Vol. 80

Friday,

No. 200

October 16, 2015

Pages 62429–63070

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 80 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

Memorandum of September 29, 2015

The President

Delegation of Authority Under Section 404(c) of the Child Soldiers Prevention Act of 2008**Memorandum for the Secretary of State**

By the authority vested in me as President by the Constitution and the laws of the United States of America, including section 301 of title 3, United States Code, I hereby delegate to the Secretary of State the authority under section 404(c)(1) of the Child Soldiers Prevention Act of 2008 (22 U.S.C. 2370c-1) (CSPA), to waive the application of the prohibition in section 404(a) of the CSPA to Yemen, and to make the determinations necessary for such waiver. I hereby also delegate to the Secretary of State the authority under section 404(c)(2) of the CSPA to notify the appropriate congressional committees of such waiver and the justification for granting such waiver.

You are hereby authorized and directed to publish this memorandum in the *Federal Register*.

THE WHITE HOUSE,
Washington, September 29, 2015

Presidential Documents

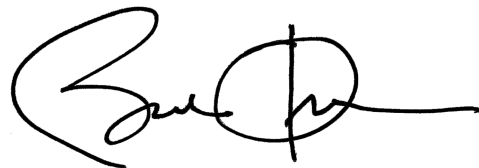

Presidential Determination No. 2015–13 of September 29, 2015

Determination With Respect to the Child Soldiers Prevention Act of 2008

Memorandum for the Secretary of State

Pursuant to section 404 of the Child Soldiers Prevention Act of 2008 (22 U.S.C. 2370c–1) (CSPA), I hereby determine that it is in the national interest of the United States to waive the application of the prohibition in section 404(a) of the CSPA with respect to the Democratic Republic of the Congo, Nigeria, and Somalia; and to waive in part the application of the prohibition in section 404(a) of the CSPA with respect to South Sudan to allow for the provision of International Military Education and Training, and Peacekeeping Operations assistance, and support provided pursuant to section 1208 of the National Defense Authorization Act of Fiscal Year 2014, to the extent such assistance or support would be restricted by the CSPA. I hereby waive such provisions accordingly.

You are hereby authorized and directed to submit this determination to the Congress, along with the accompanying Memorandum of Justification, and to publish the determination in the *Federal Register*.

THE WHITE HOUSE,
Washington, September 29, 2015

Presidential Documents

Presidential Determination No. 2015–14 of September 29, 2015

Presidential Determination on Refugee Admissions for Fiscal Year 2016

Memorandum for the Secretary of State

In accordance with section 207 of the Immigration and Nationality Act (the “Act”) (8 U.S.C. 1157), and after appropriate consultations with the Congress, I hereby make the following determinations and authorize the following actions:

The admission of up to 85,000 refugees to the United States during Fiscal Year (FY) 2016 is justified by humanitarian concerns or is otherwise in the national interest; provided that this number shall be understood as including persons admitted to the United States during FY 2016 with Federal refugee resettlement assistance under the Amerasian immigrant admissions program, as provided below.

The admissions numbers shall be allocated among refugees of special humanitarian concern to the United States in accordance with the following regional allocations; provided that the number of admissions allocated to the East Asia region shall include persons admitted to the United States during FY 2016 with Federal refugee resettlement assistance under section 584 of the Foreign Operations, Export Financing, and Related Programs Appropriations Act of 1988, as contained in section 101(e) of Public Law 100–202 (Amerasian immigrants and their family members):

Africa	25,000
East Asia	13,000
Europe and Central Asia	4,000
Latin America/Caribbean	3,000
Near East/South Asia	34,000
Unallocated Reserve	6,000

The 6,000 unallocated refugee numbers shall be allocated to regional ceilings, as needed. Upon providing notification to the Judiciary Committees of the Congress, you are hereby authorized to use unallocated admissions in regions where the need for additional admissions arises.

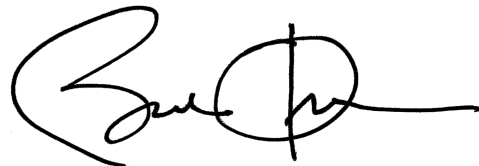

Additionally, upon notification to the Judiciary Committees of the Congress, you are further authorized to transfer unused admissions allocated to a particular region to one or more other regions, if there is a need for greater admissions for the region or regions to which the admissions are being transferred.

Consistent with section 2(b)(2) of the Migration and Refugee Assistance Act of 1962, I hereby determine that assistance to or on behalf of persons applying for admission to the United States as part of the overseas refugee admissions program will contribute to the foreign policy interests of the United States and designate such persons for this purpose. Consistent with section 101(a)(42) of the Act (8 U.S.C. 1101(a)(42)), and after appropriate consultation with the Congress, I also specify that, for FY 2016, the following persons may, if otherwise qualified, be considered refugees for the purpose of admission to the United States within their countries of nationality or habitual residence:

- a. Persons in Cuba
- b. Persons in Eurasia and the Baltics

- c. Persons in Iraq
- d. Persons in Honduras, Guatemala, and El Salvador
- e. In exceptional circumstances, persons identified by a United States Embassy in any location

You are authorized and directed to publish this determination in the *Federal Register*.

THE WHITE HOUSE,
Washington, September 29, 2015

Presidential Documents

Presidential Determination No. 2016–01 of October 5, 2015

Presidential Determination With Respect to Foreign Governments' Efforts Regarding Trafficking in Persons

Memorandum for the Secretary of State

Consistent with section 110 of the Trafficking Victims Protection Act of 2000 (the "Act") (22 U.S.C. 7107), I hereby:

Make the determination provided in section 110(d)(1)(A)(i) of the Act, with respect to the Democratic People's Republic of Korea, Equatorial Guinea, Iran, South Sudan, Venezuela, Yemen, and Zimbabwe not to provide certain funding for those countries' governments for Fiscal Year (FY) 2016, until such governments comply with the minimum standards or make significant efforts to bring themselves into compliance, as may be determined by the Secretary of State in a report to the Congress pursuant to section 110(b) of the Act;

Make the determination provided in section 110(d)(1)(A)(ii) of the Act, with respect to Eritrea, Russia, and Syria not to provide certain funding for those countries' governments for FY 2016, until such governments comply with the minimum standards or make significant efforts to bring themselves into compliance, as may be determined by the Secretary of State in a report to the Congress pursuant to section 110(b) of the Act;

Determine, consistent with section 110(d)(4) of the Act, with respect to Algeria, Belarus, Belize, Burundi, the Central African Republic, Comoros, the Gambia, Guinea-Bissau, Kuwait, Libya, Marshall Islands, Mauritania, and Thailand that provision to these countries' governments of all programs, projects, or activities described in sections 110(d)(1)(A)(i)–(ii) and 110(d)(1)(B) of the Act would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to Yemen, that a partial waiver to allow assistance and programs described in section 110(d)(1)(A)(i) of the Act, with the exception of International Military Education and Training, Foreign Military Financing, and Excess Defense Articles, would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to South Sudan, that a partial waiver to allow assistance and programs described in section 110(d)(1)(A)(i) of the Act, with the exception of Foreign Military Financing, Foreign Military Sales, and Excess Defense Articles, would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to South Sudan, that a waiver to allow assistance to be provided pursuant to section 1208 of the National Defense Authorization Act for Fiscal Year 2014 (Public Law 113–66), to the extent that such programs would otherwise be restricted by the Act, would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to Venezuela, that a partial waiver to allow funding for programs described in section 110(d)(1)(A)(i) of the Act designed to strengthen the democratic

process in Venezuela would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to Eritrea, Russia, and Syria, that a partial waiver to allow funding for educational and cultural exchange programs described in section 110(d)(1)(A)(ii) of the Act would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to Equatorial Guinea, that a partial waiver to allow funding described in section 110(d)(1)(A)(i) of the Act to build the capacity of countries to prevent, detect, and respond to infectious diseases; deliver self-help to vulnerable individuals and communities; and support the participation of government employees or officials in young leader exchanges programming would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to Equatorial Guinea, South Sudan, Syria, Venezuela, and Yemen, that assistance described in section 110(d)(1)(B) of the Act would promote the purposes of the Act or is otherwise in the national interest of the United States;

Determine, consistent with section 110(d)(4) of the Act, with respect to Zimbabwe, that a partial waiver to continue humanitarian demining initiatives and support programs described in section 110(d)(1)(A)(i) of the Act for assistance for victims of trafficking in persons or to combat such trafficking, and for programs that promote health, disease prevention, good governance, education, leadership, agriculture and food security, poverty reduction, livelihoods, family planning and reproductive health, macroeconomic growth, and biodiversity and wildlife protection, and that would have a significant adverse effect on vulnerable populations if suspended, would promote the purposes of the Act or is otherwise in the national interest of the United States;

And determine, consistent with section 110(d)(4) of the Act, with respect to Zimbabwe, that assistance described in section 110(d)(1)(B) of the Act, which:

(1) is a regional program, project, or activity under which the total benefit to Zimbabwe does not exceed 10 percent of the total value of such program, project, or activity;

(2) has as its primary objective the addressing of basic human needs, as defined by the Department of the Treasury with respect to other, existing legislative mandates concerning U.S. participation in the multilateral development banks;

(3) is complementary to or has similar policy objectives to programs being implemented bilaterally by the United States Government;

(4) has as its primary objective the improvement of Zimbabwe's legal system, including in areas that impact Zimbabwe's ability to investigate and prosecute trafficking cases or otherwise improve implementation of its anti-trafficking policy, regulations, or legislation;

(5) is engaging a government, international organization, or civil society organization, and seeks as its primary objective(s) to: (a) increase efforts to investigate and prosecute trafficking in persons crimes; (b) increase protection for victims of trafficking through better screening, identification, rescue and removal, aftercare (shelter, counseling), training, and reintegration; or (c) expand prevention efforts through education and awareness campaigns highlighting the dangers of trafficking in persons or training and economic empowerment of populations clearly at risk of falling victim to trafficking; or

(6) is targeted macroeconomic assistance from the International Monetary Fund that strengthens the macroeconomic management capacity of

Zimbabwe, would promote the purposes of the Act or is otherwise in the national interest of the United States.

The certification required by section 110(e) of the Act is provided herewith. You are hereby authorized and directed to submit this determination to the Congress, and to publish it in the *Federal Register*.

A handwritten signature in black ink, appearing to be Barack Obama's signature, consisting of a large 'B' followed by a circle and a horizontal line.

Rules and Regulations

Federal Register

Vol. 80, No. 200

Friday, October 16, 2015

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

7 CFR Part 635

RIN 0578-AA57

NRCS Procedures for Granting Equitable Relief

AGENCY: Natural Resources Conservation Service, USDA.

ACTION: Final rule.

SUMMARY: The Natural Resources Conservation Service (NRCS) issues its final rule implementing the equitable relief authority, and the procedures set forth in section 1613 of the Farm Security and Rural Investment Act of 2002 (the 2002 Act), relating to relief for participants for covered programs administered by NRCS. The relief applies to cases where the program participant took action to his or her detriment based on action or advice from an NRCS employee, and situations where the participant acted in good faith, but failed to fully comply with program requirements.

DATES: This rule is effective October 16, 2015.

FOR FURTHER INFORMATION CONTACT: Paulette Craig, National Equitable Relief Specialist, at (301) 504-1650.

SUPPLEMENTARY INFORMATION:

Executive Orders 12866 and 13563

The Office of Management and Budget (OMB) designated this rule as not significant under Executive Order 12866 as supplemented by Executive Order 13563. Therefore, OMB will not review this final rule.

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601-612) generally requires an agency to prepare a regulatory flexibility analysis of any rule subject to notice

and comment rulemaking requirements under the Administrative Procedure Act or any other statute. However, this regulation implements section 1613 of the 2002 Act, which is part of Title I of the 2002 Act. Section 1601(c) of the 2002 Act requires NRCS to promulgate regulations or administer Title I without regard to 5 U.S.C. 553. Therefore, NRCS did not prepare a regulatory flexibility analysis for this final rule.

Unfunded Mandates

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1531-1538) requires Federal agencies to assess the effects of their regulatory actions on State, local, and Tribal governments, or the private sector of \$100 million or more in any one year.

This rule contains no Federal mandates, as defined under Title II of UMRA, for State, local, and Tribal governments, or the private sector. Therefore, a statement under section 202 of UMRA is not required.

Small Business Regulatory Enforcement Fairness Act of 1996

This rule is not a major rule under the Small Business Regulatory Enforcement Fairness Act of 1996, (Pub. L. 104-121). Therefore, NRCS is not required to delay the effective date for 60 days from the date of publication to allow for congressional review. Accordingly, this rule is effective upon publication in the **Federal Register**.

Paperwork Reduction Act

Section 1601(c)(2) of the 2002 Act requires that the implementation of this provision be carried out without regard to the Paperwork Reduction Act, Chapter 35 of Title 44, United States Code. Therefore, NRCS is not reporting recordkeeping or estimated paperwork burden associated with this final rule.

Government Paperwork Elimination Act

NRCS is committed to compliance with the Government Paperwork Elimination Act as well as continued pursuit of providing all services electronically when practicable. This rule requires that a program participant make a written request for equitable relief for a program administered by NRCS. In part, this rule lends itself to electronic requests as submitted by State Conservationists or participants.

Environmental Analysis

NRCS has determined that changes made by this rule fall within a category of actions that are excluded from the requirement to prepare either an environmental assessment or an environmental impact statement. Administrative changes made in this rule fall within a categorical exclusion for policy development relating to routine activities and similar administrative functions (7 CFR 1b.3(a)(1)) and NRCS has identified no extraordinary circumstances that would otherwise require preparation of either.

Civil Rights Impact Analysis

NRCS has determined through a Civil Rights Impact Analysis (CRIA) that the final rule discloses no disproportionately adverse impacts for minorities, women, or persons with disabilities. The CRIA provides responses to the Final rule amendments.

The data presented indicates producers who are members of the protected groups have participated in NRCS conservation programs at parity with other producers. Extrapolating from historical participation data, it is reasonable to conclude that NRCS programs, including procedures for granting equitable relief for ineligibility for these programs, will continue to be administered in a non-discriminatory manner. Outreach and communication strategies are in place to ensure all producers will be provided the same information to allow them to make informed compliance decisions regarding the use of their lands that will affect their participation in U.S. Department of Agriculture (USDA) programs.

The equitable relief procedures apply to all persons equally regardless of their race, color, national origin, gender, sex, or disability status. Therefore, the final rule portends no adverse civil rights implications for women, minorities, or persons with disabilities.

Discussion of the Rule 7 CFR Part 635—Equitable Relief From Ineligibility

Section 635.1 Definitions and Abbreviations

This section amends, adds, or removes a number of defined terms in the rule. Specifically, it adds definitions for “appeal rights,” “equitable relief,” “participant,” and “State.” “Appeal rights” is defined to clarify that a

decision under this rule may be appealed to the National Appeals Division (NAD). “Participant” and “State” are defined consistent with their statutory definitions. The definitions of “covered program” and “State Conservationist” are simplified. The definition of “Natural Resources Conservation Service (NRCS)” is revised to be consistent with the definition used in other NRCS regulations, and clarifies that the term includes programs administered by the agency using the funds, facilities, and authorities of the Commodity Credit Corporation (CCC).

Section 635.2 *Applicability*

The amended rule clarifies the application of subsection (a), and strikes subsections (b) and (c) which are no longer needed.

Section 635.3 *Reliance on Incorrect Actions or Information*

The amended rule makes changes to this section to more closely conform to the language of the statute by enumerating the specific requirements to qualify for relief under this section. These changes do not substantively change the scope of this authority.

Section 635.4 *Failure To Fully Comply*

Section 635.4 of the amended rule makes changes to this section to more closely conform to the language of the statute by enumerating the specific requirements to qualify for relief under this section. These changes provide more flexibility for State Conservationists and participants to request equitable relief, and do not substantively change the scope of this authority.

Section 635.5 *Forms of Relief*

The amended rule makes technical and grammatical changes to this section, and removes references to “loans” since NRCS does not have authority to make loans.

Section 635.6 *Equitable Relief by State Conservationists*

The amended rule restructures and clarifies the existing language of § 635.6. In particular, the revised section explains the limitations on a State Conservationist’s authority in a separate subsection, and amends the description of the State Conservationist’s authority to more closely reflect the statutory language.

Section 635.7 *Procedures for Granting Equitable Relief*

The amended rule strikes the list of covered programs in paragraph (a). The

definition of “covered programs” sufficiently identifies these programs.

The amended rule allows the Chief, State Conservationist, or participant to initiate a request for equitable relief. Under the current rule, only the participant can initiate a request for equitable relief. The State Conservationist cannot initiate a request even if he or she believes the participant qualifies for such relief. For example, an NRCS employee’s misaction or misinformation may impact several different participants, resulting in a number of them being determined ineligible for program benefits. Under the current rule, the participants must request equitable relief from NRCS in order to obtain equitable relief. The State Conservationist cannot initiate an equitable relief request, even if he or she knows that other participants would likely also qualify for equitable relief. Given the potential for treating participants differently, NRCS is amending this procedure to allow the Chief or a State Conservationist to initiate a request for equitable relief for a participant meeting the requirements of this part.

Section 635.7 is also amended to add § 635.7(e) and (f). Paragraph 635.7(e) provides that requests for equitable relief must include any information necessary to determine eligibility under this authority and such other information as required by NRCS to determine whether granting equitable relief is appropriate. This revision reflects that the information needed by the agency to assess equitable relief requests will be provided and updated by applicable policy and procedure at Title 440 of the Conservation Program Manual, Part 509.

Paragraph 635.7(f) provides the participant with appeal rights to the National Appeals Division, pursuant to § 614.9(e) of this chapter, if equitable relief is denied.

List of Subjects in 7 CFR Part 635

Administrative practice and procedure, Agriculture, Conservation programs, Equitable Relief.

Accordingly, for the reasons set forth in the preamble, 7 CFR part 635 is revised to read as follows:

PART 635—EQUITABLE RELIEF FROM INELIGIBILITY

Sec.

- 635.1 Definitions and abbreviations.
- 635.2 Applicability.
- 635.3 Reliance on incorrect actions or information.
- 635.4 Failure to fully comply.
- 635.5 Forms of relief.

635.6 Equitable relief by State Conservationists.

635.7 Procedures for granting equitable relief.

Authority: 7 U.S.C. 7996.

§ 635.1 Definitions and abbreviations.

The following terms apply to this part:

Appeal rights means the right of the participant to appeal a decision to the National Appeals Division (NAD) pursuant to part 614 of this chapter.

Chief means the Chief of the Natural Resources Conservation Service or a person with delegated authority to act for the Chief.

Covered program means a conservation program administered by NRCS.

Equitable relief means an action described in § 635.5 of this part.

Natural Resources Conservation Service (NRCS) means an agency of the U.S. Department of Agriculture which has responsibility for administering covered programs, including those using the funds, facilities, and authorities of the Commodity Credit Corporation (CCC).

OGC means the Office of the General Counsel of the U.S. Department of Agriculture.

Participant means a participant in a covered program.

Secretary means the Secretary of U.S. Department of Agriculture.

State means each of the several States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and any other territory or possession of the United States.

State Conservationist means the NRCS employee authorized to direct and supervise NRCS activities in a State or the State Conservationist’s designee.

§ 635.2 Applicability.

This part applies to all covered programs administered by the Natural Resources Conservation Service, except for the Highly Erodible Land and Wetland Conservation provisions of Title XII, subtitles B and C of the Food Security Act of 1985, as amended, (16 U.S.C. 3811 *et seq.*). Administration of this part shall be under the supervision of the Chief, except that such authority shall not limit the exercise of authority by State Conservationists of the Natural Resources Conservation Service provided in § 635.6 of this part.

§ 635.3 Reliance on incorrect actions or information.

The Chief may grant equitable relief to any participant that NRCS determines is not in compliance with the requirements, terms and conditions of a

covered program, and therefore ineligible for a payment, or other benefit, if the participant—

(a) Acting in good faith, relied on action and advice from an NRCS employee or representative of USDA to their detriment;

(b) Did not know or have sufficient reason to know that the action or advice upon which they relied would be detrimental; and

(c) Did not act in reliance on their own misunderstanding or misinterpretation of the program provisions, notices, or information.

§ 635.4 Failure to fully comply.

The Chief may grant equitable relief to any participant that NRCS determines is not in full compliance with the requirements, terms and conditions of a covered program, and therefore ineligible for a payment, or other benefit, if the participant—

(a) Made a good faith effort to comply fully with the requirements; and

(b) Rendered substantial performance.

§ 635.5 Forms of relief.

(a) The Chief may authorize a participant in a covered program to:

(1) Retain payments or other benefits received under the covered program;

(2) Continue to receive payments and other benefits under the covered program;

(3) Continue to participate, in whole or in part, under any contract executed under the covered program;

(4) Re-enroll all or part of the land covered by the program; and

(5) Receive such other equitable relief as determined to be appropriate.

(b) As a condition of receiving relief under this part, the participant may be required to remedy their failure to meet the program requirement or mitigate its effects.

§ 635.6 Equitable relief by State Conservationists.

(a) *State Conservationists' Authority.* State Conservationists have the authority to grant requests for equitable relief under this section when—

(1) The program matter with respect to which the relief is sought is a program matter in a covered program operated within the authorized jurisdiction of the State Conservationist;

(2) The total amount of relief (including payments and other benefits) that will be provided to the participant under this section during the fiscal year is less than \$20,000;

(3) The total amount of such relief that has been previously provided to the participant using this section in the fiscal year, as calculated in paragraph

(a)(2) of this section, is not more than \$5,000;

(4) The total amount of payments and benefits of any kind for which relief is provided to similarly situated participants by a State Conservationist in a fiscal year, is not more than \$1,000,000.

(b) *Additional limits on authority.* The authority provided under this section does not extend to the administration of:

(1) Payment limitations under part 1400 of this title;

(2) Payment limitations under a conservation program administered by the Secretary; or

(3) The highly erodible land and wetland conservation requirements under subtitles B or C of Title XII of the Food Security Act of 1985 (16 U.S.C. 3811 *et seq.*).

(c) *Concurrence by the Office of the General Counsel.* Relief shall only be made under this part after consultation with, and concurrence by, the Office of General Counsel.

(d) *Secretary's reversal authority.* A decision made under this part by the State Conservationist may be reversed only by the Secretary, who may not delegate that authority.

(e) *Relation to other authorities.* The authority provided under this section is in addition to any other applicable authority that may allow relief.

§ 635.7 Procedures for granting equitable relief.

(a) The Chief or State Conservationist may initiate a request for equitable relief for a participant that meets the requirement of this part.

(b) Participants may request equitable relief from the Chief or the State Conservationist as provided in §§ 635.3 and 635.4 of this part.

(c) Only a participant directly affected by the non-compliance with the covered program requirements is eligible for equitable relief under this part.

(d) Requests by a participant for equitable relief must be made in writing, no later than 30 calendar days from the date of receipt of the notification of non-compliance with the requirements of the covered conservation program.

(e) Requests for equitable relief must include any information necessary to determine eligibility under this part and such other information as required by NRCS to determine whether granting equitable relief is appropriate. Information needed by the agency to assess equitable relief requests will be provided and updated by applicable policy and procedure.

(f) If equitable relief is denied by the Chief or the State Conservationist, the participant will be provided with

written notice of appeal rights to the National Appeals Division, pursuant to 7 CFR part 614.

Signed this 7th day of October, 2015, in Washington, DC.

Leonard Jordan,

Associate Chief for Conservation, Natural Resources Conservation Service.

[FR Doc. 2015-26309 Filed 10-15-15; 8:45 am]

BILLING CODE 3410-16-P

DEPARTMENT OF ENERGY

10 CFR Part 430

[Docket No. EERE-2013-BT-TP-0009]

RIN 1904-AC97

Energy Conservation Program for Consumer Products: Test Procedures for Clothes Washers; Correcting Amendments

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule; correcting amendments.

SUMMARY: On August 5, 2015, the U.S. Department of Energy (DOE) published a final rule amending the test procedures for clothes washers. This correction addresses several cross-reference numbering errors, in which the cross-references were inadvertently not updated to reflect the revised section numbering resulting from the final rule amendments. In addition, this correction republishes several amendments from the final rule that could not be incorporated into the Code of Federal Regulations (CFR) due to inaccurate amendatory instructions, and clarifies several of the amendatory instructions in the final rule to remove certain sections of the test procedures. Furthermore, this correction reinstates three sections of the clothes washer test procedure that were inadvertently removed from the CFR starting with the 2013 annual edition. Neither the errors nor the corrections in this document affect the substance of the rulemaking or any of the conclusions reached in support of either of these final rules.

DATES: *Effective Date:* October 16, 2015.

FOR FURTHER INFORMATION CONTACT: Mr. Bryan Berringer, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, Mailstop EE-5B, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 586-0371. Email: Bryan.Berringer@ee.doe.gov.

Mr. Eric Stas, U.S. Department of Energy, Office of the General Counsel,

GC-33, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 586-9507. Email: *Eric.Stas@hq.doe.gov*.

SUPPLEMENTARY INFORMATION: DOE published a final rule in the **Federal Register** on August 5, 2015 (the “August 2015 final rule”), amending the test procedures for clothes washers. 80 FR 46729. In the rule, several section number cross-references were inadvertently not updated to reflect the revised section numbering resulting from the final rule amendments. These errors apply to both Appendix J1 and Appendix J2 to subpart B of 10 CFR part 430. Table 1 summarizes the affected sections and the associated corrections.

TABLE 1—CORRECTIONS TO SECTION NUMBER CROSS-REFERENCES

Appendix J1	
Section 2.7	Existing reference to section 3.1.5 updated to 3.1.6.
Section 4.2.3 ..	
Section 4.4	
Section 3.6	Existing reference to section 1.18 updated to 1.20.
Section 3.7.1 ..	Existing reference to section 3.5.2.3 updated to 3.5.3.
Section 3.7.2 ..	
Appendix J2	
Section 3.8.2.6	Existing reference to “section 6.3 of this appendix” updated to “section 7 of appendix J3 to 10 CFR part 430, subpart B.”
Section 3.8.3.2	Existing reference to “section 6.2.1 of this appendix” updated to “section 6.1 of appendix J3 to 10 CFR part 430, subpart B.”
Section 3.8.3.4	
Section 4.2.4 ..	Existing reference to section 3.7 updated to 3.6.
Section 4.2.5 ..	Existing reference to section 3.6 updated to 3.7.
Section 4.2.12	Existing reference to section 3.1.6 updated to 3.1.7.
Section 4.2.13	
Section 4.5	
Section 4.6	

In addition, this final rule republishes the amendments to sections 2.6.5.1 and 2.6.5.2. It also clarifies that sections 2.6.5.3 (including its subsections), 2.6.5.4, 2.6.6.1, 2.6.6.2, 2.6.7.1, and 2.6.7.2 of Appendix J1 are to be removed.

Finally, in a test procedure final rule published on March 7, 2012 (the “March 2012 final rule”), DOE amended section 3.6 of Appendix J1 and intended for sections 3.6.1 through 3.6.3 to remain unchanged. 77 FR 13888. In the January 1, 2013 version of the CFR, sections 3.6.1 through 3.6.3 of Appendix J1 were inadvertently removed. Section 3.6 requires measuring water and electrical energy consumption for the

Cold Wash temperature selection using the water fill levels and test load sizes specified in sections 3.6.1 through 3.6.3. As was the case prior to the inadvertent deletion and as reinstated, sections 3.6.1 through 3.6.3 provide these specifications and also define the variables associated with each measurement. This final rule correction reinstates these sections as they appeared in the January 1, 2012 version of the CFR, except that the word “adaptive” in section 3.6.3 is changed to “automatic,” as described in the August 2015 final rule.

Procedural Issues and Regulatory Review

The regulatory reviews conducted for this rulemaking are those set forth in the March 2012 final rule and August 2015 final rule that originally codified the respective amendments to DOE’s test procedures for clothes washers. The amendments in the March 2012 final rule became effective April 6, 2012, and the amendments in the August 2015 final rule became effective September 4, 2015.

Pursuant to the Administrative Procedure Act, 5 U.S.C. 553(b), DOE has determined that notice and prior opportunity for comment on this rule are unnecessary and contrary to the public interest. Neither the errors nor the corrections in this document affect the substance of the rulemakings or any of the conclusions reached in support of either of these final rules. For these reasons, DOE has also determined that there is good cause to waive the 30-day delay in effective date.

List of Subjects in 10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Intergovernmental relations, Small businesses.

Issued in Washington, DC, on October 5, 2015.

Kathleen B. Hogan,
Deputy Assistant Secretary, Energy Efficiency and Renewable Energy.

For the reasons stated in the preamble, part 430 of title 10 of the Code of Federal Regulations is corrected by making the following correcting amendments:

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 1. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291-6309; 28 U.S.C. 2461 note.

- 2. Appendix J1 to subpart B of part 430 is amended by:
- a. Revising sections 2.6.5.1 and 2.6.5.2;
- b. Removing sections 2.6.5.3, 2.6.5.3.1 through 2.6.5.3.6, 2.6.5.4, 2.6.6.1, 2.6.6.2, 2.6.7.1, and 2.6.7.2;
- c. Revising sections 2.7, 3.6, 3.7.1, 3.7.2, 4.2.3, and 4.4; and
- d. Adding sections 3.6.1, 3.6.2, and 3.6.3.

The revisions and additions read as follows:

Appendix J1 to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Automatic and Semi-Automatic Clothes Washers

* * * * *

2.6.5.1 Using the coefficients A and B calculated in Appendix J3 to 10 CFR part 430, subpart B:

$$RMC_{corr} = A \times RMC + B$$

2.6.5.2 Substitute RMC_{corr} values in calculations in section 3.8 of this appendix.

* * * * *

2.7 *Test Load Sizes.* Maximum, minimum, and, when required, average test load sizes shall be determined using Table 5.1 of this appendix and the clothes container capacity as measured in sections 3.1.1 through 3.1.6 of this appendix. Test loads shall consist of energy test cloths, except that adjustments to the test loads to achieve proper weight can be made by the use of energy stuffer cloths with no more than 5 stuffer cloths per load.

* * * * *

3.6 “Cold Wash” (*Minimum Wash Temperature Selection*). Water and electrical energy consumption shall be measured for each water fill level or test load size as specified in sections 3.6.1 through 3.6.3 of this appendix for the coldest wash temperature selection available. For a clothes washer that offers two or more wash temperature settings labeled as cold, such as “Cold” and “Tap Cold,” the setting with the minimum wash temperature shall be considered the cold wash. If any of the other cold wash temperature settings add hot water to raise the wash temperature above the cold water supply temperature, as defined in section 2.3 of this appendix, those setting(s) shall be considered warm wash setting(s), as defined in section 1.20 of this appendix. If none of the cold wash temperature settings add hot water for any of the water fill levels or test load sizes required for the energy test cycle, the wash temperature setting labeled as “Cold” shall be considered the cold wash, and the other wash temperature setting(s) labeled as cold shall not be required for testing.

3.6.1 *Maximum test load and water fill.* Hot water consumption (Hc_x), cold water consumption (Cc_x), and electrical energy consumption (Ec_x) shall be measured for a cold wash/cold rinse energy test cycle, with the controls set for the maximum water fill level. The maximum test load size is to be used and shall be determined per Table 5.1 of this appendix.

3.6.2 *Minimum test load and water fill.* Hot water consumption (Hc_n), cold water

consumption (C_{c,n}), and electrical energy consumption (E_{c,n}) shall be measured for a cold wash/cold rinse energy test cycle, with the controls set for the minimum water fill level. The minimum test load size is to be used and shall be determined per Table 5.1 of this appendix.

3.6.3 *Average test load and water fill.* For clothes washers with an automatic water fill control system, measure the values for hot water consumption (H_{c,a}), cold water consumption (C_{c,a}), and electrical energy consumption (E_{c,a}) for a cold wash/cold rinse energy test cycle, with an average test load size as determined per Table 5.1 of this appendix.

3.7.1 For the rinse only, measure the amount of hot water consumed by the clothes washer including all deep and spray rinses, for the maximum (R_x), minimum (R_n), and, if required by section 3.5.3 of this appendix, average (R_a) test load sizes or water fill levels.

3.7.2 Measure the amount of electrical energy consumed by the clothes washer to heat the rinse water only, including all deep and spray rinses, for the maximum (E_{R,x}), minimum (E_{R,n}), and, if required by section 3.5.3 of this appendix, average (E_{R,a}) test load sizes or water fill levels.

4.2.3 *Water factor.* Calculate the water factor, WF, expressed in gallons per cycle per cubic foot (or liters per cycle per liter), as:

$$WF = Q_T / C$$

where:

Q_T = As defined in section 4.2.2 of this appendix.

C = As defined in section 3.1.6 of this appendix.

4.4 *Modified energy factor.* Calculate the modified energy factor, MEF, expressed in cubic feet per kilowatt-hour per cycle (or liters per kilowatt-hour per cycle) and defined as:

$$MEF = C / (E_{TE} + D_E)$$

where:

C = As defined in section 3.1.6 of this appendix.

E_{TE} = As defined in section 4.1.7 of this appendix.

D_E = As defined in section 4.3 of this appendix.

■ 3. Appendix J2 to subpart B of part 430 is amended by revising sections 3.8.2.6, 3.8.3.2, 3.8.3.4, 4.2.4, 4.2.5, 4.2.12, 4.2.13, 4.5, and 4.6 to read as follows:

Appendix J2 to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Automatic and Semi-Automatic Clothes Washers

3.8.2.6 Apply the RMC correction curve described in section 7 of appendix J3 to this subpart to calculate the corrected remaining moisture content, RMC_{corr}, expressed as a percentage as follows:

$$RMC_{corr} = (A \times RMC_x + B) \times 100\%$$

where:

A and B are the coefficients of the RMC correction curve as defined in section 6.1 of appendix J3 to this subpart.

RMC_x = As defined in section 3.8.2.5 of this appendix.

3.8.3.2 Apply the RMC correction curve described in section 7 of appendix J3 to this subpart to calculate the corrected remaining moisture content for Cold Wash/Cold Rinse, RMC_{COLD,corr}, expressed as a percentage, as follows:

$$RMC_{COLD,corr} = (A \times RMC_{COLD} + B) \times 100\%$$

where:

A and B are the coefficients of the RMC correction curve as defined in section 6.1 of appendix J3 to this subpart.

RMC_{COLD} = As defined in section 3.8.3.1 of this appendix.

3.8.3.4 Apply the RMC correction curve described in section 7 of appendix J3 to this subpart to calculate the corrected remaining moisture content for Warm Wash/Warm Rinse, RMC_{WARM,corr}, expressed as a percentage, as follows:

$$RMC_{WARM,corr} = (A \times RMC_{WARM} + B) \times 100\%$$

where:

A and B are the coefficients of the RMC correction curve as defined in section 6.1 of appendix J3 to this subpart.

RMC_{WARM} = As defined in section 3.8.3.3 of this appendix.

4.2.4 *Per-cycle water consumption for Warm Wash/Warm Rinse.* Calculate the maximum, average, and minimum total water consumption, expressed in gallons per cycle (or liters per cycle), for the Warm Wash/Warm Rinse cycle and defined as:

$$Q_{WW,max} = [H_{ww,x} + C_{ww,x}]$$

$$Q_{WW,avg} = [H_{ww,a} + C_{ww,a}]$$

$$Q_{WW,min} = [H_{ww,n} + C_{ww,n}]$$

where:

H_{ww,x}, C_{ww,x}, H_{ww,a}, C_{ww,a}, H_{ww,n}, and C_{ww,n} are defined in section 3.6 of this appendix.

4.2.5 *Per-cycle water consumption for Cold Wash/Cold Rinse.* Calculate the maximum, average, and minimum total water consumption, expressed in gallons per cycle (or liters per cycle), for the Cold Wash/Cold Rinse cycle and defined as:

$$Q_{C,max} = [H_{c,x} + C_{c,x}]$$

$$Q_{C,avg} = [H_{c,a} + C_{c,a}]$$

$$Q_{C,min} = [H_{c,n} + C_{c,n}]$$

where:

H_{c,x}, C_{c,x}, H_{c,a}, C_{c,a}, H_{c,n}, and C_{c,n} are defined in section 3.7 of this appendix.

4.2.12 *Water factor.* Calculate the water factor, WF, expressed in gallons per cycle per cubic foot (or liters per cycle per liter), as:

$$WF = Q_{CT} / C$$

where:

Q_{CT} = As defined in section 4.2.10 of this appendix.

C = As defined in section 3.1.7 of this appendix.

4.2.13 *Integrated water factor.* Calculate the integrated water factor, IWF, expressed in gallons per cycle per cubic foot (or liters per cycle per liter), as:

$$IWF = Q_T / C$$

where:

Q_T = As defined in section 4.2.11 of this appendix.

C = As defined in section 3.1.7 of this appendix.

4.5 *Modified energy factor.* Calculate the modified energy factor, MEF, expressed in cubic feet per kilowatt-hour per cycle (or liters per kilowatt-hour per cycle) and defined as:

$$MEF = C / (E_{TE} + D_E)$$

where:

C = As defined in section 3.1.7 of this appendix.

E_{TE} = As defined in section 4.1.7 of this appendix.

D_E = As defined in section 4.3 of this appendix.

4.6 *Integrated modified energy factor.* Calculate the integrated modified energy factor, IMEF, expressed in cubic feet per kilowatt-hour per cycle (or liters per kilowatt-hour per cycle) and defined as:

$$IMEF = C / (E_{TE} + D_E + E_{TLP})$$

where:

C = As defined in section 3.1.7 of this appendix.

E_{TE} = As defined in section 4.1.7 of this appendix.

D_E = As defined in section 4.3 of this appendix.

E_{TLP} = As defined in section 4.4 of this appendix.

[FR Doc. 2015-25963 Filed 10-15-15; 8:45 am]

BILLING CODE 6450-01-P

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Parts 352 and 361

RIN 3064-AE35

Nondiscrimination on the Basis of Disability Minority and Women Outreach Program Contracting

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Final rule.

SUMMARY: The FDIC is updating its regulations, Nondiscrimination on the Basis of Disability, and Minority and Women Outreach Program Contracting, to reflect a name change from the Agency's Office of Diversity and Economic Opportunity (ODEO) to the Office of Minority and Women Inclusion (OMWI).

DATES: This final rule will become effective on October 16, 2015.

FOR FURTHER INFORMATION CONTACT:

Melodee Brooks, Senior Deputy Director, Office of Minority and Women Inclusion, (703) 562-6090; or Robert Lee, Counsel, Legal Division, (703) 562-2020, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, DC 20429-0002.

SUPPLEMENTARY INFORMATION:**I. Background**

Following a recent review, the FDIC is updating 12 CFR parts 352 and 361 to reflect a name change from the FDIC Office of Diversity and Economic Opportunity to the FDIC Office of Minority and Women Inclusion.

Part 352 is the FDIC's regulation on nondiscrimination on the basis of disability and is intended to implement sections 504 and 508 of the Rehabilitation Act of 1973, as amended. Section 504 prohibits discrimination on the basis of disability in programs and activities conducted by a federal executive agency. Section 508 requires federal agencies to utilize electronic and information technology that is designed to allow individuals with disabilities access that is comparable to the access of those who are not disabled, unless such agency would incur an undue burden. Subsections 352.9(b) and 352.10 set forth information that is no longer accurate, as the Office of Diversity and Economic Opportunity's responsibilities and employees were transferred to the Office of Minority and Women Inclusion, a new office established by the FDIC Board of Directors pursuant to Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Act). Section 342 of the Act is codified at 12 U.S.C. 5452. The remaining contact information for OMWI remains the same as that of the predecessor office—3501 N. Fairfax Drive, Arlington, VA 22226; (877) 275-3342 or (703) 562-2473 (TTY).

Part 361 established in regulatory form the FDIC's Minority and Woman Outreach Program (MWOP) to ensure that minority- and women-owned businesses (MWOBs) are given the opportunity to participate fully in all contracts entered into by the FDIC as it is the FDIC's policy that minorities and women, and businesses owned by them have the maximum practicable opportunity to participate in contracts awarded by the FDIC. Subsections 361.5 and 361.6(a) set forth information that is no longer accurate, as the Office of Diversity and Economic Opportunity's responsibilities and employees have been transferred to the Office of Minority and Women Inclusion.

II. Final Rule

The final rule for parts 352 and 361 updates the name of the FDIC Office of Diversity and Economic Opportunity (ODEO) to the FDIC Office of Minority and Women Inclusion (OMWI). The amendments are procedural and non-substantive in nature, and would update the regulations to be consistent with the FDIC's practices and procedures. The revisions to each of the sections cited below in the List of Subjects simply reflect the change in office name.

III. Exemption From Public Notice and Comment

Section 553 of the Administrative Procedure Act (APA)(5 U.S.C. 553) sets forth requirements for providing the general public notice of, and the opportunity to comment on, proposed agency rules. However, unless notice or hearing is required by statute, those requirements do not apply:

(A) To interpretive rules, general statements of policy, or rules of agency organization, procedure, or practice; or
(B) When the agency for good cause finds (and incorporates the findings and a brief statement of reasons therefor in the rules issued) that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest. 5 U.S.C. 553(b).

The FDIC is updating parts 352 and 361 to reflect a name change from the FDIC Office of Diversity and Economic Opportunity to the FDIC Office of Minority and Women Inclusion. Since the changes relate to agency organization, procedure, or practice, and because the FDIC has determined for good cause that public notice and comment are unnecessary, the rules are being published in final form without public notice and comment.

IV. Effective Dates

Section 553 of the APA provides that a regulation shall not be made effective less than 30 days after its publication in the **Federal Register** except, among other things, upon a finding of "good cause" by the agency. (5 U.S.C. 553(d)). The FDIC finds that there is good cause to make the amendments to parts 352 and 361 effective immediately upon publication in the **Federal Register** because the name change from the Office of Diversity and Economic Opportunity (ODEO) to the Office of Minority and Women Inclusion (OMWI) is procedural and non-substantive.

V. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601-612) does not apply to a rulemaking where a general notice of proposed rulemaking is not required. (5

U.S.C. 603 and 604). As noted previously, the FDIC has determined that it is unnecessary to publish a notice of proposed rulemaking for the final rule amending part 352. Accordingly, the RFA's requirements relating to an initial and final regulatory flexibility analysis do not apply to this rulemaking for parts 352 and 361.

VI. The Paperwork Reduction Act

The final rule for parts 352 and 361 does not contain any requirements for the collection of information pursuant to the Paperwork Reduction Act (44 U.S.C. 3501, *et seq.*).

VII. The Treasury and General Government Appropriations Act, 1999—Assessment of Federal Regulations and Policies on Families

The FDIC has determined that the final rule for parts 352 and 361 will not affect family well-being within the meaning of section 654 of the Treasury and General Government Appropriations Act, 1999, enacted as part of the Omnibus Consolidated and Emergency Supplemental Appropriations Act, 1999 (Pub. L. 105-277, 112 Stat. 2681).

VIII. Small Business Regulatory Enforcement Fairness Act

The Office of Management and Budget has determined that the final rule for parts 352 and 361 is not a "major rule" within the meaning of the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA)(Title II, Pub. L. 104-121). As required by SBREFA, the FDIC will file appropriate reports with Congress and the Government Accountability Office so that the final rule for parts 352 or 361 may be reviewed.

List of Subjects*12 CFR Part 352*

Nondiscrimination on the basis of disability, Access to electronic and information technology, Employment, Communications.

12 CFR Part 361

Minority and Women Outreach Program Contracting.

Authority and Issuance

For the reason set forth in the preamble, parts 352 and 361 of Chapter III of title 12 of the Code of Federal Regulations are amended as follows:

PART 352—NONDISCRIMINATION ON THE BASIS OF DISABILITY

■ 1. The authority citation for part 352 continues to read as follows:

Authority: 12 U.S.C. 1819(a), 29 U.S.C. 794d.

§ 352.9 [Amended]

■ 2. Amend § 352.9(b) by removing the term “Office of Diversity and Economic Opportunity (ODEO)” and adding in its place “Office of Minority and Women Inclusion (OMWI).”

§ 352.10 [Amended]

■ 3. Amend § 352.10:

■ a. In paragraph (c) by removing the term “Office of Diversity and Economic Opportunity” and adding in its place “Office of Minority and Women Inclusion” wherever it occurs and by removing the term “ODEO” and adding in its place “OMWI” wherever it occurs; and

■ b. In paragraphs (e) introductory text, (g), (h), and (i) by removing the term “ODEO” and adding in its place “OMWI” wherever it occurs.

PART 361—MINORITY AND WOMEN OUTREACH PROGRAM CONTRACTING

■ 4. The authority citation for part 361 continues to read as follows:

Authority: 12 U.S.C. 1833e.

§ 361.5 [Amended]

■ 9. Amend § 361.5, in paragraph (a), by removing the term “Office of Diversity and Economic Opportunity (ODEO)” and adding in its place “Office of Minority and Women Inclusion (OMWI)” and in paragraphs (a) and (b), by removing the term “ODEO” and adding in its place “OMWI.”

§ 361.6 [Amended]

■ 10. Revise § 361.6(a) by removing the term “ODEO” and adding in its place “OMWI” wherever it occurs.

Dated this 13th day of October, 2015.
Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2015–0252; Airspace Docket No. 15–AEA–1]

Amendment of Class E Airspace; Ashland, VA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Class E Airspace at Ashland, VA as new Standard Instrument Approach Procedures have been developed at Hanover County Municipal Airport. This action enhances the safety and airspace management of Instrument Flight Rules (IFR) operations at the airport. This action also updates the geographic coordinates of the airport.

DATES: Effective 0901 UTC, December 10, 2015. The Director of the Federal Register approves this incorporation by reference action under title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.9Z, Airspace Designations and Reporting Points, and subsequent amendments can be viewed on line at <http://www.faa.gov/airtraffic/publications/>.

For further information, you can contact the Airspace Policy and Regulations Group, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: 202–267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

FAA Order 7400.9, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code.

Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part, A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace at Hanover County Municipal Airport, Ashland, VA.

History

On March 9, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to amend Class E airspace extending upward from 700 feet above the surface at Hanover County Municipal Airport, Ashland, VA. (80 FR 12357). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.9Z dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 amends Class E airspace extending upward from 700 feet above the surface within a 7-mile radius of Hanover County Municipal Airport, Ashland, VA, providing the controlled airspace required to support the new standard instrument approach procedures for IFR operations at the airport. The geographic coordinates of the airport are adjusted to be in concert with the FAA’s aeronautical database.

Class E airspace designations are published in Paragraph 6005 of FAA

Order 7400.9YZ, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures," paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71 —DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z,

Airspace Designations and Reporting Points, dated August 6, 2015, effective September 15, 2015, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward from 700 feet or More Above the Surface of the Earth

* * * * *

AEA VA E5 Ashland, VA [Amended]

Hanover County Municipal Airport, VA
(Lat. 37°42'32" N., long. 77°26'12" W.)

That airspace extending upward from 700 feet above the surface within a 7-mile radius of Hanover County Municipal Airport.

Issued in College Park, Georgia, on October 2, 2015.

Gerald E. Lynch,

*Acting Manager, Operations Support Group,
Eastern Service Center, Air Traffic
Organization.*

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part, A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes Class E airspace at Parlin Field Airport, Newport, NH.

History

On August 14, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to establish Class E airspace extending upward from 700 feet above the surface at Parlin Field Airport, Newport, NH, (80 FR 48766). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.9Z dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and

Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 establishes Class E airspace extending upward from 700 feet above the surface within a 12.1-mile radius of Parlin Field Airport, Newport, NH, providing the controlled airspace required to support the new RNAV (GPS) standard instrument approach procedures for Parlin Field Airport.

Class E airspace designations are published in Paragraph 6005 of FAA Order 7400.9Z, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures," paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2015–1136; Airspace
Docket No. 15–ANM–12]

Amendment of Class D and Class E Airspace, Revocation of Class E Airspace; Mountain Home, ID

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies Class D airspace, Class E surface area airspace, Class E airspace extending upward from 700 feet above the surface, and removes Class E surface area airspace designated

as an extension at Mountain Home AFB, Mountain Home, ID. The FAA found it necessary to amend the airspace area by increasing the Class D airspace and reducing the Class E airspace extending upward from 700 feet above the surface for the safety and management of Instrument Flight Rules (IFR) operations for arriving and departing aircraft at the airport and to change from navigation aids to geographic coordinate references in the legal description. This action updates the geographic coordinates of Mountain Home Municipal Airport, Mountain Home, ID.

DATES: Effective 0901 UTC, December 10, 2015. The Director of the Federal Register approves this incorporation by reference action under title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.9Z, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at http://www.faa.gov/air_traffic/publications/. SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use

of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes controlled airspace at Mountain Home AFB, ID.

History

On July 28, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to modify Class D airspace, Class E surface area airspace, Class E airspace extending upward from 700 feet above the surface, and remove Class E surface area airspace designated as an extension at Mountain Home AFB, Mountain Home, ID, (80 FR 44896). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. One comment was received from Mr. Ted Thompson expressing concern about the reduction of Class E airspace to the west of Mountain Home Municipal airport if an instrument approach is established from the west. In accordance with FAA Joint Order 7400.2K, airspace is established based upon existing procedures. Any changes to airspace that would be required by the development of a new instrument procedure would be addressed at that time. Subsequent to publication, the FAA found slight changes were necessary in the geographic coordinates noted in the legal description of the Class E airspace extending upward from 1,200 feet above surface.

Class D and Class E airspace designations are published in paragraph 5000, 6002, 6004, and 6005, respectively, of FAA Order 7400.9Z, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 modifies Class D airspace, Class E surface area airspace, Class E airspace

extending upward from 700 feet above the surface, and removes Class E surface area airspace as an extension at Mountain Home AFB, Mountain Home, ID. After a review, the FAA found an increase of the Class D airspace necessary to protect instrument arrival procedures at the airport. Class D airspace is extended upward from the surface to and including 5,500 feet within a 5-mile radius of Mountain Home AFB, extending to 6.5 miles to the southeast and northwest of the airport. Class E surface area airspace extends upward from the surface within a 5-mile radius of Mountain Home AFB, extending to 6.5 miles to the southeast and northwest of the airport. Class E airspace extending upward from 700 feet above the surface is modified to within a 7.7-mile radius northeast of Mountain Home AFB, extending to 12.4 miles to the northeast, and 17.7 miles to the east. The lateral boundary for that Class E airspace extending from 1,200 feet above the surface is defined utilizing latitude and longitude reference points instead of Federal airway reference, and does not change the lateral boundaries or operating requirements of the 1,200 foot airspace. This action also updates the geographic coordinates of Mountain Home Municipal Airport, Mountain Home, ID.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore, (1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1E, “Environmental Impacts: Policies and Procedures,” paragraph 311a. This airspace action is not expected to cause any potentially

significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015, is amended as follows:

Paragraph 5000 Class D airspace
* * * * *

ANM ID D Mountain Home, ID [Modified]

Mountain Home AFB, ID
(Lat. 43°02'37" N., long. 115°52'21" W.)

That airspace extending upward from the surface to and including 5,500 feet MSL within a 5-mile radius of the Mountain Home AFB and within 2 miles each side of the 135° bearing from the airport extending from the 5-mile radius to 6.5 miles southeast of the airport, and within 2 miles each side of the 315° bearing from the airport extending from the 5-mile radius to 6.5 miles northwest of the airport. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

Paragraph 6002 Class E Airspace Designated as Surface Areas
* * * * *

ANM ID E2 Mountain Home, ID [Modified]

Mountain Home AFB, ID
(Lat. 43°02'37" N., long. 115°52'21" W.)

That airspace extending upward from the surface within a 5-mile radius of the Mountain Home AFB, and within 2 miles each side of the 135° bearing from the airport extending from the 5-mile radius to 6.5 miles southeast of the airport, and within 2 miles each side of the 315° bearing from the airport extending from the 5-mile radius to 6.5 miles northwest of the airport.

Paragraph 6004 Class E Airspace Areas Designated as an Extension to a Class D or Class E Surface Area.

* * * * *

ANM ID E4 Mountain Home, ID [Removed]

Paragraph 6005 Class E Airspace areas extending upward from 700 feet or more above the surface of the earth

* * * * *

ANM ID E5 Mountain Home, ID [Modified]

Mountain Home AFB, ID

(Lat. 43°02'37" N., long. 115°52'21" W.)

Mountain Home Municipal Airport

(Lat. 43°07'54" N., long. 115°43'50" W.)

That airspace extending upward from 700 feet above the surface bounded by a line beginning at lat. 43°06'48" N., long. 115°28'39" W.; to lat. 43°02'06" N., long. 115°31'12" W.; to lat. 43°03'25" N., long. 115°36'21" W.; to lat. 42°54'24" N., long. 115°48'41" W.; to lat. 42°54'24" N., long. 115°56'47" W.; to lat. 43°00'12" N., long. 116°04'42" W.; to lat. 43°06'51" N., long. 116°01'24" W.; to lat. 43°09'22" N., long. 115°57'57" W.; to lat. 43°12'54" N., long. 115°42'51" W., thence to point of beginning, that airspace extending upward from 1,200 feet above the surface bounded by a line beginning at lat. 43°33'06" N., long. 116°11'32" W.; to lat. 42°48'43" N., long. 115°00'21" W.; to lat. 42°23'58" N., long. 115°00'21" W.; to lat. 42°23'58" N., long. 115°18'28" W.; thence clockwise along the 46.0-mile radius of Mountain Home AFB to lat. 43°09'17" N., long. 116°54'28" W.; thence to point of beginning.

Issued in Seattle, Washington, on October 1, 2015.

Christopher Ramirez,

Manager, Operations Support Group, Western Service Center.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA-2014-0967; Airspace Docket No. 14-ASO-19]

Amendment of Class E Airspace; Ponce, PR

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Class E Airspace at Ponce, PR, as the PONCE VHF Omni-Directional Radio Range Tactical Air Navigation Aid, (VORTAC) has been decommissioned, requiring airspace redesign at Mercedita Airport. This action enhances the safety and management of Instrument Flight Rules (IFR) operations at the airport.

DATES: Effective 0901 UTC, December 10, 2015. The Director of the Federal Register approves this incorporation by reference action under title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.9Z, Airspace Designations and Reporting Points, and subsequent amendments can be viewed on line at <http://www.faa.gov/airtraffic/publications/>. For further information, you can contact the Airspace Policy and Regulations Group, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC, 20591; telephone: 202-267-8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to <http://www.archives.gov/federal-register/code-of-federal-regulations/ibr-locations.html>.

FAA Order 7400.9, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace at Mercedita Airport, Ponce, PR.

History

On July 16, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to amend Class E surface area airspace at Mercedita Airport, Ponce, PR, due to the decommissioning of the Ponce VORTAC (80 FR 42068). Interested parties were

invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6002 of FAA Order 7400.9Z dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 amends Class E surface area airspace at Mercedita Airport, Ponce, PR.

Airspace reconfiguration to within a 4.1-mile radius of the airport is necessary due to the decommissioning of the Ponce VORTAC and cancellation of the VOR approach, and for continued safety and management of IFR operations at the airport.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion

under the National Environmental Policy Act in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures," paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71:

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71 —DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120, E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, effective September 15, 2015, is amended as follows:

Paragraph 6002 Class E Airspace Designated as Surface Areas

* * * * *

ASO PR E2 Ponce, PR [Amended]

Mercedita Airport, PR

(Lat. 18°00'30" N., long. 66°33'47" W.)

Within a 4.1-mile radius of Mercedita Airport. This Class E airspace is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

Issued in College Park, Georgia, on October 2, 2015.

Gerald E. Lynch,

Acting Manager, Operations Support Group, Eastern Service Center, Air Traffic Organization.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the

authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes controlled airspace at Cottonwood, AZ.

History

On August 5, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to establish Class E airspace extending upward from 700 feet above the surface at Cottonwood Airport, Cottonwood, AZ, (80 FR 46525). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designation is published in paragraph 6005, of FAA Order 7400.9Z, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 establishes Class E airspace extending upward from 700 feet above the surface at Cottonwood Airport, Cottonwood, AZ. New standard instrument approach procedures have been developed for IFR operations at the airport. The Class E airspace is established to within a 4-mile radius of Cottonwood Airport, with a segment extending from the 4-mile radius to 15 miles southeast of the airport.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which

frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures," paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part, A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes Class E airspace at Searcy County Airport, Marshall, AR

History

On August 13, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to establish Class E airspace extending upward from 700 feet above the surface at Searcy County Airport, Marshall, AR, copied incorrectly as Concordia Parish Airport, (80 FR 48470). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.9Z, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists

Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This action amends Title 14, Code of Federal Regulations (14 CFR), Part 71 by establishing Class E airspace extending upward from 700 feet above the surface within an 11.2-mile radius of Searcy County Airport, Marshall, AR, to accommodate new Standard Instrument Approach Procedures for IFR operations at the airport.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures" paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ASW AR E5 Marshall, AR [New]

Searcy County Airport, AR
(Lat. 35°53'55" N., long. 092°39'23" W.)

That airspace extending upward from 700 feet above the surface within a 11.2-mile radius of Searcy County Airport.

Issued in Fort Worth, TX, on October 7, 2015.

Robert W. Beck,

Manager, Operations Support Group, ATO Central Service Center.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31041; Amdt. No. 3664]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide for the safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective October 16, 2015. The compliance date for each SIAP, associated Takeoff Minimums,

and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of October 16, 2015.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops–M30, 1200 New Jersey Avenue SE., West Bldg., Ground Floor, Washington, DC 20590–0001;

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The office of Aeronautical Navigation Products, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center online at nfdc.faa.gov to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT:

Richard A. Dunham III, Flight Procedure Standards Branch (AFS–420) Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) by amending the referenced SIAPs. The complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (NFDC)/Permanent Notice to Airmen (P–NOTAM), and is incorporated by reference under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further,

airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained on FAA form documents is unnecessary. This amendment provides the affected CFRs, and specifies the SIAPs and Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and/or ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP and Takeoff Minimums and ODP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP and Takeoff Minimums and ODP as modified by FDC permanent NOTAMs.

The SIAPs and Takeoff Minimums and ODPs, as modified by FDC permanent NOTAM, and contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures

(TERPS). In developing these changes to SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for these SIAP and Takeoff Minimums and ODP amendments require making them effective in less than 30 days.

Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making these SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore— (1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Air Traffic Control, Airports, Incorporation by reference, Navigation (air).

Issued in Washington, DC, on September 25, 2015.

John Duncan,

Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Title 14, Code of Federal regulations, Part 97, (14 CFR part 97), is amended by amending Standard Instrument Approach Procedures and Takeoff Minimums and ODPs, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33, 97.35 [AMENDED]

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, Identified as follows:

14 CFR Part 97

[Docket No. 31040; Amdt. No. 3663]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule establishes, amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures (ODPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective October 16, 2015. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of October 16, 2015.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops–M30, 1200 New Jersey Avenue SE., West Bldg., Ground Floor, Washington, DC 20590–0001.

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The office of Aeronautical Navigation Products, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center at nfdc.faa.gov to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Richard A. Dunham III, Flight Procedure Standards Branch (AFS–420), Flight Technologies and Programs Divisions, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082, Oklahoma City, OK 73125) Telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION:

This rule amends Title 14 of the Code of Federal Regulations, Part 97 (14 CFR part 97), by establishing, amending, suspending, or removes SIAPs, Takeoff Minimums and/or ODPS. The complete regulatory description of each SIAP and its associated Takeoff Minimums or ODP for an identified airport is listed on FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR part § 97.20. The applicable FAA forms are FAA Forms 8260–3, 8260–4, 8260–5, 8260–15A, and 8260–15B when required by an entry on 8260–15A.

The large number of SIAPs, Takeoff Minimums and ODPs, their complex nature, and the need for a special format make publication in the **Federal Register** expensive and impractical. Further, airmen do not use the

regulatory text of the SIAPs, Takeoff Minimums or ODPS, but instead refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP, Takeoff Minimums and ODP listed on FAA form documents is unnecessary. This amendment provides the affected CFRs and specifies the types of SIAPs, Takeoff Minimums and ODPS with their applicable effective dates. This amendment also identifies the airport and its location, the procedure, and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and/or ODPS as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP, Takeoff Minimums and ODP as Amended in the transmittal. Some SIAP and Takeoff Minimums and textual ODP amendments may have been issued previously by the FAA in a Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for some SIAP and Takeoff Minimums and ODP amendments may require making them effective in less than 30 days. For the remaining SIAPs and Takeoff Minimums and ODPS, an effective date at least 30 days after publication is provided.

Further, the SIAPs and Takeoff Minimums and ODPS contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs and Takeoff Minimums and ODPS, the TERPS criteria were applied to the conditions existing or anticipated at the

affected airports. Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C 553(d), good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) is amended by establishing, amending, suspending, or removing Standard Instrument Approach Procedures and/or Takeoff Minimums and Obstacle Departure Procedures effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

Effective 12 NOVEMBER 2015

Arcata/Eureka, CA, Arcata, RNAV (GPS) RWY 32, Amdt 1C

Greenville, PA, Greenville Muni, RNAV (GPS–B, Orig

Greenville, PA, Greenville Muni, Takeoff Minimums and Obstacle DP, Orig

BILLING CODE 4910–13–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2015–0948]

Drawbridge Operation Regulations; James River, Isle of Wight and Newport News, VA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulations.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the James River Bridge (US 17 and VA 258) across the James River, mile 5.0, between Isle of Wight and Newport News, VA. This deviation allows the bridge to remain in the closed-to-navigation position to facilitate work on electrical control and power wiring systems on the bridge.

DATES: This deviation is effective from 8 a.m. on October 16, 2015, until 8 p.m. on October 19, 2015.

ADDRESSES: The docket for this deviation, [USCG–2015–0948], is available at <http://www.regulations.gov>. Type the docket number in the “SEARCH” box and click “SEARCH”. Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Mr. Hal R. Pitts, Bridge Administration Branch Fifth District, Coast Guard; telephone (757) 398–6222, email Hal.R.Pitts@uscg.mil.

SUPPLEMENTARY INFORMATION: The Virginia Department of Transportation, who owns and operates the James River Bridge (US 17 and VA 258), has requested a temporary deviation from the current operating regulations to facilitate work on electrical control and power wiring systems on the bridge. The bridge is a vertical lift draw bridge and has a vertical clearance in the closed position of 60 feet above mean high water.

The current operating schedule is set out in 33 CFR 117.5. Under this temporary deviation, the bridge will remain in the closed-to-navigation position from 8 a.m. on October 16, 2015 until 8 p.m. on October 19, 2015.

The James River is used by a variety of vessels including deep draft ocean-going vessels, U. S. government vessels, small commercial fishing vessels, recreational vessels and tug and barge traffic. The Coast Guard has carefully coordinated the restrictions with U. S. government and commercial waterway users.

Vessels able to pass through the bridge in the closed position may do so at anytime. The bridge will not be able to open for emergencies and there is no alternate route for vessels unable to pass through the bridge in the closed position. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notice to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impacts caused by this temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: October 13, 2015.

Hal R. Pitts,

Bridge Program Manager, Fifth Coast Guard District.

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG-2015-0944]

Drawbridge Operation Regulations; Atlantic Intracoastal Waterway, South Branch of the Elizabeth River, Portsmouth and Chesapeake, VA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulations.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Belt Line Railroad Bridge across the South Branch of the Elizabeth River, mile 2.6, between Portsmouth and Chesapeake, VA. This deviation allows the bridge to remain in the closed-to-navigation position to facilitate a tie replacement project.

DATES: This deviation is effective without actual notice from October 16, 2015 until 6 p.m. on October 23, 2015. For the purposes of enforcement, actual notice will be used from 7 a.m. on

October 16, 2015, until October 16, 2015.

ADDRESSES: The docket for this deviation, [USCG-2015-0944], is available at <http://www.regulations.gov>. Type the docket number in the "SEARCH" box and click "SEARCH". Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Mr. Hal R. Pitts, Bridge Administration Branch Fifth District, Coast Guard; telephone (757) 398-6222, email Hal.R.Pitts@uscg.mil.

SUPPLEMENTARY INFORMATION: The Norfolk and Portsmouth Belt Line Railroad Company, who owns and operates the Belt Line Railroad Bridge, has requested a temporary deviation from the current operating regulations to facilitate a tie replacement project on the bridge. The bridge is a vertical lift draw bridge and has a vertical clearance in the closed position of 6 feet above mean high water.

The current operating schedule is set out in 33 CFR 117.997(a). Under this temporary deviation, the bridge will remain in the closed-to-navigation position from 7 a.m. to 6 p.m., except for scheduled daily openings at 9 a.m., 12 noon, and 3 p.m., from October 16, 2015 through October 23, 2015. During this temporary deviation, the bridge will operate per 33 CFR 117.997(a) from 6 p.m. to 7 a.m. The South Branch of the Elizabeth River is used by a variety of vessels including deep draft ocean-going vessels, U.S. government vessels, small commercial vessels, recreational vessels and tug and barge traffic. The Coast Guard has carefully coordinated the restrictions with commercial and recreational waterway users.

Vessels able to pass through the bridge in the closed position may do so at any time. The bridge will be able to open for emergencies and there is no alternate route for vessels unable to pass through the bridge in the closed position. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notice to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impacts caused by this temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: October 13, 2015.

Hal R. Pitts,

Bridge Program Manager, Fifth Coast Guard District.

BILLING CODE 9110-04-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R09-OAR-2015-0240; FRL-9935-56-Region 9]

Approval of Implementation Plans; Arizona, Phoenix-Mesa; 2008 Ozone Standard Requirements

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking direct final action to approve revisions to the Arizona State Implementation Plan (SIP) concerning the emission inventory, emission statements, reasonably available control technology corrections and the vehicle inspection and maintenance requirements for the Phoenix-Mesa 2008 eight-Hour Ozone National Ambient Air Quality Standard (NAAQS) Marginal nonattainment area. We are approving these revisions under the Clean Air Act (CAA or the Act).

DATES: This rule is effective on December 15, 2015 without further notice, unless the EPA receives adverse comments by November 16, 2015. If we receive such comments, we will publish a timely withdrawal in the **Federal Register** to notify the public that this direct final rule will not take effect.

ADDRESSES: Submit comments, identified by docket number [EPA-R09-OAR-2015-0240] by one of the following methods:

1. *Federal eRulemaking Portal:* www.regulations.gov. Follow the on-line instructions.

2. *Email:* levin.nancy@epa.gov.

3. *Mail or deliver:* Nancy Levin (Air-4), U.S. Environmental Protection Agency Region IX, 75 Hawthorne Street, San Francisco, CA 94105-3901.

Instructions: Once submitted, comments cannot be edited or withdrawn. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. If you need to include CBI as part of your comment, please visit <http://www.epa.gov/>

dockets/comments.html for further instructions. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. For the full EPA public comment policy and general guidance on making effective comments, please visit <http://www.epa.gov/dockets/comments.html>.

Docket: Generally, documents in the docket for this action are available electronically at www.regulations.gov or in hard copy at EPA Region IX, 75 Hawthorne Street, San Francisco, California 94105–3901. While all documents in the docket are listed at www.regulations.gov, some information may be publicly available only at the hard copy location (e.g., copyrighted material, large maps), and some may not be publicly available in either location (e.g., CBI). To inspect the hard copy materials, please schedule an appointment during normal business hours with the contact listed in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Nancy Levin, EPA Region IX, (415) 972–3848, Levin.nancy@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document, “we,” “us,” and “our” refer to the EPA.

I. Background

On March 12, 2008, the EPA strengthened the primary and secondary eight-hour ozone NAAQS to 0.075 ppm (annual fourth-highest daily maximum eight-hour concentration, averaged over three years) (73 FR 16436).¹ In accordance with section 107(d) of the CAA, the EPA must designate an area “nonattainment” if it is violating the NAAQS or if it is contributing to a violation of the NAAQS in a nearby area. The EPA designated the Phoenix-

¹ Since the 2008 primary and secondary NAAQS for ozone are identical, for convenience, we refer to both as “the 2008 ozone NAAQS” or “the 2008 ozone standards.”

Mesa (hereinafter referred to as “Maricopa”) area as nonattainment for the 2008 ozone NAAQS on May 21, 2012, effective July 20, 2012 (77 FR 30088). The Maricopa nonattainment area (NAA), which includes a portion of Maricopa County and a portion of Pinal County, was classified by operation of law as a Marginal nonattainment area (40 CFR 81.303). The Arizona Department of Environmental Quality (ADEQ) submitted the “Maricopa Association of Governments 2014 Eight-Hour Ozone Plan—Submittal of Marginal Area requirements for the Maricopa Nonattainment Area (June 2014)” (“MAG 2014 Eight-Hour Ozone Plan” or “Submittal”) on July 2, 2014.

The EPA proposed the 2008 ozone NAAQS SIP Requirements Rule (SRR) on June 6, 2013 (78 FR 34178) and finalized the SRR on March 6, 2015 (80 FR 12264, codified at 40 CFR part 51, subpart AA), effective April 6, 2015. The SRR both promulgated implementation requirements for the 2008 ozone NAAQS and revoked the 1997 ozone NAAQS.²

On August 27, 2015, the EPA proposed to reclassify the Maricopa NAA as Moderate for the 2008 ozone NAAQs because the Maricopa NAA failed to attain the 2008 ozone NAAQS by the Marginal area attainment deadline of July 20, 2015 (80 FR 51992). Should this action be finalized, the Maricopa NAA would be subject to additional requirements, including (1) an attainment demonstration; (2) provisions for reasonably available control technology (RACT) and reasonably available control measures (RACM); (3) reasonable further progress (RFP) reductions in volatile organic compounds (VOC) and/or nitrogen oxide (NO_x) emissions; (4) contingency measures; (5) a vehicle inspection and maintenance program; and (6) NO_x and VOC emission offsets at a ratio of 1.15 to 1 for major source permits (see 40 CFR part 51, subpart AA and CAA sections 182(b) and 172(c)). A SIP revision addressing all of these requirements would be due to the EPA by January 1, 2017.³

II. Procedural Requirements for Adoption and Submittal of SIP Revisions

CAA section 110(a)(1) and 110(l) require states to provide reasonable notice and public hearing prior to adoption of SIP revisions. Section 110(k)(1)(B) requires the EPA to

² The SRR revokes the 1997 NAAQS, but not all of the requirements for implementing the 1997 NAAQS.

³ 80 FR 51992, 51999.

determine whether a SIP submittal is complete within 60 days of receipt. Any plan that we have not affirmatively determined to be complete or incomplete will become complete six months after the day of submittal by operation of law. A finding of completeness does not approve the submittal as part of the SIP nor does it indicate that the submittal is approvable. It does start a 12-month clock for the EPA to act on the SIP submittal (see CAA section 110(k)(2)).

ADEQ’s Submittal documents the public review process followed by MAG and ADEQ in adopting the “MAG 2014 Eight-Hour Ozone Plan—Submittal of Marginal Area Requirements for the Maricopa Nonattainment Area” prior to submittal to the EPA as a revision to the SIP (See Appendix B.1). In addition, ADEQ’s Submittal documents the adoption of the MAG 2014 Eight-Hour Ozone Plan by the MAG Regional Council and includes a letter dated June 27, 2014 from MAG to ADEQ, requesting that ADEQ submit the MAG 2014 Eight-Hour Ozone Plan to the EPA for approval.

Based on the documentation included in ADEQ’s Submittal, we find that the submittal of the MAG 2014 Eight-Hour Ozone Plan, as a SIP revision, satisfies the procedural requirements of sections 110(a)(1) and 110(l) of the Act requiring states to provide reasonable notice and public hearing prior to adoption of SIP revisions. The MAG 2014 Eight-Hour Ozone Plan became complete by operation of law on January 2, 2015 pursuant to section 110(k)(1)(B). The technical support document (TSD) for our action has more information on our evaluation.

III. Analysis of the State’s Submittal

For Marginal nonattainment areas, states are required to comply with sections 172(c) and 182(a) of the Act. Marginal areas have up to three years from the effective date of designation to attain the NAAQS (40 CFR 51.1103(a)). Unlike areas classified as Moderate and above, Marginal areas are not required to submit an attainment demonstration or RFP provisions (see CAA section 182(a) and 80 FR 12268). Below we summarize the CAA and SRR requirements, how they are addressed in the Submittal, and our recommended action. Please refer to the TSD in the docket for this action for additional information.

A. Base Year Emissions Inventory

1. Statutory and Regulatory Requirements

CAA section 182(a)(1) and 40 CFR 51.1115(a) require states to submit a “base year inventory” for each 2008 ozone nonattainment area within two years of the effective date of designation. This inventory must be “a comprehensive, accurate, current inventory of actual emissions from sources of VOC and NO_x emitted within the boundaries of the nonattainment area as required by CAA section 182(a)(1)” (40 CFR 51.1100(bb), see also CAA section 172(c)(3)). The inventory year must be selected consistent with

the baseline year for the RFP plan, which is typically the most recent calendar year for which a complete triennial inventory is required to be submitted to the EPA under the Air Emissions Reporting Requirements (AERR) (40 CFR part 51, subpart A) (see 40 CFR 51.1115(a), 51.1110(b)). The emission values in the base year must be “actual ozone season day emissions,” *i.e.* “an average day’s emissions for a typical ozone season work weekday.” (40 CFR 51.1115(c), 51.1100(cc)).

2. Summary of the State’s Submittal

The Maricopa County Air Quality Department (MCAQD) prepared a base year emissions inventory, with the

assistance of MAG, and MAG submitted the base year inventory as part of the MAG 2014 Eight-hour Ozone Plan.⁴ MCAQD selected 2011 as the base year. The base year inventory includes ozone season-day emissions from point sources, area sources, nonroad mobile sources, and on-road mobile sources. Appendix A, Exhibit 1 of the MAG 2014 Eight-Hour Ozone Plan includes a description of the methods used to estimate emissions for each category (or subcategory).

The following is a summary of the 2011 Maricopa NAA Emissions Inventory.⁵

MARICOPA NAA 2011 BASE YEAR EIGHT-HOUR OZONE SEASON DAY EMISSION INVENTORY
[July–September]

Category	VOC lbs/day	% of Total	NO _x lbs/day	% of Total
Point sources	4,908	1	15,407	3.1
Area sources:				
Fuel combustion	593	0.1	23,484	4.8
Industrial processes	17,452	4	1,490	0.3
Solvent use	166,557	34	0	0
Storage/transport	28,766	6	0	0
Waste treatment/disposal	838	0	316	0.1
Miscellaneous area sources	13,650	3	6,532	1.3
Mobile—Non road sources	111,798	23	141,444	28.8
Mobile—On road sources	148,186	30	301,824	61.5
Total (excluding biogenic) *	492,748	100	490,495	100.0

* Differences due to rounding.

The TSD for this action contains more information about how MCAQD developed the emission inventory (EI) data for each category of sources.

3. EPA Evaluation of the State’s Submittal

The EPA has reviewed the 2011 ozone season day base year inventory including emission estimates for point source, area source, nonroad and onroad sources. We find that MCAQD’s selection of 2011 as the base year is appropriate because 2011 was the most recent calendar year for which a complete triennial inventory was required to be submitted to the EPA under the AERR (see 40 CFR 51.30(b)).

We also find that the data elements in the base year inventory are “consistent with the detail” required by the AERR. Generally, MCAQD used published emission factors from EPA’s National Emissions Inventory,⁶ made assumptions consistent with the EPA’s Emission Inventory Improvement Program Guidance,⁷ and used the most recent EPA models available at the time of inventory preparation. In addition, the Submittal provides sufficient documentation and explanation to allow the EPA to make a determination on the acceptability of the base year inventory.

However, we believe that MCAQD’s initial selection of July–September as the basis for calculating the “ozone

season day emissions” was not appropriate because it was based on 1981–1991 exceedance data for a previous ozone NAAQS.⁸ Accordingly, we requested that MCAQD review more recent ozone monitoring data. Upon review of these data, MCAQD determined that the appropriate months to use to calculate ozone season day emissions are June–August.⁹ Therefore, MCAQD provided a “recast” ozone season day EI for June–August.¹⁰ The MCAQD’s “recast” analysis shows that, compared with the July–September EI, the June–August EI showed a small net increase in season day emissions for anthropogenic sources: VOC increased 0.41 and NO_x increased 2.15. MCAQD

⁴ MAG 2014 Eight-hour Ozone Plan, Table 1—Summary Table of Nonattainment Area Emissions from the Maricopa County Air Quality Department 2011 Periodic Emissions Inventory for Ozone Precursors, February 2014, page 5. See also Appendix A, Exhibit 1.

⁵ MAG 2014 Eight-Hour Ozone Plan, Table 1, pp. 5–6.

⁶ The National Emissions Inventory (NEI) is a comprehensive and detailed estimate of air emissions of air pollutants from all air emissions sources. The NEI is prepared every three years by the EPA based primarily upon emission estimates

and emission model inputs provided by State, Local and Tribal air agencies for sources in their jurisdictions, and supplemented by data developed by the EPA. See <http://www3.epa.gov/ttn/chief/eiinformation.html>.

⁷ See, e.g., EPA, Emissions Inventory Improvement Program (EIIP), Volume III, Chapter 1. Introduction to Area Source Emission Inventory Development (Revised Final January 2001), Chapter 11. Gasoline Marketing (Stage I and Stage II) (Revised Final January 2001); Chapter 18. Structure Fires (Revised Final January 2001), and Area Source Category Method Abstract—Leaking Underground Storage Tanks, May 2001.

⁸ See Appendix A, Exhibit 1: 2011 Periodic Emissions Inventory for Ozone Precursors for the Maricopa County, Arizona, Eight-Hour Ozone Nonattainment Area. Maricopa County Air Quality Department, February 2014. An “exceedance” is an ambient concentration that exceeds the relevant NAAQS.

⁹ Maricopa County Air Quality Department, 2011 Periodic Emissions Inventory for Ozone Precursors for the Maricopa County, Arizona, Eight-Hour Ozone Nonattainment Area, Addendum, August 2015, section 3.1.

¹⁰ *Ibid.* section 3.2.

also added emission reduction credits (ERCs) to the June–August EI for point sources. Total VOC ERCs were adjusted from 114.7 to 213.03 tons/year (1,167 lbs/season day) and total NO_x ERCs were adjusted from 9.8 to 14.14 tons/year (77.5 lbs/season day) to account for additional VOC and NO_x ERCs.¹¹

We agree with MCAQD that using June–August to calculate ozone season day emissions for the base year inventory is appropriate for the Maricopa NAA, given that it was the three-month period with the highest average Air Quality Index value and the greatest number of exceedances of the 2008 ozone standard in the NAA in 2011. However, in light of the relatively small differences in total anthropogenic emissions between the June–August 2011 and July–September 2011 periods, we do not believe it is necessary for MCAQD, MAG and ADEQ to submit a formal SIP revision reflecting the June–August period at this time. Accordingly, we find that the base year emission estimates approaches and methodologies are acceptable and that the state has met the requirements of the Act and the SRR with respect to base year inventories. We recommend that a revised 2011 season-day EI based on June–August data be included as part of a subsequent SIP revision to meet the CAA’s Moderate ozone nonattainment area requirements, as described above.

B. Emission Statements

1. Statutory and Regulatory Requirements

Section 182(a)(3)(B)(i) of the Act requires States to submit a SIP revision requiring owners or operators of stationary sources of VOC or NO_x to provide the State with statements of actual emissions from such sources. Statements must be submitted at least every year and must contain a certification that the information contained in the statement is accurate to the best knowledge of the individual certifying the statement. Section 182(a)(3)(B)(ii) allows States to waive the emission statement requirement for any class or category of stationary sources that emit less than 25 tons per year of VOCs or NO_x, if the state provides an inventory of emissions from such class or category of sources as part of the baseline or periodic inventory. This inventory must be based on the use of the emission factors established by the EPA or other methods acceptable to the EPA.

¹¹ ERCs from Penn Racquet Sports Inc. (March 6, 2009). See Addendum, Table A.1.

2. Summary of the State’s Submittal

ADEQ references three SIP-approved rules as meeting the requirements of CAA section 182(a)(3)(B): Maricopa County Rule 100, Section 500—Monitoring and Records, ADEQ Rule 18–2–327—Annual Emissions Inventory Questionnaire and Pinal County rule PG3–1–103—Annual EI questionnaire.

3. EPA Evaluation of the State’s Submittal

Maricopa County Rule 100 (Section 500, Subsection 503) (approved into the Arizona SIP on November 5, 2012 (77 FR 66405)) requires owners/operators of sources that emit NO_x or VOC to submit, upon request of the Control Officer, emission statements showing actual or estimated actual emissions of NO_x and VOC, containing (at a minimum) all information required by Consolidated Emissions Reporting Rule,¹² 40 CFR subpart A, appendix A, table 2a.¹³ Section 503 also requires that Emissions Statements be submitted annually. The Control Officer may waive this requirement for the owner/operator of any source that emits less than 25 tons per year of NO_x or VOC with an approved emission inventory for sources based on AP–42 or other methodologies approved by the EPA.

ADEQ Rule 18–2–327, Annual Emissions Inventory Questionnaire (approved into the Arizona SIP on November 5, 2012 (77 FR 66405)), requires every source subject to air permit requirements to complete and submit an annual emissions inventory questionnaire including facility contact information, process and control device descriptions, and a quantification of actual emissions of regulated air pollutants¹⁴ using the appropriate quantification method as described in the rule.

Pinal County Rule PG3–1–103 (approved into the Arizona SIP on December 20, 2000 (65 FR 79742)) requires every source that is subject to a permit or obtains an authorization to operate, to complete and submit to the Control Officer an annual emissions inventory questionnaire. The questionnaire must include the source’s name, address, contact information,

¹² The Consolidated Emissions Reporting Rule is now part of the AERR (see 73 FR 76539).

¹³ Appendix G of the Maricopa County Air Pollution Control Rules, section 4, specifies that 40 CFR, Subpart A, Appendix A, Table 2a is incorporated by reference as of July 1, 2014. Table 2a was revised on February 19, 2015 (80 FR 8787, 8790).

¹⁴ Regulated air pollutant is defined by SIP-approved ADEQ rule R18–2–101, section 120 to include NO_x and VOC. (See 40 CFR 52.120(c)(162)(i)(A)(2),

address, and process information (e.g., including design capacity, operations schedule, emission control devices).¹⁵

Based on the contents of these rules, we find that Arizona has met the requirements of CAA section 182(a)(3)(B) for emission statements.

C. Reasonably Available Control Technology Corrections

1. Statutory and Regulatory Requirements

Section 182(a)(2)(A) of the CAA requires the State to submit, within six months of classification under section 181(a), all rules and corrections to existing RACT rules that were required under section 172(b) of the old (pre-1990 Amendments) CAA. Newly designated nonattainment areas are not subject to the RACT “fix-ups” required by section 182(a)(2)(A) because they were not subject to section 172(b) of the old law (see 57 FR 13498, 13503).

2. Summary of the State’s Submittal

The Submittal lists the SIP-approved Rules that apply to source categories subject to CAA section 182(a)(2)(A) and notes that the EPA approved Arizona’s RACT demonstration for the Maricopa County 1-hour Serious Area Ozone NAA on June 14, 2005 (70 FR 34362).

3. EPA Evaluation of the State’s Submittal

As noted in the Submittal, the EPA previously determined that Arizona had met the VOC RACT requirements under section 182(a)(2)(A) for the Maricopa one-hour ozone NAA (see 70 FR 13435 and 70 FR 34363). Although the NAA for the 2008 eight-hour ozone standard is larger than that the one-hour NAA, only the original one-hour area is subject to the RACT correction requirement of 182(a)(2)(A). Therefore, we find that Arizona has met the requirements of CAA section 182(a)(2)(A) with respect to the Maricopa 2008 eight-hour ozone NAA.

D. Vehicle Inspection and Maintenance Programs

1. Statutory and Regulatory Requirements

Section 182(a)(2)(B)(i) of the Act requires the State to submit a revision, immediately after November 15, 1990, to correct any pre-1990 schedules for vehicle emission control inspection and

¹⁵ On September 27, 2006 ADEQ submitted an amendment to PG Rule 3–1–103, however, the change does not substantively change the rule. Rather it reflected ADEQ’s reclassification of Class A and Class B permits to Class I, Class II, and Class III. Under this amendment, the term “Class B permits” is replaced by “Class II or Class II permits.”

maintenance programs, immediately after November 15, 1990. In addition, section 182(a)(2)(B)(ii) requires that the State shall review, revise, update, and republish in the **Federal Register** the guidance for the States for motor vehicle inspection and maintenance (I/M) programs within 1 year of November 15, 1990. The EPA's I/M regulations are codified at 40 CFR part 51, subpart S ("Inspection/Maintenance Program Requirements"), sections 51.350 through 51.373. As explained in the preambles to proposed and final SRR, no new vehicle I/M programs are currently required for purposes of the 2008 ozone NAAQS (78 FR 34194–34196, 80 FR 12283).

2. Summary of the State's Submittal

The Submittal notes that the EPA approved ADEQ's Basic and Enhanced Vehicle Emissions Inspection and Maintenance Programs on January 22, 2003, and approved a statutory provision extending the State's vehicle emissions inspection program on December 21, 2009 (74 FR 67819).

3. EPA Evaluation of the State's Submittal

As noted in the Submittal, the EPA previously approved an "enhanced" I/M program that exceeds the requirements of section 182(a)(2)(B) for the Phoenix-Mesa nonattainment area (69 FR 2912 (January 22, 2003)). Therefore, we find that Arizona has met the requirements of CAA section 182(a)(2)(B) with respect to the Maricopa 2008 eight-hour ozone NAA.

E. Permit Programs: Nonattainment Area Preconstruction, New Source Review

1. Statutory and Regulatory Requirements

Section 182(a)(2)(C) of the Act, requires states to submit a SIP revision within two years after November 15, 1990 to require pre-construction permits for new or modified major stationary sources in the NAA, and to correct requirements regarding pre-1990 permit programs. However, as explained in the preambles to the EPA's final Phase 2 implementation rule for the 1997 eight-hour standard and the final SRR, the EPA considers the submission of new source review (NSR) SIPs due on November 15, 1992 to have fulfilled this CAA requirement (See 75 FR 71683, n. 110, and 80 FR 12267). Therefore, the EPA has concluded that the two-year deadline contained in CAA section 182(a)(2)(C)(i) does not apply to subsequent NSR SIPs for revised ozone standards, including the nonattainment

NSR SIPs for implementing the eight-hour ozone NAAQS. (Id.) Accordingly, the SRR at 40 CFR 51.1114 sets a deadline of three years from the date of designation for states to submit their nonattainment NSR program SIPs for the 2008 ozone NAAQS.

2. Summary of the State's Submittal

The Submittal describes the roles of ADEQ, MCAQD and PCAQCD in implementing the preconstruction permit program in the Maricopa NAA. In particular, the Submittal explains that ADEQ has permitting jurisdiction for the following stationary source categories: smelting of metal ores, coal-fired electric generating stations, petroleum refineries, Portland cement plants, and portable sources. ADEQ also has permitting jurisdiction over other major sources in Pinal County, but has delegated implementation of the major source program to PCAQCD, which implements ADEQ's major NSR rules. MCAQD has jurisdiction over other sources in Maricopa County. The Submittal also described various SIP revisions submitted by ADEQ to meet nonattainment NSR requirements.

3. EPA Evaluation of the State's Submittal

The EPA recently finalized a limited approval and limited disapproval of various rules that comprise ADEQ's NSR program.¹⁶ We expect that ADEQ will revise these rules in the near future. With regard to MCAQD's rules, we note that ADEQ had submitted MCAQD Rule 240—Permits for New Major Sources and Major Modifications to Existing Major Sources to the EPA on August 31, 1995, but withdrew it on April 25, 2014 in order to revise and resubmit it to the EPA for SIP approval. ADEQ published a proposed notice of rulemaking for amendments to Rule 240 and other related rules on August 31, 2015.¹⁷ Given the expected submittal of revised ADEQ and MCAQD NSR rules in the near future, we are deferring action on this element of the MAG 2014 Eight-Hour Ozone Plan at this time.

F. Offset Requirements

CAA Section 173 requires new and modified major sources in

¹⁶ Final rule, Revisions to Air Plan; Arizona; Stationary Sources; New Source Review (pre-publication version, signed June 29, 2015).

¹⁷ On July 31, 2015 the Arizona Secretary of State published a notice of proposed rulemaking to amend MCAQD's rules relating to NSR, including Rule 240. See Arizona Administrative Register (AAR) Vol. 21, Issue 31, page 1302 (July 31, 2015), available at: http://apps.azsos.gov/public_services/register/2015/31/28_county_notices.pdf. It also announced a 30-day comment period that ended August 31, 2015.

nonattainment areas to secure emissions reductions (*i.e.*, "offsets") to compensate for a proposed emissions increase. For Marginal areas, section 182(a)(4) of the Act sets a general offset ratio of 1.1 to 1 for total VOC and NO_x emission reductions as compared to VOC and NO_x emission increases. The Submittal references ADEQ Rule R18–2–404(f) and Maricopa County Air Pollution Control Regulations, Rule 240, Section 306.3 as fulfilling the requirements of CAA section 182(a)(4). Given the expected submittal of revised ADEQ and MCAQD NSR rules in the near future, we are deferring action on this element of the MAG 2014 Eight-Hour Ozone Plan at this time.

G. Transportation Conformity

The Submittal lists "Meet Transportation Conformity Requirements—CAA Section 176(c)" as a marginal area requirement. We note that motor vehicle emission budgets, used in transportation conformity determinations, are not required for marginal areas because such areas are not required to submit a "control strategy implementation plan revision."¹⁸ However, as noted above, the EPA has proposed to reclassify the Maricopa NAA to Moderate nonattainment. If the reclassification is finalized, MAG would be required to develop motor vehicle emission budgets as part of a Moderate area attainment demonstration. In the meantime, MAG may continue to rely on its emission budgets for the 1997 ozone NAAQS,¹⁹ which the EPA approved on September 17, 2014 (79 FR 55645). Accordingly, we are not taking further action on these budgets at this time.

IV. Final Action

The EPA is taking direct final action to approve the MAG 2014 Eight-Hour Ozone Plan with respect to the requirements of CAA section 182(a)(1), (2)(A) and (B), and (3)(B) and is deferring action with respect to the requirements of CAA sections 176(c) and 182(a)(2)(C) and (4). We do not think anyone will object to this approval, so we are finalizing it without proposing it in advance. However, in the Proposed Rules section of this **Federal Register**, we are simultaneously proposing approval of the same submitted rule(s). If we receive adverse comments by November 16, 2015, we will publish a timely withdrawal in the **Federal Register** to notify the public that the direct final approval will not take effect and we will address the

¹⁸ See 40 CFR 93.101.

¹⁹ See 40 CFR 93.109(c)(2).

comments in a subsequent final action based on the proposal. If we do not receive timely adverse comments, the direct final approval will be effective without further notice on December 15, 2015.

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by December 15, 2015. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the Proposed Rules section of today's **Federal Register**, rather than file an immediate petition for judicial review of this direct final rule, so that the EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: September 25, 2015.

Jared Blumenfeld,
Regional Administrator, Region IX.

Part 52, Chapter I, Title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

- 1. The authority citation for Part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart D—Arizona

- 2. Section 52.120 is amended by adding paragraph (c)(172) to read as follows:

§ 52.120 Identification of plan.

* * * * *

(c) * * *
(172) The following plan was submitted July 2, 2014, by the Governor's designee.

(i) [Reserved]
(ii) *Additional materials*.
(A) Arizona Department of Environmental Quality (ADEQ).

(1) *MAG 2014 Eight-Hour Ozone Plan—Submittal of Marginal Area Requirements for the Maricopa Nonattainment Area* (June 2014), excluding:

(i) Sections titled "A Nonattainment Area Preconstruction Permit Program—CAA section 182(a)(2)(C)," "New Source Review—CAA, Title I, Part D," and "Offset Requirements: 1:1 to 1 (Ratio of Total Emission Reductions of Volatile Organic Compounds to Total Increased Emissions)—CAA Section 182(a)(4)" on pages 8 and 9 and section titled "Meet Transportation Conformity Requirements—CAA Section 176(c)" on pages 10 and 11.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA-HQ-OPP-2015-0363; FRL-9933-98]

2-Propen-1-Aminium, N,N-Dimethyl-N-Propenyl-, Chloride, Homopolymer; Exemption From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a

tolerance for residues of 2-propen-1-aminium, *N,N*-dimethyl-*N*-propenyl-, chloride, homopolymer (PolyDADMAC, CAS No. 26062-79-3) when used as an inert ingredient under 40 CFR 180.940(a) as a dispersing aid in food contact surface sanitizing solutions at less than 0.6% by weight in the final product. Scientific & Regulatory Solutions, L.L.C., on behalf of SNF, Inc. submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of PolyDADMAC.

DATES: This regulation is effective October 16, 2015. Objections and requests for hearings must be received on or before December 15, 2015, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2015-0363, is available at <http://www.regulations.gov> or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (703) 305-5805. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Susan Lewis, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; main telephone number: (703) 305-7090; email address: RDfRNNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document

applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Government Printing Office's e-CFR site at http://www.ecfr.gov/cgi-bin/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab_02.tpl.

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA-HQ-OPP-2015-0363 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing, and must be received by the Hearing Clerk on or before December 15, 2015. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA-HQ-OPP-2015-0363, by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please

follow the instructions at <http://www.epa.gov/dockets/contacts.html>.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

II. Petition for Exemption

In the **Federal Register** of July 17, 2015 (80 FR 42462) (FRL-9929-13), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of a pesticide petition (PP IN-10750) by Scientific & Regulatory Solutions, L.L.C., 3450 Old Washington Rd #303, Waldorf, MD 20602 on behalf of SNF, Inc., 1 Chemical Plant Road, Riceboro, GA 31321. The petition requested that 40 CFR 180.940(a) be amended by establishing an exemption from the requirement of a tolerance for residues of PolyDADMAC, (CAS No. 26062-79-3) when used as an inert ingredient as a dispersing aid in pesticide formulations at less than 0.6% by weight. That document referenced a summary of the petition prepared by Scientific & Regulatory Solutions, L.L.C., on behalf of SNF, Inc., the petitioner, which is available in the docket, <http://www.regulations.gov>. There were no comments received in response to the notice of filing.

III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own): Solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol dispensers; microencapsulating agents; and emulsifiers. The term "inert" is not intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is "safe."

Section 408(c)(2)(A)(ii) of FFDC A defines “safe” to mean that “there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” This includes exposure through drinking water and in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of FFDC A requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . .”

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no appreciable risks to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDC A section 408(c)(2)(A), and the factors specified in FFDC A section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for PolyDADMAC including exposure resulting from the exemption established by this action. EPA’s assessment of exposures and risks associated with PolyDADMAC follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused

by PolyDADMAC as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

A single dose feeding study with rats classified PolyDADMAC as “slightly toxic” at a dose level of 5 milliliter/kilogram (mL/kg) (approx. 2,000 milligram/kilogram (mg/kg)). The results of two skin irritation studies performed with rabbits indicate that PolyDADMAC is not a skin irritant. In two eye irritation studies performed with PolyDADMAC on rabbits, the results indicate that the product was slightly irritating to the eyes and that the effects were totally reversed within 72 hours following exposure. In an eye study performed with PolyDADMAC on cultured fibroblasts, the results indicate that PolyDADMAC is slightly irritating. In a teratology study performed with Sprague-Dawley rats, the administration of 600 milligram/kilogram/day (mg/kg/day) of PolyDADMAC, and to a lesser extent, at the 450 and 150 mg/kg/day test groups, elicited a significant reduction in maternal food consumption during the first half of the dosing period. The NOAEL for PolyDADMAC on embryonic development is 600 mg/kg/day. A multi-generational study performed with PolyDADMAC using Sprague-Dawley rats dosed with 0.375, 12.5, and 125 mg/kg/day (oral gavage) showed no increase in reproductive failure, nor were there any effects upon the fertility index or any other F1 or F2 generation parameters. The inferred NOAEL from the study was 125 mg/kg/day. The two genotoxicity studies performed with PolyDADMAC were negative in both an Ames test and in a mouse micronucleus assay. There are no carcinogenicity studies available for PolyDADMAC. However, no significant systemic toxicity was observed in the teratology, multi-generational and mutagenicity toxicity studies. In the absence of significant systemic toxicity, and lack of mutagenicity concerns, PolyDADMAC is not likely to be carcinogenic.

B. Toxicological Points of Departure/ Levels of Concern

Once a pesticide’s toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each

toxicological study to determine the dose at which the NOAEL and the LOAEL are identified. Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level—generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD)—and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see <http://www.epa.gov/pesticides/factsheets/riskassess.htm>.

PolyDADMAC is a large molecular weight chemical which satisfies all of the TSCA Polymer Exemption Rule except for its cationic properties. Generally, high molecular weight polymers are unlikely to be absorbed significantly through any route of exposure. In the case of PolyDADMAC, this is evidenced by: No systemic toxicity up to 600 mg/kg/day in the teratology study, no systemic toxicity in the multi-generational reproduction study up to 125 mg/kg/day, and low acute toxicity. Therefore, no adverse effect level endpoints have been selected for PolyDADMAC, and EPA concludes that it is not necessary to assess quantitative dietary risk or risk from exposure via dermal or inhalation.

C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to PolyDADMAC, EPA considered exposure under the proposed exemption from the requirement of a tolerance. EPA assessed dietary exposures from PolyDADMAC in food as follows: Acute dietary assessments take into account exposure estimates from dietary consumption of food and drinking water. Chronic dietary assessments take into account dietary food and drinking water as well as food contact surface sanitation uses. In the case of PolyDADMAC, there are no current or proposed crop pesticidal uses; therefore oral exposures from that route (including exposure through drinking water) are not expected. Dietary exposure to PolyDADMAC can occur through its use in food contact sanitizing solutions. However, PolyDADMAC is a large molecular weight chemical which is unlikely to be absorbed significantly through any route of exposure and no endpoints have been

selected for it. The Agency has not identified any concerns for carcinogenicity relating to PolyDADMAC; therefore, a cancer dietary exposure assessment was not performed.

2. *Dietary exposure from drinking water.* PolyDADMAC residues may be found in drinking water. However, since an endpoint of concern was not identified for the dietary assessment (food and drinking water), a quantitative dietary exposure risk assessment was not conducted.

3. *From non-dietary exposure.* The term “residential exposure” is used in this document to refer to non-occupational, non-dietary exposure (e.g., textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables).

While there are no current or proposed residential uses for PolyDADMAC, it is possible that PolyDADMAC may be used as an inert ingredient in pesticide products for which residential exposures may result. However, in the case of PolyDADMAC no applicable endpoints of concern for residential exposures have been identified and a quantitative exposure assessment from residential exposures was not performed.

4. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance or exemption from a tolerance, the Agency consider “available information” concerning the cumulative effects of a particular pesticide’s residues and “other substances that have a common mechanism of toxicity.”

EPA has not found PolyDADMAC to share a common mechanism of toxicity with any other substances, and PolyDADMAC does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that PolyDADMAC does not have a common mechanism of toxicity with other substances. For information regarding EPA’s efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA’s Web site at <http://www.epa.gov/pesticides/cumulative>.

D. Safety Factor for Infants and Children

1. *In general.* Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10x) margin of safety for infants and children in the case of threshold effects to account for

prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act Safety Factor (FQPA SF). In applying this provision, EPA either retains the default value of 10x, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

2. *Prenatal and postnatal sensitivity.* Teratology and multi-generational studies in laboratory animals indicate that PolyDADMAC caused no increase in reproductive failure nor were there any PolyDADMAC related effects upon the fertility index or any other F1 or F2 generation parameters (e.g., litter size, pup weight, fertility and parturition, reproductive indices such as mating index, fecundity index, male or female fertility indices, etc.). Finally, there was no remarkable pathology noted upon necropsy of any of the test animals. Neurotoxicity was not observed in a reproduction/developmental screening study in rats where neurotoxicity parameters were evaluated.

3. *Conclusion.* Based on an assessment of PolyDADMAC, EPA has concluded that there are no toxicological endpoints of concern for the U.S. population, including infants and children, and has conducted a qualitative assessment. As part of its qualitative assessment, the Agency did not use safety factors for assessing risk, and no additional safety factor is needed for assessing risk to infants and children.

E. Aggregate Risks and Determination of Safety

Determination of safety section. EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing aggregate exposure estimates to the acute PAD (aPAD) and chronic PAD (cPAD). For linear cancer risks, EPA calculates the lifetime probability of acquiring cancer given the estimated aggregate exposure. Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the appropriate PODs to ensure that an adequate MOE exists.

Based on the lack of any endpoints of concern, EPA concludes that there is a reasonable certainty that no harm will result to the general population or to infants and children from aggregate exposure to PolyDADMAC residues.

V. Other Considerations

A. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation.

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex Alimentarius is a joint United Nation Food and Agriculture Organization/World Health Organization food standards program, and it is recognized as an international food safety standards-setting organization in trade agreements to which the United States is a party. EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level.

The Codex has not established a MRL for PolyDADMAC.

VI. Conclusions

Therefore, an exemption from the requirement of a tolerance is established under 40 CFR 180.940(a) for PolyDADMAC (CAS No. 26062-79-3) when used as an inert ingredient as a dispersing aid in food contact surface sanitizing solutions at less than 0.6% by weight in the final product.

VII. Statutory and Executive Order Reviews

This action establishes a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “Regulatory Planning and Review” (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997). This action does not contain any information collections

subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCFA section 408(d), such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCFA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the

various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: October 7, 2015.

Susan Lewis,

Director, Registration Division, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.940(a), add alphabetically the inert ingredient “2-propen-1-aminium, *N,N*-dimethyl-*N*-propenyl-, chloride, homopolymer (CAS No. 26062–79–3)” to the table to read as follows:

§ 180.940 Tolerance exemptions for active and inert ingredients for use in antimicrobial formulations (Food-contact surface sanitizing solutions).

* * * * *
(a) * * *

Pesticide chemical	CAS Reg. No.	Limits

[Docket No. USCG–2015–0867]

Shipping; Technical, Organizational, and Conforming Amendments

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: This final rule makes non-substantive technical, organizational, and conforming amendments to existing

regulations throughout Title 46 of the Code of Federal Regulations. This rule will have no substantive effect on the regulated public.

DATES: This final rule is effective October 16, 2015.

ADDRESSES: Documents mentioned in this preamble as being available in the docket are part of docket USCG–2015–0867, which is available at <http://regulations.gov>.

FOR FURTHER INFORMATION CONTACT: If you have questions on this final rule, call or email Mr. Paul Crissy, Coast Guard; telephone 202–372–1093, email Paul.H.Crissy@uscg.mil.

II. Regulatory History

We did not publish a notice of proposed rulemaking for this rule. Under 5 U.S.C. 553(b)(A), the Coast Guard finds that this rule is exempt from notice and comment rulemaking requirements, because these changes involve rules of agency organization, procedure, or practice. In addition, the Coast Guard finds that notice and comment procedures are unnecessary under 5 U.S.C. 553(b)(B), as this rule consists only of corrections and editorial, organizational, and conforming amendments, and that these changes will have no substantive effect on the public. Under 5 U.S.C. 553(d)(3), the Coast Guard finds that, for the same reasons, good cause exists for making this final rule effective upon publication in the **Federal Register**.

III. Basis and Purpose

On the 1st of October each year, the printed editions of Titles 46 and 49 of the Code of Federal Regulations (CFR) are re-codified. This rule, which becomes effective October 16, 2015, makes technical and editorial corrections throughout Title 46. There are no technical or editorial corrections for Title 49 this year. This rule does not create or change any substantive requirements.

IV. Discussion of the Rule

Each year, the Coast Guard issues technical, organizational, and conforming amendments to existing regulations in Titles 46 and 49 of the CFR. These annual “technical amendments” provide the public with more accurate and current regulatory information, but do not change the impact on the public of any Coast Guard regulations. This rule makes no changes to Title 49.

This rule makes changes in the following sections of Title 46 in the CFR:

Section 2.75–25(c)(3): Change “in the **Federal Register**” to “on the Coast Guard’s Maritime Information eXchange Web site at <http://cgmix.uscg.mil/equipment>” to reflect the accurate location where the Coast Guard publishes the approval and listing of recognized laboratories. The change updates an outdated location.

Section 5.903(b): Change the mailing address to reflect the U.S. Coast Guard Office of Investigations and Analysis as the office for submitting applications.

Section 11.329(e): Remove the table in § 11.329(e) that is titled “Table 1 to § 11.327(d).” The same Table 1 correctly appears in § 11.327(d), but it has been erroneously duplicated in

§ 11.329(e). Table 1 to § 11.329(e) remains unchanged.

Sections 107.111, 114.400(b), 125.160, 159.005–13(a)(4), 175.400: Change the reference to the location where the Coast Guard publishes a listing of current and formerly approved equipment and materials. The change updates an outdated location.

Section 113.25–9(a): Change the term “windless” to “windlass.” The change corrects a typographical error.

Sections 117.68(a)(1), 117.68(b)(1), 117.68(c)(2)(ii), 117.68(c)(2)(iii), 117.70(b)(1), 117.70(d)(1), 117.71(c), 180.68(a)(1), 180.68(c)(2)(ii), 180.68(c)(2)(iii), 180.70(b)(1), 180.70(d)(1), 180.71(c), 180.75(a): Add a reference to the relevant approval standard for equipment carried on vessels subject to the International Convention for the Safety of Life at Sea (SOLAS), 1974, as an option for compliance. The SOLAS standards have already routinely been approved by the Coast Guard as an “other standard specified by the Commandant.” The change will provide clarity for the regulated public, eliminating duplicative approval requests.

Section 162.060–10(b)(1): Change “manufacturer” to “manufacturer or independent laboratory” to reflect the fact that the independent laboratory is typically the entity that submits requests for approval of alternatives as equivalent to the regulatory requirements.

Section 162.060–42(a)(2): Change the reference from “requirements in paragraph (b) of this section” to “requirements in paragraph (a)(1) of this section.” Section 162.060–42(a)(2) discusses the ability of an independent laboratory to reject a manufacturer’s proposed ballast water management system if the system does not meet the requirements listed in another paragraph in that section. Paragraph (b) is an incorrect reference paragraph because it does not list requirements for the manufacturer’s system; instead, it is a requirement for the independent laboratory. Paragraph (a)(1) is the correct reference paragraph because it lists the relevant requirements. The change corrects a typographical error.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders (E.O.s) related to rulemaking. Below we summarize our analyses based on these statutes or E.O.s.

A. Regulatory Planning and Review

Executive Orders 13563 and 12866 direct agencies to assess the costs and

benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has not been designated a “significant regulatory action,” under section 3(f) of Executive Order 12866. Accordingly, the rule has not been reviewed by the Office of Management and Budget. Because this rule involves non-substantive changes and internal agency practices and procedures, it will not impose any additional costs on the public. The benefit of the non-substantive changes is increased clarity of regulations.

B. Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), rules exempt from the notice and comment requirements of the Administrative Procedure Act are not required to examine the impact of the rule on small entities. Nevertheless, we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

There is no cost to this final rule, and we do not expect it will have an impact on small entities because the provisions of this rule are technical and non-substantive. It will have no substantive effect on the public and will impose no additional costs. Therefore, the Coast Guard certifies under 5 U.S.C. 605(b) that this final rule will not have a significant economic impact on a substantial number of small entities.

C. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule so that they can better evaluate its effects on them and participate in the rulemaking. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please consult Mr. Paul Crissy by phone at 202–372–1093 or via email at Paul.H.Crissy@uscg.mil. The

Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1-888-REG-FAIR (1-888-734-3247).

D. Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520).

E. Federalism

A rule has implications for federalism under E.O. 13132 ("Federalism") if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in E.O. 13132.

F. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531-1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any 1 year. Though this final rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

G. Taking of Private Property

This final rule will not cause a taking of private property or otherwise have taking implications under E.O. 12630 ("Governmental Actions and Interference with Constitutionally Protected Property Rights").

H. Civil Justice Reform

This final rule meets applicable standards in sections 3(a) and 3(b)(2) of E.O. 12988 ("Civil Justice Reform"), to minimize litigation, eliminate ambiguity, and reduce burden.

I. Protection of Children

We have analyzed this final rule under E.O. 13045 ("Protection of Children from Environmental Health Risks and Safety Risks"). This final rule is not an economically significant rule and would not create an environmental risk to health or risk to safety that might disproportionately affect children.

J. Indian Tribal Governments

This final rule does not have tribal implications under E.O. 13175 ("Consultation and Coordination with Indian Tribal Governments"), because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

K. Energy Effects

We have analyzed this final rule under E.O. 13211 ("Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use"). We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under E.O. 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of OMB's Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under E.O. 13211.

L. Technical Standards

The National Technology Transfer and Advancement Act (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the OMB, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This final rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

M. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023-01 and

Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321-4370f), and have concluded that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded under section 2.B.2 and figure 2-1, paragraph (34)(a) of the Instruction. This final rule involves amendments to regulations that are editorial or procedural. An environmental analysis checklist and a categorical exclusion determination are available in the docket for this final rule where indicated under **ADDRESSES**.

List of Subjects

46 CFR Part 2

Marine safety, Reporting and recordkeeping requirements, Vessels.

46 CFR Part 5

Administrative practice and procedure, Alcohol abuse, Drug abuse, Investigations, Seamen.

46 CFR Part 11

Penalties, Reporting and recordkeeping requirements, Schools, Seamen.

46 CFR Part 107

Marine safety, Oil and gas exploration, Reporting and recordkeeping requirements, Vessels.

46 CFR Part 113

Communications equipment, Fire prevention, Vessels.

46 CFR Part 114

Marine safety, Passenger vessels, Reporting and recordkeeping requirements.

46 CFR Parts 117 and 180

Marine safety, Passenger vessels.

46 CFR Part 125

Administrative practice and procedure, Cargo vessels, Hazardous materials transportation, Marine safety, Seamen.

46 CFR Part 159

Business and industry, Laboratories, Marine safety, Reporting and recordkeeping requirements.

46 CFR Part 162

Fire prevention, Marine safety, Oil pollution, Reporting and recordkeeping requirements.

46 CFR Part 175

Marine safety, Passenger vessels, Reporting and recordkeeping requirements.

For the reasons discussed in the preamble, the Coast Guard amends 46 CFR parts 2, 5, 11, 107, 113, 114, 117, 125, 159, 162, 175, and 180 to read as follows:

PART 2—VESSEL INSPECTIONS

■ 1. The authority citation for part 2 continues to read as follows:

Authority: Sec. 622, Pub. L. 111–281; 33 U.S.C. 1903; 43 U.S.C. 1333; 46 U.S.C. 2103, 2110, 3306, 3703; E.O. 12234, 45 FR 58801, 3 CFR, 1980 Comp., p. 277, sec. 1–105; Department of Homeland Security Delegation No. 0170.1(I)(77), (90), (92)(a), (92)(b).

§ 2.75–25 [Amended]

■ 2. In § 2.75–25(c)(3), remove the text “in the **Federal Register**” and add, in its place, the text “on the Coast Guard’s Maritime Information eXchange Web site at <http://cgmix.uscg.mil/equipment>”.

PART 5—MARINE INVESTIGATION REGULATIONS—PERSONNEL ACTION

■ 3. The authority citation for part 5 continues to read as follows:

Authority: 46 U.S.C. 2103, 7101, 7301, 7701; Department of Homeland Security Delegation No. 0170.1.

■ 4. Revise § 5.903(b) to read as follows:

§ 5.903 Application procedures.

* * * * *

(b) The completed application and letter must be addressed to the U.S. Coast Guard Office of Investigations and Analysis, Commandant (CG–INV–1), U.S. Coast Guard Stop 7501, 2703 Martin Luther King Jr. Avenue SE., Washington, DC 20593–7501, and must be delivered in person to the nearest Officer in Charge, Marine Inspection.

* * * * *

PART 11—REQUIREMENTS FOR OFFICER ENDORSEMENTS

■ 5. The authority citation for part 11 continues to read as follows:

Authority: 14 U.S.C. 633; 31 U.S.C. 9701; 46 U.S.C. 2101, 2103, and 2110; 46 U.S.C. chapter 71; 46 U.S.C. 7502, 7505, 7701, 8906, and 70105; E.O. 10173; Department of Homeland Security Delegation No. 0170.1. Section 11.107 is also issued under the authority of 44 U.S.C. 3507.

§ 11.329 [Amended]

■ 6. In § 11.329(e), remove Table 1 to § 11.327(d).

PART 107—INSPECTION AND CERTIFICATION

■ 7. The authority citation for part 107 continues to read as follows:

Authority: 43 U.S.C. 1333; 46 U.S.C. 3306, 3307; 46 U.S.C. 3316; Department of Homeland Security Delegation No. 0170.1; § 107.05 also issued under the authority of 44 U.S.C. 3507.

§ 107.111 [Amended]

■ 8. In § 107.111 in the definition of “Approval series” following the text “A listing of”, remove the text “approved equipment, including all of the approval series, is published periodically by the Coast Guard in Equipment Lists (COMDTINST M16714.3 series), available from the Superintendent of Documents.” and add, in its place, the text “current and formerly approved equipment and materials may be found on the Internet at: <http://cgmix.uscg.mil/equipment>”.

PART 113—COMMUNICATION AND ALARM SYSTEMS AND EQUIPMENT

■ 9. The authority citation for part 113 continues to read as follows:

Authority: 46 U.S.C. 3306, 3703; Department of Homeland Security Delegation No. 0170.1.

§ 113.25–9 [Amended]

■ 10. In § 113.25–9(a) following the words “passageways in cargo areas, steering gear rooms,” remove the word “windless” and add, in its place, the word “windlass”.

PART 114—GENERAL PROVISIONS

■ 11. The authority citation for part 114 continues to read as follows:

Authority: 46 U.S.C. 2103, 3306, 3703; Pub. L. 103–206, 107 Stat. 2439; 49 U.S.C. App. 1804; Department of Homeland Security Delegation No. 0170.1; § 114.900 also issued under 44 U.S.C. 3507.

§ 114.400 [Amended]

■ 12. In § 114.400(b), in the definition of “Approval series” following the text “A listing of”, remove the text “approved equipment, including all of the approval series, is published periodically by the Coast Guard in Equipment Lists (COMDTINST M16714.3 series), available from the Superintendent of Documents.” and add, in its place, the text “current and formerly approved equipment and materials may be found on the Internet at: <http://cgmix.uscg.mil/equipment>”.

PART 117—LIFESAVING EQUIPMENT AND ARRANGEMENTS

■ 13. The authority citation for part 117 continues to read as follows:

Authority: 46 U.S.C. 2103, 3306; E.O. 12234, 45 FR 58801, 3 CFR, 1980 Comp., p. 277; Department of Homeland Security Delegation No. 0170.1.

§ 117.68 [Amended]

■ 14. Amend § 117.68 as follows:

■ a. In paragraphs (a)(1), (b)(1), and (c)(2)(ii) following the text “specified by the Commandant” add the text “, including, but not limited to, approval series 160.121”; and

■ b. In paragraph (c)(2)(iii), following the text “specified by the Commandant” add the text “, including, but not limited to, approval series 160.122”.

§ 117.70 [Amended]

■ 15. Amend § 117.70 as follows:

■ a. In paragraph (b)(1) following the text “specified by the Commandant”, add the text “, including, but not limited to, approval series 160.150”; and

■ b. In paragraph (d)(1) following the text “specified by the Commandant”, add the text “, including, but not limited to, approval series 160.110”.

§ 117.71 [Amended]

■ 16. In § 117.71(c), following the text “specified by the Commandant”, add the text “, including, but not limited to, approval series 160.155 or 160.176”.

PART 125—GENERAL

■ 17. The authority citation for part 125 continues to read as follows:

Authority: 46 U.S.C. 2103, 3306, 3307; 49 U.S.C. App. 1804; sec. 617, Pub. L. 111–281, 124 Stat. 2905; Department of Homeland Security Delegation No. 0170.1.

§ 125.160 [Amended]

■ 18. In § 125.160 in the definition of “Approval series” following the text “A listing of”, remove the text “approved equipment, including all of the approval series, is published periodically by the Coast Guard in Equipment Lists (COMDTINST M16714.3 series), available from the Superintendent of Documents.” and add, in its place, the text “current and formerly approved equipment and materials may be found on the Internet at: <http://cgmix.uscg.mil/equipment>”.

PART 159—APPROVAL OF EQUIPMENT AND MATERIALS

■ 19. The authority citation for part 159 continues to read as follows:

Authority: 46 U.S.C. 3306, 3703; 49 CFR 1.45, 1.46; Section 159.001–9 also issued under the authority of 44 U.S.C. 3507.

■ 20. Revise § 159.005–13(a)(4) to read as follows:

§ 159.005–13 Equipment or material: Approval.

(a) * * *

(4) Publishes a record of the approval in the Coast Guard Maritime Information Exchange (CGMIX). A listing of current and formerly approved equipment and materials may be found on the Internet at: <http://cgmix.uscg.mil/equipment>.

* * * * *

PART 162—ENGINEERING EQUIPMENT

■ 21. The authority citation for part 162 continues to read as follows:

Authority: 33 U.S.C. 1321(j), 1903; 46 U.S.C. 3306, 3703, 4104, 4302; E.O. 12234, 45 FR 58801, 3 CFR, 1980 Comp., p. 277; E.O. 12777, 56 FR 54757, 3 CFR, 1991 Comp., p. 351; Department of Homeland Security Delegation No. 0170.1.

§ 162.060–10 [Amended]

■ 22. § 162.060–10(b)(1), after the text “practicable or applicable, a manufacturer”, add the text “or independent laboratory”.

§ 162.060–42 [Amended]

■ 23. In § 162.060–42(a)(2) following the text “requirements in paragraph”, remove the text “(b)” and add, in its place, the text “(a)(1)”.

PART 175—GENERAL PROVISIONS

■ 24. The authority citation for part 175 continues to read as follows:

Authority: 46 U.S.C. 2103, 3205, 3306, 3703; Pub. L. 103–206, 107 Stat. 2439; 49 U.S.C. App. 1804; Department of Homeland Security Delegation No. 0170.1; § 175.900 also issued under 44 U.S.C. 3507.

§ 175.400 [Amended]

■ 25. In § 175.400 in the definition of “Approval series” following the text “A listing of”, remove the text “approved equipment, including all of the approval series, is published periodically by the Coast Guard in Equipment Lists (COMDTINST M16714.3 series), available from the Superintendent of Documents.” and add, in its place, the text “current and formerly approved equipment and materials may be found on the Internet at: <http://cgmix.uscg.mil/equipment>.”.

PART 180—LIFESAVING EQUIPMENT AND ARRANGEMENTS

■ 26. The authority citation for part 180 continues to read as follows:

Authority: 46 U.S.C. 2104, 3306; E.O. 12234, 45 FR 58801, 3 CFR, 1980 Comp., p. 277; Department of Homeland Security Delegation No. 0170.1.

§ 180.68 [Amended]

■ 27. Amend § 180.68 as follows:
 ■ a. In paragraph (a)(1), following the text “specified by the Commandant” add the text “, including, but not limited to, approval series 160.121”;
 ■ b. In paragraph (c)(2)(ii), after the text “specified by the Commandant”, add the text “, including, but not limited to, approval series 160.121”;
 ■ c. In paragraph (c)(2)(iii), after the text “or other standard specified by the Commandant”, add the text “, including, but not limited to, approval series 160.122”.

§ 180.70 [Amended]

■ 28. Amend § 180.70 as follows:
 ■ a. In paragraph (b)(1), following the text “specified by the Commandant” add the text “, including, but not limited to, approval series 160.150”;
 ■ b. In paragraph (d)(1), following the text “specified by the Commandant” add the text “, including, but not limited to, approval series 160.110”.

§ 180.71 [Amended]

■ 29. In § 180.71(c), following the text “specified by the Commandant” add the text “, including, but not limited to, approval series 160.155 or 160.176”.

§ 180.75 [Amended]

■ 30. In § 180.75(a), following the text “specified by the Commandant” add the text “, including, but not limited to, approval series 160.112”.

Katia Kroutil,

Chief, Office of Regulations and Administrative Law, U.S. Coast Guard.

BILLING CODE 9110–04–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 12

[PS Docket No. 14–174; FCC 15–98]

Ensuring Continuity of 911 Communications

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document the Federal Communications Commission (FCC or Commission) adopts rules to promote continued access to 911 during commercial power outages by requiring providers of facilities-based, fixed residential voice services, which are not line powered, to offer subscribers the option to purchase a backup solution capable of 8 hours of standby power, and within three years, an additional solution capable of 24 hours of standby power. The item also promotes consumer education and choice by requiring providers of covered services to disclose to subscribers the following information: availability of backup power sources; service limitations with and without backup power during a power outage; purchase and replacement options; expected backup power duration; proper usage and storage conditions for the backup power source; subscriber backup power self-testing and monitoring instructions; and backup power warranty details, if any.

DATES: Effective dates: This rule is effective October 16, 2015, except for § 12.5(b)(1), which is effective February 16, 2016; § 12.5(b)(2), which is effective February 13, 2019; and § 12.5(d), which is effective 120 days after date the Commission announces approval from the Office of Management and Budget. The Commission will announce the effective date for § 12.5(d) with a document in the **Federal Register**.

Compliance dates: Section 12.5(b)(1), for providers with fewer than 100,000 domestic retail subscriber lines on August 11, 2016; and § 12.5(d), for providers with fewer than 100,000 domestic retail subscriber lines 300 days after date the Commission announces approval from the Office of Management and Budget. The Commission will announce the compliance date for § 12.5(d) with a document in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Public Safety and Homeland Security Bureau, Linda M. Pintro, at (202) 418–7490 or linda.pintro@fcc.gov. For additional information concerning the Paperwork Reduction Act information collection requirements contained in this document, contact Nicole Ongele at (202) 418–2991 or send an email to PRA@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission’s *Report and Order (R&O)* in PS Docket No. 14–174, released on August 7, 2015. The full text of this document is available for public inspection during regular business hours in the FCC Reference Center, Room CY–A257, 445 12th Street SW., Washington, DC 20554, or online

at <https://www.fcc.gov/document/ensuring-continuity-911-communications-report-and-order>.

I. Introduction

1. In this *Report and Order*, the Federal Communications Commission (FCC or Commission) takes important steps to ensure continued public confidence in the availability of 911 service by providers of facilities-based fixed, residential voice services in the event of power outages.

2. For over one hundred years, consumers have trusted that they will hear a dial tone in an emergency even when the power is out. Now, as networks transition away from copper-based, line-powered technology, many are aware of the innovation this transition has spurred in emergency services, but many consumers, remain unaware that they must take action to ensure that dial tone's availability in the event of a commercial power outage. The Commission's own consumer complaints portal reveals frustration over the failure of service providers to adequately inform subscribers about how to self-provision backup power in order to access 911 services in a power outage. This period of transition has the potential to create a widespread public safety issue if unaddressed.

3. Accordingly, we create new section 12.5 of our rules to place limited backup power obligations on providers of facilities-based fixed, residential voice services that are not line-powered to ensure that such service providers meet their obligation to provide access to 911 service during a power outage, and to provide clarity for the role of consumers and their communities should they elect not to purchase backup power. To be sure, many providers of residential voice communications already offer some level of backup power to consumers. However, the vital importance of the continuity of 911 communications, and the Commission's duty to promote "safety of life and property through the use of wire and radio communication," favor action to ensure that all consumers understand the risks associated with non-line-powered 911 service, know how to protect themselves from such risks, and have a meaningful opportunity to do so. Specifically, we require all providers of facilities-based, fixed, voice residential service that is not line powered—including those fixed applications of wireless service offered as a "plain old telephone service" (POTS) replacement—to offer new subscribers the option to purchase a backup solution that provides consumers with at least 8 hours of standby power during

a commercial power outage, which will enable calls to 911. In addition, we require these providers to offer, within three years of the effective date of the eight hour obligation, at least one option that provides a minimum of 24 hours of 911 service.

4. Additionally, we require all providers of facilities-based, fixed, voice residential service that is not line-powered to notify subscribers, at the point of sale and annually thereafter until September 1, 2025, of the availability of backup power purchasing options, use conditions and effect on power source effectiveness, power source duration and service limitations, testing and monitoring, and replacement details. Additionally, we direct the PSHSB to work with CGB to develop, prior to the implementation date of these rules for smaller providers, as herein defined, non-binding guidance with respect to the required notifications to subscribers. We limit these obligations to ten years as that should be enough time to ensure that overall consumer expectations regarding residential voice communications are aligned with ongoing technology transitions.

5. Finally, we encourage covered providers to conduct tailored outreach to state and local disaster preparedness entities to ensure that consumables and rechargeable elements associated with backup power technical solutions deployed in their area are well understood so that communities may prioritize restocking and/or recharging in response to extended power outages.

II. Background

6. Our Nation's communications infrastructure and the services available to consumers are undergoing technology transitions. The Commission has recognized that these transitions will bring enormous benefits to consumers, but also that they raise important questions about how to appropriately carry out our obligations set forth in the Communications Act, including promoting public safety and national security, and protecting consumers.

7. To further these statutory objectives, in November 2014, the Commission adopted a *Notice of Proposed Rulemaking (NPRM)* seeking to ensure reliable backup power for consumers . . . Specifically, the Commission sought comment on the "communications services we should include within the scope of any backup power requirements we may adopt" and "propose[d] that any potential requirements would apply to facilities-based, fixed voice residential services, such as interconnected Voice over

Internet Protocol (VoIP), that are not line-powered by the provider." The Commission proposed that "providers should assume responsibility for provisioning backup power that is capable of powering network equipment at the subscriber premises during the first 8 hours of an outage" but sought comment on what should happen in the event of an extended commercial power outage. The Commission also recognized the importance of outreach to consumers on the effect of commercial power outages to their communications services and sought comment on effective consumer notification.

III. Discussion

8. Communications services play an essential role in the delivery of public safety services, particularly 911, and that role is especially prominent during emergencies that lead to power outages. In the NPRM in this proceeding, we sought comment on the means to ensure that consumers have access to minimally essential communications, including 911 calls and telephone-based alerts and warnings, during a loss of commercial power. In this *Report & Order*, we take steps toward that goal by establishing clear lines of responsibility for ensuring continued 911 service during such commercial power outages and by: (1) Establishing a phased-in obligation for the offering of backup power solutions to consumers; and (2) requiring covered providers to engage in disclosure of the risks associated with these outages and steps consumers may take to address those risks.

9. As discussed in greater detail below, we require that providers of non-line-powered facilities-based, fixed, voice residential service, including fixed wireless service intended as POTS replacement, offer, at the subscriber's option and expense, a backup power solution that provides 911 access for 8 hours in the event of commercial power loss. Within three years, providers must also offer a 24-hour backup power solution. We also require covered providers to explain at point of sale how the subscriber may extend the provision of backup power during longer, multi-day outages through devices such as solar chargers, car chargers or mobile charging stations and to direct customers to sources of such equipment. No provider will be required to install backup power unless requested by, and at the expense of, the subscriber, and no subscriber will be forced to purchase unwanted equipment. Rather, our rules will ensure that subscribers who so elect can obtain backup power simply and conveniently when activating a covered

service. In addition, in order to ensure that consumers are adequately informed in determining whether to make this election, we adopt disclosure requirements designed to ensure that subscribers are aware of the backup power options available for their service, including installation and other usage instructions. We also encourage, but do not require, providers to conduct tailored outreach to state and local disaster preparedness entities to ensure that consumables associated with their backup power technical solutions are well understood so that communities may prioritize restocking and/or recharging in support of extended power outages.

A. Need for Line Powering or an Alternative Source of Power During Outages

10. In the *NPRM*, we noted that, in the past, consumers have relied upon service providers for backup power for their residential landline phones. That is, equipment on the subscriber premises of those still served by copper networks continued to work during commercial power outages as long as the handset or other subscriber premises equipment did not need to be plugged into an electrical outlet to function. We proposed and sought comment on steps we could take to safeguard continuity of communications throughout a power outage across networks that provide residential fixed voice service used to dial 911, including the possible adoption of new rules. Based on the record of this proceeding, we conclude that in order to ensure the availability of 911 service in the provision of facilities-based, fixed, voice residential services during power outages, we must adopt rules to require, among other things, either line powering or (at the subscriber's option and expense) an alternative means of maintaining 911 access during commercial power outages.

11. During a power outage, many subscribers must rely on a battery backup, or an uninterruptible power supply (UPS), to ensure that their service will continue to operate. That is, many subscribers cannot rely on the availability of continuous power that is sufficient to provide basic telephony indefinitely in their homes. Specifically, modern fiber and cable networks do not provide power to operate necessary equipment at the subscriber location, including network devices (e.g., cable modems, optical network terminals) and telephones. The deployment of a VoIP service requires that analog voice signals be converted to IP, using a voice codec. The most commonly deployed

model for VoIP services in the United States places the Analog Telephone Adapter (ATA) in a network device that is installed inside of the living unit. This ATA function is commonly used in hybrid fiber coax cable networks that use embedded multimedia terminal adapters (eMTA), twisted pair telephone (DSL) networks and increasingly Fiber-to-the-Home (FTTH) Optical Network Units (ONUs), also called Optical Network Terminals (ONTs). Voice codecs support voice, fax, and other legacy TDM services over IP, and their function is sometimes referred to as the ATA. Network devices with the embedded ATA function are powered directly by AC power or through a UPS that converts AC to DC power. According to the CSRIC report, in other use cases, the ATA function is being placed in consumer owned devices, creating more challenges for battery backup of VoIP services.

12. Given that consumers are increasingly relying on new types of service for residential voice communications, and that in many areas traditional line-powered 911 service is now, or is soon likely to be, no longer be available, the *NPRM* asked whether it was reasonable for providers to continue to bear primary responsibility for backup power, and if so, to what extent. We also stated that it was our intention to: (1) Establish clear expectations for both providers and subscribers as to their responsibilities throughout the course of an outage; and (2) minimize potential for lapses in service because of subscriber confusion or undue reliance on the provider with respect to backup power for equipment at the subscriber premises. The *NPRM* communicated a desire to adopt baseline requirements for ensuring continuity of power for devices at the subscriber location during commercial power outages. We acknowledged that backup power is not solely a copper retirement issue. Thus, we intended to address backup power at the subscriber premises also for those who have already migrated or been transitioned to an IP-based network.

13. We adopt the rules that follow because we believe that it is essential for all consumers to be able to access 911 emergency services during commercial power outages, especially those outages caused by catastrophic storms or other unpredictable events, and to understand how to do so. Ensuring the ability to maintain such service is a vital part of our statutory mandate to preserve reliable 911 service, and more generally, our statutory goal to promote "safety of life and property through the use of wire and radio communication." We agree

with the National Association of State Utility Consumer Advocates (NASUCA) that it is unlikely that our concerns would be adequately addressed without the adoption of regulatory requirements. We are supported in our conclusion by commenters such as the Pennsylvania Public Utility Commission (PA PUC), which urges the Commission to adopt baseline requirements for ensuring continuity of power during commercial power outages applicable to providers of interconnected VoIP-based services that do not provide line power at their central office, but rather rely on backup power.

14. Specifically, we find that public safety officers, first responders and other public officials have a need to communicate with citizens through whatever means possible, and 911 service plays an important role in this regard. Indeed, consumer advocates and 911 providers emphasize the need to adopt robust backup power requirements to ensure public safety. For example, Public Knowledge notes that right now consumers of traditional landline service are "guaranteed backup power during power outages" and "many consumers keep their landline service specifically to retain this feature." Public Knowledge further states that, "[w]ith the advent of cordless phones the only time the consumer worried about backup batteries was for their cordless phone or they simply retained a traditional phone to use during emergencies."

15. NASUCA and many other commenters agree that Commission action will help preserve consumers' ability to access 911 service. Specifically, NASUCA "fully supports the Commission's determination to ensure reliable backup power for consumers of IP-based voice and data services across networks that provide residential, fixed service that substitutes for and improves upon the kind of traditional telephony used by people to dial 911." According to NASUCA, "[b]ackup power requirements will help ensure that service will continue in a power outage." The National Association of State 911 Administrators (NASNA) similarly observes that "[t]he transition from legacy copper loops to other network technologies means that an important safety net—Central Office provisioning of line power to the subscriber premises—will disappear unless the Commission takes action to mitigate it." The Communications Workers of America (CWA) asserts that CWA, consumer organizations, state regulatory commissions, and public safety associations "support Commission proposals to facilitate the

transition to high-speed broadband networks, protect consumers and promote public safety by *upgrading* Commission rules regarding back-up power, network changes, and service discontinuance.”

16. We agree that this period of transition gives rise to the need for “upgrading Commission rules.” We observe that the consumers most at risk of losing continuity of 911 communications during commercial power outages are those in the midst of transitioning from legacy copper, or that are new to non-copper media, because they may currently assume they will be able to reach 911 during a power outage. For example, Public Knowledge asserts that “the new technologies with which AT&T and Verizon propose to replace traditional POTS are not self-powered, do not work with vital devices on which consumers rely, and are not available in every community.” Public Knowledge further argues that, “[w]hile technology transitions hold tremendous promise for a state-of-the-art communications network, the loss of guaranteed backup power or shifting backup power responsibility to the consumer are serious changes that could end up creating a network that serves some and not others.”

17. We agree with the commenters who assert that transitions to new technology should not result in 911 service being more vulnerable than when consumers used the legacy network. As we stated in the *NPRM*, the absence of line powering for some voice services (such as those provided by cable companies) was not an issue that needed to be addressed when legacy line-powered network options were widely available, but it must be addressed as more and more residential subscribers are faced with only VoIP and other residential IP-based services (or legacy services delivered over fiber) as options, because these services typically will require a backup power source to function during power outages. Accordingly, we focus our requirements to support the continued transmission of 911 communications for service that will no longer have line powering capabilities. Because of the importance of the continuity of 911 communications, we also include under the new requirement providers that may have never provided line powering, but that provide services intended to replace traditional POTS services on which consumers have relied for continuous access. With the accelerating transition to new technologies, consumers of these services will no longer have competitive alternatives

that come with line-powering capabilities.

18. We reiterate our observation in the *NPRM* that adequate and reliable access to 911 services and functionalities during emergency conditions is a long-standing public policy objective. Although we recognize that we are in the midst of sweeping change, we believe that voice communications continue to play an essential and central role in the delivery of public safety services, and that this role does not diminish during events that cause power outages. Indeed, it is at these times that consumers most need to know that they will be able to use their home telephone to get help through 911.

19. We recognize that, as noted by some commenters, many users of interconnected VoIP service may well be unconcerned about backup power, choosing instead to rely on their mobile phones or alternative backup sources. Nonetheless, because of the critical nature of 911 communications, we are not persuaded by the argument that there is no need for action to ensure the continuity of 911 communications to homes across the country. Nor are we convinced that we should abandon this effort because of claims that consumer expectations, which have developed over decades, are already reset such that they no longer expect their home phone to work during power outages. Consumers who have yet to abandon (or who have only recently abandoned) line-powered service may not have had their expectations “reset.” At this time of transition, it is these consumers who are more likely to mistakenly believe that they can access emergency services during a power outage when the line power option had already been eliminated.

20. We find merit in NASUCA’s argument that the public interest requires the industry to be responsible for ensuring that its subscribers at least have some option to purchase backup power, either from the service provider or a third party. Therefore, as more fully discussed below, we conclude that the public interest would be best served by ensuring the option for continued access to backup power to maintain continuity of 911 communications during a loss of commercial power.

21. We have previously recognized that the benefits associated with reliable 911 service are substantial. The provision of backup power for network equipment at the subscriber premises promotes the “safety of life and property through the use of wire and radio communication,” by enabling 911 calls for subscribers of the covered services, when the power is out. Specifically, the

rules we adopt today will preserve safety of life by enabling the use of VoIP and other non-line powered services to contact 911 in a commercial power outage, which is what millions of Americans have come to expect from their “home phone.” We expect that providing the option for at least 8 hours of backup power would ensure the ability to make many life-saving 911 calls during commercial power outages. Therefore, we find, as we have before, that “[r]eliable 911 service provides public safety benefits that, while sometimes difficult to quantify, are enormously valuable to individual callers and to the nation as a whole.”

22. We have also previously found that greater access to 911 enables other public safety-related benefits as well. The Commission’s “Text-to-911” proceeding concluded that increasing access to 911 “could yield other benefits, such as reduced property losses and increased probability of apprehending criminal suspects. Also, the increased ability to place 911 calls necessarily means that there is an increased ability to receive calls in an emergency, including calls from public entities attempting to disseminate important information during widespread emergencies (such as evacuation notices). Many communities have installed such a function that “has proven to be effective in other counties and cities, such as San Diego during the fires of 2007.”

B. Covered Services

23. In the *NPRM*, we sought comment to help identify the most essential communications services that a customer would need to get emergency help during a power outage. We referred to this in the *NPRM* as “minimally essential” communications. We intended to afford sufficient power for minimally essential communications, including and especially 911 calls and the receipt of emergency alerts and warnings.

24. We also noted that voice services historically have been the primary means of contacting 911 for emergency help. Moreover, we observed that line-powered service can operate continuously and indefinitely during a commercial power failure, and does not require a backup power source to maintain continuity of communications for access to 911. Thus, we proposed that any rules apply “to facilities-based, fixed voice services, such as interconnected VoIP, that are not line-powered by the provider.”

25. Consistent with this proposal, we conclude that it would be in the best interest of the public to apply our rules

to facilities-based, fixed voice services, such as interconnected VoIP, that are not line-powered by the provider. Our conclusion is based on the fact that, as we stated in the *NPRM*, voice service is still the primary means of reaching help through 911. We clarify that a wireless voice service is “fixed” for purposes of our rules if it is marketed as a replacement for line-powered telephone service and is intended primarily for use at a fixed location. We further clarify that whether a wireless service is “fixed” does not depend on the regulatory classification of the service under Federal or state law, or on the mobile capabilities of the service. Similarly, the use of a femtocell or similar equipment in a residential setting does not automatically convert a mobile service into a fixed service. The decisive factor is whether the service is intended to function as or substitute for a “fixed” voice service.

26. Although the rule we adopt today would allow for calls other than to or from 911, we find there is not currently a means to prioritize the provision of power for only some voice calls (such as 911 calls) over other communications (such as calls to friends and family). Many commenters generally agree that there is no practical way to maintain power for only some calls. For example, according to Verizon, calibrating a provider’s battery backup obligations and capabilities based upon essential versus non-essential calls would be inconsistent with consumer’s expectations, and unnecessarily complex. ITTA, the Alarm Industry Communications Committee (AICC), NASUCA, and others argue that it would be technically difficult, if not impossible, to distinguish among certain types of calls or functions in a way that would allow rapid load-shedding of non-essential communications to conserve backup power, if minimally essential communications were defined as only 911 or emergency communications.

27. Some commenters argue for an even broader definition of covered services, citing various examples. Although we recognize that limiting the definition as we have done omits some services on which consumers currently rely in emergencies, we expect that both the consumer backup power needs and our rules will evolve. More importantly, we do not more broadly define covered services because we find that at this time it would be in the best interests of the public to limit application of our rules to discharge our statutory duty to ensure the continued viability of 911. Imposing specific obligations on providers to support other

communications could introduce confusion and impose costs on providers that may well exceed the incremental benefits. This is particularly true given the many backup power solutions on the market today that are capable of supporting both essential and non-essential communications.

28. We reject the argument of NCTA and others that adopting backup power rules exclusively for fixed services unduly favors competing mobile services. The rules we adopt herein are intended to clarify the obligations of providers and the expectations of consumers in the provision of services that a customer would perceive as replacing line-powered telephone service. Mobile wireless services increasingly compete with fixed services, but they function differently in multiple respects. Perhaps most significantly, mobile wireless devices are battery-powered in their normal mode of operation. Thus, we do not believe that consumers would reasonably expect such devices to draw line power during a commercial power failure. Moreover, the battery that powers a mobile device provides an inherent source of “backup power” that is often capable of providing far more than 8 hours of service per charge, and often may be charged through additional means, such as a car charger.

29. Therefore, we conclude that, at this time, the appropriate services that should be subject to backup power requirements for effective 911 service during power outages are facilities-based, fixed voice service that is not line-powered by the providers, and is offered as a residential service.

C. Responsibilities of Providers of Covered Services

30. To promote clear expectations and customer choice, we adopt a combination of performance and disclosure requirements to empower consumers to understand the backup power options available to maintain continuity of 911 service and to obtain the equipment necessary to provide such service, if they wish, at the point of sale. Providers of covered services must offer at least one technical solution capable of supporting at least 8 hours of uninterrupted 911 service and install such equipment, at the subscriber’s option and expense, as part its installation of service. Within three years, providers of covered services also must offer new subscribers at the point of sale and install, at the subscriber’s option and expense, a 24-hour backup power solution if a subscriber desires additional protection. We also adopt a

disclosure requirement designed to ensure that both current and new subscribers understand their options with respect to backup power and are aware of the consequences of their decisions whether, and to what extent, to purchase backup power. Finally, we encourage providers of covered services to engage in targeted outreach to the communities they serve to ensure that local emergency managers are aware of the limitations inherent in various fixed, residential voice service technologies commonly used in their areas, as well as backup power options for individuals and communities more broadly to maintain continuity of communications in an emergency.

1. Performance Requirements

a. Duration

31. We adopt backup power requirements that offer consumers meaningful alternatives to address their individualized needs, recognizing that consumers may have different preferences for backup power. Comments in response to the *NPRM* confirm that “a one-size fits all solution is inappropriate and would disserve customer interests.” Accordingly, we adopt a phased-in approach that will provide consumers with multiple options. As an initial baseline, we will require providers of covered services to offer, at the point of sale, to install a technical solution capable of supporting at least 8 hours of uninterrupted 911 service during a power outage. Within three years, providers must also offer, at the point of sale, a technical solution capable of supporting 24 hours of uninterrupted 911 service if the subscriber desires additional backup power. To minimize costs and provide flexibility, we do not specify the means by which providers of covered services offer to supply these amounts of backup power; instead, providers are free to develop individual technical solutions. To plan for longer power outages, we strongly encourage providers to inform subscribers of options to extend such uninterrupted service over multiple days and direct subscribers to sources of known compatible accessories such as home, car, or solar chargers. For longer power outages, we do not require providers to offer or install any particular solution, but we strongly encourage providers to inform subscribers at the point of sale, and through annual disclosures to existing and new subscribers discussed below, about known options to ensure uninterrupted 911 service and provide examples of retail sources for associated equipment, which may include third-

party vendor sources if providers do not offer such equipment themselves.

32. In the *NPRM*, we observed that 8 hours of backup power for network equipment at the subscriber premises appears to be consistent with a number of VoIP deployment models already in practice, though some providers have deployed backup power capabilities for up to 24 hours. We find that 8 hours of backup power is the appropriate amount of time to afford consumers with continuity of power in the critical hours immediately after a power outage, and is a backup power duration that is technically feasible today. The record reflects that the option to receive 8 hours of backup power is already an industry norm, as well as a reasonable baseline for the amount of standby time that is likely to be useful to consumers during emergencies. The United States Telecom Association (US Telecom), for example, states that “provisioning eight hours of backup power is consistent with industry standards and reflects what VoIP providers currently employ.” Verizon offers subscribers a 12-volt battery that provides up to 8 hours of backup for voice services and also observes that “[c]ompanies such as Comcast, Cablevision, and Cox offer a battery with eight hours of backup, and Time Warner offers a battery with a choice of eight or twelve hours.” The Electronic Security Association (ESA) and the Alarm Industry Communications Committee (AICC) urge the Commission to promote adherence to the National Fire Protection Association (NFPA) minimum standard on battery backup, which also is 8 hours. In light of this broad consensus, and based on the fact that 8 hours of backup power is already being provisioned today by some providers, we disagree with commenters who suggest that 8 hours is not an appropriate standard for backup power offerings. We find that it is technically feasible for providers of covered services to offer subscribers the option of at least 8 hours of backup power through provider-supplied backup power equipment or by offering compatible third-party equipment. While many providers already offer their subscribers an 8-hour backup power capability, the rule we adopt today establishes a common baseline that will ensure that consumers have access to backup power options regardless of their provider. This will promote public safety and emergency preparedness by allowing subscribers to reach 911 and receive telephone-based alerts and warnings in the critical hours immediately following a commercial

power failure. We emphasize that the requirements we adopt today do not place any obligation on the consumer to purchase backup power; the obligation is placed on the provider not providing line-powered service, to make backup power available to the consumer, and to install appropriate backup power upon initial installation of service if requested by the consumer. To that end, we expect that installers should be able to answer questions about backup power.

33. While we believe that 8 hours of backup power would address the need for continuity of communications immediately after a power outage, we recognize that, in some cases, 8 hours of backup power may not be enough for subscribers to reach critical emergency services during an extended loss of power. AARP urges the Commission to require providers to be “responsible for the deployment and maintenance of voice-enabling CPE that delivers at least 12 hours of standby time.” NASUCA and the Communications Workers of America (CWA) also suggest that a longer time period, such as 12 or 24 hours, would be more useful for subscribers who need a longer duration to attend to other time sensitive matters that arise during the course of a natural disaster or other emergency. While industry commenters oppose a mandate to provide more than 8 hours of backup power to every subscriber, service providers note existing solutions, as well as innovative new solutions, that are capable of supporting longer standby times. Along similar lines, NASUCA urges the Commission to monitor advances in battery technology, and as soon as such technology is available at a reasonable cost, to require providers to furnish backup batteries with 7-day standby time and 24-hour talk time.

34. In light of the critical need for maintaining 911 service during more severe and long-lasting power failures, we will require providers to offer subscribers a 24-hour backup power solution within three years. The record indicates that the provision of 24 hours of backup power is at least technically feasible today. ACA has “determined that batteries with 24 hour stand by capability can be ordered from at least one vendor but are not immediately available because they are not widely used.” As explained below, we do not require providers to offer technologically distinct 8-hour and 24-hour solutions, so a 24-hour solution could consist simply of three 8-hour batteries. Many providers that offer an 8-hour solution are therefore likely to be capable of offering a 24-hour solution with minimal additional difficulty. That said, we want to encourage continued

innovation in the development of 24-hour and longer term backup power solutions and avoid locking in solutions that are minimally compliant but that may not provide the best value to consumers. We will therefore phase-in the 24-hour requirement over three years, during which time we expect providers to work diligently to implement innovative solutions for providing at least 24 hours of backup power that improve upon current offerings in terms of cost, reliability and ease of use. This is consistent with ACA’s recommendation for a phase-in of the 24-hour battery requirement for smaller providers; however, we find that given the overall market conditions for 24-hour battery supplies, including questions about immediate availability, it is appropriate to phase in the requirements for all providers, regardless of size. While NASUCA recommends that the Commission monitor battery backup power developments and phase in the requirements as soon as the market will allow, we find that providing a date certain both allows the market sufficient time to develop, and places a backstop for development, thereby spurring innovation in a reasonable timeframe. In the meantime, we encourage but do not require providers to offer a 24-hour solution using available technologies.

35. As commenters note, the need for continued access to 911 during an extended power outage does not end after 8, or even 24, hours. For example, Public Knowledge argues that “a minimum time of seven days backup power is a reasonable requirement that will keep consumers safe before, during, and after a natural disaster, and allow them to rebuild their communities.” Based on a study by the Environmental and Energy Study Institute, Public Knowledge observes that restoring power after Hurricane Sandy and Hurricane Katrina took 12 and 15 days respectively, and on average takes 7 to 23 days. To address such extended losses of commercial power Public Knowledge asserts that “carriers must prioritize the adoption of devices that use batteries that can last days and are not proprietary.” Other commenters argue that “Americans have come to trust and expect basic telephone service to work indefinitely, particularly during power outages caused by natural disasters and public safety emergencies” and urge us to adopt even longer backup power requirements, ranging from seven days to two weeks.

36. We are not persuaded that a requirement for providers of covered services to offer or install more than 24 hours of backup power is necessary at

this time. All things equal, we would prefer access to 911 during a loss of commercial power to last indefinitely, as consumers have come to expect with line-powered services. We recognize, however, that there are technical, operational, and cost considerations that must be balanced against this theoretical desire. For reasons discussed above, we believe that it is both technically feasible and consistent with current business models for covered services to require providers to offer options for 8 and 24 hours of backup power on the timelines specified in our rules. We agree, however, with commenters who suggest that a mandate to offer backup power for multi-day outages could impose unnecessary burdens on service providers and excessive costs on consumers for comparatively little public safety benefit. As CSRIC has observed, backup power technologies are evolving, and the cost of more advanced batteries such as lithium-ion cells is likely to decrease over time as other options such as power-over-Ethernet become more widespread. We will continue to monitor these developments to ensure that our rules keep pace. Moreover, power outages of extended duration allow well-informed consumers time to recharge their existing batteries or make other arrangements to reach emergency assistance until power is restored. We therefore strongly encourage providers to inform subscribers, both at the point of sale and annually thereafter, of known ways consumers can maintain connectivity during extended power outages. As an example, this could include guidance on restocking or recharging a power supply used to provide 8- or 24-hour capability. Providers could also give information on purchasing other accessories such as solar, home or car chargers that may allow exhausted batteries to be recharged and that are compatible with the provider's equipment. Providers need not offer such accessories themselves or endorse particular third-party suppliers, but they should provide sufficient information, including technical specifications when necessary, for subscribers to obtain compatible accessories from commercial sources. Such information may be provided through welcome kits, brochures, emails to subscribers, or any other means reasonably calculated to reach each subscriber, as discussed below, while providing due consideration for any preference expressed by the customer. Providers sometimes deploy mobile charging stations to areas affected by an extended outage, and may inform

subscribers when such mobile charging stations are made available.

37. In adopting these requirements, we acknowledge observations that “[n]otwithstanding the availability of backup batteries, many customers today choose not to obtain a battery, given the growing reliance on wireless or the customers’ use of handsets or other devices that themselves require commercial power to operate.” We also agree with commenters such as Verizon that “[c]ustomers should be free to decline [a backup] battery, depending on their personal preference.” We further acknowledge that comments in the record indicate that, when it is offered, consumers often may not choose to avail themselves of options to purchase backup power. Commenters note, for example, that many subscribers of fixed, residential VoIP service also purchase mobile voice service that provides an alternate means of reaching 911 in an emergency, and that others prefer cordless phones that require backup power beyond that supplied by service provider networks. Nevertheless, some consumers—particularly the elderly and other populations that are at the greatest risk during an emergency—may not subscribe to mobile wireless service and may rely solely on the continued functionality of their residential voice service to reach 911. Furthermore, mobile networks are not designed in the same manner as wireline networks and may become overloaded in times of extreme use in an emergency situation, and thus be unavailable for use to reach 911. We emphasize that nothing in our rules forces consumers to purchase backup power they do not want. We require only that consumers who want service that will work during power outages and have not otherwise provided for such uninterrupted service have the option of obtaining that capability, and that they have sufficient information to make an informed decision.

38. In the *NPRM*, we discussed the duration of backup power in terms of “the availability of standby backup power, not actual talk time.” Commenters differ on whether backup power should be measured in terms of standby time, talk time, or some other metric that takes into account variations in battery life under different conditions. NASUCA, for example, questions provider assertions about backup battery life on the grounds that 8 hours of battery life yields far less actual talk time, and because batteries deteriorate as they age. Public Knowledge observes that the actual duration of a battery depends on its use, and that the more calls are placed, the

more quickly backup power is depleted. In light of these potential discrepancies, we believe that adopting a uniform definition of “backup power” is necessary to avoid potential consumer confusion. Therefore, we base our backup power requirements on the amount of time a technical solution can maintain a covered service in standby mode, *i.e.*, able to provide a dial tone and to initiate and receive voice calls, but not necessarily in continuous use. We believe that standby time is an appropriate metric, because our rules are premised on the need for covered services to be available to dial 911 or receive incoming communications such as emergency alerts and warnings during emergencies, not necessarily on the need for extended talk time when commercial power fails. We recognize that actual battery life may vary depending on how often subscribers place calls and how long such calls last, but we conclude it would not be practical to account for such situation-specific variations in our rules and that standby time is a more consistent and useful point of comparison. Accordingly, we require providers of covered services to offer subscribers the option to obtain backup power for 8 hours (effective 120 days after publication of this *Report and Order* in the **Federal Register**) or 24 hours (effective within three years thereafter) of standby time, measured at rated specifications, without a duration requirement for actual talk time.

b. Methods of Provisioning Backup Power

39. We agree with commenters who advocate flexibility in how providers achieve continuity of 911 access for the time periods discussed above. The record reflects that providers currently employ a variety of backup power technologies and that a range of backup power options are also available direct-to-consumer from third-party sources. CSRIC, for example, identifies nine “use cases” for residential VoIP deployment, with a range of equipment functioning as an analog telephone adaptor (ATA) with varying levels of battery backup. CSRIC observes that “[t]he most commonly deployed model for VoIP services in the United States is to locate the ATA function in a network device, installed inside the living unit.” In addition, as NCTA states, uninterruptible power supplies (UPS) that can power multiple devices during a power outage are already widely available at national retailers. Bright House also describes “numerous retail options available to subscribers like UPS, portable power packs, solar, and

manual cranks that power multiple devices during an outage and offer a more compelling and flexible solution to subscribers at comparable prices” Some parties also comment that subscribers who use more versatile power options such as UPS should not have to also pay for the duplicative cost of an additional limited-function battery; nor should the Commission require consumers to pay for a backup power option that does not work in their situation.

40. We do not require use of a specific technical solution or combination of solutions. Providers, which are not providing line-powered service, have flexibility to develop and offer their own backup power solutions, as long as those solutions comply with the rules we adopt today. In addition, we expect that installers should be able to answer questions about backup power. For example, a provider could offer a solution with a single, internal battery delivering 8 hours of backup power. With respect to the 24-hour option required within three years, providers may choose to offer consumers a single 24-hour battery (or battery tray as offered by Verizon), three 8-hour batteries, or some other combination of installed and spare batteries. UPS systems or other technologies to provide 24 hours total. If the solution requires a proprietary battery or other equipment that is not widely available in retail stores, the equipment should be provided as part of the installation of service. If, however, the solution accepts commonly available equipment such as D-Cell batteries, providers need not supply such equipment themselves, as long as they notify subscribers at the point of sale that it is not included and must be supplied by the subscriber for the solution to function properly. In cases involving spare batteries that are not widely available at retail stores, the solution offered to subscribers should also include a charger or some other method of ensuring that such batteries are stored in a charged state.

c. Battery Monitoring and Maintenance

41. In the *NPRM*, we sought comment on whether the provider should have any responsibility to monitor backup power status to determine whether the battery had degraded run time or performance. Generally, the comments of individual consumers and consumer advocacy organizations support requiring providers either to maintain and monitor the backup power or to provide subscribers with the means to do such monitoring. For example, AARP urges the Commission to adopt as a rule the CSRIC recommendation that service

providers work with their vendors to provide a mechanism to monitor battery status, and determine whether the battery is degraded. AARP states that this can be done through remote monitoring of batteries as part of the service offered to subscribers, or through LEDs visible to subscribers. Other commenters suggest that the backup power system contain a self-monitoring feature that notifies subscribers audibly and visually when the backup power system is in use, and when it is running low. ESA notes, however, that some subscribers may not pay attention to these warnings, and that it may require personal interaction with subscribers to assist with upgrading or changing a battery that needs attention. On the other hand, service providers generally argue that requiring remote monitoring of backup power is either impractical with current technology or, even if technically feasible, of limited use to subscribers or providers. AT&T contends that “IP-based voice service providers generally do not assume responsibility for monitoring their customers’ backup batteries,” and that “[r]elying on customers, rather than service providers, to monitor and maintain battery backup power for network equipment at the subscriber premises makes eminent sense given technological and marketplace changes.”

42. We do not believe it would serve the public interest to require providers of covered services to remotely monitor backup power status at this time. Similarly, we decline to adopt any requirement that providers inspect or test backup power equipment after fulfilling their initial responsibility under our rules to offer subscribers the option, at the point of sale, for backup power to be installed as part of the initiation of service. This is consistent with CSRIC’s observations that “[i]ncreasingly, battery backup is being offered as an optional accessory to the consumer, which they can control and manage themselves.” While we believe service providers are in the best position to identify and make available backup power solutions compatible with and appropriately sized for specific covered services, we agree with commenters who believe subscribers are in the best position to monitor backup power once installed, and in light of the disclosure requirements we are implementing designed to ensure they are adequately informed on how to do so. With respect to batteries, we are not persuaded that battery monitoring technology has evolved to the point of allowing service

providers to conduct useful remote monitoring of battery status without raising costs to consumers or diverting resources away from more important network reliability issues through an increase in false failure alarms. We observe, however, that our allocation of monitoring responsibility to consumers is based on the expectation that service providers offer adequate information for subscribers to understand when their equipment is functioning properly and when it may require maintenance or replacement. Service providers should also inform subscribers of the potential for batteries to degrade over time and either make replacement batteries available for self-installation at the subscriber’s expense or provide sufficient information for subscribers to obtain replacement batteries from third parties.

d. No Obligation to Retrofit

43. Some service providers express concerns about the cost and complexity of any obligation to retrofit currently installed equipment to comply with any backup power requirements the Commission adopts. AT&T, for example, states that “[i]f service providers were required to provide CPE backup power, the Commission should require only prospective implementation in order to avoid the technological pitfalls of retrofitting prior deployments.” ITTA argues that “[r]etrofitting existing service deployments for customers who are not interested in battery backup power would divert resources from new deployments, thus slowing the expansion of services to customers who desire advanced broadband capabilities.” We agree and decline to adopt any obligation that providers of covered services retrofit currently-deployed equipment to accommodate the amount of backup power specified in our rules for new installations. The record reflects that some covered services are currently deployed without backup power and that consumers may prefer to continue using their existing equipment. Accordingly, we require only that backup power options be offered at the point of sale. Providers may continue offering retrofit options for backup power upgrades to existing customers or those who decline the option at the point of sale, but they are under no obligation to do so. We note, however, that even service providers that do not currently offer backup power acknowledge that third-party UPS units may allow subscribers to maintain communications capabilities without the need to retrofit existing equipment. Therefore, we conclude that providers’ obligations to current subscribers

should include the disclosure requirements discussed below and the option for subscribers to self-install commercially available backup power solutions that are compatible with existing equipment.

e. Compensation and Costs for Providing Backup Power

44. In the *NPRM*, we proposed that any requirement for service providers to ensure a substitute for line power would be premised on the condition that such providers “would be entitled to commercially reasonable compensation in exchange for providing this service.” In response, Public Knowledge asserts that the Commission should use legacy POTS as a baseline and require providers to furnish backup power without an additional fee because, until the transition to IP-based services, reliability has always been paid for as part of a subscriber’s phone bill, and allowing providers to charge for backup power for the same service via new technology would be a step backward. However, this argument disregards the record evidence that batteries or other potential substitutes for line powering carry a not insignificant additional cost over an entire network, and that it is not unreasonable to permit providers to recoup those additional costs from those subscribers who have need for the additional coverage. We also note that it is current practice among many interconnected VoIP providers to charge an extra fee for batteries or other backup power capabilities, suggesting that the expectations Public Knowledge cites may be changing as consumers increasingly adopt VoIP services. As CSRIC has observed, “[o]ne clear trend across all VoIP use cases is that battery backup is increasingly being offered as an option to the consumer, with the cost and maintenance of the UPS and batteries being the consumer’s responsibility.” Ultimately, we are persuaded that subscribers should not have to pay for backup power they do not want. As discussed above, consumers may desire different amounts of backup power—or none at all—depending on their individual circumstances.

45. Accordingly, we conclude that providers of covered services may charge subscribers for the backup power capabilities provided under our rules, if subscribers wish to purchase such capabilities. We emphasize that we do not specify the rates at which providers of covered services may offer backup power or related accessories, we expect market forces to ensure that backup power is offered at competitive prices. A service provider can receive

compensation for all aspects of implementing the rules we adopt today, including the backup power installation, and costs of equipment and labor, from the consumer that elects to have backup power installed. And we do not preclude service providers from including backup power capabilities without separate charge, if they choose to do so for competitive or other reasons.

46. By requiring only that service providers provision backup power upon subscriber request at point of sale, and at the requesting subscriber’s expense, we have effectively negated the argument that these rules will substantially increase costs to providers. The majority of commenters who raise issues related to costs base their arguments on the assumption that the Commission would mandate a universal backup power solution across all subscribers, including retrofitting existing subscribers. The action we take today will substantially limit the providers’ costs by requiring backup power installations only for customers that request backup power at the point of sale, and at those customers’ expense. Fiber to the Home Council Americas states that “while the industry has generally supplied backup batteries to all subscribers, it would make a material difference to the cost of a build, enabling expansion into less dense areas, if it could supply battery backup only to those subscribers that expressly want it—a number all-fiber service providers has determined is not great.” Similarly, NCTA stated that in their experience only a small number of customers have purchased backup power. We also find concerns about the environmental effects of requiring all consumers to obtain backup power are inapplicable because we do not make such a requirement.

47. There are additional factors that minimize the costs associated with compliance for the covered providers. First, as noted previously, the record indicates that numerous entities comprising a significant share of the IP voice services market are already offering their customers 8 hours of backup power; for those entities no additional costs are necessary. To the extent that a service provider is not currently offering the requisite 8 hours of backup power, the fact that numerous providers are currently offering such a solution indicates that solutions exist and are widely available. Accordingly, there is little need to custom-design a solution when many of the solutions can be used universally. Indeed, providers may avoid the costs of supplying or installing a proprietary

solution. This also saves providers the costs of supplying batteries directly. The same cost-mitigating principles apply to the discussion of 24-hour and extended duration backup power; the commercial market for this solution already exists and even the smaller providers are confident in their ability to provide this level of backup power if provided ample transition. The record also indicates that many providers already offer some form of backup power, even if it is not an 8-hour solution, and therefore would be familiar with the practice of installing backup power solutions for their customers. Because the cost to providers of complying with this rule should be minimal both at the outset as well as when the 24-hour requirement takes effect, and the particular benefit to the public of enhanced continuity of communications to reach help through 911 during power outages is substantial, we conclude that our action today produces a net public benefit.

2. Subscriber Disclosure Obligations

a. Need for Subscriber Disclosure Obligations

48. In the *NPRM*, we sought comment on whether we should require providers to develop and implement consumer education plans regarding the availability of backup power, and noted our belief that such plans “would be critical to consumers’ ability to successfully self-provision.”

49. Commenters representing government stakeholders and consumers support such a requirement. For example, PA PUC states that, if providers require their customers to be responsible for purchasing or replacing backup power batteries, providers “must develop and implement outreach and education programs to ensure customers are aware that [customers] are responsible for providing their own backup power.” The New York Public Service Commission indicates that it is “critical that information about the consumer’s role in maintaining continuity of power is transmitted to the customer by the service provider,” and that providers need to develop programs to “ensure consumers are aware that [they] are responsible for providing their own backup power.” The Attorneys General for the Peoples of the States of Illinois and New York state that, because of the reluctance to advertise a diminished service, “carriers may not emphasize the need for backup power disclosures.” The FCC’s Intergovernmental Advisory Committee asserts that “providers should be required to communicate effectively and accurately the services that may no

longer be available and options for consumers to obtain comparable services, including options with respect to backup power supplies.”

50. Industry stakeholders, on the other hand, oppose such a requirement. The Independent Telephone & Telecommunications Alliance (ITTA) states that there is “no evidence that additional consumer education would be helpful or necessary, and argues that a requirement is “unwarranted and a waste of resources.” AT&T recommends that the Commission refrain from imposing a consumer education requirement, and instead work with providers to review backup power best practices for consumer education. Others, such as CenturyLink, Hawaiian Telcom, NCTA, and Verizon, suggest that the Commission support the implementation of CSRIC recommendations regarding consumer notification. They argue that this would give providers the flexibility to implement consumer education measures as their networks and business models warrant.

51. Others argue that a requirement is unnecessary because providers already give consumers information related to backup power. For example, NCTA argues that the Commission’s existing rules already “ensure that consumers are made aware of the backup power ramifications of choosing a VoIP service,” and require providers at the initiation of interconnected VoIP service to “inform consumers of the ‘circumstances under which E911 service may not be available.’ . . . includ[ing] ‘loss of electrical power.’” ITTA notes that it is “standard industry practice for interconnected VoIP providers to notify consumers regarding the potential limitations of IP-enabled voice services and equipment during a power outage.” Fiber to the Home Council Americas (FTTH Council) also asserts that industry efforts to notify consumers about battery backup availability are effective based on assumptions regarding consumer adoption of wireless and VoIP services.

52. AT&T states that providers of IP-based voice service already educate consumers on the necessity of a backup battery during a power outage and provide information about the backup battery, including practices for prolonging battery life, where to purchase battery replacement, and replacement instructions. CenturyLink indicates that it plans to provide information regarding “sample batteries that would work with [CenturyLink] equipment as well as suppliers of such equipment for those customers wishing to provide their own backup power.”

Charter and Cablevision state that they are making “significant efforts to educate their customers about the VoIP services they offer, including that such service will not work during a power outage without a backup battery.”

53. We find that the lack of uniformity in providers’ backup power information, and as commenters present, lack of consumer awareness at a time of technological transition, may lead to consumer confusion about consumer expectations and responsibilities in the access of 911 service during power outages. While some providers already offer or plan to make available information to consumers in the near future, it appears from comments submitted and providers’ Web sites that the information provided to consumers is not consistent across the industry. This lack of uniformity may lead to consumer confusion at a time of technological transition from services provided over copper networks to services provided over IP-based networks, and agree with commenters that there are consumers who “may not be aware that VoIP and wireless service operate differently from traditional landline telephony in a commercial power outage.” We acknowledge the concerns of commenters representing unique populations, such as AARP, which states that “[g]iven the diversity of service provider practices . . . the level of consumer understanding of CPE battery backup issues is certainly not uniform.” Further, subscriber complaints reveal that current disclosure practices are likely insufficient. For example, the Commission’s consumer complaints portal reveals that some subscribers are frustrated by VoIP service providers’ failure to inform subscribers about the need to self-provision a battery to operate backup power in order to access 911 services. Based on the record, while we acknowledge that there are some disclosures already mandated and some additional information provided voluntarily, we are not convinced disclosures currently required only for interconnected VoIP providers, are of sufficient scope or uniformity across all covered providers, to satisfy the Commission’s obligation to promote the safety of life and property and ensure consistent 911 services. Although not all subscribers may receive backup power information from more than one provider in a given year, we acknowledge that backup power information may be confusing especially for unique populations struggling during the technology transition, or those who may need to switch providers

often, such as military families needing to relocate. We find that it is in the public interest for the Commission to establish a uniform requirement to provide minimum information as described below in order to ensure that all subscribers of covered services are equipped with necessary information to access 911 services during power outages regardless of provider or technology used.

54. Adoption of best practices established by CSRIC, as recommended by some industry commenters, may help, and we do not intend to discourage adoption of these practices. However, we are not convinced that the voluntary adoption of these practices without a standard, mandatory baseline will eliminate consumer confusion. We therefore address these concerns by requiring minimum subscriber disclosure obligations, while at the same time encouraging providers to voluntarily follow additional CSRIC best practices regarding backup power.

55. As NCTA discussed, current Commission rules require a limited customer notification for interconnected VoIP service providers. This requirement, however, is only for a subset of covered providers considered in this *Report and Order*, and we find that the information currently required is too limited to fully inform consumers about backup power. Specifically, section 9.5(e)(1) of the Commission rules requires customer notifications for circumstances such as “loss of electrical power,” “under which E911 service may not be available through the interconnected VoIP service or may be in some way limited by comparison to traditional E911 service.” Informing consumers of the circumstances under which their E911 service is not available does not adequately inform a consumer on how to purchase, efficiently use, monitor, or replace backup power at the consumer’s premises.

56. We conclude that requiring providers to develop and implement subscriber disclosures regarding backup power with minimum baseline disclosures serves the public interest and will promote access to 911 while being of minimal cost to the providers. As CenturyLink notes, there is a clear public benefit in promoting consumers’ awareness of the need for affirmative action to acquire and maintain backup power. According to the Communications Workers of America (CWA), “Commission oversight is essential to encourage . . . consumer education about the time limits and capabilities of battery-provided backup power.” Attorneys General state that “enabling consumers to prepare

themselves for emergencies and avoiding public confusion should be fundamental Commission goals.” We agree with these commenters, and others, who recognize the importance of consumer information in managing the historical consumer expectations regarding continuity of communications. As described in detail below, we also find the costs to providers in making the required disclosure to be minimal.

b. Minimum Information Elements

57. The disclosure requirements adopted today are intended to equip subscribers with necessary information to purchase and maintain a source of backup power to enhance their ability to maintain access to reliable 911 service from their homes. Several parties commented on what information should be included in the disclosures. For example, some commenters strongly support including information about battery life spans, procedures for ordering, installing, replacing, and extending battery life during a power outage. The City of New York recommends that we require providers to furnish information to assist in extending the “useful life of battery backup” such as powering off the system or closing applications. APCO suggests that a public education requirement include information on “any impact to 9–1–1 services.” The respective Attorneys General for the State of Illinois and the State of New York strongly support consumer education addressing the many factors that can affect the amount of “stand-by time” a backup power solution provides. The California PUC urges the Commission “to mandate that service providers give customers educational materials consistent with California’s existing requirements,” which include, for example, requiring providers to tell their customers that their services require backup power on the customer’s premises, limitations of service, and potential service failure during power outages. The California PUC also requires providers to tell consumers about how to best “maximize the ability to make or receive necessary phone calls during an outage.”

58. In addition to commenting on the appropriate level of disclosure in any Commission requirements, some commented on the opportunity for states to require more extensive disclosure. For example, the California PUC requests that the Commission allow the states to “adopt more extensive backup power requirements.” Similarly, NARUC suggested that the Commission establish “a floor” that

does not impact more protective state-level measures.

59. Several industry commenters identified information that is currently included in some backup power notifications to subscribers. For example, ACA asserts that providers inform potential and current subscribers that their voice service is not powered by the network, and during a power outage, without battery backup, the subscriber may lose access to 911. ACA explains that this notice also alerts customers about specific backup power capabilities of the equipment.

60. We agree with the commenters who suggest that the Commission adopt minimal requirements for the types of information that service providers must give subscribers, regarding backup power. This will decrease the likelihood of consumer confusion, and ensure that all subscribers have access to basic information about the need for, and how to acquire and conserve, backup power. In this respect, we observe that several providers already give relevant information to their customers; however, the amount and type of information given varies greatly from one provider to another, and thus gives rise to the potential for consumer confusion. This confusion may lead the consumer to fail to take proper precautions to acquire and maintain backup power, and ultimately result in the inability to access 911 at a critical moment during a power outage. Thus, we find it in the public interest to identify minimum information that must be communicated to consumers regarding backup power. In this respect, we require providers to disclose to subscribers the following information: (1) Availability of backup power sources; (2) service limitations with and without backup power during a power outage; (3) purchase and replacement options; (4) expected backup power duration; (5) proper usage and storage conditions for the backup power source; (6) subscriber backup power self-testing and monitoring instructions; and (7) backup power warranty details, if any. In order to minimize the burden on smaller providers, we direct the PSHSB to work with CGB to develop such forms or other documents, prior to the implementation date of these rules for smaller providers, as herein defined, for the use of smaller providers in disclosing the required notifications to their subscribers, including subscribers with disabilities.

61. *Availability of Backup Power Sources.* Subscribers must be made aware whether their service is capable of accepting backup power and, after the initiation of service, whether they may

obtain backup power from the provider or from a third party. Some providers post this information online, but we find that the posted information is both too limited and not readily accessible by all subscribers. Therefore, it is insufficient notice to subscribers of a critical piece of information that they need to ensure continuity of access to critical 911 services during a power outage. Accordingly, we require providers to inform new and existing subscribers about the availability of compatible backup power sources for their service, as outlined below. Again, we emphasize that providers are not required to research and/or provide information on every possible backup power source that could potentially be compatible with a Covered Service; disclosure obligations under our rules are limited to basic information allowing consumers to make informed choices about their purchase and use of backup power to maintain continuity of access to 911.

62. *Service Limitations With and Without Backup Power.* We require providers of Covered Service to notify subscribers about the service limitations with and without the use of a backup power source. As we stated in the *NPRM*, consumers of wireline telephony may expect their plug-in phones to work during a power outage without any further action on their part. Non-copper based networks and services not based on TDM may not support these traditional wireline functionalities, or may not support them in the ways consumers have come to expect. We are persuaded by commenters who support more fulsome disclosures of service limitations. Accordingly, we require providers of Covered Service to inform subscribers about the impact of power outages on the use of 911 services and the type of service that will continue to work with backup power. For example, the obligation may be satisfied by notifying subscribers that voice service will be unavailable during a power outage without backup power, and that this backup power will not also power services other than voice. Further, to the extent the provider has information about other services at the subscriber premises—for example, home security, medical monitoring devices, or other similar equipment—the provider should notify the subscriber that these services will not be powered by the backup power source for voice service.

63. At this time, we decline to require providers of a Covered Service to disclose the limitations of cordless handsets during power outages. Commenters such as US Telecom and California PUC note that cordless

phones rely on commercial power, and will not function during a power outage. Accordingly, the California PUC supports a requirement that providers tell consumers that “cordless phones will not work in power outage.” However, we observe that the concern about cordless phones not functioning during a power outage exists regardless of the underlying network providing service to a subscriber; that is, it is an equipment issue that does not depend on the type of underlying network—copper, fiber, or cable. Accordingly, we do not believe it is imperative to impose such an obligation here on the service provider.

64. *Purchasing and Replacement Options.* Providers of Covered Service must inform subscribers about backup power purchasing and replacement options to enable subscribers to make informed decisions regarding whether to purchase backup power and how to find backup power that is compatible with the service. If, after the initiation of service, the provider does not sell a backup power source directly to subscribers, the provider must give subscribers enough identification information about what type of power source is compatible as well as purchasing options. Such identifying information must, at a minimum, include where to purchase a power source, the approximate cost, and the voltage and type of battery that is compatible with the service. That many providers currently make this information available suggests that the burden of doing so is not unreasonable.

65. *Backup Power Duration.* Providers of Covered Service must inform subscribers about the expected duration of the backup power source and factors that impact duration, e.g., usage and storage conditions. We agree with the commenters who argue that standby time can be affected by many factors. Therefore, in addition to explaining the length of time the provider’s backup power source is expected to power the service in standby mode and, to the extent possible, the expected amount of talk time, providers of Covered Service must notify subscribers of the proper backup power usage and storage conditions, and how these affect the backup power source operation during a power outage. This obligation includes identifying how subscribers may limit and conserve backup power both before and during a power outage. We agree with the suggestion of the City of New York that providers furnish “information to assist the [subscriber] in extending the useful life of battery backup.” Accordingly, providers of Covered Service must advise subscribers

of the proper backup power storage and charging conditions so that subscribers know, for example, whether battery power life, capacity, or run time will decline, whether the batteries must be replaced after a certain amount of time, and the proper storage temperatures. That is, the information provided must at a minimum clearly inform subscribers about the impact of environmental factors.

66. We strongly encourage providers to assist subscribers in developing a plan for extended backup power by notifying them of options to extend backup power beyond the life of the battery. For example, providers could inform subscribers that they could purchase several backup power units for use during prolonged outages, and provide directions for rotating these as required to keep the units charged. We also strongly encourage providers to inform subscribers of any available accessories such as solar or car chargers, which may be able to recharge a depleted backup power unit. And, when applicable, providers should inform subscribers of the availability of deployed mobile charging stations. This information will arm subscribers with the knowledge necessary to be prepared for extended power outages and to take steps to mitigate disruption to their 911 communications.

67. *Testing and Monitoring.* Although we do not require providers to monitor backup power sources, when the subscriber purchases backup power directly from the provider, the provider must inform and instruct subscribers about how to self-monitor and self-test the backup power source. Several commenters support such a requirement, and we find the analogy in the comments of MDTC to be appropriate: “like smoke alarms, IP equipment have similar importance to personal and public safety and is usually dependent upon the user for periodic testing and battery replacement.” We are persuaded by these commenters that providers must clearly explain how a subscriber may test, monitor, and maintain the backup power source. We observe that several providers are currently effectively providing pictorial or other detailed explanations about subscriber self-testing and self-monitoring of backup power. Given their ongoing relationship with their subscribers, we find that providers are in the best position to notify and remind subscribers about how to test and monitor backup power. By furnishing specific instructions to subscribers on how to self-monitor and test backup power sources, providers will decrease consumer confusion, and

greatly enhance the public’s ability to maintain critical communications during power outages.

68. *Warranty.* If the subscriber acquires the backup power from the provider, the provider must explain the elements of the warranty, if any, such as the warranty expiration date, and under what circumstances a replacement would be provided. We note that several providers already effectively offer online information regarding replacement procedures, which suggests that this is information that is helpful to consumers in preserving their ability to reach 911.

c. Availability of Required Information

69. Each element of the information described above must be given to subscribers both at the point of sale and annually thereafter, as described below. This information will help subscribers plan in advance to extend the effectiveness of their backup power and ultimately, as we stated in the *NPRM*, count on the continued availability of 911 service in harsh weather conditions or other emergencies when consumers are most vulnerable.

70. We sought comment in the *NPRM* on when providers should make information available regarding backup power. For example, we asked whether the information should be made available at the point of sale, at the initial set up of service, or at some other point in the process. We also asked whether providers should make detailed backup power information available prior to a predicted extreme weather event or other anticipated emergency.

71. Commenters support disclosure of backup power information to subscribers at various points in time. For example, the Attorneys General argue that the Commission should inform subscribers “when new service requires additional equipment to access emergency services in a power outage.” The CPUC supports providing information upon “service initiation and annually thereafter regarding backup power,” as well as sending “an annual reminder to customers to check the status of their battery.” On the other hand, providers such as CenturyLink see value in asking “at the point-of-sale” if their customers want backup power, at which time consumers will be assessed a “one-time, non-recurring charge.”

72. We are persuaded by comments supporting an initial disclosure at the point of sale for the new service and an annual disclosure for all subscribers, both new and existing. We agree with AT&T that subscribers should have the information they need to “shop among

competitive alternatives for backup power, including the alternative of opting out of backup power altogether.” As commenters note, service providers have an important role in disseminating information to their subscribers. AARP states that the “availability and distribution of accurate information related to CPE backup power from reliable sources is an important means to empower consumers.” Equipped with initial and annual notifications, including the disclosures and information as described above, all subscribers, both new and existing, will be in a better position to make backup power purchase decisions and conduct regular maintenance in order to ensure access to 911 services during power outages.

73. We also sought comment on how providers should make backup power information available to consumers. Commenters suggest that providers should offer information on Web sites, and in individual electronic and paper billing materials. ACA, for example, states that its members use a variety of approaches, such as posting information on the operator’s Web site, to inform subscribers about backup power supplies for CPE. CenturyLink states that “service providers are increasingly communicating with customers about the issue of backup power,” and supplementing brochures provided to customers with information on the company Web site. ESA raises concerns that there may be scenarios, for example with the elderly, requiring “personal interaction with consumers to assist with upgrading or changing a battery.” NTCA, GVNW, and Vantage Point Solutions suggest that consumers that “utilize an assistive device in connection with a disability” should be part of the consumer education process.

74. We seek to provide flexibility regarding the manner in which providers inform their subscribers, while also honoring any preferences expressed by customers. We thus permit providers to convey both the initial and annual disclosures and information described above by any means reasonably calculated to reach the individual subscriber. For example, a provider may meet this obligation through a combination of disclosures via email, an online billing statement, or other digital or electronic means for subscribers that communicate with the provider through these means. For a subscriber that does not communicate with the provider through email and/or online billing statements—such as someone who ordered service on the phone or in a physical store and receives a paper bill by regular mail—

email would not be a means reasonably calculated to reach that subscriber.

75. We observe that many providers use a variety of methods to offer backup power source information on their Web sites as well as in welcome kits, including charts, pictorial explanations, and links to backup power source manufacturers. We encourage providers to continue to do this, as long as required disclosures are reasonably calculated to reach each subscriber. Posting information on a Web site may be helpful but, by itself, would not satisfy our requirement that notifications be reasonably calculated to reach individual subscribers, even for those subscribers that communicate with the provider via online means. Further, we are persuaded by commenters that there are populations, such as the elderly or individuals with disabilities, who have no or a very limited online relationship with the provider or otherwise may need more targeted consumer education outreach beyond posting online information.

76. We believe that the cost of these backup power disclosure requirements will be minimal and, thus, will be exceeded by the significant benefits we expect to result from this subscriber disclosure, such as enhanced subscriber access to 911 services. Among other things, we note that the vast majority of providers already furnish subscribers with some backup power information. As a result of current disclosure practices, we expect that only a small share of the providers will need to take additional steps to comply with these rules beyond modifications to existing disclosures. Similarly, providers already furnish subscribers with information upon initiation of service, and are free to include the information we require herein with the other materials, removing the need for a special cost of distribution. Also, in order to limit costs to providers, we make clear above that a service provider may fulfill its disclosure obligation via any means reasonably calculated to reach the consumer, while also honoring any preference expressed by the customer. Such methods may include electronic outreach, including email notification and paperless billing statements; paper copies are not required for subscribers who access and receive information through those means. The annual notification associated with this requirement gives service providers ample time to plan, for example including the appropriate notifications in normally-distributed billing statements in a manner that does not serve to increase the number of printed pages distributed. As noted above, the

Commission will further reduce compliance costs by providing guidance as to the required notifications to subscribers. Accordingly, the costs of satisfying the notification requirement should be minimal for service providers, and the benefits of informing consumers of backup power solutions in order to reach 911 service from the subscriber premises during power outages, far outweighs any such minimal costs.

77. As with the rules obligating providers to offer backup power solutions, there are numerous benefits associated with the disclosure requirements on how commercial power outages affects VoIP service. Millions of Americans have come to rely on their TDM voice service working during a commercial power outage to call 911. With this backdrop, educating consumers that their phones will not work in a commercial power outage absent backup power is essential even if the consumer opts not to purchase backup power. At a minimum, an educated consumer will not have the expectation of relying on a VoIP service only to have it fail to operate when the consumer tries to make a 911 call, wasting valuable time in the process. In this way the consumer notifications not only promote the availability of 911 service in power outages, pursuant to our statutory mandate governing IP transitions, but also promote the “safety of life and property through the use of wire and radio communication,” the Commission’s statutory charge, by enabling customers to know the limitations of their service in an power outage situation and to make alternate arrangements—either via a backup power solution or alternate means of communication—to ensure the 911 call can go through. This is consistent with our findings with respect to requiring minimum wireless location accuracy where we found that the rules “will improve emergency response times, which, in turn, will improve patient outcomes, and save lives.” We find, therefore, that it is reasonable to expect that the rules we adopt today will save lives and result in numerous other benefits that are less quantifiable but still advance important public interest objectives. Given that the notification requirements contained herein have minimal associated costs, we find that the benefits of these rules far exceed the costs.

3. Community Outreach

78. In the *NPRM*, we sought comment on whether we should require providers to develop and implement consumer education plans regarding the availability of backup power. We also

inquired whether there is a need for measures beyond written notice to customers. The few commenters that addressed this issue see a need for outreach beyond written disclosures to subscribers for the Nation to make the transition to an all-IP environment effectively and with the least amount of consumer confusion. We agree with NASUCA that a backup requirement without a comprehensive consumer education plan would be of limited value, and we find that a truly comprehensive plan should contain an outreach component. That is, as noted by the Massachusetts Department of Telecommunications and Cable (MDTC), written notice to subscribers is only a portion of the consumer outreach and education that is necessary during these times of technology transitions.

79. We agree with MDTC that to provide for flexibility in the delivery of technology transition information, while ensuring its accuracy and effectiveness, providers should develop outreach and education plans in coordination with state, local, and tribal agencies and community organizations. Our Intergovernmental Advisory Committee (IAC) notes that “education efforts must include all levels of governments that interact with consumers. In this manner, state, local and tribal governments will be able to assist consumers in making informed choices that satisfy their communications needs.” However, the IAC further believes that providers instead of the FCC, state, local or tribal governments should have the primary responsibility to do consumer outreach on technology transitions. Thus, the IAC asserts that the FCC should “require [] providers to inform consumers of their options well before actual transition occurs.” For example, the IAC recommends that “providers should have dedicated phone, Web site and email contacts for consumers to report issues, and to obtain information. The objective of such outreach should be to provide information and answer questions, rather than market new services to consumers.”

80. We recognize that many providers already offer consumer education beyond providing mere written notice, and they already engage in community outreach as well. We see great value in providers forging closer relationships with communities, so that local officials can know and understand the likelihood that their residents will be able to summon help, or communicate the status of their welfare in an extended power outage. Community outreach can also help ensure the best possible outcome before disaster strikes (for example, by encouraging communities

to maintain sufficient supplies of batteries and other UPS equipment).

81. We also note that many communities have a robust telephone-based alert capability to warn residents of emergencies in their area. For this reason, and for the great value in being able to receive incoming calls from emergency services personnel, providers of covered services should organize their outreach to subscribers pursuant to this *Report and Order* around the goal of sustaining continuous communications availability.

82. In order to minimize cost and provide maximum flexibility, at this time, we encourage, but do not require, all providers to engage in the type of community outreach that would be required for a consumer education plan to truly be considered comprehensive.

D. Legal Authority

83. Today we adopt rules to educate and empower consumers to take necessary steps to ensure that their “home phone” is capable of making 911 calls during a power outage. These rules are well-grounded in the “broad public safety and 911 authority Congress has granted the FCC.” Congress created the Commission, in part, “for the purpose of promoting safety of life and property through the use of wire and radio communications.” Congress specifically directed the Commission to “designate 911 as the universal emergency telephone number within the United States for reporting an emergency to appropriate authorities and requesting assistance,” in legislation the purpose of which was to “encourage and facilitate the prompt deployment through the United States of a seamless, ubiquitous, and reliable end-to-end infrastructure for communications . . . to meet the Nation’s public safety and other communications needs.” The DC Circuit has also specifically upheld the Commission’s extension to interconnected VoIP providers of the obligation “already required of providers of traditional telephone service [to] transmit 911 calls to a local emergency authority.” In 2008, Congress expressly confirmed that authority to adopt rules that “promote and enhance public safety by facilitating the rapid deployment of IP-enabled 911 and E-911 services.” Congress has also charged the Commission with promulgating “regulations, technical standards, protocols, and procedures as are necessary to achieve reliable, interoperable communication that ensures access by individuals with disabilities to an Internet protocol-enabled emergency network, where achievable and technically feasible.”

84. In this *Report and Order*, we exercise this broad and longstanding authority over 911 to impose requirements on residential facilities-based voice service providers in their provision of 911 service. Our adoption of rules to enable the continued provision of 911 service during power outages—a logical component of the larger duty to provide 911 service in general—lies clearly within this authority. The Commission’s “broad authority” over 911 is grounded in multiple statutory provisions, as discussed above, that work together to promote universal access to 911. The rules we adopt today contribute to the implementation of this statutory scheme by facilitating the provision of 911 service under specific circumstances: when a customer is relying on a residential voice service that is not line-powered to place a 911 call during a power outage. These rules will ensure that customers who may face such circumstances are aware of the limitations of their service and empowered with options for maintaining 911 access in the event of power loss, closing a potential gap in the provision of 911 service. This *Report and Order* further advances the Commission’s statutorily mandated responsibilities over 911 by promoting the availability of 911 service during times when reports of emergencies and requests for assistance may be particularly urgent, as well as by enabling persons with disabilities to maintain 911 access during such periods. The rules will thus help the Commission more effectively implement Congress’s statutory goals of ubiquitous and reliable 911 service for all Americans.

85. Many commenters agree that our adoption of requirements to promote continuity of access to 911 during power outages is an appropriate—and necessary—exercise of our statutory public safety authority. Communications Workers of America states that “[t]he Commission has the statutory obligation to promote public safety through our nation’s communications networks” and affirms our view that “protecting public safety is one of the core principles that must guide [the Commission’s] policies during the technology transition.” The Alarm Industry Communications Committee (AICC) also contends that “[b]ackup power requirements should be adopted to protect consumers and to meet the Commission’s mandate to promote the national defense and the safety of life and property” under Title I. Similarly, the PA PUC “believes that

the [FCC] has the statutory authority to address this issue and require that providers have sufficient backup power to maintain 911/E911 connectivity during commercial power outages so long as the federal rules do not preempt more stringent state rules.” AARP comments that “[w]ith regard to the NPRM’s questions regarding whether the Commission has sufficient authority, the answer is an unequivocal yes.”

86. Commenters also cite the importance of safeguarding 911 service in particular as a basis for our adoption of rules proposed in the *NPRM*. The Electronic Security Association notes that “[n]ot only is standby power for communications important for life safety systems, but it is also critical in allowing the consumer to dial 911 during [power] outages.” AARP similarly observes that “[t]he issue of CPE backup power also overlaps the 911 reliability issue” and suggests that backup power requirements would fill an existing gap because the Commission’s 911 reliability rules “do not address the reliability of access network components that are associated with the origination of 911 calls.”

87. We disagree with Corning’s suggestion that the rules we adopt today contravene the holding of *American Library*. That court’s statement that the Commission’s “general jurisdictional grant does not encompass the regulation of consumer electronics products . . . when those devices are not engaged in the process of radio or wire transmission” is inapposite: the rules we adopt govern the provision of 911 service—which is either “radio or wire transmission”—during power outages. These rules grant providers maximum flexibility to define the technical parameters of backup power solutions they offer to achieve that goal. In the absence of line powering, these solutions may incorporate any number of proprietary and competitively sourced inputs, including D-Cell, lead-acid or lithium-ion batteries, UPS, solar panels, power over Ethernet or other technologies, including combinations thereof, provided that the solution on “offer” can support the required continuity of 911 service during a power failure. This service-oriented requirement is thus far different from the “broadcast flag” rule struck down in *American Library*. The court held that the latter rule impermissibly “impose[d] regulations on devices that receive communications after those communications have occurred” rather than on “communications themselves.” The requirements we adopt are obligations with respect to radio and wire communications. Indeed, the

purpose of these requirements is to promote access to and awareness of solutions that enable 911 calls to be originated during a power outage. The requirements therefore cannot be said to apply “after . . . communications have occurred.” The fact that devices or equipment operating on backup power may remain in standby mode when not in use, or that our performance rule is defined in terms of “standby time,” does not change this analysis. Defining the rule in terms of “standby time” is simply a means of specifying the period of time in which the rule requires 911 service be provided—*e.g.*, during the first 8 hours of an outage. Backup power solutions offered under our rules are not required to meet any performance standards that apply *while* a device is in standby mode, except that the solution must make 911 calling “available” throughout the standby period.

88. For similar reasons, we find unavailing AT&T’s comment that “[b]ecause the Commission has deregulated CPE, it has disclaimed any authority to impose CPE backup power requirements.” The rules we adopt today do not apply to CPE or regulate CPE. Rather, those rules govern the obligations of service providers to provide access to 911 service during a commercial power outage in the absence of line powering. While solutions offered under our flexible performance rule may encompass—solely at such providers’ option—the backup of some devices or equipment that might be classified as deregulated CPE, that does not mean that our rules cannot encompass such equipment when powering such equipment (which is located on a customer’s premises) is part of the solution chosen by the service provider. As discussed above, there is no general requirement to provide backup power for all equipment that might be located at the customer’s premises. Rather, the requirement is that, in lieu of line powering provided as a part of traditional POTS service, a covered service provider must offer a backup power solution that provides the customer with 911 access during a commercial power outage.

89. *First Amendment*. The disclosure obligations we adopt today are permissible under the First Amendment of the U.S. Constitution. No commenter asserts otherwise. In general, government regulation of commercial speech will be found compatible with the First Amendment if it meets the criteria laid out in *Central Hudson*: (1) There is a substantial government interest; (2) the regulation directly advances the substantial government interest; and (3) the proposed regulation

is not more extensive than necessary to serve that interest. As we have noted, the government has a substantial interest, enshrined in Section 1 of the Communications Act, in protecting the safety of the public through the use of wire and radio communications. The Commission has also long observed that “the government has a substantial interest in ensuring that consumers are able to make intelligent and well-informed commercial decisions in an increasingly competitive marketplace.” The disclosures here directly advance that government interest by warning consumers of the potential loss of access to 911 during commercial power failures and informing consumers of backup power options to maintain continuity of such communications. Like the “anti-cramming” rules the Commission adopted in 2012, we conclude that the disclosure requirements adopted here withstand Constitutional scrutiny, in that they advance the substantial government interests of protecting public safety and ensuring that consumers are able to make informed choices about uninterrupted access to 911 through networks that lack line power without requiring any more extensive disclosure than necessary to serve those interests.

90. Moreover, under the standard set forth in *Zauderer*, compelled disclosure of “purely factual and uncontroversial” information is permissible if “reasonably related to the State’s interest in preventing deception of consumers.” Courts have also recognized that other government interests beyond preventing consumer deception—here, the public safety interest in uninterrupted access to 911—may be invoked to sustain a disclosure mandate under *Zauderer*. The information about backup power disclosed to subscribers under our rules consists of factual information regarding the limitations of networks not equipped with line powering, and it is not disputed that this limitation exists or affects the provision of 911 service during power outages. This information plays an important role in preventing consumer confusion by setting clear and consistent expectations about subscribers’ ability to reach 911 in an emergency. It also allows consumers to make informed decisions about the amount and type of backup power they purchase, further reducing consumer confusion and preserving public trust in the 911 system as a means of reaching emergency assistance.

E. Sunset Date

91. The rules we adopt today ensure that consumers are adequately informed

about the role of backup power in the technology transitions and that they have the ability to purchase backup power for their service. Clearly delineating the respective roles of the provider and the consumer during this period of transition minimizes the potential for confusion or for unforeseen lapses in 911 service availability during power outages, and creates baseline expectations. Over time, we expect that both the marketplace and consumer expectations will evolve along with advances in technology so that adequate backup power solutions and availability will become commonplace. In light of this prediction, we will sunset the requirements adopted in this *Report and Order* on September 1, 2025. We anticipate that this ten-year period will allow sufficient time for a “cultural and educational shift” in consumer expectations, along with marketplace and technological development. Consumers will then be empowered to assume primary responsibility over their backup power, similar to the responsibility consumers now bear for mobile devices they may rely on for 911 access during an emergency. If, however, we determine after ten years that the marketplace and expectations have not evolved in the predicted manner we may take appropriate action designed to extend and/or modify the requirements contained herein.

IV. Procedural Matters

A. Final Regulatory Flexibility Act Analysis

92. Pursuant to the Regulatory Flexibility Act of 1980, as amended (RFA), an Initial Regulatory Flexibility Analysis (IRFA) was included in the NPRM in PS Docket No. 14–174. The Commission sought written comment on the proposals in this docket, including comment on the IRFA. This Final Regulatory Flexibility Analysis conforms to the RFA.

B. Paperwork Reduction Act Analysis

93. This document contains new information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. It will be submitted to the Office of Management and Budget (OMB) for review under Section 3507(d) of the PRA. OMB, the general public, and other Federal agencies are invited to comment on the new or modified information collection requirements adopted in this *Report and Order*.

94. In addition, we note that pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), we previously sought

comment on how the Commission might further reduce the information collection burden for small business concerns with fewer than 25 employees, in the FRFA in Appendix B of the full *Report and Order*, paragraphs 19–23. In this document, we have assessed the effects of the new rules adopted herein on small business concerns and find that the rules adopted here minimize the information collection burden on such entities.

C. Congressional Review Act

95. The Commission will send a copy of this *Report and Order* to Congress and the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1)(A).

D. Implementation

96. In this *Report and Order*, we require that providers of non-line-powered, facilities-based, fixed, voice residential service, including fixed wireless service intended as POTS replacement, offer new subscribers at the point of sale, at the subscriber's option and expense, a backup power solution that provides 911 access for 8 hours during a commercial power loss. Except as noted below, this provision of our rules will become effective 120 days after publication of this *Report and Order* in the **Federal Register**. Within three years of the foregoing effective date of the 8-hour obligation, providers must also offer a 24-hour backup power solution. We seek to ensure that the measures we adopt are timely implemented so that consumers can begin to realize the benefits as soon as feasible, while allowing a reasonable time for providers to prepare. Except as noted below, the disclosure provisions of the rules will become effective 120 days after the Commission notifies the public that approval has been received from the Office of Management and Budget.

97. We delay the effective date of two of the rules we adopt herein for providers that have fewer than 100,000 domestic retail subscriber lines for an additional 180 days to afford ample time to modify their current practices as necessary to come into compliance with our rules. The obligation of these providers to offer 8 hours of backup power will become effective 300 days after publication of this *Report and Order* in the **Federal Register**. The disclosure obligations for these providers will become effective 300 days after the Commission notifies the public that approval has been received from the Office of Management and Budget. The obligation of such providers to offer 24 hours of backup

power will become effective on the same extended three-year schedule as for all other providers.

98. Such an accommodation addresses the concerns of some commenters that adopting mandatory backup power obligations for all customers will be particularly burdensome for providers with a small number of lines, and is in line with Commission precedent. While we do not think that the more limited backup power obligations that we adopt herein will be overly burdensome for any provider, we agree with ACA's suggestion that providers with a small number of lines are more resource-constrained and would benefit from additional time to obtain any necessary equipment and prepare materials and processes for disclosure, and prepare materials and processes for disclosure. We note that ACA asserts that smaller operators should be defined as those with fewer than 100,000 voice service customers, and cites the *Rural Call Completion Report and Order* in support of its position. However, we observe that the *Rural Call Completion Report and Order* did not define smaller providers in terms of the number of customers, but subscriber lines. We find that providing an accommodation to providers on the basis of subscriber lines, rather than subscribers, is reasonably designed to minimize burdens on smaller providers without compromising the effectiveness of the rules. The number of lines better reflects a provider's size and share of traffic than does the number of subscribers. We find that limited, additional time to comply with these aspects of our rules strikes the right balance between the particular circumstances and resource constraints of providers that serve fewer customers and ensuring that consumers have backup power options available in a timely manner.

99. For this purpose, we rely on the standard adopted in the 2013 *Rural Call Completion proceeding*. In the *Rural Call Completion Report and Order*, the Commission applied the requirements to providers of long-distance voice service who make the initial long-distance call path choice for more than 100,000 domestic retail subscriber lines. Accordingly, in this proceeding, in an effort to ensure a reasonable burden of compliance, we give providers with fewer than 100,000 domestic retail subscriber lines an additional 180 days to comply with the obligations adopted in this *Report and Order*.

V. Ordering Clauses

100. Accordingly, *it is ordered*, pursuant to sections 1, 4(i), and

251(e)(3) of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i), 251(e)(3); section 101 of the NET 911 Improvement Act of 2008, Public Law 110–283, 47 U.S.C. 615a–1; and section 106 of the Twenty-First Century Communications and Video Accessibility Act of 2010, Public Law 111–260, 47 U.S.C. 615c, that this *Report and Order* in PS Docket No. 14–174 is adopted.

101. *It is further ordered* that part 12 of the Commission's Rules, 47 CFR part 12, is *hereby amended* as set forth in Appendix C of the full *Report and Order*.

102. *It is further ordered* that the requirements of this *Report and Order* will become effective as specified in paragraphs 96–99 herein.

103. *It is further ordered* that, pursuant to Section 801(a)(1)(A) of the Congressional Review Act, the Commission shall send a copy of this *Report and Order* to Congress and to the Government Accountability Office.

104. *It is further ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, shall send a copy of this *Report and Order*, including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

Secretary.

Final Rules

For the reasons set forth in the preamble, the Federal Communications Commission amends 47 CFR part 12 as follows:

PART 12—RESILIENCY, REDUNDANCY AND RELIABILITY OF COMMUNICATIONS

■ 1. The authority citation for part 12 is revised to read as follows:

Authority: 47 U.S.C. 151, 154(i), 154(j), 154(o), 155(c), 218, 219, 251(e)(3), 301, 303(g), 303(j), 303(r), 332, 403, 621(b)(3), 621(d); 47 U.S.C. 615a–1; and 47 U.S.C. 615c, unless otherwise noted.

■ 2. Section 12.5 is added to read as follows:

§ 12.5 Backup power obligations.

(a) *Covered service.* For purposes of this section, a Covered Service is any facilities-based, fixed voice service offered as residential service, including fixed applications of wireless service

offered as a residential service, that is not line powered.

(b) *Obligations of providers of a Covered Service to offer backup power.* Providers of a Covered Service shall, at the point of sale for a Covered Service, offer subscribers the option to purchase backup power for the Covered Service as follows:

(1) *Eight hours.* Providers shall offer for sale at least one option with a minimum of eight hours of standby backup power.

(2) *Twenty-four hours.* By February 13, 2019, providers of a Covered Service shall offer for sale also at least one option that provides a minimum of twenty-four hours of standby backup power.

(3) At the provider's discretion, the options in paragraphs (b)(1) and (2) of this section may be either:

(i) A complete solution including battery or other power source; or

(ii) Installation by the provider of a component that accepts or enables the use of a battery or other backup power source that the subscriber obtains separately. If the provider does not offer a complete solution, the provider shall install a compatible battery or other power source if the subscriber makes it available at the time of installation and so requests. After service has been initiated, the provider may, but is not required to, offer to sell any such options directly to subscribers.

(c) *Backup power required.* The backup power offered for purchase under paragraph (b) of this section must include power for all provider-furnished equipment and devices installed and operated on the customer premises that must remain powered in order for the service to provide 911 access.

(d) *Subscriber disclosure.* (1) The provider of a Covered Service shall disclose to each new subscriber at the point of sale and to all subscribers to a Covered Service annually thereafter:

(i) Capability of the service to accept backup power, and if so, the availability of at least one backup power solution available directly from the provider, or after the initiation of service, available from either the provider or a third party. After the obligation to offer for purchase a solution for twenty-four hours of standby backup power becomes effective, providers must disclose this information also for the twenty-four-hour solution;

(ii) Service limitations with and without backup power;

(iii) Purchase and replacement information, including cost;

(iv) Expected backup power duration;

(v) Proper usage and storage conditions, including the impact on

duration of failing to adhere to proper usage and storage;

(vi) Subscriber backup power self-testing and -monitoring instructions; and

(vii) Backup power warranty details, if any.

(2) *Disclosure reasonably calculated to reach each subscriber.* A provider of a Covered Service shall make disclosures required by this rule in a manner reasonably calculated to reach individual subscribers, with due consideration for subscriber preferences. Information posted on a provider's public Web site and/or within a subscriber portal accessed by logging through the provider's Web site are not sufficient to comply with these requirements.

(3) The disclosures required under this paragraph are in addition to, but may be combined with, any disclosures required under § 9.5(e) of this chapter.

(e) *Obligation with respect to existing subscribers.* Providers are not obligated to offer for sale backup power options to or retrofit equipment for those who are subscribers as of the effective date listed in paragraph (f) of this section for the obligations in paragraph (b)(1) of this section, but shall provide such subscribers with the annual disclosures required by paragraph (d) of this section.

(f) *Effective dates of obligations.* (1) Except as noted in paragraphs (b)(2) and (f)(2) of this section, the obligations under paragraph (b) of this section are effective February 16, 2016, and the obligations under paragraph (d) of this section are effective 120 days after the Commission announces approval from the Office of Management and Budget.

(2) For a provider of a Covered Service that (together with any entities under common control with such provider) has fewer than 100,000 domestic retail subscriber lines, the obligations in paragraph (b)(1) of this section are effective August 11, 2016, the obligations in paragraph (b)(2) of this section are effective as prescribed therein, and the obligations under paragraph (d) of this section are effective 300 days after the Commission announces approval from the Office of Management and Budget.

(g) *Sunset date.* The requirements of this section shall no longer be in effect as of September 1, 2025.

[FR Doc. 2015–24845 Filed 10–15–15; 8:45 am]

BILLING CODE 6712-01-P

DEPARTMENT OF TRANSPORTATION**National Highway Traffic Safety Administration****49 CFR Part 571**

[Docket No. NHTSA–2015–0099]

Federal Motor Vehicle Safety Standard; Automatic Emergency Braking**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).**ACTION:** Grant of petition for rulemaking.

SUMMARY: This document grants the petition for rulemaking submitted by the Truck Safety Coalition, the Center for Auto Safety, Advocates for Highway and Auto Safety, and Road Safe America on February 19, 2015, to establish a safety standard to require automatic forward collision avoidance and mitigation systems on certain heavy vehicles. For several years, NHTSA has researched forward collision avoidance and mitigation technology on heavy vehicles, including forward collision warning and automatic emergency braking systems. The agency will continue to conduct research and to evaluate real-world performance of these systems through track testing and field operational testing. NHTSA will determine whether to issue a rule in the course of the rulemaking proceeding, in accordance with statutory criteria.

DATES: October 16, 2015.

FOR FURTHER INFORMATION CONTACT: For technical issues, you may call Dr. Abigail Morgan in the Office of Crash Avoidance Standards at (202) 366–1810. For legal issues, you may call Mr. David Jasinski or Ms. Analiese Marchesseault in the Office of Chief Counsel at (202) 366–2992. You may send mail to these officials at: National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., Washington, DC 20590.

SUPPLEMENTARY INFORMATION: On February 19, 2015, the Truck Safety Coalition, the Center for Auto Safety, Advocates for Highway and Auto Safety, and Road Safe America (hereon referred to collectively as the “petitioners”) submitted a petition to NHTSA. Their petition requested that the agency initiate rulemaking to establish a new Federal motor vehicle safety standard to require vehicle manufacturers to install forward collision avoidance and mitigation (FCAM) systems on all vehicles with a gross vehicle weight rating (GVWR) of 10,000 pounds or more. The petitioners claimed that FCAM systems have the potential to provide significant safety, economic, and societal benefits.

On May 4, 2015, the Commercial Vehicle Safety Alliance (CVSA) submitted a letter supporting the petition for rulemaking. However, CVSA recommended that the mandate for FCAM systems apply to vehicles with a GVWR of 10,001 pounds or more (rather than 10,000 pounds or more) to better conform to existing commercial motor vehicle safety classes.

There are a number of terms being used by industry and regulators for FCAM technology, including forward collision warning (FCW), crash imminent braking (CIB), dynamic brake support (DBS), automatic emergency braking (AEB), and collision mitigation braking (CMB). Consistent with the terminology used in the petitioners’ request, in this notice, the FCAM technologies of focus are the systems that combine FCW alert signals with CMB automatic braking capability.

FCAM systems use forward-looking sensors, typically radars and/or cameras, to detect vehicles in the roadway. When a rear-end crash is imminent, the FCW system warns the driver of the threat. If the driver takes no action, such as braking or steering, or if the driver does brake but not enough to avoid the crash, a CMB or AEB system may automatically apply or supplement the brakes to avoid or mitigate the rear-end crash.

In their petition for rulemaking, the petitioners cited estimated safety benefits from a 2012 research study¹ conducted by the University of Michigan Transportation Research Institute (UMTRI), which evaluated the performance and effectiveness of these current and future generation systems. They also identified the systems that are commercially available. The petitioners believe that mandating technology through regulation is the fastest way to ensure the potential safety benefits. Additionally, they believe that additional safety benefits may be achieved from future FCAM systems that may have higher levels of performance than the current systems and that may be able to respond to additional crash scenarios other than rear-end crashes, such as vehicle-to-pedestrian crashes. Furthermore, the petitioners believe that a mandate would cause the system costs to decrease due to high production volumes.

For several years, NHTSA has been conducting research on heavy vehicle

FCAM technologies. This research includes test track evaluations of first generation systems, evaluation of driver-warning interface effectiveness, and an ongoing field operational test of production systems. Based on this research, the agency agrees with the petitioners that FCAM systems have the potential to save lives by preventing or reducing the severity of rear-end crashes.

The industry has indicated that next generation automatic emergency braking systems for truck tractors will be commercially available later this year and will have improved performance that enables the vehicle to warn the driver and automatically brake in response to stationary lead vehicles. In addition to the increased performance from the next generation systems, industry is also expected to begin production of automatic emergency braking systems on air-braked single unit trucks with a GVWR of more than 26,000 pounds in the near future.

The agency’s test experience has been limited to first generation production systems on truck tractors and a prototype system on a motorcoach, and the agency is aware of a few vehicles with a GVWR greater than 10,000 pounds and less than or equal to 26,000 pounds sold in the U.S. currently equipped with AEB systems. The agency plans to test the next generation systems as they become available, including AEB systems that are installed on vehicles with a GVWR greater than 10,000 pounds and less than or equal to 26,000 pounds. If available, NHTSA would consider this additional information in the rulemaking.

The European Union (EU) Commission Regulation No. 347/2012 requires an advanced emergency braking system (AEBS) with forward collision warning on most new heavy vehicles, with some exceptions.² The test scenarios, vehicle speeds, and performance criteria in EU Commission Regulation No. 347/2012 differ from the test criteria that NHTSA developed for its light vehicle automatic emergency braking evaluation that the agency plans to add to its New Car Assessment Program (NCAP), which has been the basis for the test criteria used to evaluate heavy vehicles. The agency will consider the test criteria required by the European regulation, as it

¹ Woodrooffe, J., et al., Performance Characterization and Safety Effectiveness Estimates of Forward Collision Avoidance and Mitigation Systems for Medium/Heavy Commercial Vehicles, Report No. UMTRI–2011–36, UMTRI (August 2012). Docket No. NHTSA–2013–0067–0001.

² Commission Regulation (EU) No 347/2012; of 16 April 2012 implementing Regulation (EC) No 661/2009 of the European Parliament and of the Council with respect to type-approval requirements for certain categories of motor vehicles with regard to advanced emergency braking systems. Available at <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2012:109:0001:0017:EN:PDF>.

continues to develop its heavy vehicle test procedures and performance metrics.

Considering the information before the agency, including the information referenced in the petition, NHTSA grants the February 19, 2015 petition in accordance with 49 CFR part 552 and initiates a rulemaking proceeding with respect to forward collision avoidance and mitigation systems on vehicles with a GVWR greater than 10,000 pounds. The granting of the petition from Truck Safety Coalition, the Center for Auto Safety, Advocates for Highway and Auto Safety, and Road Safe America does not mean that the agency will issue a final rule. The determination of whether to issue a rule is made after study of the requested action and the various alternatives in the course of the rulemaking proceeding, in accordance with statutory criteria.

Authority: 49 U.S.C. 322, 30111, 30115, 30117, 30162, 30166, and 49 CFR part 552; delegation of authority at 49 CFR 1.95.

Raymond R. Posten

Associate Administrator for Rulemaking.

BILLING CODE 4910-59-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Parts 300, 600, 660, and 665

[Docket No. 070516126-5907-04]

RIN 0648-AV12

International Affairs; High Seas Fishing Compliance Act; Permitting and Monitoring of U.S. High Seas Fishing Vessels

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This final action sets forth regulatory changes to improve the administration of the High Seas Fishing Compliance Act program and the monitoring of U.S. fishing vessels operating on the high seas. This final rule includes, for all U.S. fishing vessels operating on the high seas, adjustments to permitting and reporting procedures. It also includes requirements for the installation and operation of enhanced mobile transceiver units (EMTUs) for vessel monitoring, carrying observers on vessels, reporting of transshipments taking place on the high seas, and

protection of vulnerable marine ecosystems. This final rule has been prepared to minimize duplication and to be consistent with other established requirements.

DATES: This rule is effective January 14, 2016.

FOR FURTHER INFORMATION CONTACT:

Mark Wildman, Trade and Marine Stewardship Division, Office for International Affairs and Seafood Inspection, NMFS (phone 301-427-8386 or email *mark.wildman@noaa.gov*).

SUPPLEMENTARY INFORMATION:

Background

The purposes of the High Seas Fishing Compliance Act (HSFCA; 16 U.S.C. 5501 *et seq.*) are (1) to implement the Food and Agriculture Organization of the United Nations (FAO) Agreement to Promote Compliance with International Conservation and Management Measures by Fishing Vessels on the High Seas (Compliance Agreement) and (2) to establish a system of permitting, reporting and regulation for vessels of the United States fishing on the high seas. 16 U.S.C. 5501. "High seas" is defined in the HSFCA and its implementing regulations as waters beyond the territorial sea or exclusive economic zone (or the equivalent) of any nation, to the extent that such territorial sea or exclusive economic zone (or the equivalent) is recognized by the United States. 16 U.S.C. 5502 (3); 50 CFR 300.11.

The HSFCA authorizes a system of permitting U.S. fishing vessels that operate on the high seas to satisfy the obligation of Parties to the Compliance Agreement (Parties) to require that fishing vessels flying their flags obtain specific authorization to operate on the high seas. The HSFCA requires the Secretary of Commerce (Secretary) to establish conditions and restrictions on each permit issued under HSFCA as necessary and appropriate to carry out the obligations of the United States under the Compliance Agreement. 16 U.S.C. 5503 (d). At a minimum, such conditions and restrictions must include the marking of the permitted vessel in accordance with the FAO Standard Specifications for the Marking and Identification of Fishing Vessels, and reporting of fishing activities. Parties are also responsible for ensuring that their authorized vessels do not undermine conservation and management measures, including those adopted by international fisheries management organizations, or by treaties or other international agreements. Accordingly, the HSFCA prohibits the use of fishing

vessels on the high seas in contravention of international conservation and management measures recognized by the United States. 16 U.S.C. 5505(1). A list of the international conservation and management measures recognized by the United States is published by NMFS in the **Federal Register** from time to time, in consultation with the Secretary of State, as required by section 5504(e) of the HSFCA. The last such notice was published on May 19, 2011 (76 FR 28954). NMFS reinforces this prohibition by requiring a high seas fishing permit for any vessel operating on the high seas and, through the permit, authorizing only those activities that would not undermine international conservation and management measures recognized by the United States. The HSFCA also gives NMFS discretion to impose permit conditions and restrictions pursuant to other applicable law, such as the Endangered Species Act (ESA) and the Marine Mammal Protection Act, in addition to international conservation and management measures recognized by the United States. *See* 16 U.S.C. 5503(d); *Turtle Island Restoration Network v. National Marine Fisheries Service*, 340 F.3d 969 (9th Cir. 2003).

Finally, the HSFCA authorizes NMFS to promulgate regulations "as may be necessary to carry out the purposes of the Agreement and [the Act]," including its permitting authorities. 16 U.S.C. 5504(d). In promulgating such regulations, NMFS shall ensure that "[t]o the extent practicable, such regulations shall also be consistent with regulations implementing fishery management plans under the Magnuson-Stevens Fishery Conservation and Management Act," 16 U.S.C. 1801 *et seq.*, which provides broad authority to establish measures for the conservation and management of fisheries. *Id.* at 1853(b)(14).

Regulations implementing the HSFCA were first promulgated in 1996 (61 FR 11751, March 22, 1996). The initial regulations included application and issuance procedures for high seas fishing permits. Subsequent regulations promulgated in 1999 (64 FR 13, January 4, 1999) specified how high seas fishing vessels must be marked for identification purposes and required vessel owners and operators to report catch and fishing effort when fishing on the high seas.

On April 13, 2015, NMFS published a notice of proposed rulemaking for this action (80 FR 19611) to codify NMFS' procedures for reviewing its high seas fishing authorizations under environmental laws, particularly the

ESA and National Environmental Policy Act (NEPA). Another objective of this action is to improve the monitoring of U.S. fishing vessels operating on the high seas. In order to enhance the U.S. government's ability to ensure compliance with international conservation and management measures. Furthermore, this action describes how NMFS will, through high seas permit conditions and restrictions, address impacts to vulnerable marine ecosystems (VMEs) from bottom fishing consistent with international conservation and management measures recognized by the United States and United Nations General Assembly resolutions regarding VMEs. Additionally, NMFS will continue to assess the impact of the long-term exemption on the use of an EMTU, set forth in § 300.337(d)(2) of this rule, on the efficacy of the HSFCA VMS provisions and may make appropriate adjustments, including elimination of the long-term exemption, through a future rulemaking.

Responses to public comments received on the proposed rule are set forth below.

Changes From the Proposed Rule

NMFS has made one change to the final rule in light of comments received on the proposed rule. Section 300.333(i) in the proposed rule, which addressed provisions for permit modification and revocation, has been modified to clarify that modification, suspension, or revocation of a high seas permit will be carried out consistent with the Administrative Procedure Act and other applicable law. Additional detail is provided in Responses to Public Comments section below.

Responses to Public Comments

NMFS received 18 public comments on the proposed rule. Comments were received from the Western Fish Boat Owners Association, the American Albacore Fishing Association, the Hawaii Longline Association, and individual west coast albacore fishers potentially affected by new requirements in this rule.

General Comments

NMFS received numerous comments from west coast albacore fishers who voiced their view that the proposed rule, if finalized, would impose considerable and unnecessary burdens. These fishers noted that the additional burden on the fleet resulting from the requirements contained in this rule would have adverse impacts on vessels, families, onshore support businesses, local communities, and consumers.

Commenters noted the rule could reduce access to high seas fisheries by U.S. vessels and ensure that an increasing portion of catch would be taken by foreign vessels that are not subject to similar requirements. Commenters also noted that the U.S. albacore fishery already has mandatory logbook requirements that would not change under this new rule, and the information in these logbooks provides all the information necessary to monitor this fishery.

Response: NMFS recognizes the new EMTU and observer requirements will primarily impact those fishers who do not currently have to comply with such requirements in domestic fisheries or in international fisheries managed pursuant to conservation and management measures adopted by Regional Fishery Management Organizations (RFMOs). NMFS has therefore made efforts to mitigate these new burdens by informing fishers of possible reimbursement for the cost of purchasing an EMTU unit (see http://www.nmfs.noaa.gov/ole/slider_stories/2015/3june15_vms_program_codifies_requirements.html). Additionally, NMFS notes that observer coverage will not be required under this rule where such coverage is already mandated under other legal authorities. NMFS will also carefully take into consideration both the scientific need for observer coverage as well as the characteristics of the fishery when designating high seas vessels for observer coverage.

These new requirements are deemed necessary to improve U.S. capacity to monitor its vessels' compliance with domestic laws, including those used to implement RFMO requirements (both for those RFMOs to which we are a party as well as those recognized by the United States for purposes of the Compliance Act). This will enhance the United States' ability to comply with its international obligations, including the obligation to report high seas fishery data to the U.N. Food and Agriculture Organization. NMFS believes the cost of complying with these new requirements is justified in light of the benefits that will be gained from a uniform level of real-time monitoring of all high seas activities conducted by U.S. fishers.

Requirements for Enhanced Mobile Transmitting Units (EMTUs)

Comment 1: Several west coast albacore fishers noted that under WCPFC regulations, EMTUs are required for all vessels that fish west of the 150W line. This includes some of the larger U.S. albacore vessels. These fishers commented that EMTUs should not be required for pole and line and

troll vessels fishing for albacore east of the 150W line. These fishers also noted that the Inter-American Tropical Tuna Commission (IATTC) only requires VMS on vessels greater than 24 meters in length and the regulations developed by the Pacific Fishery Management Council for the albacore fishery under its purview do not require VMS. It was also noted that Canadian vessels under 24 meters are not required to have VMS.

Response: In light of U.S. obligations under the Compliance Agreement to ensure that U.S. fishing vessels on the high seas do not engage in any activity that undermines the effectiveness of international conservation and management measures, NMFS considers it necessary to require all vessels permitted to fish on the high seas be equipped with EMTUs. NMFS also notes that under its existing regulations, all U.S. vessels with WCPFC endorsement permits must continuously operate a VMS unit while at sea, regardless of where the vessel operates, *i.e.*, east or west of the 150W meridian.

Comment 2: Several west coast albacore fishers noted that the mandatory EMTU requirement is onerous, particularly since most albacore vessels fish inside the U.S. EEZ and only occasionally go out into high seas waters. With the new EMTU requirement, however, these commenters noted that many vessels would forgo obtaining the high seas permit because of the cost associated with procuring and operating an EMTU.

Response: NMFS notes that, in contrast with logbooks, VMS/EMTU reports are received in real time, enabling more timely monitoring and enforcement. NMFS recognizes the additional cost burden associated with procuring and operating EMTUs and offers a reimbursement program to provide eligible vessel owners with up to \$3,100 towards the cost of procuring an EMTU unit (see "further information" below).

Comment 3: Since the focus of the proposed rule is on the activities of U.S. fishers on the high seas, several west coast albacore fishers questioned the necessity of a requirement for the EMTU to transmit while a U.S. vessel is still within the U.S. EEZ.

Response: NMFS considered the alternative of only requiring EMTU operation on the high seas but allowing units to be powered down while a vessel is in the U.S. EEZ or in the EEZ of another country, but determined that such actions would weaken the effectiveness of using EMTU position information to monitor the locations of high seas fishing vessels. Allowing power-downs whenever in the U.S. EEZ,

in addition to the in-port and long-term exemptions provided in the rule, could also encourage non-compliance and undermine NMFS' ability to monitor U.S. high seas fishing vessels.

Comment 4: West coast albacore fishers noted that requirements in the rule to notify NOAA's Office of Law Enforcement (OLE) of EMTU power-up during office hours is burdensome and waiting for email confirmation from OLE regarding the receipt of such notifications would be another burdensome delay.

Response: NMFS recognizes that OLE office hours are somewhat constraining, but notes that vessel owners could choose to leave EMTUs on and not power them down to help alleviate pre-planning for turning on such units. NMFS also notes such power up notifications from fishers to OLE may take place after office hours although OLE acknowledgement of receipt will take place during business hours. OLE makes best efforts to minimize delays in its responses to fishers.

Comment 5: Several west coast fishers stated their view that the initial cost and expenses associated with EMTU installation and operation are significant. They furthermore noted that the lost income resulting from downtime while having an EMTU unit installed and the additional expense of travelling to a different location to have an EMTU unit installed are not included in NMFS cost estimates.

Response: NMFS recognizes the additional cost burden associated with procuring EMTUs and did account for the time necessary to have an EMTU installed as part of its cost estimate. NMFS also has a reimbursement program that will offer up to \$3,100 towards the cost of the EMTU unit for eligible vessel owners (see "further information" below). Such units can usually be installed without unduly impacting the vessel's normal operations.

Comment 6: Several west coast albacore fishers noted that, with regard to the proposed requirement for high seas vessels to possess a backup communications device in the event of an EMTU failure, it was unclear what kind of backup communications device would be required. These fishers noted that although U.S. vessels are required by the Coast Guard to carry a single side band radio when offshore, such a radio may not be capable of meeting the functionality requirements delineated by NMFS in the proposed rule.

Response: NMFS notes that as long as the communications device is two-way and capable of real-time communications per § 300.337(k) in the

final rule, NMFS would allow fishers to use a device of their choosing whether it be a satellite phone or some other communications device, including a single side band radio.

Comment 7: West coast albacore fishers expressed their view that there are no bycatch issues in this fishery, and there are no closed areas where pole and line and troll vessels fish. Because this is the case, these fishers view the EMTU requirement as being unnecessary and creating a considerable financial and administrative burden.

Response: Although there may be little bycatch of protected species in the west coast albacore fishery, NMFS is required under the Compliance Agreement to monitor all its high seas fishing vessels and believes the enhanced compliance monitoring and enforcement benefits obtained from the EMTU requirement justify the cost of procuring and operating such equipment, a significant portion of which may be lessened through the reimbursement program for eligible fishers needing to procure an EMTU. Furthermore, VMS monitoring allows the U.S. government to comply with its international obligations by ensuring that vessels not authorized to fish in certain areas (for example, west of 150 degrees longitude without a WCPFC Area Endorsement) are not fishing there.

Requirements for Observers

Comment 1: Several west coast albacore fishers noted that the new observer requirement would be problematic due to the small size of most U.S. pole and line and troll vessels fishing for albacore off the west coast. It was furthermore noted that the IATTC does not have observer requirements and neither do regulations developed by the Pacific Fishery Management Council for the albacore fishery under its purview.

Response: NMFS notes that the new observer requirement is consistent with regulations for Pacific HMS fisheries (including the north Pacific albacore fishery) at 50 CFR 660.719(a), which states that "all fishing vessels with permits issued under this subpart and operating in HMS fisheries, including catcher/processors, at-sea processors, and vessels that embark from a port in Washington, Oregon, or California and land catch in another area, may be required to accommodate an NMFS certified observer on board to collect scientific data." That being said, NMFS would carefully take into consideration both the scientific need for observer coverage as well as the characteristics of the fishery when designating high seas vessels for observer coverage.

Comment 2: The Hawaii Longline Association (HLA) noted that the proposed rule includes a new requirement stating that "[w]here observer coverage is not otherwise required by other regulations or relevant RFMO conservation and management measures, NMFS may select for at-sea observer coverage any vessel that has been issued a high seas fishing permit." Although the preamble to the proposed rule clarifies that this requirement "would not be invoked by NMFS if the vessel will already be carrying an observer pursuant to other legal authorities," HLA believes it does not speak to the situation where a fishery is already generally subject to a rigorous observer monitoring program.

Response: NMFS will take other applicable observer coverage requirements into consideration in our assignment of observers under this final rule. As stated in the preamble of the proposed rule, this requirement would not be invoked by NMFS if the vessel will already be carrying an observer pursuant to other legal authorities. NMFS does not view amending the regulatory text as desirable since it could lessen the agency's flexibility in deploying scientific observers to monitor unforeseen issues that could arise unexpectedly in a high seas fishery.

Provisions for Permit Modification and Revocation

Comment 1: HLA notes that the proposed rule includes a new provision that would allow NMFS to "modify, suspend, or revoke high seas permits if permitted activities impact living marine resources in ways that were not foreseen or anticipated at the time of permit issuance or are in contravention of an international conservation and management measure or are in violation of any provision of domestic law." HLA is concerned with the ambiguity of the phrase "impact living marine resources in ways that were not foreseen or anticipated" and recommends NMFS modify the proposed § 300.333(i) to eliminate the phrase "may impact living marine resources in ways that were not foreseen or anticipated at the time of permit issuance" and provide a more transparent standard for the regulated community. In addition to this proposed revision, HLA believes NMFS should provide an administrative process whereby the permit holder may contest the permit modification, suspension, or revocation. HLA notes its proposed revisions would require NMFS to provide reasonable notice to the permit holder before a permit is modified or revoked, as well as an opportunity to be

heard, consistent with due process requirements.

Response: Under this rule, consistent with international conservation and management measures and applicable law, NMFS authorizes the issuance of high seas fishing permits for high seas fisheries where fishing activities have been analyzed in accordance with the ESA, NEPA, and other applicable law. However, new information about fishing activities and impacts to living marine resources may arise after a fishery is authorized and permits are issued. Recognizing this, § 300.333(i) provides NMFS with authority to modify, suspend, or revoke a permit, as needed. Prior to doing so, NMFS would provide affected permit holders the new information that was not available and therefore not considered at the time of permit issuance, along with the rationale for the proposed permit modification, suspension, or revocation. In response to comments, NMFS has revised the final rule to refer to impacts that were “not considered” (as opposed to “not foreseen or anticipated”) at the time of permit issuance to provide more clarity. Broad language is necessary here because it is impossible to anticipate and codify all of the types of new information that could lead NMFS to modify, suspend, or revoke an HSFCA permit. However, the final rule also explains that, in the event of a potential permit change, NMFS would notify affected permit holders and provide an opportunity to respond, consistent with the Administrative Procedure Act (APA) and other applicable law. Individual permit infractions will continue to be handled in accordance with procedures at 15 CFR part 904. Beyond the permit change provision of § 300.333(i), NMFS notes that § 300.334(d)–(f) provides broader authority to delete a fishery from the authorized fisheries list through rulemaking. Among other things, a relevant consideration is whether fishing activities would detrimentally affect the well-being of a regulated species of fish, marine mammal, or ESA-protected species. If NMFS were to delete an authorized fishery, any activities on the high seas related to that fishery would be prohibited.

Procedures for Deletion of a Fishery From the List of Authorized High Seas Fisheries

Comment 1: The HLA stated it is essential that the process to delete a fishery from the list of authorized high seas fisheries involve a full administrative process, including issuance of a proposed rule and the opportunity for public comment, similar

to the Marine Mammal Protection Act (MMPA) List of Fisheries. The HLA view is that the proposed regulations only provide such process for the addition of fisheries—not for the deletion of fisheries. In HLA’s view, such a deletion of a fishery without notice and the opportunity for comment would violate due process requirements.

Response: Section 300.334(d) of the rule provides for rulemaking procedures to take place in the case of any revision (addition or deletion) to the list of authorized high seas fisheries and § 300.334(f) reiterates that NMFS will issue a final rule announcing any deletion from the list of authorized high seas fisheries. NMFS would conduct the rulemaking consistent with the APA which generally requires publication of a proposed and final rule, opportunity for public comment and delayed effectiveness for a final rule, but also provides for good cause waiver of notice and comment when impracticable, unnecessary, or contrary to the public interest. Any such action would also be conducted consistent with the ESA, MMPA, MSA, and other applicable law.

Conditions for Obtaining or Renewing a Permit or Authorization

Comment 1: The HLA notes that § 300.334(b)(2) of the proposed regulations, if finalized, will require a new applicant for a high seas permit to “obtain and renew any appropriate permits or authorizations.” Based on HLA’s past experience, there are situations that may arise in which a required authorization by NMFS for a given fishery is overdue (such as the issuance of a negligible impact determination under the MMPA) as a result of agency delay. In this situation, vessels in the fishery that already have permits are typically allowed to continue fishing under a temporary extension, which is issued by an agency letter. It is not clear to HLA whether § 300.334(b)(2) will prevent a new vessel from receiving a high seas permit or authorization in this situation. HLA recommends that NMFS clarify in the preamble to the final rule or in the final regulations that this condition will not apply to situations in which an authorization cannot be obtained as a result of agency delay or fault by the agency.

Response: NMFS recognizes there are temporary situations such as those noted by HLA. We believe that the phrase “permit or authorization” in § 300.334(b)(2) of the final rule is broad enough to encompass a temporary extension of a permit issued via an agency letter.

Further Information for High Seas Vessel Owners Applying for Reimbursement for Purchase of a Type-Approved VMS/EMTU Unit

High seas vessel owners that do not currently possess VMS/EMTU units type-approved for use on the high seas may apply for reimbursement by contacting the VMS reimbursement program at the Pacific States Marine Fisheries Commission (www.psmfc.org).

Vessel owners are reimbursed on a first-come, first-served basis until funds for the reimbursement program are exhausted. The standard processing time is within 30 days of a completed application. Since funding for these reimbursements is only available until the end of 2015, NOAA recommends VMS installations/activations be made no later than November 15, 2015, and all applications for reimbursement be submitted to the Pacific States Marine Fisheries Commission no later than 5 p.m./PST on November 30, 2015.

Classification

This final rule is published under the authority of the High Seas Fishing Compliance Act (16 U.S.C. 5501 *et seq.*). The NMFS Assistant Administrator has determined that this final rule is consistent with this and other applicable laws.

The Office of Management and Budget has determined that this rule is not significant for purposes of Executive Order 12866.

Regulatory Flexibility Act

A Final Regulatory Flexibility Analysis (FRFA) was prepared, as required by section 603 of the Regulatory Flexibility Act (RFA). The FRFA describes the economic impact this final rule will have on small entities. This FRFA incorporates the Initial Regulatory Flexibility Analysis (IRFA) published in the **Federal Register** on April 13, 2015 (80 FR 19611). A description of the action, why it is being considered, and the legal basis for this action are contained above in the **SUPPLEMENTARY INFORMATION** section. The analysis follows. A copy of the full FRFA is available from NMFS (see **FOR FURTHER INFORMATION CONTACT**).

Description and Estimate of the Number of Small Entities

The final rule will apply to owners and operators of U.S. fishing vessels operating on the high seas, including harvesting vessels, refrigerated cargo vessels, and other vessels used to support fishing. There are approximately 600 U.S. vessels permitted under the HSFCA to fish on the high seas. The majority of these

permitted vessels are longliners, purse seiners, trollers, or pole and line vessels that fish for highly migratory species. There are also small numbers of gillnetting, squid jigging, hand or other lining, multipurpose, and trawl vessels.

In this RFA analysis, an individual vessel is the proxy for each business entity. Although a single business entity may own multiple vessels, NMFS does not have a reliable means at this time to track ownership of multiple vessels to a single business entity. Based on limited financial information about the affected fishing vessels, NMFS believes that all the affected fish harvesting businesses, except for the Pacific tuna purse seine vessels, are small entities as defined by the RFA; that is, they are independently owned and operated and not dominant in their fields of operation, and have annual receipts of no more than \$20.5 million.

Projecting Reporting, Record-Keeping, and Other Compliance Requirements

For each element of the final rule, the analysis of impacts to small entities is described below.

Permit Application Process. NMFS currently authorizes fisheries on the high seas only after appropriate reviews are completed pursuant to the ESA, MMPA, NEPA, and other applicable law. Applicants select from a list of such authorized fisheries when applying for a high seas fishing permit. The final rule will codify this procedure. Vessel owners and operators apply for a high seas fishing permit every 5 years, paying an application fee currently set at \$129 and completing the application form, which is estimated to take 30 minutes. The rule will not change these burdens.

The final rule is explicit about the requirement that vessels harvesting or participating in operations on the high seas in support of harvesting, such as transshipment and provision of supplies or fuel, have on board a valid high seas fishing permit. NMFS expects this aspect of the final rule to result in few additional applications for high seas permits, if any, because transshipment of fish on the high seas is prohibited in some fisheries and, where it is not prohibited, records show few instances of transshipment. NMFS is not aware of any U.S. vessels that provide supplies or fuel to harvesting vessels on the high seas.

The rule will require a photograph of the high seas fishing vessel to be submitted with the permit application. The time necessary to photograph the vessel, print or scan the photograph, and attach it to the application is

estimated to take 30 minutes per application.

The final rule will allow a person, which could include an organization or a group of persons, to request that NMFS add a fishery to the list of fisheries authorized on the high seas. A request will need to include the following information:

(a) The species (target and incidental) expected to be harvested and the anticipated amounts of harvest and bycatch.

(b) The approximate times and places fishing will take place, approximate number of vessels participating, and the type, size, and amount of gear to be used.

(c) A description of the specific area that may be affected by the fishing activities.

(d) A description of any anticipated impacts on the environment, including impacts on fish stocks, marine mammals, species listed as threatened or endangered under the ESA or their critical habitat.

(e) If requested by NMFS, any additional information necessary for NMFS to conduct analyses under ESA, MMPA and NEPA.

Making the request to add an authorized fishery is expected to take approximately 110 hours. This time would be spent gathering and compiling the required information. NMFS does not expect such requests on a regular basis. For the purposes of this FRFA, NMFS estimates that one request might be submitted every 5 years. The impact from this aspect of the final rule is not expected to be significant because this is not a requirement, but an option for the public, and such requests are expected to be made infrequently.

Installation and Operation of EMTUs. The final rule will require the installation of EMTUs on all high seas fishing vessels. The EMTU will need to be operated at all times, except when the vessel will be at a dock or permanent mooring for more than 72 consecutive hours, or when the vessel will not operate on the high seas or in any fishery that requires EMTU operation for more than 30 consecutive days. Notices prior to EMTU power-down and power-up will need to be provided to NMFS.

Under the final rule, approximately 200 of the currently permitted high seas fishing vessels will need to install an EMTU. The remaining 400 or so vessels currently holding high seas fishing permits are already subject to EMTU requirements and will not bear any additional compliance costs as a result of this final rule.

The majority of the approximately 200 affected vessels are albacore trollers or pole and line vessels operating in the Pacific Ocean. These vessels have generally not been subject to VMS requirements contained in other regulations. The cost of compliance with this requirement includes the cost of purchase, installation, maintenance, and operation of the EMTU. The costs of purchase and installation are treated as one-time costs because this analysis shows costs just in the near-term future. Table 1 summarizes the costs associated with the EMTU requirement. A description of the estimates and calculations used in Table 1 is provided below the table.

TABLE 1—ESTIMATED COSTS OF COMPLIANCE WITH EMTU REQUIREMENTS

Description	Cost
EMTU purchase	Up to \$3,100
Installation cost (one-time)	\$50–400 (\$400 used for estimation)
Daily position report costs (Hourly, 24/day; \$0.06/report *24 reports/day).	\$1.44
Annual position report cost per vessel (\$1.44/day * 365 days/year).	\$525/vessel
Annual EMTU maintenance cost.	\$50–100 (\$100 used for estimation)
Total cost per vessel (Year 1; unit + installation + position reports).	\$4025
Total cost per vessel after reimbursement of EMTU cost (for eligible vessels only).	\$925
Cost per vessel (Year 2 and beyond; position reports and EMTU maintenance).	\$625/vessel
Number of affected vessels ..	200
Total cost (Year 1; total cost per vessel before reimbursement * number of affected vessels).	\$805,000
Total cost (Year 2 and beyond; total cost per vessel * number of affected vessels).	\$125,000

Units must be installed by a qualified marine electrician. Based on experience in other fisheries with EMTU requirements, NMFS believes that installation cost can range from \$50 to \$400, depending on the vessel, proximity to the installer, and the difficulty of the installation. For estimation purposes, \$400 was used to calculate the costs of compliance with this final rule.

The cost of transmitting data through the EMTU depends on the type of

EMTU installed and the communication service provider selected. For the purposes of this rulemaking, NMFS is assuming the cost of EMTU position data transmissions is approximately \$0.06 per transmission. This equates to \$1.44 per day for the location reports, at a rate of one transmission per hour. Providing position reports throughout the year will cost a high seas fishing vessel \$525 (365 days per year * 24 position reports per day * \$0.06 = \$525).

The EMTU may be powered down if the vessel will be at the dock or mooring for more than 72 consecutive hours or if the vessel, for 30 or more consecutive days, will not be operating on the high seas or participating in a fishery that requires EMTU operation. A message notifying NMFS of the power-down must be sent to NMFS prior to powering down the unit and again when the EMTU will be powered back up. If an EMTU is powered down for portions of the year, the actual annual cost of transmitting position data will be less. Thus the annual costs of EMTU operation will vary among individual vessels depending on the number of days an EMTU may be powered down.

The cost of compliance for vessel owners is estimated to be \$4025 per vessel in the first year (Table 1). This is the cost of compliance prior to receiving reimbursement for the cost of the EMTU. Reimbursement funds of up to \$3,100 per VMS unit will reduce the cost to \$925 per vessel, on average, for reimbursement-eligible vessels. The cost of operating the EMTU in year two and beyond will include the cost of sending position reports and maintenance and is estimated to be \$625.

Aside from the costs of purchase, installation, and operation of EMTUs, vessel owners or operators will need to spend time purchasing a unit, having it installed, and submitting an installation and activation report form. These steps are estimated to take an average of 4 hours. The notices prior to power-down and powering back up the EMTU are estimated to take 10 minutes each.

The compliance cost of obtaining, carrying on board, and monitoring communication devices required to be used in the event of an EMTU failure is expected to be zero, as NMFS believes all affected small entities already carry and monitor such devices.

Requirement to Carry an Observer. Under the final rule, a high seas fishing vessel will be required to carry an observer for the duration of a fishing trip, if so selected by NMFS. When an observer is deployed pursuant to this rule, NMFS will pay the cost of the observer's salary and benefits. Most high seas fishing vessels are already subject

to requirements for carrying an observer. For example, in the shallow-set and deep-set longline sectors of the Hawaii longline fleet, 100 percent and approximately 20 percent of fishing trips, respectively, are covered by observers. In authorized fisheries where observers are placed on all participating vessels pursuant to other regulations, the compliance cost of the final rule will be nil.

In high seas fisheries where only a portion of the high seas fishing vessels are selected for observer coverage, the possibility of being selected to carry an observer may increase under this final rule. However, as noted in response to Comment 8 above, NMFS would carefully take into consideration both the scientific need for observer coverage as well as the characteristics of the fishery when designating high seas vessels for observer coverage. Vessels that are not already subject to any other observer requirements may be selected to carry observers. This includes, but is not limited to, South Pacific albacore trollers, purse seine vessels of Class 5 or smaller participating in the Eastern Pacific tuna fisheries, and some longline vessels in Western Pacific pelagic fisheries.

When a vessel is selected for observer coverage under this rule, the vessel owner or operator will be required to provide NMFS a notice of their next fishing trip. This notification is estimated to take 5 minutes and cost \$1 in communication costs.

For trips on which an observer is deployed under this new requirement, the affected entity will at least be responsible for the costs associated with providing the observer with food, accommodations, and medical facilities. These costs are expected to be \$20 to \$50 per day. Assuming a high seas fishing trip averages 20 days in duration, the estimated cost of compliance for accommodating an observer on a vessel would be between \$400 and \$1,000.

Transshipment Notices and Reports.

For owners and operators of vessels involved in offloading or receiving a transshipment of fish or fish product on the high seas, the final rule will require vessel owners or operators to provide to NMFS notice of transshipments at least 36 hours prior to any transshipment on the high seas and to submit reports of transshipment following the transshipment events.

Transshipment is also regulated under other applicable law. For example, in the Atlantic Ocean, transshipments (the offloading, unloading, or transferring of fish or fish products from one vessel to another) are generally prohibited, with

some exceptions. In the Pacific Ocean, purse seine vessels are prohibited from transshipping in some instances. NMFS is aware that during 2006 to 2009, four to eight vessels offloaded longline-caught fish each year and four to eight vessels received longline-caught fish each year. It is likely that most of these transshipments took place at sea by the Hawaii-based longline fleet, but it is unknown how many of these transshipments took place on the high seas. NMFS also has data on past transshipments on the high seas involving a few U.S. albacore troll vessels.

Each transshipment notice is estimated to take about 15 minutes and no more than \$1 in communication costs to prepare and submit to NMFS.

Each transshipment report is estimated to take about 60 minutes and \$1 in communication costs to prepare and submit to NMFS. Thus, for each transshipment event on the high seas, the time burden is estimated to be 1 hour and 15 minutes and cost \$2 for each U.S. flagged vessel involved in the transshipment.

Reporting Requirements. Existing regulations require submission of high seas fishing logbooks. This final rule deletes that requirement under the HSFCA regulations, and instead, provides that owners and operators of high seas fishing vessels use the reporting forms developed for their authorized fisheries to report high seas catch and fishing effort information. Given that the former reporting requirements would not be changed in a substantive way, the associated compliance cost is unchanged.

Summary. The final rule may increase the cost of operating on the high seas for all affected entities. Fulfillment of these requirements is not expected to require any professional skills that the vessel owners and operators do not already possess.

Significant Alternatives Considered

NMFS attempted to identify alternatives that would accomplish the objectives of the rulemaking and minimize any significant economic impact of the final rule on small entities.

The alternative of taking no action was rejected because it would fail to achieve the objectives of the rulemaking.

NMFS evaluated an option to rely on existing permit programs, other than the HSFCA permit program, to authorize high seas fishing activities. However, by continuing to require the separate HSFCA permit, NMFS is able to maintain a separate record of vessels

permitted to fish on the high seas, facilitating NMFS' ability to submit information regarding U.S. high seas vessels to the FAO as required under the Compliance Agreement. FAO compiles records of vessels authorized to fish on the high seas submitted by the Parties to the Compliance Agreement. The separate HSFCA permit, required under the existing regulations to be carried on board the vessel, is also useful in demonstrating to any domestic inspectors, foreign inspectors operating under the authority of a high seas boarding and inspection scheme adopted by an RFMO to which the United States is party, or foreign port inspectors, that a vessel is permitted to fish on the high seas.

With respect to the EMTU requirement, one alternative would be to require EMTU operation at all times, which would provide NMFS the ability to monitor a vessel's location at any time. However, NMFS is aware that some vessels holding high seas fishing permits may remain in the EEZ for extended periods and are not currently subject to EMTU operation requirements while in the EEZ. Some of these vessels may also dock their vessels and not engage in fishing for portions of the year. This alternative is not preferred because the regulatory burden could be minimized by providing some exemptions to the EMTU operation requirement, such as exemptions to address the two circumstances described above. The preferred alternative would maintain the ability to monitor high seas fishing vessels yet minimize the regulatory burden.

Another alternative would be to require EMTU operation only on the high seas. However, allowing units to be powered down while a vessel is in the EEZ of the U.S. for less than the allotted exemption time or in the EEZ of another country would weaken the effectiveness of using EMTU position information to monitor the locations of high seas fishing vessels. For vessels that are highly mobile and could operate at any time of the year, such as many high seas fishing vessels, EMTUs are more effective if they remain in operation at all times. Allowing power-downs whenever in the EEZ, in addition to the in-port and long-term exemptions provided in the proposed rule, could also encourage non-compliance and result in large gaps in NMFS' ability to monitor high seas fishing vessels. Thus, this alternative is not preferred.

With respect to the requirement for prior notice of high seas transshipments, one alternative would be to allow affected entities to provide the notice of high seas transshipment to NMFS at

least one business day in advance of the transshipment, rather than 36 hours as proposed. However, a shorter advance notice would reduce opportunities for NMFS or the U.S. Coast Guard to observe transshipments in the event they are able to meet the transshipping vessels at sea. For this reason, this alternative is not preferred.

With respect to the transshipment reporting requirements, one alternative would be to impose a different timeframe for submission of the report. The report could be submitted more than 15 days after completion of the transshipment. However, NMFS believes 15 days is a reasonable timeframe, and that extending it further could lead to NMFS not receiving transshipment reports in a timely manner and would not support collection of complete information regarding authorized fisheries.

Small Entity Compliance Guide

Section 212 of the Small Business Regulatory Enforcement Fairness Act of 1996 states that, for each rule or group of related rules for which an agency is required to prepare a FRFA, the agency shall publish one or more guides to assist small entities in complying with the rule, and shall designate such publications as "small entity compliance guides." The agency shall explain the actions a small entity is required to take to comply with a rule or group of rules. As part of this rulemaking process, a letter to permit holders that also serves as small entity compliance guide (the guide) was prepared. Copies of this final rule are available from the NMFS Office for International Affairs and Seafood Inspection, and the guide, *i.e.*, permit holder letter, will be sent to all HSFCA permit holders. The guide and this final rule will be available upon request.

National Environmental Policy Act

The provisions of this rule are administrative in nature and facilitate monitoring of all high seas fishing vessels. The requirements for the installation of VMS EMTUs on vessels, the carrying of observers, and the prior notice and reporting of transshipments on the high seas will facilitate monitoring of vessels and will not have any impacts on the human environment. Moreover, the final rule also includes procedures that incorporate reviews under ESA and NEPA prior to any authorization of activities on the high seas. Therefore, this action is categorically excluded from further environmental review under NEPA pursuant to section 6.03.c.3(i) of NOAA Administrative Order 216-6.

Paperwork Reduction Act

This final rule contains a collection-of-information requirement approved by OMB under the Paperwork Reduction Act (PRA). This collection of information, under OMB Control No. 0648-0304, includes a permit application, vessel marking requirements, and high seas fishing effort and catch reporting. In addition to this collection of information, the final rule includes new requirements listed below.

The public reporting burden for each requirement has been estimated, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information per response. The estimates are as follows:

- Inclusion of a vessel photograph in the permit application: 30 minutes.
- Request for a fishery to be authorized on the high seas (optional): 110 hours.
- EMTU purchase and installation: 4 hours for purchase, installation, and activation of the EMTU and submittal of the installation and activation report.
- Position reports: Automatically sent by the EMTU.
- Notices of EMTU power-down and power-up: 10 minutes each.
- Prior notice for high seas transshipments: 15 minutes.
- Transshipment reporting: 1 hour.

Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB control number.

The reporting requirements described above amend an existing collection of information, (OMB Control No. 0648-0304) which has been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act.

List of Subjects

Administrative practice and procedure, Confidential business information, Fisheries, Fishing, Fishing vessels, Foreign relations, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Statistics.

50 CFR Part 600

Administrative practice and procedure, Confidential business information, Fisheries, Fishing, Fishing

vessels, Foreign relations, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Statistics.

50 CFR Part 660

Administrative practice and procedure, American Samoa, Fisheries, Fishing, Guam, Hawaiian Natives, Indians, Northern Mariana Islands, Reporting and recordkeeping requirements.

50 CFR Part 665

Accountability measures, Annual catch limits, Fisheries, Fishing, Western and central Pacific.

Dated: October 9, 2015.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR parts 300, 600, 660 and 665 are amended as follows:

PART 300—INTERNATIONAL FISHERIES REGULATIONS

■ 1. The authority citation for part 300 continues to read as follows:

Authority: 16 U.S.C. 951 *et seq.*, 16 U.S.C. 1801 *et seq.*, 16 U.S.C. 5501 *et seq.*, 16 U.S.C. 2431 *et seq.*, 31 U.S.C. 9701 *et seq.*

Subpart B—[Removed and Reserved]

■ 2. Remove and reserve subpart B, consisting of § 300.10 through 300.17.

■ 3. Add subpart Q to read as follows:

Subpart Q—High Seas Fisheries

Sec.	
300.330	Purpose.
300.331	Definitions.
300.332	Issuing offices.
300.333	Vessel permits.
300.334	Fisheries authorized on the high seas.
300.335	Bottom fishing.
300.336	Vessel identification.
300.337	Requirements for Enhanced Mobile Transceiver Units (EMTUs).
300.338	Observers.
300.339	Transshipment on the high seas.
300.340	Prohibitions.
300.341	Reporting.

Subpart Q—High Seas Fisheries

Authority: 16 U.S.C. 5501 *et seq.*

§ 300.330 Purpose.

This subpart implements the High Seas Fishing Compliance Act of 1995 (Act), which requires the Secretary to license U.S. vessels fishing on the high seas and to ensure that such vessels do not operate in contravention of international conservation and

management measures recognized by the United States.

§ 300.331 Definitions.

In addition to the terms defined in section 300.2 and those in the Act and the Agreement to Promote Compliance with International Conservation and Management Measures by Fishing Vessels on the High Seas, adopted by the Conference of the Food and Agriculture Organization of the United Nations on November 24, 1993 (Agreement), the terms used in this subpart have the following meanings. If a term is defined differently in section 300.2, the Act, or the Agreement, the definition in this section shall apply.

Bottom fishing means fishing using gear that is likely to contact the seafloor during the normal course of fishing operations.

Enhanced mobile transceiver unit (EMTU) is defined in 50 CFR 600.1500.

High seas means the waters beyond the territorial sea or exclusive economic zone (or the equivalent) of any Nation, to the extent that such territorial sea or exclusive economic zone (or the equivalent) is recognized by the United States.

High seas fishing permit means a permit issued under this subpart.

High seas fishing vessel means any vessel of the United States used or intended for use on the high seas for the purpose of the commercial exploitation of living marine resources and as a harvesting vessel, mothership, or any other support vessel directly engaged in a fishing operation. Support vessels include vessels that process or transship fish on the high seas; provide supplies, personnel or fuel on the high seas to other fishing vessels; or conduct other activities in support of, or in preparation for fishing.

International conservation and management measures means measures to conserve or manage one or more species of living marine resources that are adopted and applied in accordance with the relevant rules of international law, as reflected in the 1982 United Nations Convention on the Law of the Sea, and that are recognized by the United States. Such measures may be adopted by global, regional, or sub-regional fisheries organizations, subject to the rights and obligations of their members, or by treaties or other international agreements.

Observer means any person serving in the capacity of an observer employed by NMFS, either directly or under contract with a third party, or certified as an observer by NMFS.

Office Director means the director of the NMFS Office for International Affairs and Seafood Inspection.

Regional Administrator means any one of the Directors of a NMFS regional office, defined under § 300.2.

Transship or transshipment means offloading or receiving or otherwise transferring fish or fish products from one fishing vessel to another. Excluded from this definition is net sharing, which means the transfer of fish that have not yet been loaded on board any fishing vessel from the purse seine net of one vessel to another fishing vessel. Fish shall be considered to be on board a fishing vessel once they are on a deck or in a hold, or once they are first lifted out of the water by the vessel.

Vessel monitoring system (VMS) is defined in 50 CFR 600.1500.

§ 300.332 Issuing offices.

Any Regional Administrator or the Office Director may issue permits required under this subpart. While applicants for permits may submit an application to any Regional Administrator or the Office Director, applicants are encouraged to submit their applications (with envelopes marked "Attn: HSFCA Permits") to the Regional Administrator or the Office Director with whom they normally interact on fisheries matters.

§ 300.333 Vessel permits.

(a) **Eligibility.** (1) Any vessel owner or operator of a high seas fishing vessel is eligible to receive a permit for a fishery authorized on the high seas under this subpart, unless the vessel was previously authorized to be used for fishing on the high seas by a foreign nation, and—

(i) The foreign nation suspended such authorization, because the vessel undermined the effectiveness of international conservation and management measures, and the suspension has not expired; or

(ii) The foreign nation, within the 3 years preceding application for a permit under this section, withdrew such authorization, because the vessel undermined the effectiveness of international conservation and management measures.

(2) The restrictions in paragraphs (a)(1)(i) and (ii) of this section do not apply if ownership of the vessel has changed since the vessel undermined the effectiveness of international conservation and management measures, and the new owner has provided sufficient evidence to the Regional Administrator or Office Director demonstrating that the owner and operator at the time the vessel

undermined the effectiveness of such measures have no further legal, beneficial, or financial interest in, or control of, the vessel.

(3) The restrictions in paragraphs (a)(1)(i) and (ii) of this section do not apply if it is determined by the Regional Administrator or Office Director that issuing a permit would not subvert the purposes of the Agreement.

(b) *Applicability.* Any high seas fishing vessel used for fishing, as defined under § 300.2, on the high seas must have on board a valid permit issued under this subpart.

(c) *Application.* Permit application forms are available from the NMFS Web site or from any Regional Administrator or the Office Director. Failure to submit a complete and accurate application, along with all other required documentation and the specified fee will preclude issuance of a permit. To apply for a permit under this subpart, the owner or operator of a high seas fishing vessel must submit the following to a Regional Administrator or Office Director:

(1) A complete, accurate application form signed by the vessel owner or operator.

(2) Information required under this section and § 300.334(a).

(3) A color photograph showing an entire bow-to-stern side-view of the vessel in its current form and appearance. The photograph must clearly and legibly display the vessel name and identification markings. If the vessel's form or appearance materially changes (such as the vessel is painted another color, the vessel's identification markings change, or the vessel undergoes a structural modification) the vessel owner and operator must submit a new photograph of the vessel within 15 days of the change.

(4) For vessels with state registration instead of U.S. Coast Guard documentation, the applicant must supply additional vessel information that NMFS may request.

(5) The fee specified in the application form. Payment by a commercial instrument later determined to be insufficiently funded will invalidate any permit. NMFS charges this fee to recover the administrative expenses of permit issuance, and the amount of the fee is determined in accordance with the procedures of the NOAA Finance Handbook.

(d) *Permit issuance and validity.* (1) Except as provided for in subpart D of 15 CFR part 904, and subject to paragraphs (a), (c), and (d)(2) and (3) of this section, the Regional Administrator or Office Director will issue a permit, which will include applicable

conditions or restrictions, within 15 days of receipt of a completed application and payment of the appropriate fee.

(2) The Regional Administrator or Office Director will not issue a permit unless an EMTU has been installed and activated on the vessel in accordance with § 300.337(c)(2).

(3) The Regional Administrator or Office Director will not issue a permit unless the applicant holds a valid permit for the subject vessel for any U.S. domestic fisheries related to the authorized high seas fishery.

(4) Except as otherwise provided, permits issued under this subpart are valid for 5 years from the date of issuance. For a permit to remain valid to its expiration date, the vessel's U.S. Coast Guard documentation or state registration must be kept current. A permit issued under this subpart is void when the vessel owner or the name of the vessel changes, or in the event the vessel is no longer eligible for U.S. documentation, such documentation is revoked or denied, or the vessel is removed from such documentation.

(5) A permit issued under this subpart is not transferable or assignable to another vessel or owner; it is valid only for the vessel and owner to which it is issued.

(e) *Display.* A valid permit, or a copy thereof, issued under this subpart must be on board any high seas fishing vessel while operating on the high seas and available for inspection by an authorized officer.

(f) *Change in application information.* Any changes in vessel documentation status or other permit application information must be reported in writing to the Regional Administrator or Office Director who issued the permit within 15 days of such changes.

(g) *Renewal.* Application for renewal of a permit prior to its expiration is the responsibility of the permit holder and may be completed per § 300.333(c). The Regional Administrator or Office Director will not consider a permit renewal application to be complete until the permit holder satisfies all required fishing activity report requirements under the permit and § 300.341. The Regional Administrator or Office Director will not issue a renewed permit unless an EMTU has been activated on the vessel in accordance with § 300.337(c)(2) and the applicant holds a valid permit for the subject vessel for any U.S. domestic fisheries related to the authorized high seas fishery.

(h) *Marine mammals and ESA-listed species.* Permits issued under this section do not authorize vessels or persons subject to the jurisdiction of the

United States to take marine mammals or ESA-listed species. No marine mammals or ESA-listed species may be taken in the course of fishing operations unless the taking is allowed under the Marine Mammal Protection Act or the Endangered Species Act (ESA), pursuant to regulations, an authorization, or permit granted by NMFS or the U.S. Fish and Wildlife Service.

(i) *Permit Status Changes.* NMFS may modify, suspend, or revoke a permit issued under this subpart if permitted activities may impact living marine resources in ways that were not considered at the time of permit issuance; are in contravention of an international conservation and management measure; or violate any applicable law. NMFS will notify an affected permit holder of any potential change in permit status by contacting the permit holder at the address of record provided on the permit application or as updated pursuant to paragraph (f) of this subsection and will provide an opportunity to respond, consistent with the Administrative Procedure Act and other applicable law.

§ 300.334 Fisheries authorized on the high seas.

(a) *General.* When applying for a permit under § 300.333, the owner or operator of a high seas fishing vessel must identify in the application the authorized fisheries in which he or she intends to fish. More than one authorized fishery may be selected. The following fisheries are authorized on the high seas:

(1) 50 CFR part 300, subpart C—Eastern Pacific Tuna Fisheries.

(2) 50 CFR part 300, subpart D—South Pacific Tuna Fisheries.

(3) 50 CFR part 300, subpart G—Antarctic Marine Living Resources.

(4) 50 CFR part 635—Atlantic Highly Migratory Species Fisheries.

(5) 50 CFR part 660, subpart K—U.S. West Coast Fisheries for Highly Migratory Species.

(6) 50 CFR part 665, subpart F—Western Pacific Pelagic Fisheries.

(7) South Pacific Albacore Troll Fishery.

(8) Northwest Atlantic Fishery.

(b) *Requirements for authorized fisheries.* For each of the authorized fisheries specified on the high seas fishing permit, the owner or operator of the high seas fishing vessel must:

(1) Abide by the regulations, set forth in other parts of this chapter and Chapter VI, governing those authorized fisheries while operating on the high seas;

(2) Obtain and renew any appropriate permits or authorizations; and

(3) Notify the Regional Administrator or Office Director who issued the permit immediately in the event that a species listed as threatened or endangered under the ESA is taken incidental to the fishing activities without authorization under a relevant incidental take statement.

(c) *Change in authorized fisheries.* If a high seas fishing permit holder elects to change the authorized fisheries specified on the permit, he or she shall notify the Regional Administrator or Office Director who issued the permit of the change(s) and shall obtain the underlying permits for the authorized fisheries prior to engaging in the fishery on the high seas. Per the process under § 300.333(d), the Regional Administrator or Office Director will then issue a revised high seas fishing permit which will expire 5 years from the original effective date.

(d) *Revision of authorized fisheries list.* Through rulemaking, NMFS will add a fishery to, or delete a fishery from, the list in paragraph (a) of this section. NMFS may add or delete fisheries from the list after completing any analyses required under the Endangered Species Act, Marine Mammal Protection Act, National Environmental Policy Act, and other applicable laws. In taking such action, NMFS, in consultation with the relevant Regional Fishery Management Council(s) where appropriate, will consider, among other things, whether:

(1) The proposed fishing activities would detrimentally affect the well-being of the stock of any regulated species of fish, marine mammal, or species listed as threatened or endangered under the Endangered Species Act;

(2) The proposed fishing activities would be inconsistent with relevant fishery management plans and their implementing regulations or other applicable law;

(3) Insufficient mechanisms exist to effectively monitor the activities of vessels engaged in the proposed fishing activities; or

(4) The proposed fishing activities would contravene international conservation and management measures recognized by the United States.

(e) *Request for revision of authorized fisheries list.* A person may submit a written request to the Office Director to add a fishery to or delete a fishery from the list. A request to delete a fishery from the list of authorized fisheries must include the name of the fishery; information that addresses considerations under paragraph (d) of this section; and, if requested by NMFS, any additional information necessary for NMFS to conduct analyses required

under applicable laws. A request to add a fishery to the list of authorized fisheries must include the following information:

(1) The species (target and incidental) expected to be harvested and the anticipated amounts of such harvest and bycatch;

(2) The approximate times and places when fishing is expected to take place, the number and type of vessels expected to participate, and the type, size, and amount of gear expected to be used;

(3) A description of the specific area that may be affected by the fishing activities;

(4) A description of any anticipated impacts on the environment, including impacts on fisheries, marine mammals, and species listed as threatened or endangered under the ESA or their critical habitat;

(5) Other information that addresses considerations under paragraph (d) of this section; and

(6) If requested by NMFS, any additional information necessary for NMFS to conduct analyses required under applicable laws.

(7) Once all required information is received to proceed with consideration of a request, NMFS will publish in the **Federal Register** a proposed rule, noting receipt of the request to add an authorized fishery, and inviting information and comments. Relevant information received during the comment period may be considered by NMFS and, where appropriate, the relevant Regional Fishery Management Council(s), in analyzing potential environmental impacts of the fisheries and developing any conditions or restrictions. Based on its analysis, considerations under paragraph (d) of this section, and other relevant considerations, NMFS will publish its decision on the request in the **Federal Register**.

(f) *Deletion of a fishery from the authorized fisheries list.* NMFS will delete (*i.e.*, deauthorize) a fishery under paragraph (d) or (e) of this section through publication of a final rule. NMFS will also provide notice to affected permit holders by email and by Registered Mail at the addresses provided to NMFS in the high seas permit application. When a fishery is deleted from the list, any activities on the high seas related to that fishery are prohibited as of the effective date of the final rule. In addition, the high seas permit will be voided unless the permit holder notifies NMFS that he or she elects to change to another authorized high seas fishery or continue in any other authorized fisheries noted on the permit. Once the applicant so notifies

NMFS and, if necessary, secures any underlying permits necessary for participation in another authorized high seas fishery, the Regional Administrator or Office Director will then issue a revised high seas fishing permit per the process under § 300.333(d). The revised permit will expire 5 years from the original effective date.

§ 300.335 Bottom fishing.

(a) Bottom fishing may be permitted on the high seas when authorized by international conservation and management measures recognized by the United States. For bottom fishing activity not subject to international conservation measures recognized by the United States, a person who seeks to engage in such fishing must request authorization of a new high seas fishery as described in § 300.334(e) and then, if the fishery is authorized, must obtain all applicable permits including a high seas fishing permit issued under § 300.333. NMFS may specify conditions and restrictions in the permit to mitigate adverse impacts on VMEs, which may include the types of conditions that have been adopted in relevant RFMO measures recognized by the United States.

(b) *Permit.* To be permitted under this section, the owner or operator of a high seas fishing vessel must follow the procedures under § 300.334(e) or, if he or she seeks to change an existing permit, must follow the procedures under § 300.334(c).

§ 300.336 Vessel identification.

(a) *General.* A vessel permitted under this subpart must be marked for identification purposes in accordance with this section.

(b) *Marking.* Vessels must be marked either:

(1) In accordance with vessel identification requirements specified in Federal fishery regulations issued under the Magnuson-Stevens Act or under other Federal fishery management statutes; or

(2) In accordance with the following identification requirements:

(i) A vessel must be marked with its international radio call sign (IRCS) or, if not assigned an IRCS, must be marked (in order of priority) with its Federal, state, or other documentation number appearing on its high seas fishing permit and, if a WCPFC Area Endorsement has been issued for the vessel under § 300.212, that documentation number must be preceded by the characters "USA" and a hyphen (that is, "USA-");

(ii) The markings must be displayed at all times on the vessel's side or

superstructure, port and starboard, as well as on a deck;

(iii) The markings must be placed so that they do not extend below the waterline, are not obscured by fishing gear, whether stowed or in use, and are clear of flow from scuppers or overboard discharges that might damage or discolor the markings;

(iv) Block lettering and numbering must be used;

(v) The height of the letters and numbers must be in proportion to the size of the vessel as follows: for vessels 25 meters (m) and over in length overall, the height of letters and numbers must be no less than 1.0 m; for vessels 20 m but less than 25 m in length overall, the height of letters and numbers must be no less than 0.8 m; for vessels 15 m but less than 20 m in length overall, the height of letters and numbers must be no less than 0.6 m; for vessels 12 m but less than 15 m in length overall, the height of letters and numbers must be no less than 0.4 m; for vessels 5 m but less than 12 m in length overall, the height of letters and numbers must be no less than 0.3 m; and for vessels under 5 m in length overall, the height of letters and numbers must be no less than 0.1 m;

(vi) The height of the letters and numbers to be placed on decks must be no less than 0.3 m;

(vii) The length of the hyphen(s), if any, must be half the height (h) of the letters and numbers;

(viii) The width of the stroke for all letters, numbers, and hyphens must be $h/6$;

(ix) The space between letters and/or numbers must not exceed $h/4$ nor be less than $h/6$;

(x) The space between adjacent letters having sloping sides must not exceed $h/8$ nor be less than $h/10$;

(xi) The marks must be white on a black background, or black on a white background;

(xii) The background must extend to provide a border around the mark of no less than $h/6$; and

(xiii) The marks and the background must be maintained in good condition at all times.

§ 300.337 Requirements for Enhanced Mobile Transceiver Units (EMTUs).

(a) *Vessel position information.* The owner or operator of a vessel issued a permit under this subpart, or for which such permit is required, must have installed on board the vessel a NMFS type-approved enhanced mobile transceiver unit (EMTU). The operator or owner of the vessel must ensure that the EMTU is operational and properly reporting positions to NMFS as required

by this section, except when exempt under paragraph (d)(1) or (2) of this section. If the vessel is also subject to EMTU requirements in other parts of this title, the more restrictive requirements apply.

(b) *Contact information and business hours.* With respect to the requirements in this section, vessel owners and operators should consult with the divisional office of the NOAA Office of Law Enforcement (OLE) in, or nearest, the Region issuing the permit under this subpart. The OLE VMS Helpdesk in OLE headquarters office may also be contacted.

(c) *EMTU installation and activation*—(1) *EMTU installation.* The vessel owner or operator shall obtain and have installed on the fishing vessel, by a qualified marine electrician and in accordance with any instructions provided by the VMS Helpdesk or OLE divisional office, a NMFS type-approved EMTU. OLE is authorized to receive and relay transmissions from the EMTU. The vessel owner and operator shall arrange for a type-approved mobile communications service to receive and transmit position reports and email communications from the EMTU to OLE. NMFS makes available lists of type-approved EMTUs and mobile communications service providers. Vessel owners must ensure that the EMTU and communications service hardware purchased is type-approved for all fisheries and regions in which their vessel will be operating.

(2) *EMTU activation.* When an EMTU is installed or reinstalled or the mobile communications service provider changes, or if directed by OLE, the vessel owner and operator shall, prior to leaving port:

(i) Turn on the EMTU to make it operational;

(ii) Submit a VMS Installation and Activation Certification form, or an activation report as directed by OLE, to the OLE divisional office within or nearest to the region issuing the permit under this subpart; and

(iii) Receive confirmation from OLE that transmissions are being received properly from the EMTU.

(d) *EMTU operation.* Unless otherwise provided below, and subject to more restrictive requirements where applicable, the vessel owner or operator shall continuously operate the EMTU so that it automatically transmits position information to OLE, once every hour or as directed by OLE.

(1) *In-port exemption:* The EMTU may be powered down when the vessel will remain at a dock or permanent mooring for more than 72 consecutive hours and after the notice required in paragraph

(d)(3) of this section is submitted to OLE. When powering up the EMTU after the in-port exemption, the vessel owner or operator must submit the report required in paragraph (d)(4) of this section at least 2 hours before leaving port or mooring.

(2) *Long-term exemption:* The EMTU may be powered down if the vessel will not operate on the high seas, or in any fishery that requires EMTU operation, for more than 30 consecutive days and after the notice required in paragraph (d)(3) of this section is submitted. When powering up the EMTU from the long-term exemption, the vessel owner or operator must submit the report required in paragraph (d)(4) of this section.

(3) Prior to each power-down of the EMTU, under paragraph (d)(1) or (2) of this section, the vessel owner or operator must report to the OLE divisional office in, or nearest, the Region issuing the permit under this subpart during business hours, via email or other means as directed by OLE: the vessel's name; the vessel's official number; the intent to power down the EMTU; the reason for power-down; the port where the vessel is docked or area where it will be operating; and the full name, telephone, and email contact information for the vessel owner or operator.

(4) When powering up the EMTU, the vessel owner or operator must report to the OLE divisional office in, or nearest, the Region issuing the permit under this subpart during business hours, via email or other means as directed by OLE: The fact that the EMTU has been powered up; the vessel's name; the vessel's official number; port name; intended fishery; and full name, telephone, and email contact information for the vessel owner or operator.

(5) If the EMTU is powered up after a long-term or in-port exemption, the vessel owner must receive confirmation from the OLE divisional office in, or nearest, the Region issuing the permit under this subpart that EMTU transmissions are being received properly before leaving port, entering the high seas, or entering a fishery that requires EMTU operation.

(e) *Failure of EMTU.* If the vessel owner or operator becomes aware that the EMTU has become inoperable or that transmission of automatic position reports from the EMTU has been interrupted, or if notified by OLE or the U.S. Coast Guard that automatic position reports are not being received from the EMTU or that an inspection of the EMTU has revealed a problem with the performance of the EMTU, the

vessel owner or operator shall comply with the following requirements:

(1) If the vessel is in port, the vessel owner or operator shall repair or replace the EMTU and comply with the requirements in paragraph (c)(2) of this section before the vessel leaves port.

(2) If the vessel is at sea, the vessel owner, operator, or designee shall contact the OLE divisional office in, or nearest, the Region issuing the permit under this subpart by telephone or email at the earliest opportunity during business hours and identify the caller, vessel name, vessel location, and the type of fishing permit(s). The vessel operator shall follow the instructions provided by the OLE divisional office, which could include: Ceasing fishing, stowing fishing gear, returning to port, or submitting periodic position reports at specified intervals by other means. The vessel owner or operator must repair or replace the EMTU and comply with the requirements in paragraph (c)(2) of this section within 30 days or before the vessel leaves port, whichever is sooner.

(f) *Related VMS requirements.* Unless specified otherwise in the high seas fishing permit, a vessel owner's and operator's compliance with requirements in part 300, 635, 660, or 665 of this title relating to the installation, carrying, and operation of EMTUs will satisfy the requirements of this section, if the requirements are the same or more restrictive than those in this section and provided that:

(1) On the high seas, the EMTU is operated continuously and position information is automatically transmitted a minimum of once every hour;

(2) The EMTU is type-approved by NMFS;

(3) OLE is authorized to receive and relay transmissions from the EMTU; and

(4) The requirements of paragraph (d) of this section are complied with. If the EMTU is owned by NMFS, the requirement under paragraph (e) of this section to repair or replace the EMTU will be the responsibility of NMFS, but the vessel owner and operator shall be responsible for ensuring that the EMTU complies with the requirements specified in paragraph (c)(2) of this section before the vessel leaves port.

(g) *Costs.* The vessel owner and operator shall be responsible for all costs associated with the purchase, installation, operation, and maintenance of the EMTU and for all charges levied by vendors as necessary to ensure the transmission of automatic position reports to OLE as required in paragraph (c) of this section. However, if the EMTU is being carried and operated in compliance with the requirements in

part 300, 635, 660, or 665 of this title relating to the installation, carrying, and operation of EMTUs, the vessel owner and operator shall not be responsible for any costs that are the responsibility of NMFS under those regulations.

(h) *Tampering.* The vessel owner and operator shall ensure that the EMTU is not tampered with, disabled, destroyed, damaged or operated improperly, and that its operation is not impeded or interfered with.

(i) *Inspection.* The vessel owner and operator shall make the EMTU, including its antenna, connectors and antenna cable, available for inspection by authorized officers or by officers conducting boarding and inspection under a scheme adopted by an RFMO of which the United States is a member.

(j) *Access to data.* As required under fishery-specific regulations in other parts of this title, the vessel owner and operator shall make the vessel's position data, obtained from the EMTU or other means, available to authorized officers and to any inspector conducting a high seas boarding and inspection pursuant to a scheme adopted by an RFMO of which the United States is a member.

(k) *Communication devices.* In cases of EMTU failure as specified under paragraph (e) of this section, and to facilitate communication with management and enforcement authorities regarding the functioning of the EMTU and other purposes, the vessel operator shall, while the vessel is at sea, carry on board and continuously monitor a two-way communication device, in addition to the EMTU, that is capable of real-time communication with the OLE divisional office in, or nearest, the Region issuing the permit under this subpart.

§ 300.338 Observers.

(a) Where observer coverage is not otherwise required by other regulations or relevant RFMO conservation and management measures, NMFS may select for at-sea observer coverage any vessel that has been issued a high seas fishing permit. A vessel so selected by NMFS must carry an observer when directed to do so.

(b) NMFS will contact a vessel owner, in writing, when his or her vessel is selected for observer coverage under this section.

(c) A vessel shall not fish on the high seas without taking an observer if NMFS contacted the vessel owner under paragraph (b) of this section, or if so required as a condition of a permit issued under this subpart or pursuant to other legal authorities, unless the requirement to carry an observer has

been waived under paragraph (d) of this section.

(d) The vessel owner that NMFS contacts under paragraph (b) of this section must notify NMFS of his or her next fishing trip that may take place on the high seas before commencing the fishing trip. NMFS will specify the notification procedures and information requirements, such as expected gear deployment, trip duration and fishing area, in its selection letter. Once notified of a trip by the vessel owner, NMFS will assign an observer for that trip or notify the vessel owner that coverage pursuant to this subpart is not required, given the existing requirement for observer coverage under other legal authorities.

(e) The owner, operator, and crew of a vessel on which a NMFS-approved observer is assigned must comply with safety regulations at §§ 600.725 and 600.746 of this title and—

(1) Facilitate the safe embarkation and debarkation of the observer.

(2) Provide the observer with accommodations, food, and amenities that are equivalent of those provided to vessel officers.

(3) Allow the observer access to all areas of the vessel necessary to conduct observer duties.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer access to EMTUs, communications equipment, and navigation equipment to verify operation, obtain data, and use the communication capabilities of the units for official purposes.

(6) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and disposition of fish for that trip.

(7) Provide accurate vessel locations by latitude and longitude upon request by the observer.

(8) Provide access to sea turtle, marine mammal, sea bird, or other specimens as requested by the observer.

(9) Notify the observer in a timely fashion when commercial fishing activity is to begin and end.

(f) The permit holder, vessel operator, and crew must cooperate with the observer in the performance of the observer's duties.

(g) The permit holder, vessel operator, and crew must comply with other terms and conditions to ensure the effective deployment and use of observers that the Regional Administrator or Office Director imposes by written notice.

§ 300.339 Transshipment on the high seas.

(a) In addition to any other applicable restrictions on transshipment, including those under parts 300 and 635 of this title, the following requirements apply to transshipments, when authorized, taking place on the high seas:

(1) The owner or operator of a U.S. vessel receiving or offloading fish on the high seas shall provide a notice by fax or email to the Regional Administrator or the Office Director at least 36 hours prior to any intended transshipment on the high seas with the following information: the vessels offloading and receiving the transshipment (names, official numbers, and vessel types); the location (latitude and longitude to the nearest tenth of a degree) of transshipment; date and time that transshipment is expected to occur; and species, processed state, and quantities (in metric tons) expected to be transshipped. If another requirement for prior notice applies, the more restrictive requirement (*i.e.*, a requirement for greater advance notice and/or more specific information regarding vessels, location etc.) must be followed.

(2) U.S. high seas fishing vessels shall report transshipments on the high seas to the Regional Administrator or Office Director within 15 calendar days after the vessel first enters into port, using the form obtained from the Regional Administrator or Office Director. If there are applicable transshipment reporting requirements in other parts of this title, the more restrictive requirement (*e.g.*, a reporting requirement of fewer than 15 calendar days) must be followed.

(b) [Reserved]

§ 300.340 Prohibitions.

In addition to the prohibitions in § 300.4, it is unlawful for any person to:

(a) Use a high seas fishing vessel on the high seas in contravention of international conservation and management measures.

(b) Fish on the high seas unless the vessel has been issued, and has on board, a valid permit issued under § 300.333(d).

(c) Fish on the high seas unless the vessel has been issued, and has on board, valid permits related to the authorized fisheries noted on the high seas fishing permit, as required under § 300.334(b).

(d) Operate a high seas fishing vessel on the high seas that is not marked in accordance with § 300.336.

(e) With respect to the EMTU,

(1) Fail to install, activate, or continuously operate a properly functioning and type-approved EMTU as required in § 300.337;

(2) Power-down or power-up the EMTU without following the procedures required in § 300.337;

(3) In the event of EMTU failure or interruption, fail to repair or replace an EMTU, fail to notify the appropriate OLE divisional office and follow the instructions provided, or otherwise fail to act as required in § 300.337;

(4) Disable, destroy, damage or operate improperly an EMTU installed under § 300.337, attempt to do any of the same, or fail to ensure that its operation is not impeded or interfered with, as provided in § 300.337;

(5) Fail to make an EMTU installed under § 300.337 or the position data obtained from it available for inspection, as provided in § 300.337; or

(6) Fail to carry on board and monitor communication devices as required in § 300.337(l);

(f) With respect to observers,

(1) Fail to provide to an observer, a NMFS employee, or a designated observer provider, information that has been requested pursuant to § 300.338 or § 600.746 of this title, or fail to allow an observer, a NMFS employee, or a designated observer provider to inspect any item described at § 300.338 or § 600.746 of this title;

(2) Fish without an observer when the vessel is required to carry an observer pursuant to § 300.338(c);

(3) Assault, oppose, harass, impede, intimidate, or interfere with an observer;

(4) Prohibit or bar by command, impediment, threat, coercion, interference, or refusal of reasonable assistance, an observer from conducting his or her duties as an observer; or

(5) Tamper with or destroy samples or equipment.

(g) Fail to submit a prior notice or a report of a transshipment as provided in § 300.339(b) of this title.

(h) Fail to comply with reporting requirements as provided in § 300.341.

§ 300.341 Reporting.

(a) *General.* The operator of any vessel permitted under this subpart must accurately maintain on board the vessel a complete record of fishing activities, such as catch, effort, and other data and report high seas catch and effort information to NMFS in a manner consistent with the reporting requirements of the authorized fishery(ies) noted on the high seas permit. Reports must include: identification information for vessel and operator; operator signature; crew size; whether an observer is aboard; target species; gear used; dates, times, locations, and conditions under which fishing was conducted; species and amounts of fish retained and discarded;

and details of any interactions with sea turtles, marine mammals, or birds.

(1) The vessel owner and operator are responsible for obtaining and completing the reporting forms from the Regional Administrator or Office Director who issued the permit holder's high seas fishing permit. The completed forms must be submitted to the same Regional Administrator or Office Director or, if directed by NMFS, to a Science Center.

(2) Reports must be submitted within the deadline provided for in the authorized fishery or within 15 days following the end of a fishing trip, whichever is sooner. Contact information for the Regional Administrators and Science Center Directors can be found on the NMFS Web site.

(b) [Reserved]

PART 600—MAGNUSON-STEVENS ACT PROVISIONS

■ 4. The authority citation for part 600 continues to read as follows:

Authority: 5 U.S.C. 561 and 16 U.S.C. 1801 *et seq.*

■ 5. In § 600.705, add paragraph (g) to read as follows:

§ 600.705 Relation to other laws.

* * * * *

(g) *High seas fishing activities.* Regulations governing permits and requirements for fishing activities on the high seas are set forth in 50 CFR part 300, subparts A and Q. Any vessel operating on the high seas must obtain a permit issued pursuant to the High Seas Fishing Compliance Act.

■ 6. In § 600.745, revise the first two sentences in paragraph (a) to read as follows:

§ 600.745 Scientific research activity, exempted fishing, and exempted educational activity.

(a) *Scientific research activity.* Nothing in this part is intended to inhibit or prevent any scientific research activity conducted by a scientific research vessel. Persons planning to conduct scientific research activities on board a scientific research vessel in the EEZ or on the high seas are encouraged to submit to the appropriate Regional Administrator or Director, 60 days or as soon as practicable prior to its start, a scientific research plan for each scientific activity.* * *

* * * * *

PART 660—FISHERIES OFF WEST COAST STATES

■ 7. The authority citation for part 660 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*, 16 U.S.C. 773 *et seq.*, and 16 U.S.C. 7001 *et seq.*

■ 8. In § 660.2, add paragraph (c) to read as follows:

§ 660.2 Relation to other laws.

* * * * *

(c) Fishing activities on the high seas are governed by regulations of the High Seas Fishing Compliance Act set forth in 50 CFR part 300, subparts A and Q.

§ 660.708 [Amended]

■ 9. In § 660.708, remove paragraph (a)(1)(iii) and redesignate paragraph (a)(1)(iv) as paragraph (a)(1)(iii).

PART 665—FISHERIES IN THE WESTERN PACIFIC

■ 10. The authority citation for part 665 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 11. In § 665.1, revise paragraph (b) to read as follows:

§ 665.1 Purpose and scope.

* * * * *

(b) General regulations governing fishing by all vessels of the United States and by fishing vessels other than vessels of the United States are contained in 50 CFR parts 300 and 600.

[FR Doc. 2015–26398 Filed 10–15–15; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 622**

[Docket No. 130403320–4891–02]

RIN 0648–XE245

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Snapper-Grouper Resources of the South Atlantic; Trip Limit Reduction for Gag Grouper

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; trip limit reduction.

SUMMARY: NMFS reduces the commercial trip limit for gag grouper

(gag) in or from the exclusive economic zone (EEZ) of the South Atlantic to 500 lb (227 kg), gutted weight. This trip limit reduction is necessary to protect the South Atlantic gag resource.

DATES: This rule is effective 12:01 a.m., local time, October 18, 2015, until 12:01 a.m., local time, January 1, 2016.

FOR FURTHER INFORMATION CONTACT:

Mary Vara, NMFS Southeast Regional Office, telephone: 727–824–5305, email: mary.vara@noaa.gov.

SUPPLEMENTARY INFORMATION: The snapper-grouper fishery in the South Atlantic includes gag and is managed under the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region (FMP). The FMP was prepared by the South Atlantic Fishery Management Council and is implemented by NMFS under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) by regulations at 50 CFR part 622.

The commercial ACL (commercial quota) for gag in the South Atlantic during the 2015 fishing year is 295,459 lb (134,018 kg), gutted weight, 348,642 lb (158,141 kg), round weight, as specified in 50 CFR 622.190(a)(7)(i).

Under 50 CFR 622.191(a)(7)(ii), NMFS is required to reduce the commercial trip limit for gag from 1,000 lb (454 kg), gutted weight, 1,180 lb (535 kg), round weight, to 500 lb (227 kg), gutted weight, 590 lb (268 kg), round weight, when 75 percent of the quota is reached or is projected to be reached, by filing a notification to that effect with the Office of the Federal Register, as implemented by the final rule for Regulatory Amendment 14 to the FMP (79 FR 66316, November 7, 2014). Based on current data, NMFS has determined that 75 percent of the available gag commercial quota will be reached by October 18, 2015. Accordingly, NMFS is reducing the commercial trip limit for gag to 500 lb (227 kg), gutted weight, 590 lb (268 kg), round weight, in or from the South Atlantic EEZ at 12:01 a.m., local time, on October 18, 2015. This 500-lb (227-kg), gutted weight, 590-lb (268-kg), round weight, trip limit will remain in effect until either the commercial sector reaches its quota and the sector closes, or through the end of the current fishing year on December 31, 2015, whichever occurs first.

Classification

The Regional Administrator, Southeast Region, NMFS, has determined this temporary rule is necessary for the conservation and management of South Atlantic gag and

is consistent with the Magnuson-Stevens Act and other applicable laws.

This action is taken under 50 CFR 622.191(a)(7) and is exempt from review under Executive Order 12866.

These measures are exempt from the procedures of the Regulatory Flexibility Act because the temporary rule is issued without opportunity for prior notice and comment.

This action responds to the best scientific information available. The Assistant Administrator for Fisheries, NOAA (AA), finds that the need to immediately implement this commercial trip limit reduction constitutes good cause to waive the requirements to provide prior notice and opportunity for public comment pursuant to the authority set forth in 5 U.S.C. 553(b)(B), because prior notice and opportunity for public comment on this temporary rule is unnecessary and contrary to the public interest. Such procedures are unnecessary, because the rule establishing the trip limit reduction has already been subject to notice and comment, and all that remains is to notify the public of the reduced trip limit. The procedures are contrary to the public interest, because there is a need to immediately implement this action to protect the gag resource since the capacity of the fishing fleet allows for rapid harvest of the quota. Prior notice and opportunity for public comment on this action would require time and would increase the probability that the commercial sector could exceed the quota.

For the aforementioned reasons, the AA also finds good cause to waive the 30-day delay in the effectiveness of this action under 5 U.S.C. 553(d)(3).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 13, 2015.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

50 CFR Part 679

[Docket No. 141021887–5172–02]

RIN 0648–XE223

Fisheries of the Exclusive Economic Zone Off Alaska; Exchange of Flatfish in the Bering Sea and Aleutian Islands Management Area; Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; correction.

SUMMARY: The National Marine Fisheries Service (NMFS) is correcting a temporary rule that exchanged unused Community Development Quota (CDQ) for CDQ acceptable biological catch (ABC) reserves that published on October 5, 2015. The CDQ group that initiated this transfer was incorrect.

DATES: Effective October 16, 2015.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907–586–7228.

SUPPLEMENTARY INFORMATION:

Need for Correction

NMFS published the exchange of unused CDQ for CDQ ABC reserves on October 5, 2015. The document contained errors by incorrectly stating which CDQ group initiated the transfer. This correction will not affect the fishing operations. These corrections are necessary to provide the correct information on which CDQ group initiated the transfer in order to avoid confusion by fishery participants.

Correction

1. In the **Federal Register** of October 5, 2015, (80 FR 60073) in FR Doc. 2015–25291, on page 60073, column 3, paragraph 2, sentence 1 is corrected to state:

“The Norton Sound Economic Development Corporation has requested that NMFS exchange 568 mt of flathead sole and 210 mt of rock sole CDQ reserves for 778 mt of yellowfin sole CDQ ABC reserves under § 679.31(d).”

2. In the **Federal Register** of October 5, 2015, (80 FR 60073) in FR Doc. 2015–25291, on page 60074, columns 1–2, paragraph 1, sentence 3 is corrected to state:

“This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the flatfish exchange by the Norton Sound Economic Development Corporation in the BSAI.”

Classification

The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This correction amendment corrects an error identifying the CDQ group that initiated the transfer and does not change operating practices in the fisheries. Corrections should be made as soon as possible to avoid confusion for participants in the fisheries.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 13, 2015.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2015–26367 Filed 10–15–15; 8:45 am]

RIN 0648–XE180

Fisheries of the Exclusive Economic Zone Off Alaska; Reapportionment of the 2015 Gulf of Alaska Pacific Halibut Prohibited Species Catch Limits for the Trawl Deep-Water and Shallow-Water Fishery Categories; Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; correction.

SUMMARY: The National Marine Fisheries Service (NMFS) is correcting a temporary rule that reapportioned halibut prohibited species catch limits in the Gulf of Alaska (GOA) that published on September 11, 2015. The table in the document contained errors.

DATES: Effective October 16, 2015.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907–586–7228.

SUPPLEMENTARY INFORMATION:

Need for Correction

NMFS published the reapportionment of the 2015 Gulf of Alaska Pacific halibut prohibited species catch limits for the trawl deep-water and shallow-water fishery categories on September 11, 2015. The table in the document contained errors in the July 1–September 1 row and the Subtotal January 20–October 1 row. This correction will not affect the fishing operations. These corrections are necessary to provide the correct 2015 halibut PSC apportionments and eliminate potential confusion for participants in the fisheries.

Correction

In the **Federal Register** of September 11, 2015, (80 FR 54737) in FR Doc. 2015–22934, on page 54738, Table 16 is corrected and reprinted in its entirety to read as follows:

TABLE 16—FINAL 2015 APPORTIONMENT OF PACIFIC HALIBUT PSC TRAWL LIMITS BETWEEN THE TRAWL GEAR DEEP-WATER SPECIES FISHERY AND THE SHALLOW-WATER SPECIES FISHERY CATEGORIES

[Values are in metric tons]

Season	Shallow-water	Deep-water ¹	Total
January 20–April 1	135	35	170
April 1–July 1	291	375	666
Subtotal of combined first and second season limit (January 20–July 1)	426	410	836

TABLE 16—FINAL 2015 APPORTIONMENT OF PACIFIC HALIBUT PSC TRAWL LIMITS BETWEEN THE TRAWL GEAR DEEP-WATER SPECIES FISHERY AND THE SHALLOW-WATER SPECIES FISHERY CATEGORIES—Continued

[Values are in metric tons]

Season	Shallow-water	Deep-water ¹	Total
July 1–September 1	176	352	528
September 1–October 1	132	Any remainder ..	132
Subtotal January 20–October 1	734	762	1,496
October 1–December 31 ²	264
Total	1,760

¹ Vessels participating in cooperatives in the Central GOA Rockfish Program will receive 191 mt of the third season (July 1 through September 1) deep-water species fishery halibut PSC apportionment.

² There is no apportionment between trawl shallow-water and deep-water species fishery categories during the fifth season (October 1 through December 31).

Classification

The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This correction amendment corrects the unintentional transposition of the 3rd

season halibut apportionments between deep-water and shallow water fishery categories in Table 16 and does not change operating practices in the fisheries. Corrections should be made as soon as possible to avoid confusion for participants in the fisheries.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon

the reasons provided above for waiver of prior notice and opportunity for public comment.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 13, 2015.

Emily H. Menashes,

Proposed Rules

Federal Register

Vol. 80, No. 200

Friday, October 16, 2015

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 27

[DHS–2014–0016]

Chemical Facility Anti-Terrorism Standards (CFATS) Appendix A

AGENCY: National Protection and Programs Directorate, Department of Homeland Security.

ACTION: Notice of public meeting.

SUMMARY: The Department of Homeland Security (DHS or the Department) invites public comment on the Appendix A Chemicals of Interest (COI) list. These comments may be used for potential revisions to the Chemical Facility Anti-Terrorism Standards (CFATS) regulations.

DATES: A roundtable discussion will be held from 8:30 a.m. to 12:00 p.m. followed by a listening session from 1:00 p.m. to 4:00 p.m. on Tuesday, October 27, 2015. Written comments must be submitted on or before Monday, November 30, 2015.

ADDRESSES: The roundtable discussion and public listening session will be held at:

- The National Training Center, 1310 North Courthouse Road, Suite 600, Arlington, VA 22201.

You may submit comments, identified by docket number DHS–2014–0016. To avoid duplication, please use only one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Mail:* U.S. Department of Homeland Security, National Protection and Programs Directorate, Office of Infrastructure Protection, Infrastructure Security Compliance Division, 245 Murray Lane, Mail Stop 0610, Arlington, VA 20528–0610.

- *In person:* Verbal comments are acceptable in person at the public listening session.

Registration to Attend and/or to Participate: If you wish to attend the roundtable discussion and public listening session and/or make an oral comment at the listening session, please register at <http://www.cvent.com/d/8rqbsg/4W>. If you cannot attend in person you may register to participate in a listen-only webinar. Comments will not be accepted during the webinar. Attendees of the webinar may submit written comments using the methods identified in this section. Please note that the morning portion will consist of a technical, roundtable discussion and the afternoon portion will consist of a listening session. There is no fee to register for either session. Same-day registration is permitted but seating will only be on a space-available basis, beginning at 7:30 a.m. We will do our best to accommodate all persons who wish to make a comment during the listening session. DHS encourages persons and groups having similar interests to consolidate their information for presentation through a single representative.

FOR FURTHER INFORMATION CONTACT: Jon MacLaren, Rulemaking Section Chief, Office of Infrastructure Protection, Infrastructure Security Compliance Division, 245 Murray Lane, Mail Stop 0610, Washington, DC 20528–0610, Telephone 703–235–5263. For additional information on the Appendix A meeting, please email CFATS@hq.dhs.gov. Individuals with access and functional needs wishing to attend the session and require accommodations should contact Sharmine Jones at Sharmine.Jones@hq.dhs.gov as soon as possible.

 SVA Security Vulnerability Assessment

I. Background

Section 550 of the Department of Homeland Security Appropriations Act of 2007 (Pub. L. 109–295) authorized the Department to regulate the security of chemical facilities that, in the discretion of the Secretary, may present high levels of security risk. Under the Section 550 authority, on April 9, 2007, DHS issued the CFATS interim final rule, 6 CFR part 27. *See* 72 FR 17688. Additionally, in November 2007, the Department adopted as Appendix A to the CFATS rule, a final list of over 300 Chemicals of Interest (COI) that pose significant risks to human life or health if released, stolen or diverted, or sabotaged or contaminated. DHS also adopted some additional provisions that clarify how Appendix A is to be applied under CFATS. *See* 72 FR 65396. Publication of the Appendix A regulations brought the CFATS interim final rule into full effect.

On December 18, 2014, the President signed into law the Protecting and Securing Chemical Facilities from Terrorist Attacks Act of 2014, (“the Act”) (Pub. L. 113–254 (6 U.S.C. 621 *et seq.*)), which authorizes the CFATS program. The Act supersedes Section 550 of the Department of Homeland Security Appropriations Act of 2007, Public Law 109–295, as amended, under which the CFATS program was originally established in April 2007. The CFATS regulations, 6 CFR part 27, remain in effect. Under CFATS, any chemical facility (other than certain facilities expressly exempted by statute) that possesses any COI at or above the threshold amounts (applicable Screening Threshold Quantity (STQ) or minimum concentration) specified in Appendix A for that COI must complete and submit to DHS through the Chemical Security Assessment Tool (CSAT)¹ certain information (the “Top-Screen”).

II. Scope of Roundtable Discussion and Listening Session

DHS is interested in obtaining information and recommendations from the public on Appendix A. Comments and recommendations are welcomed on all aspects of CFATS Appendix A;

¹ CSAT is an information technology system primarily designed to collect facility information through specific applications for submitting Top-Screens, Security Vulnerability Assessments (SVAs), Site Security Plans (SSPs), and Alternative Security Programs (ASPs). *See* 6 CFR 27.105.

however, DHS is particularly interested in hearing about the following topics:

- The possible addition of chemicals to, and/or the deletion or modification of COI currently listed in Appendix A;
- The applicability and/or modification of any Screening Threshold Quantities (STQ) or minimum concentrations;
- Concentration and mixtures rules associated with Appendix A, which are described in 6 CFR 27.204;
- Isotopic variants to include comments on Chemical Abstract Service (CAS) Registry Numbers and nomenclature;
- The classification of COI within different security issues, to include the potential for re-designating certain chemicals now listed solely as release flammable so they are listed solely as toxic or as toxic and flammable; and
- Criteria for “counting rules” for screening threshold quantities to include clarification on how to determine if a COI is in transportation.

III. Written Comments

A. General

All interested persons, even those who are unable to attend the roundtable discussion and/or public listening session in-person, may submit written comments, data, or views on how Appendix A of the current CFATS regulations, 6 CFR part 27, might be improved. Please explain the reason for any comments and include other information or authority that supports such comments. Feedback that simply states that a stakeholder feels strongly that DHS should modify the Appendix A COI list will not enable the Department to adequately evaluate the commenter's concern, nor could DHS propose possible changes to address the commenter's feedback. Therefore the Department requests that commenters provide actionable data, including how the proposed change would impact the costs and benefits of CFATS, to allow the Department to fully consider the commenter's comment and recommendation.

Written comments may be submitted electronically or by mail, as explained previously in the **ADDRESSES** section of this Notice. To avoid duplication, please use only one of these methods to submit written comments. Written comments will not be accepted at this public meeting.

Except as provided below, all comments received, as well as pertinent background documents, will be posted without change to <http://www.regulations.gov>, including any personal information provided. All

submissions must include the agency name and docket number for this rulemaking. For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>.

B. Handling of Confidential, Sensitive and Chemical-Terrorism Vulnerability Information

Interested parties are encouraged to submit comments in a manner that avoids discussion of trade secrets, confidential commercial or financial information, Chemical-terrorism Vulnerability Information (CVI), or any other category of sensitive information that should not be disclosed to the general public. If it is not possible to avoid such discussion, however, please specifically identify any confidential or sensitive information contained in the comments with appropriate warning language (e.g., any CVI must be marked and handled in accordance with the requirements of 6 CFR 27.400(f)), and submit them by mail to the individual listed in the **FOR FURTHER INFORMATION CONTACT** section.

DHS will not place any identifiable confidential or sensitive comments in the public docket; rather, DHS will handle them in accordance with applicable safeguards and restrictions on access. See e.g., 6 CFR 27.400. See also the DHS CVI Procedural Manual, “Safeguarding Information Designated as CVI,” September 2008, located on the DHS Web site at: www.dhs.gov/critical-infrastructure-chemical-security. DHS will hold any such comments in a separate file to which the public does not have access and place a note in the public docket that DHS has received such materials from the commenter. DHS will provide appropriate access to such comments upon request to individuals who meet the applicable legal requirements for access to such information.

IV. Roundtable Discussion and Listening Session

A. Purpose

The Department will hold a public roundtable discussion and listening session to solicit the public's views and recommendations on how the current Appendix A COI list might be improved.

B. Procedures and Participation

This meeting is open to the public. DHS will use sign-in sheets to voluntarily collect contact information from the attending public and to properly log oral comments received during the two sessions. Providing

contact information will be voluntary, and members of the public also may make anonymous oral comments. Seating may be limited, but session organizers will make every effort to accommodate all participants. Please note that members of the public who participate through the listen-only webinar may log in as a guest on the Homeland Security Information Network. This log in does not require your full name or a password. As previously stated, comments will not be accepted through the webinar. If you wish to submit a written comment please submit through the methods identified in the **ADDRESSES** section. The roundtable discussion is intended for technical experts, who have a scientific, security, regulatory or other background to discuss the proposed topics regarding Appendix A at an expert level. However, individuals who are not technical experts (or who do not meet the other criteria) may still attend and participate in the meeting. The listening session is intended to afford the public an opportunity to provide comments to the Department concerning CFATS and the Appendix A. For the listening session, comments are requested not to exceed four minutes at a time to enable all interested attendees an opportunity to provide comment. Should time permit, commenters who need additional time may be invited to complete their comments. The listening session may adjourn early if all commenters present have had the opportunity to speak prior to the scheduled conclusion of the session. Participants who speak will be asked to provide their name, title, company and stakeholder segment (i.e. chemical producers, chemical storage companies, agricultural supply companies, state and local regulators, chemical critical infrastructure owners and operators, etc.). Notes from the listening session will be posted at <http://www.regulations.gov>. The public roundtable discussion and listening session also may be recorded to support the note-taking effort.

DHS will place a transcript of the public meeting in the docket for this rulemaking.

In addressing these topics, DHS encourages interested parties to provide specific data that documents the costs, burdens, and benefits of the current regulatory approach. Commenters also might address how DHS can best obtain and consider accurate, objective information and data about the costs, burdens, and benefits of Appendix A, and whether there are lower cost alternatives that would to allow the

Department to continue to achieve its security goals consistent with the law.

David M. Wulf,

*Director for Infrastructure Security
Compliance Division, Department of
Homeland Security.*

BILLING CODE 9110-9P-P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 989

[Doc. No. AMS-FV-14-0069; FV-14-989-2 PR]

Raisins Produced From Grapes Grown in California; Proposed Amendments to Marketing Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposed rule invites public comments on proposed amendments to Marketing Order No. 989, which regulates the handling of raisins produced from grapes grown in California. The Raisin Administrative Committee (Committee), which is responsible for the local administration of the order and is comprised of producers and handlers of raisins operating within the production area, recommended the amendments that would authorize the Committee to borrow from a commercial lending institution and authorize the establishment of a monetary reserve equal to up to one year's budgeted expenses. Allowing the Committee to utilize these customary business practices would help to improve administration of the order.

DATES: Comments must be received by December 15, 2015.

ADDRESSES: Interested persons are invited to submit written comments concerning this rule. Comments must be sent to the Docket Clerk, Marketing Order and Agreement Division, Fruit and Vegetable Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250-0237; Fax: (202) 720-8938; or Internet: <http://www.regulations.gov>. Comments should reference the document number and the date and page number of this issue of the **Federal Register** and will be available for public inspection in the Office of the Docket Clerk during regular business hours, or can be viewed at: <http://www.regulations.gov>. All comments submitted in response to this proposal will be included in the record

and will be made available to the public. Please be advised that the identity of the individuals or entities submitting the comments will be made public on the internet at the address provided above.

FOR FURTHER INFORMATION CONTACT:

Geronimo Quinones, Marketing Specialist, or Michelle P. Sharrow, Rulemaking Branch Chief, Marketing Order and Agreement Division, Fruit and Vegetable Program, AMS, USDA; 1400 Independence Avenue SW., Stop 0237, Washington, DC 20250-0237; Telephone: (202) 720-2491, Fax: (202) 720-8938, or Email: geronimo.quinones@ams.usda.gov or michelle.sharrow@ams.usda.gov.

Small businesses may request information on complying with this regulation by contacting Jeffrey Smutny, Marketing Order and Agreement Division, Fruit and Vegetable Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250-0237; Telephone: (202) 720-2491, Fax: (202) 720-8938, or Email: Jeffrey.Smutny@ams.usda.gov.

SUPPLEMENTARY INFORMATION: This proposal is issued under Marketing Order No. 989, as amended (7 CFR part 989), regulating the handling of raisins produced from grapes grown in California, hereinafter referred to as the "order." The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), hereinafter referred to as the "Act."

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Orders 12866, 13563, and 13175.

This proposal has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than

20 days after the date of the entry of the ruling.

Section 1504 of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill) (Pub. L. 110-246) amended section 18c(17) of the Act, which in turn required the addition of supplemental rules of practice to 7 CFR part 900 (73 FR 49307; August 21, 2008). The additional supplemental rules of practice authorize the use of informal rulemaking (5 U.S.C. 553) to amend Federal fruit, vegetable, and nut marketing agreements and orders. USDA may use informal rulemaking to amend marketing orders based on the nature and complexity of the proposed amendments, the potential regulatory and economic impacts on affected entities, and any other relevant matters.

AMS has considered these factors and has determined that the amendment proposals are not unduly complex and the nature of the proposed amendments is appropriate for utilizing the informal rulemaking process to amend the order. A discussion of the potential regulatory and economic impacts on affected entities is discussed later in the "Initial Regulatory Flexibility Analysis" section of this rule.

The proposed amendments were unanimously recommended by the Committee following deliberations at a public meeting held on October 2, 2014. Currently, the order does not allow the Committee to borrow funds from a commercial lending institution or retain unspent handler assessments past the close of a fiscal year. Allowing the Committee to utilize these customary business practices would help to improve administration of the order by providing it with the means for ensuring continuity of operations when its cash flow needs are greater than available handler assessment income.

Proposal #1—Borrowing From a Commercial Lending Institution

Section 989.80 of the order, Assessments, authorizes the Committee to collect assessments from handlers to administer the program.

This proposal would provide the Committee with authority to borrow from a commercial lending institution during times of cash shortages. Since inception of the marketing order, the Committee sometimes has used the order's volume regulation provisions to pool a portion of the annual raisin crop to assure orderly marketing. These pooled raisins, designated by the Committee as reserve raisins, were sold and released to handlers throughout the crop year. In managing the pooled raisins for the best return to growers, the Committee pooled the cash received

from the handlers until equity payments were distributed to the growers. The Committee borrowed funds (with interest) from this reserve raisin pool during times of assessment shortages to temporarily cover expenses, generally during the early part of the new crop year.

Volume regulation has not been in effect under the marketing order since 2010, and the Committee has been returning equity payments to the growers who contributed raisins to the 2009 reserve raisin pool. Therefore, funds from the reserve raisin pool are no longer available for the Committee to use during times of cash shortages. The Committee's proposed amendment to the order would allow it to borrow from a commercial lending institution when no other funding is available. This would assist the Committee in bridging finances from the end of one fiscal year through the first quarter of the new fiscal year before assessments on the new crop are received.

Additionally, the Committee has received grants from the Foreign Agricultural Service's (FAS) Market Access Program (MAP) since 1995 to conduct market expansion and development activities in various international markets. Under MAP, participants must first use their own resources for activities and request reimbursement from FAS. Sometimes there is a time-lag between submission of reimbursement requests and receipt of payments, which causes budgeting issues. Having authority to borrow from a commercial lending institution would help to ensure continuity of operations when this occurs.

Therefore, for the reasons stated above, it is proposed that § 989.80, Assessments, be amended by adding a sentence in paragraph (c) that would provide the Committee with authority to borrow from a commercial lending institution when no other funding is available.

Proposal #2—Establish a Monetary Reserve Fund Equal to One Year's Budgeted Expenses

Section 989.81 of the order, Accounting, authorizes the Committee to credit or refund unexpended assessment funds from the crop year back to the handlers from whom it was collected. Currently, the order doesn't allow the Committee to retain handler assessments from prior crop years.

This proposal would allow the Committee to establish a monetary reserve equal to one year's operational expenses as averaged over the past six years. Reserve funds could be used for specific administrative and overhead

expenses such as staff wages, salaries and related benefits, office rent, utilities, postage, insurance, legal expenses, and audit costs; to cover deficits incurred during any period when assessment income is less than expenses; to defray expenses incurred during any period when any or all provisions of the order are suspended; liquidation of the order; and other expenses recommended by the Committee and approved by the Secretary. Reserve funds could not be used for promotional expenses during any crop year prior to the time that assessment income is sufficient to cover such expenses.

As previously stated in Proposal #1, the Committee borrowed cash from the reserve raisin pool and repaid it with interest when handler assessment cash shortages occurred in the past. This practice helped the Committee to bridge finances from one fiscal crop year to the next until assessment income for the new crop year was received. This option is no longer available.

For the reasons stated above, it is proposed that § 989.81, Accounting, be amended to allow the Committee to retain excess assessment funds for the purpose of establishing a monetary reserve equal to one year's budgeted expenses as averaged over the past six years. Such excess funds could only be used for specific administrative and operational expenses.

Initial Regulatory Flexibility Analysis

Pursuant to the requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 3,000 producers of California raisins and approximately 28 handlers subject to regulation under the marketing order. The Small Business Administration defines small agricultural producers as those having annual receipts of less than \$750,000 and defines small agricultural service firms as those whose annual receipts are less than \$7,000,000 (13 CFR 121.201).

Based upon information provided by the Committee, it may be concluded that a majority of producers and approximately 18 handlers of California raisins may be classified as small entities.

The proposed rule would authorize the Committee to borrow from commercial lending institutions and to establish a monetary reserve fund equal to one year's budgeted expenses. This would help to ensure proper management and funding of the program.

The Committee reviewed and identified a yearly budget that would be necessary to continue program operations in the absence of a reserve pool. Based on this budget, the Committee believes a monetary reserve of approximately \$2 million would be sufficient to continue operations. The anticipated \$2 million to be accumulated in a monetary reserve would not be accrued in one crop year. It would be spread over several years, depending on expenses, assessment revenue, and excess handler assessments accrued in each crop year. For example: If excess annual handler assessments amount to \$400,000, it would take five years to accrue \$2 million. Currently, the average excess handler assessments paid yearly over the last six years has been \$861,622. During the time in which the monetary reserve fund would be accumulated, the Committee would seek funding from a commercial lending institution as previously explained in Proposal #1.

While this action would result in a temporary increase in handler costs, these costs would be uniform on all handlers and proportional to the size of their businesses. However, these costs are expected to be offset by the benefits derived from operation of the order. Additionally, these costs would help to ensure that the Committee has sufficient funds to meet its financial obligations. Such stability is expected to allow the Committee to conduct programs that would benefit all entities, regardless of size. California raisin producers should see an improved business environment and a more sustainable business model because of the improved business efficiency.

Alternatives were considered to these proposals, including making no changes at this time. However, the Committee believes it would be beneficial to have the means and funds necessary to effectively administer the program.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the order's information

collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB No. 0581-0178, "Vegetable and Specialty Crops." No changes in those requirements as a result of this action are necessary. Should any changes become necessary, they would be submitted to OMB for approval.

This proposed rule would impose no additional reporting or recordkeeping requirements on either small or large California raisin handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

The Committee's meeting was widely publicized throughout the California raisin production area. All interested persons were invited to attend the meeting and encouraged to participate in Committee deliberations on all issues. Like all Committee meetings, the October 2, 2014, meeting was public, and all entities, both large and small, were encouraged to express their views on these proposals. Finally, interested persons are invited to submit comments on the proposed amendments to the order, including comments on the regulatory and informational impacts of this action on small businesses.

Following analysis of any comments received on the amendments proposed in this rule, AMS will evaluate all available information and determine whether to proceed. If appropriate, a proposed rule and referendum order would be issued, and producers would be provided the opportunity to vote for or against the proposed amendments. Information about the referendum, including dates and voter eligibility requirements, would be published in a future issue of the **Federal Register**. A final rule would then be issued to effectuate any amendments favored by producers participating in the referendum.

AMS is committed to complying with the E-Government Act to promote the use of the Internet and other information technologies, to provide increased opportunities for citizen access to Government information and services, and for other purposes.

USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this action. A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: <http://www.ams.usda.gov/MarketingOrdersSmallBusinessGuide>. Any questions about the compliance guide should be sent to Jeffrey Smutny

at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

General Findings

The findings hereinafter set forth are supplementary to the findings and determinations which were previously made in connection with the issuance of the marketing order; and all said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

1. The marketing order as hereby proposed to be amended, and all of the terms and conditions thereof, would tend to effectuate the declared policy of the Act;

2. The marketing order as hereby proposed to be amended regulates the handling of raisins produced by grapes grown in California and is applicable only to persons in the respective classes of commercial and industrial activity specified in the marketing order;

3. The marketing order as hereby proposed to be amended is limited in application to the smallest regional production area which is practicable, consistent with carrying out the declared policy of the Act, and the issuance of several orders applicable to subdivisions of the production area would not effectively carry out the declared policy of the Act;

4. The marketing order as hereby proposed to be amended prescribes, insofar as practicable, such different terms applicable to different parts of the production area as are necessary to give due recognition to the differences in the production and marketing of raisins produced or packed in the production area; and

5. All handling of raisins produced or packed in the production area as defined in the marketing order is in the current of interstate or foreign commerce or directly burdens, obstructs, or affects such commerce.

A 60-day comment period is provided to allow interested persons to respond to these proposals. Any comments received on the amendments proposed in this rule will be analyzed, and if AMS determines to proceed based on all the information presented, a producer referendum would be conducted to determine producer support for the proposed amendments. If appropriate, a final rule would then be issued to effectuate the amendments favored by producers participating in the referendum.

List of Subjects in 7 CFR Part 989

Raisins, Marketing agreements, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 989 is proposed to be amended as follows:

PART 989—RAISINS PRODUCED BY GRAPES GROWN IN CALIFORNIA

■ 1. The authority citation for 7 CFR part 989 continues to read as follows:

Authority: 7 U.S.C. 601-674.

■ 2. Revise paragraph (c) of § 989.80 to read as follows:

§ 989.80 Assessments.

* * * * *

(c) During any crop year or any portion of a crop year for which volume percentages are not effective for a varietal type, all standard raisins of that varietal type acquired by handlers during such period shall be free tonnage for purposes of levying assessments pursuant to this section. The Secretary shall fix the rate of assessment to be paid by all handlers on the basis of a specified rate per ton. At any time during or after a crop year, the Secretary may increase the rate of assessment to obtain sufficient funds to cover any later finding by the Secretary relative to the expenses of the committee. Each handler shall pay such additional assessment to the committee upon demand. In order to provide funds to carry out the functions of the committee, the committee may accept advance payments from any handler to be credited toward such assessments as may be levied pursuant to this section against such handler during the crop year. In the event cash flow needs of the committee are above cash available generated by handler assessments, the committee may borrow from a commercial lending institution. The payment of assessments for the maintenance and functioning of the committee, and for such purposes as the Secretary may pursuant to this subpart determine to be appropriate, may be required under this part throughout the period it is in effect, irrespective of whether particular provisions thereof are suspended or become inoperative.

* * * * *

■ 3. Revise paragraph (a) of § 989.81 to read as follows:

§ 989.81 Accounting.

(a) If, at the end of the crop year, the assessments collected are in excess of expenses incurred, such excess shall be accounted for in accordance with one of the following:

(1) If such excess is not retained in a reserve, as provided in paragraph (a)(2) of this section, it shall be refunded proportionately to the persons from whom collected in accordance with § 989.80; *Provided*, That any sum paid by a person in excess of his or her pro rata share of expenses during any crop year may be applied by the committee at the end of such crop year as credit for such person, toward the committee's administrative operations for the following crop year; *Provided further*, That the committee may credit the excess to any outstanding obligations due the committee from such person.

(2) The committee may carry over such excess funds into subsequent crop years as a reserve; *Provided*, That funds already in the reserve do not exceed one crop year's budgeted expenses as averaged over the past six years. In the event that funds exceed one crop year's expenses, funds in excess of one crop year's budgeted expenses shall be distributed in accordance with paragraph (1) above. Such funds may be used:

(i) To defray essential administrative expenses (*i.e.*, staff wages/salaries and related benefits, office rent, utilities, postage, insurance, legal expenses, audit costs, consulting, Web site operation and maintenance, office supplies, repairs and maintenance, equipment leases, domestic staff travel and committee mileage reimbursement, international committee travel, international staff travel, bank charges, computer software and programming, costs of compliance activities, and other similar essential administrative expenses) exclusive of promotional expenses during any crop year, prior to the time assessment income is sufficient to cover such expenses;

(ii) To cover deficits incurred during any period when assessment income is less than expenses;

(iii) To defray expenses incurred during any period when any or all provisions of this part are suspended;

(iv) To meet any other such expenses recommended by the committee and approved by the Secretary; and

(v) To cover the necessary expenses of liquidation in the event of termination of this part. Upon such termination, any funds not required to defray the necessary expenses of liquidation shall be disposed of in such manner as the Secretary may determine to be appropriate; *Provided*, That to the extent practicable, such funds shall be returned pro rata to the persons from whom such funds were collected.

Dated: October 13, 2015.

Rex Barnes,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE 3410-02-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA-2015-1139; Airspace Docket No. 15-AWP-4]

Proposed Establishment of Class E Airspace; Los Angeles, CA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to establish Class E surface area airspace designated as an extension to the Class D airspace at Whiteman Airport, Los Angeles, CA. After reviewing the airspace, the FAA found it necessary to establish Class E surface area for the safety and management of Instrument Flight Rules (IFR) operations for at the airport.

DATES: Comments must be received on or before November 30, 2015.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590; telephone (202) 366-9826. You must identify FAA Docket No. FAA-2015-1139; Airspace Docket No. 15-AWP-4, at the beginning of your comments. You may also submit comments through the Internet at <http://www.regulations.gov>. You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. The Docket Office (telephone 1-800-647-5527), is on the ground floor of the building at the above address.

FAA Order 7400.9Z, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at http://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy and ATC Regulations Group, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 29591; telephone: 202-267-8783. The Order is also available

for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

FAA Order 7400.9, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT:

Steve Haga, Federal Aviation Administration, Operations Support Group, Western Service Center, 1601 Lind Avenue SW., Renton, WA 98057; telephone (425) 203-4500.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part, A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would establish Class E airspace at Whiteman Airport, Los Angeles, CA.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. FAA-2015-1139; Airspace Docket No. 15-AWP-4." The postcard will be date/time stamped and returned to the commenter.

Availability of NPRMs

An electronic copy of this document may be downloaded through the Internet at <http://www.regulations.gov>. Recently published rulemaking documents can also be accessed through the FAA's Web page at http://www.faa.gov/airports_airtraffic/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 1601 Lind Avenue SW., Renton, WA 98057.

Persons interested in being placed on a mailing list for future NPRMs should contact the FAA's Office of Rulemaking, (202) 267-9677, for a copy of Advisory Circular No. 11-2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

Availability and Summary of Documents Proposed for Incorporation by Reference

This document proposes to amend FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to Title 14 Code of Federal Regulations (14 CFR) Part 71 by establishing Class E surface area airspace designated as an extension to the Class D airspace at Whiteman Airport, Los Angeles, CA. The Class E surface area airspace would extend from the 3-mile radius of Whiteman Airport to 6.6 miles northwest of the airport for the safety and management of IFR operations.

Class E airspace designations are published in paragraph 6004, of FAA Order 7400.9Z, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore; (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified this proposed rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures" prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

- 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959-1963 Comp., p. 389.

§ 71.1 [Amended]

- 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015, is amended as follows:

Paragraph 6004 Class E Airspace Areas Designated as an Extension to a Class D or Class E Surface Area

* * * * *

AWP CA E4 Whiteman, CA [New]

Los Angeles, Whiteman Airport, CA
(Lat. 34°15'34" N., long. 118°24'48" W.)
That airspace extending upward from the surface within 1.1 miles each side of the 304°

bearing from the Whiteman Airport, extending from the 3-mile radius of Whiteman Airport to 6.6 miles northwest of the airport. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

Issued in Seattle, Washington, on October 6, 2015.

Mindy Wright,

Acting Manager, Operations Support Group, Western Service Center.

BILLING CODE 4910-13-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

24 CFR Part 203

[Docket No. FR-5742-N-02]

RIN 2502-AJ23

Federal Housing Administration (FHA): Single Family Mortgage Insurance Maximum Time Period for Filing Insurance Claims, Curtailment of Interest and Disallowance of Operating Expenses Incurred Beyond Certain Established Timeframes; Partial Withdrawal

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Partial withdrawal of proposed rule.

SUMMARY: This document withdraws part of a proposed rule, published in the *Federal Register* on July 6, 2015, that proposed to establish a maximum time period within which an FHA-approved mortgagee must file a claim with FHA for insurance benefits, and to revise HUD's policies concerning the curtailment of interest and the disallowance of certain expenses incurred by a mortgagee as a result of the mortgagee's failure to timely initiate foreclosure or timely take such other action that is a prerequisite to submission of a claim for insurance. This withdrawal covers only the portion of the proposed rule that would have established the maximum time period within which an FHA-approved mortgagee must file a claim with FHA for insurance benefits.

DATES: As of October 16, 2015, HUD withdraws the proposed additions of §§ 203.317a and 203.372, and proposed revision to § 203.318, published Monday, July 6, 2015 (80 FR 38410).

FOR FURTHER INFORMATION CONTACT: Ivery Himes, Director, Office of Single

Family Asset Management, Office of Housing, Department of Housing and Urban Development, 451 7th Street SW., Room 9172, Washington, DC 20410; telephone number 202-708-1672 (this is not a toll-free number). Persons with hearing or speech impairments may access this number by calling the Federal Relay Service at 800-877-8339 (this is a toll-free number).

SUPPLEMENTARY INFORMATION:

I. Background

On July 6, 2015, HUD published in the **Federal Register** a proposed rule that would have added § 203.372, establishing a maximum time period for filing a claim for insurance benefits, and § 203.317a, providing that the contract of insurance would be terminated if a mortgagee failed to file a claim within the maximum time period specified in § 203.372, to 24 CFR part 203. The proposed rule would have also revised § 203.318 to refer to termination of the insurance contract under new § 203.317a. Additionally, the proposed rule would amend § 203.402, and revise the title of § 203.474, related to proposals concerning the curtailment of interest and the disallowance of certain expenses incurred by a mortgagee as a result of the mortgagee's failure to timely initiate foreclosure or timely take such other action that is a prerequisite to submission of a claim for insurance.

In response to public comments expressing concern over the implementation of the proposed provisions regarding the maximum time period within which an FHA-approved mortgagee must file a claim with FHA for insurance benefits, HUD is withdrawing the proposed additions of §§ 203.317a and 203.372, and proposed revision to § 203.318. HUD will publish in the **Federal Register** any revised maximum time period for claim filing provisions in a proposed rule and solicit public comment on it.

List of Subjects in 24 CFR Part 203

Hawaiian Natives, Home improvement, Indians-lands, Loan programs-housing and community development, Mortgage insurance, Reporting and recordkeeping requirements, Solar energy.

Partial Withdrawal of Proposed Rule. For the reasons stated in the preamble and under the authority of 42 U.S.C. 3535(d), HUD withdraws the proposed additions of §§ 203.317a and 203.372, and proposed revision to § 203.318, in 24 CFR part 203.

Dated: October 7, 2015.

Edward L. Golding,

Principal Deputy Assistant Secretary for Housing.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R09-OAR-2015-0240 FRL-9935-55-Region 9]

Approval of Implementation Plans; Arizona, Phoenix-Mesa; 2008 Ozone Standard Requirements

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve revisions to the Arizona State Implementation Plan (SIP) concerning the emission inventory, emission statements, reasonably available control technology corrections and the vehicle inspection and maintenance requirements for the Phoenix-Mesa 2008 eight-Hour Ozone National Ambient Air Quality Standard (NAAQS) Marginal nonattainment area. We are approving these revisions under the Clean Air Act. **DATES:** Any comments on this proposal must arrive by November 16, 2015.

ADDRESSES: Submit comments, identified by docket number EPA-R09-OAR-2015-0240, by one of the following methods:

1. *Federal eRulemaking Portal:* www.regulations.gov. Follow the on-line instructions.
2. *Email:* levin.nancy@epa.gov.
3. *Mail or deliver:* Nancy Levin (Air-4), U.S. Environmental Protection Agency Region IX, 75 Hawthorne Street, San Francisco, CA 94105-3901.

Instructions: Once submitted, comments cannot be edited or withdrawn. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. If you need to include CBI as part of your comment, please visit <http://www.epa.gov/dockets/comments.html> for instructions. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. For additional

submission methods, the full EPA public comment policy, and general guidance on making effective comments, please visit <http://www.epa.gov/dockets/comments.html>.

Docket: Generally, documents in the docket for this action are available electronically at www.regulations.gov or in hard copy at EPA Region IX, 75 Hawthorne Street, San Francisco, California 94105-3901. While all documents in the docket are listed at www.regulations.gov, some information may be publicly available only at the hard copy location (e.g., copyrighted material, large maps), and some may not be publicly available in either location (e.g., CBI). To inspect the hard copy materials, please schedule an appointment during normal business hours with the contact listed in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Nancy Levin, EPA Region IX, (415) 972-3848, levin.nancy@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document, “we,” “us” and “our” refer to the EPA. This proposal addresses revisions to the Arizona SIP concerning the emission inventory, emission statements, reasonably available control technology corrections and the vehicle inspection and maintenance requirements for the Phoenix-Mesa 2008 eight-Hour Ozone NAAQS Marginal nonattainment area. In the Rules and Regulations section of this **Federal Register**, we are approving these revisions in a direct final action without prior proposal because we believe these SIP revisions are not controversial. If we receive adverse comments, however, we will publish a timely withdrawal of the direct final rule and address the comments in subsequent action based on this proposed rule.

We do not plan to open a second comment period, so anyone interested in commenting should do so at this time. If we do not receive adverse comments, no further activity is planned. For further information, please see the direct final action.

AFRICAN DEVELOPMENT FOUNDATION

Public Quarterly Meeting of the Board of Directors

AGENCY: United States African Development Foundation.

ACTION: Notice of meeting.

SUMMARY: The U.S. African Development Foundation (USADF) will hold its quarterly meeting of the Board of Directors to discuss the agency's programs and administration.

DATES: The meeting date is Tuesday, October 27, 2015, 9:00 a.m. to 11:30 a.m.

ADDRESSES: The meeting location is 1400 I Street Northwest, Suite #1000 (Main Conference Room), Washington, DC 2005-2246.

FOR FURTHER INFORMATION CONTACT: Julia Lingham, 202-233-8811.

Authority: Pub. L. 96-533 (22 U.S.C. § 290h).

Dated: October 13, 2015.

Doris Mason Martin,
General Counsel.

BILLING CODE 6117-01-P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Document No. AMS-ST-15-0060]

Plant Variety Protection Board; Open Meeting

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice of meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA), the Agricultural Marketing Service (AMS) is announcing a meeting of the Plant Variety Protection Board (Board). The meeting is being held to discuss a variety of topics including, but not

limited to, work and outreach plans, subcommittee activities, and proposals for procedure changes. The meeting is open to the public. This notice sets forth the schedule and location for the meeting.

DATES: Monday, December 7, 2015, from 1:00 p.m. to 5:00 p.m. and Tuesday, December 8, 2015, from 8:00 a.m. to 5:00 p.m.

ADDRESSES: The meeting will be held at the Hyatt Regency Chicago Hotel at the Ogden Room, at 151 East Wacker Drive, Chicago, IL 60601.

FOR FURTHER INFORMATION CONTACT:

Maria Pratt, Program Analyst, U.S. Department of Agriculture (USDA), AMS, Science and Technology Programs, 1400 Independence Avenue SW., Washington, DC 20250. Telephone number (202) 720-1104, fax (202) 260-8976, or email: maria.pratt@ams.usda.gov.

SUPPLEMENTARY INFORMATION: Pursuant to the provisions of section 10(a) of the FACA (5 U.S.C. Appendix 2), this notice informs the public that the Plant Variety Protection Office (PVPO) is having a Board meeting within the 15 day requirement of the FACA. The Plant Variety Protection Act (PVPA) (7 U.S.C. 2321 *et seq.*) provides legal protection in the form of intellectual property rights to developers of new varieties of plants, which are reproduced sexually by seed or are tuber-propagated. A certificate of Plant Variety Protection (PVP) is awarded to an owner of a crop variety after an examination shows that it is new, distinct from other varieties, genetically uniform and stable through successive generations. The term of protection is 20 years for most crops and 25 years for trees, shrubs, and vines. The PVPA also provides for a statutory Board (7 U.S.C. 2327). The PVPA Board is composed of 14 individuals who are experts in various areas of development and represent the private or seed industry sector, academia and government. The duties of the Board are to: (1) Advise the Secretary concerning the adoption of rules and regulations to facilitate the proper administration of the FACA; (2) provide advisory counsel to the Secretary on appeals concerning decisions on applications by the PVP office and on requests for emergency public-interest compulsory licenses; and (3) advise the Secretary on any other matters under the Regulations and Rules

of Practice and on all questions under Section 44 of the FACA, "Public Interest in Wide Usage" (7 U.S.C. 2404).

The purpose of the meeting will be to discuss the PVPO 2015 achievements, the electronic application system, reports of the outreach and molecular techniques subcommittees, PVP cooperation with other countries, and PVPO 2016 business plan.

Agenda Items: The agenda will include, welcome and introductions, discussions on program activities that encourage the development of new plant varieties and also address appeals to the Secretary. There will be presentations on 2015 accomplishments, the electronic PVP application system, PVP outreach activities, the use of molecular markers for PVP applications, PVP cooperation with other countries, and the 2016 business plan. The meeting will be open to the public. Those wishing to participate are encouraged to pre-register by November 30, 2015 by contacting Maria Pratt, Program Analyst; Telephone: (202) 720-1104; Email: maria.pratt@ams.usda.gov.

Meeting Accommodation: The meeting hotel is ADA compliant, and the USDA provides reasonable accommodations to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in this public meeting, please notify Maria Pratt at: Email: maria.pratt@ams.usda.gov or (202) 720-1104. Determinations for reasonable accommodation will be made on a case-by-case basis. Minutes of the meeting will be available for public review at the Internet Web site <http://www.ams.usda.gov/PVPO>.

Dated: October 13, 2015.

Rex A. Barnes,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE 3410-02-P

DEPARTMENT OF COMMERCE

Census Bureau

Proposed Information Collection; Comment Request; Current Population Survey (CPS) Fertility Supplement

AGENCY: U.S. Census Bureau, Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: To ensure consideration, written comments must be submitted on or before December 15, 2015.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Karen Woods, U.S. Census Bureau, 7H110F, Washington, DC 20233–8400 at (301) 763–3806.

SUPPLEMENTARY INFORMATION**I. Abstract**

The U.S. Census Bureau plans to request clearance for the collection of data concerning the Fertility Supplement to be conducted in conjunction with the June 2016 CPS. The Census Bureau sponsors the supplement questions, which were previously collected in June 2014, and have been asked periodically since 1971. Title 13 U.S.C. Sections 141 and 182 authorize the collection of this information on individuals and households. This year, the 2016 Fertility Supplement will include questions on marital status and cohabitation of women at the time of their first birth.

This survey provides information used mainly by government and private analysts to project future population growth, to analyze child spacing, and to aid policymakers in their decisions affected by changes in family size and composition. Past studies have discovered noticeable changes in the patterns of fertility rates and the timing of the first birth. Potential needs for government assistance, such as aid to families with dependent children, child care, and maternal health care for single parent households, can be estimated using CPS characteristics matched with fertility data.

II. Method of Collection

The fertility information will be collected by both personal visit and telephone interviews in conjunction with the regular June CPS interviewing. All interviews are conducted using computer-assisted interviewing.

III. Data

OMB Control Number: 0607–0610.

Form Number: There are no forms. We conduct all interviewing on computers.

Type of Review: Regular submission.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 30,000.

Estimated Time per Response: 1 minute.

Estimated Total Annual Burden Hours: 500.

Estimated Total Annual Cost: There are no costs to the respondents other than their time to answer the CPS questions.

Respondents Obligation: Voluntary.

Legal Authority: Title 13 U.S.C. Sections 141, 182.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: October 9, 2015.

Glenna Mickelson,

Management Analyst, Office of the Chief Information Officer.

[FR Doc. 2015–26308 Filed 10–15–15; 8:45 am]

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE**International Trade Administration****Healthcare Technology & Hospital Information Services Trade Mission to the Kingdom of Saudi Arabia and Kuwait**

April 23–28, 2016.

AGENCY: International Trade Administration, Department of Commerce.

ACTION: Notice.

SUMMARY: The United States Department of Commerce, International Trade Administration (ITA), with support from the U.S. Chamber of Commerce and organizers of the Saudi-American Healthcare Forum (SAHF) is organizing a Healthcare Technology & Hospital Information Services Trade Mission to the Kingdom of Saudi Arabia and Kuwait from April 23–28, 2016. The purpose of the mission is to introduce U.S. firms to the rapidly expanding healthcare sectors in these two countries and to assist U.S. companies in pursuing opportunities in this sector.

The mission is designed for U.S. companies and international hospital groups providing hospital operation and management services, hospital information systems, and eHealth solutions. The mission also will assist U.S. companies already doing business in Saudi Arabia and Kuwait to expand their footprint. Target sectors holding high potential for U.S. companies include:

- Hospital operation and management,
- healthcare training and staffing services,
- healthcare education, and
- health information systems and informatics (e.g., electronic health records).

The mission is timed to take place during the Saudi-American Healthcare Forum (SAHF) on April 25–27, 2016. The SAHF is an exclusive event dedicated to building new relationships, fostering existing partnerships, and exchanging best practices between the United States and the Middle East. The 2015 forum attracted over 1,000 attendees intent on promoting healthcare diplomacy through bilateral and international research, technology development, and education and training. Approximately 50 U.S. companies and organizations attended the event. Additional information about the SAHF can be found here: <http://sahf15.com/>.

Supported by American industry participants and the U.S. Embassy, the

2016 SAHF will showcase the ongoing health-related cooperation between the U.S. Government and Saudi healthcare counterparts. The U.S. trade mission participants will be highlighted at the SAHF through speaking roles designed to elevate their companies' visibility as thought leaders in the field of healthcare innovation. Trade mission participants also will have free access to all seminars offered at the SAHF, if they wish to participate. Additionally, through customized meetings organized by the U.S. Commercial Service, trade mission participants will gain access to top level Saudi health decision makers to gain

exposure they would not otherwise be able to achieve on their own.

The mission will help participating U.S. firms and associations/organizations gain market insights, make industry and government contacts, solidify business strategies and advance specific projects with the goal of increasing U.S. healthcare services exports. The trade mission will start in Riyadh, Saudi Arabia, where participants will receive market briefings from U.S. Commercial Service and industry experts, hold one-on-one business meetings, meet with Saudi government officials and organizations, and participate in networking events. Delegates will be invited to participate

in the SAHF. Following the SAHF, trade mission participants will travel to Jeddah, Saudi Arabia and then to Kuwait, where they will have additional opportunities to meet with key contacts and decision makers. Participating firms may also wish to remain in Riyadh, or if the firm decides to send two participants on the mission, one representative can remain in Riyadh, rather than continue to Jeddah, to participate in SAHF seminars. Participating in an official U.S. industry delegation, rather than traveling on their own, will enhance the companies' abilities to identify opportunities in Saudi Arabia and Kuwait.

SCHEDULE

Saturday—April 23, Riyadh, Saudi Arabia	<ul style="list-style-type: none"> • Arrive Riyadh and hotel check-in • Welcome reception/ice breaker
Sunday—April 24, Riyadh, Saudi Arabia	<ul style="list-style-type: none"> • Welcome and overview of Trade Mission (TM) • Market briefings from the U.S. Commercial Service and industry experts • One-on-one business meetings • Networking reception in Riyadh
Monday—April 25, Riyadh, Saudi Arabia	<ul style="list-style-type: none"> • Government meetings • Saudi-American Healthcare Forum (SAHF) speaking engagements for trade mission participants • SAHF opening ceremony & gala dinner
Tuesday—April 26, Riyadh & Jeddah	<ul style="list-style-type: none"> • SAHF speaking engagements/TM split • Some TM representatives depart for Jeddah (PM) • Networking reception in Jeddah
Wednesday—April 27, Jeddah + Kuwait	<ul style="list-style-type: none"> • One-on-one business meetings Jeddah (AM) • Depart for Kuwait City, Kuwait (PM) • Networking reception in Kuwait
Thursday—April 28, Kuwait City, Kuwait	<ul style="list-style-type: none"> • Welcome and breakfast briefings • Government meetings • One-on-one business meetings • Mission ends

Web site: Please visit our official mission Web site for more information: <https://www.export.gov/trademiissions/saudikuwaitthehealthcare2016>.

Participation Requirements

All parties interested in participating in the trade mission must complete and submit an application package for consideration by the U.S. Department of Commerce. All applicants will be evaluated on their ability to meet certain conditions and best satisfy the selection criteria as Outlined below and will be notified whether they are chosen to participate in the mission. A minimum of 12 and maximum of 15 companies and/or trade associations/organizations will be selected from the applicant pool to participate in the trade mission.

Fees and Expenses

After an applicant has been selected to participate in the mission, a payment to the U.S. Department of Commerce in the form of a participation fee is required. Upon notification of acceptance to participate, those selected have five (5) business days to submit payment or the acceptance may be revoked.

The participation fee for the trade mission to Saudi Arabia and Kuwait is \$3,740 for small or medium-sized enterprises (SME) and \$4,470 for large companies. The fee for each additional representative (large firm or SME or trade association/organization) is \$750.

Exclusions

The mission fee does not include any personal travel expenses such as

lodging, most meals, local ground transportation (except for transportation to and from meetings, airport transfers during the mission) and air transportation. Participants will, however, be able to take advantage of U.S. Government per diem rates for hotel rooms. Business or entry visas may be required for participation in the mission. Applying for and obtaining such visas will be the responsibility of the mission participant. Government fees and processing expenses to obtain such visas are not included in the participation fee. However, the U.S. Department of Commerce will provide instructions to each participant on the procedures required to obtain necessary business visas.

Conditions for Participation

Applicants must submit a completed and signed mission application and supplemental application materials, including information on their products and/or services, primary market objectives, and goals for participation by February 12, 2016, but applications will be reviewed on a rolling basis beginning October 15, 2015 (see timeframe below). If the U.S. Department of Commerce receives an incomplete application, the Department may either: request additional information/clarification, take the lack of information into account when evaluating the application, or reject the application.

Each applicant must also certify that the products and services it seeks to export through the mission are either produced in the United States, or, if not, are marketed under the name of a U.S. company and have at least fifty-one percent U.S. content by value. In the case of a trade association or organization, the applicant must certify that, for each firm or service provider to be represented by the association/organization, the products and/or services the represented firm or service provider seeks to export are either produced in the United States or, if not, marketed under the name of a U.S. company and have at least fifty-one percent U.S. content.

In addition, each applicant must:

- Certify that the products and services that it wishes to market through the mission would be in compliance with U.S. export controls and regulations;
- Certify that it has identified any matter pending before any bureau or office in the U.S. Department of Commerce;
- Certify that it has identified any pending litigation (including any administrative proceedings) to which it is a party that involves the U.S. Department of Commerce;
- Sign and submit an agreement that it and its affiliates (1) have not and will not engage in the bribery of foreign officials in connection with a company's/participant's involvement in this mission, and (2) maintain and enforce a policy that prohibits the bribery of foreign officials; and
- Certify that it meets the minimum requirements as stated in this announcement. In the case of a trade association/organization, the applicant must certify that each firm or service provider to be represented by the association/organization can make the above certifications.

Selection Criteria for Participation

Targeted mission participants are U.S. manufacturers, services providers, and trade associations/organizations providing or promoting healthcare products/services that have an interest in entering or expanding their business in the Saudi and Kuwaiti markets. The following criteria will be evaluated in selecting participants:

- Suitability of a firm's or trade association's products or services to these markets;
- Firm's or trade association/organization's potential for business in the markets, including likelihood of exports resulting from the mission; and
- Consistency of the firm's or trade association/organization goals and objectives with the stated scope of the mission.

Additional factors, such as diversity of company size, type, location, and demographics, may also be considered during the review process. Referrals from political organizations and any documents, including the application, containing references to partisan political activities (including political contributions) will be removed from an applicant's submission and not considered during the selection process.

Timeline for Recruitment and Applications

Mission recruitment will be conducted in an open and public manner, including publication in the **Federal Register**, posting on the U.S. Commerce Department trade mission calendar (<http://www.export.gov/trademissions/>) and other Internet Web sites, press releases to general and trade media, direct mail, broadcast fax, notices by industry trade associations and other multiplier groups, and publicity at industry meetings, symposia, conferences, and trade shows. Recruitment for the mission will begin immediately and conclude no later than February 12, 2016. The U.S. Department of Commerce will review applications and make selection decisions on a rolling basis beginning October 15, 2015 until the maximum of 15 participants is selected. Applications received after February 12, 2016, will be considered only if space and scheduling constraints permit.

[A-570-929]

Small Diameter Graphite Electrodes From the People's Republic of China: Final Rescission of Antidumping Duty New Shipper Review; 2014

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On May 28, 2015, the Department of Commerce (the Department) published its *Preliminary Rescission* of the new shipper review of the antidumping duty order on small diameter graphite electrodes from the People's Republic of China (PRC) for the period of review (POR) of February 1, 2014, through August 31, 2014, for Xuzhou Jianglong Carbon Products Co., Ltd. (Jianglong).¹ For these final results, we continue to find that Jianglong's request does not satisfy the regulatory requirements for a new shipper review. Accordingly, we are rescinding the new shipper review for Jianglong.

DATES: *Effective date:* October 16, 2015.

FOR FURTHER INFORMATION CONTACT: Hermes Pinilla or Minoo Hatten, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-3477 or (202) 482-1690, respectively.

SUPPLEMENTARY INFORMATION:

Background

In the *Preliminary Rescission*, the Department found that Jianglong is affiliated with Shanghai Carbon International Trade Co., Ltd. (Shanghai Carbon), which, as part of the PRC-wide Entity in the 2012-2013 administrative review, had shipments of subject merchandise to the United States. While conceding its affiliation with Shanghai Carbon, Jianglong did not certify its first U.S. entry or shipment and U.S. sale, as required under 19 CFR 351.214(b)(2)(iv)(A) and (C), respectively. Jianglong also did not request a new shipper review within one year of its first U.S. entry or shipment, as required by 19 CFR 351.214(c).

We received case and rebuttal briefs with respect to the *Preliminary Rescission* and, at the request of

¹ See *Small Diameter Graphite Electrodes from the People's Republic of China: Preliminary Rescission of Antidumping Duty New Shipper Review; 2014*, 80 FR 30438 (May 28, 2015) (*Preliminary Rescission*).

interested parties, held a hearing on August 5, 2015. We extended the due date for the final results of the review to October 5, 2015.² We conducted this new shipper review in accordance with section 751(a)(2)(B) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.214.

Scope of the Order

The merchandise covered by the order includes all small diameter graphite electrodes of any length, whether or not finished, of a kind used in furnaces, with a nominal or actual diameter of 400 millimeters (16 inches) or less, and whether or not attached to a graphite pin joining system or any other type of joining system or hardware. The subject merchandise is currently classifiable under the Harmonized Tariff Schedule of the United States (HTSUS) subheadings 8545.11.0010³ and 3801.10. The HTSUS numbers are provided for convenience and customs purposes, but the written description of the scope is dispositive. A full description of the scope of the order is contained in the Issues and Decision Memorandum.⁴

Final Rescission of Jianglong

As we explain in the Issues and Decision Memorandum, we continue to find that, because Jianglong is affiliated with an entity that had prior shipments of subject merchandise for consumption to the United States, and did not request a new shipper review within one year of those shipments, it is ineligible for a new shipper review. First, Jianglong did not certify its first U.S. entry or shipment and U.S. sale, as required under 19 CFR 351.214(b)(2)(iv)(A) and (C), respectively. Second, Jianglong did not request a new shipper review within one year of reporting its first U.S. entry or shipment, thus failing to satisfy the requirement of 19 CFR 351.214(c). Because Jianglong's new shipper review

² See memorandum entitled, "Small Diameter Graphite Electrodes from the People's Republic of China: Extension of Deadline for Final Results of Antidumping Duty New Shipper Review; 02/01/2014–08/31/2014" dated August 6, 2015.

³ The scope described in the order refers to the HTSUS subheading 8545.11.0000. We point out that, starting in 2010, imports of small diameter graphite electrodes are classified in the HTSUS under subheading 8545.11.0010 and imports of large diameter graphite electrodes are classified under subheading 8545.11.0020.

⁴ See Memorandum from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, to Paul Piquado, Assistant Secretary for Enforcement and Compliance, "Issues and Decision Memorandum for Final Rescission of Antidumping Duty New Shipper Review: Small Diameter Graphite Electrodes from the People's Republic of China" (Issues and Decision Memorandum), dated concurrently with and hereby adopted by this notice.

request does not satisfy these regulatory requirements, we are rescinding the review.⁵

Analysis of Comments Received

All issues raised in the case and rebuttal briefs by parties to this new shipper review are addressed in the Issues and Decision Memorandum. A list of the issues raised is attached to this notice as an appendix. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and in the Central Records Unit, B8024 of the main Department of Commerce building. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly on the Enforcement and Compliance Web site at <http://enforcement.trade.gov/frn/index.html>.

Cash Deposit Requirements

Effective upon publication of the final rescission of the new shipper review of Jianglong, we will instruct U.S. Customs and Border Protection (CBP) to discontinue the option of posting a bond or security in lieu of a cash deposit for entries of subject merchandise by Jianglong, in accordance with section 751(a)(2)(B)(iii) of the Act and 19 CFR 351.214(e). Cash deposits will be required for exports of subject merchandise by Jianglong entered, or withdrawn from warehouse, for consumption on or after the publication date at the *ad valorem* PRC-wide rate, 159.64 percent.

Assessment Rates

Entries of subject merchandise made by Jianglong covered by this new shipper review are within the POR covered by the administrative review initiated on April 3, 2015 (February 1, 2014 through January 31, 2015).⁶ Because Jianglong's entries are also covered by that administrative review and the POR of the new shipper review is within the POR of the administrative review, we will issue liquidation instructions and assess duties for Jianglong's entries upon completion of the ongoing administrative review. Accordingly, we will instruct CBP to assess antidumping duties on entries for Jianglong at the appropriate rate

⁵ See Issues and Decision Memorandum.

⁶ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 80 FR 18202 (April 3, 2015).

determined in the final results of the administrative review.

Notification to Importers

This notice also serves as a reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Department's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This new shipper review and notice are in accordance with sections 751(a)(2)(B) and 777(i) of the Act and 19 CFR 351.214(f)(3).

Dated: October 5, 2015.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE250

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Highly Migratory Species Advisory Subpanel (HMSAS) and Highly Migratory Species Management Team (HMSMT) will hold a Webinar, which is open to the public.

DATES: The Webinar will be held on Tuesday, November 3, 2015, from 1:30 p.m. to 4:30 p.m. Pacific Time, or when business for the day is complete.

ADDRESSES: To attend the webinar, visit <http://www.joinwebinar.com>. Enter the Webinar ID: 135-307-211, and your name and email address (required). Once you have joined the webinar, after logging in to the Webinar, dial this TOLL number (631) 992-3221, enter the Attendee phone audio access code 199-048-743, and enter your audio phone pin (shown after joining the webinar). Participants are encouraged to use their telephone, as this is the best practice to avoid technical issues and excessive feedback. System requirements for PC-based attendees: Required: Windows® 7, Vista, or XP; for Mac®-based attendees: Required: Mac OS® X 10.5 or newer; and for mobile attendees: Required: iPhone®, iPad®, Android™ phone or Android tablet (See the GoToMeeting Webinar Apps). You may also send an email to Mr. Kris Kleinschmidt or contact him at 503-820-2280 for technical assistance. A listening station will also be provided at the Pacific Council office.

Council address: Pacific Council, 7700 NE., Ambassador Place, Suite 101, Portland, OR 97220-1384.

FOR FURTHER INFORMATION CONTACT: Dr. Kit Dahl, Pacific Council; telephone: (503) 820-2422.

SUPPLEMENTARY INFORMATION: The HMSMT and HMSAS will develop recommendations for the North Pacific albacore management strategy evaluation to be conducted by the International Scientific Committee for Tuna and Tuna-Like Species in the North Pacific Ocean. Recommendations may include management objectives, harvest control rules, biological reference points, and evaluation criteria. Recommendations will be forwarded to U.S. government representatives to the planned special meeting of the Western and Central Pacific Fisheries Commission Northern Committee to be held in December 2015.

The HMSAS Chair and the HMSMT Chair will act as co-chairs and comments from the public during the webinar will be received from attendees at their discretion.

Although non-emergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The listening station is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820-2280 at least 5 days prior to the meeting date.

Dated: October 13, 2015.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Salmon Technical Team (STT), Salmon Advisory Subpanel (SAS), and Model Evaluation Workgroup (MEW) will hold a webinar, which is open to the public.

DATES: The webinar will be held on Wednesday, November 4, 2015, from 1:30 p.m. until business for the day is complete.

ADDRESSES: To attend the webinar, visit: <http://www.gotomeeting.com/online/webinar/join-webinar>. Enter the Webinar ID, which is 142-916-755, and your name and email address (required). After logging in to the webinar, please: dial this TOLL number +1 (914) 614-3221 (not a toll-free number), enter the Attendee phone audio access code 680-582-119, and then enter your audio phone pin (shown after joining the webinar). Participants are encouraged to use their telephone, as this is the best practice to avoid technical issues and excessive feedback.

(See http://www.pcouncil.org/wp-content/uploads/PFMC_Audio_Diagram_GoToMeeting.pdf). System Requirements for PC-based attendees: Required: Windows® 7, Vista, or XP; for Mac®-based attendees: Required: Mac OS® X 10.5 or newer; and for mobile attendees: iPhone®, iPad®, Android™ phone or Android tablet (See the GoToMeeting Webinar Apps).

You may send an email to kris.kleinschmidt@noaa.gov or contact

him at (503) 820-2280, extension 425 for technical assistance. A public listening station will also be provided at the Pacific Council office.

Council address: Pacific Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220-1384.

FOR FURTHER INFORMATION CONTACT: Mr. Mike Burner, Pacific Council; telephone: (503) 820-2414.

SUPPLEMENTARY INFORMATION: The STT, SAS, and MEW will discuss items on the Pacific Council's November 2016 meeting agenda. Major topics include, but are not limited to: Salmon Methodology Review, Salmon Management Schedule for 2016, Habitat, and 2016 Pacific Halibut Catch Sharing Plan and Management Measures. The STT, SAS, and MEW may also address one or more of the Council's scheduled Administrative Matters. Public comments during the webinar will be received from attendees at the discretion of the STT, SAS, and MEW Chairs.

Although non-emergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820-2280, extension 425 at least 5 days prior to the meeting date.

Dated: October 13, 2015.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

RIN 0648-XE247

Fisheries of the South Atlantic; South Atlantic Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings of the South Atlantic Fishery Management Council's Snapper Grouper Advisory Panel (AP) and Information and Education AP.

SUMMARY: The South Atlantic Fishery Management Council (SAFMC) will hold meetings of its Snapper Grouper AP and Information & Education AP in North Charleston, SC.

DATES: The Snapper Grouper AP will meet from 1:30 p.m. on Tuesday, November 3, 2015 until 5 p.m. on Wednesday, November 4, 2015. The Information and Education AP meeting will be held Thursday, November 5, 2015, from 9 a.m. until 5 p.m.

ADDRESSES:

Meeting address: The meetings will be held at the Crowne Plaza Hotel, 4831 Tanger Outlet Blvd., North Charleston, SC 29418; phone: (877) 227-6963 or (843) 744-4422; fax: (843) 744-4472.

Council address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N. Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Kim Iverson, Public Information Officer, SAFMC; phone: (843) 571-4366 or toll free: (866) SAFMC-10; fax: (843) 769-4520; email: kim.iverson@safmc.net.

SUPPLEMENTARY INFORMATION: The items of discussion in the individual meeting agendas are as follows:

Snapper Grouper Advisory Panel Agenda

1. The AP will receive updates on the status of Amendments under development and recently implemented and the October meeting of the SAFMC Scientific and Statistical Committee

2. The AP will review and provide recommendations as appropriate on the following Amendments currently under development:

a. Amendment 37 to the Snapper Grouper Fishery Management Plan (hogfish)

b. Amendment 25 (blueline tilefish, yellowtail snapper, and black sea bass)

c. Amendment 36 (Spawning Special Management Zones)

d. Joint South Atlantic (SA)/Gulf of Mexico (GM) Amendment on South Florida Issues (Yellowtail Snapper Acceptable Biological Catch and Annual Catch Limits & Accountability Measures)

e. Joint SA/GM Charterboat Electronic Reporting Amendment

3. Update on Atlantic Coastal Cooperative Statistics Program proposal for electronic reporting for charter fleet

4. Update on the October 2015 Council Visioning Workshop

Information and Education Advisory Panel Agenda

The Information and Education AP will receive updates on the following and provide recommendations as appropriate:

1. SAFMC System Management Plan—Outreach Sections
2. SAFMC Vision Blueprint for the Snapper Grouper Fishery—Communication Goal
3. SAFMC Technical Documents and Public Input Strategies
4. SAFMC Fishery Citizen Science Initiative
5. Marine Resource Education Program—South East
6. 2016 SAFMC Outreach Projects

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for auxiliary aids should be directed to the council office (see **ADDRESSES**) 3 days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 13, 2015.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

U.S. Integrated Ocean Observing System (IOOS®) Advisory Committee

AGENCY: National Ocean Service, National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice of open meeting.

SUMMARY: Notice is hereby given of a meeting of the U.S. Integrated Ocean Observing System (IOOS®) Advisory Committee (Committee) in St. Thomas, USVI.

DATES AND TIMES: The meeting will be held on Tuesday, November 3, 2015, from 8:30 a.m. to 5:30 p.m. and on Wednesday, November 4, 2015, from 8:30 a.m.–3:00 p.m. These times and the agenda topics described below are subject to change. Refer to the Web page listed below for the most up-to-date meeting agenda.

ADDRESSES: The meeting will be held at the University of the Virgin Islands—St. Thomas, ACC Building 1st Floor

Conference Room, #2 John Brewers Bay, St. Thomas, USVI, 00802.

FOR FURTHER INFORMATION CONTACT: Jessica Snowden, Alternate Designated Federal Official, U.S. IOOS Advisory Committee, U.S. IOOS Program, 1315 East-West Highway, Second Floor, Silver Spring, MD 20910; Phone 301-713-3070 x 141; Fax 301-713-3281; Email jessica.snowden@noaa.gov or visit the U.S. IOOS Advisory Committee Web site at <http://www.ioos.noaa.gov/advisorycommittee>.

SUPPLEMENTARY INFORMATION: The Committee was established by the NOAA Administrator as directed by Section 12304 of the Integrated Coastal and Ocean Observation System Act, part of the Omnibus Public Land Management Act of 2009 (Pub. L. 111-11). The Committee advises the NOAA Administrator and the Interagency Ocean Observation Committee (IOOC) on matters related to the responsibilities and authorities set forth in section 12302 of the Integrated Coastal and Ocean Observation System Act of 2009 and other appropriate matters as the Under Secretary refers to the Committee for review and advice.

The Committee will provide advice on:

- (a) Administration, operation, management, and maintenance of the System;
- (b) expansion and periodic modernization and upgrade of technology components of the System;
- (c) identification of end-user communities, their needs for information provided by the System, and the System's effectiveness in dissemination information to end-user communities and to the general public; and
- (d) any other purpose identified by the Under Secretary of Commerce for Oceans and Atmosphere or the Interagency Ocean Observation Committee.

The meeting will be open to public participation with a 30-minute public comment period on November 3, 2015, from 3:30 p.m. to 4:00 p.m. and on November 4, 2015, from 2:15 p.m. to 2:45 p.m. (check agenda on Web site to confirm time.) The Committee expects that public statements presented at its meetings will not be repetitive of previously submitted verbal or written statements. In general, each individual or group making a verbal presentation will be limited to a total time of three (3) minutes. Written comments should be received by the Designated Federal Official by October 22, 2015 to provide sufficient time for Committee review. Written comments received after

October 22, 2015, will be distributed to the Committee, but may not be reviewed prior to the meeting date. Seats will be available on a first-come, first-served basis.

Matters To Be Considered: The meeting will focus on ongoing committee priorities, including discussions of ICOOS Act Reauthorization, raising IOOS to a national-level program, and increasing engagement with industry. This meeting will also focus specifically on how U.S. IOOS may better address needs of the USVI and better leverage existing partnerships at the local level. The agenda is subject to change. The latest version will be posted at <http://www.ioos.gov/advisorycommittee>.

Special Accommodations: These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Jessica Snowden, Alternate Designated Federal Official at 301-713-3070 x 141 by October 22, 2015.

Dated: October 5, 2015.

Chris Cartwright,

Chief Financial Officer, National Ocean Service.

RIN 0648-XE255

Pacific Fishery Management Council; Public Meeting (Webinar)

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting (Webinar).

SUMMARY: The Pacific Fishery Management Council (Pacific Council) will convene a Webinar meeting of its Coastal Pelagic Species Advisory Subpanel (CPSAS). The meeting is open to the public.

DATES: The Webinar will be held Monday, November 2, 2015, from 1 p.m. to 2:30 p.m. Pacific Standard Time.

ADDRESSES: To attend the webinar, visit: <http://www.gotomeeting.com/online/webinar/join-webinar>. The Webinar ID and call-in information will be available on the Council's Web site in advance of the meeting.

Council address: Pacific Fishery Management Council, 7700 NE.

Ambassador Place, Suite 101, Portland, OR 97220.

FOR FURTHER INFORMATION CONTACT: Kerry Griffin, Staff Officer; telephone: (503) 820-2409.

SUPPLEMENTARY INFORMATION: The primary purpose of the meeting is to discuss agenda items on the November 2015 Pacific Council meeting agenda. Topics may include the Pacific sardine distribution workshop report, anchovy general status, data-limited stock assessments for CPS, and/or methodology review topic selection.

Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under Section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the CPSAS's intent to take final action to address the emergency.

Special Accommodations

The public listening station is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt, (503) 820-2280, at least 5 days prior to the meeting date.

Dated: October 13, 2015.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Groundfish Management Team (GMT) will hold a webinar that is open to the public.

DATES: The GMT meeting will be held Thursday, November 5, 2015, from 9 a.m. until 12 p.m.

ADDRESSES: To attend the webinar (1) join the meeting by visiting this link <http://www.gotomeeting.com/online/webinar/join-webinar>; (2) enter the

Webinar ID: 139-525-979, and (3) enter your name and email address (required). After logging in to the webinar, please (1) dial this TOLL number +1 (562) 247-8321 (not a toll-free number); (2) enter the attendee phone audio access code 889-990-126; and (3) then enter your audio phone pin (shown after joining the webinar). Participants are encouraged to use their telephone, as this is the best practice to avoid technical issues and excessive feedback. (See the *PFMC GoToMeeting Audio Diagram for best practices*). Technical Information and System Requirements: PC-based attendees are required to use Windows® 7, Vista, or XP; Mac®-based attendees are required to use Mac OS® X 10.5 or newer; Mobile attendees are required to use iPhone®, iPad®, Android™ phone or Android tablet (See the *GoToMeeting WebinarApps*).

You may send an email to kris.kleinschmidt@noaa.gov or contact him at (503) 820-2280, extension 425 for technical assistance. A public listening station will also be provided at the Council office.

Council address: Pacific Council, 7700 NE. Ambassador Place, Suite 101, Portland, OR 97220-1384.

FOR FURTHER INFORMATION CONTACT: Ms. Kelly Ames, Pacific Council; telephone: (503) 820-2426.

SUPPLEMENTARY INFORMATION: The primary purpose of the GMT working meeting is to prepare for the November 2015 Pacific Council meeting. The GMT may also address other assignments relating to groundfish management. No management actions will be decided by the GMT. Public comment will be accommodated if time allows, at the discretion of the GMT Chair. The GMT's task will be to develop recommendations for consideration by the Pacific Council at its November 13-19, 2015 meeting in Garden Grove, CA.

Although non-emergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during these meetings. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The public listening station is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids

should be directed to Mr. Kris Kleinschmidt at (503) 820-2425 at least 5 days prior to the meeting date.

Dated: October 13, 2015.

BILLING CODE 3510-22-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Addition

AGENCY: Committee for Purchase from People Who Are Blind or Severely Disabled.

ACTION: Addition to the Procurement List.

SUMMARY: This action adds a product to the Procurement List that will be furnished by the nonprofit agency employing persons who are blind or have other severe disabilities.

DATES: Effective 11/15/2015.

ADDRESSES: Committee for Purchase from People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603-7740, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION:

Addition

On 9/4/2015 (80 FR 53501-53502), the Committee for Purchase from People Who Are Blind or Severely Disabled published notice of proposed addition to the Procurement List.

After consideration of the material presented to it concerning capability of qualified nonprofit agency to provide the product and impact of the addition on the current or most recent contractors, the Committee has determined that the product listed below is suitable for procurement by the Federal Government under 41 U.S.C.s 8501-8506 and 41 CFR 51-2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organization that will furnish the product to the Government.
2. The action will result in authorizing a small entity to furnish the product to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. sections 8501-8506) in connection with the product proposed for addition to the Procurement List.

End of Certification

Accordingly, the following product is added to the Procurement List:

Product

NSN(s)—Product Name(s): 8415-01-644-9620—Gaiter, FREE, Army, Army Tan. Mandatory for: 100% of the requirement of the U.S. Army.

Mandatory Source(s) of Supply: NYSARC, Inc., Seneca-Cayuga Counties Chapter, Waterloo, NY.

Contracting Activity: Army Contracting Command—Aberdeen Proving Ground, Natick Contracting Division.

Distribution: C-List.

Barry S. Lineback,

Director, Business Operations.

BILLING CODE 6353-01-P

CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC-2012-0024]

Agency Information Collection Activities; Submission for OMB Review; Comment Request—Notification Requirements for Coal and Wood Burning Appliances

AGENCY: Consumer Product Safety Commission.

ACTION: Notice.

SUMMARY: In accordance with the requirements of the Paperwork Reduction Act ("PRA") of 1995 (44 U.S.C. chapter 35), the Consumer Product Safety Commission ("Commission" or "CPSC") announces that the Commission has submitted to the Office of Management and Budget ("OMB") a request for extension of approval of a collection of information associated with notification requirements for coal and wood burning appliances (OMB No. 3041-0040). In the **Federal Register** of July 30, 2015 (80 FR 45509), the CPSC published a notice to announce the agency's intention to seek extension of approval of the collection of information. The Commission received no comments. Therefore, by publication of this notice, the Commission announces that CPSC has submitted to the OMB a request for extension of approval of that collection of information, without change.

DATES: Written comments on this request for extension of approval of information collection requirements

should be submitted by November 16, 2015.

ADDRESSES: Submit comments about this request by email: OIRA_submission@omb.eop.gov or fax: 202-395-6881. Comments by mail should be sent to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the CPSC, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503. In addition, written comments that are sent to OMB also should be submitted electronically at <http://www.regulations.gov>, under Docket No. CPSC-2012-0024.

FOR FURTHER INFORMATION CONTACT: For further information contact: Robert H. Squibb, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; (301) 504-7815, or by email to: rsquibb@cpsc.gov.

SUPPLEMENTARY INFORMATION: CPSC has submitted the following currently approved collection of information to OMB for extension:

Title: Notification Requirements for Coal and Wood Burning Appliances.

OMB Number: 3041-0040.

Type of Review: Renewal of collection.

Frequency of Response: On occasion.

Affected Public: Manufacturers and importers of coal and wood burning appliances.

Estimated Number of Respondents: An estimated five submissions annually.

Estimated Time per Response: Three hours per submission.

Total Estimated Annual Burden: 15 hours (5 submissions × 3 hours).

General Description of Collection: 16 CFR part 1406, Coal and Wood Burning Appliances—Notification of Performance and Technical Data requires that manufacturers and importers provide consumers with written notification regarding certain technical and performance information related to safety on each coal and wood burning appliance. Manufacturers are also required to provide to the Commission a copy of the notification to consumers and an explanation of all clearance distances contained in the notification. For existing models, all known manufacturers have complied with the requirements. Accordingly, there is no new burden associated with the requirements of 16 CFR part 1406, except in cases where existing models are changed or new models are introduced. Less than five submissions are estimated annually as a result of new stove models coming into the market or new firms entering the market.

Dated: October 9, 2015.

Todd A. Stevenson,

Secretary, Consumer Product Safety Commission.

[FR Doc. 2015-26333 Filed 10-15-15; 8:45 am]

BILLING CODE 6355-01-P

CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC-2012-0030]

Agency Information Collection Activities; Submission for OMB Review; Comment Request—Testing and Recordkeeping Requirements for Carpets and Rugs

AGENCY: Consumer Product Safety Commission.

ACTION: Notice.

SUMMARY: In accordance with the requirements of the Paperwork Reduction Act (“PRA”) of 1995 (44 U.S.C. chapter 35), the Consumer Product Safety Commission (“Commission” or “CPSC”) announces that the Commission has submitted to the Office of Management and Budget (“OMB”) a request for extension of approval of a collection of information associated with the Standard for the Surface Flammability of Carpets and Rugs (16 CFR part 1630) and the Standard for the Surface Flammability of Small Carpets and Rugs (16 CFR part 1631) previously approved under OMB No. 3041-0017. In the **Federal Register** of June 25, 2015 (80 FR 45509), the CPSC published a notice to announce the agency’s intention to seek extension of approval of the collection of information. The Commission received no comments. Therefore, by publication of this notice, the Commission announces that CPSC has submitted to the OMB a request for extension of approval of that collection of information, without change.

DATES: Written comments on this request for extension of approval of information collection requirements should be submitted by November 16, 2015.

ADDRESSES: Submit comments about this request by email: OIRA_submission@omb.eop.gov or fax: 202-395-6881. Comments by mail should be sent to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the CPSC, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503. In addition, written comments that are sent to OMB also should be submitted electronically at [http://](http://www.regulations.gov)

www.regulations.gov, under Docket No. CPSC-2012-0030.

FOR FURTHER INFORMATION CONTACT: For further information contact: Robert H. Squibb, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; (301) 504-7815, or by email to: rsquibb@cpsc.gov.

SUPPLEMENTARY INFORMATION: CPSC has submitted the following currently approved collection of information to OMB for extension:

Title: Safety Standard for the Flammability of Carpets and Rugs and Standard for the Flammability of Small Carpets and Rugs.

OMB Number: 3041-0017.

Type of Review: Renewal of collection.

Frequency of Response: On occasion.

Affected Public: Manufacturers and importers of carpets and rugs.

Estimated Number of Respondents: 120 firms issue guarantees of compliance under the carpet and rug flammability standards. Based on information obtained from industry, the actual number of tests performed to affirm the guarantees of compliance may vary from one to 200, depending on the number of carpet styles and annual production volume. To estimate a burden, a midpoint of 100 tests per year per firm is used.

Estimated Time per Response: 2.5 hours to conduct each test, and to establish and maintain test records.

Total Estimated Annual Burden: 30,000 hours (120 firms × 100 tests × 2.5 hours).

General Description of Collection: The Standard for the Surface Flammability of Carpets and Rugs (16 CFR part 1630) and the Standard for the Surface Flammability of Small Carpets and Rugs (16 CFR part 1631) establish requirements for testing and recordkeeping for manufacturers and importers who furnish guarantees subject to the carpet and rug flammability standards.

Dated: October 9, 2015.

Todd A. Stevenson,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355-01-P

DEPARTMENT OF DEFENSE**Office of the Secretary**

[Docket ID: DoD–2015–OS–0098]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness/National Security Education Program, DoD.

ACTION: Notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the Office of the Under Secretary of Defense for Personnel and Readiness/National Security Education Program announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by December 15, 2015.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate of Oversight and Compliance, Regulatory and Audit Matters Office, 9010 Defense Pentagon, Washington, DC 20301–9010.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

Any associated form(s) for this collection may be located within this same electronic docket and downloaded for review/testing. Follow the

instructions at <http://www.regulations.gov> for submitting comments. Please submit comments on any given form identified by docket number, form number, and title.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Office of the Under Secretary of Defense for Personnel and Readiness/National Security Education Program, Attn: Dr. Michael Nugent, P.O. Box 12221, Arlington, VA 22209–2221, or call at (703) 696–5673.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: National Language Service Corps; DD Forms 2932, 2933, and 2934; OMB Control Number 0704–0449.

Needs and Uses: The information collection requirement is necessary to identify individuals with language and special skills who potentially qualify for employment or service opportunities in the public section during periods of national need or emergency.

Affected Public: Individuals or households.

Annual Burden Hours: 167 hours.

Number of Respondents: 1,500.

Responses per Respondent: 3.

Annual Responses: 4,500.

Average Burden per Response: 16.24 minutes.

Frequency: On occasion.

The DD Form 2932, *National Language Service Corps (NLSC) Pilot Application*, is the initial document used to collect information from members of the public. The NLSC Pilot Application form contains a brief set of screening questions and provides background data on where the applicant learned the foreign language and whether the applicant has used the language professionally. Applicants fill this out for basic information (age, citizenship, Foreign Language), and if they meet eligibility criteria, they proceed to the supplemental documents. Members are required to renew their DD Form 2932 information every four years. Renewing applicants are in addition to those initially applying.

The supplemental documents are used to determine eligibility for membership in the NLSC. The DD Form 2934, *National Language Service Corps (NLSC) Global Language Self-Assessment*, provides an overall assessment of the applicant's foreign language ability. The DD Form 2933, *National Language Service Corps (NLSC) Pilot Detailed Skills Self-Assessment*, is a detailed description of

the applicant's skills with respect to specific foreign language tasks. These two supplemental documents are used in conjunction for the certification of language skills for entry into the NLSC and quality assurance of certification.

The information collected in the application and the supplemental documents is used solely by the NLSC.

Dated: October 9, 2015.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE**Office of the Secretary****Membership of the Performance Review Board**

AGENCY: Office of the Secretary of Defense (OSD), DoD.

ACTION: Notice of board membership.

SUMMARY: This notice announces the appointment of the Department of Defense, Fourth Estate, Performance Review Board (PRB) members, to include the Office of the Secretary of Defense, Joint Staff, Defense Field Activities, U.S. Court of Appeals for the Armed Forces, and the following Defense Agencies: Defense Advanced Research Projects Agency, Defense Commissary Agency, Defense Contract Audit Agency, Defense Contract Management Agency, Defense Finance and Accounting Service, Defense Health Agency, Defense Information Systems Agency, Defense Legal Services Agency, Defense Logistics Agency, Defense Prisoners of War/Missing in Action Accounting Agency, Defense Security Cooperation Agency, Defense Threat Reduction Agency, Missile Defense Agency, and Pentagon Force Protection Agency. The PRB shall provide fair and impartial review of Senior Executive Service and Senior Professional performance appraisals and make recommendations regarding performance ratings and performance awards to the Deputy Secretary of Defense.

DATES: *Effective Date:* September 12, 2015.

FOR FURTHER INFORMATION CONTACT: Michael L. Watson, Assistant Director for Office of the Secretary of Defense Senior Executive Management Office, Office of the Deputy Chief Management Officer, Department of Defense, (703) 693–8373.

SUPPLEMENTARY INFORMATION: The publication of PRB membership is required by 5 U.S.C. 4314(c)(4). In accordance with 5 U.S.C. 4314(c)(4), the following executives are appointed to the Office of the Secretary of Defense PRB with specific PRB panel assignments being made from this group. Executives listed will serve a one-year renewable term, effective September 12, 2015.

Office of the Secretary of Defense

Authorizing Official—Robert O. Work,
Deputy Secretary of Defense

Principal Executive Representative—
Michael L. Rhodes

Chairperson—Bonnie M. Hammersley

BILLING CODE 5001-06-P

DEFENSE NUCLEAR FACILITIES SAFETY BOARD

Sunshine Act Notice

AGENCY: Defense Nuclear Facilities
Safety Board.

ACTION: Notice of public business
meeting.

SUMMARY: Pursuant to the provisions of the “Government in the Sunshine Act” (5 U.S.C. 552b), notice is hereby given of the Defense Nuclear Facilities Safety Board’s (Board) public business meeting described below.

DATES: *Time and Date of Meeting:* 9 a.m.–12:15 p.m., November 10, 2015.

ADDRESSES: *Place:* Defense Nuclear Facilities Safety Board, 625 Indiana Avenue NW., Suite 352, Washington, DC 20004–2901.

FOR FURTHER INFORMATION CONTACT:

Mark Welch, General Manager, Defense Nuclear Facilities Safety Board, 625 Indiana Avenue NW., Suite 700, Washington, DC 20004–2901, (800) 788–4016. This is a toll-free number.

SUPPLEMENTARY INFORMATION:

Status: Open.

Matters to be Considered: This public business meeting will be conducted pursuant to the Government in the Sunshine Act, the Board’s implementing regulations for the Government in the Sunshine Act, and the Board’s Operating Procedures dated August 2015. The meeting will proceed in accordance with the previously approved business meeting agenda entitled “DNFSB Work Plans and Staffing Plan for Fiscal Year 2016.” The Chairman and the Board Members will provide opening remarks followed by presentations from the Office of the Technical Director (OTD) staff concerning an overview of technical staff work plan activities and crosscutting issues. The Board will then engage in discussions among themselves on crosscutting issues. OTD staff will then provide a presentation on technical staff work related to National Nuclear Security Administration (NNSA) and Department of Energy Environmental Management (EM) programs. The Board is expected to conduct discussions among themselves concerning NNSA and EM program issues and Board staff priorities. The Board will then receive comments from the public followed by Board Member remarks. The Chairman will then provide closing remarks.

The business meeting agenda is posted on the Board’s public Web site. The public is invited to view this business meeting and provide comments. A transcript of the business

meeting, along with a DVD video recording, will be made available by the Board for inspection and viewing by the public at the Board’s Washington office. The Board specifically reserves its right to further schedule and otherwise regulate the course of the business meeting, to recess, reconvene, postpone, or adjourn the meeting, and otherwise exercise its rights under the Atomic Energy Act, the Government in the Sunshine Act and the Board’s Operating Procedures.

Dated: October 9, 2015.

Joyce L. Connery,
Chairman.

BILLING CODE 3670-01-P

DEPARTMENT OF EDUCATION

[Docket No.: ED-2015-ICCD-0122]

Agency Information Collection Activities; Comment Request; Student Assistance General Provisions—Non- Title IV Revenue Requirements (90/10)

AGENCY: Federal Student Aid (FSA),
Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing an extension of an existing information collection.

DATES: Interested persons are invited to submit comments on or before December 15, 2015.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2015-ICCD-0122. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E103, Washington, DC 20202-4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202-377-4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Student Assistance General Provisions—Non-Title IV Revenue Requirements (90/10).

OMB Control Number: 1845-0096.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: State, Local and Tribal Governments.

Total Estimated Number of Annual Responses: 3,360.

Total Estimated Number of Annual Burden Hours: 5,040.

Abstract: As enacted by the Higher Education Opportunity Act (Pub. L. 110-315), the regulations in 34 CFR 668.28 provide that a proprietary institution must derive at least 10% of its annual revenue from sources other than Title IV, HEA funds, sanctions for failing to meet this requirement, and otherwise implement the statute by (1) specifying a Net Present Value (NPV) formula used to establish the revenue for institutional loans, (2) providing an administratively easier alternative to the NPV calculation, and (3) describing more fully the non-Title IV eligible programs from which revenue may be counted for 90/10 purposes. The regulations require an institution to disclose in a footnote to its audited financial statements the amounts of Federal and non-Federal revenues, by

category, that it used in calculating its 90/10 ratio (see section 487(d) of the HEA). This is a request to extend the information collection that identifies the reporting burden for this regulation.

Dated: October 13, 2015.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

DEPARTMENT OF EDUCATION

[Docket No.: ED-2015-ICCD-0123]

Agency Information Collection Activities; Comment Request; Educational Quality Through Innovative Partnerships (EQUIP) Experimental Sites Initiative

AGENCY: Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing a new information collection.

DATES: Interested persons are invited to submit comments on or before December 15, 2015.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2015-ICCD-0123. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E103, Washington, DC 20202-4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202-377-4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed,

revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Educational Quality through Innovative Partnerships (EQUIP) Experimental Sites Initiative.

OMB Control Number: 1845-NEW.

Type of Review: A new information collection.

Respondents/Affected Public: Private Sector, State, Local and Tribal Governments.

Total Estimated Number of Annual Responses: 20.

Total Estimated Number of Annual Burden Hours: 1,500.

Abstract: The Department of Education (the Department) is requesting this new information collection package to provide for a series of questions that are components of the selection process for a new Federal Student Aid experimental site project. The Educational Quality through Innovative Partnerships (EQUIP) project is being undertaken in order to advance the Department's understanding of how to best increase access to high quality innovative programs in higher education. An invitation to participate and an explanation of this proposed experimental site was published separately in the **Federal Register**. This experimental site project is designed to explore ways to increase access for low-income students to high-quality innovate programs in higher education through the engagement of institutions of higher education (IHEs) with non-IHE providers and quality assurance entities that can develop new quality assurance processes for student and taxpayer

protection. The data and information collected can provide valuable guidance for the Department in determining future policy in these areas.

Dated: October 13, 2015.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 12514-074]

Northern Indiana Public Service Company, Notice of Availability of Draft Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission or FERC's) regulations, 18 Code of Federal Regulations (CFR) Part 380, the Office of Energy Projects has reviewed Northern Indiana Public Service Company's application for amendment of the license for the Norway-Oakdale Hydroelectric Project (FERC Project No. 12514-074), on the Tippecanoe River near the city of Monticello in Carroll and White Counties, Indiana. The project does not occupy any federal lands.

Staff prepared a draft environmental assessment (EA) to analyze the potential environmental effects of implementing the proposed modified definition of abnormal flow conditions, as required by article 405 of the current license (issued October 2, 2007), that would be included in a revised article 403, which defines the operation of the project. Staff concludes that authorizing the amendment, with staff's recommended modification to the definition of abnormal river conditions, would not constitute a major federal action that would significantly affect the quality of the human environment.

A copy of the EA is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at www.ferc.gov using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll-free at 1-866-208-3676, or for TTY, 202-502-8659.

You may also register online at www.ferc.gov/docs-filing/esubscription.asp to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Any comments should be filed within 30 days from the date of this notice. Comments may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site at <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and five copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. For further information, contact Rebecca Martin by telephone at 202-502-6012 or Mark Pawlowski at 202-502-6052.

Dated: October 9, 2015.

Kimberly D. Bose,
Secretary.

[EPA-HQ-SFUND-2010-0763; FRL-9935-84-OSWER]

Proposed Information Collection Request; Comment Request; Hazardous Chemical Reporting: The Emergency and Hazardous Chemical Inventory Forms (Tier I and Tier II)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is planning to submit an information collection request (ICR), "Hazardous Chemical Reporting: The Emergency and Hazardous Chemical Inventory Forms (Tier I and Tier II)" (EPA ICR No. 2436.03, OMB Control No. 2050-0206) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. Before doing so, EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of the ICR, which is currently approved through March 31, 2016. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it

displays a currently valid OMB control number.

DATES: Comments must be submitted on or before December 15, 2015.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA-HQ-SFUND-2010-0763 referencing the Docket ID numbers provided for each item in the text, online using www.regulations.gov (our preferred method), by email to or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Sicy Jacob, Office of Emergency Management, Mail Code 5104A, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone number: (202) 564-8019; fax number: (202) 564-2620; email address: jacob.sicy@epa.gov.

SUPPLEMENTARY INFORMATION:

Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The telephone number for the Docket Center is 202-566-1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

Pursuant to section 3506(c)(2)(A) of the PRA, EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., permitting electronic submission of responses. EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: Sections 311 and 312 of the Emergency Planning and Community Right-to-Know Act (EPCRA) apply to the owner or operator of any facility that is required to prepare or have available a Material Safety Data Sheet (MSDS) for a hazardous chemical under the Occupational Safety and Health Act of 1970 and its implementing regulations. Under section 311 of EPCRA, these facilities are required to submit MSDS to the State Emergency Response Commission (SERC), the Local Emergency Planning Committee (LEPC), and the local fire department for each hazardous chemical stored on-site in a quantity greater than the reporting threshold. Alternatively, a list of subject chemicals, grouped by hazard type, may be submitted. Section 312 of EPCRA requires owners and operators of facilities subject to section 311 to annually report the inventories of those chemicals reported under section 311. The Environmental Protection Agency (EPA) is required to publish two emergency and hazardous chemical inventory forms, known as "Tier I" and "Tier II," for use by these facilities. These forms were first published in October 1987 and amended in July 1990. On July 13, 2012, EPA further revised these forms to add some new data elements that would be useful for local emergency planners and responders. This is the renewal of the information collection request which was previously approved by OMB in ICR No. 2436.02. In ICR 2436.02, EPA estimated that after the initial reporting of the new data elements, which was reporting year 2013, that it would only take 0.25 hours per facility to review the new data elements and revise if necessary. Most of the new data elements were added to page one of the Tier II form, which include contact information for facility emergency coordinator; Tier II information; whether facility is manned or unmanned; if the facility is subject to EPCRA Section 302 or CAA Section 112(r) (Risk Management Program) etc. EPA do not expect these data to change annually. However, we estimated that minimal burden may be incurred for reviewing these data annually and revising the information as necessary.

Form Numbers: 8700-30, Emergency and Hazardous Chemical Inventory Form.

Respondents/Affected Entities: Facilities that are required to prepare or have available a Material Safety Data Sheet (MSDS) for any hazardous chemicals present at the facility above the reporting thresholds specified in the regulations at 40 CFR part 370. These facilities are required to submit a hazardous chemical inventory form, to the SERC, LEPC and the local fire department with jurisdiction over the facility, by March 1 annually.

Respondent's Obligation to Respond: Mandatory under Section 312 of EPCRA.

Estimated Number of Respondents: Approximately 390,000 facility respondents (120,000 manufacturers and 270,000 non-manufacturers) and 3,052 SERCs and LEPCs (total).

Frequency of Response: Annually.

Total Estimated Burden: 97,500 hours (per year). Burden is defined at 5 CFR 1320.03(b)

Total Estimated Cost: \$5,675,675 per year. There are no annualized capital or operation & maintenance costs expected during this ICR period.

Changes in Estimates: There is a decrease of 195,000 hours in the total estimated facility respondent burden compared with the ICR currently approved by OMB. This decrease is due to facility incurring minor burden for reviewing and updating previously reported data mainly on page one of the Tier II inventory form.

Dated: September 16, 2015.

Reggie Cheatham,

Director, Office of Emergency Management.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPPT-2013-0677; FRL-9935-75]

Receipt of Test Data Under the Toxic Substances Control Act

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is announcing its receipt of test data submitted pursuant to a test rule issued by EPA under the Toxic Substances Control Act (TSCA). As required by TSCA, this document identifies each chemical substance and/or mixture for which test data have been received; the uses or intended uses of such chemical substance and/or mixture; and describes the nature of the

test data received. Each chemical substance and/or mixture related to this announcement is identified in Unit I. under **SUPPLEMENTARY INFORMATION.**

FOR FURTHER INFORMATION CONTACT: For technical information contact: Kathy Calvo, Chemical Control Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (202) 564-8089; email address: calvo.kathy@epa.gov.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave. Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Chemical Substances and/or Mixtures

Information about the following chemical substances and/or mixtures is provided in Unit IV.: *D-erythro-hex-2-enonic acid, gamma-lactone, monosodium salt.* (CAS Number 6381-77-7).

II. Federal Register Publication Requirement

Section 4(d) of TSCA (15 U.S.C. 2603(d)) requires EPA to publish a notice in the **Federal Register** reporting the receipt of test data submitted pursuant to test rules promulgated under TSCA section 4 (15 U.S.C. 2603).

III. Docket Information

A docket, identified by the docket identification (ID) number EPA-HQ-OPPT-2013-0677, has been established for this **Federal Register** document that announces the receipt of data. Upon EPA's completion of its quality assurance review, the test data received will be added to the docket for the TSCA section 4 test rule that required the test data. Use the docket ID number provided in Unit IV. to access the test data in the docket for the related TSCA section 4 test rule.

The docket for this **Federal Register** document and the docket for each related TSCA section 4 test rule is available electronically at <http://www.regulations.gov> or in person at the Office of Pollution Prevention and Toxics Docket (OPPT Docket), Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744,

and the telephone number for the OPPT Docket is (202) 566-0280. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

IV. Test Data Received

This unit contains the information required by TSCA section 4(d) for the test data received by EPA. *D-erythro-hex-2-enonic acid, gamma-lactone, monosodium salt.* (CAS Number 6381-77-7).

1. *Chemical Use(s):* Antioxidant in food applications for which the vitamin activity of ascorbic acid (Vitamin C) is not required. Specifically, the compound is most frequently used to develop and retain the coloring and taste in meat products. It is also used for seafood products, fruit, and vegetable preservation, in beverages, and as a developing agent in photographic applications.

2. *Applicable Test Rule:* Chemical testing requirements for second group of high production volume chemicals (HPV2), 40 CFR 799.5087.

3. *Test Data Received:* The following listing describes the nature of the test data received. The test data will be added to the docket for the applicable TSCA section 4 test rule and can be found by referencing the docket ID number provided. EPA reviews of test data will be added to the same docket upon completion.

n-Octanol/Water Partition Coefficient (A4). The docket ID number assigned to this data is EPA-HQ-OPPT-2007-0531.

Authority: 15 U.S.C. 2601 *et seq.*

Dated: October 8, 2015.

Maria J. Doa,

Director, Chemical Control Division, Office of Pollution Prevention and Toxics.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2015-0022; FRL-9934-87]

Pesticide Product Registration; Receipt of Applications for New Uses

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has received applications to register new uses for pesticide products containing currently registered active ingredients. Pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA is hereby providing notice of receipt and opportunity to comment on these applications.

DATES: Comments must be received on or before November 16, 2015.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPP-2015-0022 and the File Symbol or Registration Number of interest as shown in the body of this document, by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001.

- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Susan Lewis, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; main telephone number: (703) 305-7090; email address: RDfrNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through www.regulations.gov or email. Clearly mark the part or all of the information that

you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at <http://www.epa.gov/dockets/comments.html>.

II. Registration Applications

EPA has received applications to register new uses for pesticide products containing currently registered active ingredients. Pursuant to the provisions of FIFRA section 3(c)(4) (7 U.S.C. 136a(c)(4)), EPA is hereby providing notice of receipt and opportunity to comment on these applications. Notice of receipt of these applications does not imply a decision by the Agency on these applications.

1. *EPA File Symbol:* 100-RLTN. *Docket ID number:* EPA-HQ-OPP-2015-0589. *Applicant:* Syngenta Crop Protection, P.O. Box 18300, Greensboro, NC 27419. *Active ingredient:* 3.41% bicyclopyrone & 23.16% bromoxynil octanoate. *Product type:* Herbicide. *Proposed Use:* Wheat & barley. *Contact:* RD.

2. *EPA Registration Numbers:* 100-1017, 100-993, and 100-1103. *Docket ID Number:* EPA-HQ-OPP-2015-0629. *Applicant:* Syngenta Crop Protection, LLC, P.O. Box 18300, Greensboro, NC 27419. *Active Ingredient:* Fomesafen. *Product Type:* Herbicide. *Proposed Use:* Vegetable, tuberous and corm, subgroup 1C; vegetable, legume, Group 6; and berry, low growing subgroup 13-07G except cranberry. *Contact:* RD.

3. *EPA Registration Number:* 100-1098. *Docket ID number:* EPA-HQ-OPP-2014-0822. *Applicant:* Syngenta Crop Protection, LLC., P.O. Box 18300, Greensboro, NC 27419. *Active ingredient:* Azoxystrobin. *Product type:* Fungicide. *Proposed use:* Quinoa, grain. *Contact:* RD.

4. *EPA Registration Numbers:* 100-1178, 100-1324 and 100-617. *Docket ID number:* EPA-HQ-OPP-2014-0788. *Applicant:* Syngenta Crop Protection, LLC., P.O. Box 18300, Greensboro, NC 27419. *Active ingredient:* Propiconazole.

Product type: Fungicide. *Proposed use:* Quinoa, grain. *Contact:* RD.

5. *EPA Registration Numbers:* 5481-433 and 5481-429. *Docket ID number:* EPA-HQ-OPP-2014-0769. *Applicant:* AMVAC Chemical Corporation, 4695 MacArthur Court, Suite 1200, Newport Beach, CA 92660. *Active ingredient:* 1-naphthaleneacetic acid ester. *Product type:* Fungicide. *Proposed use:* Pomegranate. *Contact:* RD.

6. *EPA Registration Number:* 6836-107. *Docket ID number:* EPA-HQ-OPP-2015-0558. *Applicant:* Lonza, Inc., 90 Boroline Road, Allendale, NJ 07401. *Active ingredient:* Metaldehyde. *Product type:* Molluscicide. *Proposed Use:* Wheat; beet, garden; rutabaga; turnip; hop. *Contact:* RD.

7. *EPA Registration Number:* 62719-499, 62719-611. *Docket ID number:* EPA-HQ-OPP-2014-0879. *Applicant:* Dow AgroSciences, LLC, 9330 Zionsville Road, Indianapolis, IN 46268. *Active ingredient:* Penoxsulam. *Product type:* Herbicide. *Proposed use:* Pome Fruit Group 11-10, Stone Fruit Group 12-12, Small Fruit vine Climbing Subgroup 13-07F, Olive, Pomegranate and Crop Group Conversion for Tree Nut group 14-12. *Contact:* RD.

Authority: 7 U.S.C. 136 *et seq.*

BILLING CODE 6560-50-P

FEDERAL COMMUNICATIONS COMMISSION

[3060-0270]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501-3520), the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the

information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

DATES: Written PRA comments should be submitted on or before December 15, 2015. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email PRA@fcc.gov and to Cathy.Williams@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418-2918.

SUPPLEMENTARY INFORMATION:

OMB Control No.: 3060-0270.

Title: Section 90.443, Content of Station Records.

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit, not-for-profit institutions, and state, local or tribal government.

Number of Respondents: 63,375 respondents; 63,375 responses.

Estimated Time per Response: .25 hours.

Frequency of Response: Recordkeeping requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection of information is contained in 47 U.S.C. Section 303(j), as amended.

Total Annual Burden: 15,844 hours. *Annual Cost Burden:* No cost.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Needs and Uses: Section 90.443(b) requires that each licensee of a station shall maintain records for all stations by

providing the dates and pertinent details of any maintenance performed on station equipment, along with the name and address of the service technician who did the work. If all maintenance is performed by the same technician or service company, the name and address need be entered only once in the station records.

Section 90.443(c) requires that at least one licensee participating in the cost arrangement must maintain cost sharing records.

Federal Communications Commission.

Marlene H. Dortch,

Secretary, Office of the Secretary.

BILLING CODE 6731-AA-P

FEDERAL TRADE COMMISSION

Agency Information Collection Activities; Proposed Collection; Comment Request

AGENCY: Federal Trade Commission (FTC or Commission).

ACTION: Notice.

SUMMARY: The information collection requirements described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act (PRA). The FTC seeks public comments on its proposal to extend, for three years, the current PRA clearance for information collection requirements contained in the rules and regulations under the Health Breach Notification Rule. This clearance expires on March 31, 2016.

DATES: Comments must be received on or before December 15, 2015.

ADDRESSES: Interested parties may file a comment online or on paper by following the instructions in the Request for Comments part of the **SUPPLEMENTARY INFORMATION** section below. Write "Health Breach Notification Rule, PRA Comments, P-125402" on your comment, and file your comment online at <https://ftcpublish.commentworks.com/ftc/healthbreachnotificationpra> by following the instructions on the web-based form. If you prefer to file your comment on paper, mail or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW., Suite CC-5610 (Annex J), Washington, DC 20580, or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, Constitution Center, 400 7th Street SW., 5th Floor, Suite 5610 (Annex J), Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: Requests for copies of the collection of information and supporting documentation should be addressed to Cora Tung Han, 202-326-2441, Attorney, Privacy & Identity Protection, Bureau of Consumer Protection, 600 Pennsylvania Ave. NW., Washington, DC 20580.

SUPPLEMENTARY INFORMATION: On February 17, 2009, President Obama signed the American Recovery and Reinvestment Act of 2009 (the Recovery Act or the Act) into law. The Act included provisions to advance the use of health information technology and, at the same time, strengthen privacy and security protections for health information. The Act required the FTC to adopt a rule implementing the breach notification requirements applicable to vendors of personal health records, "PHR related entities,"¹ and third party

¹ "PHR related entity" means an entity, other than a HIPAA-covered entity or an entity to the extent that it engages in activities as a business associate of a HIPAA-covered entity, that: (1) Offers products

service providers, and the Commission issued a final rule on August 25, 2009. 74 FR 42962.

The Health Breach Notification Rule (Rule), 16 CFR part 318, requires vendors of personal health records and PHR related entities to provide: (1) Notice to consumers whose unsecured personally identifiable health information has been breached; and (2) notice to the Commission. The Rule only applies to electronic health records and does not include recordkeeping requirements. The Rule requires third party service providers (*i.e.*, those companies that provide services such as billing or data storage) to vendors of personal health records and PHR related entities to provide notification to such vendors and PHR related entities following the discovery of a breach. To notify the FTC of a breach, the Commission developed a form, which is posted at www.ftc.gov/healthbreach, for entities subject to the rule to complete and return to the agency.

These notification requirements are subject to the provisions of the PRA, 44 U.S.C. Chapter 35. Under the PRA, federal agencies must get OMB approval for each collection of information they conduct, sponsor, or require. "Collection of information" means agency requests or requirements to submit reports, keep records, or provide information to a third party. 44 U.S.C. 3502(3); 5 CFR 1320.3(c). As required by Section 3506(c)(2)(A) of the PRA, the FTC is providing this opportunity for public comment before requesting that OMB extend the existing PRA clearance for the information collection requirements associated with the Commission's rules and regulations under the Health Breach Notification Rule (or Rule), 16 CFR part 318 (OMB Control Number 3084-0150).

The FTC invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond. All

or services through the Web site of a vendor of personal health records; (2) offers products or services through the Web sites of HIPAA-covered entities that offer individuals personal health records; or (3) accesses information in a personal health record or sends information to a personal health record. 16 CFR 318.2(f).

comments must be received on or before December 15, 2015.

In the Commission's view, it has maximized the practical utility of the breach notification requirements in the Rule, consistent with the requirements of the Recovery Act. Under the Rule, consumers whose information has been affected by a breach of security receive notice of it "without unreasonable delay and in no case later than 60 calendar days" after discovery of the breach. Among other information, the notices must provide consumers with steps they can take to protect themselves from harm. Moreover, the breach notice requirements encourage entities to safeguard the information of their customers, thereby potentially reducing the incidence of harm.

The form entities must use to inform the Commission of a security breach requests minimal information, mostly as replies to check boxes; thus, entities do not require extensive time to complete it. For breaches involving the health information of 500 or more individuals, entities must notify the Commission as soon as possible, and in any event no later than ten business days after discovering the breach. Breaches involving the information of fewer than 500 individuals may be reported in an annual submission that includes all breaches within the calendar year that fall within this category. The form serves the Commission by providing the agency with information about breaches occurring in the PHR industry.

The Commission inputs the information it receives from entities into a database that the Commission updates periodically. The Commission makes certain information about these breaches available to the public. This publicly-available information serves businesses and the public. It provides businesses with information about potential causes of data breaches, which is particularly helpful to those setting up data security procedures. It also provides the public with information about the extent of data breaches. Thus, in the Commission's view, the Rule and form have significant practical utility.

Pursuant to § 318.5 of the Rule, entities must notify the FTC "according to instructions at the Federal Trade Commission's Web site." In 2009, the Commission indicated that "[d]ue to security concerns associated with email transmission, the Commission will not accept emailed forms at this time."² The Commission now offers a secure online method for receiving these notices, and instructions are on the form entities should use for notification,

which is available on the FTC's Web site. Alternatively entities may continue to print and send the form to a designated FTC official by courier or overnight mail.

Burden Estimates

The PRA burden of the Rule's requirements depends on a variety of factors, including the number of covered firms; the percentage of such firms that will experience a breach requiring further investigation and, if necessary, the sending of breach notices; and the number of consumers notified. The annual hours and cost estimates below likely overstate the burden because, among other things, they assume, though it is not necessarily so, that all breaches subject to the Rule's notification requirements will be required to take all of the steps described below.

At the time the Rule was issued, insufficient data was available about the incidence of breaches in the PHR industry. Accordingly, staff based its burden estimate on data pertaining to private sector breaches across multiple industries. Staff estimated that there would be 11 breaches per year requiring notification of 232,000 consumers.³

As described above, the Rule requires covered entities that have suffered a breach to notify the Commission. Since the Rule has now been in effect for over five years,⁴ staff is now able to base the burden estimate on the actual notifications received from covered entities, which include the number of consumers notified. Accordingly, staff has used this information to update its burden estimate.

On average, about 2,500 consumers per year received notifications over the years 2010 and 2011. In 2012 and 2013, between 4,000 and 5,000 consumers received notifications each year. In 2014, approximately 17,993 consumers received notifications. In light of this upwards trend, staff bases its current burden estimate on an assumed two breach incidents per year that, together, require the notification of approximately 40,000 consumers. This estimate will likely overstate the burden; however, as consumers increasingly download their information into personal health records,⁵ staff anticipates that the number of affected consumers will increase.

Estimated Annual Hours Burden: 3,267.

³ 74 FR at 42977.

⁴ The rule became effective on September 24, 2009. Full compliance was required by February 22, 2010.

⁵ See e.g., <http://www.va.gov/bluebutton/>.

As explained in more detail within the next section, FTC staff projects that covered firms will require on average, per breach, 100 hours of employee labor to determine what information has been breached, identify the affected customers, prepare the breach notice, and make the required report to the Commission. Based on an estimated 2 breaches per year, yearly hourly burden would be 200 hours. Additionally, staff expects covered firms will require 3,067 annual hours (1,067 hours of telephone operator time + 2000 hours of information processor time) to process calls they may receive in the event of a data breach. See footnote 8 *infra*.

Estimated Annual Labor Costs: \$61,764.

FTC staff projects that covered firms will require on average, per breach, 100 hours of employee labor to determine what information has been breached, identify the affected customers, prepare the breach notice, and make the required report to the Commission, at an estimated cost of \$5,732⁶ (staff assumes that outside services of a forensic expert will also be required and those services are separately accounted for under "Estimated Annual Non-Labor Costs" below). Based on an estimated 2 breaches per year, the annual employee labor cost burden for affected entities to perform these tasks is \$11,464.⁷

Additionally, covered entities will incur labor costs associated with processing calls they may receive in the event of a data breach. The rule requires that covered entities that fail to contact 10 or more consumers because of insufficient or out-of-date contact information must provide substitute

⁶ Hourly wages throughout this document are based on mean hourly wages found at <http://www.bls.gov/news.release/ocwage.htm> ("Occupational Employment and Wages—May 2014," U.S. Department of Labor, released March 2015, Table 1 ("National employment and wage data from the Occupational Employment Statistics survey by occupation, May 2014").

The breakdown of labor hours and costs is as follows: 50 hours of computer and information systems managerial time at approximately \$66 per hour; 12 hours of marketing manager time at \$66 per hour; 33 hours of computer programmer time at \$40 per hour; and 5 hours of legal staff time at \$64 per hour.

⁷ Labor hours and costs pertaining to reporting to the Commission are subsumed within this total. Specifically, staff estimates that covered firms will require per breach, on average, 1 hour of employee labor at an approximate cost of \$65 to complete the required form. This is composed of 30 minutes of marketing managerial time at \$66 per hour, and 30 minutes of legal staff time at \$64 per hour, with the hourly rates based on the above-referenced Department of Labor table. See note 6, *supra*. Thus, based on 2 breaches per year for which notification may be required, the cumulative annual-hours burden for covered entities to complete the notification to the Commission is 2 hours and the annual labor cost is approximately \$130.00.

² 74 FR at 42975.

notice through either a clear and conspicuous posting on their Web site or media notice. Such substitute notice must include a toll-free number for the purpose of allowing a consumer to learn whether or not his/her information was affected by the breach.

Individuals contacted directly will have already received this information. Staff estimates that no more than 10 percent of affected consumers will utilize the offered toll-free number. Thus, of the 40,000 consumers affected by a breach annually, staff estimates that 4,000 may call the companies over the 90 days they are required to provide such access. Staff additionally projects that 4,000 additional consumers who are not affected by the breach will also call the companies during this period. Staff estimates that processing all 8,000 calls will require an average of 3,067 hours of employee labor at a cost of \$50,300.⁸

Accordingly, estimated cumulative annual labor costs, excluding outside forensic services, is \$62,000.

Estimated Annual Capital and other Non-Labor Costs: \$49,960.

Commission staff anticipates that capital and other non-labor costs associated with the Rule will consist of the following:

1. The services of a forensic expert in investigating the breach;
2. notification of consumers via email, mail, web posting, or media; and
3. the cost of setting up a toll-free number, if needed.

Staff estimates that covered firms (breached entities) will require 30 hours of a forensic expert's time, at a cumulative cost of \$3,960 for each breach. This is the product of hourly wages of an information security analyst (\$44), tripled to reflect profits and overhead for an outside consultant (\$132), and multiplied by 30 hours. Based on the estimate that there will be 2 breaches per year, the annual cost associated with the services of an outside forensic expert is \$7,920.

As explained above, staff estimates that an average of 40,000 consumers per year will receive a breach notification. Given the online relationship between consumers and vendors of personal health records and PHR related entities, most notifications will be made by

⁸ This assumes telephone operator time of 8 minutes per call and information processor time of 15 minutes per call. The cost estimate above is arrived at as follows: 1,067 hours of telephone operator time (8 minutes per call × 8,000 calls) at \$19 per hour, and 2000 hours of information processor time (15 minutes per call × 8,000 calls) at \$15 per hour.

email and the cost of such notifications will be minimal.⁹

In some cases, however, vendors of personal health records and PHR related entities will need to notify individuals by postal mail, either because these individuals have asked for such notification, or because the email addresses of these individuals are not current or not working. Staff estimates that the cost of a mailed notice is \$0.06 for the paper and envelope, and \$0.49 for a first class stamp. Assuming that vendors of personal health records and PHR related entities will need to notify by postal mail 10 percent of the 40,000 customers whose information is breached, the estimated cost of this notification will be \$2,200 per year.¹⁰

In addition, vendors of personal health records and PHR related entities sometimes may need to notify consumers by posting a message on their home page, or by providing media notice. Based on a recent study on data breach costs, staff estimates the cost of providing notice via Web site posting to be \$0.06 per breached record, and the cost of providing notice via published media to be \$0.03 per breached record.¹¹ Applied to the above-stated estimate of 40,000 affected consumers, the estimated total annual cost of Web site notice will be \$2,400, and the estimated total annual cost of media notice will be \$1,200, yielding an estimated total annual cost for all forms of notice to consumers of \$5,800.

Finally, staff estimates that the cost of providing a toll-free number will depend on the costs associated with T1 lines sufficient to handle the projected call volume and the cost of obtaining a toll-free telephone number.¹² Based on industry research, staff projects that affected entities may need two T1 lines

⁹ See National Do Not Email Registry, A Report to Congress, June 2004 n.93, available at www.ftc.gov/reports/dneregistry/report.pdf.

¹⁰ As mentioned above, covered entities will also need to notify the Commission either through an online process or via mail. Staff estimates the non-labor costs for this notification to be negligible.

¹¹ Ponemon Institute, 2006 Annual Study: Cost of a Data Breach, Understanding Financial Impact, Customer Turnover, and Preventative Solutions, Table 2. In studies conducted for subsequent years, the Ponemon Institute does not report this level of detail.

¹² Staff included costs associated with obtaining a T1 line (a specific type of telephone line that can carry more data than traditional telephone lines) in its initial estimate in 2009, but did not include these costs in its most recent estimate based on the low number of consumers notified pursuant to the Rule in 2010 and 2011. Since staff's current estimate includes larger projected call volumes, however, staff has again included these costs. Staff recognizes that this likely overstates the burden because entities may already have these services in place and/or they may not all be necessary depending on how many consumers are affected.

at a cost of \$9,000 for the 90 day period.¹³ In addition, staff estimates the cost of obtaining a dedicated toll-free line to be \$4,540 per month. Accordingly, staff projects that the cost of obtaining two toll-free lines for 90 days will be \$27,240,¹⁴ and the total annual cost for providing a toll-free number will be \$36,240.

In sum, the total estimate for non-labor costs is \$49,960: \$7,920 (services of a forensic expert) + \$5,800 (costs of notifying consumers) + \$36,240 (cost of providing a toll-free number).

The total estimated PRA annual cost burden is \$61,764 (labor costs) + \$49,960 (non-labor costs) = approximately \$112,000 (rounded to the nearest thousand).

Request for Comments

You can file a comment online or on paper. Write "Health Breach Notification Rule, PRA Comments, P-125402" on your comment. Your comment—including your name and your state—will be placed on the public record of this proceeding, including, to the extent practicable, on the public Commission Web site, at <http://www.ftc.gov/os/publiccomments.shtm>. As a matter of discretion, the Commission tries to remove individuals' home contact information from comments before placing them on the Commission Web site.

Because your comment will be made public, you are solely responsible for making sure that your comment does not include any sensitive personal information, such as a Social Security number, date of birth, driver's license number or other state identification number or foreign country equivalent, passport number, financial account number, or credit or debit card number. You are also solely responsible for making sure that your comment does not include any sensitive health information, such as medical records or other individually identifiable health information. In addition, do not include any "[t]rade secret or any commercial or financial information which is . . . privileged or confidential," as discussed in Section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2). In particular, do not include competitively sensitive information such as costs, sales statistics,

¹³ According to industry research, the cost of a single T1 line is \$1,500 per month.

¹⁴ Staff estimates a monthly charge of \$15 along with an activation charge of \$15 for each toll-free line, as well as a per minute charge of \$.07. Since staff estimates each breach will require 1067 hours of telephone operator time (see note 10, *infra*), staff estimates the cost/month of each toll-free line to be \$4,540.

inventories, formulas, patterns, devices, manufacturing processes, or customer names.

If you want the Commission to give your comment confidential treatment, you must file it in paper form, with a request for confidential treatment, and you must follow the procedure explained in FTC Rule 4.9(c), 16 CFR 4.9(c). Your comment will be kept confidential only if the FTC General Counsel, in his or her sole discretion, grants your request in accordance with the law and the public interest. Postal mail addressed to the Commission is subject to delay due to heightened security screening. As a result, the Commission encourages you to submit your comments online. To make sure that the Commission considers your online comment, you must file it at <https://ftcpublic.commentworks.com/ftc/healthbreachnotificationpra> by following the instructions on the web-based form. If this Notice appears at <http://www.regulations.gov>, you also may file a comment through that Web site.

If you file your comment on paper, write "Health Breach Notification Rule, PRA Comments, P-125402" on your comment and on the envelope, and mail it to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW., Suite CC-5610, (Annex J), Washington, DC 20580, or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, Constitution Center, 400 7th Street SW., 5th Floor, Suite 5610, (Annex J), Washington, DC 20024. If possible, submit your paper comment to the Commission by courier or overnight service.

The FTC Act and other laws that the Commission administers permit the collection of public comments to consider and use in this proceeding as appropriate. The Commission will consider all timely and responsive public comments that it receives on or before December 15, 2015. You can find more information, including routine uses permitted by the Privacy Act, in the Commission's privacy policy, at <http://www.ftc.gov/ftc/privacy.htm>.

David C. Shonka,

Principal Deputy General Counsel.

BILLING CODE 6750-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Meeting of the National Advisory Council for Healthcare Research and Quality

AGENCY: Agency for Healthcare Research and Quality (AHRQ).

ACTION: Notice of public meeting.

SUMMARY: In accordance with section 10(a) of the Federal Advisory Committee Act, 5 U.S.C. App. 2, this notice announces a meeting of the National Advisory Council for Healthcare Research and Quality.

DATES: The meeting will be held on Tuesday, November 3, 2015, from 8:30 a.m. to 2:45 p.m.

ADDRESSES: The meeting will be held at the Hubert H. Humphrey Building, Room 800, 200 Independence Avenue SW., Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT:

Jaime Zimmerman, Designated Management Official, at the Agency for Healthcare Research and Quality, 540 Gaither Road, Rockville, Maryland, 20850, (301) 427-1456. For press-related information, please contact Alison Hunt at (301) 427-1244.

If sign language interpretation or other reasonable accommodation for a disability is needed, please contact the Food and Drug Administration (FDA) Office of Equal Employment Opportunity and Diversity Management on (301) 827-4840, no later than Friday, October 23, 2015. The agenda, roster, and minutes are available from Ms. Bonnie Campbell, Committee Management Officer, Agency for Healthcare Research and Quality, 540 Gaither Road, Rockville, Maryland, 20850. Ms. Campbell's phone number is (301) 427-1554.

SUPPLEMENTARY INFORMATION:

I. Purpose

The National Advisory Council for Healthcare Research and Quality is authorized by Section 941 of the Public Health Service Act, 42 U.S.C. 299c. In accordance with its statutory mandate, the Council is to advise the Secretary of the Department of Health and Human Services and the Director, Agency for Healthcare Research and Quality (AHRQ), on matters related to AHRQ's conduct of its mission including providing guidance on (A) priorities for health care research, (B) the field of health care research including training needs and information dissemination on health care quality and (C) the role of

the Agency in light of private sector activity and opportunities for public private partnerships.

The Council is composed of members of the public, appointed by the Secretary, and Federal ex-officio members specified in the authorizing legislation.

II. Agenda

On Tuesday, November 3, 2015, there will be a subcommittee meeting for the National Healthcare Quality and Disparities Report scheduled to begin at 7:30 a.m. The subcommittee meeting is open to the public. The Council meeting will convene at 8:30 a.m., with the call to order by the Council Chair and approval of previous Council summary notes. The meeting is open to the public and will be available via webcast at www.webconferences.com/ahrq. The meeting will begin with the AHRQ director presenting an update on current research, programs, and initiatives. Following the Director's update, the agenda will include discussion of AHRQ's work on health information technology (Health IT), a presentation on the Medical Expenditure Panel Survey (MEPS), and discussion on the recent IOM report on diagnostic errors. The final agenda will be available on the AHRQ Web site at www.AHRQ.gov no later than Friday, October 23, 2015.

Sharon B. Arnold,
Deputy.

[FR Doc. 2015-26319 Filed 10-15-15; 8:45 am]

BILLING CODE 4160-90-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[Docket No. ATSDR-2015-0002]

Availability of Draft Toxicological Profile; Set 27 Toxicological Profiles

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS).

ACTION: Notice of availability and request for comment.

SUMMARY: The Agency for Toxic Substances and Disease Registry (ATSDR), located within the Department of Health and Human Services (HHS) announces the availability of Set 27 Toxicological Profiles for review and comment. The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended by

the Superfund Amendments and Reauthorization Act of 1986 (SARA), § 104(i)(3), (42 U.S.C. 9604(i)(3)), directs the ATSDR Administrator to prepare Toxicological Profiles of Priority hazardous substances and, as necessary, to revise and publish each updated toxicological profile.

Comments can include additional information or reports on studies about the health effects of Set 27 substances. Although ATSDR considered key studies for each of these substances during the profile development process, the **Federal Register** notice solicits any relevant, additional studies, particularly unpublished data. ATSDR will evaluate the quality and relevance of such data or studies for possible inclusion into the profile. ATSDR remains committed to providing a public comment period for this document as a means to best serve public health and our clients.

DATES: Written comments on this draft Toxicological Profile must be received on or before January 14, 2016.

ADDRESSES: You may submit comments, identified by docket number ATSDR-2015-0002, by any of the following methods:

- *Federal eRulemaking Portal:* www.regulations.gov. Follow the instructions for submitting comments.
- *Mail:* Division of Toxicology and Human Health Sciences, Agency for Toxic Substances and Disease Registry, 1600 Clifton Rd. NE., MS F-57, Atlanta, GA 30329. Attn: Docket No. ATSDR-2015-0002.

Instructions: All submissions received must include the agency name and docket number for this notice. All relevant comments will be posted without change. Because all public comments regarding ATSDR Toxicological Profiles are available for public inspection, no confidential business information or other confidential information should be submitted in response to this notice.

FOR FURTHER INFORMATION CONTACT: Ms. Delores Grant, Division of Toxicology and Human Health Sciences, Agency for Toxic Substances and Disease Registry, 1600 Clifton Rd. NE., MS F-57, Atlanta, GA 30329. Phone: (800) 232-4636 or 770-488-3351.

SUPPLEMENTARY INFORMATION: The Superfund Amendments and Reauthorization Act (SARA) (Pub. L. 99-499) amends the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund) (42 U.S.C. 9601 *et seq.*) by establishing certain responsibilities for ATSDR and the U.S. Environmental Protection Agency (U.S. EPA) regarding hazardous substances

most commonly found at facilities on the CERCLA National Priorities List (NPL). As part of these responsibilities, the ATSDR Administrator must prepare Toxicological Profiles for substances enumerated on the priority list of hazardous substances. This list identifies 275 hazardous substances which, according to ATSDR and U.S. EPA, pose the most significant potential threat to human health. The availability of the revised priority list of 275 hazardous substances was announced in the **Federal Register** on May 28, 2014 (79 FR 30613). In addition, ATSDR has the authority to prepare Toxicological Profiles for substances not found at sites on the National Priorities List, in an effort to “. . . establish and maintain inventory of literature, research, and studies on the health effects of toxic substances” under CERCLA Section 104(i)(1)(B). ATSDR also prepares Toxicological Profiles in response to requests for consultation under section 104(i)(4), and as otherwise necessary to support the site-specific response actions conducted by ATSDR.

Each profile will include an examination, a summary, and an interpretation of available toxicological information and epidemiological evaluations. This information and these data identify the levels of significant human exposure for the substance and for the associated health effects. The profiles must also include a determination of whether adequate information on the health effects of each substance is available (or in the process of development) in order to identify levels of significant human exposure. If adequate information is not available, ATSDR, in cooperation with the National Toxicology Program (NTP), is required to ensure the initiation of a program of research to provide such information.

SET 27 TOXICOLOGICAL PROFILES

	Name
1 ..	Polybrominated Biphenyl Ethers (PBDEs) UPDATE.
2 ..	N,N-Diethyl-meta-toluamide (DEET).
3 ..	Toluene Diisocyanates (mixture). Methylenediphenyl Diisocyanates (NEW).
4 ..	Nitrates/Nitrites (NEW).
5 ..	Toluene (UPDATE).

The Set 27 Toxicological Profiles are available online at <http://www.atsdr.cdc.gov/toxprofiles/index.asp> and <http://www.regulations.gov>.

www.regulations.gov, Docket No. ATSDR-2015-0002.

Donna B. Knutson,

Acting Director, Office of Policy, Planning and Evaluation, National Center for Environmental Health and Agency for Toxic Substances and Disease Registry.

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS-10003, CMS-10467, CMS-1450(UB-04), CMS-1500(08-05)]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, HHS.

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by *December 15, 2015*.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to <http://www.regulations.gov>. Follow the

instructions for “Comment or Submission” or “More Search Options” to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address:

CMS, Office of Strategic Operations and Regulatory Affairs,
Division of Regulations Development,
Attention: Document Identifier/OMB
Control Number _____,
Room C4–26–05,
7500 Security Boulevard,
Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS’ Web site address at <http://www.cms.hhs.gov/PaperworkReductionActof1995>.

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to Paperwork@cms.hhs.gov.

3. Call the Reports Clearance Office at (410) 786–1326.

FOR FURTHER INFORMATION CONTACT:
Reports Clearance Office at (410) 786–1326.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection’s supporting statement and associated materials (see **ADDRESSES**).

CMS–10003 Notice of Denial of Medical Coverage (or Payment)

CMS–10467 Evaluation of the Graduate Nurse Education Demonstration Program

CMS–1450(UB–04) Medicare Uniform Institutional Provider Bill and Supporting Regulations CMS–1500(08–05) Health Insurance Common Claims Form and Supporting Regulations

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term “collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a

60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection*

Request: Revision of a currently approved collection; *Title of Information Collection:* Notice of Denial of Medical Coverage (or Payment); *Use:* Medicare health plans, including Medicare Advantage plans, cost plans, and Health Care Prepayment Plans, are required to issue the CMS–10003 form when a request for either a medical service or payment is denied in whole or in part. The notice explains why the plan denied the service or payment and informs Medicare enrollees of their appeal rights. The notice is also used, as appropriate, to explain Medicaid appeal rights to full dual eligible individuals enrolled in a Medicare health plan that is also managing the individual’s Medicaid benefits. To that end, the revised notice contains bracketed text the plan will insert if the denial notice is being delivered to an enrollee who is a full dual eligible. The text in square brackets “[]” reflects the Federal protections for Medicaid managed care enrollees. Since a State may offer additional protections, there is also free-text space for inclusion of any State-specific protections that exceed the Federal protections. *Form Number:* CMS–10003 (OMB control number: 0938–0829). *Frequency:* Occasionally; *Affected Public:* Private sector (Business or other for-profit and Not-for-profit institutions); *Number of Respondents:* 33,574,293; *Total Annual Hours:* 5,593,477. (For policy questions regarding this collection contact Staci Paige at 410–786–2045. For all other issues call 410–786–1326.)

2. *Type of Information Collection*

Request: Revision of a currently approved information collection; *Title of Information Collection:* Evaluation of the Graduate Nurse Education Demonstration Program; *Use:* The Graduate Nurse Education (GNE) Demonstration is mandated under Section 5509 of the Affordable Care Act (ACA) under title XVIII of the Social Security Act (42 U.S.C. 1395 *et seq.*). According to Section 5509 of the ACA, the five selected demonstration sites receive “payment for the hospital’s reasonable costs for the provision of qualified clinical training to advance

practice registered nurses.” Section 5509 of the ACA also states that an evaluation of the graduate nurse education demonstration must be completed no later than October 17, 2017. This evaluation includes analysis of the following: (1) Growth in the number of advanced practice registered nurses (APRNs) with respect to a specific base year as a result of the demonstration; (2) growth for each of the following specialties: clinical nurse specialist, nurse practitioner, certified nurse anesthetist, certified nurse-midwife; and (3) costs to the Medicare program as result of the demonstration.

All information collected through the Evaluation of the GNE project will be used to meet the requirements specified under the ACA Section 5509. We will also use the information to determine the overall effectiveness of the GNE project. The process evaluation seeks to understand how the demonstration is implemented overall, how that implementation has changed over time, which aspects of the demonstration have been successful or unsuccessful, and what plans the sites have for the remainder of the implementation and after the demonstration formally ends. The process evaluation will answer both quantitative and qualitative questions. *Form Number:* CMS–10467 (OMB control number: 0938–1212); *Frequency:* Annually; *Affected Public:* State, Local, or Tribal Governments; Private sector (Business and other for-profit and Not-for-profit institutions); *Number of Respondents:* 104; *Total Annual Responses:* 104; *Total Annual Hours:* 802. (For policy questions regarding this collection contact Pauline Karikari-Martin at 410–786–1040.)

3. *Type of Information Collection*

Request: Extension of a currently approved collection; *Title of Information Collection:* Medicare Uniform Institutional Provider Bill and Supporting Regulations in 42 CFR 424.5; *Use:* Section 42 CFR 424.5(a)(5) requires providers of services to submit a claim for payment prior to any Medicare reimbursement. Charges billed are coded by revenue codes. The bill specifies diagnoses according to the International Classification of Diseases, Ninth Edition (ICD–9–CM) code. Inpatient procedures are identified by ICD–9–CM codes, and outpatient procedures are described using the CMS Common Procedure Coding System (HCPCS). These are standard systems of identification for all major health insurance claims payers. Submission of information on the CMS–1450 permits Medicare intermediaries to receive consistent data for proper payment. *Form Numbers:* CMS–1450 (UB–04)

(OMB control number: 0938-0997); *Frequency*: On occasion; *Affected Public*: Private sector (Business or other for-profit and Not-for-profit institutions); *Number of Respondents*: 53,111; *Total Annual Responses*: 181,909,654; *Total Annual Hours*: 1,567,455. (For policy questions regarding this collection contact Matt Klischer at 410-786-7488.)

4. Type of Information Collection Request: Extension of a currently approved collection; *Title of Information Collection*: Health Insurance Common Claims Form and Supporting Regulations at 42 CFR part 424, Subpart C; *Use*: The Form CMS-1500 answers the needs of many health insurers. It is the basic form prescribed by CMS for the Medicare program for claims from physicians and suppliers. The Medicaid State Agencies, CHAMPUS/TriCare, Blue Cross/Blue Shield Plans, the Federal Employees Health Benefit Plan, and several private health plans also use it; it is the de facto standard "professional" claim form.

Medicare carriers use the data collected on the CMS-1500 and the CMS-1490S to determine the proper amount of reimbursement for Part B medical and other health services (as listed in section 1861(s) of the Social Security Act) provided by physicians and suppliers to beneficiaries. The CMS-1500 is submitted by physicians/suppliers for all Part B Medicare. Serving as a common claim form, the CMS-1500 can be used by other third-party payers (commercial and nonprofit health insurers) and other Federal programs (e.g., CHAMPUS/TriCare, Railroad Retirement Board (RRB), and Medicaid). However, as the CMS-1500 displays data items required for other third-party payers in addition to Medicare, the form is considered too complex for use by beneficiaries when they file their own claims. Therefore,

the CMS-1490S (Patient's Request for Medicare Payment) was explicitly developed for easy use by beneficiaries who file their own claims. The form can be obtained from any Social Security office or Medicare carrier. *Form Number*: CMS-1500(08/05), CMS-1490-S (OMB control number: 0938-0999) *Frequency*: On occasion; *Affected Public*: State, Local, or Tribal Governments, Private sector (Business or other-for-profit and Not-for-profit institutions); *Number of Respondents*: 1,448,346; *Total Annual Responses*: 988,005,045; *Total Annual Hours*: 21,418,336. (For policy questions regarding this collection contact Shannon Seales at 410-786-4089.)

Dated: October 13, 2015.
William N. Parham, III,
Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for OMB Review; Comment Request

Title: Native Language Preservation and Maintenance Grant Application Template Pilot (Funding Application Submission Tool (F.A.S.T. form))

OMB No.:
Description: The proposed F.A.S.T. form is intended to be used by applicants in the Administration for Native Americans' Native American Language Preservation and Maintenance grant competition in FY 2016. The F.A.S.T. form is proposed to be piloted as a consolidated and streamlined pre-

formatted electronic application form that is user-friendly and has an interactive interface providing structure and clarity for applicants. The proposed F.A.S.T. form is not intended to replace the Funding Opportunity Announcement (FOAs) which will still function as the full text of all funding opportunities for which applications are sought and considered by the Administration for Native Americans.

The proposed F.A.S.T. form will be used in a pilot capacity in just one Administration for Native Americans' discretionary program areas: Native American Language Preservation and Maintenance. All applicants applying for funding in that program area will be required to use the F.A.S.T. form during the pilot competition proposed for FY16 unless they request and receive approval to submit a paper application. By using the F.A.S.T. form no applicant will be required to provide any information beyond what is already required by the FOA. Additionally, free training and technical assistance will be available to all applicants on use of the F.A.S.T. form.

ANA intends to use the project proposals submitted via the F.A.S.T. form to make funding decisions for Native American Language Preservation and Maintenance grant awards made in the FY 2016 pilot year. In addition, ANA will solicit feedback from applicants and panel reviewers to obtain feedback on the results, outcomes, and their recommendations regarding the F.A.S.T. form as a user friendly method of applying for funding opportunities. If the pilot is successful in making it easier for applicants to apply, ANA will consider potentially expanding use of the F.A.S.T. form to all Administration for Native Americans' discretionary funding areas in subsequent years.

Respondents: 40.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
F.A.S.T. form	40	28	.50	14

Estimated Total Annual Burden Hours: 560.

Additional Information

Copies of the proposed collection may be obtained by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 370 L'Enfant Promenade SW., Washington, DC 20447,

Attn: ACF Reports Clearance Officer. All requests should be identified by the title of the information collection. Email address: infocollection@acf.hhs.gov.

OMB Comment

OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the

Federal Register. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication. Written comments and recommendations for the proposed information collection should be sent directly to the following: Office of Management and Budget, Paperwork Reduction Project, Email: OIRA_SUBMISSION@OMB.EOP.GOV,

Attn: Desk Officer for the Administration for Children and Families.

Robert Sargis,

Reports Clearance Officer.

BILLING CODE 4184-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2015-D-3474]

Draft Recommendations for the Permitted Daily Exposures for Two Solvents, Triethylamine and Methylisobutylketone, According to the Maintenance Procedures for the Guidance Q3C Impurities: Residual Solvents; International Conference on Harmonisation; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of draft recommendations for a new permitted daily exposure (PDE) for the residual solvent triethylamine and a revised PDE for the residual solvent methylisobutylketone, according to the maintenance procedures for the guidance for industry entitled “Q3C Impurities: Residual Solvents.” The draft recommendations were prepared under the auspices of the International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH). The document is intended to recommend acceptable amounts for the listed residual solvents in pharmaceuticals for the safety of the patient.

DATES: Although you can comment on any guidance at any time (see 21 CFR 10.115(g)(5)), to ensure that the Agency considers your comment on the draft recommendations before it begins work on the final recommendations, submit either electronic or written comments on the document by December 15, 2015.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to [http://](http://www.regulations.gov)

www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- Mail/Hand delivery/Courier (for written/paper submissions): Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2015-D-3474 for “Draft Recommendations for the Permitted Daily Exposures for Two Solvents, Triethylamine and Methylisobutylketone, According to the Maintenance Procedures for the Guidance Q3C Impurities: Residual Solvents; International Conference on Harmonisation; Availability.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The

Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of the draft recommendations to the Division of Drug Information (HFD-240), Center for Drug Evaluation and Research (CDER), Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993-0002, or the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research (CBER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993-0002. Send one self-addressed adhesive label to assist the office in processing your requests. The draft recommendations may also be obtained by mail by calling CBER at 1-800-835-4709 or 240-402-8010. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft recommendations.

Regarding the guidance: Timothy J. McGovern, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 6300, Silver Spring, MD 20993-0002, 240-402-0477.

Regarding the ICH: Michelle Limoli, CBER International Programs, Food and

Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7212, Silver Spring, MD 20993-0002, 301-796-8377.

SUPPLEMENTARY INFORMATION:

I. Background

In recent years, many important initiatives have been undertaken by regulatory authorities and industry associations to promote international harmonization of regulatory requirements. FDA has participated in many meetings designed to enhance harmonization and is committed to seeking scientifically based harmonized technical procedures for pharmaceutical development. One of the goals of harmonization is to identify and then reduce differences in technical requirements for drug development among regulatory agencies.

ICH was organized to provide an opportunity for tripartite harmonization initiatives to be developed with input from both regulatory and industry representatives. FDA also seeks input from consumer representatives and others. ICH is concerned with harmonization of technical requirements for the registration of pharmaceutical products among three regions: Europe, Japan, and North America. The eight ICH sponsors are the European Commission; the European Federation of Pharmaceutical Industries Associations; the Japanese Ministry of Health, Labour, and Welfare; the Japanese Pharmaceutical Manufacturers Association; CDER and CBER, FDA; the Pharmaceutical Research and Manufacturers of America; Health Canada; and Swissmedic. The ICH Secretariat, which coordinates the preparation of documentation, is provided by the International Federation of Pharmaceutical Manufacturers Associations (IFPMA).

The ICH Steering Committee includes representatives from each of the ICH sponsors and the IFPMA, as well as observers from the World Health Organization.

In the **Federal Register** of December 24, 1997 (62 FR 67377), FDA published the ICH guidance for industry entitled "Q3C Impurities: Residual Solvents." The guidance makes recommendations as to what amounts of residual solvents are considered to be toxicologically acceptable for some residual solvents. Upon issuance in 1997, the text and appendix 1 of the guidance contained several tables and a list of solvents categorizing residual solvents by toxicity, classes 1 through 3, with class 1 being the most toxic. The ICH Quality Expert Working Group (EWG) agreed that the PDE could be modified if

reliable and more relevant toxicity data were brought to the attention of the group and the modified PDE could result in a revision of the tables and list.

In 1999, ICH instituted a Q3C maintenance agreement and formed a maintenance EWG (Q3C EWG). The agreement provided for the revisitation of solvent PDEs and allowed for minor changes to the tables and list that include the existing PDEs. The agreement also provided that new solvents and PDEs could be added to the tables and list based on adequate toxicity data. In the **Federal Register** of February 12, 2002 (67 FR 6542), FDA briefly described the process for proposing future revisions to the PDE. In the same notice, the Agency announced its decision to delink the tables and list from the Q3C guidance and create a stand-alone document entitled "Q3C: Tables and List" to facilitate making changes recommended by ICH.

In June 2015, the ICH Steering Committee agreed that draft recommendations for a new PDE for the residual solvent triethylamine and a revised PDE for the residual solvent methylisobutylketone should be made available for public comment. The draft recommendations are the product of the Quality Expert Working Group of the ICH. Comments about this draft will be considered by FDA and the Quality Expert Working Group.

The draft recommendations provide guidance on the new PDE for the solvent trimethylamine and the revised PDE for the solvent methylisobutylketone. In addition, the data used to derive the PDEs are summarized. The document is intended to recommend acceptable amounts for the listed residual solvents in pharmaceuticals for the safety of the patient.

The draft recommendations are being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft recommendations for the solvents trimethylamine and methylisobutylketone, when finalized, will represent the current thinking of FDA on this topic. They do not establish any rights for any person and are not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2015-N-3403]

Clarifying Current Roles and Responsibilities Described in the Coordinated Framework for the Regulation of Biotechnology and Developing a Long-Term Strategy for the Regulation of the Products of Biotechnology; Public Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public meeting.

SUMMARY: Under the auspices of the National Science and Technology Council, the Food and Drug Administration (FDA or the Agency), along with the Office of Science and Technology Policy (OSTP), the Environmental Protection Agency (EPA), and the United States Department of Agriculture (USDA), is announcing a public meeting, to be held on October 30, 2015, to discuss the memorandum entitled, "Modernizing the Regulatory System for Biotechnology Products," issued by the Executive Office of the President (EOP) in July 2015. The purpose of the meeting is to inform the public about the activities described in the July 2015 memorandum; invite oral comments from interested parties; and provide information about how to submit written comments, data, or other information to the docket.

DATES: See section II, "How to Participate in the Public Meeting" in the **SUPPLEMENTARY INFORMATION** section of this document for the date and time of the public meeting, closing dates for advance registration, and information on deadlines for submitting either electronic or written comments to FDA's Division of Dockets Management. Comments may be submitted in writing until November 13, 2015.

ADDRESSES: See section II, "How to Participate in the Public Meeting" in the **SUPPLEMENTARY INFORMATION** section of this document.

You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- Mail/Hand delivery/Courier (for written/paper submissions): Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2015-N-3403 for "Clarifying Current Roles and Responsibilities Described in the Coordinated Framework for the Regulation of Biotechnology and Developing a Long-Term Strategy for the Regulation of the Products of Biotechnology; Public Meeting." Comments received will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION". The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: For general questions about the meeting, to request an opportunity to make an oral presentation at the public meeting, to submit the full text or summary of an oral presentation, or for special accommodations due to a disability, contact the Office of Policy, Office of the Commissioner, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993, 301-796-4830, email: BiotechnologyUpdate@fda.hhs.gov.

For questions about the memorandum entitled, "Modernizing the Regulatory System for Biotechnology Products," or related activities described in that memorandum, contact the National Science and Technology Council: Emerging Technologies Interagency

Policy Coordination Committee, Office of Science and Technology Policy, Executive Office of the President, Eisenhower Executive Office Building, 1650 Pennsylvania Ave., Washington DC 20504, 202-456-4444, online: <https://www.whitehouse.gov/webform/contact-emerging-technologies-interagency-policy-coordinating-committee-national-science-and->

SUPPLEMENTARY INFORMATION:

I. Background

In 1986, OSTP issued the Coordinated Framework for Regulation of Biotechnology (CF), which outlined a comprehensive Federal regulatory policy for ensuring the safety of biotechnology products. The CF sought to achieve a balance between regulation adequate to ensure the protection of health and the environment while maintaining sufficient regulatory flexibility to avoid impeding innovation (51 FR 23302; June 26, 1986) (Ref. 1).

In 1992, OSTP issued an update to the CF that set forth a risk-based, scientifically sound basis for the oversight of activities that introduce biotechnology products into the environment (57 FR 6753; February 27, 1992) (Ref. 2). The update affirmed that Federal oversight should focus on the characteristics of the product, the environment into which it is being introduced, and the intended use of the product, rather than the process by which the product is created.

On July 2, 2015, the EOP issued a memorandum entitled, "Modernizing the Regulatory System for Biotechnology Products," (the EOP memorandum) directing the primary federal Agencies that have oversight responsibilities for the products of biotechnology—EPA, FDA, and USDA—to update the CF to clarify current roles and responsibilities of the Agencies that regulate the products of biotechnology, develop a long-term strategy to ensure that the Federal biotechnology regulatory system is prepared for the future products of biotechnology, and commission an independent, expert analysis of the future landscape of biotechnology products (Ref. 3). These efforts will build on the regulatory principles described in the CF and the 1992 update to the CF. The EOP memorandum's objectives are to ensure public confidence in the regulatory system and to prevent unnecessary barriers to future innovation and competitiveness by improving the transparency, coordination, predictability, and efficiency of the regulation of biotechnology products while continuing to protect health and the environment.

The July 2, 2015, EOP memorandum stated that the update to the CF should clarify the current roles and responsibilities of the Agencies that regulate the products of biotechnology by accomplishing the following four objectives:

1. Clarifying which biotechnology product areas are within the authority and responsibility of each Agency.
2. Clarifying the roles that each Agency plays for different product areas, particularly for those product areas that fall within the responsibility of multiple agencies, and how those roles relate to each other in the course of a regulatory assessment.

3. Clarifying a standard mechanism for communication and, as appropriate, coordination among Agencies, while they perform their respective regulatory functions, and for identifying Agency designees responsible for this coordination function.

4. Clarifying the mechanism and timeline for regularly reviewing, and updating as appropriate, the CF to minimize delays, support innovation, protect health and the environment, and promote the public trust in the regulatory systems for biotechnology products.

As noted in the EOP memorandum, “biotechnology products” refers to products developed through genetic engineering or the targeted or in vitro manipulation of genetic information of organisms, including plants, animals, and microbes. It also covers some of the products produced by such plants, animals, and microbes or their derived products as determined by existing statutes and regulations. Products such as human drugs and medical devices are not the focus of the activities described in the EOP memorandum.

In addition, on October 6, 2015, OSTP issued a notice of request for information (RFI) to solicit data and information, including case studies, that can inform the development of the proposed update to the CF and the development of a long-term strategy

consistent with the objectives described in the July 2, 2015, EOP memorandum (80 FR 60414). In addition to the RFI, the EOP noted that it will hold three public engagement sessions over the next 12 months (Ref. 4), and that the current update to the CF will undergo public notice and comment before it is finalized. This notice is announcing the first public engagement session.

The purpose of this first public meeting is to inform the public about the activities described in the EOP memorandum; invite oral, stakeholder comments relevant to those activities; and provide information about how to submit written comments, data, or other information to the docket. At this public meeting, OSTP will provide an overview of the CF and the 1992 update to the CF, and discuss the activities described in the EOP memorandum. EPA, FDA, and USDA will provide an overview of their current approaches to regulating products of biotechnology. The agenda for this public meeting will be posted approximately 5 days before the meeting at: <http://www.fda.gov/NewsEvents/MeetingsConferencesWorkshops/ucm463783.htm>.

II. How To Participate in the Public Meeting

OSTP, EPA, FDA, and USDA (collectively referred to as “we” or “us”) are holding the public meeting under the auspices of the National Science and Technology Council. The meeting will be held on October 30, 2015, in the White Oak Great Room, at FDA’s White Oak Campus, Building 31 Conference Center, the Great Room (Rm. 1503 B&C), 10903 New Hampshire Ave., Silver Spring, MD 20993–002. Entrance for the public meeting participants (non-FDA employees) is through Building 1 where routine security check procedures will be performed. For parking and security information, please refer to <http://www.fda.gov/AboutFDA/WorkingatFDA/BuildingsandFacilities/WhiteOakCampusInformation/>

[ucm241740.htm](#). Due to limited space and time, we encourage all persons who wish to attend the meeting to register early and in advance of the meeting. There is no fee to register for the public meeting, and registration will be on a first-come, first-served basis. Onsite registration will be accepted, as space permits, after all preregistered attendees are seated.

Those requesting an opportunity to make an oral presentation during the time allotted for public comment at the meeting are asked to submit a request in advance and to provide information about any specific topic or issue to be addressed. There will not be an opportunity to display materials such as slide shows, videos, or other media during the meeting. If time permits, individuals or organizations that did not register in advance may be granted the opportunity to make an oral presentation. We would like to maximize the number of individuals who make a presentation at the meeting and will do our best to accommodate all persons who wish to make a presentation or express their opinions at the meeting.

We encourage persons and groups who have similar interests to consolidate their information for presentation by a single representative. After reviewing the presentation requests, we will notify each participant before the meeting of the approximate start time of their presentation and of the amount of time allotted for the comment.

While oral presentations from specific individuals and organizations will be necessarily limited due to time constraints during the public meeting, interested parties may submit electronic or written comments to the docket. All relevant data and documentation should be submitted with the comments to Docket No. FDA–2015–N–3403.

Table 1 provides information on participation in the public meeting.

III. Comments, Transcripts, and Recorded Video

Information and data submitted voluntarily to us will become part of the administrative record for this activity, and will be accessible to the public at <http://www.regulations.gov>. The transcript of the proceedings from the public meeting will become part of the administrative record for this activity. Please be advised that as soon as a transcript is available, it will be accessible at <http://www.regulations.gov> and on FDA's Web site at: <http://www.fda.gov/Food/NewsEvents/WorkshopsMeetingsConferences/default.htm>. It may also be viewed at the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. A transcript will also be available in either hardcopy or on CD-ROM, after submission of a Freedom of Information request. Written requests are to be sent to the Division of Freedom of Information, 5630 Fishers Lane, Rm. 1035, Rockville, MD 20857. Additionally, we will live webcast and record the public meeting. Once the recorded video is available, it will be accessible on FDA's Web site at: <http://www.fda.gov/Food/NewsEvents/WorkshopsMeetingsConferences/default.htm>.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; 60-day Comment Request; Media-Smart Youth Leaders Program (NICHHD)

SUMMARY: In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), National Institutes of Health (NIH), will issue a funding announcement for the Media-Smart Youth Leaders Program to the Office of Management and Budget (OMB) for review and approval.

Written comments and/or suggestions from the public and affected agencies are invited on one or more of the following points: Whether the proposed collection of information is necessary for the proper selection of facilitators to serve as local health educators, using the Media-Smart Youth curriculum; the accuracy of the agency's estimate of the burden of the proposed collection of information; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of

information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

To Submit Comments and For Further Information: To obtain a copy of the data collection plans and instruments, submit comments in writing, or request more information on the proposed project, contact: Dr. Sarah Glavin, Acting Director, Office of Science Policy, Analysis, and Communications, Eunice Kennedy Shriver National Institute of Child Health and Human Development, National Institutes of Health, 31 Center Dr., Bldg. 31, Rm. 2A28, Bethesda, MD 20892, or call non-toll-free number (301) 496-7898, or email your request, including your address to: glavins@mail.nih.gov. Formal requests for additional plans and instruments must be requested in writing.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if

received within 60 days of the date of this publication.

Proposed Collection: Application for Consideration for the Media-Smart Youth Leaders Program (A Local Health Education Program and Leadership Opportunity): 0925—New, Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), National Institutes of Health (NIH).

Need and Use of Information Collection: Media-Smart Youth: Eat, Think, and Be Active!® is an interactive program designed to teach youth ages 11–13 about how media can affect their health. Developed by the NIH’s Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), the program includes 10 lessons on media analysis, nutrition, and physical activity, plus a final capstone project. The Media-Smart Youth® Leaders Program is designed for teens and adults, ages 15 years and up, who are interested in bringing the Media-Smart Youth program to their community. In return for recruiting youth participants, teaching the 10

lessons, and leading the final project, Media-Smart Youth Leaders will receive leadership experience, community service hours, and recognition from the NICHD. To help Leaders succeed, the NICHD will provide training, ongoing assistance, and a small funding amount for program expenses.

The purpose of this information collection is to solicit information from applicants about their qualifications that would make them effective Leaders, their reason for wanting to pursue this opportunity, and the details of their proposed program (including, but not limited to, location, community partner(s), and proposed budget). This information will help NICHD staff select the candidates for the program who are most likely to succeed in implementing the full curriculum and teaching youth effective lessons about nutrition, physical activity, and media.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 800.

ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Type of respondent	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total annual burden hour
Media-Smart Youth Leaders Program Application Form.	Applicants	300	1	2.5	750
Media-Smart Youth Leaders Program Application Form.	Advisors	300	1	5/60	25
Media-Smart Youth Leaders Program Application Form.	Community partners	300	1	5/60	25

Dated: October 10, 2015.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Neurological Disorders and Stroke, Interagency Pain Research Coordinating Committee Call for Committee Membership Nominations

SUMMARY: The Department of Health and Human Services (HHS) (Department) has created the Interagency Pain Research Coordinating Committee and is seeking nominations for this committee.

DATES: Nominations are due by 5 p.m. on November 19, 2015.

ADDRESSES: Nominations must be submitted through the web form on the IPRCC Web site: <http://iprcc.nih.gov/about/IPRCC-Nomination.htm>.

FOR FURTHER INFORMATION CONTACT: Linda Porter, porterl@ninds.nih.gov.

SUPPLEMENTARY INFORMATION: As specified in Public Law 111-148 (“Patient Protection and Affordable Care Act”) the Committee will: (a) Develop a summary of advances in pain care research supported or conducted by the Federal agencies relevant to the diagnosis, prevention, and treatment of pain and diseases and disorders associated with pain; (b) identify critical gaps in basic and clinical research on the symptoms and causes of pain; (c) make recommendations to ensure that the activities of the National Institutes of Health and other Federal agencies are free of unnecessary duplication of effort;

(d) make recommendations on how best to disseminate information on pain care; and (e) make recommendations on how to expand partnerships between public entities and private entities to expand collaborative, cross-cutting research.

Membership on the committee will include six (6) non-Federal members from among scientists, physicians, and other health professionals and six (6) non-Federal members of the general public who are representatives of leading research, advocacy, and service organizations for individuals with pain-related conditions. Members will serve overlapping three year terms. It is anticipated that the committee will meet at least once a year.

The Department strives to ensure that the membership of HHS Federal advisory committees is fairly balanced in terms of points of view represented and the committee’s function. Every effort is made to ensure that the views of diverse ethnic and racial groups and

people with disabilities are represented on HHS Federal advisory committees, and the Department therefore, encourages nominations of qualified candidates from these groups. The Department also encourages geographic diversity in the composition of the Committee. Appointment to this Committee shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, disability, and cultural, religious, or socioeconomic status.

The Department is soliciting nominations for two non-federal members from among scientists, physicians, and other health professionals and for one non-federal member of the general public who is a representative of a leading research, advocacy, or service organization for people with pain-related conditions. These candidates will be considered to fill positions opened through completion of current member terms. Nominations are due by 5 p.m. on November 19, 2015, using the IPRCC nomination web form: <http://iprcc.nih.gov/about/IPRCC-Nomination.htm>.

Dated: October 8, 2015.

Walter J. Koroshetz,

Director, National Institute of Neurological Disorders and Stroke, National Institutes of Health.

[FR Doc. 2015-26408 Filed 10-15-15; 8:45 am]

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Action Under the NIH Guidelines for Research Involving Recombinant or Synthetic Nucleic Acid Molecules (NIH Guidelines)

AGENCY: National Institutes of Health (NIH), HHS.

ACTION: Notice of proposed changes to the *NIH Guidelines*.

SUMMARY: The NIH seeks public comment on its proposal to amend the *NIH Guidelines for Research Involving Recombinant or Synthetic Nucleic Acid Molecules (NIH Guidelines)* to incorporate the recommendations of the Institute of Medicine (IOM) regarding human gene transfer clinical research protocols. The NIH proposes amendments to the following: (A) The criteria for selecting protocols for in-depth review and public discussion by the NIH Recombinant DNA Advisory Committee (RAC), (B) the process by which human gene transfer protocols

are reviewed and registered with the NIH, and (C) the streamlining of the NIH protocol registration submission requirements under Appendix M-I-A of the *NIH Guidelines*.

DATES: To ensure consideration, comments must be submitted in writing by November 30, 2015.

ADDRESSES: Comments may be submitted by email at OBA-osp@od.nih.gov, by fax at 301-496-9839, or by mail to the Office of Science Policy, National Institutes of Health, 6705 Rockledge Drive, Suite 750, Bethesda, Maryland 20892-7985. All written comments received in response to this notice will be available for public inspection at the NIH Office of Science Policy (OSP), 6705 Rockledge Drive, Suite 750, Bethesda, MD 20892-7985, weekdays between the hours of 8:30 a.m. and 5 p.m. and may be posted to the NIH OSP Web site.

FOR FURTHER INFORMATION CONTACT: If you have questions, or require additional background information about these proposed changes, please contact the NIH by email at OBA-osp@od.nih.gov, or telephone at 301-496-9838.

SUPPLEMENTARY INFORMATION: The NIH Office of the Director requested that the IOM review whether gene transfer research raises issues of concern that warrant the current level of RAC oversight of individual clinical trials involving gene transfer techniques. The IOM noted that the RAC has served a valuable role, but concluded that the current level of oversight over individual clinical trials is no longer justifiable. In an effort to maximize the benefits of the RAC review process, the IOM recommended that the NIH maintain its protocol submission and safety reporting requirements, but restrict individual gene transfer protocol reviews to exceptional cases that meet specified criteria (full recommendations are listed in the IOM report *Oversight and Review of Clinical Gene Transfer Protocols: Assessing the Role of the Recombinant DNA Advisory Committee* (<http://www.iom.edu/Reports/2013/Oversight-and-Review-of-Clinical-Gen-Transfer-Protocols.aspx>)).

After careful consideration of the IOM's recommendations, the NIH proposes amendments to the *NIH Guidelines* in the following areas:

A. *Criteria and process for selecting protocols for RAC review.* The following criteria (subsequently referred to as the NIH RAC review criteria) are proposed for initiating RAC review of individual human gene transfer protocols (criteria listed in both items 1 and 2 must be met):

1. An oversight body (an Institutional Biosafety Committee (IBC) or an Institutional Review Board (IRB)) determines that a human gene transfer protocol submitted to it for approval would significantly benefit from RAC review; and

2. One or more of the criteria below are satisfied:

a. The protocol uses a new vector, genetic material, or delivery methodology that represents a first-in-human experience, thus presenting an unknown risk.

b. The protocol relies on preclinical safety data that were obtained using a new preclinical model system of unknown and unconfirmed value.

c. The proposed vector, gene construct, or method of delivery is associated with possible toxicities that are not widely known and that may render it difficult for oversight bodies to evaluate the protocol rigorously.

The chair of an oversight body or an authorized oversight body representative may submit a request for RAC review by sending the request to the NIH as part of the submission materials provided by the PI. This request must include the rationale for why the protocol satisfies both items 1 and 2 of the NIH RAC review criteria. The NIH will review the request and notify the requestor of a decision in no more than ten working days.

1. If the NIH determines that the criteria listed in both 1 and 2 above are satisfied, the NIH Director will convene the RAC.

2. If the NIH receives a request for RAC review of a protocol that the NIH determines does not meet both of these criteria, the NIH would:

a. Inform the requestor that RAC review is not warranted, and

b. offer to provide the requestor with information about previous protocols that have used similar products, the outcome of those studies, if available, and a summary of relevant safety data.

3. Even if the protocol does not meet the proposed criteria listed in both items 1 and 2 above, the NIH Director, in consultation (if necessary) with appropriate regulatory authorities (e.g., the Office for Human Research Protections, the Food and Drug Administration), can select protocols for review that may present significant scientific, societal, or ethical concerns.

B. *Process by which human gene transfer protocols are registered with the NIH.* All human gene transfer protocols subject to Section III-C of the *NIH Guidelines* will continue to be registered with the NIH. However, the following changes are being proposed:

1. The Principal Investigator (PI) will continue to be responsible for submitting documentation regarding a proposed human gene transfer protocol to his or her local oversight bodies. The PI will also continue to be responsible for submitting documentation as outlined in Appendix M–I–A to the NIH. As part of the submission to the NIH, the PI shall provide documentation from oversight bodies regarding their assessment of whether RAC review is warranted.

2. Completion of the protocol registration process:

a. If no oversight body requests RAC review, the IBC may proceed with its approval process upon receipt of documentation from the NIH indicating that the protocol registration process is complete. No research participant shall be enrolled (see definition of enrollment in Section I–E–7) in the human gene transfer protocol until the protocol registration process has been completed.

b. If an oversight body requests review and the NIH agrees that the submission has met the criteria in A above, the protocol will undergo RAC review and public discussion. The IBC may not approve a protocol until the RAC review process has been completed. The IBC may proceed with its approval process upon receipt of documentation from the NIH indicating that the protocol registration process is complete. No research participant shall be enrolled (see definition of enrollment in Section I–E–7) in the human gene transfer protocol until the protocol registration process has been completed.

c. *Streamlining the submission requirements for protocol registration.* Section III–C–1 and Appendix M of the *NIH Guidelines* specify the requirements for protocol submission, RAC review, and reporting requirements for human gene transfer experiments. In an effort to streamline the protocol submission process, the NIH proposes to reduce the submission requirements as outlined in Appendix M–I–A. Specifically, only a subset of the information listed under the current Appendices M–II through M–V will be required mainly for oversight bodies to determine RAC review eligibility and to support the Genetic Modification Clinical Research Information System (GeMCRIS[®]), which facilitates safety reporting and provides access to information about human gene transfer protocols registered with the NIH.

The proposed changes to the RAC review process, outlined above, will require amendment of multiple portions of the *NIH Guidelines*.

Proposed Amendments to the NIH Guidelines

Throughout the document the following global changes will be made: (i) The NIH OSP will replace the NIH OBA, (ii) the term “RAC review” will be replaced with the term “NIH protocol registration process” as appropriate; (iii) the title for Appendix M–I–B will be changed; and (iv) the requirement for a CV/biosketch of key personnel will be deleted.

Section I–E is proposed to be amended to include the following new definitions:

I–E–11. An “oversight body” is an institutional entity (an Institutional Biosafety Committee or an Institutional Review Board) that must review and approve a human gene transfer trial.

I–E–12. A “regulatory authority” is a federal entity that by statute has oversight over research involving humans.

Section III–C–1 currently states:

Section III–C–1. Experiments Involving the Deliberate Transfer of Recombinant or Synthetic Nucleic Acid Molecules, or DNA or RNA Derived From Recombinant or Synthetic Nucleic Acid Molecules, Into One or More Human Research Participants

Human gene transfer is the deliberate transfer into human research participants of either:

1. Recombinant nucleic acid molecules, or DNA or RNA derived from recombinant nucleic acid molecules, or
2. Synthetic nucleic acid molecules, or DNA or RNA derived from synthetic nucleic acid molecules that meet any one of the following criteria:
 - a. Contain more than 100 nucleotides; or
 - b. Possess biological properties that enable integration into the genome (*e.g.*, *cis* elements involved in integration); or
 - c. Have the potential to replicate in a cell; or
 - d. Can be translated or transcribed.

No research participant shall be enrolled (see definition of enrollment in Section I–E–7) until the RAC review process has been completed (see Appendix M–I–B, RAC Review Requirements).

In its evaluation of human gene transfer proposals, the RAC will consider whether a proposed human gene transfer experiment presents characteristics that warrant public RAC review and discussion (See Appendix M–I–B–2). The process of public RAC review and discussion is intended to foster the safe and ethical conduct of human gene transfer experiments. Public review and discussion of a human gene transfer experiment (and access to relevant information) also serves to inform the public about the technical aspects of the proposal, the meaning and significance of the research, and any significant safety, social, and ethical implications of the research.

Public RAC review and discussion of a human gene transfer experiment may be: (1)

Initiated by the NIH Director; or (2) initiated by the NIH OBA Director following a recommendation to NIH OBA by: (a) Three or more RAC members; or (b) a Federal agency other than NIH. After a human gene transfer experiment is reviewed by the RAC at a regularly scheduled meeting, NIH OBA will send a letter, unless NIH OBA determines that there are exceptional circumstances, within 10 working days to the NIH Director, the Principal Investigator, the sponsoring institution, and other DHHS components, as appropriate, summarizing the RAC recommendations.

For a clinical trial site that is added after the RAC review process, no research participant shall be enrolled (see definition of enrollment in Section I–E–7) at the clinical trial site until the following documentation has been submitted to NIH OBA: (1) Institutional Biosafety Committee approval (from the clinical trial site); (2) Institutional Review Board approval; (3) Institutional Review Board-approved informed consent document; (4) curriculum vitae of the Principal Investigator(s) (no more than two pages in biographical sketch format); and (5) NIH grant number(s) if applicable.

In order to maintain public access to information regarding human gene transfer (including protocols that are not publicly reviewed by the RAC), NIH OBA will maintain the documentation described in Appendices M–I through M–V. The information provided in response to Appendix M should not contain any confidential commercial information or trade secrets, enabling all aspects of RAC review to be open to the public.

Note: For specific directives concerning the use of retroviral vectors for gene delivery, consult Appendix B–V–1, Murine, Retroviral Vectors.

Section III–C–1 is proposed to be amended as follows:

Section III–C–1. Experiments Involving the Deliberate Transfer of Recombinant or Synthetic Nucleic Acid Molecules, or DNA or RNA Derived From Recombinant or Synthetic Nucleic Acid Molecules, Into One or More Human Research Participants

Human gene transfer is the deliberate transfer into human research participants of either:

1. Recombinant nucleic acid molecules, or DNA or RNA derived from recombinant nucleic acid molecules, or
2. Synthetic nucleic acid molecules, or DNA or RNA derived from synthetic nucleic acid molecules that meet any one of the following criteria:
 - a. Contain more than 100 nucleotides; or
 - b. Possess biological properties that enable integration into the genome (*e.g.*, *cis* elements involved in integration); or
 - c. Have the potential to replicate in a cell; or
 - d. Can be translated or transcribed.

No research participant shall be enrolled (see definition of enrollment in Section I–E–7) until the NIH protocol registration process has been completed (see Appendix M–I–B, Selection of Individual Protocols for Public RAC Review and Discussion).

In its evaluation of human gene transfer protocols, the NIH will make a

determination, following a request from one or more oversight bodies, whether a proposed human gene transfer experiment has one or more of the characteristics that warrant public RAC review and discussion (See Appendix M-1-B-1). The process of public RAC review and discussion is intended to foster the safe and ethical conduct of human gene transfer experiments. Public review and discussion of a human gene transfer experiment (and access to relevant information) also serves to inform the public about the technical aspects of the proposal, the meaning and significance of the research, and any significant safety, social, and ethical implications of the research.

Public RAC review and discussion of a human gene transfer experiment may be initiated in two exceptional circumstances: (1) The NIH will determine, following a request for RAC public review from an oversight body, whether the protocol has one or more of the following characteristics: (i) The protocol uses a new vector, genetic material, or delivery methodology that represents a first-in-human experience, thus presenting an unknown risk; (ii) the protocol relies on preclinical safety data that were obtained using a new preclinical model system of unknown and unconfirmed value; or (iii) the proposed vector, gene construct, or method of delivery is associated with possible toxicities that are not widely known and that may render it difficult for oversight bodies to evaluate the protocol rigorously. If an oversight body requests public RAC review, but the protocol does not have one or more of the above characteristics (listed in i, ii, or iii), then the NIH will inform the requesting oversight body that public RAC review is not warranted. (2) Public RAC review and discussion of protocols not requested for review by an oversight body may be initiated by the NIH Director if: (a) The protocol has one or more of the three characteristics listed above (i, ii, or iii) and public RAC review and discussion would provide a clear and obvious benefit to the scientific community or the public; or (b) the protocol otherwise raises significant scientific, societal, or ethical concerns.

For a clinical trial site that is added after completion of the NIH protocol registration process, no research participant shall be enrolled (see definition of enrollment in Section I-E-7) at the clinical trial site until the following documentation has been submitted to the NIH OSP: (1) Institutional Biosafety Committee approval (from the clinical trial site); (2) Institutional Review Board approval; (3) Institutional Review Board-approved informed consent document; and (4) the NIH grant number(s) if applicable.

In order to maintain public access to information regarding human gene transfer (including protocols that are not publicly reviewed by the RAC), the NIH OSP will maintain the documentation described in Appendices M-I through M-II. The information provided in response to Appendix M should not contain any confidential commercial or financial information or trade secrets, enabling all aspects of RAC review to be open to the public.

Note: For specific directives concerning the use of retroviral vectors for gene delivery,

consult Appendix B-V-1, Murine, Retroviral Vectors.

Section IV-B-1-f currently states:

Section IV-B-1-f. Ensure that when the institution participates in or sponsors recombinant or synthetic nucleic acid molecule research involving human subjects: (i) The Institutional Biosafety Committee has adequate expertise and training (using *ad hoc* consultants as deemed necessary), (ii) all aspects of Appendix M have been appropriately addressed by the Principal Investigator; and (iii) no research participant shall be enrolled (see definition of enrollment in Section I-E-7) in a human gene transfer experiment until the RAC review process has been completed (see Appendix M-I-B, RAC Review Requirements). Institutional Biosafety Committee approval has been obtained, Institutional Review Board approval has been obtained, and all applicable regulatory authorizations have been obtained. Institutional Biosafety Committee approval must be obtained from each institution at which recombinant or synthetic nucleic acids will be administered to human subjects (as opposed to each institution involved in the production of vectors for human application and each institution at which there is *ex vivo* transduction of recombinant or synthetic nucleic acid molecule material into target cells for human application).

Section IV-B-1-f is proposed to be amended as follows:

Section IV-B-1-f. Ensure that when the institution participates in or sponsors recombinant or synthetic nucleic acid molecule research involving human subjects: (i) The Institutional Biosafety Committee has adequate expertise and training (using *ad hoc* consultants as deemed necessary), (ii) all aspects of Appendix M have been appropriately addressed by the Principal Investigator; and (iii) no research participant shall be enrolled (see definition of enrollment in Section I-E-7) in a human gene transfer experiment until the NIH protocol registration process has been completed (see Appendix M-I-B, Selection of Individual Protocols for Public RAC Review and Discussion), Institutional Biosafety Committee approval has been obtained, Institutional Review Board approval has been obtained, and all applicable regulatory authorizations have been obtained. Institutional Biosafety Committee approval must be obtained from the clinical trial site.

None of the other sub-sections under Section IV-B-1. General Information are proposed to be amended.

Section IV-B-2-a-(1) currently states:

Section IV-B-2-a-(1). The Institutional Biosafety Committee must be comprised of no fewer than five members so selected that they collectively have experience and expertise in recombinant or synthetic nucleic acid molecule technology and the capability to assess the safety of recombinant or synthetic nucleic acid molecule research and to identify any potential risk to public health or the environment. At least two members

shall not be affiliated with the institution (apart from their membership on the Institutional Biosafety Committee) and who represent the interest of the surrounding community with respect to health and protection of the environment (*e.g.*, officials of state or local public health or environmental protection agencies, members of other local governmental bodies, or persons active in medical, occupational health, or environmental concerns in the community). The Institutional Biosafety Committee shall include at least one individual with expertise in plant, plant pathogen, or plant pest containment principles when experiments utilizing Appendix P, Physical and Biological Containment for Recombinant or Synthetic Nucleic Acid Molecule Research Involving Plants, require prior approval by the Institutional Biosafety Committee. The Institutional Biosafety Committee shall include at least one scientist with expertise in animal containment principles when experiments utilizing Appendix Q, Physical and Biological Containment for Recombinant or Synthetic Nucleic Acid Molecule Research Involving Animals, require Institutional Biosafety Committee prior approval. When the institution conducts recombinant or synthetic nucleic acid molecule research at BL3, BL4, or Large Scale (greater than 10 liters), a Biological Safety Officer is mandatory and shall be a member of the Institutional Biosafety Committee (see Section IV-B-3, Biological Safety Officer). When the institution participates in or sponsors recombinant or synthetic nucleic acid molecule research involving human research participants, the institution must ensure that: (i) The Institutional Biosafety Committee has adequate expertise and training (using *ad hoc* consultants as deemed necessary); (ii) all aspects of Appendix M have been appropriately addressed by the Principal Investigator; (iii) no research participant shall be enrolled (see definition of enrollment in Section I-E-7) in a human gene transfer experiment until the RAC review process has been completed (see Appendix M-I-B, RAC Review Requirements); and (iv) final IBC approval is granted only after the RAC review process has been completed (see Appendix M-I-B, RAC Review Requirements). Institutional Biosafety Committee approval must be obtained from the institution at which recombinant or synthetic nucleic acid molecule material will be administered to human research participants (rather than the site involved in manufacturing gene transfer products).

Note: Individuals, corporations, and institutions not otherwise covered by the *NIH Guidelines*, are encouraged to adhere to the standards and procedures set forth in Sections I through IV (see Section IV-D, Voluntary Compliance). The policy and procedures for establishing an Institutional Biosafety Committee under Voluntary Compliance, are specified in Section IV-D-2, Institutional Biosafety Committee Approval).

Section IV-B-2-a-(1) is proposed to be amended as follows:

Section IV-B-2-a-(1). The Institutional Biosafety Committee must be comprised of no fewer than five members so selected that they collectively have experience and expertise in recombinant or synthetic nucleic acid molecule technology and the capability to assess the safety of recombinant or synthetic nucleic acid molecule research and to identify any potential risk to public health or the environment. At least two members shall not be affiliated with the institution (apart from their membership on the Institutional Biosafety Committee) and who represent the interest of the surrounding community with respect to health and protection of the environment (e.g., officials of state or local public health or environmental protection agencies, members of other local governmental bodies, or persons active in medical, occupational health, or environmental concerns in the community). The Institutional Biosafety Committee shall include at least one individual with expertise in plant, plant pathogen, or plant pest containment principles when experiments utilizing Appendix P, Physical and Biological Containment for Recombinant or Synthetic Nucleic Acid Molecule Research Involving Plants, require prior approval by the Institutional Biosafety Committee. The Institutional Biosafety Committee shall include at least one scientist with expertise in animal containment principles when experiments utilizing Appendix Q, Physical and Biological Containment for Recombinant or Synthetic Nucleic Acid Molecule Research Involving Animals, require Institutional Biosafety Committee prior approval. When the institution conducts recombinant or synthetic nucleic acid molecule research at BL3, BL4, or Large Scale (greater than 10 liters), a Biological Safety Officer is mandatory and shall be a member of the Institutional Biosafety Committee (see Section IV-B-3, Biological Safety Officer). When the institution participates in or sponsors recombinant or synthetic nucleic acid molecule research involving human research participants, the institution must ensure that: (i) The Institutional Biosafety Committee has adequate expertise and training (using ad hoc consultants as deemed necessary); (ii) all aspects of Appendix M have been appropriately addressed by the Principal Investigator; (iii) no research participant shall be enrolled (see definition of enrollment in Section I-E-7) in a human gene transfer experiment until the NIH protocol registration process has been completed (see Appendix M-I-B, Selection of Individual Protocols for Public RAC Review and Discussion); and (iv) final IBC approval is granted only after the NIH protocol registration process has been completed (see Appendix M-I-B, Selection of Individual Protocols for Public RAC Review and Discussion). Institutional Biosafety Committee approval must be obtained from the clinical trial site.

Note: Individuals, corporations, and institutions not otherwise covered by the *NIH Guidelines*, are encouraged to adhere to the standards and procedures set forth in Sections I through IV (see Section IV-D, Voluntary Compliance). The policy and

procedures for establishing an Institutional Biosafety Committee under Voluntary Compliance, are specified in Section IV-D-2, Institutional Biosafety Committee Approval.

None of the other sub-sections under Section IV-B2-a. Membership and Procedures of the IBC are proposed to be amended.

Section IV-B-2-b-(1) currently states:

Section IV-B-2-b-(1). Reviewing recombinant or synthetic nucleic acid molecule research conducted at or sponsored by the institution for compliance with the *NIH Guidelines* as specified in Section III, Experiments Covered by the *NIH Guidelines*, and approving those research projects that are found to conform with the *NIH Guidelines*. This review shall include: (i) Independent assessment of the containment levels required by the *NIH Guidelines* for the proposed research; (ii) assessment of the facilities, procedures, practices, and training and expertise of personnel involved in recombinant or synthetic nucleic acid molecule research; (iii) ensuring that all aspects of Appendix M have been appropriately addressed by the Principal Investigator; (iv) ensuring that no research participant is enrolled (see definition of enrollment in Section I-E-7) in a human gene transfer experiment until the RAC review process has been completed (see Appendix M-I-B, RAC Review Requirements), Institutional Biosafety Committee approval (from the clinical trial site) has been obtained, Institutional Review Board approval has been obtained, and all applicable regulatory authorizations have been obtained; (v) for human gene transfer protocols selected for public RAC review and discussion, consideration of the issues raised and recommendations made as a result of this review and consideration of the Principal Investigator's response to the RAC recommendations; (vi) ensuring that final IBC approval is granted only after the RAC review process has been completed (see Appendix M-I-B, RAC Review Requirements); and (vii) ensuring compliance with all surveillance, data reporting, and adverse event reporting requirements set forth in the *NIH Guidelines*.

Section IV-B-2-b-(1) is proposed to be amended as follows:

Section IV-B-2-b-(1). Reviewing recombinant or synthetic nucleic acid molecule research conducted at or sponsored by the institution for compliance with the *NIH Guidelines* as specified in Section III, Experiments Covered by the *NIH Guidelines*, and approving those research projects that are found to conform with the *NIH Guidelines*. This review shall include: (i) Independent assessment of the containment levels required by the *NIH Guidelines* for the proposed research; (ii) assessment of the facilities, procedures, practices, and training and expertise of personnel involved in recombinant or synthetic nucleic acid molecule research; (iii) ensuring that all aspects of Appendix M have been appropriately addressed by the Principal Investigator (iv) ensuring that no research participant is enrolled (see definition of

enrollment in Section I-E-7) in a human gene transfer experiment until the NIH protocol registration process has been completed (see Appendix M-I-B, Selection of Individual Protocols for Public RAC Review and Discussion), Institutional Biosafety Committee approval (from the clinical trial site) has been obtained, Institutional Review Board approval has been obtained, and all applicable regulatory authorizations have been obtained; (v) for human gene transfer protocols selected for public RAC review and discussion, consideration of the issues raised and recommendations made as a result of this review and consideration of the Principal Investigator's response to the RAC recommendations; (vi) ensuring that final IBC approval is granted only after the NIH protocol registration process has been completed (see Appendix M-I-B, Selection of Individual Protocols for Public RAC Review and Discussion); and (vii) ensuring compliance with all surveillance, data reporting, and adverse event reporting requirements set forth in the *NIH Guidelines*.

None of the other sub-sections under Section IV-B-2-b. Functions of the IBC are proposed to be amended.

Section IV-B-6 currently states:

Section IV-B-6. Human Gene Therapy Expertise

When the institution participates in or sponsors recombinant or synthetic nucleic acid molecule research involving human subjects, the institution must ensure that: (i) the Institutional Biosafety Committee has adequate expertise and training (using ad hoc consultants as deemed necessary) and (ii) all aspects of Appendix M, Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant or Synthetic Nucleic Acid Molecules into One or More Human Subjects (Points to Consider), have been appropriately addressed by the Principal Investigator prior to submission to NIH/OBA.

Section IV-B-6 is proposed to be amended as follows:

Section IV-B-6. Human Gene Therapy Expertise

When the institution participates in or sponsors recombinant or synthetic nucleic acid molecule research involving human subjects, the institution must ensure that: (i) the Institutional Biosafety Committee has adequate expertise and training (using ad hoc consultants as deemed necessary) and (ii) all aspects of Appendix M, Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant or Synthetic Nucleic Acid Molecules into One or More Human Subjects (Points to Consider), have been appropriately addressed by the Principal Investigator prior to its approval.

Section IV-B-7-b-(6) currently states:

Section IV-B-7-b-(6). Ensure that all aspects of Appendix M have been appropriately addressed prior to submission of a human gene transfer experiment to NIH OBA, and provide a letter signed by the Principal Investigator(s) on institutional

letterhead acknowledging that the documentation being submitted to NIH OBA complies with the requirements set forth in Appendix M. No research participant shall be enrolled (see definition of enrollment in Section I-E-7) in a human gene transfer experiment until the RAC review process has been completed (see Appendix M-I-B, RAC Review Requirements); IBC approval (from the clinical trial site) has been obtained; Institutional Review Board (IRB) approval has been obtained; and all applicable regulatory authorization(s) have been obtained.

For a clinical trial site that is added after the RAC review process, no research participant shall be enrolled (see definition of enrollment in Section I-E-7) at the clinical trial site until the following documentation has been submitted to NIH OBA: (1) IBC approval (from the clinical trial site); (2) IRB approval; (3) IRB-approved informed consent document; (4) curriculum vitae of the Principal Investigator(s) (no more than two pages in biographical sketch format); and (5) NIH grant number(s) if applicable.

Section IV-B-7-b-(6) is proposed to be amended as follows:

Section IV-B-7-b-(6). Ensure that all aspects of Appendix M have been appropriately addressed prior to submission. No research participant shall be enrolled (see definition of enrollment in Section I-E-7) in a human gene transfer experiment until the NIH protocol registration process has been completed (see Appendix M-I-B, Selection of Individual Protocols for Public RAC Review and Discussion); IBC approval (from the clinical trial site) has been obtained; Institutional Review Board (IRB) approval has been obtained; and all applicable regulatory authorization(s) have been obtained.

For a clinical trial site that is added after completion of the NIH protocol registration process, no research participant shall be enrolled (see definition of enrollment in Section I-E-7) at the clinical trial site until the following documentation has been submitted to the NIH OSP: (1) IBC approval (from the clinical trial site); (2) IRB approval; (3) IRB-approved informed consent document; and (4) NIH grant number(s) if applicable.

To implement this new process, the NIH proposes to amend Appendix M, Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant or Synthetic Nucleic Acid Molecules into One or More Human Research Participants (Points to Consider).

Appendix M currently states:

Appendix M applies to research conducted at or sponsored by an institution that receives any support for recombinant or synthetic nucleic acid molecule research from NIH. Researchers not covered by the *NIH Guidelines* are encouraged to use Appendix M (see Section I-C, General Applicability).

The acceptability of human somatic cell gene transfer has been addressed in several public documents as well as in numerous

academic studies. In November 1982, the President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research published a report, *Splicing Life*, which resulted from a two-year process of public deliberation and hearings. Upon release of that report, a U.S. House of Representatives subcommittee held three days of public hearings with witnesses from a wide range of fields from the biomedical and social sciences to theology, philosophy, and law. In December 1984, the Office of Technology Assessment released a background paper, *Human Gene Therapy*, which concluded that civic, religious, scientific, and medical groups have all accepted, in principle, the appropriateness of gene transfer of somatic cells in humans for specific genetic diseases. Somatic cell gene transfer is seen as an extension of present methods that might be preferable to other technologies. In light of this public support, RAC is prepared to consider proposals for somatic cell gene transfer.

RAC will not at present entertain proposals for germ line alterations but will consider proposals involving somatic cell gene transfer. The purpose of somatic cell gene transfer is to treat an individual patient, *e.g.*, by inserting a properly functioning gene into the subject's somatic cells. Germ line alteration involves a specific attempt to introduce genetic changes into the germ (reproductive) cells of an individual, with the aim of changing the set of genes passed on to the individual's offspring.

The RAC continues to explore the issues raised by the potential of *in utero* gene transfer clinical research. However, the RAC concludes that, at present, it is premature to undertake any *in utero* gene transfer clinical trial. Significant additional preclinical and clinical studies addressing vector transduction efficacy, biodistribution, and toxicity are required before a human *in utero* gene transfer protocol can proceed. In addition, a more thorough understanding of the development of human organ systems, such as the immune and nervous systems, is needed to better define the potential efficacy and risks of human *in utero* gene transfer. Prerequisites for considering any specific human *in utero* gene transfer procedure include an understanding of the pathophysiology of the candidate disease and a demonstrable advantage to the *in utero* approach. Once the above criteria are met, the RAC would be willing to consider well rationalized human *in utero* gene transfer clinical trials.

Research proposals involving the deliberate transfer of recombinant or synthetic nucleic acid molecules, or DNA or RNA derived from such nucleic acid molecules, into human subjects (human gene transfer) will be considered through a review process involving both NIH/OBA and RAC. Investigators shall submit their relevant information on the proposed human gene transfer experiments to NIH/OBA. Submission of human gene transfer protocols to NIH will be in the format described in Appendix M-I-A, Submission Requirements for Protocol Submission. Submission to NIH shall be for registration purposes and will

ensure continued public access to relevant human gene transfer information conducted in compliance with the *NIH Guidelines*. Investigational New Drug (IND) applications should be submitted to FDA in the format described in 21 CFR, Chapter I, Subchapter D, Part 312, Subpart B, Section 23, IND Content and Format.

Institutional Biosafety Committee approval must be obtained from each institution at which recombinant or synthetic nucleic acid molecule material will be administered to human subjects (as opposed to each institution involved in the production of vectors for human application and each institution at which there is *ex vivo* transduction of recombinant or synthetic nucleic acid molecule material into target cells for human application).

Factors that may contribute to public discussion of a human gene transfer experiment by RAC include: (i) New vectors/new gene delivery systems, (ii) new diseases, (iii) unique applications of gene transfer, and (iv) other issues considered to require further public discussion. Among the experiments that may be considered exempt from RAC discussion are those determined not to represent possible risk to human health or the environment. Full, public RAC review and discussion of a human gene transfer experiment may be (1) initiated by the NIH Director; or (2) initiated by the NIH OBA Director following a recommendation to NIH OBA by: (a) Three or more RAC members, or (b) a Federal agency other than NIH. An individual human gene transfer experiment that is recommended for full RAC review should represent novel characteristics deserving of public discussion. If it is determined that an experiment will undergo full RAC discussion, NIH/OBA will immediately notify the Principal Investigator. RAC members may forward individual requests for additional information relevant to a specific protocol through NIH/OBA to the Principal Investigator. In making a determination whether an experiment is novel, and thus deserving of full RAC discussion, reviewers will examine the scientific rationale, scientific context (relative to other proposals reviewed by RAC), whether the preliminary *in vitro* and *in vivo* safety data were obtained in appropriate models and are sufficient, and whether questions related to relevant social and ethical issues have been resolved. RAC recommendations on a specific human gene transfer experiment shall be forwarded to the NIH Director, the Principal Investigator, the sponsoring institution, and other DHHS components, as appropriate. Relevant documentation will be included in the material for the RAC meeting at which the experiment is scheduled to be discussed. RAC meetings will be open to the public except where trade secrets and proprietary information are reviewed (see Section IV-D-5, Protection of Proprietary Data—Voluntary Compliance). RAC prefers that information provided in response to Appendix M contain no proprietary data or trade secrets, enabling all aspects of the review to be open to the public.

Note: Any application submitted to NIH/OBA shall not be designated as 'confidential'

in its entirety. In the event that a sponsor determines that specific responses to one or more of the items described in Appendix M should be considered as proprietary or trade secret, each item should be clearly identified as such. The cover letter (attached to the submitted material) shall: (1) Clearly indicate that select portions of the application contain information considered as proprietary or trade secret, (2) a brief explanation as to the reason that each of these items is determined proprietary or trade secret.

Public discussion of human gene transfer experiments (and access to relevant information) shall serve to inform the public about the technical aspects of the proposals, meaning and significance of the research, and significant safety, social, and ethical implications of the research. RAC discussion is intended to ensure safe and ethical conduct of gene transfer experiments and facilitate public understanding of this novel area of biomedical research.

In its evaluation of human gene transfer proposals, RAC will consider whether the design of such experiments offers adequate assurance that their consequences will not go beyond their purpose, which is the same as the traditional purpose of clinical investigation, namely, to protect the health and well being of human subjects being treated while at the same time gathering generalizable knowledge. Two possible undesirable consequences of the transfer of recombinant or synthetic nucleic acid molecules would be unintentional: (i) Vertical transmission of genetic changes from an individual to his/her offspring, or (ii) horizontal transmission of viral infection to other persons with whom the individual comes in contact. Accordingly, Appendices M–I through M–V request information that will enable RAC and NIH/OBA to assess the possibility that the proposed experiment(s) will inadvertently affect reproductive cells or lead to infection of other people (e.g., medical personnel or relatives).

Appendix M will be considered for revisions as experience in evaluating proposals accumulates and as new scientific developments occur. This review will be carried out periodically as needed.

Appendix M is proposed to be amended as follows:

Appendix M applies to research conducted at or sponsored by an institution that receives any support for recombinant or synthetic nucleic acid molecule research from NIH. Researchers not covered by the *NIH Guidelines* are encouraged to use Appendix M (see Section I–C, General Applicability).

The acceptability of human somatic cell gene transfer has been addressed in several public documents as well as in numerous academic studies. In November 1982, the President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research published a report, *Splicing Life*, which resulted from a two-year process of public deliberation and hearings. Upon release of that report, a U.S. House of Representatives subcommittee held three days of public hearings with witnesses from a wide range of fields from the biomedical and social

sciences to theology, philosophy, and law. In December 1984, the Office of Technology Assessment released a background paper, *Human Gene Therapy*, which concluded that civic, religious, scientific, and medical groups have all accepted, in principle, the appropriateness of gene transfer of somatic cells in humans for specific genetic diseases. Somatic cell gene transfer is seen as an extension of present methods that might be preferable to other technologies. In light of this public support, the NIH is prepared to consider proposals for somatic cell gene transfer.

The NIH will not at present entertain proposals for germ line alterations but will consider proposals involving somatic cell gene transfer. The purpose of somatic cell gene transfer is to treat an individual patient, e.g., by inserting a properly functioning gene into the subject's somatic cells. Germ line alteration involves a specific attempt to introduce genetic changes into the germ (reproductive) cells of an individual, with the aim of changing the set of genes passed on to the individual's offspring.

The NIH continues to explore the issues raised by the potential of *in utero* gene transfer clinical research. However, the NIH concludes that, at present, it is premature to undertake any *in utero* gene transfer clinical trial. Significant additional preclinical and clinical studies addressing vector transduction efficacy, biodistribution, and toxicity are required before a human *in utero* gene transfer protocol can proceed. In addition, a more thorough understanding of the development of human organ systems, such as the immune and nervous systems, is needed to better define the potential efficacy and risks of human *in utero* gene transfer. Prerequisites for considering any specific human *in utero* gene transfer procedure include an understanding of the pathophysiology of the candidate disease and a demonstrable advantage to the *in utero* approach. Once the above criteria are met, the NIH would be willing to consider well rationalized human *in utero* gene transfer clinical trials.

Research proposals involving the deliberate transfer of recombinant or synthetic nucleic acid molecules, or DNA or RNA derived from such nucleic acid molecules, into one or more human subjects (human gene transfer) will be considered through a registration process involving the NIH, oversight bodies, and regulatory authorities, when appropriate. Investigators shall submit the relevant information on the proposed human gene transfer experiment to the oversight bodies and then to the NIH. The format of the submission is described in Appendix M–I–A, Requirements for Protocol Submission. Submission to the NIH OSP shall be for registration purposes and will ensure continued public access to relevant human gene transfer information conducted in compliance with the *NIH Guidelines*.

Public RAC review and discussion of a human gene transfer experiment may be initiated in two exceptional circumstances: (1) The NIH will determine, following a request for RAC review from an oversight body, whether the protocol has one or more of the following characteristics: i) The

protocol uses a new vector, genetic material, or delivery methodology that represents a first-in-human experience, thus presenting an unknown risk; ii) the protocol relies on preclinical safety data that were obtained using a new preclinical model system of unknown and unconfirmed value; or iii) the proposed vector, gene construct, or method of delivery is associated with possible toxicities that are not widely known and that may render it difficult for oversight bodies to evaluate the protocol rigorously. If an oversight body requests public RAC review, but the NIH determines that the protocol does not have one or more of the above characteristics (listed in i, ii, or iii), then the NIH will inform the requesting oversight body that public RAC review is not warranted. (2) Public RAC review and discussion of protocols not requested for review by an oversight body may be initiated by the NIH Director, after consultation (if needed) with appropriate regulatory authorities, if: (a) The protocol has one or more of the three characteristics listed above (i, ii, or iii) and public RAC review and discussion would provide a clear and obvious benefit to the scientific community or the public; or (b) the protocol otherwise raises significant scientific, societal, or ethical concerns.

If it is determined that a human gene transfer trial will undergo RAC review, the NIH will immediately notify the Principal Investigator. RAC recommendations following public review on a specific human gene transfer experiment shall be forwarded to the Principal Investigator, oversight bodies, and regulatory authorities, as appropriate. Relevant documentation will be included in the material for the RAC meeting at which the human gene transfer trial is scheduled to be discussed. RAC meetings will be open to the public except where trade secrets and proprietary information are reviewed (see Section IV–D–5, *Protection of Proprietary Data—Voluntary Compliance*). The NIH prefers that information provided in response to Appendix M contain no proprietary data or trade secrets, enabling all aspects of the review to be open to the public.

Some but not all sections of Appendix M–I Requirements for Protocol Submission, Review, and Reporting—Human Gene Transfer Experiments are proposed to be amended to decrease the number and amount of supporting documentation that must be submitted upon protocol registration, and to modify the timing of the registration processes. As proposed, Principal Investigators must submit the material as outlined below to oversight bodies at the proposed clinical trial sites; however, submission of responses to Appendices M–II through M–V or curriculum vitae will no longer be required.

Appendix M–I–A currently states: Appendix M–I.A. Requirements for Protocol Submission

The following documentation must be submitted (see exemption in Appendix M–III–A, Footnotes of Appendix M) in printed or electronic form to the: Office of Biotechnology Activities, National Institutes

of Health, 6705 Rockledge Drive, Suite 750, Bethesda, MD 20892-7985 (20817 for non-USPS mail), 301-496-9838, 301-496-9839 (fax), Email: rosenthg@od.nih.gov. NIH OBA will confirm receipt within three working days after receiving the submission. Investigators should contact NIH OBA if they do not receive this confirmation.

1. A cover letter on institutional letterhead, signed by the Principal Investigator(s), that: (1) Acknowledges that the documentation submitted to NIH OBA complies with the requirements set forth in Appendix M-I-A, Requirements for Protocol Submission; (2) identifies the Institutional Biosafety Committee (IBC) and Institutional Review Board (IRB) at the proposed clinical trial site(s) responsible for local review and approval of the protocol; and (3) acknowledges that no research participant will be enrolled (see definition of enrollment in Section I-E-7) until the RAC review process has been completed (see Appendix M-I-B, RAC Review Requirements); IBC approval (from the clinical trial site) has been obtained; IRB approval has been obtained; and all applicable regulatory authorizations have been obtained.

2. The scientific abstract.

3. The non-technical abstract.

4. The proposed clinical protocol, including tables, figures, and relevant manuscripts.

5. Responses to Appendices M-II through M-V, Description of the Proposal, Informed Consent, Privacy, and Special Issues. Responses to Appendices M-II through M-V may be provided either as an appendix to the clinical protocol or incorporated in the clinical protocol. If responses to Appendices M-II through M-V are incorporated in the clinical protocol, each response must refer to the appropriate Appendix M-II through M-V.

6. The proposed informed consent document.

7. Curriculum vitae of the Principal Investigator(s) (no more than two pages in biographical sketch format).

Note: A human gene transfer experiment submitted to NIH OBA should not contain confidential commercial information or trade secrets, enabling all aspects of the review to be open to the public.

Appendix M-I-A is proposed to be amended as follows:

Appendix M-I-A. Requirements for Protocol Submission

The following documentation must be submitted according to institutional policy, to the appropriate oversight bodies and subsequently in electronic form to the NIH OSP:

1. A scientific abstract.

2. The proposed clinical protocol, including tables, figures, and any relevant publications.

3. Summary of preclinical studies conducted in support of the proposed clinical trial or reference to the specific section of the protocol providing this information.

4. A description of the product:

a. Describe the derivation of the delivery vector system including the source (e.g.,

viral, bacterial, or plasmid vector); and modifications (e.g., deletions to attenuate or self-inactivate, encapsulation in any synthetic complex, changes to tropisms, etc.). Please reference any previous clinical experience with this vector or similar vectors.

b. Describe the genetic content of the transgene or nucleic acid delivered including the species source of the sequence and whether any modifications have been made (e.g. mutations, deletions, and truncations). What are the regulatory elements contained in the construct?

c. Describe any other material to be used in preparation of the agent (vector and transgene) that will be administered to the human research subject (e.g., helper virus, packaging cell line, carrier particles).

d. Describe the methods for replication-competent virus testing, if applicable.

e. Describe the intended *ex vivo* or *in vivo* target cells and transduction efficiency.

f. Describe the gene transfer agent delivery method.

5. The proposed informed consent document.

6. Specifically for submission to the NIH OSP, the PI shall provide additional documentation from oversight bodies regarding their assessment of whether RAC review is warranted. In the event that review is requested, the documentation shall include a justification that the protocol characteristics (see Section III-C-1) that would warrant RAC public review have been met.

Note: Any application submitted shall not contain any document that is designated as 'confidential' in its entirety. In the event that a sponsor determines that a portion of a specific document should be considered as proprietary or trade secret, each portion of the document should be clearly identified as such. In the event that a specific portion of the submission does contain information that a sponsor considers to be proprietary or trade secret, the submission to the NIH OSP must contain a letter from the sponsor that: (1) Clearly indicates what select portions of the application contain information considered as proprietary or trade secret, (2) provides an adequate and convincing justification as to the reason that this information is considered to be proprietary or trade secret. The justification must be able to demonstrate *with specificity* how release of that information will reveal a trade secret or will result in substantial competitive harm.

Appendix M-I-B, RAC Review Requirements is proposed to be amended to change the process and timing of initial and RAC review. Currently, investigators are informed within 15 working days whether or not the protocol requires public RAC review. Public discussion of selected protocols then occurs at the next quarterly RAC meeting, which occurs, at a minimum of, eight weeks after receipt of a complete protocol submission. Under the proposal, individual RAC members will no longer make a recommendation regarding whether a protocol should be selected for review at a public meeting.

Therefore, Appendix M-1-B-1 and Appendix M-1-B-2 are being amended

as follows to form a consolidated Appendix M-1-B:

Appendix M-1-B. Selection of Individual Protocols for Public RAC Review and Discussion

As part of the NIH protocol registration process, documentation from oversight bodies regarding their assessment of whether RAC review is warranted. If no oversight body would significantly benefit from public RAC review and discussion, then the Principal Investigator shall submit all of the documentation required to register the submission (see Appendix M-I-A) to the NIH OSP at any time but shall occur not less than three working days prior to the anticipated date of enrollment of the first subject (see definition of enrollment in Section I-E-7), and shall be provided in electronic form to the Office of Science Policy, National Institutes of Health, 6705 Rockledge Drive, Suite 750, Bethesda, MD 20892-7985 (20817 for non-USPS mail), 301-496-9838, 301-496-9839 (fax), Email: HGTprotocols@mail.nih.gov. Enrollment may proceed upon acknowledgement that the submission is registered.

If an oversight body determines that: (1) A protocol submission would significantly benefit from public RAC review and discussion and (2) that one or more of the following NIH RAC review criteria are met: (i) The protocol uses a new vector, genetic material, or delivery methodology that represents a first-in-human experience, thus presenting an unknown risk; or (ii) the protocol relies on preclinical safety data that were obtained using a new preclinical model system of unknown and unconfirmed value; or (iii) the proposed vector, gene construct, or method of delivery is associated with possible toxicities that are not widely known and that may render it difficult for local and federal regulatory bodies to evaluate the protocol rigorously, and is therefore requesting RAC review and public discussion, the Principal Investigator shall submit the documentation as outlined in Appendix M-I-A at least 8 weeks prior to the next scheduled meeting in order to be reviewed at that RAC meeting. The submission shall include documentation from oversight bodies regarding their assessment of whether RAC review is warranted and that one or both have justified their request according to the NIH RAC review criteria listed above. The submission shall be provided to the NIH in electronic form to the Office of Science Policy, National Institutes of Health, 6705 Rockledge Drive, Suite 750, Bethesda, MD 20892-7985 (20817 for non-USPS mail), 301-496-9838, 301-496-9839 (fax), Email: HGTprotocols@mail.nih.gov. If NIH determines that any of the criteria listed in subsections (i), (ii), or (iii) above is met, the protocol will undergo public RAC review and discussion.

If an oversight body requests that the RAC review a protocol and the NIH determines that the protocol does not satisfy one or more of the above NIH RAC review criteria, the NIH OSP will inform the Principal Investigator, oversight bodies, and regulatory authorities, as appropriate, that RAC review is not warranted.

Even if an oversight body does not request that a particular protocol be reviewed by the RAC, the NIH Director, after consultation (if needed) with appropriate regulatory authorities, may initiate RAC review if (a) the protocol has one or more of the characteristics listed above (i, ii, or iii) and public RAC review and discussion would provide a clear and obvious benefit to the scientific community or public; or (b) the protocol otherwise raises significant scientific, societal, or ethical concerns.

Completion of the registration process is defined as: (1) Receipt by the Principal Investigator of a letter from the NIH OSP indicating that protocol registration process is complete and that enrollment may proceed; or (2) receipt by the Principal Investigator of a letter from the NIH after public RAC review that summarizes the committee's key comments and recommendations (if any).

A complete human gene transfer protocol package must be submitted at least eight weeks before a scheduled RAC meeting to be reviewed at that upcoming meeting.

After a human gene transfer experiment is publicly reviewed by the full RAC at a regularly scheduled meeting, the NIH OSP will send a letter summarizing the RAC's key comments and recommendations (if any) regarding the protocol to the Principal Investigator(s), oversight bodies, and regulatory authorities as appropriate. Completion of RAC review is defined as receipt by the Principal Investigator(s) of a letter from the NIH OSP summarizing the committee's findings. Unless the NIH determines that there are exceptional circumstances, the letter containing recommendations and comments made following public review will be sent within 10 working days after the completion of the RAC meeting at which the protocol was reviewed.

RAC meetings will be open to the public except where trade secrets or confidential commercial information are reviewed. To enable all aspects of the protocol review process to be open to the public, information provided in response to Appendix M-I-A should not contain trade secrets or confidential commercial or financial information. An application submitted to the NIH OSP shall not contain any document that is designated as 'confidential' in its entirety. In the event that a determination has been made that a specific portion of a document submitted as one of the items described in Appendix M should be considered as confidential commercial or financial information or a trade secret, each item must be clearly identified as such. The cover letter (attached to the submitted material) shall: (1) Clearly designate the information that is considered as confidential commercial or financial information or a trade secret; and (2) explain and justify each designation to demonstrate *with specificity* how release of that information will reveal a trade secret or will result in substantial competitive harm.

There are no proposed amendments to Appendix M-I-C, Reporting Requirements and Appendix M-I-D, Safety Assessments in Human Gene Transfer Research.

The current appendices Appendix M-II, Description of the Proposal; Appendix M-III, Informed Consent; Appendix M-IV, Privacy; and Appendix M-V, Special Issues are proposed to be deleted in their entirety, except for Appendix M-III-B-2-b, Long Term Follow-Up which will be updated to include a reference to FDA's current guidance on this issue and will become Appendix M-II.

Appendix M-II is proposed to be amended as follows:

Appendix M-II. Long Term Follow-Up

To permit evaluation of long-term safety and efficacy of gene transfer, prospective subjects should be informed that they are expected to cooperate in long-term follow-up that extends beyond the active phase of the study. A list of persons who can be contacted in the event that questions arise during the follow-up period should be provided to the investigator. In addition, the investigator should request that subjects continue to provide a current address and telephone number.

The subjects should be informed that any significant findings resulting from the study will be made known in a timely manner to them and/or their parent or guardian including new information about the experimental procedure, the harms and benefits experienced by other individuals involved in the study, and any long-term effects that have been observed.

Additional guidance is available in the FDA Guidance for Industry: Gene Therapy Clinical Trials—Observing Subjects for Delayed Adverse Events (available at the following URL: <http://www.fda.gov/BiologicsBloodVaccines/GuidanceComplianceRegulatoryInformation/Guidances/CellularandGeneTherapy/default.htm>).

Appendix M-VI Footnotes of Appendix M will be renumbered to Appendix M-III. Footnotes of Appendix M. There will be no amendment to the language.

Dated: October 9, 2015.

Francis S. Collins,

Director, National Institutes of Health.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Environmental Health Sciences; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of a meeting of the Board of Scientific Counselors, NIEHS.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other

reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

The meeting will be closed to the public as indicated below in accordance with the provisions set forth in section 552b(c)(6), Title 5 U.S.C., as amended for the review, discussion, and evaluation of individual intramural programs and projects conducted by the National Institute of Environmental Health Sciences, including consideration of personnel qualifications and performance, and the competence of individual investigators, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Board of Scientific Counselors, NIEHS.

Date: November 15–17, 2015.

Closed: November 15, 2015, 7 p.m. to 10 p.m.

Agenda: To review and evaluate programmatic and personnel issues.

Place: Doubletree Guest Suites, 2515 Meridian Parkway, Research Triangle Park, NC 27713.

Open: November 16, 2015, 8:30 a.m. to 11:50 a.m.

Agenda: Scientific Presentations.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Closed: November 16, 2015, 11:50 a.m. to 1:30 p.m.

Agenda: To review and evaluate programmatic and personnel issues.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Open: November 16, 2015, 1:30 p.m. to 3 p.m.

Agenda: Poster Session.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Closed: November 16, 2015, 3 p.m. to 3:30 p.m.

Agenda: To review and evaluate programmatic and personnel issues.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Open: November 16, 2015, 3:45 p.m. to 5:25 p.m.

Agenda: Scientific Presentations.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Closed: November 16, 2015, 5:25 p.m. to 5:55 p.m.

Agenda: To review and evaluate programmatic and personnel issues.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Closed: November 16, 2015, 6:15 p.m. to 10 p.m.

Agenda: To review and evaluate programmatic and personnel issues.

Place: Doubletree Guest Suites, 2515 Meridian Parkway, Research Triangle Park, NC 27713.

Open: November 17, 2015, 8:30 a.m. to 10:10 a.m.

Agenda: Scientific Presentations.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Closed: November 17, 2015, 10:10 a.m. to 10:40 a.m.

Agenda: To review and evaluate programmatic and personnel issues.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Open: November 17, 2015, 10:55 a.m. to 12 p.m.

Agenda: Scientific Presentations.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Closed: November 17, 2015, 12 p.m. to 1:30 p.m.

Agenda: To review and evaluate programmatic and personnel issues.

Place: Nat. Inst. of Environmental Health Sciences, Building 101, Rodbell Auditorium, Rooms 101 ABC, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709.

Contact Person: Darryl C. Zeldin, Scientific Director & Principal Investigator, Division of Intramural Research, National Institute of Environmental Health Sciences, NIH, 111 TW Alexander Drive, Maildrop A2-09, Research Triangle Park, NC 27709, 919-541-1169, zeldin@niehs.nih.gov.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

BILLING CODE 4140-01-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG-2015-0950]

Sewage Treatment Technology—Type Approval of Marine Sanitation Devices

AGENCY: Coast Guard, DHS.

ACTION: Notice of meeting.

SUMMARY: The Coast Guard will conduct a public workshop in Washington, DC to discuss sewage treatment technologies, issues concerning testing of marine sanitation devices for type approval, and issues concerning gray water. This workshop is intended to be an interactive exchange of information between policymakers, industry experts, and interested members of the public.

DATES: The workshop will be held on Tuesday and Wednesday, December 8 and 9, 2015 beginning at 9:30 a.m. and ending at 4 p.m., Eastern Time. This workshop is open to the public. Please note that the workshop has a limited number of seats and may close early if all business is finished. Contact the Coast Guard (see **FOR FURTHER INFORMATION CONTACT**) by December 4, 2015 to reserve seating. The comment period for the docket closes January 9, 2016.

ADDRESSES: The workshop will be held in conference rooms 8, 9, and 10 of the Department of Transportation Headquarters Building, 1200 New Jersey Ave. SE., Washington, DC 20590. The building is accessible by public transportation (Navy Yard subway station) or taxi. Parking for privately-owned vehicles is available nearby. Due to security requirements, each visitor must present a valid government-issued photo identification (for example, a driver's license) in order to gain entrance to the building. Contact the Coast Guard (see **FOR FURTHER INFORMATION CONTACT**) to facilitate the security process related to building access, or to request reasonable accommodation.

You may submit comments identified by docket number USCG-2015-0950 using the Federal eRulemaking Portal at <http://www.regulations.gov>. See **SUPPLEMENTARY INFORMATION** for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions concerning the workshop, please call or email Mr. Wayne Lundy, U.S. Coast Guard; telephone 202-372-1379, email Wayne.M.Lundy@uscg.mil or Ms. Katherine Weiler, Environmental Protection Agency; telephone 202-566-1280, email Weiler.Katherine@epa.gov.

SUPPLEMENTARY INFORMATION: Your comment is important to us. If you submit a comment, please include the docket number shown at the beginning of this notice and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at <http://www.regulations.gov>. If your material cannot be submitted using <http://www.regulations.gov>, contact us (see **FOR FURTHER INFORMATION CONTACT**) for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <http://www.regulations.gov> and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

We accept anonymous comments. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

This workshop is sponsored by the Coast Guard and the Environmental Protection Agency and is intended to be an interactive exchange of information between policymakers, industry experts, and interested members of the public. The primary topics that will be discussed include:

- Sewage treatment technologies;
- Issues concerning testing of marine sanitation devices for type approval;
- Simple on board checks for verifying performance of marine sanitation devices;
- Impact of gray water on the environment;
- Impact on the ship from processing gray water;
- Technologies for processing of gray water;
- Analytes for considering technologies treating gray water;
- Issues associated with existing federal standards and MARPOL Annex IV equipment standards (International Maritime Organization (IMO) resolution MEPC.227(64));
- Impact of No Discharge Zones; and
- Revision of an industry consensus standard, ASTM F2363—"Standard Specification for Sewage and Graywater Flow Through Treatment Systems".

Please note that the workshop has a limited number of seats and may close early if all business is finished.

We encourage you to participate and join in discussions, subject to the discretion of the moderator. If you wish to attend the meeting via teleconference, arrange for assistance in attending the meeting in person, or make a presentation, contact us (see **FOR FURTHER INFORMATION CONTACT**; audiovisual arrangements will be available). If you bring written comments to the workshop, you may submit them at the meeting and we will place them on our docket.

This notice is issued under the authority of 5 U.S.C. 552(a).

Dated: 13 October, 2015.

J. G. Lantz,

Director of Commercial Regulations and Standards, U.S. Coast Guard.

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG-2015-0960]

Coast Guard Acceptance of Sewage Treatment Plants for Type-Approval to International Maritime Organization Resolution MEPC.227(64)

AGENCY: Coast Guard, DHS.

ACTION: Notice of Policy and request for comments.

SUMMARY: The Coast Guard announces its acceptance of sewage treatment plants (also referred to as marine sanitation devices) for type-approval to International Maritime Organization resolution MEPC.227(64) as meeting the requirements for marine sanitation devices. This action will allow manufacturers as well as shipowners and operators the option to take advantage of building and using equipment that meets both domestic and international requirements while also benefitting the environment. The Coast Guard is also seeking information on simple on board checks to verify performance of sewage treatment plants.

DATES: Comments and related material must be received by the Coast Guard on or before November 16, 2015.

You may submit comments identified by docket number USCG-2015-0880 using the Federal eRulemaking Portal at <http://www.regulations.gov>. See the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: For information about this document call or email Wayne M. Lundy, CG-ENG-3, U.S. Coast Guard; telephone 202-372-1379, email Wayne.M.Lundy@uscg.mil.

SUPPLEMENTARY INFORMATION:

Public Participation and Comments

If you submit a comment, please include the docket number for this notice, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at <http://www.regulations.gov>. If your material cannot be submitted using <http://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Documents mentioned in this notice as being available in the docket, and all public comments, will be in our online docket at <http://www.regulations.gov> and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We are also planning to hold a two-day public workshop in Washington DC in the fall of 2015. We will issue a separate **Federal Register** notice to announce the date, time, and location of such a workshop. The purpose of the workshop will be to discuss sewage treatment technologies, issues concerning testing of marine sanitation devices for type approval and information on simple on board checks to verify performance of a marine sanitation device. The workshop will also consider issues associated with existing federal standards and MARPOL Annex IV equipment standards (resolution MEPC.227(64)), impact of No Discharge Zones, and issues concerning gray water.

Background and Purpose

Title 33 of the Code of Federal Regulations (CFR), part 159, prescribes requirements for the design and construction of marine sanitation devices ("MSDs", also referred to as

sewage treatment plants) and procedures for certifying that MSDs meet the regulations and standards of the Environmental Protection Agency promulgated under Section 312 of the Federal Water Pollution Control Act (Pub. L. 92-500, § 312, 86 Stat. 871 (October 18, 1972), *as amended*; *classified* to 33 U.S.C. 1322). In October 2012, the International Maritime Organization (IMO) adopted resolution MEPC.227(64)—*2012 Guidelines on implementation of effluent standards and performance tests for sewage treatment plants*. The International Convention on the Prevention of Pollution from Ships 73/78 (MARPOL) Annex IV requires sewage treatment plants to be type-approved taking into account the standards of IMO Resolution MEPC.227(64). While the United States is not a Contracting Government to MARPOL Annex IV, we recognize that the limits and standards in IMO resolution MEPC.227(64) are more stringent or prescriptive than those requirements in 33 CFR 159 concerning threshold limits and testing of equipment and thus equipment that is type-approved to the MEPC.227(64) standards would also satisfy U.S. threshold effluent limits. Specifically, we have determined that a MSD meeting the design specifications in MEPC.227(64) would exceed the performance specifications for Type II tanks, as listed in 33 CFR 159.53(b), which states that, "[u]nder the test conditions described in §§ 159.126 and 159.126a, [the tanks must] produce an effluent having a fecal coliform bacteria count not greater than 200 per 100 milliliters and suspended solids not greater than 150 milligrams per liter."

In recognition of this, the Coast Guard believes MSDs type-approved in accordance with the requirements of IMO resolution MEPC.227(64) and installed on U.S. flagged ships comply with those threshold effluent limits in 33 CFR 159.53(b). MSDs must still meet the other requirements contained in part 159, and any inconsistencies between part 159 and MEPC.227(64) must be resolved in favor of part 159. Manufacturers may submit their equipment to a recognized testing facility recognized by the Coast Guard for testing of such equipment and may make a submission to the Coast Guard requesting type approval.

Resolution MEPC.227(64) also contains a process allowing the Coast Guard to certify that a type-approved MSD meets the specific effluent discharge requirements for a vessel to enter Special Areas listed in MARPOL Annex IV. The Coast Guard would certify that the MSD meets the enhanced

effluent discharge and treatment specifications listed in MEPC.227(64). Under MARPOL Annex IV Regulations 9.1.1 and 9.1.2, vessels with MSDs conforming to the Special Area specifications contained in MEPC.227(64) may be permitted to operate in Special Areas. This certification would allow U.S.-flagged vessels to document that they meet those standards.

However, U.S.-flagged vessels voluntarily installing MSDs in accordance with MARPOL Annex IV standards must comply with the U.S. application of MEPC.227(64), as follows, to receive U.S. certification. Currently, MEPC.227(64), is vague on the amount of reduction required for thermotolerant coliform (TC), total suspended solids (TSS), biochemical oxygen demand without nitrification (BOD₅) and chemical oxygen demand (COD). While Section 3 of MEPC.227(64) states that “[i]n meeting the effluent standards in Section 4, an approved sewage

treatment plant should not rely solely on dilution of wastewater,” there are no specific levels of reduction given for TC, TSS, BOD₅ and COD (unlike the specific Percent Reductions given for discharges of nitrogen and phosphorus in Section 4.2).

IMO Resolution MEPC.227(64) states that an approved MSD not rely solely on dilution of wastewater in order to meet the effluent limits stipulated in resolution MEPC.227(64). Resolution MEPC.227(64) further states that, where amounts of dilution are deemed essential to a treatment process, the effluent standards in Section 4 should be adjusted proportionally using dilution compensation factor Q_i/Q_e to account for dilution Q_d .¹ In order to demonstrate that the MSD does not rely solely on dilution of wastewater in order to meet the effluent standards, the effluent concentration value C_e for any particular analyte addressed in resolution MEPC.227(64), Section 4.1 (specifically, TC, TSS, BOD₅ and COD)

will need to be less than the effluent standard for that analyte multiplied by the dilution compensation factor Q_i/Q_e .

In order for a MSD to be able to be technically evaluated for type approval under MEPC.227(64), the concentration value of the effluent for that analyte being considered must be readable, *i.e.*, at or above the detection limit for the test method for that analyte. For consideration by the Coast Guard, a MSD, after application of the dilution compensation factor Q_i/Q_e , the revised effluent concentration value of any analyte measured at the Effluent Sample Point as shown in figure 1 of this Notice of Policy cannot be below the Test Method detection limit for that analyte. Figure 1 is replicated from resolution MEPC.227(64). If the revised concentration value is below the Test Method detection limit for that analyte, then it becomes impossible for the concentration value to be physically measured.

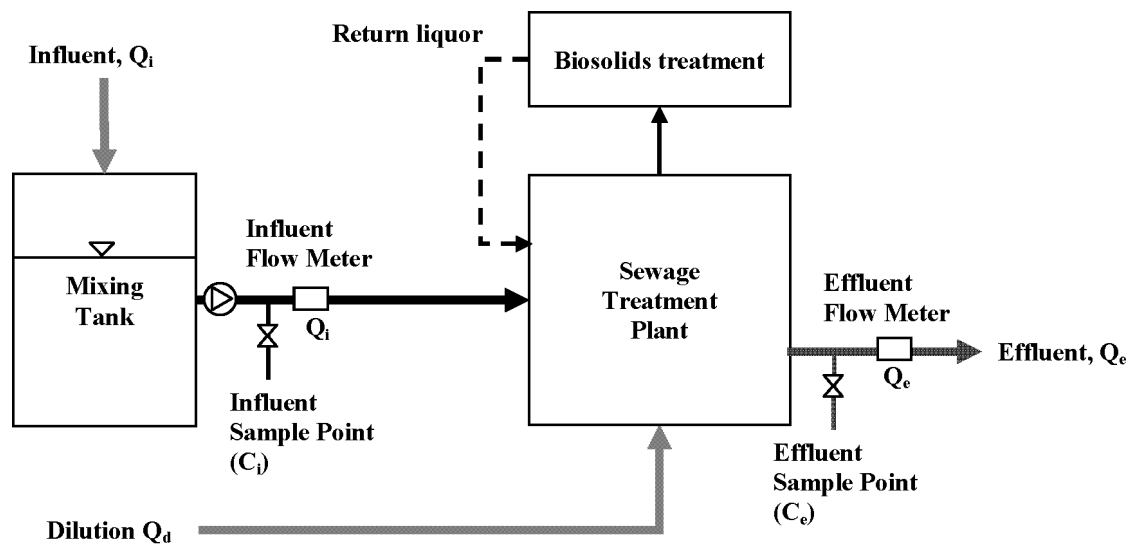

Figure 1: System diagram of a sewage treatment plant

To make the above determination for Annex IV certification, the Coast Guard will use the approved test methods that are listed in the Environmental

Protection Agency regulations (40 CFR 136, Guidelines Establishing Test Procedures for the Analysis of

Pollutants). The following methods must be used:

- Thermotolerant Coliform (TC) Test Method EPA 600/8–78–017 Chapter III²

¹ Dilution (Q_d)—is dilution water, grey water, process water, and/or seawater introduced to the sewage treatment plant after the influent sample point and after the influent flow measurement device, see figure 1 of resolution MEPC.227(64).

Effluent (Q_e)—is treated wastewater produced by the sewage treatment plant, see figure 1 of resolution MEPC.227(64).

Influent (Q_i)—is liquid containing sewage, grey water or other liquid streams, to be processed by the

treatment plant, see figure 1 of resolution MEPC.227(64).

(Detection Limit = 1 colony form unit (CFU)/100 mL),

- Total Suspended Solids (TSS) Test Method 160.2 (Detection Limit = 4.0 mg/L),

- Biochemical Oxygen Demand (BOD₅) without nitrification³ Test Method 5210 B³ (Detection Limit = 2.0 mg/L),

- Chemical Oxygen Demand (COD) Test Method 410.4 (Detection Limit = 3.0 mg/L),

- pH Test Method 150.1 (none stated but not normally reported below 0.01),⁴

- Total Nitrogen⁵ 351.2 (Detection Limit = 0.5 mg/L),

- Total Phosphorus Test Method 365.2 (Detection Limit = 0.01 mg/L) and Disinfectant residual

- Chlorine Test Method 330.5 (Detection Limit = 0.2 mg/L)

The Coast Guard is also seeking information on possible simple on board checks that may be available and easily used to verify performance of a sewage treatment plant with effluent requirements.

This notice is issued under authority of 5 U.S.C. 552(a).

Dated: October 9, 2015.

F.J. Sturm,

Deputy Director, Commercial Regulations and Standards, U.S. Coast Guard.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA-2015-0001; Internal Agency Docket No. FEMA-B-1534]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

Display=p%7Cf&DefSeekPage=x&SearchBack=ZyActionL&Back=ZyActionS&BackDesc=Results%20page&MaximumPages=1&ZyEntry=1.

³ The equivalent U.S. EPA Test Method for Biochemical Oxygen Demand (BOD₅) without nitrification is done as carbonaceous biochemical oxygen demand (CBOD₅) and should not be confused with the traditional BOD₅ test method which measures "total BOD". The addition of the nitrification inhibitor is not a procedural option, but must be included to report the CBOD₅ parameter.

⁴ There is no US EPA Test Method listed in 40 CFR 136 so the US EPA has adopted American Public Health Association (APHA) Standard Methods for the Examination of Water and Wastewater. The current edition is the 22nd edition.

⁵ Total Nitrogen means the sum of total Kjeldahl nitrogen (organic and ammoniacal nitrogen) nitrate-nitrogen and nitrite-nitrogen.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Title 44, Part 65 of the Code of Federal Regulations (44 CFR part 65). The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will become effective on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has 90 days in which to request through the community that the Deputy Associate Administrator for Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at www.msc.fema.gov for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance

and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) Luis.Rodriguez3@fema.dhs.gov; or visit the FEMA Map Information eXchange (FMIX) online at www.floodmaps.fema.gov/fhm/fmx_main.html.

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at www.msc.fema.gov for comparison.

BILLING CODE 9110-12-P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA-2015-0001; Internal Agency Docket No. FEMA-B-1533]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency

Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Title 44, Part 65 of the Code of Federal Regulations (44 CFR part 65). The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will become effective on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has 90 days in which to request through the

community that the Deputy Associate Administrator for Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at www.msc.fema.gov for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) Luis.Rodriguez3@fema.dhs.gov; or visit the FEMA Map Information eXchange (FMIX) online at

www.floodmaps.fema.gov/fhm/fmx_main.html.

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The

flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below.

Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at www.msc.fema.gov for comparison.

BILLING CODE 9110-12-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5828-N-42]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402-3970; TTY number for the hearing- and speech-impaired (202) 708-2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800-927-7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless v. Veterans Administration*, No. 88-2503-OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been

reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for "off-site use only" recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to: Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 5B-17, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other

purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1-800-927-7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.*, acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: *Agriculture:* Ms. Debra Kerr, Department of Agriculture, Reporters Building, 300 7th Street SW., Room 300, Washington, DC 20024, (202) 720-8873; *Army:* Ms. Veronica Rines, Office of the Assistant Chief of Staff for Installation Management, Department of Army, Room 5A128, 600 Army Pentagon, Washington, DC 20310, (571) 256-8145; *Energy:* Mr. David Steinau, Department of Energy, Office of Property Management, OECM MA-50, 4B122, 1000 Independence Ave. SW., Washington, DC 20585 (202) 287-1503; *GSA:* Mr. Flavio Peres, General Services Administration, Office of Real Property Utilization and Disposal, 1800 F Street NW., Room 7040, Washington, DC 20405, (202) 501-0084; *Interior:* Mr. Michael Wright, Acquisition & Property Management, Department of the Interior, 3960 N. 56th Ave. #104, Hollywood, FL. 33021; (443) 223-4639; *Navy:* Mr. Steve Matteo, Department of the Navy, Asset Management; Division, Naval Facilities Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202) 685-9426; (These are not toll-free numbers).

Dated: October 7, 2015.

Brian P. Fitzmaurice,
Director, Division of Community Assistance,
Office of Special Needs Assistance Programs.

BILLING CODE 4210-67-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLCO923000-L1440000-ET0000-15X]

Application for Withdrawal and Opportunity for Public Meeting, Deep Creek Canyon and Corridor, Colorado

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The United States Forest Service (USFS) has filed an application (COC 77206) with the Bureau of Land Management (BLM) requesting the Secretary of the Interior to withdraw approximately 4,200 acres of National Forest System lands within the White River National Forest from location and entry under the United States mining laws for a period of 20 years to protect multiple outstanding features, including scenic, recreational, geologic, ecologic, wildlife, and fisheries values, in the Deep Creek canyon and corridor.

The character of the canyon and corridor is natural and essentially primitive, and the lands and free-flowing waters were found to be eligible for Wild and Scenic designation under the Wild and Scenic Rivers Act in the 2002 White River National Forest, Land and Resource Management Plan Revision. The Forest Plan decision recommended withdrawal of the canyon and corridor from location and entry under the United States mining laws.

This notice temporarily segregates the land for up to 2 years from location and entry under the United States mining laws while the application is being processed. This notice also provides the public an opportunity to comment on the application and to request a public meeting. The lands have been and will remain open to mineral and geothermal leasing, and to such forms of disposition as may be allowed by law on National Forest System lands.

DATES: Comments and public meeting requests must be received by January 14, 2016.

ADDRESSES: Comments and meeting requests should be sent to Steve Craddock, Branch of Lands and Realty, BLM Colorado State Office, 2850 Youngfield Street, Lakewood, CO 80215-7093.

FOR FURTHER INFORMATION CONTACT: Steve Craddock, BLM Colorado State Office, 303-239-3707, or Carole Huey, White River National Forest, 970-945-3219, during regular business hours 7:45 a.m. to 4:15 p.m., Monday through Friday, except holidays. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The USFS has filed an application with the BLM pursuant to the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714, requesting the Secretary of the Interior to withdraw the following described National Forest System lands from location and entry under the United States mining laws (30 U.S.C. Ch. 2), but not from leasing under the mineral or geothermal leasing laws, for a period of 20 years, subject to valid existing rights:

- sec. 3, beginning at the corner common to Sections 2 and 3 on the north township line, thence West, along the north line of the township, a distance of 3480 feet; thence S.28°E. a distance of 2230 feet to a point in the Johnson Pasture Trail, Forest Service Trail Number 1852; thence N.85°E. a distance of 800 feet; thence East a distance of 400 feet; thence S.45°E. a distance of 1250 feet to a point on the east line of Section 3; thence N.0°09'W., on and along the east line of Section 3, a distance of 2815 feet to the Point of Beginning;
- sec. 12, beginning at a point on the north section line of Section 12 from which the corner common to Sections 1, 2, 11, and 12 bears N.89°57'W. a distance of 30 feet, thence S.15°E. a distance of 255 feet; thence N.70°E. a distance of 620 feet to a point on the North line of Section 12; thence N.89°57'W., on and along the north line of Section 12, a distance of 650 feet to the Point of Beginning; and Beginning at the corner common to Sections 1 and 12 on the east township line, thence N.89°57'W., on and along the north section line of Section 12, a distance of 360 feet; thence S.50°E. a distance of 465 feet to a point on the west line of Section 12; thence North, on and along the west line of Section 12, a distance of 286 feet to the Point of Beginning.

The areas described aggregate approximately 4,200 acres in Garfield County.

The purpose of the withdrawal is to protect multiple outstanding features, including scenic, recreational, geologic, ecologic, wildlife, and fisheries values, in the Deep Creek canyon and corridor.

The use of a right-of-way, interagency or cooperative management agreement would not adequately constrain non-discretionary uses that could irrevocably destroy the area's scenic and recreational values.

No alternative sites are feasible as the described lands contain the natural resource and recreation values in need of protection.

No water rights will be needed to fulfill the purpose of the proposed withdrawal.

For a period until January 14, 2016, all persons who desire to submit comments, suggestions, or objections in connection with the withdrawal application may present their views in writing to the BLM Colorado State Office at the address listed above. Comments, including names and street addresses of respondents, will be available for public review at the BLM Colorado State Office at the above address during regular business hours 7:45 a.m. to 4:15 p.m. Monday through Friday, except Federal holidays.

Notice is also hereby given that the opportunity for a public meeting is afforded in connection with the withdrawal application. All interested parties who desire a public meeting for the purpose of being heard on the proposed withdrawal application must submit a written request to the BLM Colorado State Office at the address listed above by January 14, 2016.

If the authorized officer decides that a public meeting will be held, a notice of the time and place will be published

in the **Federal Register** and in a newspaper of general circulation in the respective areas of the proposed withdrawal at least 30 days before the scheduled date of the meeting.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Records related to the application may be examined at the White River National Forest, Supervisor's Office at 900 Grand Avenue, Glenwood Springs, Colorado 81601.

For a period until October 16, 2017, subject to valid existing rights, the lands described in this notice will be segregated from location and entry under the United States mining laws unless the application is denied or cancelled or the withdrawal is approved prior to that date. The lands will remain open to other uses within the statutory authority pertinent to National Forest System lands and subject to discretionary approval.

The application will be processed in accordance with the regulations set forth in 43 CFR part 2300.

(Authority: 43 CFR 2310.3–1(b))

Ruth Welch,

BLM Colorado State Director.

Bureau of Land Management

[LLCON05000 L16100000.DU0000]

Notice of Intent To Amend the Resource Management Plan for the White River Field Office and Prepare an Associated Environmental Assessment for Travel and Transportation Management, Colorado

AGENCY: Bureau of Land Management, Interior

ACTION: Notice.

SUMMARY: In compliance with the National Environmental Policy Act of 1969, as amended (NEPA); and the Federal Land Policy and Management Act of 1976, as amended (FLPMA); the Bureau of Land Management (BLM) White River Field Office (WRFO), Meeker, Colorado, intends to prepare a

Resource Management Plan (RMP) amendment with an associated Environmental Assessment (EA) for the WRFO. By this notice the WRFO is announcing the beginning of the scoping process to solicit public comments and identify issues.

DATES: Comments on issues may be submitted in writing until November 16, 2015. The BLM will announce the date(s) and location(s) of any scoping meetings at least 15 days in advance through local news media, newspapers and the BLM Web site at: <http://www.blm.gov/co/st/en/fo/wrfo.html>. The BLM must receive all comments prior to the close of the 30-day scoping period or 15 days after the last public meeting, whichever is later, in order for them to be included in the analysis. We will provide additional opportunities for public participation as appropriate.

ADDRESSES: You may submit comments on issues and planning criteria related to the WRFO's Travel and Transportation Management RMP amendment/EA by any of the following methods:

- *Web site:* <http://www.blm.gov/co/st/en/fo/wrfo.html>.
- *Email:* blm_co_wrfo_tmp@blm.gov.
- *Fax:* 970–989–3805.
- *Mail:* BLM, White River Field Office, 220 East Market St., Meeker, CO 81641.

Documents pertinent to this proposal may be examined at the White River FO.

FOR FURTHER INFORMATION CONTACT:

Heather Sauls, Planning and Environmental Coordinator; telephone 970–878–3855; address White River FO (see address above); email hsauls@blm.gov. Contact Ms. Sauls to have your name added to our mailing list. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, seven days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: This document provides notice that the WRFO, Meeker, Colorado, intends to prepare an RMP amendment with an associated EA for the White River Planning Area, announces the beginning of the scoping process, and seeks public input on issues and planning criteria. The RMP amendment will address comprehensive transportation and travel management planning and will amend the 1997 WRFO RMP. At a minimum, the RMP amendment will consider designation of all public lands within

the planning area as “open areas” for off-road vehicle use, “limited areas” for off-road vehicle use, or “closed areas” to off-road vehicle use. The RMP amendment will also consider whether to further restrict other modes of transport (e.g., mechanized and non-motorized) through area allocations and allowable use decisions. The BLM will also address whether or not exceptions should be granted within closed or limited areas and provide general direction for how to address resource conflicts during future implementation-level planning. The planning area is located in Rio Blanco, Moffat and Garfield counties, Colorado, and encompasses approximately 1.5 million acres of public land.

The purpose of the public scoping process is to determine relevant issues that will influence the scope of the environmental analysis, including alternatives, and guide the planning process. BLM personnel; Federal, State and local agencies; and other stakeholders identified the following preliminary issues for the RMP amendment area:

- Is there a recreational need for an open area?
- Are there areas that should be managed with seasonal closures on motorized vehicle use to allow for non-motorized hunting experiences?
- Should the White River FO provide exceptions for off-road motorized travel in limited areas for the purposes of camping, firewood gathering, or retrieval of downed big game?
- Should the WRFO provide exceptions for physically challenged individuals to travel off-road?
- Should the WRFO limit motorized over-the-snow travel by vehicle type, season, snow-depth, or other conditions?
- Should Pike Ridge be managed as closed to motorized vehicles?
- Should travel on existing energy and mineral development access roads be restricted to authorized use?
- Should right-of-way exclusion areas also be managed as closed areas?
- What types of uses are appropriate (e.g., motorized, mechanized, horseback) within right-of-way avoidance and exclusion areas?
- Should the WRFO implement seasonal or permanent road or trail closures in Greater Sage-Grouse habitat?
- Should construction of new roads be allowed within lands with wilderness characteristics?
- What types of uses are appropriate (e.g., motorized, mechanized, horseback) within lands with wilderness characteristics?

Preliminary Planning Criteria Include

1. The RMP amendment will be limited to making land use planning decisions specific to transportation and travel management.

2. The BLM will designate all public lands within the planning area as open, limited, or closed areas to off-road vehicle use.

3. Lands addressed in the RMP amendment will be surface lands managed by the BLM and will not include split-estate lands (*i.e.*, private surface with Federal mineral estate).

4. The RMP amendment, if approved, will comply with FLPMA, NEPA, Council on Environmental Quality regulations at 40 CFR 1500–1508, Department of the Interior regulations at 43 CFR 46 and 43 CFR 1600, the BLM Land Use Planning Handbook (H–1601–1), the BLM NEPA Handbook (H–1790–1), the BLM Travel and Transportation Management Handbook (H–8342–1), and all other applicable laws and BLM policies and guidance.

5. Land use decisions in Greater Sage-Grouse habitat considered in the RMP amendment will be consistent with land use decisions in the Northwest Colorado Greater Sage-Grouse RMP amendment.

6. The RMP amendment will recognize valid existing rights.

7. The BLM will use a collaborative approach to planning.

8. The BLM will consult with Indian tribes to identify sites, areas and objectives important to their cultural and religious heritage.

9. The BLM will coordinate and communicate with State, local and tribal governments to ensure the BLM considers provisions of pertinent plans; seek to resolve inconsistencies between State, local and tribal plans; and provide ample opportunities for State, local and tribal governments to comment on the development of the amendment.

10. The BLM will address socioeconomic and Environmental Justice impacts of the alternatives.

11. Land use allocations made for Wilderness Study Areas (WSA) must be consistent with the BLM Management of WSA manual (BLM Manual 6330) and with other laws, regulations and policies related to WSA management.

12. The BLM will consider public welfare and safety when addressing fire management in the context of travel and transportation management planning.

13. The BLM will not consider creating any new special designations, such as Areas of Critical Environmental Concern, through this RMP amendment.

14. The BLM will conduct implementation (route-by-route designations) travel management

planning in a separate effort subsequent to completing this RMP amendment.

You may submit comments on issues and planning criteria in writing to the BLM at any public scoping meeting, or you may submit them to the BLM using one of the methods listed in the

ADDRESSES section above. To be most helpful, you should submit comments by the close of the 30-day scoping period or within 15 days after the last public meeting, whichever is later.

The BLM will use the NEPA public participation requirements to assist in satisfying the public involvement requirements under Section 106 of the National Historic Preservation Act (NHPA) (16 U.S.C. 470(f)) pursuant to 36 CFR 800.2(d)(3). The information about historic and cultural resources within the area potentially affected by the proposed action will assist the BLM in identifying and evaluating impacts to such resources in the context of both NEPA and Section 106 of the NHPA.

The BLM will consult with Indian tribes on a government-to-government basis in accordance with Executive Order 13175 and other policies. The BLM will give tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, due consideration. Federal, State and local agencies, along with tribes and other stakeholders that may be interested in or affected by the proposed action the BLM is evaluating, are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate in the development of the environmental analysis as a cooperating agency.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The BLM will evaluate identified issues to be addressed in the plan, and will place them into one of three categories:

1. Issues to be resolved in the RMP amendment;
2. Issues to be resolved through policy or administrative action; or
3. Issues beyond the scope of this RMP amendment.

The BLM will provide an explanation in the Draft RMP amendment/preliminary EA as to why an issue was placed in category two or three. The BLM also encourages the public to help

identify any management questions and concerns that should be addressed in the plan. The BLM will work collaboratively with interested parties to identify the management decisions that are best suited to local, regional, and national needs and concerns.

The BLM will use an interdisciplinary approach to develop the plan amendment in order to consider the variety of resource issues and concerns identified. Specialists with expertise in the following disciplines will be involved in the planning process: Rangeland management, vegetation, riparian and wetlands, invasive and noxious weeds, minerals and geology, forestry, outdoor recreation, visual resource management, cultural resources and Native American concerns, paleontology, wildlife and fisheries, threatened and endangered species, lands and realty, hydrology, soils, wild horses, fire ecology and management, sociology and economics, public safety, law enforcement, and geographic information systems.

Authority: 40 CFR 1501.7 and 43 CFR 1610.2.

Ruth Welch,

BLM Colorado State Director.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLES962000 L14200000.B0000 15X]

Eastern States: Filing of Plats of Survey

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of filing of plats of survey; Wisconsin.

SUMMARY: The Bureau of Land Management (BLM) will officially file the plats of survey of the lands described below in the BLM-Eastern States Office, Washington, DC at least 30 calendar days from the date of publication in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Bureau of Land Management, Eastern States Office, 20 M Street SE., Washington, DC 20003. Attn: Cadastral Survey. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the

above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: These surveys were requested by the Bureau of Indian Affairs.

The lands surveyed are:

Fourth Principal Meridian, Wisconsin

T. 30 N., R. 16 E.

The plat of survey represents the Dependent Resurvey of a portion of the south boundary, a portion of the subdivisional lines, and a portion of the certified survey map recorded on Page 149, volume 2, in section 26, the retracement of a portion of the eastern right of way of county road "AA" in section 35, the survey of the subdivision of sections 25, 26, 35, and 36 and the western boundary of document No. 310, recorded on Page 31, volume 3, in section 35, and the informational traverse of the northern shore and a portion of the eastern shore of Vejo Lake in section 35 in Township 30 North, Range 16 East, of the 4th Principal Meridian, in the State of Wisconsin, and was accepted September 16, 2015.

Fourth Principal Meridian, Wisconsin

T. 51 N., R. 3 W.

The plat of survey represents the retracement of a portion of Blocks 4 and 5 of Buffalo's Subdivision and the retracement, resurvey and monumentation of specified lot and block corners and right of way intersection points, in Blocks 1, 2, and 3 of Buffalo's Subdivision, lands held in trust for the Red Cliff Band of Lake Superior Chippewa Indians in Government Lot 3, Section 31 of Township 51 North, Range 3 West, 4th Principle Meridian, in the State of Wisconsin, and was accepted September 1, 2015.

We will place a copy of the plats we described in the open files. They will be available to the public as a matter of information.

If BLM receives a protest against these surveys, as shown on the plats, prior to the date of the official filing, we will stay the filing pending our consideration of the protest.

We will not officially file the plats until the day after we have accepted or dismissed all protests and they have become final, including decisions on appeals.

Dated: October 7, 2015.

Dominica VanKoten,

Chief Cadastral Surveyor.

BILLING CODE P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLCO923000 L14400000.FR0000]

Initial Classification of Public Lands and Minerals for State Indemnity Selection, Colorado

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The Colorado State Board of Land Commissioners (State) has filed a petition for classification and application to obtain public lands and mineral estate in lieu of lands to which the State was entitled but did not receive under its Statehood Act. The State did not receive title because the lands had been included in an Indian Reservation, Forest Reserve, National Forest, or other encumbrance at the time of statehood. Under the Taylor Grazing Act of 1934, the Bureau of Land Management (BLM) may classify sufficient public lands and/or minerals in Colorado for title transfer to the State to satisfy this obligation.

DATES: Interested parties may submit written comments regarding the classification of lands and minerals on or before November 16, 2015. Persons asserting a claim to or interest in the lands or mineral estate described in this notice will find the requirements for filing such claims in the **SUPPLEMENTARY INFORMATION** section.

ADDRESSES: Written comments concerning this Notice should be addressed to: State Director, Bureau of Land Management, Colorado State Office, 2850 Youngfield Street, Lakewood, CO 80215-7093.

FOR FURTHER INFORMATION CONTACT: John D. Beck, Chief, Branch of Lands and Realty; telephone 303-239-3882; email jbeck@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: Sections 2275 and 2276 of the Revised Statutes, as amended (43 U.S.C. 851 and 852), provide authority for Colorado to receive title to public lands in lieu of lands to which it was entitled under Section 7 of its statehood act of March 3, 1875, where it did not receive title because those lands had otherwise been encumbered.

Section 7 of the Taylor Grazing Act of June 8, 1934, clarified by the Supreme Court in *Andrus v. Utah*, 446 U.S. 500 (1980), requires that such public lands and/or minerals identified for proposed transfers out of Federal ownership under this authority must first be classified. The BLM is classifying these lands and minerals pursuant to 43 CFR 2400 and Section 7 of the Act of June 8, 1934 (48 Stat. 1272, as amended), 43 U.S.C. 315(f). The final acres conveyed will be determined after further environmental analysis is completed, will be based on a dollar value, and may be less than the aggregate acreage described in this notice.

All persons who wish to submit comments on a motion of any protestant with this initial classification may present their views by any means shown under the **ADDRESSES** section above.

The BLM Colorado State Director will evaluate any adverse comment and issue a notice of determination to proceed with, modify, or cancel the proposed action. In the absence of any action by the BLM State Director, this initial classification action will become the final determination of the Department of the Interior.

The BLM will review any comments and may sustain, vacate, or modify this realty action. In the absence of any adverse comments, the classification of the land described in this notice will become effective on December 15, 2015.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. As provided by 43 CFR 2462.1, the BLM Colorado State Director will schedule a public hearing. The BLM will announce the public hearing date 15 days prior to the hearing.

The lands and minerals included within this initial classification are in Chaffee, Custer, Dolores, Eagle, El Paso, Garfield, Grand, Huerfano, Jackson, Kiowa, La Plata, Moffat, Montezuma, Ouray, Park, Pueblo, Routt, San Miguel and Weld counties, Colorado, and are described as follows:

 Sec. 12, those portions of W $\frac{1}{2}$ lying west
 of Routt County Road 80.
 The areas described aggregate 6,354 acres.

If and when the selection is approved and certified to the State, the Clear List may either be subject to or reserve any rights-of-way granted by the BLM. Oil and gas, geothermal, or other leases issued under the authority of the Mineral Leasing Act of 1920 (30 U.S.C 181 *et seq.*) will remain in effect under the terms and conditions of the leases. Pursuant to 43 CFR 2462.2, publication of this notice of initial classification in the **Federal Register** segregates the above described lands from all forms of disposal under the public land laws, including the mining laws, except for the form of land disposal specified in this notice of initial classification. However, this notice does not alter the applicability of the public land laws governing the use of the lands under lease, license, or permit, or governing the disposal of their mineral and vegetative resources, other than under the mining laws.

The segregative effect of a classification for this form of disposal will terminate in one of the following ways:

- (1) Disposal of the lands.
- (2) Publication in the **Federal Register** of a notice of termination of the classification.
- (3) An Act of Congress.

Authority: 43 CFR 2400.

Ruth Welch,

BLM Colorado State Director.

BILLING CODE 4310-JB-P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS-WASO-NAGPRA-19126;
 PPWOCRADN0-PCU00RP14.R50000]

Notice of Inventory Completion: U.S. Department of the Interior, National Park Service, Natchez Trace Parkway, Tupelo, MS

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: The U.S. Department of the Interior, National Park Service, Natchez Trace Parkway has completed an inventory of human remains and associated funerary objects, in consultation with the appropriate Indian tribes or Native Hawaiian organizations, and has determined that there is no cultural affiliation between the human remains and associated funerary objects and any present-day Indian tribes or Native Hawaiian organizations. Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request to Natchez Trace Parkway. If no additional requestors come forward, transfer of control of the human remains and associated funerary objects to the Indian tribes or Native Hawaiian organizations stated in this notice may proceed.

DATES: Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to Natchez Trace Parkway at the address in this notice by November 16, 2015.

ADDRESSES: Mary Risser, Superintendent, Natchez Trace Parkway, 2680 Natchez Trace Parkway, Tupelo, MS 38804-9715, telephone (662) 680-4005, email mary_risser@nps.gov.

SUPPLEMENTARY INFORMATION: Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains and associated funerary objects under the control of the U.S. Department of the Interior, National Park Service, Natchez Trace Parkway, Tupelo, MS. The human remains and associated funerary objects were removed from Lee, Prentiss, and Tishomingo Counties, MS.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3) and 43 CFR 10.11(d). The determinations in this notice are the sole responsibility of the Superintendent, Natchez Trace Parkway.

Consultation

A detailed assessment of the human remains was made by Natchez Trace Parkway professional staff in consultation with representatives of the

Alabama-Coushatta Tribe of Texas, The Chickasaw Nation, and the United Keetoowah Band of Cherokee Indians in Oklahoma.

History and Description of the Remains

On an unknown date, human remains representing, at minimum, three individuals, were removed from the Citizens Bank Property site in Lee County, MS. The exact details of removal are unknown, but documentation indicates that the remains were likely removed by Natchez Trace naturalist Francis Elmore. No known individuals were identified. No associated funerary objects are present.

In 1940, human remains representing, at minimum, four individuals were removed from the Carr site in Lee County, MS, during Works Progress Administration (WPA) excavations. The site is dated to the Late Woodland-Early Mississippian period (circa 1000 B.C.–A.D. 1200). No known individuals were identified. The 287 associated funerary objects are 140 Mulberry Creek vessel fragments, 3 Furrs Cord Marked vessel fragments, 1 Mississippi Plain vessel fragment, 8 Baytown Plain vessel fragments, 1 Baldwin Plain vessel fragment, 6 untyped vessel fragments, 1 piece of daub, 5 flakes, 3 pieces of shatter, 1 piece of ochre, 2 flake tools, 1 scraper, 2 bifaces, 1 core tool, 2 pieces of sandstone, 29 deer bones, 1 turkey bone, 6 box turtle bones, 26 mammal bones, and 48 animal bones.

In 1940, human remains representing, at minimum, one individual were removed from Jennings Dig Number One in Lee County, MS, during WPA excavations. The site is dated to the Miller I–II periods (100 B.C.–A.D. 500). No known individuals were identified. The 22 associated funerary objects are 1 biface, 1 piece of shatter, 1 concretion, 3 Baytown Plain vessel fragments, 1 untyped vessel fragment, and 15 fossil fragments.

In 1940, human remains representing, at minimum, 35 individuals were removed from Miller Mounds in Lee County, MS, during WPA excavations. The site is dated to the Woodland period (A.D. 500–1000). No known individuals were identified. The 39 associated funerary objects are 4 Saltillo Fabric Marked vessel fragments, 3 Saltillo Plain vessel fragments, 2 Baldwin Plain vessel fragments, 5 untyped vessel fragments, 7 projectile points, 1 Lowe Cluster projectile point, 3 bifaces, 4 flakes, 1 platform pipe, 1 busycon shell, 1 chert knife, 1 piece of shatter, 1 unmodified stone, 2 flake tools, 2 Baldwin Plain bowls, and 1 Furrs Cord Marked jar.

In 1947–1951, human remains representing, at minimum, one individual were removed from the Chewapa site in Lee County, MS, by an unknown individual who gave the remains to the WPA survey in the area. The site is dated to the Miller III/Late Woodland period (circa A.D. 500–1200). No known individuals were identified. No associated funerary objects are present.

In 1948, human remains representing, at minimum, one individual were removed from Headquarters Mound in Lee County, MS, during excavation and survey. The site dates to the Late Woodland period (circa A.D. 500–1000). No known individuals were identified. No associated funerary objects are present.

In 1948, human remains representing, at minimum, three individuals were removed from Old Rodgers Place Number One in Lee County, MS, during a WPA survey. The site is prehistoric Native American, but an exact date is unknown. No known individuals were identified. No associated funerary objects are present.

In 1949, human remains representing, at minimum, one individual, were removed from the Coonewah Creek site in Lee County, MS, during a site survey. The site dates to the Miller III/Late Woodland Period (circa A.D. 500–1200). No known individuals were identified. No associated funerary objects are present.

In 1965, human remains representing, at minimum, three individuals were removed from Bear Creek Temple Mound in Tishomingo County, MS, during archeological investigations. The site dates to the Late Mississippian period (circa A.D. 1400–1600). No known individuals were identified. The three associated funerary objects are one untyped vessel fragment and two deer bones.

In 1972, human remains representing, at minimum, six individuals were removed from Pharr Mounds in Prentiss County, MS, during excavations of the village area and four mounds. The site dates to the Miller I–II phases of the Middle Woodland period (circa A.D. 0–500). No known individuals were identified. The 14 associated funerary objects are 7 Saltillo Fabric vessel fragments, 6 Baldwin Plain vessel fragments, and 1 untyped vessel fragment.

In 1978, human remains representing, at minimum, two individuals were removed from Pharr Mounds in Prentiss County, MS. The remains were removed during excavations to investigate the impact of construction near the site. No

known individuals were identified. No associated funerary objects are present.

Cultural affiliation of the human remains described above could not be determined due to uncertain burial provenience, lack of culturally affiliated historic artifacts, and/or the antiquity of the remains.

Determinations Made by Natchez Trace Parkway

Officials of Natchez Trace Parkway have determined that:

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice are Native American based on archeological context.

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of 60 individuals of Native American ancestry.

- Pursuant to 25 U.S.C. 3001(3)(A), the 365 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony. The National Park Service intends to convey the associated funerary objects to the tribes pursuant to 16 U.S.C. 18f–2.

- Pursuant to 25 U.S.C. 3001(2), a relationship of shared group identity cannot be reasonably traced between the Native American human remains and associated funerary objects and any present-day Indian tribe.

- Treaties, Acts of Congress, or Executive Orders, indicate that the land from which the Native American human remains and associated funerary objects were removed is the aboriginal land of The Chickasaw Nation.

- Pursuant to 43 CFR 10.11(c)(1), the disposition of the human remains and associated funerary objects may be to The Chickasaw Nation.

Additional Requestors and Disposition

Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to Mary Risser, Superintendent, Natchez Trace Parkway, 2680 Natchez Trace Parkway, Tupelo, MS 38804–9715, telephone (662) 680–4005, email mary_risser@nps.gov, by November 16, 2015. After that date, if no additional requestors have come forward, transfer of control of the human remains and associated funerary objects to The Chickasaw Nation may proceed.

Natchez Trace Parkway is responsible for notifying the Alabama-Coushatta Tribe of Texas, The Chickasaw Nation,

and the United Keetoowah Band of Cherokee Indians in Oklahoma that this notice has been published.

Dated: August 25, 2015.

Melanie O'Brien,

Manager, National NAGPRA Program.

BILLING CODE 4312–50–P

DEPARTMENT OF THE INTERIOR

Bureau of Ocean Energy Management

[OMB Number 1010—New; MMAA104000]

Information Collection: Atlantic Offshore Wind Energy Development—Public Attitudes, Values, and Implications for Tourism and Recreation; Submitted for OMB Review; Comment Request

ACTION: 30-day notice.

SUMMARY: To comply with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Ocean Energy Management (BOEM) is notifying the public that we have submitted an information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval. The ICR concerns a new survey on the potential impacts of Atlantic offshore wind energy development on coastal tourism and recreation. This notice provides the public a second opportunity to comment on the paperwork burden of this collection.

DATES: Submit written comments by November 16, 2015.

ADDRESSES: Submit comments on this ICR to the Desk Officer for the Department of the Interior at OMB–OIRA at (202) 395–5806 (fax) or OIRA_submission@omb.eop.gov (email). Please provide a copy of your comments to the BOEM Information Collection Clearance Officer, Kye Mason, Bureau of Ocean Energy Management, 45600 Woodland Road, Sterling, Virginia 20166 (mail) or kye.mason@boem.gov (email). Please reference ICR 1010–New in your comment and include your name and return address.

FOR FURTHER INFORMATION CONTACT: Kye Mason, Office of Policy, Regulations, and Analysis at kye.mason@boem.gov (email) or (703) 787–1025 (phone). You may review the ICR online at <http://www.reginfo.gov>. Follow the instructions to review Department of the Interior collections under review by OMB.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 1010—New.

Title: Atlantic Offshore Wind Energy Development: Public Attitudes, Values,

and Implications for Tourism and Recreation.

Abstract: Under the Outer Continental Shelf (OCS) Lands Act (43 U.S.C. 1331–1356), BOEM is responsible for conducting OCS lease sales and for monitoring and mitigating adverse impacts that might be associated with offshore energy development. The Energy Policy Act of 2005 (42 U.S.C. 13201 *et seq.*) authorizes the Secretary of the Interior to issue leases, easements, and rights-of-way for offshore renewable energy activities in Federal waters, such as offshore wind power development. In fulfilling these responsibilities, BOEM must take into consideration the impacts of OCS activities on recreational resources. While we have seen significant interest in offshore wind power development in recent years, the absence of baseline data for

specific areas along the Atlantic coast and the absence of a broader regional study on tourism and wind power have made it difficult to identify and analyze the potential impacts of offshore wind development on coastal tourism and recreation. Additional information on these potential impacts will contribute to better planning and decision making for BOEM and other stakeholders, including other Federal agencies and State and local governments.

Under a cooperative agreement awarded by the Department of the Interior, the University of Delaware will conduct a survey to assess the impact of offshore wind power projects on coastal recreation and tourism from Massachusetts to South Carolina. The survey will gauge public perceptions of offshore wind energy projects and how development could impact future

recreation and visitation choices. BOEM will use this information, along with other economic and environmental information, in our offshore wind decision making process and marine spatial planning efforts. States and coastal communities will use the information for local coastal planning efforts.

The data collection will be done by an Internet-based survey. We decided to use an internet-based approach in part to improve the images respondents are shown. The internet also allows us to easily accommodate different skip patterns and variation in wind projects shown to respondents.

Frequency: One time.

Description of Respondents: Individuals.

TOTAL ANNUAL BURDEN HOURS

Activity	Annual number of responses	Average completion time per person (minutes)	Total annual burden hours
General Population Sample			
Non-respondents & Dropouts	88	2	3
Respondents	500	15	125
Total	588	17	128
Beachgoer-Only Sample			
Non-respondents & Dropouts	3,778	3	189
Respondents	1,600	15	400
Total	5,378	18	589
Overall Total	5,966	717

Estimated Reporting and Recordkeeping Non-hour Cost Burden: We have not identified any non-hour cost burdens for this collection.

Public Disclosure Statement: The PRA (44 U.S.C. 3501, *et seq.*) provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

Comments: We invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our burden estimates;

- Ways to enhance the quality, utility, and clarity of the information to be collected; and

- Ways to minimize the burden on respondents.

To comply with the public consultation process, on July 1, 2014, BOEM published a **Federal Register** notice (79 FR 37348) announcing that we would submit this ICR to OMB for approval. This notice provided the required 60-day comment period. We received comments from one person.

Comment: The location of residence (primary or secondary) should be given as a zip code. The zip code then determines the city, State, and distance to beach. There is no need for the respondent to guess what the distance is.

Response: The distance question has been deleted.

Comment: Offshore wind farms is a mature technology. A simple google image search shows a variety of real photos of wind farms off Denmark and the UK. Consider the use of real pictures in place of simulated offshore wind turbines.

Response: We are particularly interested in the impact on beach use and tourism of wind projects at different distances offshore. It is not feasible to find pictures of existing projects at different distances while keeping other features constant (*e.g.*, number of turbines, size of turbines, beach appearance, production quality for presentation on the Internet, etc.). The simulations allow us to “move wind projects” to different distances holding all other features constant. We also are interested in specific turbine sizes (larger than most of the existing ones) and turbine numbers (also larger than

most existing projects). We also want to use beaches on the Atlantic coast for our shots. The coastlines in Europe where turbines exist are very different from the coastline in the United States.

Comment: The geology of the Atlantic OCS indicates it is a natural gas province. For example in the 1970s, there was a natural gas discovery off the coast of Atlantic City, New Jersey. Natural gas production accidents do not yield oil and tar balls. A better hypothetical would be beach closures from hurricanes and nor'easters. The respondents should be familiar with these kinds of events.

Response: These hypothetical beach closure questions have been dropped altogether.

Comment: There is a question asking for personal annual income from working. There are many who have considerable income without working. Is it the intent not to capture this information? They have the time and the resources to be frequent ocean beach users.

Response: The income question has been changed to read: "Which category is closest to your personal annual income before taxes?"

Comment: The stratum sample sizes for the survey gives the appearance of being arbitrary. Consider that New Jersey & Delaware has a stratum of population of 8.8 million with a sample size of 200 participants. That works out to 22.73 participants per million. Compare to Pennsylvania 10.4 million population with 150 participants which is 14.42 participants per million. So citizens of Delaware are about 50% more likely to be selected as compared to Pennsylvania citizens. For full disclosure the University of Delaware is conducting the survey and I am a resident of Pennsylvania who is also a property owner in New Jersey. Further someone in Memphis, TN, is part of the survey universe, however someone living in Vermont is excluded. I have family members who live in Vermont and frequently visit the Jersey Shore.

Response: Based on this comment and comments from others we have redesigned the sampling strategy to include two separate samples: A General Population Sample and an Oversample Sample. The former is a random draw from all individuals in the 20 states in our region (now including Vermont, New Hampshire, Maine, and Georgia) and the latter is a random draw from all beachgoers in the same states. Since both of these samples are randomly drawn, the representation is proportional to state populations.

Comment: A good property of selected stratum is to have homogeneity within

the stratum (http://en.wikipedia.org/wiki/Stratified_sampling). The use of New York state as a stratum fails this principal. There is Long Island which is the beach community. New York City a major city with near by ocean beaches. Up state New York has ocean beaches which are more distant. Does not make sense to put Hampton's and Buffalo in the same stratum!

Response: See comment to previous question. We no longer stratify by state.

Comment: The total sample size for the participants of 1,400 is reasonable for obtaining summary insights. The data collection includes attributes, such as distance to the beach, education, number of children, employment status and income. If this survey has a goal of obtaining insights at this kind of granular level then the sample size will need to be adjusted to meet these goals.

Response: Our budget limits us to the sample size we are using.

Comment: The statistical survey design should follow Dillman's Tailored Design Method (http://www.amazon.com/Internet-Phone-Mail-Mixed-Mode-Surveys/dp/1118456149/ref=dp_ob_title_bk). This is the approach that is being used by BOEM in Alaska in the Arctic Communities Survey.

Response: Our survey follows Dillman's method fairly closely. It may depart in a few instances based on our own judgment calls, but it is largely based on Dillman.

Comment: The commenter made the following recommendations:

- Establish clear goals for the information collection, which then drives the design.
- Use Dillman's Tailored Design Method.
- Create strata that are approximately homogeneous. Suggested strata: Near Ocean Beaches (SC coast, Outer Banks, Tidewater VA, Delmarva, Jersey shore, Long Island, Rhode Island, Cape Cod), Metro Areas (Washington, Baltimore, Philadelphia, New York City, Boston metro areas), Inland (Other parts of SC, NC, VA, MD, Central PA, NJ, CT, MA), Distant Areas (OH, WV, TN, KY, Western PA, Upstate NY, VT, NH).
- Use zip codes for location of respondents.
- Publish the raw data so it can be independently analyzed.

Response: We addressed most of the recommendations in our responses. As noted, our survey was designed with a specific economic model in mind—a travel cost model; we use Dillman's approach fairly closely, but not always; we no longer stratify by geography; and we will use zip codes for location of the

respondents. In addition, we plan to publish the raw data.

Public Availability of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: October 1, 2015.

Deanna Meyer-Pietruszka,

Chief, Office of Policy, Regulations, and Analysis.

BILLING CODE 4310-MR-P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337-TA-956]

Certain Recombinant Factor VIII Products; Commission Determination Not To Review an Initial Determination Granting an Unopposed Motion To Amend the Complaint and Notice of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination ("ID") (Order No. 10) granting an unopposed motion to add as complainants Baxalta, Inc. of Deerfield, Illinois; Baxalta US Inc. of Deerfield, Illinois; and Baxalta GmbH of Glattpark, Switzerland.

FOR FURTHER INFORMATION CONTACT: Lucy Grace D. Noyola, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone 202-205-3438. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone 202-205-2000. General information concerning the Commission may also be obtained by accessing its Internet server (<http://www.usitc.gov>). The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at <http://edis.usitc.gov>. Hearing-impaired

persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202-205-1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on May 22, 2015, based on a complaint filed by Baxter International Inc. of Deerfield, Illinois; Baxter Healthcare Corporation of Deerfield, Illinois; and Baxter Healthcare SA of Glattpark, Switzerland ("Baxter"). 80 FR 29745 (May 22, 2015). The complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain recombinant factor VIII products by reason of infringement of certain claims of U.S. Patent Nos. 6,100,061; 6,936,441; and 8,084,252. *Id.* The notice of investigation named Novo Nordisk A/S of Bagsvaerd, Denmark and Novo Nordisk Inc. of Plainsboro, New Jersey ("Novo Nordisk") as respondents. *Id.* at 29746. The Office of Unfair Import Investigations ("OUII") also was named as a party to the investigation. *Id.*

On September 3, 2015, Baxter filed a motion to amend the complaint and notice of investigation to add Baxalta, Inc., Baxalta US Inc., and Baxalta GmbH ("the Baxalta entities") as complainants. Neither Novo Nordisk nor OUII opposed the motion.

On September 16, 2015, the presiding administrative law judge ("ALJ") issued an ID, Order No. 10, granting the motion to amend the complaint and notice of investigation. The ALJ found good cause for the amendment. The ALJ found the amendment would not prejudice the parties because (1) they have been aware of a corporate transition involving Baxter and the Baxalta entities since the service of the complaint and the notice of investigation and (2) Baxter has been responding to discovery requests as though they were directed to Baxter and the Baxalta entities and will continue to do so. The ALJ found that having the correct parties in the investigation would simplify and streamline the discovery process. No petitions for review of the ID were filed.

The Commission has determined not to review the subject ID.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: October 8, 2015.

Lisa R. Barton,

Secretary to the Commission.

[FR Doc. 2015-26295 Filed 10-15-15; 8:45 am]

BILLING CODE 7020-02-P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337-TA-958]

Certain Automated Teller Machines and Point of Sale Devices and Associated Software Thereof; Notice of Commission Determination Not To Review an Initial Determination Granting Complainant's Motion To Amend the Complaint and the Notice of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination ("ID") (Order No. 9) issued by the presiding administrative law judge ("ALJ"), granting the complainant's unopposed motion to amend the complaint and notice of investigation to change the corporate name of the complainant.

FOR FURTHER INFORMATION CONTACT: Robert Needham, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 708-5468. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205-2000. General information concerning the Commission may also be obtained by accessing its Internet server (<http://www.usitc.gov>). The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at <http://edis.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205-1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on June 9, 2015, based on a complaint filed by Global Cash Access, Inc. ("Complainant"). 80 FR 32605-06. The complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 ("section 337"), in the importation into the

United States, the sale for importation, and the sale within the United States after importation of certain automated teller machines, point of sale devices, and associated software that infringes claims 1-3, 5-7, and 9 of U.S. Patent No. 6,081,792. *Id.* The Commission's notice of investigation named as respondents NRT Technology Corp. of Toronto, Canada and NRT Technologies, Inc., of Las Vegas, Nevada. *Id.* at 32606. The Office of Unfair Import Investigations (OUII) is a party to the investigation. *Id.*

On August 26, 2015, Complainant filed an unopposed motion to amend the complaint and the notice of investigation to change the name of Complainant to Everi Payments Inc. to reflect a corporate name change. Complainant asserts that good cause exists for the amendments.

On September 15, 2015, the ALJ issued the subject ID, granting Complainant's motion to amend the complaint and the notice of investigation. The ALJ found good cause for granting the motion because it is early in the investigation and the amendments will not affect discovery or any issue to be litigated. No petitions for review of the ID were filed.

The Commission has determined not to review the subject ID.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: October 9, 2015.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020-02-P

DEPARTMENT OF JUSTICE

[OMB Number 1110-0058]

Agency Information Collection Activities: Proposed eCollection, eComments Requested; Revision of a Currently Approved Collection; National Incident-Based Reporting System (NIBRS)

AGENCY: Federal Bureau of Investigation, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice, Federal Bureau of Investigation, Criminal Justice Information Services Division has submitted the following information collection request to the

Office of Management and Budget (OMB) for review and clearance in accordance with established review procedures of the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** 80 *FR* 48567, on August 13, 2015, allowing for a 60 day comment period.

DATES: The purpose of this notice is to allow for an additional 30 days for public comment until November 16, 2015.

FOR FURTHER INFORMATION CONTACT:

Written comments and/or suggestions regarding the items contained in this notice, especially the estimated public burden and associated response time, should be directed to Mr. Samuel Berhanu, Unit Chief, Federal Bureau of Investigation, Criminal Justice Information Services (CJIS) Division, Module E-3, 1000 Custer Hollow Road, Clarksburg, West Virginia 26306; facsimile (304) 625-3566. Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to OIRA_submissions@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Comments should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques of other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Revision of a currently approved collection.

(2) *The Title of the Form/Collection:* National Incident-Based Reporting System

(3) *The agency form number, if any, and the applicable component of the department sponsoring the collection:* Form Number: 1110-0058 Sponsor: Criminal Justice Information Services Division, Federal Bureau of Investigation, Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: City, county, state, tribal, and federal law enforcement agencies.

Abstract: Under U.S. Code, Title 28, Section 534, Acquisition, Preservation, and Exchange of Identification Records; Appointment of Officials, June 11, 1930; Public Law 109-177 (H.R. 3199), March 9, 2006, USA Patriot Improvement and Reauthorization Act of 2005; Public Law 110-457, Title II, Section 237(a), (b), December 23, 2008, the William Wilberforce Trafficking Victims Reauthorization Act of 2008, and Matthew Shepard Hate Crimes Prevention Act, April 28, 2009, this collection requests incident data from city, county, state, tribal and federal law enforcement agencies in order for the FBI UCR Program to serve as the national clearinghouse for the collection and dissemination of crime data and to publish these statistics in Crime in the United States, Hate Crime Statistics, and Law Enforcement Officers Killed and Assaulted. NIBRS is an incident-based reporting system in which law enforcement collects data on each crime occurrence. Designed to be generated as a byproduct of local, state, and federal automated records systems, currently, the NIBRS collects data on each incident and arrest within 23 crime categories made up of 49 specific crimes called Group A offenses. For each of the offenses coming to the attention of law enforcement, various facts about the crime are collected. In addition to the Group A offenses, there are 10 Group B offense categories for which only arrest data are reported. The most significant difference between NIBRS and the traditional Summary Reporting System (SRS) is the degree of detail in reporting. In reporting data via the traditional SRS, law enforcement agencies tally the occurrences of eight Part I crimes. NIBRS is capable of producing more detailed, accurate, and meaningful data because data are collected about when and where crime takes place, what form

it takes, and the characteristics of its victims and perpetrators. Although most of the general concepts for collecting, scoring, and reporting UCR data in the SRS apply in the NIBRS, such as jurisdictional rules, there are some important differences in the two systems. The most notable differences that give the NIBRS an advantage over the SRS are: No Hierarchy Rule, in a multiple-offense incident NIBRS reports every offense occurring during the incident where SRS would report just the most serious offense and the lower-listed offense would not be reported; NIBRS provides revised, expanded, and new offense definitions; NIBRS provides more specificity in reporting offenses, using NIBRS offense and arrest data for 23 Group A offense categories can be reported while in the SRS eight Part I offenses can be reported; NIBRS can distinguish between attempted and completed Group A crimes; NIBRS also provides crimes against society while the SRS does not; the victim-to-offender data, circumstance reporting, drug related offenses, offenders suspected use of drugs, and computer crime is expanded in NIBRS; the NIBRS update reports are directly tied to the original incident submitted. The Group A offense categories include arson, assault offenses, bribery, burglary/breaking and entering, counterfeiting/forgery, destruction/damage/vandalism of property, drug/narcotic offenses, embezzlement, extortion/blackmail, fraud offenses, gambling offenses, homicide offenses, human trafficking, kidnapping/abduction, larceny/theft offenses, motor vehicle theft, pornography/obscene material, prostitution offenses, robbery, sex offenses, sex offenses/nonforcible, stolen property offenses, and weapon law violations. The Group B offense categories include bad checks, curfew/loitering/vagrancy violations, disorderly conduct, DUI, drunkenness, family offenses/nonviolent, liquor law violations, peeping tom, trespass of real property, and all other offenses.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* There are approximately 6,420 law enforcement agencies. The amount of time estimated for an average respondent to respond is two hours monthly which totals to an annual hour burden of 24 hours. The 2 hours to respond is the time it takes for the agencies records management system (RMS) to download the NIBRS and send to the FBI. By design, law enforcement agencies generate NIBRS data as a by-product of their RMS. Therefore, a law

enforcement agency builds its system to suit its own individual needs, including all of the information required for administration and operation; then forwards only the data required by the NIBRS to participate in the FBI UCR Program.

(6) *An estimate of the total public burden (in hours) associated with this collection:* There are approximately 154,080 hours, annual burden, associated with this information collection. The total number of respondents is 6,420 with a total annual hour burden of 24 hours, (6,420 × 24 = 154,080 total annual hours).

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE., Room 3E.405B, Washington, DC 20530.

Dated: October 13, 2015.

Jerri Murray,

Department Clearance Officer PRA, United States Department of Justice.

BILLING CODE 4410-02-P

DEPARTMENT OF JUSTICE

[OMB Number 1110-0048]

Agency Information Collection Activities; Proposed eCollection, eComments Requested; Extension of a Currently Approved Collection Cargo Theft Incident Report

AGENCY: Federal Bureau of Investigation, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice, Federal Bureau of Investigation, Criminal Justice Information Services (CJIS) Division will be submitting the following Information Collection Request to the Office of Management and Budget (OMB) for review and clearance in accordance with the established review procedures of the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** at 80 FR 48574, on August 13, 2015, allowing for a 60 day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until November 16, 2015.

FOR FURTHER INFORMATION CONTACT: Written comments and/or suggestions

regarding the items contained in this notice, especially the estimated public burden and associated response time, should be directed to Mr. Samuel Berhanu, Unit Chief, Federal Bureau of Investigation, CJIS Division, Module E-3, 1000 Custer Hollow Road, Clarksburg, West Virginia 26306; facsimile (304) 625-3566. Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to *OIRA_submissions@omb.eop.gov*.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Comments should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques of other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *The Title of the Form/Collection:* Cargo Theft Incident Report.

(3) *The agency form number, if any, and the applicable component of the department sponsoring the collection:* Form Number: 1110-0048. Sponsor: Criminal Justice Information Services Division, Federal Bureau of Investigation, Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: City, county, state, federal, and tribal law enforcement agencies. Abstract: This collection is needed to collect information on cargo theft incidents committed throughout the United States.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* There are approximately 18,415 law enforcement agency respondents that submit monthly for a total of 220,980 responses with an estimated response time of 5 minutes per response.

(6) *An estimate of the total public burden (in hours) associated with this collection:* There are approximately 18,415 hours, annual burden, associated with this information collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE., Room 3E.405B, Washington, DC 20530.

Dated: October 13, 2015.

Jerri Murray,

Department Clearance Officer for PRA, United States Department of Justice.

BILLING CODE 4410-02-P

DEPARTMENT OF LABOR

Employment and Training Administration

Comment Request for Information Collection for the Self-Employment Training (SET) Demonstration Evaluation (SET Evaluation); Extension Request Without Change to an Existing Collection

AGENCY: Employment and Training Administration (ETA); Labor.

ACTION: Notice.

SUMMARY: The Department of Labor (Department), as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA) [44 U.S.C. 3506(c)(2)(A)]. This program helps to ensure that required data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

The Department notes that a Federal agency cannot conduct or sponsor a collection of information unless it is approved by the Office of Management

and Budget (OMB) under the PRA and displays a currently valid OMB control number, and the public is not required to respond to a collection of information unless it displays a currently valid OMB control number. Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (see 5 CFR 1320.5(a) and 1320.6).

This information collection request (ICR) is to obtain extended clearance for Mathematica Policy Research, under contract to ETA, to administer the follow-up survey for the SET Evaluation. A 20-month extension is requested to the data-collection period for the follow-up survey.

DATES: Written comments must be submitted to the office listed in the addressee section below on or before December 15, 2015.

ADDRESSES: Send comments to Janet Javar, U.S. Department of Labor, Room S-2312, 200 Constitution Avenue NW., Washington, DC 20210. Telephone number: (202) 693-5954 (this is not a toll-free number). Email address: javar.janet.o@dol.gov. Fax number: (202) 693-5961 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background: ETA seeks to implement and rigorously evaluate the effectiveness of innovative strategies for promoting employment based on the authority granted to the agency under the Workforce Innovation and Opportunity Act and, formerly, the Workforce Investment Act. The SET Demonstration focuses specifically on self-employment as a reemployment strategy for dislocated workers. The demonstration is premised on the hypotheses that: (1) Self-employment could be a viable strategy for dislocated workers to become reemployed; (2) starting a small business is difficult, especially for individuals who lack business expertise or access to start-up capital; and (3) dislocated workers might experience difficulties locating and accessing training and counseling services that could effectively prepare them for self-employment via the existing workforce infrastructure.

The SET Demonstration will implement a new service delivery model that seeks to better connect dislocated workers to self-employment services. This approach differs from previous large-scale demonstration programs, which have provided mixed evidence on the effectiveness of self-employment services on earnings and

employment, because the SET Demonstration will: (1) Rely on self-employment advisors to offer more intensive business development counseling services than prior demonstrations have offered; and (2) concentrate on dislocated workers who have fairly limited traditional employment prospects but are well-positioned to benefit from self-employment counseling and training. The SET Evaluation will assess the effectiveness of the SET Demonstration model.

To achieve the study's target sample size, enrollment in the SET program began in July 2013 and will continue through December 2015. About 3,000 eligible applicants will be randomly assigned to either receive SET services or to a control group. All 3,000 applicants are asked to complete the 18-month follow-up survey.

An initial clearance request for the SET Evaluation was approved by OMB in January 2013 (ICR reference number 201209-1205-001; OMB control number 1205-0505). Clearance covered the study's consent and application forms, the program participation records, the evaluation team's site visit and case study protocols, and the study participant follow-up survey. This data collection was approved with an expiration date of January 31, 2016 and an annualized total allowable burden of 5,344 hours.

A subsequent non-substantive change request related to the follow-up survey (ICR reference number 201408-1205-005) was approved by OMB in October 2014. This non-substantive request sought to preserve the most critical outcome measures while shortening instrument length to reduce respondent burden. The non-substantive change did not affect any data collection efforts other than the follow-up survey. As with the originally approved OMB package, all 3,000 applicants would be asked to complete the survey, but the shortening of the instrument will reduce the total annualized burden across the entire study from 5,344 to 4,277 hours.

This new request is to extend OMB clearance of the follow-up survey administration, which will expire on January 31, 2016, for an additional 20 months, to September 30, 2017. Given that study enrollment has proceeded more slowly than originally planned, an 18-month follow-up survey could be administered to only approximately 25 percent of the demonstration applicants by the current expiration date of January 31, 2016. Assuming an 80 percent response rate, this would result in approximately 630 respondents (= 3,000 respondents × 0.80 response rate × 0.25

of study participants). Extending the expiration date to September 30, 2017 will allow sufficient time to field the survey to all study applicants. This request does not cover any of the other elements of the OMB-approved data collection; no extension is required for the consent and application forms, the program participation records, or the evaluation team's site visit and case study protocols.

The 18-month follow-up survey is administered 18 months after study participants apply to the SET program. It is the only source of information needed to evaluate the impact program on the six groups of study outcomes: (1) Current employment status; (2) receipt of self-employment assistance services; (3) business development activities; (4) self-employment experiences; (5) experiences in wage and salary employment; and (6) job satisfaction and program participation. These data will be used to determine the impacts of the SET Demonstration on participants' outcomes.

Desired Focus of Comments:

Currently, the Department of Labor is soliciting comments concerning the above data collection. Comments are requested to:

- * Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

- * evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

- * enhance the quality, utility, and clarity of the information to be collected; and

- * minimize the burden of the information collection on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

Current Actions: At this time, the Department is requesting clearance for a 20-month extension of time allowed to complete the SET Evaluation's 18-month follow-up survey.

Type of review: Extension without a change.

Title of Collection: Self-Employment Training Demonstration Evaluation.

OMB Control Number: 1205-0505.

Affected Public: Dislocated workers who applied for services available through the SET Demonstration.

Cite/Reference/Form/etc.: Workforce Investment Act of 1998, Section 172

(Pub. L. 105–220) and Workforce

Innovation and Opportunity Act,
Section 169 (Pub. L. 113–128).

ANNUAL BURDEN ESTIMATES FOR THE SET DEMONSTRATION EVALUATION 18-MONTH FOLLOW-UP SURVEY BETWEEN
FEBRUARY 1, 2016 AND SEPTEMBER 30, 2017

Activity	Number of respondents ¹	Responses per respondent	Average time per response	Total respondent burden (hours)
18-Month Follow-Up Survey	1,770	1	20 minutes	590

¹ Attempts will be made to complete interviews with all 3,000 eligible applicants who went through random assignment. Given the targeted response rate of 80 percent, interviews are expected to be completed with 2,400 sample members. The 18-Month follow-up survey will be fielded through September 30, 2017. Interviews with 630 sample members are expected to be completed by January 31, 2016, when the current OMB clearance expires. Another 1,770 interviews are expected to be completed between February 1, 2016 and September 30, 2017, the extension proposed in this request.

This request includes no changes to the follow-up survey instrument, and therefore implies no change in total respondent burden. The study team expects to complete 2,400 interviews, as originally planned, for a response rate of 80 percent. A total of 210 burden hours ((= 630 responses × 20 minutes per response) ÷ 60 minutes/hour) are anticipated for surveys completed prior to the expiration date. As seen in the table above, another 590 burden hours ((= 1,770 responses × 20 minutes/response) ÷ 60 minutes/hour) would occur for surveys completed during the extension period, if granted. The total burden for the follow-up survey as a whole would remain unchanged at 800 hours, the amount originally approved by OMB.

The extension would also reduce the average annualized burden hours because the survey fielding would occur over a longer period than originally planned. The original OMB clearance package assumed that the fielding period would last for 18 months, which implied an average annualized hour burden of 533 (= 800 total hours/1.5 years). Given study enrollment patterns, the follow-up survey began in early April 2015, and the fielding period will last until September 2017 if the extension is granted, for a total of 30 months. The longer fielding period implied a reduction in the average annualized hour burden of 320 (= 800 total hours/2.5 years). If granted, the extension would result in an average annualized dollar burden of \$5,737 ((= 2,400 responses × 20 minutes/response) ÷ (60 minutes/hour × \$17.93 per hour/2.5 years)), which is lower than under the plan originally approved by OMB.

Comments submitted in response to this request will be summarized and/or included in the request for Office of Management and Budget approval; they will also become a matter of public record.

Signed:
Portia Wu,
Assistant Secretary for Employment and Training, Labor.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Humanities

Meetings of Humanities Panel; Correction

AGENCY: National Endowment for the Humanities, National Foundation on the Arts and the Humanities.

ACTION: Notice of Meetings; correction.

SUMMARY: The National Endowment for the Humanities published a document in the **Federal Register** of September 16, 2015, concerning notice of meetings of the Humanities Panel during the month of October, 2015. One meeting date has changed. All other information in the notice remains the same.

FOR FURTHER INFORMATION CONTACT: Lisette Voyatzis, Committee Management Officer; (202) 606–8322; *evoyatzis@neh.gov*.

Correction

In the **Federal Register** of September 16, 2015, in FR Doc. 2015–23205, on page 55650, in the first column, replace item 16 with:

- 16. DATE: October 30, 2015.
- TIME: 8:30 a.m. to 5:00 p.m.
- ROOM: Virtual Meeting.

This meeting will discuss applications on the subject of Linguistics, for the Humanities Collections and Reference Resources grant program, submitted to the Division of Preservation and Access.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Humanities

Meetings of Humanities Panel

AGENCY: National Endowment for the Humanities, National Foundation on the Arts and the Humanities.

ACTION: Notice of meetings.

SUMMARY: The National Endowment for the Humanities will hold twenty-six meetings of the Humanities Panel, a federal advisory committee, during November, 2015. The purpose of the meetings is for panel review, discussion, evaluation, and recommendation of applications for financial assistance under the National Foundation on the Arts and Humanities Act of 1965.

DATES: See Supplementary Information section for meeting dates.

ADDRESSES: The meetings will be held at Constitution Center at 400 7th Street SW., Washington, DC 20506. See **SUPPLEMENTARY INFORMATION** for meeting room numbers.

FOR FURTHER INFORMATION CONTACT: Lisette Voyatzis, Committee Management Officer, 400 7th Street SW., Room 4060, Washington, DC 20506; (202) 606–8322; *evoyatzis@neh.gov*. Hearing-impaired individuals who prefer to contact us by phone may use NEH’s TDD terminal at (202) 606–8282.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App.), notice is hereby given of the following meetings:

- 1. DATE: November 2, 2015

TIME: 8:30 a.m. to 5:00 p.m.
ROOM: 4002
This meeting will discuss applications on the subjects of U.S. History and Culture, for Museums, Libraries, and Cultural Organizations: Implementation Grants, submitted to the Division of Public Programs.

2. DATE: November 2, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications for Enduring Questions: Pilot Course Grants, submitted to the Division of Education Programs.

3. DATE: November 3, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P002
This meeting will discuss applications on the subjects of Music and Performing Arts, for the Humanities Collections and Reference Resources grant program, submitted to the Division of Preservation and Access.

4. DATE: November 3, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications for Enduring Questions: Pilot Course Grants, submitted to the Division of Education Programs.

5. DATE: November 3, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications on the subject of History, for Media Projects: Development Grants, submitted to the Division of Public Programs.

6. DATE: November 4, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: 4002
This meeting will discuss applications on the subjects of U.S. History and Culture, for Museums, Libraries, and Cultural Organizations: Implementation Grants, submitted to the Division of Public Programs.

7. DATE: November 4, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications for Enduring Questions: Pilot Course Grants, submitted to the Division of Education Programs.

8. DATE: November 5, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P002
This meeting will discuss applications on the subjects of Art and Architectural History, for the Humanities Collections and Reference Resources grant program, submitted to the Division of Preservation and Access.

9. DATE: November 5, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call

This meeting will discuss applications on the subjects of U.S. History and Culture, for Museums, Libraries, and Cultural Organizations: Planning Grants, submitted to the Division of Public Programs.

10. DATE: November 5, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications for Enduring Questions: Pilot Course Grants, submitted to the Division of Education Programs.

11. DATE: November 9, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications on the subjects of Arts and Culture, for Media Projects: Development Grants, submitted to the Division of Public Programs.

12. DATE: November 9, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications for Enduring Questions: Pilot Course Grants, submitted to the Division of Education Programs.

13. DATE: November 10, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P002
This meeting will discuss applications on the subjects of Contemporary U.S. History and Culture, for the Humanities Collections and Reference Resources grant program, submitted to the Division of Preservation and Access.

14. DATE: November 10, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications on the subject of American Studies, for Museums, Libraries, and Cultural Organizations: Planning Grants, submitted to the Division of Public Programs.

15. DATE: November 12, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Conference Call
This meeting will discuss applications on the subjects of Art and Design, for Museums, Libraries, and Cultural Organizations: Planning Grants, submitted to the Division of Public Programs.

16. DATE: November 13, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P002
This meeting will discuss applications on the subject of World Studies: Early Modern Era to Present, for the Humanities Collections and Reference Resources grant program, submitted to the Division of Preservation and Access.

17. DATE: November 16, 2015

TIME: 8:30 a.m. to 5:00 p.m.
ROOM: 4002
This meeting will discuss applications on the subjects of Archives and Digital Collections I (Level II), for Digital Humanities Start-Up Grants, submitted to the Office of Digital Humanities.

18. DATE: November 16, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P003
This meeting will discuss applications for the Dialogues on the Experience of War grant program, submitted to the Division of Education Programs.

19. DATE: November 17, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P002
This meeting will discuss applications on the subject of World Studies: Classic Era to Medieval, for the Humanities Collections and Reference Resources grant program, submitted to the Division of Preservation and Access.

20. DATE: November 17, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P003
This meeting will discuss applications for the Dialogues on the Experience of War grant program, submitted to the Division of Education Programs.

21. DATE: November 17, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: 4002
This meeting will discuss applications on the subject of Geospatial and Visualization (Level II), for Digital Humanities Start-Up Grants, submitted to the Office of Digital Humanities.

22. DATE: November 18, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: 4084
This meeting will discuss applications on the subjects of Media Studies and Scholarly Communication (Level II), for Digital Humanities Start-Up Grants, submitted to the Office of Digital Humanities.

23. DATE: November 18, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: 4075
This meeting will discuss applications for the Dialogues on the Experience of War grant program, submitted to the Division of Education Programs.

24. DATE: November 23, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: Virtual Panel
This meeting will discuss applications on the subjects of Public Programs and Education (Level I), for Digital Humanities Start-Up Grants, submitted to the Office of Digital Humanities.

25. DATE: November 23, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P003

This meeting will discuss applications for the Dialogues on the Experience of War grant program, submitted to the Division of Education Programs.

26. DATE: November 24, 2015
TIME: 8:30 a.m. to 5:00 p.m.
ROOM: P003

This meeting will discuss applications for the Dialogues on the Experience of War grant program, submitted to the Division of Education Programs.

Because these meetings will include review of personal and/or proprietary financial and commercial information given in confidence to the agency by grant applicants, the meetings will be closed to the public pursuant to sections 552b(c)(4) and 552b(c)(6) of Title 5, U.S.C., as amended. I have made this determination pursuant to the authority granted me by the Chairman's Delegation of Authority to Close Advisory Committee Meetings dated July 19, 1993.

Dated: October 8, 2015.

Lisette Voyatzis,
Committee Management Officer.

BILLING CODE 7590-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76117; File No. TP 15-19]

Order Granting Limited Exemptions From Exchange Act Rule 10b-17 and Rules 101 and 102 of Regulation M to PowerShares DWA Tactical Sector Rotation Portfolio Pursuant to Exchange Act Rule 10b-17(b)(2) and Rules 101(d) and 102(e) of Regulation M

October 8, 2015.

By letter dated October 8, 2015 (the "Letter"), as supplemented by conversations with the staff of the Division of Trading and Markets, counsel for PowerShares Exchange-Traded Fund Trust II (the "Trust"), on behalf of the Trust, PowerShares DWA Tactical Sector Rotation Portfolio (the "Fund"), any national securities exchange on or through which shares issued by the Fund ("Shares") may subsequently trade, Invesco Distributors, Inc. (the "Distributor"), and persons or entities engaging in transactions in Shares (collectively, the "Requestors"), requested exemptions, or interpretive or no-action relief, from Rule 10b-17 of the Securities Exchange Act of 1934, as amended ("Exchange Act"), and Rules 101 and 102 of Regulation M, in connection with secondary market transactions in Shares and the creation or redemption of aggregations of Shares of at least 50,000 shares ("Creation Units").

The Trust is registered with the Securities and Exchange Commission ("Commission") under the Investment Company Act of 1940, as amended ("1940 Act"), as an open-end management investment company. The Fund seeks to track the performance of the underlying index, the Dorsey Wright® Sector 4 Index (the "Index").

The Fund intends to operate as an “ETF of ETFs” by seeking to track the performance of its underlying Index through, under normal circumstances, investing at least 90% of its total assets in the ETFs that comprise the Index, and may include U.S. Treasury Bills.¹ Except for the fact that the Fund will operate as an ETF of ETFs, the Fund will operate in a manner identical to the ETFs that are included in the Index.

The Requestors represent, among other things, the following:

- Shares of the Fund will be issued by the Trust, an open-end management investment company that is registered with the Commission;
- The Trust will continuously redeem Creation Units at net asset value (“NAV”), and the secondary market price of the Shares should not vary substantially from the NAV of such Shares;
- Shares of the Fund will be listed and traded on the NASDAQ Stock Market LLC or another exchange in accordance with exchange listing standards that are, or will become, effective pursuant to Section 19(b) of the Exchange Act (the “Exchange”);²
- All ETFs in which the Fund is invested will meet all conditions set forth in a relevant class relief letter,³ will have received individual relief from the Commission, or will be able to rely upon individual relief even though they

¹ At any point, the Index comprises up to four PowerShares ETFs from a set of nine eligible PowerShares ETFs. During market periods when fewer than four eligible PowerShares ETFs demonstrate sufficient relative strength, however, the Index may hold up to a 100% cash position, represented by U.S. Treasury Bills with a duration ranging from 0–180 days, in an amount equal to the weight of the PowerShares ETFs that would otherwise be included in the Index.

² Further, the Letter states that should the Shares also trade on a market pursuant to unlisted trading privileges, such trading will be conducted pursuant to self-regulatory organization rules that have become effective pursuant to Section 19(b) of the Exchange Act.

³ Exchange Act Rel. No. 67215 (June 19, 2012); 77 FR 37941 (June 25, 2012); Letter from Catherine McGuire, Esq., Chief Counsel, Division of Market Regulation, to the Securities Industry Association Derivative Products Committee (November 21, 2005); Letter from Raquel L. Russell, Branch Chief, Division of Market Regulation, to George T. Simon, Esq., Foley & Lardner LLP (June 21, 2006); Letter from James A. Brigagliano, Acting Associate Director, Division of Market Regulation, to Stuart M. Strauss, Esq., Clifford Chance US LLP (October 24, 2006); Letter from James A. Brigagliano, Associate Director, Division of Market Regulation, to Benjamin Haskin, Esq., Willkie Farr & Gallagher LLP (April 9, 2007); Letter from Josephine Tao, Assistant Director, Division of Trading and Markets, to Domenick Pugliese, Esq., Paul, Hastings, Janofsky & Walker LLP (June 27, 2007); see also Staff Legal Bulletin No. 9, “Frequently Asked Questions About Regulation M” (April 12, 2002) (regarding actively-managed ETFs).

are not named parties (for example, a no-action letter);

- At least 70% of the Fund is comprised of component securities that will meet the minimum public float and minimum average daily trading volume thresholds under the “actively-traded securities” definition found in Regulation M for excepted securities during each of the previous two months of trading prior to formation of the Fund;

- All the components of the Index will have publicly available last sale trade information;
- The intra-day proxy value of the Fund per share and the value of the Index will be publicly disseminated by a major market data vendor throughout the trading day;
- On each business day before the opening of business on the Exchange, the Fund’s custodian, through the National Securities Clearing Corporation, will make available the list of the names and the numbers of securities and other assets of the Fund’s portfolio that will be applicable that day to creation and redemption requests;
- The Exchange or other market information provider will disseminate (i) continuously every 15 seconds throughout the trading day, through the facilities of the consolidated tape, the market value of a Share, and (ii) every 15 seconds throughout the trading day, a calculation of the intra-day indicative value of a Share;

- The arbitrage mechanism will be facilitated by the transparency of the Fund’s portfolio and the availability of the intra-day indicative value, the liquidity of securities held by the Fund, and the ability to acquire such securities, as well as the arbitrageurs’ ability to create workable hedges;

- The Fund will invest solely in liquid securities;
- The Fund will invest in securities that will facilitate an effective and efficient arbitrage mechanism and the ability to create workable hedges;
- The Trust believes that arbitrageurs are expected to take advantage of price variations between the Fund’s market price and its NAV; and
- A close alignment between the market price of Shares and the Fund’s NAV is expected.

Regulation M

While redeemable securities issued by an open-end management investment company are excepted from the provisions of Rules 101 and 102 of Regulation M, the Requestors may not rely upon those exceptions for the

Shares.⁴ However, we find that it is appropriate in the public interest and is consistent with the protection of investors to grant a conditional exemption from Rules 101 and 102 to persons who may be deemed to be participating in a distribution of Shares of the Fund as described in more detail below.

Rule 101 of Regulation M

Generally, Rule 101 of Regulation M is an anti-manipulation rule that, subject to certain exceptions, prohibits any “distribution participant” and its “affiliated purchasers” from bidding for, purchasing, or attempting to induce any person to bid for or purchase any security that is the subject of a distribution until after the applicable restricted period, except as specifically permitted in the Rule. Rule 100 of Regulation M defines “distribution” to mean any offering of securities that is distinguished from ordinary trading transactions by the magnitude of the offering and the presence of special selling efforts and selling methods. The provisions of Rule 101 of Regulation M apply to underwriters, prospective underwriters, brokers, dealers, or other persons who have agreed to participate or are participating in a distribution of securities. The Shares are in a continuous distribution, and, as such, the restricted period in which distribution participants and their affiliated purchasers are prohibited from bidding for, purchasing, or attempting to induce others to bid for or purchase extends indefinitely.

Based on the representations and the facts presented in the Letter, particularly that the Trust is a registered open-end management investment company that will continuously redeem at the NAV Creation Unit size aggregations of the Shares of the Fund and that a close alignment between the market price of Shares and the Fund’s NAV is expected, the Commission finds that it is appropriate in the public interest, and consistent with the protection of investors to grant the Trust an exemption under paragraph (d) of Rule 101 of Regulation M with respect to the Fund, thus permitting persons participating in a distribution of Shares of the Fund to bid for or purchase such Shares during their participation in such distribution.⁵

⁴ While ETFs operate under exemptions from the definitions of “open-end company” under Section 5(a)(1) of the 1940 Act and “redeemable security” under Section 2(a)(32) of the 1940 Act, the Fund and its securities do not meet those definitions.

⁵ Additionally, we confirm the interpretation that a redemption of Creation Unit size aggregations of

Rule 102 of Regulation M

Rule 102 of Regulation M prohibits issuers, selling security holders, and any affiliated purchaser of such person from bidding for, purchasing, or attempting to induce any person to bid for or purchase a covered security during the applicable restricted period in connection with a distribution of securities effected by or on behalf of an issuer or selling security holder.

Based on the representations and the facts presented in the Letter, particularly that the Trust is a registered open-end management investment company that will redeem at the NAV Creation Unit size aggregations of Shares of the Fund and that a close alignment between the market price of Shares and the Fund's NAV is expected, the Commission finds that it is appropriate in the public interest, and consistent with the protection of investors to grant the Trust an exemption under paragraph (e) of Rule 102 of Regulation M with respect to the Fund, thus permitting the Fund to redeem Shares of the Fund during the continuous offering of such Shares.

Rule 10b-17

Rule 10b-17, with certain exceptions, requires an issuer of a class of publicly traded securities to give notice of certain specified actions (for example, a dividend distribution) relating to such class of securities in accordance with Rule 10b-17(b). Based on the representations and the facts presented in the Letter, and subject to the conditions below, the Commission finds that it is appropriate in the public interest, and consistent with the protection of investors, to grant the Trust a conditional exemption from Rule 10b-17 because market participants will receive timely notification of the existence and timing of a pending distribution, and thus the concerns that the Commission raised in adopting Rule 10b-17 will not be implicated.⁶

Conclusion

It is hereby ordered, pursuant to Rule 101(d) of Regulation M, that the Trust, based on the representations and facts

Shares of the Fund and the receipt of securities in exchange by a participant in a distribution of Shares of the Fund would not constitute an "attempt to induce any person to bid for or purchase[] a covered security during the applicable restricted period" within the meaning of Rule 101 of Regulation M and therefore would not violate that rule.

⁶ We also note that timely compliance with Rule 10b-17(b)(1)(v)(a) and (b) would be impractical in light of the Fund's nature because it is not possible for the Fund to accurately project ten days in advance what dividend, if any, would be paid on a particular record date.

presented in the Letter, is exempt from the requirements of Rule 101 with respect to the Fund, thus permitting persons who may be deemed to be participating in a distribution of Shares of the Fund to bid for or purchase such Shares during their participation in such distribution.

It is further ordered, pursuant to Rule 102(e) of Regulation M, that the Trust, based on the representations and the facts presented in the Letter, is exempt from the requirements of Rule 102 with respect to the Fund, thus permitting the Fund to redeem Shares of the Fund during the continuous offering of such Shares.

It is further ordered, pursuant to Rule 10b-17(b)(2), that the Trust, based on the representations and the facts presented in the Letter and subject to the conditions below, is exempt from the requirements of Rule 10b-17 with respect to the transactions in the Shares of the Fund.

This exemptive relief is subject to the following conditions:

- The Trust will comply with Rule 10b-17, except for Rule 10b-17(b)(1)(v)(a) and (b); and
- The Trust will provide the information required by Rule 10b-17(b)(1)(v)(a) and (b) to the Exchange as soon as practicable before trading begins on the ex-dividend date, but in no event later than the time when the Exchange last accepts information relating to distributions on the day before the ex-dividend date.

This exemptive relief is subject to modification or revocation at any time the Commission determines that such action is necessary or appropriate in furtherance of the purposes of the Exchange Act. This exemption is based on the facts presented and the representations made in the Letter. Any different facts or representations may require a different response. Persons relying upon this exemptive relief shall discontinue transactions involving the Shares of the Fund, pending presentation of the facts for the Commission's consideration, in the event that any material change occurs with respect to any of the facts or representations made by the Requestors, and as is the case with all preceding letters, particularly with respect to the close alignment between the market price of Shares and the Fund's NAV. In addition, persons relying on this exemption are directed to the anti-fraud and anti-manipulation provisions of the Exchange Act, particularly Sections 9(a), 10(b), and Rule 10b-5 thereunder. Responsibility for compliance with these and any other applicable provisions of the federal securities laws

must rest with the persons relying on this exemption. This Order should not be considered a view with respect to any other question that the proposed transactions may raise, including, but not limited to, the adequacy of the disclosure concerning, and the applicability of other federal or state laws to, the proposed transactions.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁷

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76121; File No. SR-FINRA-2015-037]

**Self-Regulatory Organizations;
Financial Industry Regulatory
Authority, Inc.; Notice of Filing and
Immediate Effectiveness of a Proposed
Rule Change To Extend the TRACE
Pilot Program in FINRA Rule 6730(e)(4)**

October 9, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² notice is hereby given that on September 28, 2015, Financial Industry Regulatory Authority, Inc. ("FINRA") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as constituting a "non-controversial" rule change under paragraph (f)(6) of Rule 19b-4 under the Act,³ which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

**I. Self-Regulatory Organization's
Statement of the Terms of Substance of
the Proposed Rule Change**

FINRA is proposing to extend the pilot program in FINRA Rule 6730(e)(4) to October 27, 2017. The pilot program exempts from TRACE reporting transactions in TRACE-Eligible Securities that are executed on a facility of the New York Stock Exchange

⁷ 17 CFR 200.30-3(a)(6) and (9).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 17 CFR 240.19b-4(f)(6).

(“NYSE”), subject to specified conditions.

Below is the text of the proposed rule change. Proposed new language is in italics; proposed deletions are in brackets.

(5) through (6) No Change.

(f) No Change.

* * * Supplementary Material:

.01 through .02 No Change.

* * * * *

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

FINRA Rule 6730(e)(4) exempts members from reporting to the Trade Reporting and Compliance Engine (“TRACE”) transactions in TRACE-Eligible Securities⁴ that are executed on

a facility of NYSE in accordance with specified NYSE rules and that are reported to NYSE and disseminated publicly, provided that a data sharing agreement between FINRA and NYSE related to transactions covered by FINRA Rule 6730 remains in effect. This exemption operates as a pilot program and is currently scheduled to expire on October 23, 2015.⁵

FINRA is proposing to extend the pilot program for two years until October 27, 2017. Thus, members would continue to be exempted from reporting to TRACE transactions in TRACE-Eligible Securities that are executed on an NYSE facility in accordance with NYSE Rules 1400, 1401 and 86, where such transactions are reported to NYSE in accordance with NYSE’s applicable trade reporting rules, and disseminated publicly by NYSE.⁶

FINRA is proposing to extend the pilot to provide additional time to analyze the impact of the exemption and to avoid duplicative reporting

private issuer, and, if a “restricted security” as defined in Securities Act Rule 144(a)(3), sold pursuant to Securities Act Rule 144A; or is a debt security that is U.S. dollar-denominated and issued or guaranteed by an Agency as defined in paragraph (k) or a Government-Sponsored Enterprise as defined in paragraph (n). “TRACE-Eligible Security” does not include a debt security that is: Issued by a foreign sovereign, a U.S. Treasury Security as defined in paragraph (p), or a Money Market Instrument as defined in paragraph (o).

⁵ See Securities Exchange Act Release No. 54768 (November 16, 2006), 71 FR 67673 (November 22, 2006) (Order Approving File No. SR-NASD-2006-110) (pilot program in FINRA Rule 6730(e)(4), subject to the execution of a data sharing agreement addressing relevant transactions, became effective on January 9, 2007); Securities Exchange Act Release No. 59216 (January 8, 2009), 74 FR 2147 (January 14, 2009) (Notice of Filing and Immediate Effectiveness of File No. SR-FINRA-2008-065) (pilot program extended to January 7, 2011); Securities Exchange Act Release No. 63673 (January 7, 2011), 76 FR 2739 (January 14, 2011) (Notice of Filing and Immediate Effectiveness of File No. SR-FINRA-2011-002) (pilot program extended to July 8, 2011); Securities Exchange Act Release No. 64665 (June 14, 2011), 76 FR 35933 (June 20, 2011) (Notice of Filing and Immediate Effectiveness of File No. SR-FINRA-2011-025) (pilot program extended to January 27, 2012); Securities Exchange Act Release No. 66018 (December 21, 2011), 76 FR 81549 (December 28, 2011) (Notice of Filing and Immediate Effectiveness of File No. SR-FINRA-2011-072) (pilot program extended to October 26, 2012); Securities Exchange Act Release No. 68076 (October 22, 2012), 77 FR 65431 (October 26, 2012) (Notice of Filing and Immediate Effectiveness of File No. SR-FINRA-2012-047) (pilot program extended to October 25, 2013); and Securities Exchange Act Release No. 70288 (August 29, 2013), 78 FR 54694 (September 5, 2013) (Notice of Filing and Immediate Effectiveness of File No. SR-FINRA-2013-038) (pilot program extended to October 23, 2015).

⁶ The success of the pilot program remains dependent on FINRA’s ability to continue to effectively conduct surveillance for TRACE-Eligible Securities. The exemption, therefore, continues to be conditional on a data sharing agreement being in effect between FINRA and NYSE related to transactions covered by FINRA Rule 6730.

requirements for members with regard to transactions in these securities, which otherwise would be subject to trade reporting to both FINRA and NYSE. However, FINRA supports a regulatory construct that, in the future, consolidates all last sale transaction information to provide better price transparency and a more efficient means to engage in market surveillance of TRACE-Eligible Securities transactions. The proposed extension would allow the pilot program to continue to operate without interruption while FINRA and NYSE continue to assess the effect of the exemption and issues regarding the consolidation of market data, market surveillance and price transparency.

FINRA has filed the proposed rule change for immediate effectiveness. The implementation date will be October 23, 2015.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(6) of the Act,⁷ which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest.

FINRA believes that extension of the pilot protects investors and the public because it continues to ensure that transactions are required to be reported and publicly disseminated; therefore, transparency will be maintained for these transactions. The continued condition that a data sharing agreement remain in effect between NYSE and FINRA for transactions covered by the FINRA Rule 6730(e)(4) exemption allows FINRA to continue to conduct surveillance in TRACE-Eligible Securities. In addition, extending the exemption permits members that are subject to both FINRA’s and NYSE’s trade reporting requirements to avoid a duplicative regulatory structure and the increased costs that may be incurred as a result of such duplicative requirements.

B. Self-Regulatory Organization’s Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. FINRA believes that the extension of the exemptive provision does not result in any burden on competition since it allows members that are subject to both

⁴ Rule 6710(a) provides that a “TRACE-Eligible Security” is a debt security that is United States dollar-denominated and issued by a U.S. or foreign

⁷ 15 U.S.C. 78o-3(b)(6).

FINRA's and NYSE's trade reporting requirements to avoid a duplicative regulatory structure and the increased costs that may be incurred as a result of such duplicative requirements.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act⁸ and Rule 19b-4(f)(6)⁹ thereunder.

FINRA has asked the Commission to waive the 30-day operative delay so that the pilot may continue to operate without interruption. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. This action will continue to allow the benefits of the pilot—preventing duplicative reporting of transactions in TRACE-Eligible Securities that occur on NYSE—to continue without interruption. Therefore, the Commission hereby designates the proposed rule change as operative upon filing.¹⁰

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

⁸ 15 U.S.C. 78s(b)(3)(A).

⁹ 17 CFR 240.19b-4(f)(6). As required under Rule 19b-4(f)(6)(iii), FINRA provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission.

¹⁰ For purposes only of waiving the 30-day operative delay, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-FINRA-2015-037 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-FINRA-2015-037. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of FINRA. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-FINRA-2015-037 and should be submitted on or before November 6, 2015.

¹¹ 17 CFR 200.30-3(a)(12).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹¹

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76126; File No. SR-NASDAQ-2015-095]

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Order Granting Approval of Proposed Rule Change Relating to the Listing and Trading of the Shares of the AltShares Long/Short High Yield Fund of ETFs Series Trust I

October 9, 2015.

I. Introduction

On August 7, 2015, The NASDAQ Stock Market LLC (the "Exchange" or "Nasdaq") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act" or "Exchange Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to list and trade shares ("Shares") of the AltShares Long/Short High Yield Fund ("Fund") of ETFs Series Trust I ("Trust") under NASDAQ Rule 5735. The proposed rule change was published for comment in the **Federal Register** on August 25, 2015.³ The Commission received no comments on the proposed rule change. This order grants approval of the proposed rule change.

II. Description of the Proposal

The Exchange proposes to list and trade the Shares under Nasdaq Rule 5735, which governs the listing and trading of Managed Fund Shares on the Exchange. The Fund will be an actively-managed exchange-traded fund ("ETF"). The Shares will be offered by the Trust,⁴ which is registered with the Commission as an investment company and has filed a registration statement on Form N-1A ("Registration Statement")

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 75738 (August 19, 2015), 80 FR 51632 ("Notice").

⁴ According to the Exchange, the Adviser (as defined herein) has obtained certain exemptive relief, upon which the Trust may rely, under the Investment Company Act of 1940 ("1940 Act"). See Investment Company Act Release No. 30607 (July 23, 2013) (File No. 812-14080).

with the Commission.⁵ The Fund will be a series of the Trust.

Etfis Capital LLC will be the investment adviser (“Adviser”) to the Fund, and Bramshill Investments, LLC will be the investment sub-adviser to the Fund (“Sub-Adviser”). ETF Distributors LLC (“Distributor”) will be the principal underwriter and distributor of the Fund’s Shares. The Bank of New York Mellon Corporation (“BNY”) will act as the administrator, accounting agent, custodian, and transfer agent to the Fund. The Exchange states that the Adviser is not a broker-dealer, although it is affiliated with the Distributor, a broker-dealer.⁶ The Exchange represents that the Adviser has implemented a fire wall with respect to its broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio.⁷ According to the Exchange, the Sub-Adviser is not a broker-dealer and is not affiliated with a broker-dealer.⁸

The Exchange has made the following representations and statements in describing the Fund and its investment strategy, including the Fund’s portfolio holdings and investment restrictions.⁹

A. Exchange’s Description of the Fund’s Principal Investments

The investment objective of the Fund will be to seek current income and capital appreciation with reduced volatility over time. The Fund will seek to achieve its investment objective primarily by investing in a portfolio of “high yield” debt securities of U.S. companies. Under normal market conditions,¹⁰ the Fund will hold long

positions in high yield debt securities selected because the Sub-Adviser believes they are likely to outperform the market over time or increase in value in the near term (“Long Position”), and will hold short positions in high yield debt securities selected because the Sub-Adviser believes they are likely to lose value in the near or longer term (“Short Position”).

The Fund will not have any portfolio maturity limitation and may invest its assets in instruments with short-term, medium-term, or long-term maturities. Issuers of securities in which the Fund expects to invest will include large and medium capitalization companies, and may include small capitalization companies. According to the Exchange, the Sub-Adviser expects the Fund’s investment portfolio to include up to 200 different securities positions with a target portfolio net exposure (the market value of the Long Position minus the market value of the Short Position) of between -20% and 100%.¹¹

In selecting securities for the Fund’s portfolio, the Sub-Adviser generally will analyze debt securities included in the Bloomberg USD Corporate High Yield Bond Index. While the Fund may invest directly in high yield debt securities, the Sub-Adviser may also implement the Fund’s strategy by investing in exchange-traded pools (which will consist of exchange-traded funds, exchange-traded notes, or closed-end funds, each of which will be listed for trading on a U.S. exchange, collectively, “ETPs”) that invest a significant portion of their portfolios in high yield debt instruments (“High Yield ETPs”).

Positions in high-yield debt securities also may include foreign debt securities traded on U.S. or foreign exchanges or in U.S. or foreign over-the-counter markets, which may be denominated in foreign currencies. Any currency hedging will be accomplished by taking long or short positions in ETPs.

The Exchange states that “high yield debt securities” generally include debt securities that are rated lower than “BBB-” by Standard & Poor’s Ratings Group or “Baa3” by Moody’s Investors Service, Inc. or at a similar level by another nationally recognized statistical rating organization, or are unrated but are deemed to be of comparable quality

absence of adverse market, economic, political or other conditions, including extreme volatility or trading halts in the fixed income or other securities markets or the financial markets generally; operational issues causing dissemination of inaccurate market information; or *force majeure* type events such as systems failure, natural or man-made disaster, act of God, armed conflict, act of terrorism, riot or labor disruption, or any similar intervening circumstance.

¹¹ See Notice, *supra* note 3, 80 FR at 51633.

by the Sub-Adviser.¹² These securities will consist of: (a) Senior and subordinated corporate debt obligations (bonds, debentures, notes, and commercial paper); (b) senior bank loans (including through loan assignments and loan participations); (c) preferred stocks; (d) municipal bonds; (e) convertible bonds; and (f) convertible preferred stocks.¹³ The Fund will not invest in other types of high-yield debt securities, such as asset-backed securities. The Fund will not be limited to investing in high-yield securities, so any of the securities listed may also be investment grade. In addition, the Fund may invest in U.S. treasuries.

According to the Exchange, as a result of its trading strategy, the Fund expects to engage in frequent portfolio transactions that will likely result in higher portfolio turnover than other similar investment companies.¹⁴ Under normal circumstances, the anticipated annual portfolio turnover rate for the Fund is expected to be greater than 100%.

B. Exchange’s Description of the Fund’s Other Investments

In addition to investing in High Yield ETPs, the Fund may invest in other fixed-income ETPs, but the Fund will not invest in leveraged ETPs. The Exchange states that the Fund will not purchase more than 3% of an ETF’s outstanding shares unless: (i) The ETF or the Fund has received an order for exemptive relief from the 3% limitation from the Commission that is applicable to the Fund; and (ii) the ETF and the Fund take appropriate steps to comply with any conditions in such order.¹⁵

The Fund also may invest in warrants.¹⁶ In certain adverse market, economic, political, or other conditions, the Fund

¹² See *id.*

¹³ The Exchange states that convertible bonds and convertible preferred stocks in which the Fund may invest, and the equity securities into which these securities may be converted, and also preferred stocks (non-convertible) in which the Fund may invest, generally will be exchange-traded. According to the Exchange, the Sub-Adviser’s current expectation is that at least 80% of these securities will be exchange-traded. The Exchange represents that at least 90% of these exchange-traded securities will be traded on exchanges that are Intermarket Surveillance Group (“ISG”) members. See *id.* at 51633 n.12.

¹⁴ See *id.* at 51633.

¹⁵ See *id.*

¹⁶ The Exchange states that warrants in which the Fund invests, and the equity securities into which these warrants may be converted, generally will be exchange-traded. According to the Exchange, the Sub-Adviser’s current expectation is that at least 80% of these securities will be exchange-traded. The Exchange represents that at least 90% of these exchange-traded securities will be traded on exchanges that are ISG members. See Notice, *supra* note 3, 80 FR at 51633 n.13.

⁵ See Post-Effective Amendment No. 40/41 to Form N-1A Registration Statement for the Trust, dated May 4, 2015 (File Nos. 333-187668 and 811-22819).

⁶ See Notice, *supra* note 3, 80 FR at 51632.

⁷ See *id.*

⁸ In the event (a) the Adviser or the Sub-Adviser becomes newly affiliated with a broker-dealer or registers as a broker-dealer, or (b) any new adviser or new sub-adviser is a registered broker-dealer or is or becomes affiliated with a broker-dealer, it will implement a fire wall with respect to its relevant personnel and/or such broker-dealer affiliate, as applicable, regarding access to information concerning the composition and/or changes to the Fund portfolio and will be subject to procedures designed to prevent the use and dissemination of material nonpublic information regarding such portfolio.

⁹ The Commission notes that additional information regarding the Fund, the Trust, and the Shares, including investment strategies, risks, creation and redemption procedures, fees, portfolio holdings disclosure policies, calculation of net asset value (“NAV”), distributions, and taxes, among other things, can be found in the Notice and the Registration Statement, as applicable. See Notice and Registration Statement, *supra* notes 3 and 5, respectively.

¹⁰ The term “under normal market conditions” as used herein includes, but is not limited to, the

may temporarily depart from its normal investment policies and strategy, provided that the alternative is consistent with the Fund's investment objective and is in the best interest of the Fund. At such times, the Fund may invest in cash or cash equivalents, such as money market instruments,¹⁷ and to the extent permitted by applicable law and the Fund's investment restrictions, the Fund may invest in shares of money market mutual funds. Under such circumstances, the Fund may invest up to 100% of its assets in these investments and may do so for extended periods of time. Under normal circumstances, however, the Fund may also hold money market instruments and/or shares of money market mutual funds for various reasons including to provide for funds awaiting investment, to accumulate cash for anticipated purchases of portfolio securities, to allow for shareholder redemptions, and to provide for the Fund's operating expenses.

C. Exchange's Description of the Fund's Investment Restrictions

According to the Exchange, the Fund anticipates investing entirely in fully liquid assets, but it has the flexibility to invest up to 15% of its net assets in illiquid securities and other illiquid assets.¹⁸ Under the supervision of the Board of Trustees of the Trust ("Trust Board"), the Sub-Adviser will determine the liquidity of the Fund's investments, and through reports from the Sub-Adviser, the Trust Board will monitor investments in illiquid instruments.¹⁹ The Exchange represents that, if through a change in values, net assets, or other circumstances, the Fund were in a position where more than 15% of its net assets were invested in illiquid securities or other illiquid assets, it would seek to take appropriate steps to protect liquidity.²⁰

The Fund will generally seek to invest in high-yield debt securities, bank loans,

¹⁷ The Exchange states that the money market instruments in which the Fund may invest are short-term (less than one-year) notes issued by (i) the U.S. government, (ii) an agency of the U.S. government, or (iii) a U.S. corporation. See *id.* at 51633 n.14.

¹⁸ See *id.* at 51633–34.

¹⁹ According to the Exchange, in determining the liquidity of the Fund's investments, the Sub-Adviser may consider various factors including: (i) The frequency of trades and quotations; (ii) the number of dealers and prospective purchasers in the marketplace; (iii) dealer undertakings to make a market; (iv) the nature of the security (including any demand or tender features); and (v) the nature of the marketplace for trades (including the ability to assign or offset the Fund's rights and obligations relating to the investment). See Notice, *supra* note 3, 80 FR at 51634.

²⁰ See *id.*

and other debt issuances that the Sub-Adviser deems to be liquid, with readily available prices. The Fund will only invest in bank loans that have a par amount outstanding of U.S. \$100 million or greater at the time the loan is originally issued. The Fund will not enter into a long or short position in high yield debt securities with a par amount outstanding of less than U.S. \$100 million at the time of issuance of such high yield debt securities, if upon establishing such position, the total value of such positions would represent fifty percent or greater of the Fund's net assets.

The Fund will not invest more than 25% of the value of its total assets in securities of issuers in any particular industry.

The Fund's investments (including investments in ETPs) will not be utilized to seek to achieve a leveraged return on the Fund's net assets. The Exchange represents that the Fund will not invest in futures contracts, options, swaps, or other derivative instruments.

III. Discussion and Commission Findings

After careful review, the Commission finds that the Exchange's proposal to list and trade the Shares is consistent with the Exchange Act and the rules and regulations thereunder applicable to a national securities exchange.²¹ In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Exchange Act,²² which requires, among other things, that the Exchange's rules be designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Commission also finds that the proposal to list and trade the Shares on the Exchange is consistent with Section 11A(a)(1)(C)(iii) of the Exchange Act,²³ which sets forth the finding of Congress that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure the availability to brokers, dealers, and investors of information with respect to quotations for, and transactions in, securities. Quotation and last-sale information for the Shares and the exchange-traded securities held by the

²¹ In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

²² 15 U.S.C. 78f(b)(5).

²³ 15 U.S.C. 78k-1(a)(1)(C)(iii).

Fund will be available via UTP Level 1, as well as Nasdaq proprietary quote and trade services.²⁴ On each business day, before commencement of trading in Shares in the Regular Market Session²⁵ on the Exchange, the Trust will disclose on its Web site the identities and quantities of the portfolio of securities and other assets ("Disclosed Portfolio") held by the Fund that will form the basis for the Fund's calculation of NAV at the end of the business day.²⁶ In addition, the Intraday Indicative Value, available on the NASDAQ OMX Information LLC proprietary index data service,²⁷ will be based upon the current value for the components of the Disclosed Portfolio and will be updated and widely disseminated and broadly displayed at least every 15 seconds during the Regular Market Session.²⁸ During hours when the local markets for foreign securities in the Fund's portfolio are closed, the Intraday Indicative Value will be updated at least every 15 seconds during the Regular Market Session to reflect currency exchange fluctuations.²⁹ The NAV of the Fund will be calculated by BNY and determined at the close of regular trading on the New York Stock

²⁴ See Notice, *supra* note 3, 80 FR at 51636.

²⁵ See Nasdaq Rule 4120(b)(4) (describing the three trading sessions on the Exchange: (1) Pre-Market Session from 7:00 a.m. to 9:30 a.m. Eastern time; (2) Regular Market Session from 9:30 a.m. to 4:00 p.m. or 4:15 p.m. Eastern time; and (3) Post-Market Session from 4:00 p.m. or 4:15 p.m. to 8:00 p.m. Eastern time).

²⁶ Under accounting procedures to be followed by the Fund, trades made on the prior business day ("T") will be booked and reflected in NAV on the current business day ("T+1"). Notwithstanding the foregoing, portfolio trades that are executed prior to the opening of the Exchange on any business day may be booked and reflected in NAV on such business day. Accordingly, the Fund will be able to disclose at the beginning of the business day the portfolio that will form the basis for the NAV calculation at the end of the business day. The daily disclosure will include for each portfolio security and other asset of the Fund the following information on the Fund's Web site (if applicable): name, ticker symbol, CUSIP number or other identifier, if any; type of holding (such as "bond," "note," "preferred stock," "ETP," "mutual fund"); quantity held (as measured by, for example, number of shares, contracts or units); maturity date, if any; coupon rate, if any; effective date, if any; market value of the holding; and the percentage weighting of the holdings in the Fund's portfolio. The Web site information will be publicly available at no charge.

²⁷ Currently, the NASDAQ OMX Global Index Data Service ("GIDS") is the NASDAQ OMX global index data feed service, offering real-time updates, daily summary messages, and access to widely followed indexes and Intraday Indicative Values for ETFs. The Exchange represents that GIDS provides investment professionals with the daily information needed to track or trade NASDAQ OMX indexes, listed ETFs, or third-party partner indexes and ETFs. See Notice, *supra* note 3, 80 FR at 51636, n.23.

²⁸ See *id.* at 51636.

²⁹ See *id.*

Exchange (ordinarily 4:00 p.m. Eastern time) on each day that such exchange is open.³⁰ The Web site for the Fund will include a form of the prospectus for the Fund and additional data relating to NAV and other applicable quantitative information.³¹

The Exchange further states that the intra-day, executable price quotations on the high yield debt securities, bank loans, warrants, other fixed-income and convertible securities, including cash and cash equivalents, ETPs, and other assets held by the Fund will be available from major broker-dealer firms or on the exchange on which they are traded, if applicable.³² The foregoing intra-day price information is available through subscription services, such as Bloomberg and Thomson Reuters, which can be accessed by Authorized Participants and other investors. Information regarding market price and volume of the Shares is and will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. The previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers.

The Commission also believes that the proposal to list and trade the Shares is reasonably designed to promote fair disclosure of information that may be necessary to price the Shares appropriately and to prevent trading when a reasonable degree of transparency cannot be assured. The Exchange states that it will obtain a representation from the issuer of the Shares that the NAV per Share will be

calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time.³³ The Exchange also represents that the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of the Fund. Nasdaq will halt or pause trading in the Shares under the conditions specified in Nasdaq Rules 4120 and 4121, including the trading pauses under Nasdaq Rules 4120(a)(11) and (12). Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable.³⁴ Trading in the Shares also will be subject to Rule 5735(d)(2)(D), which sets forth circumstances under which Shares of the Fund may be halted.³⁵ The Exchange states that it has a general policy prohibiting the distribution of material, non-public information by its employees.³⁶ In addition, the Exchange states that the Adviser is not a broker-dealer, although it is affiliated with the Distributor, a broker-dealer, and that the Adviser has implemented a fire wall with respect to its broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio.³⁷ The Exchange states that the Sub-Adviser is

³³ See *id.*

³⁴ These may include: (1) the extent to which trading is not occurring in the securities and/or the financial instruments constituting the Disclosed Portfolio of the Fund; or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. See *id.* at 51636.

³⁵ See *id.*

³⁶ See *id.* at 51637.

³⁷ See *id.* at 51632. See also *supra* note 8. The Exchange further represents that an investment adviser to an open-end fund is required to be registered under the Investment Advisers Act of 1940 ("Advisers Act"). As a result, the Adviser and its related personnel are subject to the provisions of Rule 204A-1 under the Advisers Act, which requires investment advisers to adopt a code of ethics that reflects the fiduciary nature of their relationship with their clients as well as compliance with other applicable securities laws. Accordingly, investment advisers must have procedures designed to prevent the communication and misuse of non-public information, consistent with Rule 204A-1 under the Advisers Act. In addition, Rule 206(4)-7 under the Advisers Act makes it unlawful for an investment adviser to provide investment advice to clients unless such investment adviser has (i) adopted and implemented written policies and procedures reasonably designed to prevent violation, by the investment adviser and its supervised persons, of the Advisers Act and the Commission rules adopted thereunder; (ii) implemented, at a minimum, an annual review regarding the adequacy of the policies and procedures established pursuant to subparagraph (i) above and the effectiveness of their implementation; and (iii) designated an individual (who is a supervised person) responsible for administering the policies and procedures adopted under subparagraph (i) above.

not a broker-dealer and is not affiliated with a broker-dealer.³⁸ Further, the Commission notes that the Reporting Authority³⁹ that provides the Disclosed Portfolio must implement and maintain, or be subject to, procedures designed to prevent the use and dissemination of material, non-public information regarding the actual components of the portfolio.⁴⁰ The Exchange represents that trading in the Shares will be subject to the existing trading surveillances, administered by both Nasdaq and also the Financial Industry Regulatory Authority ("FINRA") on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws.⁴¹

Nasdaq deems the Shares to be equity securities, thus rendering trading in the Shares subject to Nasdaq's existing rules governing the trading of equity securities. In support of this proposal, the Exchange represented that:

(1) The Shares will be subject to Nasdaq Rule 5735, which sets forth the initial and continued listing criteria applicable to Managed Fund Shares.

(2) Trading in the Shares will be subject to the existing trading surveillances administered by both Nasdaq and FINRA on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws, and these procedures are adequate to properly monitor Exchange trading of the Shares in all trading sessions and to detect and help deter violations of Exchange rules and applicable federal securities laws.

(3) FINRA, on behalf of the Exchange, will communicate as needed regarding trading in the Shares or other exchange-traded securities with other markets and other entities that are ISG⁴² members, and FINRA, on behalf of the Exchange, may obtain trading information regarding trading in the Shares; exchange-traded fixed income securities; exchange-traded warrants; exchange-traded convertible securities; ETPs; or other exchange-traded securities from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares; exchange-traded warrants; exchange-traded fixed-income securities; exchange-traded convertible

³⁸ See *id.* at 51632.

³⁹ Nasdaq Rule 5730(c)(4) defines "Reporting Authority."

⁴⁰ See Nasdaq Rule 5735(d)(2)(B)(ii).

⁴¹ FINRA surveils trading on the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement.

⁴² For a list of the current members of ISG, see www.isgportal.org.

³⁰ According to the Exchange, ETPs, exchange-traded fixed income securities, exchange-traded convertible securities, exchange-traded warrants, and any other exchange traded securities will be valued at the official closing price on their principal exchange or board of trade, or lacking any current reported sale at the time of valuation, at the mean between the most recent bid and asked quotations on the principal exchange or board of trade. Portfolio securities traded on more than one securities exchange will be valued at the last sale price or official closing price, as applicable, on the business day as of which such value is being determined at the close of the exchange representing the principal market for such securities. Fixed-income securities traded over-the-counter (including high yield fixed-income securities and money market instruments); warrants traded over-the-counter; and convertible securities traded over-the-counter will be valued at the mean between the most recent available bid and asked quotations provided by parties that make a market in the instrument. If recent bid and ask quotations are not available, these securities will be valued in accordance with the Fund's fair valuation procedures. Money market instruments with maturities of less than 60 days will be valued at amortized cost. Shares of mutual funds that are not exchange-listed will be valued at their net asset value.

³¹ See *id.* at 51638.

³² See *id.*

securities; ETPs; or other exchange-traded securities from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. FINRA, on behalf of the Exchange, is able to access, as needed, trade information for certain fixed income securities, including corporate debt securities and money market instruments, held by the Fund reported to FINRA's TRACE.

(4) The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions.

(5) Prior to the commencement of trading, the Exchange will inform its members in an Information Circular of the special characteristics and risks associated with trading the Shares. Specifically, the Information Circular will discuss the following: (a) The procedures for purchases and redemptions of Shares in Creation Units (and that Shares are not individually redeemable); (b) Nasdaq Rule 2111A, which imposes suitability obligations on Nasdaq members with respect to recommending transactions in the Shares to customers; (c) how and by whom information regarding the Intraday Indicative Value and the Disclosed Portfolio is disseminated; (d) the risks involved in trading the Shares during the Pre-Market and Post-Market Sessions when an updated Intraday Indicative Value will not be calculated or publicly disseminated; (e) the requirement that members deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; and (f) trading information.

(6) For initial and continued listing, the Fund must be in compliance with Rule 10A-3 under the Act.⁴³

(7) At least 90% of the convertible bonds, convertible preferred stocks, and warrants in which the Fund invests, and the equity securities into which these securities may be converted, and also preferred stocks (non-convertible) in which the Fund invests, will be traded on exchanges that are ISG members.

(8) The Fund may hold up to an aggregate amount of 15% of its net assets in illiquid assets.

(9) The Fund will only invest in bank loans that have a par amount outstanding of U.S. \$100 million or greater at the time the loan is originally issued.

(10) The Fund will not enter into a long or short position in high yield debt securities with a par amount outstanding of less than U.S. \$100 million at the time of issuance of such

high yield debt securities, if upon establishing such position, the total value of such positions would represent fifty percent or greater of the Fund's net assets. In addition, the Fund will not invest in other types of high-yield debt securities, such as asset-backed securities.

(11) The Fund will not invest more than 25% of the value of its total assets in securities of issuers in any particular industry.

(12) The Fund's investments (including investments in ETPs) will not be utilized to seek to achieve a leveraged return on the Fund's net assets.

(13) The Fund will not invest in futures contracts, options, swaps, or other derivative instruments.

(14) A minimum of 100,000 Shares will be outstanding at the commencement of trading on the Exchange.

This approval order is based on all of the Exchange's representations, including those set forth above and in the Notice. The Commission notes that the Fund and the Shares must comply with the requirements of Nasdaq Rule 5735 to be listed and traded on the Exchange.

For the foregoing reasons, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act⁴⁴ and the rules and regulations thereunder applicable to a national securities exchange.

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act,⁴⁵ that the proposed rule change (SR-NASDAQ-2015-095) be, and it hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁴⁶

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76127; File No. SR-NYSE-2015-36]

Self-Regulatory Organizations; New York Stock Exchange LLC; Order Approving Proposed Rule Change, Amending Section 907.00 of the Listed Company Manual (the "Manual") To (i) Amend the Suite of Complimentary Products and Services That Are Offered to Certain Current and Newly Listed Companies, (ii) Update the Value of Complimentary Products and Services Offered to Listed Companies, and (iii) Provide That Complimentary Products and Services Would Also Be Offered to Companies That Transfer Their Listing to the Exchange From Another National Securities Exchange

October 9, 2015.

I. Introduction

On August 11, 2015, New York Stock Exchange LLC ("NYSE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to amend section 907.00 of the listed company manual ("Manual") to amend the suite of complimentary products and services that are offered to certain current and newly listed companies and update the value of complimentary products and services offered to listed companies. In addition, the proposal would separate companies that transfer their listing to the Exchange from another national securities exchange to a new category and expand the complimentary products and services offered to such transfer companies. The proposed rule change was published for comment in the **Federal Register** on August 25, 2015.³ No comment letters were received in response to the Notice. This order approves the proposed rule change.

II. Description of the Proposed Rule Change

In December 2013, the Exchange adopted a rule to expand the suite of complimentary products and services that it offers to certain current and newly listed companies on the Exchange.⁴ Under this rule, certain

⁴³ See 17 CFR 240.10A-3.

companies currently listed on the Exchange (“Eligible Current Listings”) are offered a suite of complimentary products and services that vary depending on the number of shares of common stock or other equity security that a company has outstanding. The Exchange presently offers a suite of complimentary products and services to (i) any U.S. company that lists common stock on the Exchange for the first time and any non-U.S. company that lists an equity security on the Exchange under Section 102.01 or 103.00 of the Manual for the first time, regardless of whether such U.S. or non-U.S. company conducts an offering and (ii) any U.S. or non-U.S. company emerging from a bankruptcy, spinoff (where a company lists new shares in the absence of a public offering), or carve-out (where a company carves out a business line or division, which then conducts a separate initial public offering) (collectively, “Eligible New Listings”). Currently, companies that transfer their listing to the Exchange are offered complimentary products and services on the same terms as Eligible Current Listings.

The Exchange proposes to amend Section 907.00 of the Manual to (i) amend the suite of complimentary products and services that are offered to Eligible Current Listings and Eligible New Listings, (ii) update the value of complimentary products and services offered to such companies, and (iii) provide that any U.S. or non-U.S. company that transfers its listing of common stock or equity securities, respectively, to the Exchange from another national securities exchange (“Eligible Transfer Companies”) would be eligible to receive an enhanced package of complimentary products and services comparable to the package offered to Eligible New Listings, with the exception of corporate governance tools.⁵

The Exchange proposes to update the approximate commercial value of the following offerings to Eligible Current Listings, Eligible New Listings, and Eligible Transfer Companies: Market surveillance products and services from \$45,000 to \$55,000 per annum, corporate governance tools from \$20,000 to \$50,000 per annum, web-hosting products and services from a range of \$12,000–16,000 to \$16,000 per annum, market analytics products and services from \$20,000 to \$30,000 per annum, and

news distribution products and services from \$10,000 to \$20,000 per annum. The Exchange also proposes to include web-casting services (with a commercial value of approximately \$6,500 annually) as a separate category of complimentary products and services offered to certain issuers.⁶ In addition, the Exchange proposes to add whistleblower hotline services (with a commercial value of approximately \$4,000 annually) to the list of services that it offers to all listed companies for a period of 24 months. The whistleblower hotline services will replace data room services and virtual investor relation tools (with a commercial value of \$15,000–\$20,000) as complimentary products offered to all listed issuers.

Currently, all listed issuers receive some complimentary products and services through NYSE Market Access Center. The Exchange also offers Eligible Current Listings a suite of products and services, varying based on the number of shares such companies have issued and outstanding. Eligible Current Listings that have at least 270 million shares issued and outstanding (“Tier One Eligible Current Listing”) are presently offered (i) a choice of market surveillance, corporate governance tools and advisory services or market analytics products and services and (ii) web-hosting products and services, on a complimentary basis. Eligible Current Listings that have between 160 million and up to 270 million shares issued and outstanding (“Tier Two Eligible Current Listing”) are presently offered a choice of market analytics, corporate governance tools, or web-hosting products and services. The Exchange proposes to amend Section 907.00 to delete corporate governance tools and advisory services from the suite of products offered to a Tier One Eligible Current Listing and corporate governance tools from the suite of products offered to a Tier Two Eligible Current Listing. In both cases, the proposed rule replaces the deleted service with web-casting products and services.

The Exchange currently offers Eligible New Listings different products and services based on such companies’ global market value. Eligible New Listings with a global market value of \$400 million or more (each a “Tier A Eligible New Listing”) are presently offered web-hosting and news

distribution products and services for a period of 24 months and either (i) market surveillance products and services for a period of 12 calendar months from the date of listing or (ii) a choice of market analytics products and services or corporate governance tools for a period of 24 calendar months from the date of listing. Eligible New Listings with a global market value of less than \$400 million (each a “Tier B Eligible New Listing”) are presently offered web-hosting and news distribution products and services for a period of 24 months from the date of listing. The Exchange proposes to amend Section 907.00 to offer 24 months each of market analytics, market surveillance products, web-hosting, web-casting, corporate governance tools, and news distribution products and services to Tier A Eligible New Listings. Accordingly, the Exchange proposes to delete text from Section 907.00 that discusses providing market surveillance products and services for only 12 months, as well as the option for continuing such services at the end of the initial 12 month period. The proposed rule further amends Section 907.00 to offer 24 months of web-casting, market analytics, and corporate governance tools to Tier B Eligible New Listings, in addition to the currently-offered web-hosting and news distribution products.

Pursuant to the proposed rule change, Eligible Transfer Companies would be offered a package of complimentary products and services that are similar to Eligible New Listings, with one exception.⁷ The one difference between the packages is that the Exchange will not offer corporate governance tools to Eligible Transfer Companies, while Eligible New Listings will receive this service.

Regarding the timing of complimentary products and services, the proposed rule amends Section 907.00 to specify that if an Eligible New Listing or Eligible Transfer Company

⁷ As noted above, the Exchange proposes to offer Eligible Transfer Companies a package of complimentary products and services comparable to the package that it offers to Eligible New Listings. Therefore, the Exchange proposes to utilize the same metric, *i.e.*, global market value, to determine eligibility for each designation so as to avoid confusion. Currently, transfer companies may receive complimentary products and services if they qualify to be designated as an Eligible Current Listing, such designation being based on the number of outstanding shares of a company’s equity securities. Under the proposed rule change, Eligible Transfer Companies with a global market value of \$400 million or more will be eligible to receive a suite of complimentary products and services valued at \$127,500 per year for two years and Eligible Transfer Companies with a global market value of less than \$400 million will be eligible to receive a suite of complimentary products and services valued at \$72,500 per year for two years.

NYSE–2013–68) (“December 2013 Approval Order”).

⁵ Eligible transfers currently receive complimentary products and services, if eligible, under the “currently listed issuers” category.

⁶ The web-hosting product offered by the Exchange provides eligible issuers with a Web site containing business content that can be viewed by investors. Web-casting services enable companies to host interactive web-casts to communicate with investors. Eligible companies will receive four interactive web-casts each year.

begins using a particular service within 30 days after the date of listing, the complimentary period begins on such date of first use. In all other instances, the complimentary period begins on the listing date.

In addition to the foregoing, the Exchange proposes making several changes to its rule to reflect a change in terminology. The proposed rule change amends Section 907.00 to change the terms “newly listed issuer” and “currently listed issuers” to “Eligible New Listing” and “Eligible Current Listings,” respectively. The Exchange also proposes to amend Section 907.00 to include a definition of Eligible Transfer Companies.⁸ Accordingly, since Eligible Transfer Companies would be a separate category of issuer under the proposed rule, the Exchange stated in its filing that it does not believe there could be any inference that a transfer company would be included in the definition of an Eligible New Listing. Therefore, the Exchange proposes to delete the exception for companies that are transferring their listing from another national securities exchange from the current definition of newly listed issuers, which would be renamed Eligible New Listing under the proposed rule.

The Exchange also proposes to amend the first paragraph of Section 907.00 of the Manual to specify that it will offer certain complimentary products and services, and access to discounted third-party products and services through the NYSE Market Access Center to both currently and newly listed issuers, whereas previously it stated such services were only offered to currently listed issuers.

While the Exchange will implement the proposed rule upon approval, any Eligible New Listing that listed on the Exchange prior to approval of the proposed rule will continue to receive services under the terms of the current rule. Therefore, for as long as any Eligible New Listing is receiving services under the terms of Section 907.00 of the Manual as currently in effect, the Exchange will maintain a link to such section in the Introductory Note to Section 907.00.

With respect to Eligible Current Listings, to the extent that the Exchange has already paid a third-party provider (prior to approval) for corporate governance services to an Eligible Current Listing, such complimentary

service will continue until the payments run out. Once any pre-approval payments run out, such services will be discontinued. The Exchange expects all corporate governance services to Eligible Current Listings to be completely discontinued no later than early 2016.

The specific products and services offered by the Exchange will be developed by the Exchange or by third-party vendors. In its filing, the Exchange represented that NYSE Governance Services⁹ will offer and develop the corporate governance tools, but will not provide any other service related to the proposed rule. NYSE Governance Services is an entity that is owned by the Exchange’s parent company that provides corporate governance, risk and compliance services to its clients, including companies listed on the Exchange. According to the Exchange, companies that are offered these products are under no obligation to accept them and a company’s listing on the Exchange is not conditioned upon acceptance of any product or service. Moreover, the Exchange represents that, from time to time, companies elect to purchase products and services from other vendors at their own expense rather than accepting comparable products and services offered by the Exchange.

III. Discussion and Commission Findings

The Commission has carefully reviewed the proposed rule change and finds that it is consistent with the requirements of Section 6 of the Act.¹⁰ Specifically, the Commission finds that the proposal is consistent with Sections 6(b)(4)¹¹ and (5) of the Act¹² in particular, in that the proposed rule is designed to provide for the equitable

⁹ In its filing, NYSE stated its belief that NYSE Governance Services is not a “facility” of the Exchange as defined in 15 U.S.C. 78c(a)(2), and noted that its proposed rule change is being filed with the Commission under Section 19(b)(2) of the Act because it relates to services offered in connection with a listing on the Exchange. See Notice *supra* note 3. The Commission notes that the definition of a “facility” of an exchange is broad under the Act, and “includes its premises, tangible or intangible property whether on the premises or not, any right to the use of such premises or property or any service thereof for the purpose of effecting or reporting a transaction on an exchange . . . and any right of the exchange to the use of any property or service.” The Commission further notes that any determination as to whether a service or other product is a facility of an exchange requires an analysis of the particular facts and circumstances.

¹⁰ 15 U.S.C. 78f. In approving this proposed rule change, the Commission has considered the proposed rule’s impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹¹ 15 U.S.C. 78f(b)(4).

¹² 15 U.S.C. 78f(b)(4) and (5).

allocation of reasonable dues, fees, and other charges among Exchange members, issuers, and other persons using the Exchange’s facilities, and is not designed to permit unfair discrimination between customers, issuers, brokers or dealers. Moreover, the Commission believes that the proposed rule change is consistent with 6(b)(8) of the Act¹³ in that it does not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

As described above, the Exchange proposes to alter the complimentary products and services it offers companies. Specifically, the Exchange proposes to (i) remove corporate governance tools and advisory services for Tier One companies, (ii) remove corporate governance tools for Tier Two companies, (iii) expand the services provided to Tier A Eligible New Listings to include all of the services listed, as described above, for a period of 24 months, not just provide a choice of services, (iv) expand the services provided to Tier B Eligible New Listings to include market analytics and corporate governance tools, (v) offer Eligible Transfer Companies the same products and services offered to Eligible New Listings, except for corporate governance tools,¹⁴ (vi) provide web-casting to Tier One, Tier Two, Tier A, and Tier B companies, and (vii) replace data room services and virtual investor relation tools available to all issuers annually with a whistleblower hotline for a period of 24 months.

The Commission believes that it is consistent with the Act for the Exchange to revise the products and services it offers to companies. The Exchange has represented that the corporate governance services are not as helpful to more established companies as they are to newly listed companies and that web-casting may be more useful to them.¹⁵ According to the Exchange, the corporate governance products currently offered to Eligible Current Listings are in low demand. The Exchange believes replacing such offerings with web-casting would be more beneficial to listed companies who utilize this service in connection with quarterly earnings releases. The Commission believes that, based on NYSE’s representations, replacing a little-

¹³ 15 U.S.C. 78f(b)(8).

¹⁴ Because the Exchange is proposing to offer Eligible Transfer Companies a package of complimentary benefits similar to the benefits offered to Eligible New Listings, the Exchange also proposes using the same metric, *i.e.*, global market value, to determine eligibility for certain products and services.

¹⁵ See Notice, *supra* note 3.

⁸ For purposes of this Section 907.00, the term “Eligible Transfer Company” means any U.S. or non-U.S. company that transfers its listing of common stock or equity securities, respectively, to the Exchange from another national securities exchange.

utilized service by companies already listed with one that could help companies communicate better with shareholders is reasonable and consistent with Section 6(b)(5) of the Act.

In addition, the Exchange believes that it is appropriate to expand the suite of complimentary products and services it offers to Tier A and Tier B Eligible New Listings, because such companies are listing on the Exchange for the first time and frequently have greater needs with respect to developing their corporate governance and shareholder outreach capabilities.¹⁶ Moreover, the Exchange has represented that it faces competition in the market for listing services.¹⁷ As part of this competition, the Exchange seeks to entice Nasdaq-listed companies to transfer their listing to the Exchange. The Exchange competes in part by improving the quality of the services that it offers to listed companies. NYSE believes that offering transfers from Nasdaq a similar package to that currently offered to NYSE listed companies transferring to Nasdaq, as well as new listings on Nasdaq, should enhance its ability to compete for listings. According to the Exchange, by offering products and services on a complimentary basis and ensuring that it is offering the services most valued by its listed issuers, it improves the quality of the services that listed companies receive.¹⁸

Accordingly, the Commission believes that the proposed rule reflects the current competitive environment for exchange listings among national securities exchanges, and is appropriate and consistent with Section 6(b)(8) of the Act.¹⁹ Further, by extending the provision of certain complementary services (as listed above) to Tier A and Tier B Eligible New Listings to 24 months and by entitling Eligible Transfer Companies to receive these products and services, other than corporate governance tools, on similar terms as Eligible New Listings, the proposed change enables the Exchange to better compete for new listings.

Moreover, the Commission believes that it is appropriate for the Exchange to offer varying services to different categories of issuers. The Commission has previously found that the tiers originally established under the corporate products and services rule was consistent with the Act.²⁰ The

Commission further found that the changes approved in the December 2013 Approval Order expanding the complimentary products and services offered to some tiers but not others was also justified, in part, based on the different-sized companies within each tier and the amount of services they needed.²¹ According to the Exchange, the current proposal to expand the products and services available to Tier A and Tier B Eligible New Listings should ease the transition of companies becoming public for the first time.²² In addition, as stated by the Exchange, it competes with Nasdaq for listings and further, that Nasdaq offers similar products and services to new listings, including transfers.²³

As noted above, under the proposal, while newly listed companies and transfers will receive similar services there is one exception involving corporate governance tools (valued at \$50,000) which newly listed companies will receive but not transfers. NYSE argues that this approach is consistent with the changes being proposed for currently listed companies in that in the Exchange's experience these tools are not as useful for already established companies and as a result are in low demand by such listed companies. Based on these representations, the Commission does not believe that the exception for transfers violates the unfair discrimination standard under Section 6(b)(5) of the Act and appears to provide equal treatment among established companies, whether currently listed or transferring. The Commission notes that all listed companies will continue to receive some level of free services, including the addition of the whistleblower hotline services being approved in this order. The Commission also notes that within each tier all issuers receive the exact same package of services. The approval of this proposal, including the updated dollar values and specific services provided within each tier, will therefore help to ensure that individual listed companies are not given specially

negotiated packages of products and services to list or remain listed which would raise unfair discrimination issues under the Act. The Commission also believes that it is reasonable, and in fact required by Section 19(b) of the Act, that the Exchange amend its rule to update the commercial values of the products it offers to Eligible Current Listings, Eligible Transfer Companies, and Eligible New Listings.²⁴ This provides greater transparency to Exchange's rules and the fees, and the value of free products and services, applicable to listed companies.

The Commission also believes that it is consistent with the Act for the Exchange to allow the complimentary period for a particular service offered to Eligible New Listings and Eligible Transfer Companies to begin on the date of first use if a company begins to use the service within 30 days after the date of listing. According to the Exchange, companies listing on the Exchange for the first time often require a period of time after listing to complete the contracting and training process with vendors providing the complimentary products and services.²⁵ Therefore, many companies are not able to begin using the suite of products offered to them immediately on the date of listing.²⁶ The Commission notes that this proposed change is substantially similar to Nasdaq Rule IM-5900-7, which also allows a company to begin using services within 30 days of listing.²⁷ As noted in the Nasdaq Order, the Commission believes that this change would provide only a short window of additional time to allow companies to finalize their contracts for the complimentary products and services, and that this additional time would only be available to companies that have already determined to list on the Exchange.²⁸

Based on the factors noted above, the Commission continues to believe that NYSE's products and services, and their commercial value, are equitably allocated among issuers, consistent with Section 6(b)(4) of the Act.²⁹ The

NYSE-2011-20) ("Approval Order"). In particular, the Approval Order states that while not all issuers receive the same level of services, NYSE has stated that trading volume and market activity are related to the level of services that the listed companies would use in the absence of complimentary arrangements. The Commission found, among other things, that ". . . the products and services and their commercial value are equitably allocated among issuers consistent with Section 6(b)(4) of the Act, and the rule does not unfairly discriminate between issuers consistent with Section 6(b)(5) of the Act." See Approval Order, 76 FR at 51452.

²¹ See December 2013 Approval Order, *supra* note 4.

²² See Notice, *supra* note 3.

²³ See *id.*

²⁴ We would expect the Exchange, consistent with Section 19(b) of the Act, to periodically update the value of products and services offered should they change. This would help to provide transparency to listed companies on the value of the free services they receive and the actual costs associated with listing on the Exchange.

²⁵ See Notice, *supra* note 3.

²⁶ See *id.*

²⁷ See Securities Exchange Act Release No. 72669 (July 24, 2014), 79 FR 44234 (July 30, 2014) (approving Nasdaq-2014-058) ("Nasdaq Order").

²⁸ The Commission expects the Exchange to track the start (and end) date of each free service.

²⁹ 15 U.S.C. 78f(b)(4).

¹⁶ See *id.*

¹⁷ See *id.*

¹⁸ See *id.*

¹⁹ 15 U.S.C. 78f(b)(8).

²⁰ See Securities Exchange Act Release No. 65127 (Aug. 12, 2011), 76 FR 51449 (Aug. 18, 2011) (SR-

Commission also continues to believe that the rule does not unfairly discriminate between issuers, consistent with Section 6(b)(5) of the Act.³⁰ Finally, the Commission believes that the proposal does not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act, consistent with Section 6(b)(8) of the Act.³¹

V. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,³² that the proposed rule change (SR-NYSE-2015-36), be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³³

Brent J. Fields,
Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76120; File No. SR-BATS-2015-83]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Related to Fees for Use of BATS Exchange, Inc.

October 9, 2015.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) ¹ and Rule 19b-4 thereunder,² notice is hereby given that on October 1, 2015, BATS Exchange, Inc. (the “Exchange” or “BATS”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II and III below, which Items have been prepared by the Exchange. The Exchange has designated the proposed rule change as one establishing or changing a member due, fee, or other charge imposed by the Exchange under Section 19(b)(3)(A)(ii) of the Act ³ and Rule 19b-4(f)(2) thereunder,⁴ which renders the proposed rule change effective upon filing with the Commission. The Commission is publishing this notice to

solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange filed a proposal to amend the fee schedule applicable to Members ⁵ and non-members of the Exchange pursuant to BATS Rules 15.1(a) and (c).

The text of the proposed rule change is available at the Exchange’s Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify the fee schedule applicable to the Exchange’s options platform (“BATS Options”) effective immediately, in order to: (i) Increase the fees for certain logical ports; and (ii) provide for separate fees based upon the number of logical ports utilized.

A logical port represents a port established by the Exchange within the Exchange’s system for trading and billing purposes. Each logical port established is specific to a Member or non-member and grants that Member or non-member the ability to operate a specific application, such as FIX order entry or PITCH data receipt. The Exchange’s Multicast PITCH data feed is available from two primary feeds, identified as the “A feed” and the “C feed”, which contain the same information but differ only in the way such feeds are received. The Exchange also offers two redundant feeds,

identified as the “B feed” and the “D feed.” The Exchange also offers a bulk-quoting interface which allows Users ⁶ of BATS Options to submit and update multiple bids and offers in one message through logical ports enabled for bulk-quoting.⁷ The bulk-quoting application for BATS Options is a particularly useful feature for Users that provide quotations in many different options.

Logical ports, including Multicast PITCH Spin Server and GRP ports, which are used to request and receive a retransmission of data from the Exchange, are currently subject to a fee of \$400 per month per port and ports with bulk quoting capabilities are charged \$1,500 per month per port. These fees are set and do not currently vary based on the number of ports purchased. In addition, logical port fees are limited to logical ports in the Exchange’s primary data center and no logical port fees are assessed for redundant secondary data center ports. The Exchange assesses the monthly per logical port fees for all of a Member and non-Member’s logical ports.

The Exchange now proposes to increase the fees for logical ports (including Multicast PITCH Spin Server and GRP ports) from \$400 per port per month to \$550 per port per month for the first five ports. Multicast PITCH Spin Server Ports and GRP Ports would now be subject to a fee of \$550 per month for a set of primary ports (A or C feed). The Exchange will continue to offer for free the ports necessary to receive the Exchange’s redundant Multicast “B feed” and “D feed”, as well as all ports made available in the Exchange’s secondary data center. Accordingly, this proposal only applies to ports used to receive an Exchange primary Multicast PITCH feeds at the Exchange’s primary data center. Other than as described below, the Exchange does not propose to amend the monthly fee for ports with bulk quoting capabilities.

Where a User subscribes to more than five ports, the Exchange proposes to charge for each port in excess of five \$650 per logical port per month and \$2,000 per month for logical ports with bulk quoting capabilities. For example, if a User subscribes to seven logical ports, it would pay \$550 per port per month for ports one through five and

⁶ A User on BATS Options is either a member of BATS Options or a sponsored participant who is authorized to obtain access to the Exchange’s system pursuant to BATS Rule 11.3.

⁷ See Securities Exchange Act Release Nos. 65133 (August 15, 2011), 76 FR 52032 (August 19, 2011) (SR-BATS-2011-029) and 65307 (September 9, 2011), 76 FR 57092 (September 15, 2011) (SR-BATS-2011-034).

⁵ The term “Member” is defined as “any registered broker or dealer that has been admitted to membership in the Exchange.” See Exchange Rule 1.5(n).

³⁰ 15 U.S.C. 78f(b)(5).

³¹ 15 U.S.C. 78f(b)(8).

³² 15 U.S.C. 78s(b)(2).

³³ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A)(ii).

⁴ 17 CFR 240.19b-4(f)(2).

\$650 per port per month for ports six and seven. Except for bulk quoting ports, which will be separately evaluated, the Exchange will sum logical ports across all classifications in order to determine applicable fees. For example, if a User subscribes to five logical ports and one logical port with bulk quoting capabilities, that User would be charged \$550 per port per month for each logical port and \$1,500 per month for the port with bulk quoting capabilities. That User would not be charged the increased fees for its sixth ports. However, should that User subscribe to six logical ports and one logical port with bulk quoting capabilities, that User would be charged \$550 per port per month for logical ports one through five, \$650 per month for its sixth logical port, and \$1,500 per month for the port with bulk quoting capabilities.

Implementation Date

The Exchange proposes to implement these amendments to its fee schedule effective immediately.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6 of the Act.⁸ Specifically, the Exchange believes that the proposed rule change is consistent with Section 6(b)(4) of the Act,⁹ in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and other persons using any facility or system which the Exchange operates or controls.

The Exchange operates in a highly competitive market in which exchanges offer connectivity services as a means to facilitate the trading activities of members and other participants. Accordingly, fees charged for connectivity are constrained by the active competition for the order flow of such participants as well as demand for market data from the Exchange. If a particular exchange charges excessive fees for connectivity, affected members will opt to terminate their connectivity arrangements with that exchange, and adopt a possible range of alternative strategies, including routing to the applicable exchange through another participant or market center or taking that exchange's data indirectly. Accordingly, the exchange charging

excessive fees would stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it by affected members, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any exchange to charge unreasonable fees for connectivity.

The Exchange believes that the proposal to increase fees for logical ports is equitably allocated, reasonable, and not unfairly discriminatory in that the proposal will help the Exchange to cover increasing infrastructure costs associated with offering and maintaining logical ports connections. The Exchange notes its proposal to increase the fee for logical ports equals that currently charged by the New York Stock Exchange, Inc. ("NYSE") and NYSE Arca, Inc. ("NYSE Arca").¹⁰ In addition, the Exchange believes that charging different fees based on the number of ports a User subscribes to is also equitably allocated, reasonable, and not unfairly discriminatory because proposed fees based on the number of ports subscribed to would encourage Users to become more efficient with, and reduce the number of ports used, thereby resulting in a corresponding increase in the efficiency that the Exchange would be able to realize with respect to managing its own infrastructure. Lastly, the Exchange notes that the NYSE and NYSE Arca also previously charged different fees based on the number of ports subscribed to.¹¹

Lastly, the Exchange also believes that the proposed amendments to its fee schedule are non-discriminatory because they will apply uniformly to all Members. All Members that voluntarily select various service options will be charged the same amount for the same services. All Members have the option to select any connectivity option, and there is no differentiation among Members with regard to the fees charged for the services offered by the Exchange.

¹⁰ See File Nos. SR-NYSE-2015-43 (filed September 23, 2015), and SR-NYSEArca-2015-87 (filed September 22, 2015) (proposing a fee of \$550 per port per month). In addition, the charge on the NASDAQ Stock Market LLC ("NASDAQ") for a FIX Trading Port is \$550 per port per month. See NASDAQ Rule 7015. A separate charge for Pre-Trade Risk Management ports also is applicable, which ranges from \$400 to \$600 and is capped at \$25,000 per firm per month. See NASDAQ Rule 7016.

¹¹ See File Nos. SR-NYSE-2015-43 (filed September 23, 2015), and SR-NYSEArca-2015-87 (filed September 22, 2015).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes its proposed amendments to its fee schedule would not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed change represents a significant departure from previous pricing offered by the Exchange or pricing offered by the Exchange's competitors. Additionally, Members may opt to disfavor the Exchange's pricing if they believe that alternatives offer them better value. Accordingly, the Exchange does not believe that the proposed change will impair the ability of Members or competing venues to maintain their competitive standing in the financial markets.

The Exchange believes that fees for connectivity are constrained by the robust competition for order flow among exchanges and non-exchange markets. Further, excessive fees for connectivity, including logical port fees, would serve to impair an exchange's ability to compete for order flow rather than burdening competition. The Exchange also does not believe the proposed rule change would impact intramarket competition as it would apply to all Members and non-Members equally.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)¹² of the Act and subparagraph (f)(2) of Rule 19b-4¹³ thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the

¹² 15 U.S.C. 78s(b)(3)(A).

¹³ 17 CFR 240.19b-4(f)(2).

⁸ 15 U.S.C. 78f.

⁹ 15 U.S.C. 78f(b)(4).

Commission shall institute proceedings under Section 19(b)(2)(B)¹⁴ of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BATS-2015-83 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File No. SR-BATS-2015-83. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-BATS-

2015-83, and should be submitted on or before November 6, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁵

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76124; File No. SR-NYSEArca-2015-91]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change, as Modified by Amendment No. 1, Amending the Exchange's Fee Schedule To Eliminate the Sponsor Fee In Connection With Listing a New Derivative Securities Product on the Exchange

October 9, 2015.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that, on October 5, 2015, NYSE Arca, Inc. (the "Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. On October 8, 2015, the Exchange filed Amendment No. 1 to the proposed rule change.⁴ The Commission is publishing this notice to solicit comments on the proposed rule change, as modified by Amendment No. 1, from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's Schedule of Fees and Charges ("Fee Schedule") to eliminate the \$20,000 one-time consultation fee when a first time sponsor, managing owner, general partner or equivalent is listing a new Derivative Securities Product on the Exchange. The text of the proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange,

¹⁵ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

⁴ In Amendment No. 1, the Exchange represented that, notwithstanding the elimination of the Sponsor Fee (as defined herein), the Exchange will continue to be able to fund its regulatory obligations.

and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Currently, the Exchange's Schedule of Fees and Charges ("Schedule") provides that, where a first time sponsor, managing owner, general partner or equivalent ("Sponsor") lists a new Derivative Securities Product⁵ on the Exchange, the Sponsor is charged a one-time consulting charge of \$20,000 (the "Sponsor Fee"). The Exchange originally implemented the Sponsor Fee in 2009 to adequately compensate the Exchange for additional legal and business resources to properly advise new Sponsors through the listing process.⁶

The Exchange proposes to amend the Fee Schedule to eliminate the Sponsor Fee. The Exchange has determined to eliminate the Sponsor Fee to permit the Exchange to better compete for listings of Derivative Securities Products with other exchanges that do not impose a fee similar to the Sponsor Fee. Elimination of the Sponsor Fee would benefit Sponsors by providing a cost savings and by permitting them to select their listing venue for a new Derivative Securities Product based on level of service and without consideration of

⁵ For the purposes of the Schedule, the term "Derivative Securities Products" includes securities described in NYSE Arca Equities Rules 5.2(j)(3) (Investment Company Units); 8.100 (Portfolio Depository Receipts); 8.200 (Trust Issued Receipts); 8.201 (Commodity-Based Trust Shares); 8.202 (Currency Trust Shares); 8.203 (Commodity Index Trust Shares); 8.204 (Commodity Futures Trust Shares); 8.300 (Partnership Units); 8.500 (Trust Units); 8.600 (Managed Fund Shares), and 8.700 (Managed Trust Securities).

⁶ See Securities Exchange Act Release No. 60184 (June 29, 2009), 74 FR 32209 (July 7, 2009) (SR-NYSEArca-2009-52) (notice of filing of proposed rule change to amend the schedule of fees and changes for Exchange services).

¹⁴ 15 U.S.C. 78s(b)(2)(B).

whether a consulting fee would be charged.

Listing Fees and Annual Fees applicable to Derivatives Securities Products would remain unchanged.

2. Statutory Basis

NYSE Arca believes that the proposal is consistent with Section 6(b)⁷ of the Act, in general, and Section 6(b)(4)⁸ of the Act in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among its issuers and other persons using its facilities. In addition, the Exchange believes the proposal is consistent with the requirement under Section 6(b)(5)⁹ that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest. The proposed elimination of the Sponsor Fee is equitable and does not unfairly discriminate between issuers because it would apply uniformly to all Sponsors. The Exchange believes elimination of the Sponsor Fee is reasonable in that it constitutes a reduction in fees for Sponsors. Notwithstanding the elimination of the Sponsor Fee, the Exchange will continue to be able to fund its regulatory obligations.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The Exchange believes the proposed rule change would promote competition because it will permit the Exchange to better compete with other exchanges that do not charge a fee similar to the Sponsor Fee.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)¹⁰ of the Act and

subparagraph (f)(2) of Rule 19b-4¹¹ thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)¹² of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change, as modified by Amendment No. 1, is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEArca-2015-91 on the subject line.

Paper comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-NYSEArca-2015-91. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public

Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from the submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2015-91 and should be submitted on or before November 6, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹³

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76123; File No. SR-NASDAQ-2015-096]

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Order Approving Proposed Rule Change To Adopt a Kill Switch for NOM

October 9, 2015.

I. Introduction

On August 7, 2015, The NASDAQ Stock Market LLC filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt a risk protection functionality referred to as a kill switch that will be available to all Participants of the NASDAQ Options Market ("Exchange" or "NOM"). The proposed rule change was published for comment in the **FEDERAL REGISTER** on August 26, 2015.³ The Commission received no comment letters on the proposed rule change. This order approves the proposed rule change.

II. Description of the Proposed Rule Change

The Exchange proposes to offer to all its members a new optional risk protection functionality for options to

¹³ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 75743 (August 26, 2015), 80 FR 51850 ("Notice").

⁷ 15 U.S.C. 78f(b).

⁸ 15 U.S.C. 78f(b)(4).

⁹ 15 U.S.C. 78f(b)(5).

¹⁰ 15 U.S.C. 78s(b)(3)(A).

¹¹ 17 CFR 240.19b-4(f)(2).

¹² 15 U.S.C. 78s(b)(2)(B).

help members control their quote and order activity on NOM.⁴ Referred to as a “Kill Switch,” the functionality will allow NOM Participants to remove quotes and cancel open orders, and will prevent the submission of new quotes and orders until the Exchange re-enables access to the NOM System for the Participant.⁵

To use the Kill Switch, a Participant will send a message⁶ to the NOM System to: (i) Promptly remove quotes; and/or (ii) promptly cancel orders for certain specified Identifiers (e.g., a particular Exchange account, port, or badge or mnemonic, or for a group of Identifiers).⁷ The Exchange’s proposal does not allow Participants to remove quotes or cancel orders by symbol. The NOM System will send an automated message to the Participant when it has processed a Kill Switch request.

The NOM Participant will be unable to enter any new quotes or orders using the affected Identifier(s) until the Participant makes a verbal request to the Exchange and Exchange staff enables re-entry. Once enabled for re-entry, the Exchange will send a message to the Participant and, if it requests to receive such notifications, to the Participant’s clearing firm as well.

III. Discussion and Commission Findings

After careful review, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange,⁸ and, in particular, the requirements of Section 6 of the Act.⁹ In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,¹⁰ which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and

equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and that the rules are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

According to the Exchange, the proposed rule change is designed to protect Participants in the event that the Participant encounters a situation, like a systems issue, for which they would like to withdraw temporarily from the market.¹¹ The Exchange further notes that the proposed Kill Switch is designed to increase systemic protections and, in so doing, should encourage liquidity generally while removing impediments to market participation.¹² To the extent that the Exchange’s proposal provides member firms with greater control over their quotes and orders, and allows firms to remove quotes and cancel orders in an appropriate manner, then the proposal may encourage firms to provide liquidity on NOM and thus contribute to fair and orderly markets in a manner that protects the public interest, protects investors, and is not designed to permit unfair discrimination.

Further, the Commission agrees that it would be appropriate to notify a Participant’s clearing member, at the clearing member’s request, once a Participant’s selected Identifiers are re-enabled following the Participant’s use of the Kill Switch. Because the clearing member accepts financial responsibility for clearing the Participant’s trades, notifying the applicable clearing member of a Participant’s re-enabled Identifiers following use of the Kill Switch may be appropriate and help the clearing member manage the risk associated with the Participant’s trading activity.

The Commission notes that the Exchange represented in its proposal that the Kill Switch will operate consistently with a broker-dealer’s firm quote obligations pursuant to Rule 602 of Regulation NMS,¹³ and that the proposal does not diminish a market-maker’s obligation to provide continuous two-sided quotes on a daily basis under NOM rules.¹⁴ Specifically, the Exchange represents that “any interest that is executable against a

NOM Participant’s quotes and orders that are received by the Exchange prior to the time the Kill Switch is processed by the System will automatically execute at the price up to the NOM Participant’s size.”¹⁵ In that respect, the Exchange further represented that “[t]he Kill Switch message will be accepted by the System in the order of receipt in the queue and will be processed in that order so that interest that is already accepted into the System will be processed prior to the Kill Switch message.”¹⁶ Based on these representations, the Commission believes that the proposal is designed to promote just and equitable principles of trade and perfect the mechanism of a free and open market.

Accordingly, the Commission finds that the Exchange’s proposal is consistent with the Act, including Section 6(b)(5) thereof, in that it is designed to promote just and equitable principles of trade, foster cooperation and coordination with persons engaged in facilitating transactions in securities, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest.

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,¹⁷ that the proposed rule change (SR-NASDAQ-2015-096) be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁸

Robert W. Errett,
Deputy Secretary.

SUMMARY: The Securities and Exchange Commission published a document in the **Federal Register** of October 9, 2015 concerning a Notice of Filing of Proposed Rule Change Amending Several Rules to Address Certain Order Handling Obligations on the Part of Its Floor Brokers. The document incorrectly indicated that the Commission had waived the operative delay for the proposed rule change.

FOR FURTHER INFORMATION CONTACT: Marc F. McKayle, Division of Trading and Markets, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549, (202) 551-5633.

Correction

In the **Federal Register** of October 7, 2015, in FR Doc No: 2015-25463, on page 60723, the sentences from the 24th line through the 42nd line of the third column referring to the operative delay should be deleted.

Robert W. Errett,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76122; File No. SR-ICC-2015-015]

Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing of Proposed Rule Change Related to the ICC Rule Enforcement Process for Missed Submissions

October 9, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b-4 thereunder,² notice is hereby given that on September 30, 2015, ICE Clear Credit LLC (“ICC”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared primarily by ICC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The purpose of the proposed changes is to make revisions to the ICC Clearing Rules (the “Rules”) related to the ICC rule enforcement process for Missed Submissions.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. ICC has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of these statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

As part of ICC’s end-of-day price discovery process, ICC Clearing Participants (“CPs”) are required to submit end-of-day prices for specific instruments related to their open interest at ICC, in accordance with Rule 404(b) and ICC Procedures. Failure of a CP to provide submissions required by ICC pursuant to Rule 404(b) and ICC Procedures constitute a Missed Submission. In order to provide incentive against Missed Submissions, ICC has adopted a summary assessment approach described in Rule 702(e) and Schedule 702 of the Rules.

Currently, under Rule 702(e)(ii)(2), a CP may be eligible for a once-in-a-lifetime conditional waiver from such assessments, if one or more Missed Submissions are the first instance(s) of a Missed Submission for the type of instrument (index or single name) and the CP provides adequate explanation of the cause and plans for remedial actions.

Given the increased automation of price submissions, ICC recognizes that there may be circumstances, due to technological failures, which may result in Missed Submissions. Furthermore, due to the significant length of time since the inception of the end-of-day process, many CPs have utilized their once-in-a-lifetime waiver. As such, ICC believes it is reasonable to provide, under limited circumstances, a conditional once-a-year waiver for such Missed Submissions caused by technical failures, as described below. Such Rule changes will not affect the integrity and effectiveness of the end-of-day price discovery process. ICC believes such Rule changes provide a valuable and practical balance between the technicalities of the price discovery process and appropriate penalization for Missed Submissions.

The proposed Rule text provides for the replacement of ICC’s current once-in-a-lifetime waiver for Missed Submissions with a conditional once-a-year waiver for Missed Submissions caused by technical failures. Under revised Rule 702(e)(ii)(2), a CP would be eligible for one waiver per year for single name Missed Submissions, and one waiver per year for index Missed Submissions. A CP may request such waiver(s) be applied against all Missed Submissions for a given instrument class on a given day. A CP would be required to provide documentation with a waiver request, explaining that the root-cause of the Missed Submission was a technology issue and including a remediation plan to fix the cause of the Missed Submission. ICC would review and evaluate the waiver request and accept unless it had legitimate concerns that the root-cause of the Missed Submission had not been adequately identified, was not due to a technical issue, and/or would not be corrected by the provided remediation plan. ICC would maintain its current ability to provide waivers for Missed Submissions deemed to be due to extraordinary circumstances outside of a CP’s control, as set forth in Rule 702(e)(ii)(3). Pending regulatory approval, ICC plans to implement these changes on January 1, 2016, and apply the once-a-year waiver to the 2016 calendar year, and each calendar year going forward. There are no changes to ICC policies and procedures as a result of the Rule changes.

Section 17A(b)(3)(F) of the Act³ requires, among other things, that the rules of a clearing agency be designed to protect investors and the public interest and to comply with the provisions of the Act and the rules and regulations thereunder. ICC believes that the proposed rule changes are consistent with the requirements of the Act and the rules and regulations thereunder applicable to ICC, in particular, to Section 17(A)(b)(3)(F),⁴ because ICC believes that the proposed rule changes will assure the prompt and accurate clearance and settlement of securities transactions, derivatives agreements, contracts, and transactions, as the proposed revisions enhance ICC’s price discovery process, by ensuring a fair and equitable assessment structure. As such, the proposed changes are designed to promote the prompt and accurate clearance and settlement of securities transactions, derivatives agreements, contracts, and transactions

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78q-1(b)(3)(F).

⁴ *Id.*

within the meaning of Section 17A(b)(3)(F)⁵ of the Act.

Furthermore, such proposed changes are designed to ensure that CPs are appropriately disciplined for violations of ICC's rules, specifically Missed Submissions, through an appropriate fining structure, in accordance with Section 17A(b)(3)(G).⁶ Finally, such proposed rule changes are intended to provide a fair procedure with respect to the disciplining of CPs for Missed Submissions, in accordance with Section 17A(b)(3)(H).⁷

B. Self-Regulatory Organization's Statement on Burden on Competition

ICC does not believe the proposed rule changes would have any impact, or impose any burden, on competition. The Rule changes related to the ICC rule enforcement process for Missed Submissions apply uniformly across all market participants. Therefore, ICC does not believe the proposed rule changes impose any burden on competition that is inappropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments relating to the proposed rule change have not been solicited or received. ICC will notify the Commission of any written comments received by ICC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

- (A) By order approve or disapprove the proposed rule change or
- (B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-ICC-2015-015 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-ICC-2015-015. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filings also will be available for inspection and copying at the principal office of ICE Clear Credit and on ICE Clear Credit's Web site at <https://www.theice.com/clear-credit/regulation>.

All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-ICC-2015-015 and should be submitted on or before November 6, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁸

Robert W. Errett,

Deputy Secretary.

DEPARTMENT OF STATE

[Public Notice: 9318]

Culturally Significant Objects Imported for Exhibition Determinations: "Picturing the Americas: Landscape Painting From Tierra del Fuego to the Arctic" Exhibition

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.*; 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236-3 of August 28, 2000 (and, as appropriate, Delegation of Authority No. 257 of April 15, 2003), I hereby determine that the objects to be included in the exhibition "Picturing the Americas: Landscape Painting from Tierra del Fuego to the Arctic," imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to a loan agreement with the foreign owner or custodian. I also determine that the exhibition or display of the exhibit objects at the Crystal Bridges Museum of American Art, Bentonville, Arkansas, from on about November 7, 2015, until on or about January 18, 2016, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the imported objects, contact the Office of Public Diplomacy and Public Affairs in the Office of the Legal Adviser, U.S. Department of State (telephone: 202-632-6471; email: section2459@state.gov). The mailing address is U.S. Department of State, L/PD, SA-5, Suite 5H03, Washington, DC 20522-0505.

Dated: October 6, 2015.

Kelly Keiderling,

Principal Deputy Assistant Secretary, Bureau of Educational and Cultural Affairs, Department of State.

BILLING CODE 4710–05–P**DEPARTMENT OF TRANSPORTATION****Maritime Administration****[Docket No. MARAD–2015–0118]****Requested Administrative Waiver of the Coastwise Trade Laws: Vessel PAESANA; Invitation for Public Comments**

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Notice.

SUMMARY: As authorized by 46 U.S.C. 12121, the Secretary of Transportation,

as represented by the Maritime Administration (MARAD), is authorized to grant waivers of the U.S.-build requirement of the coastwise laws under certain circumstances. A request for such a waiver has been received by MARAD. The vessel, and a brief description of the proposed service, is listed below.

DATES: Submit comments on or before November 16, 2015.

ADDRESSES: Comments should refer to docket number MARAD–2015–0118. Written comments may be submitted by hand or by mail to the Docket Clerk, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590. You may also send comments electronically via the Internet at <http://www.regulations.gov>. All comments will become part of this docket and will be available for inspection and copying at the above address between 10 a.m. and 5 p.m., E.T., Monday through Friday, except federal holidays. An electronic version of this document and all documents entered into this docket is available on the World Wide Web at <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT:

Linda Williams, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue SE., Room W23–453, Washington, DC 20590. Telephone 202–366–0903, Email Linda.Williams@dot.gov.

SUPPLEMENTARY INFORMATION: As described by the applicant the intended service of the vessel PAESANA is:

Intended Commercial Use of Vessel: “To charter inshore up to 12 passengers for hire for private charter, and port-to-port cruises.”

Geographic Region: Washington, DC, Florida, Maryland, Virginia, North Carolina, South Carolina, and Georgia

The complete application is given in DOT docket MARAD–2015–0118 at <http://www.regulations.gov>. Interested parties may comment on the effect this action may have on U.S. vessel builders or businesses in the U.S. that use U.S.-flag vessels. If MARAD determines, in accordance with 46 U.S.C. 12121 and MARAD’s regulations at 46 CFR part 388, that the issuance of the waiver will have an unduly adverse effect on a U.S.-vessel builder or a business that uses U.S.-flag vessels in that business, a waiver will not be granted. Comments should refer to the docket number of this notice and the vessel name in order for MARAD to properly consider the

comments. Comments should also state the Commenter's interest in the waiver application, and address the waiver criteria given in § 388.4 of MARAD's regulations at 46 CFR part 388.

Privacy Act

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477-78).

By Order of the Maritime Administrator.

Dated: October 6, 2015.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

BILLING CODE 4910-81-P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket Number USCG-2013-0363]

Deepwater Port License Application: Liberty Natural Gas LLC, Port Ambrose Deepwater Port; Final Application Public Hearing and Final Environmental Impact Statement

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Notice of availability; notice of public hearing; request for comments.

SUMMARY: The Maritime Administration (MARAD) and the U.S. Coast Guard (USCG) announce: (1) The schedule and locations of public hearings; and (2) the availability of the Final Environmental Impact Statement (FEIS) for the Liberty Natural Gas LLC, Port Ambrose Liquefied Natural Gas Deepwater Port license application for the importation of natural gas.

The Port Ambrose application describes an offshore natural gas deepwater port facility that would be located 16.1 nautical miles southeast of Jones Beach, New York, 24.9 nautical miles east of Long Branch, New Jersey, and 27.1 nautical miles from the entrance to New York Harbor in a water depth of approximately 103 feet. The FEIS complies with the Deepwater Port Act of 1974, as amended (33 U.S.C. 1501 *et seq.*) (DWPA) and the National Environmental Policy Act (NEPA) (42 U.S.C. 4332(2)(C)), as implemented by the Council on Environmental Quality regulations (40 CFR 1500 to 1508).

MARAD and the USCG request public comments on the FEIS and the application.

Publication of this notice begins a 45-day comment period, requests public participation in the process, provides information on how to participate in the process and announces informational open houses and public hearings in New York and New Jersey. Pursuant to the criteria provided in the DWPA, both New Jersey and New York have been designated as Adjacent Coastal States (ACS) for this application.

Please note that this application is only for the construction and operation of a deepwater port that could only be used as a natural gas import facility. The considerable technical, operational and environmental differences between import and export operations for natural gas deepwater ports is such that any licensed deepwater port facility that proposed to convert from import to export operations would be required to submit a new license application (including application fee) and conform to all licensing requirements and regulations in effect at such time of application. In addition to payment of the application fee, licensing requirements include, but are not limited to, completion of an extensive environmental impact assessment which would include public participation and a financial responsibility review which would include public participation.

DATES: There will be a total of four public hearings held in connection with the application and the FEIS; two public hearings will be held in Long Beach, New York on November 2, 2015 and November 3, 2015, from 6:00 to 10:00 p.m.; and two public hearings will be held in Eatontown, New Jersey on November 4, 2015 and November 5, 2015, from 6:00 to 10:00 p.m. Each public hearing will be preceded by an open house from 4:30 to 5:30 p.m. The public hearing may end later than the stated time, depending on the number of persons wishing to speak. Additionally, materials submitted in response to the request for comments must reach the Docket Management Facility as detailed below, by close of business Monday, November 30, 2015, or 45 days after publication of this notice in the **Federal Register** whichever is later.

Federal and State agencies must also submit comments, recommended conditions for licensing, or letters of no objection by Monday, November 30, 2015, or 45 days after publication of this notice in the **Federal Register** whichever is later. Also, within 45 days following the final hearing, on or prior

to December 21, 2015, the Governor of New York and the Governor of New Jersey (ACS Governors) may approve, disapprove, or notify MARAD of inconsistencies with State programs relating to environmental protection, land and water use, and coastal zone management for which MARAD may ensure consistency by placing conditions on the license.

MARAD must issue a Record of Decision (ROD) to approve, approve with conditions, or deny the deepwater port license application, within 90 days following the final license hearing, on or prior to February 3, 2016.

ADDRESSES: The open houses and public hearings in Long Beach, New York will be held at the Long Beach Hotel, 405 East Broadway, Long Beach, New York, 11561; phone 516-544-4444. Free street parking is available, and the parking lot at the Long Island Railroad (LIRR) Long Beach Train Station, near Park Place and Park Avenue is available from 5:00 p.m. to 5:00 a.m. The City of Long Beach operates local bus public transportation services between the LIRR Long Beach Train Station and the Long Beach Hotel. The open houses and public hearings in Eatontown, New Jersey will be held at the Sheraton Eatontown Hotel, 6 Industrial Way East, Eatontown, NJ 07724; phone 732-542-6500. Free parking is available on site at the hotel.

The FEIS, license application, comments, supporting information and other associated documentation are available for viewing at the Federal Docket Management System (FDMS) Web site: <http://www.regulations.gov> under docket number USCG-2013-0363. The FEIS is also available at the following public libraries: Oceanside Library, 30 Davison Avenue, Oceanside, NY 11572; phone 516-766-2360; Long Beach Public Library, 111 W Park Ave, Long Beach, NY 11561; phone 516-432-7200; Long Branch Free Public Library, 328 Broadway, Long Branch, NJ 07740; phone 732-222-3900; and Queens Jamaica Library, 889-11 Merrick Blvd., Jamaica, NY 11432; phone 718-990-0700.

Docket submissions for USCG-2013-0363 should be addressed to: Department of Transportation, Docket Management Facility, West Building, Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590-0001.

The Federal Docket Management Facility accepts hand-delivered submissions and makes docket contents available for public inspection and copying at this address between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. The Facility telephone number is 202-366-

9329, fax number is 202-493-2251, and the Web site for electronic submissions to the FDMS or for electronic access to docket contents is <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Mr. Roddy Bachman, U.S. Coast Guard, telephone 202-372-1451, email: Roddy.C.Bachman@uscg.mil, or Ms. Yvette M. Fields, Maritime Administration, telephone 202-366-0926, email: Yvette.Fields@dot.gov. For questions regarding the Docket, please call Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION:

Public Hearing and Open House

You are invited to learn about the proposed Port Ambrose Deepwater Port at one of the above noticed informational open houses, and to comment on the application and the environmental impact analysis contained in the FEIS at any of the above public hearings or directly to the docket. The open houses, public hearings and docket comments will be used by MARAD to inform the Maritime Administrator's decision making process, including the ROD and any conditions that may be placed on a subsequent license to own, construct and operate a deepwater port.

Speakers may register upon arrival (registration by proxy is not authorized) and will be recognized in the following order: Elected officials, public agencies, individuals or groups in the order in which they registered. In order to accommodate all speakers, speaker time may be limited, hearing hours may be extended, or both. Speakers' transcribed remarks will be included in the public docket. Written material may also be submitted for inclusion in the public docket. Written material must include the author's name. We request attendees respect the hearing procedures in order to ensure a constructive hearing. Please do not bring signs or banners inside the hearing venue. The presiding officer will use his/her discretion to conduct the hearing in an orderly manner. In the interest of allowing all interested parties to speak, and because all comments that are received, both verbal and written, are included in the record and will be considered by MARAD before making a licensing decision, it is not necessary to sign up more than once to provide duplicate comments at subsequent meetings.

Public hearing locations are wheelchair-accessible. However, attendees who require special assistance such as sign language interpretation or other reasonable accommodation, please

notify the USCG at least five business days in advance. See **FOR FURTHER INFORMATION CONTACT**. Include contact information as well as information about specific needs.

Request for Comments

We request public comments on the FEIS and the application. The public hearing is not the only opportunity you have to comment. In addition to, or in place of, attending a hearing, you may submit comments to the Federal Docket Management Facility during the public comment period. See **DATES**. We will consider all comments and material received during the comment period.

Submissions should include:

- Docket number USCG-2013-0363.
- Your name and address.

Submit comments or material using only one of the following methods:

- Electronic submission (preferred to expedite processing) to the FDMS, <http://www.regulations.gov>.

- Fax, mail, or hand delivery to the Federal Docket Management Facility. See **ADDRESSES**. Faxed or hand delivered submissions must be unbound, no larger than 8½ by 11 inches, and suitable for copying and electronic scanning. If you mail your submission and want to confirm it reaches the Facility, include a stamped, self-addressed postcard or envelope.

Regardless of the method used for submitting comments or material, all submissions will be posted, without change, to the FDMS Web site (<http://www.regulations.gov>) and will include any personal information you provide. Therefore, submitting this information makes it a public record. See Privacy Act. You may view docket submissions at the Department of Transportation Docket Management Facility or electronically on the FDMS Web site. See **ADDRESSES**.

Background

Information about deepwater ports, DWPA, other applicable statutes, regulations governing deepwater port licensing, including the application review process and the receipt of the current application for the proposed Port Ambrose liquefied natural gas (LNG) deepwater port was published in the **Federal Register** on June 14, 2013, 78 FR 36014. The "Summary of the Application" from that publication is reprinted below for your convenience. The Notice of Intent to Prepare an environmental impact statement (EIS) for the proposed action was published in the **Federal Register** on June 24, 2013, (78 FR 37878), and the Notice of Availability of the Draft EIS was published in the **Federal Register** on

December 16, 2014, (79 FR 74808). The FEIS, application materials and associated comments and supporting information are available on the docket.

Proposed Action and Alternatives

USCG and MARAD are co-lead Federal agencies for the preparation of the FEIS; MARAD is the Federal licensing agency (action agency). The proposed action requiring environmental review is the Federal licensing of the proposed deepwater port described in the "Summary of the Application" below. The alternatives to licensing the proposed port are: (1) Licensing with conditions (including conditions designed to mitigate environmental impact) and (2) denying the application, which, for purposes of environmental review, is the "no-action" alternative. These alternatives are more fully discussed in the FEIS. You can address any questions about the proposed action or the FEIS to USCG or MARAD project managers identified in **FOR FURTHER INFORMATION CONTACT**.

Summary of the Application

Liberty Natural Gas, LLC is proposing to construct, own and operate a LNG deepwater port import facility, known as Port Ambrose, located in the New York Bight. The Port Ambrose facility will be located at a different proposed location and include a different design than the previous deepwater port license application submitted by Liberty Natural Gas, LLC in 2010. Port Ambrose would consist of two Submerged Turret Loading Buoys (STL Buoys) in Federal waters 16.1 nautical miles southeast of Jones Beach, New York, 24.9 nautical miles east of Long Branch, New Jersey and 27.1 nautical miles from the entrance to New York Harbor, in a water depth of approximately 103 feet.

LNG would be delivered from purpose-built LNG regasification vessels (LNGRVs), vaporized on site and delivered through the STL Buoys, flexible riser/umbilical, subsea manifold and lateral pipelines to a buried 18.8 nautical mile subsea mainline connecting to the existing Transco Lower New York Bay Lateral in New York State waters 2.2 nautical miles southwest of Long Beach, New York and 13.1 nautical miles east of Sandy Hook, New Jersey. The STL Buoys would be lowered to rest on a landing pad when not in use and would also include a suction anchor mooring array.

STL Buoy 1 is located at Latitude: 40°19'24.61" N and Longitude: 73°25'45.33" W. STL Buoy 2 is located at Latitude: 40°20'09.26" N and Longitude 73°23'51.92" W. The Port

components would fall in the following U.S. Outer Continental Shelf (OCS) lease blocks:

Buoy 1 (6708, 6709, 6758); Buoy 2 (6709); Lateral 1 (6708); Lateral 2 (6708, 6709); "Y" Assembly (6708); Mainline Pipeline (6708, 6658, 6657, 6607, 6606, 6556, 6555, 6554, 6504 and 6503).

The 145,000 cubic meter LNGRVs would have onboard closed-loop vaporization and metering and odorant capability. Each vessel would have three vaporization units capable of maximum send-out of 750 million standard cubic feet per day (MMscfd) (maximum pipeline system flow rate is 660 MMscfd with two buoys) with annual average expected to be 400 MMscfd. The LNGRVs have been designed to use a ballast water cooling system that will entirely re-circulate onboard the vessel during Port operations, eliminating vessel discharges associated with regasification while at the Port. Deliveries through Port Ambrose would be focused during peak demand winter and summer months, and it is anticipated that approximately 45 deliveries will occur each year.

As proposed, the LNGRVs would access the port inbound from the Hudson Canyon to Ambrose Traffic Lane and depart via the Ambrose to Nantucket Traffic Lane. MARAD and USCG are aware that Port Ambrose falls within the proposed area of interest for the Long Island—New York City Offshore Wind Collaborative wind energy project. This project has been acknowledged and considered in the cumulative impacts analysis section of the FEIS based on currently available information. If approved, the majority of the port and pipeline construction and installation would occur in 2017, with commissioning estimated to be in December 2018.

In addition, pipelines and structures such as the STL Buoy moorings will require permits under Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act, which are administered by the U.S. Army Corps of Engineers (USACE). Port Ambrose will also require permits from the Environmental Protection Agency (EPA) pursuant to the provisions of the Clean Air Act, as amended, and the Clean Water Act, as amended.

The new pipeline is included in the NEPA review as part of the deepwater port application process. The EPA and the USACE, among others, are cooperating agencies (40 CFR 1501.6) and have assisted in development of the FEIS. See 40 CFR 1501.6. To the extent required, each agency will incorporate the FEIS into their permitting processes. Comments sent to the EPA or USACE

will be incorporated in the USCG Port Ambrose docket and considered under this notice to ensure consistency with the NEPA Process.

There have been some proposed project changes since the original Port Ambrose application was submitted, which were set forth in the Notice of Availability of the Draft EIS (DEIS). In summary, these include: (1) The original Application proposed a plowed mainline pipeline burial depth of three (3) feet to top of pipe. Pursuant to USACE requirements, the mainline pipeline is now proposed to be plow-buried to seven (7) feet (4 feet to top of pipe), and for approximately three (3) miles within the Ambrose Anchorage Area, buried to 10 feet (7 feet to top of pipe). The pipeline within the Ambrose Anchorage Area will then be backfilled and covered with three (3) feet of 8-inch rock to a point. Once the rock has been placed, gravelly sand will be deposited on top of the rock covered pipeline to restore the seabed to near its original seafloor bottom elevation; (2) the originally proposed impact driven mooring pile anchors are now proposed to be suction anchors; (3) the original port construction and commissioning was proposed to occur in 2015. This timetable has been amended to occur in 2018 (assuming license is approved and issued). Should a license be issued, the deepwater port would be designed, fabricated, constructed, commissioned, maintained, inspected and operated in accordance with applicable codes and standards.

Privacy Act

The electronic form of all comments received into the FDMS can be searched by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). The DOT Privacy Act Statement can be viewed in the **Federal Register** published on April 11, 2000 (65 FR 19477).

Authority: The Deepwater Port Act of 1974, as amended, 33 U.S.C. 1501 *et seq.*; 49 CFR 1.93.

BILLING CODE 4910-81-P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. AB 57 (Sub-No. 63X)]

Soo Line Railroad Company— Abandonment Exemption—in Cook County, Ill.

Soo Line Railroad Company d/b/a Canadian Pacific (Soo Line) has filed a verified notice of exemption under 49 CFR part 1152 subpart F—*Exempt Abandonments* to abandon approximately 5,253 feet of railroad line between milepost 0.0 +/- (milepost 8.9 +/- on the Metra main line) and milepost 0.9 +/- at the intersection of Diversey Avenue in Chicago (Dunning Line), in Cook County, Ill. (the Line). The Line traverses United States Postal Service Zip Code 60707.

Soo Line has certified that: (1) No local traffic has moved over the Line for at least two years; (2) any overhead traffic can be and has been rerouted over other lines; (3) no formal complaint filed by a user of rail service on the Line (or by a state or local government entity acting on behalf of such user) regarding cessation of service over the Line either is pending with the Surface Transportation Board (Board) or with any U.S. District Court or has been decided in favor of complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7(c) (environmental report), 49 CFR 1105.11 (transmittal letter), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho*, 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received, this exemption will be effective on November 17, 2015, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,¹ formal expressions of intent to

¹ The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. See *Exemption of Out-of-Serv. Rail Lines*, 5 I.C.C. 2d 377 (1989). Any request for a stay should

file an OFA under 49 CFR 1152.27(c)(2),² and trail use/rail banking requests under 49 CFR 1152.29 must be filed by October 26, 2015. Petitions to reopen or requests for public use conditions under 49 CFR 1152.28 must be filed by November 5, 2015, with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423-0001.

A copy of any petition filed with the Board should be sent to Soo Line's representative: W. Karl Hansen, Stinson Leonard Street LLP, 150 South Fifth Street, Suite 2300, Minneapolis, MN 55402.

If the verified notice contains false or misleading information, the exemption is void ab initio.

Soo Line has filed environmental and historic reports that address the effects, if any, of the abandonment on the environment and historic resources. OEA will issue an environmental assessment (EA) by October 23, 2015. Interested persons may obtain a copy of the EA by writing to OEA (Room 1100, Surface Transportation Board, Washington, DC 20423-0001) or by calling OEA at (202) 245-0305. Assistance for the hearing impaired is available through the Federal Information Relay Service at (800) 877-8339. Comments on environmental and historic preservation matters must be filed within 15 days after the EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), Soo Line shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the Line. If consummation has not been effected by Soo Line's filing of a notice of consummation by October 16, 2016, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

² Each OFA must be accompanied by the filing fee, which is currently set at \$1,600. See 49 CFR 1002.2(f)(25).

Board decisions and notices are available on our Web site at "www.stb.dot.gov."

Decided: October 13, 2015.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Tia Delano,

Clearance Clerk.

[FR Doc. 2015-26383 Filed 10-15-15; 8:45 am]

BILLING CODE 4915-01-P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[STB Docket No. FD 35874]

Lone Star Railroad, Inc. and Southern Switching Company—Track Construction and Operation Exemption—in Howard County, Tex

AGENCY: Surface Transportation Board.

ACTION: Issuance of Draft Environmental Assessment; Request for Comments.

SUMMARY: On February 24, 2015, Applicants, Lone Star Railroad, Inc. (LSR) and Southern Switching Company (SSC), filed a petition with the Surface Transportation Board (Board) pursuant to 49 United States Code (U.S.C.) 10502 and 49 Code of Federal Regulations (CFR) 1121.1. The Board's Office of Environmental Analysis (OEA) is responsible for ensuring the Board's compliance with the requirements of the National Environmental Policy Act. Applicants seek Board authority for LSR to construct and SSC to operate approximately 3.18 miles of rail line that would connect to an existing Union Pacific Railroad Company mainline and provide rail service to an industrial park property near Big Spring, in Howard County, Texas. The primary purpose for the proposed action is the efficient delivery of frac sand by rail to the industrial park property, where it would be transloaded to trucks for delivery to crude oil wellhead locations in the Permian Basin. Applicants anticipate that the proposed rail line would support an average of five trains per week.

Today, OEA has issued the Draft Environmental Assessment (EA), which

is available on the Board's Web site, www.stb.dot.gov, by clicking "Decisions" under "Quick Links," and locating the document under the service date of 10/16/2015. The Draft EA identifies the natural and man-made resources in the area of the proposed rail line and analyzes the potential impacts of the proposal on these resources. Based on the information provided from all sources to date and its independent analysis, OEA preliminarily concludes that construction of the proposed rail line would have no significant environmental impacts if the Board imposes and Applicants implement the recommended mitigation measures set forth in the Draft EA.

DATES: Interested parties are invited to submit written comments on the Draft EA by November 16, 2015. OEA will consider and respond to comments received on the Draft EA in the Final EA. The Board will issue a final decision on the proposed transaction after issuance of the Final EA.

Filing Environmental Comments: Comments submitted by mail should be addressed to: Kenneth Blodgett, Surface Transportation Board, 395 E Street SW., Washington, DC 20423-0001, Attention: Environmental Filing, Docket No. FD 35874. Comments may also be submitted electronically on the Board's Web site, www.stb.dot.gov, by clicking on the "E-FILING" link on the home page and then selecting "Environmental Comments." Please refer to *Docket No. FD 35874* in all correspondence, including e-filings, addressed to the Board.

FOR FURTHER INFORMATION CONTACT: Kenneth Blodgett at the address above or by phone at 202-245-0305. Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at 1-800-877-8339.

By the Board, Victoria Rutson, Director, Office of Environmental Analysis.

Tia Delano,

Clearance Clerk.

BILLING CODE 4915-01-P

FEDERAL REGISTER

Vol. 80

Friday,

No. 200

October 16, 2015

Part II

Department of Health and Human Services

Office of the Secretary

45 CFR Part 170

2015 Edition Health Information Technology (Health IT) Certification
Criteria, 2015 Edition Base Electronic Health Record (EHR) Definition, and
ONC Health IT Certification Program Modifications; Final Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

45 CFR Part 170

RIN 0991-AB93

2015 Edition Health Information Technology (Health IT) Certification Criteria, 2015 Edition Base Electronic Health Record (EHR) Definition, and ONC Health IT Certification Program Modifications

AGENCY: Office of the National Coordinator for Health Information Technology (ONC), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule finalizes a new edition of certification criteria (the 2015 Edition health IT certification criteria or “2015 Edition”) and a new 2015 Edition Base Electronic Health Record (EHR) definition, while also modifying the ONC Health IT Certification Program to make it open and accessible to more types of health IT and health IT that supports various care and practice settings. The 2015 Edition establishes the capabilities and specifies the related standards and implementation specifications that Certified Electronic Health Record Technology (CEHRT) would need to include to, at a minimum, support the achievement of meaningful use by eligible professionals (EPs), eligible hospitals, and critical access hospitals (CAHs) under the Medicare and Medicaid EHR Incentive Programs (EHR Incentive Programs) when such edition is required for use under these programs.

DATES: These regulations are effective January 14, 2016, except for § 170.523(m) and (n), which are effective on April 1, 2016.

The incorporation by reference of certain publications listed in the rule is approved by the Director of the **Federal Register** as of January 14, 2016.

FOR FURTHER INFORMATION CONTACT: Michael Lipinski, Office of Policy, Office of the National Coordinator for Health Information Technology, 202-690-7151.

I. Executive Summary

A. Purpose of Regulatory Action

Building on past rulemakings, we issued a proposed rule (“Proposed Rule”) (80 FR 16804) that identified how health IT certification to the proposed 2015 Edition health IT certification criteria could support the establishment of an interoperable nationwide health information infrastructure. The Proposed Rule reflected stakeholder feedback received through various outreach initiatives, including the regulatory process, and was designed to broadly support the health care continuum through the use of certified health IT. This final rule, taking into account public comments received on the Proposed Rule, continues to focus on the establishment of an interoperable nationwide health information infrastructure, through the same means identified in the Proposed Rule and recited below, but with an additional focus on reducing health IT developer and provider burden as compared to the Proposed Rule. To this end, this final rule will:

- Improve interoperability for specific purposes by adopting new and updated vocabulary and content standards for the structured recording and exchange of health information, including a Common Clinical Data Set composed primarily of data expressed using adopted standards; and rigorously testing an identified content exchange

standard (Consolidated Clinical Document Architecture (C-CDA));

- Facilitate the accessibility and exchange of data by including enhanced data export, transitions of care, and application programming interface (API) capabilities in the 2015 Edition Base Electronic Health Record (EHR) definition;

- Establish a framework that makes the Office of the National Coordinator for Health Information Technology (ONC) Health IT Certification Program open and accessible to more types of health IT, health IT that supports a variety of care and practice settings, various HHS programs, and public and private interests;

- Support the Centers for Medicare & Medicaid Services (CMS) Medicare and Medicaid EHR Incentive Programs (EHR Incentive Programs) through the adoption of a set of certification criteria that align with proposals for Stage 3;

- Address health disparities by providing certification: to standards for more granular capture of race and ethnicity; the collection of sexual orientation, gender identity, social, psychological, and behavioral data; for the exchange of sensitive health information (Data Segmentation for Privacy); and for the accessibility of health IT;

- Ensure all health IT presented for certification possess the relevant privacy and security capabilities;

- Improve patient safety by: applying enhanced user-centered design principles to health IT, enhancing patient matching, requiring health IT to be capable of exchanging relevant patient information (e.g., Unique Device Identifiers), improving the surveillance of certified health IT, and making more information about certified products publicly available and accessible;

- Increase the reliability and transparency of certified health IT through surveillance and disclosure requirements; and

- Provide health IT developers with more flexibility, opportunities, and *time* for development and certification of health IT that supports interoperability, usability, and innovation.

B. Summary of Major Provisions

1. Overview of the 2015 Edition Health IT Certification Criteria

The 2015 Edition health IT certification criteria (“2015 Edition” or “2015 Edition certification criteria”) facilitates greater interoperability for several clinical health information purposes and enables health information exchange through new and enhanced certification criteria,

standards, and implementation specifications. It incorporates changes that are designed to spur innovation, open new market opportunities, and provide more choices to providers when it comes to electronic health information exchange. To achieve these goals, new “application access” (also known as “API”) certification criteria have been adopted that will require the demonstration of an API that responds to data requests for any one category of the data referenced in the Common Clinical Data Set as well as for all of the data referenced in the Common Clinical Data Set. We note that in response to comments, we have separated this criterion into 3 criteria to provide health IT developers and providers more flexibility. To further validate the continued interoperability of certified health IT and the ability to exchange electronic health information with health IT certified to the 2014 Edition, 2015 Edition, and potentially future editions, a new “transitions of care” certification criterion will rigorously assess a product’s ability to create and receive an interoperable C-CDA. We have also adopted certification criteria that both support interoperability and other settings and use cases, such as the “Common Clinical Data Set summary record,” “data segmentation for privacy,” and “care plan” certification criteria.

We refer readers to section III.A for an overview table (Table 2) of certification criteria adopted in this final rule as compared to the certification criteria proposed in the Proposed Rule and the adopted 2014 Edition. We also refer readers to sections III.A.3 and III.A.5 of this preamble for full discussions of certification criteria adopted as part of the 2015 Edition in this final rule (III.A.3) and the proposed certification criteria not adopted in this final rule (III.A.5).

2. Health IT Definitions

a. Base EHR Definitions

This final rule adopts a Base EHR definition specific to the 2015 Edition (i.e., a 2015 Edition Base EHR definition) at § 170.102 and renames the current Base EHR definition at § 170.102 as the 2014 Edition Base EHR definition. The 2015 Edition Base EHR definition differs from the 2014 Edition Base EHR definition in the following ways:

- It does not include privacy and security capabilities and certification criteria.

- It only includes capabilities to record and export clinical quality measure (CQM) data (§ 170.315(c)(1))

and not other CQM capabilities such as import, calculate, and “report to CMS.”

- It includes the 2015 Edition “smoking status” certification criterion as patient demographic and clinical health information data consistent with statutory requirements.¹

- It includes the 2015 Edition “implantable device list” certification criterion as patient demographic and clinical health information data consistent with statutory requirements.²

- It includes the 2015 Edition “API” certification criteria as capabilities that support both the capture and query of information relevant to health care quality and exchange electronic health information with, and integrate such information from other sources.³

- It includes the proposed 2015 Edition certification criteria that correspond to the remaining 2014 Edition certification criteria referenced in the “2014 Edition” Base EHR definition (i.e., CPOE, demographics, problem list, medication list, medication allergy list, CDS, transitions of care, data portability, and relevant transport certification criteria). For the transport certification criteria, we include the “Direct Project” criterion (§ 170.315(h)(1)) as well as the “Direct Project, Edge Protocol and XDR/XDM” criterion (§ 170.315(h)(2)) as equivalent alternative means for meeting the 2015 Edition Base EHR definition.

We refer readers to section III.B.1 of this preamble for a more detailed discussion of the 2015 Edition Base EHR definition and to section III.A.3 of this preamble for a full discussion of the criteria that have been included in the Base EHR definition. Of note, the “demographics” certification criterion (§ 170.315(a)(5)) now includes sexual orientation and gender identity as data elements, the “smoking status” certification criterion (§ 170.315(a)(11)) is now only a functional requirement, the “API” criterion has been separated into 3 distinct criteria as mentioned above, and the Direct-related criteria have been updated from “unchanged” to “revised” to incorporate updated and necessary interoperability standards.

As discussed in more detail under the “privacy and security” heading in section IV.C.1 of this preamble, Health

¹ A Base EHR is the regulatory term we have given to what the HITECH Act defines as a “qualified EHR.” Our Base EHR definition(s) include all capabilities found in the “qualified EHR.” Please see the 2014 Edition final rule (77 FR 54262) for further explanation.

² A capability included in the Base EHR definition, which originates from the “qualified EHR” definition found in the HITECH Act.

³ These are capabilities included in the Base EHR definition, which originate from the “qualified EHR” definition found in the HITECH Act.

IT Modules presented for certification to criteria listed in the 2015 Base EHR definition and other 2015 Edition certification criteria *will be* subject to the applicable privacy and security criteria for the purposes of certification.

The CQM capabilities noted above as not included in the 2015 Edition Base EHR definition have, however, been included in the Certified EHR Technology (CEHRT) definition under the EHR Incentive Programs. We refer readers to the next section (“b. CEHRT definition”) for further information and guidance on the relationship of the 2015 Edition Base EHR definition and the 2015 Edition certification criteria with the CEHRT definition. We also refer readers to the CEHRT definition finalized in the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register** as the authoritative source for the requirements to meet the CEHRT definition.

b. CEHRT Definition

This final rule removes the CEHRT definition from § 170.102 for the following reasons. The CEHRT definition has always been defined in a manner that supports the EHR Incentive Programs. As such, the CEHRT definition more appropriately resides solely within the EHR Incentive Programs regulations. This is also consistent with our approach in this final rule to make the ONC Health IT Certification Program more open and accessible to other types of health IT beyond EHR technology and for health IT that supports care and practice settings beyond those included in the EHR Incentive Programs. Further, this adds administrative simplicity in that regulatory provisions, which EHR Incentive Programs participants must meet (*e.g.*, the CEHRT definition), are defined within the context of rulemakings for those programs.

We note that the CEHRT definition finalized by CMS continues to include the Base EHR definition(s) defined by ONC, including the 2015 Edition Base EHR definition adopted in this final rule. We also refer readers to Table 4 (“2015 Edition Health IT Certification Criteria Associated with the EHR Incentive Programs Stage 3”) found in section III.A.3 of this preamble. Table 4 crosswalks 2015 Edition certification criteria with the finalized CEHRT definition and EHR Incentive Programs Stage 3 objectives. It also identifies mandatory and conditional certification requirements (*i.e.*, the application of certain certification criteria to Health IT Modules) that Health IT Modules presented for certification must meet

regardless of the setting or program the Health IT Module is designed to support.

For the full requirements to meet the CEHRT definition under the EHR Incentive Programs, including for years before 2018 and for 2018 and subsequent years, we refer readers to the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**.

c. Common Clinical Data Set

We revised the “Common MU Data Set” definition in § 170.102. We changed the name to “Common Clinical Data Set,” which aligns with our approach throughout this final rule to make the ONC Health IT Certification Program more open and accessible to other types of health IT beyond EHR technology and for health IT that supports care and practice settings beyond those included in the EHR Incentive Programs. We also changed references to the “Common MU Data Set” in the 2014 Edition (§ 170.314) to “Common Clinical Data Set.”

We revised the definition to account for the new and updated standards and code sets we have adopted in this final rule for the 2015 Edition that will improve and advance interoperability through the exchange of the Common Clinical Data Set. We also revised the definition to support patient safety and improve care through clearly referenced data elements (“care plan data”) and the inclusion of new patient data (*e.g.*, Unique Device Identifiers (UDIs) and immunizations (with standards)). These revisions will *not* change the standards, codes sets, and data requirements specified in the Common Clinical Data Set for 2014 Edition certification, which remain unchanged. They only apply to health IT certified to the 2015 Edition certification criteria that reference the Common Clinical Data Set.

We refer readers to section III.B.3 of this preamble for a detailed discussion of the Common Clinical Data Set and a table listing the data and standards included in the Common Clinical Data Set for both the 2014 and 2015 Editions.

3. The ONC Health IT Certification Program and Health IT Module

We have changed the name of the ONC HIT Certification Program to the “ONC Health IT Certification Program.” We have also modified the ONC Health IT Certification Program in ways that will make it more accessible to other types of health IT beyond EHR technology and for health IT that supports care and practice settings beyond the ambulatory and inpatient

settings. These modifications will also serve to support other public and private programs that may reference the use of health IT certified under the ONC Health IT Certification Program. When we established the certification program (76 FR 1262),⁴ we stated our initial focus would be on EHR technology and supporting the EHR Incentive Programs, which at the time, focused on the ambulatory setting and inpatient setting (76 FR 1294).

This final rule permits other types of health IT, such as technology implemented by health information service providers (HISPs) and health information exchanges (HIEs), to receive appropriate attribution and not be referenced by a certificate with “EHR” included in it. This final rule also supports health IT certification for other care and practice settings, such as long-term post-acute care (LTPAC), behavioral health, and pediatrics. Further, this final rule will make it simpler for certification criteria and certified health IT to be referenced by other HHS programs (*e.g.*, Medicare and Medicaid payment programs and various grant programs), other public programs, and private entities and associations.

a. Program Alignment Changes

As part of our approach to evolve the ONC Health IT Certification Program, we have replaced prior rulemaking use of “EHR” and “EHR technology” with “health IT.” The term health IT is reflective of the scope of ONC’s authority under the Public Health Service Act (§ 3000(5) as “health information technology” is so defined), and represents a broad range of technology, including EHR technology. It also more properly represents some of the technology, as noted above, that has been previously certified to editions of certification criteria under the ONC Health IT Certification Program and may be certified to the 2015 Edition. Similarly, to make the ONC Health IT Certification Program more open and accessible, we have renamed the EHR Module as “Health IT Module.”

b. “Meaningful Use Measurement”

We have adopted our proposed approach in that we will not require ONC-Authorized Certification Bodies (ONC-ACBs) to certify Health IT Modules to the 2015 Edition “meaningful use measurement” certification criteria. We note, however, that *CMS has included* the 2015 Edition

⁴ Please see section II.B.3 of this preamble for a regulatory history of the ONC Health IT Certification Program, including changes to the program’s name.

“meaningful use measurement” certification criteria in the CEHRT definition as a program requirement for the EHR Incentive Programs.

Accordingly, we encourage health IT developers supporting providers participating in the EHR Incentive Programs or providers’ quality improvement needs to seek certification to these criteria as appropriate for their Health IT Modules (e.g., a Health IT Module is presented for certification to a criterion that supports a Stage 3 objective with a percentage-based measure and the Health IT Module can meet the “automated numerator recording” criterion or “automated measure calculation” criterion).

c. Privacy and Security Certification Framework

We have adopted a new, simpler, straight-forward approach to privacy and security certification requirements for Health IT Modules certified to the 2015 Edition. In sum, the privacy and security certification criteria applicable to a Health IT Module presented for certification is based on the other capabilities included in the Health IT Module and for which certification is sought. Under the 2015 Edition privacy and security certification framework, a health IT developer will know exactly what it needs to do in order to get its Health IT Module certified and a purchaser of a Health IT Module will

know exactly what privacy and security functionality against which the Health IT Module had to be tested in order to be certified.

d. Principles of Proper Conduct (PoPC) for ONC-ACBs

We have adopted new and revised PoPC for ONC-ACBs. ONC-ACBs are now required to report an expanded set of information to ONC for inclusion in the open data file that would make up the Certified Health IT Product List (CHPL). ONC-ACBs must ensure that health IT developers provide more meaningful disclosure of certain types of costs and limitations that could interfere with the ability of users to implement certified health IT in a manner consistent with its certification. ONC-ACBs must retain records for a period of time that will support HHS program needs. ONC-ACBs must also obtain a record of all adaptations and updates affecting “safety-enhanced design” criteria on a quarterly basis each calendar year. ONC-ACBs must also report to the National Coordinator complaints received on certified health IT. We have also adopted new requirements for “in-the-field” surveillance under the ONC Health IT Certification Program that clarify and expand ONC-ACBs’ existing surveillance responsibilities by specifying requirements and procedures for in-the-field surveillance. We believe

these new and revised PoPC promote greater transparency and accountability for the ONC Health IT Certification Program.

C. Costs and Benefits

Our estimates indicate that this final rule is an economically significant rule as its overall costs for health IT developers may be greater than \$100 million in at least one year. We have, therefore, projected the costs and benefits of the final rule. The estimated costs expected to be incurred by health IT developers to develop and prepare health IT to be tested and certified in accordance with the 2015 Edition certification criteria (and the standards and implementation specifications they include) are represented in monetary terms in Table 1 below. We note that this final rule does not impose the costs cited as compliance costs, but rather as investments which health IT developers voluntarily take on and may expect to recover with an appropriate rate of return. We further note that, based on the estimates provided by a health IT developer association in response to the Proposed Rule, we have reduced the estimated burden of the 2015 Edition by over 40,000 burden hours per health IT developer by not adopting certain proposed certification criteria, functionality and standards.

The dollar amounts expressed in Table 1 are expressed in 2014 dollars.

TABLE 1—DISTRIBUTED TOTAL 2015 EDITION DEVELOPMENT AND PREPARATION COSTS FOR HEALTH IT DEVELOPERS (4-YEAR PERIOD)—TOTALS ROUNDED

Year	Ratio (%)	Total low cost estimate (\$M)	Total high cost estimate (\$M)	Total average cost estimate (\$M)
2015	15	39.07	60.48	49.77
2016	35	91.15	141.12	116.14
2017	35	91.15	141.12	116.14
2018	15	39.07	60.48	49.77
4-Year Totals	260.44	403.19	331.82

As noted above, we expect that health IT developers will recover an appropriate rate of return for their investments in developing and preparing their health IT for certification to the 2015 Edition certification criteria adopted in this final rule. However, we do not have data available to quantify these benefits or other benefits that will likely arise from health IT developers certifying their health IT to the 2015 Edition.

We believe that there will be several significant benefits that may arise from this final rule for patients, health care providers, and health IT developers.

The 2015 Edition continues to improve health IT interoperability through the adoption of new and updated standards and implementation specifications. For example, many proposed certification criteria include standards and implementation specifications for interoperability that directly support the EHR Incentive Programs, which include objectives and measures for the interoperable exchange of health information and for providing patients electronic access to their health information in structured formats. In addition, the adopted certification criteria that support the collection of

patient data that could be used to address health disparities would not only benefit patients, but the entire health care delivery system through improved quality of care. The 2015 Edition also supports usability and patient safety through new and enhanced certification requirements for health IT.

This final rule also makes the ONC Health IT Certification Program open and accessible to more types of health IT and for health IT that supports a variety of care and practice settings. This should benefit health IT developers, providers practicing in

other care/practice settings, and consumers through the availability and use of certified health IT that includes capabilities that promote interoperability and enhanced functionality.

II. Background

A. Statutory Basis

The Health Information Technology for Economic and Clinical Health (HITECH) Act, Title XIII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (the Recovery Act) (Pub. L. 111–5), was enacted on February 17, 2009. The HITECH Act amended the Public Health Service Act (PHSA) and created “Title XXX—Health Information Technology and Quality” (Title XXX) to improve health care quality, safety, and efficiency through the promotion of HIT and electronic health information exchange.

1. Standards, Implementation Specifications, and Certification Criteria

The HITECH Act established two new federal advisory committees, the Health IT Policy Committee (HITPC) and the Health IT Standards Committee (HITSC) (sections 3002 and 3003 of the PHSA, respectively). Each is responsible for advising the National Coordinator for Health Information Technology (National Coordinator) on different aspects of standards, implementation specifications, and certification criteria. The HITPC is responsible for, among other duties, recommending priorities for the development, harmonization, and recognition of standards, implementation specifications, and certification criteria. Main responsibilities of the HITSC include recommending standards, implementation specifications, and certification criteria for adoption by the Secretary under section 3004 of the PHSA, consistent with the ONC-coordinated Federal Health IT Strategic Plan.

Section 3004 of the PHSA identifies a process for the adoption of health IT standards, implementation specifications, and certification criteria and authorizes the Secretary to adopt such standards, implementation specifications, and certification criteria. As specified in section 3004(a)(1), the Secretary is required, in consultation with representatives of other relevant federal agencies, to jointly review standards, implementation specifications, and certification criteria endorsed by the National Coordinator under section 3001(c) and subsequently determine whether to propose the

adoption of any grouping of such standards, implementation specifications, or certification criteria. The Secretary is required to publish all determinations in the **Federal Register**.

Section 3004(b)(3) of the PHSA titled, Subsequent Standards Activity, provides that the Secretary shall adopt additional standards, implementation specifications, and certification criteria as necessary and consistent with the schedule published by the HITSC. We consider this provision in the broader context of the HITECH Act to grant the Secretary the authority and discretion to adopt standards, implementation specifications, and certification criteria that have been recommended by the HITSC and endorsed by the National Coordinator, as well as other appropriate and necessary health IT standards, implementation specifications, and certification criteria.

2. Health IT Certification Programs

Section 3001(c)(5) of the PHSA provides the National Coordinator with the authority to establish a certification program or programs for the voluntary certification of health IT. Specifically, section 3001(c)(5)(A) specifies that the National Coordinator, in consultation with the Director of the National Institute of Standards and Technology (NIST), shall keep or recognize a program or programs for the voluntary certification of health information technology as being in compliance with applicable certification criteria adopted under this subtitle (i.e., certification criteria adopted by the Secretary under section 3004 of the PHSA).

The certification program(s) must also include, as appropriate, testing of the technology in accordance with section 13201(b) of the [HITECH] Act. Overall, section 13201(b) of the HITECH Act requires that with respect to the development of standards and implementation specifications, the Director of the NIST, in coordination with the HITSC, shall support the establishment of a conformance testing infrastructure, including the development of technical test beds. The HITECH Act also indicates that the development of this conformance testing infrastructure may include a program to accredit independent, non-Federal laboratories to perform testing.

B. Regulatory History

1. Standards, Implementation Specifications, and Certification Criteria Rules

The Secretary issued an interim final rule with request for comments titled, “Health Information Technology: Initial

Set of Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology” (75 FR 2014, Jan. 13, 2010) (the “S&CC January 2010 interim final rule”), which adopted an initial set of standards, implementation specifications, and certification criteria. After consideration of the comments received on the S&CC January 2010 interim final rule, a final rule was issued to complete the adoption of the initial set of standards, implementation specifications, and certification criteria and realign them with the final objectives and measures established for the EHR Incentive Programs Stage 1 (formally titled: Health Information Technology: Initial Set of Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology; Final Rule, (75 FR 44590, July 28, 2010) and referred to as the “2011 Edition final rule”). The 2011 Edition final rule also established the first version of the CEHRT definition. Subsequent to the 2011 Edition final rule (October 13, 2010), we issued an interim final rule with a request for comment to remove certain implementation specifications related to public health surveillance that had been previously adopted in the 2011 Edition final rule (75 FR 62686).

The standards, implementation specifications, and certification criteria adopted by the Secretary in the 2011 Edition final rule established the capabilities that CEHRT must include in order to, at a minimum, support the achievement of EHR Incentive Programs Stage 1 by eligible professionals (EPs), eligible hospitals, and critical access hospitals (CAHs) under the Medicare and Medicaid Programs; Electronic Health Record Incentive Program; Final Rule (75 FR 44314) (the “EHR Incentive Programs Stage 1 final rule”).

The Secretary issued a proposed rule with request for comments titled “Health Information Technology: Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to the Permanent Certification Program for Health Information Technology” (77 FR 13832, March 7, 2012) (the “2014 Edition proposed rule”), which proposed new and revised standards, implementation specifications, and certification criteria. After consideration of the comments received on the 2014 Edition proposed rule, a final rule was issued to adopt the 2014 Edition set of standards, implementation specifications, and certification criteria and realign them with the final objectives and measures established for

the EHR Incentive Programs Stage 2, as well as Stage 1 revisions (Health Information Technology: Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to the Permanent Certification Program for Health Information Technology (77 FR 54163, Sept. 4, 2012) (the “2014 Edition final rule”). The standards, implementation specifications, and certification criteria adopted by the Secretary in the 2014 Edition final rule established the capabilities that CEHRT must include in order to, at a minimum, support the achievement of the EHR Incentive Programs Stage 2 by EPs, eligible hospitals, and CAHs under the Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 2 final rule (77 FR 53968) (the “EHR Incentive Programs Stage 2 final rule”).

On December 7, 2012, an interim final rule with a request for comment was jointly issued and published by ONC and CMS to update certain standards that had been previously adopted in the 2014 Edition final rule. The interim final rule also revised the EHR Incentive Programs by adding an alternative measure for the Stage 2 objective for hospitals to provide structured electronic laboratory results to ambulatory providers, corrected the regulation text for the measures associated with the objective for hospitals to provide patients the ability to view online, download, and transmit information about a hospital admission, and made the case number threshold exemption policy for clinical quality measure (CQM) reporting applicable for eligible hospitals and CAHs beginning with FY 2013. In addition, the interim final rule provided notice of CMS's intent to issue technical corrections to the electronic specifications for CQMs released on October 25, 2012 (77 FR 72985). On September 4, 2014, a final rule (Medicare and Medicaid Programs; Modifications to the Medicare and Medicaid Electronic Health Record (EHR) Incentive Program for 2014 and Other Changes to the EHR Incentive Program; and Health Information Technology: Revisions to the Certified EHR Technology Definition and EHR Certification Changes Related to Standards; Final Rule) (79 FR 52910) was published adopting these proposals.

On November 4, 2013, the Secretary published an interim final rule with a request for comment, 2014 Edition Electronic Health Record Certification Criteria: Revision to the Definition of “Common Meaningful Use (MU) Data Set” (78 FR 65884), to make a minor revision to the Common MU Data Set

definition. This revision was intended to allow more flexibility with respect to the representation of dental procedures data for EHR technology testing and certification.

On February 26, 2014, the Secretary published a proposed rule titled “Voluntary 2015 Edition Electronic Health Record (EHR) Certification Criteria; Interoperability Updates and Regulatory Improvements” (79 FR 10880) (“Voluntary Edition proposed rule”). The proposed rule proposed a voluntary edition of certification criteria that was designed to enhance interoperability, promote innovation, and incorporate “bug fixes” to improve upon the 2014 Edition. A correction notice was published for the Voluntary Edition proposed rule on March 19, 2014, entitled “Voluntary 2015 Edition Electronic Health Record (EHR) Certification Criteria; Interoperability Updates and Regulatory Improvements; Correction” (79 FR 15282). This correction notice corrected the preamble text and gap certification table for four certification criteria that were omitted from the list of certification criteria eligible for gap certification for the 2015 Edition EHR certification criteria. On September 11, 2014, a final rule was published titled “2014 Edition Release 2 Electronic Health Record (EHR) Certification Criteria and the ONC HIT Certification Program; Regulatory Flexibilities, Improvements, and Enhanced Health Information Exchange” (79 FR 54430) (“2014 Edition Release 2 final rule”). The final rule adopted a small subset of the original proposals in the Voluntary Edition proposed rule as optional and revised 2014 Edition EHR certification criteria that provide flexibility, clarity, and enhance health information exchange. It also finalized administrative proposals (i.e., removal of regulatory text from the Code of Federal Regulations (CFR)) and proposals for the ONC HIT Certification Program that provide improvements.

On May 23, 2014, CMS and ONC jointly published the “Medicare and Medicaid Programs; Modifications to the Medicare and Medicaid Electronic Health Record Incentive Programs for 2014; and Health Information Technology: Revisions to the Certified EHR Technology Definition” proposed rule (79 FR 29732). The rule proposed to update the EHR Incentive Programs Stage 2 and Stage 3 participation timeline. It proposed to revise the CEHRT definition to permit the use of EHR technology certified to the 2011 Edition to meet the CEHRT definition for FY/CY 2014. It also proposed to allow EPs, eligible hospitals, and CAHs that could not fully implement EHR

technology certified to the 2014 Edition for an EHR reporting period in 2014 due to delays in the availability of such technology to continue to use EHR technology certified to the 2011 Edition or a combination of EHR technology certified to the 2011 Edition and 2014 Edition for the EHR reporting periods in CY 2014 and FY 2014. On September 4, 2014, a final rule (“CEHRT Flexibility final rule”) was published (79 FR 52910) adopting these proposals.

On March 30, 2015, the Secretary published a proposed rule titled “2015 Edition Health Information Technology (Health IT) Certification Criteria; 2015 Edition Base Electronic Health Record (EHR) Definition, and ONC Health IT Certification Program Modifications” (80 FR 16804) (“2015 Edition Proposed Rule” or “Proposed Rule”). The Proposed Rule proposed an edition of certification criteria that was designed to enhance interoperability and is the subject of this final rule.

2. Medicare and Medicaid EHR Incentive Programs Rules

On January 13, 2010, CMS published the Medicare and Medicaid Programs; Electronic Health Record Incentive Program; Proposed Rule (75 FR 1844). The rule proposed the criteria for Stage 1 of the EHR Incentive Programs and regulations associated with the incentive payments made available under Division B, Title IV of the HITECH Act. Subsequently, CMS published a final rule (75 FR 44314) for Stage 1 of the EHR Incentive Programs on July 28, 2010, simultaneously with the publication of the 2011 Edition final rule. The EHR Incentive Programs Stage 1 final rule established the objectives, associated measures, and other requirements that EPs, eligible hospitals, and CAHs must satisfy to meet Stage 1.

On March 7, 2012, CMS published the Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 2; Proposed Rule (77 FR 13698). Subsequently, CMS published a final rule (77 FR 53968) for the EHR Incentive Programs on September 4, 2012, simultaneously with the publication of the 2014 Edition final rule. The EHR Incentive Programs Stage 2 final rule established the objectives, associated measures, and other requirements that EPs, eligible hospitals, and CAHs must satisfy to meet Stage 2. It also revised some Stage 1 requirements.

As described above in Section II.B.1, ONC and CMS jointly issued an interim final rule with a request for comment that was published on December 7, 2012 and a final rule that was published on

September 4, 2014. Also, as described above in Section II.B.1, ONC and CMS jointly issued proposed and final rules that were published on May 23, 2014 and September 4, 2014, respectively.

On March 30, 2015, CMS published the Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3; Proposed Rule (80 FR 16732) (“EHR Incentive Programs Stage 3 proposed rule”) outlining objectives, associated measures, and other requirements that EPs, eligible hospitals, and CAHs would need to meet to participate in Stage 3 of the EHR Incentive Programs.

On April 15, 2015, CMS published the Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Modifications to Meaningful Use in 2015 Through 2017; Proposed Rule (80 FR 20346) (“EHR Incentive Programs Modifications proposed rule”) proposing modifications to the EHR Incentive Programs for the EHR reporting periods and meaningful use measures in 2015 through 2017.

3. ONC Health IT Certification Program Rules

On March 10, 2010, ONC published a proposed rule (75 FR 11328) titled, “Proposed Establishment of Certification Programs for Health Information Technology” (the “Certification Programs proposed rule”). The rule proposed both a temporary and permanent certification program for the purposes of testing and certifying HIT. It also specified the processes the National Coordinator would follow to authorize organizations to perform the certification of HIT. A final rule establishing the temporary certification program was published on June 24, 2010 (75 FR 36158) (“Temporary Certification Program final rule”) and a final rule establishing the permanent certification program was published on January 7, 2011 (76 FR 1262) (“the Permanent Certification Program final rule”).

On May 31, 2011, ONC published a proposed rule (76 FR 31272) titled “Permanent Certification Program for Health Information Technology; Revisions to ONC-Approved Accreditor Processes.” The rule proposed a process for addressing instances where the ONC-Approved Accreditor (ONC-AA) engaged in improper conduct or did not perform its responsibilities under the permanent certification program, addressed the status of ONC-Authorized Certification Bodies in instances where there may be a change in the accreditation organization serving as the ONC-AA, and clarified the responsibilities of the new ONC-AA.

All these proposals were finalized in a final rule published on November 25, 2011 (76 FR 72636).

The 2014 Edition final rule made changes to the permanent certification program. The final rule adopted a proposal to change the Permanent Certification Program’s name to the “ONC HIT Certification Program,” revised the process for permitting the use of newer versions of “minimum standard” code sets, modified the certification processes ONC-ACBs need to follow for certifying EHR Modules in a manner that provides clear implementation direction and compliance with the new certification criteria, and eliminated the certification requirement that every EHR Module be certified to the “privacy and security” certification criteria.

The Voluntary Edition proposed rule included proposals that focused on improving regulatory clarity, simplifying the certification of EHR Modules that are designed for purposes other than meeting requirements of the EHR Incentive Programs, and discontinuing the use of the Complete EHR definition. As noted above, we issued the 2014 Edition Release 2 final rule to complete the rulemaking for the Voluntary Edition proposed rule. The 2014 Edition Release 2 final rule discontinued the “Complete EHR” certification concept beginning with the proposed 2015 Edition, adopted an updated standard (ISO/IEC 17065) for the accreditation of ONC-ACBs, and adopted the “ONC Certified HIT” certification and design mark for required use by ONC-ACBs under the ONC Health IT Certification Program.

As noted above, on March 30, 2015, the Secretary published the Proposed Rule which, in addition to proposing the 2015 Edition, proposed revisions to the ONC Health IT Certification Program.

III. Provisions of the Proposed Rule Affecting Standards, Implementation Specifications, and Certification Criteria

A. 2015 Edition Health IT Certification Criteria

This rule finalizes new, revised, and unchanged certification criteria that establish the capabilities and related standards and implementation specifications for the certification of health IT, including EHR technology. We refer to these new, revised, and unchanged certification criteria as the “2015 Edition health IT certification criteria” and have added this term and its definition to § 170.102. As noted in the Executive Summary, we also refer to

these criteria as the “2015 Edition” in this preamble. We codified the 2015 Edition in § 170.315 to set them apart from other editions of certification criteria and make it easier for stakeholders to quickly determine the certification criteria included in the 2015 Edition.

In the Proposed Rule, we identified the 2015 Edition certification criteria as new, revised, or unchanged in comparison to the 2014 Edition. In the 2014 Edition final rule we gave meaning to the terms “new,” “revised,” and “unchanged” to both describe the differences between the 2014 Edition certification criteria and the 2011 Edition certification criteria, as well as establish what certification criteria in the 2014 Edition were eligible for gap certification (see 77 FR 54171, 54202, and 54248). Given that beginning with the 2015 Edition, “Complete EHR” certifications will no longer be issued (see also 79 FR 54443–45) and that we proposed to make the ONC Health IT Certification Program more open and accessible to other health care/practice settings, we also proposed to give new meaning to these terms for the purpose of a gap certification analysis as so specified:

- “New” certification criteria are those that as a whole only include capabilities never referenced in previously adopted certification criteria editions and to which a Health IT Module presented for certification to the 2015 Edition could have never previously been certified. As a counter example, the splitting of a 2014 Edition certification criterion into two criteria as part of the 2015 Edition would not make those certification criteria “new” for the purposes of a gap certification eligibility analysis.

- “Revised” certification criteria are those that include within them capabilities referenced in a previously adopted edition of certification criteria as well as changed or additional new capabilities; and to which a Health IT Module presented for certification to the 2015 Edition could *not* have been previously certified to all of the included capabilities.

- “Unchanged” certification criteria are those that include the same capabilities as compared to prior certification criteria of adopted editions; and to which a Health IT Module presented for certification to the 2015 Edition could have been previously certified to all of the included capabilities.

Comments. While we received no specific comments on these terms, we received comments both supporting and opposing the adoption of certification

criteria that go beyond specifically supporting an objective and measure under the EHR Incentive Programs.

Response. We continue to maintain the same meanings for the terms “new,” “revised,” and “unchanged” as described in the Proposed Rule with a slight modification to the meaning of “unchanged” to state that “unchanged” certification criteria are certification criteria that include the same *or less* of the same capabilities as compared to prior certification criteria of adopted editions. We refer readers to section III.A.4 (“2015 Edition Gap Certification

Eligibility Table”) of this preamble for a complete description of gap certification and the identification of 2015 Edition certification criteria eligible for gap certification. In sum, “unchanged” criteria are eligible for gap certification. For health IT previously certified to the 2011 or 2014 Edition certification criteria, this permits, where applicable, the use of prior test results for certification to the 2015 certification criteria. This creates efficiencies and substantially reduces burden.

As described in the Proposed Rule and Executive Summary of this final

rule as well as discussed in more detail in section IV.B of this preamble, we believe the availability and use of certified health IT for other use cases and health care settings beyond the EHR Incentive Programs has significant value. Therefore, we have adopted certification criteria that support those purposes. Table 2 below provides an overview of certification criteria adopted in this final rule as compared to the certification criteria proposed in the Proposed Rule and the adopted 2014 Edition.

TABLE 2—2015 EDITION HEALTH IT CERTIFICATION CRITERIA

Not Adopted Proposed Criteria (14)

Vital Signs
Image Results
Family Health History—Pedigree
Patient List Creation
Electronic Medication Administration Record
Decision Support—Knowledge Artifact
Decision Support—Service
Incorporate Laboratory Tests and Values/Results
Transmission of Laboratory Test Reports
Accessibility Technology
SOAP Transport and Security Specification and XDR/XDM for Direct Messaging
Healthcare Provider Directory—Query Request
Healthcare Provider Directory—Query Response
Electronic Submission of Medical Documentation

Unchanged Criteria as Compared to the 2014 Edition (Gap Certification Eligible) (16)

Computerized Provider Order Entry (CPOE)—Medications
CPOE—Laboratory
CPOE—Diagnostic Imaging
Drug-Drug, Drug-Allergy Interaction Checks for CPOE
Medication List
Medication Allergy List
Drug-Formulary and Preferred Drug List Checks
Smoking Status
Authentication, Access Control, Authorization
Audit Report(s)
Amendments
Automatic Access Time-Out
Emergency Access
End-User Device Encryption
Accounting of Disclosures
Transmission to Public Health Agencies—Reportable Laboratory Tests and Values/
Results

Revised Criteria as Compared to the 2014 Edition (25)

Demographics
Problem List
Clinical Decision Support
Family Health History
Patient-Specific Education Resources
Transitions of Care
Clinical Information Reconciliation and Incorporation
Electronic Prescribing
Data Export
Clinical Quality Measures—Record and Export
Clinical Quality Measures—Import and Calculate
Clinical Quality Measures—Report
View, Download, and Transmit to 3rd Party
Transmission to Immunization Registries
Transmission to Public Health Agencies—Syndromic Surveillance
Transmission to Cancer Registries
Automated Numerator Recording
Automated Measure Calculation

Safety-enhanced Design Quality Management System Auditable Events and Tamper-Resistance* Integrity* Secure Messaging* Direct Project* Direct Project, Edge Protocol, and XDR/XDM*	
New Criteria as Compared to the 2014 Edition (19)	
Implantable Device List Social, Psychological, and Behavioral Data Data Segmentation for Privacy—Send Data Segmentation for Privacy—Receive Care Plan Common Clinical Data Set Summary Record—Create	New criteria based on request for comment in the Proposed Rule.
Common Clinical Data Set Summary Record—Receive Clinical Quality Measures—Filter Trusted Connection	New for privacy and security certification framework and API approach.
Auditing Actions on Health Information	New for privacy and security certification framework and API approach.
Patient Health Information Capture. Transmission to Public Health Agencies—Electronic Case Reporting. Transmission to Public Health Agencies—Antimicrobial Use and Resistance Reporting. Transmission to Public Health Agencies—Health Care Surveys. Consolidated CDA Creation Performance. Application Access—Patient Selection	Split the proposed API criterion into three criteria based on public comments. Application Access—Data Category Request.
Application Access—All Data Request Accessibility—centered Design.	

* The criterion was proposed as unchanged, but has been adopted as revised in this final rule.

We proposed that readers should interpret the following terms used in the 2015 Edition with the same meanings we adopted in the 2014 Edition final rule (77 FR 54168–54169), in response to comment: “User,” “record,” “change,” “access,” “incorporate,” “create,” and “transmit,” but apply to all health IT, not just “EHR technology.” For the term “incorporate,” we also proposed that readers should interpret the term as we further explained it under the “transitions of care” certification criterion (77 FR 54218) in the 2014 Edition final rule and in the Voluntary Edition proposed rule (79 FR 10898). We proposed that the scope of a 2015 Edition certification criterion was the same as the scope previously assigned to a 2014 Edition certification criterion (for further explanation, see the discussion at 77 FR 54168). That is, certification to the 2015 Edition certification criteria at § 170.315 would occur at the second paragraph level of the regulatory section and encompass all paragraph levels below the second paragraph level. We also proposed to continue to use the same specific descriptions for the different types of “data summaries” established in the 2014 Edition final rule (77 FR 54170–54171) for the 2015 Edition certification

criteria (*i.e.*, “export summary,” “transition of care/referral summary,” “ambulatory summary,” and “inpatient summary.”) We received no specific comments on these proposals and have adopted these meanings and approaches for certification to the 2015 Edition. As with the adoption of the 2011 and 2014 editions of certification criteria (see the introductory text to §§ 170.302, 170.304, 170.306, and 170.314), all capabilities mentioned in certification criteria are expected to be performed electronically, unless otherwise noted. Therefore, we no longer include “electronically” in conjunction with each capability included in a certification criterion under § 170.315 because the introductory text to § 170.315 (which covers all the certification criteria included in the section) clearly states that health IT must be able to *electronically* perform the following capabilities in accordance with all applicable standards and implementation specifications adopted in the part. Health IT certified to the 2015 Edition certification criteria and associated standards and implementation specifications can be implemented as part of an EP’s, eligible hospital’s, or

CAH’s CEHRT and used to demonstrate meaningful use (as identified in Table 4 of section III.A.3 below). We note that Table 4 also identifies certification criteria that are mandatory and conditional certification requirements for Health IT Modules, such as safety-enhanced design (conditional), and quality management system (mandatory), accessibility-centered design (mandatory), and privacy and security certification criteria (conditional). To note, we use the term mandatory to mean that all Health IT Modules must be certified to the certification criterion (see also § 170.550(g)(2) and (3)). Conditional means that certification to the certification criterion (e.g., the “Consolidated CDA creation performance,” “safety-enhanced design,” “automatic access timeout,” or “integrity” certification criterion) depends on what other certification criteria a Health IT Module is presented for certification to (see § 170.550(g)(1) and (4) and § 170.550(f)). For more information on “conditional” certification related to privacy and security, we also refer readers to section IV.C.1 (“Privacy and Security”) of this preamble.

Health IT certified to the 2015 Edition certification criteria and associated standards and implementation specifications can also be used to meet other HHS program requirements (e.g., Medicare chronic care management services) or private sector requirements (e.g., The Joint Commission performance measurement initiative (“ORYX” vendor)). We refer readers to section IV.B.4 of this preamble for further programs that reference the use of certified health IT.

1. Applicability

Section 170.300 establishes the applicability of subpart C—Certification Criteria for Health Information Technology. We proposed to revise paragraph (d) of § 170.300 to add in a reference to § 170.315 and revise the parenthetical in the paragraph to say “i.e., apply to any health care setting” instead of “i.e., apply to both ambulatory and inpatient settings.”

We received no comments on these specific proposed revisions and have adopted the proposed revisions. As noted in the Proposed Rule, these revisions clarify which specific capabilities *within* a certification criterion included in § 170.315 have general applicability (i.e., apply to any health care setting) or apply only to an inpatient setting or an ambulatory setting. The revision to change the language of the parenthetical aligns with our approach to make the ONC Health IT Certification Program more agnostic to health care settings and accessible to health IT that supports care and practice settings beyond the ambulatory and inpatient settings. We refer readers to section IV.B of this preamble for a detailed discussion of modifications to the ONC Health IT Certification Program responses to public comments received on the proposed modifications.

We note that, with the 2015 Edition, we no longer label an entire certification criterion as either optional or ambulatory/inpatient (at the second paragraph level of § 170.315). For example, the 2015 Edition certification criterion for transmission to cancer registries is simply “transmission to cancer registries” instead of “optional—ambulatory setting only—transmission to cancer registries.” Similarly, the 2015 Edition certification criterion for “accounting of disclosures” is simply “accounting of disclosures” instead of “optional—accounting of disclosures.” These simplifications are possible given that, beginning with the 2015 Edition certification criteria, “Complete EHR” certifications will no longer be issued (see 79 FR 54443–45). Therefore, there is no longer a need to designate an

entire certification criterion in this manner. Again, this approach also supports our goal to make the ONC Health IT Certification Program more agnostic to health care settings and accessible to health IT that supports care and practice settings beyond the ambulatory and inpatient settings. We note that we still use “optional,” “inpatient setting only,” and “ambulatory setting only” designations within certification criteria to provide flexibility and reduce burden where feasible and appropriate.

We proposed to replace the term “EHR technology” in paragraphs (d)(1) and (d)(2) of § 170.300 with “health IT” to align with our approach to make the ONC Health IT Certification Program more clearly open to the certification of all types of health IT. We received no comments on this specific proposal and have replaced “EHR technology” with “health IT” in the referenced paragraphs. Again, we refer readers to section IV.B of this preamble for a detailed discussion of modifications to the ONC Health IT Certification Program and responses to public comments received on the proposed modifications.

2. Standards and Implementation Specifications

a. National Technology Transfer and Advancement Act

The National Technology Transfer and Advancement Act (NTTAA) of 1995 (15 U.S.C. 3701 *et. seq.*) and the Office of Management and Budget (OMB) Circular A–119⁵ require the use of, wherever practical, technical standards that are developed or adopted by voluntary consensus standards bodies to carry out policy objectives or activities, with certain exceptions. The NTTAA and OMB Circular A–119 provide exceptions to selecting only standards developed or adopted by voluntary consensus standards bodies, namely when doing so would be inconsistent with applicable law or otherwise impractical. In this final rule, we refer to voluntary consensus standards, except for:

- The standards adopted in § 170.202. (These industry standards were developed by groups of industry stakeholders committed to advancing the Direct Project,⁶ which included initiatives under the Standards and Interoperability (S&I) Framework.⁷ These groups used consensus processes

⁵ http://www.whitehouse.gov/omb/circulars_a119.

⁶ <http://www.healthit.gov/policy-researchers-implementers/direct-project>.

⁷ <http://www.healthit.gov/policy-researchers-implementers/standards-interoperability-si-framework>.

similar to those used by voluntary consensus standards bodies.);

- The standards adopted at § 170.205(d)(4) and (e)(4) for reporting of syndromic surveillance and immunization information to public health agencies, respectively (These standards go through a process similar within the public health community to those used by other industry stakeholders and voluntary consensus standards bodies.);

- The standard adopted at § 170.207(f)(2) for race and ethnicity; and

- Certain standards related to the protection of electronic health information adopted in § 170.210.

We are aware of no voluntary consensus standard that would serve as an alternative to these standards for the purposes that we have identified in this final rule.

b. Compliance With Adopted Standards and Implementation Specifications

In accordance with Office of the Federal Register regulations related to “incorporation by reference,” 1 CFR part 51, which we follow when we adopt proposed standards and/or implementation specifications in a final rule, the entire standard or implementation specification document is deemed published in the **Federal Register** when incorporated by reference therein with the approval of the Director of the Federal Register. Once published, compliance with the standard and implementation specification includes the entire document unless we specify otherwise. For example, for the Health Level Seven (HL7) Implementation Guide (IG) for CDA Release 2: National Health Care Surveys (NHCS), Release 1 adopted in this final rule, health IT certified to the certification criterion referencing this IG will need to demonstrate compliance with all mandatory elements and requirements of the IG. If an element of the IG is optional or permissive in any way, it will remain that way for testing and certification unless we specified otherwise in regulation. In such cases, the regulatory text preempts the permissiveness of the IG.

c. “Reasonably Available” to Interested Parties

The Office of the Federal Register has established new requirements for materials (e.g., standards and implementation specifications) that agencies incorporate by reference in the **Federal Register** (79 FR 66267; 1 CFR 51.5(b)). To comply with these requirements, in section V (“Incorporation by Reference”) of this

preamble, we provide summaries of, and uniform resource locators (URLs) to, the standards and implementation specifications we have adopted and incorporated by reference in the **Federal Register**. To note, we also provide relevant information about these standards and implementation specifications throughout this section of the preamble (section III), including URLs.

“Minimum Standards” Code Sets

In the Proposed Rule, we proposed to adopt newer versions of four previously adopted minimum standards code sets for the 2015 Edition. The code sets proposed were: The September 2014 Release of the U.S. Edition of SNOMED CT®, LOINC® version 2.50, the February 2, 2015 monthly version of RxNorm, and the February 2, 2015 version of the CVX code set. We also proposed to adopt two new minimum standards code sets (the National Drug Codes (NDC)—Vaccine Codes, updates through January 15, 2015 and the “Race & Ethnicity—CDC” code system in the PHIN Vocabulary Access and Distribution System (VADS) Release 3.3.9 (June 17, 2011)). We reiterated, as we have previously articulated (77 FR 54170), the adoption of newer versions improve interoperability and health IT implementation, while creating little additional burden through the inclusion of new codes. We further stated that, as many of these minimum standards code sets are updated frequently throughout the year, we would consider whether it may be more appropriate to adopt a version of a minimum standards code set that is issued before we publish a final rule for the Proposed Rule.

Comments. A number of commenters were supportive of the proposal to adopt more recent versions of the U.S. Edition of SNOMED CT®, LOINC®, RxNorm, and the CVX code set. Commenters supported adoption of NDC codes for vaccines, but also recommended we adopt the MVX codes for vaccine manufacturer as part of this list. One commenter requested identification of the steward for the PHIN VADS “Race & Ethnicity—CDC” code system, noting that it did not appear to have been updated since 2007. This commenter also requested verification that the code set has been reviewed on a regular basis.

A few commenters suggested that we do not specify an exact version and release of a standard (e.g., allow for adoption of version/release 1.x of the HL7 Implementation Guide for CDA

Release 2: National Health Care Surveys (NHCS) where “x” could be any version/release within the version/release 1 family). Another commenter suggested that we consider adopting a “rolling” upgrade cycle for all standardized code systems and value sets. Specifically, the commenter recommended that a certified Health IT Module should not be more than two versions behind the most currently released version of the code system or value set. Commenters also suggested that the vocabulary code set versions in the Proposed Rule are now outdated and have since been updated per a regular update cycle. Commenters suggested we adopt these more recent versions of these vocabulary code sets as they provide the most up-to-date clinical information for clinical relevance and interoperability.

Response. As many of the proposed minimum standards code sets are updated frequently throughout the year, we considered whether it was more appropriate to adopt versions of minimum standards code sets that were issued after the Proposed Rule and before we published this final rule. In making such determination, as we have done with prior finalized versions of minimum standards code sets, we gave consideration to whether these newer versions included any new substantive requirements and their effects on interoperability. We have found no negative effects on interoperability with the newer versions we have adopted as compared to the proposed versions. Rather, these newer versions will further support and improve the structured recording of data. To note, the adopted newer version of a minimum standards code set will serve as the baseline for certification. As with all adopted minimum standards code sets, health IT can be certified to newer versions of the adopted baseline version minimum standards code sets for purposes of certification, unless the Secretary specifically prohibits the use of a newer version (see § 170.555 and 77 FR 54268).

We have adopted newer versions of four 2014 Edition minimum standards code sets in this final rule for the 2015 Edition. These code sets are the September 2015 Release of the U.S. Edition of SNOMED CT®, LOINC® version 2.52, the September 8, 2015 monthly version of RxNorm, and the August 17, 2015 version of the CVX code set. We have also adopted three new minimum standards code sets.

These code sets are the National Drug Codes (NDC)—Vaccine NDC Linker, updates through August 17, 2015; the CDC Race and Ethnicity Code Set Version 1.0 (March 2000);⁸ and the Crosswalk: Medicare Provider/Supplier to Healthcare Provider Taxonomy, April 2, 2015.

We have not adopted MVX codes for vaccine manufacturers as detailed further in the discussion on the “transmission to immunization registries” certification criterion in section III.A.3 of the preamble. Therefore, we do not see a need to include MVX codes in this list of code sets.

We confirm that CDC continues to steward the CDC Race and Ethnicity Code Set, Version 1.0 (March 2000). We also confirm that we have reviewed this version and believe it is appropriate to adopt it as the minimum standard code set for race and ethnicity. Any updates to the code set, including the issuance of newer versions, are within the oversight of the CDC.

As we stated in the 2014 Edition final rule (77 FR 54169–54170), the Office of the Federal Register regulations related to “incorporation by reference” are limited to a specific version that is approved rather than future versions or revisions of a given publication. Thus, we do not include regulation language that refers to a version/release as, for example “Version/Release 1.X” when “X” remains variable. Further, to remain in compliance with the Administrative Procedure Act and address any potential interoperability concerns, we would need to issue regulations to adopt a newer version minimum standards code set as a “baseline” standard and cannot require health IT developers to upgrade on a rolling basis.

e. Object Identifiers (OIDs) for Certain Code Systems

We are providing the following table (Table 3) of OIDs for certain code systems to assist health IT developers in the proper identification and exchange of health information coded to the vocabulary standards referenced in this final rule.

⁸ We have more specifically identified the CDC Race and Ethnicity code set as compared to the identification in the Proposed Rule. We note this code set remains part of the PHIN Vocabulary Access and Distribution System (VADS) Release 3.3.9. <http://www.cdc.gov/phn/resources/vocabulary/index.html>.

TABLE 3—CODE SYSTEM OBJECT IDENTIFIERS (OIDS)

Code system OID	Code system name
2.16.840.1.113883.6.96	IHTSDO SNOMED CT®.
2.16.840.1.113883.6.1	LOINC®.
2.16.840.1.113883.6.88	RxNorm.
2.16.840.1.113883.12.292	HL7 Standard Code Set CVX-Vaccines Administered.
2.16.840.1.113883.6.69	National Drug Code Directory.
2.16.840.1.113883.6.8	Unified Code of Units of Measure (UCUM ⁹).
2.16.840.1.113883.6.13	Code on Dental Procedures and Nomenclature (CDT).
2.16.840.1.113883.6.4	International Classification of Diseases, 10th Revision, Procedure Coding System (ICD-10-PCS).
2.16.840.1.113883.6.238	CDC Race and Ethnicity Code Set Version 1.0 (March 2000).
2.16.840.1.113883.6.316	Tags for Identifying Languages—Request for Comment (RFC) 5646 (preferred language).
2.16.840.1.113883.6.101	Healthcare Provider Taxonomy.

f. Subpart B—Standards and Implementation Specifications for Health Information Technology

We proposed to remove the term “EHR Modules” from § 170.200 and add in its place “Health IT Modules” We proposed to remove the term “EHR technology” from § 170.210 and add in its place “health IT.” We noted that these proposals were consistent with our overall approach to this rulemaking as discussed in the Proposed Rule Executive Summary and recited in this final rule’s Executive Summary. We received no comments on these specific proposals and have adopted these proposals. We refer readers to section IV.B of this preamble for a detailed discussion of modifications to the ONC Health IT Certification Program and responses to public comments received on the proposed modifications.

3. Adopted Certification Criteria

We discuss the certification criteria that we have adopted as part of the 2015 Edition in this section. We discuss each

certification criterion in the chronological order in which it would appear in the CFR. In other words, the preamble that follows discusses the adopted certification criteria in § 170.315(a) first, then § 170.315(b), and so on through section (h). Due to certain proposed certification criteria not being adopted as well as further consideration of proper categorization of criteria, the designation of some criteria within § 170.315 has changed in comparison to the Proposed Rule (*e.g.*, the 2015 Edition “smoking status” criterion has been codified in § 170.315(a)(11) instead of proposed (a)(12) and the 2015 Edition “patient health information capture” criterion has been codified in § 170.315(e)(3) instead of proposed (a)(19)).

We note that we have restructured the regulatory text of certification criteria to remove the use of “or” in many places where it was proposed to indicate certification optionality. We have replaced it with language that we believe will better convey that same optionality. This restructuring of the

regulatory text will provide further clarity regarding when a health IT developer has flexibility to select one of two or more options for certifying its Health IT Module as compared to when it is expected that the Health IT Module demonstrate all listed methods for certification. This restructuring, by itself, did not alter any of the proposed certification criteria requirements.

Table 4 below identifies the 2015 Edition certification criteria associated with the EHR Incentive Programs Stage 3 as finalized in EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**. While these certification criteria can be used to support other use cases and health care settings beyond the EHR Incentive Programs, we have also adopted additional 2015 health IT certification criteria that support other specific use cases and health care settings. These criteria were listed in Table 2 and are discussed in this section of the preamble.

(g)(6)	Consolidated CDA Creation Performance		Conditional
Key			
<u>Mandatory</u> : All Health IT Modules must be certified to the certification criterion.			
<u>Conditional</u> : A Health IT Module is certified to the certification criterion depending on the other certification criteria the Health IT Module is presented for certification to.			

• *Computerized Provider Order Entry*

We proposed to adopt three separate 2015 computerized provider order entry (CPOE) certification criteria based on the clinical purpose (*i.e.*, medications, laboratory, and diagnostic imaging), which was consistent with the 2014 Edition CPOE certification criteria we adopted in the 2014 Edition Release 2 final rule (79 FR 54435–36).

Comments. We received only a few comments on this proposed approach, all which expressed support for separating the functionality based on clinical purpose.

Response. We have adopted separate CPOE certification criteria based on clinical purposes that are described in more detail below.

We requested comment on whether we should specify, for the purposes of testing and certification to the 2015 Edition CPOE criteria, certain data elements that a Health IT Module must be able to include in a transmitted order. In particular, we requested comment on whether a Health IT Module should be able to include any or all of the following data elements: secondary diagnosis codes; reason for order; and comment fields entered by the ordering provider, if they are provided to the ordering provider in their order entry screen. We also requested comment on whether there are any other data elements that a Health IT Module should be able to include as part of an order for the purposes of testing and certification.

Comments. Most commenters opposed the inclusion of specific data elements for certification. These commenters most often cited burden on health IT developers and concern that new data elements might lead to inefficient workflow for the order entry process as reasons for not including additional data elements. Some commenters expressed support for the inclusion of additional data elements mentioned in the Proposed Rule, but varied in their support for the specific data elements that should we included. These commenters did, however, agree that the “reason for order” data element was a data element that should be included with an order.

Response. We acknowledge the lack of agreement as to what data elements

should be required for certification, but also the support for the “reason for order” data elements. With consideration of commenters concerns about burden and workflow inefficiencies, we have adopted the “reason for order” data element as an optional certification provision in each of the three CPOE certification criteria. We agree with commenters that the reason for an order data element has value. The designation of this provision as optional in all three criteria gives flexibility to health IT developers as they consider certification of their health IT and providers as they consider what certified health IT to purchase.

• *Computerized Provider Order Entry—Medications*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(1) (Computerized provider order entry—medications)

We proposed to adopt a 2015 Edition CPOE certification criterion specific to medication ordering that was unchanged in comparison to the 2014 Edition CPOE—medications criterion adopted at § 170.314(a)(18) as well as § 170.314(a)(1)(i). The proposed criterion does not reference any standards or implementation specifications.

Comments. Commenters overwhelmingly recommended that this criterion remain unchanged. A few commenters requested clarifications regarding the designation of authorized CPOE users and the proper counting of CPOE orders for the purposes of meeting the associated meaningful use objective and measure.

Response. We thank commenters for their support and have adopted this criterion as unchanged. As noted above, we have, however, adopted the “reason for order” data element as an *optional* provision within this criterion. For questions related to the EHR Incentive Programs (*i.e.*, the designation of authorized CPOE users and the proper counting of CPOE order for the purposes of meeting the associated meaningful use objective and measure), we refer readers to CMS and the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**.

• *Computerized Provider Order Entry—Laboratory*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(2) (Computerized provider order entry—laboratory)

We proposed to adopt a 2015 Edition CPOE certification criterion specific to laboratory ordering that was revised in comparison to the CPOE—laboratory criterion adopted at § 170.314(a)(19) as well as § 170.314(a)(1)(ii). For the ambulatory setting, we proposed that this criterion would include the HL7 Version 2.5.1 Implementation Guide: S&I Framework Laboratory Orders (LOI) from EHR, Draft Standard for Trial Use, Release 2—US Realm (“Release 2”). We proposed to adopt the most recent version of the HL7 Version 2.5.1 Implementation Guide: S&I Framework Laboratory Test Compendium Framework, Release 2, (also referred to as the “electronic Directory of Services (eDOS) IG”) for certification to all health care settings. We also proposed to require that a Health IT Module use, at a minimum, version 2.50 of Logical Observation Identifiers Names and Codes (LOINC[®]) as the vocabulary standard for laboratory orders.

Comments. Commenters stated that the LOIs and eDOS IGs were not ready for implementations, but acknowledged the significant progress being made in developing standards for laboratory ordering and the harmonizing of laboratory-related IGs.

Response. With consideration of comments, we have determined not to adopt any standards for this certification criterion. We have, however, adopted the “reason for order” data element as an *optional* provision within this criterion. We have made the determination to keep this criterion “functional” at this time based on a number of factors, including (among other aspects) that the best versions of the IGs that could be associated with this criterion were not sufficiently ready. That being said, we believe that the LOI and eDOS IGs show great promise in improving laboratory interoperability and could potentially result in significant cost savings to the industry at large. Accordingly, we remain committed to continued collaboration with stakeholders to support the widespread adoption of these IGs, including the development of testing tools and pilots where necessary and feasible.

• *Computerized Provider Order Entry—Diagnostic Imaging*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(3) (Computerized provider order entry—diagnostic imaging)

We proposed to adopt a 2015 Edition CPOE certification criterion specific to diagnostic imaging ordering that was unchanged in comparison to the 2014

Edition CPOE—diagnostic imaging criterion adopted at § 170.314(a)(20) as well as § 170.314(a)(1)(iii). The proposed criterion does not reference any standards or implementation specifications. We also proposed to adopt the title of “diagnostic imaging,” which is the title we gave to the 2014 Edition version of this certification criterion in the 2014 Edition Release 2 final rule (79 FR 54436).

Comments. Commenters overwhelmingly recommended that this criterion remain unchanged. A few commenters recommended we add functionality to this criterion, including the required use of a standard such as Digital Imaging and Communications in Medicine (DICOM) to support radiology.

Response. We thank commenters for their support and have adopted this criterion as unchanged. As noted above, we have, however, adopted the “reason for order” data element as an *optional* provision within this criterion. While we appreciate comments suggesting the inclusion of additional functionality, the recommended functionality is outside the scope of the proposed criterion. Therefore, we have not adopted the recommended functionality in this criterion. We also refer readers to our previous discussion of DICOM (77 FR 54173).

• *Drug-Drug, Drug-Allergy Interaction Checks for CPOE*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(4) (Drug-drug, drug-allergy interaction checks for CPOE)

We proposed to adopt a revised 2014 Edition “drug-drug, drug-allergy interaction checks” criterion (§ 170.314(a)(2)) to clarify that the capabilities included in this criterion are focused on CPOE. We proposed that a Health IT Module must record at least one action taken and by whom, and must generate either a human readable display or human readable report of actions taken and by whom in response to drug-drug or drug-allergy interaction checks (DD/DAI). We explained that the benefits of recording user actions for DD/DAI interventions that assist with quality improvement and patient safety outweigh the development burden associated with this functionality. However, to address development concerns, we proposed that a Health IT Module must only record, at a minimum, one user action for DD/DAI checks; and asked for comment on focusing the requirement to record at least one user action taken for DD/DAI interventions on a subset of DD/DAI interventions and what sources we

should consider for defining this subset. We further noted that the proposed criterion does not establish the uses for the “user action” information, who should be able to view the information, or who could adjust the capability. We also sought comment on requiring functionality that would inform a user of new or updated DD/DAI when the medication or medication allergy lists are updated.

Comments. We received a few comments supporting our proposed clarification that this criterion focused on CPOE, but also suggestions that this functionality could support other use cases, such as when medications are reviewed or medication or medication allergy lists are updated. We received mixed comments in response to the proposed additional “recording user response” functionality for this criterion. While many commenters supported the overall goal of interaction checking for quality improvement and patient safety, including functionality that would inform a user of new or updated DD/DAI, many commenters stated that current systems already provide a wide range of functionality to enable providers to document decisions concerning interaction warnings. These commenters stated that the proposed “recording user response” is not necessary for certification or for providers to satisfy objectives of the EHR Incentive Programs. Commenters requested the criterion remain eligible for gap certification. A few expressed overall agreement with the other functionality specified in this criterion, including the ability to adjust the severity level of interventions (*e.g.*, alerts) for drug-drug interaction checks.

Response. We have determined, based on public comments, to focus this certification criterion on CPOE and to not adopt the “recording user response” functionality. This approach is responsive to comments and will permit health IT developers to focus their efforts on functionality and requirements that support the goals outlined in the Executive Summary, including supporting the interoperability of health IT. To note, this criterion is eligible for gap certification.

- *Demographics*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(5) (Demographics)

We proposed to adopt a revised 2015 Edition “demographics” certification criterion in comparison to the 2014 Edition certification criterion (§ 170.314(a)(3)). We received comments

that focused on each of the specific data elements in the certification criterion. We have categorized and responded to these comments in a similar manner.

Sex

We proposed the requirement to record sex in accordance with HL7 Version 3 (“AdministrativeGender”) and a nullFlavor value attributed as follows: male (M); female (F); and unknown (UNK), and noted that HL7 Version 3 for recording sex would be required under the “Common Clinical Data Set” definition for certification to the 2015 Edition. In the Proposed Rule’s section III.B.3 (“Common Clinical Data Set”), we stated that this approach would become the method for capturing sex under the “Common Clinical Data Set” definition for certification to the 2015 Edition.

Comments. Commenters were generally supportive of recording sex in a structured manner. A few commenters suggested that we used other values, such as U or UN for undifferentiated. A few commenters also requested clarification on the proposed use of two different value sets (HL7 AdministrativeGender and NullFlavor).

Response. We appreciate the support for our proposal. We have adopted the requirement for recording sex as proposed. We clarify that this coding is intended to present birth sex. Therefore, we believe the use of the specified values and value sets is the most appropriate approach. It is also an approach that we believe poses the least burden and most health IT developers are using these values and value sets.

Race and Ethnicity

We proposed the requirement to record each one of a patient’s races and ethnicities in accordance with, at a minimum, the “Race & Ethnicity—CDC” code system in the PHIN Vocabulary Access and Distribution System (VADS), Release 3.3.9¹⁸ and aggregate each one of a patient’s races and ethnicities to the categories in the OMB standard for race and ethnicity. We explained that a Health IT Module must be able to record each one of a patient’s races and ethnicities using any of the 900 plus concepts in the “Race & Ethnicity—CDC” code system, and noted that health IT developers and health care providers could determine the appropriate user interface implementation in a given setting. The Proposed Rule section III.A.2.d (“Minimum Standards” Code Sets) discussed the adoption of the “Race &

Ethnicity—CDC” code system in PHIN VADS as a minimum standards code set and Release 3.3.9, or potentially a newer version if released before this final rule, as the baseline for certification to the 2015 Edition. To note, the Proposed Rule section III.B.3 “Common Clinical Data Set” also discussed adopting the Race & Ethnicity—CDC” code system in PHIN VADS (at a minimum, Release 3.3.9) and the OMB standard as the race and ethnicity standards under the “Common Clinical Data Set” definition for certification to the 2015 Edition.

Comments. A majority of commenters supported our proposal to require a Health IT Module to be able to capture granular patient race and ethnicity data. Some commenters questioned the necessity for such granular race and ethnicity capture because it was not required for the EHR Incentive Programs or another identified purpose, with one commenter recommending that this be a future certification requirement.

Commenters expressed concerns about user interfaces in relation to the over 900 concepts for race and ethnicity in PHIN VADS, including concern over how many concepts should be displayed for users. Similarly, commenters suggested that testing and certification should not be to all 900 concepts. A few commenters requested clarification on whether a health IT Module must be able to capture multiple races or ethnicities for a patient and the appropriate method for capturing when a patient declines to provide race or ethnicity information.

Response. We thank commenters for their support. We have adopted the race and ethnicity requirements as proposed, including the use of both the OMB and the CDC Race and Ethnicity standards. We believe that the structured granular recording of race and ethnicity can both improve patient care and support the elimination of health disparities whether or not currently required by the EHR Incentives Programs or another HHS program. By adopting these requirements, we ensure certified health IT has these capabilities and can make them available to providers. We clarify four points in response to comments. First, as mentioned in the Proposed Rule, a health IT developer and provider can best determine how the user interface is designed, including how many race and ethnicity values are displayed. Second, as mentioned above and in the Proposed Rule, a Health IT Module must be able to record each one of a patient’s races and ethnicities using any of the 900 plus concepts. For testing and certification, a Health IT Module would be tested to any of the 900 plus concepts at the discretion of the testing

¹⁸ <https://phinvads.cdc.gov/vads/ViewCodeSystem.action?id=2.16.840.1.113883.6.238#>.

body. Third, a Health IT Module would need to be capable of recording multiple races and/or ethnicities for a patient. This approach is consistent with the OMB standard. Fourth, a Health IT Module must be able to demonstrate that it can record whether a patient declined to provide information for all data specified in this certification criterion. We do not, however, specify for the purposes of certification how that data is specifically captured.

Preferred Language

In the Proposed Rule, we proposed to require the use of the Internet Engineering Task Force (IETF) Request for Comments (RFC) 5646¹⁹ standard for preferred language. We stated that RFC 5646 entitled “Tags for Identifying Languages, September 2009” is the coding system that is commonly used to encode languages on the web. We also noted that this standard is compatible with the C-CDA Release 2.0 (and C-CDA Release 2.1) and that other preferred language standards in use today can be efficiently mapped to it, such as ISO 639-1, 639-2, and 639-3. The Proposed Rule explained that the standard does not determine the way in which health care providers use the capability to record preferred language or the preferred language values they are presented with to select a patient’s preferred language. In the Proposed Rule’s section III.B.3 (“Common Clinical Data Set”), we stated that RFC 5646 would also become the preferred language standard under the “Common Clinical Data Set” definition for certification to the 2015 Edition.

Comments. Commenters were generally supportive of the adoption of the RFC 5646 standard. Some commenters (health IT developers) expressed opposition to the recording of preferred language in RFC 5646 due to the new burden it would create versus the perceived minimal value. One commenter suggested adopting ISO 639-3 instead of RFC 5646.

Response. We have adopted RFC 5646 as the preferred language standard for this criterion. As extensively discussed in the Proposed Rule (80 FR 16817), we believe this is the most appropriate standard for capturing a patient’s preferred language. It is compatible with the C-CDA Release 2.1 and other preferred language standards can be efficiently mapped to it, including ISO 639-1, 639-2, and 639-3. As mentioned in the Proposed Rule and clarified for other demographics data, a health IT developer and provider can best determine how the user interface is

designed, including how many preferred languages are displayed.

Preliminary Cause of Death and Date of Death

In the Proposed Rule, we proposed that, for the inpatient setting, a Health IT Module must include the functionality to record, change, and access the “date of death.” We stated that this functionality would be in addition to the requirement to enable a user to electronically record, change, and access “preliminary cause of death” in case of mortality, as is included in the 2014 Edition “demographics” certification criterion.

Comments. The majority of commenters supported this requirement. A few commenters requested clarification as to whether the preliminary cause of death was to be recorded consistent with either the SNOMED CT® or ICD-10-CM standards.

Response. We thank commenters for their support and have adopted this requirement as proposed. We clarify that the preliminary cause of death is not required to be recorded in accordance with a standard for the purposes of certification to this criterion as we did not propose such a requirement nor have we adopted one.

Sexual Orientation and Gender Identity (SO/GI)

We did not propose to include a requirement to capture a patient’s sexual orientation or gender identity as part of this criterion. Rather, we proposed the capture of SO/GI data as part of the proposed “social, psychological, and behavioral data” certification criterion.

Comments. We received a significant number of comments from providers, consumers/individuals, and health care coalitions strongly recommending that we consider including sexual orientation and gender identify as a component of the Base EHR definition (e.g., in the demographics certification criterion) or Common Clinical Data Set definition. These commenters suggested that there are mature vocabulary standards for representing SO/GI and there is strong clinical value in having this data to inform decisions about health care and treatment. Commenters indicated that by including SO/GI in the Base EHR or Common Clinical Data Set definitions, providers would be required to possess this functionality for participation in the EHR Incentive Programs, which could have a large impact for evaluating the quality of care provided to lesbian, gay, bisexual, and transgender (LGBT) communities.

Response. We thank commenters for their feedback. Given this feedback, the clinical relevance of capturing SO/GI, and the readiness of the values and vocabulary codes for representing this information in a structured way, we require that Health IT Modules enable a user to record, change, and access SO/GI to be certified to the 2015 Edition “demographics” certification criterion. By doing so, SO/GI is now included in the 2015 Edition Base EHR definition. The 2015 Edition Base EHR definition is part of the CEHRT definition under the EHR Incentive Programs. Therefore, providers participating in the EHR Incentive Programs will need to have certified health IT with the capability to capture SO/GI to meet the CEHRT definition in 2018 and subsequent years.

We note that like all information in the “demographics” criterion, certification does not require that a provider collect this information, only that certified Health IT Modules enable a user to do so. We believe including SO/GI in the “demographics” criterion represents a crucial first step forward to improving care for LGBT communities.

We have not included it in the Common Clinical Data Set at this time. We refer readers to section III.B.3 of this preamble for further discussion of the Common Clinical Data Set.

Comments. We received comments from a health care coalition that has partnered with and coordinated industry-development of the appropriate terminology to capture SO/GI for health care settings. The commenters suggested that we revise the proposed terminology for collecting SO/GI to use more appropriate language that reflects up-to-date, non-offensive terminology that will facilitate the goal of providing welcoming and affirming health care to LGBT individuals. As such, the commenters recommended that we retain the proposed SNOMED CT® and HL7 V3 codes but revise the description of some codes to use synonyms which reflect more appropriate language. The commenters noted that they have already submitted revisions to SNOMED CT® to include the synonyms for these terms. The commenters also noted that the core concepts of the codes remain the same.

Response. We thank the commenters for the suggestion and are proceeding with the recommendation to include use the revised terminology for collecting SO/GI. We refer readers to § 170.207(o)(1) and § 170.207(o)(2) for a full list of the code descriptors and codes for SO/GI, respectively.

Comments. One commenter recommended we consider including structured and coded questions for

¹⁹ <http://www.rfc-editor.org/info/rfc5646>.

soliciting SO/GI information as part of certification.

Response. While we thank the commenter for providing this recommendation, we do not believe that the suggested questions have not yet been scientifically validated for use in health care settings and, thus, have not adopted them. We do, however, believe that these questions are being used today in health care settings as “best practices,” and would suggest that health care providers and institutions decide whether to include these questions in the collection of SO/GI information. These “best practice” questions and the answers we have adopted are:

- Do you think of yourself as:
 - Straight or heterosexual;
 - Lesbian, gay, or homosexual;
 - Bisexual;
 - Something else, please describe.
 - Don't know.
- What is your current gender identity? (Check all that apply.)
 - Male;
 - Female;
 - Transgender male/Trans man/ Female-to-male;
 - Transgender female/Trans woman/ Male-to-female;
 - Genderqueer, neither exclusively male nor female;
 - Additional gender category/(or other), please specify.
 - Decline to answer.

Comments. One commenter recommended that we add another question and set of answers to collect assigned birth sex.

Response. We have not adopted this recommendation to collect assigned birth sex as suggested because we already require the capturing of birth sex as described under the “sex” section above.

- *Problem List*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(6) (Problem list)

We proposed to adopt a 2015 Edition “problem list” certification criterion that was revised as compared to the 2014 Edition “problem list” certification criterion (§ 170.314(a)(5)) by requiring the September 2014 Release of the U.S. Edition of SNOMED CT® as the baseline version permitted for certification to this criterion. The Proposed Rule’s section III.A.2.d (“Minimum Standards” Code Sets) discussed our adoption of SNOMED CT® as a minimum standards code set and the adoption of the September 2014 Release (U.S. Edition), or potentially a newer version if released before this final rule, as the

baseline for certification to the 2015 Edition.

Comments. The majority of commenters supported the proposed certification criterion. A commenter suggested that instead of the full SNOMED CT® code system, the reference should be explicit to a concept and its value set relevant to this criterion, such as the “core” problem list. A commenter recommended requiring certification to the *most current* version of SNOMED CT®. Some commenters recommended that we require the use of the ICD–10–CM code set. These commenters noted that the code set is used for billing purposes and the required use of SNOMED CT® adds burden on providers and their staff due to the required use of two different systems.

A couple of commenters stated that the problem list should not be limited to the duration of a hospitalization because it may be needed when the patient is out of the hospital, suggesting “for the duration of an entire hospitalization” be struck from the criterion. Another commenter suggested that the distinction between inpatient and ambulatory records should be dropped in favor of a “patient” record stating that several major healthcare systems have dropped the distinction and are focusing on a patient problem list where one or more problems on the problem list are addressed in a particular encounter (outpatient visit or inpatient stay).

Commenters suggested that if this criterion was adopted as proposed that health IT developers should have the ability to attest that their health IT previously certified to the 2014 Edition “problem list” criterion meets the newer baseline version of SNOMED CT® for the purposes of testing and certification to this criterion.

Response. We have adopted this certification criterion as proposed, except that we have adopted a newer baseline version SNOMED CT® (September 2015 Release of the U.S. Edition) for the purposes of certification. We refer readers to section III.A.2.c (“Minimum Standards” Code Sets) for a more detailed discussion of our adoption of the September 2015 Release of the U.S. Edition of SNOMED CT® and for our reasons why we always adopt a baseline version of a vocabulary code set for certification instead of specifying certification must be to the “most current” version. As with the 2014 Edition, testing and certification will focus on a Health IT Module’s ability to enable a user to record, change, and access a patient’s problem list in accordance with SNOMED CT®.

This will enable a provider to choose any available and appropriate code in SNOMED CT® for a patient’s problems.

We did not propose as part of this criterion to test and certify a Health IT Module’s ability to enable a user to record, change, and access a patient’s active problem list and problem history across health care settings as this criterion is focused on the ambulatory and inpatient settings in support of the EHR Incentive Programs. We believe the use of “for the duration of an entire hospitalization” is appropriate for this criterion and refer readers to our detailed discussion of this determination in the 2014 Edition final rule (77 FR 54211–54212).

We agree with commenters that efficient testing and certification processes should be available to Health IT Modules previously certified to the 2014 Edition “problem list” criterion for certification to this criterion. Accordingly, we will consider such options, such as attestation, in developing the test procedure for this criterion and in issuing guidance to the ONC–AA and ONC–ACBs.

- *Medication List*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(7) (Medication list)

We proposed to adopt a 2015 Edition “medication list” certification criterion that was unchanged as compared to the 2014 Edition “medication list” certification criterion (§ 170.314(a)(6)). To note, the proposed criterion does not reference any standards or implementation specifications.

Comments. The majority of commenters expressed support for this certification criterion as proposed. A few commenters suggested additional functionalities for this criterion. These suggestions included functionality to designate or mark medications as confidential or sensitive and include patient-generated data. One commenter recommended requiring that medications be recorded in accordance with RxNorm. A couple of commenters requested clarification and expansion of the medication list to include over-the-counter medications, herbal supplements, medical cannabis, and oxygen. In general, a few commenters suggested that the medication list should be available across encounters and there should not be a distinction between inpatient and ambulatory records. One of these commenters noted that healthcare systems have dropped the distinction and are focusing on a patient medication list. Another commenter stated that the Food and

Drug Administration (FDA) is currently working to implement requirements from the Drug Supply Chain Security Act (DSCSA) regarding standards for the interoperable exchange of information for tracing human, finished and/or prescription drugs. The commenter recommended that we be aware of these efforts and align current and future certification requirements with any future FDA requirements for standards-based identification of prescription drugs.

Response. We thank commenters for their support and have adopted this criterion as proposed. The other comments summarized above are outside the scope of the proposed criterion. We did not propose additional functionality for this criterion, including structured capture in accordance with RxNorm. We also did not propose as part of this criterion to test and certify a Health IT Module's ability to enable a user to record, change, and access a patient's active medication list and medication history across health care settings as this criterion is focused on the ambulatory and inpatient settings in support of the EHR Incentive Programs (please also see our response to comments for the "problem list" certification criterion above). Further, we do not define "medications" for the purpose of testing and certifying a Health IT Module's ability to enable a user to record, change, and access a patient's active medication list and medication history. We thank the commenter for the information related to FDA's work and will take steps to ensure our work aligns with the relevant work of the FDA.

- *Medication Allergy List*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(8) (Medication allergy list)

We proposed to adopt a 2015 Edition "medication allergy list" certification criterion that was unchanged as compared to the 2014 Edition "medication allergy list" certification criterion (§ 170.314(a)(7)).

Comments. The majority of commenters supported this criterion as proposed. Multiple commenters recommended adding functionality to support food and environmental allergies as well as other types of allergens, noting that most providers are already recording this information and that such functionality would support patient safety. Some of these same commenters recommended the structured capture of this information in various standards, including RxNorm, UNII, SNOMED CT®, and LOINC®. A

couple of commenters recommended additional functionalities such as including time and date for medication allergies entered, edited, and deleted. In general, a few commenters suggested that the medication allergy list should be available across encounters and there should not be a distinction between inpatient and ambulatory records. One of these commenters noted that healthcare systems have dropped the distinction and are focusing on a patient medication allergy list. Another commenter stated that the FDA is currently working to implement requirements from the Drug Supply Chain Security Act (DSCSA) regarding standards for the interoperable exchange of information for tracing human, finished and/or prescription drugs. The commenter recommended that we be aware of these efforts and align current and future certification requirements with any future FDA requirements for standards-based identification of prescription drugs.

Response. We thank commenters for their support and have adopted this criterion as proposed. The other comments summarized above are outside the scope of the proposed criterion. We did not propose additional functionality for this criterion, including additional allergens and the structured capture of medication allergies. As we noted in the Proposed Rule (80 FR 16820), there are a number of vocabularies and code sets that could support food and environmental allergies as well as medications, but our view is that there is no ready solution for using multiple vocabularies to code allergies that could be adopted for the purposes of certification at this time. We also did not propose as part of this criterion to test and certify a Health IT Module's ability to enable a user to record, change, and access a patient's active medication allergy list and medication allergy history across health care settings as this criterion is focused on the ambulatory and inpatient settings in support of the EHR Incentive Programs (please also see our response to comments for the "problem list" certification criterion above). As noted in our response under the "medication list" certification criterion, we will take steps to ensure our work aligns with the relevant work of the FDA.

- *Clinical Decision Support*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(9) (Clinical decision support)

We proposed to adopt a 2015 Edition "clinical decision support" (CDS) certification criterion that was revised

in comparison to the 2014 Edition "CDS" criterion (§ 170.314(a)(8)). We proposed to require a Health IT Module to follow the updated Infobutton standard (Release 2, June 2014)²⁰ and one of two updated associated IGs: HL7 Implementation Guide: Service-Oriented Architecture Implementations of the Context-aware Knowledge Retrieval (Infobutton) Domain, Release 1, August 2013 ("SOA Release 1 IG"),²¹ the updated Infobutton URL-based IG (HL7 Version 3 Implementation Guide: Context-Aware Knowledge Retrieval (Infobutton), Release 4, June 2014) ("URL-based Release 4 IG").²² We proposed to require certification only to the Infobutton standard (and an associated IG) for identifying diagnostic or therapeutic reference information, as we stated this is the best consensus-based standard available to support the use case. We requested comment on requiring that a Health IT Module be able to request patient-specific education resources identified using Infobutton standards based on a patient's preferred language. We proposed to require that a Health IT Module presented for certification to this criterion be able to record at least one action taken and by whom when a CDS intervention is provided to a user, and that a Health IT Module must generate either a human readable display or human readable report of the responses and actions taken and by whom when a CDS intervention is provided. We clarified that the 2015 Edition CDS certification criterion does not use the terms "automatically" and "trigger" as related to CDS interventions so as to reiterate the intent to encompass all types of CDS interventions without being prescriptive on how the interventions are deployed. We proposed cross-reference corrections to the 2014 Edition CDS criterion.

Infobutton Standard and Related IGs

Comments. A majority of commenters supported the inclusion of the updated Infobutton standard and related IGs. Multiple commenters recommended that there should be more options besides Infobutton for identifying diagnostic or therapeutic reference information. A commenter recommended a requirement for Infobutton to be connected to a reference resource at the end user's choice in cases of inability to use the Infobutton functionality due to

²⁰ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=208.

²¹ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=283.

²² http://www.hl7.org/implement/standards/product_brief.cfm?product_id=22.

contractual relationships to reference resources. Multiple commenters voiced a need for materials to be tested and vetted to ensure the accuracy and appropriate literacy level of material, in addition to providers being able to provide educational resources from other sources in case the most appropriate material deemed by the physician cannot be identified or is limited by the health IT.

Response. We thank commenters for their support and have adopted the proposed Infobutton standard and supporting IGs. We clarify for commenters that our certification approach only focuses on capabilities that must be certified to meet this criterion. A health IT developer's product could include other means for identifying diagnostic or therapeutic reference information. Our approach actually reduces burden on health IT developers in that they do not have to have any other means tested and certified. In regard to comments suggesting the certification of the connection to a reference resource and diagnostic or therapeutic reference information obtained, these comments are beyond the scope of our proposal and we have not adopted them.

Preferred Language Request for Comment

Comments. Commenters expressed support for the capability to identify for a user diagnostic and therapeutic reference information based on a patient's preferred language with the use of Infobutton. Commenters stated that this would support reducing racial and ethnic health disparities by improving literacy and addressing language barriers. Some commenters contended that including such as requirement would increase burden for limited value because resources are often not available in other languages with the exception of three or four of the most commonly spoken languages.

Response. We appreciate the comments received in response to this request for comment, including those supporting the inclusion of preferred language. We have, however, not included preferred language functionality in this criterion. While this functionality many support reducing health disparities, we believe that when weighing all proposed policies and the accumulated burden they present, this functionality would not provide as much impact in relation to other proposals such as the structured recording of a patient's preferred language and specific race and ethnicity information under the "demographics" criterion. By not adopting this

functionality, health IT developers will be able to focus more of their efforts on other adopted functionality and requirements, including those that support the interoperability of health IT.

CDS Intervention Response Documentation

Comments. We received mixed comments in response to the proposed additional "recording user response" functionality for this criterion. While many commenters supported the overall goal of interaction checking for quality improvement and patient safety, many commenters stated that current systems already provide a wide range of functionality to enable providers to document decisions concerning CDS interventions. These commenters stated that the proposed "recording user response" is not necessary for certification or for providers to satisfy objectives of the EHR Incentive Programs.

Response. We have not adopted the "recording user response" functionality. This approach is responsive to comments suggesting that this functionality is already included in health IT and is unnecessary to support providers participating in the EHR Incentive Programs. Further, by not adopting this functionality, health IT developers will be able to focus more of their efforts on other adopted functionality and requirements, including those that support the interoperability of health IT.

Clarifying "Automatically" and "Triggered" Regulatory Text

Comments. Commenters expressed agreement with our proposal to not use the terms "automatically" and "trigger" in the 2015 Edition CDS criterion and that CDS interventions should be limited by how they are deployed.

Response. We thank commenters for their support. We have not included these terms in the certification criterion to clarify our intent to encompass all types of CDS interventions without being prescriptive on how the interventions are deployed.

Clinical Decision Support Configuration—Laboratory Tests and Values/Results

Comments. We received a comment seeking clarification on the criterion's reference to laboratory tests and values/results for CDS configuration capabilities related to the incorporation of a transition of care/referral summary. The commenter stated that we should remove reference to laboratory tests and values/results for CDS configuration in relation to the incorporation of a

transition of care/referral summary because the proposed 2015 Edition "clinical information reconciliation and incorporation" criterion does not include reconciling laboratory tests and values/results.

Response. We have removed the references to laboratory tests and values/results from the criterion. The commenter is correct in that the 2015 Edition "clinical information reconciliation and incorporation" criterion does not include reconciling laboratory tests and values/results. Therefore, this data would not necessarily be available for CDS when a patient record is incorporated.

Reordering of Provisions/Regulation Text

We have reordered the provisions of the criterion/regulation text to better align with testing procedures. We have moved the CDS intervention interaction provision to the beginning, followed by the CDS configuration, evidence-based decision support interventions, linked referential CDS, and source attributes. This reordering does not alter the requirements of the criterion in any way.

2014 Edition "Clinical Decision Support" Certification Criterion—Corrections

We received no comments on our proposal to revise the cross-reference in § 170.314(a)(8)(iii)(B)(2) (CDS configuration) to more specifically cross-reference the 2014 "transitions of care" ("ToC") criterion (§ 170.314(b)(1)(iii)(B)). Accordingly, we have adopted this proposed revision.

- *Drug-Formulary and Preferred Drug List Checks*

2015 Edition Health IT Certification Criterion

§ 170.315(a)(10) (Drug-formulary and preferred drug list checks)

In the Proposed Rule, we proposed to adopt a 2015 Edition "drug formulary checks and preferred drug list" certification criterion that was split based on drug formularies and preferred drug lists. We proposed that a Health IT Module must (1) automatically check whether a drug formulary exists for a given patient and medication and (2) receive and incorporate a formulary and benefit file according to the National Council for Prescription Drug Programs (NCPDP) Formulary and Benefit Standard v3.0 ("v3.0"). We proposed that a Health IT Module must automatically check whether a preferred drug list exists for a given patient and medication. For drug formularies and

preferred drug lists, we proposed that a Health IT Module be capable of indicating the last update of a drug formulary or preferred drug list as part of certification to this criterion. We requested comment on more recent versions of the NCPDP Formulary and Benefit Standard to support functionality for receiving and incorporating a formulary and benefit file and sought to understand associated potential development burdens. In addition, we sought comment on a standard for individual-level, real-time formulary benefit checking to address the patient co-pay use case, whether we should offer health IT certification to the standard for this use case, and if this functionality should be a separate criterion from the 2015 Edition “drug formulary and preferred drug list checks” certification criterion.

Comments. Commenters were supportive of splitting the drug-formulary checks functionality from the preferred drug list functionality. A number of commenters stated that the NCPDP Formulary and Benefit Standard provides static, group-level formulary pricing information that does not indicate individual-level, real-time prescription pricing information. A few commenters stated that these static, group-level formularies are not useful for informing discussions with patients about what medications to prescribe because they do not provide information about the patient’s co-pay for a particular drug. Many commenters also suggested that it was not necessary for ONC to offer certification to this functionality because most health IT systems already support NCPDP’s Formulary and Benefit Standard v3.0 due to the Medicare Part D e-prescribing requirements under the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA). Some of these commenters even indicated that they test and certify through Surescripts’ certification program to the standard. In terms of a version of the NCPDP Formulary and Benefit Standard, stakeholders preferred ONC adopt v3.0 rather than any subsequent version to align with the Medicare Part D requirements. Commenters also contended that the industry has widely adopted v3.0 and that newer versions are less stable.

Many commenters stated that there is not an industry-wide accepted standard for real-time individual patient-level formulary checking, but recommended ONC adopt certification to a standard once the industry moves to an agreed-upon standard. A few commenters noted that an NCPDP task group is analyzing use cases to support a real-

time prescription benefit inquiry and is planning to make recommendations to the NCPDP membership on the creation of a new transaction and/or standard or modification of existing transactions or standards.

Response. We appreciate the detailed feedback commenters provided. We have determined that it is most appropriate to not adopt a specific standard for this criterion. We agree with commenters that the NCPDP Formulary and Benefit Standard v3.0 is widely implemented today in support of Medicare Part D requirements and that certification to this standard would add unnecessary burden to health IT developers and providers who are already adhering to the standard.

We believe that certification for individual-level, real-time prescription pricing information will provide the most value to inform provider prescribing decisions and discussions between providers and patients on the most appropriate medication options for the patient. However, at this time, there is no real-time patient-level standard with consensus stakeholder support that would be appropriate for certification. Based on the comments received, we strongly urge the industry to accelerate its work on identifying the need to create a new transaction and/or standard or modify existing transactions or standards for real-time prescription benefit inquiries. We intend to continue our participation in this area and will consider proposing certification functionalities for real-time prescription benefit inquiries in future rulemaking.

With consideration of comments supporting our proposed split of functionality between drug formularies and preferred drug lists, we have adopted a 2015 Edition “drug-formulary and preferred drug list checks” criterion that simply separates drug formulary and preferred drug list functionality, but does *not* require any standards or functionality beyond that included in the 2014 Edition “drug-formulary checks” criterion. As such, this certification criterion is eligible for gap certification.

- *Smoking Status*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(11) (Smoking status)

We proposed to adopt a 2015 Edition “smoking status” certification criterion that was revised in comparison to the 2014 Edition “smoking status” criterion (§ 170.314(a)(11)) and to include the 2015 Edition certification criterion in the 2015 Edition Base EHR definition. To be certified, we proposed that a

Health IT Module must record, change, and access smoking status to any of the September 2014 Release of the U.S. Edition of SNOMED CT® available codes for smoking status, at a minimum. We noted that a Health IT Module certified to certification criteria that reference the Common Clinical Data Set (*i.e.*, the “transitions of care” (“ToC”), “data export” (previously “data portability”), “view, download, and transmit to 3rd party” (VDT), “Consolidated CDA creation performance,” and “application access to the Common Clinical Data Set” certification criteria) would need to be able to code smoking status in only the 8 smoking status codes,²³ which may mean mapping other smoking status codes to the 8 codes. We explained that we expect Health IT developers to work with health care providers to include the appropriate implementation of smoking status codes in a user interface.

Comments. Some commenters stated that health IT should not be required to support the full set of smoking status codes within SNOMED CT® as it would cause unnecessary development burden and potential workflow issues for providers. Multiple commenters also expressed concern with the proper mapping of all of the available smoking status codes within SNOMED CT® to the specified 8 SNOMED CT® smoking codes in the Common Clinical Data Set and used for exchange of patient health information. We also received comments requesting the inclusion of other substances and routes of administration, including the use of chewing tobacco.

Response. We have adopted a “smoking status” certification criterion that does not reference a standard. As stated in the Proposed Rule (80 FR 16870), the capture of a patient’s smoking status has significant value in assisting providers with addressing the number one cause of preventable death and disease in the United States. We have also included this criterion in the Base EHR definition so that this functionality is available to all providers participating in the EHR Incentive Programs. In consideration of the concerns expressed by commenters regarding development burden and the proper mapping of all available smoking status codes within SNOMED CT® to the specified 8 SNOMED CT® for

²³These 8 codes are: current every day smoker, 449868002; current some day smoker, 428041000124106; former smoker, 8517006; never smoker, 266919005; smoker—current status unknown, 77176002; unknown if ever smoked, 266927001; heavy tobacco smoker, 428071000124103; and light tobacco smoker, 428061000124105.

exchange, we believe that the best path forward is the adoption of a “smoking status” criterion that would simply require a Health IT Module to demonstrate that it can enable a user to record, change, and access a patient’s smoking status. In regard to comments suggesting the inclusion of other substances and routes of administration, these comments are beyond the scope of our proposal and we have not adopted them. In sum, this certification criterion is “unchanged” as compared to the 2014 Edition “smoking status” criterion and is eligible for gap certification.

As discussed in more detail under section III.B.3 of this preamble, we have adopted the 8 specified SNOMED CT® smoking codes as part of the Common Clinical Data Set (and for purposes of exchange). This is a continuation of our approach first adopted with the 2014 Edition.

- *Family Health History*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(12) (Family health history)

We proposed to adopt a 2015 Edition “family health history” (FHH) certification criterion that was revised in comparison to the 2014 Edition FHH certification criterion adopted at § 170.314(a)(13). In particular, we proposed to require a Health IT Module to enable a user to record, change, and access a patient’s FHH electronically according to, at a minimum, the concepts or expressions for familial conditions included in the September 2014 Release of the U.S. Edition of SNOMED CT®, which would be a newer baseline version of SNOMED CT® than adopted for the 2014 Edition FHH criterion. The proposed rule’s section III.A.2.d (“Minimum Standards” Code Sets) discussed our adoption of SNOMED CT® as a minimum standards code set and the adoption of the September 2014 Release (U.S. Edition), or potentially a newer version if released before a this final rule, as the baseline for certification to the 2015 Edition.

Comments. Commenters generally supported this certification criterion. Some commenters suggested not adopting this criterion because it does not support a specific meaningful use objective of the proposed EHR Incentive Programs Stage 3. A couple of commenters suggested the recording of FHH is more valuable when it is actually exchanged, with one commenter recommending that we require FFH data be sent using the C–CDA FHH Section with Entries or, minimally, the C–CDA FHH Organizer

Entry. Another commenter suggested that the FHH be stored in a question/answer format (LOINC® for “questions” (observations) and SNOMED CT® for “answers” (observation values)), which would also better support electronic exchange of the information. Some commenters suggested that if this criterion was adopted as proposed that health IT developers should have the ability to attest that their Health IT previously certified to the 2014 Edition FHH criterion meets the newer baseline version of SNOMED CT® for the purposes of testing and certification to this criterion.

Response. We have adopted this certification criterion as proposed, except that we have adopted a newer baseline version SNOMED CT® (September 2015 Release of the U.S. Edition) for the purposes of certification. We refer readers to section III.A.2.c (“Minimum Standards” Code Sets) for a more detailed discussion of our adoption of the September 2015 Release of the U.S. Edition of SNOMED CT®. While not supporting a specific meaningful use objective of Stage 3 of the EHR Incentive Programs, this functionality is included in the CEHRT definition. Furthermore, we believe that the FHH functionality is a functionality that should be available to providers for more comprehensive patient care.

We note that our intent is not to limit the use of LOINC® for associated FHH “questions” or the specific SNOMED CT® code that is used to label FHH. Rather, the intent is to capture this information in SNOMED CT® instead of billing terminologies like ICD–10–CM. We also do not intend to prohibit the exchange of this information using the C–CDA 2.1. As we have noted in this and prior rulemakings, certification serves as a baseline. This baseline can be built upon through future regulation or simply through a decision by a health IT developer and/or its customer to include functionality that goes beyond the baseline. As present, we have set the certification baseline for FHH information at recording it in SNOMED CT®.

We agree with commenters that efficient testing and certification processes should be available to Health IT Modules previously certified to the 2014 Edition FHH criterion for certification to this criterion. Accordingly, we will consider such options, such as attestation, in developing the test procedure for this criterion and in issuing guidance to the ONC–AA and ONC–ACBs.

- *Patient-Specific Education Resources*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(13) (Patient-specific education resources)

In the Proposed Rule, we proposed to adopt a 2015 Edition “patient-specific education resources” certification criterion that was revised in comparison to the 2014 Edition “patient-specific education resources” certification criterion (§ 170.314(a)(15)). We proposed that certification would only focus on the use of Infobutton for this certification criterion instead of Infobutton *and* any means other than Infobutton as required by the 2014 Edition criterion. We stated that there is diminished value in continuing to frame the 2015 Edition certification criterion similarly to the 2014 Edition criterion.

We proposed to adopt the updated Infobutton standard (Release 2 and the associated updated IGs (SOA-based IG and URL-based IG)). We also noted that we would not include a requirement that health IT be capable of electronically identifying patient-specific education resources based on “laboratory values/results” because the Infobutton standard cannot fully support this level of data specificity.

We proposed that a Health IT Module be able to request patient-specific education resources based on a patient’s preferred language as this would assist providers in addressing and mitigating certain health disparities. More specifically, we proposed that a Health IT Module must be able to *request* that patient-specific education resources be identified (using Infobutton) in accordance with RFC 5646. We noted that Infobutton only supports a value set of ISO 639–1 for preferred language and, therefore, stated that testing and certification of preferred language for this certification criterion would not go beyond the value set of ISO 639–1. We further noted testing and certification would focus only on the ability of a Health IT Module to make a request using a preferred language and Infobutton because the language of patient education resources returned through Infobutton is dependent on what the source can support.

Comments. Multiple commenters supported the inclusion of the updated Infobutton standard and supporting IGs. A few commenters expressed concern about limiting certification to only Infobutton and suggested there are other viable options for requesting patient-specific education resources. A commenter requested clarification as to whether providers must only use certified health IT for requesting patient-specific education resources for

the purposes of participating in the EHR Incentive Programs.

Response. We thank commenters for their support and have adopted the proposed Infobutton standard and supporting IGs. We continue to believe that the Infobutton capability is important to be available to providers to have and use to identify patient-specific education resources. We clarify for commenters that our certification approach only focuses on capabilities that must be certified to meet this criterion. A health IT developer's product could include other means for requesting patient-specific education resources. Our approach actually reduces burden on health IT developers in that they do not have to have any other means tested and certified. For questions related to the EHR Incentive Programs, we refer readers to CMS and the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**.

Comments. We received a few comments supporting our approach for "laboratory values/results."

Response. We have not included "laboratory values/results" as patient data that must be used to identify patient-specific education resources.

Comments. Commenters expressed strong support for the capability to request patient-specific education materials based on a patient's preferred language with the use of Infobutton. Commenters stated that this would support reducing racial and ethnic health disparities by improving literacy and addressing language barriers. Commenters also expressed a need for materials to be tested and vetted to ensure the accuracy and appropriate literacy level of the materials. Some commenters contended that this requirement would increase burden for limited value because educational resources are often not available in other languages with the exception of three or four of the most commonly spoken languages.

Response. We thank commenters for their support and feedback. With consideration of the mixed feedback, we have determined to designate the use of preferred language as an optional provision within this criterion. As optional, health IT developers have flexibility to pursue certification if they deem it advantageous. With our new open data CHPL (see section IV.D.3 of this preamble), information on whether a Health IT Module was certified to this functionality would be readily available for consumers.

- *Implantable Device List*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(14) (Implantable device list)

In the Proposed Rule, we proposed to adopt a new 2015 Edition certification criterion focused on the ability of health IT to exchange, record, and allow a user to access a list of Unique Device Identifiers (UDIs)²⁴ associated with a patient's implantable devices. Health IT certified to the proposed criterion would be able to "parse" a UDI into its constituent components (or "identifiers") and make those accessible to the user. Separately, the health IT would be able to retrieve and provide a user with access to, if available, the optional "Device Description" attribute associated with a UDI in the FDA's Global Unique Device Identification Database (GUDID). Further, to facilitate the exchange of UDIs and increase their availability and reliability in certified health IT, we proposed to include the proposed 2015 Edition implantable device list certification criterion in the 2015 Edition Base EHR definition and to include a patient's UDIs as data within the CCDS definition for certification to the 2015 Edition. We also proposed to modify § 170.102 to include new definitions for "Device Identifier," "Implantable Device," "Global Unique Device Identification Database (GUDID)," "Production Identifier," and "Unique Device Identifier."

We explained that the purpose of the proposed implantable device list certification criterion was to enable the baseline functionality necessary to support the exchange and use of UDIs in certified health IT. The need to exchange and have access to this information wherever patients seek care is broadly relevant to all clinical users of health IT, regardless of setting or specialty, so that they may know what devices their patients are using (or have used) and thereby prevent device-related adverse events and deliver safe and effective care.²⁵ This need is most

²⁴ A UDI is a unique numeric or alphanumeric code that consists of two parts: (1) A device identifier (DI), a mandatory, fixed portion of a UDI that identifies the labeler and the specific version or model of a device, and (2) a production identifier (PI), a conditional, variable portion of a UDI that identifies one or more of the following when included on the label of a device: The lot or batch number within which a device was manufactured; the serial number of a specific device; the expiration date of a specific device; the date a specific device was manufactured; the distinct identification code required by 21 CFR 1271.290(c) for a human cell, tissue, or cellular and tissue-based product (HCT/P) regulated as a device. 21 CFR 801.3. See also <http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/UniqueDeviceIdentification/>.

²⁵ In addition, as UDIs become ubiquitous, UDI capabilities in health IT will support other

acute for implantable devices, which by their nature are difficult to detect and identify in the absence of reliable clinical documentation.

We acknowledged in the Proposed Rule that fully implementing UDIs in health IT will take time and require addressing a number of challenges. Nevertheless, we noted that substantial progress has been made. In particular, we summarized the FDA's regulatory activities and timeline for implementing the Unique Device Identification System and extensive work by public and private sector stakeholders to advance standards and specifications in support of UDI use cases. On the basis of these developments and our own ongoing consideration of these and other issues,²⁶ we recognized that while "the path to full implementation is complex, there are relatively straightforward steps" that we could take now to support the electronic exchange and use of UDIs, beginning with UDIs for implantable devices. Our proposed certification criterion focused narrowly on implementing these first steps.

In light of the foregoing and with the revisions discussed below in our analysis of the comments on this proposal, we have finalized a 2015 Edition "implantable device list" certification criterion. We have also finalized our proposals to include this certification criterion in the 2015 Base EHR definition and to include a patient's UDIs as data within the 2015 Common Clinical Data Set definition. Discussion of those proposals can be found elsewhere in this final rule.

Comments. Most commenters agreed with the central premise of our proposal, that enabling the exchange and use of UDIs in certified health IT is a key initial step towards realizing the substantial patient safety, public health, and other benefits of UDIs and the Unique Device Identification System. Many commenters strongly supported the proposed criterion, including its focus on implantable devices. Commenters stated that the ability to exchange and access identifying information about patients' implantable devices wherever patients seek care would enable clinicians to prevent device-related medical errors and improve the quality of care provided to patients. Commenters also stated that the need to access accurate information

important benefits, including better surveillance and evaluation of device performance and more effective preventative and corrective action in response to device recalls.

²⁶ As further context for our proposal, we described our previous consideration of these and other issues related to UDI adoption in a previous rulemaking. 79 FR 10894.

about patients' implantable devices is broadly applicable to primary care physicians, specialists, and other providers to support care coordination and ensure that providers have a complete medical history of their patients.

Many commenters supported the proposed criterion in full and recommended that we finalize it without any substantial revision. A significant number of commenters also urged to expand the scope of this criterion to include additional UDI-related capabilities. In contrast, a significant number of commenters stated that we should not finalize this criterion or should make all or part of it an optional certification criterion for the 2015 Edition. Commenters also offered a variety of suggested revisions and refinements with respect to the capabilities we proposed.

Response. We have adopted this certification criterion substantially as proposed, subject to certain revisions and clarifications discussed further below in response to the comments we received. We thank commenters for their detailed and thoughtful feedback on our proposal. We reiterate that this certification criterion represents a *first step* towards enabling the widespread exchange and use of UDIs and related capabilities in certified health IT, beginning with implantable devices. Because we recognize that fully implementing UDIs in health IT will take time and require addressing a number of challenges, the certification criterion focuses narrowly on baseline health IT capabilities that developers can feasibly implement today. These capabilities will provide the foundation for broader adoption and more advanced capabilities and use cases. We believe that this approach minimizes the potential burden while maximizing the impact of this criterion for all stakeholders.

Comments. A significant number of commenters who supported our proposed implantable device list certification criterion also recommended that we adopt additional UDI-related capabilities, either as part of this criterion (which we proposed to reference in the 2015 Edition Base EHR definition) or as a separate, optional certification criterion. Many commenters urged us to include requirements for Automatic Identification and Data Capture (AIDC) of UDIs. Commenters stated that such a requirement would facilitate the accurate and efficient capture of UDIs and align this criterion with the UDI final rule, which requires UDIs to support one or more forms of AIDC.

Some commenters also stated that if we did not require—or at least provide the option for—AIDC, users may be forced to manually enter UDIs. They stated that this could discourage them from capturing UDIs, which could lead to incomplete or inaccurate information about patients' implantable devices. Separate from AIDC, several commenters suggested that we adopt other UDI-related capabilities, such as the ability to generate lists of patients with a particular device; to generate notifications to patients in the event of a device recall; and to record and track information about non-implantable devices and medical and surgical supplies that are not regulated as a device.

Response. We have not adopted any AIDC requirements for UDIs as part of this final rule. While we unequivocally agree with commenters that UDIs should be captured using AIDC and should rarely if ever be manually entered; and while for this reason we strongly urge health IT developers and health care organizations to implement AIDC capabilities in all settings and systems in which UDIs may be captured; yet for the reasons elaborated below, we believe at this time that certification is neither an effective nor appropriate means to further these policies. As we explained in the Proposed Rule, this criterion is not intended to provide the capability to enter or "capture" UDIs for implantable device, such as during the course of a procedure. The reason for this is that the capture of UDIs currently occurs in a wide variety of "upstream" IT systems and settings that are beyond the scope of the current ONC Health IT Certification Program. Rather than ineffectually trying to address these "upstream" use cases, we have chosen to focus this certification criterion on the baseline functionality necessary to ensure that, once recorded in a patient's electronic health record, UDIs can be exchanged among "downstream" health IT systems (the overwhelming majority of which we do certify) and accessed by clinicians wherever patients seek care.

Some commenters understood our rationale for not requiring AIDC capabilities for all certified health IT and instead recommended we adopt a separate optional AIDC certification criterion that could be leveraged by certified health IT designed for operating rooms and other surgical settings in which devices are implanted or removed. While we appreciate the suggestion, such a certification criterion would be applicable to only a small subset of certified health IT, which in turn represents only a small subset of IT

systems used to capture UDIs for implantable devices. Moreover, prescribing specific AIDC requirements for certified health IT may also be unnecessary. Given the obvious convenience, accuracy, and other advantages of AIDC, we anticipate that users of certified health IT designed for surgical settings will expect developers to include AIDC capabilities as a necessary complement to the baseline implantable device list functionality required by this criterion. Allowing developers and their customers to design and implement the most appropriate AIDC solutions for their individual needs is consistent with FDA's policy of permitting flexibility in the use of these technologies and avoids imposing unnecessary requirements and costs on developers, providers, and our testing and certification bodies.

Contrary to the suggestions of some commenters, our decision not to adopt a particular AIDC requirement for implantable devices does not mean that users of certified health IT systems will be forced to manually record UDIs. Again, for the reasons we have stated, this criterion has no bearing on how UDIs are entered or captured in upstream IT systems during a procedure or operation. It is tailored solely to bringing and providing capabilities for UDIs to downstream EHR and health IT systems used in physicians' offices, hospitals, and other places where patients with implantable devices seek care.

Similarly, at this time we believe that it would be premature to include other capabilities suggested by commenters. Some of those capabilities—such as the ability to record information about non-implantable devices—are beyond the scope of the proposal. For other capabilities, greater adoption and use of UDIs in certified health IT is needed before the capabilities will be useful to most health IT users. For example, we recognize that being able to generate a list of patients with a particular device will be necessary to respond to device recalls and analyze device performance and other characteristics. But those benefits cannot materialize until UDIs are more broadly and more readily accessible through interoperable health IT and health information exchange. Likewise, achieving these benefits will first require implementing other baseline functionality included in this criterion, such as the ability to retrieve key device attributes from the GUDID. We think that focusing the requirements of this criterion—and thus the efforts of developers and users of certified health IT—on these essential baseline functionalities is the quickest path to

the adoption of UDIs in health IT and thus to creating demand and opportunities for the more advanced capabilities commenters envision.

Comments. Some commenters requested clarification as to what constitutes an “implantable device” for purposes of this certification criterion.

Response. We have adopted new definitions in § 172.102 for “Implantable Device” and several other terms by cross-referencing the definitions for those terms already provided at 21 CFR 801.3. We believe adopting these definitions in our final rule will prevent any interpretative ambiguity and ensure that each phrase’s specific meaning reflects the same meaning given to it in the Unique Device Identification System final rule. For further discussion of these new definitions, we refer readers to section III.B.4 of this preamble.

Comment. A commenter recommended that we use the term “identifier” instead of the term “data element” to refer to the following identifying information that composes the Production Identifier portion of a UDI:

- The lot or batch within which a device was manufactured;
- the serial number of a specific device;
- the expiration date of a specific device;
- the date a specific device was manufactured; and
- for an HCT/P regulated as a device, the distinct identification code required by 21 CFR 1271.290(c).

To avoid confusion and align our terminology with the UDI final rule, the commenter recommended we refer to these “data elements” as “identifiers” or “production identifiers.”

Response. We agree that our use of the term “data elements” was imprecise and could lead to unnecessary confusion. Accordingly, we have revised our terminology as follows to align more closely with the UDI final rule.

In our proposal, we used the term “data elements” to describe two distinct types of information associated with UDIs. First, we said that a Health IT Module certified to our proposed criterion would have to be able to parse certain “data elements from a UDI” and make these accessible to a user. 80 FR 16825. In that context, we were referring to what the UDI final rule describes as the “production identifiers that appear on the label of the device.” 21 CFR 830.310(b)(1). These are the identifiers listed above that compose and are required to be included in the Production Identifier when required to be included on the label of a device. 21

CFR 801.3. Because these identifiers are part of the UDI, health IT should be able to parse these identifiers from the UDI using the issuing agency’s specifications. There is no need to query an external database or source, such as the GUDID.

Second, we also used the same term, “data element,” to refer to certain information not included in the UDI itself but that is associated with the UDI and can be retrieved using the GUDID. Specifically, we proposed that health IT be able to retrieve and make accessible the optional “Device Description” attribute associated with the Device Identifier portion of the UDI (assuming the attribute has been populated in the GUDID).

To distinguish these separate concepts and for consistency with the UDI final rule, this preamble and the corresponding regulation at § 170.315(a)(14) use the terms “identifier” and “attribute” to refer to the two distinct types of information described above.

Comments. Many commenters, including some health IT developers, supported the requirement to parse a UDI and allow a user to access the identifiers that compose the UDI. Other commenters stated that requiring this functionality would be burdensome because UDIs may be issued by different issuing agencies and in different formats. Some commenters suggested we withdraw this proposed requirement until a canonical format is established to harmonize and streamline the process of parsing UDIs issued by different FDA-accredited issuing agencies and in different formats.

A number of commenters pointed out that we had omitted from this requirement the Distinct Identification Code required by 21 CFR 1271.290(c), which is one of the five identifiers that make up the Production Identifier and applies to human cells, tissues, or cellular and tissue-based products (HCT/P) regulated as a device, including certain kinds of implantable devices (e.g., skin grafts and bone matrixes). To ensure the exchange of UDIs for all implantable devices and to avoid misalignment with the UDI final rule, we were urged to include the Distinct Identification Code among the identifiers that technology must be able to parse and make accessible to a user under this criterion.

Response. The requirement to parse a UDI is reasonable despite the existence of multiple issuing agencies and formats. We disagree that this requirement is burdensome and note that it was supported by several health IT developers. This criterion would

require health IT to be able to parse UDIs issued by FDA-accredited issuing agencies. There are currently three FDA-accredited issuing agencies (GS1, HIBCC, and ICCBBA)²⁷ and each issuing agency has only one approved UDI format. All three formats are unique and can thus be readily distinguished by health IT and parsed according to the correct format. The formats themselves are described in detail in a single five-page reference document available on the FDA Web site.²⁸ Each format has been approved by the FDA, and no changes can be made unless the FDA similarly approves of the changes prior to implementation.

We disagree that the requirement to parse a UDI should be postponed until the emergence of a single canonical UDI format. It is unclear at this time when or if such a canonical format will be developed and whether it would support the functionality we are requiring. It is also unclear whether implementing a canonical format would reduce or increase the overall technical complexity and burden of implementing these capabilities for multiple UDI formats. Meanwhile, postponing these capabilities would frustrate the purpose of this certification criterion. Without the ability to parse a UDI, health IT would be unable to provide users with useful information identifying and safety-related information about a device, such as the device’s expiration date (which will be parsed from the Production Identifier) or a description of the device (which will be retrieved by parsing and looking up the Device Identifier in the GUDID).

The omission of “Distinct Identification Code required by 21 CFR 1271.290(c)” among the identifiers that health IT must be able to parse was an oversight, and we thank commenters for bringing it to our attention. We agree that to avoid misalignment with the UDI final rule, health IT should be required to parse this identifier and make it accessible in the same manner required for the other identifiers that compose the Production Identifier, as referenced in the Proposed Rule. We therefore

²⁷ <http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/UniqueDeviceIdentification/UDIIssuingAgencies/default.htm>.

²⁸ FDA, *UDI Formats by FDA-Accredited Issuing Agency* (May 7, 2014), <http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/UniqueDeviceIdentification/GlobalUDIDatabaseGUDID/UCM396595.doc>. The reference document is one of two technical documents made available by the FDA to assist labelers and other persons to comply with the GUDID Guidance. See <http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/UniqueDeviceIdentification/GlobalUDIDatabaseGUDID/ucm416106.htm>.

include it with those identifiers at § 170.315(a)(14)(ii). For similar alignment and consistency, we also include the Production Identifier itself in the list of identifiers at § 170.315(a)(14)(ii).

Comments. Several commenters objected to the proposed requirement that health IT be able to query a UDI against the GUDID and retrieve the associated “Device Description” attribute (when that attribute has been populated and is available). Some commenters stated that it was unreasonable to expect developers to implement GUDID capabilities before all of the planned GUDID functionality is available. At the time of the Proposed Rule, the GUDID was available as a downloadable file, which was and continues to be updated daily. A web interface and web services were also planned but had not yet been implemented. Although we explained that the daily downloadable version of GUDID could be used to satisfy the proposed criterion, some commenters insisted that we should not require any GUDID retrieval capabilities until web services are in place to enable GUDID attributes to be easily retrieved “on demand.” Several commenters requested that we clarify FDA’s timeline for implementing web services.

Response. FDA has partnered with the National Library of Medicine (NLM) to implement the GUDID. The GUDID is now available via a web interface called AccessGUDID.²⁹ In addition, FDA has confirmed that web services will be available via the AccessGUDID website by October 31, 2015. These web services are being implemented to support health IT developers to meet this implantable device list certification criterion. For any valid UDI, the web services will return the following GUDID attributes:

- “GMDN PT Name”;
- “Brand Name”;
- “Version or Model”;
- “Company Name”;
- “What MRI safety information does the labeling contain?”; and
- “Device required to be labeled as containing natural rubber latex or dry natural rubber (21 CFR 801.437).”

In addition to these GUDID attributes, and for the convenience of health IT developers, the web services will also return the “SNOMED CT® Identifier” and the “SNOMED CT® Description” mapped to the GMDN code set.³⁰

As commenters acknowledged, including many who objected to this requirement, the availability of dedicated web services for retrieving the attributes associated with a UDI from the GUDID will significantly streamline and reduce the costs of including this functionality in certified health IT. We take the commenters at their word and believe that the availability of these dedicated web services—which will be specifically designed for health IT developers and aligned with this certification criterion—will substantially mitigate the concerns raised by developers and other commenters regarding the potential burden or technical challenges of implementing GUDID functionality.

Comments. Several commenters were puzzled by our proposal to require retrieval only of the “Device Description” attribute. They pointed out that submission of this attribute to the GUDID is optional and is not standardized. The proposed requirement would therefore be unlikely to serve our goal of providing clinicians and patients with accurate and accessible information about implantable devices. Some commenters suggested that the “Global Medical Device Nomenclature (GMDN) PT Name” attribute would better suit our purpose and noted that this attribute, unlike “Device Description,” is a required attribute and a recognized international standard for medical device nomenclature.

Several commenters also urged us to require retrieval of additional GUDID attributes. Several commenters noted that certain safety-related attributes—specifically “What MRI safety information does the labeling contain?” and “Device required to be labeled as containing natural rubber latex or dry natural rubber (21 CFR 801.437)” —are required to be submitted to the GUDID, are already available, and would significantly further the patient safety aims outlined in our proposal. Along the same lines, other commenters identified additional GUDID attributes that would enable identification of the manufacturer or labeler (i.e., company name), brand, and specific version or model of a device.

Response. We believed that retrieving the “Device Description” attribute would be a good starting point for GUDID functionality under this criterion and would make the implantable device list more useful to

clinicians by displaying the familiar name of each device in the list next to the device’s UDI. Based on the comments, we accept that the “GMDN PT Name” attribute is more suitable for our purposes because it is a recognized international standard for medical devices and, unlike the “Device Description” attribute, is required and therefore much more likely to in fact be populated in the GUDID. We are therefore revising § 170.315(a)(14)(iii) to require the “GMDN PT Name” attribute instead of “Device Description.” Relatedly, we have also revised § 170.315(a)(14)(iii) to permit health IT developers who meet this requirement using the GUDID web services to do so in either of two ways. They may either retrieve the “GMDN PT Name” attribute or, alternatively, the “SNOMED CT® Description” associated with a UDI. Pursuant to a cooperative agreement between the relevant standards developing organizations, the SNOMED CT® code set is being mapped to GMDN PT and thus the description of a device will be identical under both terminologies. However, we expect that many developers will prefer to use the SNOMED CT® code set because they already do so and because they can retrieve the computable “SNOMED CT® Identifier,” which will also be available via the web services and will enable developers to more easily deploy CDS and other functionality for implantable devices. Thus allowing developers the flexibility to retrieve the “SNOMED CT® Description” in lieu of the identical mapped “GMDN PT Name” attribute will avoid requiring them to support multiple and duplicative code sets for medical devices and may also encourage them to incorporate more advanced capabilities for implantable devices, consistent with the goals of this criterion.

As discussed above, the GUDID web interface is now available via the NLM AccessGUDID website, which will soon be augmented with dedicated web services designed to support health IT certified to this criterion. With this increased readiness of the GUDID, health IT should be able to retrieve additional GUDID attributes with little additional effort. Therefore, we are also including the following attributes among those that must be retrieved and made accessible to users of health IT certified to this criterion:

- “Brand Name”;
- “Version or Model”;
- “Company Name”;
- “What MRI safety information does the labeling contain?”; and

²⁹ See <http://accessgudid.nlm.nih.gov/>. A list of APIs currently in development is available at <http://accessgudid.nlm.nih.gov/docs>.

³⁰ Under a Cooperative Agreement between the Global Medical Device Nomenclature Agency and

the International Health Terminology Standards Development Organization (IHTSDO), GMDN will be used as the basis for the medical device component of SNOMED CT®. See <http://www.ihtsdo.org/resource/resource/84>.

• “Device required to be labeled as containing natural rubber latex or dry natural rubber (21 CFR 801.437).”³¹

For the reasons that commenters identified, these particular attributes will further the core goals of this criterion by significantly enhancing the ability of clinicians to identify and access important safety-related information about their patients’ implantable devices.

Comment. A commenter noted that this criterion would require health IT to retrieve UDI attributes exclusively from the GUDID. The commenter recommended we consult with FDA to ensure that the GUDID will be able to support the potentially large volume of requests that could result from this requirement.

Response. As discussed above, FDA and NLM are implementing web services specifically to support health IT developers to meet this implantable device list certification criterion. FDA has signed an interagency agreement with NLM to provide public access to AccessGUDID, including web services. NLM has experience with large volume requests and will be able to meet any demands generated by developers and users as a result of this criterion.

Comments. Some commenters noted that UDI attributes are not exclusive to the GUDID and are commonly stored in providers’ enterprise resource planning systems (ERPS), materials management information systems (MMIS), and other “systems of record.” Thus, instead of requiring health IT to always retrieve the UDI attributes from the GUDID, it was suggested that we permit attributes to be retrieved from these and other appropriate sources, thereby giving providers and developers (who may have different database and technical infrastructures) the flexibility to select the most appropriate source of this information.

Response. As we stated in the Proposed Rule, the requirement to retrieve attributes from the GUDID can be accomplished using the GUDID’s web interface, web services, downloadable module, or any other method of retrieval permitted under FDA’s GUDID guidance. Thus GUDID attributes could be retrieved from a local system, provided the information in that system is up to date and is based upon the data downloaded from the GUDID. That said, we encourage the use of the

AccessGUDID web services, which as discussed above are being designed specifically to support health IT developers to meet this implantable device list certification criterion.

Comments. Commenters overwhelmingly supported our proposal to require that health IT enable a user to change a UDI in a patient’s implantable device list and, in appropriate circumstances, “delete” erroneous, duplicative, or outdated information about a patient’s implantable devices. However, several commenters took issue with our use of the term “delete,” which could imply that a user should be able to completely remove a UDI and associated information from a patient’s implantable device list and from the patient’s electronic health record altogether. Commenters stated that information about a patient’s implantable devices should be retained for historical accuracy and context. One commenter noted that allowing users to delete this information could violate record retention laws. Several commenters suggested that we clarify that a user should be able to “flag” or otherwise annotate a UDI as no longer active while still retaining the UDI and associated information.

The comments on this aspect of our proposal suggest some confusion surrounding the concept of an “implantable device list” contemplated in the Proposed Rule. Different commenters used the term “implantable device list” to refer to at least three distinct constructs: (1) The list of UDIs that would be recorded and exchanged as structured data; (2) the presumably more detailed list of information about a patient’s implantable devices that would subsist separately and locally in EHR systems; and (3) the list of UDIs and other information that would be formatted and presented to users of an EHR system. Some commenters recognized this ambiguity and asked us to be more precise. But several commenters oscillated between these different constructs and imputed them to different parts of our proposal, depending on the context. As a result, some of these commenters perceived in our proposal elements that had not been proposed, such as the ability to enable a user to manually record a UDI or to exchange certain kinds of information about implantable devices.

Response. We appreciate commenters’ feedback on this aspect of our proposal. We agree that a user should not be able to permanently “delete” UDIs recorded for a patient. Therefore, we are adopting the approach suggested by most commenters that would allow a user to

change the status of a UDI but would require that UDI itself not be deleted and still be accessible to a user. Specifically, health IT certified to this criterion must enable a user to change the status of a UDI recorded for a patient to indicate that the UDI is inactive. We also expect that developers will implement this functionality in a manner that allows users to indicate the reason that the UDI’s status was changed to inactive. Consistent with the policy that UDIs should not be deleted from the implantable device list or from a patient’s electronic health record, a UDI that has been designated inactive must still be accessible to the user so that users can access information about the device, even if it was explanted or recorded in error. We expect that both the status and other appropriate metadata will be recorded in a manner consistent with the C–CDA, where applicable, and will be exchanged with the UDI according to that standard.

As noted above, the comments on this aspect of our proposal suggest the need for greater precision regarding the concept of an “implantable device list.” In this final rule, we use the term “implantable device list” to refer to the visible list that is displayed to the user of health IT certified to this criterion and that must show, at a minimum: (1) A patient’s active UDIs, meaning all UDIs recorded for the patient that have not been designated inactive; (2) the corresponding description of each UDI in the list (which, as discussed above, may be either the GUDID attribute “GMDN PT Name” or the “SNOMED CT® Description” mapped to that attribute); and (3) if one or more inactive UDIs are not included in the list, a method of accessing those UDIs and their associated information from within the list. The implantable device list may but need not also include the identifiers and attributes associated with each UDI that the health IT must be able to retrieve and make accessible to a user. If the implantable device list does not contain these identifiers and attributes, then the health IT would need to enable a user to access them (for example, by presenting them when a user clicks on an item in the implantable device list). Similarly, the implantable device list may but need not include inactive UDIs, so long as these UDIs are accessible from within the list. For example, the implantable device list could display only active UDIs so long as it also contained a link or other obvious way for a user to access all other UDIs recorded for the patient.

The discussion above should make clear that we are using the term “implantable device list” to refer to the

³¹ Current GUDID attributes are derived from the UDI final rule and are specified in the FDA GUDID Data Elements Reference Table (May 1, 2015). <http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/UniqueDeviceIdentification/GlobalUIDatabaseGUDID/UCM396592.xls>.

UDIs and other information that must be presented and made accessible to a user in the manner described above. This information is distinct from the information not visible to a user that must be recorded and exchanged by health IT certified to this criterion. That information is not an “implantable device list” but rather a list of UDIs recorded for a patient and the associated metadata that must be recorded and exchanged in accordance with the requirements of the CCDS definition, the 2015 Base EHR definition, and the C-CDA standard. We discuss this data separately below in response to comments regarding the exchange of contextual information about a patient’s implantable devices. To avoid any ambiguity or misinterpretation, we have structured § 170.315(a)(14) to more precisely codify the concepts explained above.

Comments. In the Proposed Rule, we stated that this certification criterion would not require health IT to be able to exchange or use contextual information about a device (such as a procedure note). We requested comment on whether we had overlooked the need for or feasibility of requiring this functionality. Many of the comments we received emphasized the importance of recording and exchanging contextual information about implantable devices. Some commenters expressed concerns that exchanging UDIs without their proper context could lead to interoperability, patient safety, or other implementation challenges. Some commenters also urged us to specify precisely how contextual information associated with an implantable device should be recorded and exchanged among health IT certified to this criterion. These commenters did not identify any specific standards or implementation specifications. Several other commenters explained that current standards and implementation guides do not specify a consistent approach to documenting this information.

Response. We recognize the importance of contextual information about patients’ implantable devices. As described elsewhere in this rule, we have included the Unique Device Identifier in the CCDS definition with the intent of capturing and sharing UDIs associated with implantable devices in both internal EHR records as well as exchangeable documents. We clarify that, where the UDI is present and represents an Implantable Device, the UDI should be sent in accordance with the C-CDA, which specifies its inclusion in the Procedure Activity section of exchangeable documents. We

also expected that appropriate associated metadata, such as the date and site of the implant, will be included with the UDI where available as specified in the standard.³²

Beyond these basic parameters, we believe it is premature to prescribe the exact content and form of contextual information associated with UDIs. The comments confirm our observation in the Proposed Rule that additional standards and use cases will be needed to support this functionality.

Comments. Some commenters insisted that the proposed criterion lacked relevance to the majority of providers who do not practice in surgical or certain kinds of inpatient settings. For this reason, they suggested that we remove some or all of the criterion from the 2015 Base EHR definition or from the final rule.

Some commenters who otherwise supported our proposal felt that we should not include this certification criterion in the Base EHR or should make some of the proposed requirements optional in the 2015 Edition. Similarly, some commenters objected to the inclusion of a patient’s Unique Device Identifiers in the CCDS definition. Some of these commenters objected in principle to including any requirements that are not correlated with a meaningful use objective or measure, while others objected on the basis that this certification criterion would be unduly costly and burdensome for developers and could place significant and unnecessary burdens on providers.

Several commenters claimed that this criterion was not ripe and there were a lack of available standards for certain aspects of our proposal. Commenters also cited potential implementation challenges, especially the fact that UDIs and other information about implantable devices are often captured in IT systems that are not part of certified health IT. Because bridging these systems will be challenging without more mature standards or customized interfaces, the information in these systems may not be recorded in certified health IT.

Response. Again, we reiterate that this criterion is not aimed at surgical specialties, settings, or systems. It is aimed at delivering information to all clinicians so that they can know what

³² The UDI for implantable devices is encoded and exchanged in the Procedure Activity Procedure (V2) section of C-CDA, which contains a Product Instance template that can accommodate the UDI the implantable device, the implant date, and the target site. Although not required by the standard, this information should be sent if available, as with all of the CCDS content.

devices their patients have and use that information to deliver safer and more effective care. We take seriously the concerns raised by some commenters regarding the potential costs and burdens of the proposed criterion. We have addressed those concerns above in our responses to comments on the specific aspects of our proposal to which those concerns pertain. We note that for many of these aspects, health IT developers often contradicted one another as to the relative costs and difficulty of implementing the UDI-related capabilities we proposed. As just one illustration, several EHR developers stated that the requirement that health IT be able to parse a UDI was infeasible or would be unduly burdensome. In contradistinction, a different EHR developer objected to other aspects of the proposal but specifically endorsed the capability to parse UDIs; and yet another EHR developer supported all of the capabilities we proposed. In short, health IT developers’ comments regarding cost and burden often pointed in different directions, which suggests that many of their concerns are idiosyncratic to particular developers, not generalizable to all developers or the health IT industry. We submit that competition in the marketplace is the more appropriate vehicle for mediating such differences, not our regulations.³³

Because all providers should have access to information about their patients’ implantable devices, we are including a patient’s Unique Device Identifiers in the CCDS definition. To ensure that all certified health IT has the basic ability to exchange, record, and make this information available, we are including this certification criterion in the 2015 Base EHR definition. These definitions are not limited to the EHR Incentive Programs and must support other programs as well as the broader needs of health IT users throughout the health care system. We refer commenters to our discussion of these definitions elsewhere in this final rule. We decline to postpone this criterion until the Unique Device Identification System is fully implemented for all devices and across the entire medical device industry, or until additional standards are fully developed and harmonized for additional use cases. While this work is ongoing, UDIs are required to be available for all implantable devices by September 2015. Similarly, standards already exist for recording and exchanging UDIs for

³³ In this connection we refer readers to the discussion of the new transparency and disclosure requirements for health IT developers finalized elsewhere in this rule.

implantable devices as structured data in patients' electronic health records. These standards have been refined since the last time we proposed to adopt a certification criterion for implantable devices. And, as noted above, the GUDID is now available via the NLM's AccessGUDID website and will support web services for this certification criterion. While full implementation of the Unique Device Identification System will take several years, and while the development of standards is an ongoing process, UDIs for implantable devices can begin to be incorporated in health IT and will support and help accelerate these other efforts.

Commenters concerns regarding potential "upstream" implementation challenges are valid, but we have addressed those concerns by focusing this certification criterion only on the baseline functionality necessary to ensure that, once recorded in a patient's electronic health record, UDIs can be exchanged among certified health IT and accessed by users of certified health IT wherever the patient seeks care.

• *Social, Psychological, and Behavioral Data*

2015 Edition Health IT Certification Criterion
§ 170.315(a)(15) (Social, psychological, and behavioral data)

We proposed to adopt a new 2015 Edition "social, psychological, and behavioral data" certification criterion that would require a Health IT Module to be capable of enabling a user to record, change, and access a patient's social, psychological, and behavioral data based on SNOMED CT® and LOINC® codes, including sexual orientation and gender identity and the ability to record a patient's decision not to provide information. As the Proposed Rule explained, the proposed certification criterion is designed to advance the collection and use of such patient data, to transform health delivery, to reduce health disparities, and to achieve the overarching goals of the National Quality Strategy. We proposed that social, psychological, and behavioral data be coded in accordance with, at a minimum, version 2.50 of LOINC®, and we explained that LOINC® codes will be established in a newer version of LOINC® for the question-answer sets that do not currently have a LOINC® code in place, prior to the publication of the final rule. We proposed that sexual orientation be coded in accordance with, at a minimum, the September 2014 Release of the U.S. Edition of SNOMED CT® and HL7 Version 3 that gender identity be

coded in accordance with, at a minimum, the September 2014 Release of the U.S. Edition of SNOMED CT® and HL7 Version 3, as enumerated in tables in the Proposed Rule. We sought comment on inclusion of the appropriate social, psychological, and behavioral data measures, on standardized questions for collection of sexual orientation and gender identity data, on a minimum number of data measures for certification, on combining and separating the measures in certification criteria, and on inclusion of additional data and available standards.

Comments. Many commenters were in support of our proposal to include a new certification criterion for the capture of social, psychological, and behavioral data. Commenters recommended that we consider including security and privacy safeguards for this information and additional measures relevant to other settings (e.g., oral health measures, behavioral health diagnosis history, expansion of violence measures, and expansion of measure applicability to parents of pediatric patients). Commenters also recommended that we verify proposed LOINC® codes that were listed as pending in the Proposed Rule.

Some commenters were against certification for this data. These commenters cited lack of uses cases for the data, overburdening providers with data collection, and lack of maturity of data standards. A few commenters were not supportive of additional certification for criteria that are not proposed to specifically support Stage 3 of the EHR Incentive Programs.

Response. We thank commenters for their feedback. We have adopted a 2015 Edition "social, psychological, and behavioral data" certification criterion that is described in more detail below. As stated in Proposed Rule (80 FR 16826), we continue to believe that offering certification to enable a user to record, change, and access a patient's social, psychological, and behavioral data will assist a wide array of stakeholders in better understanding how this data may adversely affect health and ultimately lead to better outcomes for patients. We also believe that this data has use cases beyond the EHR Incentive Programs, including supporting the Precision Medicine Initiative³⁴ and delivery system reform. In addition, the Federal Health IT Strategic Plan aims to enhance routine medical care through the incorporation of more information into the health care process for care coordination and a

more complete view of health, including social supports and community resources.³⁵ We believe the collection of the information in certified Health IT Modules through this criterion can better inform links to social supports and community resources.

In regard to comments expressing privacy and security concerns, we first note that the functionality in this criterion is focused on capture and not privacy and security. Second, we have established a privacy and security certification framework for all Health IT Modules that are certified to the 2015 Edition (please see section IV.C.1 of this preamble). Third, we recommend that institutions develop and maintain policies for the collection and dissemination of this data that is consistent with applicable federal and state laws.

We appreciate comments on additional data to consider for inclusion in this criterion. We have, however, determined that the proposed list presents an appropriate first step for the standardized collection of social, behavioral, and psychological data. We note, based on feedback from commenters, we have included the capture of sexual orientation and gender identity (SO/GI) data in the 2015 Edition "demographics" certification criterion. We will continue to consider whether this list should be expanded through future rulemaking.

We have verified the LOINC® codes that were proposed and obtained the codes for those listed as pending in the Proposed Rule, and have provided the proper codes and answer list IDs for all eight domains we are adopting in this criterion (please refer to § 170.207(p)) for the full list of LOINC® codes).

Comments. There were mixed comments on whether we should adopt all proposed domains in one criterion or adopt a separate criterion for each proposed domain. We also received mixed feedback on whether certification would be to all domains, a select number, or at least one. Commenters in favor of one criterion with all domains stated that the proposed domains are interrelated and together provide a total health system perspective that can facilitate care management and coordination.

Response. We thank commenters and agree that these eight domains can together provide a more comprehensive picture of the patient that can facilitate care management and coordination. We also believe that there will not be a significant increase in development

³⁴ <http://www.nih.gov/precisionmedicine/>.

³⁵ http://www.healthit.gov/sites/default/files/9-5-federalhealthitstratplanfinal_0.pdf.

burden to meet all the proposed domains because there will be developmental synergies in meeting all domains using the required LOINC® code set. Accordingly, we have adopted one criterion that requires certification to all eight proposed domains (not including SO/GI).

- *Transitions of Care*

2015 Edition Health IT Certification Criterion
§ 170.315(b)(1) (Transitions of care)

We proposed to adopt a 2015 Edition certification criterion for “transitions of care” (“ToC”) that is a continuation and extension of the “ToC” certification criterion adopted as part of the 2014 Edition Release 2 final rule at § 170.314(b)(8). We proposed the following revisions and additions.

Updated C–CDA Standard

We proposed to adopt C–CDA Release 2.0 at § 170.205(a)(4) and noted that compliance with the C–CDA Release 2.0 cannot include the use of the “unstructured document” document-level template for certification to this criterion. To address “bilateral asynchronous cutover,” we proposed that the 2015 Edition “ToC” certification criterion reference both the C–CDA Release 1.1 and Release 2.0 standards and that a Health IT Module presented for certification to this criterion would need to demonstrate its conformance and capability to create and parse both versions (Release 1.1 and 2.0) of the C–CDA standards. While we recognized that this proposal was not ideal, we proposed this more conservative approach as a way to mitigate the potential that there would be interoperability challenges for transitions of care as different health care providers adopted Health IT Modules certified to the 2015 Edition criterion (including CCDA Release 2.0 capabilities) at different times. We requested comment on an alternative approach related to the creation of C–CDA-formatted documents. We noted that the adoption of C–CDA Release 2.0 would be applicable to all of the other certification criteria in which the C–CDA is referenced and that, unless C–CDA Release 2.0 is explicitly indicated as the sole standard in a certification criterion, we would reference both C–CDA versions in each of these criteria.

Comments. Commenters agreed that C–CDA Release 2.0 offered improvements compared to Release 1.1 for unifying summary care record requirements and better enabling

exchange of structured data between providers across disparate settings than previous versions. Commenters did not support requiring that Health IT Modules presented for certification would need to demonstrate its conformance and capability to send, receive, and parse both versions Release 1.1 and 2.0 of the C–CDA standards. Commenters stated that this proposed requirement would be too resource intensive, expressed concerns about the storage needed to store two versions of the C–CDA document, and would require systems to establish complex rules about handling content that is present in one version but not in the other. The majority of commenters instead recommended that we adopt a single version of the C–CDA standard that would ensure systems can correctly process both Releases 1.1 and 2.0, with many commenters specifically recommending Release 2.1 of C–CDA (HL7 Implementation Guide for CDA® Release 2: Consolidated CDA Templates for Clinical Notes (US Realm), Draft Standard for Trial Use Release 2.1, August 2015)³⁶ which the industry has developed, balloted, and published. Release 2.1 provides compatibility between Releases 2.0 and 1.1 by applying industry agreed-upon compatibility principles.³⁷ Release 2.1 also contains all the new document templates included in Release 2.0. Commenters also recommended an alternate pathway if we did not adopt Release 2.1 that would require:

- A 2015 Edition certified Health IT Module to be able to send documents conformant to C–CDA Release 2.0;
- A 2015 Edition certified Health IT Module to be able to parse both a C–CDA Release 1.1 and 2.0 document;
- A 2014 Edition certified Health IT Module to be able to parse a C–CDA Release 1.1 document, and display but not parse a document conformant to C–CDA Release 2.0.

A few commenters requested clarification on the different kinds of null values and guidance on what constitutes an “indication of none” since blank values will not meet the requirements of the corresponding measure for transitions of care for Stage 3 of the EHR Incentive Programs.

Response. We thank commenters for their suggestions to adopt Release 2.1 rather than require adherence to both versions Release 1.1 and Release 2.0. We agree that Release 2.1 largely provides

compatibility with Release 1.1 while maintaining many of the improvements and new templates in Release 2.0. While we thank commenters for the alternate suggested pathway regarding 2014 Edition certified health IT, this would require a revision to the existing 2014 Edition “ToC” certification criteria (§ 170.314(b)(1), § 170.314(b)(2), and § 170.314(b)(8)) that would require technology to be able to display a C–CDA document conformant with C–CDA Release 2.0. We did not propose this approach for public comment. Further, it would also be impractical and burdensome to implement as it would require forcing all health IT developers to bring back health IT certified to the 2014 Edition to update each product’s certification.

We believe that adopting Release 2.1 largely achieves the goal to ensure systems can send, receive, and parse both C–CDA documents formatted according to Release 1.1 or 2.0 and minimizes the burden raised by commenters. However, we are aware that a system developed strictly to Release 2.1 might not automatically support receiving Release 1.1 C–CDAs without additional development (e.g., additional generation and import effort since different vocabulary requirements apply in several places when comparing the two versions of the C–CDA). Therefore, we have adopted C–CDA Release 2.1 (both Volumes 1 and 2) as a requirement for the 2015 Edition “ToC” criterion at § 170.314(b)(1), and have also adopted the requirement that a Health IT Module must demonstrate its ability to receive, validate, parse, display, and identify errors to C–CDA Release 1.1 documents to ensure compatibility and interoperability. Note that for consistency, all 2015 Edition certification criteria that reference C–CDA creation (e.g., clinical information reconciliation and incorporation; view, download, and transmit to 3rd party) require conformance to Release 2.1. 2015 Edition certification criteria that include a “receipt” of C–CDA documents function (e.g., clinical information reconciliation and incorporation) will also require testing to correctly process C–CDA Release 1.1 documents for the reasons described above. This pathway ensures maximum interoperability while balancing the development burden.

Regarding the questions of clarification on the use of null values and what constitutes an “indication of none” for the purposes of meeting the EHR Incentive Program Stage 3 measure, this issue concerns the information needed to fulfill the “automated numerator recording” and “automated

³⁶ http://www.hl7.org/documentcenter/public/standards/dstu/CDAR2_IG_CCDA_CLINNOTES_R1_DSTUR2.1_2015AUG.zip.

³⁷ http://wiki.hl7.org/index.php?title=Consolidated_CDA_R2.1_DSTU_Update.

measure calculation” functions proposed at §§ 170.315(g)(1) and (g)(2), respectively. This issue concerns the draft test procedure for §§ 170.315(g)(1) and (g)(2) as related to transitions of care, and we intend to update the test procedures to include guidance on how C–CDA R2.1 null values (including “indication of none”) are appropriately expressed by applying guidance from the HL7 Examples Task Force.

We also highly recommend that health IT developers and providers follow the guidance provided in the HL7 Implementation Guide: S&I Framework Transitions of Care Companion Guide to Consolidated-CDA for Meaningful Use Stage 2, Release 1—US Realm³⁸ that includes industry “best practices” guidance for consistent implementation of the C–CDA Release 1.1 standard, including for mapping Common MU Data Set elements into the C–CDA standard. It is our understanding that the industry is developing an update to this “companion guide” to provide guidance on implementing the C–CDA Release 2.1 standard. We encourage health IT developers to use the update to develop their products to the 2015 Edition criteria that reference C–CDA Release 2.1 when it becomes available.

C–CDA Document Template Types

We proposed to require that all certified Health IT Modules be able to parse C–CDA Release 2.0 documents formatted according to the following document templates:

- Continuity of Care Document (CCD);
- Consultation Note;
- History and Physical;
- Progress Note;
- Care Plan;
- Transfer Summary;
- Referral Note; and
- Discharge Summary.

These document templates include clarifications and enhancements relative to Release 1.1, as well as new document templates (*i.e.*, Care Plan, Referral Note, and Transfer Summary). We also proposed to prohibit the use of the unstructured document template.

Comments. Commenters were supportive of the new and clarified document templates for more specific use cases where a CCD may contain more information than is necessary. However, a number of commenters were concerned about the burden to certify all document templates, and noted that not all document templates were applicable to all settings. As such,

commenters suggested we require only the CCD, Referral Note, and (for inpatient settings only) Discharge Summary and allow health IT developers to determine which additional templates would be appropriate to offer for the settings and providers intended to be served by the product. A few commenters suggested that we not prohibit the use of the unstructured document template as it could be a stepping stone to help providers begin using the C–CDA standard and can be used to provide reports with images or scanned forms.

Response. We thank commenters for the comments, and acknowledge that some of the proposed C–CDA document templates may not be applicable to all settings. Therefore, we have required that certified Health IT Modules be able to parse C–CDA Release 1.1 and C–CDA Release 2.1 CCD, Referral Note, and (for inpatient settings only) Discharge Summary document templates for certification to this criterion. We encourage health IT developers and providers to work together to determine if additional C–CDA templates would be better suited for certain settings. For example, the CCD may contain more information than is necessary for some care transitions and other C–CDA document templates may provide a more succinct and/or targeted summary of a patient’s clinical information for certain settings. We note that C–CDA Release 2.1 includes the same document templates included in Release 2.0.

Regarding the use of the unstructured document template, we believe that it limits interoperability as data is not exchanged in a structured and standardized (*e.g.*, to certain vocabulary standards) manner. For the purposes of certification to this certification criterion, Health IT Modules cannot include the use of the unstructured document template.

Valid/Invalid C–CDA System Performance and Display

We proposed that Health IT Modules would need to demonstrate the ability to detect valid and invalid C–CDA documents, including document, section, and entry level templates for data elements specified in 2014 and 2015 Editions. Specifically, that this would include the ability to detect invalid C–CDA documents, to identify valid C–CDA document templates, to detect invalid vocabularies and codes not specified in either the C–CDA 1.1 or 2.0 standards or required by this regulation, and to correctly interpret empty sections and nullFlavor combinations per the C–CDA 1.1 or 2.0 standards. Last, we proposed that

technology must be able to display in human readable format the data included in a transition of care/referral summary document. We explained that we expected that Health IT Modules to have some mechanism to track errors encountered when assessing received C–CDA documents and we proposed that health IT be able to track the errors encountered and allow for a user to be notified of errors or review the errors produced. We stated these functionalities are an important and necessary technical prerequisite in order to ensure that as data in the system is parsed from a C–CDA for incorporation as part of the “clinical information reconciliation and incorporation” certification criterion the user can be assured that the system has appropriately interpreted the C–CDA it received.

Comments. There was overall support from commenters on the proposal to require Health IT Modules detect valid and invalid C–CDA documents. However, similar to the comments above, commenters did not support the proposal to require validation of both C–CDA Releases 1.1 and 2.0 because of the burden and complexity of processing two versions of the same standard. A few commenters were concerned with the proposed requirement for the receiving system to manage an incorrectly formatted C–CDA document, and requested that this burden should be on the sending system. A few commenters also requested clarification on whether the receiver is required to notify the sender of the C–CDA document of errors. Commenters also requested clarification on how validation and display would be tested as it would be unrealistic for health IT to accept every single code in a system. Last, some commenters were concerned about the “alert fatigue” a user could encounter if notified of every C–CDA error detected by the certified system.

Response. We thank commenters for their support of the proposal. As noted above, systems would be required to support validation and display for both Releases 1.1 and Release 2.1 to ensure compatibility and interoperability. We reiterate as noted above that systems will be tested to perform the validation and display functions for only the CCD, Referral Note, and (inpatient settings only) Discharge Summary templates.

Regarding the burden to the receiving system to process incorrectly formatted C–CDA errors, we note that all Health IT Modules certified to a 2015 Edition criterion that includes the functionality to create a C–CDA are also required to be certified to the “C–CDA Creation

³⁸ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=374.

Performance” certification criterion at § 170.315(g)(6). This certification criterion requires that systems are able to create C-CDA documents in accordance with a gold standard that we provide, thereby reducing the potential for errors in a C-CDA sent by an outgoing system (please refer to the “C-CDA creation performance” criterion in the preamble for further details).

However, we recognize that there may still be errors in created C-CDA documents from a sending system and therefore continue to believe in the value of the receiving system to process and validate C-CDA documents, including notifying the user of errors. We clarify that the error notification should be available to the receiving user. Regarding error notification, systems would be required to demonstrate its ability to notify the user of errors or allow the user to review the errors for the purposes of certification. Per commenters’ concerns about “alert fatigue,” we note there is no explicit requirement that the user be interrupted regarding the availability of errors. Rather, that the user needed to be able to access such errors. We anticipate that validation and display would be tested through visual inspection that test data in the form of C-CDA documents with and without errors can be correctly parsed and errors correctly identified.

We have finalized the requirement as part of this criterion that Health IT Modules must be able to detect valid and invalid transition of care/referral summaries received and formatted in accordance with C-CDA Release 1.1 and Release 2.1 for the CCD, Referral Note, and (inpatient settings only) Discharge Summary document templates, including detection of invalid vocabulary standards and codes, correct interpretation of empty sections and null combinations, recording of errors/notification of errors to the user, and the ability to display a human readable formatted C-CDA (for both Releases 1.1 and 2.1). We discuss additional clarifications regarding the display of C-CDA sections below.

Clinical Relevance of Summary Care Record Information

We have received feedback from providers expressing difficulty finding or locating the pertinent and relevant clinical information on a patient from a transition of care/referral summary received as a C-CDA document. Commenters have indicated that data included in a transition of care/referral summary document may be rendered and displayed as a long, multi-page document, which makes it challenging

for a provider to quickly find the clinical information they seek to make a care decision.

We note that CMS has finalized in the EHR Incentive Programs Stage 3 and Modifications final rule guidance that permits a provider and organization (*i.e.*, the “sender”) to define the “clinical relevance” of information sent in a summary care record depending on the circumstances, as best fits the organizational needs, and as relevant for the patient population.³⁹ CMS notes, however, that the sending provider has to have the ability to send all clinical notes or laboratory results in a summary care document if that level of detail is requested by the receiving provider.

While the guidance in the EHR Incentive Programs Stage 3 and Modifications final rule does address “clinical relevance” from the sending side and could result in a reduction in the quantity of data potentially viewed by a recipient as “unnecessary” or not useful, we recognize that certain patients, such as those with complex and/or chronic conditions may have a transition of care/referral summary sent to receiving providers with large quantities of data included. In that respect, we included as part of the 2014 Edition Final Rule a specific “section views” capability in the “transitions of care” certification criterion (adopted at 45 CFR 170.314(b)(1)(iii)(C)), which we described as having been added to the certification criterion in order to make sure that health IT would be able to extract and allow for individual display each additional section or sections (and the accompanying document header information (*i.e.*, metadata)) that were included in a transition of care/referral summary received and formatted in accordance with the Consolidated CDA (77 FR 54219).

We indicated that this functionality would be useful in situations when a user wanted to be able to review other sections of the transition of care/referral summary that were not incorporated (as required by this certification criterion at 45 CFR 170.314(b)(1)), such as a patient’s procedures and smoking status, and that the technology would need to provide the user with a mechanism to select and just view those sections *without* having to navigate through what could be a lengthy document.

The section views capability remains as part of the 2015 Edition version of this criterion. Additionally, to address comments that raised concerns and

requested that we act to address a C-CDA’s “length” and users’ ability to more easily navigate to particular data within the C-CDA, we have included more precise requirements in this portion of the certification criterion. Specifically, the 2015 Edition version includes that a user must be able to: (1) Directly display only the data within a particular section, (2) set a preference for the display order of specific sections, and (3) set the initial quantity of sections to be displayed. We also clarify that the sole use of the CDA.xsl style sheet provided by HL7 to illustrate how to generate an HTML document from a CDA document will not be acceptable to meet these requirements. We believe these clarifications will help address stakeholder concerns regarding the difficulty finding or locating the pertinent and relevant clinical information on a patient from a ToC/referral summary received as a C-CDA document. We intend to ensure that the test procedure for this criterion thoroughly tests these aspects consistent with the certification criterion’s requirements. We also strongly urge the health IT industry to dedicate additional focus toward improving the rendering of data when it is received. Putting such data to use in ways that enable providers to quickly view and locate the information they deem necessary can help improve patient care and prevent important information from being inadvertently missed. We further note that standards experts are aware of the stakeholder concerns discussed above, and that the HL7 Structured Documents Work Group is working on contributing positive momentum to this issue.⁴⁰ The HL7 Structured Documents Work Group’s work involves developing guidance on the “relevant” data that should be sent by the sender. We encourage health IT developers to participate in this process and implement the industry principles arising out of this project.

Edge Protocols

We proposed to “carry-over” a requirement from the 2014 Edition Release 2 “transitions of care” criterion at § 170.314(b)(8) that would require a certified Health IT Module be able to send and receive transition of care/referral summaries through a method that conforms to the ONC Implementation Guide for Direct Edge Protocols, Version 1.1 at § 170.202(d).

Comments. Commenters were generally in support of requiring one of

³⁹ Please see the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**.

⁴⁰ <http://www.hl7.org/special/Committees/projman/searchableProjectIndex.cfm?action=edit&ProjectNumber=1183>.

the four Edge Protocols designated in the ONC IG for Direct Edge Protocols. One commenter was concerned that the edge protocols offer no additional value for those that have already implemented Direct.

Response. As stated in the 2014 Edition Release 2 final rule, we believe that adoption of the ONC IG for Direct Edge Protocols can improve the market availability of electronic health information exchange services for transitions of care by separating content from transport related to transitions of care. We believe that certification to the Direct Edge Protocols IG can also enable greater certainty and assurance to health IT developers that products certified to this IG have implemented the IG's edge protocols in a consistent manner (79 FR 54437). As such, we have finalized the requirement that a certified Health IT Module be able to send and receive transition of care/referral summaries through a method that conforms to the ONC Implementation Guide for Direct Edge Protocols, Version 1.1.

We note that we inadvertently left out a provision of the proposed regulation text related to Edge Protocol requirements. As noted above and in the Proposed Rule, we intended to "carry over" the Edge Protocol requirements included in § 170.314(b)(8) for this criterion. Therefore, we have added to the provision in § 170.315(b)(1)(i)(A) about sending transition of care/referral summaries through a method that conforms with the Edge Protocol and a requirement that it must also lead to the summaries being processed by a service that has implemented Direct. This addition parallels the Direct Edge Protocol "receiving" requirements we proposed and have finalized. It also clarifies a consistent set of technical capabilities for sending the Edge Protocol and technologies interacting with services that have implemented Direct, which again are the exact same requirements included in § 170.314(b)(8) that we intended to duplicate in this 2015 Edition criterion.

XDM Package Processing

We proposed to include a specific capability in this certification criterion that would require a Health IT Module presented for certification that is also being certified to the SMTP-based edge to demonstrate its ability to accept and process an XDM package it receives, which would include extracting relevant metadata and document(s). We explained that this additional requirement only applies to a Health IT Module presented for certification with an SMTP-based edge implementation and not an XDR edge implementation.

Because we expect XDM packaging to be created in accordance with the specifications included in IHE IT Infrastructure Technical Framework Volume 2b, Transactions Part B—Sections 3.29—2.43, Revision 7.0, August 10, 2010 (ITI TF–2b),⁴¹ we proposed to adopt this as the standard at § 170.205(p)(1) for assessing whether the XDM package was successfully processed.

Comments. Commenters were supportive of the proposal to demonstrate XDM package processing. Many commenters recommended that processing on receipt depends on metadata in the XDM package that should be aligned with the general metadata in Appendix B of the IHE Data Access Framework Document Metadata Based Access Implementation Guide that was published for public comment on June 1, 2015.⁴² One commenter recommended that the certification criterion point specifically to section 3.32.4.1.4 of ITI TF–2b.

Response. We thank commenters for their support of the proposal and have finalized this requirement that Health IT Modules certified to an SMTP-based edge protocol be able to receive and make available the contents of an XDM package formatted in accordance with ITI TF–2b, which we have adopted at § 170.205(p)(1). We note that the ONC Implementation Guide for Direct Edge Protocols adopted at § 170.202(d) and required for this criterion as discussed above references the guidance in the ONC XDR and XDM for Direct Messaging Specification for proper use of metadata that is aligned with the IHE Data Access Framework Document Metadata Based Access IG. Therefore, we do not believe it is necessary to reference the IHE IG as these metadata requirements are already referenced and required for this criterion. Similarly, our requirement to adhere to the ITI TF–2b would include any specific section required in the standard, and thus we do not need to reference a specific section.

SMTP-based transport systems use standard Multi-Purpose Internet Mail Extension (MIME) to identify email attachments and to enable receiving computer systems to process attachments seamlessly. For example, a MIME type of "text/html" identifies text styled in HTML format. C–CDA documents are commonly identified using "text/xml" and "application/xml"

In addition, XDM packages are commonly identified with "application/zip" and "application/octet-stream" MIME types. However, these MIME types have not been standardized by the community for transporting C–CDA and XDM files. Systems could potentially use other valid MIME types to send the documents. While these standard MIME types provide sufficient information for receiving systems to render content, they do not provide a way to distinguish the C–CDA and XDM documents from all the other documents that could be sent using the same MIME types. Until an appropriate set of MIME types are developed that can uniquely identify C–CDA and XDM, there is widespread acknowledgement that the receiving systems should accept all common MIME types, and use the information within the actual documents, to process C–CDA and XDM accordingly. Hence, in order to facilitate interoperability, we expect Health IT Modules to be able to support all commonly used MIME types when receiving C–CDA and XDM packages. We intend to update the test procedure to include guidance on specific MIME types that we expect Health IT Modules to support, at a minimum.

Common Clinical Data Set

We proposed to require Health IT Modules to enable a user to create a transition of care/referral summary that includes, at a minimum, the Common Clinical Data Set for the 2015 Edition that includes references to new and updated vocabulary standards code sets.

Comments. Commenters were supportive of this proposal overall. A few commenters were concerned about specific data elements in the proposed 2015 Edition Common Clinical Data Set definition.

Response. We thank commenters for their support and have adopted the requirement that Health IT Modules enable a user to create a transition of care/referral summary that includes the 2015 Edition Common Clinical Data Set at a minimum. We address the specific data elements in the 2015 Edition Common Clinical Data Set definition in under section III.B.3 of this final rule.

Encounter Diagnoses

We proposed to continue the requirement from the 2014 Edition "ToC" certification criterion that a Health IT Module must enable a user to create a transition of care/referral summary that also includes encounter diagnoses using either SNOMED CT® (September 2014 Release of the U.S.

⁴¹ http://www.ihe.net/Technical_Framework/upload/IHE_ITI_TF_Rev7-0_Vol2b_FT_2010-08-10.pdf.

⁴² http://ihe.net/uploadedFiles/Documents/PCC/IHE_PCC_IG_DAF_National%20Extension_Rev1.0_PC_2015-06-01.pdf.

Edition as a baseline for the 2015 Edition) or ICD-10-CM codes.

Comments. One commenter recommended solely the use of ICD-10-CM for encounter diagnoses and certification. Another commenter requested clarification on whether the encounter diagnoses are meant to be “billing diagnoses” and whether the health IT would need to include all billing diagnoses for encounters or just the primary encounter, and how primary would be determined.

Response. As stated in our 2014 Edition final rule (77 FR 54178 and 54220), we believe that SNOMED CT® is the more appropriate vocabulary for clinical purposes and provides greater clinical accuracy. However, it may be beneficial for inpatient Health IT Modules to be certified to and support the use of ICD-10-CM to represent diagnoses, and finalized the 2014 Edition “transitions of care—create and transmit” criterion at § 170.314(b)(1) to allow for either ICD-10-CM or SNOMED CT®. We continue this policy and have finalized the requirement for this 2015 Edition “ToC” certification criterion that a Health IT Module enable a user to create a transition of care/referral summary that includes encounter diagnoses using either SNOMED CT® (September 2015 Release of the U.S. Edition as a baseline for the 2015 Edition⁴³) or ICD-10-CM codes.

We note that our certification requirement does not dictate what encounter diagnoses providers would include in a transitions of care document, only that certified Health IT Modules can enable a provider to include encounter diagnoses using SNOMED CT® or ICD-10-CM.

“Create” and Patient Matching Data Quality

As a part of the “Create” portion of the “ToC” criterion in the 2015 Edition, we proposed to require a Health IT Module to be able to create a transition of care/referral summary that included a limited set of standardized data in order to improve the quality of the data that could potential be used for patient matching by a receiving system. The proposed standardized data included: First name, last name, maiden name, middle name (including middle initial), suffix, date of birth, place of birth, current address, historical address, phone number, and sex, with constrained specifications for some of the proposed standardized data.

⁴³ We refer readers to section III.A.2.c (“Minimum Standards” Code Sets) for further discussion of our adoption of SNOMED CT® as a minimum standards code set and our decision to adopt this version.

Comments. There was general support for requiring the proposed data elements to be exchanged in order to improve patient matching. Some commenters were concerned with conflicts between the proposed approach and existing systems’ algorithms and patient matching protocols. A few commenters recommended that we wait until there is a consensus-based patient matching standard before adopting requirements for certification. A few commenters also noted that the proposal does not address data quality.

Response. We note that systems can continue to use their existing algorithms and patient matching protocols and that our proposed approach was not intended to conflict with any existing practice. We reiterate that the proposed data elements stem from the HITPC’s and HITSC’s recommendations and findings from the 2013 ONC initiative on patient matching as described in the Proposed Rule (80 FR 16833–16834). We continue to believe these recommendations represent a first step forward that is consensus-based. We agree that the proposal did not address data quality in the sense that it would improve the “source’s” practices and procedures to collect highly accurate and precise data. However, we believe that including standards for the exchange of certain data elements could improve interoperability and provides an overall level of consistency around how the data are represented. We encourage ongoing stakeholder efforts focused on improving patient matching through better data quality processes and will continue to monitor and participate in these activities.

Comments. Commenters recommended that we ensure alignment between the proposed data elements and corresponding standards with those in the C-CDA standard.

Response. We have performed an analysis of the proposed data elements and standards with those in C-CDA Release 2.1 and have made some revisions as described below. In some cases, the ONC method may be more constrained than what is in C-CDA Release 2.1 and we believe there will be no conflict. Rather the additional constraint is intended to promote patient matching and interoperability. We also address standards for specific elements below.

Comments. Commenters suggested that we should not reference the CAQH Phase II Core 258: Eligibility and Benefits 270/271 Normalizing Patient Last Name Rule version 2.1.0 for suffix as it puts JR, SR, I, II, III, IV, and V in the same field as RN, MD, PHD, and ESQ. Commenters felt that these suffixes

should be kept separate as it could be confusing if a patient has more than one suffix (e.g., JR and MD). Individuals may also not use both suffixes in all circumstances, so it may be difficult to match records using both.

Response. We agree with the comments and have not adopted the constraint for suffix to adhere to the CAQH standard. We recommend that health IT developers and providers follow the guidance for suffix in C-CDA Release 2.1 for exchange, which allows for an additional qualifier for any suffix provided with the last name field.

Comments. One commenter noted that the CAQH Phase II Core 258: Eligibility and Benefits 270/271 Normalizing Patient Last Name Rule version 2.1.0 is intended for normalization of information upon receipt rather than at the point of sending. Pre-normalization can lead to data loss and detract from patient matching. Therefore the commenter recommended ONC not require the CAQH Phase II Core 258: Eligibility and Benefits 270/271 Normalizing Patient Last Name Rule version 2.1.0 for normalizing last name in the sending of transition of care/referral summary documents and rather point to it as guidance for receiving systems.

Response. We agree with the commenter, and have not adopted the constraint for last name normalization in accordance with the CAQH standard. We recommend that health IT developers and providers follow the guidance for last name in C-CDA Release 2.1 for exchange of transition of care/referral summary documents.

Comments. A few commenters suggested that the concept of “maiden name” is not used in all cultures and is also gender-specific. Some commenters noted that some nationalities, cultures, or ethnic groups do not use this term and, in other cases, an individual may adopt more than one family name during marriage. There are other cases where the last name or family name has been legally changed for other situations. Most commenters recommended we instead use another term that broadly captures these situations and allows for aliases that a patient may use in these circumstances.

Response. We thank commenters for the feedback and have revised “maiden name” to “previous name” to accommodate for any other aliases including the situations described above by the commenters. We note that the C-CDA Release 2.1 contains a field for “birth name” that can accommodate this information.

Comments. A number of commenters were concerned about including place

of birth in the list of data elements as there is a lack of standards on representing the place of birth. Some systems include city, county, state, and country, while other systems may only include some of these elements. Therefore, these commenters stated that it would be difficult to standardize on place of birth as proposed and it would offer no additional value for improving patient matching.

Response. We agree with commenters that the lack of standards for representing place of birth would not improve patient matching at this time and, therefore, have not finalized this data element requirement.

Comments. A few commenters noted concerns about including the hour, minute, and second of the date of birth, and suggested that the time zone is needed to correctly match records.

Response. We note that as proposed in the 2015 Edition, the hour, minute, and second of the date of birth were optional or conditional fields based on whether they were included. Since we have not finalized the proposed requirement to include place of birth, we have revised the requirement as follows. We clarify that for the purposes of certification that the hour, minute, and second for a date of birth are optional for certification. If a product is presented for certification to this optional provision, the technology must demonstrate that the correct time zone offset is included.

Comments. One commenter supported the proposal to include phone number in the list of patient match elements. Another commenter recommended we specify a standard for representing phone number.

Response. We clarify that we proposed that the phone number must be represented in the ITU format specified in the International Telecommunication Union (ITU)'s ITU-T E.123⁴⁴ and ITU-T E.164 standards.⁴⁵ These are the best available industry standards for representing phone number and we have adopted them for representing phone number in this certification criterion.

Comments. As stated above, commenters suggested we perform an analysis of the standards required by the C-CDA standard and resolve any inconsistencies with our proposal.

Response. In our analysis of the proposed data elements with the C-CDA Release 2.1 standard as suggested by commenters, we found that the C-CDA Release 2.1 standard is not able to

distinguish between historical and current address as proposed. Because of the discrepancy between our proposal and what the C-CDA Release 2.1 can accommodate, we have revised the requirement to "address" (not specified as historical or current). We note that C-CDA Release 2.1 can accommodate more than one address. It is our understanding that the underlying parent C-CDA standard (*i.e.*, CDA) included the ability to send a useable period with the address to specify different addresses for different times of the year or to refer to historical addresses. However, this useable period was removed from C-CDA as it did not have enough use. We intend to work with stakeholders going forward in assessing whether the useable period should be included in future versions of the C-CDA standard or whether there are other methods for distinguishing historical or current address for consideration in future rulemaking.

Comments. A number of commenters recommended ONC adopt the US Postal Service (USPS) standard for representing address. Commenters noted that the standard is widely supported by health care organizations today, and that it is recommended by the American Health Information Management Association.⁴⁶ Another commenter recommended we consider adoption of the GS1 Global Location Number standard.

Response. We thank commenters for the input. At this point in time and since this patient matching requirement focuses on the use and representation of address in the C-CDA standard, we believe that use of the C-CDA standard's built-in requirements is the best, most incremental path forward. We note the C-CDA Release 2.1 standard references the HL7 postal format. Additionally, testing and validation to the HL7 postal format in the C-CDA standard is already available as part of 2014 Edition "transitions of care" testing to C-CDA Release 1.1. We see a need for continued industry work to determine the appropriateness of existing standards and tools for normalizing postal address for health care use cases such as matching of electronic patient health records, and intend to work with stakeholders in this space. Thus, we look forward to continuing to work with stakeholders to analyze the USPS address standard⁴⁷ and other industry standards with respect to any future updates to the

C-CDA to bring about industry-wide consistency. We anticipate the C-CDA validation tool for 2015 Edition "transitions of care" testing will carry over the 2014 Edition testing and suggest that health IT developers and implementers adhere to the guidance in C-CDA Release 2.1 on the use of the HL7 postal format.

Comments. A few commenters suggested we consider the addition of data elements to the proposed list, such as a social security number or the last four digits of a social security number.

Response. We thank commenters for the suggestions but do not agree and have not accepted these suggestions. We have evaluated the list proposed in the Proposed Rule⁴⁸ and continue to believe that it represents a good first step toward improving patient matching in line with the HITSC, HITPC, and ONC 2013 patient matching initiative recommendations. We intend to continue our work in developing patient matching best practices and standards, including evaluating the feasibility, efficacy, and, in some cases, the legality of specifying other data elements for patient matching. We may propose to expand this list or adopt a more sophisticated patient match policy in future rulemaking as standards mature.

Comments. A few commenters noted that a 100% patient match is impossible to achieve in every instance.

Response. We note that our proposal only concerns the ability of a certified Health IT Module to create a transition of care/referral summary document that contains the proposed data elements in accordance with the specified standards/constraints. The proposal would not require a system to demonstrate how it performs patient matching with these data for certification. As noted above, we believe the algorithms and patient matching protocols are best left to health IT systems and providers to determine at this point in time. While the HITPC recommended⁴⁹ that we should develop, promote, and disseminate best practices, there is not an industry-wide standard for patient matching protocols that is ready to require as a condition of certification. We intend to continue working with the industry to develop these best practices, and will evaluate at a later point if certification would

⁴⁸ First name, last name, maiden name, middle name (including middle initial), suffix, date of birth, place of birth, current address, historical address, phone number, and sex, with constrained specifications for some of the proposed standardized data.

⁴⁹ http://www.healthit.gov/FACAS/sites/default/files/standards-certification/8_17_2011Transmittal_HITSC_Patient_Matching.pdf.

⁴⁴ <http://www.itu.int/rec/T-REC-E.123-200102-1/e>.

⁴⁵ <http://www.itu.int/rec/T-REC-E.164-201011-1/en>.

⁴⁶ <http://perspectives.ahima.org/wp-content/uploads/2014/12/PatientMatchingAppendixA.pdf>.

⁴⁷ <http://pe.usps.gov/cpim/ftp/pubs/Pub28/pub28.pdf>.

confer additional benefit for improving patient matching. Until such protocols are established and mature, our requirement addresses the HITPC's first recommendation, which is to provide standardized formats for demographic data fields.

In consideration of public comments, we have finalized the requirement that Health IT Modules must be able of creating a transition of care/referral summary in accordance with just C-CDA Release 2.1 as part of this certification criterion that includes the following data formatted to the associated standards/constraints where applicable:

- First name;
- Last name;
- Previous name;
- Middle name (including middle initial);
- Suffix;
- Date of birth—The year, month, and day of birth are required fields. Hour, minute, and second are optional fields; however, if hour, minute, and second are provided then the time zone offset must be included. If date of birth is unknown, the field should be marked as null;

- Address;
- Phone number—Represent phone number (home, business, cell) in the ITU format specified in ITU-T E.123⁵⁰ and ITU-T E.164⁵¹ which we are adopting at § 170.207(q)(1). If multiple phone numbers are present, all should be included; and

- Sex in accordance with the standard we are adopting at § 170.207(n)(1).

We note that we corrected the date of birth requirements to specify the year, month, and day of birth as the required fields. We previously inadvertently listed “date” instead of “day.”

Direct Best Practices

Given feedback from stakeholders regarding health IT developers limiting the transmission or receipt of different file types via Direct, we reminded all stakeholders in the Proposed Rule of the following best practices for the sharing of information and enabling the broadest participation in information exchange with Direct: <http://wiki.directproject.org/Best+Practices+for+Content+and+Workflow>. We did not include a proposal or request for comment related to this guidance.

Comments. One commenter recommended we review the challenges and solutions recommended by the DirectTrust in Chapter 2, Chapter 7 and

Chapter 8 of the white paper, “A Report on Direct Trust Interoperability Testing and Recommendations to Improve Direct Exchange.”⁵²

Response. As we did not include a proposal or request for comment, we thank the commenter for the recommendation and will review the recommended material.

Certification Criterion for C-CDA and Common Clinical Data Set Certification

We noted that no proposed 2015 Edition certification criterion includes just the C-CDA Release 2.0 and/or the Common Clinical Data Set, particularly with the 2015 Edition not including a proposed “clinical summary” certification criterion as discussed in the 2015 Edition Proposed Rule (80 FR 16850). We requested comment on whether we should adopt a separate 2015 Edition certification criterion for the voluntary testing and certification of health IT to the capability to create a summary record formatted to the C-CDA Release 2.0 with or without the ability to meet the requirements of the Common Clinical Data Set definition.

Comments. We received comments in favor of adopting a new 2015 Edition criterion that includes just the ability of a Health IT Module to enable a user to create a transition of care/summary care record in accordance with C-CDA Release 2.0 and with the ability to meet the requirements of the Common Clinical Data Set.

Response. We have adopted two new 2015 Edition certification criteria (with no relation to the EHR Incentive Programs) that include just the ability of a Health IT Module to enable a user to create (one criterion) and receive (one criterion) a transition of care/referral summary in accordance with C-CDA Release 2.1 (create) and both C-CDA Releases 1.1 and 2.1 (receive) and with the ability to meet the requirements of the Common Clinical Data Set at § 170.315(b)(4) and § 170.315(b)(5), respectively. For the certification criterion adopted to “create” a transition of care/referral summary at § 170.315(b)(4), we have also, for consistency, include the same patient matching data as referenced by the “ToC” certification criterion. We refer readers to the “Common Clinical Data Set summary record—create” and “Common Clinical Data Set summary record—receive” certification criteria in this section of the preamble for a more detailed description of the rationale and

specific requirements of the new certification criteria.

C-CDA Data Provenance Request for Comment

We requested comment on the maturity and appropriateness of the HL7 IG for CDA Release 2: Data Provenance, Release 1 (US Realm) (DSTU)⁵³ for the tagging of health information with provenance metadata in connection with the C-CDA, as well as the usefulness of this IG in connection with certification criteria, such as “ToC” and “VDT” certification criteria.

Comments. Although commenters were supportive of the usefulness of data provenance, the majority of commenters did not think the HL7 Data Provenance standard was mature for adoption at this point in time.

Response. We thank commenters for their input and will continue to monitor the industry uptake and maturity of the HL7 Data Provenance standard in consideration of future rulemaking.

• Clinical Information Reconciliation and Incorporation

2015 Edition Health IT Certification Criterion

§ 170.315(b)(2) (Clinical information reconciliation and incorporation)

We proposed to adopt a 2015 Edition “clinical information reconciliation and incorporation” certification criterion that is a revised (but largely similar to the 2014 Edition Release 2) version of the “clinical information reconciliation and incorporation” criterion adopted at § 170.314(b)(9). First, we proposed that Health IT Modules must be able to incorporate and reconcile information upon receipt of C-CDA's formatted to both Release 1.1 and Release 2.0 for similar reasons (e.g., for compatibility with Release 1.1) as proposed for the “ToC” criterion described above.

Comments. Commenters were generally supportive of the proposal to adopt a criterion for “clinical information reconciliation and incorporation” for interoperability.

Response. We thank commenters for their support and have adopted a 2015 Edition criterion for “clinical information reconciliation and incorporation” with the following changes and clarifications as discussed below.

Comments. Similar to the comments we received for the “ToC” criterion, commenters were not in favor of the proposed requirement to support both

⁵⁰ <http://www.itu.int/rec/T-REC-E.123-200102-1/e>.

⁵¹ <http://www.itu.int/rec/T-REC-E.164-201011-1/en>.

⁵² <http://static1.1.sqspcdn.com/static/f/1340919/26054983/1426686689687/Report+on+DirectTrust+Interoperability+Testing.pdf?token=A0DNBiAqjj2YzuhUTn4vnBMrVI%3D>.

⁵³ http://wiki.hl7.org/index.php?title=HL7_Data_Provenance_Project_Space and http://gforge.hl7.org/gforge/project/cbccc/frs/?action=FrsReleaseBrowse&frs_package_id=240.

versions of C-CDA Release 1.1 and 2.0 because of the burden to receive and process two versions of the same standard.

Response. As discussed in the preamble of the “ToC” criterion above, we have adopted a requirement that systems must be able to receive and correctly process documents formatted to both C-CDA Releases 1.1 and 2.1. While C-CDA Release 2.1 largely addresses compatibility issues with Release 1.1 and reduces the burden for systems receiving both versions, we are aware that a system developed strictly to Release 2.1 might not automatically support receiving Release 1.1 C-CDAs without additional development. Therefore, this criterion will focus on functionalities to receive, incorporate, and reconcile information from a C-CDA formatted to Releases 1.1 and 2.1.

C-CDA Document Templates and Reconciliation

We proposed that a certified Health IT Module be able to receive, reconcile, and incorporate information from the C-CDA Release 2.0 CCD, Discharge Summary, and Referral Note document templates at a minimum. Note that we incorrectly referenced the “Referral Summary” document template. There is no “Referral Summary” document template and we intended the “Referral Note” document template.

Comments. We did not receive specific comments regarding the C-CDA document templates proposed for this criterion.

Response. Although we did not receive comments regarding the C-CDA document templates for this certification criterion, we maintain the consistency decision discussed in the “ToC” criterion to require incorporation and reconciliation of information from the C-CDA Releases 1.1 and 2.1 CCD, Referral Note, and (for inpatient settings only) Discharge Summary document templates. We believe this will provide consistency between the minimum certification requirements for systems creating and sending C-CDA documents for transitions of care and this criterion for the receipt, incorporation, and reconciliation of C-CDA information.

Data for Reconciliation

We proposed that a Health IT Module must be able to reconcile and incorporate, at a minimum: problems, medications, and medication allergies from multiple C-CDAs, with testing for this specific system performance to verify the ability to incorporate valid C-CDAs with variations of data elements to be reconciled (*e.g.*,

documents with no medications, documents having variations of medication timing data). We also proposed that problems be incorporated in accordance with the September 2014 Release of the U.S. Edition of SNOMED CT® and that medications and medication allergies be incorporated in accordance with the February 2, 2015 monthly version of RxNorm as a baseline and in accordance with our “minimum standards code sets” policy.

Comments. A few commenters suggested we include additional data for incorporation and reconciliation, such as food allergies and intolerances, labs, and immunizations.

Response. As stated in the 2014 Edition final rule, we continue to believe that problems, medications, and medication allergies are the minimum data that should be reconciled and incorporated from a C-CDA (77 FR 54223). We note that this minimum requirement for certification would not prohibit health IT developers from including functionality to reconcile and incorporate a broader set of information from a C-CDA, which is something we encourage developers to pursue.

Comments. One commenter suggested that a provider may use different functionality for the reconciliation of medications distinct from the medication allergies and/or problems, and recommended that that certification criterion should allow for distinct or combined reconciliation approaches.

Response. We clarify that the certification criterion would allow for distinct (individual) or combined reconciliation functions for medications, medication allergies, and problems to be implemented so long as all the functions can be demonstrated.

Comments. Commenters were supportive of testing for this criterion to verify a Health IT Module’s ability to incorporate valid C-CDAs with variations in the data elements to be reconciled. Commenters believed this would reasonably test the real-world variation that may be found in C-CDA documents.

Response. We thank commenters for their support and intend for testing to verify a certified Health IT Module’s ability to incorporate valid C-CDAs with variations in the data elements.

C-CDA Creation for Validation of Accurate Reconciliation

We proposed to require that a C-CDA be created based on the reconciliation and incorporation process in order to validate the incorporation results. We expected that the generated C-CDA would be verified using test tools for conformance and can be checked

against the information that was provided to incorporate.

Comments. We received mixed feedback on this proposal. Some commenters were concerned that this requirement would not provide added benefit for Health IT Module users or patients. Other commenters noted that this requirement would be adding in a “create” function to this criterion, which they thought contradicted the modularity we previously introduced in the 2014 Edition Release 2 final rule when we made modifications to the 2014 Edition “transitions of care” and “clinical information reconciliation” criteria.

Response. We believe that the creation of a C-CDA based on the reconciliation and incorporation process will improve and automate the testing and verification process. While there are other methods of verifying reconciliation, such as queries and list displays, an automated verification through the use of test tools provides the most assurance that the information was reconciled and incorporated correctly. We do not believe this requirement will add unnecessary burden as it is our understanding that systems that receive, incorporate, and reconcile C-CDA information can also create a C-CDA. Furthermore, the purpose of this additional portion of the certification criterion is to increase provider assurance that the incorporation performed by a system post-reconciliation is accurate and complete.

With respect to the comments that mentioned an apparent contradiction with the requirement for “creating” a C-CDA as part of this certification criterion, we disagree, and remind commenters that the changes we made in the 2014 Edition Release 2 final rule were to better position the “incorporation” functionality in the right certification criterion (79 FR 54438–54439). Therefore, we have adopted the requirement that Health IT Modules be able to create a C-CDA Release 2.1 based on the reconciliation and incorporation process that will be verified during testing and certification. Note that this requirement applies to the ability to create a C-CDA formatted to the C-CDA Release 2.1 CCD document template only.

Comments. One commenter asked for clarification on whether the proposed regulation text “technology must be able to demonstrate that the transition of care/referral summary received is or can be properly matched to the correct patient” means that Health IT Modules must be able to auto-match to the correct patient. Commenters noted that

many systems allow for manual match, and that an auto-match may not be the most appropriate method to match patient records.

Response. We clarify that it was not our intention to prescribe how patient match is performed for this criterion. We have revised the regulation text to reflect that the technology must demonstrate that the received transition of care/referral summary document can be properly matched to the correct patient. We leave the flexibility to the health IT developer and provider to determine the best method for patient match.

Comments. A few commenters were concerned with the proposed requirement that for each list type (*i.e.*, medications, medication allergies, or problems) the Health IT Module must simultaneously display the data from at least two sources. Commenters noted that there would not be two sources if the patient is new to the receiving system.

Response. We reiterate that for the purposes of testing and certification, Health IT Modules must demonstrate the ability to simultaneously display the data from at least two sources. While the commenters' point is fair it is not within scope for the purposes of testing and certification, which focuses on when there is data to reconcile. In other words, the purpose of this certification criterion is, in part, to assess technology's capability to reconcile data from two sources. Testing and certification is focused on ensuring that that functionality exists and performs correctly. Additionally, the criterion does not address the totality of capabilities that may be present in the technology. In cases where a new patient presents this specific functionality may not be applicable or used at all.

• *Electronic Prescribing*

2015 Edition Health IT Certification Criterion
§ 170.315(b)(3) (Electronic prescribing)

We proposed to adopt a 2015 Edition certification criterion for e-prescribing that is revised in comparison to the 2014 Edition "e-prescribing" criterion (§ 170.314(b)(3)).

First, we proposed to require a Health IT Module certified to this criterion be able to receive and respond to additional National Council for Prescription Drug Programs (NCPDP) SCRIPT Standard Implementation Guide Version 10.6 (v10.6) transactions or segments in addition to the New Prescription transaction, namely Change Prescription, Refill Prescription, Cancel Prescription, Fill Status, and Medication History. We proposed to require that a Health IT Module be able to send and receive end-to-end prescriber-to-receiver/sender-to-prescriber transactions (bidirectional transactions). The proposed transactions and reasons for inclusion for testing and certification are outlined in Table 5 below.

TABLE 5—PROPOSED ADDITIONAL⁵⁴ NCPDP SCRIPT v10.6 TRANSACTIONS FOR TESTING AND CERTIFICATION TO e-PRESCRIBING CERTIFICATION CRITERION

NCPDP SCRIPT v10.6 transaction or segment	Use case(s)	Problem addressed/value in testing for certification
Change Prescription (RXCHG, CHGRES).	<ul style="list-style-type: none"> Allows a pharmacist to request a change of a new prescription or a "fillable" prescription. Allows a prescriber to respond to pharmacy requests to change a prescription. 	Facilitates more efficient, standardized electronic communication between prescribers and pharmacists for changing prescriptions.
Cancel Prescription (CANRX, CANRES).	<ul style="list-style-type: none"> Notifies the pharmacist that a previously sent prescription should be canceled and not filled. Sends the prescriber the results of a prescription cancellation request. 	Facilitates more efficient, standardized electronic communication between prescribers and pharmacists for cancelling prescriptions.
Refill Prescription (REFREQ, REFRES).	<ul style="list-style-type: none"> Allows the pharmacist to request approval for additional refills of a prescription beyond those originally prescribed. Allows the prescriber to grant the pharmacist permission to provide a patient with additional refills or decline to do so. 	Facilitates more efficient, standardized electronic communication between prescribers and pharmacists for refilling prescriptions.
Fill Status (RXFILL)	Allows the pharmacist to notify the prescriber about the status of a prescription in three cases: (1) To notify the prescriber of a dispensed prescription, (2) to notify the prescriber of a partially dispensed prescription, and (3) to notify a prescriber of a prescription not dispensed.	Allows the prescriber to know whether a patient has picked up a prescription, and if so, whether in full or in part. This information can inform assessments of medication adherence.
Medication History (RXHREQ, RXHRES).	<ul style="list-style-type: none"> Allows a requesting entity to generate a patient-specific medication history request. The responding entity can respond, as information is available, with a patient's medication history, including source, fill number, follow-up contact, date range. 	Allows a requesting entity to receive the medication history of a patient. A prescriber may use this information to perform medication utilization review, medication reconciliation, or other medication management to promote patient safety.

We solicited comment on other NCPDP SCRIPT v10.6 transactions that should be considered for testing and certification, and for what use cases/value, and the factors to consider for

⁵⁴ We proposed to keep the "New Prescription" transaction for testing and certification.

end-to-end prescriber-to-receiver testing.

Second, we proposed to require that a Health IT Module certified to this criterion enable a user to enter, receive, and transmit codified Sig instructions in a structured format in accordance with NCPDP Structured and Codified Sig Format Implementation Guide v1.2

which is embedded within NCPDP SCRIPT v10.6 for certification to the e-prescribing criterion in the 2015 Edition.⁵⁵ We proposed this because we

⁵⁵ NCPDP's Structured and Codified Sig Format Implementation Guide v1.2 is within the NCPDP SCRIPT v10.6 standard. <https://www.ncdp.org/NCPDP/media/pdf/StandardsMatrix.pdf>.

believe standardizing and codifying the majority of routinely prescribed directions for use can promote patient safety, as well as reduce disruptions to prescriber workflow by reducing the number of necessary pharmacy call-backs. We proposed that this requirement apply to the New Prescription, Change Prescription, Refill Prescription, Cancel Prescription, Fill Status, and Medication History prescription transactions or segments as we understood that the NCPDP Structured and Codified Sig Format can be used for all NCPDP SCRIPT v10.6 prescription transactions that include directions for medication use. We also proposed to require that a Health IT Module include all structured Sig segment components enumerated in NCPDP SCRIPT v10.6 (i.e., Repeating Sig, Code System, Sig Free Text String, Dose, Dose Calculation, Vehicle, Route of Administration, Site of Administration, Sig Timing, Duration, Maximum Dose Restriction, Indication and Stop composites).

We solicited comment on whether we should require testing and certification to a subset of the structured and codified Sig format component composites that represent the most common Sig instructions rather than the full NCPDP Structured and Codified Sig Format Implementation Guide v1.2. NCPDP published recommendations for implementation of the structured and Codified Sig format for a subset of component composites that represent the most common Sig segments in the NCPDP SCRIPT Implementation Recommendations Version 1.29.⁵⁶

Third, we proposed that a Health IT Module certified to this criterion be capable of limiting a user's ability to electronically prescribe all medications only in the metric standard, and be capable of always inserting leading zeroes before the decimal point for amounts less than one when a user electronically prescribes medications. We also proposed that the Health IT Module not allow trailing zeroes after a decimal point. We stated our intent for proposing these requirements was to support more precise prescription doses in order to reduce dosing errors and improve patient safety.

Last, we proposed to adopt and include the February 2, 2015 monthly version of RxNorm in this criterion as the baseline version minimum standards code set for coding medications.

Comments. Many commenters suggested reducing the scope of this proposed criterion to either divide out the requirements into separate certification criteria or to only require the minimum functionalities needed to achieve the corresponding proposed e-prescribing objective for Stage 3 of the EHR Incentive Programs (80 FR 16747).

Response. In finalizing the e-prescribing criterion, we considered whether the proposed functionality would help achieve interoperability between health IT systems and would align with the goals and objectives described in the "Federal Health IT Strategic Plan."⁵⁷ The reasons for the finalized e-prescribing criterion and its included functionality are described below in response to comments.

Comments. A number of commenters supported the additional NCPDP SCRIPT v10.6 transactions we proposed to require for testing and certification to this criterion, and believed the additional requirement would facilitate bidirectional prescriber-pharmacist communications and comprehensive medication management. A number of commenters were concerned about the variable adoption and use of the additional NDPCP SCRIPT v10.6 transactions that were proposed. A few commenters were concerned with the interruptive nature of real-time messaging alerts and suggested that they be batch-processed to a team rather than a single provider for viewing. One commenter suggested that we verify the correct official names of the proposed NCPDP SCRIPT v10.6 transactions. Regarding the medication history transactions, a few commenters noted that many EHRs support additional means of retrieving medication history that can offer advantages to the NCPDP medication history transactions (e.g., HL7, proprietary third party integration, direct connection with third party payers).

Response. We thank commenters for their support of the proposal. Providers that prescribe or dispense Medicare Part D drugs using electronic transmission of prescriptions are required to comply with the standards that CMS has adopted under the Medicare Prescription Drug, Improvement, and Modernization Act (MMA) of 2003. CMS adopted NCPDP SCRIPT v10.6 for Part D e-prescribing in the 2013 Physician Fee Schedule final rule (77 FR 69330–69331) effective November 1, 2013, including the following transactions which we also proposed to

require for 2015 Edition testing and certification:

- New prescription transaction;
- Prescription change request transaction;
- Prescription change response transaction;
- Refill prescription request transaction;
- Refill prescription response transaction;
- Cancel prescription request transaction;
- Cancel prescription response transaction; and
- Fill status notification.

We believe that providers that are e-prescribing under Part D should have already adopted NCPDP SCRIPT v10.6 for these transactions as required effective November 1, 2013. Further, by requiring these transactions as part of certification, we are supporting the use of additional NDPCP SCRIPT v10.6 transactions in a standardized way.

Comments. Some commenters also noted support for the medication history transaction request and response transactions, and other commenters noted that both pharmacy and EHR systems have widely adopted the medication history transactions.

Response. As stated in the Proposed Rule, we believe that all the above proposed transactions can facilitate prescriber and pharmacist communications that advance better care for patients and improve patient safety. Therefore, in support of these goals and to harmonize with CMS' Part D requirements, we have finalized our proposal to require that certified health IT systems enable a user to prescribe, send, and respond to the following NCPDP SCRIPT v10.6 transactions for certification to the 2015 Edition e-prescribing criterion:

- New prescription transaction (NEWRX);
- Prescription change request transaction (RXCHG);
- Prescription change response transaction (CHGRES);
- Refill prescription request transaction (REFREQ);
- Refill prescription response transaction (REFRES);
- Cancel prescription request transaction (CANRX);
- Cancel prescription response transaction (CANRES);
- Fill status notification (RXFILL);
- Medication history request transaction (RXHREQ); and
- Medication history response transaction (RXHRES).

We have confirmed the official name of these transactions with NCPDP. We note that the requirements we have

⁵⁶ <http://www.ncdp.org/NCPDP/media/pdf/SCRIPTImplementationRecommendationsV1-29.pdf>.

⁵⁷ http://www.healthit.gov/sites/default/files/9-5-federalhealthitstratplanfinal_0.pdf.

finalized outline the capabilities that certified health IT must be able to support, and do not require providers to use these functionalities when e-prescribing. The requirements of providers and prescribers for e-prescribing are specified by other programs, such as the implementation of the Medicare Modernization Act and the EHR Incentive Programs. We also note that there are other standards and services available for requesting and receiving medication history information. Our adoption of the NCPDP SCRIPT v10.6 medication history request and response transactions is consistent with a standard that commenters agreed is widely used and—as above stated—has been adopted by the health care industry. Our adoption of these requirements does not preclude developers from incorporating and using technology standards or services not required by our regulation in their health IT products.

Regarding how message notifications are presented to health IT users, we believe this is a design feature that should be left to providers and health IT developers to determine, including whether batch notification is preferable to real-time messaging alerts.

Comments. Some commenters suggested that it was premature to require end-to-end bidirectional testing because they believed pharmacy systems may not support the transactions. Commenters also asked for clarification on how certified health IT would be tested to demonstrate end-to-end bidirectional messaging. A number of commenters suggested ONC consider deeming Surescripts certification to count towards meeting the requirements of ONC's Health IT Certification Program. A few commenters also were concerned about the differences between Surescripts and testing and certification requirements under the ONC Health IT Certification Program.

Response. ONC published a notice in the **Federal Register** (80 FR 32477) that restated our commitment to work with the health IT industry towards a more streamlined health IT testing and certification system. This notice addressed a flexibility included in the ONC Health IT Certification Program that allows the National Coordinator to approve test procedures, test tools, and test data developed by non-governmental entities for testing efficiencies in the ONC Health IT Certification Program. A person or entity may submit a test procedure or test tool (which includes test data) to the National Coordinator for Health IT to be considered for approval and use by

NVLAP accredited testing laboratories. We strongly encourage persons or entities to submit such test procedures, test tools, and test data to us if they believe such procedures, tools, and data could be used to meet certification criteria and testing approval requirements, including those for e-prescribing functionalities. Given our policy that permits any person or entity to submit test procedures, test tools, and test data for approval and use under the ONC Health IT Certification Program, we encourage stakeholders to review the **Federal Register** notice and submit test procedures, test tools, and test data for approval by the National Coordinator in accordance with the instructions outlined in the notice.⁵⁸

We look forward to testing tools that allow pharmacy communications to either be simulated or sent by a pharmacy system that has agreed to participate in the ONC Health IT Certification Program as a pilot test system that is able to emulate real-life e-prescribing scenarios. We note that we intend to analyze any differences between our requirements for testing and certification to this certification criterion and other industry certification programs for e-prescribing to determine opportunities for alignment. However, we note that industry certification programs may address a different use case and potentially test more functionality than required by this certification criterion.

Comments. A number of commenters were concerned with the limitation of the NCPDP Structured and Codified Sig Format Implementation Guide v1.2 that limits the structured and codified Sig text element to 140 characters, and noted that it could hinder the ability to transmit complex dosing instructions (e.g. tapers). Commenters noted that a later version of the NCPDP SCRIPT Standard Implementation Guide expands this text element length to 1,000 characters, but recommended that we not adopt this version until CMS has adopted a later version as a requirement for part of Part D e-prescribing. Commenters were also concerned that the NCPDP Structured and Codified Sig Format v1.2 is not widely implemented and needs more testing. A number of commenters noted NCPDP is in the process of updating the NCPDP SCRIPT Implementation Recommendations to reflect updates in guidance on implementation of the most common Sig instructions. Some commenters also

noted that there are newer versions to the NCPDP SCRIPT Implementation Recommendations than v1.29. These commenters were concerned that guidance on implementing the most common Sig instructions is still evolving and suggested that we wait until there is more implementation experience with using the NCPDP Structured and Codified Sig Format v1.2 and later versions before considering inclusion in a certification criterion. A number of commenters supported the Sig segment for the indication for the medication to be documented in SNOMED CT[®] to assist the pharmacist with medication counseling and care coordination, whether or not ONC were to adopt the full NCPDP Structured and Codified Sig Format v1.2.

Response. We thank commenters for their detailed comments and recommendations. We acknowledge the limitations of the 140 character structured and codified Sig, and the concerns with low implementation of the NCPDP SCRIPT Structured and Codified Sig Format v1.2 and later versions. In light of our decision to focus on interoperability and considerations about the maturity of standards, we have not finalized the proposal to require a Health IT Module certified to this criterion to enable a user to enter, receive, and transmit codified Sig instructions in a structured format. While we continue to believe that e-prescribed medication instructions should be transmitted in a structured format for improved patient safety and for clearer communication of the prescribing information as intended by the prescriber, we do not believe a standard is ready for adoption at this point in time. We will continue to monitor CMS's requirements for Part D e-prescribing, and may reconsider this stance for future rulemaking based on newer versions of the NCPDP SCRIPT Standard Implementation Guide that may provide implementation improvements.

While we are not adopting the NCPDP SCRIPT Structured and Codified Sig Format v1.2 in its entirety, we agree with commenters on the potential benefits of a field that captures the reason for the prescription. This information has value for care coordination between prescribers, pharmacists, and care team members. NCPDP SCRIPT v10.6 supports the exchange of the reason for the prescription in a few ways, including (1) medication-associated diagnosis using diagnosis elements in the DRU (Drug Segment) and (2) medication indication using the indication elements in the SIG (Structured Sig Segment).

⁵⁸ <https://www.federalregister.gov/articles/2015/06/09/2015-13510/acceptance-and-approval-of-non-governmental-developed-test-procedures-test-tools-and-test-data-for>.

For the first method, NCPDP SCRIPT v10.6 supports use of ICD-9-CM codes or ICD-10-CM codes with an additional qualifier. However, the standard does not permit the medication-associated diagnosis to be exchanged using SNOMED CT® codes until version 2013011 and later. We continue to support SNOMED CT® as the vocabulary code set for clinical diagnoses. Despite the limitation of NCPDP SCRIPT v10.6 regarding exchange of SNOMED CT® codes for medication-associated diagnoses, e-prescribing transactions that include the reason for the prescription support patient safety and align with initiatives underway at HHS.⁵⁹ While the use of ICD-10-CM for medication-associated diagnoses is not ideal, the value of requiring a field for medication-associated diagnoses in accordance with NCPDP SCRIPT v10.6 outweighs the limitations of that version of the standard. We will consider requiring certification for the medication-associated diagnosis using SNOMED CT® codes in a future version of this certification criterion if we adopt a version of NCPDP SCRIPT that can support medication-associated diagnoses using SNOMED CT® codes.

The second method described above (medication indication using indication elements in the SIG) does support the use of SNOMED CT® vocabulary. In order to implement the indication elements in the SIG, developers would need to implement at least a subset of the structured and codified Sig format component composites that represent the most common Sig instructions as described in the SCRIPT Implementation Recommendations Version 1.29⁶⁰ and later. As we have not adopted the proposal to require a Health IT Module certified to this criterion to enable a user to enter, receive, and transmit codified Sig instructions in a structured format, implementation of this second method would depend on whether the developer voluntarily chooses to implement Structured and Codified Sig Format v1.2.

Given the options discussed above, we have finalized a requirement that requires a Health IT Module to enable a user to receive and transmit the reason for the prescription using the diagnosis elements in the DRU Segment. This requirement would apply to the new, change request and response, cancel

request and response, refill request and response, fill status, and medication history request and response NCPDP SCRIPT v10.6 transactions that we have required in this criterion (see discussion above). Again, we note that this requirement would only apply to the capability that a certified Health IT Module certified to this criterion has to demonstrate, not that a provider is required to populate the field for reason for the prescription when e-prescribing. For the first method described above, we note that with compliance deadline of October 1, 2015, for use of ICD-10-CM and the effective date of this final rule, we intend to test compliance with ICD-10-CM for the purposes of testing and certification under the ONC Health IT Certification Program.

We are also including an optional provision that would test a Health IT Module's ability to enable a user to receive and transmit the reason for the prescription using the indication elements in the SIG Segment for those developers that may have voluntarily chosen to implement the Structured and Codified Sig Format v1.2.

Comments. Commenters were generally supportive of improving patient safety through use of the metric standard for dosing, but recommended that this requirement only apply to oral liquid medications. A number of commenters noted that the dose quantity for non-oral, non-liquid medications may not be representable using metric units (e.g., number of puffs for inhalers, number of drops for ear and eye drops, "thin film" for topic creams and ointments). There was some concern that pharmacies may translate metric prescribing instructions into more "patient friendly" instructions (such as translating from mL to "spoonfuls") that could lead to patient dosing concerns. Commenters were also supportive of the proposal to require the use of standard conventions for leading zeroes and decimals (i.e., a leading zero is always inserted before the decimal point for amounts less than one, as well as not allowing trailing zeroes after a decimal point).

Response. We thank commenters for their support of the proposal, and for clarifying the issue about non-metric dose quantities. Given this input and support, we have finalized the requirement that a Health IT Module be capable of limiting a user's ability to electronically prescribe *oral, liquid medications* in only metric standard units of mL (i.e., cc units will not be allowed for certification). A Health IT Module certified to this criterion would also be required to always insert leading zeroes before the decimal point for

amounts less than one when a user electronically prescribes all medications, as well as not allow trailing zeroes after a decimal point. Stakeholder feedback has indicated that medication labels will contain dosing instructions in the metric standard if the prescriber doses in the metric standard. Along with federal partners (including the FDA and CDC),⁶¹ we encourage pharmacies to ensure the labels maintain the metric standard for dosing instructions. Guidance already exists encouraging this as a best practice for medication labeling.⁶² We understand that industry best practices also promote the provision of a metric dosing device along with oral liquid medications.⁶³ Last, for purposes of patient safety, we would also encourage health IT developers to implement industry recommendations around the use of "tall man lettering" to differentiate between drug names that are similar and commonly confused.⁶⁴

Comments. Commenters were supportive of the proposal to adopt the February 2, 2015, monthly version of RxNorm. A few commenters suggested that we adopt this version at a minimum, but allow implementation of later versions.

Response. We thank commenters for their support and have adopted the September 8, 2015 monthly version of RxNorm.⁶⁵ As we finalized in the 2014 Edition final rule (77 FR 54170), we remind stakeholders that our policy for "minimum standards" code sets permits the adoption of newer versions of the adopted baseline version minimum standards code sets for purposes of certification unless the Secretary specifically prohibits the use of a newer version (see § 170.555 and 77 FR 54268). We agree with stakeholders that the adoption of newer versions of RxNorm can improve interoperability and health IT implementation.

Comments. A few commenters noted there is a need for standards for e-prescribing of controlled substances (EPCS). One commenter suggested that a standard for prior authorization (ePA) prescribing transactions is needed.

Response. We thank commenters for these suggestions, but note that these

comments are outside the scope of this criterion as proposed.

- *Common Clinical Data Set Summary Record—Create; and Common Clinical Data Set Summary Record—Receive*

2015 Edition Health IT Certification Criterion

§ 170.315(b)(4) (Common Clinical Data Set summary record—create)

2015 Edition Health IT Certification Criterion

§ 170.315(b)(5) (Common Clinical Data Set summary record—receive)

In the Proposed Rule under the proposed 2015 Edition “transitions of care” certification criterion, we solicited comment on whether we should adopt and make available for testing and certification a separate certification criterion focused on the capability to create a summary record formatted to the C-CDA Release 2.0 with or without the ability to meet the requirements of the Common Clinical Data Set definition.

Comments. Comments generally supported the proposal to adopt a separate certification criterion for the ability of a Health IT Module to create a summary care record formatted to the C-CDA standard. A few commenters suggested that this certification criterion would only be valuable if the Common Clinical Data Set was included as well. Similar to the comments received for the “ToC” criterion summarized previously in this section of the preamble, commenters were concerned that C-CDA documents formatted to Release 2.0 would not provide compatibility with C-CDA Release 1.1. These commenters recommended that this certification criterion should require creation of C-CDAs consistent with C-CDA Release 2.1.

Response. We agree with commenters that this criterion will be valuable if it includes the capability to create a C-CDA with the Common Clinical Data Set. This criterion may also be valuable and less burdensome for health IT developers that design technology for other programs and settings outside of the EHR Incentive Programs that would like to require or offer functionality for the creation of C-CDA documents without the other requirements of the 2015 Edition “transitions of care” criterion (e.g., transport requirements). These programs and settings may find value for providers to create a summary care record or transition of care document in accordance with the C-CDA standard and with the Common Clinical Data Set. For example, existing

CMS programs point to the use of technology certified to create C-CDA documents with the Common Clinical Data Set, including for chronic care management services in the CY 2016 Physician Fee Schedule final rule (80 FR 41796). CMS programs also encourage the use of certified health IT for various settings and purposes.⁶⁶ Accordingly, we have adopted a new 2015 Edition “Common Clinical Data Set summary record—create” certification criterion to support this and other use cases. We have also adopted a similar criterion that would support receipt of health information exchanged in accordance with this functionality (Common Clinical Data Set summary record—receive” certification criterion).

Common Clinical Data Set Summary Record—Create

This new criterion would require a Health IT Module enable a user to create a transition of care/referral summary formatted in accordance with C-CDA Release 2.1 and that includes, at a minimum, the Common Clinical Data Set and patient matching data. For the same reasons described in the “ToC” certification criterion above, the patient match data represent a first step forward to improving the quality of data included in an outbound summary care record to improve patient matching. Please refer to our decision to adopt C-CDA Release 2.1 for all certification criteria that reference C-CDA standard creation in the 2015 Edition as described further in the preamble for the “ToC” certification criterion. Consistent with our decision for the “ToC,” “clinical information reconciliation and incorporation,” and “C-CDA creation performance” criteria described elsewhere in this section of the preamble, this certification criterion references the C-CDA Release 2.1 CCD, Referral Note, and (for inpatient settings only) Discharge Summary document templates for this certification criterion.

We have also included the encounter diagnoses (with either the September 2015 Release of the US Edition of SNOMED CT® or ICD-10 codes), cognitive status, functional status, reason for referral (ambulatory only), referring or transitioning provider’s name and office contact information (ambulatory only), and discharge instructions (inpatient only) which are contained in the “transitions of care” criterion. This data has value for

providing additional context and information for providers to make care decisions when receiving and sending transition of care/referral summary documents. As noted above, certain CMS programs have required or encouraged that this data be transmitted between care settings. Inclusion of this data will promote consistency for transitions of care across care settings and highlight ongoing efforts to develop standards for representing this data electronically.

Common Clinical Data Set Summary Record—Receive

In addition to adopting a new certification criterion for “Common Clinical Data Set summary record—create,” we have also adopted a complementary certification criterion focused on the receipt and proper processing of a transition of care/referral summary formatted to C-CDA and with the Common Clinical Data Set. Our goal is to ensure that when a C-CDA document is created consistent with the “Common Clinical Data Set summary record—create” certification criterion that the receiving system can properly process the information for informing care coordination. This has value for stakeholders such as providers who may be participating in other programs that require the use of the “Common Clinical Data Set summary record—create” functionality as well as registries that may be recipients of this information. As stated in the Federal Health IT Strategic Plan, core technical standards form the foundation for interoperability, and systems that send and receive information in these common standards will help ensure the meaning of information is consistently understood.⁶⁷

In order to ensure the receiving system correctly processes the C-CDA document, we will test that a system can properly validate the information in accordance with the same requirements of the “ToC” criterion (e.g., parse, detect and notify users of errors, identify valid document templates and process data elements, and correctly interpret empty sections and null combinations and be able to display a human readable format that contains the information in the received C-CDA document in accordance with the C-CDA standard). These methods mirror those in the “ToC” criterion and will provide baseline assurance that a receiving system can properly process the C-CDA document as together they verify that the Health IT Module is correctly

⁶⁶ We refer readers to section IV.B.4 (“Referencing the ONC Health IT Certification Program”) of this preamble for discussion of these programs and associated rulemakings.

⁶⁷ http://www.healthit.gov/sites/default/files/9-5-federalhealthitstratplanfinal_0.pdf.

interpreting the received C-CDA document information.

Consistent with our decision for the “ToC” and “clinical information reconciliation and incorporation” certification criteria described above, we have required certification to the C-CDA Releases 1.1 and 2.1 CCD, Referral Note, and (for inpatient settings only) Discharge Summary document templates for this certification criterion. As previously discussed, while C-CDA Release 2.1 largely promotes compatibility with C-CDA Release 1.1, receiving systems may have to perform additional processing to ensure Release 1.1 conformance with Release 2.0. We have included a requirement that Health IT Modules be able to receive C-CDA documents with the encounter diagnoses (with either the September 2015 Release of the U.S. Edition of SNOMED CT® or ICD-10-CM codes), cognitive status, functional status, reason for referral (ambulatory only), referring or transitioning provider’s name and office contact information (ambulatory only), and discharge instructions (inpatient only) for the same reasons we have included these data in the “Common Clinical Data Set summary record—create” criterion described above.

We have also included the “section views” capability from the “ToC” certification criterion to ensure that Health IT Modules certified to this certification criterion will be able to extract and allow for individual display each section (and the accompanying document header information (*i.e.*, metadata)) that was included in a transition of care/referral summary received and formatted in accordance with C-CDA Releases 1.1 and 2.1. This will allow a user to select and just view the relevant sections without having to navigate a potentially length C-CDA document.

- *Data Export*

2015 Edition Health IT Certification Criterion
§ 170.315(b)(6) (Data export)

We proposed to adopt a 2015 Edition “data portability” certification criterion that was revised in comparison to the 2014 Edition “data portability” certification criterion (§ 170.314(b)(7)). Similar to the 2014 Edition version, we proposed to include the 2015 Edition “data portability” criterion in the Base EHR definition (*i.e.*, the 2015 Base EHR definition). To address feedback from health IT developers and providers on the 2014 Edition certification criterion, the proposed “data portability” certification criterion at § 170.315(b)(6)

focused on specific capabilities that would give providers easy access and an easy ability to export clinical data about their patients for use in a different health information technology or a third party system for the purpose of their choosing. We emphasized that this capability would need to be user-focused and user-driven. We proposed to require that a user be able to configure a Health IT Module to create an export summary for a given patient or set of export summaries for as many patients selected and that these export summaries be able to be created according to certain document-template types included in the C-CDA Release 2.0. We proposed to require the Common Clinical Data Set as the minimum data that a Health IT Module must be capable of including in an export summary, in addition to encounter diagnoses (according to the standard specified in § 170.207(i) (ICD-10-CM) or, at a minimum, the version of the standard at § 170.207(a)(4) (September 2014 Release of the U.S. Edition of SNOMED CT®), cognitive status, functional status, reason for referral and the referring or transitioning provider’s name and office contact information, and discharge instructions for the inpatient setting. We proposed to require that a user would need to be able to be able to configure the technology to set the time period within which data would be used to create the export summary or summaries, and that this must include the ability to enter in a start and end date range as well as the ability to set a date at least three years into the past from the current date. We proposed to require that a user would need to be able to configure the technology to create an export summary or summaries based on specific user selected events listed in the Proposed Rule. We proposed to require that a user would need to be able to configure and set the storage location to which the export summary or export summaries were intended to be saved.

Comments. Many commenters expressed support of the concept of “data portability.” Many commenters also requested that we clarify the purpose of data portability and provide related use cases to distinguish “data portability” from the transition of care certification criterion. Some commenters also suggested renaming the criterion to better describe its intended use. One commenter noted the “ambulatory only” requirement included in the criterion seemed to be confusing data portability with transition of care.

Response. We appreciate commenters’ support of the concept of data

portability and the proposed certification criterion. To provide additional clarity, we have decided to simply name the adopted certification criterion in this final rule “data export.”

This certification criterion’s purpose is to enable a user to export clinical data from health IT for one patient, a set of patients, or a subset of that set of patients. The functionality included in the criterion is intended to support a range of uses determined by a user and it was not our intention to prescribe or imply particular uses for this functionality. We also note that this functionality is not intended to and may not be sufficient to accomplish a full migration from one product to another without additional intervention because of the scope of this criterion. Specifically, the data and document templates specified in this criterion would not likely support a full migration, which could include administrative data such as billing information. The criterion’s functionality could, however, support the migration of clinical data between health IT systems and can play a role in expediting such an activity if so determined by the user.

The “inpatient only” and “ambulatory only” portions of the criterion that require referral and discharge information, respectively, were part of the scope of 2014 Edition “data portability” certification criterion, are part of the transition of care criterion, and are also referenced in by the “VDT” criterion. As such, we see no compelling reason to change this criterion’s scope and have adopted the criterion with these distinctions and data.

Comments. Some commenters supported requiring all of the proposed C-CDA document templates. Other commenters stated that the number of document templates should be limited. Some commenters had recommendations on alternative vocabularies to include in the C-CDA.

Response. Consistent with other responses provided in this final rule, this certification criterion requires conformance to the C-CDA R2.1. In consideration of comments received on the Proposed Rule, we have limited the C-CDA document template scope for this criterion to the CCD document template. We note that the vocabularies used by the C-CDA R2.1 are defined through the Standards Developing Organization (SDO) process and we do not seek to change that approach via this rulemaking (*i.e.*, we adopt the C-CDA R2.1 as published). We note that we have adopted this criterion with the proposed inclusion of the Common

Clinical Data Set and other specified data, including the updated minimum standards code sets we discuss in section III.A.2.c (“Minimum Standards” Code Sets) of this preamble.

Comments. One commenter stated that when a note is signed or an order is placed does not necessarily indicate that all relevant documentation is ready for export as the provider may enter more information in the record or a result could come back from a laboratory order. The commenter stated that this could result in incomplete data being exported. Another commenter stated that there should be an affirmative action by the user clearly indicating the intent to initiate a data export. A commenter suggested removal of the requirements related to event configuration, stating there was no clear use case. Commenters also stated that the dates in the “timeframe configuration” were unclear and sought clarification on whether it was an admission date, an encounter date, the date the data was entered in the system or some other date. One commenter recommended that providers should have access to the full set of data included in the certified health IT for the entire period covered by a provider’s contract. The HITSC stated in written advice to the National Coordinator that the “trigger conditions” were not appropriate and went beyond what it believed the policy goals for this criterion.⁶⁸

Response. In consideration of comments, we have not finalized the requirement to permit a user to configure a data export based on signing a note or placing an order. We believe that a time-based approach as the baseline scope for this certification criterion is the most appropriate, consistent with our policy goals, and helps balance user functionality required for the purposes of certification with developer burden. In that regard, by finalizing a time-based approach, we have determined that this final certification criterion can be more simply described by combining the proposed “timeframe” and “event” configurations into one provision.

We have also not adopted the proposed time requirement that technology would need to include the ability to set a date at least three years into the past from the current date. We have determined that we could not properly test and certify to such a requirement. We acknowledge that some Health IT Modules presented for

certification, particularly in 2016, will not have access to three or even one year’s worth of patient health information that is conformant to the standards requirements of this criterion. A health IT developer’s and Health IT Module’s access to such health information, and the quality of such health information, will also likely vary considerably based on the customers (providers) it serves. This would further complicate testing and certification, and potentially place certain health IT developers and products at a disadvantage. Therefore, we have not adopted this proposed requirement.

We have finalized as part of this criterion a specific capability that expresses time-based configuration requirements. This first portion of this part of the criterion expresses that a user must be able to configure a time period within which data would be used to create export summaries, which must include the ability to express a start and end date range. The second portion of this part of the criterion expresses three time-based actions/configurations a user must be able to complete based on the date range they have specified. A user would need to be able to: (1) Create export summaries in real-time (*i.e.*, on demand); (2) configure technology to create such summaries based on a relative date and time (*e.g.*, generate a set of export summaries from the prior month on the first of every month); and (3) configure technology to create such summaries based on a specific date and time (*e.g.*, generate a set of export summaries with a date range between January 1, 2015 and March 31, 2015 on April 1, 2015 at 1:00AM EDT). We reiterate that a Health IT Module will need to support the user’s ability to select and configure those dates and times.

Comments. One commenter requested that the “file location” be a Direct address or an external location in an HIE or some other system.

Response. For the purposes of certification, we clarify that a Health IT Module must, at a minimum, permit a user to select a local or network storage location. We have intentionally left the specific transport method (*e.g.*, sending to a Direct email address) or further product integration (*e.g.*, routing the export to a web service, web service or integration engine) to the discretion of the health IT developer and its customers.

Comments. Commenters expressed concern that privacy and security issues may arise when data is exported. Some commenters suggested that the criterion should require an ability to limit the users that would be permitted to

execute the data export functionality, contending that limiting the users could address potential performance issues that may result when executing this functionality as well as issues related to use access or misuse.

Response. We thank commenters for raising these issues and have modified this criterion in response. We agree that this certification criterion could benefit from requiring health IT to include a way to limit the (type of) users that would be able to access and initiate data export functions. Thus, consistent with other certification criteria that include functionality to place restrictions on the (type of) users that may execute this functionality, we have adopted corresponding language in this final criterion. However, we emphasize for stakeholders this additional “limiting” functionality on the type of users that may execute the data export functionality is intended to be used by and at the discretion of the provider organization implementing the technology. In other words, this functionality cannot be used by health IT developers as an implicit way to thwart or moot the overarching user-driven aspect of this certification criterion.

- *Data Segmentation for Privacy*

2015 Edition Health IT Certification Criterion
§ 170.315(b)(7) (Data segmentation for privacy—send)

2015 Edition Health IT Certification Criterion
§ 170.315(b)(8) (Data segmentation for privacy—receive)

We proposed to adopt two new 2015 Edition certification criteria referred to as “data segmentation for privacy (DS4P)—send” and data segmentation for privacy (DS4P)—receive.” These criteria were not proposed to be in scope for the EHR Incentive Programs. Rather, they were proposed to be available for health IT developers and other programs. The proposed certification criteria focused on technical capabilities to apply and recognize security labels (*i.e.*, privacy metadata tags) to a patient’s health record. We noted in the Proposed Rule that the technical capabilities to do so would enable a sending provider’s technology to tag a patient’s record such that recipient of such a record (if such recipient had also implemented the technology) would be able to recognize that the patient’s record was “sensitive” and needed special protection under federal or state privacy law. For example, DS4P was piloted to support the exchange of health information

⁶⁸ https://www.healthit.gov/FACAS/sites/faca/files/HITSC_Certification_NPRM_TSSWG_Comments_2015-05-20.pdf.

covered by 42 CFR part 2 (“Part 2”), which are federal regulations implementing the law protecting confidentiality of, and restricting access, to substance abuse related patient records.

We proposed to adopt the DS4P standard as outlined in the HL7 Version 3 Implementation Guide: DS4P, Release 1 (DS4P IG), Part 1: CDA R2 and Privacy Metadata.⁶⁹ The standard describes the technical means to apply security labels to a health record and data may be tagged at the document-level, the section-level, or individual data element-level. The DS4P standard also provides a means to express obligations and disclosure restrictions that may exist for the data. The DS4P standard does not enforce privacy laws or alter privacy laws. A healthcare provider is still responsible for ensuring that use, access, or disclosure of the sensitive health information complies with relevant state and federal law. DS4P supports that compliance in an electronic health environment and is a means for providers to electronically flag certain pieces of data that may be subject to those laws. Importantly, the DS4P standard is “law-agnostic” and not restricted to Part 2 data. It may be implemented to support other data exchange environments in which compliance with state or federal legal frameworks require sensitive health information to be tagged and segmented.

Comments. In general, most commenters recognized the value in complying with laws that require protecting sensitive health information. However, we received comments both expressing support and opposition to adopting the proposed certification criteria at this time. Commenters in support of the DS4P certification criteria and proposed standard pointed out the standard was the best currently available option for protecting sensitive health information and allows behavioral health, substance abuse, and other data to be available at the point of care. Commenters cited teenagers, victims of intimate partner violence, and patients with behavioral health or substance abuse conditions as particularly vulnerable populations that would benefit from the ability to exchange sensitive health information electronically. Several commentators pointed out that, while we limited segmentation to document-level tagging in the Proposed Rule preamble, we did

not do so in the proposed regulation text.

Commenters that expressed opposition to the DS4P certification criteria and proposed standard stated that the standard was immature and not widely adopted. The commenters expressed concern that segmentation can lead to incomplete records and that receiving systems may not know how to handle the DS4P tagged data, which could lead to incomplete records that may subsequently contribute to patient safety issues. Several comments stated that DS4P has only been piloted with Part 2 data. One commenter requested clarification on how a sending system will know if a receiving system supports DS4P. Commenters also requested guidance on how to visualize in the system that data may be incomplete or what workflows should be used when segmented data is received. Several commentators requested that we consider the Integrating the Healthcare Enterprise (IHE) IT Infrastructure Technical Framework Volume 4—National Extensions—Section 3.1 Data Segmentation for Privacy (DS4P)⁷⁰ as an alternative to the DS4P IG.

Response. We appreciate the thoughtful comments submitted on the proposed criteria. Notably, with respect to the comments we received that expressed opposition to the DS4P standard our analysis of the comments indicates that commenters were more concerned with the complexity of the privacy law landscape than they were about the technology itself. In this regard, the vast majority of comments focused on policy-related questions such as the likelihood that specialized privacy laws might create “holes” in the data. Additionally, we received no comments that provided substantive technical criticisms of the DS4P standard.

In reference to the DS4P standard’s maturity, we note that it is considered a “normative” standard from the HL7 perspective—a status which requires substantially higher HL7 membership participation compared to a Draft Standard for Trial Use (DSTU) status. While we recognize that to date the standard has not been widely adopted, it has been used with Part 2 data and other sensitive health information by the Substance Abuse and Mental Health Services Administration (SAMHSA), the U.S. Department of Veterans Affairs (VA), and private companies.

In consideration of the comments we received and several of HHS’ overarching policy goals (enabling

interoperability, supporting delivery system reform, reducing health disparities, and supporting privacy compliance), we have adopted the proposed DS4P criteria. We note that these criteria are not part of the 2015 Edition Base EHR definition, are not required in the certification program policies for health IT developers to seek certification to, and are not required for providers to participate in the EHR Incentive Programs. As we have stated, DS4P enables sensitive health information to be exchanged electronically and we strongly encourage health IT developers to include DS4P functionality and pursue certification of their products to these criteria in order to help support their users’ compliance with relevant state and federal privacy laws that protect sensitive health information.

We agree with commenters that we should explicitly state that document-level tagging is the scope required for certification and have made this modification to criteria. We have also clearly indicated in the DS4P-receive criterion that the ability to receive a summary record in accordance with the C—CDA R2.1 is required. This was inadvertently omitted from the criterion’s proposed regulation text, but was referenced in the DS4P-send criterion.

In response to the broader comments that were critical of the notion of DS4P, we reiterate that DS4P is a technical standard that helps healthcare providers comply the laws applicable to them. As such, healthcare providers should already have processes and workflows to address their existing compliance obligations. The DS4P standard does not itself create incomplete records. Under existing law patients already have the right to prevent re-disclosure of certain types of data by withholding consent to its disclosure or to place restrictions on its re-disclosure. DS4P allows providers to tag data as sensitive and express re-disclosure restrictions and other obligations in an electronic form. DS4P does not determine whether a segmentation obligation exists legally or what that legal obligation means to the recipient. Instead, DS4P allows for tagging and exchange of health information that has already been determined to be sensitive and in need of special protections. In the absence of DS4P, this specially protected data may still be exchanged, if consent is given for disclosure, by fax or mail, but these methods may make the data unavailable in electronic form in the receiving provider’s EHR.

We recognize that the current privacy law landscape is complex. Despite the

⁶⁹ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=354 Completed Normative Ballot in January 2014 and was successfully reconciled in February 2014. HL7 approved the final standard for publication and ANSI approved in May 2014.

⁷⁰ http://www.ihe.net/uploadedFiles/Documents/ITI/IHE_ITI_TF_Vol4.pdf.

complexities of the privacy law landscape, we believe now is the time to support a standard that allows for increased protection for individuals with sensitive health conditions and enables sensitive health information to flow more freely to authorized recipients. Over 43 million Americans ages 18 and up have some form of mental illness.⁷¹ As stated before, providers already have workflows to care for individuals with these and other sensitive health conditions. DS4P allows providers the ability to move away from fax-and-paper information exchange into interoperable exchange of sensitive health information. Oftentimes, individuals with sensitive health conditions require coordinated care that is not possible if sensitive health data cannot be exchanged. Additionally, the technical ability to segment data supports the Precision Medicine Initiative⁷² and delivery system reform⁷³ where those initiatives depend on making computable individual's choices about disclosure of their data.

The current DS4P standard does not have a service discovery mechanism to determine if a potential recipient is able to receive a tagged document. We expect that providers will have to determine the receiving capabilities of their exchange partners, similar to how they have to work with their exchange partners today when they are manually exchanging sensitive health information via fax. Additionally, the DS4P standard contains a human-readable text block that will render in the recipients system—putting the human healthcare user on notice that they are viewing sensitive health information, allowing them to take appropriate actions in their system manually.

We are not aware of implementations that have used the IHE National Extensions for Data Segmentation for Privacy and do not agree with permitting it as an alternative approach to DS4P for the purposes of certification at this time.

- *Care Plan*

2015 Edition Health IT Certification Criterion
§ 170.315(b)(9) (Care plan)

We proposed to adopt a new 2015 Edition certification criterion that

would require a Health IT Module to enable a user to record, change, access, create and receive care plan information in accordance with the Care Plan document template in the HL7 Implementation Guide for CDA® Release 2: Consolidated CDA Templates for Clinical Notes.⁷⁴ We explained that the C–CDA Release 2.0 contains a Care Plan document template that provides a structured format for documenting information such as the goals, health concerns, health status evaluations and outcomes, and interventions. We emphasized that the Care Plan document template is distinct from the “Plan of Care Section” in previous versions of the C–CDA, stating that the Care Plan document template represents the synthesis of multiple plans of care (for treatment) for a patient, whereas the Plan of Care Section represented one provider's plan of care (for treatment). The Proposed Rule noted that the C–CDA Release 2.0 had renamed the previous “Plan of Care Section” as the “Plan of Treatment Section (V2)” for clarity. We sought comment on whether we should require for certification to this criterion certain “Sections” that are currently deemed optional as part of the Care Plan document template for certification to this criterion, namely the “Health Status Evaluations and Outcomes Section” and “Interventions Section (V2).”

Comments. Commenters were supportive of the proposal to adopt a new voluntary “care plan” criterion. The commenters stated that the Care Plan document template supports broader information about the patient, including education, physical therapy/range of motion, and social interventions not commonly found in other parts of the C–CDA standard. A few commenters stated that the C–CDA Release 2.0 Care Plan document template only represents a “snapshot in time,” rather than a dynamic, longitudinal shared care plan. Some commenters expressed concern that this document template is new to C–CDA Release 2.0 and suggested that there was no implementation experience. Other commenters stated that clinician input was factored into the development of the Care Plan document template and that there have been pilots through the S&I Framework Longitudinal Coordination of Care Initiative.⁷⁵ Commenters suggested that the inclusion of the Care Plan document template in certification would provide

a glide path for adoption of EHRs by home health care and hospice providers.

Response. We thank commenters for their feedback. As stated in the Proposed Rule (80 FR 16842), we believe the Care Plan document template has value for improving coordination of care and provides a structured format for documenting information such as goals, health concerns, health status evaluations, and interventions. It represents a consensus-based approach and is the best standard available today for capturing and sharing care plan information. The document template has also been demonstrated through pilots in the S&I Framework. As such, we have adopted this criterion. To note, we have adopted the C–CDA Release 2.1 standard for this certification criterion for consistency with our approach to the C–CDA in this final rule and for the same substantive reasons discussed earlier in this preamble under the “ToC” certification criterion.

Comments. A few commenters suggested that it was not necessary to adopt this certification criterion because other proposed criteria also reference the C–CDA standard and Care Plan template.

Response. As described in more detail in this preamble for the other certification criteria we have adopted that reference the C–CDA standard (e.g., “ToC,” “data export,” and “Consolidated CDA creation performance”), we have adopted reduced requirements for C–CDA Release 2.1 document template conformance per the use case(s) served by each certification criterion. As such, the “ToC,” “data export,” “clinical information reconciliation,” and “Consolidated CDA creation performance” criteria do not require the C–CDA Release 2.1 Care Plan document template. Therefore, we have adopted this criterion to support the care planning use cases recited above and in the Proposed Rule.

Comments. A commenter recommended that we be more specific about which optional (e.g., “MAY”) items in the Health Concerns section of the C–CDA Care Plan document template should be required.

Response. As we stated in section III.A.2.b of this preamble regarding referenced standards for certification, if an element of a standard or IG is optional or permissive in any way, it will remain that way for testing and certification unless we specified otherwise in regulation. To the commenter's question, we have not specified otherwise in regulation. We note, however, that we would expect

⁷¹ <http://www.samhsa.gov/disorders>.

⁷² https://www.whitehouse.gov/sites/default/files/docs/pmi_privacy_and_trust_principles_july_2015.pdf; see also <https://www.whitehouse.gov/the-press-office/2015/01/30/fact-sheet-president-obama-s-precision-medicine-initiative>.

⁷³ <http://www.hhs.gov/healthcare/facts/blog/2014/09/improving-health-care-delivery.html>.

⁷⁴ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=379.

⁷⁵ <http://wiki.siframework.org/LCC+Pilots+WG>.

that health IT developers and providers would work together to determine whether the optional items are relevant and useful for the provider and patients intended to be served by the Health IT Module.

Comments. Most commenters expressed support for requiring a Health IT Module to be certified to the optionally designated sections in the C-CDA Release 2.0 Care Plan document template to meet this criterion. Commenters noted the Health Status Evaluations and Outcomes Section incorporates patient-reported outcomes to improve care and assist with the long-term goal of a truly integrated care plan. Commenters also suggested the Interventions Section (V2) would be useful for patients and family caregivers.

Response. We thank commenters for their feedback. We agree with commenters that the Health Status Evaluations and Outcomes Section and Interventions Section (V2) of the C-CDA provide important information for incorporating the patient's perspective in an effort to improve outcomes and the long-term goal of a longitudinal, dynamic, shared care plan. Accordingly, we have specifically identified these sections as required to be met for certification to this criterion.

Comments. A few commenters suggested that this criterion should also include a requirement for the receiving system of a C-CDA Care Plan to be able to reconcile the care plan information with the patient's record in the receiving system.

Response. While reconciliation is important and may be appropriate for any future iteration of this certification criterion, this functionality is outside the scope of our proposal. Therefore, we have not included in this criterion. We note that the industry continues to improve and develop advanced care planning standards and tools, which may address the incorporation of care planning information. As such, we will continue to monitor these developments for consideration in future rulemaking.

Comments. A few commenters suggested that we are conflating certain sections of the C-CDA Care Plan document template (e.g., Health Concerns and Goals) with items proposed in the Common Clinical Data Set.

Response. We refer readers to our response to this comment under the Common Clinical Data Set definition in section III.B.3 of this preamble.

• *Clinical Quality Measures—Record and Export*

2015 Edition Health IT Certification Criterion
§ 170.315(c)(1) (Clinical quality measures—record and export)

We proposed to adopt a 2015 Edition “clinical quality measures (CQM)—record and export” certification criterion that was revised in comparison to the 2014 Edition “CQM—capture and export” certification criterion (§ 170.314(c)(1)). In the Proposed Rule, we explained that we would align our use of the term “record” used in other 2014 and 2015 Edition certification criteria and proposed to call this certification criterion “CQM—record and export.” We proposed to require that a system user be able to export CQM data formatted to the Quality Reporting Document Architecture (QRDA) Category I standard at any time the user chooses for one or multiple patients and without subsequent developer assistance to operate. We also proposed to require that this certification criterion be part of the set of criteria necessary to satisfy the “2015 Edition Base EHR” definition (see also section III.B.1 of this preamble for a discussion of the 2015 Edition Base EHR definition). We solicited comment on the standard, including versions of QRDA Category I, we should adopt for this certification criterion with consideration given to where the industry may be with adoption of CQM and CDS standards over the next few years. In particular, we identified industry efforts to harmonize CQM and CDS standards. We asked for comment on the following version of QRDA or QRDA-like standards:

- HL7 Implementation Guide for CDA Release 2: Quality Reporting Document Architecture (QRDA), DSTU Release 2 (July 2012);
- HL7 Implementation Guide for CDA Release 2: Quality Reporting Document Architecture (QRDA), DSTU Release 2 (July 2012) and the September 2014 Errata; or
- A QRDA-like standard based on the anticipated Quality Improvement and Clinical Knowledge (QUICK) Fast Healthcare Interoperability Resources (FHIR)-based DSTU.

In asking for comment, we sought to understand the tradeoffs stakeholders perceive in adopting each standard considering that the EHR Incentive Programs Stage 3 proposed rule proposed that health IT certified to the 2015 Edition would not be required until January 1, 2018, but that EPs, eligible hospitals, and CAHs participating in the EHR Incentive Programs Stage 3 objectives and measures could upgrade to health IT

certified to the 2015 Edition “CQM—record and export” certification criterion in 2017.

Comments. The majority of commenters recommended adopting the HL7 CDA® R2 Implementation Guide: Quality Reporting Document Architecture—Category I (QRDA I); Release 1, DSTU Release 3, US Realm (“QRDA Category I Release 3 IG” or “Release 3”).⁷⁶ Commenters noted that CMS is using the QRDA Category I Release 3 IG for the 2015 update eCQM measures and the 2016 reporting period and recommended that we adopt this version for program alignment.⁷⁷ Commenters indicated Release 3 addresses known issues, fixes errors, and adds missing content compared to earlier versions of the QRDA Category I standard. Commenters also noted that Release 3 uses an incremental version of the underlying data model (the Quality Data Model 4.1.1) that is a step-wise approach toward harmonized CQM and CDS standards that stakeholders are developing.

While commenters were supportive of the work and direction on harmonized CQM and CDS standards to produce an anticipated QUICK FHIR-based DSTU, all commenters noted that no such standard is currently available and that it is premature to require any such standard for the 2015 Edition. Many commenters stated that stakeholders are still in the process of implementing QRDA and that we should adopt an incremental version of QRDA rather than pivot to the QUICK standard at this time.

Response. With consideration of commenters' feedback, we have adopted this criterion and the QRDA Category I Release 3 IG (both Volumes 1 and 2) for this criterion. In order to accommodate Release 3, we are amending the paragraph level at § 170.205(h) to move the standard that is required for the 2014 Edition “CQM—capture and export” criterion to § 170.205(h)(1), and adopting Release 3 at § 170.205(h)(2).

We agree with commenters that it is too early to adopt the QUICK CQM standards, but will continue to support the development and piloting of these harmonized CQM and CDS standards and reassess their appropriateness for certification at the time of a relevant future rulemaking.

Comments. Commenters expressed support for the proposal to permit users to export CQM data formatted to the

⁷⁶ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=35.

⁷⁷ http://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQM_Library.html.

QRDA Category I standard for one or multiple patients at any time the user chooses and without subsequent developer assistance to operate. Some commenters requested clarification on what constitutes “without subsequent developer assistance to operate” and noted that batch export could be disruptive to overall EHR functionality. A few commenters asked for clarification of the use cases for export. Some commenters also requested clarification regarding who constitutes a “user,” with a few commenters suggesting that the “user” should only be those individuals with specific administrative privileges.

Response. We thank commenters for their support of the proposal. We have included in this criterion a requirement that a user be able to export a data file formatted in accordance with Release 3 for one or multiple patients that includes all of the data captured for each CQM to which the health IT was certified. We believe that the ability to export CQM data would serve two purposes. First, this functionality will allow a provider or health system to view and verify their CQM results for quality improvement on a near real-time basis. Second, the export functionality gives providers the ability to export their results to multiple programs, such as those run by CMS, states, and private payers.

As we discussed in the 2015 Edition proposed rule (80 FR 16843), our intent is for users of certified health IT to be able to export CQM data formatted to the QRDA Category I standard for one or more patients without needing to request support from a developer. Stakeholders have noted that some health IT certified to the 2014 Edition “CQMs—capture and export” criterion do not provide users the ability to export QRDA Category I files “on demand” and that users must submit requests for the health IT developer to assist or perform the export function on their behalf. For testing and certification to the 2015 Edition “CQM—record and export” criterion, we would expect demonstration that the Health IT Module enables the user to export CQM data formatted to the QRDA Category I standard for one or more patients without needing additional developer support. We believe that providers and health systems should determine the protocols around when and how providers export CQM data, and we do not address this issue as part of certification as it is outside the scope of the ONC Health IT Certification Program.

We previously described a “user” in the 2014 Edition final rule (77 FR

54168) and continue to use the same description for the 2015 Edition. We expect the functionalities of this criterion to be available to any user, but the specification or limitation of types of users for this functionality is outside the scope of certification to this criterion. Providers have the discretion to determine the protocols for when and which users should use this functionality.

• *Clinical Quality Measures—Import and Calculate*

2015 Edition Health IT Certification Criterion
§ 170.315(c)(2) (Clinical quality measures—import and calculate)

We proposed to adopt a 2015 Edition “clinical quality measures (CQM)—import and calculate” certification criterion that was revised in comparison to the 2014 Edition “CQM—import and calculate” certification criterion (§ 170.314(c)(2)). We proposed to require that a system user be able to import CQM data formatted to the QRDA standard for one or multiple patients at any time the user chooses and without additional assistance to operate. We proposed to no longer include an exemption that would allow a Health IT Module presented for certification to § 170.315(c)(1), (c)(2), and (c)(3) to not demonstrate the data import capability. Rather, we proposed that a Health IT Module would be required to demonstrate that it could import data in order to be certified to this certification criterion even if it is also certified to provide “record and export” and “electronic submission/report” functions. We solicited comment on the version of QRDA or QRDA-like standards for individual patient-level CQM reports we should adopt for this certification criterion.

We stated that we intend testing to the 2015 Edition “CQM—import and calculate” certification criterion to include the import of a larger number of test records compared to testing for the 2014 Edition and to automatically de-duplicate records for accurate CQM calculation. We requested comment on this intent and the number of test records we should consider testing a Health IT Module for performing import and calculate functions.

Comments. The majority of commenters recommended adopting the HL7 CDA® R2 Implementation Guide: Quality Reporting Document Architecture—Category I (QRDA I); Release 1, DSTU Release 3, US Realm (“QRDA Category I Release 3 IG” or “Release 3”). These commenters cited the same reasons for adopting Release 3

as recited under the 2015 Edition “CQM—record and export” criterion summarized above, and to which we refer readers. A few commenters recommended that QRDA Category III (aggregate level CQM reports) should not be required for this criterion.

Response. With consideration of commenters’ feedback, we have adopted this criterion and the QRDA Category I Release 3 IG (both Volumes 1 and 2) for this criterion. We note that we did not propose to require import of QRDA Category III files for this criterion and thus QRDA Category III is outside the scope of this criterion.

Comments. Commenters expressed support for the proposal to permit users to import CQM data formatted to the QRDA Category I standard for one or multiple patients at any time the user chooses and without subsequent developer assistance to operate. A few commenters asked for clarification of the use cases for import, and the justification for why all systems (even those previously considered “self-contained”) must demonstrate import. These commenters noted that some systems export CQM data to a third-party data aggregator or warehouse for calculation, whereas other EHR systems perform the calculation function itself. In the latter case, some commenters suggested it was not necessary for the system to be able to import CQM data. A few commenters were not supportive of requiring import using the QRDA Category I standard. Rather, they suggested import should be allowed using whatever standard or data structure is already being used by the system for import.

Response. We thank commenters for their support of the proposal and requests for additional clarifications. We have included in this criterion a requirement that a user be able to import a data file formatted in accordance with Release 3 for one or multiple patients that includes all of the data captured for each CQM to which the health IT was certified. We believe that the ability to import CQM data would serve two purposes. First, this functionality could streamline the testing and certification process by importing QRDA Category I files rather than systems needing to manually enter test patient data. Second, the import functionality can promote quality improvement and data sharing between systems by providing systems the ability to import CQM data from other systems in a standardized format. We note that ONC held a HITPC hearing on certification in 2014 and the HITPC recommended CQM certification as a top priority for providing value for

quality improvement and delivery system reform.⁷⁸ While we are not prescribing how data is imported into a system (e.g., mapped to a backend database or viewable to a provider as part of the patient record), we believe that requiring the import functionality can facilitate these use cases.

As we discussed in the 2015 Edition proposed rule (80 FR 16843), our intent is for users of certified health IT to be able to import CQM data formatted to the QRDA Category I standard for one or more patients without needing to request support from a developer. Stakeholders have noted that some health IT certified to the 2014 Edition “CQMs—import and calculate” criterion do not provide users to import QRDA Category I files “on demand” and that users must submit requests for the developer to assist or perform the import function on their behalf. For testing and certification to the 2015 Edition “CQM—import and calculate” criterion, we would expect demonstration that the Health IT Module enables the user to import CQM data formatted to the QRDA Category I standard for one or more patients without needing additional developer support. We believe that providers and health systems should determine the protocols around when and how providers import CQM data, and we do not address this issue as part of certification as it is outside the scope of the ONC Health IT Certification Program.

Comments. Commenters supported our intent to increase the number of test records used during the testing and certification process for this criterion. Most commenters recommended that rather than test to a certain number of records, testing should ensure that every pathway by which a patient can enter the numerator or denominator of the given measure is tested. Commenters were supportive of requiring health IT to demonstrate auto de-duplication of imported records during the testing process, but some commenters were concerned about how systems would be required to incorporate and reconcile imported data. Commenters requested clarification on whether duplicate records would be determined by a duplicate record ID number or by requiring the system to compare the data in two records and determine whether it is a duplicate. Commenters were concerned about the amount of work to reconcile data using the latter method.

⁷⁸ <http://www.healthit.gov/facas/calendar/2014/05/07/policy-certification-hearing>.

Response. We thank commenters for supporting use of an increased number of test records during the testing and certification process and we agree that testing should more robustly test the pathways by which a patient can enter the numerator or denominator of a measure, including exclusions and exceptions. In regard to auto de-duplication, while we have adopted the requirement, we have not prescribed how systems would demonstrate de-duplication or what systems must do with the imported data. We are providing flexibility in allowing health IT developers and providers to determine the most suitable methods for de-duplication and import of data for the given situation.

• *Clinical Quality Measures—Report*

2015 Edition Health IT Certification Criterion
§ 170.315(c)(3) (Clinical quality measures—report)

In the Proposed Rule, we stated that we intend to better align with the reporting requirements of other CMS programs, and thus, would propose certification policy for reporting of CQMs in or with annual PQRS and/or Hospital IQR program rulemaking anticipated in CY 2015. We explained that we anticipated proposing standards for reporting of CQMs that reflect CMS’ requirements for the “form and manner” of CQM reporting (e.g., CMS program-specific QRDA standards), allowing for annual updates of these requirements as necessary. Under this approach, we noted that the “CQMs—report” certification policy and associated standards for the 2015 Edition that support achieving EHR Incentive Programs requirements would be proposed jointly with the calendar year (CY) 2016 PFS and/or IPPS proposed rules. We clarified that we anticipated removing “electronic” from the name of this certification criterion because we expected that all functions proposed in the 2015 Edition health IT certification criteria to be performed or demonstrated electronically, unless specified otherwise. We also explained that we anticipated naming this certification criterion “report” instead of “submission” to better align with the language we use in other certification criteria that also require demonstration of a “reporting” functionality (i.e., to submit data).

We subsequently proposed a 2015 Edition “CQMs—report” certification criterion in the 2016 IPPS/LTCH PPS proposed rule that would require a Health IT Module to enable a user to electronically create a data file for

transmission of clinical quality measurement data using the “base” (i.e., industry-wide, non-program-specific) HL7 QRDA Category I and Category III standards, at a minimum (80 FR 24613–24614). We also proposed, as part of this proposed criterion, to permit optional certification for health IT in accordance with the CMS “form and manner” requirements defined in the CMS QRDA Implementation Guide.⁷⁹ CMS specified that health IT certified to this proposed certification criterion would be required to meet the proposed CEHRT definition for the EHR Incentive Programs.

As detailed in the FY 2016 IPPS/LTCH PPS proposed rule, we solicited comment on the appropriate versions of the Quality Reporting Document Architecture—Category I (individual patient level quality reports) and Category III (aggregate level quality reports) standards that should be adopted. In order to give full consideration to the comments received on the appropriate versions of the standards we should adopt, we did not adopt a “CQMs-report” certification criterion in the 2016 IPPS/LTCH PPS final rule (80 FR 49760). We stated that we anticipate adopting both the certification criterion and the appropriate versions of the standards in a subsequent final rule later this year. We also noted we intended to address comments received on both the proposed “CQMs-report” certification criterion and the versions of the standards in that same rule. We have used this final rule to address the comments and adopt the criterion and standards as specified below.

Comments. Commenters were supportive of the proposal to adopt a 2015 Edition certification criterion for CQM reporting. There was mixed feedback on whether a 2015 Edition “CQMs—report” criterion should require adherence to the HL7 QRDA Category I and Category III standards, or solely to the CMS QRDA Implementation Guide. The majority of commenters recommended that we not move to the Quality Improvement and Clinical Knowledge (QUICK) CQM⁸⁰ standards as they are unpublished and have not yet been balloted. Rather, commenters suggested we adopt incremental versions the QRDA standards because health IT developers and providers have focused efforts on fully supporting QRDA reporting. To this end, some commenters

⁷⁹ The CMS QRDA Implementation Guide can be accessed at http://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQM_Library.html.

⁸⁰ <http://wiki.siframework.org/Clinical+Quality+Framework+Initiative>.

recommended that we adopt Release 3 of the QRDA Category I standard, and the November 2012 version of the QRDA Category III standard with the September 2014 Errata. Other commenters did not support Release 3 of the QRDA Category I standard, stating it was too immature for adoption. One commenter suggested that while Release 3 of QRDA Category I may be a new standard and require more work compared to Release 2 of QRDA Category I with the 2014 Errata, it offers more efficiencies and reduces errors that would ultimately improve eCQM processing.

Response. We thank commenters for their support for proposal and comments regarding the versions of standards. We believe that certification to the HL7 QRDA Category I and III standards provides a baseline for interoperability of CQM data as these standards are consensus-based and industry developed. Additionally, the HL7 QRDA standards are program-agnostic and can support a number of use cases for exchanging CQM data. Providers participating in CMS payment programs such as the EHR Incentive Programs, IPPS, or Hospital IQR may need to adhere to additional CMS QRDA reporting requirements as detailed in the CMS QRDA IG. However, we do not believe that all certified health IT is intended to be used for CMS reporting, and therefore have only included requirements for reporting to CMS (e.g., use of the CMS QRDA IG) as an optional provision within the criterion. We note that the CMS QRDA IG has been aligned with the HL7 QRDA Category I and III standards, but the CMS QRDA IG includes additional requirements beyond the HL7 IGs specific to CMS program reporting.

Our adoption of an optional provision to certify CQM reporting in the form and manner of CMS submission allows CMS to determine as part of its program requirements whether this optional provision of the CQM reporting criterion is required for participation in certain CMS programs. For example, CMS has proposed to revise the CEHRT definition to require health IT be certified to the provision of the “CQMs—report” criterion we have deemed optional (80 FR 41880–41881), which would affect, at a minimum, providers participating in the EHR Incentive Programs.

We agree with the comments supporting the adoption of Release 3 of the QRDA Category I IG as the IG will improve eCQM processing and reduce errors. The IG will also better align with the C-CDA Release 2.1 for purposes of interoperability as compared to QRDA Category I Release 2 with the 2014

Errata. Further, Release 3 of the QRDA Category I IG also aligns with the CMS 2015 update to eCQM measures for 2016 e-reporting (<https://ecqi.healthit.gov/ecqm>).

We agree with commenters that it is too early to adopt the QUICK CQM standards, but will continue to support the development and piloting of these harmonized CQM and CDS standards and reassess their appropriateness for certification at the time of a relevant future rulemaking.

In sum, after consideration of public comments, we have adopted a 2015 Edition “CQMs—report” criterion that requires a Health IT Module to enable a user to (electronically) create a data file for transmission of CQM data in accordance with:

- HL7 CDA® R2 Implementation Guide: Quality Reporting Document Architecture—Category I (QRDA I); Release 1, DSTU Release 3 (US Realm) (both Volumes 1 and 2); and
- HL7 Implementation Guide for CDA® Release 2: Quality Reporting Document Architecture—Category III, DSTU Release 1 (US Realm) with September 2014 Errata.

All Health IT Modules must certify to the above standards to meet the criterion. As noted above, the criterion also includes an optional provision that requires the electronic creation of a data file for transmission of CQM data that can be electronically accepted by CMS (i.e., the form and manner of submission as specified in the CMS QRDA IG⁸¹).

In order to accommodate the new QRDA standards in the regulation text, we have revised the paragraph levels at § 170.205(h) and (k) to move the QRDA standards adopted in the 2014 Edition to § 170.205(h)(1) and (k)(1) respectively. We have also made a technical amendment to the regulation text for the 2014 Edition certification criteria for capturing, calculating, and reporting CQMs (at 45 CFR 170.314(c)(1), (c)(2), and (c)(3), respectively) to continue to reference the appropriate implementation specifications.

Comments. Commenters requested clarification on whether our proposal to adopt a 2015 Edition “CQMs—report” certification criterion through the 2016 IPPS/LTCH PPS proposed rule implies that annual recertification to the proposed criterion would be required as CMS updates the measure specifications and the CMS QRDA IG annually.

Response. We clarify that the proposal for a 2015 Edition “CQMs—report”

certification criterion would not require Health IT Modules to be recertified annually as part of the ONC Health IT Certification Program. However, in conjunction with our CMS colleagues, we also clarify that CMS requires that health IT be certified to the CMS QRDA IG and be updated to the latest annual measure specifications if providers intend to use the health IT to report CQMs electronically to CMS. This does not mean *recertification* is required each time the health IT system is updated to a more recent version of the CQMs. As CMS stated in the 2016 IPPS/LTCH PPS proposed rule, CMS intends to publish a request for information (RFI) on the establishment of an ongoing cycle for the introduction and certification of new measures, the testing of updated measures, and the testing and certification of submission capabilities (80 FR 24614–24615). We and CMS encourage readers to submit their comments and recommendations for consideration upon publication of the RFI.

- *Clinical Quality Measures—Filter*

2015 Edition Health IT Certification Criterion
 § 170.315(c)(4) (Clinical quality measures—filter)

We proposed to adopt a new 2015 Edition certification criterion that would require health IT to be able to record data (according to specified standards, where applicable) and filter CQM results at both patient and aggregate levels. We listed proposed data elements and vocabulary standards for some data elements to maintain consistency in the use of adopted national standards, and we clarified that a Health IT Module must be able to filter by any combination of the proposed data elements (i.e., by any one (e.g., provider type) or a combination of any of the data elements). We noted that the combination requirement is different than other certification criteria in the Proposed Rule in that it requires all combinations to be demonstrated for certification and not just one. We requested comment on the appropriateness of the proposed data elements for CQM filtering, including whether they are being captured in standardized vocabularies, and additional data elements that we should consider for inclusion and standardized vocabularies that might be leveraged for recording this information in health IT.

Comments. Many commenters were in support of adopting a new criterion for CQM filtering. Commenters noted the benefit for supporting the identification and reduction of disparities by filtering

⁸¹ Available at: https://www.cms.gov/regulations-and-guidance/legislation/ehrincentiveprograms/ecqm_library.html.

by patient demographics and problem list. A number of commenters also supported the list of proposed data elements as a good starting point with mature standards.

Response. We thank commenters for the feedback. Our overall goal for this functionality is to allow a provider to make a query for CQM results using one or a combination of data captured in the certified Health IT Module for quality improvement and quality reporting purposes. We agree with commenters on the value of this functionality for identification of health disparities, helping providers identify gaps in quality, and supporting a provider in delivering more effective care to subgroups of their patients. As such, we have adopted this certification criterion with the following modifications described below.

Comments. Some commenters noted it would be valuable to filter both QRDA Category I and Category III quality reports for this criterion to assist with individual patient quality improvement and for population health. One commenter noted that providing a filtered view to the provider would allow for easy spot-checking of health disparity trends to inform quality improvement projects.

Response. We thank commenters for the feedback and agree with the value of being able to filter QRDA I and Category III files as well as for providing a filtered view of the quality results for supporting the quality improvement and quality reporting use cases. QRDA Category I enables an individual patient-level quality report that contains quality data for one patient for one or more quality measures.⁸² The QRDA Category III standard enables an aggregate quality report containing calculated summary data for one or more measures for a specified population of patients within a particular health system over a specific period of time.⁸³ We have, therefore, required that a Health IT Module certified to this criterion must be able to filter CQM results at the patient and aggregate levels and be able to create a data file of the filtered data in accordance with the QRDA Category I and Category III standards, as well as be able to display the filtered data results in human readable format. To align with the versions of the QRDA standards we are adopting for the 2015 Edition “CQMs—record and export,” “CQMs—import and calculate,” and “CQMs—report” criteria, we have

adopted the following standards for this criterion:

- HL7 CDA® R2 Implementation Guide: Quality Reporting Document Architecture—Category I (QRDA I); Release 1, DSTU Release 3 (US Realm) (both Volumes 1 and 2); and
- HL7 Implementation Guide for CDA® Release 2: Quality Reporting Document Architecture—Category III, DSTU Release 1 (US Realm) with September 2014 Errata.

Comments. One commenter expressed concern that the proposed criterion aims to achieve attribution of eCQM results to particular providers or groups of providers for participation in certain quality reporting programs, but that the proposed functionality to filter does not actually achieve attribution. The commenter noted that attribution requires a more complex approach than is currently proposed with the filtering of CQM results using different combinations of data, and suggested that it was appropriate for the industry to develop attribution standards in upcoming quality standards work.

Response. We thank the commenter for the feedback. We agree that proper attribution of eCQM results to a particular provider or group of providers will require a set of defined processes. We believe that the functionality in this criterion is a good step forward toward establishing such a process while the industry continues to improve eCQM standards as described further in the Proposed Rule (80 FR 16842–16843). We intend to continue working with stakeholders to establish standards and processes for proper attribution of quality measure results for consideration in future rulemaking.

Comments. A few commenters requested clarification of the language in the preamble and suggested that testing should not require that all possible combinations of data be demonstrated as it would be time-consuming and a very large number.

Response. We clarify that for testing Health IT Modules will not be tested to every possible combination of data, but that any combination could be tested at the discretion of the tester. We also note that we have not prescribed a workflow that must be demonstrated for certification in order to provide flexibility as long as the desired outcome can be achieved.

Comments. A few commenters indicated concern over the lack of alignment between the data and associated standards proposed for this criterion compared with our proposed 2015 Edition Common Clinical Data Set definition (80 FR 16871–16872), the data proposed in the 2015 Edition

“demographics” criterion (80 FR 16816–16817), and the request for comment for “future considerations for electronically specified measures using Core Clinical Data Elements” in the CMS 2016 Inpatient Prospective Payment System (IPPS) proposed rule (80 FR 24583–24584). Commenters suggested we work to ensure alignment of the data proposed in this criterion with those in the Common Clinical Data Set definition and proposed for the demographics criterion. Commenters also suggested we work with CMS on the Core Clinical Data Elements definition.

Response. We thank commenters for the recommendation to ensure data definitions are aligned. This criterion proposes a filter by “patient age” whereas the Common Clinical Data Set and demographics certification criterion specify “date of birth.” For this certification criterion, we intend that “patient age” is derived from the patient’s date of birth, but specify “patient age” because we believe that providers should be able to filter/query CQM results by the patient’s age rather than their date of birth. For example, the provider may query for patients older than a certain age, younger than a certain age, or between a range of ages. Therefore, we have adopted patient age as a data element for this certification criterion. We believe that all the other data in this criterion are aligned with the 2015 Edition Common Clinical Data Set and “demographics” criterion. We note that the “Core Clinical Data Elements” in CMS’ 2016 IPPS proposed rule is not being proposed for the 2016 program year and is a comment solicitation for future rulemaking. We intend to continue to work with CMS on alignment of data elements being required for capture across programs.

Comments. Commenters indicated some concern that providers may use multiple Tax Identification Numbers (TINs) and different levels of TIN/ National Provider Identifier (TIN/NPI) combinations. There was general support for the use of the NPI as a data element for this criterion.

Response. We believe that including TIN and NPI in this criterion offers a baseline for filtering by these data for certification. We would expect that any programs that may require CQM reporting using TIN and/or NPI would provide additional guidance on the level to use for participation in its programs. Therefore, we have adopted TIN and NPI as data elements for this criterion.

Comments. There was general support for use of the Healthcare Provider

⁸² Available at: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=35.

⁸³ Available at: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=286.

Taxonomy Code Set⁸⁴ for classifying provider types. Commenters indicated they were not aware of additional existing standards for provider types. A few commenters indicated concern that providers can select multiple codes in the NPI system that reflects their overall practice rather than their individual specialty, and that the code may have low reliability.

Response. We thank commenters for the feedback. We agree that the Healthcare Provider Taxonomy Code Set (the “Code Set”) is the best available standard for classifying provider type at this point in time, and have therefore adopted the CMS Crosswalk: Medicare Provider/Supplier to Healthcare Provider Taxonomy, April 2, 2015 as the standard for provider type for this criterion (to the version updated April 2, 2015 as a minimum version for certification).⁸⁵ This crosswalk maps the Medicare Provider/Supplier type to the relevant healthcare provider taxonomy codes. It is our understanding that when a provider registers for an NPI number, they are required to select at least one provider type code from the Code Set, but may select more than one code. However, the provider is required to select one code as the primary code. It is also our understanding that the NPI record for a given provider contains all codes a provider selected, and so we would expect that CQM results could be filtered by any one of the provider’s selected codes (e.g., primary, secondary, tertiary, etc.). In order to ensure the NPI record is up-to-date, we would recommend that health care providers update and/or verify their registration annually in the CMS National Plan and Provider Enumeration System (NPPES)⁸⁶ to reflect the most accurate codes for the type of care the provider is currently providing. There are three methods by which an individual can access the NPI files: (1) Through a downloadable file, (2) through a display/query on the NPPES website, and (3) through an interface to the NPPES API. While health systems may keep their own internal records of NPI information for the providers practicing in their system, we recommend that any of the three above methods provides the most up-to-date information and would encourage systems to verify and use this information for their internal records.

⁸⁵ <https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/MedicareProviderSupEnroll/Downloads/TaxonomyCrosswalk.pdf>.

⁸⁶ <https://nppes.cms.hhs.gov/NPPES/Welcome.do>.

Comments. As discussed in the “transitions of care” criterion, a number of commenters suggested adoption of the U.S. Postal Service postal address standard for address as concerns patient matching. Commenters noted that the standard is widely supported by health care organizations today and is recommended by the American Health Information Management Association.⁸⁷ Some commenters were concerned about complexity in systems being able to choose the correct practice site that a patient was seen at as a patient may visit more than one practice site for a given provider. Another commenter suggested we consider the GS1 Global Location Number (GLN) standard⁸⁸ for practice site address as it is based on the USPS standard and could be filtered to provide a specific practice site address through the level of “party” and “location” using the GS1 GLN standard.

Response. We thank commenters for the input. At this point in time, we believe that use of the QRDA Category I and III standards which reference the HL7 postal format is an incremental step toward an industry standard. This is the same HL7 postal format standard referenced in C–CDA Release 2.1; and QRDA is based on the same underlying standard as C–CDA (i.e., the CDA). While we continue to analyze the USPS address standard⁸⁹ and other industry standards, we believe these standards were developed for other use cases (such as the shipping and delivery of mail or tracking medical products) than for querying for health information in the health care industry. We see a need for continued industry work to determine the appropriateness of existing standards and tools for normalizing postal address for health care uses cases, and intend to work with stakeholders in this space.

Testing and validation to the HL7 postal format in the QRDA standard is already available as part of Cypress testing⁹⁰ to QRDA for the 2014 Edition CQM certification criteria. We anticipate the Cypress testing tool for 2015 Edition CQMs criteria, including for CQM filtering, will carry over this testing and suggest that health IT developers and implementers adhere to the guidance in the QRDA Category I and III standards adopted for this criterion for the HL7 postal format. We believe it is best left to health IT developers and providers to

⁸⁷ <http://perspectives.ahima.org/wp-content/uploads/2014/12/PatientMatchingAppendixA.pdf>.

⁸⁸ <https://www.gs1.org/gln>.

⁸⁹ <http://pe.usps.gov/cpim/ftp/pubs/Pub28/pub28.pdf>.

⁹⁰ <http://projectcypress.org/>. Cypress is the testing tool used to test and certify products for CQMs in the ONC Health IT Certification Program.

work together to determine how to provide results for queries for patient seen at a particular practice site address at this point in time, and note that testing and certification will only test that a Health IT Module is able to filter CQM results by practice site address. Other programs that may require the use of this certification criterion may provide additional guidance on the definition of practice site address and guidance on attribution.

Comments. Commenters supported the Public Health Data Standards Consortium Source of Payment Typology Code Set⁹¹ for representing patient insurance. SDOs such as ANSI X12 and HL7 recognize the Source of Payment Typology Code Set for representing patient insurance in their standards.⁹²

Response. We have adopted the Public Health Data Standards Consortium Source of Payment Typology Code Set Version 5.0 (October 2011) to represent patient insurance for this criterion.

Comments. Commenters expressed concern over the value set proposed to represent patient sex.

Response. We address the value set for patient sex in the “demographics” certification criterion discussed in section III.A.3 of this preamble, to which we refer readers. As noted above and recommended by commenters, we have adopted the same standard for this criterion as for the “demographics” certification criterion, which supports alignment and consistency.

Comments. Commenters expressed concern about the proposed requirement to filter all 900+ race and ethnicity codes in the “Race & Ethnicity—CDC” code system in PHIN VADS.

Response. We addressed the comments about the CDC Race and Ethnicity code set in the “demographics” certification criterion discussed elsewhere in this section of the preamble, to which we refer readers. We continue to believe in the value of querying by granular patient race and ethnicity for identification of health disparities and supporting a provider in delivering more effective care to sub-groups of their patients. As noted above and recommended by commenters, we have adopted the same standard for this criterion as for the “demographics” certification criterion, which supports alignment and consistency.

Comments. Commenters expressed concern on the level of complexity for

⁹¹ <http://www.phdsc.org/standards/pdfs/SourceofPaymentTypologyVersion5.0.pdf>.

⁹² <http://www.phdsc.org/standards/payer-typology.asp>.

filtering by SNOMED CT® codes for patient problem list.

Response. We acknowledge commenters' concerns about the level of complexity of filtering by SNOMED CT® codes for this certification criterion. To lessen the burden while continuing to provide value for quality improvement, we clarify that for testing and certification, a Health IT Module would only need to demonstrate it can filter by the parent level code in SNOMED CT® as the code system is designed in a hierarchical manner with more specific codes grouped under more general parent codes.

Comments. One commenter suggested we consider adding the CMS Certification Number (CCN) as an additional data element for this criterion as it is used by hospitals to report their CQM data to CMS.

Response. We thank the commenter for the suggestion. At this current point in time, we believe there are complexities with using the CCN as a filter for CQMs. For example, a certified Health IT Module may be certified partway through a reporting year. The CCN also represents a unique combination of certified Health IT Modules a provider is using to meet the CEHRT definition requirements. Thus, we are not clear on the use case that would be served in requiring a Health IT Module certified to this criterion to be able to filter CQM results by CCN. We will consider the use cases and implementation of using CCN for CQM filtering for the potential expansion of this criterion through future rulemaking.

- *Authentication, Access Control, and Authorization*

2015 Edition Health IT Certification Criterion

§ 170.315(d)(1) (Authentication, access control, and authorization)

We proposed to adopt a 2015 Edition “authentication, access control, and authorization” certification criterion that was unchanged in comparison to the 2014 Edition “authentication, access control, and authorization” criterion (§ 170.314(d)(1)).

Comments. Commenters were generally supportive of this criterion as proposed. One commenter suggested that we track the National Strategy for Trusted Identities in Cyberspace (NSTIC) initiative and the NSTIC Trustmark Framework pilot. One commenter was supportive of us adopting standards for multi-factor authentication for remote authentication to EHR systems, whereas another commenter pointed out that current approaches to multi-factor

authentication are costly and burdensome to implement. One commenter discussed digital signatures as they relate to the authenticity of medical documentation.

Response. We have adopted this certification criterion largely as proposed. We have made one minor revision by replacing the term “person” in the criterion with “user.” This revision is consistent with our use of the term “user” in the 2015 Edition. We note that, notwithstanding this revision, this criterion remains eligible for gap certification.

In response to comments on multi-factor authentication, we have not adopted multi-factor authentication as part of this criterion or in another criterion or requirement as we did not propose such functionality. We will, however, continue to track NSTIC. We will also monitor industry progress with multi-factor authentication and may consider multi-factor authentication certification for a future rulemaking as noted in our discussion of the HITSC recommendations below.

Digital signatures were proposed as part of the “electronic submission of medical documentation” criterion, but were not proposed as part of this criterion. Accordingly, we have not adopted such a requirement as part of this criterion. We may, however, consider digital signatures as part of a future rulemaking.

HITSC Recommendations

We received recommendations from the HITSC after the close of the public comment period for the Proposed Rule. The HITSC recommended the adoption of a certification criterion that would include capabilities to “continuously protect the integrity and confidentiality of information used to authenticate users.” The HITSC stated that the adoption of such a criterion would strengthen the authentication capabilities in currently certified health IT. The HITSC also recommended the adoption of a certification criterion for multi-factor authentication. These recommendations for the adoption of certification criteria must proceed through the processes outlined in sections 3001 and 3004 of the Public Health Service Act (HITECH Act), which may lead to a future rulemaking proposing the adoption of criteria that include capabilities recommended by the HITSC.

- *Auditable Events and Tamper-Resistance*

§ 170.315(d)(2) (Auditable events and tamper-resistance)

We proposed to adopt a 2015 Edition “auditable events and tamper-resistance” certification criterion that was unchanged in comparison to the 2014 Edition “auditable events and tamper-resistance” criterion (§ 170.314(d)(2)) and sought comment on two issues. First, given that it does not appear that the ASTM standard indicates recording an event when an individual’s user privileges are changed, we asked for comment on whether we need to explicitly modify/add to the overall auditing standard adopted in 170.210(e) to require such information to be audited or if this type of event is already audited at the point of authentication (*e.g.*, when a user switches to a role with increased privileges and authenticates themselves to the system). We also sought comments on any recommended standards to be used in order to record those additional data elements. We reiterated our policy in the 2014 Edition “auditable events and tamper resistance” certification criterion in that the ability to disable the audit log must be restricted to a limited set of users to meet this criterion, and we stated that we believe our certification criterion is appropriately framed within the parameters of what our regulation can reasonably impose as a condition of certification. With regard to feedback to the Voluntary Edition proposed rule that there may be some events recorded in the audit log that may be more critical to record than other events, we again sought comment on whether: There is any alternative approach that we could or should consider; there is a critical subset of those auditable events that we should require remain enabled at all times, and if so, additional information regarding which events should be considered critical and why; and any negative consequences may arise from keeping a subset of audit log functionality enabled at all times.

Comments. The majority of commenters requested that this criterion remain as proposed and be eligible for gap certification. Commenters overwhelmingly agreed that emergency access was being audited and is already covered under the ASTM E2147 standard. Some commenters expressed support for specifically auditing user privilege changes with the HITSC TSSWG recommending that this

2015 Edition Health IT Certification Criterion

criterion require events to be audited in accordance with NIST SP 800–92.⁹³

Most commenters, including the HITSC TSSWG, recommended that there should be no change in the requirements related to disabling and enabling the audit log. A commenter noted that determining when the audit log should or should not be enabled is best defined by end-users of Health IT Modules and not the health IT developers. Commenters representing consumer organizations suggested that the audit log should not be able to be disabled, which they argued would enhance consumer trust. Another commenter stated that any allowance for disabling the audit logs, for any reason, compromises the integrity of the auditing.

Commenters did not identify a critical subset of those auditable events that we should require remain enabled at all times. However, one commenter suggested that as an alternative to requiring the audit log to always be enabled, we should provide regulatory guidance on the specific information to be included in the audit log, such as is stipulated in the ASTM E2147 standard. The commenter also recommended that we provide clarity on the scope of the applicability of the ASTM standard as a part of that guidance when it comes to whether the intent is to include only natural person/end user accesses or other access such as “machine to machine.”

Response. We have adopted this criterion as proposed, except that we have revised the auditing standard referenced by this criterion and adopted in § 170.210(e)(1)(i)⁹⁴ to include a requirement to audit changes in user privileges. With consideration of public comments, we believe that this is an event that should be audited for the purposes of certification. We do not, however, believe that at this time certification should expand to an extensive list of auditable events as recommended by the HITSC TSSWG. Rather, we believe that certification should remain a baseline and health IT developers and providers can expand their auditing practices as appropriate.

We did not receive an overwhelming response or rationale from commenters that convinced us to change our approach to require that a Health IT Module not permit an audit log to be disabled. In fact, comments remained

mixed and the HITSC continued to support our current approach. As recited in the Proposed Rule, there are valid reasons for disabling the audit log. We continue to believe that it is appropriate to restrict the ability to disable the audit log to a limited set of users, which permits the end user to determine if, when, and by whom the audit log may be disabled. As to the alternative approach to always enabling the audit log, we note that we have chosen to maintain the current approach, but will consider as part of the finalizing of the 2015 Edition test procedure for this criterion what additional guidance we can provide related to auditable actions consistent with the ASTM E2147 standard.

- *Audit Report(s)*

2015 Edition Health IT Certification Criterion
§ 170.315(d)(3) (Audit reports)

We proposed to adopt a 2015 Edition “audit reports(s)” certification criterion that was unchanged in comparison to the 2014 Edition “audit reports(s)” criterion (§ 170.314(d)(3)).

Comments. Commenters recommended that we adopt this criterion as proposed. A couple of commenters requested that we include additional functionality in this criterion, such as a filtering functionality (beyond sorting) and automated reporting without manual searches/sorting.

Response. We have adopted this criterion as proposed. We appreciate commenters’ suggested additional functionalities, but these functionalities are beyond the scope of our proposal. To note, certification serves as a baseline for health IT. We would expect health IT developers to incorporate such functionalities to possibly differentiate their products in the market or if specifically desired by their customers (e.g., providers).

- *Amendments*

2015 Edition Health IT Certification Criterion
§ 170.315(d)(4) (Amendments)

We proposed to adopt a 2015 Edition “amendments” certification criterion that was unchanged in comparison to the 2014 Edition “amendments” criterion (§ 170.314(d)(4)). We noted that this certification criterion only partially addresses the amendment of protected health information (PHI) requirements of 45 CFR 164.526.

Comments. Commenters supported this criterion as proposed. A commenter requested clarification as to whether amendment steps such as request,

approval/denial, and updating are to be tracked as separate unique events or as a single event with a single timestamp. A couple of commenters suggested this criterion include the capability to maintain the provenance of amendments made by patients and other patient generated health data to reduce the numbers of errors.

Response. We have adopted this certification criterion as proposed. The “tracking” or auditing of events mentioned by the commenter is outside the scope of this criterion. Rather, we would expect such actions to be subject of an entity’s auditing technology and practices. We appreciate the suggestion to maintain provenance of amendments made by patients and other patient generated health data, but this is outside the scope of the functionality proposed for this criterion.

- *Automatic Access Time-Out*

2015 Edition Health IT Certification Criterion
§ 170.315(d)(5) (Automatic access time-out)

We proposed to adopt a 2015 Edition “automatic access time-out” certification criterion that was unchanged in comparison to the 2014 Edition “automatic log-off” criterion (§ 170.314(d)(5)). In terms of the functionality within the criterion, we proposed to restate the language to require a Health IT Module to demonstrate that it can automatically stop user access to health information after a predetermined period of inactivity and require user authentication in order to resume or regain the access that was stopped. This proposal was based on feedback previously received from the HITSC Privacy and Security Workgroup (PSWG).⁹⁵ The PSWG noted in June 2014 that many systems are not session-based. Instead, systems may be stateless, clientless, and/or run on any device. The HITSC recommended that this certification criterion should not be overly prescriptive so as to inhibit system architecture flexibility. We agreed with the substance of the PSWG and HITSC recommendations and proposed to state the functionality required as specified above, noting that we do not believe this would have any impact on testing and certification as compared to testing and certification to the 2014 Edition “automatic log-off” criterion (i.e., the 2015 “automatic

⁹³ <http://csrc.nist.gov/publications/nistpubs/800-92/SP800-92.pdf>.

⁹⁴ We note that the ASTM E2147 standard has been reapproved (in 2013) with no changes. We have, therefore, revised the regulation text to reflect the reapproval. <http://www.astm.org/Standards/E2147.htm>.

⁹⁵ http://www.healthit.gov/facac/sites/faca/files/HITSC_PSWG_2015NPRM_Update_2014-06-17.pdf. The HITSC Privacy & Security Work Group changed names and became the HITSC Transport & Security Standards Work Group in July 2014.

access time-out” criterion would be eligible for gap certification).

Comments. Commenters expressed support for this criterion as proposed. The HITSC Transport and Security Standards Workgroup (TSSWG) again recommended that we change the language of the criterion to read “automatically terminate access to protected health information after a system- and/or administrator-defined period of inactivity, and reinitiate the session upon re-authentication of the user.”

Response. We thank commenters for their support. We continue to believe that the language offered by the TSSWG prescribes a particular session-based design and is not the most appropriate language for this criterion. As mentioned above, not all systems are session-based. Therefore, we have adopted this criterion as proposed.

- *Emergency Access*

2015 Edition Health IT Certification Criterion
§ 170.315(d)(6) (Emergency access)

We proposed to adopt a 2015 Edition “emergency access” certification criterion that was unchanged in comparison to the 2014 Edition “emergency access” criterion (§ 170.314(d)(6)).

Comments. Commenters supported this criterion as proposed.

Response. We have adopted this criterion as proposed.

- *End-User Device Encryption*

2015 Edition Health IT Certification Criterion
§ 170.315(d)(7) (End-user device encryption)

We proposed to adopt a 2015 Edition “end-user device encryption” certification criterion that was unchanged in comparison to the 2014 Edition “end-user device encryption” criterion (§ 170.314(d)(7)). We proposed to require certification to this criterion consistent with the most recent version of Annex A: Approved Security Functions (Draft, October 8, 2014) for Federal Information Processing Standards (FIPS) Publication 140–2.⁹⁶ We noted, however, that we do not believe that this would have any impact on testing and certification as compared to testing and certification to the 2014 Edition “end-user device encryption” criterion (*i.e.*, the 2015 “end-user device encryption” criterion would be eligible for gap certification).

⁹⁶ <http://csrc.nist.gov/publications/fips/fips140-2/fips1402annexa.pdf>.

Comments. Many commenters expressed support for leaving the certification criterion unchanged in comparison to the 2014 Edition “end-user device encryption” criterion. Many commenters also supported our proposal for using the most recent version of Annex A as cited in the Proposed Rule.

Response. We appreciate the support expressed by many commenters. We have adopted this certification criterion as proposed, including the updated version of Annex A.

Comments. Some commenters suggested that we expanded the functionality of this criterion to include server-side encryption or encryption of data in-motion. One commenter said that data should be encrypted when using cloud storage technologies. Another commenter requested clarification if this criterion applied to data at-rest or in-motion.

Response. As described in the 2014 Edition final rule (77 FR 54236–54238), the functionality included in the 2014 Edition certification criterion (and this 2015 Edition unchanged criterion) does not focus on server-side or data center hosted technology. We recognize that these implementations could employ a variety of different administrative, physical, and technical safeguards, including hardware-enabled security protections that would be significantly more secure than software oriented encryption capabilities. Rather, this criterion focuses on data locally stored on end-user devices after the use of the technology is stopped.

Comments. Some commenters stated that we should address encryption key management and key storage in this certification criterion.

Response. We agree with commenters that encryption controls depend on the encryption key remaining secure. However, this functionality is outside the scope of the proposed criterion. We also note that encryption key management often occurs outside of certified health IT and depends on the environment in which the certified health IT is deployed, and, as such, depends on organizational policy and security risk assessments. We encourage stakeholders to follow applicable guidance from the Office for Civil Rights (OCR)⁹⁷ and the National Institutes of Standards and Technology⁹⁸ for securing encryption keys.

- *Integrity*

⁹⁷ <http://www.hhs.gov/ocr/privacy/hipaa/administrative/breachnotificationrule/brguidance.html>.

⁹⁸ <http://csrc.nist.gov/publications/nistpubs/800-111/SP800-111.pdf>.

2015 Edition Health IT Certification Criterion
§ 170.315(d)(8) (Integrity)

We proposed to adopt a 2015 Edition “integrity” certification criterion that was unchanged in comparison to the 2014 Edition “integrity” criterion (§ 170.314(d)(8)). We did, however, propose a change in how a Health IT Module would be tested and certified to this criterion. We explained that the 2015 Edition “integrity” criterion would be tested and certified to support the context for which it was adopted—upon receipt of a summary record in order to ensure the integrity of the information exchanged (see § 170.315(d)(8)(ii)). Therefore, we stated that we expect that this certification criterion would most frequently be paired with the “ToC” certification criterion for testing and certification.

We sought comment on if, and when, we should set the baseline for certification to the 2015 Edition “integrity” certification criterion at SHA–2.⁹⁹ In support of this potential change, we noted that SHA–2 has much more security strength compared to the SHA–1 standard. We also pointed out that many companies, including Microsoft and Google, plan to deprecate SHA–1 no later than January 1, 2017.

Comments. Several commenters and the HITSC expressed support for increasing the integrity standard to SHA–2. One commenter pointed out that NIST has deprecated the use of SHA–1, whereas another commenter claimed that health IT would have to eventually get recertified to SHA–2 if we moved to SHA–2 at a later date (beyond the effective date of this final rule) or in a future edition. A few commenters requested that we wait until 2017 or 2018 to increase the standard to SHA–1.

Response. In 2012, NIST Special Publication 800–57¹⁰⁰ recommended that federal systems not be permitted to create new hashes using SHA–1 starting in 2014. Given that NIST, technology companies, and health IT developers are moving away from SHA–1, we believe now is the appropriate time to move towards the more secure SHA–2 standard. Therefore, we will make this new requirement effective with the effective date of this final rule. We note that there is no requirement obligating health IT developers to get their products certified to this requirement immediately, and we would expect

⁹⁹ <http://csrc.nist.gov/publications/fips/fips180-4/fips-180-4.pdf>.

¹⁰⁰ http://csrc.nist.gov/publications/nistpubs/800-57/sp800-57_part1_rev3_general.pdf.

health IT developers to not begin seeking certification to this criterion until later in 2016 for implementation in 2017 and 2018. We further note that certification only ensures that a Health IT Module can create hashes using SHA-2, it does not require the use of SHA-2. For example, users of certified health IT may find it appropriate to continue to use SHA-1 for backwards compatibility if their security risk analysis justifies the risk.

Consistent with this decision, we have also updated this criterion and standard to reference the most recent version of FIPS PUB 180-4, Secure Hash Standard, 180-4 (August 2015).¹⁰¹

2015 Edition Health IT Certification Criterion
§ 170.315(d)(9) (Trusted connection)

Please see the discussion under the “Application Access To Common Clinical Data Set” certification criteria later in this section of the preamble.

2015 Edition Health IT Certification Criterion
§ 170.315(d)(10) (Auditing actions on health information)

Please see the discussion under the “Application Access To Common Clinical Data Set” certification criteria later in this section of the preamble.

- *Accounting of Disclosures*

2015 Edition Health IT Certification Criterion
§ 170.315(d)(10) (Accounting of disclosures)

We proposed to adopt a 2015 Edition “accounting of disclosures” certification criterion that was unchanged in comparison to the 2014 Edition “accounting of disclosures” criterion (§ 170.314(d)(9)). We noted that the 2015 Edition criterion is no longer designated “optional” because such a designation is no longer necessary given that we have discontinued the Complete EHR definition and Complete EHR certification beginning with the 2015 Edition certification criteria.

Comments. Commenters expressed support for this certification criterion as proposed. A commenter recommended removing the criterion until the HHS Office for Civil Rights (OCR) issues a final rule for its previously published proposed rule regarding accounting of disclosures (76 FR 31426).¹⁰² Other commenters recommended strengthening this criterion and

specifications to enhance the ability to identify inappropriate access inside an entity or organized health care arrangement and to provide reports with sufficiently relevant data.

Response. We have adopted this certification criterion as proposed. We initially adopted an “accounting of disclosures” certification criterion to supplement HITECH Act requirements and rulemaking by OCR (75 FR 2016-17 and 75 FR 44623-24) and believe there is value in its continue adoption as proposed. We appreciate the suggested revisions offered by commenters, but believe that alignment with an “account of disclosures” final rule will provide the most certainty and useful functionality for providers, while also mitigating any health IT development and implementation burdens that may accrue through compliance with potential multiple adopted versions of this certification criterion. We believe it is most appropriate to wait and consider the provisions of an “accounting of disclosures” final rule to be issued by OCR before making any revisions to this certification criterion. As currently adopted, health IT developers have the option of pursuing certification to this criterion if they deem it advantageous.

- *View, Download, and Transmit to 3rd Party*

2015 Edition Health IT Certification Criterion
§ 170.315(e)(1) (View, download, and transmit to 3rd party)

We proposed to adopt a 2015 Edition “view, download, and transmit to 3rd party” (VDT) criterion that was revised in comparison to the 2014 Edition “VDT” criterion (§ 170.314(e)(1)).

Clarified Introductory Text for 2015 Edition VDT Certification Criterion

We proposed to revise the introductory text to lead with “Patients (and their authorized representatives) must be able to use health IT to . . .” We also proposed to use this same phrase at the beginning of each specific capability for VDT to reinforce this point. We noted that this does not override or substitute for an individual’s right to access protected health information (PHI) in a designated record set under 45 CFR 164.524.

Comments. Many commenters voiced support for the inclusion of “authorized representative” in the introductory text of VDT, noting that specifically granting the patient’s authorized representative the ability to view/download/transmit patient health information reinforces the importance of the caregiver role on the care team and supports a vision of

patient-centered care. One commenter urged us to adopt the “personal representative” term used in HIPAA.

Response. We have adopted the proposed introductory language as it clarifies that these capabilities must enable patients and their authorized representatives. We decline to use the HIPAA term “personal representative.” Rather, we have adopted our proposal of “patients (and their authorized representatives)” to be consistent with the approach we have used in previous rulemakings that aligns with the use of the term under the EHR Incentive Programs. A “patient-authorized representative” is defined as any individual to whom the patient has granted access to their health information (see also 77 FR 13720). Examples would include family members, an advocate for the patient, or other individual identified by the patient. A patient would have to affirmatively grant access to these representatives with the exception of minors for whom existing local, state, or federal law grants their parents or guardians access without the need for the minor to consent and individuals who are unable to provide consent and where the state appoints a guardian (see also 77 FR 13720).

Additionally, consistent with our certification program approach to apply particular privacy and security certification criteria to a product’s certification based on the scope of capabilities presented, we have determined that this certification criterion would be clearer and more focused if we were to remove the secure access language included in (e)(1)(i) in favor of having a specific privacy and security certification criterion that would be applicable to this criterion. In transitioning this text, we have also made a conforming revision to note that the “technology” used would need to be “internet-based” which we believe is a more generally applicable and innovation supportive term compared to the user of the word “online,” which was part of the sentence that included the security specific language that we have removed.

Updated C-CDA and Common Clinical Data Set

We proposed to reference the updated version of the C-CDA (Draft Standard for Trial Use, Release 2.0) for the “VDT” criterion and noted that compliance with Release 2.0 cannot include the use of the “unstructured document” document-level template for certification to this criterion. We also solicited comment on whether we should limit the scope of the C-CDA

¹⁰¹ <http://nvlpubs.nist.gov/nistpubs/FIPS/NIST.FIPS.180-4.pdf>.

¹⁰² <http://www.gpo.gov/fdsys/pkg/FR-2011-05-31/pdf/2011-13297.pdf>.

document created for the purposes of this criterion to just the CCD document template. We also solicited comment on whether we should require in this criterion to permit patients and their authorized representatives to select their health information for, as applicable, viewing, downloading, transmitting, or API based on a specific date or time, a period of time, or all the information available.

Comments. Multiple commenters supported the reference to C-CDA Release 2.0 document template. Some commenters voiced concern about adoption C-CDA Release 2.0 if backwards compatibility is not fully addressed. Other commenters suggested additional information that patients may need outside of the C-CDA, including referral summaries, discharge instructions, documents listed in the Patient Health Information Capture criterion, and nutrition and diet orders. Multiple commenters supported the focus on the creation of a CCD document template based on the C-CDA Release 2 for the “VDT” criterion, stating that it would be less confusing for consumers who may not be able to distinguish between different document types. In regard to our solicitation on time and date range functionality, multiple commenters were in support of adding such capabilities, while a few commenters did not agree with including this functionality.

Response. Consistent with our decision for the “ToC” criterion, we will reference C-CDA Release 2.1 in the “VDT” criterion. In response to public comment, we have narrowed the scope of the C-CDA document templates to only the CCD for this criterion. We emphasize that this requirement serves as a “floor” rather than a “ceiling” and that Health IT Modules and their purchasers may choose to add additional document types as appropriate for different practice and care settings.

We have included an updated Common Clinical Data Set for the 2015 Edition that includes references to new and updated vocabulary standards code sets. Please also see the Common Clinical Data Set definition in section III.B.3 of this preamble.

In consideration of public comments that focused on our comment solicitation around the addition of date and time filtering capabilities, we have decided to adopt such requirements as part of this criterion. We believe that adding this explicit functionality to the certification criterion provides specific clarity that patients should have certain baseline capabilities available to them when it comes to selecting the data (or

range of data) they wish to view, download, or transmit. Specifically, we have adopted within this criterion two timeframe filters that patients must be able to select and configure on their own. The first would ensure that a patient can select data associated with a specific date (to be viewed, downloaded, or transmitted) and the second would ensure that the patient could select data within an identified date range (to be viewed, downloaded, or transmitted), which must be able to accommodate the patient selecting a range that includes all data available to them. We also clarify that we are not including the ability to select a specific data element category as part of this requirement, but reiterate that these requirements represent a floor rather than a ceiling, and health IT developers may choose to add other functionalities as appropriate. The technology specifications should be designed and implemented in such a way as to provide maximum clarity to a patient (and their authorized representative) about what data exists in the system and how to interpret it, and we expect that health IT developers will make choices following design and usability best practices that will make it easier and clearer for patients to find and use their records.

Diagnostic Image Reports

We proposed to require that a Health IT Module would need to demonstrate that it can make diagnostic image reports available to the patient in order to be certified. We explained that a diagnostic image report contains a consulting specialist’s interpretation of image data, that it is intended to convey the interpretation to the referring (ordering) physician, and that it becomes part of the patient’s medical record.

Comments. Commenters were generally supportive of including diagnostic image reports and associated context in the “VDT” criterion. Some commenters requested clarification on where this data would be accessible within the C-CDA.

Response. We have adopted this proposal to include the diagnostic imaging report (including the consulting specialist’s interpretation) as a requirement in the “VDT” criterion. Health IT Modules may include this information in the “Results” section of the CCD. We clarify that unstructured data for the interpretation text is acceptable.

VDT—Application Access to Common Clinical Data Set

We have addressed all comments on this proposed provision under the “Application Access to Common Clinical Data Set” in this section of the preamble.

Activity History Log

We proposed to include “addressee” as a new data element in the 2015 Edition “VDT” criterion related to the activity history log. In the Proposed Rule, we noted that this transactional history is important for patients to be able to access, especially if a patient actively transmits his or her health information to a 3rd party or another health care provider.

Comments. Commenters were generally supportive of this new data element. One commenter suggested that we not include transmission status in the final rule because few patients actually transmit.

Response. We have adopted the new data element of “addressee” as part of the VDT criterion. While fewer patients may currently use “transmit” than “view” or “download,” we anticipate that more patients will use this functionality in the future and that this information will be helpful for transaction history.

Patient Access to Laboratory Test Reports

In the Proposed Rule, we noted recent regulatory changes addressing the intersection of the CLIA rules, state laws governing direct patient access to their laboratory test reports, and the HIPAA Privacy Rule. These regulatory changes converged in a final rule that permits a patient, or his or her “personal representative,” as applicable, to request a copy of the patient’s completed test reports directly from the laboratory or to request that the test results be transmitted to a designated person. To ensure fidelity of such reports regardless of the system delivering laboratory results to a patient, we proposed that a Health IT Module presented for certification to this criterion must demonstrate that it can provide laboratory test reports that include the information for a test report specified in 42 CFR 493.1291(c)(1) through (7); the information related to reference intervals or normal values as specified in 42 CFR 493.1291(d); and the information for corrected reports as specified in 42 CFR 493.1291(k)(2).

Comments. One commenter suggested that this requirement be removed until the C-CDA specification supports the requisite CLIA data referenced in the

Proposed Rule. Another commenter noted that some laboratory results require provider annotation and/or follow up testing before they can be released to the patient to avoid harm, particularly with certain sensitive tests such as HIV tests. Thus, a laboratory result awaiting provider annotation may not be fully “available” until the annotation is complete.

Response. We have adopted the proposed laboratory test reports requirement for the VDT criterion. We note that the C-CDA can support this information in a structured way using the “Result Observation Template” in the “Results” section. We recommend that health IT developers follow the best practices for use of these C-CDA templates as outlined by HL7 (see, e.g., HL7 Task Force Examples: http://wiki.hl7.org/index.php?title=CDA_Example_Task_Force). Further, we strongly recommend an approach favoring coded data where possible and appropriate, and anticipate that future certification editions will require more extensively coded data.

Web Content Accessibility Guidelines (WCAG)

We proposed to modify the regulatory text hierarchy at § 170.204(a) to designate the WCAG 2.0 Level A (Level A) conformance at § 170.204(a)(1) instead of § 170.204(a). This would also require the 2014 Edition “VDT” certification criterion to be revised to correctly reference § 170.204(a)(1). We also sought comment on whether we should adopt WCAG 2.0 Level AA (Level AA) conformance requirements for the “view” capability included in the 2015 Edition VDT criterion, instead of the current Level A.

Comments. Many commenters representing the patient advocate community supported the increase to Level AA; additionally, the U.S. Access Board noted that other federal agencies and programs are moving toward Level AA. Other commenters said that Level A conformance was sufficient and that level AA is not needed and overly burdensome.

Response. We have adopted and retained the Level A requirement for this criterion. However, we have included Level AA as an optional component of this certification criterion via an “or” in the certification criterion so that if a developer so chooses it can demonstrate that a Health IT Module can meet Level AA. We reiterate that the “or” does not mean that a technology would need to meet both levels. At a minimum it would need to meet Level A. We note that such information would be listed with the product as part of its

Certified Health IT Product List (CHPL) listing. We believe this option adds transparency to what capabilities products include and can better inform purchasers. We have adopted Level AA as a standard at § 170.204(a)(2). Additionally, we have determined that the certification criterion’s requirements for the application of WCAG would be clearer if it were expressed in the general requirement at the paragraph 170.315(e)(1)(i) since WCAG needs to apply to all user viewable functionality and would equally apply to and include the user experience aspects of download and transmit.

“Transmit” Request for Comment

We requested comment on (1) whether we should include the Direct Project’s Implementation Guide for Direct Project Trust Bundle Distribution specification as part of certification for the “VDT” certification criterion; and (2) whether any additional requirements are needed to support scalable trust between Security/Trust Agents (STAs) as well as ways in which we, in collaboration with other industry stakeholders, could support or help coordinate a way to bridge any gaps.

Comments. One commenter noted that the proposed inclusion of the Direct Project’s Implementation Guide for Trust Bundle Distribution will be confusing because most of the Direct Project IG for the trust bundle focuses on creating a trust bundle, not consuming it. The commenter recommended pointing developers to Section 3.0 Trust Bundle Requestors for additional guidance, and that we support participation in existing trust communities such as the National Association for Trusted Exchange (NATE). Another commenter recommended that we require EHR and HISP vendors to preload all Blue Button Patient Trust Bundles into their systems so providers using these systems can transmit records using the Direct protocol.

Response. Our intent is to ensure that an individual who wants to transmit his or her health information to a third party has options to be able to do so, and those options should be easy and convenient. Individuals who are more concerned about sharing their data in transit can choose a more secure, simple option for transmitting this information. To provide greater flexibility for patients to effectively use the “transmit” capability and to ensure that patients have an easy and near universal ability to send their health information to a destination they select, we have adopted a more flexible approach for testing and certifying “transmit” as part of this

certification criterion. In order to satisfy this portion of the certification criterion a Health IT Module must demonstrate two forms of transmission:

- (1) Email transmission (of a CCD) to any email address;¹⁰³ and
- (2) An encrypted method of electronic transmission.

This approach will provide patients with a readily understood and convenient option to simply send their health information via email. Patients, under current HIPAA regulations,¹⁰⁴ may presently ask that data be disclosed to them via unencrypted email. Therefore, including email as an option for transmission capabilities is consistent with HIPAA as well as with common communications for other purposes. We also provide and encourage an encrypted option for transmitting their health information if they prefer or need to transmit their data with added security. There is a heightened interest in security of information in transit and at rest across all industries. As such, we encourage developers to provide innovative options for individuals to easily and efficiently protect their health information based on generally available mechanisms for security and new advances in this area. In either case—whether by email or an encrypted method—the goal is to support patients in transmitting their health information on demand to a third party of their own choice. We note that, for certification, the encrypted method would be subject to the 2015 Edition privacy and security certification framework, particularly the “trusted connection” certification criterion. We refer readers to section IV.C.1 (“Privacy and Security”) of this preamble for further discussion of the 2015 Edition P&S certification framework and to the “application access to Common Clinical Data Set” section of this preamble for more information of the “trusted connection” certification criterion.

In adding flexibility to this portion of the certification criterion, the other proposals and topics on which we sought comment are moot. However, we wish to reiterate that for the purposes of meeting the second form of transmission, the Direct protocol is an encouraged and viable method, especially since health IT developers have already been certified to this functionality for the purposes of 2014 Edition certification, and will also be

¹⁰³ Please see the OCR frequently asked questions for best practices regarding the use of email for transmitting health information: http://www.hhs.gov/ocr/privacy/hipaa/faq/health_information_technology/570.html.

¹⁰⁴ 45 CFR 164.524 and related guidance.

certified to this functionality as part of 2015 Edition certification to support transitions of care requirements through the 2015 Edition “ToC” criterion. Additionally, we clarify that with respect to the second method, health IT developers have the flexibility to either establish an encrypted connection between two end points or, alternatively, secure the payload via encryption. In other words, we make no presumption and do not imply through the language in the second method that only one approach will satisfy testing and certification.

C–CDA Data Provenance Request for Comment

We refer readers to our response to this request for comment under the “ToC” criterion.

- *Secure Messaging*

2015 Edition Health IT Certification Criterion § 170.315(e)(2) (Secure messaging)

We proposed to adopt a 2015 Edition “secure messaging” certification criterion that was unchanged in comparison to the 2014 Edition “secure messaging” criterion (§ 170.314(e)(3)).

Comments. The majority of commenters supported this criterion as proposed. Some commenters suggested additional functionality for this criterion, including the ability to track responses to patient-generated messages, support languages other than English, and other forms of communication including audio, video, or images. A few commenters questioned whether patients’ devices would need to be secure and encrypted, and whether the encryption criteria would only apply to the message content. A commenter recommended that health IT developers should have to preload trust bundles. Another commenter suggested that health IT developers should be prohibited from charging significant add-on fees for secure messaging. Another commenter recommended that in-the-field surveillance is needed to ensure that health IT developers and providers were enabling this functionality. A commenter listed several issues associated with the EHR Incentive Programs Stage 3 objective and measure related to secure messaging, including the lack of a routine secure messaging use case for eligible hospitals and CAHs, that only certain types of secure messages would count, that the API alternative might drive down secure messaging using certified health IT, and that measurement should be based on those patients who “opt in.” This same

commenter also suggests that if the CMS proposal is adopted, the criterion should clearly define exclusion criteria.

Response. We have adopted this criterion with modification. We have removed the specific security requirements out of the criterion because the appropriate privacy and security (P&S) requirements will be applied through the 2015 Edition P&S certification framework finalized in this final rule. To clarify, a Health IT Module certified to this criterion will still need to demonstrate the same security requirements as included in the proposed criterion (patient/user authentication and encryption and integrity-protection), but there will be more flexibility in that a health IT developer can choose between message-level or transport level certification in accordance with § 170.315(d)(9). Certification to this criterion will also require certification to other privacy and security criteria under the P&S certification framework, including automatic log-off (§ 170.315(d)(5)) and the auditing criteria (§ 170.315(d)(2) and (3)). Our revisions to the criterion and approach are consistent with our overall approach to applying the appropriate privacy and security certification requirements to each 2015 Edition certification criterion. We refer readers to section IV.C.1 (“Privacy and Security”) of this preamble for further discussion of the 2015 Edition P&S certification framework, including specific application of the P&S certification framework to a Health IT Module presented for certification to the “secure messaging” criterion in conjunction with other certification criteria.

This criterion is no longer eligible for gap certification as the new hashing standard (a hashing algorithm with a security strength equal to or greater than SHA–2) applies to this criterion.

We appreciate the suggested additional functionalities for inclusion in this criterion (tracking responses, use of languages beyond English, and other forms of communication, and preloaded trust bundles), but the functionalities are beyond the scope of our proposal. We will consider these additional functionalities for a future edition of this criterion. We clarify in this final rule that the encryption requirements only apply to the message content and not to patients’ devices.

We cannot prescribe the fees health IT developers charge for their certified health IT, but note that our transparency provisions (§ 170.523(k)) require ONC–ACBs to ensure that health IT developers make public the types of costs they charge to enable certified

health IT. ONC–ACBs also conduct surveillance of certified health IT under the ONC Health IT Certification Program to ensure that health IT continues to function as initially certified. Surveillance can be initiated randomly or in response to complaints.

For concerns and questions related to the EHR Incentive Programs, we refer readers to CMS and the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**. We note that health IT certified to certification criteria that support percentage-based measures under the EHR Incentive Programs (i.e., this criterion) must also be able to record, at a minimum, the numerator for that measure per the CEHRT definition requirements and the “meaningful use measurement calculation” certification criteria (§ 170.315(g)(1) and (g)(2)).

- *Patient Health Information Capture*

2015 Edition Health IT Certification Criterion § 170.315(e)(3) (Patient health information capture)

In following the HITSC recommendation for Health IT Module functionality to store an advance directive and/or include more information about the advance directive, we proposed a 2015 Edition “patient health information capture” certification criterion that would “replace” the 2014 Edition “advance directives” certification criterion (§ 170.314(a)(17)) and apply to various patient health information documents. We stated that a Health IT Module would need to enable a user to: (1) Identify (e.g., label health information documents as advance directives and birth plans), record (capture and store) and access (ability to examine or review) patient health information documents; (2) reference and link to patient health information documents; and (3) record and access information directly and electronically shared by a patient.

We received general comments and comments on each of the capabilities included in the proposed criterion. We have divided and responded to the comments in a similar manner.

Comments. Commenters expressed general agreement with this criterion, with broad support across health IT developers, providers, consumers, and various advocacy groups. Commenters stated that this functionality could support addressing health disparities in populations that are less likely to execute healthcare planning documents

or provide health information to providers.

Response. We thank commenters for their feedback. We have adopted this criterion as proposed with the revisions and clarifications specified below. As adopted, we anticipate health IT developers will develop innovative and efficient ways to meet this criterion and simultaneously support providers accepting health information from patient.

Identify, Record, and Access Information Documents

Comments. Commenters universally supported this proposed provision.

Response. We thank commenters for their support. We have adopted the capabilities of this provision (identify, record, and access information documents) by combining them with the proposed provision of this criterion that included capabilities to record and access information directly and electronically shared by a patient. The capabilities to identify, record, and access patient health information documents are essentially a subset of the capabilities to record and access information directly and electronically shared by a patient, except for the proposed “identification” capability. Therefore, we have specifically retained the “identification” capability, while merging the other capabilities to finalize a provision that requires health IT to enable a user to identify, record, and access information directly and electronically shared by a patient (or authorized representative).

Reference and Link Documents

Comments. Most commenters supported this requirement, while some commenters did not agree that there was value in linking documents and others expressed security concerns. A commenter stated that a link could require additional log in credentials. A few commenters also expressed concerns regarding a system’s need to capture information from any external internet site, stating that a patient (intentionally or unintentionally) could provide a URL to the provider that contained a virus.

Response. The criterion focuses solely on the ability of the Health IT Module to be able reference (providing narrative information on where to locate a specific health information document) and link to patient health information. “Linking,” as described in the Proposed Rule, requires a Health IT Module to demonstrate it could link to an internet site storing a health information document. While an intranet link to a health information document might

suffice for provider use, a Health IT Module will still need to demonstrate the ability to link to an external site via the internet for the purposes of certification. The requirement of this provision does not go beyond this specified functionality.

This criterion is subject to the 2015 Edition privacy and security (P&S) certification framework adopted in this final rule. In this regard, a Health IT Module certified to this criterion would also need to be certified to the P&S certification criteria in § 170.315(d)(1) (authentication, access control, and authorization), (d)(2) (auditable events and tamper resistance), (d)(3) (audit reports), (d)(4) (amendments), (d)(5) (automatic log-off), and (d)(9) (trusted connection).¹⁰⁵ We believe these certification criteria and included capabilities will assist a provider in protecting its health IT system against potential security concerns. However, we note that certification is a baseline. Health IT developers and providers have the discretion to both determine what types of security features should be implemented (e.g., multi-factor authentication) with the functionality included in this criterion and whether to accept specific electronic information from a patient, such as a URL.

Record and Access Information Directly Shared by a Patient

Comments. Many commenters expressed support for this provision, including not specifying standards for compliance. A few commenters requested we identify standards or ensure compatibility with other standards such as the C-CDA or Direct messaging protocol. Most commenters sought clarification of this requirement. A couple of commenters suggested we drop this provision. A few commenters requested to know if this criterion was intended to directly support the proposed EHR Incentive Programs Stage 3 objective and measure regarding patient-generated health data and what types of patient health information was contemplated by this criterion. A commenter suggested making this functionality a separate criterion.

Response. The intent of this provision is to establish at least one means for accepting patient health information directly and electronically from patients in the most flexible manner possible. This approach means focusing on functionality and not standards. Further, we do not believe there are

¹⁰⁵ We refer readers to section IV.C.1 (“Privacy and Security”) of this preamble for further discussion of the 2015 Edition P&S certification framework.

appropriate standards that we could adopt that cover all the conceivable use cases.

This criterion was specifically included in the CEHRT definition to ensure, at a minimum, providers participating in the EHR Incentive Programs had this capability. While it could potentially be used to support the Stage 3 objective and measure regarding patient-generated health data, it was not proposed with the intention of it being the only means available for meeting the Stage 3 objective and measure. Rather, the goal was to set a foundation for accepting information directly from patients.

We do not seek to define the types of health information that could be accepted as we believe this should be as broad as possible. The types of health information could be documents as described in the Proposed Rule (e.g., advance directive or birth plans) or health information from devices or applications. The devices and applications could include home health or personal health monitoring devices, fitness and nutrition applications, or a variety of other devices and applications. In addition, patient health information could be accepted directly and electronically through a patient portal, an API, or even email.

We have determined that it is most appropriate to keep all the functionality in one criterion and combine capabilities as noted above. We emphasize that it is always possible to have multiple technologies certified together as a one “Health IT Module” to meet this criterion.

We note that we intend for “patient” to be interpreted broadly to include an authorized representative. For clarity, we have specified this intent in regulation.

• Transmission To Immunization Registries

2015 Edition Health IT Certification Criterion
§ 170.315(f)(1) (Transmission to immunization registries)

We proposed to adopt a 2015 Edition “transmission to immunization registries” certification criterion that was revised in comparison to the 2014 Edition “transmission to immunization registries” criterion (§ 170.314(f)(2)). To note, we have structured the comments we received and our responses based on the specific proposed provisions of this criterion.

Comments. Most commenters supported the proposed criterion. Many commenters noted the value of the proposed criterion to bi-directional data

exchange of immunization data, which was not supported by the functionality included in the 2014 Edition “transmission to immunization registries” criterion. Commenters also noted the importance of NDC and CVX codes, but expressed concern regarding issues with NDC codes as discussed in more detail below. One commenter suggested that intermediaries should be able to play a role, such as transformation of the data, in the transmission of immunization data and that only one system in the process of moving the immunization information from sender to public health agency should be required to be certified. Another commenter requested clarification if the criteria would be part of the Base EHR definition.

Response. We appreciate the support for the proposed certification criterion. We have adopted this certification criterion as proposed, but with an update to the proposed IG and the clarifications in response to comments discussed in detail below. We clarify for commenters that any health IT can be certified to this criterion if it can meet all the requirements of the criterion, which include context exchange and vocabulary standards but do *not* specify a transport standard or mechanism. We further clarify that this criterion is not included in the 2015 Edition Base EHR definition, but would support meeting one of measures under the public health objective of the EHR Incentive Programs Stage 3.

Implementation Guide for Transmission to Immunization Registries

We proposed to adopt the CDC’s updated implementation guide for immunization messaging, HL7 Version 2.5.1: Implementation Guide for Immunization Messaging, Release 1.5 (October 2014) (“Release 1.5”). We explained that the updated IG promotes greater interoperability between immunization registries and health IT systems, addresses issues from the previous release, and revises certain HL7 message elements to reduce data element recording differences between states and public health jurisdictions.

Comments. The majority of commenters supported adoption of Release 1.5, acknowledging that it resolves known issues in the previous release and offers improved support for standard data transmission. Some commenters noted that Release 1.5 includes references to the CDC Race and Ethnicity code set for purposes of the exchange of race and ethnicity data—which is more granular regarding race and ethnicity options for reporting when compared to the OMB standards.

These commenters asked for clarification of the required use of aggregated OMB standard values.

Response. We appreciate the support for Release 1.5. We note that the CDC has issued an addendum to Release 1.5.¹⁰⁶ The addendum consolidates the IG information that clarifies the conformance requirements, but does not specify additional substantive requirements. The addendum also provides value set requirements, general clarifications, and errata. The errata provides corrections to the length, data type, data type descriptions, usage, cardinality and/or value sets for various message elements, as well as corrections to, and addition of, conformance statements where they were mistakenly omitted. The addendum also includes clarifications to use of coding systems and value sets, additional examples of sending multiple forecast recommendations in a single message, usage of particular message elements (including those in the ORC and RXA segments), and updates to the value sets for patient eligibility status and vaccine funding source. We believe that Release 1.5 and the addendum are important components to advancing public health reporting and interoperability. We, therefore, have adopted HL7 Version 2.5.1: Implementation Guide for Immunization Messaging, Release 1.5 (October 1, 2014) and HL7 Version 2.5.1: Implementation Guide for Immunization Messaging, Release 1.5, Addendum (July 2015) for the transmission to immunization requirement. We clarify that to meet this criterion, health IT must comply with all mandatory requirements of Release 1.5 and its addendum, which would include the coding for race and ethnicity. The 2015 Edition “demographics” criterion and Common Clinical Data Set requirements related to race and ethnicity are not implicated by this criterion.

National Drug Codes for Administered Vaccinations

We proposed to require for certification that a Health IT Module be able to electronically create immunization information for electronic transmission to immunization registries using NDC codes for vaccines administered (*i.e.*, the National Drug Code Directory—Vaccine Codes, updates through January 15, 2015¹⁰⁷). For historical vaccines, we proposed to continue the use of CVX codes and

proposed to adopt the HL7 Standard Code Set CVX—Vaccines Administered, updates through February 2, 2015¹⁰⁸ as the baseline version for certification to the 2015 Edition.

We solicited comment on whether we should allow use of NDC codes for administered vaccines as an option for certification, but continue to require CVX codes for administered vaccines for the 2015 Edition. We also solicited comment on whether we should require CVX plus the HL7 Standard Code Set MVX—Manufacturers of Vaccines Code Set (October 30, 2014 version)¹⁰⁹ as an alternative to NDC codes for administered vaccines, and we sought feedback on the implementation burden for health IT developers and health care providers related to requiring CVX plus MVX codes versus NDC codes for administered vaccines.

Comments. The majority of commenters supported the use of NDC codes for administered vaccines and CVX codes for historical vaccines. Commenters stated that using NDC codes for administered vaccines is valuable because NDC codes provide more granular data than CVX codes, which can improve patient safety. Comments also stated that adopting NDC for administered vaccines aligns with on-going industry efforts related to vaccine data capture.

Some commenters suggested that mapping NDC codes to CVX could be burdensome for health IT developers and immunization registries, especially for a multiple component vaccine. Commenters noted that NDC codes are subject to change and codes are added and changed more frequently than CVX and MVX codes. Commenters further noted that the reuse of NDC codes by FDA can present difficulties regarding the transmission of immunization data using such codes. One commenter requested clarification on when NDC and CVX codes are required and noted the importance of clear requirements by states when NDC, CVX, or both codes would be needed.

Response. We appreciate commenters support for the use of NDC codes for administered vaccines and CVX codes for historical vaccines. For the purposes of administered vaccines, when an immunization is reported at the time it is administered and the actual product is known, the NDC code must be sent. We clarify that for when sending historical vaccines and the actual NDC code is not available, CVX codes can be

¹⁰⁶ <http://www.cdc.gov/vaccines/programs/iis/technical-guidance/hl7.html>.

¹⁰⁷ http://www2a.cdc.gov/vaccines/iis/iisstandards/ndc_tableaccess.asp.

¹⁰⁸ <http://www2a.cdc.gov/vaccines/iis/iisstandards/vaccines.asp?rpt=cvx>.

¹⁰⁹ <http://www2a.cdc.gov/vaccines/iis/iisstandards/vaccines.asp?rpt=mvx>.

sent as this method would be supported by health IT certified to this criterion. We understand the concerns regarding ensuring that the appropriate amount of information is available for immunizations and the concern regarding mapping between NDC and CVX for purposes of reporting. Therefore, we finalize a criterion that supports one set of codes to be used for administered vaccines at all times and another set of codes to be used for historical vaccines at other times. Therefore, we have adopted the August 17, 2015 version of the CVX code set as the minimum standards code set for historical vaccines. For purposes of administered vaccines, we have adopted the National Drug Codes (NDC)—Vaccine NDC Linker, updates through August 17, 2015 as the minimum standards code set. We refer readers to section III.A.2.c (“Minimum Standards” Code Sets) for further discussion of our adoption of minimum standards code sets and our decision to adopt these versions.

Immunization History and Forecast

We proposed that a Health IT Module would need to enable a user to request, access, and display a patient’s immunization history and forecast from an immunization registry in accordance with Release 1.5. We requested comment on whether we should include an immunization history information reconciliation capability in this criterion and the factors we should consider regarding the reconciliation of immunization history information. We explained that we believe that bidirectional exchange between health IT and immunization registries is important for patient safety and improved care. Immunization registries can provide information on a patient’s immunization history to complement the data in the health IT system. We noted that immunization registries also provide immunization forecasting recommendations according to the Advisory Committee on Immunization Practices (ACIP)’s recommendations. This information allows for the provider to access the most complete and up-to-date information on a patient’s immunization history to inform discussions about what vaccines a patient may need based on nationally recommended immunization recommendations.

Comments. Many commenters recognized the benefit of bi-directional data exchange to patient safety and population health, but some commenters expressed concern. Commenters primarily expressed concern that immunization registries

were not ready for bi-directional data exchange. Other commenters, however, noted that 28 Immunization Information Systems (IIS) (which, according to the commenter, represents about 52% of reporting systems) have notified the CDC of their query capabilities in production today using HL7 2.5.1. The commenter noted that the proportion would likely rise to near 100% by 2018. A few commenters questioned the utility of the ability to query a state registry.

Many commenters also expressed concern regarding reconciliation of forecasting data. One commenter noted that we should permit innovation to occur by not prescribing the workflows related to reconciliation. Another commenter noted that where bi-directional exchange is already in production, several different workflows exist within health IT products for reconciliation of immunization history.

Commenters expressed support for vaccine forecasting, but many commenters also stated that incorporating a forecast from an immunization registry into a health IT system could be difficult. Other commenters noted that some products already have forecasting functions, such as CDS functions for forecasting immunizations and, by association with forecasting, more complete data for allergies and contraindications.

Response. We have adopted the requirement for a Health IT Module to enable a user to request, access, and display a patient’s immunization history and forecast from an immunization registry in accordance with the Release 1.5 IG. We note that this criterion and its included capabilities are designed and focused on health IT, such as EHRs. In this regard, the goal is that health IT is certified to the criterion and its included capabilities (e.g., the Release 1.5 IG). Providers who adopt health IT certified to this criterion would then have the capabilities to meet requirements under the EHR Incentive Programs or query an IIS.

While we agree with commenters that some health IT (e.g., EHR products) may sometimes have a version of the immunization history or a version of the forecast that may differ from the immunization registry, we still believe that it is important for an EHR to receive the history and forecast from the registry. Based on compliance with the Release 1.5 IG, a user would be able to see and compare the forecast from the certified health IT (e.g., EHR products) with the forecast from the immunization registry. However, we note that this criterion does not prescribe a particular workflow or reconciliation

requirements. Providers and health IT developers may reconcile forecast and history information in a manner that best meets their needs for workflow and patient safety.

• Transmission to Public Health Agencies—Syndromic Surveillance

2015 Edition Health IT Certification Criterion

§ 170.315(f)(2) (Transmission to public health agencies—syndromic surveillance)

We proposed to adopt a 2015 Edition certification criterion for transmission of syndromic surveillance to public health agencies that was revised in comparison to the 2014 Edition version (§ 170.314(f)(3)) for the inpatient setting. We noted, however, that this proposed certification criterion is unchanged (for the purposes of gap certification) for the ambulatory setting. Given the varied adoption of methods for transmitting syndromic surveillance information to public health agencies from ambulatory settings, we proposed to continue to distinguish between ambulatory and emergency department, urgent care, and inpatient settings.

Comments. Commenters expressed support for distinguishing ambulatory settings from emergency department, urgent care and inpatient settings, especially given the variations in data requirements and readiness for data acceptance among the states. A commenter also noted that the distinction was appropriate because ambulatory systems are still evolving. Some commenters requested clarification of exclusions, active engagement, and other requirements to meet the syndromic surveillance measure under the EHR Incentive Programs.

Response. We appreciate the support offered by commenters and agree that it is appropriate to distinguish between settings. For questions related to the EHR Incentive Programs, we refer readers to CMS and the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**.

Emergency Department, Urgent Care, and Inpatient Settings

We proposed to adopt the PHIN Messaging Guide for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Care Settings, Release 2.0, September 2014 (“Release 2.0”), due to its improvements over previous versions.

Comments. The majority of commenters supported the proposed IG. One commenter suggested that, due to state variability, a standard should not

be referenced until at least 75% of states are committed to the use of a common standard. Other comments noted that Release 2.0 is the standard used by all states accepting hospital-based syndromic surveillance data. A commenter suggested that laboratory information be removed as required from the IG as states already collect this information under electronic laboratory reporting. One commenter suggested that there was a potential discrepancy between OMB value sets for race and ethnicity and the CDC Race and Ethnicity referenced code set in the IG. Another commenter asked for clarification of the “message frequency requirement of syndromic messages,” noting that the requirements within Release 2.0 may be burdensome for health IT developers. A commenter requested that certification include optional data elements within the IG.

Response. We appreciate the overall support for this criterion and the Release 2.0 IG. The CDC has recently published an updated version of the IG (April 21, 2015)¹¹⁰ that reflects work to correct errors and clarify ambiguities that were present in the proposed version (dating back to Release 1.0) as well as provide missing information. The CDC also recently published an addendum to the IG, titled “Erratum to the CDC PHIN 2.0 Implementation Guide, August 2015; Erratum to the CDC PHIN 2.0 Messaging Guide, April 2015 Release for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Care Settings” (“Erratum”).¹¹¹ The Erratum consolidates Release 2.0 information and clarifies existing conformance requirements of the IG. For example, it specifies conformance statements and conditional predicates that clarify message requirements. It also specifies value set requirements, provides general clarifications, and PHIN MG corrections. Overall, the April 21, 2015, updated version and the addendum do not create additional substantive requirements in comparison to Release 2.0. Rather, through the corrections, clarifications, and additional information the IG will improve testing, certification, implementation, and interoperability. Therefore, we have adopted this criterion with both the April 21, 2015, updated version and addendum.

We believe that the additional IG requirements for laboratory information are critical for public health as not all

laboratory information is reportable to public health through electronic laboratory reporting. These additional data elements enable public health jurisdictions to monitor the nation’s public health. We also clarify that the aggregated OMB value sets for race and ethnicity are acceptable within Release 2.0. We decline to make the optional elements of the IG required for certification as we believe that certification to the IG as published appropriately supports the use case. We also note that any IG instructions regarding the frequency of submission are outside the scope of certification as certification focuses on the technical capabilities of the Health IT Module presented for certification.

Ambulatory Syndromic Surveillance

We proposed to permit, for ambulatory setting certification, the use of any electronic means for sending syndromic surveillance data to public health agencies as well as optional certification to certain syndromic surveillance data elements. Due to the continued lack of mature IGs, we proposed to provide the option for health IT to electronically produce syndromic surveillance information that contains patient demographics, provider specialty, provider address, problem list, vital signs, laboratory results, procedures, medications, and insurance.

Comments. Most commenters stated that the majority of public health jurisdictions do not accept ambulatory syndromic surveillance data and that the standards for ambulatory syndromic surveillance are not mature. In particular, one commenter noted that syndromic surveillance standards for ambulatory encounters remain ill-defined and derivative of the inpatient standards. A few commenters stated that the “flexibility” in certification created burden on both providers and health IT developers to develop and implement health IT to meet the specified data elements without an established use case across public health jurisdictions.

Response. With consideration of public comments, comments received on a prior rulemaking (79 FR 54439–54441), and stakeholder feedback through public health outreach, we have determined to not adopt certification requirements for the ambulatory setting. Without mature standards and the widespread acceptance of ambulatory syndromic surveillance data across public health jurisdictions, sufficient reason does not exist to justify certification to the proposed functionality. To clarify, the PHIN 2.0 IG does support the *urgent care* ambulatory setting and would be

appropriate for use in that particular setting.

• *Transmission To Public Health Agencies—Reportable Laboratory Tests and Values/Results*

2015 Edition Health IT Certification Criterion

§ 170.315(f)(3) (Transmission to public health agencies—reportable laboratory tests and values/results)

We proposed to adopt a 2015 Edition certification criterion that was revised in comparison to the 2014 Edition “transmission of reportable laboratory tests and values/results” criterion (§ 170.314(f)(4)). We proposed to name this criterion “transmission to public health agencies—reportable laboratory tests and values/results” to clearly convey the capabilities included in this criterion as they relate to the intended recipient of the data. We proposed to include and adopt an updated IG, the HL7 Version 2.5.1 Implementation Guide: Electronic Laboratory Reporting to Public Health, Release 2 (US Realm), DSTU R1.1, 2014 or “Release 2, DSTU R1.1” that addresses technical corrections and clarifications for interoperability with laboratory orders and other laboratory domain implementation guides. Given the improvements included in the updated IG (Release 2, DSTU R1.1), we proposed to adopt it at § 170.205(g)(2) and include it in the 2015 Edition “transmission of reportable laboratory tests and values/results” certification criterion at § 170.315(f)(3). We also proposed the September 2014 Release of the U.S. Edition of SNOMED CT® and LOINC® version 2.50. We also proposed to make a technical amendment to the regulation text for the 2014 Edition criterion in order to have it continue to reference the appropriate standard and implementation specifications¹¹² after we restructured the regulatory text hierarchy at § 170.205(g) to accommodate our 2015 Edition proposal.

Comments. Most commenters supported the proposed criterion and standards. A few commenters expressed concern with the proposed IG related to use of OIDs, SPM–22 and SPM–24.

Response. We appreciate the expression of support for this criterion and the proposed standards. We note, however, that the HL7 Public Health and Emergency Response Workgroup is currently working on a newer version of

¹¹⁰ http://www.cdc.gov/nssp/documents/guides/syndrsurvmsgguide2_messagingguide_phn.pdf.

¹¹¹ <http://www.cdc.gov/nssp/documents/guides/erratum-to-the-cdc-phin-2.0-implementation-guide-august-2015.pdf>.

¹¹² HL7 2.5.1 and HL7 Version 2.5.1: Implementation Guide: Electronic Laboratory Reporting to Public Health, Release 1 with Errata and Clarifications and ELR 2.5.1 Clarification Document for EHR Technology Certification.

the proposed IG that harmonizes with the HL7 Laboratory Results Interface (LRI) profiles. Harmonization with LRI will address the noted concerns as well as ensure alignment across laboratory IGs, including the LRI IG and the Laboratory Orders Interface (LOI) IG. This updated IG is not yet complete and cannot be adopted at this time. With these considerations, we do not believe it would be appropriate to adopt the proposed IG as health IT developer and provider efforts to meet and implement the requirements of the proposed IG would shortly be superseded by the updated IG. Therefore, we have not adopted the proposed IG. We have also not adopted the updated vocabulary standards because without a newer IG, there is little benefit from having health IT developers be tested and certified to updated vocabulary standards for this particular use case.

We have adopted a 2015 Edition “transmission to public health agencies—reportable laboratory tests and values/results” certification criterion that requires adherence to the same standards as we referenced in the 2014 Edition “transmission of reportable laboratory tests and values/results” criterion. Data from CDC and CMS indicates that over 80% of hospitals are already in the process of submitting electronic laboratory results using the previously adopted standards (HL7 Version 2.5.1 Implementation Guide: Electronic Laboratory Reporting to Public Health, Release 1 with Errata and Clarifications, ELR 2.5.1 Clarification Document for EHR Technology Certification, and versions of SNOMED CT® and LOINC®). Our decision to adopt these same standards for the 2015 Edition criterion will ensure continuity in reporting and reduce burden for providers as well as health IT developers as this criterion is eligible for gap certification. We will continue to monitor the development of the updated IG and may consider proposing it for adoption through a future rulemaking to give health IT developers and providers another option to meet EHR Incentive Programs requirements for use of certified health IT to meet public health objectives and measures.

- *Transmission To Cancer Registries*

2015 Edition Health IT Certification Criterion
§ 170.315(f)(4) (Transmission to cancer registries)

We proposed to adopt a 2015 Edition “transmission to cancer registries” certification criterion that was revised in comparison to the 2014 Edition

“transmission to cancer registries” certification criterion (§ 170.314(f)(6)). We proposed to adopt the HL7 Implementation Guide for CDA® Release 2: Reporting to Public Health Cancer Registries from Ambulatory Healthcare Providers Release 1 or “HL7 Release 1 IG”) to address technical corrections and clarifications for interoperability with EHRs and cancer registries, at § 170.205(i)(2). We proposed to include the September 2014 Release of the U.S. Edition of SNOMED CT® and LOINC® version 2.50 in this criterion. We proposed to modify the 2014 Edition certification criterion to reference § 170.205(i)(1) to establish the regulatory text hierarchy necessary to accommodate the standard and IG referenced by the proposed 2015 Edition certification criterion.

Comments. The majority of commenters expressed support for this criterion as proposed, including the HL7 Release 1 IG. Commenters stated that the proposed IG would provide substantial improvements in cancer reporting. Commenters also expressed support for incorporating updated versions of SNOMED CT® and LOINC® in this criterion as the vocabulary standards align with the IG requirements. Some commenters suggested mapping the IG to the currently used North American Association of Central Cancer Registries (NAACCR) format for any new cited standards. A commenter contended there was contradictory use of null values within the proposed IG. A few commenters expressed general concern regarding a lack of standardization across public health jurisdictions and registries to accept data according to proposed public health standards.

Response. We appreciate the overall support for this criterion and the HL7 Release 1 IG. The CDC recently published and updated version of the IG (HL7 CDA® Release 2 Implementation Guide: Reporting to Public Health Cancer Registries from Ambulatory Healthcare Providers, Release 1; DSTU Release 1.1, U.S. Realm)¹¹³ (“Release 1.1.”). Release 1.1 involves technical corrections to Release 1. No new content has been included. The templates in the IG were versioned due to the versioning of included templates (see the detailed section “Changes from Previous Version” in Volume 2 of this guide for a detailed view of these changes). The TNM Clinical Stage Observation was separated into a nested series of smaller, easier to implement templates. To note, the TNM Clinical Stage Observation

template had grown into a large, multi-level template that was difficult to implement and test. Similar changes were made to the TNM Pathologic Stage Observation template. Release 1.1 also addresses the contradictory use of nullFlavor attributes. A final notable revision is a constraint in the Cancer Diagnosis Observation that provided a choice between the TNM Pathologic Stage Observation and a No Known TNM Pathologic Stage Observation was replaced by a choice of standard constraints on the same two templates. This revision results in both an easier to understand specification and a simplified schematron file used for validation.

We have adopted this criterion with the updated IG, Release 1.1 (both Volumes 1 and 2). Commenters were supportive of our overall proposed approach and the proposed IG. As detailed above, Release 1.1 addresses errors, ambiguities, implementation issues, and commenters’ concerns. Therefore, the adoption of Release 1.1 will lead to improved implementation and interoperability.

Mapping to the NAACCR format is not included in the IG because the mapping rules are complex, and can change over time based on continued input and refinement by the cancer registry community. It is our understanding that the CDC will work closely with the cancer registry community to develop mapping rules for the IG and will incorporate the rules into the software tools CDC provides state cancer registries. In regard to concerns expressed about jurisdictional variations, all public health jurisdictions have all adopted the HL7 IG Release 1 for cancer reporting and will be moving to the updated version published by the CDC.

We have adopted a newer baseline versions of SNOMED CT® (September 2015 Release of the U.S. Edition) and LOINC® (version 2.52) for the purposes of certification. We refer readers to section III.A.2.c (“Minimum Standards” Code Sets) for further discussion of our adoption of minimum standards code sets and our decision to adopt these versions.

Cancer Case Information

We did not propose a “cancer case information” criterion as part of the 2015 Edition (80 FR 16854–855), but welcomed comments on this approach.

Comments. Commenters expressed agreement with discontinuing the “cancer case information” certification criterion, with a commenter noting the relevant data elements are already contained in the IG referenced in the

¹¹³ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=398.

2015 Edition “transmission to cancer registries” certification criterion. A commenter asked for clarification as to whether the discontinuation of this criterion affects the requirements of the “transmission to cancer registries” certification criterion and the requirements of the IG.

Response. We thank commenters for their feedback and have *not* adopted a “cancer case information” certification criterion. This decision has no impact on the requirements of the 2015 Edition “transmission to cancer registries” certification criterion or the requirements of the IG. Certification to the 2015 Edition “transmission to cancer registries” criterion requires a Health IT Module to demonstrate that it can create a file with the necessary cancer case information in accordance with the IG.

• *Transmission To Public Health Agencies—Electronic Case Reporting*

2015 Edition Health IT Certification Criterion

§ 170.315(f)(5) (Transmission to public health agencies—electronic case reporting)

We proposed to adopt a new 2015 Edition “transmission to public health agencies—case reporting” certification criterion, which would support the electronic transmission of case reporting information to public health agencies. We proposed to require a Health IT Module to be able to electronically create case reporting information for electronic transmission in accordance with the IHE Quality, Research, and Public Health Technical Framework Supplement, Structured Data Capture, Trial Implementation (September 5, 2014) standard. We noted that a Health IT Module would need to demonstrate that it can create and send a constrained transition of care document to a public health agency, accept a URL in return, be able to direct end users to the URL, and adhere to the security requirements for the transmission of this information.

In addition, we requested comment on whether we should consider adopting the HL7 FHIR Implementation Guide: SDC DSTU that would be balloted in mid-2015 in place of, or together with, the IHE Quality, Research, and Public Health Technical Framework Supplement.

Comments. Commenters expressed agreement on the importance of case reporting for public health. Some commenters expressed no concerns with the IHE profile, while others were unsure whether public health agencies had been sufficiently involved in the creation of the IG to warrant adoption in

the 2015 Edition. The latter commenters stated that the IG is primarily driven by clinical research requirements and has not been adopted by the public health community. Some commenters expressed concern with the potential use of the FHIR standard, stating it is immature and requires piloting and initial deployments before it can be adopted as a national standard. A commenter recommended that case reporting remain as a public health reporting option for the EHR Incentive Programs, but not be constrained by a requirement to use a specific standard.

Response. We understand commenters’ concerns with the current state of standards available and the continual evolution of standards. We also agree with commenters’ suggestions that an appropriate approach for this criterion would be to permit flexibility for case reporting by not referencing a specific content exchange standard for certification at this time.

We understand the industry is moving towards RESTful approaches and considering FHIR for different exchange patterns, including case reporting. To accommodate this evolution, we have not adopted the proposed IHE profile as part of this certification criterion or another exchange standard. We understand that there are certain functional requirements that a Health IT Module would need to support to enable electronic case reporting. Specifically, a Health IT Module would need to support the ability to electronically: (1) Consume and maintain a table of trigger codes to determine which encounters should initiate an initial case report being sent to public health; (2) when a trigger is matched, create and send an initial case report to public health; (3) receive and display additional information, such as a “notice of reportability” and data fields to be completed; and (4) submit a completed form.

Public health agencies have, however, prioritized receiving the initial electronic case report form, while building the infrastructure to request supplemental data over time. Given the priority to receive the initial case report form, we have adopted the following functionality that supports the first two identified steps above. To meet this certification criterion, a Health IT Module must be able to (1) consume and maintain a table of trigger codes to determine which encounters should initiate an initial case report being sent to public health to determine reportability; and (2) when a trigger is matched, create an initial case report that includes specific data (Common Clinical Data Set; encounter diagnoses;

provider name, office contact information, and reason for visit, and an identifier representing the row and version of the trigger table that triggered the case report).

The CCD template of the C-CDA Release 2.1 is currently the most viable approach for achieving step (2) above. We note, however, that the CDC and CSTE, with the HL7 Public Health and Emergency Response Working Group, are currently developing C-CDA and FHIR IGs to specify the data needed in the initial case report form and the data that would be provided in the information returned to the provider. As standards evolve, additional/supplemental data would likely be requested electronically about cases for which public health has received an initial case report that is deemed reportable. To support this additional data reporting, the future might include a FHIR-based approach that could utilize the FHIR Structured Data Capture (SDC) IG. Therefore, we believe this overall initial certification approach establishes necessary flexibility within the ONC Health IT Certification Program related to electronic case reporting in that as technical approaches evolve to accomplish electronic case reporting they can be certified. In the future, we may be able to consider a specific standard for certification through rulemaking.

We note that we have inserted “electronic” in the criterion name to emphasize the evolution of case reporting and the importance of *electronic* case reporting.

Comments. Many commenters expressed concern around the burden of connecting to multiple jurisdictions. One commenter noted a typical practice may be required to report in three different states using entirely different technologies, standards, and processes. The commenter recommended that the public health community develop a single reporting hub where all reports are submitted using the same technologies, standards, and processes. A couple of commenter suggested the use of a centralized platform or intermediary, which could streamline connectivity and reduce jurisdictional variability.

Response. We agree with commenters that a common public health interface or intermediary would reduce the burden on health IT developers and state and local public health agencies. The CDC and the public health community have made an investment in a centralized approach for receipt of electronic case reports. The CDC will identify a test harness and tool for all the functional requirements described

above. Additionally, as the CDC and public health approach matures to include other interfaces, the CDC will continue to monitor the development of standards to support these functional requirements. As noted above, this may lead to future rulemaking for the certification of electronic case reporting.

Comments. Many commenters identified a difference in the description of case reporting between the Proposed Rule and the EHR Incentive Programs Stage 3 proposed rule. In particular, a commenter compared the examples given for the Structured Data Capture standard proposed for case reporting in the Proposed Rule with the description of case reporting provided in the EHR Incentive Programs Stage 3 proposed rule, which focused on submitting information about reportable conditions to monitor disease outbreaks.

Response. The examples in the Proposed Rule of birth reports and other public health reporting were not examples of electronic case reporting. The examples were meant to illustrate how other public health domains have accomplished public health reporting through the use of the IHE RFD profile, upon which the IHE SDC profile proposed for adoption is based.

• *Transmission To Public Health Agencies—Antimicrobial Use And Resistance Reporting*

2015 Edition Health IT Certification Criterion

§ 170.315(f)(6) (Transmission to public health agencies—antimicrobial use and resistance reporting)

We proposed to adopt a new 2015 Edition certification criterion that would require a Health IT Module to be able to electronically create antimicrobial use and resistance reporting information for electronic transmission in accordance with specific sections of the HL7 Implementation Guide for CDA® Release 2—Level 3: Healthcare Associated Infection Reports, Release 1, U.S. Realm (August 2013) (“HAI IG”). We explained that collection and analysis of data on antimicrobial use and antimicrobial resistance are important components of antimicrobial stewardship programs throughout the nation and electronic submission of antimicrobial use and antimicrobial resistance data to a public health registry can promote timely, accurate, and complete reporting, particularly if data is extracted from health IT systems and delivered using well established data exchange standards to a public health registry.

We proposed to test and certify a Health IT Module for conformance with the following sections of the IG in § 170.205(r)(1): HAI Antimicrobial Use and Resistance (AUR) Antimicrobial Resistance Option (ARO) Report (Numerator) specific document template in Section 2.1.2.1 (pages 69–72); Antimicrobial Resistance Option (ARO) Summary Report (Denominator) specific document template in Section 2.1.1.1 (pages 54–56); and Antimicrobial Use (AUP) Summary Report (Numerator and Denominator) specific document template in Section 2.1.1.2 (pages 56–58). We explained that we would expect a Health IT Module presented for certification to this criterion to conform to all named constraints within the specified document template.

Comments. Most commenters expressed support for the adoption the proposed certification criterion and the included standard. A commenter stated that data on antimicrobial use and antimicrobial resistance are essential components of antimicrobial stewardship programs throughout the nation and is a highlight of the National Action Plan for Combating Antibiotic Resistant Bacteria. Another commenter stated that the data elements for antimicrobial use and resistance reporting are positive steps to help guide public health activities. Commenters also stated that the proposed criterion and standard would bolster the CDC’s National Healthcare Safety Network (NHSN) effort to develop coherent policies to fight antibiotic resistance through the reporting of standardized data about antibiotic use and resistance.

A commenter expressed concern about the pace and volume of changes between versions of the standard, the burden on health IT developers related to the timing of deployments, and that NHSN does not accept data submitted using prior versions. Another commenter expressed concern about state variations that are not addressed by this criterion, suggesting that the criterion and standard not be adopted until at least 75% of public health agencies are committed to adopting this standard.

A commenter stated that there were inconsistencies in the EHR Incentive Programs Stage 3 proposed rule related to this criterion regarding the standards available as well as a reference to meeting the measure four times. Another commenter suggested that the associated proposed measure under Stage 3 should be limited to eligible hospitals and CAHs (not EPs).

Response. We appreciate the overall support for this criterion and the IG. We

have adopted this criterion as proposed (with both Volumes 1 and 2 of the HAI IG). We intend to work with federal partners, such as the CDC, to eliminate or reduce any negative impacts on health IT developers resulting from the frequency of reporting changes or the manner in which changes are implemented in the associated program. We note that certification to the adopted version of the standard is what is necessary to meet the CEHRT definition under the EHR Incentive Programs. In regard to the concern about state variations, this data will only be collected by the CDC at the national level. The CDC is the only public health agency that needs to be able to receive these surveys electronically, which it is capable of doing. The use of a national interface for receipt avoids the problems associated with jurisdictional variation.

For concerns and questions related to the EHR Incentive Programs, we refer readers to CMS and the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**.

• *Transmission To Public Health Agencies—Health Care Surveys*

2015 Edition Health IT Certification Criterion

§ 170.315(f)(7) (Transmission to public health agencies—health care surveys)

We proposed to adopt a new 2015 Edition certification criterion for transmission of health care surveys to public health agencies that would require a Health IT Module to be able to create health care survey information for electronic transmission in accordance with the HL7 Implementation Guide for CDA® Release 2: National Health Care Surveys (NHCS), Release 1—US Realm, Draft Standard for Trial Use (December 2014).¹¹⁴ We explained that the National Ambulatory Medical Care Survey (NAMCS) is a national survey designed to meet the need for objective, reliable information about the provision and use of ambulatory medical care services in the U.S. We also explained that the National Hospital Ambulatory Medical Care Survey (NHAMCS) is designed to collect data on the utilization and provision of ambulatory care services in hospital emergency and outpatient departments. We clarified that the proposed IG is intended for the transmission of survey data for both the NAMCS (e.g., for ambulatory medical care settings) and NHAMCS (e.g., for hospital ambulatory settings including

¹¹⁴ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=385.

emergency departments and outpatient departments). We noted that templates included in the IG align with the C-CDA standard. Additionally, we noted that the templates in the IG expand on the scope of the original NAMCS and NHAMCS survey data elements. The templates do not constrain the data collected to the narrow lists on the survey instruments; rather they allow any service, procedure or diagnosis that has been recorded.

Commenters. Commenters overwhelmingly supported the certification criterion and the use of the NHCS IG. Commenters expressed support for the continued effort to advance use of health care surveys as a means of improving patient outcomes. Commenters also expressed support for the specified data elements in the IG. One commenter, however, questioned the maturity of the standard and its adoption for certification at this time. Commenters requested clarification (and confirmation) on the surveys that must be supported for the purposes of certification. In particular, a commenter noted that it was not unclear whether the NAMCS and NHAMCS are the only surveys covered for certification.

A commenter requested information on the number of public health agencies that can electronically accept data in accordance with the IG.

Response. We appreciate the overall support for this criterion and the IG. We have adopted this criterion as proposed. While we understand the concerns that this standard may not be fully mature, the IG has gone through the HL7 balloting process and is currently a Draft Standard for Trial Use, which is no different than other standards in use today and adopted as part of the 2015 Edition. Further, the CDC has been working with providers to submit this data electronically using these surveys prior to this rulemaking. As such, we believe that the IG is mature enough for widespread adoption.

We clarify that, as proposed, certification would cover the entire NHCS IG. The NHCS IG consists of the National Hospital Care Survey, NHAMCS, and NAMCS. In the Proposed Rule, we focused on clarifying that the NHAMCS and NAMCS were included in the IG and the changes in the surveys as compared to past versions. However, all three surveys are covered by the NHCS IG and will be covered as part of testing and certification.

All public health agencies may not be able to receive this data electronically and that variability across jurisdictions could be problematic. However, this data will only be collected by the CDC at the national level. The CDC is the

only public health agency that needs to be able to receive these surveys electronically, which it is capable of doing. The use of a national interface for receipt avoids the problems associated with jurisdictional variation.

- *Automated Numerator Recording*

2015 Edition Health IT Certification Criterion
§ 170.315(g)(1) (Automated numerator recording)

We proposed to adopt a 2015 Edition “automated numerator recording” certification criterion that was unchanged in comparison to the 2014 Edition “automated numerator recording” criterion. We noted that the test procedure for this criterion would be different from the 2014 Edition “automated numerator recording” certification criterion in order to remain consistent with the applicable objectives and measures required under the EHR Incentive Programs.

Comments. We received mixed comments in response to the proposal. A number of commenters supported this criterion as proposed. A few commenters stated that this criterion has been burdensome and complicated as its implementation has led to interruptions in provider workflows solely for the purposes of reporting on measures under the EHR Incentive Programs. These commenters further contended that such data collection was unrelated to improving patient care. A commenter suggested that we ensure that the terminology used in the test procedures aligns with that used for the measures under the EHR Incentive Programs. Another commenter suggested that this criterion should be gap certification eligible if the associated EHR Incentive Programs measure has not changed from Stage 2.

Response. We have adopted this criterion as proposed. This criterion is included in the CEHRT definition under the EHR Incentive Programs. This certification criterion could ease the burden of reporting particularly for small providers and hospitals (77 FR 54184). We will work to ensure consistency with the test procedure and the measures under the EHR Incentive Programs. As stated in the 2015 Edition proposed rule (FR 80 16868), this certification criterion’s gap certification eligibility is “fact-specific” and depends on any modifications made to the specific certification criteria to which this criterion applies. As mentioned above and in the Proposed Rule, it would also depend on changes to the test procedure that are made to align

with applicable objectives and measures under the EHR Incentive Programs.

We have changed the term “meaningful use” to “EHR Incentive Programs” and removed “objective with a” in the first sentence of the criterion to more clearly align with the terminology and framework used under the EHR Incentive Programs.

- *Automated Measure Calculation*

2015 Edition Health IT Certification Criterion
§ 170.315(g)(2) (Automated measure calculation)

We proposed to adopt a 2015 Edition “automated measure calculation” certification criterion that was unchanged in comparison to the 2014 Edition “automated measure calculation” criterion. We proposed to apply the guidance provided for the 2014 Edition “automated measure calculation” certification criterion in the 2014 Edition final rule that a Health IT Module must be able to support all CMS-acceptable approaches for measuring a numerator and denominator in order for the Health IT Module to meet the proposed 2015 Edition “automated measure calculation” certification criterion.¹¹⁵ We also proposed that the interpretation of the 2014 Edition “automated measure calculation” certification criterion in FAQ 32¹¹⁶ would apply to the 2015 Edition “automated measure calculation” certification criterion. We also noted that the test procedure for this criterion would be different from the 2014 Edition “automated measure calculation” certification criterion in order to remain consistent with the applicable objectives and measures required under the EHR Incentive Programs.

Comments. We received mixed comments in response to our proposal. One commenter noted that this criterion and included functionality has value for helping providers understand their quality outcomes and performance on certain EHR Incentive Programs measures. A few commenters stated that this criterion has been burdensome and complicated as its implementation has led to interruptions in provider workflows solely for the purposes of reporting on measures under the EHR Incentive Programs. These commenters further contended that such data collection was unrelated to improving patient care.

¹¹⁵ 77 FR 54244–54245.

¹¹⁶ <http://www.healthit.gov/policy-researchers-implementers/32-question-11-12-032>.

Commenters were generally supportive of applying the guidance provided in the 2014 Edition final rule (77 FR 54244–54245) and the guidance in FAQ 32 to the 2015 Edition criterion. One commenter suggested that this criterion should be gap certification eligible if the associated EHR Incentive Programs measure has not changed from Stage 2. This commenter recommended that ONC provide revised draft test procedures for this criterion for public comment prior to the release of the final rule.

Response. We have adopted this criterion as proposed. This criterion is included in the CEHRT definition under the EHR Incentive Programs. This certification criterion could improve the accuracy of measure calculations to reduce reporting burdens for EPs, eligible hospitals, and CAHs (77 FR 54244). We will apply the guidance in the 2014 Edition final rule and FAQ 32 to this criterion.

As stated in the 2015 Edition proposed rule (FR 80 16868), this certification criterion's gap certification eligibility is "fact-specific" and depends on any modifications made to the specific certification criteria to which this criterion applies. As mentioned above and in the Proposed Rule, it would also depend on changes to the test procedure that are made to align with applicable objectives and measures under the EHR Incentive Programs. We note that draft test procedures for the 2015 Edition were released with the publication of the Proposed Rule¹¹⁷ and were open for public comment from March 20, 2015, to June 30, 2015. Revised draft final test procedures will be made available after publication of this final rule for public review and comment.

We have changed the first use of the term "meaningful use" to "EHR Incentive Programs" and removed its second use in the criterion. We have also removed the phrase "objective with a." We have made these revisions to more clearly align with the terminology and framework used under the EHR Incentive Programs.

- *Safety-Enhanced Design*

2015 Edition Health IT Certification Criterion
§ 170.315(g)(3) (Safety-enhanced design)

We proposed to adopt a 2015 Edition "safety-enhanced design" (SED) certification criterion that was revised in comparison to the 2014 Edition "safety-enhanced design" criterion. We

proposed to include seventeen (17) certification criteria (seven new) in the 2015 Edition SED certification criterion (80 FR 16857), and for each of the referenced certification criteria and their corresponding capabilities presented for certification, we proposed to require that user-centered design (UCD) processes must have been applied in order to satisfy this certification criterion. We stated we intend to continue submission of summative usability test results to promote transparency and foster health IT developer competition, spur innovation, and enhance patient safety. With this in mind, we sought comment on whether there are other certification criteria that we omitted from the proposed SED criterion that commenters believe should be included.

Comments. Comments generally supported the proposed SED criterion, but questioned the number of certification criteria included. Some commenters questioned rationale for adding the new criteria and the carryover inclusion of the "drug-drug, drug-allergy interaction checks for CPOE" criterion, while other commenters generally questioned whether this criterion has contributed to improving usability or patient safety. A few commenters suggested that this criterion only apply to criteria that involve tasks performed by clinical users. A couple of commenters expressed concern about the additional burden the new criteria presented.

Response. We thank commenters for their feedback. We have adopted the proposed SED with revisions and clarifications. We note that 5 criteria proposed for inclusion in the SED criterion have not been adopted as part of the 2015 Edition. These criteria are: "vital signs," "eMAR," "incorporate laboratory tests/results," and both "decision support" criteria. Consequently, these criteria cannot be included in the SED criterion and, therefore, there is only a net increase of two criteria subject to the SED criterion. We do not believe this will create a significant burden for health IT developers and note that many developers have had their products certified to the 2014 Edition versions of the criteria included in the 2015 SED criterion and the 2014 Edition SED criterion. The criteria included in the 2015 Edition SED criterion are as follows (emphasis added for the new criteria):

- Section 170.315(a)(1) Computerized provider order entry—medications
- Section 170.315(a)(2) Computerized provider order entry—laboratory

- Section 170.315(a)(3) Computerized provider order entry—diagnostic imaging
- Section 170.315(a)(4) Drug-drug, drug-allergy interaction checks
- Section 170.315(a)(5) *Demographics*
- Section 170.315(a)(6) *Problem list*
- Section 170.315(a)(7) Medication list
- Section 170.315(a)(8) Medication allergy list
- Section 170.315(a)(9) Clinical decision support
- Section 170.315(a)(14) *Implantable device list*
- Section 170.315(b)(2) Clinical information reconciliation and incorporation
- Section 170.315(b)(3) Electronic prescribing

We believe the inclusion of criteria such as "demographics," "implantable device list," "drug-drug, drug-allergy interaction checks for CPOE," and "CDS" are appropriate because data entry errors and poor user interfaces for responding to alerts and interventions can compromise patient safety. While we do not have empirical data related to the "effectiveness" of the SED criterion, we believe that our approach contributes to improving usability and patient safety through both the application of the SED criterion's requirements to a significant number of health technologies being used in the market today and in the future as well as through the SED information being available on the CHPL for stakeholder review and evaluation.

NISTIR 7742 Submission Requirements, New Requirements and Compliance Guidance

We proposed to include the specific information from the NISTIR 7742 "Customized Common Industry Format Template for Electronic Health Record Usability Testing" (NIST 7742)¹¹⁸ in the regulation text of the 2015 Edition SED criterion to provide more clarity and specificity on the information requested in order to demonstrate compliance with this certification criterion. We reiterated that the information must be submitted for each and every one of the criteria specified in the 2015 Edition SED criterion to become part of the test results publicly available on the Certified Health IT Product List (CHPL). We specified that all of the data elements and sections must be completed, including "major findings" and "areas for improvement."

We identified the table on page 11 of NISTIR 7742 for the submission of demographic characteristics of the test

¹¹⁷ <http://healthit.gov/policy-researchers-implementers/2015-edition-draft-test-procedures>.

¹¹⁸ http://www.nist.gov/manuscript-publication-search.cfm?pub_id=907312.

participants because it is important that the test participant characteristics reflect the audience of current and future users. In accordance with NISTIR 7804 (page 8),¹¹⁹ we recommended that the test scenarios be based upon an analysis of critical use risks for patient safety, which can be mitigated or eliminated by improvements to the user interface design.

We strongly advised health IT developers to select an industry standard process because compliance with this certification criterion requires submission of the name, description, and citation (URL and/or publication citation) of the process that was selected, and we provided examples of method(s) that could be employed for UCD, including ISO 9241–11, ISO 13407, ISO 16982, ISO/IEC 62366, ISO 9241–210 and NISTIR 7741. We explained that, in the event that a health IT developer selects a UCD process that was not an industry standard (i.e., not developed by a voluntary consensus standards organization), but is based on one or more industry standard processes, the developer may name the process(es) and provide an outline of the process in addition to a short description as well as an explanation of the reason(s) why use of any of the existing UCD standards was impractical. We also noted that health IT developers can perform many iterations of the usability testing, but the submission that is ultimately provided for summative usability testing and certification must be an expression of a final iteration, and the test scenarios used would need to be submitted as part of the test results. We noted that we do not expect developers to include trade secrets or proprietary information in the test results.

Comments. Commenters expressed appreciation for the clarity the proposed 2015 Edition SED criterion provided in terms of requirements. Some commenters agreed with including major findings and areas for improvement sections in the summative testing documentation, while other commenters did not support the public reporting of major findings and areas for improvement because they argued that the information is usually meant to inform the developer.

Many commenters expressed concern on the proposed limitation for measuring user satisfaction. Commenters mentioned that user satisfaction ratings are often now based on non-standard surveying processes. Commenters suggested that we not solely rely on task-based satisfaction

measures and consider post-session satisfaction measures. Commenters suggested that we use industry standard, literature-recognized satisfaction measures such as the Single Ease-of-use Question, System Usability Scale, or Software Usability Measurement Inventory.

Response. We thank commenters for their feedback. We have finalized our proposed requirements with one revision. In response to comments, we now also permit the submission of an alternative acceptable user satisfaction measure to meet the requirements of this criterion. Stated another way, a health IT developer could meet the proposed NIST 7742 based approach for user satisfaction or provide documentation of an alternative acceptable user satisfaction measure. We will take into consideration the other user satisfaction measures identified by commenters in the development and finalization of the 2015 SED test procedures and related guidance for complying with this criterion and particularly the user satisfaction measure.

Number of Test Participants

We recommended following NISTIR 7804¹²⁰ “Technical Evaluation, Testing, and Validation of the Usability of Electronic Health Records” for human factors validation testing of the final product to be certified, and recommended a minimum of 15 representative test participants for each category of anticipated clinical end users who conduct critical tasks where the user interface design could impact patient safety (e.g., physicians, nurse practitioners, physician assistants, nurses, etc.) and who are not include employees of the developer company. We additionally requested comment on whether we should establish a minimum number(s) and user cohort(s) for test participants for the purposes of testing and certification to the 2015 Edition under the ONC Health IT Certification Program.

Comments. We received a large number of comments in response to this request for comment with the majority of commenters advocating for a required minimum number of test participants and some commenters advocating for established user cohorts per capability. Commenters strongly stated that establishing a minimum number of participants would allow for proper validation of testing results. Many commenters advocated for a minimum of 12 or 15 participants. Another large

contingent of commenters advocated for 10 participants. A few commenters suggested that the number of test participants should remain as guidance. A few commenters also stated that a high participant threshold could be burdensome to small developers.

Commenters generally recommended that cohorts should be consistent with the capability under testing. Some commenters stated, for example, that clinicians would not be appropriate for a more administrative capability such as recording demographics. Commenters gave mixed responses on whether this described approach should be required or simply guidance.

Response. As a general matter, the more users tested, the more likely developers will be able to identify and remedy design flaws. To this point, research suggests that “with ten participants, 80 percent of the problems are found whereas 95 percent of the problems are found with twenty participants.”¹²¹ For the purposes of this final rule, we have adopted a provision as part of this criterion that requires 10 participants per criterion/capability as a mandatory minimum for the purposes of testing and certification. We believe this minimum is responsive to commenters and will ensure more reliable summative testing results. We also believe this number will balance any potential burden for health IT developers, including small developers. However, we strongly encourage health IT developers to exceed the mandatory minimum in an effort to identify and resolve more problems.

We agree with commenters that cohorts should not be limited to clinicians but instead consist of test participants with the occupation and experience that aligns with the capability under testing. We believe, however, that it would be too restrictive and complicated to establish cohort requirements per criterion. Instead, we continue to recommend that health IT developers follow NISTIR 7804 for human factors validation testing of the final product to be certified. We will also work with NIST to provide further guidance as needed.

Request for Comment on Summative and Formative Testing

We requested comment regarding options that we might consider in addition to—or as alternatives to—summative testing. We asked whether a standardized report of formative testing

¹¹⁹ http://www.nist.gov/customcf/get_pdf.cfm?pub_id=909701.

¹²⁰ http://www.nist.gov/customcf/get_pdf.cfm?pub_id=909701.

¹²¹ Pg. 42. NISTIR 7804 Technical Evaluation, Testing, and Validation of the Usability of Electronic Health Records http://www.nist.gov/healthcare/usability/upload/EUP_WERB_Version_2_23_12-Final-2.pdf

could be submitted for one or more of the 17 proposed certification criteria for which summative testing would be required, if formative testing reflected a thorough process that has tested and improved the usability of a product. Additionally, we asked for feedback on the requirements for such a formative testing report and on how purchasers would evaluate these reports.

Comments. Commenters acknowledged the benefits of formative testing, with some noting that it can act as a risk management process before getting to summative testing. The majority of the commenters, however, were against formative testing as an alternative to summative testing. One commenter stated that one of the main objectives for the SED criterion is to allow purchasers and consumers to compare competing products on the quality of human interaction and usability. The commenter contended that test results are therefore publicly available for this purpose on the Certified Health IT Product List (CHPL). The commenter maintained that this essential function cannot be fulfilled, however, with the results of formative testing as they cannot be compared across products but only between the iterations of a single product. The commenter noted, as other commenters did, that formative tests are intended to identify problems rather than produce measures. A few commenters suggested that we require both summative and formative testing, while a few other commenters suggested formative testing was not reliable or useful.

Response. We thank commenters for their insightful feedback. We agree with the commenters that see value in formative testing, but we also agree with the commenters that contend it should not be a substitute for summative testing for the purposes of this criterion. With this in mind and consideration of the potential burden imposed by requiring both summative and formative testing, we have decided to retain summative testing requirements and not adopt formative testing requirements.

Retesting and Certification

We stated that we believe that ONC-ACB determinations related to the ongoing applicability of the SED certification criterion to certified health IT for the purposes of inherited certified status (§ 170.550(h)), adaptations and other updates would be based on the extent of changes to user-interface aspects of one or more capabilities to which UCD had previously been applied. We specified that ONC-ACBs should be notified when applicable changes to user-interface aspects occur,

and we included these types of changes in our proposal to address adaptations and updates under the ONC-ACB Principles of Proper Conduct (§ 170.523).

We discuss the comments received on this proposal and our response under section IV.D.6 of this preamble.

- *Quality Management System*

2015 Edition Health IT Certification Criterion
§ 170.315(g)(4) (Quality management system)

We proposed to adopt a 2015 Edition “quality management system” certification criterion that was revised in comparison to the 2014 Edition and proposed that all Health IT Modules certified to the 2015 Edition would need to be certified to the 2015 Edition QMS criterion “quality management system” criterion. We proposed to require the identification of the Quality Management System (QMS) used in the development, testing, implementation, and maintenance of capabilities certified under the ONC Health IT Certification Program. We specified that the identified QMS must be compliant with a quality management system established by the federal government or a standards developing organization; or mapped to one or more quality management systems established by the federal government or standards developing organization(s). We stated that we will not permit health IT to be certified that has not been subject to a QMS and that we will require health IT developers to either use a recognized QMS or illustrate how the QMS they used maps to one or more QMS established by the federal government or a standards developing organization(s) (SDOs). We explained that we encourage health IT developers to choose an established QMS, however, developers may also use either a modified version of an established QMS, or an entirely “home grown” QMS. In cases where a health IT developer does not use a QMS established by the federal government or an SDO, we proposed to require the health IT developers illustrate how their QMS maps to one or more QMS established by the federal government or SDO through documentation and explanation that links the components of their QMS to an established QMS and identifies any gaps in their QMS as compared to an established QMS. We added that documentation of the current status of QMS in a health IT development organization would be sufficient. We also provided a list of QMS standards established by the

federal government and SDOs (80 FR 16858).

Comments. The majority of commenters supported the proposed criterion and its approach, with broad support across health IT developers, providers, and consumers. A commenter questioned whether we provided the appropriate example standards, citing ISO 14971 as a risk-management standard for medical devices and not a QMS standard. Other commenters stated that the identified standards were too focused on medical devices. A few commenters indicated that other standards and processes should be considered as acceptable means for meeting this criterion. These commenters specifically mentioned ISO 12207, IEEE 730, IEEE 1012, ISO 14764, ISO 80001, the health IT QMS standards under development through the Association for the Advancement of Medical Instrumentation (AAMI), and the accreditation process software quality systems run by the Capability Maturity Model Integration Institute (CMMI). A few commenters expressed concern that it would be burdensome to map an internal QMS to one or more QMS established by the federal government or SDO, including more burdensome on small health IT developers.

A few commenters requested clarifications. A commenter noted that health IT developers use agile software development practices and requested clarification if these processes would be sufficient for certification. A commenter asked how this criterion would apply to a self-developer or open source software. A couple of commenters asked how Health IT Modules would be evaluated against this criterion, including what type of documentation would be required for mapping and whether a documented combined QMS approach for the entire Health IT Module would be sufficient in lieu of a capability by capability identification.

Response. We thank commenters for their feedback and support. We have adopted this criterion as proposed with further clarification in response to comments. We note that this criterion applies to any health IT presented for certification to the 2015 Edition, including self-developed and open source software that is part of the Health IT Module because one of the goals of this criterion is to improve patient safety through QMS.

We expect that ONC-ACBs will certify health IT to this criterion in the same manner as they certify health IT to the 2014 Edition QMS criterion, but accounting for any differences that are finalized through the 2015 Edition ACD

test procedure. To this point, we have removed the term “compliant” from the provision requiring identification of a QMS compliant with a quality management system established by the federal government or a standards developing organization. Similar to the mapping provision, the focus and intent of the provision (and the criterion as a whole) is the identification of the QMS, not a determination of compliance by the ONC-ACB. We note that the identification of a single QMS is permitted for a Health IT Module, which is consistent with testing and certification to the 2014 Edition QMS certification criterion.

As noted in the 2014 Edition final rule (77 FR 54191), we agree that existing standards may not explicitly state support for agile development methodologies and that such methods may be part of an optimal QMS. As such, documented agile development methodologies may be used in meeting the mapping provision of this criterion. We will issue further compliance guidance as necessary, including through the 2015 Edition QMS test procedure. This guidance will include updated identification of QMS standards and more specification of documentation requirements necessary to meet this criterion. Overall, we do not believe this criterion presents a significant burden as many health IT products have been previously certified to the 2014 Edition QMS criterion and most, if not all, developers (with previously certified products or not) should have QMS documentation readily available for their health IT products as a standard practice.

- *Accessibility-Centered Design*

2015 Edition Health IT Certification Criterion
§ 170.315(g)(5) (Accessibility-centered design)

We proposed to adopt a new 2015 Edition “accessibility-centered design” certification criterion that would apply to all Health IT Modules certified to the 2015 Edition and require the identification of user-centered design standard(s) or laws for accessibility that were applied, or complied with, in the development of specific capabilities included in a Health IT Module or, alternatively, the lack of such application or compliance.

We proposed to require that for each capability that a Health IT Module includes and for which that capability’s certification is sought, the use of a health IT accessibility-centered design standard or compliance with a health IT accessibility law in the development,

testing, implementation, and maintenance of that capability must be identified. Further, we proposed to permit that a health IT developer could document that no health IT accessibility-centered design standard or law was applied to the health IT’s applicable capabilities as an acceptable means of satisfying this proposed certification criterion. We added that the method(s) used to meet this proposed criterion would be reported through the open data CHPL. We solicited comment on whether the standards and laws identified in the Proposed Rule were appropriate examples and whether we should limit the certification criteria to which this criterion would apply.

We explained that the proposed certification criterion would serve to increase transparency around the application of user-centered design standards for accessibility to health IT and the compliance of health IT with accessibility laws. We stated that this transparency would benefit health care providers, consumers, governments, and other stakeholders, and would encourage health IT developers to pursue the application of more accessibility standards and laws in product development that could lead to improved usability for health care providers with disabilities and health care outcomes for patients with disabilities.

We also proposed to revise § 170.550 to require ONC-ACBs follow this proposed approach and referred readers to section IV.C.2 of the Proposed Rule’s preamble for this proposal.

Comments. The vast majority of commenters supported the proposed criterion and its approach, with broad support across health IT developers, providers, and consumers. One commenter suggested that we narrow the list of example standards to those that have the widest applicability to EHRs. Another commenter suggested that the focus should be on more accessibility-centered standards such as ISO 9241–20 (2008) “Ergonomics of Human-System Interaction—Part 20: Accessibility guidelines for information/communication technology (ICT) equipment and services,” ISO 9241–171 (2008) “Ergonomics of Human-System Interaction—Part 171: Guidance on software accessibility,” Section 508 of the Rehabilitation Act, and Section 504 of the Rehabilitation Act. A few commenters suggested that this criterion would have a significant development burden for health IT developers. One commenter requested clarification on how testing and certification will be conducted.

Response. We thank commenters for their feedback. We have adopted this criterion as proposed. We will work with our federal partners (e.g., NIST, Administration for Community Living and Aging Policy, and the HHS Office for Civil Rights) and consider comments on the final test procedure for this criterion in providing more precise identification and guidance on accessibility-centered standards and laws. We believe this criterion poses minimal burden on health IT developers as it only requires health IT developers to *identify* relevant standards or laws; *and*, alternatively, permits a health IT developer to state that its health IT product presented for certification does not meet any accessibility-centered design standards or any accessibility laws. That said, as noted above, we remind health IT developers and providers that the existence of an option to certify that health IT products do not meet any accessibility design standards or comply with any accessibility laws does not exempt them from their independent obligations under applicable federal civil rights laws, including Section 504 of the Rehabilitation Act, Section 1557 of the Affordable Care Act, and the Americans with Disabilities Act that require covered entities to provide individuals with disabilities equal access to information and appropriate auxiliary aids and services as provided in the applicable statutes and regulations.

We expect that ONC-ACBs will certify health IT to this criterion in the same manner as they certify health IT to the 2014 Edition QMS criterion, but accounting for any differences that are finalized through the 2015 Edition ACD test procedure. We will issue further compliance guidance as necessary.

- *Consolidated CDA Creation Performance*

2015 Edition Health IT Certification Criterion
§ 170.315(g)(6) (Consolidated CDA creation performance)

We proposed to adopt a new certification criterion at § 170.315(g)(6) that would rigorously assess a product’s C-CDA creation performance (for both C-CDA Release 1.1 and 2.0) when it is presented for a Health IT Module certification that includes within its scope any of the proposed certification criteria that require C-CDA creation (e.g., “transitions of care” at § 170.315(b)(1)). We explained that to implement this proposal, we would amend § 170.550 to add a requirement that ONC-ACBs shall *not* issue a Health IT Module certification to a product that

includes C-CDA creation capabilities within its scope, unless the product was also tested and satisfied the certification criteria requirements proposed at § 170.315(g)(6). If the scope of certification included multiple certification criteria that require C-CDA creation, we noted that § 170.315(g)(6) need only be tested in association with one of those certification criteria and would not be expected or required to be tested for each. Specifically, we proposed that three technical outcomes be met: reference C-CDA match, document template conformance, and vocabulary conformance.

We noted that we coordinated with our colleagues at NIST and understand that NVLAP-Accredited Testing Laboratories would retain the C-CDA files created under test and contribute them to an ONC-maintained repository.

Comments. A number of commenters expressed support for the proposal for this certification criterion that would test a Health IT Module's C-CDA creation performance as proposed. Some commenters suggested that the gold standard needs to be specific on what to do with optionality permitted in the C-CDA standard. A few commenters requested clarifications on how the gold standard would be structured, whether it would be one or multiple documents, and whether the testing would be done through an automated tool or by visual inspection.

Response. We thank commenters for their support and have adopted a C-CDA creation performance certification criterion with the following changes described below. As discussed in the 2014 Edition Release 2 proposed rule (79 FR 10899), we continue to believe in the value of this capability to promote the ability of providers to exchange C-CDA documents and subsequently be able to parse and use the C-CDA received. This is especially important for interoperability when the C-CDA standard allows for optionality and variations.

We intend to publish sample gold standard C-CDA documents on www.healthit.gov or another ONC-maintained repository for the public to review and provide comment. We also anticipate that there will be multiple gold standard documents for each C-CDA document template we require for this criterion with variations in each to test optionality for which the C-CDA standard allows. With respect to testing, we anticipate that testing will be performed, at a minimum, through a conformance testing tool and could also include visual inspection as necessary to verify reference C-CDA match,

document template conformance, and vocabulary conformance.

Comments. Similar to comments received to other certification criteria such as "transitions of care," commenters did not support the proposal to be able to create C-CDA documents in accordance with both C-CDA Releases 1.1 and 2.0.

Response. We have adopted C-CDA Release 2.1 for this certification criterion for the same reasons as noted in the preamble for the "transitions of care" criterion.

C-CDA Document Templates

We proposed that Health IT Modules would have to demonstrate compliance with the C-CDA creation performance functions of this criterion for the following C-CDA Release 2.0 document templates:

- Continuity of Care;
- Consultation Note;
- History and Physical;
- Progress Note;
- Care Plan;
- Transfer Summary;
- Referral Note; and
- Discharge Summary (for inpatient settings only).

Comments. A few commenters suggested that ONC not require certification to all proposed document templates and indicated that not all document templates are applicable to every setting. They also cited potential development burdens with the proposed scope.

Response. As discussed in the preamble for other certification criteria that include C-CDA creation within its scope, we have limited the C-CDA Release 2.1 document template requirements based on the use case for each certification criterion. Therefore, some criteria (e.g., ToC) require three C-CDA templates whereas others (e.g., care plan) only require one C-CDA template. As such, we have required that C-CDA creation performance be demonstrated for the C-CDA Release 2.1 document templates required by the 2015 Edition certification criteria presented for certification. For example, if a Health IT Module only included § 170.315(e)(1) within its certificate's scope, then only the Continuity of Care Document (CCD) document template would be applicable within this criterion. Conversely, if a Health IT Module designed for the inpatient setting included § 170.315(b)(1) within its certificate's scope, then all three document templates referenced by that criterion would need to be evaluated as part of this certification criterion.

If the scope of certification includes more than one certification criterion

with C-CDA creation required, C-CDA creation performance only has to be demonstrated once for each C-CDA document template (e.g., C-CDA creation performance to the CCD template would *not* have to be demonstrated twice if the Health IT Module presents for certification to both "ToC" and the "data export" criteria).

Comments. One commenter was concerned that the proposed regulation text language "upon the entry of clinical data consistent with the Common Clinical Data Set" implies the incorrect workflow, and would only allow creation to be done while the user finishes creating or composing the C-CDA document. The commenter noted that there is an additional step between creation and sending where additional vocabulary mapping steps need to be applied.

Response. We thank the commenter for the input. We clarify that the purpose of the phrase was to provide a clear scope to the certification criterion for health IT developers. Given that the C-CDA includes many section templates to represent data outside of the data specified by the Common Clinical Data Set definition, we sought to indicate that testing would be limited to only the data within scope for the Common Clinical Data Set definition. We have modified the language in the certification criterion to more clearly reflect this scope limitation.

C-CDA Completeness

Due to past feedback from providers that indicated the variability associated with different functionalities and workflows within certified health IT can ultimately affect the completeness of the data included in a created C-CDA, we requested comment on a proposal that would result in a certification requirement to evaluate the completeness of the data included in a C-CDA. This additional requirement would ensure that the data recorded by a user in health IT is equivalent to the data included in a created C-CDA.

Comments. We received mixed comments in response to this request for comment. One commenter was supportive of the proposal. Another commenter requested clarification on whether the request for comment intended to specify how the user interface captures specific data using specific vocabulary, and was not supportive of imposing data capture requirements for this criterion. One commenter was concerned that ONC was being too prescriptive by soliciting comment on this potential requirement to test C-CDA completeness and suggested ONC test this in a sub-

regulatory manner and/or through improved conformance test tools. One commenter suggested that some C-CDA document templates do not include all information entered into an EHR for certain use cases, as some document templates are meant to include targeted and specific information for a particular setting to which a patient is being transitioned.

Response. We thank commenters for the input and, in consideration of the comments, have adopted this proposal as part of this certification criterion. As we stated in the Proposed Rule, the intent and focus of this proposal was to ensure that however data is entered into health IT—via whatever workflow and functionality—that the C-CDA output would reflect the data input and not be missing data a user otherwise recorded. We also clarify that the scope of the data for this certification criterion is limited to the Common Clinical Data Set definition. We did not intend imply and note that that this criterion does not prescribe how the user interface captures data.

Repository of C-CDA Documents

We did not receive any comments regarding our understanding that NVLAP-Accredited Testing Laboratories would retain the C-CDA files created under test and contribute them to an ONC-maintained repository. We note that we intend to implement this repository as noted in the Proposed Rule.

- *Application Access To Common Clinical Data Set*

2015 Edition Health IT Certification Criterion
§ 170.315(g)(7) (Application access—patient selection)

2015 Edition Health IT Certification Criterion
§ 170.315(g)(8) (Application access—data category request)

2015 Edition Health IT Certification Criterion
§ 170.315(g)(9) (Application access—all data request)

We proposed a new 2015 Edition criterion at § 170.315(g)(7) that would require health IT to demonstrate it could provide application access to the Common Clinical Data Set via an application programming interface (API), and requiring that those same capabilities be met as part of the “VDT” criterion. We noted that providing API functionality could help to address many of the challenges currently faced

by individuals and caregivers accessing their health data, including the “multiple portal” problem, by potentially allowing individuals to aggregate data from multiple sources in a web or mobile application of their choice. We emphasized that the proposed approach was intended to provide flexibility to health IT developers to implement an API that would be most appropriate for its customers and allow developers to leverage existing standards that most health IT developers would already need in order to seek certification for other criteria.

Because many commenters provided feedback on the “API” criterion within the context of the “VDT” criterion and in the order of this final rule the VDT discussion comes first, we address all comments to proposed § 170.315(g)(7) here.

Comments. The HITSC recommended that we permit Health IT Modules to certify towards each of the three API scenarios (get patient identifier, get document, get discrete data) individually, while stating the expectation that Health IT developers and provider organizations should ensure that the APIs work together functionally. The HITSC also recommended providing a “sub-regulatory flexibility” certification testing approach to allow developers to achieve certification by participating in “a public-private effort that provides adequate testing and other governance sufficient to achieve functional interoperability.”

Response. We agree with the approach suggested by the HITSC to split our original proposed certification criterion into three separate certification criteria with each individual criterion focused on specific functionality. Based on prior experience with certification criteria that “lump” functionality together that can otherwise be separately performed, we believe that this additional flexibility will allow for health IT developers to be more innovative. This will enable additional modularity as part of the ONC Health IT Certification Program in the event that a health IT developer seeks to change and recertify one of the three API functionalities and leave the other two capabilities unchanged. The three certification criteria will be adopted at § 170.315(g)(7), (g)(8), and (g)(9). Each will include the documentation and terms of use requirement that was part of the single proposed criterion. Additionally, in consideration of this change and because CMS has required as part of the EHR Incentive Program Stage 3 and Modifications final rule that

providers will need to have health IT certified to both the VDT certification criterion and these three “API” criteria to meet Stage 3 Objectives 5 and 6, we have removed the API functionality embedded within the VDT certification criterion and adopted these three criteria to simplify our rule and reduce redundancy.

For the purposes of testing for each of the “API” certification criteria, a health IT developer will need to demonstrate the response (*i.e.*, output) for each of the data category requests and for the “all” request, the output according to the C-CDA in the CCD document template. For all other aspects of these certification criteria, we expect the testing would include, but not be limited to, attestation, documentation, functional demonstration, and visual inspection.

We appreciate suggestions as to a “sub-regulatory approach” and will consider whether such approaches could fit within our regulatory structure as well as lead to consistent and efficient testing and certification.

Comments. Multiple commenters voiced concern that we did not name a standard for API functionality in the Proposed Rule. Of these commenters, some suggested that we specifically name FHIR as the standard for this criterion, while others expressed concern that FHIR is not yet mature enough for inclusion in regulation, and suggested that ONC eliminate or make optional API functionality until a time when API standards have undergone more testing in the market. However, many commenters strongly supported the inclusion of API functionality for patient access, discussing the criterion’s provision of more flexibility and choice for the consumer, better facilitation of communication and education for individuals, fostering of more efficient and modern information exchange, and encouraging innovation by app developers and entrepreneurs to create better online experiences for users. Several commenters also voiced support for the approach of encouraging movement towards APIs, without locking in any specific standard, and urged ONC to maintain an open, transparent process with public input as it works with industry to identify and develop emerging standards in this space.

Response. We have adopted three new criteria as a new component of the 2015 Base EHR definition in § 170.102. We appreciate the number of detailed and thoughtful comments on this criterion, and the concerns regarding standardization. We agree with the many comments supportive of the

inclusion of API functionality for Health IT Modules, and note that in addition to enhanced flexibility for consumers and increased innovation, we believe that the “API” criteria will enable easier access to health data for patients via mobile devices, which may particularly benefit low income populations where smartphone and tablet use may be more prevalent than computer access. Regarding comments on standardization, we believe that the criterion is at an appropriate level of specificity given the ongoing development of API standards for health care, and continue to support our initial proposal to allow for a flexible approach without naming a specific standard. However, we emphasize that we intend to adopt a standards-based approach for certification in the next appropriate rulemaking and we note the existence and ongoing piloting of promising work such as the Fast Healthcare Interoperability Resources (FHIR) specification. We agree with commenters’ suggestions that ONC continue to monitor and actively participate in industry efforts to support testing of these and other emerging standards. We understand that many Health IT Modules have APIs today and providing for flexibility in the final rule will allow them to certify their existing APIs.

Security

We proposed that the API include a means for the establishment of a trusted connection with the application that requests patient data. We stated that this would need to include a means for the requesting application to register with the data source, be authorized to request data, and log all interactions between the application and the data source.

Comments. Multiple commenters cited a need to provide security standards for this criterion while also noting that current and emerging standards, such as OAuth, are not yet tested and fully mature for inclusion in regulation. Other commenters suggested that ONC specifically name OAuth and/or some combination of OAuth, Open ID Connect, and User Managed Access (UMA) as the standards for authentication and authorization within this criterion. A few commenters cited other standards, such as HTTPS and SSL/TLS. Multiple commenters noted that the consumers of the API—the web and mobile applications—were ultimately the entities responsible for security, rather than the Health IT Module itself, and that the market for third party applications is currently unregulated.

Response. We have adopted a final criterion without the proposed requirement for registration of third party applications. Our intention is to encourage dynamic registration and strongly believe that registration should not be used as a means to block information sharing via APIs. That is, applications should not be required to pre-register (or be approved in advance) with the provider or their Health IT Module developer before being allowed to access the API. Under the 2015 Edition privacy and security (P&S) certification framework, health IT certified to the API criteria must support an application connecting to the API. The P&S certification framework for the API criteria requires that a Health IT Module certified to this criterion be capable of ensuring that: valid user credentials such as a username and password are presented (that match the credentials on file at the provider for that user); the provider can authorize the user to view the patient’s data; the application connects through a trusted connection; and the access is audited (§ 170.515(d)(1); (d)(9); and (d)(2) or (d)(10); respectively). These certification requirements should be sufficient to allow access without requiring further application pre-registration. The applicable P&S certification criteria are discussed in more detail below.

We intend to pursue a standards-based approach for this criterion in the future, but believe that providing flexibility currently is more appropriate as emerging standards continue to mature and gain traction in industry, and consistent with our overall “functional” approach to the API certification criteria at § 170.315(g)(7), (g)(8), (g)(9). We recognize and encourage the work being done to develop emerging standards in this space, including OAuth, OpenID Connect, UMA, and the Open ID Foundation’s HEART profile. Accordingly, we emphasize that the security controls mentioned in the Proposed Rule establish a floor, not a ceiling. We encourage organizations to follow security best practices and implement security controls, such as penetration testing, encryption, audits, and monitoring as appropriate, without adversely impacting a patient’s access to data, following their security risk assessment. We expect health IT developers to include documentation on how to securely deploy their APIs in the public documentation required by the certification criteria and to follow industry best practices. We also seek to clarify that a “trusted connection” means the link is encrypted/integrity

protected according to § 170.210(a)(2) or (c)(2). As such, we do not believe it is necessary to specifically name HTTPS and/or SSL/TLS as this standard already covers encryption and integrity protection for data in motion.

While we appreciate the concerns of commenters regarding privacy and security of third party applications, we note that the regulation of third party applications is outside the scope of certification, unless those applications are seeking certification as Health IT Modules. As consumer applications, third-party applications may fall under the authority of the Federal Trade Commission (FTC). In addition, if third-party applications are offered on behalf of a HIPAA covered entity or business associate, they would be governed by the HIPAA Privacy and Security Rules as applicable to those entities. We also note that the Federal Trade Commission and the National Institute of Standards and Technology (NIST) have issued guidance regarding third-party applications; we encourage third-party application developers to take advantage of these resources.¹²²

Comments. Commenters pointed out that the proposed process for certifying security & privacy requirements for the “Application Access to Common Clinical Data Set” criterion was inconsistent with the proposed privacy and security certification approach listed in Appendix A of the Proposed Rule’s preamble. The HITSC recommended that we include encryption and integrity protection as a security requirement for the “API” criterion.

Response. We agree with commentators that the approach from our prior rules and our most recent Proposed Rule were inconsistent. We have finalized an approach that standardizes the way Health IT Modules certify for privacy and security (P&S). For consistency, we have moved the trusted connection security requirements included proposed § 170.315(g)(7)(i) into two new certification criteria under § 170.315(d) and have applied them back to the three adopted “API” certification criteria as part of the 2015 Edition P&S certification framework

¹²² See, e.g., NIST Technical Considerations for Vetting 3rd Party Mobile Applications, available at http://csrc.nist.gov/publications/drafts/800-163/sp800_163_draft.pdf; FTC, Careful Connections: Building Security in the Internet of Things (Jan. 2015), available at <https://www.ftc.gov/tips-advice/business-center/guidance/careful-connections-building-security-internet-things>; FTC, Mobile App Developers: Start with Security (Feb. 2013), available at <https://www.ftc.gov/tips-advice/business-center/guidance/mobile-app-developers-start-security>.

(§ 170.550(h)).¹²³ To be certified for the “API” criteria, a Health IT Module must certify to either Approach 1 (technically demonstrate) or Approach 2 (system documentation) for the following security criteria:

- Section 170.315(d)(1) “authentication, access control, and authorization;”
- Section 170.315(d)(9) “trusted connection;” and
- Section 170.315(d)(10) “auditing actions on health information” or § 170.315(d)(2) “auditable events and tamper resistance.”

We intended the trusted connection requirement to encompass encryption and integrity. The “trusted connection” criterion at § 170.315(d)(9) requires health IT to establish a trusted connection in accordance with the standards specified in § 170.210(a)(2) and (c)(2). We have adopted § 170.315(d)(10) “auditing actions on health information” as an abridged version of § 170.315(d)(2) “auditable events and tamper resistance” as some of the capabilities included in § 170.315(d)(2) would likely not apply to a Health IT Module certified only to the “API” criteria, such as recording the audit log status or encryption status of electronic health information locally stored on end-user devices by the technology. A Health IT Module presented for certification to the “API” criteria, depending on the capabilities it included for certification, could be certified to either § 170.315(d)(2) or (d)(10) as part of the 2015 Edition P&S certification framework.

We have removed the requirement that the API must include a means for the requesting application to register with the data source. Our intention was that APIs should support dynamic registration that does not require pre-approval before an application requests data from the API. However, from the comments received it was clear that our intention was not understood. Further, open source standards for dynamic registration are still under active development, there is currently no consensus-based standard to apply, and we do not want registration to become a barrier for use of Health IT Modules’ APIs. We are removing this requirement at this time for the purposes of certification and will consider verifying this technical capability for a potential future rulemaking.

Comments. Several commenters expressed concern that APIs may

¹²³ We refer readers to section IV.C.1 (“Privacy and Security”) of this preamble for further discussion of the 2015 Edition P&S certification framework.

increase security risks. In particular, these commenters called for security standards to specify the manner in which the API is authorized, authenticated, and how data must be secured in transit.

Response. Entities must follow federal and state requirements for security. APIs, like all technology used in a HIPAA-regulated environment, must be implemented consistent with the HIPAA Security Rule. Namely, covered entities and their business associates must perform a security risk assessment and must meet the HIPAA Security Rule standards, consistent with their risks to the administrative, technical, and physical security of the ePHI they maintain. The security safeguards required by certification establish a floor of security controls that all APIs must meet; an organization’s security risk assessment may reveal additional risks that must be addressed in the design or implementation their EHR’s particular API or they may have additional regulatory requirements for security. Therefore, users of health information technology should include APIs in their security risk analysis and implement appropriate security safeguards. We also strongly encourage health IT developers to build security into their APIs and applications following best practice guidance, such as the Department of Homeland Security’s Build Security In initiative.¹²⁴ We also reiterate that at this time, we are requiring a read-only capability—read-only capabilities may have fewer security risks because the EHR does not consume external data.

Provider organizations already transmit information outside their networks such as electronic claims submission, lab orders, and VDT messages. These transmissions may be occurring using APIs today. Therefore, provider organizations could already be implementing safeguards needed to secure APIs. We encourage providers to employ resources released by OCR and ONC, such as the Security Risk Assessment Tool¹²⁵ and the Guide to Privacy and Security of Electronic Health Information,¹²⁶ as well as the Office for Civil Rights’ website¹²⁷ to make risk-based decisions regarding their implementation of APIs and the

selection of appropriate and reasonable security safeguards.

It is important to recognize that an API may be used to enable a patient to access data in the Designated Record Set for that individual, pursuant to 45 CFR 164.524(a)(1).¹²⁸ Additionally, the electronic tools an individual uses to handle or transport data in the individual’s custody are not required to meet the HIPAA Security Rule. Those tools cannot pose an unreasonable threat to the covered entity’s system, but the tools used by the individual themselves are not regulated by HIPAA. For example, a patient may insist that in providing an electronic copy of data about them, the email that delivers the ePHI to the patient is not encrypted.¹²⁹ A patient may also select a third party product that will receive their data through the API that is not subject to HIPAA Security Rule requirements.

Comments. Several commenters stated that APIs should align with patient privacy expectations.

Response. We appreciate the commenters’ concerns about patient privacy expectations and agree that use of APIs must align with all federal and state privacy laws and regulations. We expect APIs to be used in circumstances when consent or authorization by an individual is required, as well as in circumstances when consent or authorization by an individual is not legally required for access, use or disclosure of PHI. In other words, APIs, like faxes before them, will be used in light of the existing legal framework that already supports the transmission of protected health information, sensitive health information, and applicable consent requirements.

In circumstances where there is a requirement to document a patient’s request or particular preferences, APIs can enable compliance with such documentation requirements. The HIPAA Privacy Rule¹³⁰ permits the use of electronic documents to qualify as writings for the purpose of proving signature, e.g., electronic signatures. Electronic signatures can be captured by a patient portal or an API, absent the application of a more privacy-protective state law.

The existing legal framework would support the use of APIs to facilitate patient access to electronic health information or patient access requests

¹²⁸ 45 CFR 164.524(a)(1): <http://www.gpo.gov/fdsys/pkg/CFR-2013-title45-vol1/xml/CFR-2013-title45-vol1-sec164-501.xml>.

¹³⁰ 45 CFR part 160 and Part 164, Subparts A and E.

made pursuant to 45 CFR 164.524 to transmit their information to a designated third party. For example, an individual may request a copy of their data from their provider's API using software tools of the individual's choosing. Assuming the individual has been properly authenticated and identity-proofed, the provider's obligation under HIPAA is to fulfill the "access" request through the API if that functionality is available, because that is the medium so chosen by the patient. The addition of APIs to the technical landscape of health IT does not alter HIPAA requirements, which support reliance on the established and prevailing standards for electronic proof of identity.¹³¹ This policy supports the availability of health information for treatment, payment, and health care operations (45 CFR 164.506) and leverages the progress already made to operationalize privacy laws in an electronic environment, while facilitating interoperability.

Patient Selection

We proposed that the API would need to include a means for the application to query for an identification (ID) or other token of a patient's record in order to subsequently execute data requests for that record.

Comments. Commenters noted that standardization of this requirement should include industry-accepted standards such as IHE PDQ or PIX query.

Response. Consistent with our approach throughout the "API" criteria, we decline to require a specific standard at this time, although we intend to do so in a future rulemaking. We note that the standards suggested by commenters have been adopted in industry and we encourage Health IT Modules to identify and implement any existing standards that best support the needs of their users. We have adopted these final requirements in the certification criterion adopted in § 170.315(g)(7). It includes the proposed requirement with specific conforming adjustments to be its own certification criterion. The criterion specifies that technology will need to be able to receive a request with sufficient information to uniquely identify a patient and return an ID or other token that can be used by an application to subsequently execute requests for that patient's data. We do not presume or prescribe a particular method or amount of data by which technology developer implements its approach to uniquely identify a patient. However, we note that such information

must be included in the technical documentation also required to be made available as part of certification. Once the specific ID or other token is returned in a response, we expect and intend for the other "API" criteria discussed below to be able to use the ID or other token to then perform the data requests.

Data Requests, Response Scope, and Return Format

We proposed that the API would need to support two types of data requests and responses: "by data category" and "all." In both cases, the proposed scope for certification was limited to the data specified in the Common Clinical Data Set. For "by data category," the API would need to respond to requests for each of the data categories specified in the Common Clinical Data Set and return the full set of data for that data category. We also proposed that as the return format for the "by data category," that either XML or JSON would need to be produced. "All" requests for a specific patient would return a patient's fully populated summary record formatted in accordance with the C-CDA version 2.0.

Comments. Commenters suggested several specific changes to this criterion, including: We should clarify that access is for a specific patient; we should include a requirement that applications be able to request specific date ranges, ability to request patient lists or other identified populations; and we should remove the return format of either XML or JSON, because some APIs could return data in HL7 v2 format. For the "data category" request requirement, commenters asked that ONC clarify whether "each" means a query limited to one category at a time, or whether combinations of categories can be requested at one time. For "all" requests, some commenters suggested that this functionality should support the ability to view or download based on specific data, time, or period of time; other commenters urged us to focus first on the narrow set of capabilities initially proposed to gain experience, and add additional capabilities in future certification. Most commenters supported focusing on the CCD document to create clear expectations and enhance interoperability. Two commenters were opposed to restricting the use of C-CDA 2 to CCD document type because other document types (i.e. Transfer Summary, Referral Note and Care Plan) are very commonly used documents in the real world, and would not be available through this functionality.

Response. We expect that all three API capabilities would function

together; thus applications connecting to the API would be able to request data on a specific patient, as described in the "API—patient selection" criterion, using an obtained ID or other token. At this time, we have decided not to include an additional patient list creation requirement. However, we emphasize that this initial set of APIs represents a floor rather than a ceiling, and we expect developers to build enhanced APIs to support innovation and easier, more efficient access to data in the future.

In response to concerns regarding the return format for the data-category request, we have decided to make that requirement more flexible and have removed the specific proposed language of XML or JSON to say in the final criterion that the returned data must be in a computable (i.e., machine readable) format.

In response to comments concerning the "all-request," we clarify that the API functionality must be able to respond to requests for all of the data included in the CCDS on which there is data for patient, and that the return format for this functionality would be limited to the C-CDA's CCD document template. We believe that focusing on the CCD document template will reduce the implementation burden for health IT developers to meet this certification criterion and will help application developers connecting to Health IT Modules' APIs because they will know with specificity what document template they are going to receive.

With regard to requests for each "data category," for the purposes of certification, the technology must demonstrate that it can respond to requests for each individual data category one at a time. However, this is a baseline for the purposes of testing and certification and health IT developers are free to enable the return of multiple categories at once if they choose to build out that functionality.

Similar to our response for "VDT" criterion, we clarify that patients should be provided access to any data included in the Common Clinical Data Set.

As with the VDT requirement, we have adopted date and time filtering requirements as part of this criterion. We agree with commenters that adding this functionality to these criteria will provide clarity that patients should have certain baseline capabilities available to them when it comes to selecting the data (or range of data) they wish to access using an application that interacts with the Health IT Module's APIs. Specifically, we have adopted two timeframe requirements: First, to ensure that an application can request data

¹³¹ NIST SP 800-63-2.

associated with a specific date, and the second, to ensure that an application can request data within an identified date range, which must be able to accommodate the application requesting a range that includes all data available for a particular patient. The technology specifications should be designed and implemented in such a way as to return meaningful responses to queries, particularly with regard to exceptions and exception handling, and should make it easy for applications to discover what data exists for the patient.

Documentation and Terms of Use

We proposed that the required technical documentation would need to include, at a minimum: API syntax, function names, required and optional parameters and their data types, return variables and their types/structures, exceptions and exception handling methods and their returns. We also stated that the terms of use must include the API's developer policies and required developer agreements so that third-party developers could assess these additional requirements before engaging in any development against the API. We also proposed that health IT developers would need to submit a hyperlink to ONC-ACBs, which the ONC-ACB would then submit as part of its product certification submission to the Certified Health IT Product List (CHPL) that would allow any interested party to view the API's documentation and terms of use.

Comments. One commenter suggested that ONC should clarify whether our intent is that terms of use would replace, include, or overlap with HIPAA privacy policies that health care providers are required to provide their patients. Another commenter voiced concern that the API-consuming application should be the party responsible for assuring effective use of the API in terms of safety, security, privacy, and accessibility. Multiple commenters suggested that ONC place certain restrictions on terms of use, including limits on any fees, copyright, or licensing requirements on APIs.

Response. We emphasize that nothing in this criterion is intended to replace federal or state privacy laws and regulations, nor the contractual arrangements between covered entities and business associates. Placing requirements or limitations on the specific content of the terms of use is beyond the scope of certification. However, we reiterate that our policy intent is to allow patients to access their data through APIs using the applications of their own choosing, and limit the creation of "walled gardens" of

applications that only interact with certain Health IT Modules. As stated previously in this preamble, we intend to require a standards-based approach to this criterion in the next appropriate rulemaking and we encourage vendors to start piloting the use of existing and emerging API standards. By requiring that documentation and terms of use be open and transparent to the public by requiring a hyperlink to such documentation to be published with the product on the ONC Certified Health IT Product List, we hope to encourage an open ecosystem of diverse and innovative applications that can successfully and easily interact with different Health IT Modules' APIs.

• *Transport Methods and Other Protocols*

We proposed two ways for providers to meet the 2015 Edition Base EHR definition using health IT certified to transport methods. The first proposed way to meet the proposed 2015 Edition Base EHR definition requirement would be for a provider to have health IT certified to § 170.315(b)(1) and (h)(1) (Direct Project specification). This would account for situation where a provider uses a health IT developer's product that acts as the "edge" and the HISP. The second proposed way would be for a provider to have health IT certified to § 170.315(b)(1) ("ToC" criterion) and (h)(2) ("Direct Project, Edge Protocol, and XDR/XDM"). This would account for situations where a provider is using one health IT developer's product that serves as the "edge" and another health IT developer's product that serves as a HISP.¹³² To fully implement this approach, we proposed to revise § 170.550 to require an ONC-ACB to ensure that a Health IT Module includes the certification criterion adopted in § 170.315(b)(1) in its certification's scope in order to be certified to the certification criterion proposed for adoption at § 170.315(h)(1). We lastly proposed to revise the heading of § 170.202 from "transport standards" to "transport standards and other protocols."

We received minimal comments on these proposals and discussed what comments we received under the "Direct Project, Edge Protocol, and XDR/XDM" certification criterion below.

• *Direct Project*

¹³² See the 2014 Edition Release 2 final rule for more discussion on such situations (79 FR 54436-38).

2015 Edition Health IT Certification Criterion § 170.315(h)(1) (Direct Project)

We proposed to adopt a certification criterion that includes the capability to send and receive according to the Applicability Statement for Secure Health Transport (the primary Direct Project specification). We noted that we previously adopted this capability for the 2014 Edition at § 170.314(b)(1), (b)(2) and (h)(1). We proposed to include as an optional capability for certification the capability to send and receive according to the Implementation Guide for Delivery Notification in Direct, Version 1.0, June 29, 2012 ("Delivery Notification IG"). We explained that the primary Direct Project lacked certain specificity and consistency guidance such that deviations from normal message flow could result if Security/Trust Agents (STAs) implemented only requirements denoted as "must" in Section 3 of the primary Direct Project. As a result, STAs may not be able to provide a high level of assurance that a message has arrived at its destination. We further stated that the Delivery Notification IG provides implementation guidance enabling STAs to provide a high level of assurance that a message has arrived at its destination and outlines the various exception flows that result in compromised message delivery and the mitigation actions that should be taken by STAs to provide success and failure notifications to the sending system.

Comments. Commenters overwhelmingly supported the adoption of this criterion as proposed. Many commenters also expressed strong support for the optional delivery notification provision as a means to support specific business practices. Some commenters stated that delivery notification will only work when both receiving and sending parties support the functionality and, thus, delivery notification must be required of both sending and receiving entities in order for it to work. Commenters also requested clarification regarding "ownership" and maintenance of the Direct Project, including some that recommended that "ownership" should belong to a SDO.

Response. We have adopted a revised criterion in comparison to our proposal and the related 2014 Edition certification criteria. After careful consideration of comments, we believe it is appropriate to adopt the Applicability Statement for Secure Health Transport, Version 1.2 (August 3,

2015).¹³³ This new version of the specification includes updates that improve interoperability through the clarification of requirements that have been subject to varying interpretations, particularly requirements around message delivery notifications. This version also clarifies pertinent requirements in the standards underlying the Applicability Statement for Secure Health Transport. Migration to this newer version will provide improvements for exchange of health information and should have minor development impacts on health IT developers. Further, we expect that many developers and technology organizations that serve as STAs will quickly migrate to version 1.2 due to its improvements. We note, for certification to this criterion, we have made it a requirement to send and receive messages in only “wrapped” format even though the specification (IG) allows use of “unwrapped” messages. This requirement will further improve interoperability among STAs, while having minor development impact on health IT developers.

We have also adopted as a requirement for this criterion the Implementation Guide for Delivery Notification in Direct, Version 1.0, June 29, 2012. While we proposed this IG as an optional provision, we agree with commenters that this functionality must be required to best support interoperability and exchange, particularly for both sending and receiving parties. As we stated in the 2014 Edition Release 2 proposed rule (79 FR 10914–915), the capabilities in this IG provide implementation guidance enabling HISPs to provide a high level of assurance to senders that a message has arrived at its destination, a *necessary* component to interoperability.

We appreciate the recommendations and questions regarding “ownership” of the Direct specifications. We clarify that although ONC played a significant role in the creation and coordination of the Direct specifications that ONC does *not* “own” them. Rather, the specifications are publicly available and we view them as maintained by the community of stakeholders who have and continue to support the Direct specifications. To that end, as a participant in this community, we have been working with other stakeholders to locate an appropriate SDO who can maintain and mature these specifications over the

long term. We believe this step is both necessary and critical for Direct specifications to be well maintained and industry supported over time.

• *Direct Project, Edge Protocol, and XDR/XDM*

2015 Edition Health IT Certification Criterion

§ 170.315(h)(2) (Direct Project, Edge Protocol, and XDR/XDM)

We proposed a 2015 Edition “Direct, Edge Protocol, and XDR/XDM” certification criterion that included three distinct capabilities. The first proposed capability focused on technology’s ability to send and receive according to the Applicability Statement for Secure Health Transport (the primary Direct Project specification). The second proposed capability focused on technology’s ability to send and receive according to both Edge Protocol methods specified by the standard adopted in § 170.202(d). The third proposed capability focused on technology’s ability to send and receive according to the XDR and XDM for Direct Messaging Specification. We noted that these three capabilities were previously adopted as part of the 2014 Edition, including through the 2014 Edition and 2014 Edition Release 2 final rules, and we reminded health IT developers that best practices exist for the sharing of information and enabling the broadest participation in information exchange with Direct.¹³⁴

Comments. Commenters overwhelmingly supported the adoption of this criterion as proposed. A commenter suggested that the primary Direct Project specification should only be included in the Direct Project certification criterion (§ 170.315(h)(1)). A commenter requested clarification on the anticipated advantage(s) of certifying with XDR/XDM. A commenter stated some systems are still using SMTP and IMAP. Another commenter stated that while certified Health IT Modules may implement Direct Edge protocols there is no requirement for HISPs to adopt the protocol. Commenters also requested clarification regarding “ownership” and maintenance of the Direct project, with some recommending that “ownership” should belong to a SDO.

Response. We have adopted this as a revised criterion in comparison to our proposal and the related 2014 Edition certification criteria. After careful consideration of comments, we believe it is appropriate to adopt the

Applicability Statement for Secure Health Transport, Version 1.2 (August 3, 2015).¹³⁵ This new version of the specification includes updates that improve interoperability through the clarification of requirements that have been subject to varying interpretations, particularly requirements around message delivery notifications. This version also clarifies pertinent requirements in the standards underlying the Applicability Statement for Secure Health Transport. Migration to this newer version will provide improvements for exchange of health information and should have minor development impacts on health IT developers. Further, we expect that many developers and technology organizations that serve as STAs will quickly migrate to version 1.2 due to its improvements. For certification to this criterion, we have made it a requirement to send and receive messages in only “wrapped” format even though the specification (IG) allows use of “unwrapped” messages. This requirement will further improve interoperability among STAs while having minor development impact on health IT developers.

We have also adopted as a requirement for this criterion the Implementation Guide for Delivery Notification in Direct, Version 1.0, June 29, 2012. While we proposed this IG as an optional provision, we agree with commenters that this functionality must be required to best support interoperability and exchange, particularly for both a sending and receiving HISP. As we stated in the 2014 Edition Release 2 proposed rule (79 FR 10914–915), the capabilities in this IG provide implementation guidance enabling HISPs to provide a high level of assurance to senders that a message has arrived at its destination, a *necessary* component to interoperability.

We require the use of XDR/XDM to support interoperability and ensure that certain messages packaged using XDR/XDM can be received and processed. This is the same approach we required with the 2014 Edition. We also refer readers to the “ToC” certification criterion discussed earlier in this preamble for further explanation of the interoperability concerns related to the use of XDR/XDM. We clarify for commenters that for health IT to be certified to this criterion it must be able to support both of the Edge Protocols

¹³³ <http://wiki.directproject.org/file/view/Applicability%20Statement%20for%20Secure%20Health%20Transport%20v1.2.pdf/556133893/Applicability%20Statement%20for%20Secure%20Health%20Transport%20v1.2.pdf>.

¹³⁴ <http://wiki.directproject.org/Best+Practices+for+Content+and+Workflow>.

¹³⁵ <http://wiki.directproject.org/file/view/Applicability%20Statement%20for%20Secure%20Health%20Transport%20v1.2.pdf/556133893/Applicability%20Statement%20for%20Secure%20Health%20Transport%20v1.2.pdf>.

methods referenced in the Edge IG version 1.1 (i.e., the “IHE XDR profile for Limited Metadata Document Sources” edge protocol or an SMTP-focused edge protocol (SMTP alone or SMTP in combination with either IMAP4 or POP3)).

We note that even though the Edge Protocol requires support for XDS limited metadata, XDR/XDM supports capability to transform messages using full metadata wherever appropriate. Therefore, we require that a Health IT Module must support both the XDS Metadata profiles (Limited and Full), as specified in the underlying IHE specifications, to ensure that the transformation between messages packaged using XDR/XDM are done with as much appropriate metadata as possible.

This criterion requires the three capabilities specified (Direct Project specification, Edge Protocol compliance, and XDR/XDM processing) because it must support interoperability and all potential certified exchange options as well as support a provider in meeting the Base EHR definition. As we discussed above, a provider could use an “independent” HISP to meet the Base EHR definition. In such a case, the HISP would need to be certified to this criterion in order for the provider to use it to meet the Base EHR definition, which is part of the CEHRT definition under the EHR Incentive Programs. Therefore, there is incentive for a HISP to be certified to this criterion.

Please see our prior response regarding the “ownership” of the Direct

specifications under the “Direct Project” certification criterion.

4. Gap Certification Eligibility Table for 2015 Edition Health IT Certification Criteria

We have previously defined gap certification at 45 CFR 170.502 as the certification of a previously certified Complete EHR or EHR Module(s) to: (1) all applicable new and/or revised certification criteria adopted by the Secretary at subpart C of part 170 based on the test results of a NVLAP-accredited testing laboratory; and (2) all other applicable certification criteria adopted by the Secretary at subpart C of part 170 based on the test results used to previously certify the Complete EHR or EHR Module(s) (for further explanation, see 76 FR 1307–1308). Our gap certification policy focuses on the differences between certification criteria that are adopted through rulemaking at different points in time. This allows health IT to be certified to only the differences between certification criteria editions rather than requiring health IT to be fully retested and recertified to certification criteria (or capabilities) that remain “unchanged” from one edition to the next and for which previously acquired test results are sufficient. Under our gap certification policy, “unchanged” criteria are eligible for gap certification, and each ONC–ACB has discretion over whether it will provide the option of gap certification.

For the purposes of gap certification, we included a table in the Proposed Rule to provide a crosswalk of the

proposed “unchanged” 2015 Edition certification criteria to the corresponding 2014 Edition certification criteria (80 FR 16868). We noted that with respect to the 2015 Edition certification criteria at § 170.315(g)(1) through (g)(3) that gap certification eligibility for these criteria would be fact-specific and would depend on any modifications made to the specific certification criteria to which these “paragraph (g)” certification criteria apply.

Comments. We did not receive specific comments on the gap certification eligibility table or our described gap certification policy.

Response. We have revised the proposed “gap certification eligibility” table to reflect the adopted 2015 Edition certification criteria discussed in section III.A.3 of this preamble. Table 6 below provides a crosswalk of “unchanged” 2015 Edition certification criteria to the corresponding 2014 Edition certification criteria. These 2015 Edition certification criteria have been identified as eligible for gap certification. We note that with respect to the 2015 Edition certification criteria at § 170.315(g)(1) (“automated numerator recording”) and (g)(2) (“automated measure calculation”), a gap certification eligibility determination would be fact-specific and depend on any modifications to the certification criteria to which these criteria apply and relevant Stage 3 meaningful use objectives and measures.

5. Not Adopted Certification Criteria

This section of the preamble discusses proposed certification criteria included in the Proposed Rule that we have not adopted and requests for comments on potential certification criteria included in the Proposed Rule. We summarize the comments received on these proposed criteria and requests for comments and provide our response to those comments.

• *Vital Signs, Body Mass Index, and Growth Charts*

We proposed to adopt a 2015 Edition “vital signs, BMI, and growth charts” certification criterion that was revised in comparison to the 2014 Edition “vital signs, BMI, and growth charts” criterion (§ 170.314(a)(4)). Specifically, we proposed to: (1) Expand the types of vital signs for recording;¹³⁶ (2) require that each type of vital sign have a specific LOINC® code attributed to it; (3) that The Unified Code of Units of Measure, Revision 1.9, October 23, 2013 (“UCUM Version 1.9”)¹³⁷ be used to record vital sign measurements; and (4) that certain metadata accompany each vital sign, including date, time, and measuring- or authoring-type source. In providing this proposal, we stated awareness that several stakeholder groups are working to define unique, unambiguous representations/ definitions for vital signs along with structured metadata to increase data standardization for consistent representation and exchange. To ensure consistent and reliable interpretation when information is exchanged, we stated that vital signs should be captured natively. In addition, we proposed “optional” pediatric vital signs for health IT to electronically record, change, and access. With regard to the proposed metadata, we requested comment on additional information that we should consider for inclusion and the best available standards for representing the metadata consistently and unambiguously. We also requested

comment on the on the feasibility and implementation considerations for proposals that rely on less granular LOINC® codes for attribution to vital sign measurements and the inclusion of accompanying metadata. In the Proposed Rule’s section III.B.3 (“Common Clinical Data Set”), we stated that vital signs would be represented in same manner for the “Common Clinical Data Set” definition as it applies to the certification of health IT to the 2015 Edition, with the exception of the proposed optional vital signs.

Comments. We received mixed feedback to the overall proposal, with many commenters suggesting that (1) ONC should not be mandating how vital signs are recorded natively within certified Health IT Modules, and (2) the proposed approach to require recording of vital signs using a less granular LOINC® code with associated metadata was not a mature or the right approach for ensuring semantic interoperability. Many commenters suggested that ONC should only specify how vital signs are exchanged for the Common Clinical Data Set.

Concerning the proposal to specify how vital signs are recorded natively in a health IT system, commenters noted that there would be workflow and usability issues, such as requiring the user to enter in metadata every time a vital sign is taken. As vital signs are routinely taken as a part of every patient visit in many provider settings, this could be burdensome and time-consuming.

Regarding the proposed approach to record vital signs using a less granular LOINC® code with associated metadata, commenters had a number of concerns. Some commenters were concerned that LOINC® was designed as a pre-coordinated code system (e.g., some LOINC® codes for vital signs are pre-specified to the site of vital sign measurement, method of vital sign measurement, and/or device used to take vital sign), but that our proposal to use a less granular code with associated metadata to assist with interpretation would treat LOINC® as a post-coordinated code system. Since LOINC® does not include specific syntax rules,

our proposed method could lead to data integrity issues and patient safety concerns. Commenters suggested that the industry is working to define a methodology for structured data capture through initiatives like the S&I Framework Structured Data Capture Initiative,¹³⁸ and that ONC should not adopt requirements for structured data capture as part of certification until there is a consensus-based way forward. A few commenters were concerned that the metadata could be lost or hidden from the user’s view when exchanged, resulting in the receiving user’s inability to accurately and safely interpret the vital sign measurement.

Some commenters noted that SNOMED CT® is the international standard used for vital signs. One commenter noted that IHE is working with the Department of Veterans Affairs and other stakeholders to create a utility that would allow conversion from SNOMED CT® to LOINC® or to make data accessible from other countries that use SNOMED CT® for vital signs.

Many commenters suggested that the complexity of the proposed approach for recording vital signs with metadata would require extensive rework and mapping of existing systems resulting in little additional benefit for workflow, usability, and semantic interoperability. As such, commenters stated there was little incentive to certify to the proposed criterion for vital signs as it was not proposed as a requirement for participation in the EHR Incentive Programs. Commenters also noted that most 2014 Edition certified health IT capture vital signs data in different methods based on the product and provider setting, but all of them still support the exchange of vital signs as specified by the industry-accepted C-CDA standard. Thus, most health IT already supports mapping to accepted industry standards for exchange today.

Response. We thank commenters for the thoughtful and detailed feedback. We agree with commenters’ concerns

¹³⁶ Per 80 FR 16818: Systolic blood pressure, diastolic blood pressure, body height, body weight measured, heart rate, respiratory rate, body temperature, oxygen saturation in arterial blood by pulse oximetry, body mass index (BMI) [ratio], and mean blood pressure.

¹³⁷ <http://unitsofmeasure.org/trac/>.

¹³⁸ <https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&uact=8&ved=0CCUQFjAA&url=http%3A%2F%2Fwiki.si-framework.org%2FStructured%2BData%2BCapture%2BInitiative&ei=I3KiVYW-MIKU-AH0kbjwCg&usq=AFQjCNFOiejjmvMMPbgBjd2zJ3igsdJVbw&sig2=GESy7uftrinE-ohpXqMQjw>.

regarding the proposed approach to record vital signs natively within a certified Health IT Module using less specific LOINC® codes and associated metadata. Our long-term goal is for a vital sign measurement to be semantically interoperable during exchange and thereby retain its meaning and be correctly interpretable by a receiving system user. As vital signs data relates to clinical decision support (CDS) and other quality reporting improvement tools, we continue to believe that vital signs should be consistently and uniformly captured in order to apply industry-developed CDS and CQM standards. However, as noted by commenters, the proposed approach does not fully achieve these goals and does not offer an added benefit to the current 2014 Edition approach of requiring vital signs exchange using industry standards and capture in a standards-agnostic manner. We expect the industry to develop a consensus-based approach for structured data capture, including for vital signs, and we will continue to support these processes in consideration of a future rulemaking. Given these considerations, we have not adopted a 2015 Edition “vital signs, BMI, and growth charts” certification criterion at this time, as we believe there is no added certification value for capturing vital signs in either the proposed manner or in a simply standards-agnostic manner.

- *Image Results*

We proposed to adopt a 2015 Edition “image results” certification criterion that was unchanged in comparison to the 2014 Edition “image results” criterion (§ 170.314(a)(12)).

Comments. The majority of commenters supported this criterion as proposed, but some commenters questioned why health IT developers would seek certification to this criterion and why providers would adopt health IT certified to this criterion because it did not support an objective or measure of the proposed EHR Incentive Programs Stage 3 or another program requirement. Some commenters also questioned the value of this criterion without a required standard, with a few commenters recommending the adoption of the Digital Imaging and Communication in Medicine (DICOM) standard.

Response. We have not adopted this certification criterion as part of the 2015 Edition at this time. We have considered public comments and no longer believe there is sufficient value in making this criterion available for certification as proposed. The criterion was proposed with functional requirements that do not advance functionality beyond the

2014 Edition “image results” criterion, support interoperability, nor serve an identified HHS or other program requiring the use of health IT certified to this functionality. In the response to the commenters recommending DICOM as the standard we should adopt, we will further assess whether there is an appropriate use case for the adoption of a certification criterion that requires the use of the DICOM standard as part of any future rulemaking. However, for the particular criterion we proposed, we refer readers to our prior thoughts on the appropriateness of adopting DICOM (77 FR 54173).

- *Family Health History—Pedigree*

In the Proposed Rule, we proposed a 2015 Edition “family health history—pedigree” certification criterion that required health IT to enable a user to create and incorporate a patient’s FHH according to HL7 Pedigree standard and the HL7 Pedigree IG, HL7 Version 3 Implementation Guide: Family History/Pedigree Interoperability, Release 1.¹³⁹

Comments. While some commenters supported adoption of this functionality and criterion, many commenters expressed concerns about the standard and IG. Commenters stated that there has been very little adoption of the Pedigree standard and IG. Commenters also expressed specific concerns about the standard and IG. Commenters noted that the standard is out of date (not been updated since 2009) and not in sync with HL7 V3-based standards. Commenters also stated that the IG was immature and had not been updated since 2013. In particular, commenters noted that the W3C XML schema language cannot represent all constraints expressed in the base specifications referenced in the IG and that there was a lack of clear guidance on interactions and appropriate implementations, which would likely lead to inconsistent implementations. Overall, commenters suggested that a criterion not be adopted with the Pedigree standard and associated IG until the standard and IG have been appropriately updated, including addressing the interoperability interactions that need to be supported, matured, and widely adopted.

Response. We thank commenters for their detailed feedback. We have not adopted this criterion as part of the 2015 Edition at this time. We agree with commenters that further effort is necessary to address their concerns before adoption of this criterion and associated standards. We intend to follow up with relevant stakeholders to

¹³⁹ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=301.

address these concerns and will consider whether it is appropriate to include such a criterion and associated standards in a future rulemaking as HHS’ work to support the Precision Medicine Initiative matures.¹⁴⁰

- *Patient List Creation*

We proposed to adopt a 2015 Edition “patient list creation” certification criterion that was unchanged in comparison to the 2014 Edition “patient list creation” criterion (§ 170.314(a)(14)) and explained the expectation that a Health IT Module must demonstrate its capability to use at least one of the more specific data categories included in the “demographics” certification criterion (§ 170.315(a)(5)) (e.g., sex or date of birth).

Comments. The majority of commenters supported this criterion as proposed, but some commenters questioned why health IT developers would seek certification to this criterion and why providers would adopt health IT certified to this criterion because it did not support an objective or measure of the proposed EHR Incentive Programs Stage 3 or another program requirement. Conversely, some commenters suggested that we adopt a “patient list creation” criterion that had more functionality that would be valuable to providers. These commenters suggested that the criterion included required functionality to select, sort, and create patient lists on, for example: on all patient demographics, vital signs, orders, and referrals, and allergies beyond medication allergies. Commenters stated that such enhanced functionality would improve patient tracking and the monitoring of health disparities.

Response. We have not adopted this certification criterion as part of the 2015 Edition at this time. We have considered public comments and no longer believe there is sufficient value in making this criterion available for certification as proposed. The criterion was proposed with limited functionality that did not go beyond the 2014 Edition “patient list creation” criterion. Further, as proposed, it does not serve an identified HHS or other program. We will, however, consider the comments recommending more enhanced functionality as we consider certification criteria for future rulemaking.

- *Electronic Medication Administration Record*

We proposed to adopt a 2015 Edition electronic medication administration record (eMAR) certification criterion that was unchanged in comparison to

¹⁴⁰ <http://www.nih.gov/precisionmedicine/>.

the 2014 Edition “eMAR” criterion (§ 170.314(a)(16)).

Comments. The majority of commenters supported this criterion as proposed, but some commenters questioned why health IT developers would seek certification to this criterion and why providers would adopt health IT certified to this criterion because it did not support an objective or measure of the proposed EHR Incentive Programs Stage 3 or another identified program requirement. A few commenters requested clarification as to whether bar-code scanning is required to meet this criterion, with a couple of commenters recommending that bar-code scanning be part of this criterion to improve patient safety.

Response. We have not adopted this certification criterion as part of the 2015 Edition at this time. We have considered public comments and no longer believe there is sufficient value in making this criterion available for certification as proposed. The criterion was proposed with functional requirements that do not advance functionality beyond the 2014 Edition “eMAR” criterion, support interoperability, nor serve an identified program requiring the use of health IT certified to this functionality. We will consider whether we should propose the same or a more enhanced eMAR certification criterion in future rulemaking, including giving consideration to the value of identifying or requiring specific assistive technologies (e.g., bar-code scanning) for demonstrating compliance with the functional requirements of the criterion.

- *Decision Support—Knowledge Artifact; and Decision Support—Service*
- *Decision Support—Knowledge Artifact*

In the Proposed Rule, we proposed to adopt a new 2015 Edition “decision support—knowledge artifact” certification criterion that, for the purposes of certification, would require health IT to demonstrate that it could electronically send and receive clinical decision support (CDS) knowledge artifacts in accordance with a Health eDecisions (HeD) standard. To assist the industry in producing and sharing machine readable files for representations of clinical guidance, we proposed to adopt the HL7 Version 3 Standard: Clinical Decision Support Knowledge Artifact Specification, Release 1.2 DSTU (July 2014) (“HeD standard Release 1.2”)¹⁴¹ and to require health IT to demonstrate it can electronically send and receive a CDS artifact formatted in the HeD standard

¹⁴¹ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=337.

Release 1.2. We requested comment on specific types of CDS Knowledge Artifacts for testing and certification to the HeD standard Release 1.2, and on standards’ versions to consider as alternative options, or for future versions of this certification criterion, given the ongoing work to harmonize CDS and quality measurement standards.

- *Decision Support—Service*

In the Proposed Rule, we proposed to adopt a new 2015 Edition “decision support—service” certification criterion that, for the purposes of certification, would require health IT to demonstrate that it could electronically make an information request with patient data and receive in return electronic clinical guidance in accordance with an HeD standard and the associated HL7 Implementation Guide: Decision Support Service, Release 1.1 (March 2014), US Realm DSTU Specification.¹⁴² We specified that health IT would need to demonstrate the ability to send and receive electronic clinical guidance according to the interface requirements defined in Release 1.1. We requested comment on alternative versions of standards and on future versions of this certification criterion to advance the work to harmonize CDS and quality measurement standards.

We have summarized and responded to comments on these “decision support” criteria together as the referenced HeD standards were developed by one S&I initiative to address two use cases, we received similar comments on both proposals, and have determined to not adopt both criteria.

Comments. Many commenters supported the overall goals of the HeD standards to provide standardized ways to exchange decision support artifacts and request decision support information. However, these same commenters recommended ONC not adopt these criteria because of the ongoing work to develop harmonized CDS and clinical quality measure (CQM) standards through the Clinical Quality Framework Standards & Interoperability (S&I) Framework Initiative.¹⁴³ Commenters noted that the harmonized standards are expected to offer clinical and operational improvements for quality improvement over existing standards. These commenters also stated that they expect health IT developers and providers to dedicate

¹⁴² http://www.hl7.org/documentcenter/public/standards/dstu/HL7_DSS_IG%20_R1_1_2014MAR.zip.

¹⁴³ <http://wiki.siframework.org/Clinical+Quality+Framework+Initiative>.

resources to adopting the harmonized standards upon their completion. Therefore, these commenters stated that they do not intend to adopt the HeD standards because the standards are based on a different data model (the Virtual Medical Record or vMR) than the anticipated harmonized CDS and CQM standards. A few commenters noted that they did not support any proposal to offer certification for functionalities or standards that did not directly support a requirement of the proposed the EHR Incentive Programs Stage 3.

Response. We thank commenters for their thoughtful feedback. We acknowledge that the overall direction of health IT developers and providers is to continue to support and eventually adopt the harmonized CDS and CQM standards. Therefore, we agree with commenters that meeting the proposed “decision support” criteria and HeD standards would likely be inconsistent with this overall direction and require inefficient use of resources. As such, we also agree with comments that few, if any, health IT developers would get certified to the proposed criteria and very few providers would demand CDS functionality using the HeD standards. Accordingly, we have not adopted these certification criteria. We will continue to monitor the development and implementation of the harmonized CDS and CQM standards; and will consider whether to propose certification criteria that include these standards in a future rulemaking.

- *Incorporate Laboratory Tests and Values/Results*

We proposed to adopt a 2015 Edition “incorporate laboratory tests and values/results” certification criterion that was revised in comparison to the 2014 Edition “incorporate laboratory tests and values/results” criterion (§ 170.314(b)(5)). We proposed to adopt and include the HL7 Version 2.5.1 Implementation Guide: S&I Framework Lab Results Interface, Draft Standard for Trial Use, Release 2, US Realm (“LRI Release 2”) in the final 2015 Edition “transmission of laboratory test reports” criterion for the ambulatory setting. We explained that the LRI Release 2 addresses errors and ambiguities found in LRI Release 1 and harmonizes interoperability requirements with other laboratory standards we proposed to adopt in this final rule (e.g., the HL7 Version 2.5.1 Implementation Guide: S&I Framework Laboratory Orders from EHR, DSTU Release 2, US Realm, 2013).

We proposed that a Health IT Module would be required to display the following information included in laboratory test reports it receives: (1)

The information for a test report as specified in 42 CFR 493.1291(a)(1) through (a)(3) and (c)(1) through (c)(7); the information related to reference intervals or normal values as specified in 42 CFR 493.1291(d); the information for alerts and delays as specified in 42 CFR 493.1291(g) and (h); and the information for corrected reports as specified in 42 CFR 493.1291(k)(2). We also proposed to require a Health IT Module to be able to use, at a minimum, LOINC[®] version 2.50 as the vocabulary standard for laboratory orders.

Comments. We received mixed comments on this proposed certification criterion. Some commenters generally supported adopting the LRI Release 2 IG. Other commenters also expressed support for inclusion of LOINC[®]. One commenter pointed out potential issues with the use of LOINC[®] as its use may conflict with CLIA reporting requirements for the test description and that in some cases a textual description from the laboratory must be displayed for CLIA reporting. This commenter encouraged the harmonization of requirements with CMS and CDC for CLIA reporting to eliminate potential conflicts. Some commenters expressed concerns that the proposed LRI Release 2 IG was immature and noted additional pilots and potential refinements should be pursued before requiring adoption of the IG for certification.

Response. We have not adopted this certification criterion as part of the 2015 Edition at this time. We have made this determination based on a number of factors, including (among other aspects) that this criterion is no longer referenced by the EHR Incentive Programs and that the best versions of the IGs (LRI and EHR–S Functional Requirements for LRI) that could be associated with this criterion are not sufficiently ready. We agree with commenters regarding the LRI Release 2 IG lack of readiness for widespread adoption. We believe, however, that there is great promise and value in the LRI Release 2 IG for improving the interoperability of laboratory test results/values, the electronic exchange of laboratory test results/values, and compliance with CLIA for laboratories. To that end, we emphasize that we remain committed to continued collaboration with stakeholders to take the necessary steps to support widespread adoption of this IG, including the availability of test tools for industry use. As necessary and feasible, we also remain interested in supporting appropriate pilots for the IG.

EHR–S Functional Requirements LRI IG/Testing and Certification Requirements—Request for Comment

We sought comment on the HL7 EHR–S Functional Requirements for the V2.5.1 Implementation Guide: S&I Framework Lab Results Interface R2, Release 1, US Realm, Draft Standard for Trial Use, Release 1 (“EHR–S IG”), under ballot reconciliation with HL7¹⁴⁴ in describing the requirements related to the receipt and incorporation of laboratory results for measuring conformance of a Health IT Module to LRI Release 2. We also requested comment on uniform testing and certification approaches, specifically for the EHR–S IG.

Comments. Commenters stated that while progress has been made with the EHR–S IG, the standard has not yet been finalized and remains unproven. One commenter requested that we consider this IG for inclusion in a later edition of certification. Some commenters noted that the functional requirements would only govern a Health IT Module’s ability to receive specific laboratory result content, and there is no corresponding guarantee that a laboratory system will send well-formatted results using the EHR–S IG. Another commenter recommended that additional State variation and certification needs be accounted for in the IG. A commenter stated that the HL7 Allergies and Intolerances Workgroup¹⁴⁵ will produce standards on allergies and intolerances and that these standards should be utilized in expanding a future or revised version of the EHR–S IG to addresses genotype-based drug metabolizer rate information appropriately.

Response. We thank commenters for their feedback. We have not adopted the EHR–S IG primarily because we have not adopted this certification criterion. We also agree with commenters that the IG is not yet ready for adoption. The comments we received will be used to inform any future rulemaking related to LRI Release 2 and EHR–S IG.

• Transmission of Laboratory Test Reports

We proposed to adopt a 2015 Edition “transmission of laboratory test reports” certification criterion that was revised in comparison to the 2014 Edition “transmission of electronic laboratory tests and values/results to ambulatory

providers” criterion (§ 170.314(b)(6)). We stated that we renamed the criterion to more clearly indicate its availability for the certification of health IT used by any laboratory. We proposed to adopt and include the HL7 Version 2.5.1 Implementation Guide: S&I Framework Lab Results Interface, Draft Standard for Trial Use, Release 2, US Realm (“LRI Release 2”) in the criterion and discussed our rationale for its inclusion in the 2015 Edition “incorporate laboratory tests and values/results.” We further explained that inclusion of this standard for certification should not only facilitate improved interoperability of electronically sent laboratory test reports, but also facilitate laboratory compliance with CLIA as it relates to the incorporation and display of test results in a receiving system. We also proposed to require a Health IT Module to be able to use, at a minimum, LOINC[®] version 2.50 as the vocabulary standard.

Comments. We received similar comments to those received for the proposed “incorporate laboratory tests and values/results” certification criterion described above (*i.e.*, some general support for adoption and other commenters expressed concern). In regard to expressed concerns, as recited under “incorporate laboratory tests and values/results” certification criterion, commenters stated that the proposed LRI Release 2 IG was immature and noted additional pilots and potential refinements should be pursued before requiring adoption of the IG for certification. Commenters also expressed concern with the use of LOINC[®] in relation to CLIA requirements. One commenter requested that data provenance requirements be included in the standard and/or the criterion.

Response. We have not adopted this certification criterion as part of the 2015 Edition at this time. We have made this determination based on the same factors recited for the proposed 2015 Edition “incorporate laboratory tests and values/results” certification criterion as this criterion is similarly situated as discussed below. This criterion is no longer referenced by the EHR Incentive Programs and the best version of the LRI IG that could be associated with this criterion is not sufficiently ready. We agree with commenters regarding the LRI Release 2 IG lack of readiness for widespread adoption. We believe, however, as stated under the “incorporate laboratory tests and values/results” certification criterion response to comments, that there is great promise and value in the LRI Release 2 IG for improving the

¹⁴⁴ <http://www.hl7.org/participate/onlineballoting.cfm?ref=nav#nonmember>. Access to the current draft of the EHR–S IG is freely available for review during the public comment period by establishing an HL7 user account.

¹⁴⁵ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=308.

interoperability of laboratory test results/values, the electronic exchange of laboratory test results/values, and compliance with CLIA for laboratories. To that end, we emphasize that we remain committed to continued collaboration with stakeholders to take the necessary steps to support widespread adoption of this IG, including the availability of test tools for industry use. As necessary and feasible, we also remain interested in supporting appropriate pilots for the IG.

• *Accessibility Technology Compatibility*

We proposed to adopt a new 2015 Edition “accessibility technology compatibility” certification criterion that would offer health IT developers that present a Health IT Module for certification to one or more of the clinical, care coordination, and patient engagement certification criteria listed in proposed § 170.315(a), (b), or (e) the opportunity to have their health IT demonstrate compatibility with at least one accessibility technology for the user-facing capabilities included in the referenced criteria. By “opportunity,” we noted that we meant that the proposed criterion would be available for certification but not required (*i.e.*, by the ONC Certification Program or the EHR Incentive Programs). We explained that to meet this proposed certification criterion, a Health IT Module would need to demonstrate that the capability is *compatible* with at least one accessibility technology that provides text-to-speech functionality to meet this criterion. We noted that an accessibility technology used to meet this criterion would also *not* be “relied upon” for purposes of § 170.523(f). However, we stated that it would need to be identified in the issued test report and would ultimately be made publicly available as part of the information ONC-ACBs are required to report to ONC for inclusion on the CHPL so that users would be able to identify the accessibility technology with which the certified Health IT Module demonstrated its compatibility.

We sought comment on the extent to which certification to this criterion would assist in complying with Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and other applicable federal (e.g., Section 508 of the Rehabilitation Act of 1973) and state disability laws. We also sought comment on whether certification to this criterion *as proposed* would serve as a valuable market distinction for health IT developers and consumers (e.g., “Health IT Module with certified accessibility features”).

Comments. Some commenters supported the concept of health IT being compatible with accessibility technology. Conversely, other commenters stated that complying with the criterion would be burdensome and would effectuate policy that should not be part of certification. A few commenters contended that text-to-speech capabilities would be costly to implement organization-wide and are not frequently appropriate for many health care workflows, particularly when considering privacy issues. A few commenters suggested that this criterion should include other assistive technology beyond screen readers. One commenter stated that many operation systems are already equipped with accessibility features.

Response. We thank commenters for their feedback. We have not adopted this certification criterion as part of the 2015 Edition at this time. We believe additional research is necessary into the appropriate accessibility technologies that should be referenced by such a criterion and could be supported by a testing infrastructure.

We also believe further research or evidence is needed to determine whether customers would make purchasing decisions based on whether a health IT product was *certified* as being compatible with a text-to-speech technology or simply based on whether a health IT product is compatible with the desired accessibility technology (e.g., Braille capability). In this regard, we did not propose that health IT must have certain accessibility capabilities beyond text-to-speech and, more importantly, that it must be certified to this criterion. Therefore, we have not adopted the proposed criterion.

We do, however, believe that certification can currently support the accessibility of health IT through other means. As such, we have adopted the proposed “accessibility-centered design” certification criterion. We refer readers to section III.A.3 of this preamble for further discussion of this criterion. Independent of this certification requirement, we remind health IT developers seeking certification and providers using certified health IT of their independent obligations under applicable federal civil rights laws, including Section 504 of the Rehabilitation Act, Section 1557 of the Affordable Care Act, and the Americans with Disabilities Act that require covered entities to provide individuals with disabilities equal access to information and appropriate auxiliary aids and services as provided in the applicable statutes and regulations.

• *SOAP Transport and Security Specification and XDR/XDM for Direct Messaging*

We proposed to adopt a 2015 Edition “SOAP Transport and Security Specification and XDR/XDM for Direct Messaging” certification criterion that included the capability to send and receive according to the Transport and Security Specification (also referred to as the SOAP-Based Secure Transport RTM) and its companion specification XDR and XDM for Direct Messaging Specification. We noted that we previously adopted these capabilities for the 2014 Edition at § 170.314(b)(1), (b)(2) and (h)(3).

Comments. We received comments in support of the proposed certification criterion. One commenter suggested that support of XDM should be eliminated and replaced with a translation solution. We received also received a number of comments from the Immunization Information System (IIS) community noting their reliance on SOAP as the recommended transport mechanism for exchange of immunization information in many jurisdictions.

Response. We thank commenters for their feedback. We have not adopted this certification criterion as part of the 2015 Edition at this time. The SOAP specification was originally adopted as an alternative to, or for use in conjunction with, the Direct Project specification. The goal was to offer more certified ways to support the EHR Incentive Program Stage 2 meaningful use transition of care/exchange measure, which required the use of certified technologies in the transmission of health information. There is no longer an explicit need for certification to SOAP because the corresponding health information exchange objectives in the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register** permit any transport mechanism (*i.e.*, not necessarily the use of a certified transport method). In addition, as part of SOAP testing under the ONC Health IT Certification Program, only base SOAP standards, such as the web services standards (WS-*) are tested. For implementation, health IT systems have to layer in additional profiles (IHE based such as XDS) and IGs (e.g., NwHIN specs for patient discovery, query for documents, and retrieve documents) that utilize SOAP. The current testing for SOAP does not test for these additional standards since there has not been a convergence in the industry for a concise set of IGs. Thus, the current testing of SOAP does not provide the rigor or assurance to health IT users that

systems using SOAP will ultimately enable them to exchange seamlessly. We expect the convergence on standards will be accomplished through SDOs.

In response to the XDM comment, we had paired the “XDR/XDM for Direct” with SOAP to enable the testing of SOAP with XDR using XDM packaging. While the comments from the IIS community are beyond the scope of this proposal, we note for clarity that consistent with the approach under the EHR Incentive Programs Stage 2 final rule (77 FR 53979), in the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this edition of the **Federal Register**, CMS adopts flexibility with respect to the public health and clinical data registry reporting objectives at § 495.316(d)(2)(iii). This policy allows states to specify the means of transmission of public health data, and otherwise change the public health agency reporting objective, so long as the state does not require functionality greater than what is required under the Medicare EHR Incentive Program CEHRT definition and the 2015 Edition certification criteria adopted in this final rule.

• *Healthcare Provider Directory—Query Request*

We proposed a new 2015 Edition “healthcare provider directory—query request” certification criterion that would require a Health IT Module to be capable of querying a directory using the Integrating the Healthcare Enterprise (IHE)¹⁴⁶ Healthcare Provider Directory (HPD).¹⁴⁷ In addition, we proposed including an optional capability within this certification criterion that addresses federated requirements. This optional capability would require a Health IT Module to follow the approved federation option of IHE HPD¹⁴⁸ to accomplish querying in federated environments. The proposed certification criterion sought to establish a minimum set of queries that a Health IT Module could support. We specified that the capabilities required by a Health IT Module would include: (1) Querying for an individual provider; (2) querying for an organizational provider; (3) querying for both individual and organizational provider in a single query; (4) querying for relationships between individual and organizational providers; and (5) electronically

processing responses according to the IHE HPD Profile.

Comments. Many commenters confirmed the value of provider directories and the ability for EHRs to query a provider directory. Most commenters stated that the proposed IHE HPD standard was immature and had few current implementations beyond pilot projects, with some commenters expressing concern about the costs associated with potential changes as the standard matures. Other commenters expressed concern with potential performance issues related to federated queries as well as the potential to proliferate redundant data. Commenters also noted, to ensure quality data, there needs to be: Centralized directories; a governance model for a centralized approach; and uniform directory sharing strategies among providers, organizations, and intermediaries. A commenter recommended the S&I Framework revisit consider expanding the scope of the use cases for provider directories and any solutions beyond query and response to include the maintenance of provider directories.

Some commenters stated a preference for an approach that utilized a RESTful architecture, such as FHIR, noting that a service stack utilizing SOAP protocols (as used by the IHE HPD protocol) is more difficult to implement and maintain.

Response. We thank commenters for their feedback and appreciate their comments in supporting the use of provider directories. We have not adopted this criterion as part of the 2015 Edition at this time. As noted in the draft ONC 2015 Interoperability Standards Advisory (draft ISA), the IHE HPD Profile is a provider directory standard and was listed as the best available standard in the draft ISA.¹⁴⁹ However, we agree with commenters that the IHE HPD standard requires further implementation to ensure stability and support widespread adoption and the same is true for the federated concepts. We also agree with commenters that RESTful solutions are being defined and may be a viable alternative in the near future. We note that HHS remains committed to advancing policies related to provider directories as a means of furthering health information exchange and interoperability. We believe that continued work in this space can inform the development and implementation of provider directory standards for consideration in future rulemaking.

• *Healthcare Provider Directory—Query Response*

We proposed to adopt a new certification criterion that would focus on the “query response” and include the corresponding set of capabilities to respond to a provider directory query. This proposed criterion was intended to complement the certification criterion we proposed for adoption related to health IT issuing a healthcare provider directory “query request,” and we explained that the proposed separation would provide developers with the flexibility to test and certify for provider directory “query” independent of the provider directory “response.” We stated that a health IT system would be able to be presented for testing and certification to both proposed certification criteria if applicable or just to one or the other as appropriate based on the product’s capabilities.

We proposed that directory sources must demonstrate the capability to respond to provider directory queries according to the IHE HPD profile and must respond to the following provider directory queries: Query for an individual provider; query for an organizational provider; and query for relationships between individual providers and organizational providers.

In addition we proposed including an optional capability within this certification criterion to address federated requirements that would require a Health IT Module to follow the approved federation option of for IHE HPD to accomplish querying in federated environments. The federation change proposal was approved in September, 2014 and was incorporated into the IHE HPD Profile.

Comments. Commenters submitted the same or equivalent comments as those submitted on the proposed “healthcare provider directory—query request” certification criterion, which are described above.

Response. We have not adopted this criterion for reasons specified in our response above for the proposed healthcare provider directory—query request” certification criterion.

• *Electronic Submission of Medical Documentation*

We proposed to adopt a new 2015 Edition “electronic submission of medical documentation” (esMD) certification criterion that focused on the electronic submission of medical documentation through four specific capabilities.

We proposed Capability 1 would require a Health IT Module be able to support the creation of a document in accordance with the HL7 Implementation Guide for CDA Release

¹⁴⁶ http://wiki.ihe.net/index.php?title=Healthcare_Provider_Directory.

¹⁴⁷ http://www.ihe.net/uploadedFiles/Documents/ITI/IHE_ITI_Suppl_HPDPdr.

¹⁴⁸ http://www.ihe.net/uploadedFiles/Documents/ITI/IHE_ITI_Suppl_HPDPdf.

¹⁴⁹ <http://www.healthit.gov/standards-advisory>.

2: Additional CDA R2 Templates—Clinical Documents for Payers—Set 1, Release 1—US Realm in combination with the C—CDA Release 2.0 standard. We proposed to adopt the most recent version of the CDP1 IG, which is designed to be used in conjunction with C—CDA Release 2.0 templates and makes it possible for providers to exchange a more comprehensive set of clinical information. We explained that a Health IT Module must be able to create a document that conforms to the CDP1 IG's requirements along with appropriate use of nullFlavors to indicate when information is not available in the medical record for section or entry level template required in the CDP1 IG. In addition, we proposed that a conformant Health IT Module must also demonstrate the ability to generate the document level templates as defined in the C—CDA Release 2.0, including the unstructured document. We proposed a list of the applicable document templates within the C—CDA Release 2.0 and CDP1 IG that would need to be tested and certified for specific settings for which a Health IT Module is designed: (regardless of setting) Diagnostic Imaging Report; Unstructured Document; Enhanced Operative Note Document; Enhanced Procedure Note Document; Interval Document; (ambulatory setting only) Enhanced Encounter Document; and (inpatient setting only) Enhanced Hospitalization Document.

We proposed Capability 2 would require a Health IT Module be able to support the use of digital signatures embedded in C—CDA Release 2.0 and CDP1 IG documents templates by adopting the HL7 Implementation Guide for CDA Release 2: Digital Signatures and Delegation of Rights, Release 1 (DSDR IG).¹⁵⁰ This DSDR IG defines a method to embed digital signatures in a CDA document and provides an optional method to specify delegation of right assertions that may be included with the digital signatures. We proposed that for the purposes of certification, the optional method must be demonstrated to meet this certification criterion. The Proposed Rule listed the requirements that a system used to digitally sign C—CDA Release 2.0 or CDP1 IG documents must meet to create a valid digital signature that meets Federal Information Processing Standards (FIPS),¹⁵¹ Federal Information Security Management Act

of 2002 (FISMA),¹⁵² and Federal Bridge Certification Authority (FBCA) requirements.¹⁵³ For the purposes of testing and certification, we proposed that cryptographic module requirements must be met through compliance documentation, and the remaining capabilities listed in the Proposed Rule would be met through testing and certification assessment. We also proposed that a Health IT Module must demonstrate the ability to validate a digital signature embedded in a C—CDA Release 2.0 document that was conformant with the DSDR IG. The requirements proposed to perform this action are included in the DSDR IG.

We proposed Capability 3 would require a Health IT Module be able to support the creation and transmission of “external digital signatures” for documents that may be used to sign any document for the purpose of both data integrity and non-repudiation. The esMD Initiative defines the requirements in the Author of Record Level 1: Implementation Guide;¹⁵⁴ and we proposed to adopt the IG. We explained that this “signing” capability is intended for use when the sender of one or more documents needs to ensure that the transmitted documents include the non-repudiation identity of the sender and ensure that the recipient can validate that the documents have not been altered from the time of signing, and it is not intended to replace the ability to embed multiple digital signatures in a C—CDA Release 2.0 and CDP1 IG document.

We proposed Capability 4 would require a Health IT Module to support the creation and transmission of digital signatures for electronic transactions for the purpose of both data integrity and non-repudiation authenticity. The esMD Initiative defines the requirements in the Provider Profiles Authentication: Registration Implementation Guide;¹⁵⁵ and we proposed to adopt the IG. We explained that this “signing” capability is intended for use when the sender or recipient of a transaction needs to ensure that the transmitted information include the non-repudiation identity of

the sender and ensure that the recipient can validate that the authenticity and integrity of the transaction information, and it is not intended to replace the digital signature requirements defined in either Capability 2 or 3 above.

Comments. A few commenters expressed support for this criterion. However, many more commenters expressed concerns. Commenters stated that the IG was immature, there had been few pilots, and it was not proposed as required for Stage 3 of the EHR Incentive Programs. A few commenters also expressed concern about advancing a digital signature standard that may conflict with the existing Drug Enforcement Administration (DEA) standard for electronic prescribing of controlled substances. Other commenters expressed concerns that the changes to existing administrative and clinical workflows would be required to integrate esMD at a significant cost and resource burden.

Response. We have not adopted this criterion as part of the 2015 Edition at this time. We acknowledge and agree with commenters' stated concerns about the relative immaturity of the proposed standards and recommendations for further industry piloting and implementation to determine the usefulness of the standards for meeting the stated use cases. We will continue to monitor the development and implementation of esMD and will consider whether proposing a certification criterion or criteria to support esMD is appropriate for a future rulemaking.

- *Work Information—Industry/ Occupation (I/O) Data—Request for Comment*

In the Proposed Rule, we requested that commenters consider what additional support might be needed for health IT developers, implementers, and users to effectively include a certification criterion that would require health IT to enable a user to record, change, and access (all electronically) the following data elements in structured format:

- Patients' employment status and primary activities (e.g., volunteer work);
- Patients' current I/O, linked to one another and with time-stamp, including start date;
- Patients' usual I/O, linked to one another and with time-stamp, including start year and duration in years; and
- Patients' history of occupation with a time and date stamp for when the history was collected (to note, this is focused on the capability to record a history, not a requirement that a history must be recorded or that a patient

¹⁵² <http://csrc.nist.gov/drivers/documents/FISMA-final.pdf>.

¹⁵³ <http://www.idmanagement.gov/sites/default/files/documents/FBCA%20Certificate%20Policy%20v2.27.pdf>.

¹⁵⁴ <http://wiki.siframework.org/file/view/esMD%20AoR%20Level%201%20Implementation%20Guide%20v5%20FINAL.docx/539084894/esMD%20AoR%20Level%201%20Implementation%20Guide%20v5%20FINAL.docx>.

¹⁵⁵ <http://wiki.siframework.org/file/view/esMD%20Use%20Case%201%20Implementation%20Guide%20v24%20FINAL.docx/539084920/esMD%20Use%20Case%201%20Implementation%20Guide%20V24%20FINAL.docx>.

¹⁵⁰ http://www.hl7.org/implement/standards/product_brief.cfm?product_id=375.

¹⁵¹ <http://www.nist.gov/itl/fips.cfm>.

history be recorded for a certain historical period of time).

We also solicited public comment on the experience health IT developers and health care providers have had in recording, coding, and using I/O data, which included any innovation that is making I/O data more useful for providers.

To better understand the health care needs associated with work data, we specifically solicited public comment from *health care providers, provider organizations, and patients* on the following:

- The usefulness for providers to be able to access current and usual I/O and related data in the EHR, including whether additional data elements, such as work schedule, are useful.

- The usefulness of a history of positions provided as current I/O, with data from each position time-stamped, linked, retained, and accessible as part of the longitudinal patient care (medical) record.

- Narrative text (vs. codes) for both current and usual I/O.

- CDC Census codes for both current and usual I/O; available through PHIN VADS at <https://phinvads.cdc.gov/vads/SearchVocab.action>.

- SNOMED CT® codes for occupation (current codes or potentially developed codes).

- Other standards and codes that may be in use by the health IT industry for both current and usual I/O.

Comments. Many commenters supported the capture of structured industry/occupation (I/O) data in EHRs and other health IT systems to improve patient health outcomes for health issues wholly or partially caused by work and for health conditions whose management is affected by work. These commenters stated that the structured capture of I/O information would also improve interoperability as the information being collected today is largely unstructured. Commenters did, however, express a number of concerns relating to maturity of available standards for representing the information and the time needed for a provider to collect structured I/O information. In regard to standards, a number of commenters suggested that the codes currently available in SNOMED CT® are not specific enough to capture the level of I/O detail that would be of clinical value. Instead, commenters stated that the industry is working through a NIOSH-led effort to develop an interface between health IT and an I/O coding knowledge engine that would guide users through choosing CDC Census I/O titles based on the North American Industry Coding

System (NAICS) and the Bureau of Labor Statistics Standard Occupational Codes (SOC). Commenters mentioned that this work is still underway and suggested we wait until this standard is available for use before adopting requirements for capture of I/O information through certification. Commenters stated that the NAICS/SOC code set is considered the most authoritative and mature code set. These comments further stated that the adoption of SNOMED CT® would not align with the NAICS/SOC code set or the NIOSH tool and, therefore, could potentially create unnecessary burden.

Response. We thank commenters for the thoughtful feedback. As stated in the 2015 Edition proposed rule (80 FR 16829), we continue to believe in the value of I/O information to provide opportunities for health care providers to improve patient health outcomes for health issues wholly or partially caused by work and for health conditions whose management is affected by work. Our long-term goal is for health care providers to use I/O information to assess symptoms in the context of work activities and environments, inform patients of risks, obtain information to assist in return-to-work determinations and evaluate the health and information needs of groups of patients.

Given the feedback about the immaturity of the standards currently available for supporting these goals, we have not adopted a 2015 Edition certification criterion for the collection of I/O information. We are, however, optimistic about the NIOSH-led effort to develop a tool based on the NAICS/SOC code set and believe that it can provide a much-needed authoritative standard that can enable the detailed recording of I/O titles. We intend to monitor the development of such a tool and will consider it and the additional comments we received regarding structured capture of I/O information for future rulemaking.

- *U.S. Uniformed/Military Service Data—Request for Comment*

To improve coding of military and all uniformed history, we stated in the Proposed Rule that a promising path forward would be to add codes to the U.S. Extension of SNOMED-CT®. Therefore, we requested comment on the following:

- Whether a potential certification criterion should be focused solely on U.S. military service or all uniformed service members (e.g., commissioned officers of the USPHS and NOAA);

- Whether the U.S. Extension of SNOMED-CT® is the most appropriate vocabulary code set or whether other

vocabulary code sets may be appropriate; and

- The concepts/values we should use to capture U.S. military service or all uniformed service status. We ask commenters to consider the work of NIOSH on I/O information as it relates to capturing military service.

Comments. A large number of commenters suggested that we adopt certification to capture military service. Commenters stated that capturing information on military service could identify significant occupational exposure risks unique to military service, including overseas deployment and combat environments. Commenters stated that capturing a patient's military service could also ensure that a patient receives all the applicable health care benefits (e.g., military and veteran's benefits), s/he is entitled to by alerting medical professionals to the patient's service history. Commenters stated that capturing military service information could also enable the assembly of a complete longitudinal record of care for a U.S. service member, including merging of health care data from different sources.

Some commenters supported and opposed the collection of non-military service uniformed service status (e.g., service data for U.S. Public Health Service and National Oceanic and Atmospheric Administration uniformed officers) as part of military/uniformed service data or collected separately.

In regard to vocabulary standards for collecting military service information, commenters submitted mixed comments on whether SNOMED CT® codes were sufficiently detailed and captured the right types of military service information. Commenters pointed out that SNOMED CT® contains some concepts to capture high-level military history, including current or past active military service and combat zone service. However, other commenters expressed concern that current SNOMED CT® codes for military history are not detailed enough to be of clinical value. As an example, commenters noted that while SNOMED CT® can document general information about whether the person served in the military, it does not allow for the capture of the individual's specific occupation.

Commenters stated that the NIOSH work on developing a tool for industry and occupation codes as described in the "Work Information—Industry/Occupation Data—Request for Comment" section above would include detailed codes for military service branch; service status; commissioned, warrant officer, non-commissioned and

enlisted service; and many occupational areas. Commenters noted, however, that the NIOSH tool is not expected to be able to capture Military Occupational Specialty (MOS) codes maintained by the Armed Forces or areas of service (such as ships, stations, and combat theaters).

Response. We thank commenters for the thoughtful feedback. As stated in the 2015 Edition proposed rule (80 FR 16830), we continue to believe in the value of capturing patient military service and other uniformed service information. We believe recording U.S. uniformed/military service information can have many benefits. It can help in identifying epidemiological risks for patients such as those noted above. It can assist in ensuring that a patient receives all the health care benefits he or she is entitled to by alerting medical professionals to the patient's service history, which can facilitate the coordination of benefits. This information can also increase the ability to assemble a longitudinal record of care for a U.S. service member, such as by requesting or merging of a patient's electronic health record stored by the Department of Defense, Veteran's Health Administration, and/or another health care provider.

Our long-term goal is for health care providers to use military service information to provide better care for our nation's veterans. However, given the feedback about SNOMED CT and the NIOSH tool under development, we have not adopted a 2015 Edition certification criterion for military service. We plan to continue to work with the appropriate stakeholders to develop the appropriate values and code sets that would enable consideration of a relevant certification criterion in a future rulemaking.

• *Pharmacogenomics Request for Comment*

Pharmacogenomics data identifies genetic variants in individuals that alter their metabolism or other interactions with medications and can lead to serious adverse events. This information is being included in an increasing number of FDA-approved drug labels. Health IT that can capture pharmacogenomics information could be used to improve patient safety and enhance patient outcomes. In the Proposed Rule, we stated that to our knowledge, in general, health IT has not yet captured genomic and genetic patient information—the presence of clinically significant genomic variants—in a structured manner such as exists for

other categorical clinical findings or laboratory-derived data.¹⁵⁶

In collaboration with the National Institutes of Health, we solicited comment on whether:

- The 2015 Edition “medication allergy list” certification criterion should include the capability to integrate genotype-based drug metabolizer rate information;
- the 2015 Edition “drug-drug, drug-allergy interactions checks for CPOE” certification criterion or as a separate certification criterion should include pharmacogenomic CDS for “drug-genome interactions;”
- we should offer 2015 Edition certification for CDS that incorporate a patient's pharmacogenomic genotype data into the CPOE prescribing process with the goal of avoiding adverse prescribing outcomes for known drug-genotype interactions;
- there are certification approaches that could enhance the end-user's (provider's) adoption and continued use of health IT implementations that guide prescribing through CDS using pharmacogenomic data; and
- there are existing or developing standards applicable to the capture, storage, display, and exchange of potentially clinically relevant genomic data, including the pharmacogenomic subset.

Comments. Most commenters agreed on the value of pharmacogenomics data as an integral part of medicine in the future, but indicated that the standards were currently not mature enough to support this functionality and that it was premature to attempt to include it in certification. Commenters noted that the inclusion of pharmacogenomics data can link variants to changes in drug metabolism or response, especially when clinical guidelines exist about dosing for variant carriers and how it can enable pharmacogenomic-based therapeutic recommendations integrated into computerized systems for drug prescription, automated medication surveillance, and EHRs.

In certain instances, commenters supported inclusion of the pharmacogenomic variant causing the allergy if such information is known for the patient. However, other commenters suggested that studies are needed to prove effectiveness and support inclusion of such data. Some commenters cited drug-drug and drug-allergy interaction alerts without an appropriate filter as the largest source of alert fatigue in relation to the value.

¹⁵⁶ <http://www.genomebc.ca/education/articles/genomics-vs-genetics/>; and <http://www.who.int/genomics/geneticsVSgenomics/en/>.

Many other commenters also cited concerns over other CDS alert fatigue, poor return on investment, high costs of testing, and the staff resources needed to maintain the CDS in a rapidly evolving area with little evidence to show that it improves overall outcomes or reduces costs. A few commenters noted the existence of third-party web services that provide drug-genome interaction checking functionality that are easily integrated with EHRs.

Response. While we believe in the value of CDS including drug-drug/drug-allergy interaction checks for improving patient safety, we agree that standards are not mature to support incorporating pharmacogenomics data into health IT certification at this point in time. We encourage the industry to continue its work on developing standards for incorporating this information into health IT. We note that we view the use of pharmacogenomics data in health IT as one of the early tangible products of the Precision Medicine Initiative,¹⁵⁷ and intend to monitor and consider developments in this field for future rulemaking.

Privacy and Security Considerations for Pharmacogenomics

We solicited comment on whether:

- We should offer certification for health IT functionality that could facilitate HIPAA-compliant sharing of discrete elements of a patient's genomic information from their record to the family history section of a relative's record;
- the proposed “data segmentation for privacy” criteria would provide needed health IT functions with respect to the storage, use, transmission, and disclosure of genetic, genomic, and pharmacogenomics information that is subject to protections under HIPAA and additional state and federal privacy and protection laws such as the Genetic Information Nondiscrimination Act (GINA);¹⁵⁸
- the proposed “data segmentation for privacy” criteria adequately balance complex genetic privacy issues, such as those related to behavioral health, with the clinical value of context-appropriate availability of a patient's actionable genetic and genomic information;
- health IT should be required to apply different rules for the use and exchange of genetic, genome, and pharmacogenomics data based on different groupings of diseases or conditions based on the sensitivity of

¹⁵⁷ <http://www.nih.gov/precisionmedicine/>.

¹⁵⁸ <http://ghr.nlm.nih.gov/spotlight=thegeneticinformationnondiscriminationatina>.

the information, such as those related to behavioral health; and

- there are other factors we should consider for health IT that allows the user to use or disclose genetic information in a manner compliant with federal and state privacy laws.

Comments. Many commenters noted privacy concerns stating it is essential to understand and implement proper privacy and security requirements associated with certified functionalities. Commenters indicated certified functionalities must not lead to discrimination against individuals or their families who may be at risk of developing future health issues. These commenters were concerned that there is not sufficient technical maturity to support privacy protections for genetic data, segmented to the genetic data atom. In particular, commenters were concerned about behavioral health implications, the risk of revealing latent conditions and providing information on close relatives, and the effect on insurance coverage. In addition to privacy concerns, select comments noted ethical and legal implications of any gene-related functionality. Some commenters suggested that the features of the “data segmentation for privacy” criteria should be incorporated into any inclusion of pharmacogenomic data.

Response. We thank commenters for sharing their concerns and feedback. As noted above, standards are not mature to support incorporating pharmacogenomics data into health IT certification at this point in time. We will continue to consider privacy and security implications and stakeholder concerns as they relate to any potential future rulemaking for pharmacogenomics data. To note, we have adopted the proposed “data segmentation for privacy” criteria (see section III.3 of this preamble) and will further assess and consider its value in the segmentation of individually identifiable genetic information that is protected by federal and state privacy laws as part of any future rulemaking related to pharmacogenomics data.

B. Definitions

1. Base EHR Definitions

We proposed to adopt a Base EHR definition specific to the 2015 Edition (*i.e.*, a 2015 Edition Base EHR definition) at § 170.102 and rename the current Base EHR definition at § 170.102 as the 2014 Edition Base EHR definition. We proposed a 2015 Edition Base EHR definition that would differ from the 2014 Edition Base EHR definition in the following ways:

- It would not include privacy and security capabilities and certification criteria.
- It would only include capabilities to record and export CQM data (§ 170.315(c)(1)) and not the other CQM capabilities such as import, calculate, and “report to CMS.”
- It would include the 2015 Edition “smoking status” certification criterion as patient demographic and clinical health information data consistent with statutory requirements.¹⁵⁹
- It would include the 2015 Edition “implantable device list” certification criterion as patient demographic and clinical health information data consistent with statutory requirements.¹⁶⁰
- It would include the 2015 Edition “application access to Common Clinical Data Set” certification criterion as a capability to both capture and query information relevant to health care quality and exchange electronic health information with, and integrate such information from other sources.¹⁶¹
- It would include the proposed 2015 Edition certification criteria that correspond to the remaining 2014 Edition certification criteria referenced in the “2014 Edition” Base EHR definition (*i.e.*, CPOE, demographics, problem list, medication list, medication allergy list, CDS, transitions of care, data portability, and relevant transport certification criteria). On the inclusion of transport certification criteria, we proposed to include the “Direct Project” criterion (§ 170.315(h)(1)) as well as the “Direct Project, Edge Protocol and XDR/XDM” criterion (§ 170.315(h)(2)) as equivalent alternative means for meeting the 2015 Edition Base EHR definition.

Comments. A commenter recommended removing the Base EHR definition from the 2015 Edition rulemaking and including it in the EHR Incentive Programs rulemaking. Several commenters suggested that we modify the Base EHR definition to accommodate use of health IT that is certified to the 2014 Edition and the 2015 Edition, stating that this will give providers flexibility as they upgrade to 2015 Edition and begin to achieve Stage 3.

¹⁵⁹ A Base EHR is the regulatory term we have given to what the HITECH Act defines as a “qualified EHR.” Our Base EHR definition(s) include all capabilities found in the “qualified EHR.” Please see the 2014 Edition final rule (77 FR 54262) for further explanation.

¹⁶⁰ A capability included in the Base EHR definition, which originates from the “qualified EHR” definition found in the HITECH Act.

¹⁶¹ These are capabilities included in the Base EHR definition, which originate from the “qualified EHR” definition found in the HITECH Act.

Commenters provided varying recommendations for the criteria that should be included in the Base EHR definition. Some commenters stated that separating privacy and security certification criteria from the Base EHR definition is overly burdensome or confusing, or may create security gaps. A commenter recommended that the “data export” and “application access to Common Clinical Data Set” criteria are more appropriate as “modular” certification, rather than as part of the Base EHR definition. A commenter suggested that “drug-drug, drug-allergy interaction checks for CPOE” criterion be included in the Base EHR definition as it is specifically for CPOE, which is part of the Base EHR definition. Some commenters rejected the idea of including the “implantable device list” criterion in the Base EHR definition, while other commenters supported inclusion of this criterion and noted that this capability would improve care coordination. A few commenters voiced support for the inclusion of the Direct Edge Protocol as an alternative to Direct Project. Some commenters recommended that sexual orientation and gender identity data be included in the Base EHR definition.

Response. We have renamed the current Base EHR definition at § 170.102 as the 2014 Edition Base EHR definition and adopted the 2015 Base EHR definition largely as proposed. In Table 7 below, we list the 2015 Edition certification criteria included in the 2015 Edition Base EHR definition. Many of the proposed criteria have been revised in response to comments and we refer readers to section III.A.1 of this preamble for a detailed discussion of those criteria and revisions.

Since the establishment of the 2014 Edition Base EHR definition (77 FR 54263–64), we have tried to limit the criteria included in the Base EHR definition to those necessary to meet the HITECH Act requirements and our policy goals. In this regard, we have not included “drug-drug, drug-allergy interaction checks for CPOE” criterion in the 2015 Edition Base EHR definition just as we did not for the 2014 Edition Base EHR definition (see 77 FR 54264). We have, however, included the “implantable device list” criterion in this 2015 Edition Base EHR definition for the reasons stated in the Proposed Rule (80 FR 16825) and discussed under the “implantable device list” criterion in section III.A.1 of this preamble. We have also included the Direct transport alternatives for the reasons discussed in the Proposed Rule (80 FR 16862) and under “transport methods and other protocols” in section III.A.1 of this

preamble. In response to comments and other considerations, the “demographics” certification criterion (§ 170.315(a)(5)) now includes sexual orientation and gender identity as data elements, thus including this data in the 2015 Edition Base EHR definition. We discuss this further under the “demographics” certification criterion in section III.A.1 of this preamble. We also note that given our decision to split the “application access to Common Clinical Data Set” criterion into three separate criteria, we have accordingly modified the 2015 Edition Base EHR definition to include these three criteria.

In regard to the lack of inclusion of privacy and security criteria in the 2015 Edition Base EHR definition, we believe commenters are confused by our approach. As discussed in more detail under the “privacy and security” heading in section IV.C.1 of this preamble, Health IT Modules presented for certification to criteria listed in the 2015 Base EHR definition and other 2015 Edition certification criteria *will be* subject to the applicable privacy and security criteria for the purposes of certification. Our new privacy and security certification approach places responsibility more clearly on the health IT developer presenting its product for

certification to ensure that its health IT has the applicable privacy and security capabilities in order to be certified. This is counter to the approach under the 2014 Edition Base EHR definition, which puts the onus on the provider to ensure he/she has health IT certified to the privacy and security criteria included in the Base EHR definition.

The CQM capabilities noted above as not included in the 2015 Edition Base EHR definition have, however, been included the Certified EHR Technology (CEHRT) definition under the EHR Incentive Programs. We refer readers to the next section (“2. Certified EHR Technology Definition”) and Table 4 found in section III.A.3 (“2015 Edition Health IT Certification Criteria Associated with the EHR Incentive Programs Stage 3”) of this preamble for further information and guidance on the relationship of the 2015 Edition Base EHR definition and the 2015 Edition certification criteria with the CEHRT definition. We also refer readers to the CEHRT definition finalized in the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register** as the authoritative source for the requirements to meet the CEHRT definition.

We seek to clarify the 2015 Base EHR definition in response to comments. First, the Base EHR definition is just a definition not a single certified product. As noted in 2014 Edition final rule (77 FR 54263), the Base EHR definition may be met using multiple Health IT Modules. Therefore, to the commenter’s point, Health IT Modules separately certified to the “data export,” “application access” criteria, and other criteria included in the 2015 Edition Base EHR definition can be combined to meet the definition. Second, we believe the defining of the Base EHR definition should remain in the rulemaking as the Base EHR definition is only one part of the CEHRT definition and may serve other purposes beyond its inclusion in the CEHRT definition and supporting the EHR Incentive Programs. Third, with the 2014 and 2015 Base EHR definitions’ inclusion in the CEHRT definition and the CEHRT definition’s included flexibility to use both health IT certified to the 2014 and 2015 Editions for the specified EHR reporting periods, we do not believe there would be a benefit to developing a single Base EHR definition that referenced both the 2014 and 2015 Editions. Rather, we believe this would cause confusion, particularly in relationship to the CEHRT definition.

TABLE 7—CERTIFICATION CRITERIA REQUIRED TO SATISFY THE 2015 EDITION BASE EHR DEFINITION

Base EHR capabilities	Certification criteria
<i>Includes patient demographic and clinical health information, such as medical history and problem lists.</i>	Demographics § 170.315(a)(5). Problem List § 170.315(a)(6). Medication List § 170.315(a)(7). Medication Allergy List § 170.315(a)(8). Smoking Status § 170.315(a)(11). Implantable Device List § 170.315(a)(14).
<i>Capacity to provide clinical decision support</i>	Clinical Decision Support § 170.315(a)(9).
<i>Capacity to support physician order entry</i>	Computerized Provider Order Entry § 170.315(a)(1), (2) or (3).
<i>Capacity to capture and query information relevant to health care quality</i>	Clinical Quality Measures—Record and Export § 170.315(c)(1).
<i>Capacity to exchange electronic health information with, and integrate such information from other sources.</i>	Transitions of Care § 170.315(b)(1). Data Export § 170.315(b)(6). Application Access—Patient Selection § 170.315(g)(7). Application Access—Data Category Request § 170.315(g)(8). Application Access—All Data Request § 170.315(g)(9). Direct Project § 170.315(h)(1) or Direct Project, Edge Protocol, and XDR/XDM § 170.315(h)(2).

Marketing

In the Proposed Rule, we noted that we would continue the same marketing policy that we adopted for the 2014 Edition as it relates to the 2015 Edition Base EHR definition (*i.e.*, health IT developers would have the ability to market their technology as meeting the 2015 Edition Base EHR definition when their Health IT Module(s) is/are certified to all the 2015 Edition certification criteria included in the 2015 Edition

Base EHR definition) (see also 77 FR 54273).

Comments. A commenter requested clarification regarding how we anticipate ONC–ACBs will monitor the use of the term “Base EHR definition.”

Response. We will maintain this policy with the 2015 Edition. We anticipate that ONC–ACBs will continue to monitor health IT developers and their certified health IT as they do now with regard to the 2014 Edition Base EHR definition. ONC–ACBs have various oversight responsibilities for

certified health IT, including ensuring the public disclosure of certain information for certified health IT (see § 170.523(k)); the proper use of the Certified HIT certification mark (see § 170.523(l)); and responsibilities under ISO/IEC 17065 (2012) (ISO 17065),¹⁶² to which they are accredited. In regard to ISO 17065, section 4.1.3.2 states “incorrect references to the certification scheme or misleading use of licenses,

¹⁶² This standard is incorporated by reference in 45 CFR 170.599.

certificates, marks, or any other mechanism for indicating a product is certified, found in documentation or other publicity, shall be dealt with by suitable action.” Consistent with the performance of these responsibilities, we anticipate ONC-ACBs will be able to identify any improper marketing association of certified health IT with the “Base EHR definition.” We also note that any purchaser or other stakeholder may inform us of any alleged improper marketing association of certified health IT with the “Base EHR definition.”

2. Certified EHR Technology Definition

We proposed to remove the Certified EHR Technology (CEHRT) definition from § 170.102, effective with this final rule. We explained that the CEHRT definition has always been defined in a manner that supports the EHR Incentive Programs and would more appropriately reside solely within the EHR Incentive Programs regulations to be consistent with our approach in this final rule to make the ONC Health IT Certification Program more open and accessible to other types of health IT beyond EHR technology and for health IT that supports care and practice settings beyond those included in the EHR Incentive Programs. We noted that this removal of the definition should add administrative simplicity in that regulatory provisions, which EHR Incentive Programs participants must meet (e.g., the CEHRT definition), would be defined within the context of rulemakings for those programs. We further noted that, as proposed in the EHR Incentive Programs Stage 3 proposed rule (80 FR 16767), CMS would adopt a CEHRT definition in 42 CFR 495.4 that would cover all relevant compliance timelines (i.e., specify the CEHRT definition applicable for each year/EHR reporting period) and EHR Incentive Programs requirements. We explained that the CEHRT definition proposed by CMS would also continue to point to the relevant Base EHR definitions¹⁶³ adopted or proposed by ONC and to other ONC-adopted and proposed certification criteria relevant to the EHR Incentive Programs.

Comments. The overwhelming majority of commenters were supportive of moving the CEHRT definition into the EHR Incentive Programs. One commenter requested that we and CMS identify which certification criteria are required for to meet the CEHRT definition and be a meaningful user.

¹⁶³ This is required by the HITECH Act under the term “Qualified EHR” and references a foundational set of certified capabilities all EPs, eligible hospitals, and CAHs need to adopt.

Many commenters suggested that the CEHRT definition should accommodate use of health IT certified to the 2014 Edition and health IT certified to the 2015 Edition as this approach would give providers flexibility as they upgrade to 2015 Edition. Many commenters also requested that we work closely with CMS and other organizations to align any changes to the CEHRT definition or adoption of proposed criteria for inclusion in programs beyond the EHR Incentive Programs.

Response. We have finalized our proposal to remove the CEHRT definition for 2015 certification. As proposed in the EHR Incentive Programs Stage 3 proposed rule, a combination of health IT certified to the 2014 Edition and 2015 Edition may be used during EHR reporting periods through calendar year 2017. Table 4 found in section III.A.3 (“2015 Edition Health IT Certification Criteria Associated with the EHR Incentive Programs Stage 3”) provides guidance on the relationship of the 2015 Edition certification criteria with the CEHRT definition and Stage 3 of the EHR Incentive Programs. We also refer readers to the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register** as the authoritative source for the requirements to meet the CEHRT definition (and meaningful use objectives and measures). We note that supplemental guidance documents we intend to issue with this final rule will also identify the 2015 Edition certification criteria necessary to meet the CEHRT definition and are associated with meaningful use objectives and measures. We further note that we intend to work closely with CMS and other stakeholders to ensure alignment of the 2015 Edition and CEHRT definition to support settings, use cases, and programs beyond the EHR Incentive Programs.

3. Common Clinical Data Set Definition

We received general comments on our overall proposal and comments on the data and vocabulary standards included in the proposed definition. We have divided and responded to the comments in a similar manner.

Name Change

We proposed to revise the “Common MU Data Set” definition in § 170.102 and change the name to “Common Clinical Data Set,” which aligned with our proposed approach to make the ONC Health IT Certification Program more open and accessible to other types of health IT beyond EHR technology and

for health IT that supports care and practice settings beyond those included in the EHR Incentive Programs. We explained the procedural requirement to remove the previous name from the CFR and add the new name. We also proposed to change references to the “Common MU Data Set” in the 2014 Edition (§ 170.314) to “Common Clinical Data Set.”

Comments. The majority of commenters expressed support for the name change. One commenter did not support the name change stating it would add confusion and lack of continuity. One commenter stated the term “clinical” may be too restrictive.

Response. We thank commenters for the support for the name change and have finalized this proposal and related changes to the CFR. The term “Common Clinical Data Set” aligns with our approach to make the ONC Health IT Certification Program more open and accessible to other types of health IT beyond EHR technology and for health IT that supports care and practice settings beyond those included in the EHR Incentive Programs. We believe “clinical” is a suitable descriptor for the purpose and context within which the Common Clinical Data Set has been defined (i.e., for the certification of health IT under the ONC Health IT Certification Program).

We refer readers to Table 8 below for a complete listing of the data included in the Common Clinical Data Set and the associated standards.

Vocabulary Standards

We proposed to revise the definition to include new and updated standards and code sets (HL7 Version 3 for sex; “Race & Ethnicity—CDC” code system in PHIN VADS and the OMB standard for race and ethnicity; RFC 5646 for preferred language, the September 2014 Release of the U.S. Edition of SNOMED CT® for problems and procedures; the February 2, 2015 monthly version of RxNorm for medications and medication allergies; and LOINC® version 2.50 for laboratory tests). We noted that for race and ethnicity a Health IT Module must be able to express both detailed races and ethnicities according to the “Race & Ethnicity—CDC” code system and the aggregate OMB code for each race and ethnicity identified by the patient.

We emphasized that the proposed revisions would *not* change the standards, codes sets, and data requirements specified in the Common Clinical Data Set for 2014 Edition certification and would only apply to a Health IT Module certified to the 2015

Edition certification criteria that reference the Common Clinical Data Set.

Comments. The majority of commenters expressed support updating the definition to reflect new and updated standards and code sets. Some commenters stated that specific versions of vocabulary standards may become obsolete or superseded and systems should be permitted to use later versions.

Response. We thank commenters for their support. We have adopted the proposed data elements and referenced standards for the Common Clinical Data Set definition. We note that we have adopted newer versions of SNOMED CT®, RxNorm, and LOINC® than we proposed as the baseline versions for certification. We have also more specifically identified the CDC Race and Ethnicity code set (CDC Race and Ethnicity Code Set Version 1.0 (March 2000)) as compared to the identification in the Proposed Rule. We note this code set remains part of the PHIN Vocabulary Access and Distribution System (VADS) Release 3.3.9. We refer readers to section III.A.2.c (“Minimum Standards” Code Sets) for further discussion of our adoption of minimum standards code sets and our decision to adopt these newer versions. We also remind readers that health IT developers may seek certification to newer versions than the adopted baseline versions of minimum standards code sets, unless the Secretary specifically prohibits it.

Comments. One commenter requested clarification regarding which codes for race and ethnicities are included in the Common Clinical Data Set.

Response. Both the CDC Race and Ethnicity code set in PHIN VADS and the OMB standard for race and ethnicity are included for certification to the 2015 Edition, but only the OMB standard for certification to the 2014 Edition.

Comments. One commenter requested clarification if the C–CDA Release 1.1 will be applicable for certification to the “Common MU Data Set” or the Common Clinical Data Set.

Response. For the 2014 Edition certification criteria that reference the Common Clinical Data Set (formerly the “Common MU Data Set”), the C–CDA Release 1.1 is the referenced standard.

Immunizations

We proposed to include immunizations in the Common Clinical Data Set for 2015 Edition certification. We noted that the C–CDA Release 2.0 could support NDC codes as a translational data element, but the CVX code is required to accompany it. We stated that it would not be a heavy burden to map from an NDC code to a

CVX code because a mapping from NDC codes to CVX codes is publicly available. Therefore, for the purposes of including immunizations in the Common Clinical Data Set for 2015 Edition certification, immunizations would be required to be coded according to the CVX code set (HL7 Standard Code Set CVX—Vaccines Administered, updates through February 2, 2015) and the NDC code set (NDC—Vaccine NDC Linker, updates through January 15, 2015).

Comments. Multiple commenters expressed concerns with mapping burden. One commenter stated that the inclusion of immunizations mapped to NDC codes may be problematic as most providers may not include NDC codes when documenting immunizations particularly for historical immunizations and immunizations received outside the practice setting. Some commenters commented that IIS transmission doesn’t seem to align since IIS transmission is based on HL7 V2 and not C–CDA R2.

Response. We have included immunizations in the definition according to the standards proposed. We note that we have adopted newer versions of NDC and CVX than we proposed as the baseline versions for certification. We refer readers to section III.A.2.c (“Minimum Standards” Code Sets) for further discussion of our adoption of minimum standards code sets and our decision to adopt these newer versions. We do not believe this creates an undue mapping burden as CDC provides a publicly available mapping of NDC codes for vaccines to CVX codes.¹⁶⁴ We also note that these requirements are to test and certify a Health IT Module’s capabilities; and they do not require a provider to send an immunization using a certain code. IIS transmission based on HL7 V2 serves a different use case than the Common Clinical Data Set and the C–CDA, which support transitions of care, data export, API access, and a patient’s ability to view, download, and transmit their health information.

Vital Signs

We proposed to include vital signs in the Common Clinical Data Set according to specific LOINC® codes, metadata, and relevant UCUM unit of measures. We also proposed to offer optional certification to pediatric vital signs as part of the Common Clinical Data Set.

We have not adopted the proposed vital signs criterion as discussed in section III.A.5 above.

Comments. Commenters generally supported the expanded list of proposed vital signs for the Common Clinical Data Set with concerns on a few items. For systolic and diastolic blood pressure, a few commenters did not support the separating out of these from blood pressure generally as their systems allow both to be collected in one field with a delineator (e.g., a comma or forwards-slash) that can be used to parse the two fields. A few commenters suggested that “body weight measured” specifies the method of measurement and noted that there are other ways that body weight is collected, such as self-reporting. There was a lot of concern over the choice of “oxygen saturation in arterial blood by pulse oximetry” and a few commenters suggested there are multiple ways of collecting pulse oximetry. Commenters noted that BMI is typically a calculated value from height and weight, and were concerned that users should not be allowed to manually enter in a BMI as it could be incorrectly calculated. Last, commenters were concerned that mean blood pressure is not a vital sign typically collected in all provider settings, and is more specific to surgery, ED, and ICU settings.

Response. We thank commenters for their feedback. While we have not adopted the proposed 2015 Edition “vital signs” criterion as discussed in section III.A.5 above, we have included vital signs in the Common Clinical Data Set for certification to the 2015 Edition consistent with the same vocabulary standards as specified by the C–CDA Release 2.1 standard (i.e., vital signs are exchanged using a LOINC® code, and with a Unified Code of Units of Measure (UCUM) code for the unit of measure associated with the vital sign measurement). We discuss the list of vital signs that must be exchanged in this manner below, including changes made in comparison to our proposals.

We continue to differentiate between systolic and diastolic blood pressure as two distinct vital signs, but note that Health IT Modules may store and display the two values in one field as long as they are exchanged as two separate fields. We have revised “body weight measured” to “body weight.” We have revised “oxygen saturation in arterial blood by pulse oximetry” to “pulse oximetry” and will allow implementers, for the purposes of testing and certification, to choose the LOINC® code with “pulse oximetry” in its name that best represents the method of measurement for exchange. We note that we believe that inhaled oxygen

¹⁶⁴ <http://www2a.cdc.gov/vaccines/iis/iisstandards/vaccines.asp?rpt=ndc>. See also: http://www2a.cdc.gov/vaccines/iis/iisstandards/ndc_tableaccess.asp.

concentration is a necessary measurement in order to correctly interpret the pulse oximetry measurement, and are including it in the list of vital signs for exchange. This does not mean that providers are required to capture this measurement every time, only that certified Health IT Modules are able to exchange the value if present. Last, we have removed BMI and mean blood pressure from the list of vital signs.

In summary, we require that the following vital signs must be exchanged as part of the Common Clinical Data Set using a LOINC® code and with a UCUM code for the unit of measure associated with the vital sign measurement:

- Systolic blood pressure;
- Diastolic blood pressure;
- Body height;
- Body weight;
- Heart rate;
- Respiratory rate;
- Body temperature;
- Pulse oximetry; and
- Inhaled oxygen concentration.

We believe this list represents vital signs commonly collected across provider settings today and is a start at defining a minimum set of vital signs, but note that we will continue to work with stakeholders to determine and consider if this list should be revised through a future rulemaking.

Comments. A number of commenters were concerned that UCUM does not allow for mixing of units, and were therefore concerned that a height of 5 feet and 6 inches (5'6") could not be represented with an associated UCUM code for the unit of measure.

Response. We note that systems have the flexibility to choose how to display the vital sign measurement. Our requirement only specifies that the vital sign measurement must be exchanged using an applicable unit of measurement with a UCUM code. Therefore, systems could exchange a height of 5'6" as 66 inches or 5.5 feet or 167.64 centimeters using the appropriate UCUM code to represent the unit of measure for the measurement. Note that we provide this as an example only, and leave the decision on the appropriate unit of measure to the developers and providers. As noted in the 2015 Edition proposed rule (80 FR16818), LOINC provides a translation table¹⁶⁵ that enumerates UCUM syntax for a subset of UCUM codes that are commonly used in health IT that may be a useful reference for stakeholders. We would also suggest that health IT developers and providers follow the

guidance provided in C–CDA Release 2.1 for exchanging vital signs.

Comments. Commenters were generally supportive of the proposed optional pediatric vital signs.

Response. We have adopted the pediatric vital signs as proposed for inclusion in the Common Clinical Data Set definition as optional for exchange. We note that as discussed in the 2015 Edition proposed rule, CDC recommends the use of these pediatric vital signs for settings of care in which pediatric and adolescent patients are seen (80 FR 16818–16819) as part of best practices. The availability of a reference range/scale or growth curve can help with proper interpretation of the measurements for the BMI percentile per age and sex and weight for age per length and sex. Thus, we are including the reference range/scale or growth curve for each of these two pediatric vital signs as part of the Common Clinical Data Set definition for certification, and would suggest that providers include this information as appropriate. We note that the C–CDA Release 2.1 standard does allow for including additional clinically relevant information with vital signs.

Unique Device Identifier(s)

We proposed to include the Unique Device Identifier(s) of a patient's Implantable Device(s) for certification to the 2015 Edition.

Comments. Some commenters were in agreement with including UDIs, while other commenters suggested removing UDIs until more progress has been made with medical device identifier manufacturers and utilization among providers.

Response. We have included UDIs in the definition and require it be recorded in accordance with the "Product Instance" in the "Procedure Activity Procedure Section" of the C–CDA 2.1. This specificity within the C–CDA will make this information more easily retrievable. As discussed in more detail under the "implantable device list" certification criterion in section III.A.3 of this preamble, this information leads to improved patient safety when available to providers. By including this information in the Common Clinical Data Set, a Health IT Module certified to criteria referencing the Common Clinical Data Set would be capable of exchanging this information and further facilitating improvements in patient safety.

Assessment and Plan of Treatment, Goals, and Health Concerns

We proposed to include the "assessment and plan of treatment,"

"goals," and "health concerns" in the "Common Clinical Data Set" for certification to the 2015 Edition to replace the concept of the "care plan field(s), including goals and instructions" which is part of the "Common MU Data Set" in the 2014 Edition. We clarified that we intend "care plan field(s), including goals and instructions" to be a single provider's documentation of their assessment, plan of treatment, goals, and health concerns for the patient, and we stated that this clarification applies for 2014 Edition certification. We proposed this clarification to better align with the terms used in the C–CDA Release 2.0, which includes the "Assessment and Plan Section (V2)," "Assessment Section (V2)," "Plan of Treatment Section (V2)," "Goals Section," and "Health Concerns Section." In previous iterations of the C–CDA, we explained that the "Plan of Treatment Section" was called the "Plan of Care Section," which resulted in confusion on whether the information was intended to represent a single encounter or the synthesis of multiple encounters. For that reason, the "Plan of Care Section" was proposed to be called the "Plan of Treatment Section" to indicate that it is intended to represent a single encounter and not to be confused with the "Care Plan document template."

For certification to the 2015 Edition, we proposed to include in the Common Clinical Data Set "assessment and plan of treatment," "goals," and "health concerns" data in accordance with the C–CDA Release 2.0 "Assessment and Plan Section (V2)" or both the "Assessment Section (V2)" and "Plan of Treatment Section (V2);" the "Goals Section;" and the "Health Concerns Section." We encouraged health IT developers to allow for structured documentation or tagging that would allow a provider to choose relevant pieces of assessment, plan of treatment, goals, and health concerns data that could be synthesized into a comprehensive care plan. We noted that all proposed 2015 Edition certification criteria that reference the "Common Clinical Data Set" (e.g., the "ToC" criterion) would therefore also require a Health IT Module to be able to capture "assessment and plan of treatment," "goals," and "health concerns" data.

Comments. A couple of commenters expressed concern regarding whether this proposal aligned with the C–CDA standard. One commenter found this inclusion to be duplicative since it is captured under "Care Plan Field(s)" and "Problems." A few commenters noted that we should clarify the intent of the "Goals Section" and "Health Concerns

¹⁶⁵ <https://loinc.org/downloads/usage/units>.

Section.” These commenters noted that the “Goals Section” and “Health Concerns Section” of the C–CDA Care Plan document template provide more structure and were originally designed to be used with the Care Plan document template. However, other C–CDA document templates, like CCD, allow for health concerns and goals to be included as a narrative within the “Assessment Section (V2),” “Plan of Treatment Section (V2),” or “Assessment and Plan Section (V2).”

Response. We have reviewed the C–CDA 2.1 standard and believe there is no misalignment with our proposal and that it provides the requisite specificity we described in the Proposed Rule (80 FR 16872). Therefore, we have adopted the specific data elements as proposed (i.e., “Assessment Section (V2)” and “Plan of Treatment Section (V2)” or “Assessment and Plan Section (V2);”

“Goals Section;” and “Health Concerns Section”). We clarify that we will certify Health IT Modules to the “Goals Section” and the “Health Concerns Section” from the Care Plan document template for the purposes of meeting the Common Clinical Data Set definition. Thus, other C–CDA document templates such as CCD, Referral Note, and Discharge Summary would need to be able to exchange the structured “Goals Section” and “Health Concerns Section” in order to meet the Common Clinical Data Set definition.

Sexual Orientation, Gender Identity, and Other Data

We received recommendations for the inclusion of data in Common Clinical Data Set that we did not propose.

Comments. Commenters recommended that we include sexual orientation and gender identity (SO/GI), military history, and nutritional data in

the Common Clinical Data Set definition.

Response. We have not included any of this data in the definition as this was outside the scope of our proposal and, more importantly, inclusion at this time would not give full consideration to the maturity of related standards, the readiness of health IT developers to exchange this data, the clinical relevance of the data, and other considerations for some of the data such as any potential privacy and security concerns. We note, however, that we have taken the intermediate step of including SO/GI data in the 2015 Edition “demographics” criterion, which is a criterion included in the 2015 Edition Base EHR definition. We refer readers to section III.A.3 of this preamble for more information on the 2015 Edition “demographics” criterion and SO/GI data.

Table 8. Common Clinical Data Set		
Data	2014 Edition Standard	2015 Edition Standard
Patient Name	No associated standard.	No associated standard.
Sex	No associated standard.	The standard specified in § 170.207(n)(1) – Birth sex must be coded in accordance with HL7 Version 3 (V3) Standard, Value Sets for AdministrativeGender and NullFlavor attributed as follows: (1) Male. M (2) Female. F (3) Unknown. nullFlavor UNK
Date of Birth	No associated standard.	No associated standard.
Race	The standard specified in § 170.207(f)(1) – The Office of Management and Budget Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity, Statistical Policy Directive No. 15, as revised, October 30, 1997 (see “Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity”).	The standard specified in § 170.207(f)(2) - CDC Race and Ethnicity Code Set Version 1.0 (March 2000); and The standard specified in § 170.207(f)(1) for each race identified in accordance § 170.207(f)(2).
Ethnicity	The standard specified in § 170.207(f)(1) - The Office of Management and Budget Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity, Statistical Policy Directive No. 15, as revised, October 30, 1997 (see “Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity”).	The standard specified in § 170.207(f)(2) - CDC Race and Ethnicity Code Set Version 1.0 (March 2000); and The standard specified in § 170.207(f)(1) for each ethnicity identified in accordance § 170.207(f)(2).
Preferred Language	The standard specified in § 170.207(g)(1) – As specified by the Library of Congress, ISO 639-2 alpha-3 codes limited to those that also have a corresponding alpha-2 code in ISO 639-1.	The standard specified in § 170.207(g)(2) – Request for Comments (RFC) 5646.
Smoking Status	The standard specified in § 170.207(h) – Smoking status must be coded in one of the following SNOMED CT® codes: (1) Current every day smoker. 449868002 (2) Current some day smoker. 428041000124106	The standard specified in § 170.207(h) – Smoking status must be coded in one of the following SNOMED CT® codes: (1) Current every day smoker. 449868002 (2) Current some day smoker. 428041000124106 (3) Former smoker. 8517006

	(3) Former smoker. 8517006 (4) Never smoker. 266919005 (5) Smoker, current status unknown. 77176002 (6) Unknown if ever smoked. 266927001 (7) Heavy tobacco smoker. 428071000124103 (8) Light tobacco smoker. 428061000124105	(4) Never smoker. 266919005 (5) Smoker, current status unknown. 77176002 (6) Unknown if ever smoked. 266927001 (7) Heavy tobacco smoker. 428071000124103 (8) Light tobacco smoker. 428061000124105
Problems	At a minimum, the standard specified in § 170.207(a)(3) – IHTSDO SNOMED CT® International Release July 2012 and US Extension to SNOMED CT® March 2012 Release.	At a minimum, the standard specified in § 170.207(a)(4) - IHTSDO SNOMED CT®, U.S. Edition, September 2015 Release.
Medications	At a minimum, the standard specified in § 170.207(d)(2) – RxNorm, a standardized nomenclature for clinical drugs produced by the United States National Library of Medicine, August 6, 2012 Release.	At a minimum, the standard specified in § 170.207(d)(3) – RxNorm, a standardized nomenclature for clinical drugs produced by the United States National Library of Medicine, September 8, 2015 Release.
Medication Allergies	At a minimum, the standard specified in § 170.207(d)(2) – RxNorm, a standardized nomenclature for clinical drugs produced by the United States National Library of Medicine, August 6, 2012 Release.	At a minimum, the standard specified in § 170.207(d)(3) – RxNorm, a standardized nomenclature for clinical drugs produced by the United States National Library of Medicine, September 8, 2015 Release.
Laboratory Test(s)	At a minimum, the standard specified in § 170.207(c)(2) – Logical Observation Identifiers Names and Codes (LOINC®) Database version 2.40, a universal code system for identifying laboratory and clinical observations produced by the Regenstrief Institute, Inc.	At a minimum, the standard specified in § 170.207(c)(3) – Logical Observation Identifiers Names and Codes (LOINC®) Database version 2.52.
Laboratory Value(s)/Result(s)	No associated standard.	No associated standard.
Vital Signs	Height/length, weight, blood pressure, and BMI (no associated vocabulary standard).	The patient's diastolic blood pressure, systolic blood pressure, body height, body weight, heart rate, respiratory rate, body temperature, pulse oximetry, and inhaled oxygen concentration must be exchanged in numerical values only; and in accordance with the standard specified

		<p>in § 170.207(c)(3) and with the associated applicable unit of measure for the vital sign measurement in the standard specified in § 170.207(m)(1).</p> <p>§ 170.207(c)(3) – Logical Observation Identifiers Names and Codes (LOINC[®]) version 2.52.</p> <p>§ 170.207(m)(1) – The Unified Code of Units of Measure, Revision 1.9, October 23, 2013.</p> <p><u>Optional.</u> The patient’s BMI percentile per age and sex for youth 2-20 years of age, weight for age per length and sex for children less than 3 years of age, and head occipital-frontal circumference for children less than 3 years of age must be recorded in numerical values only in accordance with the standard specified in § 170.207(c)(3) and with the associated applicable unit of measure for the vital sign measurement in the standard specified in § 170.207(m)(1). For BMI percentile per age and sex for youth 2-20 years of age and weight for age per length and sex for children less than 3 years of age, the reference range/scale or growth curve should be included as appropriate.</p>
Care Plan Field(s), including Goals and Instructions	No associated standard.	Not applicable (replaced with Assessment and plan of treatment, goals, and health concerns – see below).
Procedures	<p>At a minimum, the version of the standard specified in § 170.207(a)(3), or § 170.207(b)(2).</p> <p>§ 170.207(a)(3) - IHTSDO SNOMED CT[®] International Release July 2012 and US Extension to SNOMED CT[®] March 2012 Release</p> <p>§ 170.207(b)(2) – The code set specified in 45 CFR 162.1002(a)(5) – The combination of Health Care Financing Administration Common Procedure Coding System (HCPCS), as maintained and</p>	<p>At a minimum, the version of the standard specified in § 170.207(a)(4), or § 170.207(b)(2).</p> <p>§ 170.207(a)(4) - IHTSDO SNOMED CT[®], U.S. Edition, September 2015 Release</p> <p>§ 170.207(b)(2) – The code set specified in 45 CFR 162.1002(a)(5) – The combination of Health Care Financing Administration Common Procedure Coding System (HCPCS), as maintained and distributed by HHS, and Current Procedural Terminology, Fourth Edition (CPT-4), as maintained and distributed</p>

	<p>distributed by HHS, and Current Procedural Terminology, Fourth Edition (CPT-4), as maintained and distributed by the American Medical Association, for physician services and other health care services. These services include, but are not limited to, the following:</p> <ol style="list-style-type: none"> (1) Physician services. (2) Physical and occupational therapy services. (3) Radiologic procedures. (4) Clinical laboratory tests. (5) Other medical diagnostic procedures. (6) Hearing and vision services. (7) Transportation services including ambulance. <p>For technology primarily developed to record dental procedures, the standard specified in § 170.207(b)(3) - The code set specified in 45 CFR 162.1002(a)(4) – <i>Code on Dental Procedures and Nomenclature</i>, as maintained and distributed by the American Dental Association, for dental services.</p>	<p>by the American Medical Association, for physician services and other health care services. These services include, but are not limited to, the following:</p> <ol style="list-style-type: none"> (1) Physician services. (2) Physical and occupational therapy services. (3) Radiologic procedures. (4) Clinical laboratory tests. (5) Other medical diagnostic procedures. (6) Hearing and vision services. (7) Transportation services including ambulance. <p>For technology primarily developed to record dental procedures, the standard specified in § 170.207(b)(3) - The code set specified in 45 CFR 162.1002(a)(4) – <i>Code on Dental Procedures and Nomenclature</i>, as maintained and distributed by the American Dental Association, for dental services.</p>
Care Team Member(s)	No associated standard.	No associated standard.
Immunizations	Immunization data not included for 2014 Edition certification.	<p>In accordance with, at a minimum, the standards specified in § 170.207(e)(3) and (4).</p> <p>§ 170.207(e)(3) - HL7 Standard Code Set CVX—Vaccines Administered, updates through August 17, 2015</p> <p>§ 170.207(e)(4) - National Drug Code Directory (NDC) – Vaccine NDC Linker, updates through August 17, 2015</p>
Unique Device Identifier(s) (UDIs) for a Patient's Implantable Device(s)	UDI data not included for 2014 Edition certification.	<p>In accordance with the “Product Instance” in the “Procedure Activity Procedure Section” of the standard specified in § 170.205(a)(4).</p> <p>§ 170.205(a)(4) - HL7 Implementation Guide for CDA[®] Release 2: Consolidated CDA Templates for Clinical Notes, Draft Standard for Trial</p>

		<p>Use, Release 2.1.</p> <p><u>Unique device identifier</u> is defined as it is in 21 CFR 801.3 - means an identifier that adequately identifies a device through its distribution and use by meeting the requirements of 830.20 of this chapter. A unique device identifier is composed of:</p> <p>(1) A device identifier --a mandatory, fixed portion of a UDI that identifies the specific version or model of a device and the labeler of that device; and</p> <p>(2) A production identifier --a conditional, variable portion of a UDI that identifies one or more of the following when included on the label of the device:</p> <p>(i) The lot or batch within which a device was manufactured;</p> <p>(ii) The serial number of a specific device;</p> <p>(iii) The expiration date of a specific device;</p> <p>(iv) The date a specific device was manufactured;</p> <p>(v) For an HCT/P regulated as a device, the distinct identification code required by 1271.290(c) of this chapter.</p> <p><u>Implantable device</u> is defined as it is in 21 CFR 801.3 – means a device that is intended to be placed in a surgically or naturally formed cavity of the human body. A device is regarded as an implantable device for the purpose of this part only if it is intended to remain implanted continuously for a period of 30 days or more, unless the Commissioner of Food and Drugs determines otherwise in order to protect human health.</p>
Assessment and Plan of Treatment	Not applicable (refer to care plan field(s), including goals and instructions – see above).	§ 170.205(a)(4) - HL7 Implementation Guide for CDA [®] Release 2: Consolidated CDA Templates for Clinical Notes, Draft Standard for Trial Use, Release 2.1.
Goals	Not applicable (refer to care plan field(s), including goals and instructions – see above).	In accordance with the “Goals Section” of the standard specified in § 170.205(a)(4).

		§ 170.205(a)(4) - HL7 Implementation Guide for CDA [®] Release 2: Consolidated CDA Templates for Clinical Notes, Draft Standard for Trial Use, Release 2.1.
Health Concerns	Not applicable (refer to care plan field(s), including goals and instructions – see above).	In accordance with the “Health Concerns Section” of the standard specified in § 170.205(a)(4). § 170.205(a)(4) - HL7 Implementation Guide for CDA [®] Release 2: Consolidated CDA Templates for Clinical Notes, Draft Standard for Trial Use, Release 2.1.

Alignment With Clinical Practice

We requested comment in the Proposed Rule on ways in which we can engage the public to keep the Common Clinical Data Set relevant to clinical practice as the data included in the Common Clinical Data Set may change over time.

Comments. A commenter suggested we limit the use of highly prescriptive criteria, permitting innovation and clinical appropriateness to exist within “guardrails.” Another commenter encouraged us to seek input from provider specialty societies and organizations to ensure the interests of clinicians are properly represented, including concerns about clinical workflows.

Response. We thank commenters for their feedback. We will take these comments under consideration for further development and uses of the Common Clinical Data Set to support interoperability, program alignment, and patient care.

4. Cross-Referenced FDA Definitions

We proposed to adopt in § 170.102 new definitions for “Implantable Device,” “Unique Device Identifier,” “Device Identifier,” and “Production Identifier” as discussed in the Proposed Rule’s sections for the “implantable device list” certification criterion. We proposed to adopt the same definitions already provided to these phrases at 21 CFR 801.3 and emphasized that capitalization was purposefully applied to each word in these defined phrases in order to signal to readers that they have specific meanings.

Comments. Commenters expressed unanimous support for our proposed approach to cross-reference relevant FDA definitions. One commenter recommended that we use the term “identifiers” when referring to Device

Identifier and Product Identifier instead of the term “UDI data.” The commenter contended that this would align better with FDA terminology.

Response. We thank commenters for their support. We are adopting the cross-referenced FDA definitions as proposed. In regard to the recommendation to use the term “identifiers,” we agree that our terminology related to UDIs should more closely align with FDA terminology and the UDI final rule to prevent any unnecessary confusion. Therefore, we have revised our terminology use within this final rule and refer readers to the “implantable device list” certification criterion discussed earlier in this preamble for further details.

IV. Provisions of the Proposed Rule Affecting the ONC Health IT Certification Program

A. Subpart E—ONC Health IT Certification Program

We proposed to replace the term “HIT” with the term “health IT” and to change the name of the “ONC HIT Certification Program” to the “ONC Health IT Certification Program” wherever these references occur in subpart E. In referring to the certification program, we noted that the term “health” is capitalized. We also proposed to remove § 170.553 “Certification of health information technology other than Complete EHRs and EHR Modules” as no longer relevant due to proposals in the Proposed Rule for the ONC Health IT Certification Program that would make the program more open and accessible to health IT beyond EHR technology.

Comments. Commenters were broadly supportive of these proposals.

Response. We have adopted these proposals as proposed.

B. Modifications to the ONC Health IT Certification Program

In the Voluntary Edition proposed rule (79 FR 10929–30) we recited our authority and the history of the ONC Health IT Certification Program. The history includes multiple requests for comment and significant stakeholder feedback on making the certification program more accessible to health IT beyond EHR technology and health care settings and practices not directly tied to the EHR Incentive Programs. With consideration of stakeholder feedback and our policy goals, we attempted to make the ONC Health IT Certification Program more open and accessible through a proposal in the Voluntary Edition proposed rule (79 FR 10918–20) to create “meaningful use” (MU) and non-MU EHR Modules. We determined that our proposal was not the best approach in a subsequent final rule (79 FR 54472–73). Since that rulemaking, the HITPC issued recommendations supporting certification for care/practice settings beyond the ambulatory and inpatient settings.¹⁶⁶ In response, we reconsidered how best to structure the program and make it open and accessible to more types of health IT, health IT that supports a variety of care and practice settings, and programs that may reference the ONC Health IT Certification Program, including Medicaid and Medicare payment programs and various grant programs. In the Proposed Rule, we proposed revisions to the ONC Health IT Certification Program to achieve these goals, including new certification criteria for use cases and health care

¹⁶⁶ http://www.healthit.gov/facilities/sites/faca/files/TransmittalLetter_LTPAC_BH_Certification.pdf and http://www.healthit.gov/facilities/sites/faca/files/HITPC_LTPAC_BH_Certification_Recommendations_FINAL.pdf.

settings beyond the EHR Incentive Programs.

Comments. Most commenters supported the increase in scope of technologies and health care settings to include lab information systems, HISPs, HIEs, LTPAC, behavioral health, and pediatrics. Commenters supported opening the certification program to greater accessibility to more health IT, allowing for greater flexibility and use of a variety of health IT products and services, and advancing interoperability beyond narrowly defined EHR technology. Some commenters, however, opposed a more open ONC Health IT Certification Program and the use of certified health IT beyond the EHR Incentive Programs, including linking forms of Medicare and Medicaid reimbursement to the use of certified health IT.

Response. We disagree with the commenters that do not support a more open ONC Health IT Certification Program and the use of certified health IT beyond the EHR Incentive Programs. We believe the ONC Health IT Certification Program should be open and accessible to more types of health IT, health IT that supports a variety of care and practice settings, and programs beyond the EHR Incentive Programs. We have finalized provisions and adopted 2015 Edition certification criteria to support these goals. As discussed in more detail below in regard to referencing the use of certified health IT, ONC and HHS continue to encourage the use of certified health IT to support interoperability and health information exchange across diverse care and practice settings, including the linking of certified health IT to reimbursement under HHS payment programs.

1. Health IT Modules

We proposed to rename EHR Modules as Health IT Modules by removing the EHR Module definition from the CFR at § 170.102 and adding the “Health IT Module” definition. We proposed this change to be effective with this final rule, and we proposed to make this change applicable for certification to the 2014 Edition and 2015 Edition. We stated that the proposed change would have no substantive impact on the technologies that might be, or have been, certified under the ONC Health IT Certification Program. We also noted that technologies already certified to the 2014 Edition as EHR Modules, and their use to meet the CEHRT definition, would not be affected by this proposal.

Comments. Many commenters strongly supported the removal of “Complete EHR” certification in favor of modular certification. A couple of

commenters requested that we clarify what exactly constitutes a Health IT Module, saying that deviations in this definition will lead to inaccurate assessments of workload requirements and scope of impact to implement a specific certification criterion.

Response. We thank commenters for their feedback. The 2014 Edition Release 2 final rule discontinued the “Complete EHR” certification concept (see 79 FR 54443–45). “Complete EHR” certification will not be available to the 2015 Edition.

The definition of a Health IT Module is any service, component, or combination thereof that can meet the requirements of at least one certification criterion adopted by the Secretary (see § 170.102). This essentially means any type of technology that could be certified to one *or more* certification criteria under the ONC Health IT Certification Program. For example, a Health IT Module could be certified to only the 2015 Edition “CPOE—Medications” criterion and the other required mandatory and conditional criteria (*i.e.*, the 2015 Edition “safety-enhanced design,” “quality management system,” “accessibility-centered design,” and applicable privacy and certification criteria). Alternatively, a Health IT Module could be certified to practically all the 2015 Edition certification criteria. While we appreciate commenters’ requests for further specificity for the Health IT Module definition, we believe that this definition affords flexibility for health IT developers and providers in terms of what technologies are presented for certification and to what certification criteria (*e.g.*, technology provided by a HISP that is presented for certification to the 2015 Edition “Direct Project, Edge Protocol, and XDR/XDM” certification criterion (§ 170.315(h)(2)) or an EHR technology presented by a developer for certification to the 2015 Edition “CDS” certification criterion (§ 170.315(a)(9)).

2. “Removal” of Meaningful Use Measurement Certification Requirements

We proposed to *not* require ONC–ACBs to certify Health IT Modules to the 2015 Edition “meaningful use measurement” certification criteria (§ 170.315(g)(1) “automated numerator recording” and § 170.315(g)(2) “automated measure calculation”). We explained that we believe this will make the ONC Health IT Certification more accessible to the certification of health IT for other purposes beyond the EHR Incentive Programs. We also emphasized that this proposed approach would not preclude health IT

developers from seeking certification to § 170.315(g)(1) or (2) in support of their customers’ and providers’ needs related to the EHR Incentive Programs.

Comments. A commenter stated that these criteria and their functionality have been well-established through certification to the 2014 Edition “automated measure calculation” and “automated numerator recording” certification criteria; and therefore, their removal should have minimal effect. Several commenters voiced support for removal of these requirements. One commenter noted that this change will not reduce the requirements for accredited testing laboratories to test nor ONC–ACBs to certify these criteria when a health IT developer elects to certify a product for use in the EHR Incentive Programs. A commenter disagreed with removal of these criteria, stating that this functionality is important for EPs and EHs to meet requirements under the EHR Incentive Programs and for purposes of their own quality improvement efforts.

Response. We have adopted our proposed approach in that we will not require ONC–ACBs to certify Health IT Modules to the 2015 Edition “meaningful use measurement” certification criteria. However, the EHR Incentive Program Stage 3 and Modifications final rule includes a CEHRT definition that will require EPs, eligible hospitals, and CAHs to have health IT certified to these criteria in order to meet the CEHRT definition. Accordingly, we encourage health IT developers supporting providers participating in the EHR Incentive Programs or providers’ quality improvement needs to seek certification to these criteria as appropriate for their Health IT Modules (*e.g.*, a Health IT Module is presented for certification to a criterion that supports a Stage 3 objective with a percentage-based measure and the Health IT Module can meet the “automated numerator recording” criterion or “automated measure calculation” criterion) for their Health IT Module (*e.g.*, the Health IT Module is presented for certification to a criterion that supports a Stage 3 objective percentage-based measure and the Health IT Module can meet the “automated numerator recording” criterion or “automated measure calculation” criterion).

3. Types of Care and Practice Settings

We commented in the Proposed Rule that we had proposed a diverse edition of health IT certification criteria with capabilities included that could support a wide range of providers practicing in various settings. We stated that we

anticipated that we would issue general interoperability guidance for the 2015 Edition when it became final, but that we had no plans to *independently* develop and issue certification “paths” or “tracks” by care or practice setting (e.g., a “LTPAC certification”) because it would be difficult to independently devise such “paths” or “tracks” in a manner that was sure to align with other relevant programs and specific stakeholder needs. We explained that we are best suited for supporting the development of standards for specific settings/use cases and providing technical assistance to both health IT developers and providers about the certification criteria, the standards and capabilities they include, and the processes of the ONC Health IT Certification Program. We stated that we would welcome working with HHS agencies, other agencies, or provider associations, in identifying the appropriate functionality and certification criteria to support their stakeholders, including jointly developing specialized certification “paths” or “tracks.” We noted that such an approach would be consistent with stakeholder feedback we received through rulemaking (79 FR 54473–74) and the HITPC recommendations for us to work with HHS agencies and other agencies.

We sought comment on potential future certification criteria that could include capabilities that would uniquely support LTPAC, behavioral health, or pediatrics care/practice settings, as well as other settings. In particular, we sought comment on whether certification criteria focused on patient assessments for certain settings would be of value to health IT developers and health care providers.

Comments. A commenter suggested that patient assessments should not be included in future certification criteria. A commenter requested that EHR certification standards adequately capture and address data elements necessary to support the home care setting—specifically for durable medical equipment prosthetics, orthotics, and supplies (collectively, DMEPOS). The HITPC listed several entities that may find certification requirements applicable to them, including pharmacy information systems, long-term services and support providers (transport, meals, care management services, etc.), ambulance providers, blood banks, end-stage renal disease facilities, free-standing cancer hospitals, visiting nurse services, outpatient surgical centers, telehealth and monitoring, personal health devices (e.g. bands, watches, monitors), biomedical tech devices (e.g.,

pacemakers), personal health record systems, health and fitness centers, free-standing weight-loss centers. One commenter recommended including standards and capabilities to include e-signatures to the Home Health and Hospice Plans of Treatment.

Multiple commenters suggested that modular certification should follow “tracks” or “pathways” for specialists to identify what they need. Some commenters requested that we publish guidelines as to which criteria are applicable to which care settings. These commenters suggested that “certification tracks” could be established for each different segment of the provider market (laboratories, behavioral health, long-term care, etc.) looking for alignment and interoperability across certification “tracks.” A commenter questioned how we and stakeholders would monitor claims that a set of independently certified Health IT Modules meet the requirements of the path or track.

Response. We appreciate the breadth and diversity of comments on potential future certification criteria that could include capabilities to support different care settings and use cases. Consistent with our request for comment in the Proposed Rule, we will carefully consider these suggestions for future certification criteria.

As mentioned in the Proposed Rule and recited above, we do not intend to develop certification “tracks” or “pathways” for particular provider specialties or settings within this final rule because it would be difficult for us to independently devise such “paths” or “tracks” in a manner that was sure to align with other relevant programs and specific stakeholder needs. We are, however, working with our colleagues within HHS to identify capabilities and certification criteria that support other programs and use cases. We also continue to welcome the opportunity to collaborate with representatives from different provider and specialties societies as well as health IT developers to determine what certification criteria and “tracks” could be identified and developed to support various care and practice settings and particular use cases. We do not anticipate monitoring any developed certification “tracks.” Rather, we anticipate that a program or association, as applicable, would develop any necessary compliance requirements.

4. Referencing the ONC Health IT Certification Program

We stated in the Proposed Rule that the adoption of proposed criteria that support functionality for different care

and practice settings and the proposals to make the ONC Health IT Certification Program open and accessible to more types of health IT and health IT that supports a variety of care and practice settings, would permit further referencing and use of certified health IT. We proceeded to cite other HHS programs that reference certification criteria and the ONC Health IT Certification Program (80 FR 16874).

Comments. One commenter recommended that we not over-specify or over-bundle a singular certification criterion that could cause a mismatch between what a federal program requires and what is defined as a single criterion. Another commenter recommended that we allow for at least 18 months in advance of any compliance dates for providers and health IT developers to successfully test and deploy required certified health IT, stating that an 18-month minimum timeframe is important to ensure that the process provides good design while reducing risks to care and safety.

Response. We agree with the commenter that it is important to try to properly scope a certification criterion so that the capabilities included are consistent with current health IT technologies and design practices. In this regard, we have separated out capabilities that have once been proposed or adopted in a single criterion (e.g., see the “CPOE” criteria or the “application access” (“API”) criteria).

We also agree with the commenter that sufficient lead time must be provided for development, testing, certification, and implementation before certified health IT is required for use. With this final rule and the EHR Incentive Programs Stage 3 and Modifications final rule, providers and health IT developers have 27 months before health IT certified to the 2015 Edition must be used to meet the CEHRT definition adopted in the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**. This timeframe should provide sufficient time for development, testing, certification, and implementation of certified health IT. We plan to continue to work with our colleagues in HHS to ensure that proper lead time is considered with respect to the required use of certified health IT.

We continue to support the use of certified health IT and the ONC Health IT Certification Program to support interoperability and health information exchange across diverse care and practice settings. To note and building on the references we cited in the

Proposed Rule, the HHS interoperability strategy and the encouraged use of certified health IT are mentioned in the Prospective Payment System and Consolidated Billing for Skilled Nursing Facilities for FY 2015 proposed rule (79 FR 45652), the Conditions of Participation for Home Health Agencies proposed rule (79 FR 61185), the CY 2016 Home Health Prospective Payment System Rate Update; Home Health Value-Based Purchasing Model; and Home Health Quality Reporting Requirements proposed rule (80 FR 39844), and the End-Stage Renal Disease Prospective Payment System, and Quality Incentive Program proposed rule (80 FR 37852). The required use of certified health IT continues to be referenced for chronic care management services in CY 2016 Physician Fee Schedule final rule (80 FR 41796). Further, the Mechanized Claims Processing and Information Retrieval Systems (MMIS) proposed rule (80 FR 20464) requires that state MMIS systems align with adopted standards and allow

for interoperability with health information exchanges.

C. Health IT Module Certification Requirements

1. Privacy and Security

We proposed a new approach for privacy and security (P&S) certification to the 2015 Edition. In our past rulemakings, we discussed and instituted two different policy approaches and sought comment on others for ensuring that health IT and providers have privacy and security capabilities while also trying to minimize the level of regulatory burden imposed on health IT developers. With the 2011 Edition, we included an upfront requirement that required Health IT Modules to meet all P&S certification criteria as a condition of certification unless the health IT developer could demonstrate that certain P&S capabilities were either technically infeasible or inapplicable. With the 2014 Edition, we eliminated the upfront requirement for each Health IT Module to be certified against the

P&S criteria in favor of what we thought would better balance the burden potentially posed by our rulemaking. Thus, the P&S criteria were made part of the 2014 Edition Base EHR definition that all EPs, eligible hospitals, and CAHs participating in the EHR Incentive Programs must meet in order to satisfy the CEHRT definition (meaning each provider needed post-certification to ultimately have technology certified to the P&S criteria).

Based on recommendations from the HITSC, in the Proposed Rule, we proposed a revised P&S certification approach for the 2015 Edition so that each certification criterion has a set of appropriate P&S “safeguards” that must be in place. We proposed to require that an ONC-ACB must ensure that a Health IT Module presented for certification to any of the certification criteria that fall into each regulatory text “first level paragraph” category of § 170.315 (e.g., § 170.315(a)) identified below would be certified to either Approach 1 (technically demonstrate) or Approach 2 (system documentation) as follows:

TABLE 9—PROPOSED 2015 EDITION PRIVACY AND SECURITY CERTIFICATION FRAMEWORK

If the Health IT Module includes capabilities for certification listed under:	It will need to be certified to Approach 1 or Approach 2 for each of the P&S certification criteria listed in the “Approach 1” column	
	Approach 1	Approach 2
§ 170.315(a)	§ 170.315(d)(1) (authentication, access control, and authorization), (d)(2) (auditable events and tamper resistance), (d)(3) (audit reports), (d)(4) (amendments), (d)(5) (automatic log-off), (d)(6) (emergency access), and (d)(7) (end-user device encryption).	For each applicable P&S certification criterion not certified for approach 1, there must be system documentation sufficiently detailed to enable integration such that the Health IT Module has implemented service interfaces for each applicable privacy and security certification criterion that enable the Health IT Module to access external services necessary to meet the privacy and security certification criterion.
§ 170.315(b)	§ 170.315(d)(1) through (d)(3) and (d)(5) through (d)(8) (integrity).	
§ 170.315(c)	§ 170.315(d)(1) through (d)(3).	
§ 170.315(e)	§ 170.315(d)(1) through (d)(3), (d)(5), and (d)(7).	
§ 170.315(f)	§ 170.315(d)(1) through (d)(3) and (d)(7).	
§ 170.315(h)	§ 170.315(d)(1) through (d)(3).	
§ 170.315(i)	§ 170.315(d)(1) through (d)(3) and (d)(5) through (d)(8).	

We explained that under the P&S certification framework we proposed, a health IT developer would know exactly what it needed to do in order to get its Health IT Module certified and a purchaser of a Health IT Module would know exactly what privacy and security functionality against which the Health IT Module had to be tested in order to be certified. We further explained that, because we explicitly proposed which P&S certification criteria would be applicable to the associated criteria adopted in each regulatory text “first level paragraph” category and also

proposed Approach 2, we did not propose to permit the 2011 Edition policy of allowing for a criterion to be met through documentation that the criterion is inapplicable or would be technically infeasible for the Health IT Module to meet.

Comments. Most commenters were supportive of our proposed P&S certification framework, including the HITSC. One commenter recommended that we keep the option for a health IT developer to attest that a certain security criterion is inapplicable or infeasible. Another commenter was concerned that

a health IT developer would have to redundantly certify products that have a shared security infrastructure.

Response. We appreciate the broad support expressed for the proposed framework. We have adopted the P&S certification framework as proposed. As recited above and stated in the Proposed Rule, we continue to believe it is not necessary to permit health IT developers to attest that certain P&S criteria are inapplicable or infeasible because we have specified which P&S certification criteria are applicable to a Health IT Module based on the other adopted

2015 Edition certification criteria for which it is presented for certification to as well as also permitting certification through Approach 2. We clarify that Approach 2 provides health IT developers with the ability to demonstrate through system documentation that products share a security infrastructure, giving developers the option to certify the security infrastructure only once.

Comments. Several commenters provided feedback suggesting which 2015 Edition P&S certification criteria should apply to each grouping of 2015 Edition certification criteria in Table 9 above. Commenters recommended that we should add the:

- “Integrity” certification criterion (§ 170.315(d)(8)) to the clinical certification criteria (§ 170.315(a)) due to transmissions of laboratory data per the proposed “CPOE—laboratory” certification criterion (§ 170.315(a)(2));
- “Amendments” certification criterion (§ 170.315(d)(4)) to the care coordination criteria (§ 170.315(b)) to support patient requested amendments; and
- “Automatic access time-out” certification criterion (§ 170.315(d)(5)) to the clinical quality measures criteria (§ 170.315(c)) since patient health information is evident in many quality measurement implementations.

Response. We have not adopted the commenter’s recommendation to apply the “integrity” certification criterion (§ 170.315(d)(8)) to the clinical certification criteria because we have not adopted the proposed content

exchange functionality for the “CPOE—laboratory” certification criterion. By not adopting the content exchange functionality (LOI standard), testing and certification will not involve the preparation of patient laboratory data for transmission consistent with the proposed standards. Therefore, the “integrity” certification criterion (§ 170.315(d)(8)) does not need to be applied to the category of criteria (*i.e.*, § 170.315(a)).

The application of the “amendment” criterion is not necessary for care coordination. We have made the “amendment” criterion applicable to the “clinical care” category of criteria (*i.e.*, § 170.315(a)). The functionality certified under the “clinical care” category focuses on data capture and is more appropriate for application of the “amendment” criterion, while the “care coordination” category focuses on the transmission of health information and not patient interaction related to amending the record.

We agree with commenters that the “automatic access time-out” criterion should apply to the clinical quality measures criteria for the reasons provided by the commenters and have included it as applicable to § 170.315(c) under the P&S certification framework. As discussed in the “application access to Common Clinical Data Set” section of this preamble, we have adopted and applied new P&S criteria (“trusted connection” (§ 170.315(d)(9)) and “auditing actions on health information” (§ 170.315(d)(10)) to the

three “API” certification criteria as part of the P&S certification framework. These new criteria are derived from the security requirements included in the proposed “API” criterion in the Proposed Rule and have been applied back to the “API” criteria adopted in this final rule.

We have separated out the “patient engagement” category (§ 170.315(e)) by criterion to provide clarity and appropriate application of privacy and security capabilities. In this regard, we do not apply “end-user device encryption” to the “secure messaging” and “patient health information capture” criteria as that was not our intention. We have added the new “trusted connection” criteria to the “patient engagement” category (§ 170.315(e)) to compliment the revisions we made to the “VDT” and “secure messaging” criteria as part of the overall P&S certification framework and to support the functionality included in the “patient health information capture” criterion. Please see the discussions of these criteria earlier in this preamble for further details.

In this final rule, we require that an ONC–ACB must ensure that a Health IT Module presented for certification to any of the certification criteria that fall into each regulatory text “first level paragraph” category of § 170.315 (*e.g.*, § 170.315(a)) identified in Table 10 below is certified to either Approach 1 (technically demonstrate) or Approach 2 (system documentation) as follows:

TABLE 10—FINAL 2015 EDITION PRIVACY AND SECURITY CERTIFICATION FRAMEWORK

If the Health IT Module includes capabilities for certification listed under:	It will need to be certified to Approach 1 or Approach 2 for each of the P&S certification criteria listed in the “Approach 1” column	
	Approach 1	Approach 2
§ 170.315(a)	§ 170.315(d)(1) (authentication, access control, and authorization), (d)(2) (auditable events and tamper resistance), (d)(3) (audit reports), (d)(4) (amendments), (d)(5) (automatic log-off), (d)(6) (emergency access), and (d)(7) (end-user device encryption).	For each applicable P&S certification criterion not certified for approach 1, the health IT developer may certify for the criterion using system documentation sufficiently detailed to enable integration with external services necessary to meet the criterion.
§ 170.315(b)	§ 170.315(d)(1) through (d)(3) and (d)(5) through (d)(8) (integrity).	
§ 170.315(c)	§ 170.315(d)(1) through (d)(3) and (d)(5)*.	
§ 170.315(e)(1)	§ 170.315(d)(1) through (d)(3), (d)(5), (d)(7), and (d)(9) (trusted connection)*.	
§ 170.315(e)(2) and (3)	§ 170.315(d)(1) through (d)(3), (d)(5), and (d)(9)*.	
§ 170.315(f)	§ 170.315(d)(1) through (d)(3) and (d)(7).	
§ 170.315(g)(7), (8) and (9)*	§ 170.315(d)(1) and (d)(9); and (d)(2) or (d)(10) (auditing actions on health information)*.	
§ 170.315(h)	§ 170.315(d)(1) through (d)(3).	

* Emphasis added to identify additions to the framework as compared to the Proposed Rule.

We clarify that of the adopted 2015 Edition certification criteria, only the privacy and security criteria and the

criteria specified in § 170.315(g)(1) through (6) are exempt from the P&S certification framework due to the

capabilities included in these criteria, which do not implicate privacy and security concerns.

In order to be issued a certification, a Health IT Module would only need to be tested once to each applicable privacy and security criterion identified as part of Approach 1 or Approach 2 so long as the health IT developer attests that such privacy and security capabilities apply to the full scope of capabilities included in the requested certification, except for the certification of a Health IT Module to § 170.315(e)(1) “VDT” and (e)(2) “secure messaging.” For each criterion, a Health IT Module must be separately tested to § 170.315(d)(9) because of the specific capabilities for secure electronic transmission and secure electronic messaging included in each criterion, respectively.

Comments. We received several comments requesting clarification on our proposal to allow a health IT developer to certify for P&S criteria using system documentation sufficiently detailed to enable integration with external services necessary to meet P&S certification criteria (Approach 2). One commenter requested clarification regarding how an ONC-ACB would verify that documentation was sufficient to implement the interface. Another commenter pointed out that interfaces to external systems may carry an additional cost. Other commenters questioned whether the lack of standardized interfaces will lead to security gaps or be an impediment to information sharing.

Response. System documentation for Approach 2 requires a clear description of how the external services necessary to meet the applicable P&S criteria would be deployed and used. We note that Approach 2 is one of two options that provide health IT developers more certification flexibility. Health IT developers and their customers have the discretion to seek certification to the approach (Approach 1 or 2) that best meets their needs, taking into account efficiencies, costs, and security concerns. We further note that the actual implementation of privacy and security capabilities is outside the scope of certification, but in most instances, is guided by applicable federal and state privacy and security laws. We are supportive of the unencumbered exchange of health information and note that certified capabilities should not be implemented in a way that precludes health information sharing.

Comments. A commenter requested clarification on how a health IT developer could guarantee certain functionality, particularly end-user device encryption.

Response. Certification ensures that a Health IT Module can meet the

capabilities of a certification criterion. However, it does not ensure the appropriate implementation of the capabilities. For example, in the context of a Health IT Module’s certification to the “VDT” criterion (§ 170.315(e)(1)), additional required certification to the “end-user device encryption” criterion is intended to apply to the storage actions that the Health IT Module is programmed to take (*i.e.*, creation of temp files, cookies, or other types of cache approaches) and not an individual or isolated user action to save or export a file to their personal electronic storage media.

Comments. A commenter stated that the P&S certification framework is more specific than the approach prescribed in the HIPAA Security Rule. Another commenter stated that we should not name specific encryption and hashing standards because the information security risk landscape is constantly evolving.

Response. The P&S certification framework focuses on the capabilities of health IT certified to the 2015 Edition. It is not designed nor could it align with each covered entity’s responsibilities under the HIPAA Security Rule, which focus on a risk-based approach to security. We note, however, that the adoption of health IT certified to the 2015 Edition under the P&S framework may support a provider’s compliance with the HIPAA Security Rule and other federal and state privacy and security laws. We do not require specific standards for encryption and hashing. Rather, we require any encryption algorithm identified by the National Institute of Standards and Technology (NIST) as an approved security function in Annex A of the Federal Information Processing Standards (FIPS) Publication 140-2, October 8, 2014.¹⁶⁷ For hashing, we require any hashing algorithm with security strength equal to or greater than SHA-2 as identified by NIST as an approved security function in that publication.

2. Design and Performance (§ 170.315(g))

We proposed to revise § 170.550 to add paragraph (g), which would require ONC-ACBs to certify Health IT Modules to certain proposed certification criteria under § 170.315(g). We proposed to require ONC-ACBs to certify Health IT Modules to § 170.315(g)(3) (safety-enhanced design) and § 170.315(g)(6) (Consolidated CDA creation performance) consistent with the requirements included in these criteria.

¹⁶⁷ <http://csrc.nist.gov/publications/fips/fips140-2/fips1402annexa.ps>.

We noted that paragraph (g) also includes a requirement for ONC-ACBs to certify all Health IT Modules presented for certification to the 2015 Edition to § 170.315(g)(4) (quality system management) and (g)(8) (accessibility-centered design). We explained that the proposed certification requirements for § 170.315(g)(3) and (4) maintain the policy approach established with certification to the 2014 Edition (see § 170.550(f)(2) and (3)), which ensures Health IT Modules, as applicable, are certified to these specific safety and quality certification criteria. We also explained that the proposed certification requirement for § 170.315(g)(6) is associated with the new “Consolidated CDA creation performance” criterion we proposed for the 2015 Edition. We reiterated that the requirement is similarly designed to ensure that Health IT Modules (with Consolidated CDA creation capabilities within their scope) are also certified to the “Consolidated CDA creation performance” criterion. We noted the proposed certification requirements for § 170.315(g)(8) were associated with the new “accessibility-centered design” criterion we proposed for the 2015 Edition, which patterned the certification approach of the 2014 Edition “quality system management” criterion.

Comments. Commenters supported the proposed revisions to § 170.550.

Response. We thank commenters for their support. We have added paragraph (g) to § 170.550 as proposed with a minor cross-reference revision that points to the 2015 Edition “accessibility-centered design” criterion codified in § 170.315(g)(5) instead of proposed paragraph (g)(8).

D. Principles of Proper Conduct for ONC-ACBs

1. “In-the-Field” Surveillance and Maintenance of Certification

We proposed new requirements for “in-the-field” surveillance and maintenance of certification under the ONC Health IT Certification Program. The requirements would clarify and expand ONC-ACBs’ existing surveillance responsibilities, including the responsibility to perform surveillance of certified capabilities “in the field.” We explained that in-the-field surveillance is necessary to provide assurance to customers, implementers, and users that health IT certified on behalf of ONC will continue to meet the requirements of its certification when it is implemented and used in a production environment.

Through our proposal, we sought to promote greater consistency, transparency, and rigor in the surveillance of certified capabilities and to provide stakeholders with greater clarity and predictability regarding this important aspect of the ONC Health IT Certification Program.

Our proposal defined in-the-field surveillance and specified certain conditions and procedures under which ONC-ACBs would be required to initiate in-the-field surveillance of certified Complete EHRs and certified Health IT Modules. We delineated separate requirements for surveillance based on complaints or other information about potential non-conformities (“reactive surveillance”) and for surveillance based on a random sampling approach (“randomized surveillance”). In addition, we specified certain corrective action plan requirements and procedures that would apply in the context of randomized surveillance. ONC-ACBs would also be required to report the results of their in-the-field surveillance to the National Coordinator on at least a quarterly basis and, separately, to report corrective action plan information to the publicly accessible open data CHPL detailed in our separate proposal “Open Data Certified Health IT Product List (CHPL).”

To implement the new requirements for in-the-field surveillance outlined in the Proposed Rule, we proposed to add § 170.556 (In-the-field surveillance and maintenance of certification for health IT) and amend § 170.503 (ONC-AA Ongoing Responsibilities) and § 170.523 (ONC-ACB Principles of Proper Conduct).

Definition and Principles for In-the-Field Surveillance

We proposed to explicitly define in-the-field surveillance to mean an ONC-ACB’s assessment of whether a certified Complete EHR or certified Health IT Module to which it has issued a certification continues to conform to the certification’s requirements when the health IT is implemented and in use in the field. This assessment would require an ONC-ACB to assess the technology’s capabilities in a production environment and, where applicable, would be based on the use of the capabilities with protected health information (PHI), unless the use of test data were specifically approved by the National Coordinator. We explained that such surveillance could be performed through an in-person site visit or by remote observation. We solicited comments on these and other approaches to in-the-field surveillance.

Comments. We received mixed comments on our focus on “in-the-field” surveillance. The commenters who supported our focus on surveillance of certified health IT capabilities “in the field” expressed strong support for our proposal to define and establish clear and explicit expectations for in-the-field surveillance. Commenters stated that clearer and more rigorous requirements for in-the-field surveillance would promote confidence in certifications issued on behalf of ONC and significantly improve the reliability and performance of certified health IT. One ONC-ACB specifically endorsed these requirements and our commitment to ensure that certified health IT capabilities function for providers in their local offices and hospitals in the same manner demonstrated by the health IT developer in a controlled testing environment. Another ONC-ACB specifically supported the concept of in-the-field surveillance in the context of complaint-based surveillance, which has been a focus of the current approach to in-the-field surveillance developed through our annual surveillance guidance.

Several commenters described specific challenges they or their members had encountered with certified health IT capabilities that failed to perform in an acceptable manner when implemented in the field. For example, one commenter stated that it had witnessed several instances in which certified health IT that had successfully demonstrated the ability to send a single standards-compliant continuity of care document in a controlled testing environment could not “scale” and send multiple standards-compliant continuity of care documents when deployed in a production environment. Commenters stated that our proposed in-the-field surveillance requirements would help identify and address these kinds of apparent non-conformities.

Response. We thank these commenters for their feedback. They underscore our view of the importance of in-the-field surveillance for ensuring that providers and other stakeholders can rely on certifications issued on behalf of ONC. This basic assurance protects the integrity of the ONC Health IT Certification Program and federal health IT investments because it enables customers, implementers, and users to select appropriate technologies and capabilities; identify potential implementation or performance issues; and implement certified health IT in a predictable, reliable, and successful manner.

While ONC-ACBs are already required to conduct in-the-field surveillance as part of their overall surveillance approaches, we agree with these commenters that establishing more explicit and more rigorous requirements will promote greater consistency and clarity regarding ONC-ACBs’ responsibilities for conducting in-the-field surveillance, which will in turn improve the reliability and performance of certified health IT and help identify and address potential non-conformities.

Comments. Other commenters, mostly health IT developers, were less supportive of in-the-field surveillance. They cautioned that some factors that may affect the performance of certified health IT—such as how the health IT is configured, implemented and adopted by users and integrated with other health IT components as part of complex, local implementations—may be challenging for ONC-ACBs to evaluate or could in some cases be beyond the scope of a health IT’s certification. Some commenters asserted that ONC-ACBs may lack the sophistication or expertise to distinguish certification non-conformities from other factors that may cause certified health IT to perform differently in the field than in a controlled testing environment. In particular, current certification requirements may be tested with an established workflow (often the health IT developer’s “optimal workflow”) but made available to users with additional workflow and implementation options. According to these commenters, an ONC-ACB unfamiliar with a particular variation could incorrectly regard it as a non-conformity. Separately, a few commenters asserted that end-users with whom an ONC-ACB would conduct in-the-field surveillance may lack the necessary skill and knowledge to properly demonstrate certified health IT capabilities, or may be susceptible to “leading questioning” (presumably by the ONC-ACB conducting the surveillance).

Response. We appreciate the concerns raised by commenters and acknowledge that in-the-field surveillance presents unique challenges. However, we disagree with the suggestion that ONC-ACBs lack the sophistication or expertise to perform in-the-field surveillance or to do so in a reliable and objective manner.

Under the ONC Health IT Certification Program, ONC-ACBs’ surveillance approaches must include the use of consistent, objective, valid, and reliable methods, subject to the ongoing supervision of the ONC-AA.

(§ 170.503(e)(2)). In addition, the requirements for in-the-field surveillance established by this final rule build on those with which ONC-ACBs are already familiar, including the requirements for in-the-field surveillance that have existed since the establishment of the Permanent Certification Program in 2011.¹⁶⁸ Since that time, it is our experience that ONC-ACBs have become increasingly adept at analyzing the performance of certified health IT in the field, including working with developers and end-users to identify the causes of reported problems and to distinguish certification issues from other factors that may affect the performance of certified health IT. For all of these reasons, we are confident that ONC-ACBs will be able to meet their responsibilities for conducting in-the-field surveillance.

Comments. Given the unique challenges associated with in-the-field surveillance, some commenters suggested that, in addition to observing how certified capabilities operate in a production environment, ONC-ACBs should be permitted to use other methods to inform their evaluation of technology in the field. For example, the ONC-AA stated that attempting to replicate reported problems in a controlled testing environment may provide a better basis for identifying a suspected non-conformity than relying on in-the-field observations. Separately, several commenters, including the ONC-AA, suggested that ONC-ACBs should work closely with health IT developers in analyzing complaints and other information about potential non-conformities. The commenters stated that including developers in the surveillance process would be important because ONC-ACBs may not be familiar with a developer's particular technology and implementations. Moreover, health IT developers may have internal complaint and quality management programs that could be leveraged to provide insight into problems and their causes.

Response. We appreciate these suggestions, which are consistent with the approach to in-the-field surveillance we envisioned in the Proposed Rule. We agree with commenters that the assessment of certified health IT in a production environment may require ONC-ACBs to employ a variety of

methodologies and approaches. While these must include, they need not be limited to, observing the performance of certified capabilities in the field. Thus in addition to observing how capabilities function in the field, an ONC-ACB might supplement its field observations with information related to the certified technology gleaned from other sources of surveillance, such as user surveys, reviewing developers' complaint logs and defect tickets (including the developer's root cause analysis and resolution of tickets), and attempting to replicate reported problems in a controlled environment. These and other appropriate investigative and diagnostic techniques may help ONC-ACBs more effectively target and conduct their field assessments and inform their overall assessments of certified health IT capabilities in the field.

We also agree that ONC-ACBs should, where appropriate, involve health IT developers in their surveillance activities. For example, an ONC-ACB could require a health IT developer to provide technical assistance to the ONC-ACB in understanding and analyzing variations not seen during the testing and certification process and other complexities. ONC-ACBs could also require or permit health IT developers to assist in analyzing and determining the causes of issues, provided such assistance does not compromise the ONC-ACB's independence or the requirements of its accreditation.

Comments. Several commenters requested additional clarity regarding the precise standards that would govern an ONC-ACB's assessment of certified capabilities in the field. Some commenters stated that the standards articulated in the Proposed Rule did not provide a sufficiently objective basis for determining that certified health IT, once implemented, no longer conforms to the requirements of its certification. Some commenters requested that we provide detailed guidance and bright-line rules to guide ONC-ACBs in making these determinations.

Response. While we understand the desire for bright-line rules, we do not think it practicable or a useful exercise to attempt to anticipate and prescribe detailed rules for every conceivable situation in which an ONC-ACB may discover a non-conformity during its surveillance of technology in the field. In practice, certified health IT may be integrated with a wide range of other systems, processes, and people and may be customized and used in many different ways. These circumstances, which are inherent to the production

environment, are too numerous and varied to anticipate or to reduce to simple rules of universal application.

In light of these complexities, we identified the basic principles that would guide an ONC-ACB's surveillance of certified health IT in the field. (80 FR 16877). In response to commenters' requests for additional clarity, we further elaborate on these principles below. We believe that with these additional clarifications, the principles we have identified will provide ONC-ACBs with clear and predictable guidance and ensure that in-the-field surveillance is conducted in a fair, reliable, and consistent manner across all health IT products and implementations.

Analysis and Examples of Non-Conformities in the Field

Comments. Some commenters asked us to clarify whether an ONC-ACB's evaluation of certified health IT capabilities in the field must be limited to those aspects of the health IT that were tested in a controlled environment. In this connection, a few commenters stated that certain factors—such as how certified capabilities are made available to and implemented by users in the field—are beyond the scope of certification under the ONC Health IT Certification Program and therefore cannot give rise to a “non-conformity.”

Response. An ONC-ACB's assessment of certified health IT in the field is not limited to aspects of the technology that were tested in a controlled environment. Rather, an ONC-ACB must consider the unique circumstances and context in which the certified health IT is implemented and used in order to properly assess whether it continues to perform in a manner that complies with its certification.

Testing is an important part of an ONC-ACB's overall analysis of health IT under the ONC Health IT Certification Program. For practical reasons, however, testing focuses on particular use cases and necessarily reflects assumptions about how capabilities will be implemented and used in practice. Thus while test results provide a preliminary indication that health IT meets the requirements of its certification and can support the capabilities required by the certification criteria to which the technology was certified, that determination is always subject to an ONC-ACB's ongoing surveillance, including the ONC-ACB's evaluation of certified capabilities in the field. Indeed, a fundamental purpose of in-the-field surveillance is to identify deficiencies that may be difficult to anticipate or that may not become

¹⁶⁸ 76 FR 1282 (clarifying our expectation under the Permanent Certification Program that an “ONC-ACB would focus its surveillance activities on whether the Complete EHRs and/or EHR Modules it has certified continue to perform ‘in the field’ . . . as they did when they were certified.”); see also ONC, *ONC Health IT Certification Program, Program Policy Guidance #13*-01.

apparent until after certified health IT is implemented and used in a production environment. That purpose would be entirely frustrated if an ONC-ACB's assessment of technology in the field were confined to those aspects of the technology's performance specifically delineated in test procedures.

Comments. Several commenters stated that, depending on the circumstances, certified health IT that has been implemented in the field may be unable to demonstrate certified capabilities for reasons that are beyond the health IT developer's control. For example, users may customize certified health IT capabilities in ways that could not be anticipated by the developer or that conflict with the developer's explicit instructions regarding the proper implementation and configuration of its technology. These and other factors beyond the control of a developer should not, according to these commenters, be grounds for a determination of non-conformity.

Response. We recognize there may be instances in which certified health IT cannot successfully demonstrate implemented capabilities for reasons that the developer cannot reasonably influence or control. We clarify that, as discussed below, these circumstances would be beyond the scope of the health IT's certification and would not give rise to a non-conformity.

A non-conformity arises when certified health IT fails to conform to the requirements of its certification under the ONC Health IT Certification Program. Those requirements take several forms and may apply to aspects of the design and performance of technology as well as the responsibilities of health IT developers. In particular, certified health IT must be able to support the capabilities and uses required by applicable certification criteria, and developers must make such capabilities available in ways that enable them to be implemented and used in production environments for their intended purposes.¹⁶⁹ Developers

¹⁶⁹ Most certification criteria permit technology to be designed and made available to users in any way that meets the outcomes required by the criteria. Several certification criteria, however, also prescribe specific requirements for how certified capabilities are designed or made available to users. For example, the safety-enhanced design criterion (§ 170.315(g)(3)) requires developers to apply user-centered design processes to the capabilities referenced in that criterion during the design and development of certified health IT. Other certification criteria require developers to identify specific design or performance characteristics of their technology, such as the quality management system (§ 170.315(g)(4)) and accessibility-centered design standard or law (§ 170.315(g)(5)) used in the development, testing, implementation, and maintenance of the capability.

must also comply with additional program requirements as a condition of certification.¹⁷⁰

While these requirements vary based on the specific certification criteria or program requirements at issue, all of them focus on the responsibilities of health IT developers and those aspects of their technology that they can reasonably influence or control. Accordingly, if an ONC-ACB finds that health IT, as implemented in the field, cannot demonstrate required capabilities in a compliant manner, the ONC-ACB must determine the reasons for the failure, including the roles of the technology as well as the health IT developer, users, and other parties. If the ONC-ACB finds that the developer or its technology were a substantial cause of the failure, the ONC-ACB would conclude that the health IT does not meet the requirements of its certification. By contrast, if the ONC-ACB finds that the failure was caused exclusively by factors far removed from the control or responsibility of the developer, the ONC-ACB would regard those factors as beyond the scope of the health IT's certification and would not find a non-conformity. The following contrasting scenarios provide an example of these requirements in practice.

• *Scenario A:* An ONC-ACB initiates in-the-field surveillance of a Health IT Module certified to the clinical decision support certification criterion at § 170.315(a)(9). The ONC-ACB observes the use of the capability at a location at which it has been implemented. The ONC-ACB observes as a user unsuccessfully attempts to access user diagnostic or therapeutic reference information for a patient as required by the criterion. The ONC-ACB then performs a series of troubleshooting and diagnostic exercises with the provider and the developer of the certified Health IT Module. After additional fact-finding and analysis, the ONC-ACB concludes that the failure of the technology to perform as expected was caused by the failure to implement a routine update of the linked referential clinical decision support component of the Health IT Module. Under the terms of the provider's agreement with the

¹⁷⁰ In addition to the requirements established by adopted certification criteria, a Complete EHR or Health IT Module's certification is also conditioned on the health IT developer's compliance with certain program requirements that are necessary to the basic integrity and effectiveness of the ONC Health IT Certification Program. These requirements include, for example, the mandatory disclosure requirements (§ 170.523(k)(1)) and the requirements related to displaying the ONC Certified HIT Certification and Design Mark (§ 170.523(1)).

developer, the developer was solely responsible for implementing routine updates in return for an annual maintenance fee, which the provider had paid in full.

Based on these facts, the ONC-ACB would find a non-conformity because the failure of the certified health IT to function as expected was due solely to the actions of the developer that prevented the user from accessing capabilities to which the health IT was certified.

• *Scenario B:* An ONC-ACB initiates in-the-field surveillance of a Health IT Module certified to the clinical decision support certification criterion § 170.315(a)(9). The ONC-ACB observes the use of the capability at a location at which it has been implemented. The ONC-ACB observes as a user unsuccessfully attempts to view user diagnostic or therapeutic reference information for a patient as required by the criterion. Upon further evaluation, the ONC-ACB learns that the provider had notified the developer that it did not wish to purchase or sublicense the standard clinical reference information bundled with the developer's clinical decision support technology and requested instead that the developer integrate its technology with the provider's preferred third-party database of clinical reference information. The developer agreed to integrate the third-party database information as requested, but in writing advised the provider that, because the developer did not have a sublicensing agreement in place with the third-party vendor, the provider would be responsible for obtaining and maintaining the necessary licenses for access to the third-party vendor's database. The developer successfully integrated the third-party database information as requested, and the certified capabilities performed as expected using the third-party database information for several months prior to the ONC-ACB's surveillance. However, at the time of the surveillance, access to the third-party database information had been temporarily suspended because of the provider's failure to pay several outstanding invoices from the third-party vendor—the result of an oversight in the provider's accounting department. Because of the suspension in service, the technology, which was otherwise performing as certified, was unable to retrieve and display user diagnostic and therapeutic reference information.

Based on these facts, the ONC-ACB would not find a non-conformity because, while the technology was unable to perform required capabilities in the field, the failure was caused by

factors far removed from the control or responsibility of the developer. Indeed, the developer took care to warn the provider that, while the technology could be customized to support third-party database information, the provider would be responsible for maintaining any necessary licenses for access to the third party database information.

Comments. Some commenters stated that contractual restrictions or other limitations on the use of a developer's certified health IT should be treated as a non-conformity, while several other commenters asked for additional guidance on this issue.

Response. As the scenarios above illustrate, because developers sell and license certified technology in many different ways and often in conjunction with many other related products and services, an ONC-ACB's evaluation of technology in the field will necessarily require a consideration of the manner in which the developer makes its certified technology and associated capabilities available to customers and users, including a consideration of implementation options, contractual terms, and other factors that could affect the performance of the capabilities in the field. For example, an ONC-ACB would find a non-conformity were it to determine that a developer had imposed restrictions or limitations¹⁷¹ on its technology (or the use of its technology) that substantially interfered with users' ability to access or use certified capabilities for any purpose within the scope of the technology's certification, as in the following scenarios.

- *Scenario C:* An ONC-ACB initiates in-the-field surveillance of a Health IT Module certified to the data export criterion at § 170.315(b)(6). The ONC-ACB observes the use of the capability at a location at which it has been implemented. The ONC-ACB observes as a user unsuccessfully attempts to create a set of export summaries using the required standard for patients whose information is stored in the technology. The ONC-ACB contacts the health IT developer, which explains that to utilize the data export capability, a user must load a series of coded instructions into the technology using the developer's proprietary scripting language. However, the developer restricts the ability of users to access training materials or instructions that would allow them to acquire the necessary knowledge and expertise to perform this function.

Based on these facts, the ONC-ACB would find a non-conformity. Specifically, the developer has restricted access to training materials and instructions that are needed to access and capability and successfully use it to achieve the technical outcomes contemplated by § 170.315(b)(6). Indeed, as the scenario illustrates, the restriction effectively prevents a user from using the data export capability at all. As such, the technology no longer conforms to the requirements of its certification.

- *Scenario D:* An ONC-ACB initiates in-the-field surveillance of a Health IT Module certified to the data export criterion at § 170.315(b)(6). The ONC-ACB observes the use of the capability at a location at which it has been implemented. The user is able to successfully create a set of export summaries for patients in real time but is unable to configure the technology to create a set of export summaries based on a relative time and date (e.g., the first of every month at 1:00 a.m.). The ONC-ACB contacts the health IT developer, which explains that the ability to create export summaries based on a relative time and date is an "advanced functionality" that the developer has disabled by default. The developer will only enable the functionality if a customer specifically requests it.

Based on these facts, the ONC-ACB would find a non-conformity. Specifically, the developer has placed a technical limitation on its technology by disabling and thus preventing users from accessing functionality within the scope of the technology's certification to the data export capability. Indeed, the ability to create a set of export summaries based on a relative time and date is expressly required by § 170.315(b)(6)(iii)(B)(2). That a customer must specifically request that the developer turn on the functionality is a substantial interference with a user's ability to access and use this aspect of the certified capability. As such, the technology no longer conforms to the requirements of its certification.

Comments. Some commenters asked whether a developer's failure to disclose known material limitations or types of costs associated with its certified health IT would give rise to a non-conformity. Several commenters assumed that it would and stated that, together with the more meaningful transparency and disclosure requirements we proposed, assessing the effect of developers' disclosures on the performance of certified health IT in the field would promote greater transparency and reliability of certified health IT capabilities and help mitigate business

practices that limit or interfere with access to certified health IT capabilities.

Response. Under the expanded transparency and disclosure requirements at § 170.523(k)(1), which are discussed in section IV.D.2 of this preamble, a health IT developer must disclose all known material limitations and types of costs associated with its certified health IT. The failure to disclose this information is a violation of an explicit certification program requirement (§ 170.523(k)(1)) and thus constitutes a non-conformity. The disclosure violation may also give rise to a separate non-conformity in the event that the failure to disclose the required information has substantially impaired, or would be likely to substantially impair, the ability of one or more users (or prospective users) to implement or use the developer's certified health IT in a manner consistent with its certification.

As an example, if the developer in Scenario D above failed to disclose the technical limitation described in that scenario, the ONC-ACB would find a non-conformity to the disclosure requirements at § 170.523(k)(1). This determination would be warranted because the developer's failure to disclose the limitation could substantially interfere with the ability of a user or prospective user to implement the data export capability in a manner consistent with the technology's certification to § 170.315(b)(6).¹⁷²

Given the risk of non-conformity created by the failure of a developer to disclose the kinds of material information described above, and the concomitant requirement for ONC-ACBs to evaluate such disclosures in order to properly evaluate certified technology in the field, we have finalized elsewhere in this final rule our proposal to expand and clarify the types of information that developers are required to disclose as a condition of certification under the ONC Health IT Certification Program. We discuss these disclosure requirements in detail in section IV.D.2 of this preamble, "Transparency and Disclosure Requirements."

For the foregoing reasons, and with the clarifications discussed above, we have finalized as proposed the definition of in-the-field surveillance at § 170.556(a).

Reactive Surveillance

We proposed to clarify and add to ONC-ACBs' responsibilities for

¹⁷² The ONC-ACB would also find a separate non-conformity to § 170.315(b)(6), for the reasons explained in connection with Scenario D.

¹⁷¹ Potential restrictions and limitations are discussed in detail in section IV.D.2 of this preamble, "Transparency and Disclosure Requirements."

conducting “reactive surveillance”—that is, surveillance of certified health IT initiated on the basis of complaints or other indications that the health IT does not conform to the requirements of its certification. We proposed to create an explicit duty for an ONC-ACB to initiate such surveillance whenever it becomes aware of facts or circumstances that call into question the continued conformity of a certified Complete EHR or certified Health IT Module to the requirements of its certification (including conformity both to applicable certification criteria as well as to other requirements of certification, such as the disclosure requirements at § 170.523(k)(1)). Further, we proposed that whenever an ONC-ACB initiates reactive surveillance, it would be required, as a matter of course, to assess the health IT developer’s compliance with the disclosure requirements at § 170.523(k)(1).

Comments. Many commenters agreed with the proposed requirements for reactive surveillance. Commenters stated that strengthening surveillance, including in-the-field surveillance, based on complaints and other information about the real-world performance of capabilities would provide greater assurance to providers that they will in fact be able to implement and use the capabilities to which health IT has been certified. The ONC-AA and ONC-ACBs largely supported our proposed reactive surveillance requirements and urged us to focus primarily on refining this aspect of in-the-field surveillance and not the proposed randomized surveillance requirements.

Some commenters, mostly ONC-ACBs, sought greater clarity regarding the interaction between the proposed reactive surveillance requirements and ONC-ACBs’ existing responsibilities for conducting reactive and other forms of surveillance pursuant to the requirements of their accreditation to ISO/IEC 17065 and authorization to issue certifications under the ONC Health IT Certification Program. Relatedly, several commenters noted that the proposed duty to initiate reactive surveillance would require in all cases that such surveillance take place in the field; these commenters regarded this as an overly broad requirement that could unnecessarily supplant other forms of “traditional” surveillance that, depending on the circumstances, may be more effective and less burdensome.

Response. We thank commenters for their thoughtful comments on this aspect of our proposal. In consideration of these comments and the additional

comments summarized below, we are finalizing the reactive surveillance requirements at § 170.556(b), subject to the revisions discussed below. The revisions address the request from commenters for clarification of the interaction between the proposed reactive surveillance requirements and ONC-ACBs’ existing obligations to conduct reactive surveillance.

The proposed reactive surveillance requirements focused primarily on an ONC-ACB’s duty to initiate surveillance of certified health IT *in the field*. Specifically, we stated that an ONC-ACB would be required to initiate *in-the-field* surveillance whenever it becomes aware of facts or circumstances that call into question health IT’s continued conformity to the requirements of its certification (80 FR 16878). However, we agree with the observation of several commenters that requiring ONC-ACBs to initiate in the field surveillance in all cases would be unnecessarily prescriptive. In some cases, an ONC-ACB will be able to investigate and evaluate a putative non-conformity just as effectively by using traditional forms of surveillance that do not depend on observing certified health IT capabilities in the field. For example, an ONC-ACB may identify and substantiate non-conformities through conventional desk-audits followed by re-testing of Health IT Modules in a controlled environment. As another example, an ONC-ACB may perform an audit of a developer’s complaint processes to identify potential non-compliance with the requirements of ISO/IEC 17065. Similarly, an ONC-ACB may audit a developer’s website and other communications to identify potential non-compliance with the disclosure requirements (§ 170.523(k)(1)), the Criteria and Terms of Use for the ONC Certified HIT Certification and Design Mark (§ 170.523(l)), or other certification requirements.

Because our intent was to build upon—not supplant—these traditional forms of surveillance, we have revised the requirements at § 170.556(b) as follows. Under § 170.556(b), an ONC-ACB has a duty to initiate reactive surveillance—including, as necessary, in-the-field surveillance—whenever it becomes aware of facts or circumstances that would cause a reasonable person to question a certified Complete EHR or certified Health IT Module’s continued conformity to the requirements of its certification. Such conformity includes both ongoing conformity to applicable certification criteria as well as compliance with other requirements of certification, including the disclosure

requirements for health IT developers at § 170.523(k)(1).

Whether reactive surveillance must include in-the-field surveillance or may employ other methods is governed by the definition and principles for in-the-field surveillance described earlier in this preamble and codified at § 170.556(a), including the nature of the suspected non-conformity and the adequacy of other forms of surveillance under the circumstances. In most cases, the need to evaluate the certified health IT in the field will be obvious from the nature of the suspected non-conformity. For example, if a problem with a certified health IT capability is reported to arise only in connection with a specific local implementation option, an ONC-ACB would likely need to observe the relevant capabilities in the field in order to fully analyze the cause of the problem and determine whether it is the result of a non-conformity. In other cases, the need for in-the-field surveillance may become apparent only after other surveillance methods and techniques have failed to isolate the cause of the problem.

In-the-field surveillance may also be necessary to determine a developer’s compliance with certification program requirements, such as the mandatory disclosure requirements at § 170.523(k)(1). While non-compliance with these requirements may often be established from complaints and a review of a developer’s disclosures, certain kinds of undisclosed limitations on the capabilities of certified health IT may need to be confirmed through in-the-field surveillance of the technology, or may not be discovered at all except upon observing the operation of certified capabilities in the field.

Comments. A number of commenters asked us to articulate more precise standards for when an ONC-ACB would be required to initiate reactive surveillance. Some of these commenters stated that ONC-ACBs would not be able to consistently apply the standard set forth in the Proposed Rule, which would require an ONC-ACB to initiate reactive surveillance whenever it becomes aware of facts or circumstances that would cause a reasonable person to question a certified Complete EHR or certified Health IT Module’s continued conformity to the requirements of certification.

Response. As requested by commenters, we provide the following additional guidance on the circumstances that would trigger an ONC-ACB’s duty to initiate reactive surveillance under the requirements at § 170.556(b).

In determining whether to initiate reactive surveillance, an ONC-ACB must consider and weigh the volume, substance, and credibility of complaints and other information received against the type and extent of the alleged non-conformity, in light of the ONC-ACB's expertise and experience with the particular capabilities, health IT, and certification requirements at issue. For example, if an ONC-ACB receives a number of anonymous complaints alleging general dissatisfaction with a particular certified Health IT Module, the ONC-ACB is not required to initiate surveillance (though it would not be precluded from doing so). In contrast, if an ONC-ACB receives several complaints alleging, for example, that a particular certified Health IT Module is unable to electronically create a set of export summaries in accordance with the data export certification criterion at § 170.315(b)(6), the ONC-ACB must initiate surveillance of the Health IT Module unless a reasonable person in the ONC-ACB's position would doubt the credibility or accuracy of the complaints. A reasonable basis for doubt might exist if the ONC-ACB had recently responded to the very same issue and determined through in-the-field surveillance of the Health IT Module at several different locations that the reported problem was due to a "bug" arising from an unsupported use of the Health IT Module that the developer had specifically cautioned users about in advance.

An ONC-ACB's decision to initiate reactive surveillance must also take into account complaints and other information indicating whether a health IT developer has disclosed all known material information about certified capabilities, as required by § 170.523(k)(1). The failure to disclose this information calls into question the continued conformity of those capabilities because it creates a substantial risk that existing and prospective users will encounter problems implementing the capabilities in a manner consistent with the applicable certification criteria. Thus in the example above, if the complaints received by the ONC-ACB suggested that the developer knew about but failed to disclose the data export issue to users, the ONC-ACB would be required to initiate in-the-field surveillance of the certified Health IT Module to verify whether the developer had failed to disclose known material information and, if so, whether the failure to disclose that information prevented users from reasonably implementing

and using the data export capability in accordance with the requirements of the certification criterion at § 170.315(b)(6).

We believe the foregoing principles and examples will provide sufficient clarity and practical guidance for ONC-ACBs regarding their responsibilities for conducting reactive surveillance pursuant to § 170.556(b). If necessary, we will issue additional guidance to ONC-ACBs to assist them in conducting such surveillance in a consistent, objective, and reliable manner.

Comments. A commenter suggested that reactive surveillance should be based solely on complaints submitted directly to ONC-ACBs. The commenter stated that ONC-ACBs "can't be expected to keep ears to the ground" to monitor the trade press, user group message boards, blogs, analyst reports, and other sources of information, which may not be credible. Another commenter asked us to clarify that in determining whether to initiate reactive surveillance, ONC-ACBs would be required to consider complaints from persons other than providers and users of certified health IT (such as public health agencies and other recipients of electronic health information that may not themselves use certified health IT).

Response. Under the requirements adopted in this final rule, an ONC-ACB has a duty to initiate reactive surveillance whenever it becomes aware of facts or circumstances that call into question the continued conformity of health IT to which it has issued a certification. We do not prescribe new requirements for ONC-ACBs to proactively monitor any particular source of information (such as the trade press or user forums), as ONC-ACBs are already required obtain and synthesize information about certified health IT from multiple sources.

Regardless of the form of the information or how it comes to an ONC-ACB's attention, if the information suggests that health IT the ONC-ACB has certified may no longer conform to the requirements of its certification, the ONC-ACB is required to initiate surveillance. For example, an ONC-ACB may become aware of a potential non-conformity through user surveys and other "behind-the-scenes" surveillance of users and products. Or an ONC-ACB may become aware of a potential non-conformity while auditing a developer's website and other disclosures. ONC will also share information with ONC-ACBs, which may well come from the trade press and other sources. And, of course, an ONC-ACB will receive complaints from a variety of sources, including, as one commenter suggested, entities such as

public health agencies that may not be certified health IT users. All of this information would compose the facts and circumstances of which an ONC-ACB is aware and is required to consider in determining whether to initiate surveillance.

Randomized Surveillance

In addition to reactive surveillance, we proposed to require ONC-ACBs to initiate in-the-field surveillance on a "randomized" basis for the certification criteria prioritized by the National Coordinator. For those prioritized certification criteria, an ONC-ACB would be required each calendar year to randomly select at least 10% of the Complete EHRs and Health IT Modules to which it has issued a certification. The ONC-ACB would then be required to initiate in-the-field surveillance of each such certified Complete EHR or certified Health IT Module at the lesser of 10 or 5% of locations at which the technology is implemented and in use in the field. The locations would be selected at random, subject to certain sampling considerations and limited exclusions described in the Proposed Rule.

We stated that randomized surveillance would enable ONC-ACBs to identify non-conformities that are difficult to detect through complaint-based or other reactive forms of surveillance. Randomized surveillance would also enable an ONC-ACB to detect patterns of non-conformities that indicate a more widespread or recurring problem requiring a comprehensive corrective action plan. We proposed that a pattern of non-conformity would exist if an ONC-ACB found that a certified Complete EHR or certified Health IT Module failed to demonstrate conformity to any prioritized certification criterion at 20% or more of the locations surveilled. Upon such a finding, the ONC-ACB would deem the certified Complete EHR or certified Health IT Module "deficient" and impose a corrective action plan on the developer of the certified Complete EHR or certified Health IT Module. We specified certain elements and procedures that would be required for such corrective action plans.

Comments. We received strong support for our proposal to require ONC-ACBs to perform "randomized" surveillance as part of their in-the-field surveillance approach. Several commenters who supported our proposal urged us to minimize the associated disruption and other burdens for providers who participate in randomized surveillance.

A number of commenters—including the ONC-AA and the ONC-ACBs—raised concerns regarding this aspect of our proposal. The ONC-ACBs estimated that performing randomized surveillance on 10% of certified products, even at the relatively small number of locations specified in the Proposed Rule, would as much as double the total cost of certification and divert an inordinate amount of time and resources away from other important certification and surveillance activities. Meanwhile, commenters including the ONC-AA doubted that the proposed sample size would be sufficient to detect patterns of non-conformities or to determine with any degree of confidence how widespread a particular non-conformity may be. In this connection, commenters pointed out that surveilling a randomly selected certified Complete EHR or certified Health IT Module at the lesser of 10 or 5% of locations at which the technology is installed may not yield a statistically significant result. For example, if an ONC-ACB were to randomly select a Health IT Module installed at 40 locations, the ONC-ACB would only be required to perform in-the-field surveillance at 2 locations. The ONC-AA stated that performing surveillance of certain certified capabilities, such as interoperability or privacy and security, at only 2 locations would be insufficient to identify all but the grossest non-conformities.

Some commenters felt that it was premature to codify a specific approach to randomized surveillance and that we should instead create a “pilot study” or allow ONC-ACBs to continue to experiment with approaches to randomized surveillance in order to gauge the willingness of providers to participate, potential methodologies, and the costs and benefits of this type of surveillance.

Response. Randomized surveillance is an important aspect of an ONC-ACB’s overall approach to in-the-field surveillance. In addition to exposing problems that may not surface through complaints and other forms of surveillance, randomized surveillance will encourage developers to proactively address issues and will also encourage providers to participate in and become familiar with in-the-field surveillance of certified health IT. However, we acknowledge that the proposed randomized surveillance requirements could place a significant burden on ONC-ACBs and divert resources and energy away from other equally important aspects of our proposal, including more rigorous in-the-field surveillance of certified health IT based

on complaints and other evidence of potential non-conformities. Balancing these considerations, we are persuaded that starting with a less ambitious approach to randomized surveillance will allow us to refine this aspect of surveillance over time and will provide the best path to achieving our overall goal of strengthening in-the-field surveillance and making it more meaningful.

Accordingly, we have revised the proposed randomized surveillance requirements as follows. First, we have reduced the annual sample size for randomized surveillance. Instead of 10% of all certified Complete EHRs and certified Health IT Modules, an ONC-ACB must perform randomized surveillance on 2% of certified Complete EHRs or certified Health IT Modules each year. Based on current data on the CHPL, we estimate this could require ONC-ACBs to perform randomized surveillance of up to 24 products per calendar year (depending on the total number of products the ONC-ACB has certified, which we expect will increase with the addition of Health IT Modules certified to the 2015 Edition). We believe this new minimum threshold will provide additional insight and experience related to randomized surveillance. This specific baseline will establish a randomized surveillance program that advances our policy aims while reducing the burden of randomized surveillance for all stakeholders and making this initial approach more manageable for ONC-ACBs. That being said, we intend to continually review surveillance results and experiences to determine whether and how to increase this threshold over time (e.g., whether an incrementally rising threshold over time would be appropriate and effective). We also intend to pursue and investigate other avenues that could add feedback to (and be combined with) this surveillance process. For example, we will explore other kinds of tools, such as those that may be able to be used directly by health care providers to test and report how their products performed. Overall, and over the long-term, we believe that other approaches can and should be included to complement the randomized in-the-field surveillance performed by ONC-ACBs.

Second, while an ONC-ACB must perform surveillance of randomly selected certified Complete EHRs and certified Health IT Modules in the field, we no longer specify a minimum number of locations at which the ONC-ACB will be required to conduct such surveillance. This revision reflects commenters’ insight that requiring an

ONC-ACB to surveil the technology at the lesser of 5% or 10 locations, as we had proposed, could be simultaneously both burdensome and yet unlikely to yield statistically significant or generalizable results. It also reflects our recognition, underscored by the comments, that well-established methodologies and standards for post-market surveillance used in other industries typically focus on conformity testing of discrete products or components in isolation and thus provide little guidance for formulating appropriate sampling and statistical methods under the ONC Health IT Certification Program. Given the lack of suitable reference models in other industries, we agree with commenters that this particular aspect of an ONC-ACB’s randomized surveillance approach would benefit from additional experience and piloting. Thus we intend to work with ONC-ACBs and the ONC-AA and issue guidance as necessary to refine these aspects and ensure the use of consistent and reliable methods across ONC-ACBs and their surveillance approaches.

Finally, we have eliminated the concept of “deficient surveillance results” and instead applied the proposed corrective action plan requirements across-the-board to all types of surveillance and confirmed non-conformities. Thus, if an ONC-ACB performs randomized surveillance for a certified Complete EHR or certified Health IT Module and confirms a non-conformity, it must institute a corrective action plan under § 170.556(d) and report related information to the open data CHPL, as required by § 170.556(e)(3). This requirement applies regardless of whether the non-conformity meets the 20% “deficiency threshold” described in the Proposed Rule. These changes are described in more detail below in our responses to the comments on these aspects of our proposal.

We have finalized these revisions at § 170.556(c)–(e).

Comments. A number of commenters suggested that we specify additional details regarding the random sampling approach that ONC-ACBs must follow when selecting certified Complete EHRs and certified Health IT Modules for randomized surveillance and, separately, when selecting the locations at which the technology will be surveilled in the field. Commenters noted that under a purely random sampling approach, an ONC-ACB would be equally likely to select a Complete EHR or Health IT Module with relatively few installations or users as one with many installations or users.

To maximize the value of randomized surveillance for providers and other stakeholders, commenters suggested that we require ONC-ACBs to weigh the selection of products based on the number of installed locations, users, or other factors.

Commenters also suggested we clarify or specify additional requirements related to the number and types of locations at which an ONC-ACB must surveil certified Complete EHRs and certified Health IT Modules that it has randomly selected for in-the-field surveillance. One commenter stressed the importance of ensuring random selection of and diversity in the providers and locations selected for surveillance. Another commenter suggested that an ONC-ACB's approach to selecting locations would need to vary depending on the type of implementation (e.g., local versus hosted systems).

Response. We thank commenters for their feedback on potential random sampling and other considerations for randomized surveillance. While we do not explicitly adopt any additional sampling or methodological constraints beyond those we proposed, we agree with many of the commenters' suggestions and intend to work with ONC-ACBs and the ONC-AA to incorporate these and other elements in their approaches to randomized surveillance, consistent with the basic parameters established by this final rule and discussed in more detail below.

In consideration of the comments provided, we have determined that an ONC-ACB's selection process under randomized surveillance will adhere to the following requirements. On an annual basis the ONC-ACB must ensure that it meets the threshold sample size, which is initially being established at 2% of all of the Complete EHRs and Health IT Modules to which the ONC-ACB has issued a certification. The ONC-ACB must randomly select products from those to which it has issued a certification, but is permitted to implement appropriate weighting and sampling considerations. After an ONC-ACB has randomly selected a product for surveillance, for each product selected, the ONC-ACB must select a random sample of one or more locations at which the ONC-ACB will initiate in-the-field surveillance of the certified Complete EHR or certified Health IT Module's prioritized capabilities. At both stages of the selection process, an ONC-ACB must ensure that every product selected and every provider location at which the product is in use has a chance of being randomly selected for in-the-field surveillance (unless a

product is excluded from selection because it was already selected for randomized surveillance within the last 12 months). This prospect, that any product and location may be selected at random, is the essence of a "random sampling" approach and is a central feature of randomized surveillance because it ensures that all health IT developers' products and implementations are potential candidates for in-the-field surveillance. The possibility that any product may be surveilled at any provider location will encourage developers to proactively address issues and improve the real-world performance and reliability of health IT capabilities across all customers.

Consistent with these principles, we clarify that an ONC-ACB's selection of products and locations need not be random in the absolute sense of assigning an equal probability of selection to every product or location in the pool. Indeed, for the reasons stated by commenters, there may be strong justifications for assigning different probabilities or "weights" to products or locations based on a variety of factors that are relevant to maximizing the value and impact of randomized surveillance activities for providers and other stakeholders. For example, when selecting products for randomized surveillance, the ONC-ACB could assign greater weight to products that are more widely adopted and used so as to increase the likelihood that the products surveilled will include at least some products with a large number of installations and users. This would increase the overall impact of the ONC-ACB's surveillance activities by increasing the likelihood of discovering and addressing non-conformities that affect a large number of providers and users. As another example, when randomly selecting locations at which to perform in-the-field surveillance for any particular product, an ONC-ACB might ensure that no two locations selected are under the common ownership or control of a single person or entity, thereby addressing the concerns raised by commenters regarding the diversity of providers and locations selected for randomized surveillance.

To avoid any misinterpretation of the phrases "randomly select" and "selected at random," we have clarified the regulation text at § 170.556(c)(2) and § 170.556(c)(4)(ii) to allow for appropriate weighting and sampling considerations in the random selection of products and locations, respectively.

Finally, we note that under the ONC Health IT Certification Program, it is an ongoing responsibility of the ONC-AA

to ensure that the surveillance approaches used by ONC-ACBs, including the selection processes and methodologies for randomized surveillance discussed above, include the use of consistent, objective, valid, and reliable methods. (§ 170.503(e)(2)). We intend to work closely with the ONC-AA and the ONC-ACBs to ensure that such methods are in place and to identify and incorporate appropriate best practices and elements that serve the policies of this final rule.

Comments. Commenters pointed out that while ONC-ACBs may be able to randomly select locations at which to conduct in-the-field surveillance, they cannot compel a provider to grant access to its health care facility or to cooperate in the surveillance of its certified health IT. At the same time, providers may be reluctant to allow ONC-ACBs to perform in-the-field surveillance because of concerns about granting access to PHI. One ONC-ACB stated that it had experienced difficulties securing cooperation from providers in connection with its existing surveillance activities and therefore questioned whether providers would be willing to participate in additional surveillance, especially when conducted at random rather than in response to a complaint or identified issue.

Given these concerns, some commenters suggested that ONC-ACBs should not be required to conduct randomized surveillance unless providers are also required to participate in such surveillance as a condition of participation in the EHR Incentive Programs or other programs. Alternatively, other commenters suggested that we provide exceptions and other flexibility for ONC-ACBs in the event that a provider is selected for but does not cooperate with an ONC-ACB's in-the-field surveillance of the provider's certified health IT. Several commenters requested clarity on our expectations for providers' role as participants in in-the-field surveillance, especially randomized surveillance.

Response. We appreciate commenters' concerns and acknowledge that randomized surveillance presents unique challenges. In particular, we recognize that some providers who are selected for randomized surveillance may not cooperate with an ONC-ACB's efforts. Moreover, depending on the number of locations at which a particular product is in use, a lack of cooperation from providers or end-users could prevent the ONC-ACB from conducting in-the-field surveillance of that product altogether.

Because we agree that an ONC-ACB should not be penalized in such situations, we clarify that where an ONC-ACB makes a good faith effort but is nevertheless unable to complete in-the-field surveillance at a particular location for reasons beyond its control, the ONC-ACB may exclude the location and substitute another location that meets the random selection requirements described above. Similarly, in the event that the ONC-ACB exhausts all available locations for a particular certified Complete EHR or certified Health IT Module, the ONC-ACB may exclude that Complete EHR or Health IT Module and substitute another randomly selected Complete EHR or Health IT Module. In the case of exhaustion, we clarify that the excluded certified Complete EHR or Health IT Module would be counted towards the minimum number of products an ONC-ACB is required to randomly surveil during the calendar year surveillance period. We emphasize, however, that an ONC-ACB must carefully and accurately document its efforts to complete in-the-field surveillance for each product and at each location. The ONC-AA would be expected to review this documentation to ensure that ONC-ACBs have met the required random selection requirement and have made a good faith effort to perform in-the-field surveillance prior to excluding any product or location from randomized surveillance. We believe that these revisions—combined with the reduced minimum sample size for in-the-field surveillance and the clarifications noted above regarding the number of locations at which an ONC-ACB must observe capabilities in the field—will mitigate the concerns raised by commenters and make randomized surveillance more manageable for ONC-ACBs, providers, and developers.

It is our expectation that providers will cooperate with an ONC-ACB's authorized surveillance activities, including the surveillance of certified health IT in the field. While we understand that some providers may be reluctant to grant ONC-ACBs access to PHI, we point out that providers who commented on our proposal overwhelmingly supported and urged us to finalize requirements for the surveillance of certified health IT in the field (i.e., in production environments in which the technology is implemented and used). Such surveillance will only be successful if providers are actively engaged and cooperate with ONC-ACBs' surveillance activities, including by granting access to and assisting ONC-ACBs to observe the performance

of production systems. We also note that, in consultation with the Office for Civil Rights, we have clarified that under the "health oversight agency" exception of the HIPAA Privacy Rule, a healthcare provider is permitted to disclose PHI to an ONC-ACB during the course of authorized in-the-field surveillance activities, without patient authorization and without a business associate agreement.¹⁷³

Comment. One commenter, an ONC-ACB, stated that some health IT developers have resisted providing the ONC-ACB with a complete list of the health IT developers' users. The commenter asked us to clarify that health IT developers have an obligation to abide by and support an ONC-ACB's surveillance requirements, including furnishing complete and up-to-date user lists upon request.

Response. We expect an ONC-ACB to require, as a condition of certification, that health IT developers furnish to the ONC-ACB upon request, accurate and complete customer lists, user lists, and other information that the ONC-ACB determines is necessary to enable it to carry out its surveillance responsibilities. We note that even under ONC-ACB's existing annual surveillance plans, access to accurate customer and user lists is essential to an ONC-ACB's ability to contact users for reactive surveillance and to conduct surveys and other activities necessary to obtain and synthesize information about the performance of certified health IT. Therefore, if a health IT developer refuses to provide this information to an ONC-ACB, the ONC-ACB may regard the refusal as a refusal to participate in surveillance under the ONC Health IT Certification Program and institute appropriate procedures, consistent with the ONC-ACB's accreditation to ISO 17065, to suspend or terminate the health IT developer's certification.

Corrective Action Requirements; Reporting of Surveillance Results and Corrective Action Information

In the Proposed Rule, we stated that if an ONC-ACB found a pattern of nonconformity—defined as a failure to demonstrate conformity to any prioritized certification criterion at 20% or more of the locations surveilled—the ONC-ACB would be required to treat the certified Complete EHR or certified Health IT Module as "deficient." This finding would also trigger special requirements for corrective action plans and the reporting of that information to

the open data CHPL. Specifically, the ONC-ACB would have to contact the developer of the certified Complete EHR or certified Health IT Module and require the developer to submit a proposed corrective action plan to the ONC-ACB within 30 days of the date that the developer was notified by the ONC-ACB of the "deficient" finding. The ONC-ACB would be responsible for prescribing the form and content of corrective action plans and for developing specific procedures for submission and approval, with guidance from ONC to promote consistency across ONC-ACBs.

Comments. Many commenters supported our proposal to specify certain required elements and procedures for corrective action. Several commenters asked us to clarify whether these requirements would apply to non-conformities confirmed through reactive and other forms of surveillance and, if not, what if any corrective action would be required for those non-conformities. Several commenters urged us to apply the same standards for corrective action to all types of surveillance and non-conformities. Commenters pointed out that the reasons for imposing such requirements apply with equal force to all confirmed non-conformities, not only those identified through randomized surveillance and meeting the proposed 20% threshold. In particular, requiring corrective action plans and related public reporting for only some non-conformities and not others would be difficult to square with our stated goals of improving transparency and accountability for health IT developers and ONC-ACBs. Commenters also questioned whether the proposed approach would best achieve our patient safety goals. When an ONC-ACB confirms a non-conformity in the context of reactive surveillance, it may not know whether the problem is widespread unless and until it conducts more extensive randomized surveillance of a large sample of the potentially affected certified Complete EHR or certified Health IT Module. For reasons described earlier, ONC-ACBs may have difficulty at this time conducting randomized surveillance on the necessary scale. Applying the corrective action plan and related reporting requirements to all types of surveillance and confirmed non-conformities would alert users to these potential concerns.

Response. Our goal for these requirements was to ensure that health IT users, implementers, and purchasers would be alerted to potential non-conformities in a timely and effective manner, consistent with the patient

¹⁷³ See ONC Regulation FAQ #45 [12-13-045-1], available at <http://www.healthit.gov/policy-researchers-implementers/45-question-12-13-045>.

safety, program integrity, and transparency objectives described in the Proposed Rule. But as the comments make clear, the proposed requirements would only partially serve those goals. As commenters pointed out, there is no principled reason to apply the proposed corrective action plan exclusively to non-conformities identified in the context of the proposed randomized surveillance approach. Moreover, the comments suggest that prescribing different corrective action plan requirements in this context than for other types of non-conformities (which would be governed by an ONC-ACB's general responsibility to require corrective action per its accreditation to ISO 17065) would likely create significant and unnecessary confusion.

Particularly in light of the reduced emphasis on randomized surveillance in comparison to the Proposed Rule, we are persuaded that our policy objectives will be better served by requiring the same approach to corrective action across the board. Thus we have finalized the proposed requirements for corrective action plans for all certified Complete EHRs and certified Health IT Modules for which an ONC-ACB confirms a non-conformity, whether that non-conformity is confirmed through randomized, reactive, or any other form of surveillance under the ONC Health IT Certification Program.

For similar reasons, we have finalized the proposed reporting requirements for corrective action plans and extended these requirements to all cases in which an ONC-ACB confirms a non-conformity and subsequently approves a corrective action plan. Requiring the uniform submission of this information will promote transparency and alert health IT users, implementers, and purchasers to potential conformity issues in a more timely and effective manner. These reporting requirements are discussed further below in our response to the comments on this aspect of our proposal and also in our discussion of the "Open Data CHPL" requirements found elsewhere in this preamble.

Comment. A commenter suggested that in addition to making information about corrective action plans available on the CHPL, we should require health IT developers to notify affected users of the corrective action, similar to the requirements for breach notification under the HIPAA Rules. The commenter stated that many providers do not regularly check the CHPL and therefore may not be made aware of problems in a timely manner.

Response. We appreciate the commenter's suggestion that health IT

developers who are subjected to a corrective action plan should be required to notify affected and potentially affected users of identified non-conformities and deficiencies. We already proposed to require developers to describe in their corrective action plans both an assessment of how widespread an identified non-conformity might be and how the developer planned to address the non-conformity both at the specific locations at which surveillance occurred and more generally at other potentially affected locations (80 FR 16879). Requiring developers to describe how they will notify affected and potentially affected users of the extent of the problem and their plans to address it is a natural extension of these requirements and will help alert stakeholders to potential non-conformities in a timely and effective manner, which was one of the stated purposes of these requirements (80 FR 16884).

Accordingly, we have added as a requirement of all corrective action plans approved by an ONC-ACB that the developer identify a process for ensuring that all affected and potentially affected customers and users are alerted to identified non-conformities and deficiencies, as applicable. This process must describe in detail: How the developer will assess the scope and impact of the problem, including identifying all potentially affected customers; how the developer will promptly ensure that all potentially affected customers are notified of the problem and plan for resolution; how and when the developer will resolve issues for individual affected customers; and how the developer will ensure that all issues are in fact resolved.

To ensure adherence to these requirements for notification and resolution across a developer's customer base, and to the other requirements of the approved corrective action plan, we have added as an additional requirement of all corrective action plans approved by an ONC-ACB that the developer attest to having completed all required elements of the plan, including the requirements for alerting customers and users described above.

Comments. Many commenters supported our proposals to improve the reporting and submission of surveillance results. Several commenters stated that requiring ONC-ACBs to submit corrective action plan information to the publicly accessible open data CHPL would provide customers and users with valuable information about the performance of certified health IT while significantly

enhancing transparency and accountability for health IT developers and ONC-ACBs.

Some commenters, including several health IT developers, objected to the reporting of corrective action plan information to the publicly accessible Open Data CHPL. Some commenters felt that information about non-conformities should not be made public unless and until the developer of the certified Complete EHR or certified Health IT Module at issue has been given a full and fair opportunity to contest the ONC-ACB's determination, including whether the developer was responsible or "at fault" for the non-conformity. Other commenters stated that such information should never be made public because it is bound to lack important context, could be misinterpreted, or would not offer substantial value to health IT customers and users. Separately, some commenters raised concerns regarding the reporting of proprietary or competitively sensitive information.

A few commenters suggested that to reduce reporting burden or improve the efficacy of the open data CHPL, we limit the types of information about corrective action that an ONC-ACB would be required to submit. One commenter suggested that the reporting of corrective action plan information be limited to 2015 Edition certified health IT and that reporting of surveillance results be limited to twice a year instead of quarterly. The commenter stated that these changes would reduce burden and enable us to assess the costs of these reporting requirements.

Response. We agree with commenters that requiring ONC-ACBs to report surveillance results to the National Coordinator on a quarterly basis will significantly improve our ability to respond to problems and provide timely and accurate information stakeholders.

With regard to the reporting of corrective action plan information to the open data CHPL, we understand the concerns raised by some commenters but believe that it is both necessary and appropriate to require ONC-ACBs to submit this information. The public safety, transparency, and program integrity rationales for requiring timely and public reporting of this information are compelling. In comparison, and contrary to the assertions of some commenters, making this information available is not likely to cause customers and users to draw inaccurate or unfair conclusions about a health IT developer or its certified technology. By definition, this information will only be required when an ONC-ACB has confirmed a non-conformity and

required a health IT developer to take corrective action. Thus the ONC-ACB will have completed its review of the relevant facts and circumstances, including those raised by the developer in the course of the surveillance of its certified Complete EHR or certified Health IT Module. ONC-ACBs are required to make such determinations in accordance with their accreditation to ISO 17065 and with the Principles of Proper Conduct for ONC-ACBs, subject to ongoing supervision by the ONC-AA. Moreover, as stated in the Proposed Rule, when the developer has provided an explanation of the deficiencies identified by the ONC-ACB as the basis for its determination, the ONC-ACB must include the developer's explanation in its submission to the open data CHPL. Thus developers will be able to note any objections and provide any additional context or information that may be relevant to interpreting the results of the surveillance and the ONC-ACB's findings and conclusions.

We are confident that the concerns of some commenters regarding disclosure of proprietary or sensitive information will be adequately addressed through appropriate safeguards implemented at the discretion of ONC-ACBs. ONC-ACBs should not submit to the open data CHPL any information that is in fact legally privileged or protected from disclosure. ONC-ACBs may also implement other appropriate safeguards, as necessary, to protect information they believe should not be reported to a publicly available Web site. However, we caution ONC-ACBs to ensure that such safeguards are narrowly tailored and consistent with our goal of promoting the greatest possible degree of transparency with respect to certified health IT and the business practices of certified health IT developers. ONC-ACBs are required to accurately report the results of their surveillance and to explain in detail the facts and circumstances on which their conclusions are based. Similarly, health IT developers are required to cooperate with these efforts and may not prevent or seek to discourage an ONC-ACB from reporting the results of its authorized surveillance activities. We note that while the ONC Health IT Certification Program is a voluntary one, developers who choose to participate agree to comply with certification program requirements, including reporting requirements designed to ensure transparency and accountability for all participants and stakeholders.

We decline to limit the requirements for more frequent reporting of surveillance results to the National

Coordinator and the submission of corrective action plan information to the open data CHPL to 2015 Edition certified health IT. The public safety, transparency, and program integrity reasons for requiring the reporting of this information apply to all, and not only 2015 Edition, certified health IT. However, we do agree that the reporting of corrective action information should be limited to the types of information that will be useful to customers and users, consistent with the goals of reporting this information to the open data CHPL explained above. We have therefore revised § 170.523(f)(1)(xxii) and (f)(2)(xi) to limit reporting to the following subset of information:

- The specific certification requirements to which the technology failed to conform, as determined by the ONC-ACB;
- A summary of the deficiency or deficiencies identified by the ONC-ACB as the basis for its determination of non-conformity;
- When available, the health IT developer's explanation of the deficiency or deficiencies;
- The dates surveillance was initiated and completed;
- The results of randomized surveillance, including pass rate for each criterion in instances where the Health IT Module is evaluated at more than one location;
- The number of sites that were used in randomized surveillance;
- The date of the ONC-ACB's determination of non-conformity;
- The date on which the ONC-ACB approved a corrective action plan;
- The date corrective action began (effective date of approved corrective action plan);
- The date by which corrective action must be completed (as specified by the approved corrective action plan);
- The date corrective action was completed; and
- A description of the resolution of the non-conformity or non-conformities.

Comments. We proposed that an ONC-ACB would have to require a health IT developer to submit a proposed corrective action plan within 30 days of being notified of an ONC-ACB's non-conformity determination and to complete an approved corrective action plan within 6 months of such notice. One commenter stated that this timeline was much too long and that developers should not be able to market health IT as certified for 6 months while they correct a non-conformity. Another commenter stated that the 30 day timeline was too short because it would not allow sufficient time for the developer to understand and investigate

the issues and respond to the ONC-ACB's preliminary findings.

Response. We agree with the commenter that a developer should be able to complete an approved corrective action plan within a substantially shorter timeframe than we proposed.

We clarify that the 30 day period for submitting a proposed corrective action plan would begin to run only after an ONC-ACB has issued a non-conformity determination. In our experience, ONC-ACBs already work with health IT developers and users to investigate potential non-conformities prior to issuing a final determination. Because this back-and-forth will have occurred prior to the ONC-ACB's non-conformity determination, we believe that a developer should be able to submit a proposed corrective action plan within 30 days of being notified of the ONC-ACB's non-conformity determination under § 170.556(d)(1). Similarly, if after 90 days of notifying the developer of a non-conformity under § 170.556(d)(1), the ONC-ACB cannot approve a corrective action plan because the developer has not submitted a revised proposed corrective action plan in accordance with § 170.556(d)(4), the ONC-ACB must initiate suspension procedures. Finally, an ONC-ACB must initiate suspension procedures when it has approved a corrective action plan but the developer fails to comply with all of the requirements of the plan within the time specified therein. We have revised § 170.556(d)-(e) to reflect these requirements.

Effective Date and Applicability of Requirements

At the time of this Proposed Rule, ONC-ACBs had submitted their annual surveillance plans for calendar year 2015, which include their existing approaches and methodologies for randomized surveillance. To minimize disruption to ONC-ACBs' current surveillance activities, we proposed to make the requirements for randomized surveillance effective beginning on January 1, 2016. We said this would provide time for ONC-ACBs to implement these requirements in their annual surveillance plans and incorporate additional guidance and clarification from ONC and the ONC-AA as necessary. All other proposed surveillance requirements would be effective immediately. We requested comment on whether this timeline and plan for implementation was appropriate and on ways to minimize disruption and ensure that the requirements and purpose of this proposal are timely and effectively achieved.

Comments. Some commenters, including the ONC-AA and an ONC-ACB, suggested that we specify a single January 1, 2016 effective date for all proposed surveillance requirements in order to allow ONC-ACBs to effectively and consistently implement these requirements in their annual surveillance plans for the calendar year 2016 surveillance period. Another commenter, also an ONC-ACB, stated that it would have difficulty implementing the randomized surveillance requirements for calendar year 2016 and suggested that the requirements be postponed until January 1, 2017. Yet another commenter felt that the timeline for implementing the proposed requirements should be more aggressive.

One ONC-ACB suggested that the proposed requirements for in-the-field surveillance be applied only to 2015 Edition certified health IT so that ONC-ACBs could implement the requirements prospectively in new contracts with health IT developers.

Response. We believe that the proposed timeline for implementation is reasonable. Given the significantly reduced scope of randomized surveillance in comparison to the Proposed Rule, we are confident that ONC-ACBs will be able to complete randomized surveillance requirements over the course of the calendar year 2016 surveillance period. We also believe that ONC-ACBs will be able to implement the other requirements established by this final rule during the 90 days between its publication and effective date. Accordingly, ONC-ACBs must comply with all new requirements by the effective date of this final rule. We will provide guidance to ONC-ACBs regarding updates to their annual surveillance plans for calendar year 2016 and, as necessary, regarding other aspects of surveillance affected by this final rule.¹⁷⁴

We decline to adopt the commenter's suggestion to limit the requirements for in-the-field surveillance and maintenance of certification to only 2015 Edition certified health IT. The need to assure that certified health IT conforms to the requirements of its certification is applicable to all health

IT certified under the ONC Health IT Certification Program, not just technology certified to the new 2015 Edition. Thus, as proposed, we have finalized the in-the-field surveillance and maintenance of certification requirements for all Health IT Modules certified to either the 2015 Edition or the 2014 Edition. With respect to Complete EHRs, because we have discontinued Complete EHR certification with the 2015 Edition, we have finalized these requirements for all Complete EHRs certified to the 2014 Edition. We note that Complete EHR certification to the 2014 Edition has and will continue to occur as providers may use health IT certified to the 2014 Edition to meet the CEHRT definition at least through 2017 based on the EHR Incentive Programs Stage 3 and Modifications final rule published elsewhere in this issue of the **Federal Register**.

2. Transparency and Disclosure Requirements

We proposed to revise the Principles of Proper Conduct for ONC-ACBs to require greater and more effective disclosure by health IT developers of certain types of limitations and additional types of costs that could interfere with the ability to implement or use health IT in a manner consistent with its certification. We stated that these additional disclosure requirements were necessary to ensure that existing and potential customers, implementers, and users of certified health IT are fully informed about these implementation considerations that accompany capabilities certified under the ONC Health IT Certification Program.

Our proposal expanded on health IT developers' existing disclosure obligations at § 170.523(k)(1). Those obligations were adopted in the 2014 Edition final rule to promote greater price transparency in certified health IT capabilities required to meet meaningful use objectives and measures; to mitigate confusion in the marketplace; and to reduce the risk that EPs, eligible hospitals, and CAHs would encounter unexpected difficulties in the implementation or use of certified health IT.

As we explained in the Proposed Rule, despite our initial efforts to promote greater transparency and disclosure of information by health IT developers, many providers continue to lack reliable up-front information about health IT products and services. We described reports from providers who have encountered unexpected costs and limitations in connection with their

certified health IT that were not disclosed or contemplated when the technology was initially purchased or licensed. (80 FR 16880–81). We said that the failure of developers to disclose “known material information” about limitations or additional types of costs associated with the capabilities of certified health IT diminishes both the reliability of certified health IT and of certifications issued under the ONC Health IT Certification Program. In particular, the failure of developers to disclose such information creates a substantial risk that existing or prospective users of certified health IT will encounter problems implementing and using the health IT in a manner consistent with its certification. Moreover, inadequate or incomplete information about health IT products and services distorts the marketplace by preventing customers from accurately assessing the costs and capabilities of different technologies and selecting the most appropriate solutions to their needs, which increases the likelihood of downstream implementation problems and, ultimately, reduced opportunities to use health IT to improve health and health care. Finally, customers who purchase or license inappropriate or suboptimal technologies may find it difficult to switch to superior alternatives due to the often significant financial and other “switching costs” associated with health IT.¹⁷⁵ When providers become “locked in” to technologies or solutions that do not meet their needs or the needs of their patients, health IT developers have fewer incentives to innovate and compete on those aspects of health IT that providers and their patients most value and need.

For all of these reasons, we proposed to revise and strengthen our existing transparency and disclosure requirements in three key respects.

First, under our proposal, a health IT developer's obligation to disclose “additional types of costs” would no longer be confined to the use of capabilities to demonstrate a meaningful use objective or measure under the EHR Incentive Programs. Instead, ONC-ACBs would be required to ensure that developers disclose any additional types of costs that a user may incur in order to implement or use capabilities of

¹⁷⁴ In our annual surveillance guidance to ONC-ACBs for the calendar year 2016 surveillance period, we stated that ONC-ACBs should be aware of the proposals in the 2015 Edition proposed rule that could affect their surveillance responsibilities and indicated that we would update our surveillance guidance as necessary in the event that such proposals were finalized. ONC, *ONC Health IT Certification Program, Program Policy Guidance #15-01* (July 16, 2015), http://healthit.gov/sites/default/files/policy/onc-acb_cy16annual_surveillance_guidance.pdf.

¹⁷⁵ The costs of switching to a new technology include not only the costs of purchasing or licensing the technology itself but of installing and integrating it with other administrative and clinical IT systems, migrating data, redesigning associated workflows and processes, and retraining staff to use the new technology. The transition may also disrupt normal health care and business operations, adding additional costs and strain on provider organizations and staff.

certified health IT, whether to demonstrate meaningful use objectives or measures or for any other purpose within the scope of the health IT's certification.

Second, in addition to "additional types of costs," we proposed that health IT developers would be required to disclose other factors that may similarly interfere with a user's ability to successfully implement certified health IT, including information about certain "limitations" associated with its certified health IT. We explained that the failure to disclose information about limitations—including contractual, technical, and other restrictions or policies—associated with certified health IT creates a substantial risk that current or prospective users will encounter problems implementing the health IT in a manner consistent with its certification. Thus the disclosure of this information is no less important than the disclosure of information about additional types of costs.

Third, with regard to both "limitations" and "additional types of costs," we proposed to significantly broaden the types of information and the level of detail that a health IT developer would be required to disclose. In contrast with the price transparency requirements adopted in the 2014 Edition final rule, which required disclosure only of additional types of costs that a user "would pay" to implement certain capabilities, we proposed to require health IT developers to be more proactive in identifying the kinds of limitations and additional types of costs that a user "may" pay or encounter in order to achieve any use of the health IT within the scope of its certification. Specifically, developers would be required to provide, in plain language, a detailed description of any "known material information" about limitations that a purchaser may encounter, and about additional types of costs that a user may be required to pay, in the course of implementing or using the capabilities of health IT to achieve any use within the scope of its certification. We also provided an extensive discussion of the types of information that would be deemed "material" and of the types of information that developers would and would not be required to disclose. Further, we described the manner in which the information would need to be disclosed as well as safeguards to avoid the disclosure of intellectual property and trade secrets.

Finally, in addition to these three aspects, we proposed one additional element designed to complement the disclosure requirements set forth in the

Proposed Rule. We proposed that in addition to requiring health IT developers to disclose known material information about their certified health IT, an ONC-ACB would be required to obtain a public attestation from every health IT developer to which it issues or has issued a certification for any edition of certified health IT. The attestation would take the form of a written "pledge" by the health IT developer to take the additional, voluntarily step of proactively providing information (which it would already be required to disclose via its website and in marketing and other materials) to all current and prospective customers as well as to any other persons who request such information. While adherence to the attestation would be strictly voluntary, we explained that requiring developers to make the attestation could encourage a culture of greater transparency and accountability in the health IT marketplace. For example, health IT purchasers, implementers, and users (and organizations that represent them) would be invited to approach developers directly and request information most relevant to their health IT decisions and needs. The expectation that developers will provide this information in a way that is more meaningful for stakeholders, consistent with the attestation, would create greater competitive incentives for developers to do so. Developers would also receive important feedback about the types of information that stakeholders find important, which would assist developers in meeting their disclosure obligations under the ONC Health IT Certification Program. For example, requests for information about a particular cost or capability may alert the developer to a material limitation or additional type of cost that it is required to disclose.

Comments. Most commenters strongly supported our proposal to require the disclosure of additional information about certified health IT. Many of these commenters agreed with our assessment that providers and other stakeholders often lack reliable information about certified health IT products and services and, as a result, may encounter unexpected costs and limitations that interfere with their ability to successfully implement and use certified health IT capabilities. Several commenters cited examples of providers encountering unexpected fees to license, implement, upgrade, or use health IT; to exchange or export electronic health information stored in certified health IT; or to integrate certified health IT capabilities and data with other

technologies, organizations, and applications. Similarly, commenters cited examples of providers encountering unanticipated contractual, technical, or other limitations on their ability to implement and use certified health IT capabilities in the manner they anticipated when they purchased or licensed the technology. Some commenters stated that small providers are especially vulnerable to these unexpected challenges because they lack the resources and time to study and understand the complexities associated with developer contracts.

Many commenters stated that the proposed transparency and disclosure requirements would help ensure that providers are informed of these and other considerations and enable them both to more reliably estimate the resources needed to successfully implement certified health IT capabilities and to arrive at a realistic expectation of how those capabilities will perform in the field. Commenters also noted that this increased ability of customers to assess and compare certified health IT products and services could reduce the problems of "lock in" and "unfair surprise" described in our proposal and put pressure on developers to compete to innovate and deliver better and more affordable technologies and solutions based on provider and consumer preferences. Commenters also stated that greater transparency in health IT products and services would help to expose and discourage information blocking and other business practices that frustrate interoperability and prevent the effective sharing of electronic health information. A number of commenters cited our discussion of these issues in our recent Report to Congress on Health Information Blocking.¹⁷⁶

Response. We thank commenters for their detailed and thoughtful feedback on this proposal. As that feedback overwhelmingly demonstrates, the lack of transparency and access to reliable information about health IT products and services is a persistent and pervasive problem that undermines the reliability of certifications issued on behalf of ONC and creates substantial risks that users will be unable to successfully implement and derive the benefits of certified health IT. For this and the additional reasons discussed below in our responses to comments on specific aspects of our proposal, we have finalized the transparency and

¹⁷⁶ ONC, *Report to Congress on Health Information Blocking* (April 2015), http://www.healthit.gov/sites/default/files/reports/info_blocking_040915.pdf (hereinafter "Blocking Report").

disclosure requirements at § 170.523(k). We have finalized these requirements as proposed, except for the attestation requirement, which we have revised. To complement these new requirements, we have also finalized additional reporting requirements to the open data CHPL, which we have added to §§ 170.523(f)(1) and (f)(2). We discuss these revisions below in our response to the comments on this aspect of our proposal.

Comments. Several commenters specifically agreed with our proposal to require health IT developers to disclose known material information about the capabilities of certified health IT, including limitations and additional types of costs. Many commenters also specifically endorsed our proposal to apply these requirements uniformly to all capabilities and uses within the scope of a health IT's certification—not just those required to meet a specific meaningful use objective or measure. Commenters stated that applying clear and uniform standards for the disclosure of this information will be necessary to help customers understand and use an increasing array of certified health IT products, services, and capabilities.

In contrast, some commenters, mostly health IT developers, strongly opposed all of the proposed disclosure requirements. These commenters stated, among other objections, that requiring the disclosure of this information is unnecessary; would be burdensome for developers; and could limit developers' flexibility to design and market their products and services in ways that their customers value. Several commenters stated that the proposed disclosure requirements would be unfair to developers because developers may not be aware of capabilities or uses of their technology that are not specifically required to demonstrate the meaningful use of certified health IT under the EHR Incentive Programs. Some commenters also stated that developers should not be expected to know about—or required to disclose—limitations or additional types of costs that may apply to third-party components or that may flow from local implementation decisions.

Response. While we appreciate the concerns raised by some commenters, we believe they are outweighed by the need to promote greater and more meaningful disclosure of information by developers of health IT certified on behalf of ONC.

First, we respectfully disagree with the assertion that these transparency and disclosure requirements are unnecessary. Our conclusion is based on the overwhelming support for this

proposal from providers and other customers of certified health IT, whose comments and first-hand accounts of the health IT marketplace affirm our assessment in the Proposed Rule. Those comments suggest that many customers lack access to reliable information about certified health IT products and services and, as a result, are more likely to encounter unexpected costs and limitations that interfere with their ability to successfully implement and use certified health IT capabilities. The comments also provide insight into other deleterious consequences that flow from a lack of basic transparency in the marketplace, including the increased risk that developers will engage in information blocking and other business practices that undermine the goals of certification and the ONC Health IT Certification Program.

Second, we disagree that the transparency and disclosure requirements are burdensome or unfair to health IT developers. We note that developers are not required to disclose information of which they are not and could not reasonably be aware, nor to account for every conceivable cost or implementation hurdle that a customer may encounter in order to successfully implement and use the capabilities of a developer's certified health IT. Indeed, we recognized in the Proposed Rule that certified health IT often functions in combination with many third party technologies and services whose specific costs and limitations may be difficult for a health IT developer to precisely predict or ascertain. Local implementation factors and other individual circumstances also vary substantially among customers and impact the cost and complexity of implementing certified health IT. In addition, the costs of upgrading health IT to meet new regulatory requirements or compliance timelines, which are subject to change, may make some particular types of additional costs especially difficult to forecast.

Nevertheless, it is reasonable to assume that health IT developers are experts on their own products and services and possess sophisticated technical and market knowledge related to the implementation and use of health IT in a variety of settings in which their products are used. Through their accumulated experience developing and providing health IT solutions to their customers, health IT developers should be familiar with the types of costs and limitations that most users encounter, and therefore must describe these in sufficient detail so as to provide potential customers with the information they need to make informed

purchasing or licensing and implementation decisions.

Finally, we disagree that the transparency and disclosure requirements will limit developers' flexibility to design and market their products and services in ways that their customers value. To the contrary, greater transparency in health IT developers' business practices will provide customers with the basic information they need to make informed decisions in the marketplace, which will in turn encourage and enable developers to experiment, innovate, and compete to deliver products and services that customers demand and on such prices and terms that meet their individual needs and requirements.

Comments. Several commenters stated that ONC-ACBs and developers may have difficulty complying with the proposed disclosure requirements because we had not specified with sufficient clarity or detail the types of information that developers would be required to disclose. Two ONC-ACBs indicated that additional guidance may be needed to fully implement the requirements. However, another ONC-ACB that commented extensively on the proposal did not raise these concerns. In addition, the ONC-AA supported our approach and noted that the criteria and examples described in the Proposed Rule provided sufficient guidance to ONC-ACBs and developers. The ONC-AA stated that while ONC-ACBs and developers would inevitably need to exercise some degree of judgment regarding the precise form and content of the required disclosures, comparisons across developers' disclosures would promote consistency and provide additional clarity to ONC-ACBs, developers, and other stakeholders as to the types of information and level of detail that must be disclosed.

Response. We understand the desire for clear and predictable rules governing these expanded disclosure requirements under the ONC Health IT Certification Program. We note that our ability to issue guidance is limited by the problem we are trying to solve; that is, the lack of transparency in the marketplace means we lack detailed information about many types of limitations and additional types of costs that customers and users may encounter in the course of implementing and using certified health IT and that developers would be required to disclose.

Nevertheless, based on the comments and in particular the feedback of the ONC-AA, we believe that the principles and examples provided in the Proposed Rule provide a workable starting point for ONC-ACBs to apply, and developers

to comply with, the disclosure requirements. As stated by the ONC-AA, while these principles inevitably involve the exercise of some discretion, comparisons across developers' disclosures over time will provide consistency and additional clarity regarding the types of information and level of detail that developers must disclose. In addition, as our visibility into these practices improves, we stand ready to issue additional guidance.

For the sake of additional clarity, we clarify that to comply with the disclosure requirements, a developer must disclose in plain language—on its website and in all marketing materials, communications statements, and other assertions related to its certified health IT—a detailed description of all known material information concerning limitations and additional types of costs that a person may encounter or incur to implement or use certified health IT capabilities, whether to meet meaningful use objectives and measures or to achieve any other use within the scope of the health IT's certification. Such information is "material" (and its disclosure therefore required) if the failure to disclose it could substantially interfere with the ability of a user or prospective user to implement certified health IT in a manner consistent with its certification. Certain kinds of limitations and additional types of costs will always be material and thus, if known, must be disclosed. These include but are not limited to:

- Additional types of costs or fees (whether fixed, recurring, transaction-based, or otherwise) imposed by a developer (or any third-party from whom the developer purchases, licenses, or obtains any technology, products, or services in connection with its certified health IT) to purchase, license, implement, maintain, upgrade, use, or otherwise enable and support the use of capabilities to which health IT is certified; or in connection with any data generated in the course of using any capability to which health IT is certified.

- Limitations, whether by contract or otherwise, on the use of any capability to which technology is certified for any purpose within the scope of the technology's certification; or in connection with any data generated in the course of using any capability to which health IT is certified.

- Limitations, including but not limited to technical or practical limitations of technology or its capabilities, that could prevent or impair the successful implementation, configuration, customization, maintenance, support, or use of any

capabilities to which technology is certified; or that could prevent or limit the use, exchange, or portability of any data generated in the course of using any capability to which technology is certified.

As already noted, developers are not required to disclose information of which they are not and could not reasonably be aware, nor to account for every conceivable type of cost or implementation hurdle that a customer may encounter in order to successfully implement and use the capabilities of the developer's certified health IT. Developers are required, however, to describe *with particularity* the nature, magnitude, and extent of the limitations or types of costs. A developer's disclosure possesses the requisite particularity if it contains sufficient information and detail from which a reasonable person under the circumstances would, without special effort, be able to reasonably identify the specific limitations he may encounter and reasonably understand the potential costs he may incur in the course of implementing and using capabilities for any purpose within the scope of the health IT's certification.

Comments. A commenter asked whether a developer would be required to disclose known material limitations of its certified health IT where the limitations are due to the actions of a third-party from whom the developer purchases, licenses, or obtains technology, products, or services in connection with its own certified health IT. The commenter noted that in describing certain kinds of presumptively material information that a developer would be required to disclose, we mentioned third parties only in connection with types of costs and not limitations.

Response. We clarify that a developer must disclose known material limitations of its certified health IT, including limitations caused by a third party that the developer should be aware of under the circumstances.

A developer's disclosure obligations are limited to material information that the developer knows or should know about under the circumstances. The reference to third parties at § 170.526(k)(1)(iv)(A) and above is intended to limit the material types of costs a developer will be presumed to know about to those that the developer itself imposes or that are imposed by a third party from whom the developer purchases, licenses, or obtains any technology, products, or services in connection with its certified health IT. This reflects the reality that developers are unlikely to know about types of

costs imposed by third parties with whom they do not have a contractual relationship. In contrast, because limitations include not only contractual restrictions but also technical and practical limitations of a developer's technology, developers will often be aware of material limitations notwithstanding the existence of a contractual relationship, and there is therefore no reason to expressly qualify the types of material limitations for which a developer may, in appropriate circumstances, be presumed to have knowledge.

Comments. Several commenters who supported our proposal urged us to require the disclosure of more specific information about prices and cost structures for health IT products and services. Some of these commenters suggested that developers be required to disclose specific prices for each service a user may need and provide guidance on how relevant factors—such as the volume of transmissions, geography, interfaces, and exchange partner technology—may impact the costs of those services. One commenter stated that developers should be required to disclose more detailed and specific cost structures that include costs and fees not covered by the provider's service contract. Another commenter stated that developers should be required to disclose costs that could arise from common end-user customizations and implementations of the developer's health IT. Commenters believed that requiring the disclosure of this information would enable customers to more easily and accurately estimate their likely total cost of ownership and other costs.

In contrast, several health IT developers and a few other commenters strongly objected to a requirement to disclose any additional information about prices or costs. One commenter stated that this information and other "commercial terms and conditions" are too varied and complex to be disclosed in a useful manner to customers. Other commenters worried that requiring disclosure of this information could expose intellectual property, trade secrets, or other sensitive information.

Response. We thank commenters for their extensive input regarding the types of costs and price information health IT developers should be required to disclose.

We understand the importance of ensuring that health IT developers' disclosures provide meaningful information to customers and users of certified health IT. We believe it is important for developers to provide the kind of information and level of detail

that will enable ordinary purchasers, licensees, and users to understand and make informed health IT purchasing and implementation decisions.

At the same time, we appreciate that the disclosure of certain kinds of proprietary or confidential information may not be necessary to achieve these goals and may also lead to undesirable consequences. Requiring developers to disclose trade secrets and other confidential information, for example, could dampen innovation by making it difficult for developers to license and make their technologies available on terms that protect their research and investments.¹⁷⁷ And requiring the disclosure of detailed price information could lessen price competition or even lead to price coordination among competitors, at least for certain kinds of products and services in highly concentrated markets.

We believe the approach described in the Proposed Rule accommodates these concerns by ensuring that developers' disclosures are comprehensive, and thus meaningful, while also providing certain safeguards against the unnecessary disclosure of proprietary or confidential information.

Consistent with that approach, and to comply with this final rule, a developer must make a comprehensive disclosure of all known material information regarding its certified health IT—including limitations and additional types of costs. With respect to types of costs, the disclosure must identify and describe the types of costs *with particularity*, from which a potential customer or user would be able to reasonably understand his potential costs to implement and use the health IT for any purpose within the scope of the health IT's certification. The disclosure must also describe the factors that impact additional types of costs, including but not limited to geographical considerations, volume and usage, costs associated with necessary interfaces or other licenses or technology, and costs associated with exchange partner technology and characteristics, among other relevant factors. Since certified technical capabilities may be bundled with non-certified capabilities, any disclosure would need to include an explanation of any limitations such other non-certified capabilities may have on the use or implementation of the certified capabilities.¹⁷⁸ Developers have

substantial flexibility as to the content of their disclosures, including how they choose to describe the particular limitations and additional types of costs associated with their certified health IT products and services. As such, developers should be able to comply with the disclosure requirements without publishing their prices or cost structures or unnecessarily disclosing information that they deem confidential.

The following scenario and discussion further illustrate these requirements.

• *Scenario:* A Health IT Module is certified to the 2014 Edition transitions of care certification criterion at § 170.314(b)(1). The developer of the Health IT Module charges a yearly "subscription fee" for the use of the capability. In making the capability available, the developer bundles it with its own HISP. Because the developer is not a member of any trust network, users can only exchange transitions of care summaries with other users of the developer's own HISP and with users of third-party HISPs with which the developer has negotiated or is willing to negotiate a trust agreement. The developer also charges a "transaction fee" for each transitions of care summary sent or received via a third-party HISP (the transaction fee does not apply for transitions of care summaries exchanged among users of the developer's own HISP).

Under these facts, the developer must disclose the existence of the subscription fee and the transaction fee—each of which is a known material type of cost associated with the transitions of care capability. In addition, the developer must disclose the known material limitation (and any associated additional types of costs) presented by its HISP policy. The developer must describe each of these additional types of costs and limitations with particularity to the extent they impact the implementation and use of the transitions of care capability for any purpose to which it is certified.

Beginning with the "subscription fee," the developer must disclose that there is such a fee along with any factors that impact the amount a customer would have to pay. Examples include number of licenses or limitations on the number of workstations where the software is deployed, additional types of costs related to the volume of transactions, or usage, or associated bandwidth costs for a customer's transactions. Such factors would need to

be described with particularity. For example, for additional types of costs related to the volume of transactions, the developer would need to explain how the volume of transactions would be measured and if variations in volume or types of transactions may trigger additional fees or variations in the subscription fee.

Turning to the developer's HISP policy, the developer must disclose this material limitation and the additional types of costs a user may incur as a result. The developer must explain, for example, that as a result of its policy the transitions of care capability is restricted and users will be unable to exchange transitions of care summaries with users of third-party HISPs with whom the developer does not have a trust agreement. The developer must describe, in plain terms, its current network of HISPs and how such network would enable a user to exchange transitions of care summaries with users of other HISPs servicing a provider's local referral area, including HISPs that participate in trust networks. Further, the disclosure needs to clearly identify any HISPs with whom the developer will not permit exchange or which the developer knows will not agree to a trust agreement with the developer (e.g., because the developer is not a member of a particular trust network). If the developer offers the option to customers to connect to third-party HISPs with whom the developer currently has no relationship, the developer must describe the process for customers to request such connectivity. The developer must also describe any additional types of costs that may apply for this service, including a description of any factors (e.g., geographical considerations or variability in HISP technologies and trust policies) that impact the amount a customer would have to pay.

Finally, the developer would need to disclose the separate "transaction fee" charged for exchanging transitions of care summaries with users of third-party HISPs. Disclosure of all additional types of costs based on volume, geography, or exchange partner technology would be required. The developer would also be required to provide additional information to assist the customer in realistically understanding additional potential costs of sending and receiving transitions of care summaries via third-party HISPs.

The scenario and discussion above illustrate the substantial flexibility developers have in determining the content of their disclosures, including how they choose to describe the particular limitations and types of costs

¹⁷⁷ See M. Jager, 1 Trade Secrets Law § 1.1; Restatement (Third) of Unfair Competition § 39, cmt. a.

¹⁷⁸ Health IT includes "hardware, software, integrated technologies or related licenses,

intellectual property, upgrades, or packaged solutions sold as services. . . ." 42 U.S.C. § 300j(5).

associated with their certified health IT products and services. We caution, however, that developers are ultimately responsible for effectuating a comprehensive disclosure that satisfies the expanded requirements of this final rule. Because developers have substantial flexibility as to the form and content of their disclosures, it is unlikely that they would have to disclose proprietary or confidential information in order to comply with these requirements. However, the safeguards we have adopted are prophylactic and do not create a substantive basis for a developer to refuse to comply with the requirements. Thus a developer cannot cure a deficient disclosure or avoid a non-conformity finding by asserting that the disclosure of known material limitations or types of costs would require it to disclose trade secrets or other proprietary or confidential information. We note that the ONC Health IT Certification Program is a voluntary program. To the extent that developers choose to seek certification under the Program and to market their products and services as certified health IT, they must comply with the transparency and disclosure requirements in their entirety.

Comments. An ONC-ACB stated that some health IT developers have circumvented the requirement to disclose required information on their websites by omitting discussion of the certification or certified status of their health IT. The ONC-ACB asked us to clarify whether such conduct is permissible or constitutes a violation of the disclosure requirements under § 170.523(k)(1). Relatedly, multiple ONC-ACBs asked whether it would be permissible for a developer to use an abbreviated or alternative disclosure more appropriate to the kind of marketing material and medium at issue. One commenter noted that requiring a detailed disclosure of information in *all* marketing materials or assertions about certified health IT is impracticable and not helpful to customers. It may also discourage developers from including such assertions in marketing and promotional materials or from using certain kinds of materials or media.

Response. A health IT developer's website is not only one of its most powerful marketing tools but also, for most people, among the most readily available sources of information about a developer's health IT products and services. It is therefore essential that a developer include the information specified by § 170.523(k)(1) on its website. This information must be

included and updated on the developer's website regardless of whether the website refers to the certification or certified status of the developer's health IT. The information must also be located in a place that is accessible and obvious to viewers and contextually relevant to the certification criteria to which the disclosures pertain.

For the reasons stated by the commenters, we agree that requiring a comprehensive disclosure in all marketing materials and other assertions may be burdensome and counterproductive to our goal of providing this information to customers in a manner that is meaningful and likely to inform. Therefore, we clarify that a developer may satisfy the requirement to disclose the information required by § 170.523(k)(1) in its marketing materials, communications statements, and other assertions related to a Complete EHR or Health IT Module's certification by providing an abbreviated disclaimer, appropriate to the material and medium, provided the disclaimer is accompanied by a hyperlink to the complete disclosure on the developer's website. Where a hyperlink is not feasible (for example, in non-visual media), the developer may use another appropriate method to direct the recipient of the marketing material, communication, or assertion to the complete disclosure on its website.

Because of the challenges and accommodations described above, and the need to ensure that customers and users are able to easily locate information about certified health IT products and services, we believe that developers' disclosures should be accessible from a single, authoritative source. Thus, we have included a developer's disclosures as part of the information that an ONC-ACB must submit to ONC for inclusion in the open data CHPL. We have revised § 170.523(f)(1) and (f)(2) to reflect this requirement.

In keeping with the goal of making developers' disclosures accessible and useful to customers and other stakeholders, we have also revised § 170.523(k)(1)(ii), which requires developers to include in their disclosures certain types of administrative and programmatic information they are required to report to ONC. While the reporting and availability of this information is important and is still required by § 170.523(f)(1) and (2), requiring developers to insert all of this information in their disclosures could add unnecessary clutter and detract from the overall accessibility and clarity of those disclosures. Therefore, under

§ 170.523(k)(1)(ii), developers must include in their disclosures only a subset of this information that will be valuable to customers in making informed decisions about their certified health IT.

Comments. Several commenters supported our proposal to require developers to attest to voluntarily providing information about their required disclosures to additional persons and in additional circumstances. Other commenters questioned the value of this requirement or stated that it was duplicative of the other requirements we proposed. Some commenters stated that requiring developers to provide such an attestation as a condition of certification would in effect make compliance with the attestation mandatory.

Response. We appreciate the comments in support of the proposed attestation requirement, which we regard as a key feature of the transparency and disclosure requirements adopted in this final rule. In response to the comments questioning the value of this additional requirement, we clarify that the purpose of the attestation is to create market incentives—independent of any regulatory obligations—for health IT developers to be more transparent about their health IT products, services, and business practices. Although the attestation does not create any additional disclosure obligations under the ONC Health IT Certification Program, we believe it will encourage developers to make a good faith effort to ensure that customers and other persons actually receive the information that developers are required to disclose at such times and in such a manner as is likely to be useful in informing their health IT purchasing or licensing, implementation, and other decisions.

In the Proposed Rule, we explained that the attestation would take the form of a written "pledge" by the developer to take the additional, voluntarily step of proactively providing information (which it would already be required to disclose via its Web site and in marketing and other materials) to all current and prospective customers as well as to any other persons who request such information. While we stated that the attestation would not broaden or change a health IT developer's disclosure obligations under the ONC Health IT Certification Program, some commenters believed that in practice developers would be forced to comply with the attestation. Because that was and is not our intent, we have revised the attestation requirement. Under the revised

approach, which we have codified at § 170.523(k)(2), a developer must either attest that it will voluntarily take the actions described above, or, in the alternative, attest that it will not take these actions. Further, an ONC-ACB will be required to include the developer's attestation in the information submitted to the open data CHPL so that persons can easily identify which attestation the developer has made. We have revised §§ 170.523(f)(1) and (f)(2) accordingly.

3. Open Data Certified Health IT Product List (CHPL)

We proposed to require ONC-ACBs to report an expanded set of information to ONC for inclusion in the CHPL upon its conversion from its present form to an open data file represented in both XML and JSON and with accompanying API functionality. We are converting the CHPL to this new "open data CHPL" in response to feedback from stakeholders regarding the accessibility of information on the CHPL, especially the information contained in the publicly available test reports for certified health IT products.¹⁷⁹ We estimated that the conversion along with the future additional data collection we have proposed for 2015 Edition certifications would occur over the next 12 to 18 months from the date the Proposed Rule was issued.

To complement this conversion, we proposed to require ONC-ACBs to report an expanded set of information to ONC for inclusion in the open data CHPL. Specifically, we proposed to revise § 170.523(f) to move the current (f) to (f)(2) and to create a new paragraph (f)(1) that would require

ONC-ACBs upon issuing a 2015 Edition (or any subsequent edition certification) to report on the same data elements they report to ONC under § 170.523(f), the information contained in the publicly available test report, and certain additional data listed in the Proposed Rule. We explained that the additional data reported to the open data CHPL would include the information ONC-ACBs would be required to report in connection with corrective action plans under the proposal "In-the-field Surveillance and Maintenance of Certification" in the Proposed Rule. Because this data would be required for all, and not only 2015 Edition, certified health IT, we also proposed to revise new § 170.523(f)(2) (former § 170.523(f)) accordingly.

Consistent with ONC-ACBs' current reporting practice required by § 170.523(f), ONC-ACBs would be required to submit the additional data no less frequently than weekly. Because this expanded list of data would largely subsume the data included in the test results summary, we would no longer require for 2015 Edition and subsequent edition certifications that ONC-ACBs provide a publicly accessible hyperlink to the test results used to certify a Health IT Module.

In submitting this data related to corrective action and surveillance, ONC-ACBs would be required to exclude any information that would identify any user or location that participated in or was subject to surveillance (as currently required for ONC-ACBs' annual surveillance results reported to the ONC). ONC-ACBs would not be required and should take care not to submit proprietary information to ONC for inclusion in the open data file. With respect to the reporting of corrective action plan and surveillance information for health IT, an ONC-ACB would be able to meet the requirement by summarizing the deficiencies leading to its non-conformity determination without disclosing information that the ONC-ACB believes could be proprietary or expose it to liability.

Consistent with these proposals, we also proposed to make a conforming modification to 45 CFR 170.523(k)(1)(ii) which currently cross references § 170.523(f) to cross reference proposed paragraph (f)(2) for 2014 Edition certifications and an equivalent set of data (minus the test results summary) in paragraph (f)(1) for 2015 Edition and subsequent certifications.

Comments. Most commenters supported requiring ONC-ACBs to report an expanded set of information to ONC for inclusion in the open data

CHPL. Multiple commenters agreed that information contained in the CHPL has previously been difficult to access and use and supported our proposal and plans to make this information easier to access. Commenters stated that this information and the open data CHPL more generally would provide greater product transparency, with a focus on surveillance, user-centered design, and testing results.

Response. We appreciate these comments in support of our proposal. We have finalized this proposal in its entirety, subject to minor clarifications and revisions discussed below.

Comments. Commenters offered suggestions on operational details of the conversion of the current CHPL to an open data format and on how we should subsequently collect and organize information via the open data CHPL.

Response. We appreciate these suggestions. While the conversion of the CHPL is already underway, we will consider these comments on operational aspects of the open data CHPL as we continue to implement these efforts.

Comments. Some commenters stated that this proposal was unnecessary or that its benefits would be outweighed by associated costs and administrative burden of collecting and reporting an expanded set of information to ONC for inclusion in the new open data CHPL. Commenters asked us to review the proposed reporting requirements to see if they might be clarified and simplified.

Response. While we recognize that the collection and reporting of additional data to the open data CHPL will place a new reporting burden on ONC-ACBs, we believe that the benefit to the public of having all of this data about product certification in granular detail far outweighs the administrative burden it will take to report this information.

Comments. A number of commenters, including several health IT developers, objected to the reporting of corrective action plan information to the publicly accessible open data CHPL. Some commenters felt that information about non-conformities should not be made public unless and until the developer of the certified Complete EHR or certified Health IT Module at issue has been given a full and fair opportunity to contest the ONC-ACB's determination, including whether the developer was responsible or "at fault" for the non-conformity. Other commenters stated that such information should never be made public because it is bound to lack important context, could be misinterpreted, or would not offer substantial value to health IT customers and users. Separately, some commenters

¹⁷⁹ As the ONC Health IT Certification Program has matured, ONC-ACBs have continued to report the products and information about the products they have certified to ONC for listing on the CHPL. As part of the 2014 Edition final rule (77 FR 54271), we required additional transparency in the ONC Health IT Certification Program in the form of a hyperlink that ONC-ACBs needed to maintain that would enable the public to access the test results that the ONC-ACB used as the basis for issuing a certification. For all 2014 Edition products certified under the ONC Health IT Certification Program, the test results are available in a standardized summary accessible and from the product's detailed information page on the CHPL Web page. The test result summary includes granular detail from ATLS about the testing performed, including, among other information: The certification criteria tested; the test procedure, test data, and test tool versions used during testing for each certification criterion; instances where optional portions of certification criteria were tested; and which standard was used for testing when a certification criterion allowed for more than one standard to be used to meet the certification criterion. The test result summary also includes the user-centered design information and summative tests results applicable to a product in cases where it was required to meet the "safety-enhanced design" certification criterion (§ 170.314(g)(3)) in order to ultimately be certified.

raised concerns regarding the reporting of proprietary or competitively sensitive information.

Response. We have addressed the concerns related to the submission of corrective action plan and related information to the open data CHPL in section IV.D.1 of this preamble (“‘In-the-field’ Surveillance and Maintenance of Certification Criteria”). For the reasons stated there, we have finalized the requirement to submit a corrective action plan and related information to the open data CHPL. Further, we have revised the specific data elements that must be submitted to accommodate the revised randomized in-the-field surveillance and corrective action plan and related reporting requirements finalized at §§ 170.556(c)–(e).

Comments. Some commenters expressed confusion as to why we proposed to require the submission of corrective action and related information only for randomized surveillance and not for other surveillance activities. Commenters also suggested several technical clarifications to our proposed regulation text to ensure alignment between our “Open Data CHPL” and “‘In-the-field’ Surveillance and Maintenance of Certification” proposals.

Response. We have responded to these concerns in section IV.D.1 of this preamble (“‘In-the-field’ Surveillance and Maintenance of Certification Criteria”) and refer commenters to that section for a more detailed treatment of these issues. For the reasons stated there, we agree with commenters that the requirement to submit corrective action and related information to the open data CHPL should be applied to all forms of surveillance and all confirmed non-conformities. We have also refined the data elements required to be reported for reasons also set forth in section IV.D.1 of this preamble. To implement these changes we have revised the randomized in-the-field surveillance and corrective action plan reporting requirements at §§ 170.556(c)–(e) and have made conforming revisions to § 170.523(k)(1) and § 170.523(k)(2) to accommodate the revised data elements.

As discussed in section IV.D.2 of this preamble (“Transparency and Disclosure Requirements”), we have also added developers’ disclosures required by § 170.523(k)(1) and their attestations required by § 170.523(k)(2) to the data that must be submitted to ONC for inclusion in the open data CHPL.

4. Records Retention

We proposed to change the records retention requirement in § 170.523(g) in

two ways. We proposed to require that ONC–ACBs retain all records related to the certification of Complete EHRs and/or Health IT Module(s) (including EHR Modules) for a minimum of 6 years instead of 5 years as was required by regulation. We stated that this proposal would make certification records available for a longer time period, which may be necessary for HHS programmatic purposes such as evaluations or audits. We also proposed that records of certifications performed under the ONC Health IT Certification Program must be available to HHS upon request during the proposed 6-year period that a record is retained. We stated that this would help clarify the availability of certification records for agencies (e.g., CMS) and authorities (e.g., the Office of Inspector General) within HHS.

Comments. A majority of commenters expressed support for the proposed 6-year records retention requirement without additional comment. One commenter suggested a 10-year requirement. Another commenter recommended record retention requirements for the life of the edition of certification criteria. A commenter requested clarification on the start date of the retention period, asking whether the start date was from the first instance of certification for a product or from the last documented date of an activity related to the certification such as surveillance.

Response. We thank commenters for their feedback. We have adopted a records retention provision that requires ONC–ACBs to retain all records related to the certification of Complete EHRs and/or Health IT Module(s) (including EHR Modules) for the “life of the edition” plus an additional 3 years. We have also adopted our proposal to make these records available to HHS upon request during this period of time for the reasons specified above and in the Proposed Rule. We define the “life of the edition” as beginning with the codification of an edition of certification criteria in regulation and ending when the edition is removed from regulation. This means that certification records for a Complete EHR and/or Health IT Module(s) (including EHR Modules) certified to a specific edition (e.g., the 2015 Edition) must be kept for a minimum of 3 years after the effective date of the removal of that edition from the Code of Federal Regulations (CFR). This approach is responsive to commenters and addresses the goal of ensuring records are available for HHS programs, including evaluations and audits, during a relevant period of time. It provides more clarity and certainty than establishing a term such as 6 or 10

years, which may not be a sufficient period of time or too long a period of time. It also provides consistency and reduced burden for ONC–ACB record keeping. To illustrate this point, establishing a record keeping period based on an event such as an instance of first certification or a surveillance activity would lead to variances in ONC–ACB record keeping for certified health IT, while under our finalized approach all records would be retained until a regulatory certain date (at least 3 years after an edition is removed from the CFR). To note, the record would include all documents related to the issued certification, such as test results and surveillance engagements and results.

5. Complaints Reporting

We proposed that ONC–ACBs provide ONC (the National Coordinator) with a list of complaints received on a quarterly basis. We proposed that ONC–ACB indicate in their submission the number of complaints received, the nature or substance of each complaint, and the type of complainant for each complaint (e.g., type of provider, health IT developer, etc.). We stated that this information would provide further insight into potential concerns with certified health IT and/or the ONC Health IT Certification Program and give ONC a better ability to identify trends or issues that may require action including notification of the public.

Comments. A majority of commenters expressed support for the proposed quarterly complaints reporting requirement. Some commenters, however, expressed opposition or concern with the proposed requirement. These commenters stated that the proposed requirement would add certification cost without value. A few commenters recommended a more robust reporting requirement than proposed, suggesting we require a more comprehensive list of complaint data as well as aggregated and analyzed data. One commenter requested clarification on whether the proposed requirement would apply to any complaint received by an ONC–ACB, such as complaints about an ONC–ACB’s services and complaints about certified Health IT Modules.

Response. We have adopted this requirement as proposed with clarifications in response to comments. We continue to believe that this requirement will provide us with insight and situational awareness of issues related to the ONC Health IT Certification Program. We further believe these benefits outweigh the limited reporting burden we have

specified, which does *not* adopt any new reporting requirements as suggested by a few commenters. We clarify that this requirement applies to all complaints received by the ONC-ACB. This includes, but is not limited to, complaints regarding ONC-ACB services, certified health IT, and the ONC Health IT Certification Program in general. To provide ONC-ACBs sufficient time to meet this new requirement, this provision will become effective on April 1, 2016. This means that we expect ONC-ACBs to first provide ONC with a list of complaints received on July 1, 2016.

We intend to provide, as necessary, more specific guidance to ONC-ACBs through the annual ONC Health IT Certification Program surveillance guidance on reporting complaints received regarding certified Health IT Modules.

6. Adaptations and Updates of Certified Health IT

We proposed to require that ONC-ACBs obtain monthly reports from health IT developers regarding their certified health IT. Specifically, we proposed to require that ONC-ACBs obtain a record of all adaptations and updates, including changes to user-facing aspects, made to certified health IT (*i.e.*, Complete EHRs and certified Health IT Modules), on a monthly basis each calendar year, and we requested comment on whether we should require even more frequent reporting. We stated that this new PoPC would apply for all certified Complete EHRs and certified Health IT Modules (which includes “EHR Modules”) to the 2014 Edition and all certified Health IT Modules to the 2015 Edition.

We proposed that the PoPC would become effective with this final rule and we would expect ONC-ACBs to begin complying with the PoPC at the beginning of the first full calendar month that is at least 30 days after the effective date of the final rule. We explained that we would not expect the information in these records to be reported to ONC and listed on the CHPL. Rather, we stated that the best course of action would be for ONC-ACBs to retain this information to provide awareness to the ONC-ACB on adaptations and updates made to technologies they certified.

Comments. We received mixed comments in response to the proposal. A number of commenters supported the proposal, but expressed concerns with the volume and frequency of updates to certified health IT. Commenters stated that updates could arise from relatively small changes to software code that do

not result in risks to the certified health IT and that the burden to collect a list of these updates would not be worth the effort. Some commenters noted that health IT developers time their major updates with certification to reflect a new product listing on the CHPL whereas others do not. These commenters suggested there is inconsistency in the industry in the versioning of certified products. One commenter recommended that we provide guidance on consistently distinguishing major from minor updates for products listed on the CHPL.

Response. In response to comments and to balance the ONC-ACBs’ burden, we have adopted a more limited requirement than proposed. We agree with commenters that many updates to certified health IT products would not normally pose a risk to certified capabilities or patient safety. As such, we have limited the requirement to only adaptations (all adaptations); and all updates that affect the capabilities included in certification criteria to which the “safety-enhanced design” certification criteria apply.¹⁸⁰ These types of updates, particularly changes to the user-interface, pose the greatest risk to patient safety. The adoption of this requirement will provide ONC-ACBs with more insight and transparency into these kinds of updates and adaptations, which should improve ONC-ACBs’ situational awareness and surveillance.

We thank the commenter for the feedback on distinguishing major and minor updates. We first note that, as stated in the 2014 Edition final rule (77 FR 54268), unless adaptations are presented for separate certification, the CHPL would not independently list the adaptation because it is considered part of a previously certified Complete EHR

¹⁸⁰ 2014 Edition certification criteria: CPOE (§ 170.314(a)(1)); drug-drug, drug-allergy interaction checks (§ 170.314(a)(2)); medication list (§ 170.314(a)(6)); medication allergy list (§ 170.314(a)(7)); clinical decision support (§ 170.314(a)(8)); electronic medication administration record (§ 170.314(a)(16)); CPOE—medications (§ 170.314(a)(18)); CPOE—laboratory (§ 170.314(a)(19)); CPOE—diagnostic imaging (§ 170.314(a)(20)); electronic prescribing (§ 170.314(b)(3)); clinical information reconciliation (§ 170.314(b)(4)); and clinical information reconciliation and incorporation (§ 170.314(b)(9)).

2015 Edition certification criteria: CPOE—medications (§ 170.315(a)(1)); CPOE—laboratory (§ 170.315(a)(2)); CPOE—diagnostic imaging (§ 170.315(a)(3)); drug-drug, drug allergy interaction checks (§ 170.315(a)(4)); demographics (§ 170.315(a)(5)); problem list (§ 170.315(a)(6)); medication list (§ 170.315(a)(7)); medication allergy list (§ 170.315(a)(8)); clinical decision support (§ 170.315(a)(9)); implantable device list (§ 170.315(a)(14)); clinical information reconciliation and incorporation (§ 170.315(b)(2)); and electronic prescribing (§ 170.315(b)(3)).

or certified Health IT Module, including EHR Modules. Second, the CHPL does not list updates to products unless they are presented for separate certification. This policy allows a health IT developer to update a product for routine maintenance or to include new or modified capabilities without the need for recertification. However, in these instances, the product name and version on the CHPL would remain unchanged. We established an attestation process for a product to be approved for inherited certified status to provide a more efficient pathway for certification for a new version of a previously certified product in the Permanent Certification Program final rule (76 FR 1306). As part of this policy, we noted that we do not presume the version numbering schema that a health IT developer may choose to utilize. For compliance with this requirement, the focus on “updates” is for *all* updates to certified Health IT that affect the capabilities included in certification criteria to which the “safety-enhanced design” criteria apply.

Comments. A commenter requested that we clarify the definition of an “adaptation.” Another commenter suggested that ONC-ACBs should only be required to monitor adaptations made by the health IT developer as it would be impractical for an ONC-ACB to monitor all customer-initiated adaptations. A commenter requested clarification as to whether an ONC-ACB is expected to review each report from a health IT developer, which the commenter contended could be time-consuming and costly. Another commenter requested clarification as to whether an ONC-ACB has the authorization to suspend or withdraw a certification if the health IT developer does not provide a report of adaptations and updates within the specified timeframe.

Response. We maintain our previously adopted definition of an “adaptation” as a software application designed to run on a different medium that includes the full and exact same capabilities included in the Complete EHR or certified Health IT Module, including EHR Modules (77 FR 54267). We refer readers to the discussion in the 2014 Edition final rule preamble for more detailed examples of adaptations (77 FR 54267). We also previously stated in the 2014 Edition final rule (77 FR 54268) that a health IT developer can choose to seek certification for adaptations which would lead to it being separately listed on the CHPL and permit the health IT developer to openly sell the adaptation to all potential purchasers as a separate certified product.

We would expect that ONC-ACBs obtain a record of adaptations of certified health IT made by the health IT developer as those are the adaptations covered by the issued certification. An ONC-ACB has the discretion in determining how much time and resources should be devoted to reviewing the lists provided by health IT developers. As previously noted, we expect this information to inform ONC-ACBs surveillance activities for certified health IT. In terms of non-compliance by a health IT developer in providing the requisite list, we note that an ONC-ACB retains its authority and oversight over the certifications it issues and has the discretion to implement that authority and oversight in a manner that supports its role and responsibilities as well as the integrity of the ONC Health IT Certification Program.

Comments. We received a number of comments on the proposed frequency in which an ONC-ACB would have to obtain a record of all adaptations and applicable updates, with many commenters suggesting quarterly reporting. Another commenter suggested that the reports should be required only when adaptations and updates occur, or alternately weekly.

Response. We have finalized a calendar quarter reporting frequency for this requirement. This approach addresses commenters' concerns about burden, but also ensures that ONC-ACBs receive timely notifications about new adaptations and updates that could affect the safety of certified health IT. In order to provide ONC-ACBs and health IT developers sufficient time to plan and implement this new requirement, this PoPC will not become effective until April 1, 2016. For clarity, we reiterate that this PoPC applies to all certifications issued to the 2014 Edition, 2015 Edition, and future editions of certification criteria. We expect all ONC-ACBs to receive lists from health IT developers on July 1, 2016, and then every calendar quarter thereafter (e.g., October 1, 2016, January 1, 2017, and so on).

E. "Decertification" of Health IT—Request for Comments

The Proposed Rule proposed and the final rule take certain steps to support the certification of health IT that meets relevant program standards and permits the unrestricted use of certified capabilities that facilitate health information exchange (see the "In-The-Field Surveillance and Maintenance of Certification" and "Transparency and Disclosure Requirements" proposals in section IV.D of this preamble).

In the Proposed Rule, we stated that additional rulemaking would be necessary to implement any approach that would include ONC appropriating an ONC-ACB's delegated authority to issue and terminate a certification, including establishing new program requirements and processes by which ONC or an ONC-ACB would have the grounds to terminate an issued certification. We requested comment on the circumstances, due process, remedies, and other factors that we should consider regarding the termination of a certification. To assist commenters, we provided a brief background of the ONC Health IT Certification Program and examples of the complexities and potential impacts associated with terminating a certification. We asked commenters to account for the potentially profound asymmetric impacts revoking a certification could create, especially if based on the business practices (by health IT developers or their customers) associated with the health IT's use and not necessarily the health IT's performance according to certification requirements.

Comments. Commenters overwhelmingly expressed support for the decertification of health IT products that did not continue to meet certification requirements or proactively blocked the sharing of health information. Of these commenters, the majority supported a clear and structured approach to "decertification," with some commenters specifically recommending a regulatory approach that could be implemented as soon as possible. However, other commenters opposed changing the current approach or, at a minimum, urged caution in implementing a new "decertification" process. In this regard, commenters recommended clear parameters be established that would lead to decertification; appropriate due processes, including sufficient opportunities to correct deficiencies and non-compliance; and safeguards for non-culpable parties, such as "hold harmless" provisions, hardship exemptions, and "safe harbors" when applicable. A few commenters also suggested that further stakeholder input was needed before considering regulations, particularly to fully understand the "downstream" implications of "decertification."

Response. We thank commenters for their feedback. As noted in the Proposed Rule, additional rulemaking would be necessary to implement any new "decertification" process. We will take the comments received under

consideration as we determine whether a new regulatory "decertification" process for health IT is necessary or whether other steps could better support the continued compliance of certified health IT with certification requirements, the unencumbered access and use of certified capabilities of health IT, the unrestricted exchange of health information, and overall interoperability.

V. Incorporation by Reference

- The Office of the Federal Register has established new requirements for materials (e.g., standards and implementation specifications) that agencies incorporate by reference in the **Federal Register** (79 FR 66267; 1 CFR 51.5). Specifically, § 51.5(b) requires agencies to discuss, in the preamble of a final rule, the ways that the materials they incorporate by reference are reasonably available to interested parties and how interested parties can obtain the materials; and summarize, in the preamble of the final rule, the material they incorporate by reference.

To make the materials we have incorporated by reference reasonably available, we provide a uniform resource locator (URL) for the standards and implementation specifications. In many cases, these standards and implementation specifications are directly accessible through the URL provided. In instances where they are not directly available, we note the steps and requirements necessary to gain access to the standard or implementation specification. In most of these instances, access to the standard or implementation specification can be gained through no-cost (monetary) participation, subscription, or membership with the applicable standards developing organization (SDO) or custodial organization. In certain instances, where noted, access requires a fee or paid membership.

The National Technology Transfer and Advancement Act (NTTAA) of 1995 (15 U.S.C. 3701 *et seq.*) and the Office of Management and Budget (OMB) Circular A-119¹⁸¹ require the use of, wherever practical, technical standards that are developed or adopted by voluntary consensus standards bodies to carry out policy objectives or activities, with certain exceptions. The NTTAA and OMB Circular A-119 provide exceptions to selecting only standards developed or adopted by voluntary consensus standards bodies, namely when doing so would be inconsistent with applicable law or otherwise

¹⁸¹ http://www.whitehouse.gov/omb/circulars_a119.

impractical. As discussed in section III.A.2 of this preamble, we have followed the NTTAA and OMB Circular A-119 in adopting standards and implementation specifications, including describing any exceptions in the adoption of standards and implementation specifications. Over the years of adopting standards and implementation specifications for certification, we have worked with SDOs, such as HL7, to make the standards we adopt and incorporate by reference in the **Federal Register** available to interested stakeholders. As described above, this includes making the standards and implementation specifications available through no-cost memberships and no-cost subscriptions.

As required by § 51.5(b), we provide summaries of the standards and implementation specifications we have adopted and incorporated by reference in the **Federal Register**. We also provide relevant information about these standards and implementation specifications throughout section III.3 of the preamble. In particular, in relevant instances, we identify differences between previously adopted versions of standards and implementation specifications and 2015 Edition adopted versions of standards and implementation specifications.

We have organized the following standards and implementation specifications that we have adopted through this final rule according to the sections of the Code of Federal Regulation (CFR) in which they are codified and cross-referenced for associated certification criteria that we have adopted in 45 CFR 170.315.

Transport and Other Protocol Standards—45 CFR 170.202

- *Applicability Statement for Secure Health Transport, Version 1.2.*

URL: <http://wiki.directproject.org/file/view/Applicability+Statement+for+Secure+Health+Transport+v1.2.pdf>. This is a direct access link.

Summary: This document is intended as an applicability statement providing constrained conformance guidance on the interoperable use of a set of Requests for Comments (RFCs) describing methods for achieving security, privacy, data integrity, authentication of sender and receiver, and confirmation of delivery consistent with the data transport needs for health information exchange.

- *Implementation Guide for Delivery Notification in Direct, Version 1.0.*

URL: <http://wiki.directproject.org/file/view/Implementation+Guide+for+Delivery+Notification+in+Direct+v1.0.pdf>. This is a direct access link.

Summary: This document provides implementation guidance enabling Security/Trust Agents (STAs) to provide a high level of assurance that a message has arrived at its destination. It also outlines the various exception flows that result in a compromised message delivery and the mitigation actions that should be taken by STAs to provide success and failure notifications to the sending system.

Functional Standards—45 CFR 170.204

- *HL7 Version 3 Standard: Context Aware Knowledge Retrieval Application (“Infobutton”), Knowledge Request, Release 2.*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=208. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: The Context-aware knowledge retrieval specifications (Infobutton) provide a standard mechanism for clinical information systems to request context-specific clinical knowledge from online resources. Based on the clinical context, which includes characteristics of the patient, provider, care setting, and clinical task, Infobutton(s) anticipates clinicians’ and patients’ questions and provides automated links to resources that may answer those questions.

- *HL7 Implementation Guide: Service-Oriented Architecture Implementations of the Context-aware Knowledge Retrieval (Infobutton) Domain, Release 1.*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=283. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: Context-aware knowledge retrieval (Infobutton) into clinical information systems help deliver clinical knowledge to the point of care as well as patient-tailored education material. This specification enables the implementation of context-aware knowledge retrieval applications through a Service Oriented Architecture based on the RESTful software architectural style.

- *HL7 Version 3 Implementation Guide: Context-Aware Knowledge Retrieval (Infobutton), Release 4.*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=22. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: Context-aware knowledge retrieval (Infobutton) in clinical

information systems help deliver clinical knowledge to the point of care as well as patient-tailored education material. This implementation guide provides a standard mechanism for EHR systems to submit knowledge requests over the HTTP protocol through a standard using a URL format.

Content Exchange Standards and Implementation Specifications for Exchanging Electronic Health Information—45 CFR 170.205

- *HL7 CDA® R2 Implementation Guide: Quality Reporting Document Architecture—Category I (QRDA I); Release 1, Draft Standard for Trial Use (DSTU) Release 3 (US Realm), Volumes 1 (Introductory Material) and 2 (Templates and Supporting Material).*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=35. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: The Quality Reporting Document Architecture (QRDA) is an electronic document format that provides a standard structure with which to report quality measure data to organizations that will analyze and interpret the data. The Release 3 IG is consistent with the CDA, and Category I is an individual-patient-level quality report. The Release 3 IG includes updates to align with the Quality Data Model version 4.1.2; incorporates appropriate QRDA Category I Release 2 (R2) DSTU comments that were considered as New Feature Requests; and updates of the QRDA I R1 DSTU Release 3 templates to align with the CDA R2 templates where applicable.

- *Errata to the HL7 Implementation Guide for CDA® Release 2: Quality Reporting Document Architecture—Category III, DSTU Release 1 (US Realm), September 2014.*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=286. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement. The DSTU package must be downloaded in order to access the errata.

Summary: The September 2014 Errata reflects updates for the implementation of QRDA Category I consistent with the Quality Data Model-based Health Quality Measures Format Release 2.1, an incremental version of harmonized clinical quality measure and CDS standards.

- *HL7 Implementation Guide for CDA® Release 2: Consolidated CDA Templates for Clinical Notes (US Realm), Draft Standard for Trial Use,*

Release 2.1, Volumes 1 (Introductory Material) and 2 (Templates and Supporting Material).

URL: http://www.hl7.org/documentcenter/public/standards/dstu/CDAR2_IG_CCDA_CLINNOTES_R1_DSTUR2.1_2015AUG.zip. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: The Consolidated CDA (C-CDA) IG contains a library of CDA templates, incorporating and harmonizing previous efforts from HL7, IHE, and the Health Information Technology Standards Panel (HITSP). It represents harmonization of the HL7 Health Story guides, HITSP C32, related components of IHE Patient Care Coordination (IHE PCC), and Continuity of Care (CCD). The C-CDA Release 2.1 IG, in conjunction with the HL7 CDA Release 2 (CDA R2) standard, is to be used for implementing the following CDA documents and header constraints for clinical notes: Care Plan including Home Health Plan of Care, Consultation Note, CCD, Diagnostic Imaging Reports, Discharge Summary, History and Physical, Operative Note, Procedure Note, Progress Note, Referral Note, Transfer Summary, Unstructured Document, and Patient Generated Document (US Realm Header). The Consolidated CDA (C-CDA) Release 2.1 IG provides compatibility between Releases 2.0 and 1.1 by applying industry agreed-upon compatibility principles.

- *HL7 Implementation Guide: Data Segmentation for Privacy (DS4P), Release 1, Part 1: CDA R2 and Privacy Metadata Reusable Content Profile.*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=354. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: This guide supports segmenting clinical records so that protected health information (PHI) can be appropriately shared as may be permitted by privacy policies or regulations.

- *HL7 2.5.1 Implementation Guide for Immunization Messaging, Release 1.5.*

URL: <http://www.cdc.gov/vaccines/programs/iis/technical-guidance/downloads/hl7guide-1-5-2014-11.pdf>. This is a direct access link.

Summary: This document represents the collaborative effort of the American Immunization Registry Association and CDC to improve inter-system communication of immunization records. The guide is intended to

facilitate exchange of immunization records between different systems.

- *HL7 Version 2.5.1 Implementation Guide for Immunization Messaging (Release 1.5)—Addendum, July 2015.*

URL: <http://www.cdc.gov/vaccines/programs/iis/technical-guidance/hl7.html>.

Summary: This addendum consolidates the HL7 Version 2.5.1 Implementation Guide for Immunization Messaging, Release 1.5 information that clarifies the conformance requirements. This supplement does not specify additional requirements; it just clarifies existing ones. Value set requirements, general clarifications, and Immunization IG errata are also provided in this addendum.

- *PHIN Messaging Guide for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Settings, Release 2.0, April 21, 2015.*

URL: http://www.cdc.gov/nssp/documents/guides/syndrsurvmsgguide2_messagingguide_phn.pdf. This is a direct access link.

Summary: This document represents the collaborative effort of the International Society for Disease Surveillance, CDC, and NIST to specify a national electronic messaging standard that enables disparate health care applications to submit or transmit administrative and clinical data for public health surveillance and response. The scope of the guide is to provide guidelines for sending HL7 v.2.5.1 compliant messages from emergency department, urgent and ambulatory care, and inpatient settings to public health authorities.

- *Erratum to the CDC PHIN 2.0 Implementation Guide, August 2015; Erratum to the CDC PHIN 2.0 Messaging Guide, April 2015 Release for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Care Settings.*

URL: <http://www.cdc.gov/nssp/documents/guides/erratum-to-the-cdc-phin-2.0-implementation-guide-august-2015.pdf>. This is a direct access link.

Summary: This document contains erratum and conformance clarifications for the PHIN Messaging Guide for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Setting, Release 2.0. Value set requirements and errata are also provided in the addendum.

- *HL7 CDA® Release 2 Implementation Guide: Reporting to Public Health Cancer Registries from Ambulatory Healthcare Providers, DSTU Release 1.1, Volumes 1*

(Introductory Material) and 2 (Templates and Supporting Material).

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=398. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: As ambulatory health care providers adopt modern EHR systems, the opportunity to automate cancer registry reporting from ambulatory health care provider settings is also increasing and becoming more feasible. This document provides clear and concise specifications for electronic reporting form ambulatory health care provider EHR systems to public health central cancer registries using the HL7 CDA based standards. This document is designed to guide EHR vendors and public health central cancer registries in the implementation of standardized electronic reporting.

- *IHE IT Infrastructure Technical Framework Volume 2b (ITI TF-2b).*

URL: http://www.ihe.net/TechnicalFramework/upload/IHE_ITI_TF_Rev7-0_Vol2b_FT_2010-08-10.pdf. This is a direct access link.

Summary: This document defines specific implementations of established standards to achieve integration goals that promote appropriate sharing of medical information to support ongoing patient care. The IHE IT Infrastructure Technical Framework identifies a subset of functional components of the health care enterprise, called “IHE actors,” and specified their interactions in terms of a set of coordinated, standards-based transactions. Volume 2b corresponds to transactions [ITI-29] through [ITI-57].

- *HL7 Implementation Guide for CDA® Release 2—Level 3: Healthcare Associated Infection Reports, Release 1, U.S. Realm.*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=20. Access requires a “user account” and a license agreement. There is no monetary cost for a user account and license agreement.

Summary: This document specifies a standard for electronic submission of health care associated infection reports (HAI) to the National Healthcare Safety Network of the CDC. This document defines the overall approach and method of electronic submission and develops constraints defining specific HAI report types.

- *HL7 Implementation Guide for CDA® Release 2: National Health Care Surveys (NHCS), Release 1—US Realm, HL7 Draft Standard for Trial Use, Volumes 1 (Introductory Material) and 2 (Templates and Supporting Material), December 2014.*

URL: http://www.hl7.org/implement/standards/product_brief.cfm?product_id=385. Access requires a “user account” and license agreement. There is no monetary cost for a user account and license agreement.
