 and FY 2016.

In calculating these estimated HCO payments we increased estimated costs by our actuaries' projected market basket percentage increase factor. This increase in estimated costs also results in a projected increase in SSO payments in FY 2016. We estimate that these increased SSO payments in FY 2016 will increase total payments for LTCH PPS standard Federal payment rate cases by 0.2 percent. (Payments for SSO cases represent approximately 13 percent of the estimated total payments for LTCH PPS standard Federal payment rate cases.)

Table IV below shows the estimated impact of the payment rate and policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2016 by comparing estimated FY 2015 LTCH PPS payments to estimated FY 2016 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) The projected increase in payments from FY 2015 to FY 2016 for LTCH PPS standard Federal payment rate cases of 1.5 percent is attributable to the impacts of the change to the LTCH PPS standard Federal payment rate (1.4 percent in Column 6) and the effect of the estimated decrease in HCO payments for LTCH PPS standard Federal payment cases (−0.1 percent), and the estimated increase in payments for SSO cases (0.2 percent).

As we discuss in detail throughout this final rule, based on the most recent available data, we believe that the provisions of this final rule relating to the LTCH PPS, which are projected to result in an overall decrease in estimated aggregate LTCH PPS payments, and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 1.5 percent increase in estimated payments for LTCH PPS standard Federal payment rate cases. This estimated impact is based on the FY 2014 data for the 21 rural LTCHs (out of 419 LTCHs) that were used for the analyses in this final rule. We note that these impacts do not include LTCH PPS site neutral payment rate cases for the reasons discussed in section I.J.3. of this Appendix.

3. Anticipated Effects of LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs ''maintain budget neutrality.'' We believe that the statute's mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a new dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. As discussed in section VII.B. of the preamble of this final rule, under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) will be paid based on the LTCH PPS standard Federal payment rate. LTCH discharges that will be paid at the site neutral payment rate will generally be paid the lower of the IPPS comparable per diem amount, including any applicable HCO payments or 100 percent of the estimated cost of the case. The statute also establishes a transitional payment method for cases that will be paid at the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017, under which the site neutral payment rate cases will be paid a blended payment rate calculated as 50 percent of the applicable site neutral payment rate amount for the discharge and 50 percent of the applicable LTCH PPS standard Federal payment rate for the discharge. (For additional details on the application of the site neutral payment rate beginning in FY 2016, we refer readers to section VII.B. of the preamble of this final rule.)

As discussed above in section I.J.1. of this Appendix, we project a decrease in aggregate LTCH PPS payments in FY 2016 of approximately $250 million. This estimated decrease in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately $50 million and the projected decrease in payments to site neutral payment rate cases of approximately $300 million under the new dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016.

As discussed in section VII.B.7.b. of the preamble of this final rule, our actuaries

project cost and resource changes for site neutral payment rate cases due to the site neutral payment rates required under the statute. Specifically, our actuaries project that the costs and resource use for cases paid at the site neutral payment rate will likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate, and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG. While we are able to incorporate this projection at an aggregate level into our payment modeling, because the historical claims data that we are using in this final rule to project estimated FY 2016 LTCH PPS payments (that is, FY 2014 LTCH claims data) do not reflect this actuarial projection, we are unable to model the impact of the change in LTCH PPS payments for site neutral payment rate cases at the same level of detail with which we are able to model the impacts of the changes to LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, Table IV below only reflects changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.3 of this Appendix refers only to the impact on LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Below we present our provider impact analysis for the changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

b. Impact on Providers

Under the new dual rate LTCH PPS payment structure, the statute establishes two distinct payment rates for LTCH discharges occurring in cost reporting periods beginning on or after October 1, 2015. Under that statute, any discharges that occur on or after October 1, 2015, but prior to the start of the LTCH's FY 2016 cost reporting period will be paid at the LTCH PPS standard Federal payment rate. On or after the start of an LTCH's FY 2016 cost reporting period, discharges are paid based on the nature of the case. As described previously, LTCH PPS standard Federal payment rate cases are defined as LTCH discharges that will meet the patient-level criteria to be excluded from the typically lower site neutral payment rate, and site neutral payment rate cases are defined as LTCH discharges that will not meet the patient-level criteria and will generally be paid the generally lower site neutral payment rate. For discharges occurring in cost reporting periods beginning in FY 2016 or 2017, however, the statute specifies that site neutral payment rate cases will be paid based on a transitional payment method that will be calculated as 50 percent of the applicable site neutral payment rate amount and 50 percent of the applicable LTCH PPS standard Federal payment rate.

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is set forth under § 412.515 through § 412.536. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and SSOs. LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. As explained previously, under our application of the new dual rate LTCH PPS payment structure required under section 1886(m)(6) of the Act, the LTCH PPS standard Federal payment rate would generally only be used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). Under the new statutory changes to the LTCH PPS, LTCH discharges that will not meet the patient-level criteria for exclusion will be paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also will be able to receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this final rule on different categories of LTCHs for FY 2016, it is necessary to estimate payments per discharge for FY 2015 using the rates, factors, and the policies established in the FY 2015 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2016 using the rates, factors, and the policies finalized in this FY 2016 IPPS/LTCH PPS final rule (as discussed in section VII. of the preamble of this final rule and section V. of the Addendum to this final rule). As discussed elsewhere in this rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for SSO and HCO cases in each year. The resulting analyses can then be used to compare how our finalized policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, FY 2012 through FY 2013 cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: Large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

c. Calculation of LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our finalized policies on payments for LTCH PPS standard Federal payment rate cases, we simulated FYs 2015 and 2016 payments on a case-by-case basis using historical LTCH claims from the FY 2014 MedPAR files that would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for those cases. For modeling FY 2015 LTCH PPS payments, we used the FY 2015 standard Federal rate of $41,043.71, or $40,240.51 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP, which reflects the 2.0 percentage points reduction required by section 1886(m)(5)(C) of the Act. Similarly, for modeling FY 2016 LTCH PPS standard Federal payment rate payments, we used the FY 2016 standard Federal payment rate of $41,762.85, or $40,941.55 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP, again, to reflect the 2.0 percentage points reduction required by section 1886(m)(5)(C) of the Act. In each case, we applied the applicable adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2015 LTCH PPS payments, we used the current FY 2015 labor-related share (62.306 percent); the wage index values established in the Tables 12A through 12D listed in the Addendum to the FY 2015 IPPS/LTCH PPS final rule (which are available via the Internet on the CMS Web site), including the transitional blended wage index for the implementation of the CBSA delineations in FY 2015; the FY 2015 fixed-loss amount for LTCH PPS standard Federal payment rate cases of $14,972 (as discussed in section V.D. of the Addendum to that final rule) and the FY 2015 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2015 nonlabor-related share (37.694 percent) for LTCHs located in Alaska and Hawaii. Similarly, for modeling FY 2016 LTCH PPS payments, we used the FY 2016 LTCH PPS labor-related share (62.0 percent), the FY 2016 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this final rule (which are also available via the Internet on the CMS Web site), the FY 2016 fixed-loss amount for LTCH PPS standard Federal payment rate cases of $16,423 (as discussed in section V.D.3. of the Addendum to this final rule), and the FY 2016 COLA factors (shown in the table in section V.C. of the Addendum to this final rule) to adjust the FY 2016 nonlabor-related share (38.0 percent) for LTCHs located in Alaska and Hawaii.

As discussed above, our impact analysis reflects an estimated change in payments for SSO cases, as well as an estimated decrease in HCO payments for LTCH PPS standard Federal payment rate cases (as described previously in section I.J.1. of this Appendix). In modeling payments for SSO and HCO cases for LTCH PPS standard Federal payment rate cases, we applied an inflation factor of 4.6 percent (determined by the Office of the Actuary) to update the 2014 costs of each case.

The impacts presented below reflect the estimated ''losses'' or ''gains'' among the various classifications of LTCHs from FY 2015 to FY 2016 based on the payment rates and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2015 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described above).
- The fifth column shows the estimated FY 2016 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described above).
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2015 to FY 2016 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2015 to FY 2016 for changes to the area wage level adjustment (that is, the wage indexes and the labor-related share), including the application of an area wage level budget neutrality factor (as discussed in section V.B. of the Addendum to this final rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2015 (Column 4) to FY 2016 (Column 5) for all changes (and includes the effect of estimated changes to HCO and SSO payments).

TABLE IV—IMPACT OF PAYMENT RATE AND POLICY CHANGES TO LTCH PPS PAYMENTS FOR STANDARD PAYMENT RATE CASES FOR FY 2016

[Estimated FY 2015 payments compared to estimated FY 2016 payments]

LTCH Classification	Number of LTCHs	Number of LTCH PPS standard federal payment rate cases	Average FY 2015 LTCH PPS payment per case	Average FY 2016 LTCH PPS standard federal payment rate payment per case [1]	Percent change in payments per case due to the annual update to the LTCH PPS standard federal rate [2]	Percent change in payments per case due to changes to the area wage level adjustment with budget neutrality [3]	Percent change in payments per case from FY 2015 to FY 2016 for all changes [4]

[1] Estimated FY 2016 LTCH PPS payments to LTCH cases that are expected to meet the LTCH PPS standard Federal payment rate criteria based on the payment rate and factor changes applicable to LTCH PPS standard Federal payment rate cases presented in the preamble of and the Addendum to this final rule.

[2] Percent change in estimated payments per discharge for LTCH cases that are expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2015 to FY 2016 for the annual update to the LTCH PPS standard Federal payment rate.

[3] Percent change in estimated payments per discharge for LTCH cases that are expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2015 to FY 2016 for changes to the area wage level adjustment under § 412.525(c) (as discussed in section V.B. of the Addendum to this final rule).

[4] Percent change in estimated payments per discharge for LTCH cases that are expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2015 (shown in Column 4) to FY 2016 (shown in Column 5), including all of the changes to the rates and factors applicable to LTCH PPS standard Federal payment rate cases presented in the preamble and the Addendum to this final rule. Note, this column, which shows the percent change in estimated payments per discharge for all changes, does not equal the sum of the percent changes in estimated payments per discharge for the annual update to the LTCH PPS standard Federal payment rate (column 6) and the changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in both estimated payments to SSO cases that are paid based on estimated costs and aggregate HCO payments for LTCH cases that are expected to meet the LTCH PPS standard Federal payment rate criteria (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

d. Results

Based on the FY 2014 LTCH cases (from 419 LTCHs) that were used for the analyses in this final rule, we have prepared the following summary of the impact (as shown above in Table IV) of the LTCH PPS payment rate and finalized policy changes for LTCH PPS standard Federal payment rate cases presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are expected to increase 1.5 percent, on average, for all LTCHs from FY 2015 to FY 2016 as a result of the payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. This estimated 1.5 percent increase in LTCH PPS payments per discharge to LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016 for all LTCHs (as shown in Table IV) was determined by comparing estimated FY 2016 LTCH PPS payments (using the payment rates and factors discussed in this final rule) to estimated FY 2015 LTCH PPS payments for LTCH discharges which would be LTCH PPS standard Federal payment rate cases if the new dual rate LTCH PPS payment structure had been in effect at the time of the discharge (as described in section I.J.3. of this Appendix).

As stated previously, we are updating the LTCH PPS standard Federal payment rate for FY 2016 by 1.7 percent based on the latest estimate of the LTCH PPS market basket increase (2.4 percent), the reduction of 0.5 percentage point for the MFP adjustment, and the 0.2 percentage point reduction consistent with sections 1886(m)(3) and (m)(4) of the Act. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction would be applied to the annual update to the LTCH PPS standard Federal rate. As explained earlier in this section, for most categories of LTCHs (as shown in Table IV, Column 6), the payment increase due to the 1.7 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 1.4 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2015 to FY 2016. This is because our estimate of the changes in payments due to the update to the LTCH PPS standard Federal payment rate also reflects estimated payments for SSO cases that will be paid using special methodologies that are not affected by the update to the LTCH PPS standard Federal payment rate. Consequently, we estimate that payments to LTCH PPS standard Federal payment rate cases may increase by less than 1.7 percent for certain hospital categories due to the annual update to the LTCH PPS standard Federal payment rate for FY 2016.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 3 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the overall average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016 for all hospitals is 1.5 percent. For rural LTCHs, the overall percent change for LTCH PPS standard Federal payment rate cases is estimated to be a 0.9 percent increase, while for urban LTCHs, we estimate the increase will be 1.5 percent. Large urban LTCHs are projected to experience an increase of 1.4 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016, and other urban LTCHs are projected to experience an increase of 1.6 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016, as shown in Table IV.

(2) Participation Date

LTCHs are grouped by participation date into four categories: (1) Before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the most recent available data, the categories of LTCHs with the largest expected percentage of LTCH PPS standard Federal payment rate cases (approximately 44 percent) are in LTCHs that began participating in the Medicare program between October 1993 and September 2002, and they are projected to experience a 1.6 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016, as shown in Table IV.

Approximately 3 percent of LTCHs began participating in the Medicare program before October 1983, and these LTCHs are projected to experience a higher than average percent increase (2.6 percent) in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016, as shown in Table IV, which is primarily due to a projected larger than average increase in payments due to the changes to the area wage adjustment. Approximately 10 percent of LTCHs began participating in the Medicare program between October 1983 and September 1993. These LTCHs are projected to experience a 1.3 percent increase in estimated payments for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016. LTCHs that began participating in the Medicare program after October 1, 2002, which treat approximately 40 percent of all LTCH PPS standard Federal payment rate cases, are projected to experience a 1.3 percent increase in estimated payments from FY 2015 to FY 2016.

(3) Ownership Control

LTCHs are grouped into three categories based on ownership control type: Voluntary, proprietary, and government. Based on the most recent available data, approximately 18 percent of LTCHs are identified as voluntary (Table IV). The majority (nearly 78 percent) of LTCHs are identified as proprietary while government-owned and operated LTCHs represent approximately 4 percent of LTCHs. Based on ownership type, voluntary LTCHs are expected to experience an average increase in payments to LTCH PPS standard Federal payment rate cases of 1.6 percent; proprietary LTCHs are expected to experience an increase of 1.5 percent in payments to LTCH PPS standard Federal payment rate cases, while government-owned and operating LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases of 1.8 percent from FY 2015 to FY 2016.

(4) Census Region

Estimated payments per discharge for LTCH PPS standard Federal payment rate cases for FY 2016 are projected to increase for LTCHs located in all regions in comparison to FY 2015. Of the 9 census regions, we project that the increase in estimated payments per discharge to LTCH PPS standard Federal payment rate cases would have the largest positive impact on LTCHs in the New England region (2.6 percent as shown in Table IV), which is largely attributable to the changes in the area wage level adjustment.

In contrast, LTCHs located in the Middle Atlantic region are projected to experience the smallest increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016. The lower than national average estimated increase in payments of 0.8 percent is primarily due to estimated decreases in payments associated with the changes to the area wage level adjustment.

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. All bed size categories are projected to receive an increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016. We project that large LTCHs (200+ beds) will experience a 2.2 percent increase in payments for LTCH PPS standard Federal payment rate cases, which is higher than the national average mostly due to a larger than average increase from the area wage level adjustment. Similarly, we project that both small LTCHs (0–24 beds) and relatively large LTCHs (125–199 beds) will experience a 2.1 percent increase and 1.8 percent increase, respectively, in payments for LTCH PPS standard Federal payment rate cases, which is also higher than the national average mostly due to increases in the area wage level adjustment. LTCHs with 25 to 49 beds and 75 to 124 beds are expected to experience a nearly average increase in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016 (1.4 percent and 1.5 percent, respectively), while LTCHs with between 50 and 74 beds are expected to experience a smaller than average increase in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2015 to FY 2016 (1.3 percent).

4. Effect on the Medicare Program

As stated previously, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2016 relative to FY

2015 of approximately $50 million (or approximately 1.5 percent) for the 419 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2016 relative to FY 2015 of approximately $300 million (or approximately 14.8 percent) for the 419 LTCHs in our database. Therefore, we project that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments to all cases in FY 2016 relative to FY 2015 of approximately $250 million (or approximately 4.6 percent) for the 419 LTCHs in our database.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this final rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program.

K. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

In section VIII.A. of the preamble of this final rule, we discuss our requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase for the FY 2018 payment determination.

In this final rule, we are finalizing our proposals to remove nine measures from the Hospital IQR Program for the FY 2018 payment determination and subsequent years:

- STK–01 Venous Thromboembolism (VTE) Prophylaxis (NQF #0434);
- STK–06: Discharged on Statin Medication* (NQF #0439);
- STK–08: Stroke Education* (NQF endorsement removed);
- VTE–1: Venous Thromboembolism Prophylaxis* (NQF #0371);
- VTE–2: Intensive Care Unit Venous Thromboembolism Prophylaxis* (NQF #0372);
- VTE–3: Venous Thromboembolism Patients with Anticoagulation Overlap Therapy* (NQF #0373);
- AMI–7a Fibrinolytic Therapy Received Within 30 Minutes of Hospital Arrival* (NQF #0164);
- IMM–1 Pneumococcal Immunization (NQF #1653); and
- SCIP-Inf-4 Cardiac Surgery Patients with Controlled Postoperative Blood Glucose (NQF #0300).

(An asterisk (*) indicates that the measure is finalized for retention as an electronic clinical quality measure for the FY 2018 payment determination and subsequent years in section VIII.A.8. of the preamble of this final rule.)

The anticipated effect of removing these measures will be a reduction in the burden associated with the collection of chart-abstracted data. Due to the burden associated with the collection of chart-abstracted data, we estimate that the removal of AMI–7a will result in a burden reduction of approximately 219,000 hours across all hospitals. We estimate that the removal of the 6 VTE and STK chart-abstracted measures will result in a burden reduction of approximately 522,000 hours across all hospitals. The remaining two measures we are finalizing for removal have been previously suspended from the Hospital IQR Program. Therefore, their removal will not affect burden to hospitals. In total, we estimate that the removal of 9 measures will result in a total burden reduction of approximately 741,000 hours for the FY 2018 payment determination across all hospitals.

We are retaining six of the chart-abstracted measures finalized for removal as electronic clinical quality measures. We believe retaining some measures as electronic clinical quality measures will not affect the overall burden, as these measures were available for electronic reporting under previous requirements.

In this final rule, we are finalizing refinements, modified from what was proposed, to expand the measure cohorts for: (1) The Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Pneumonia Hospitalization measure (NQF #0468); and (2) the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) Following Pneumonia Hospitalization measure (NQF #0506). Expanding the measure cohorts to include a broader population of patients adds a large number of patients, as well as additional hospitals, to these measures. However, this expansion will not affect the burden on hospitals or hospital performance on the Hospital IQR Program because these measures are claims-based and, therefore, require no additional effort on hospitals' part to submit the required data.

We also are finalizing our proposal to add seven of the eight measures we proposed to the Hospital IQR Program measure set. Four of these seven measures are added beginning with the FY 2018 payment determination and for subsequent years; three of these measures, addressing clinical episode-based payments, are added beginning with the FY 2019 payment determination and for subsequent years. Six of these measures are claims-based, and one measure is structural. The seven new measures are:

- Hospital Survey on Patient Safety Culture (structural);
- Kidney/UTI Clinical Episode-Based Payment (claims-based);
- Cellulitis Clinical Episode-Based Payment (claims-based);
- Gastrointestinal Hemorrhage Clinical Episode-Based Payment (claims-based);
- Hospital-Level, Risk-Standardized Payment Associated with an Episode-of-Care for Primary Elective THA/TKA (claims-based);
- Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction (claims-based); and
- Excess Days in Acute Care after Hospitalization for Heart Failure (claims-based).

We are not finalizing our proposal to add the Lumbar Spine Fusion/Refusion Clinical Episode-Based Payment measure (claims-based).

We believe adopting the six claims-based measures above will have no effect on hospital burden because they do not require additional effort on the part of hospitals. We further believe adopting the Hospital Survey on Patient Safety Culture measure will have a minimal effect on hospital burden, as it involves filling out a one-time form to report on this measure for a given performance period. In total we estimate a burden of 15 minutes per hospital to complete other forms such as the ECE and Measure Exception form, and to report structural measures. The estimate of 15 minutes includes all previously finalized and newly required structural measures.

For the FY 2018 payment determination and subsequent years, we also are finalizing a modification of our proposal to require hospitals to report 16 electronic clinical quality measures to instead require hospitals to report a minimum of 4 electronic clinical quality measures. Under this modified policy, no NQS domain distribution will be required. We also are requiring that hospitals submit one quarter of data (either Q3 or Q4) for CY 2016/FY 2018 payment determination and subsequent years by February 28, 2017. We believe the finalized requirement will increase the burden associated with electronic clinical quality measure reporting because electronic reporting was previously voluntary. The total burden increase is estimated to be approximately 40 minutes per hospital to report 4 electronic clinical quality measures for one quarter. For hospitals choosing to submit more electronic clinical quality measures, the total burden increase for hospitals to report 16 electronic clinical quality measures would be approximately 2 hours and 40 minutes per hospital for one quarter.

We are finalizing our proposal to change the requirements for population and sampling such that hospitals will be required to submit population and sample size data only for those measures that a hospital submits as chart-abstracted measures under the Hospital IQR Program. We believe this finalized proposal will result in a minimal decrease in burden as hospitals will not have to report population and sample size if they electronically report any of the measures that can be reported either as an electronic clinical quality measure or via chart-abstraction.

We also are finalizing our proposal to modify the existing processes for validation of chart-abstracted Hospital IQR Program data to remove one stratum. This modification will not affect hospital burden. For validation of chart-abstracted data for the FY 2018 payment determination and subsequent years, we require hospitals to provide 72 charts per hospital per year (with an average page length of 1,500), including 40 charts for HAI validation and 32 charts for clinical process of care validation, for a total of 108,000 pages per hospital per year. We reimburse hospitals at 12 cents per photocopied page (79 FR 50346) for a total per hospital cost of $12,960. For hospitals providing charts digitally via a re-writable disc, such as encrypted CD–ROMs, DVDs, or flash drives, we will reimburse hospitals at a rate of 40 cents per disc. We do not believe

any additional burden is associated with data submitting this information via Web portal or PDF.

In addition to the activities described above, participation in the Hospital IQR Program requires hospitals to participate in a number of other activities, including: (1) Reviewing reports for claims-based measure sets; (2) completing HAI validation templates for CLABSI and CAUTI; (3) completing HAI validation templates for MRSA bacteremia and CDI; and (4) completing other forms and structural measures. The cumulative effects of these activities on facility burden are expected to be substantially similar to that stated for FY 2017. Considering the proposals finalized in this final rule, as well as our updated estimates for the number of records reported and the time associated with data reporting activities, we estimate a total burden of 2,289 hours per hospital and 7.6 million hours across approximately 3,300 hospitals participating in the Hospital IQR Program for the FY 2018 payment determination.

In general, however, we anticipate that, because of the new requirements we are finalizing for reporting for the FY 2018 payment determination, the number of hospitals not receiving the full annual percentage increase may be higher than average. Information is not available to determine the precise number of hospitals that will not meet the requirements to receive the full annual percentage increase for the FY 2018 payment determination. Historically, 100 hospitals, on average, of those participating in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year. The highest number of hospitals failing to meet program requirements was approximately 200 after the introduction of new NHSN reporting requirements. If the number of hospitals failing does increase because of the new requirements, we anticipate that, over the long run, this number will decline as hospitals gain more experience with these requirements.

Finally, under OMB Control Number 0938–1022, we estimated that the total burden for the FY 2017 payment determinations was 1,781 hours per hospital and 5.9 million hours across approximately 3,300 hospitals participating in the Hospital IQR Program. We estimate here that the total burden for the FY 2018 payment determination will increase to 2,289 hours per hospital and 7.6 million hours across approximately 3,300 hospitals due to the proposals discussed above and updates to the historical data used to determine the number of cases reported and time for reporting per measure set. The table below describes the hospital burden associated with the Hospital IQR Program requirements.

BURDEN IMPACT OF HOSPITAL IQR PROGRAM REQUIREMENTS FOR FY 2018 PAYMENT DETERMINATION

Hospital IQR Program requirement	Number of hospitals impacted	Burden per hospital for previously finalized	Burden per hospital for all requirements as adopted (continuing, removed, added)	Net change in burden per hospital
Chart-abstracted and structural measures, forms.	3,300	1,131 hours	906 hours	−225 hours.
Review reports for claims-based measures	3,300	4 hours	4 hours	0.
Electronic Clinical Quality Measure Reporting.	3,300	0 hours (electronic clinical quality measure reporting voluntary for FY 2017).	40 minutes	+40 minutes.
Validation templates	Up to 600	72 hours	72 hours	0.
Electronic Clinical Quality Measure validation test.	Up to 100	16 hours	0 hours (no test this year).	−16 hours.
Validation charts photocopying	Up to 600	$8,496	$12,960	+$4,464.

In implementing the Hospital IQR Program and other quality reporting programs, we have focused on measures that have high impact and support CMS and HHS priorities for improved quality and efficiency of care for Medicare beneficiaries.

L. Effects of Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program for FY 2018

In section VIII.B. of the preamble of this final rule, we discuss our policies for the quality data reporting program for PPS-exempt cancer hospitals (PCHs), which we refer to as the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act, which was added by section 3005 of the Affordable Care Act.

In section VIII.B.3. of the preamble of this final rule, we are finalizing our proposal that PCHs must submit data on three additional measures beginning with the FY 2018 program: (1) The CDC NHSN Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716); (2) the CDC NHSN Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717); and, (3) the CDC NHSN Influenza Vaccination Coverage Among Healthcare Personnel Measure (NQF #0431). In conjunction with our finalized proposal in section VIII.B.2. of the preamble of this final rule to remove the six SCIP measures from the PCHQR Program beginning with fourth quarter (Q4) 2015 discharges and for subsequent years, the PCHQR measure set will consist of 16 measures for the FY 2018 program.

The impact of the new requirements for the PCHQR Program is expected to be minimal overall because all 11 PCHs are already submitting quality measure data to the CDC NHSN and are familiar with this reporting process. Beginning with Q1 2013 events, PCHs have been submitting Central Line-associated Bloodstream Infection (CLABSI) and Catheter-Associated Urinary Tract Infection (CAUTI) data to the CDC NHSN (77 FR 53566). Similarly, beginning with Q1 2014 events, PCHs have been submitting Surgical Site Infections (SSI) data to the CDC NHSN (78 FR 50849). As a result, PCHs are familiar with the CDC NHSN IT infrastructure and programmatic operations. In addition to fostering transparency and facilitating public reporting, we believe our requirements uphold our goals in improving quality of care and achieving better health outcomes, which outweigh burden.

One expected effect of the PCHQR Program is to keep the public informed of the quality of care provided by PCHs. We will publicly display quality measure data collected under the PCHQR Program as required under the Act. These data will be displayed on the *Hospital Compare* Web site. The goals of making these data available to the public in a user-friendly and relevant format include, but are not limited to: (1) Allowing the public to compare PCHs in order to make informed health care decisions regarding care setting; and (2) providing information about current trends in health care. Furthermore, PCHs can use their own health care quality data for many purposes such as in risk management programs, healthcare associated infection prevention programs, and research and development activities, among others.

M. Effects of Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP) for FY 2018

In section VIII.C.1. of the preamble of this final rule, we discuss the implementation of section 1886(m)(5) of the Act, which was added by section 3004(a) of the Affordable Care Act. Section 1886(m)(5) of the Act provides that, for rate year 2014 and each subsequent year, any LTCH that does not submit data to the Secretary in accordance with section 1886(m)(5)(C) and (F) of the Act shall receive a two (2) percentage point reduction to the annual update to the standard Federal rate for discharges for the hospital during the applicable fiscal year.

In the FY 2015 IPPS/LTCH PPS final rule (76 FR 50443 through 50445), we estimated

that only a few LTCHs will not receive the full annual percentage increase in any fiscal year as a result of failure to submit data under the LTCH QRP. There are approximately 442 LTCHs currently reporting quality data to CMS. At the time that this analysis was prepared, 47, or approximately 10 percent, of these LTCHs did not receive the full annual percentage increase for the FY 2015 annual payment update determination. Information is not available to determine the precise number of LTCHs that will not meet the requirements to receive the full annual percentage increase for the FY 2016 payment determination.

We believe that a majority of LTCHs will continue to collect and submit data for the FY 2017 payment determination and subsequent years because they will continue to view the LTCH QRP as an important step in improving the quality of care patients receive in the LTCHs. We believe that the burden associated with the LTCH QRP is the time and effort associated with data collection.

In this FY 2016 IPPS/LTCH PPS final rule, we are retaining 12 previously finalized measures, 2 of which we are adopting in order to establish their use as cross-setting measures that satisfy the required addition of quality measures under the domains of skin integrity and incidence of major falls, as mandated by the section 1899B of the Act: Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and an Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674). We are adopting a third previously finalized measure, All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512), in order to establish the newly NQF-endorsed status of this measure. Finally, we are finalizing an Application of Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015), which satisfies the addition of a quality measure under the third initially required domain of functional status, cognitive function, and changes in function and cognitive function, as mandated by section 1899B of the Act.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50443 through 50445) we discussed burden estimates that were inclusive of the 12 previously finalized measures we are retaining in this final rule. We previously estimated the total cost for all 12 quality measures to be $17,410 per LTCH annually, or $7,695,423 for all LTCHs annually (79 FR 50443 through 50445); or $2,992,384 for all quality measures reported via the CDC's NHSN; and $4,703,039 for all quality measures reported to CMS using the LTCH CARE Data Set version 2.01. For a list of the 12 previously finalized measures included in the above burden estimate, we refer readers to the FY 2015 IPPS/LTCH PPS final rule.

The burden calculation discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50443 through 50445) accounts for any burden associated with newly finalized measures in this FY 2016 IPPS/LTCH PPS final rule. The measure, the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), is currently being reported by LTCHs using version 2.01 of the LTCH CARE Data Set, which has burden approval under OMB control number 0938–1163. The burden associated with the application of the measure, the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674), is discussed at length in the FY 2015 IPPS/LTCH PPS final rule, and is included in the above total annual burden figures in that rule, as well as listed above.

The measure, All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512), is calculated based on CMS FFS claims data, and therefore does not have any associated data reporting burden for LTCH providers.

The new quality measure we are finalizing for inclusion in the LTCH QRP, the cross-setting functional status process measure: an Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function, is not specifically discussed in the FY 2015 IPPS/LTCH PPS final rule. However, the data elements used to report this quality measure to CMS are included in that discussion and burden estimate in that final rule, because we are finalizing our proposal to use a subset of the same data elements that are used to report the previously finalized measure, the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function, which is included in that burden estimate. Therefore, the addition of this quality measure to the LTCH QRP does not increase burden on LTCHs.

Currently, LTCHs use two separate data collection mechanisms to report quality data to CMS: The CDC's NHSN, which is used to report all Healthcare Associated Infection (HAI) and vaccination data (used to calculate CAUTI, CLABSI, MRSA, CDI, VAE, and Healthcare Personnel Influenza vaccination measures); and the Quality Improvement and Evaluation System Assessment Submission and Processing (QIES ASAP) system, which is used by LTCHs to report quality data via the LTCH CARE Data Set.

The data collection burden associated with the reporting of the quality measures (HAI and vaccination) reported via the CDC's NHSN is discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50443 through 50445). However, we note that these measures are stewarded by the CDC, and the reporting burden is approved under OMB control number 0920–0666.

The remaining quality measures are reported to CMS by LTCHs using the LTCH CARE Data Set. Currently, LTCHs are using version 2.01 of the LTCH CARE Data Set (approved under OMB control number 0938–1163) which includes data elements related to two quality measures: Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (NQF #0678) and Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680).

We have developed a subsequent iteration of the LTCH CARE Data Set (version 3.00), which will also include data elements for the three quality measures we previously finalized in the FY 2015 IPPS/LTCH PPS final rule: Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674); Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015); and Functional Status Outcome Measure: Change in Mobility Among LTCH Patients Requiring Ventilator Support (NQF #2632; endorsed on 07/23/2015). We refer readers to section X.B.9. of the preamble of this final rule for a discussion of the additional data elements in version 3.00 of the LTCH CARE Data Set.

Version 3.00 of the LTCH CARE Data Set will also be used to report the newly finalized cross-setting functional status process measure, an Application of the Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015). However, the data items that will inform this measure are a subset of the data elements currently used to report the LTCH-specific measure, Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631; endorsed on 07/23/2015). Therefore, this measure will not add any data collection burden beyond that discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50443 through 50445), in which NQF #2631 was finalized.

We discussed the LTCH burden related to the submission using the LTCH CARE Data Set version 3.00 in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50443 through 50445), and this burden is included in the total annual burden noted in that final rule, which is $17,410 per LTCH annually, or $7,695,423 for all LTCHs annually. We believe that this estimate remains unchanged as a result of the LTCH QRP proposals we are finalizing in this final rule. We received several comments on these proposals, which we summarize and respond to below.

Comment: One commenter recommended that CMS modify the LTCH CARE Data Set to ensure consistent and necessary data will appropriately and accurately populate the required quality measures for the implementation of the IMPACT Act of 2014 as well as ongoing implementation of the LTCH QRP.

Response: We appreciate and agree with the commenter's recommendations. As evidenced from our efforts to develop and successfully implement the LTCH CARE Data Set version 1.01 to support the implementation of the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure starting on October 1, 2012, and our subsequent revisions and implementation of LTCH CARE Data Set version 2.01 starting on July 1, 2014 to support the implementation of an additional quality measure the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680), we have developed the LTCH CARE Data Set version 3.00 to support the implementation

of additional quality measures as part of the LTCH QRP starting on April 1, 2016. We intend to continue to further revise and develop the LTCH CARE Data Set in order to support CMS efforts to successfully implement quality measures we adopt for the LTCH QRP through future rulemaking. At this time, we believe the LTCH CARE Data Set version 3.00 includes the necessary items required to support data collection to appropriately and accurately capture patient-level data for each of the quality measures adopted for April 1, 2016 implementation, for the LTCH QRP.

Comment: One commenter suggested combining several items in Section GG of the LTCH CARE Data Set version 3.00. Specifically, the commenter suggested combining the three walking items and the two wheelchair items.

Response: We appreciate the commenter's review of the LTCH CARE Data Set. Based on our analyses of the PAC PRD data and our feedback from the PAC PRD participants, we believe it is important to document the walking and wheeling distances as well as assistance needed for the activities of walking and wheelchair mobility. Therefore, we will not make changes to the LTCH CARE Data Set version 3.00 in response to this suggestion.

Comment: Several commenters were concerned that, in the process of trying to limit some of the data fields that made up the LTCH CARE Data Set, CMS has inappropriately collapsed response categories, such as in the section focused on Active Diagnoses, Comorbidities and Co-Existing Conditions. For example, the commenters asked for clarification of Severe Cancers and Opportunistic Infections as they considered the term to be subjective and could lead to inconsistent reporting across facilities.

Response: We appreciate the commenters' review of the LTCH CARE Data Set. We will provide detailed instructions in the LTCH QRP Manual version 3.0, including providing examples of severe cancers and opportunistic infections. The diagnosis groupings that we include on the LTCH CARE Data Set version 3.00 are the labels and definitions from the Hierarchical Condition Categories (HCCs), and some HCCs were further merged based on sample size requirements and the regression analysis results. Severe cancers can include, but are not limited to, cancer of stomach; cancer of liver; cancer of pancreas; cancer of trachea, bronchus, lung, and pleura; and multiple myeloma. Opportunistic infections include, but are not limited to, cytomegaloviral disease, including pneumonia; candidiasis of lung, esophagus, or disseminated; opportunistic mycoses (aspergillosis, cryptococcosis, zygomycosis, etc.); and pneumocystis pneumonia. We understand the importance of education and have worked in the past with public outreach, including training sessions, training manuals, Webinars, open door forums, help desk support and a Web site that hosts training information (*http://www.youtube.com/user/CMSHHSgov*). We plan to conduct such activities for the new items.

Comment: A few commenters suggested that, for patients who are in a coma/persistent vegetative state, the LTCH CARE Data Set include a skip pattern that allows the clinician to skip the Confusion Assessment Method (CAM©) items.

Response: We appreciate the commenters' suggestion to add a skip pattern that would reduce burden. We have taken this suggestion into consideration and determined that skipping the CAM© for patients in a coma is appropriate and therefore, we will implement this skip pattern.

Comment: One commenter noted that many of the data elements in the LTCH CARE Data Set will engender codes indicating ''Not applicable'' and ''Activity did not occur due to medical condition or safety concerns.''

Response: We agree with the commenter and are aware that for several of the data elements in the LTCH CARE Data Set, codes ''Not applicable'' and ''Activity did not occur due to medical condition or safety concerns'' may be appropriate. We anticipate that in the instances when a patient is unable to respond and family members are not able to provide the information, these codes would be appropriate. We invite readers to review the data submission specifications for information on specific codes (including ''Not applicable'' and ''Activity did not occur due to medical condition or safety concerns'') allowed for each data element of the LTCH CARE Data Set version 3.00, available for download on the CMS Web site at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html*.

Comment: One commenter noted that the CARE Item Set would take 60 minutes to complete in the LTCH setting although Pilot 2 of the PAC PRD (available at: *http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Reports/Research-Reports-Items/PAC_Payment_Reform_Demo_Final.html*) stated that, despite the request for time estimates at the end of each CARE tool domain, ''The amount of time taken to fill out the form was completed for up to half the records for some sections, and not at all for others.''

Response: We thank the commenter for reviewing and drawing upon the PAC PRD reports to inform their concern and feedback on burden estimates. We would like to clarify that the burden associated with the CARE Tool (which was used in PAC PRD) is not directly applicable to the LTCH CARE Data Set (which has been in use as part of LTCH QRP since October 1, 2012). Specifically, we are clarifying that we pay careful attention to and make every attempt to reduce LTCH burden for compliance with the LTCH QRP (including completion of LTCH CARE Data Set to submit data on quality measures adopted for the LTCH QRP). This is among several reasons why we have taken an incremental approach to develop and implement the LTCH CARE Data Set to include only those items that support data collection for quality measures adopted for the LTCH QRP and why we have not implemented the CARE Tool in its entirety.

Further, we are clarifying that there is no new burden associated with the additions to Section GG of the LTCH CARE Data Set, since the measures adopted through this final rule will utilize data elements that are collected under the LTCH CARE Data Set version 3.00. These data elements were previously finalized through rulemaking in order to inform quality measures that were previously finalized, and for which data collection will begin on April 1, 2016.

After consideration of the public comments we received, we are finalizing our estimates of the burden associated with the use of LTCH CARE Data Set version 3.00 for implementation starting April 1, 2016. Further, we are finalizing our use of CDC's burden estimates for using NHSN for data collection and submission of NHSN-based quality measures.

II. Alternatives Considered

This final rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

III. Overall Conclusion

1. Acute Care Hospitals

Table I of section I.G. of this Appendix demonstrates the estimated distributional impact of the IPPS budget neutrality requirements for the MS–DRG and wage index changes, and for the wage index reclassifications under the MGCRB. Table I also shows an overall increase of 0.4 percent in operating payments. As discussed in section I.G. of this Appendix, we estimate that operating payments will increase by approximately $378 million in FY 2016 relative to FY 2015. However, when we account for the impact of the changes in Medicare DSH payments and the impact of the new additional payments based on uncompensated care in accordance with section 3133 of the Affordable Care Act, based on estimates provided by the CMS Office of the Actuary, consistent with our policy discussed in section IV.D. of the preamble of this final rule, we estimate that operating payments will increase by approximately $75 million relative to FY 2015. We currently estimate that the changes in new technology add-on payments for FY 2016 will increase spending by approximately $9.5 million due to the expiration of three new technology add-on payments and the additional approval of two new technology add-on payments. This estimate, combined with our estimated increase in FY 2016 operating payment of $75 million, results in an estimated increase of approximately $85 million for FY 2016. We estimate that hospitals will experience a 2.3 percent increase in capital payments per case, as shown in Table III of section I.I. of this Appendix. We project that there will be a $187 million increase in capital payments in FY 2016 compared to FY 2015. The cumulative operating and capital payments will result in a net increase of approximately $272 million to IPPS providers. The discussions presented in the previous pages, in combination with the rest of this final rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience a decrease in estimated payments per discharge in FY 2016. In the impact analysis, we are using the rates, factors, and policies presented in this final rule, including updated wage index values and relative weights, and the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2016. Accordingly, based on the best available data for the 419 LTCHs in our database, we estimate that FY 2016 LTCH PPS payments will decrease approximately $250 million relative to FY 2015 as a result of the payment rates and factors presented in this final rule.

IV. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A–4 (available at *http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf*), in Table V below, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule. All expenditures are classified as transfers to Medicare providers.

The cost to the Federal Government associated with the policies in this final rule are estimated at $272 million.

TABLE V—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMIATED EXPENDITURES UNDER THE IPPS FROM FY 2015 TO FY 2016

Category	Transfers
Annualized Monetized Transfers.	−$272 million.
From Whom to Whom	Federal Government to IPPS Medicare Providers.

B. LTCHs

As discussed in section I.J. of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS, is projected to result in a decrease in estimated aggregate LTCH PPS payments in FY 2016 relative to FY 2015 of approximately $250 million based on the data for 419 LTCHs in our database that are subject to payment under the LTCH PPS. Therefore, as required by OMB Circular A–4 (available at *http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf*), in Table VI below, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to the changes to the LTCH PPS. Table VI provides our best estimate of the estimated change in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this final rule based on the data for the 419 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs).

The savings to the Federal Government associated with the policies for LTCHs in this final rule are estimated at $250 million.

TABLE VI—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2015 LTCH PPS TO THE FY 2016 LTCH PPS

Category	Transfers
Annualized Monetized Transfers.	−$250 million.
From Whom to Whom	Federal Government to LTCH Medicare Providers.

V. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $7.5 million to $38.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 36 of the Table of Small Business Size Standards for NAIC 622 found on the SBA Web site at: *http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf.*)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the provisions of this final rule relating to acute care hospitals would have a significant impact on small entities as explained in this Appendix. Because we lack data on individual hospital receipts, we cannot determine the number of small proprietary LTCHs. Therefore, we are assuming that all LTCHs are considered small entities for the purpose of the analysis in section I.J. of this Appendix. MACs are not considered to be small entities. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule constitutes our regulatory flexibility analysis. In FY 2016 IPPS/LTCH PPS proposed rule, we solicited public comments on our estimates and analysis of the impact of our proposals on those small entities. Any public comments that we received and our responses are presented throughout this final rule.

VI. Impact on Small Rural Hospitals

Section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals. (We refer readers to Table I in section I.G. of this Appendix for the quantitative effects of the policy changes under the IPPS for operating costs.)

VII. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2015, that threshold level is approximately $144 million. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

VIII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget reviewed this final rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules, respectively. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the Puerto Rico-specific standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we have made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2016, we plan to include the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to

MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2016

A. FY 2016 Inpatient Hospital Update

As discussed in section IV.A. of the preamble to this final rule, for FY 2016, consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a 66 2/3 percent reduction to three-fourths of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment), and an additional reduction of 0.2 percentage point as required by section 1886(b)(3)(B)(xii) of the Act. Sections 1886(b)(3)(B)(xi) and (b)(3)(B)(xii) of the Act, as added by section 3401(a) of the Affordable Care Act, state that application of the MFP adjustment and the additional FY 2016 adjustment of 0.2 percentage point may result in the applicable percentage increase being less than zero.

In the FY 2016 IPPS/LTCH PPS proposed rule, based on the most recent data available at that time, in accordance with section 1886(b)(3)(B) of the Act, we proposed to establish the FY 2016 market basket update used to determine the applicable percentage increase for the IPPS based on IHS Global Insight, Inc.'s (IGI's) first quarter 2015 forecast of the FY 2010-based IPPS market basket rate-of-increase with historical data through fourth quarter 2014, which was estimated to be 2.7 percent. Based on the most recent data available for this FY 2016 final rule, in accordance with section 1886(b)(3)(B) of the Act, we are establishing the FY 2016 market basket update used to determine the applicable percentage increase for the IPPS based on IHS Global Insight, Inc.'s (IGI's) second quarter 2015 forecast of the FY 2010-based IPPS market basket rate-of-increase, which is estimated to be 2.4 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.A. of the preamble of the FY 2016 IPPS/LTCH PPS proposed rule, we proposed a multifactor productivity (MFP) adjustment (the 10-year moving average of MFP for the period ending FY 2016) of 0.6 percent. Therefore, based on IGI's first quarter 2015 forecast of the FY 2010-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we presented in the proposed rule four possible applicable percentage increases that could be applied to the standardized amount. Based on the most recent data available for this FY 2016 IPPS/LTCH PPS final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.A. of the preamble of this final rule, we are establishing a MFP adjustment (the 10-year moving average of MFP for the period ending FY 2016) of 0.5 percentage point.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, as discussed in section IV.A. of the preamble of this final rule, we are establishing the applicable percentages increases for the FY 2016 updates based on IGI's second quarter 2015 forecast of the FY 2010-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, as outlined in the table below.

FY 2016	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase	2.4	2.4	2.4	2.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.6	−0.6
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−1.2	0.0	−1.2
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.5	−0.5	−0.5	−0.5
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	−0.2	−0.2	−0.2	−0.2
Applicable Percentage Increase Applied to Standardized Amount	1.7	0.5	1.1	−0.1

B. Update for SCHs and MDHs for FY 2016

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2016 applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS).

As discussed in section IV.L. of the preamble of this final rule, section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017).

As mentioned above, the update to the hospital specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four applicable percentage increases in the table above for the hospital-specific rate applicable to SCHs and MDHs.

C. FY 2016 Puerto Rico Hospital Update

Section 401(c) of Public Law 108–173 amended section 1886(d)(9)(C)(i) of the Act and states that, for discharges occurring in a fiscal year (beginning with FY 2004), the Secretary shall compute an average standardized amount for hospitals located in any area of Puerto Rico that is equal to the average standardized amount computed under subclause (I) for FY 2003 for hospitals in a large urban area (or, beginning with FY 2005, for all hospitals in the previous fiscal year) increased by the applicable percentage increase under subsection (b)(3)(B) for the fiscal year involved. Therefore, the update to the Puerto Rico-specific operating standardized amount is subject to the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act as amended by sections 3401(a) and 10319(a) of the Affordable Care Act (that is, the same update factor as for all other hospitals subject to the IPPS). Accordingly, we are making an applicable percentage increase to the Puerto

Rico-specific standardized amount of 1.7 percent.

D. Update for Hospitals Excluded From the IPPS for FY 2016

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and America Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, RNHCIs are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. We are applying the FY 2016 percentage increase in the IPPS operating market basket to the target amount for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. For this final rule, the current estimate of the FY 2016 IPPS operating market basket percentage increase is 2.4 percent.

E. Update for LTCHs for FY 2016

As discussed in section V.A. of the Addendum to this final rule, we are establishing an update to the LTCH PPS standard Federal rate for FY 2016 based on the full LTCH PPS market basket increase estimate (for the proposed rule, we estimated this to be 2.7 percent; for this final rule, we estimate this to be 2.4 percent), subject to an adjustment based on changes in economy-wide productivity and an additional reduction required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. In accordance with the LTCH QRP under section 1886(m)(5) of the Act, we are reducing the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. The MFP adjustment described under section 1886(b)(3)(B)(xi)(ii) of the Act is currently estimated to be 0.5 percent for FY 2016. In addition, section 1886(m)(3)(A)(ii) of the Act requires that any annual update for FY 2016 be reduced by the ''other adjustment'' at section 1886(m)(4)(E) of the Act, which is 0.2 percentage point. Therefore, based on more recent data from the proposed rule, that is, the IGI's second quarter 2015 forecast of the FY 2016 LTCH PPS market basket increase, we are establishing an annual update to the LTCH PPS standard Federal rate of 1.7 percent (that is, the current FY 2016 estimate of the market basket rate-of-increase of 2.4 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point). Accordingly, we are applying an update factor of 1.7 percent in determining the LTCH PPS standard Federal rate for FY 2016. For LTCHs that fail to submit quality data for FY 2016, we are applying an annual update to the LTCH PPS standard Federal rate of –0.3 percent (that is, the annual update for FY 2016 of 1.7 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying an update factor of −0.3 percent in determining the LTCH PPS standard Federal rate for FY 2016.

III. Secretary's Recommendations

MedPAC is recommending an inpatient hospital update equal to 3.25 percent for FY 2016. MedPAC's rationale for this update recommendation is described in more detail below. As mentioned above, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs and MDHs. For the Puerto Rico-specific standardized amount, we are recommending an update of 1.7 percent.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa of 2.4 percent.

For FY 2016, consistent with policy set forth in section VII. of the preamble of this final rule, for LTCHs that submit quality data, we are recommending an update of 1.7 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2016, we are applying an annual update to the LTCH PPS standard Federal rate of −0.3 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2015 Report to Congress, MedPAC assessed the adequacy of current payments and costs and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates equal to 3.25 percent concurrent with changes to the outpatient prospective payment system and with initiating change to the LTCH PPS. We refer the reader to the March 2015 MedPAC report, which is available on the Web site at *http://www.medpac.gov* for a complete discussion on this recommendation. MedPAC expects Medicare margins to remain low in 2015. At the same time, MedPAC's analysis finds that efficient hospitals have been able to maintain positive Medicare margins while maintaining a relatively high quality of care. However, under current law, payment margins are projected to decline which could result in negative Medicare margins industry wide. Specifically, MedPAC noted several current law policy changes are scheduled to reduce payments in FY 2015 and FY 2016. Because of these changes and reduced payments, MedPAC asserted that an update of 3.25 percent in the base payment is warranted. MedPAC maintains that Medicare payment rates should be determined by analysis of payment adequacy rather than an across-the-board sequester reduction. Therefore, MedPAC recommended that hospitals receive base payment rates that are 3.25 percent higher than the FY 2015 base payment rates, and there should be no sequester adjustment. However, MedPAC concluded that if the Congress increases hospital payments by reinstating expiring special payments, the full 3.25 percent update would not be warranted.

Response: With regard to MedPAC's recommendation of an update to the hospital inpatient rates equal to 3.25 percent, for FY 2016, as discussed above, section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, sets the requirements for the FY 2016 applicable percentage increase. Therefore, we are applying an applicable percentage increase for FY 2016 of 1.7 percent, provided the hospital submits quality data and is a meaningful EHR user, consistent with these statutory requirements.

We note that, because the operating and capital prospective payment systems remain separate, we are continuing to use separate updates for operating and capital payments. The update to the capital rate is discussed in section III. of the Addendum to this final rule.

Vol. 80 Monday,
No. 158 August 17, 2015

Part III

Department of the Interior

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Designation of Critical Habitat for *Brickellia mosieri* (Florida Brickell-bush) and *Linum carteri* var. *carteri* (Carter's Small-flowered Flax); Final Rule

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

[Docket No. FWS–R4–ES–2013–0108: 4500030114]

RIN 1018–AZ64

Endangered and Threatened Wildlife and Plants; Designation of Critical Habitat for Brickellia mosieri (Florida Brickell-bush) and Linum carteri var. carteri (Carter's Small-flowered Flax)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), designate critical habitat for *Brickellia mosieri* (Florida brickell-bush) and *Linum carteri* var. *carteri* (Carter's small-flowered flax) under the Endangered Species Act of 1973, as amended (Act). We designate as critical habitat approximately 1,062 hectares (ha) (2,624 acres (ac)) for *B. mosieri* and approximately 1,072 ha (2,649 ac) for *L. c.* var. *carteri.* The critical habitat areas for these plants, located entirely in Miami-Dade County, Florida, largely overlap, for a combined total of approximately 1,095 ha (2,706 ac). Critical habitat for both plants includes both occupied and unoccupied habitat. The Service determined that the unoccupied units are essential for the conservation of the plants, to provide for the necessary expansion of current *Brickellia mosieri* and *Linum carteri* var. *carteri* populations, and for reestablishment of populations into areas where these plants previously occurred. The effect of this regulation is to extend the Act's protections to these plants' critical habitats.

DATES: This rule is effective on September 16, 2015.

ADDRESSES: This final rule is available on the internet at *http://www.regulations.gov* and from the South Florida Ecological Services Field Office. Comments and materials we received, as well as some supporting documentation we used in preparing this final rule, are available for public inspection at *http://www.regulations.gov.* All of the comments, materials, and documentation that we considered in this rulemaking are available by appointment, during normal business hours at: U.S. Fish and Wildlife Service, South Florida Ecological Services Field Office, 1339 20th Street, Vero Beach, FL 32960; by telephone 772–562–3909; or by facsimile 772–562–4288. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 800–877–8339.

The coordinates or plot points or both from which the maps were generated are included in the administrative record for this critical habitat designation and are available at *http://www.regulations.gov* at Docket No. FWS–R4–ES–2013–0108, and at the South Florida Ecological Services Field Office (*http://www.fws.gov/verobeach/*) (see **FOR FURTHER INFORMATION CONTACT**). Any additional tools or supporting information that we developed for this critical habitat designation will also be available at the Fish and Wildlife Service Web site and Field Office addresses provided above, and at *http://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Dana Hartley, Endangered Species Supervisor, U.S. Fish and Wildlife Service, South Florida Ecological Services Field Office, 1339 20th Street, Vero Beach, FL 32960; by telephone 772–562–3909; or by facsimile 772–562–4288. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:

Executive Summary

Why we need to publish a rule. Under the Act, when we list a species as endangered or threatened, we must designate critical habitat, to the maximum extent prudent and determinable. Designations of critical habitat can only be completed by issuing a rule.

We listed *Brickellia mosieri* and *Linum carteri* var. *carteri* as endangered species on September 4, 2014 (79 FR 52567). On October 3, 2013, we published in the **Federal Register** a proposed critical habitat designation for *B. mosieri* and *L. c.* var. *carteri* (78 FR 61293). Section 4(b)(2) of the Act states that the Secretary shall designate critical habitat on the basis of the best available scientific data after taking into consideration the economic impact, national security impact, and any other relevant impact of specifying any particular area as critical habitat.

The critical habitat areas we are designating in this rule constitute our current best assessment of the areas that meet the definition of critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri.* Here we are designating approximately 1,062 ha (2,624 ac) as critical habitat for *Brickellia mosieri* and approximately 1,072 ha (2,649 ac) for *Linum carteri* var. *carteri.* The critical habitat areas for these plants, located entirely in Miami-Dade County, Florida, largely overlap, for a combined total of approximately 1,095 ha (2,706 ac). Critical habitat for both plants includes both occupied and unoccupied habitat. The Service determined that the unoccupied units are essential for the conservation of the plants, to provide for the necessary expansion of current *Brickellia mosieri* and *Linum carteri* var. *carteri* populations, and for reestablishment of populations into areas where these plants previously occurred.

This rule consists of: A final rule designating critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri* under the Act.

We have prepared an economic analysis of the designation of critical habitat. We have prepared an analysis of the economic impacts of the critical habitat designations and related factors. We announced the availability of the draft economic analysis (DEA) in the **Federal Register** on July 15, 2014 (79 FR 41211), allowing the public to provide comments on our analysis. We have incorporated the comments and have completed the economic analysis concurrently with this final designation.

Peer review and public comment. We sought comments from independent specialists to ensure that our designation is based on scientifically sound data and analyses. We obtained opinions from five knowledgeable individuals with scientific expertise to review our technical assumptions and analysis, and whether or not we had used the best available information. These peer reviewers generally concurred with our methods and conclusions, and provided additional information and suggestions to improve this final rule. Information we received from peer review is incorporated in this final revised designation. We also considered all comments and information received from the public during the comment periods.

Previous Federal Actions

For more information on previous Federal actions concerning *Brickellia mosieri* and *Linum carteri* var. *carteri,* refer to the proposed rules published in the **Federal Register** on October 3, 2013 (78 FR 61273 and 78 FR 61293), and the final listing rule published in the **Federal Register** on September 4, 2014 (79 FR 52567), which are available online at *http://www.regulations.gov* or from the South Florida Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Summary of Comments and Recommendations

We requested written comments from the public on the proposed designation of critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri* during two comment periods. The first comment period opened with the publication of the proposed rule (78 FR 61293) on October 3, 2013, and closed on December 2, 2013. We also requested comments on the proposed critical habitat designation and associated draft economic analysis during a comment period that opened July 15, 2014, and closed on August 14, 2014 (79 FR 41211). We also contacted appropriate Federal, State, and local agencies; scientific organizations; and other interested parties and invited them to comment on the proposed rule and draft economic analysis during these comment periods.

During the first comment period, we received 10 comment letters directly addressing the proposed critical habitat designation. During the second comment period, we received six comment letters addressing the proposed critical habitat designation. We did not receive any requests for a public hearing during either comment period. All substantive information provided during the comment periods specifically relating to the proposed designation either has been incorporated directly into this final designation or is addressed below.

Peer Review

In accordance with our peer review policy published in the **Federal Register** on July 1, 1994 (59 FR 34270), we solicited expert opinions from six knowledgeable individuals with scientific expertise, that included familiarity with *Brickellia mosieri* and *Linum carteri* var. *carteri* and/or their habitat, biological needs, and threats; the geographical region of South Florida in which these plants occur; and conservation biology principles. We received responses from five of the peer reviewers.

We reviewed all comments we received from the peer reviewers for substantive issues and new information regarding critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri.* The peer reviewers generally concurred with our methods and conclusions, and provided additional information and suggestions to improve the final critical habitat rule. Peer reviewer comments are addressed in the following summary and incorporated into the final rule as appropriate.

(1) *Comment:* One peer reviewer requested that additional information be provided regarding the source of ownership data and conservation lands. This reviewer also requested that ownership data and conservation land boundaries be referenced on the critical habitat maps or additional maps.

Our Response: Ownership of proposed critical habitat areas in the proposed rule was determined using geographic information system (GIS) data consisting of Miami-Dade County parcel layer (August 2008 version) and the Florida Natural Areas Inventory (FNAI) Florida Managed Areas layer (March 2009 version). Ownership of critical habitat areas in this final rule was determined using updated GIS data consisting of Miami-Dade County parcel layer (July 2013 version) and FNAI Florida Managed Areas layer (March 2014 version); this information has been incorporated into Tables 1 and 2 in the Final Critical Habitat Designation section, below. With regard to the inclusion of ownership data and conservation area boundaries on critical habitat maps, we prepare these maps under the parameters for publication within the Code of Federal Regulations. While we attempted in the proposed rule to provide detail such as select area names to better show the location of critical habitat areas along the Miami Rock Ridge, the scale of the maps prevented all conservation areas or ownership data from being depicted. This is still the case for maps showing the final critical habitat designation, which retained the same scale as maps in the proposed rule. More detailed information is available at the South Florida Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

(2) *Comment:* One peer reviewer suggested that the FNAI Florida Element Occurrence (FLEO) data for the pine rockland natural community and rare plants, animals, and invertebrates could have been used in our designation of critical habitat units. The reviewer also commented on the lack of map references to these and other spatial occurrence data (from Fairchild Tropical Botanic Garden (FTBG), the Institute for Regional Conservation (IRC), and other sources), while allowing that the latter were well referenced in the proposed rule.

Our Response: We appreciate the reviewer's comment. We did review the FLEO data for rare pine rockland species as part of our anlaysis, and have added text reflecting this under the *Criteria Used To Identify Critical Habitat* section, below. We were not aware of available FLEO data for the pine rockland natural community. We have since inquired with FNAI regarding these data, and have found out that the information available is only for some, not all, pine rocklands on the Miami Rock Ridge, and that detailed data (*e.g.,* habitat condition, species occurrences) for most areas are at least 10 years old. Thus, we believe that the information we used in our critical habitat analysis (specifically, recent aerial photography and the feedback of experts familiar with on-the-ground conditions) is more appropriate to a current assessment of habitat conditions than the FLEO pine rockland data, and constitutes the best available scientific and commercial information. Please refer to our response to *Comment (1),* above, regarding the inclusion of additional information on critical habitat maps.

(3) *Comment:* One peer reviewer recommended including the fire-suppressed pine rockland habitat located between Ross and Castellow Hammocks in *Brickellia mosieri'*s designated critical habitat, based on it being the type locality for the plant.

Our Response: In our analysis of proposed critical habitat, some areas of former pine rockland habitat were considered too severely fire suppressed (*i.e.,* having extremely dense canopy cover, based on our assessment of aerial photography) such that they are now unsuitable habitat for *Brickellia mosieri,* and unlikely to be able to be restored. These areas were not delineated as pine rocklands in our critical habitat analysis, and thus were not included in the consequence matrix used to identify unoccupied habitat for designation. This included the severely fire-suppressed pine rockland between Ross and Castellow Hammocks. Our assessment has been confirmed by a species expert who conducts monitoring in the area and is familiar with current habitat conditions. Thus, we believe that the subject area is not appropriate for inclusion in the critical habitat designation at this time.

(4) *Comment:* One peer reviewer noted that our methodology and choice of critical habitat patches appear very reasonable, but suggested supporting future critical habitat designations with quantitative analyses, such as those that would provide the quantitative contribution of each patch to network connectivity.

Our Response: We appreciate the reviewer's comment. In our analysis for the proposed rule, we evaluated connectivity of each habitat patch using two criteria: The number of other pine rockland habitat patches within 2 kilometers (km) (1.2 miles (mi)), and the distance to the nearest pine rockland

patch within a 2-km (1.2-mi) radius (where a score of ''0'' signaled adjacent patches). In this quantitative ranking, scores for both of these criteria were calculated in GIS using the pine rockland habitat layer we previously delineated as described in the *Criteria Used To Identify Critical Habitat* section, below. By applying these criteria, given areas of equal habitat quality, size, and surrounding landscape composition, those patches having more and closer neighbors (*i.e.,* other pine rockland patches) would be ranked higher in our evaluation. The intent of these criteria was to maximize patch connectivity within each geographic area. We believe this was the best approach for delineating the critical habitat for these two plants, but appreciate that the reviewer's suggested evaluation approach may be useful in developing a consequence matrix in future critical habitat designations, where necessary and appropriate.

(5) *Comment:* One peer reviewer suggested adding many of the mowed fields within the U.S. Coast Guard (USCG) and Miami Zoo properties to the designated critical habitat in Unit 4 (now, Units BM4 and LCC4). The reviewer stated that these lack a pine canopy and shrub layer, but support a high diversity of pine rockland species, including State-listed and federally listed plants, and noted that similar mowed areas likely occur in other portions of the Richmond Pinelands. We received a similar comment, concerning a mowed area on the USCG property, during the second public comment period (see response to Comment (10) below).

Our Response: We thank the reviewer for this comment. We acknowledge that mown areas having pine rockland substrate (*i.e.,* cleared pine rocklands) support some imperiled pine rockland plants, including *Linum carteri* var. *carteri.* However, while cleared areas currently support occurrences of *L. c.* var. *carteri,* scientific data are lacking with regard to the reason for this—whether it be a requirement related to very high light conditions, disturbed substrate, or a combination of these or other factors not yet identified. For the long-term conservation of these plants, we consider habitats having a completely open canopy (*i.e.,* cleared pine rocklands) to be less preferred than intact pine rockland having suitable canopy cover. Accordingly, cleared areas scored lower quantitatively for onsite habitat quality than intact pine rockland, and thus had a lower overall ranking in our consequence matrix, which we used to evaluate the conservation quality of unoccupied habitat (discussed in the *Criteria Used To Identify Critical Habitat* section, below). Mown fields within USCG and Miami Zoo lands, and surrounding land in the Richmond Pinelands, were included in our evaluation, but did not rank high enough (*i.e.,* conservation quality ranking was less than 0.50) for inclusion in the critical habitat designation. Based on our assessment, we do not believe these areas are essential to the plant's conservation at this time. However, we are actively communicating with both USCG and Miami-Dade County, and are supportive of conservation measures that would benefit *L. c.* var. *carteri* on these lands (*e.g.,* optimizing mowing regime).

(6) *Comment:* One peer reviewer provided additional information related to cultivated plantings of *Brickellia mosieri,* citing an observation of larger, more vigorous individuals than their wild counterparts, and the potential for plantings of both *B. mosieri* and *Linum carteri* var. *carteri* to provide a continual input of propagules that may successfully colonize other pine rockland areas.

Our Response: We thank the reviewer for this additional information, and support such planting programs (*e.g.,* FTBG's Connect to Protect Network) to aid in the recovery of these plants.

Comments From States

Section 4(i) of the Act (16 U.S.C. 1531 *et seq.*) states, ''the Secretary shall submit to the State agency a written justification for [her] failure to adopt regulations consistent with the agency's comments or petition.'' The two plants only occur in Florida, and we received no comments from the State of Florida regarding the critical habitat proposal. We note, however, that one peer reviewer was from the Florida Forest Service, Florida Department of Agriculture and Consumer Services; those comments are addressed above.

Public Comments

(7) *Comment:* One commenter stated that there is no reason why a population of *Brickellia mosieri* could not be supported at Tropical Park (in the vicinity of Unit BM1).

Our Response: We thank the reviewer for this comment. In our evaluation of unoccupied habitat, we used the best available scientific data to establish a minimum habitat size that would likely support a sustaining population of *Brickellia mosieri.* Based on expert opinion, we excluded unoccupied patches below 2 ha (5 ac) for *B. mosieri* (see ''Sites for Breeding, Reproduction, or Rearing (or Development) of Offspring,'' in the proposed critical habitat rule published in the **Federal Register** on October 3, 2013 (78 FR 61293)). The pine rockland habitat patch at Tropical Park (unoccupied) is approximately 1.7 ha (4.3 ac), and thus was not included in the consequence matrix for *B. mosieri.* Although some sites occupied by *B. mosieri* are less than 2 ha (5 ac) in size, it is not known whether these populations are sustainable in the long term. Thus, we believe that our minimum size threshold for unoccupied habitat is a conservative estimate, and that the methodology we used to determine proposed critical habitat supports the identification of pine rockland habitat patches with the highest conservation quality.

(8) *Comment:* Two commenters suggested revising the criteria used to evaluate onsite habitat quality in the consequence matrix, which was used to score and rank unoccupied pine rockland habitat patches in our critical habitat analysis. Both commenters stated that it would be more appropriate (especially for *Linum carteri* var. *carteri*) for pine rockland with a canopy openness greater than 50 percent to score higher than pine rockland with 25–50 percent canopy openness.

Our Response: We appreciate the comment and acknowledge that *Linum carteri* var. *carteri* responds favorably to high light conditions, including disturbed pine rocklands with canopy openness near 100 percent. Such cleared areas currently support occurrences of *L. c.* var. *carteri,* but scientific data are lacking with regard to the reason for this—whether it be a requirement related to very high light conditions, disturbed substrate, or a combination of these or other factors not yet identified. The criteria used to evaluate onsite habitat quality reflect our belief that habitats having a completely open canopy (*i.e.,* cleared pine rocklands) are less preferred than intact pine rockland having suitable canopy cover for the long-term conservation of these plants. However, to investigate whether and how the suggested change to scoring would impact the set of unoccupied habitat patches having an overall score greater than 0.50, we conducted a test revision of the consequence matrix for *L. c.* var. *carteri.* Scoring of canopy cover was adjusted as follows: If canopy was estimated to be 50 to 75 percent open, that patch received the highest possible score for that criteria (*i.e.,* a ''4''; original score for these patches was a ''3''); patches with a canopy estimated to be greater than 75 percent open received a score of ''3'' (original score was a ''2''); patches with a canopy estimated to be

25 to 50 percent open received a score of ''2'' (original score was a ''4''); and patches with a canopy estimated to be less than 25 percent open (*e.g.,* having a closed canopy due to inadequate fire management and extensive cover by nonnative invasive plants) received the lowest possible score (''1''; unchanged from original scoring). We then compared these test patch rankings to rankings under the original scoring scheme. All habitat patches for *L. c.* var. *carteri* in the original matrix having a total score greater than 0.63 were still in the revised set. Based on total score greater than 0.50 (our chosen cut-off for conservation quality as discussed in the *Criteria Used To Identify Critical Habitat* section, below), the revised set of unoccupied habitat patches for *L. c.* var. *carteri* included 3 new patches, but did not include 28 previously included patches (compared to proposed critical habitat in the proposed rule published in the **Federal Register** on October 3, 2013 (78 FR 61293)). The net area difference, based on the revised versus original matrix, was approximately 101 ha (250 ac) less than the proposed critical habitat. We also evaluated the revised set of habitat patches spatially, and determined that the revised polygon set had reduced connectivity, particularly in the area between the U.S. Department of Agriculture's Chapman Field (on the coast) and more interior habitat to the southwest. Lastly, we evaluated aerial photography of the individual polygons that would be added, and do not believe that they represent quality habitat—as pine rockland habitat in general, or for *L. c.* var. *carteri* specifically. Evaluation of aerial photography of the individual polygons that would be deleted indicates that at least some of these areas represent high-quality pine rockland habitat, including areas that could be open enough for *L. c.* var. *carteri.*

Based on our test revision, it seems apparent that a lower cut-off value for conservation quality would be needed to capture these high-quality areas and achieve adequate connectivity if the revised scoring was used. Therefore, we do not believe that the suggested scoring revision would result in a more appropriate set of habitat patches for *L. c.* var. *carteri,* and thus have not made any changes to the consequence matrix. One reason that the revised scoring did not result in the anticipated improvement to proposed critical habitat for *L. c.* var. *carteri* may be due to the way in which we scored patch canopy cover—that is, the entire polygon received a single score for canopy cover, although in many cases canopy cover is not distributed evenly through a habitat patch. While there are likely many alternative methods for evaluating conservation quality of pine rockland habitat, peer reviewers of the proposed rule agreed that our methodology is sound and that the resulting determination for unoccupied critical habitat is appropriate.

(9) *Comment:* One commenter suggested technical corrections to sections of the proposed rule pertaining to characteristic pine rockland vegetation, related to scientific names.

Our Response: We appreciate the comment and have incorporated these corrections into the *Physical or Biological Features,* the *Primary Constituent Elements,* and the Regulation Promulgation sections of the final rule, below.

(10) *Comment:* One commenter stated that the ''antenna field'' area of mowed pine rockland bordered on the north by Coral Reef Drive (152nd Street) and on the east by SW 117th Street would support both *Brickellia mosieri* and *Linum carteri* var. *carteri,* and that it is possible that one or both plants are there already. The commenter further stated that, although the area has been mown for decades, the vegetation is primarily native pine rockland plants that have adapted to the mowing by growing prostrate instead of vertically.

Our Response: Please see our response to Peer Review Comment (5), above, with regard to how these areas were handled in the methodology for designation. In addition, a survey of this area has recently been conducted, and neither *Brickellia mosieri* nor *Linum carteri* var. *carteri* were found. However, we continue to actively communicate with both USCG and Miami-Dade County, and are supportive of conservation measures that would benefit pine rockland plants on these lands (*e.g.,* optimizing mowing regime).

Summary of Changes From Proposed Rule

Based on information we received in comments regarding *Brickellia mosieri* and *Linum carteri* var. *carteri,* we refined our description of physical or biological features and primary constituent elements for both plants to include corrections to the following scientific names, in order to more accurately describe the characteristic vegetation of pine rocklands on the Miami Rock Ridge:

(1) *Lysiloma bahamense* has been changed to *L. latisiliquum;*

(2) *Thrinax morrisii* has been deleted;

(3) *Rapanea punctata* has been changed to *Myrsine floridana;*

(4) *Dodonaea viscosa* has been deleted;

(5) *Quercus elliottii* has been changed to *Q. pumila;*

(6) *Chamaecrista fasciculata* has been changed to *C. deeringiana; and*

(7) *Zamia pumila* has been changed to *Z. integrifolia.*

These revisions have also been made in the critical habitat discussion as well as in the Regulation Promulgation section of this final rule.

We also made revisions and refinements of the proposed critical habitat designation, and described these amendments in our document making available the draft economic analysis and reopening the proposed rule's comment period (79 FR 41211; July 15, 2014). Please refer to that notice for details; those revisions, with the exception of the proposed additions on Department of Defense lands, are reflected in this final rule, and described below in *Criteria Used To Identify Critical Habitat.*

Since publishing the revised proposed critical habitat designation on July 15, 2014 (79 FR 41211), we have determined that three unoccupied areas on Department of Defense lands (Homestead Air Reserve Base and the Special Operations Command South Headquarters) meet the criteria for exemption from critical habitat designation under section 4(a)(3) of the Act (discussed under the Exemptions section, below), and we have removed these from this final designation. The exemptions result in the removal of one area (one subunit; approximately 5.2 ha (12.9 ac)) from the critical habitat designation for *Brickellia mosieri,* and three areas (two subunits; totaling approximately 7.0 ha (17.3 ac)) from the critical habitat designation for *Linum carteri* var. *carteri.* The amount of critical habitat designated for each plant in this final rule (1,062 ha (2,624 ac) for *B. mosieri* and 1,072 ha (2,649 ac) for *L. c.* var. *carteri*) reflects these exempted areas.

Critical Habitat

Background

Critical habitat is defined in section 3 of the Act as:

(1) The specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the Act, on which are found those physical or biological features

(a) Essential to the conservation of the species, and

(b) Which may require special management considerations or protection; and

(2) Specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Conservation, as defined under section 3 of the Act, means to use and the use of all methods and procedures that are necessary to bring an endangered or threatened species to the point at which the measures provided pursuant to the Act are no longer necessary. Such methods and procedures include, but are not limited to, all activities associated with scientific resources management such as research, census, law enforcement, habitat acquisition and maintenance, propagation, live trapping, and transplantation, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated taking.

Critical habitat receives protection under section 7 of the Act through the requirement that Federal agencies ensure, in consultation with the Service, that any action they authorize, fund, or carry out is not likely to result in the destruction or adverse modification of critical habitat. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. Such designation does not allow the government or public to access private lands. Such designation does not require implementation of restoration, recovery, or enhancement measures by non-Federal landowners. Where a landowner requests Federal agency funding or authorization for an action that may affect a listed species or critical habitat, the consultation requirements of section 7(a)(2) of the Act would apply, but even in the event of a destruction or adverse modification finding, the obligation of the Federal action agency and the landowner is not to restore or recover the species, but to implement reasonable and prudent alternatives to avoid destruction or adverse modification of critical habitat.

Under the first prong of the Act's definition of critical habitat, areas within the geographical area occupied by the species at the time it was listed are included in a critical habitat designation if they contain physical or biological features (1) which are essential to the conservation of the species and (2) which may require special management considerations or protection. For these areas, critical habitat designations identify, to the extent known using the best scientific and commercial data available, those physical or biological features that are essential to the conservation of the species (such as space, food, cover, and protected habitat). In identifying those physical or biological features within an area, we focus on the principal biological or physical constituent elements (primary constituent elements such as roost sites, nesting grounds, seasonal wetlands, water quality, tide, soil type) that are essential to the conservation of the species. Primary constituent elements are those specific elements of the physical or biological features that provide for a species' life-history processes and are essential to the conservation of the species.

Under the second prong of the Act's definition of critical habitat, we can designate critical habitat in areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species. We designate critical habitat in areas outside the geographical area occupied by a species only when a designation limited to its range would be inadequate to ensure the conservation of the species.

Section 4 of the Act requires that we designate critical habitat on the basis of the best scientific and commercial data available. Further, our Policy on Information Standards Under the Endangered Species Act (published in the **Federal Register** on July 1, 1994 (59 FR 34271)), the Information Quality Act (section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106–554; H.R. 5658)), and our associated Information Quality Guidelines provide criteria, establish procedures, and provide guidance to ensure that our decisions are based on the best scientific data available. They require our biologists, to the extent consistent with the Act and with the use of the best scientific data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat.

When we are determining which areas should be designated as critical habitat, our primary source of information is generally the information developed during the listing process for the species. Additional information sources may include the recovery plan for the species, articles in peer-reviewed journals, conservation plans developed by States and counties, scientific status surveys and studies, biological assessments, other unpublished materials, or experts' opinions or personal knowledge.

Habitat is dynamic, and species may move from one area to another over time. We recognize that critical habitat designated at a particular point in time may not include all of the habitat areas that we may later determine are necessary for the recovery of the species. For these reasons, a critical habitat designation does not signal that habitat outside the designated area is unimportant or may not be needed for recovery of the species. Areas that are important to the conservation of the species, both inside and outside the critical habitat designation, will continue to be subject to: (1) Conservation actions implemented under section 7(a)(1) of the Act, (2) regulatory protections afforded by the requirement in section 7(a)(2) of the Act for Federal agencies to insure their actions are not likely to jeopardize the continued existence of any endangered or threatened species, and (3) section 9 of the Act's prohibitions on taking any individual of the species, including taking caused by actions that affect habitat. Federally funded or permitted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. These protections and conservation tools will continue to contribute to recovery of this species. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future recovery plans, habitat conservation plans (HCPs), or other species conservation planning efforts if new information available at the time of these planning efforts calls for a different outcome.

Physical or Biological Features

In accordance with section 3(5)(A)(i) and 4(b)(1)(A) of the Act and regulations at 50 CFR 424.12, in determining which areas within the geographical area occupied by the species at the time of listing to designate as critical habitat, we consider the physical or biological features (PBFs) essential to the conservation of the species and which may require special management considerations or protection. These include, but are not limited to:

(1) Space for individual and population growth and for normal behavior;

(2) Food, water, air, light, minerals, or other nutritional or physiological requirements;

(3) Cover or shelter;

(4) Sites for breeding, reproduction, or rearing (or development) of offspring; and

(5) Habitats that are protected from disturbance or are representative of the historical, geographical, and ecological distributions of a species.

We derive the specific PBFs essential for *Brickellia mosieri* and *Linum carteri* var. *carteri* from studies of the plants' habitat, ecology, and life history as described in the Critical Habitat section of the proposed rule to designate critical habitat published in the **Federal Register** on October 3, 2013 (78 FR 61293), and in the information presented below. Additional information can be found in the final listing rule published in the **Federal Register** on September 4, 2014 (79 FR 52567). The PBFs for *Brickellia mosieri* and *Linum carteri* var. *carteri* were defined on the basis of the habitat features of the areas occupied by the plants at the time of listing, which included substrate types, plant community structure, and associated plant species. The PBFs below include an updated description of the PBF related to ''Cover or Shelter.'' We have determined that *B. mosieri* and *L. c.* var. *carteri* require the following PBFs:

Space for Individual and Population Growth

Brickellia mosieri and *Linum carteri* var. *carteri* are endemic to, and occur exclusively within, pine rockland habitat on the Miami Rock Ridge outside of Everglades National Park (ENP) in Miami-Dade County in south Florida. This community and associated native plant species are described in the Status Assessment for *Brickellia mosieri* and *Linum carteri* var. *carteri* section in the proposed listing rule published in the **Federal Register** on October 3, 2013 (78 FR 61273). Pine rocklands are a fire-maintained ecosystem characterized by an open canopy and understory and by a limestone substrate (often exposed). Open canopy conditions are required to allow sufficient sunlight to reach the herbaceous layer and permit growth and flowering of *B. mosieri* and *L. c.* var. *carteri.* These plants also require a limestone substrate to provide suitable growing conditions (*e.g.,* pH, nutrients, anchoring, and proper drainage). This combination of ecosystem characteristics (*i.e.,* open canopy and limestone substrate) occurs only in pine rockland habitats (as opposed to rockland hammock, which occurs in conjunction with pine rockland and has a limestone substrate but a closed canopy). Therefore, based on this information, we identify pine rockland habitats to be a PBF for these plants.

Food, Water, Air, Light, Minerals, or Other Nutritional or Physiological Requirements

Soils—Substrates supporting *Brickellia mosieri* and *Linum carteri* var. *carteri* for anchoring or nutrient absorption are composed of oolitic limestone that is at or very near the surface. Solution holes occasionally form where the surface limestone is dissolved by organic acids. There is typically very little soil development, consisting primarily of accumulations of low-nutrient sand, marl, clayey loam, and organic debris found in solution holes, depressions, and crevices on the limestone surface (FNAI 2010, p. 62). However, extensive sandy pockets can be found at the northern end of the Miami Rock Ridge, beginning from approximately North Miami Beach and extending south to approximately SW. 216 Street (which runs east-west approximately one-half mile south of Quail Roost Pineland) (Service 1999, p. 3–162). In this area (the northern Biscayne region), pine rockland soils are primarily quartz sands classified as Opalocka sand-rock outcrop complex. This region has the least exposed rock. In the southern Biscayne, or Redlands, region to the south, pine rockland soils are rockier (*i.e.,* exposed rock is the predominant surface) and are primarily classified as Cardsound silty clay loam-rock outcrop complex. Other soil types that are loosely associated with pine rocklands include Udorthents (in the northern half of the plants' current ranges) and Krome very gravelly loam (in the southern half). Therefore, based on the information above, we identify substrate derived from oolitic limestone to provide anchoring and nutritional requirements to be a PBF for these plants.

Cover or Shelter

Pine rockland is characterized by an open canopy of *Pinus elliottii* var. *densa* (South Florida slash pine). Subcanopy development is rare in well-maintained pine rocklands, with only occasional hardwoods such as *Lysiloma latisiliquum* (wild tamarind) and *Quercus virginiana* (live oak) growing to tree size in Miami Rock Ridge pinelands (Snyder *et al.* 1990, p. 253). The shrub/understory layer is also characteristically open, although the height and density of the shrub layer varies based on fire frequency, with understory plants growing taller and more dense as time since fire increases. Subcanopy/shrub species that typically occur include, but may not be limited to, *Serenoa repens* (saw palmetto), *Sabal palmetto* (cabbage palm), *Coccothrinax argentata* (silver palm), *Myrica cerifera* (wax myrtle), *Myrsine floridana* (myrsine), *Metopium toxiferum* (poisonwood), *Byrsonima lucida* (locustberry), *Tetrazygia bicolor* (tetrazygia), *Guettarda scabra* (rough velvetseed), *Ardisia escallonioides* (marlberry), *Psidium longipes* (mangroveberry), *Sideroxylon salicifolium* (willow bustic), and *Rhus copallinum* (winged sumac) (FNAI 2010, pp. 61–62). Short-statured shrubs may include, but are not limited to, *Quercus pumila* (running oak), *Randia aculeata* (white indigoberry), *Crossopetalum ilicifolium* (Christmas berry), *Morinda royoc* (redgal), and *Chiococca alba* (snowberry) (FNAI 2010, p. 62). Understory vegetation may include, but is not limited to: *Andropogon* spp.; *Schizachyrium gracile, S. rhizomatum,* and *S. sanguineum* (bluestems); *Aristida purpurascens* (arrowfeather threeawn); *Sorghastrum secundum* (lopsided Indiangrass); *Muhlenbergia capillaris* (hairawn muhly); *Rhynchospora floridensis* (Florida white-top sedge); *Tragia saxicola* (pineland noseburn); *Echites umbellata* (devil's potato); *Croton linearis* (pineland croton); *Chamaesyce* spp. (sandmats); *Chamaecrista deeringiana* (partridge pea); *Zamia integrifolia* (coontie); and *Anemia adiantifolia* (maidenhair pineland fern) (FNAI 2010, p. 62). An open canopy and understory are required to allow sufficient sunlight to reach the herbaceous layer and permit growth and flowering of *B. mosieri* and *L. c.* var. *carteri.* Therefore, based on the information above, we identify vegetation composition and structure that allows for adequate sunlight, and space for individual growth and population expansion, to be a PBF for these plants.

Sites for Breeding, Reproduction, or Rearing (or Development) of Offspring

Brickellia mosieri—The reproductive biology and needs of *B. mosieri* have not been studied (Bradley and Gann 1999, p. 12), and our knowledge of the ecology of the species related to reproduction needs primarily consists of observed habitat requirements and demographic trends. Field observations indicate that the species does not usually occur in great abundance; populations are typically sparse and contain a low density of plants, even in well-maintained pine rockland habitat (Bradley and Gann 1999, p. 12). Bradley (2013b, pers. comm.) estimated that, based on this observation, the minimum habitat patch size to support a sustaining population may be approximately 2 ha (5 ac), although no

studies have been conducted to evaluate this estimate. Some occupied sites are less than 2 ha (5 ac) in size, but it is not known whether these populations are sustainable in the long term.

Reproduction is sexual (Bradley and Gann 1999, p. 12), but specific pollinators or dispersers are unknown. Flower morphology suggests the species may be pollinated by butterflies, bees, or both (Koptur 2013, pers. comm.). Wind is one likely dispersal vector (Gann 2013b, pers. comm.), as is seed dispersal by animals. Within pine rocklands, more than 50 species of butterflies have been observed that may act as pollinators for *Brickellia mosieri* . Similarly, a large variety of native and nonnative bee species are known to pollinate pine rockland plants, which may include *B. mosieri.* Declines in pollinator visitation may cause decreased seed set or fruit production, which could lead to lower seedling establishment and numbers of mature plants. The availability of pollinators of appropriate type and sufficient numbers is necessary for *B. mosieri* to reproduce and ensure sustainable populations. Because the specific type(s) and number of pollinators of *B. mosieri* are unknown, and may include non-generalist species closely tied to pine rockland habitats, preserving and restoring connectivity of pine rockland habitat fragments is essential to the long-term conservation of the species. Sufficient connectivity of pine rockland habitat is also necessary to support establishment of new populations through seed dispersal, and to preserve and enhance genetic diversity.

Therefore, based on the information above, we identify habitat connectivity of sufficient size and suitability, or habitat that can be restored to these conditions that supports the species' growth, distribution, and population expansion, to be a PBF for *Brickellia mosieri.*

Linum carteri var. *carteri*—The reproductive needs of *L. c.* var. *carteri* are not well understood. Maschinski (2006, p. 83) reported that *L. c.* var. *carteri* has typical behavior for an early successional plant—plants grow to reproductive status quickly, and populations typically contain a higher density of plants. The minimum habitat patch size to support a sustaining population may be smaller than that needed for *Brickellia mosieri,* possibly as small as 0.4 ha (1 ac) (Bradley 2013b, pers. comm.), although no studies have been conducted to evaluate this estimate. Reproduction is believed to be sexual (Bradley and Gann 1999, p. 71), but specific pollinators are unknown. Flower morphology suggests this variety may also be pollinated by butterflies or bees, or both (Koptur 2013, pers. comm.). Alternatively, Mosquin and Hayley (1967, p. 1278) suggested *L. c.* var. *carteri* may be self-pollinated. Dispersal agents are unknown, but most likely include animal and human-related vectors in the existing landscape.

Therefore, given the uncertainty regarding specific pollinators and dispersal vectors, the importance of connectivity of pine rockland habitat discussed above for *Brickellia mosieri* also applies to *Linum carteri* var. *carteri.* We identify habitat connectivity of sufficient size and suitability, or habitat that can be restored to these conditions to support the species' growth, distribution, and population expansion, to also be a PBF for *L. c.* var. *carteri.*

Habitats Protected From Disturbance or Representative of the Historical, Geographic, and Ecological Distributions of *Brickellia mosieri* and *Linum carteri* var. *carteri*

Brickellia mosieri and *Linum carteri* var. *carteri* continue to occur in habitats that are protected from incompatible human-generated disturbances and are only partially representative of the plants' historical, geographical, and ecological distributions because their ranges within these habitats has been reduced. These plants are still found in their representative plant communities of pine rocklands. Representative communities are located on Federal, State, local, and private lands that implement habitat management activities which benefit these plants.

Disturbance Regime—Pine rockland is dependent on some degree of disturbance, most importantly from natural or prescribed fires (Loope and Dunevitz 1981, p. 5; Snyder *et al.* 2005, p. 1; Bradley and Saha 2009, p. 4; Saha *et al.* 2011, pp. 169–184; FNAI 2010, p. 63). These fires are a vital component in maintaining native vegetation, such as *Brickellia mosieri* and *Linum carteri* var. *carteri,* which require high light conditions and exposed substrate. Without fire, succession from pine rockland to rockland hammock (an upland tropical hardwood forest occurring over limestone) is rapid, and understory species such as *B. mosieri* and *L. c.* var. *carteri* are shaded out by dense canopy and deep leaf litter. In addition, displacement of native species by invasive, nonnative plants often occurs.

Hurricanes and other significant weather events also create openings in the pine rockland canopy (FNAI 2010, p. 63), although these types of disturbances are more sporadic in nature and may pose a threat to small, isolated populations such as those that remain of *Brickellia mosieri* and *Linum carteri* var. *carteri.* For *L. c.* var. *carteri,* mowing may also serve as another means of maintaining an open canopy where the plant occurs in firebreaks, rights-of-way, and cleared fields. However, in order to avoid potential negative impacts, the timing of mowing is critical and should be conducted after flowering has occurred (see *Demographics, Reproductive Biology and Population Genetics of L. c.* var. *carteri* in the proposed listing rule published October 3, 2013 (78 FR 61273)). Mechanical control of hardwoods may also help maintain an open canopy in pine rockland, but cannot entirely replace fire since it does not have the same benefits related to removal of leaf litter and nutrient cycling. Natural and prescribed fire remains the primary and ecologically preferred disturbance regime for pine rockland.

Brickellia mosieri tends to occur on exposed limestone with minimal organic litter and in areas with only minor amounts of substrate disturbance (Bradley and Gann 1999, p. 11). In contrast, *Linum carteri* var. *carteri* is currently associated with pine rocklands that have undergone some sort of substrate disturbance (*e.g.,* firebreaks, canal banks, edges of railway beds). All known occurrences over the last 15 years have been within either scarified pine rockland, disturbed areas adjacent to or within pine rocklands, or completely disturbed areas having a limestone substrate (Bradley and Gann 1999, p. 71; Bradley 2013a, pers. comm.). Inadequate fire management, resulting in closed canopy conditions, may have excluded *L. c.* var. *carteri* (which responds positively to low competition and high light environments) from otherwise suitable pine rocklands habitat (Bradley and Gann 1999, p. 71). Alternatively, this variety may only proliferate on sites where exposed substrate occurs following disturbance; historically this may have occurred following hurricanes (*e.g.,* under tip-up mounds of fallen trees), animal disturbance, or fire (Gann 2013a, pers. comm.). Whether current occurrences of *L. c.* var. *carteri* reflect a need for higher light conditions than *B. mosieri,* a requirement for disturbed substrate, or some combination of these, or other unidentified factors, is unknown, and microhabitat data for either plant are generally lacking. The best available scientific data suggest that both plants require a similar disturbance regime to maintain the open canopy and

low litter conditions characteristics of pine rockland habitat, and thereby maintain persistent populations.

Therefore, based on the information above, we identify natural or prescribed fire, or other disturbance regimes that maintain the pine rockland habitat, to be a PBF for these plants.

Primary Constituent Elements

Under the Act and its implementing regulations, we are required to identify the physical or biological features essential to the conservation of *Brickellia mosieri* and *Linum carteri* var. *carteri* in areas occupied at the time of listing, focusing on the features' primary constituent elements (PCEs). PCEs are those specific elements of the PBFs that provide for a species' life-history processes and are essential to the conservation of the species.

Based on our current knowledge of the PBFs and habitat characteristics required to sustain the plants' life-history processes, we determine that the PCEs specific to *Brickellia mosieri* and *Linum carteri* var. *carteri* are:

(1) Areas of pine rockland habitat that contain:

(a) Open canopy, semi-open subcanopy, and understory;

(b) Substrate of oolitic limestone rock; and

(c) A plant community of predominately native vegetation that may include, but is not limited to:

(i) Canopy vegetation dominated by *Pinus elliottii* var. *densa* (South Florida slash pine);

(ii) Subcanopy vegetation that may include, but is not limited to, *Serenoa repens* (saw palmetto), *Sabal palmetto* (cabbage palm), *Coccothrinax argentata* (silver palm), *Myrica cerifera* (wax myrtle), *Myrsine floridana* (myrsine), *Metopium toxiferum* (poisonwood), *Byrsonima lucida* (locustberry), *Tetrazygia bicolor* (tetrazygia), *Guettarda scabra* (rough velvetseed), *Ardisia escallonioides* (marlberry), *Psidium longipes* (mangroveberry), *Sideroxylon salicifolium* (willow bustic), and *Rhus copallinum* (winged sumac);

(iii) Short-statured shrubs that may include, but are not limited to, *Quercus pumila* (running oak), *Randia aculeata* (white indigoberry), *Crossopetalum ilicifolium* (Christmas berry), *Morinda royoc* (redgal), and *Chiococca alba* (snowberry); and

(iv) Understory vegetation that may include, but is not limited to: *Andropogon* spp.; *Schizachyrium gracile, S. rhizomatum,* and *S. sanguineum* (bluestems); *Aristida purpurascens* (arrowfeather threeawn); *Sorghastrum secundum* (lopsided Indiangrass); *Muhlenbergia capillaris* (hairawn muhly); *Rhynchospora floridensis* (Florida white-top sedge); *Tragia saxicola* (pineland noseburn); *Echites umbellata* (devil's potato); *Croton linearis* (pineland croton); *Chamaesyce* spp. (sandmats); *Chamaecrista deeringiana* (partridge pea); *Zamia integrifolia* (coontie); and *Anemia adiantifolia* (maidenhair pineland fern).

(2) A disturbance regime that naturally or artificially duplicates natural ecological processes (*e.g.,* fire, hurricanes, or other weather events) and that maintains the pine rockland habitat as described in PCE (1).

(3) Habitats that are connected and of sufficient area to sustain viable populations of *Brickellia mosieri* and *Linum carteri* var. *carteri* in the pine rockland habitat as described in PCE (1).

Special Management Considerations or Protection

When designating critical habitat, we assess whether the specific areas within the geographical area occupied by the species at the time of listing contain features that are essential to the conservation of the species and which may require special management considerations or protection. The features essential to the conservation of *Brickellia mosieri* and *Linum carteri* var. *carteri* may require special management considerations or protection to reduce threats related to habitat loss, fragmentation, and modification primarily due to development; inadequate fire management; nonnative, invasive plants; and sea level rise. For an indepth discussion of threats, see Summary of Factors Affecting the Species in our proposed listing rule published in the **Federal Register** on October 3, 2013 (78 FR 61273), and as updated in our final listing rule published in the **Federal Register** on September 4, 2014 (79 FR 52567). For a discussion of the special management considerations or protection for the PBFs in this critical habitat designation, see the discussion in the proposed critical habitat rule published in the **Federal Register** on October 3, 2013 (78 FR 612793).

Criteria Used To Identify Critical Habitat

As required by section 4(b)(2) of the Act, we use the best scientific data available to designate critical habitat. In accordance with the Act and our implementing regulations at 50 CFR 424.12(b) we review available information pertaining to the habitat requirements of the species and identify occupied areas at the time of listing that contain the features essential to the conservation of the species. If, after identifying areas occupied by the species at the time of listing, we determine that those areas are inadequate to ensure conservation of the species, in accordance with the Act and our implementing regulations at 50 CFR 424.12(e) we then consider whether designating additional areas—outside those occupied at the time of listing—are essential for the conservation of the species.

In this rule, we are designating as critical habitat habitat both within the geographical area occupied by these plants at the time of listing, and outside the geographical area occupied by these plants at the time of listing but within their historical range, because such areas are essential for the conservation of these plants. We used habitat and historical occurrence data, and applied general conservation design principles, to identify unoccupied habitat essential for the conservation of these plants.

To determine the general extent, location, and boundaries of critical habitat, the Service used the following sources of information:

(1) Historical and current records of *Brickellia mosieri* and *Linum carteri* var. *carteri* occurrences and distributions found in publications, reports, personal communications, and associated voucher specimens housed at museums and private collections;

(2) FNAI, IRC, and FTBG GIS data showing the location and extent of documented occurrences of *Brickellia mosieri* and *Linum carteri* var. *carteri,* as well as occurrence data for other imperiled pine rockland species;

(3) Reports and databases prepared by botanists with IRC and FTBG. Some of these were funded by the Service, while others were requested or volunteered by biologists with IRC or FTBG;

(4) ESRI ArcGIS online basemap aerial imagery (collected December 2010) and Digital Orthophoto Quarter Quadrangles (DOQQs; 1-m true color; collected 2004) of Miami-Dade County. Because pine rockland habitat has a recognizable signature in these aerial photographs, the presence of PCEs was partially determined through evaluation of this imagery; and

(5) GIS data depicting soils (Soil Service Geographic (SSURGO) dataset), land cover (South Florida Water Management District Land Use and Cover 2008–2009), and elevation (Dade County LiDAR 88—2003) within Miami-Dade County; these data were also used to determine the presence of PCEs.

Due to the lack of existing taxa-specific data or recommendations related to conservation design (*e.g.,*

minimum area or number of populations needed for recovery), we used general conservation design principles in conjunction with the best available data for *Brickellia mosieri* and *Linum carteri* var. *carteri* to identify those unoccupied pine rocklands with the highest conservation quality—that is, those areas that currently provide the best quality habitat and are likely to continue to do so in the future, or areas that have the highest restoration potential. Guidelines for conservation design, which have been developed using island biogeography models, are highly relevant to areas such as the fragmented pine rocklands of the Miami Rock Ridge (*i.e.,* pine rockland islands in a sea of urban and agriculture development). Due to the degree of habitat loss that has already occurred, application of all such guidelines are somewhat limited by the nature of the remaining habitat (*e.g.,* sizes, shapes, and locations of individual habitat patches). As such, we evaluated conservation quality of unoccupied pine rockland habitat using the following three major principles:

(1) Geographic spread—Species that are well distributed across their native ranges are less susceptible to extinction than are species confined to small portions of their ranges.

(2) Size—Large habitat patches are superior to small habitat patches, in that larger areas will support larger populations and will be less negatively impacted by edge effects. All else being equal, conservation design options that include greater areal extent are superior. When comparative circumstances are not otherwise equal, factors such as habitat quality, the presence of specific landscape features, and the spatial arrangement of habitat may offset a solely area-driven selection process.

(3) Connectivity—Habitat that occurs in less fragmented, contiguous patches is preferable to habitat that is fragmented or isolated by urban lands. Habitat patches close to one another serve species of concern better than patches situated far apart. Interconnected patches are better than isolated patches. Conservation design alternatives should seek, in order of priority:

(a) Continuity within habitat (minimize additional fragmentation);

(b) Connectedness (increase existing habitat patches); and

(c) Proximity (minimize distance between habitat patches).

Using these guiding principles, we evaluated the remaining unoccupied pine rockland habitat on the Miami Rock Ridge outside of ENP with the intent of identifying the largest patches and highest quality habitat available (patches of sufficient size and quality to support populations), in sufficient amount (*i.e.,* sufficient numbers of populations) and spatial arrangement (to provide opportunities for future migration and colonization) to provide for the conservation of *Brickellia mosieri* and *Linum carteri* var. *carteri.* Our evaluation consisted of the following steps:

(1) Using primarily aerial imagery and GIS-based vegetation and soils data, wedelineated pine rockland habitat in Miami Dade County outside of ENP. Pine rocklands were identified based on the presence of specific soil types (see ''Food, Water, Air, Light, Minerals, or Other Nutritional or Physiological Requirements,''above), and presence of pine rockland vegetation. Fire-suppressed areas and areas where intergrading with rockland hammock occurs were also evaluated. Some former pine rockland habitat was considered too severely fire suppressed (*i.e.,* having extremely dense canopy cover) such that it is now unsuitable habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri,* and unlikely to be able to be restored; these areas were not delineated as pine rocklands in our critical habitat analysis. Some cleared areas occurring over pine rockland soils were delineated, with the intent that such areas provide opportunities for restoration. The resulting habitat layer consisted of 245 habitat patches.

(2) To maximize geographic spread within the plants' historical ranges, we divided the extent of delineated habitat into five geographic areas (northeast to southwest).

(3) For each plant, we included occupied patches in final critical habitat (25 habitat patches for *Brickellia mosieri,* and 6 patches for *Linum carteri* var. *carteri*). One occurrence of *L. c.* var. *carteri* (a single plant found on a canal bank) is not included in final critical habitat due to the anomalous nature of the occurrence, and because we were not able to define patch boundaries based on any of the criteria described in (1), above. In addition, a new occurrence of *L. c.* var. *carteri* (11 plants in a firebreak) was discovered on October 17, 2014 on the Deering Estate, but outside the proposed critical habitat subunit. Because we believe that the proposed critical habitat designation contains sufficient habitat for the conservation of this plant, subunit boundaries were not revised and this occurrence is not included in the final critical habitat designation.

(4) For each plant, for the remaining (unoccupied) habitat, we excluded patches below the estimated minimum size for each plant based on expert opinion—2 ha (5 ac) for *Brickellia mosieri,* and 0.4 ha (1 ac) for *Linum carteri* var. *carteri* (see ''Sites for Breeding, Reproduction, or Rearing (or Development) of Offspring,'' above). The resulting layers consisted of 106 habitat patches for *B. mosieri,* and 218 patches for *L. c.* var. *carteri.*

(5) For each plant, for the remaining habitat (unoccupied; 2 ha (5 ac) or greater than or equal to 0.4 ha (1 ac), *Brickellia mosieri* or *Linum carteri* var. *carteri,* respectively), we assigned a score for eight evaluation criteria designed to assess overall conservation quality of the patch, using the following five major objectives (discussed more indepth below and at *http://www.regulations.gov*):

(a) Onsite habitat quality (intact, open pine rocklands scored higher than cleared patches or patches having a closed canopy);

(b) Patch size (larger patches scored higher);

(c) Surrounding landscape composition (pine rocklands surrounded by less development scored higher);

(d) Connectivity (within each geographic area, pine rockland patches in closer proximity to each other and with greater numbers of neighbors scored higher); and

(e) Vulnerability to sea level rise (pine rockland patches located at higher elevations scored higher).

(6) For each plant, within each geographic area, we used a consequence matrix to evaluate the performance of each unoccupied pine rockland patch across the objectives described above in (5). The resulting total score of each patch was a 0.0–1.0 value, summed across all criteria, where a score of 1.0 indicates the patch in each geographic area that has the highest conservation quality, based on the defined objectives.

Using the results of the consequence matrix for each plant, we evaluated potential ''cut-off'' values for patch total score by visually assessing and comparing habitat amounts and spatial arrangements between various cut-off values in order to identify the best conservation arrangement. Because taxa-specific data and recommendations were not available regarding how much area is needed for the conservation and recovery of *Brickellia mosieri* and *Linum carteri* var. *carteri,* we applied the general conservation design principles related to connectivity, above, and principles of population viability and metapopulation theory. Small populations and plant species with limited distributions, like those of *B. mosieri* and *L. c.* var. *carteri,* are

vulnerable to relatively minor environmental disturbances (Frankham 2005, pp. 135–136), and are subject to the loss of genetic diversity from genetic drift, the random loss of genes, and inbreeding (Ellstrand and Elam 1993, pp. 217–237; Leimu *et al.* 2006, pp. 942–952). These factors increase the probability of both local extinctions and population extinction (Barrett and Kohn 1991, pp. 4, 28; Newman and Pilson 1997, p. 360; Palstra and Ruzzante 2008, pp. 3428–3447). To ameliorate these effects, the recovery of many rare plant species includes the creation of new sites or reintroductions to increase population size (each occurrence, and overall) and support genetic diversity. Sufficient area is also required to allow *B. mosieri* and *L. c.* var. *carteri* to expand their current distributions (curtailed compared to historical ranges), use habitat depending on the availability of suitable conditions (dynamic, related to time since disturbance within each patch), and maintain their ability to withstand local- or unit-level environmental fluctuations or catastrophes.

Based on our assessment, as described above, we determined that unoccupied pine rockland patches with a total score for conservation quality greater than 0.50 should be proposed for critical habitat designation. In addition, in the proposed critical habitat rule published in the **Federal Register** on October 3, 2013 (78 FR 61293), we proposed 15 supplemental pine rockland patches for critical habitat designation for one or more of the following reasons: (1) A population of *Brickellia mosieri* was previously observed in the patch (although not recently enough to consider the population extant at this time); (2) addition of the patch increases conservation quality of adjacent critical habitat; (3) addition of the patch increases connectivity of pine rockland habitat across the landscape; and (4) the patch is located at the northernmost end of these plants' historical ranges (an area not captured using the consequence matrix approach). The last category consists of four patches with conservation quality less than or equal to 0.50, due to some combination of lower onsite habitat quality, smaller size, and more development in the surrounding landscape, all of which are related to their position closer to Miami. While these patches may not represent the best habitat currently available, they do provide needed opportunities to increase these plants' geographic spread and restore the plants to the northernmost intact habitat within their historical ranges, which is more heavily impacted, and are essential to the conservation of these plants, as discussed above.

Revisions to the resulting set of habitat patches were proposed in the revised proposed rule and availability of the draft economic analysis published in the **Federal Register** on July 15, 2014 (79 FR 41211), based on new information concerning the current habitat condition of proposed areas as well as information regarding additional areas of suitable habitat that were not included in the proposed designation but that meet the definition of critical habitat. The proposed changes consisted of the removal of two unoccupied patches from the proposed designation, the revision of patch boundaries for three unoccupied areas, and the proposed designation of six new unoccupied pine rockland patches (multiple patches may make up a single subunit). For more information regarding these proposed changes, refer to that notice. We have since determined that three of the six new proposed patches (*i.e.,* three unoccupied areas on Department of Defense lands) meet the criteria for exemption from critical habitat designation under section 4(a)(3) of the Act (discussed under the Exemptions section, below), and we have removed these from the designation of critical habitat in this final rule.

Habitat Within the Geographic Range at the Time of Listing

We are designating seven critical habitat units for each plant. Five of the seven units were occupied by *Brickellia mosieri* at the time of listing; the remaining two units are within the plant's historical range, but were unoccupied at the time of listing. Three of the seven units were occupied by *Linum carteri* var. *carteri* at the time of listing; the remaining four units are within the plant's historical range, but were unoccupied at the time of listing. The occupied units include the mapped extent of each plant's population and contain the PCEs.

Within each of these occupied units is also unoccupied habitat, which is included based on our determination that such areas are essential to the conservation of these plants, as discussed above. In addition to providing sufficient habitat (area, number of patches, connectivity), this unoccupied habitat allows for the dynamic nature of pine rockland habitat. Conditions within pine rockland patches, such as the openness of the canopy and understory and the accumulation of leaf litter over the limestone substrate, vary greatly across the landscape and across time. Only a portion of the delineated habitat is suitable for *Brickellia mosieri* or *Linum carteri* var. *carteri,* or both plants, at any given time, and the size and location of suitable areas within the population is dynamic over time, being largely driven by the frequency and scale of natural or prescribed fires and other types of disturbance (*e.g.,* for *L. c.* var. *carteri,* mowing or other events that disturb the limestone substrate). Although prescribed burns are administered on conservation lands that retain *B. mosieri* or *L. c.* var. *carteri,* or both, populations, fire return intervals and scope are inconsistent. Thus, areas of pine rockland habitat that now support one or both of these plants may not support the plants in the future, as inadequate fire management removes or fragments suitable habitat. Conversely, suitable habitat conditions may return or increase in areas following natural or prescribed fires, allowing opportunities for the plants to expand or colonize these areas in the future.

The delineation of units (occupied plus unoccupied patches) also includes space to plan for the persistence of *Brickellia mosieri* and *Linum carteri* var. *carteri* populations in the face of imminent effects on habitats as a result of sea level rise. Although occupied habitat within each unit contains the PCEs, some of these areas may be altered, as a result of vegetation shifts or salt water intrusion, to an extent which cannot be predicted at this time.

In identifying unoccupied patches with these units, we considered the following additional criteria, which we incorporated into the consequence matrix described above:

(1) *Objective 1 (onsite habitat quality):* Pine rockland areas of sufficient habitat quality to support the growth and reproduction of *Brickellia mosieri* and *Linum carteri* var. *carteri.* In general, areas of intact pine rockland having an open canopy and understory are more likely to support populations of these plants over the long term. In some cases, disturbed or cleared pine rockland areas have also been included in the designation; these areas possess other desirable characteristics (*e.g.,* size, connectivity) and could allow *B. mosieri* or *L. c.* var. *carteri* to expand from areas already occupied by these plants. These areas are typically habitats within or adjacent to pine rocklands that have been affected by natural or anthropogenic impacts, but that retain areas that are still suitable for the plants. These areas would help to off-set the anticipated loss and degradation of habitat occurring or expected from the

effects of climate change (such as sea level rise) or due to development.

(2) *Objective 2 (patch size):* Pine rockland areas of sufficient size to support ecosystem processes for populations of *Brickellia mosieri* or *Linum carteri* var. *carteri.* Given areas of equal habitat quality, larger areas would be ranked higher in our evaluation.

(3) *Objective 3 (surrounding landscape composition):* Pine rockland areas within a suitable landscape to allow for natural disturbance regimes—specifically, prescribed fire—and to minimize negative impacts related to changes in hydrology or nutrient/pollution inputs from the surrounding area. Pine rocklands surrounded by other natural communities will likely provide higher quality habitat in the long term than pine rocklands that are imbedded in a highly urbanized or agricultural matrix. Given areas of equal habitat quality and size, areas with more natural communities and less urban development in the surrounding area would be ranked higher in our evaluation.

(4) *Objective 4 (connectivity):* Pine rockland areas of sufficient amount and arrangement to maintain connectivity of habitat to allow for population sustainability and expansion. Sufficient connectivity of pine rockland habitat will contribute to the availability of pollinators of appropriate type and sufficient numbers to allow *Brickellia mosieri* and *Linum carteri* var. *carteri* to reproduce and ensure sustainable populations, and to allow for population expansion through seed dispersal. Given areas of equal habitat quality, size, and surrounding landscape composition, those patches having more and closer neighbors (*i.e.,* other pine rockland patches) would be ranked higher in our evaluation.

(5) *Objective 5 (vulnerability to sea level rise):* Pine rockland areas of suitable elevation to reduce vulnerability to sea level rise. Those pine rocklands situated at higher elevations are less likely to be negatively affected by either inundation or vegetation shifts caused by changes in the salinity of the water table and soils associated with sea level rise. Given areas of equal conservation quality, as described above, those patches having a higher average elevation would be ranked higher in our evaluation.

A complete description regarding how these objectives were weighted and evaluated in our consequence matrix can be found in the supplemental materials provided with the proposed rule at *http://www.regulations.gov.*

Habitat Outside of the Geographic Range at the Time of Listing

We are designating two critical habitat units that were unoccupied by *Brickellia mosieri* at the time of listing, and four critical habitat units that were unoccupied by *Linum carteri* var. *carteri* at the time of listing, which have been determined to be essential to the conservation of these plants. These units represent portions of these plants' historical ranges in which the plants have been extirpated (see *Current Range, Population Estimates, and Status* for both plants in our proposed listing rule published in the **Federal Register** on October 3, 2013 (78 FR 61273)). In one unit, located in the northern portion of these plants' historical ranges but unoccupied by either *B. mosieri* or *L. c.* var. *carteri,* the unoccupied critical habitat patches are the only pine rockland habitat that remains in this area. While the full extent of *B. mosieri*'s historical range is unknown, due to limited data, comparing its current distribution to historical observations suggests that its range has contracted at least 30 percent (based on our revised estimate of the species' historical range as described in the final listing rule published in the **Federal Register** on September 4, 2014 (79 FR 52567)). Likewise, the historical range of *L. c.* var. *carteri* has been reduced approximately 30 percent. The reductions in the historical ranges of these plants have occurred almost entirely in their northern portions, between Pinecrest and South Miami/Coconut Grove. As noted earlier, little pine rockland habitat has escaped urban development in this area, and those patches that remain are of lesser conservation quality due to lower onsite habitat quality, smaller patch sizes, and higher amounts of development in the surrounding landscape. While these patches may not represent the best pine rockland habitat currently available, they provide needed habitat to increase these plants' geographic spread to currently unoccupied portions of their historical ranges, and are essential for the conservation of the two plants.

In summary, for occupied habitat within the geographic area occupied by *Brickellia mosieri* or *Linum carteri* var. *carteri* at the time of listing, we delineated critical habitat unit boundaries by evaluating habitat suitability of pine rockland habitat within this geographic area, and retained those areas that contain some or all of the PCEs to support life-history functions essential for conservation of these plants.

For unoccupied habitat within the geographic area occupied by *Brickellia mosieri* or *Linum carteri* var. *carteri* at the time of listing, we delineated critical habitat unit boundaries by evaluating the five objectives incorporated into the consequence matrix (see discussion above).

For habitat outside the geographic area occupied by the species at the time of listing, we delineated critical habitat unit boundaries based on the availability of remaining pine rockland habitat in the unit. All four available patches were included in the delineation in order to provide sufficient area for *Brickellia mosieri* and *Linum carteri* var. *carteri* to expand their current restricted ranges.

When determining critical habitat boundaries within this final rule, we made every effort to avoid including developed areas such as lands covered by buildings, pavement, and other structures because such lands lack physical or biological features for *Brickellia mosieri* and *Linum carteri* var. *carteri.* The scale of the maps we prepared under the parameters for publication within the Code of Federal Regulations may not reflect the exclusion of such developed lands. Any such lands inadvertently left inside critical habitat boundaries shown on the maps of this final rule have been excluded by text in the rule and are not designated as critical habitat. Therefore, a Federal action involving these lands will not trigger section 7 consultation with respect to critical habitat and the requirement of no adverse modification unless the specific action would affect the physical or biological features in the adjacent critical habitat.

The critical habitat designation is defined by the map or maps, as modified by any accompanying regulatory text, presented at the end of this document in the Regulation Promulgation section. We include more detailed information on the boundaries of the critical habitat designation in the preamble of this document. We will make the coordinates or plot points or both on which each map is based available to the public on *http://www.regulations.gov* at Docket No. FWS–R4–ES–2013–0108, and at the field office responsible for the designation (see **FOR FURTHER INFORMATION CONTACT**, above).

Units and subunits are designated based on sufficient elements of physical or biological features being present to support the life processes of *Brickellia mosieri* and *Linum carteri* var. *carteri.* Some subunits contain all of the identified elements of physical or biological features and support multiple

life processes. Some subunits contain only some elements of the physical or biological features necessary to support particular use of that habitat by *B. mosieri* or *L. c.* var. *carteri.*

Final Critical Habitat Designation

We are designating seven units, each, as critical habitat for *Brikellia mosieri* and *Linum carteri.* var. *carteri.* The critical habitat areas described below constitute our best assessment at this time of areas that meet the definition of critical habitat.

Brickellia mosieri

The seven units (all located in Miami-Dade County, Florida) we are designating as critical habitat for *Brickellia mosieri* are: (1) Unit BM1: Trinity Pineland and surrounding areas; (2) Unit BM2: Nixon Smiley Pineland Preserve and surrounding areas; (3) Unit BM3: U.S. Department of Agriculture (USDA) Subtropical Horticultural Research Station and surrounding areas; (4) Unit BM4: Richmond Pinelands and surrounding areas; (5) Unit BM5: Quail Roost Pineland and surrounding areas; (6) Unit BM6: Camp Owaissa Bauer and surrounding areas; and (7) Unit BM7: Navy Wells Pineland Preserve and surrounding areas. Because of the highly fragmented nature of the remaining pine rockland habitat, these large overall unit boundaries encompass multiple, smaller designations (*i.e.*, subunits) within each unit; only these subunits within the unit boundaries meet the definition of critical habitat. Subunit designations identify individual habitat patches, or multiple habitat patches having the same occupancy status that are only separated by a road. Table 1 shows occupancy, area, and land ownership for each subunit within the critical habitat designation for *B. mosieri.*

Note: Area sizes may not sum due to rounding.
[1] Ownership information is based on Miami-Dade County parcel data (July 2013) and FNAI's Florida Managed Lands data (March 2014).

We present brief descriptions of all units, and reasons why they meet the definition of critical habitat for *Brickellia mosieri*, below.

Unit BM1: Trinity Pineland and Surrounding Areas, Miami-Dade County, Florida

Unit BM1 consists of 18 ha (43 ac) in Miami-Dade County. Within Unit BM1, there are two subunits—BM1A (County-owned) and BM1B (combination of State, County, and privately owned lands). The unit is comprised of State lands within Trinity Pineland County Park (4 ha (10 ac)); County lands primarily within A. D. ''Doug'' Barnes Park (6 ha (14 ac)); and parcels in private ownership (8 ha (19 ac)). This unit is bordered on the north by SW 24 Street, on the south by the Snapper Creek Expressway (State Road (SR) 878), on the east by SW 67 Avenue, and on the west by SW 87 Avenue. The unit is within the historical range of *Brickellia mosieri*, although data are lacking regarding historical occupancy of the specific critical habitat patches in the unit. This unit includes the only remaining pine rockland habitat in this northern portion of the Miami Rock Ridge.

This unit was not occupied by *Brickellia mosieri* at the time of listing but is essential to the conservation of the species because it serves to protect habitat needed to recover the species, reestablish wild populations within the historical ranges of the species, and maintain populations throughout the historical distribution of the species in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *B. mosieri* be extirpated from one of its current locations.

Unit BM2: Nixon Smiley Pineland Preserve and Surrounding Areas, Miami-Dade County, Florida

Unit BM2 consists of approximately 108 ha (267 ac) of habitat in Miami-Dade County. Within Unit BM2, there are seven subunits (BM2A–BM2G) comprising primarily conservation lands and including four larger areas plus three smaller areas. The unit is comprised of State lands within Camp Matecumbe, Tamiami Pineland Complex Addition, and Rockdale Pineland (49 ha (121 ac)); County/local lands primarily within Nixon Smiley Pineland Preserve, Tamiami #8 (Nixon Smiley Addition) Pineland, Pine Shore Pineland Preserve, Ron Ehman Park, and Rockdale Pineland Addition (59 ha (146 ac)); and small portions of parcels in private or other ownership (less than 1 ha (less than 1 ac)). This unit is bordered on the north by SW 104 Street, on the south by SW 152 Street (Coral Reef Drive), on the east by U.S. 1 (South Dixie Highway), and on the west by SW 177 Avenue (Krome Avenue).

This unit is composed of both occupied and unoccupied habitat. Some habitat within the unit was occupied by *Brickellia mosieri* (three occurrences; approximately 21 ha (52 ac)) at the time of listing. This occupied habitat contains some or all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise. In some cases, these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Some of the unoccupied habitat within this unit was historically occupied by *Brickellia mosieri*, although it was not occupied by the species at the time of listing. This unoccupied habitat is essential to the conservation of *B. mosieri* because it serves to protect habitat needed to recover the species, reestablish wild populations within the historical ranges of the species, and maintain populations throughout the historical distribution of the species in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *B. mosieri* be extirpated from one of its current locations.

Unit BM3: USDA Subtropical Horticultural Research Station and Surrounding Areas, Miami-Dade County, Florida

Unit BM3 consists of approximately 127 ha (315 ac) of habitat in Miami-Dade County. Within Unit BM3, there are eight subunits (BM3A–BM3H), including two larger areas (U.S. Department of Agriculture (USDA) Subtropical Horticultural Research Station, and Deering Estate at Cutler) plus six smaller areas surrounding these. The unit is comprised of Federal lands within the USDA Subtropical Horticultural Research Station (59 ha (145 ac)); State lands within the R. Hardy Matheson Preserve, Ludlam Pineland, Deering Estate at Cutler, and Deering Estate South Addition (45 ha (112 ac)); County/local lands within Coral Reef Park, Ned Glenn Nature Preserve, and Bill Sadowski Park (15 ha (38 ac)); and parcels in private ownership (8 ha (19 ac)). This unit is bordered on the north by SW 112 Street, on the south by the intersection of Old Cutler Road and Franjo Road (County Road (CR) 977), on the east by the Atlantic Ocean, and on the west by U.S. 1 (South Dixie Highway). The unit is within the historical range of *Brickellia mosieri*, although data are lacking regarding historical occupancy of the specific critical habitat patches in the unit.

This unit was unoccupied by *Brickellia mosieri* at the time of listing but is essential to the conservation of the species because it serves to protect habitat needed to recover the species, reestablish wild populations within the historical ranges of the species, and maintain populations throughout the historical distribution of the species in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *B. mosieri* be extirpated from one of its current locations.

Unit BM4: Richmond Pinelands and Surrounding Areas, Miami-Dade County, Florida

Unit BM4 consists of approximately 395 ha (975 ac) in Miami-Dade County. Within Unit BM4, there are eight subunits (BM4A–BM4H), most within the Richmond Pinelands complex (made up of Federal and County-owned lands, as well as land owned by the University of Miami). The unit is comprised of Federal lands owned by the USCG (Homeland Security), U.S. Army Corps of Engineers (ACOE; Department of Defense), U.S. Prison Bureau (Department of Justice), and the U.S. Department of Commerce/National Oceanic and Atmospheric Administration (NOAA) (75 ha (185 ac)); County/local lands within and adjacent to Larry and Penny Thompson Park, Martinez Pineland, Zoo Miami, and Eachus Pineland (239 ha (590 ac)); and parcels in private or other ownership (81 ha (200 ac)). This unit is bordered on the north by SW 152 Street (Coral Reef Drive), on the south by SW 200 St (Quail Drive/SR 994), on the east by U.S. 1 (South Dixie Highway), and on the west by SW 177 Avenue (Krome Avenue).

This unit is composed of both occupied and unoccupied habitat. Some habitat within the unit was occupied by *Brickellia mosieri* (approximately 267 ha (660 ac)) at the time of listing. All occupied habitat occurs within the Richmond Pinelands, which together compose the largest remaining group of contiguous fragments of pine rockland habitat outside of ENP. This occupied habitat contains all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat loss and fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise. In some cases, these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Some of the unoccupied habitat within this unit was historically occupied by *Brickellia mosieri*, although it was not occupied by the species at the time of listing. This unoccupied habitat is essential to the conservation of *B. mosieri* because it serves to protect habitat needed to recover the species, reestablish wild populations within the historical ranges of the species, and maintain populations throughout the historical distribution of the species in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *B. mosieri* be extirpated from one of its current locations.

Unit BM5: Quail Roost Pineland and Surrounding Areas, Miami-Dade County, Florida

Unit BM5 consists of approximately 96 ha (238 ac) in Miami-Dade County. Within Unit BM5, there are 11 subunits (BM5A–BM5K), including 4 larger areas plus 7 smaller areas surrounding these. The unit is comprised of State lands within Quail Roost Pineland, Goulds Pineland and Addition, and Silver Palm Groves Pineland (39 ha (97 ac)); County/local lands including Black Creek Forest, Rock Pit #46, and lands owned by the School Board of Miami-Dade County (15 ha (37 ac)); and parcels in private ownership (42 ha (104 ac)), including Porter-Russell Pineland owned by the Tropical Audubon Society. This unit is bordered on the north by SW 200 St (Quail Drive/SR 994), on the south by SW 248 Street, on the east by the Florida Turnpike, and on the west by SW 194 Avenue.

This unit is composed of both occupied and unoccupied habitat. Some habitat within the unit was occupied by *Brickellia mosieri* (two occurrences; approximately 28 ha (70 ac)) at the time of listing. This occupied habitat contains some or all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise. In some cases, these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Unoccupied habitat in the unit is essential to the conservation of *Brickellia mosieri* because it serves to protect habitat needed to recover the species, reestablish wild populations within the historical ranges of the species, and maintain populations throughout the historical distribution of the species in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *B. mosieri* be extirpated from one of its current locations.

Unit BM6: Camp Owaissa Bauer and Surrounding Areas, Miami-Dade County, Florida

Unit BM6 consists of approximately 112 ha (276 ac) of habitat in Miami-Dade County. Within Unit BM6, there are 12 subunits (BM6A–BM6L), composed of 1 larger area (Camp Owaissa Bauer and its addition) and 11 smaller areas to the south. The unit is comprised of State lands within Owaissa Bauer Pineland Addition, Ingram Pineland, West Biscayne Pineland, and Fuchs Hammock Addition (20 ha (50 ac)); County/local lands including Camp Owaissa Bauer, Pine Island Lake Park, Seminole Wayside Park, and Northrop Pineland

(63 ha (156 ac)); and parcels in private ownership (28 ha (70 ac)), including the private conservation area, Pine Ridge Sanctuary. This unit is bordered on the north by SW 248 Street, on the south by SW 312 Street, on the east by SW 112 Avenue, and on the west by SW 217 Avenue.

This unit is composed of both occupied and unoccupied habitat. Some habitat within the unit was occupied by *Brickellia mosieri* (five occurrences; approximately 27 ha (67 ac)) at the time of listing. This occupied habitat contains some or all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat loss and fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise. In some cases, these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Some of the unoccupied habitat within this unit was historically occupied by *Brickellia mosieri.* Although it was unoccupied by the species at the time of listing, this habitat is essential to the conservation of *B. mosieri* because it serves to protect habitat needed to recover the species, reestablish wild populations within the historical ranges of the species, and maintain populations throughout the historical distribution of the species in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *B. mosieri* be extirpated from one of its current locations.

Unit BM7: Navy Wells Pineland Preserve and Surrounding Areas, Miami-Dade County, Florida

Unit BM7 consists of approximately 206 ha (510 ac) of habitat in Miami-Dade County. Within Unit BM7, there are eight subunits (BM7A–BM7H), including one larger area (Navy Wells Pineland Preserve) and seven smaller outlying areas. The unit is comprised of State lands within Palm Drive Pineland, Navy Wells Pineland #39, Navy Wells Pineland Preserve (portion), and Florida City Pineland (53 ha (132 ac)); County/local lands including primarily Sunny Palms Pineland and Navy Wells Pineland Preserve (portion) (125 ha (309 ac)); and parcels in private ownership (28 ha (68 ac)). This unit is bordered on the north by SW 320 Street, on the south by SW 368 Street, on the east by U.S. 1 (South Dixie Highway), and on the west by SW 217 Avenue.

This unit is composed of both occupied and unoccupied habitat. Some habitat in the unit was occupied by *Brickellia mosieri* (one occurrence; approximately 134 ha (330 ac)) at the time of listing. This occurrence is on Navy Wells Pineland Preserve, which is one of the largest remaining areas of pine rockland habitats outside of ENP. This occupied habitat contains all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise. However, in Navy Wells, most of these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Some of the unoccupied habitat within this unit was historically occupied by *Brickellia mosieri.* Although it was unoccupied by the species at the time of listing, this habitat is essential to the conservation of *B. mosieri* because it serves to protect habitat needed to recover the species, reestablish wild populations within the historical ranges of the species, and maintain populations throughout the historical distribution of the species in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *B. mosieri* be extirpated from one of its current locations.

Linum carteri var. *carteri*

The seven units (all located in Miami-Dade County, Florida) we are designating as critical habitat for *Linum carteri* var. *carteri* are: (1) Unit LCC1: Trinity Pineland and surrounding areas; (2) Unit LCC2: Nixon Smiley Pineland Preserve and surrounding areas; (3) Unit LCC3: USDA Subtropical Horticultural Research Station and surrounding areas; (4) Unit LCC4: Richmond Pinelands and surrounding areas; (5) Unit LCC5: Quail Roost Pineland and surrounding areas; (6) Unit LCC6: Camp Owaissa Bauer and surrounding areas; and (7) Unit LCC7: Navy Wells Pineland Preserve and surrounding areas. Because of the highly fragmented nature of the remaining pine rockland habitat, these large overall unit boundaries encompass multiple, small designations (*i.e.*, subunits) within each unit; only these subunits within the unit boundaries are designated as critical habitat. Subunit designations identify individual habitat patches, or multiple habitat patches having the same occupancy status that are only separated by a road. Table 2 shows occupancy, area, and land ownership for each subunit within the critical habitat designation for *L. c.* var. *carteri.*

TABLE 2—OCCUPANCY (O = OCCUPIED, U = UNOCCUPIED), AREA, AND LAND OWNERSHIP OF DESIGNATED CRITICAL HABITAT SUBUNITS FOR LINUM CARTERI VAR. CARTERI. AREA ESTIMATES REFLECT ALL LAND WITHIN CRITICAL HABITAT UNIT/SUBUNIT BOUNDARIES. SUBSTANTIAL OVERLAP EXISTS WITH AREAS BEING DESIGNATED FOR BRICKELLIA MOSIERI

Note: Area sizes may not sum due to rounding.
[1] Ownership information based on Miami-Dade County parcel data (July 2013) and FNAI's Florida Managed Lands data (March 2014).

We present brief descriptions of all units, and reasons why they meet the definition of critical habitat for *Linum carteri* var. *carteri,* below.

Unit LCC1: Trinity Pineland and Surrounding Areas, Miami-Dade County, Florida

Unit LCC1 consists of 19 ac (48 ha) in Miami-Dade County. Within Unit LCC1, there are three subunits—LCC1A and LCC1B (primarily County-owned), and LCC1C (combination of State lands and private ownership). The unit is comprised of State lands within Trinity Pineland County Park (4 ac (10 ha)); County lands primarily within Tropical Park and A. D. ''Doug'' Barnes Park (7 ha (18 ac)); and parcels in private ownership (8 ha (19 ac)). This unit is bordered on the north by SW 24 Street, on the south by the Snapper Creek Expressway (State Road (SR) 878), on the east by SW 67 Avenue, and on the west by SW 87 Avenue. The unit is within the historical range of *Linum carteri* var. *carteri*, although data are lacking regarding historical occupancy of the specific critical habitat patches in the unit. This unit includes the only

remaining pine rockland habitat in this northern portion of the Miami Rock Ridge.

This unit was unoccupied by *Linum carteri* var. *carteri* at the time of listing but is essential to the conservation of the plant because it serves to protect habitat needed to recover the plant, reestablish wild populations within the plant's historical range, and maintain populations throughout the plant's historical distribution in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *L. c.* var. *carteri* be extirpated from one of its current locations.

Unit LCC2: Nixon Smiley Pineland Preserve and Surrounding Areas, Miami-Dade County, Florida

Unit LCC2 consists of approximately 113 ha (278 ac) of habitat in Miami-Dade County. Within Unit LCC2, there are six subunits (LCC2A–LCC2F) comprising primarily conservation lands and including four larger areas plus two smaller areas. The unit is comprised of State lands within Camp Matecumbe, Tamiami Pineland Complex Addition, and Rockdale Pineland (53 ha (131 ac); County/local lands within Nixon Smiley Pineland Preserve, Tamiami #8 (Nixon Smiley Addition) Pineland, Pine Shore Pineland Preserve, Ron Ehman Park, and Rockdale Pineland Addition (59 ha (147 ac)); and parcels in private or other ownership (<1 ha (<1 ac)). This unit is bordered on the north by SW 104 Street, on the south by SW 152 Street (Coral Reef Drive), on the east by U.S. 1 (South Dixie Highway), and on the west by SW 177 Avenue (Krome Avenue).

This unit is composed of both occupied and unoccupied habitat. Some habitat within the unit was occupied by *Linum carteri* var. *carteri* (one occurrence; approximately 16 ha (39 ac)) at the time of listing. This occupied habitat contains some or all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise. In some cases, these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Unoccupied habitat within the unit is essential to the conservation of *Linum carteri* var. *carteri* because it serves to protect habitat needed to recover the plant, reestablish wild populations within the plant's historical range, and maintain populations throughout the plant's historical distribution in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *L. c.* var. *carteri* be extirpated from one of its current locations.

Unit LCC3: USDA Subtropical Horticultural Research Station and Surrounding Areas, Miami-Dade County, Florida

Unit LCC3 consists of approximately 128 ha (316 ac) of habitat in Miami-Dade County. Within Unit LCC3, there are nine subunits (LCC3A–LCC3I), including two larger areas (USDA and Deering Estate at Cutler) plus seven smaller areas surrounding these. The unit is comprised of Federal lands within the USDA Subtropical Horticultural Research Station (59 ha (145 ac)); State lands within the R. Hardy Matheson Preserve, Ludlam Pineland, Deering Estate at Cutler, and Deering Estate South Addition (45 ha (112 ac)); County/local lands within Coral Reef Park, Ned Glenn Nature Preserve, and Bill Sadowski Park (15 ha (38 ac)); and parcels in private ownership (8 ha (21 ac)). This unit is bordered on the north by SW 112 Street, on the south by the intersection of Old Cutler Road and Franjo Road (County Road (CR) 977), on the east by the Atlantic Ocean, and on the west by U.S. 1 (South Dixie Highway).

This unit is composed of both occupied and unoccupied habitat. Some habitat within the unit was occupied by *Linum carteri* var. *carteri* (three occurrences; approximately 62 ha (153 ac)) at the time of listing. This occupied habitat contains some or all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat loss and fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise, including storm surge. In some cases, these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Unoccupied habitat within the unit is essential to the conservation of *Linum carteri* var. *carteri* because it serves to protect habitat needed to recover the plant, reestablish wild populations within the plant's historical range, and maintain populations throughout the plant's historical distribution in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *L. c.* var. *carteri* be extirpated from one of its current locations.

Unit LCC4: Richmond Pinelands and Surrounding Areas, Miami-Dade County, Florida

Unit LCC4 consists of approximately 386 ha (952 ac) in Miami-Dade County. Within Unit LCC4, there are four subunits (LCC4A–LCC4D), primarily within the Richmond Pinelands complex (made up of Federal and County-owned lands, as well as land owned by the University of Miami). The unit is comprised of Federal lands owned by USCG, ACOE, U.S. Prison Bureau, and NOAA (75 ha (185 ac)); County/local lands within and adjacent to Larry and Penny Thompson Park, Martinez Pineland, Zoo Miami, and Eachus Pineland (240 ha (592 ac)); and parcels in private or other ownership (71 ha (175 ac)). This unit is bordered on the north by SW 152 Street (Coral Reef Drive), on the south by SW 200 St (Quail Drive/SR 994), on the east by U.S. 1 (South Dixie Highway), and on the west by SW 177 Avenue (Krome Avenue).

This unit was unoccupied by *Linum carteri* var. *carteri* at the time of listing but is essential to the conservation of the plant because it serves to protect habitat needed to recover the plant, reestablish wild populations within the plant's historical range, and maintain populations throughout the plant's historical distribution in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *L. c.* var. *carteri* be extirpated from one of its current locations.

Unit LCC5: Quail Roost Pineland and Surrounding Areas, Miami-Dade County, Florida

Unit LCC5 consists of approximately 98 ha (242 ac) in Miami-Dade County. Within Unit LCC5, there are 10 subunits (LCC5A–LCC5J), including 4 larger areas plus 6 smaller areas surrounding these. The unit is comprised of State lands within Quail Roost Pineland, Goulds Pineland and Addition, and Silver Palm Groves Pineland (39 ha (97 ac)); County/local lands including Medsouth Park, Black Creek Forest, Rock Pit #46, and lands owned by the School Board of Miami-Dade County (18 ha (44 ac)); and parcels in private ownership (41 ha (101 ac)), including Porter-Russell Pineland owned by the Tropical Audubon Society. This unit is bordered on the north by SW 200 St (Quail Drive/SR 994), on the south by SW 248 Street, on

the east by the Florida Turnpike, and on the west by SW 194 Avenue.

This unit was unoccupied by *Linum carteri* var. *carteri* at the time of listing but is essential to the conservation of the plant because it serves to protect habitat needed to recover the plant, reestablish wild populations within the plant's historical range, and maintain populations throughout the plant's historical distribution in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *L. c.* var. *carteri* be extirpated from one of its current locations.

Unit LCC6: Camp Owaissa Bauer and Surrounding Areas, Miami-Dade County, Florida

Unit LCC6 consists of approximately 128 ha (315 ac) of habitat in Miami-Dade County. Within Unit LCC6, there are 21 subunits (LCC6A–LCC6U), composed of 1 larger area (Camp Owaissa Bauer and its addition) and 20 smaller areas surrounding it. The unit is comprised of State lands within Owaissa Bauer Pineland Addition, Ingram Pineland, West Biscayne Pineland, and Fuchs Hammock Addition (20 ha (51 ac)); County/local lands including Camp Owaissa Bauer, Pine Island Lake Park, Seminole Wayside Park, and Northrop Pineland (63 ha (156 ac)); and parcels in private ownership (44 ha (109 ac)), including the private conservation area, Pine Ridge Sanctuary. This unit is bordered on the north by SW 248 Street, on the south by SW 312 Street, on the east by SW 112 Avenue, and on the west by SW 217 Avenue.

This unit is composed of both occupied and unoccupied habitat. Some habitat within the unit was occupied by *Linum carteri* var. *carteri* (2 occurrences; approximately 9 ha (23 ac)) at the time of listing. This occupied habitat contains some or all of the PCEs, including pine rockland habitat, oolitic limestone substrate, suitable vegetation composition and structure, natural or artificial disturbance regimes, and habitat connectivity of sufficient size and suitability. The PCEs in this unit may require special management considerations or protection to address threats of habitat loss and fragmentation; inadequate fire management; competition with nonnative, invasive plants; and sea level rise. In some cases, these threats are being addressed or coordinated with our partners and landowners to implement needed actions.

Unoccupied habitat within the unit is essential to the conservation of *Linum carteri* var. *carteri* because it serves to protect habitat needed to recover the plant, reestablish wild populations within the plant's historical range, and maintain populations throughout the plant's historical distribution in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *L. c.* var. *carteri* be extirpated from one of its current locations.

Unit LCC7: Navy Wells Pineland Preserve and Surrounding Areas, Miami-Dade County, Florida

Unit LCC7 consists of approximately 201 ha (497 ac) of habitat in Miami-Dade County. Within Unit LCC7, there are seven subunits (LCC7A–LCC7G), including one larger area (Navy Wells Pineland Preserve) and six smaller outlying areas. The unit is comprised of State lands within Palm Drive Pineland, Navy Wells Pineland #39, Navy Wells Pineland Preserve (portion), and Florida City Pineland (53 ha (132 ac)); County/local lands including primarily Sunny Palms Pineland and Navy Wells Pineland Preserve (portion) (125 ha (309 ac)); and parcels in private ownership (23 ha (56 ac)). This unit is bordered on the north by SW 320 Street, on the south by SW 368 Street, on the east by U.S. 1 (South Dixie Highway), and on the west by SW 217 Avenue.

This unit was unoccupied by *Linum carteri* var. *carteri* at the time of listing but is essential to the conservation of the plant because it serves to protect habitat needed to recover the plant, reestablish wild populations within the plant's historical range, and maintain populations throughout the plant's historical distribution in Miami-Dade County. It also provides habitat for recovery in the case of stochastic events, should *L. c.* var. *carteri* be extirpated from one of its current locations.

Effects of Critical Habitat Designation

Section 7 Consultation

Section 7(a)(2) of the Act requires Federal agencies, including the Service, to ensure that any action they fund, authorize, or carry out is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of designated critical habitat of such species. In addition, section 7(a)(4) of the Act requires Federal agencies to confer with the Service on any agency action which is likely to jeopardize the continued existence of any species proposed to be listed under the Act or result in the destruction or adverse modification of proposed critical habitat.

Decisions by the 5th and 9th Circuit Courts of Appeal have invalidated our regulatory definition of ''destruction or adverse modification'' (50 CFR 402.02) (see *Gifford Pinchot Task Force* v. *U.S. Fish and Wildlife Service,* 378 F. 3d 1059 (9th Cir. 2004) and *Sierra Club* v. *U.S. Fish and Wildlife Service et al.,* 245 F.3d 434 (5th Cir. 2001)), and we do not rely on this regulatory definition when analyzing whether an action is likely to destroy or adversely modify critical habitat. Under the provisions of the Act, we determine destruction or adverse modification on the basis of whether, with implementation of the proposed Federal action, the affected critical habitat would continue to serve its intended conservation role for the species.

If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency (action agency) must enter into consultation with us. Examples of actions that are subject to the section 7 consultation process are actions on State, tribal, local, or private lands that require a Federal permit (such as a permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or a permit from the Service under section 10 of the Act) or that involve some other Federal action (such as funding from the Federal Highway Administration, Federal Aviation Administration, or the Federal Emergency Management Agency). Federal actions not affecting listed species or critical habitat, and actions on State, tribal, local, or private lands that are not federally funded or authorized, do not require section 7 consultation.

As a result of section 7 consultation, we document compliance with the requirements of section 7(a)(2) through our issuance of:

(1) A concurrence letter for Federal actions that may affect, but are not likely to adversely affect, listed species or critical habitat; or

(2) A biological opinion for Federal actions that may affect and are likely to adversely affect, listed species or critical habitat.

When we issue a biological opinion concluding that a project is likely to jeopardize the continued existence of a listed species and/or destroy or adversely modify critical habitat, we provide reasonable and prudent alternatives to the project, if any are identifiable, that would avoid the likelihood of jeopardy and/or destruction or adverse modification of critical habitat. We define ''reasonable and prudent alternatives'' (at 50 CFR 402.02) as alternative actions identified during consultation that:

(1) Can be implemented in a manner consistent with the intended purpose of the action,

(2) Can be implemented consistent with the scope of the Federal agency's legal authority and jurisdiction,

(3) Are economically and technologically feasible, and

(4) Would, in the Director's opinion, avoid the likelihood of jeopardizing the continued existence of the listed species and/or avoid the likelihood of destroying or adversely modifying critical habitat.

Reasonable and prudent alternatives can vary from slight project modifications to extensive redesign or relocation of the project. Costs associated with implementing a reasonable and prudent alternative are similarly variable.

Regulations at 50 CFR 402.16 require Federal agencies to reinitiate consultation on previously reviewed actions in instances where we have listed a new species or subsequently designated critical habitat that may be affected and the Federal agency has retained discretionary involvement or control over the action (or the agency's discretionary involvement or control is authorized by law). Consequently, Federal agencies sometimes may need to request reinitiation of consultation with us on actions for which formal consultation has been completed, if those actions with discretionary involvement or control may affect subsequently listed species or designated critical habitat.

Application of the ''Adverse Modification'' Standard

The key factor related to the adverse modification determination is whether, with implementation of the proposed Federal action, the affected critical habitat would continue to serve its intended conservation role for the species. Activities that may destroy or adversely modify critical habitat are those that alter the physical or biological features to an extent that appreciably reduces the conservation value of critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri.* As discussed above, the role of critical habitat is to support life-history needs of the species and provide for the conservation of the species.

Section 4(b)(8) of the Act requires us to briefly evaluate and describe, in any proposed or final regulation that designates critical habitat, activities involving a Federal action that may destroy or adversely modify such habitat, or that may be affected by such designation.

Activities that may affect critical habitat, when carried out, funded, or authorized by a Federal agency, should result in consultation for *Brickellia mosieri* and *Linum carteri* var. *carteri.* These activities include, but are not limited to:

(1) Actions that would significantly alter the pine rockland ecosystem, including significant alterations to hydrology or substrate. Such activities may include, but are not limited to, residential, commercial, or recreational development, including associated infrastructure.

(2) Actions that would significantly alter vegetation structure or composition, such as suppression of natural fires or excessive prescribed burning, or clearing vegetation for construction of residential, commercial, or recreational development and associated infrastructure.

(3) Actions that would introduce nonnative plant species that would significantly alter vegetation structure or composition. Such activities may include, but are not limited to, residential and commercial development, and associated infrastructure.

Exemptions

Application of Section 4(a)(3) of the Act

The Sikes Act Improvement Act of 1997 (Sikes Act) (16 U.S.C. 670a) required each military installation that includes land and water suitable for the conservation and management of natural resources to complete an integrated natural resources management plan (INRMP) by November 17, 2001. An INRMP integrates implementation of the military mission of the installation with stewardship of the natural resources found on the base. Each INRMP includes:

(1) An assessment of the ecological needs on the installation, including the need to provide for the conservation of listed species;

(2) A statement of goals and priorities;

(3) A detailed description of management actions to be implemented to provide for these ecological needs; and

(4) A monitoring and adaptive management plan.

Among other things, each INRMP must, to the extent appropriate and applicable, provide for fish and wildlife management; fish and wildlife habitat enhancement or modification; wetland protection, enhancement, and restoration where necessary to support fish and wildlife; and enforcement of applicable natural resource laws.

The National Defense Authorization Act for Fiscal Year 2004 (Pub. L. 108–136) amended the Act to limit areas eligible for designation as critical habitat. Specifically, section 4(a)(3)(B)(i) of the Act (16 U.S.C. 1533(a)(3)(B)(i)) now provides: ''The Secretary shall not designate as critical habitat any lands or other geographical areas owned or controlled by the Department of Defense, or designated for its use, that are subject to an INRMP prepared under section 101 of the Sikes Act (16 U.S.C. 670a), if the Secretary determines in writing that such plan provides a benefit to the species for which critical habitat is proposed for designation.''

We consulted with the military on the development and implementation of INRMPs for installations with listed species. We analyzed INRMPs developed by military installations located within the range of our proposed critical habitat designation for *B. mosieri* and *L. c.* var. *carteri* to determine if they met the criteria for exemption from critical habitat under section 4(a)(3) of the Act. We found that the following areas are Department of Defense lands with completed, Service-approved INRMPs within the range of the proposed critical habitat designation.

Homestead Air Reserve Base—Unit LCC6

The Homestead Air Reserve Base (HARB) has a current and completed INRMP, signed in July 2009. This INRMP identifies goals, objectives, and strategies for the management of HARB's natural resources for a 5-year period (*i.e.,* through 2014), and provides environmental stewardship initiatives for the remaining natural communities on HARB, including pine rocklands, as well as efforts to control invasive and nonnative animal and plant species. The INRMP (including appendices) identifies a ''Remnant Pine Rockland'' management unit (2.1 ha (5.1 ac)), which includes the unoccupied habitat patch proposed for critical habitat designation for *Linum carteri* var. *carteri* (subunit LCC6V; 1.0 ha (2.5 ac)) in the revised proposed rule and availability of the draft economic analysis published in the **Federal Register** on July 15, 2014 (79 FR 41211). The INRMP briefly discusses management recommendations for this area including mechanical reduction of fuel load, herbicide treatment of *Neyraudia reynaudiana* (Burma reed), and potential reforestation of canopy species. The INRMP identifies one objective for the remnant pine rockland: To restore and protect the habitat to support native plant communities and

associated wildlife, including endangered and threatened species' habitat. To achieve this objective, the INRMP proposes the development of a Pine Rockland Restoration and Management Plan (PRRMP) to include invasive and nonnative species removal.

An updated INRMP has been drafted and is expected to be finalized by the time this final critical habitat rule publishes in the **Federal Register** or shortly thereafter. The revised INRMP incorporates the PRRMP, which was finalized in September 2012, as well as a Protected Plant Management Plan (PPMP). The updated INRMP goals include implementation of both plans, which consist of restoring the pine rockland management unit to natural conditions by removing invasive and nonnative plants and animals, reintroducing extirpated native species, preventing pollution, and conducting various maintenance and monitoring procedures. The PPMP is used to supplement and update the INRMP, and currently focuses on measures to manage habitat for *Galactia smallii* (Small's milkpea), *Linum arenicola* (sand flax), and State-protected plant species occurring on HARB. The PPMP states that if *Brickellia mosieri* or *Linum carteri* var. *carteri* are identified on HARB, the PPMP will be revised to include these plants and appropriate management and monitoring activities will be implemented.

The current HARB INRMP benefits *Linum carteri* var. *carteri* through ongoing ecosystem management, which should provide suitable habitat for this plant. Specifically, the PPMP includes control of woody and herbaceous invasive pest plants, which would support suitable habitat for *L. c.* var. *carteri* by helping ensure a more open canopy. In addition, the INRMP includes continued mowing and ''weed whacking,'' which function as a surrogate for periodic fires by reducing competition with weedy species and helping to maintain an open canopy. While these activities are proposed to continue at the current frequencies, weed whacking would be raised to 15 cm (6 in) above the ground to avoid cutting *L. arenicola* too low—this would also benefit *L. c.* var. *carteri,* which has a similar life history and response to mowing, if it were to occur there. (For an indepth discussion related to the effects of invasive, nonnative plants and mowing on *L. c.* var. *carteri,* see *Summary of Factors Affecting the Species* in our proposed listing rule published in the **Federal Register** on October 3, 2013 (78 FR 61273), and as updated in our final listing rule published in the **Federal Register** on September 4, 2014 (79 FR 52567)).

Based on the above considerations, and in accordance with section 4(a)(3)(B)(i) of the Act, we have determined that the identified lands are subject to the HARB INRMP and that conservation efforts identified in the INRMP will provide a benefit to *Linum carteri* var. *carteri.* Therefore, lands within this installation are exempt from critical habitat designation under section 4(a)(3) of the Act. We are not including approximately 1.0 ha (2.5 ac) of habitat in this final critical habitat designation because of this exemption.

Special Operations Command South Headquarters—Units BM6 and LCC6

The U.S. Special Operations Command South Headquarters (SOCSO) has an INRMP that was finalized in December 2014. SOCSO is a 34.1–ha (84.2–ac) property that was formerly part of HARB and is now leased by SOCSO from Miami-Dade County. The SOCSO INRMP provides natural resource management for portions of this property for a 5-year period (2012–2017), focusing on the management of *Galactia smallii* and *Linum arenicola.* In part, the INRMP designates two pine rockland management areas, totaling approximately 7.2 ha (17.9 ac), that will be conserved and managed, including permanent fencing of the areas, invasive plant control, mowing, and prescribed burning. These designated management areas include the unoccupied habitat patches proposed for critical habitat designation for *Brickellia mosieri* (subunit BM6M; 5.2 ha (12.9 ac)) and *Linum carteri* var. *carteri* (subunit LCC6W; totaling 6.0 ha (14.8 ac)) in the revised proposed rule and availability of the draft economic analysis published in the **Federal Register** on July 15, 2014 (79 FR 41211).

The SOCSO INRMP benefits *Brickellia mosieri* and *Linum carteri* var. *carteri* through ongoing ecosystem management, which should provide suitable habitat for these plants. Although conservation benefits and management for *Galactia smallii* and *Linum arenicola* are the focus of the INRMP, some protection and conservation for other native pine rockland plant species (including *B. mosieri* and *L. c.* var. *carteri,* if they were to occur there) will be provided by the use of prescribed fire and invasive species control including herbicide treatments used to benefit *G. smallii* and *L. arenicola.* Prescribed fire is proposed in the management areas on a 4- to 7-year interval, the year following the herbicide treatment if weather conditions permit. In addition, proposed protocols for mowing of the inside perimeter of the management areas would benefit *L. c.* var. *carteri.* Where *G. smallii* and *L. arenicola* occur within the fenced perimeter, winter mowing (mid-January to mid-February) would avoid primary seed set by these species and *L. c.* var. *carteri,* if it were to occur there. In addition, where invasive and nonnative species occur in the mowed area, a broadcast herbicide would be applied to the areas with exotic species approximately 1 month after mowing, further reducing competition and helping to ensure an open canopy.

Based on the above considerations, and in accordance with section 4(a)(3)(B)(i) of the Act, we have determined that the identified lands are subject to the SOCSO INRMP and that conservation efforts identified in the INRMP will provide a benefit to *Brickellia mosieri* and *Linum carteri* var. *carteri.* Therefore, lands within this installation are exempt from critical habitat designation under section 4(a)(3) of the Act. We are not including approximately 6.0 ha (14.8 ac) of habitat in this final critical habitat designation because of this exemption.

Consideration of Impacts Under Section 4(b)(2) of the Act

Under Section 4(b)(2) of the Act, the Secretary may exclude an area from critical habitat if she determines that the benefits of such exclusion outweigh the benefits of specifying such area as part of the critical habitat, unless she determines, based on the best scientific data available, that the failure to designate such area as critical habitat will result in the extinction of the species. In making that determination, the statute on its face, as well as the legislative history, are clear that the Secretary has broad discretion regarding which factor(s) to use and how much weight to give to any factor.

Exclusions Based on Economic Impacts

Under section 4(b)(2) of the Act, we must consider the economic impacts of specifying any particular area as critical habitat. In order to consider economic impacts, we prepared an incremental effects memorandum (IEM) and screening analysis (Industrial Economics, Incorporated, 2014) which together with our narrative and interpretation of effects constitute our draft economic analysis (DEA) of the critical habitat designation and related factors. This analysis was made available for public review from July 15, 2014, through August 14, 2014. Following the close of the comment period, we reviewed and evaluated all

information submitted during the comment period that may pertain to our consideration of the probable incremental economic impacts of this critical habitat designation. This information is summarized below and available in the screening analysis for *Brickellia mosieri* and *Linum carteri* var. *carteri* (Industrial Economics, Incorporated, 2014), available at *http://www.regulations.gov*.

In our IEM, we attempted to clarify the distinction between the effects that will result from the species being listed and those attributable to the critical habitat designation (*i.e.,* difference between the jeopardy and adverse modification standards) for *Brickellia mosieri* and *Linum carteri* var. *carteri*'s critical habitat. Because the designations of critical habitat for *B. mosieri* and *L.c.* var. *carteri* were proposed concurrently with the listing, it has been our experience that it is more difficult to discern which conservation efforts are attributable to the species being listed and those which will result solely from the designation of critical habitat. However, the following specific circumstances in this case help to inform our evaluation: (1) The PBFs identified for critical habitat are the same features essential for the life requisites of the species, and (2) any actions that would result in sufficient harm or harassment to constitute jeopardy to *B. mosieri* and *L. c.* var. *carteri* would also likely adversely affect the essential physical and biological features of critical habitat. The IEM outlines our rationale concerning this limited distinction between baseline conservation efforts and incremental impacts of the designation of critical habitat for this species. This evaluation of the incremental effects has been used as the basis to evaluate the probable incremental economic impacts of the designation of critical habitat.

In occupied areas, the economic impacts of implementing the rule through section 7 of the Act will most likely be limited to additional administrative effort to consider adverse modification. This finding is based on the following factors:

- Any activities with a Federal nexus occurring within occupied habitat will be subject to section 7 consultation requirements regardless of critical habitat designation, due to the presence of the listed species; and
- In most cases, project modifications requested to avoid adverse modification are likely to be the same as those needed to avoid jeopardy in occupied habitat.

In unoccupied areas, incremental section 7 costs will include both the administrative costs of consultation and the costs of developing and implementing conservation measures needed to avoid adverse modification of critical habitat. Therefore, this analysis focuses on the likely impacts to activities occurring in unoccupied areas of the critical habitat designation.

This analysis forecasts the total number and administrative cost of future consultations likely to occur for transportation and land management activities undertaken by or funded by Federal agencies within unoccupied habitat. In addition, the analysis forecasts costs associated with conservation efforts that may be recommended in consultation for those activities occurring in unoccupied areas. The total incremental section 7 costs associated with the designation are estimated to be $120,000 (2013 dollars) in a single year for both administrative and conservation effort costs.

The designation of critical habitat is unlikely to trigger additional requirements under State or local regulations. This assumption is based on the protective status currently afforded pine rocklands habitat. Additionally, the designation of critical habitat may cause developers to perceive that private lands will be subject to use restrictions, resulting in perceptional effects. Such costs, if they occur, are unlikely to result in costs reaching $100 million in any one year.

Our economic analysis did not identify any disproportionate costs that are likely to result from the designation. Consequently, the Secretary is not exercising her discretion to exclude any areas from this designation of critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri* based on economic impacts.

A copy of the IEM and screening analysis with supporting documents may be obtained by contacting the South Florida Ecological Services Field Office (see **ADDRESSES**) or by downloading from the Internet at *http://www.regulations.gov.*

Exclusions Based on National Security Impacts or Homeland Security Impacts

As discussed above, we have already exempted from the designation of critical habitat under Section 4(a)(3) of the Act those Department of Defense lands with completed INRMPs determined to provide a benefit to *Brickellia mosieri* and *Linum carteri* var. *carteri.* Under section 4(b)(2) of the Act, we consider whether there are other lands where a national security or homeland security impact might exist. In preparing this final rule, we have determined that additional lands within the proposed designation are owned or managed by the Department of Defense and the Department of Homeland Security. However, we anticipate that designation of these additional lands will have no impact on national security or homeland security. Consequently, the Secretary is not intending to exercise her discretion to exclude any areas from this final designation based on impacts on national security or homeland security.

Exclusions Based on Other Relevant Impacts

Under section 4(b)(2) of the Act, we also consider any other relevant impacts resulting from the designation of critical habitat. We consider a number of factors, including whether the landowners have developed any HCPs or other management plans for the area, or whether there are conservation partnerships that would be encouraged by designation of, or exclusion from, critical habitat. In addition, we look at any tribal issues and consider the government-to-government relationship of the United States with tribal entities.

In preparing this final rule, we have determined that there are currently no permitted HCPs or other approved management plans for *Brickellia mosieri* and *Linum carteri* var. *carteri,* and the final designation does not include any tribal lands or tribal trust resources. We anticipate no impact on tribal lands, partnerships, or HCPs from this critical habitat designation. Accordingly, the Secretary is not exercising her discretion to exclude any areas from this final designation based on other relevant impacts.

Required Determinations

Regulatory Planning and Review (Executive Orders 12866 and 13563)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. The Office of Information and Regulatory Affairs has determined that this rule is not significant.

Executive Order 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based

on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this rule in a manner consistent with these requirements.

Regulatory Flexibility Act (5 U.S.C. 601 et seq.)

Under the Regulatory Flexibility Act (RFA; 5 U.S.C. 601 *et seq.*), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA; 5 U.S.C. 801 *et seq.*), whenever an agency is required to publish a notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effects of the rule on small entities (*i.e.,* small businesses, small organizations, and small government jurisdictions). However, no regulatory flexibility analysis is required if the head of the agency certifies the rule will not have a significant economic impact on a substantial number of small entities. The SBREFA amended the RFA to require Federal agencies to provide a certification statement of the factual basis for certifying that the rule will not have a significant economic impact on a substantial number of small entities.

According to the Small Business Administration, small entities include small organizations such as independent nonprofit organizations; small governmental jurisdictions, including school boards and city and town governments that serve fewer than 50,000 residents; and small businesses (13 CFR 121.201). Small businesses include manufacturing and mining concerns with fewer than 500 employees, wholesale trade entities with fewer than 100 employees, retail and service businesses with less than $5 million in annual sales, general and heavy construction businesses with less than $27.5 million in annual business, special trade contractors doing less than $11.5 million in annual business, and agricultural businesses with annual sales less than $750,000. To determine if potential economic impacts to these small entities are significant, we considered the types of activities that might trigger regulatory impacts under this designation as well as types of project modifications that may result. In general, the term ''significant economic impact'' is meant to apply to a typical small business firm's business operations.

The Service's current understanding of the requirements under the RFA, as amended, and following recent court decisions, is that Federal agencies are only required to evaluate the potential incremental impacts of rulemaking on those entities directly regulated by the rulemaking itself, and therefore, not required to evaluate the potential impacts to indirectly regulated entities. The regulatory mechanism through which critical habitat protections are realized is section 7 of the Act, which requires Federal agencies, in consultation with the Service, to ensure that any action authorized, funded, or carried by the agency is not likely to destroy or adversely modify critical habitat. Therefore, under section 7 only Federal action agencies are directly subject to the specific regulatory requirement (avoiding destruction and adverse modification) imposed by critical habitat designation. Consequently, it is our position that only Federal action agencies will be directly regulated by this designation. There is no requirement under RFA to evaluate the potential impacts to entities not directly regulated. Moreover, Federal agencies are not small entities. Therefore, because no small entities are directly regulated by this rulemaking, the Service certifies that this final critical habitat designation will not have a significant economic impact on a substantial number of small entities. Therefore, a regulatory flexibility analysis is not required.

Energy Supply, Distribution, or Use—Executive Order 13211

Executive Order 13211 (Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use) requires agencies to prepare Statements of Energy Effects when undertaking certain actions. Following our evaluation of the probable incremental economic impacts resulting from the designation of critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri,* we affirm the information in our proposed rule concerning E.O. 13211. Specifically, the designation of critical habitat is not expected to significantly affect energy supplies, distribution, or use. Therefore, this action is not a significant energy action, and no Statement of Energy Effects is required.

Unfunded Mandates Reform Act (2 U.S.C. 1501 et seq.)

In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*), we make the following findings:

(1) This rule will not produce a Federal mandate. In general, a Federal mandate is a provision in legislation, statute, or regulation that would impose an enforceable duty upon State, local, or tribal governments, or the private sector, and includes both ''Federal intergovernmental mandates'' and ''Federal private sector mandates.'' These terms are defined in 2 U.S.C. 658(5)–(7). ''Federal intergovernmental mandate'' includes a regulation that ''would impose an enforceable duty upon State, local, or tribal governments'' with two exceptions. It excludes ''a condition of Federal assistance.'' It also excludes ''a duty arising from participation in a voluntary Federal program,'' unless the regulation ''relates to a then-existing Federal program under which $500,000,000 or more is provided annually to State, local, and tribal governments under entitlement authority,'' if the provision would ''increase the stringency of conditions of assistance'' or ''place caps upon, or otherwise decrease, the Federal Government's responsibility to provide funding,'' and the State, local, or tribal governments ''lack authority'' to adjust accordingly. At the time of enactment, these entitlement programs were: Medicaid; Aid to Families with Dependent Children work programs; Child Nutrition; Food Stamps; Social Services Block Grants; Vocational Rehabilitation State Grants; Foster Care, Adoption Assistance, and Independent Living; Family Support Welfare Services; and Child Support Enforcement. ''Federal private sector mandate'' includes a regulation that ''would impose an enforceable duty upon the private sector, except (i) a condition of Federal assistance or (ii) a duty arising from participation in a voluntary Federal program.''

The designation of critical habitat does not impose a legally binding duty on non-Federal Government entities or private parties. Under the Act, the only regulatory effect is that Federal agencies must ensure that their actions do not destroy or adversely modify critical habitat under section 7. While non-Federal entities that receive Federal funding, assistance, or permits, or that otherwise require approval or authorization from a Federal agency for an action, may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of critical habitat rests squarely on the Federal agency. Furthermore, to the extent that non-Federal entities are indirectly impacted because they receive Federal assistance or participate in a voluntary Federal aid program, the Unfunded Mandates Reform Act would not apply, nor would critical habitat shift the costs of the large entitlement programs listed above onto State governments.

(2) We do not believe that this rule will significantly or uniquely affect

small governments because it will not produce a Federal mandate of $100 million or greater in any year, that is, it is not a ''significant regulatory action'' under the Unfunded Mandates Reform Act. The economic analysis concludes that incremental impacts may primarily occur due to administrative costs of section 7 consultations for transportation and land management projects; however, these are not expected to significantly affect small governments. Incremental impacts stemming from various species conservation and development control activities are expected to be borne by the Federal Government, State of Florida, and Miami-Dade County, which are not considered small governments. Consequently, we do not believe that the critical habitat designation will significantly or uniquely affect small government entities. As such, a Small Government Agency Plan is not required.

Takings—Executive Order 12630

In accordance with Executive Order 12630 (''Government Actions and Interference with Constitutionally Protected Private Property Rights''), we have analyzed the potential takings implications of designating critical habitat for *Brickellia mosieri* and *Linum carteri* var. *carteri* in a takings implications assessment. As discussed above, the designation of critical habitat affects only Federal actions. Although private parties that receive Federal funding, assistance, or require approval or authorization from a Federal agency for an action may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of critical habitat rests squarely on the Federal agency. The economic analysis found that no significant economic impacts are likely to result from the designation of critical habitat for *B. mosieri* and *L. c.* var. *carteri.* Because the Act's critical habitat protection requirements apply only to Federal agency actions, few conflicts between critical habitat and private property rights should result from this designation. Based on the best available information, the takings implications assessment concludes that this designation of critical habitat for *B. mosieri* and *L. c.* var. *carteri* does not pose significant takings implications.

Federalism—Executive Order 13132

In accordance with E.O. 13132 (Federalism), this rule does not have significant Federalism effects. A federalism summary impact statement is not required. In keeping with Department of the Interior and Department of Commerce policy, we requested information from, and coordinated development of this critical habitat designation with, appropriate State resource agencies in Florida. We did not receive comments from the State of Florida. We note, however, that one peer reviewer was from the Florida Forest Service, Florida Department of Agriculture and Consumer Services, and we have addressed those comments in the Summary of Comments and Recommendations section of this rule. From a federalism perspective, the designation of critical habitat directly affects only the responsibilities of Federal agencies. The Act imposes no other duties with respect to critical habitat, either for States and local governments, or for anyone else. As a result, the rule does not have substantial direct effects either on the States, or on the relationship between the national government and the States, or on the distribution of powers and responsibilities among the various levels of government. The designation may have some benefit to these governments because the areas that contain the features essential to the conservation of the species are more clearly defined, and the physical and biological features of the habitat necessary to the conservation of the species are specifically identified. This information does not alter where and what federally sponsored activities may occur. However, it may assist these local governments in long-range planning (because these local governments no longer have to wait for case-by-case section 7 consultations to occur).

Where State and local governments require approval or authorization from a Federal agency for actions that may affect critical habitat, consultation under section 7(a)(2) would be required. While non-Federal entities that receive Federal funding, assistance, or permits, or that otherwise require approval or authorization from a Federal agency for an action, may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of critical habitat rests squarely on the Federal agency.

Civil Justice Reform—Executive Order 12988

In accordance with Executive Order 12988 (Civil Justice Reform), the Office of the Solicitor has determined that the rule does not unduly burden the judicial system and that it meets the applicable standards set forth in sections 3(a) and 3(b)(2) of the Order. We are designating critical habitat in accordance with the provisions of the Act. To assist the public in understanding the habitat needs of these plants, the rule identifies the elements of physical or biological features essential to the conservation of *Brickellia mosieri* and *Linum carteri* var. *carteri.* The designated areas of critical habitat are presented on maps, and the rule provides several options for the interested public to obtain more detailed location information, if desired.

Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.)

This rule does not contain any new collections of information that require approval by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This rule will not impose recordkeeping or reporting requirements on State or local governments, individuals, businesses, or organizations. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

National Environmental Policy Act (42 U.S.C. 4321 et seq.)

It is our position that, outside the jurisdiction of the U.S. Court of Appeals for the Tenth Circuit, we do not need to prepare environmental analyses pursuant to the National Environmental Policy Act in connection with designating critical habitat under the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244). This position was upheld by the U.S. Court of Appeals for the Ninth Circuit (*Douglas County* v. *Babbitt,* 48 F.3d 1495 (9th Cir. 1995), cert. denied 516 U.S. 1042 (1996)).

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994 (Government-to-Government Relations with Native American Tribal Governments; 59 FR 22951), Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments), and the Department of the Interior's manual at 512 DM 2, we readily acknowledge our responsibility to communicate meaningfully with recognized Federal Tribes on a government-to-government basis. In accordance with Secretarial Order 3206 of June 5, 1997 (American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act), we readily acknowledge our responsibilities to work directly with tribes in developing programs for healthy ecosystems, to acknowledge that

tribal lands are not subject to the same controls as Federal public lands, to remain sensitive to Indian culture, and to make information available to tribes.

We have determined that there are no tribal lands occupied by *Brickellia mosieri* or *Linum carteri* var. *carteri* at the time of listing that contain the physical or biological features essential to conservation of the species, and no tribal lands unoccupied by *B. mosieri* or *L. c.* var. *carteri* that are essential for the conservation of the species. Therefore, we are not designating critical habitat for *B. mosieri* or *L. c.* var. *carteri* on tribal lands.

The primary authors of this rulemaking are the staff members of the South Florida Ecological Services Field Office.

List of Subjects in 50 CFR Part 17

Endangered and threatened species, Exports, Imports, Reporting and recordkeeping requirements, Transportation.

Regulation Promulgation

Accordingly, we amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—[AMENDED]

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 1531–1544; 4201–4245, unless otherwise noted.

■ 2. Amend § 17.12(h) by revising the entries for ''*Brickellia mosieri''* and ''*Linum carteri* var. *carteri''* under FLOWERING PLANTS in the List of Endangered and Threatened Plants to read as follows:

§ 17.12 Endangered and threatened plants.

* * * * *

(h) * * *

Species		Historic range	Family	Status	When listed	Critical habitat	Special rules
Scientific name	Common name						
Flowering Plants							
*	*	*	*	*	*	*	
Brickellia mosieri	Florida brickell-bush	U.S.A. (FL)	Asteraceae	E	844	17.96(a)	NA
*	*	*	*	*	*	*	
Linum carteri var. *carteri*.	Carter's small-flowered flax.	U.S.A. (FL)	Linaceae	E	844	17.96(a)	NA
*	*	*	*	*	*	*	

* * * * *

■ 3. In § 17.96, amend paragraph (a) as follows:

■ a. By adding an entry for ''*Brickellia mosieri* (Florida brickell-bush)'' in alphabetical order under the family Asteraceae;

■ b. By adding Family Linaceae in alphabetical order to the list of families; and

■ c. By adding an entry for ''*Linum carteri* var. *carteri* (Carter's small-flowered flax)'' in alphabetical order under the family Linaceae.

The additions read as follows:

§ 17.96 Critical habitat—plants.

(a) *Flowering plants.*

* * * * *

Family Asteraceae: *Brickellia mosieri* (Florida brickell-bush)

(1) Critical habitat units for *Brickellia mosieri* are depicted for Miami-Dade County, Florida, on the maps in this entry.

(2) Within these areas, the primary constituent elements of the physical or biological features essential to the conservation of *Brickellia mosieri* are:

(i) Areas of pine rockland habitat that contain:

(A) Open canopy, semi-open subcanopy, and understory;

(B) Substrate of oolitic limestone rock; and

(C) A plant community of predominately native vegetation that may include, but is not limited to:

(1) Canopy vegetation dominated by *Pinus elliottii* var. *densa* (South Florida slash pine);

(2) Subcanopy vegetation that may include, but is not limited to, *Serenoa repens* (saw palmetto), *Sabal palmetto* (cabbage palm), *Coccothrinax argentata* (silver palm), *Myrica cerifera* (wax myrtle), *Myrsine floridana* (myrsine), *Metopium toxiferum* (poisonwood), *Byrsonima lucida* (locustberry), *Tetrazygia bicolor* (tetrazygia), *Guettarda scabra* (rough velvetseed), *Ardisia escallonioides* (marlberry), *Psidium longipes* (mangroveberry), *Sideroxylon salicifolium* (willow bustic), and *Rhus copallinum* (winged sumac);

(3) Short-statured shrubs that may include, but are not limited to, *Quercus pumila* (running oak), *Randia aculeata* (white indigoberry), *Crossopetalum ilicifolium* (Christmas berry), *Morinda royoc* (redgal), and *Chiococca alba* (snowberry); and

(4) Understory vegetation that may include, but is not limited to: *Andropogon* spp.; *Schizachyrium gracile, S. rhizomatum,* and *S. sanguineum* (bluestems); *Aristida purpurascens* (arrowfeather threeawn); *Sorghastrum secundum* (lopsided Indiangrass); *Muhlenbergia capillaris* (hairawn muhly); *Rhynchospora floridensis* (Florida white-top sedge); *Tragia saxicola* (pineland noseburn); *Echites umbellata* (devil's potato); *Croton linearis* (pineland croton); *Chamaesyce* spp. (sandmats); *Chamaecrista deeringiania* (partridge pea); *Zamia integrifolia* (coontie); and *Anemia adiantifolia* (maidenhair pineland fern).

(ii) A disturbance regime that naturally or artificially duplicates natural ecological processes (*e.g.,* fire, hurricanes, or other weather events) and that maintains the pine rockland habitat described in paragraph (2)(i) of this entry.

(iii) Habitats that are connected and of sufficient area to sustain viable populations of *Brickellia mosieri* in the pine rockland habitat described in paragraph (2)(i) of this entry.

(3) Critical habitat does not include manmade structures (such as buildings, aqueducts, runways, roads, and other paved areas) and the land on which they are located exists within the legal boundaries on September 16, 2015.

(5) Critical habitat map units. Unit maps were developed using ESRI ArcGIS mapping software along with various spatial data layers. ArcGIS was also used to calculate the size of habitat areas. The projection used in mapping and calculating distances and locations within the units was North American Albers Equal Area Conic, NAD 83. The maps in this entry, as modified by any accompanying regulatory text, establish the boundaries of the critical habitat designation. The coordinates or plot points or both on which each map is based are available to the public at the Service's Internet site at *http://www.fws.gov/verobeach/,* at the Federal eRulemaking Portal (*http://www.regulations.gov* at Docket No. FWS–R4–ES–2013–0108), and at the field office responsible for this designation. You may obtain field office location information by contacting one of the Service regional offices, the addresses of which are listed at 50 CFR 2.2.
