- Supporting public and private parties involved in audits and other accountability functions with technical assistance and other collaborative support;
- Conducting targeted on-farm surveys and inspections to understand current practices and identify gaps in compliance;
- Taking administrative compliance and enforcement action when needed to correct problems that put consumers at risk;
- Responding to produce outbreaks effectively to lessen impact on public health; and
- Conducting in-depth environmental assessments where appropriate to identify root causes of outbreaks associated with produce and inform future prevention efforts.

FDA’s inspection resources will be targeted based on risk. In addition to conducting its own inspections, FDA also plans to rely heavily on States to conduct a large proportion of the routine inspections on farms. Thus,

inspection will play an important role in the overall compliance effort.

B. FDA Enforcement Decisions

(Comment 412) Several comments suggest specific criteria that FDA should use in determining how to respond to violations of this rule, such as whether the violation represents an “immediate public health risk,” and whether the farm demonstrates a willingness and effort to correct violations. Another comment requests that FDA be clear in explaining to farmers what is wrong to allow them to come into compliance. Some comments express concern about the potential impact of FDA’s compliance and enforcement determinations on their business.

(Response) We intend to assess a farm’s compliance with this rule on a case-by-case basis. In considering what action is appropriate, we are likely to consider factors including the severity of the violation, the willingness of the farmer to cooperate and take corrective actions, and the risk to public health. While many farms already follow some or all of the requirements in this regulation, we recognize that this is the first national standard for on-farm practices related to produce safety and that it will take time and a concerted, community-wide effort for the wide range of farms to come into full compliance. Under the FD&C Act, FDA has authority to inspect produce farms and can take enforcement action when appropriate. However, we realize that no food safety regime can provide complete assurance against the emergence of foodborne illness, and there might be circumstances in which the failure to prevent foodborne illness might not mean that the farm has violated the Produce Safety rule. See also our response to Comment 411 describing our implementation and enforcement strategy.

(Comment 413) One comment suggests that compliance with FSMA should be presumed for certain farms. The comment cites North Carolina

Session Law 2013–265 (Senate Bill 63) (NC Farm Act of 2013) as providing protection to farmers by entitling them to “a rebuttable presumption that the commodity producer was not negligent when death or injury is proximately caused by consumption of the producer’s raw agricultural commodity” under certain conditions.

(Response) We are aware that North Carolina has passed this law in their State, and that other States may choose to establish similar laws. However, State law tort duties are not relevant for purposes of this rule.

C. Coordination of Education and Enforcement (§ 112.193)

(Comment 414) Several comments address the degree to which FDA will enforce the rule, and the extent to which States will be involved. Several comments request clarification, including on the framework for coordination, timeline for inspection-related activities, expectations from State agencies, and securing necessary funds and resources. Several comments favor FDA working with State governments using existing established efforts, including State-industry educational and regulatory interfaces and assistance programs, as well as education and standards of current protocols developed by extension services, State departments, other farming good management practices, and local regulations. Several comments express a belief that such an approach would be most successful because State governments best know the realities of agricultural practices within their borders and often have an established history of successful inspection processes. Some comments express a preference for State agricultural agencies to be involved in compliance activities related to this rule, rather than other State agencies (such as health- or environmentally-oriented agencies), arguing that State agricultural agencies have a deep understanding of local agricultural practices and have developed strong working relationships with farmers. One comment notes some potential challenges with implementation by States, including that in some circumstances, State agencies lack the authority to enter farms. Some comments also express concerns related to resources necessary for States to conduct inspections.

(Response) As discussed previously, we are revising § 112.193 to clarify that FDA coordinates education and enforcement activities by State, territorial, tribal, and local officials by helping develop education, training, and enforcement approaches. FDA plans

to work closely with States to implement the produce safety rule. We agree that our State counterparts have substantial knowledge about the farms in their jurisdiction. FDA intends to work collaboratively with our federal and State regulatory partners to use available inspection resources to conduct risk-based inspections of farms for compliance with this rule. Section 702(a)(1)(A) of the FD&C Act (21 U.S.C. 372(a)(1)(A)) expressly authorizes FDA to conduct examinations and investigations for the purposes of the FD&C Act through any health, food, or drug officer or employee of any State, Territory, or political subdivision thereof (such as a locality), duly commissioned to act on behalf of FDA. Qualified State, territorial, tribal, or local regulatory officials may be commissioned or serve under contract with FDA to conduct examinations, inspections, and investigations for purposes of the FD&C Act. In addition, section 702(a)(2) [21 U.S.C. 372(a)(2)] expressly authorizes FDA to conduct examinations and investigations for the purposes of the FD&C Act through officers and employees of another federal department or agency, subject to certain conditions set forth in that section. We expect to continue to cooperatively leverage the resources of federal, State, tribal, and local government agencies in this and other ways as we strive to obtain industry-wide compliance with this rule. We agree that FDA should leverage existing State programs when feasible. The roles of FDA and State partners are likely to vary based on the nature of the task and the State involved.

We have entered into a cooperative agreement with NASDA to obtain critical information related to implementation of this rule, in partnership with State regulatory agencies (Ref. 256). As part of the cooperative agreement, NASDA will conduct an assessment of the current foundation of State law, the resources needed by States to implement this rule, as well as develop a timeline for successful implementation.

In addition, FDA anticipates that some States may choose to adopt requirements modeled after the provisions of this rule and may choose to perform inspections under their own authorities to enforce the provisions of their State laws. Such actions would further drive compliance with the produce safety standards in this rule.

(Comment 415) One comment notes that a State agency would not be the appropriate enforcement agency on tribal lands regarding food and water systems. This comment also states the

final produce safety rule should include issuance of a tribal regulatory authority for training and implementation and limit the authority of State law enforcement officers on tribal lands, or exclude tribal lands altogether from State enforcement unless at the request of the tribe.

(Response) FDA recognizes the importance of engaging tribal regulatory authorities for successful FSMA implementation on tribal lands. FDA intends to work collaboratively with tribal regulatory partners to develop the appropriate education, enforcement, and training needed to facilitate compliance with the produce safety regulation on tribal lands (see FDA’s recently released FSMA training strategy at www.fda.gov/fsma). We do not expect to use State officials to conduct inspections on FDA’s behalf on tribal lands, but rather we intend to work with tribal authorities to commission tribal officials, as appropriate, to conduct these inspections.

(Comment 416) One comment requests adding to § 112.193 a list of entities, including State and federal partners, that will be working with FDA to implement the rule, as well as a timeframe for when operations will begin.

(Response) FDA declines to establish a list of partnerships in the regulatory text. Such partnerships may change over time. Similarly, our operations timeframes will depend on the specific operational strategies we adopt in various circumstances. We plan to make information on our FSMA operational work plans public as previously described in Comment 411.

D. On-Farm Inspections

(Comment 417) Several comments seek information about on-farm inspections. Some comments argue that, because farmers make the majority of their money in a relatively small period of time, inspectors should be sufficiently familiar with agricultural production, harvesting, and handling methods to minimize potential disruptions to the farm business, particularly when inspections occur at the peak of harvest season. In addition, some comments ask FDA to develop specific training modules to ensure consistency in inspections and inspectors’ awareness of farming practices. Some comments also recommend that inspectors should have familiarity with acceptable on-farm practices taking into consideration the diversity of agricultural practices, conditions and commodities.

(Response) See our response to Comment 411, in which we discuss our expectation that inspections will play an important role in the overall compliance effort, along with a range of other public and private efforts ranging from education, training, and technical assistance to private third-party audits. We anticipate developing educational materials related to compliance and enforcement activities for produce safety. As discussed previously (in Comment 411 and Comment 414), FDA plans to collaborate with State and other partners in implementing the produce safety rule. Personnel performing farm inspections may include federal investigators, State inspectors, or other authorities, and will likely vary by State. In addition, FDA plans to deploy a cadre of produce safety experts in headquarters and the field with the depth and breadth of capacity to support implementation and provide technical support to government and industry parties working to foster compliance.

We anticipate that FDA and State investigators, as well as other partners conducting inspections, will receive joint training and education, which will include refresher training as needed. FDA intends to work closely with State, local, territorial, and tribal partners to develop the tools and training programs needed to help implementation activities, including inspections, to be conducted consistently. We expect to build on our collaboration with State, local, territorial, and tribal officials in the development of tools and training for use by inspectors in farm investigations on issues specific to food safety during growing, harvest, packing and holding produce. Funding may be made available through various mechanisms, such as grant programs, to support inspector training.

(Comment 418) Some comments ask questions regarding when farms would be inspected and for what reasons. Some comments ask FDA to clarify whether or not FDA may inspect a farm without prior notice. One commenter believes all farm inspections should be “for-cause” only, and that Congress did not intend for FDA to routinely inspect farms.

(Response) FDA’s authority to conduct on-farm examinations and investigations for the purposes of the FD&C Act is not limited to for-cause situations and FDA is not required to give a farm prior notice of an inspection. As discussed in Comment 411, FDA intends to prioritize inspections based on risk. FDA intends to develop a work plan regarding routine farm inspections. FDA is exploring the possibility of pre-

announcing at least some farm inspections; however, there will likely be instances where a farm will not receive prior notice regarding an inspection.

E. Third-Party Audits, Inspections, and Other Arrangements

(Comment 419) One comment urges FDA to encourage retailers and other customers who require audits to minimize the number of individual audits and align the standards against which farms are audited with the standards in the produce safety regulation. The comment notes that such an approach will minimize the economic and operational burden created by multiple audits, especially on smaller operations.

(Response) FDA supports streamlining audit standards for efficiency and supports harmonizing existing industry standards with the requirements of this rule. We also recognize the value in industry’s continued development of innovative and effective methods to ensure the production of safe foods.

(Comment 420) Several comments note the existence of third-party audits, stating that existing groups already conduct various farm audits. Some comments suggest that FDA should utilize these third-party audits as part of FDA’s compliance strategy for this rule. Some comments ask FDA to “recognize” certain types of audits as sufficient for certain purposes.

(Response) FDA anticipates that significant incentives and accountability for compliance with this rule will come through third-party audits and supply chain management initiated by produce farms, their customers, or other private entities. As outlined in Comment 411, third-party audits are an important part of our overall compliance strategy. We believe it is important to have significant oversight of farms to ensure compliance with the rule. Thus, as a complement to State and FDA inspections of farms, we intend to leverage the conduct of reliable third-party farm audits by USDA and others, as well as compliance with marketing agreements, with a goal of annual verification of farms that must comply with the rule.

In addition to audits conducted to meet buyer-specific criteria, a number of retail produce buyers currently require, as a condition of sale, that their produce suppliers comply with and be audited by third parties for conformance with the GAPs guide, USDA GAP and GHPs, CA LGMA and AZ LGMA standards, and other voluntary programs. Whether conducted under such programs or in

response to specific buyer demands, adequately rigorous and reliable private audits can be an important additional tool for fostering food safety and ultimately compliance with this rule. We note further that private audits may be relevant to some aspects of compliance with the supplier verification requirements in the FSVP and preventive controls regulations, where a farm supplies produce to an importer or receiving facility that seeks to verify that the farm has adequately controlled applicable hazards.

We intend to pursue the goal of making third-party audits an important part of our compliance strategy by building on current private audit activity and by working with the produce industry and other government and private partners to improve the rigor and reliability of private audits. We believe that strengthening both the quality and credibility of private audits will help improve food safety, especially if conducted on the basis of the standards in this rule, but it can also be the basis for streamlining current audit practices and making them more efficient. Potentially, a single annual audit that is recognized to be a rigorous and reliable means of verifying compliance with this rule could substitute for multiple audits conducted under disparate standards with less well-established credibility. We seek public-private collaboration to achieve this goal.

We also note that in the final third-party certification rule (published elsewhere in this issue of the **Federal Register**), FDA is establishing a voluntary program for the accreditation of third-party certification bodies that may conduct audits and issue certifications for purposes of establishing an entity’s eligibility to participate in VQIP or to satisfy conditions set forth under section 801(q) of the FD&C Act.

FDA is not recognizing any auditing body in this produce safety rulemaking.

(Comment 421) Some comments recommend that FDA should both permit the use of any government-approved inspector or inspection service and also require farms’ customers to accept certification or approval by any such approved inspector or service. The commenters believe that this step is necessary to protect farms from having to pay large fees to private companies.

(Response) It is beyond the scope of this rule to require that entities in a supply chain accept certifications or approvals provided by third-party inspection services for other entities in the supply chain. To the extent that the

comments request that FDA allow farms to undergo inspections or audits, nothing in this rule prohibits such use of inspection or auditing services.

(Comment 422) One comment suggests that, where FDA has systems recognition arrangements with foreign governments, importers who import produce from such countries should be subject to lesser requirements than they otherwise would be, and FDA should not inspect covered farms from that country.

(Response) As discussed previously (see our response to Comment 408), systems recognition involves an intensive and extensive review of key aspects of a country’s overall food safety control system. The comment addresses the requirements applicable to an importer when there is a systems recognition arrangement. Requirements for importers are outside the scope of this produce safety rule. FDA addresses requirements applicable to importers who import food from countries whose food safety systems FDA has officially recognized as comparable or equivalent in the final FSVP rule (published elsewhere in this issue of the **Federal Register**).

This comment also addresses FDA inspections of covered farms in countries with which FDA has systems recognition arrangements. Ideally, FDA’s systems recognition of a food control system should include a successful assessment of its produce production practices. We note that FDA’s pilot systems recognition activities pre-date FSMA, and FDA is currently refining the program to ensure alignment, where appropriate, with FSMA. While all systems recognition assessments have followed a similar process, each assessment varies in scope

of the review for oversight of specific products. In the future, FDA will likely consider including additional consideration for produce standards, oversight, and production practices particularly with respect to the country’s practices and oversight regarding the specific provision(s) in part 112 in its systems recognition assessments. Further, systems recognition does not mean that no oversight of produce from such a country is warranted; therefore, it would not be appropriate to state that farms in countries with systems recognition are not subject to FDA inspection. It is also premature at this point to determine whether or how existing or future systems recognition arrangements may affect our inspections of foreign farms.

XXIII. Subpart R—Comments on Withdrawal of Qualified Exemption

In the 2013 proposed rule, under subpart R of proposed part 112, we proposed to establish the procedures that would govern the circumstances and process whereby we may issue an order withdrawing a qualified exemption applicable to a farm in accordance with the requirements of proposed § 112.5. Specifically, proposed § 112.201 listed the circumstances under which FDA may withdraw a qualified exemption applicable to a farm, while §§ 112.202 and 112.203 specified the procedure and information that FDA would include in an order to withdraw such qualified exemption. In addition, proposed §§ 112.204 through 112.207 provided for a process whereby you may submit a written appeal (which may include a request for a hearing) of an order to withdraw a qualified exemption applicable to your farm, and proposed §§ 112.208 through 112.211

provided a procedure for appeals, hearings, and decisions on appeals and hearings. We discussed each of the proposed provisions and explained our rationale (78 FR 3504 at 3611 through 3616). We requested public comment on our proposed provisions, including on related process and timeframes for actions to be taken by FDA and covered farms.

In the supplemental notice, in part, taking into account public comment on the 2013 proposed rule, we proposed certain amendments to §§ 112.201 and 112.202 related to the circumstances under which FDA may withdraw a qualified exemption and the procedure for issuing an order to withdraw a qualified exemption; and added a new proposed provision § 112.213 to list the circumstances under which FDA would reinstate a farm’s qualified exemption that is withdrawn. We asked for public comment on our new and amended proposed provisions (79 FR 58434 at 58464–58467).

In this section of this document we discuss comments that we received on the withdrawal provisions in the 2013 proposed rule, but that we did not address in the supplemental notice. We also discuss comments that we received on the new and amended proposed withdrawal provisions in the supplemental notice.

We are finalizing the provisions in subpart R with revisions (see Table 29). We discuss these changes in this section. For §§ 112.202, 112.209, 112.210, and 112.211, we did not receive any comments or received only general comments in support of the proposed provision and, therefore, we do not specifically discuss these provisions further.

TABLE 29—DESCRIPTION OF REVISIONS TO SUBPART R

Final provision	Description of revisions
§ 112.201(b)(2)	—Revision to allow 15 calendar days from the date of receipt of an order to withdraw a qualified exemption, for a farm to respond in writing to our notification.
§ 112.202	—Editorial change to insert the word “either” in § 112.202(a).
§ 112.203(c)	—Editorial changes to clarify that the order will specify which of two circumstances that may lead FDA to withdraw a qualified exemption apply, or whether both of these two circumstances apply.
§ 112.203(d)	—Revision to require that the contents of an order must include a statement that the farm must either comply with or appeal the order. —Revision to require compliance with an order to withdraw a qualified exemption within 120 days of the date of receipt of the order, consistent with the timeline in the PCHF regulation; and corresponding changes to §§ 112.204(a) and 112.205(b).
§ 112.203(e)	—Include a statement informing the farm that it may ask us to reinstate an exemption that was withdrawn by following the procedures in § 112.213.
§ 112.204(b)	—Revision to require that a farm may request an informal hearing by submitting a written appeal within 15 calendar days from the date of receipt of the order; and corresponding changes to §§ 112.206(a)(1) and 112.207(a)(2).
§ 112.205(b)(2)	—Specifies that a farm that loses its qualified exemption would no longer need to comply with the modified requirements in §§ 112.6 and 112.7.
§ 112.208(a)	—Revision to allow for the hearing to be held within 15 calendar days after the date the appeal is filed.
§ 112.213(a)	—Editorial change to replace the word “shall” with “will”.

A. Circumstances That May Lead FDA To Withdraw a Farm's Qualified Exemption (§ 112.201)

(Comment 423) Some comments agree with the proposed provisions regarding certain actions we may take, and other actions we must take, before issuing an order to withdraw a qualified exemption. For example, some comments agree that other regulatory actions should be considered before withdrawing a qualified exemption, and some comments agree that it is appropriate to assess corrective actions taken by a farm in response to a food safety problem when considering whether to withdraw its exemption. Some comments recommend revising the wording in § 112.201(b)(1) from “may consider” to “shall take” thus requiring FDA to take alternative actions prior to withdrawing a qualified exemption. Other comments agree that these provisions are reasonable and will provide farms due process and greater clarity on the withdrawal process, but suggest that we could issue guidance rather than include these provisions in the rule to allow us greater flexibility should we have to act quickly to protect the public health.

Other comments disagree with these proposed provisions and ask us to delete them from the final rule. These comments assert that FSMA does not require us to describe the actions that we may take prior to withdrawing a qualified exemption and that it is not necessary to do so because it is customary for us to work with regulated industry to address problems before taking enforcement actions. These comments also express concern that listing possible regulatory actions before we would issue an order to withdraw a qualified exemption could create an expectation that we will always exercise such regulatory actions before issuing the order. These comments also express concern that being bound by these provisions could prevent us from acting quickly to protect public health.

(Response) We are retaining the provisions regarding certain actions we may take, and other actions we must take, before issuing an order to withdraw a qualified exemption. We agree that it is customary for us to work with industry to address problems before taking enforcement actions but disagree that specifying this customary practice in the rule would prevent us from acting quickly to protect public health. We consider that issuing an order to withdraw an exemption would be a rare event, in part because alternative actions such as those described in these provisions may

provide a more expeditious approach to correcting a problem than withdrawing an exemption. We also disagree that the rule binds us to take alternative regulatory action before issuing an order to withdraw a qualified exemption, other than to notify the farm in writing of circumstances that may lead us to withdraw the exemption, provide an opportunity for the farm to respond in writing, and consider the actions taken by the farm to address the circumstances we describe. The rule clearly specifies that regulatory actions such as a warning letter, recall, administrative detention, refusal of food offered for import, seizure, and injunction are actions that we “may” (not “must”) take before issuing an order to withdraw a qualified exemption. Providing the farm with an opportunity to correct the problems before we take steps to withdraw an exemption has the potential to save agency resources associated with preparing an order, responding to an appeal of the order and request for a hearing, and administering a hearing. Directing resources to help a farm to correct problems, rather than to administer a withdrawal process that could be resolved by the time of a hearing, is appropriate public health policy.

(Comment 424) Some comments ask us to specify that the notification of circumstances that may lead FDA to withdraw the exemption must include facts specific to the situation and information about how the farm can remedy the situation.

(Response) By specifying that we must notify the farm of circumstances that may lead us to withdraw an exemption, we mean that we would include facts specific to the situation. It is the responsibility of the farm, not FDA, to remedy the situation.

(Comment 425) Some comments recommend that both the initial notice of intent to withdraw and the withdrawal order itself should be based on an individualized, case-by-case determination, and should not apply to a group or class of farms.

(Response) The decision to withdraw a qualified exemption is an individualized determination and will not be applied to a class of farms or farmers.

(Comment 426) Some comments ask us to provide additional time for a farm to respond, in writing, to a notification of circumstances that may lead us to withdraw its qualified exemption. Some of these comments request timeframes such as 2 weeks or 90 days for a farm to compile information and

documentation of facts and to respond to FDA's notification.

(Response) We are revising § 112.201(b)(2) to provide for 15 calendar days, rather than 10 calendar days, for a farm to respond in writing to our notification. The 15-day timeframe is the same as the timeframe for responding to a warning letter. Circumstances that could lead us to withdraw a qualified exemption require prompt action on the part of a farm, just as circumstances that lead us to issue a warning letter require prompt action.

(Comment 427) Several comments request that FDA notify the appropriate State regulatory agency before a farm's qualified exemption is withdrawn or reinstated.

(Response) We decline this request. We are sensitive to the time required for various inspection activities and intend to communicate with States regarding our expectations for how to verify whether a farm meets the criteria for a qualified exemption. The qualified exemption status of a farm principally affects the requirements that it is subject to, and will be most useful to FDA and our food safety partners when preparing for inspection. At this time, we do not intend to establish a system notifying the applicable State authorities at a point in time when the qualified exemption status of a farm changes, whether as a result of withdrawal or reinstatement of the farm's qualified exemption or because the farm's business has grown to the point where it exceeds the criteria that must be met for a farm to be eligible for a qualified exemption.

B. Contents of an Order To Withdraw a Qualified Exemption (§ 112.203)

(Comment 428) Some comments recommend that the order specify which of the two circumstances (§ 112.201(a)(1) or § 112.201(a)(2)) that could lead us to issue the order apply.

(Response) We have made editorial changes to the regulatory text to make it more clear that the proposed provision to require us to include a brief, general statement of the reasons for the order, including information relevant to (1) an active investigation of a foodborne illness outbreak that is directly linked to the farm; or (2) conduct or conditions associated with a farm that are material to the safety of the food that would otherwise be covered produce grown, harvested, packed and held at such farm, should specify which of these two circumstances apply, or whether both of these two circumstances apply. See the revised regulatory text for § 112.203(c).

(Comment 429) Several comments recommend that the written order withdrawing the qualified exemption should include a detailed description of the substantial, science-based evidence FDA has to support its finding for withdrawal of a qualified exemption, rather than a brief, general description, as described in § 112.203(c). Comments argue that a brief, general description supporting the order to withdraw a qualified exemption is not sufficient to allow the farmer to adequately respond to the order or prepare for an appeal hearing. Comments also contend that FDA must be required to clearly and specifically identify the “material conduct or conditions associated with the farm that are material to the safety of the food” regulated under this rule. In addition, some comments assert that “material conditions” should be based on scientifically measureable traits that can be clearly identified as occurring on the individual farm and/or should be limited to conditions within the farm’s control. Some comments recommend that we require FDA to meet an explicit evidentiary threshold to find that conduct or conditions exist on a farm sufficient to warrant withdrawal of the farm’s exemption.

(Response) We agree that the order must provide sufficient information to enable a farm to respond with particularity to specific evidence about the circumstances leading to the order. However, we disagree that the order must do so by including the specific information recommended by the comments, or that we should include an explicit evidentiary threshold, and we have not revised the proposed withdrawal provisions to incorporate the suggestions of these comments. A number of these comments appear to be more focused on whether the circumstances that lead us to issue an order meet an evidentiary standard than on explaining the problem so that a farm can both understand the problem and respond with particularity to the facts and issues contained in the order. The withdrawal provisions that we are establishing in this provision require the order to include a brief, general statement of the reasons for the order, including information relevant to: (1) An active investigation of a foodborne illness outbreak that is directly linked to the farm; or (2) conduct or conditions associated with a farm that are material to the safety of the food that would otherwise be covered produce grown, harvested, packed and held at such farm. The requirements that we are establishing in this provision would enable the farm to understand the

problem, have a dialogue with us as appropriate, and respond to the problem. In addition, we intend that the process of responding to the notification that we must send before issuing an order to withdraw a qualified exemption, including discussing the problems with FDA as warranted, would provide additional information to the farm to enable the farm to both understand the problem and respond to it. Also, as discussed in Comment 184 and Comment 186, conditions that are not within a farm’s control may be material to the safety of the produce grown on that farm, and this rule includes certain provisions requiring covered farms to consider certain conditions that may not be under the farm’s control as an important part of minimizing the risks presented by such conditions.

(Comment 430) Some comments suggest that FDA should require confirmation of the delivery and receipt of the withdrawal order by the farm, such as through certified mail.

(Response) We are not specifying that we send an order in a way that ensures its receipt. Although certified mail with confirmation of delivery is one way to ensure receipt, other methods are available, including delivery through private carriers that provide mechanisms to document receipt. FDA will likely use one of these methods to document receipt. In light of the provisions in §§ 112.203, 112.204, 112.205, 112.206, and 112.207 linking the timeframes for you to comply with, or appeal, an order to the date of receipt of the order (rather than to the date of the order) (see our responses to Comment 433 and Comment 434), it will be up to us to deliver the order in a way that provides us with evidence of receipt.

(Comment 431) Some comments ask us to include in the order a statement that a farm may request that FDA reinstate an exemption that was withdrawn by following the procedures in § 112.213.

(Response) We are revising the requirements for the contents of an order as requested by these comments (see § 112.203(e)).

(Comment 432) One comment recommends that the order specify the two options that a farm has upon receipt of the order, similar to the withdrawal provisions in proposed 117.257(d) in the proposed human preventive controls rule.

(Response) We agree that it would be useful for the order to itself specify the two options that a farm has upon receipt of the order, even though the order would otherwise include this

information (because the order will contain the full text of the withdrawal provisions under § 112.203(f)). In § 112.203(d), we are requiring that the contents of an order must include a statement that the farm must either comply with or appeal the order.

C. Compliance With, or Appeal of, an Order To Withdraw a Qualified Exemption (§§ 112.204, 112.205, and 112.206)

(Comment 433) Several comments express that 60 calendar days in proposed § 112.204(a) is not sufficient time for a farm to comply with an order withdrawing its qualified exemption. Several comments recommend revising proposed §§ 112.203(d) and 112.204(a) to require compliance within 120 days of the date of receipt of the order, consistent with the parallel timeline in part 117. Other comments ask for 1 or 2 years to comply. Some comments also suggest that the timelines in both rules should be based on working or business days rather than on calendar days. Other comments ask us to consider provisions that would require compliance with only those portions of the rule that formed the basis for the revocation.

(Response) As in the case of facilities subject to the PCHF regulation, we conclude that the nature of what a farm would need to do to comply with an order—*i.e.*, comply with the full requirements for minimum science-based standards established in the produce safety regulation—makes the 60-day timeframe in the 2013 proposed withdrawal provisions insufficient. However, it is relevant that in contrast to the general compliance dates, the withdrawal provisions would only apply when a significant public health concern has been identified for a particular farm.

We are revising §§ 112.203(d), 112.204(a), and 112.205(b) to require compliance within 120 days of the date of receipt of the order, consistent with the parallel timeline in part 117. We believe that the 120-day timeframe is adequate, but we are adding flexibility such that a farm may request, with a justification in writing to FDA, a reasonable timeframe for compliance that exceeds 120 calendar days from the date of receipt of the order. FDA must grant the request for the farm to receive the extended timeframe. We are not generally extending the timeframe because circumstances that could lead us to withdraw a farm’s qualified exemption require prompt action on the part of the farm. A farm that receives an order to withdraw its qualified exemption would have received advance notification of the

circumstances leading to the order and would have had an opportunity to correct the problems rather than have us proceed to issue the order (see § 112.201(b)). If the farm requests a hearing, more than 40 days could elapse between the date that the farm receives the order and the date that the presiding officer for the hearing confirms the order to withdraw the exemption. Given that the circumstances that would lead us to issue the order involve either (1) an active investigation of a foodborne illness outbreak that is directly linked to the farm; or (2) a determination that withdrawal of the exemption is necessary to protect the public health and prevent or mitigate a foodborne illness outbreak based on conduct or conditions associated with the farm that are material to the safety of the food that would otherwise be covered produce grown, harvested, packed and held at such farm, a delay of one to two years to comply with the rule is not warranted.

We also do not believe that it would be appropriate to require a farm to come into compliance with only those provisions that formed the basis of the revocation. The provisions of subparts B through O are interrelated and operate as a system and, therefore, are not optimized through piecemeal implementation. However, FDA may consider staggered implementation as an option in granting a request for an extension of the timeframe to comply with an order to withdraw the qualified exemption for a farm.

We also conclude that it is appropriate to link the timeframe for compliance to the date of receipt of the order, rather than to the date the order was issued. Doing so would be consistent with our other administrative procedures, such as appeal of an order for administrative detention (21 CFR 1.402).

In the supplemental notice, we acknowledged the difference in our proposed timelines for compliance when a qualified exemption is withdrawn between the PCHF and produce safety regulations (79 FR 58434 at 58467). We have made the administrative procedures associated with the withdrawal of a qualified exemption consistent to the extent practicable, and are revising the withdrawal provisions to require that a covered farm comply with an order to withdraw an exemption within 120 calendar days of the date of receipt of the order. See the revised regulatory text in provisions §§ 112.203(d), 112.204(a), and 112.205(b).

For clarification, we are specifying, in new § 112.205(b)(2), that a farm that

loses its qualified exemption would no longer need to comply with the modified requirements in §§ 112.6 and 112.7. This revision is also consistent with provisions in the PCHF regulation.

(Comment 434) Several comments request longer than the proposed 10 calendar days to file a written appeal of the order of withdrawal of the qualified exemption. Comments cite various reasons, including possible issues in mail delivery such that the farmer would have less than 10 calendar days, potential need for legal counsel, and time needed to gather evidence. Some comments ask us to provide 15 business days from date of receipt of the order for the farm to appeal the order.

(Response) We have revised the timeframe for compliance with the rule to the date of receipt of an order to withdraw a qualified exemption (see our response to Comment 433). Likewise, we conclude that it is appropriate to link the timeframe for submitting a written appeal of a withdrawal order to the date of receipt of the order, rather than to the date the order was issued. Doing so would be consistent with our other administrative procedures, such as appeal of an order for administrative detention (21 CFR 1.402). Accordingly, we are revising the withdrawal provisions to require that a covered farm may request an informal hearing by submitting a written appeal in accordance with § 112.206 within 15 calendar days from the date of receipt of the order. See the revised regulatory text in provisions §§ 112.204(b), 112.206(a)(1), and 112.207(a)(2). We are also revising § 112.201(b)(2) to provide for 15 calendar days from the date of receipt of the order for a farm to respond in writing to FDA's notification. We are also extending the timeframe for the hearing to be held within 15 calendar days, rather than the proposed 10 calendar days, after the date the appeal is filed to provide more time for the farm to prepare for the hearing (see § 112.208(a)). The timeframe for the hearing to be held continues to provide for an alternative timeframe agreed upon in writing by both the farm and FDA; a farm that would have preferred the proposed timeframe of 10 calendar days could request that the hearing be held more quickly than 15 calendar days.

The 15-day timeframe is the same as the timeframe for responding to a warning letter. As discussed in Comment 423, circumstances that could lead us to withdraw a qualified exemption require prompt action on the part of a farm, just as circumstances that lead us to issue a warning letter require prompt action.

D. Procedure for Requesting an Informal Hearing (§ 112.207)

(Comment 435) Some comments ask us to guarantee a hearing so that a farm can present its case in person before having its qualified exemption revoked.

(Response) We decline this request. We agree that a farm has a right to appeal an order to withdraw its qualified exemption, and we have provided for a right to appeal.

E. Informal Hearing (§ 112.208)

(Comment 436) One comment states that the two-day time period to review and respond to the presiding officer's report is not sufficient.

(Response) We decline this request. Circumstances that could lead us to withdraw a farm's qualified exemption require prompt action on the part of the farm, and we conclude that two calendar days is a reasonable timeframe, should the farm choose to review and comment on the presiding officer's report.

(Comment 437) Some comments object to our proposal that no party shall have the right, under 21 CFR 16.119, to petition FDA for reconsideration or a stay of the presiding officer's final decision, and ask us to revise proposed § 112.208(c)(6) to specify that a farm with a qualified exemption shall have the right to file a motion for reconsideration or stay. These comments find insufficient our rationale that the circumstances that would lead to a withdrawal merit prompt action and that a farm has the opportunity for judicial review in accordance with 21 CFR 10.45.

(Response) We decline this request. In § 112.201(b), we are providing an additional mechanism for a farm with a qualified exemption to present its view that its exemption should not be withdrawn—i.e., by providing advance written notification to the farm if we are considering withdrawing an exemption and providing an opportunity for the farm to respond before we issue an order to withdraw an exemption. In addition, in § 112.213, we are providing an opportunity for reinstatement of a qualified exemption that had been withdrawn. We believe the multiple opportunities now available to a farm provide adequate opportunities for the farm's views to be considered, and further mechanisms are not warranted.

F. Circumstances Related to Reinstatement of a Qualified Exemption That is Withdrawn (§ 112.213)

(Comment 438) Some comments agree with our tentative conclusion that the absence of a specific provision in

section 418 of the FD&C Act for the reinstatement of an exemption that is withdrawn does not preclude us from providing for such a process (79 FR 58434 at 58466). Other comments disagree with that tentative conclusion and assert that Congress crafted the withdrawal provision as a “one strike, you’re out” provision. These comments also assert that including the withdrawal provision as a “one strike, you’re out” provision was an essential part of the legislative agreement that allowed for adoption of the qualified exemption of a farm. These comments also assert that reinstatement would undermine the intent of the withdrawal provision, because it would reduce the incentive for small farms to ensure that the produce they sell is as safe as possible. These comments also assert that a recognized principle of statutory interpretation provides that exemptions to statutes should be strictly construed, particularly when the statute addresses public health and safety, and that FDA is giving the exemption an impermissibly broad construction.

Some comments ask why we believe that a farm deserves a “second bite of the apple” in light of the understanding (under proposed § 112.201(b)) that we will first seek to correct problems before considering withdrawal. These comments also question at what point a farm would apply for reinstatement, and ask why we would allow a farm that has already come into compliance with FSMA’s requirement to implement produce safety standards to abandon those measures in favor of reinstating its exempt status. These comments ask us to eliminate the proposed provisions allowing for reinstatement.

Some comments do not support the proposed reinstatement provisions when a farm has been directly linked to a foodborne illness outbreak. Some comments support the proposed reinstatement provisions only when we determine, after finishing an active investigation of a foodborne illness outbreak, that the outbreak is not directly linked to the farm that had its exemption withdrawn.

(Response) We disagree that the proposed reinstatement provisions would give the exemption an impermissibly broad construction. The express statutory language of section 419(f) of the FD&C Act does not support the comments’ assertion that the withdrawal provision is a “one strike, you’re out” provision. We also disagree that reinstatement would undermine the intent of the withdrawal provision in that it would reduce the incentive for small farms to ensure that the produce they sell is as safe as possible. We

proposed that a farm would need to present data and information to demonstrate that it has adequately resolved the problems with the conduct or conditions that are material to the safety of the food that would otherwise be covered produce grown, harvested, packed or held at the farm, such that continued withdrawal of the exemption is not necessary to protect public health and prevent or mitigate a foodborne illness outbreak. In contrast to the assertion of the comments, we believe that the opportunity for reinstatement would be an incentive—not a disincentive—for farms that are eligible for a qualified exemption to ensure that the produce they sell is safe by continuing to adhere to procedures and practices that it develops to comply with the rule. For example, if a farm had to implement the provisions of the rule after having its exemption withdrawn and realized through testing to comply with the water provisions that it needed to apply a day of die-off in field before harvesting to come into compliance with the water standard, then the farm would likely continue to apply the die-off and delay harvesting by a day even after the exemption was reinstated. The farm would likely realize that if it did not continue to conduct activities that improve the safety of its produce that it might have a repeat food safety issue.

We disagree that we should categorically refuse to consider reinstating a qualified exemption if we had withdrawn the exemption because a farm had been directly linked to a foodborne illness outbreak. First, if information later comes to light to raise considerable doubt that a farm with a qualified exemption had, indeed, been directly linked to a foodborne illness outbreak, and conduct and conditions at the farm do not otherwise warrant withdrawing the farm’s exemption, it would be appropriate for us to reinstate the farm’s exemption. Second, as already discussed in this response, we consider the reinstatement provisions to be an incentive for a farm to continue adhering to procedures and practices that it develops to comply with the rule.

(Comment 439) Some comments that support the reinstatement of a withdrawn exemption ask us to establish a timeframe within which FDA will reinstate an exemption. Some comments ask us to specify in the regulatory text that the reinstatement would occur in a reasonable period of time, both in circumstances where FDA has decided on its own initiative to reinstate the exemption and in circumstances where a farm submits a request for reinstatement. Some comments suggest 10 days is a

reasonable period of time within which FDA should reinstate an exemption.

(Response) We decline the requests to establish a timeframe for reinstatement in the regulatory text. If we determine on our own initiative to reinstate an exemption (e.g., because we later determine, after finishing the active investigation of a foodborne illness outbreak, that the outbreak is not directly linked to the farm), our determination would be effective immediately. If we receive a request to reinstate a withdrawn exemption, we intend to respond in a reasonable time frame consistent with available resources. In some cases, we may respond that we need more information in order to evaluate your request.

(Comment 440) Some comments ask us to establish a 1-year probationary period before the withdrawn qualified exemption of a farm could be fully reinstated.

(Response) We decline this request. We intend to act on a request for reinstatement based on the merits of the data and information presented in the request, not after a pre-determined timeframe.

(Comment 441) One comment believes that the word “will” in proposed § 112.213(c) implies discretion where none is warranted, and suggests changing it to “shall” consistent with 112.213(a).

(Response) We decline this request. Instead, we are replacing the word “shall” with “will” in § 112.213(a) to be consistent with § 112.213(c), in the interest of using plain language in drafting regulations.

G. Other Comments

(Comment 442) Several comments ask us to provide clarification through guidance, issued for public comment, on a variety of topics associated with the withdrawal provisions, including on science-based standards that FDA would use when making the final decision to either approve or deny an order to withdraw a qualified exemption, and the conduct, conditions, or activities that would trigger FDA’s actions toward withdrawal.

(Response) We will consider the need for guidance in the future. At this time, we consider that withdrawing a qualified exemption of a farm would be both rare and dependent upon the circumstances. We need to direct our resources to developing guidance on issues that would apply more broadly, and more generally, than the withdrawal provisions.

H. Conforming Amendment to 21 CFR Part 16

We proposed to amend § 16.1(b)(2) to include part 112, subpart R, relating to the withdrawal of a qualified exemption applicable to a farm, to the list of regulatory provisions under which regulatory hearings are available. We received no comments that disagreed with this proposed provision, and we are finalizing it as proposed.

XXIV. Comments on Effective and Compliance Dates

A. Effective and Compliance Dates for Part 112

In the 2013 proposed rule, we proposed that any final rule based on proposed part 112 would become effective 60 days after its date of publication in the **Federal Register**, with staggered compliance dates based on size of the farm. In addition, for certain specified proposed requirements related to agricultural water, we proposed the compliance dates would

be 2 years beyond the compliance date for the rest of the final rule applicable to the farm based on its size.

Most comments generally support our proposed staggered compliance periods based on farm size as well as the extended compliance period for the specified water provisions, although some comments suggest further extensions whereas others find the proposed compliance periods too long. In this section, we discuss comments that express concern with the proposed compliance periods, suggest extensions to the proposed compliance dates, and/or ask us to clarify how the compliance dates will apply.

After considering comments, we are finalizing the effective date as proposed, *i.e.*, 60 days after the publication of this rule. As shown in Table 30, we are establishing three sets of compliance dates, all of which vary based on size of the farm: one for covered activities involving sprouts covered under subpart M, which are subject to all of part 112; another for covered activities involving

all other produce, which are subject to part 112 except subpart M; and another for modified requirements relating to the qualified exemption. In the second set of compliance dates, we are also providing extended compliance dates for certain specified requirements related to agricultural water. In the compliance dates relating to the qualified exemption, the compliance date for the records that a farm is required by § 112.7(b) to maintain to support its eligibility for the qualified exemption (*e.g.*, sales receipts and other records as applicable) is the effective date of this rule, *i.e.*, January 26, 2016. Farms need not comply with the requirement for a written record reflecting that the farm has performed an annual review and verification of continued eligibility for the qualified exemption until the farm's general compliance date, however. In addition, we are establishing January 1, 2020, as the compliance date for the modified requirement in § 112.6(b)(1).

TABLE 30—COMPLIANCE DATES

Size of covered farm	Covered activities involving sprouts covered under subpart M (i.e., subject to all requirements of part 112)	Covered activities involving all other covered produce (i.e., subject to part 112, except subpart M)		Farms eligible for a qualified exemption (if applicable)		
		Compliance date for certain specified agricultural water requirements	Compliance date for all other requirements	Compliance date for retention of records supporting eligibility in § 112.7(b)	Compliance date for modified requirement in § 112.6(b)(1)	Compliance date for all other requirements in §§ 112.6 and 112.7
	Time periods starting from the effective date of this rule					
Very small business ...	3 years	6 years	4 years	Effective date of rule	January 1, 2020	4 years. 3 years. N/A.
Small business	2 years	5 years	3 years			
All other businesses ...	1 year	4 years	2 years			

(Comment 443) Some comments state the proposed compliance periods are too long and fail to protect public health. One such comment suggests we increase efforts to provide technical assistance, particularly to small and very small farms to help implement the rule, and decrease the length of compliance periods. Another comment suggests not delaying compliance period for the standards directed to worker health and hygiene because the commenter believes farms already implement those provisions to comply with other government regulations.

Conversely, some other comments find the proposed compliance periods unrealistic given, according to these commenters, the significant scope and number of changes required and associated potential costs. One comment states implementation of the rule will require substantial investment and covered farms in its country will need additional time to comply with the rule. This comment suggests ten years as the

compliance period for the water provisions and a minimum of four to six years for the remaining provisions.

Still other comments maintain we should apply a uniform 5-year compliance period for all covered farms, instead of the proposed staggered compliance periods based on farm sizes. These comments argue having different compliance dates for different covered farms will be confusing and difficult to manage across different entities in the produce supply chain.

(Response) We intend to prioritize our compliance and enforcement efforts. The purpose of tiered compliance dates is to give businesses of various sizes time to come into compliance with the rule technically, financially, and operationally. FDA and food safety partners will be targeting education and outreach efforts to smaller businesses that may not be as familiar with our requirements as some of the larger farms.

We conducted extensive stakeholder outreach during the 10-month comment period for the 2013 proposed rule. We also provided public notice about proposed changes to the farm-related definitions that affect the determination of whether a farm is subject to this rule or the PCHF regulation, and about specific potential requirements for agricultural water. We conducted outreach activities to discuss the new and amended proposed provisions in the supplemental notice (see section I.E of this document). In addition, we have been collaborating with relevant stakeholders to support the development of necessary training materials (see section XI of this document) as well as research in the areas of agricultural water and raw manure (see sections XIII and XIV, respectively, of this document). In light of the extensive outreach associated with this rulemaking, we disagree that farms will need more than the established compliance periods

(including the extended compliance periods for certain water provisions for covered activities involving covered produce (except sprouts covered under subpart M)) to fully adapt their programs to the specific requirements of this rule.

We disagree that we should establish a uniform compliance period across all farm sizes. Rather, these compliance periods provide an appropriate balance between public health protection and flexibility, in light of practical considerations for small and very small businesses. Moreover, the extended compliance periods for certain specified water provisions are intended to help businesses to develop the necessary expertise to implement the specified water requirements, and to consider appropriate alternatives and develop adequate scientific data or information necessary to support the use of that alternative.

1. Effective Date

Under this rule, the effective date is 60 days after the date of publication of this rule in the **Federal Register**.

2. Compliance Dates for Covered Activities Involving Sprouts Covered Under Subpart M

For covered activities involving sprouts covered under subpart M (*i.e.*, all requirements of part 112 apply), the compliance dates are as follows: (1) 3 years from the effective date for covered farms that are very small businesses; (2) 2 years from the effective date for covered farms that are small businesses; and (3) 1 year from the effective date for all other covered farms. As discussed in section XVIII.J of this document, we conclude these compliance periods are appropriate for covered activities involving sprouts covered under subpart M, to protect public health. We are also not providing extended compliance dates related to certain water requirements. Therefore, the one-to-three year compliance period applicable to the farm based on its size applies for compliance with all requirements of part 112.

3. Compliance Dates for Covered Activities Involving All Other Covered Produce

For covered activities involving all other covered produce (*i.e.*, except sprouts covered under subpart M) (*i.e.*, requirements of part 112 except those of subpart M apply), the compliance dates are as follows: (1) 4 years from the effective date (with the exception of compliance with certain requirements in subpart E, as discussed in the paragraphs that follow) for covered

farms that are very small businesses; (2) 3 years from the effective date (with the exception of compliance with certain requirements in subpart E, as discussed in the paragraphs that follow) for covered farms that are small businesses; and (3) 2 years from the effective date (with the exception of compliance with certain requirements in subpart E, as discussed in the paragraphs that follow) for all other covered farms. In addition, for covered activities involving covered produce (except sprouts covered under subpart M), we are providing the additional flexibility of extended compliance dates for certain water-related requirements. As discussed in section XIII.K of this document, the compliance period for the following requirements is 2 years beyond the compliance date for the rest of this rule applicable to the farm based on its size: §§ 112.44, 112.45, 112.46 (except § 112.46(a) and (b)(1)), 112.50(b)(5), 112.50(b)(6), 112.50(b)(7), and 112.50(b)(8). Accordingly, for these specified requirements, the compliance period is 6 years from the effective date for covered farms that are very small businesses, 5 years from the effective date for covered farms that are small businesses, and 4 years from the effective date for all other covered farms.

4. Compliance Dates for Farms Engaged in Covered Activities Involving Sprouts Covered Under Subpart M as Well as Other Covered Produce

For those covered farms that may be engaged in covered activities involving both sprouts covered under subpart M as well as other covered produce, both sets of compliance dates will apply depending on the produce involved in the covered activity. For those aspects of your operation relating to covered activities involving sprouts covered under subpart M, the compliance dates ranging from 1 to 3 years (based on size of your farm) will apply, and for other aspects of your operation relating to covered activities involving all other covered produce, the compliance dates ranging from 2 to 4 years (based on size of the farm) as well as the extended compliance dates ranging from 4 to 6 years (based on size of the farm) for certain specified water requirements will apply.

5. Compliance Dates Applicable to Farms Eligible for a Qualified Exemption

We are establishing three additional compliance dates applicable to farms eligible for a qualified exemption. First, as explained in section IX.C.7 of this document, the compliance date for the

records that a farm maintains to support its eligibility for a qualified exemption in accordance with §§ 112.5 and 112.7 is the effective date of this rule, *i.e.*, January 26, 2016. Farms need not comply with the requirement for a written record reflecting that the farm has performed an annual review and verification of continued eligibility for the qualified exemption until the farm's general compliance date, however. Second, we are establishing January 1, 2020, as the compliance date for the modified requirement of § 112.6(b)(1). A farm that is eligible for a qualified exemption must notify consumers as to the name and complete business address of the farm where the food is grown, harvested, packed, and held (see § 112.6(b)). If a food packaging label is required, the required notification must appear prominently and conspicuously on the label of the food (see § 112.6(b)(1)). This modified requirement may require some farms to update the labels of their packaged food products. For many labeling requirements, the time frame for a food establishment to comply with new or revised labeling requirements is governed by a uniform compliance date (see, *e.g.*, 79 FR 73201, December 10, 2014 and 77 FR 70885, November 28, 2012). Use of a uniform compliance date provides for an orderly and economical industry adjustment to new labeling requirements by allowing sufficient lead time to plan for the use of existing label inventories and the development of new labeling materials. This policy serves consumers' interests as well because the cost of multiple short-term label revisions that would otherwise occur would likely be passed on to consumers in the form of higher prices. We generally announce a uniform compliance date during November or December of even-numbered calendar years, and establish the uniform compliance date to be January 1 of an upcoming even-numbered calendar year. For example, in December, 2014, we issued a final rule establishing January 1, 2018, as the uniform compliance date for food labeling regulations that are issued between January 1, 2015, and December 31, 2016 (79 FR 73201). Likewise, in November, 2012, we issued a final rule establishing January 1, 2016, as the uniform compliance date for food labeling regulations that are issued between January 1, 2013, and December 31, 2014 (77 FR 70885, November 28, 2012). These uniform compliance dates provide a minimum of 1 year between the date when a food labeling regulation is issued and the date when a food

establishment must comply with that regulation. Following this pattern, we intend that the next uniform compliance date will be January 1, 2020 for food labeling regulations that are issued between January 1, 2017 and December 31, 2018. A farm that is eligible for a qualified exemption would become subject to the modified requirement in § 112.6(b)(1) during this timeframe—*i.e.*, by December 31, 2018. The compliance date that we are establishing for the modified requirement of § 112.6(b)(1) (*i.e.*, January 1, 2020) is consistent with the approach of a uniform compliance date and will provide such farms with more than 1 year from the applicable general compliance date to comply with this modified requirement. This compliance date also will provide such a farm with more than 4 years to comply with the modified requirement relative to the date of publication of this rule. Third, we are establishing the compliance dates for all other requirements in §§ 112.6 and 112.7. As explained under Comment 120, because of the difference in the bases for monetary cut-offs established in § 112.3 and in § 112.5, farms that are eligible for the qualified exemption may be either small businesses or very small businesses (as defined in § 112.3). Farms eligible for a qualified exemption (in accordance with § 112.5) must comply with all other modified requirements of §§ 112.6 and 112.7 within the compliance periods established for either a small business or a very small business, whichever is applicable. Based on the monetary cut-offs and definitions in § 112.3 and in § 112.5, a farm eligible for a qualified exemption must either be a small business or a very small business for purposes of this rule.

(Comment 444) Some comments further request clarification regarding the beginning of the compliance period. One comment asks us to account for the seasonal nature of farming operations and suggests the compliance period should begin on the date of the beginning of the first harvest period following the effective date of the rule.

(Response) See our response to Comment 443 for compliance dates, which are based on the size of a covered farm. Setting the compliance date for a farm based on the time of harvest, as the comment suggested, is challenging because harvest periods will vary greatly based on commodity, region, and the farm's practices, which would result in widely variable compliance dates. Therefore, we decline this request.

B. Effective Dates for Conforming Changes

The conforming amendment to part 11 adds a reference to the scope of part 11 that the records required under part 112 are not subject to part 11. The conforming amendment to part 16 adds a reference to the scope of part 16 for new procedures in part 112, subpart R that provide a person with an opportunity for a hearing under part 16. These conforming amendments are effective on January 26, 2016, the same date as the effective date of part 112. We are not establishing compliance dates for these conforming amendments. As a practical matter, compliance will be implemented by compliance with part 112.

C. Effective Date for Certain Provisions in the PCHF Regulation

The final human preventive controls rule established six new provisions (§§ 117.5(k)(2), 117.8, 117.405(c), 117.410(d)(2)(ii), 117.430(d), and 117.475(c)(13)) that refer to provisions in part 112. We announced our intent to publish a document in the **Federal Register** announcing the effective dates of these provisions (80 FR 55908). These provisions are effective on January 26, 2016, the same date as the effective date of part 112.

D. Effective Date for Certain Provisions in the PCAF Regulation

The final animal preventive controls rule established five new provisions (§§ 507.12(a)(1)(ii), 507.105(c), 507.110(d)(2)(ii), 507.130(d), and 507.175(c)(13)) that refer to provisions in part 112. We announced our intent to publish a document in the **Federal Register** announcing the effective dates of these provisions (80 FR 56170). These provisions are effective on January 26, 2016, the same date as the effective date of part 112.

XXV. Executive Order 13175

In accordance with Executive Order 13175, FDA has consulted with tribal government officials. A Tribal Summary Impact Statement has been prepared that includes a summary of tribal officials' concerns and how FDA has addressed them (Ref. 257). Persons with access to the Internet may obtain the Tribal Summary Impact Statement at <http://www.fda.gov/Food/GuidanceRegulation/FSMA/ucm334114.htm> or at <http://www.regulations.gov>. Copies of the Tribal Summary Impact Statement also may be obtained by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**.

XXVI. Economic Analysis of Impacts

FDA has examined the impacts of the final rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) (Ref. 142). Executive Orders 12866 and 13563 direct Agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). FDA believes this rule is a significant regulatory action under Executive Order 12866.

The Regulatory Flexibility Act requires Agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because small farms will bear a large portion of the costs, FDA concludes that the final rule will have a significant economic impact on a substantial number of small entities.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that Agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing “any rule that includes any federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$144 million, using the most current (2014) Implicit Price Deflator for the Gross Domestic Product. FDA expects this final rule to result in a 1-year expenditure that will exceed this amount.

The final analysis conducted in accordance with these Executive Orders and statutes is available in the docket for this rulemaking (Ref. 142) and at: <http://www.fda.gov/AboutFDA/ReportsManualsForms/Reports/EconomicAnalyses/>.

XXVII. Analysis of Environmental Impact

FDA has carefully considered the potential environmental effects of this action. FDA determined that the proposed action may significantly affect the quality of the human environment (21 CFR 25.22(b)) and, therefore, an EIS is necessary for the final rule (78 FR 50358, August 19, 2013). The Draft EIS was released for public comment (80 FR 1852, January 14, 2015). FDA considered the comments received on

the Draft EIS when preparing the Final EIS (see (Ref. 258)). Table 31 lists Federal Register publications regarding the EIS related to this rule.

FDA's Final EIS and record of decision (Ref. 126) (Ref. 150) may be seen in the Division of Dockets Management (see ADDRESSES) between 9

a.m. and 4 p.m., Monday through Friday.

TABLE 31—LIST OF FEDERAL REGISTER PUBLICATIONS REGARDING THE EIS

Description	Publication
Proposed Rule, Standards for Growing, Harvesting, Packing, and Holding of Produce for Human Consumption (Note: The categorical exclusion statement was cited as a reference in this document).	78 FR 3504; January 16, 2013.

XXVIII. Paperwork Reduction Act of 1995

This rule contains information collection provisions that are subject to review by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). A description of these provisions is given in the following paragraphs with an estimate of the annual recordkeeping and reporting burdens. Included in the estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each collection of information.

Title: Standards for the Growing, Harvesting, Packing and Holding of Produce for Human Consumption.

Description: Section 105 of FSMA adds section 419 to the FD&C Act (21 U.S.C. 350h) requiring FDA to adopt a final regulation to provide for minimum science-based standards for fruits and vegetables that are RACs based on known safety risks, and directing FDA to set forth in the final regulation those procedures, processes, and practices that we determine to minimize the risk of serious adverse health consequences or death, including those that are reasonably necessary to prevent the introduction of known or reasonably foreseeable hazards into produce and to provide reasonable assurances that produce is not adulterated under section 402 of the FD&C Act.

Description of Respondents: The regulation applies to farms that grow produce, meaning fruits and vegetables such as berries, tree nuts, herbs, and sprouts. There are 37,404 farms in the United States, excluding sprouting operations (Ref. 259), that would be covered by the rule. We estimate that there are approximately 285 sprouting operations covered by this rule. One section of the regulation also applies to some non-farm entities as described in

the Third-Party Disclosure Burden subsection of this section.

Exemptions or Eligibility for Exemptions

The rule includes provisions under which certain farms and produce are either not covered or eligible for an exemption and, instead, subject to certain modified requirements (see §§ 112.2 through 112.7).

Information Collection Burden Estimate

The estimated hourly burden is 20,484 one-time hours, and 1,112,641 annual hours. Furthermore, the estimated one-time third-party disclosure burden is 247 hours and the estimated annual third-party disclosure burden is 379,705 hours. FDA estimates the burden for this information collection as follows:

One-Time Hourly Burden

Agricultural Water—Documentation of Scientific Data

Section 112.50(b)(3) requires documentation of scientific data or information relied on to support the adequacy of a method used to satisfy the requirements of §§ 112.43(a)(1) and (a)(2). All covered farms that would treat their water to achieve a water quality requirement in the rule will be required to keep these records. Consequently, we estimate that 5,547 farms ([17,840 farms from table 18 of the RIA × 20 percent that do not rely on die-off] + [3,958 farms from table 19 of the RIA × 50 percent that do not re-inspect and correct]) would rely on documentation of scientific data or information to support the adequacy of a method used to satisfy these requirements. It is estimated that one recordkeeper for each of 5,547 farms will spend 0.5 hour one-time on this documentation, estimated to consist of gathering and maintaining the documentation of scientific data and

information. Therefore, 5,547 × 0.5 = 2,773 one-time hours to meet the requirement of § 112.50(b)(3).

Section 112.50(b)(5) requires farms that rely on a microbial die-off or removal rate to determine a time interval between harvest and end of storage, including other activities such as commercial washing, to achieve a calculated log reduction of generic *E. coli* in accordance with § 112.45(b)(1)(ii) to have documentation of the scientific data or information they rely on to support that rate. We estimate that 25 percent of all farms that rely on die-off, 3,661 (17,840 farms from table 18 of the RIA × 80 percent that rely on die-off × 25 percent) would generate these records for postharvest die-off intervals. It is estimated that two recordkeepers for each of 3,661 farms will spend 0.5 hour one-time on this documentation, estimated to consist of gathering and maintaining the documentation of scientific data and information. Therefore, 3,661 × 2 × 0.5 = 3,661 one-time hours to meet the requirement of § 112.50(b)(5).

Section 112.50(b)(8) requires all farms that choose to rely on an alternative under § 112.49 to have documentation of the scientific data or information they rely on to support that alternative. There are four types of alternatives that may be employed according to § 112.49(a)–(d).

Section 112.49(a) provides for an alternative microbial quality criterion (or criteria) using an appropriate indicator of fecal contamination, in lieu of the microbial quality criteria in § 112.44(b). We estimate that approximately 8,757 farms that irrigate (35,029 total farms × 25 percent) will generate these alternative records. It is estimated that one recordkeeper (one for each type of alternative offered) for each of 8,757 farms will spend 0.5 hour one-time on this documentation, estimated to consist of gathering and maintaining

the documentation of scientific data and information. Therefore, $8,757 \times 0.5 = 4,376$ one-time hours to meet the requirements of §§ 112.50(b)(8) and 112.49(a).

Section 112.49(b) provides for an alternative microbial die-off rate and an accompanying maximum time interval, in lieu of the microbial die-off rate and maximum time interval in § 112.45(b)(1)(i). We estimate that approximately 3,661 farms that rely on die-off (14,643 farms that rely on die-off \times 25 percent) will generate these alternative records. It is estimated that one recordkeeper (one for each type of alternative offered) for each of 3,661 farms will spend 0.5 hour one-time on this documentation, estimated to consist of gathering and maintaining the documentation of scientific data and information. Therefore, $3,661 \times 0.5 = 1,830$ one-time hours to meet the requirements of §§ 112.50(b)(8) and 112.49(b).

Section 112.49(c) provides for an alternative minimum number of samples used in the initial survey for an untreated surface water source, in lieu of the minimum number of samples required under § 112.46(b)(1)(i)(A). We estimate that approximately 2,551 farms that utilize surface water (12,554 irrigated farms that use surface water less the percentage estimated on public water sources \times 20 percent) will generate these alternative records. It is estimated that one recordkeeper (one for each type of alternative offered) for each of 2,511 farms will spend 0.5 hour one-time on this documentation, estimated to consist of gathering and maintaining the documentation of scientific data and information. Therefore, $2,511 \times 0.5 = 1,255$ one-time hours to meet the requirements of §§ 112.50(b)(8) and 112.49(c).

Section 112.49(d) provides for an alternative minimum number of samples used in the annual survey for an untreated surface water source, in lieu of the minimum number of samples required under § 112.46(b)(2)(i)(A). We estimate that approximately 2,551 farms that utilize surface water (12,554 irrigated farms that use surface water less the percentage estimated on public water sources \times 20 percent) will generate these alternative records. It is estimated that one recordkeeper (one for each type of alternative offered) for each of 2,511 farms will spend 0.5 hour one-time on this documentation, estimated to consist of gathering and maintaining the documentation of scientific data and information. Therefore, $2,511 \times 0.5 = 1,255$ one-time hours to meet the requirements of §§ 112.50(b)(8) and 112.49(c).

Section 112.50(b)(9) requires all farms that are required to test their agricultural water in compliance with § 112.46 to have documentation of any analytical methods that they choose to use for such testing in lieu of the method that is incorporated by reference in § 112.151(a). It is not known how many farms will use other analytical methods; however, it is estimated that one recordkeeper will work a total of 5 hours one-time to fulfill this requirement, estimated as the time needed to search for and collect the documentation of the alternative analytical methods.

Sprouts—Establishment of Environmental Monitoring Plan

Section 112.150(b)(2) requires sprout operations to establish and keep a written environmental monitoring plan in accordance with § 112.145. There is a one-time burden estimated for the establishment of this plan and an annual burden estimated for the maintenance of this plan. For 74 very small farms, it is estimated that the establishment of this environmental monitoring plan (that is, determining the information needed to be included in the monitoring plan, including the corrective action plan, and developing a template for the plan) record is a one-time burden of 7 hours. Therefore, $46 \text{ farms} \times 7 \text{ hours} = 321$ one-time hours to comply with § 112.150(b)(2). For 60 small farms, it is estimated that the establishment of this environmental monitoring plan (that is, determining the information needed to be included in the monitoring plan, including the corrective action plan, and developing a template for the plan) is a one-time burden of 12 hours. Therefore, $37 \text{ farms} \times 12 \text{ hours} = 446$ one-time hours to comply with § 112.150(b)(2). For 94 large farms, it is estimated that the establishment of this environmental monitoring plan (that is, determining the information needed to be included in the monitoring plan, including the corrective action plan, and developing a template for the plan) is a one-time burden of 17 hours. Therefore, $94 \text{ farms} \times 17 \text{ hours} = 1,592$ one-time hours to comply with § 112.150(b)(2).

Sprouts—Establishment of Sampling Plan

Section 112.150(b)(3) requires the documentation of the written sampling plan for each production batch of sprouts in accordance with § 112.147(a). It is estimated that there is a one-time burden to establish this record (that is, determining the information needed to be included in the sampling plan, including a corrective action plan, and

developing a template for the plan) and an annual burden to maintain this record (such as updating or making needed changes to the plan). For each of 177 sprout farms, it is estimated that the one-time burden to establish a written sampling plan is 8 hours. Therefore, $8 \text{ hours} \times 177 \text{ sprout farms} = 1,414$ one-time burden hours for sprout farms to comply with § 112.150(b)(3).

Sprouts—Documentation of Scientific Data

Section 112.150(b)(5) requires sprout operations to have documentation of any analytical methods used in lieu of the methods for both environmental testing and batch testing that are incorporated by reference in §§ 112.152 and 112.153. It is not known how many sprout operations will use other analytical methods; however, it is estimated that one recordkeeper will work a total of 5 hours one-time to fulfill this requirement, estimated as the time needed to search for and collect the documentation of the alternative analytical methods.

In addition, § 112.144(c) requires sprout operations to conduct testing for additional pathogens when certain conditions are met, and § 112.150(b)(5) requires sprouting operations to have documentation of any analytical methods used for such testing because there is no specific method for such testing incorporated by reference in § 112.152 or 112.153. It is not known if or when there will be a pathogen(s) meeting the relevant criteria; however, it is estimated that one recordkeeper will work a total of 2 hours one-time to fulfill this requirement, estimated as the time needed to establish a new testing routine. Therefore, we estimate it will take 177 sprouters 353 records (177×2) to fulfill this requirement. At two hours per record, this represents a total hourly burden of 707 (353×2) to fulfill the requirements of §§ 112.150(b)(5) and § 112.144(c).

Variances

Section 112.171 of this rule allows States, tribes, and foreign countries to petition FDA for a variance from one or more requirements of the rule. Section 112.172 requires the competent authority (*i.e.*, the regulatory authority for food safety) for a State, tribe, or a foreign country to submit a petition to seek a variance, and § 112.173 describes what must be included in the Statement of Grounds in a petition requesting a variance.

Data on the number of hours needed to assemble the information required for a petition are not available. However, it is estimated that it will take one

recordkeeper 80 hours to compile the relevant information and submit the petition to FDA. Furthermore, it is estimated that an additional recordkeeper (for example, a supervisor) will evaluate and review the petition before it is submitted. We estimate that it will take an additional 40 hours for the additional recordkeeper to review the submission. Therefore, it is estimated that a State, tribe, or foreign government would spend a total of 120 hours on a petition, and this would be a one-time burden. Data do not exist to estimate how many petitions FDA may get in a year; however, for the purposes of this analysis, it is estimated that FDA may receive seven petitions. Therefore, 120 hours \times 7 petitions = 840 hours to comply with the requirements of § 112.173.

Annual Hourly Burden

Qualified Exempt Farms—Documenting Eligibility

Section 112.7(b) requires farms eligible for the qualified exemption in accordance with § 112.5 to establish and keep adequate records necessary to demonstrate that the farm satisfies the criteria for a qualified exemption, including a written record reflecting that the owner, operator, or agent in charge of the farm has performed an annual review and verification of the farm's continued eligibility for the qualified exemption. We calculate that there are a total of 3,285 farms that will incur the costs of recordkeeping associated with demonstrating qualified exempt status. Therefore, it is estimated that one recordkeeper on each of 3,285 farms will spend an average of 0.5 hours per year on recordkeeping related to documenting eligibility for the qualified exemption. Therefore, 3,285 recordkeepers \times 0.5 average hours per recordkeeper = 1,643 hours to meet the requirements of § 112.7(b).

Training Records

Section 112.30(b)(1) requires the establishment and maintenance of records of training documenting required training of personnel, including the date of training, topics covered, and the persons(s) trained. We calculate that there are a total of 24,420 farms (37,404 total farms \times 0.65 not currently keeping training records) that will incur the costs of worker training recordkeeping. Therefore, it is estimated that one recordkeeper on each of 24,420 farms will spend an average of 7.25 hours per year on recordkeeping related to training requirements (recording and maintaining the dates and topics of training, and person(s) trained) of this

final rule. Therefore, 24,420 recordkeepers \times 7.25 average hours per recordkeeper = 177,045 hours to meet the requirements of § 112.30(b)(1).

Water Testing

Water Testing for Zero Detectable Generic *E. coli*. Section 112.46(c) requires testing untreated groundwater for the purposes that are subject to the requirements of § 112.44(a). We calculate there are a total of 26,038 farms (all farms with activities during and after harvest, and sprout farms using untreated ground water for growing sprouts) that will incur these costs. Therefore, it is estimated that two recordkeepers on each of 26,038 farms will spend an average of 0.66 hours per year on testing water for zero detectable generic *E. coli* of this final rule. Therefore, 26,038 farms \times 2 recordkeepers \times 0.66 average hours per recordkeeper = 34,371 hours to meet the requirements of §§ 112.44(a) and 112.46(c).

Testing for GM of 126 CFU/100 mL and STV of 410 CFU/100 mL Generic *E. coli*—Untreated Surface Water Used For Direct Application Irrigation of Non-Sprout Covered Produce. Section 112.46(b) requires testing each such source of water used for the purposes that are subject to the requirements of § 112.44(b). We calculate that there are a total of 12,554 farms (all irrigated farms using surface water less the percentage estimated on public water sources) that will incur these costs. Therefore, it is estimated that 6.29 recordkeepers on each of 12,554 farms will spend an average of 0.92 hours per year on Testing for GM of 126 CFU/100 mL and STV of 410 CFU/100 mL Generic *E. coli*—Untreated Surface Water Used For Direct Application Irrigation of Non-Sprout Covered Produce of this final rule. Therefore, 12,554 farms \times 6.29 recordkeepers \times 0.92 average hours per recordkeeper = 72,648 hours to meet the requirements of §§ 112.44(b) and 112.46(b).

Testing for GM of 126 CFU/100 mL and STV of 410 CFU/100 mL Generic *E. coli*—Untreated Ground Water Used For Direct Application Irrigation of Non-Sprout Covered Produce. Section 112.46(b) requires testing each such source of water used for the purposes that are subject to the requirements of § 112.44(b). We calculate that there are a total of 9,471 farms (all irrigated farms using ground water less the percentage estimated on public water sources) that will incur these costs. Therefore, it is estimated that 1.4 recordkeepers on each of 9,471 farms will spend an average of 0.92 hours per year on Testing for GM of 126 CFU/100 mL and

STV of 410 CFU/100 mL Generic *E. coli*—Untreated Ground Water Used For Direct Application Irrigation of Non-Sprout Covered Produce of this final rule. Therefore, 9,471 farms \times 1.4 recordkeepers \times 0.92 average hours per recordkeeper = 12,198 hours to meet the requirements of §§ 112.44(b) and 112.46(b).

Section 112.45 requires water testing as part of certain options for corrective steps when the water quality requirements of §§ 112.41 or 112.44 are not met (see §§ 112.45(a)(1)(i) and 112.45(b)(2)). We calculate approximately one percent of all irrigated farms will need to conduct these tests; therefore 298 farms (29,763 \times 1 percent) will incur these costs. Therefore, it is estimated that 1 recordkeeper on each of the 298 farms will spend an average of 0.33 hours per year on these actions taken when requirements in subpart E are not met. Therefore, 298 farms \times 1 recordkeeper \times 0.33 average hours per recordkeeper = 98 hours to meet the requirements of § 112.45.

Recordkeeping Related to Water

Section 112.50(b)(1) requires the establishment and maintenance of records of the Findings of Water System Inspections. We calculate that there are 34,369 (all covered farms not currently keeping these records) that will incur the costs of water inspection recordkeeping. Therefore, it is estimated that 4 recordkeepers on each of 34,369 farms will spend an average of 0.8 hours per year on recordkeeping related to the Findings of Water System Inspections. Therefore, 34,369 farms \times 4 recordkeepers \times 0.8 average hours per recordkeeper = 110,066 hours to meet the requirement of § 112.50(b)(1).

Section 112.50(b)(2) requires the establishment and maintenance of Records of Testing for 0 Detectable Generic *E. coli*. We calculate that 26,038 farms (see testing discussion) will incur the costs of recordkeeping of testing for 0 detectable generic *E. coli*. Therefore, it is estimated that 2 recordkeepers on each of the 26,038 farms will spend an average of 0.33 hours per year on recordkeeping related to Records of Testing for 0 Detectable Generic *E. coli*. Therefore, 26,038 farms \times 2 recordkeepers \times 0.33 average hours per recordkeeper = 17,185 hours to meet the requirements of § 112.50(b)(2).

Section 112.50(b)(2) requires the establishment and maintenance of Records of Testing for GM of 126 CFU/100 mL and STV of 410 CFU/100 mL Generic *E. coli* for Untreated Surface Water Used for Direct Application Irrigation of Non-Sprout Covered

Produce. We calculate that 12,554 farms (see previous testing discussion) will incur the costs of establishing these records. Therefore, it is estimated that 6.29 recordkeepers on each of the 12,554 farms will spend an average of 0.08 hours per year on this recordkeeping. Therefore, 12,554 farms \times 6.29 recordkeepers \times 0.08 average hours per recordkeeper = 6,317 hours to meet the requirements of § 112.50(b)(2). As noted in response to Comment 229, we are exploring the development of an online tool to allow covered farms to derive their GM and STV values and appropriate time intervals between last irrigation and harvest using the 0.5 log per day die-off rate, based on input of sample data, such that farms would not need to perform the necessary calculations themselves. We expect such a tool to reduce the recordkeeping burden associated with testing of untreated surface and untreated ground water (§§ 112.46(b) and 112.50(b)(2)) and time intervals applied between last irrigation and harvest (§§ 112.45(b)(1) and 112.50(b)(6)). Moreover, FDA will not be collecting, storing, or otherwise using any water testing sample data that farms enter into the online tool to calculate the GM and STV values and develop or update their microbial water quality profiles.

Section 112.50(b)(2) also requires the establishment and maintenance of Records of Testing for GM of 126 CFU/100 mL and STV of 410 CFU/100 mL Generic *E. coli* for Untreated Ground Water Used for Direct Application Irrigation of Non-Sprout Covered Produce. We calculate that 9,471 farms (see previous testing discussion) will incur the costs of establishing these records. Therefore, it is estimated that 1.4 recordkeepers on each of the 9,471 farms will spend an average of 0.08 hours per year on this recordkeeping. Therefore, 9,471 farms \times 1.4 recordkeepers \times 0.08 average hours per recordkeeper = 1,061 hours to meet the requirements of § 112.50(b)(2). As noted previously, we expect development of an online tool to reduce the recordkeeping burden associated with testing of untreated surface and untreated ground water required under §§ 112.46(b) and 112.50(b)(2).

Section 112.50(b)(4) requires Documentation of Results of Monitoring Water Treatment under § 112.43(b). We calculate that 5,547 farms (the proportion of covered farms that do not use municipal water sources and who are not able to use other options to otherwise meet quality criteria) will incur the costs of documentation of monitoring water treatment. Therefore, it is estimated that 1 recordkeeper on

each of the 5,547 farms will spend an average of 0.98 hours per year on recordkeeping related to Monitoring Water Treatment. Therefore, 5,547 farms \times 1 recordkeeper \times 0.98 average hours per recordkeeper = 5,436 hours to meet the requirements of § 112.50(b)(4).

Section 112.50(b)(6) requires documentation of any corrective actions taken in accordance with § 112.45. Further, where time intervals or (calculated) log reductions are applied in accordance with § 112.45(b)(1)(i) and/or (b)(1)(ii), such documentation must include the specific time interval or log reduction applied, how the time interval or log reduction was determined, and the dates of corresponding activities such as the dates of last irrigation and harvest, the dates of harvest and end of storage, and/or the dates of activities such as commercial washing. We calculate that 14,643 farms will incur the costs of documentation of any corrective actions taken in accordance with § 112.45, including any time intervals or calculated log reductions applied. Therefore, it is estimated that 1 recordkeeper on each of the 14,643 farms will spend an average of 0.5 hours per year on recordkeeping related to corrective actions applied. Therefore, 14,643 farms \times 1 recordkeeper \times 0.5 average hours per recordkeeper = 7,322 hours to meet the requirements of § 112.50(b)(6). As noted previously, we expect development of an online tool to reduce the recordkeeping burden associated with time intervals applied between last irrigation and harvest as required under §§ 112.45(b)(1) and 112.50(b)(6).

Section 112.50(b)(7) requires annual documentation of the results or certificates of compliance from a Public Water System required under § 112.46(a)(1) or (a)(2), if applicable. We calculate that 9,108 farms (the number of farms using public water systems such as municipal water sources) will incur the costs of getting this annual documentation from their public water systems. Therefore, it is estimated that 1 recordkeeper on each of the 9,108 farms will spend an average of 0.33 hours per year on recordkeeping related to Documentation from Public Water Systems. Therefore, 9,108 farms \times 1 recordkeeper \times 0.33 average hours per recordkeeper = 3,005 hours to meet the requirements of § 112.50(b)(7).

Recordkeeping Related to Biological Soil Amendments of Animal Origin

Section 112.60(b) of this rule specifies the records that covered produce farms must establish and keep regarding biological soil amendments of animal origin.

For treated soil amendments acquired from a third party, § 112.60(b)(1) requires documentation, at least annually, that certain criteria have been met, namely that: (1) The process used to treat the biological soil amendment of animal origin is a scientifically valid process that has been carried out with appropriate process monitoring; and (2) The biological soil amendment of animal origin has been handled, conveyed and stored in a manner and location to minimize the risk of contamination by an untreated or in process biological soil amendment of animal origin. It is estimated that, for any covered produce farm already using treated biological soil amendments from a third party, this requirement does not represent a new recordkeeping burden. Furthermore, to account for the possibility that this may still be a new recordkeeping burden for farms using soil amendments acquired from a third party, it is estimated that this requirement will be a new recordkeeping burden for an additional 10 percent of remaining covered farms (35,029 \times 0.10 = 3,503). Therefore, for the purposes of this analysis, it is estimated that one recordkeeper for each of a maximum of 3,503 farms will spend 0.25 hour annually to meet this requirement, estimated to consist of the act of acquiring and maintaining documentation. Therefore, 3,503 recordkeepers \times 0.25 hour = 876 annual hours.

Section 112.60(b)(2) of this rule requires covered farms to document, for a treated biological soil amendment of animal origin produced by the covered farm, documentation that process controls (for example, time, temperature, and turnings) were achieved. NASS data do not exist that would make it possible to estimate how many covered farms would choose to produce treated biological soil amendments of animal origin for use on their own farms. However, using the USDA's 1999 Fruit and Vegetable Survey (Ref. 260), it is estimated that 15 percent of farms that claim to use manure also claim that the manure is composted on farm. Furthermore, using data from NASS, the RIA estimates that a total of 2,802 covered produce farms use manure (either as a component of stabilized compost or raw). For the purposes of this analysis, we assume, as an upper bound, that 420 covered farms (2,802 \times 0.15 = 420) choose to produce treated biological soil amendments of animal origin for their own farms, and that one recordkeeper for each of the 420 farms will spend 0.5 hour annually on this requirement, estimated to

consist of recording confirmation of process control achievement. Therefore, 420 recordkeepers \times 0.5 hour = 210 annual hours.

Recordkeeping Related to Cleaning and Sanitation

Section 112.140(b)(1) requires establishment and maintenance of records related to cleaning and sanitation, including cleaning worker tools and machinery. We calculate that 16,061 very small farms (farms that are not currently cleaning and sanitizing tools plus 50 percent of farms that are currently cleaning and sanitizing tools) will incur the costs of recordkeeping related to cleaning and sanitizing worker tools. Therefore, it is estimated that 1 recordkeeper on each of the 16,061 very small farms will spend an average of 8 hours per year on recordkeeping related to cleaning and sanitizing worker tools. Therefore, 16,061 very small farms \times 1 recordkeeper \times 8 average hours per recordkeeper = 128,485 hours to meet the requirements of § 112.140(b)(1). We calculate that 8,635 small and large farms (farms that are not currently cleaning and sanitizing tools plus 50 percent of farms that are currently cleaning and sanitizing tools) will incur the costs of recordkeeping related to cleaning and sanitizing worker tools. Therefore, it is estimated that 1 recordkeeper on each of the 8,635 small and large farms will spend an average of 25 hours per year on recordkeeping related to cleaning and sanitizing worker tools. Therefore, 8,635 small and large farms \times 1 recordkeeper \times 25 average hours per recordkeeper = 215,871 hours to meet the requirements of § 112.140(b)(1).

Section 112.140(b)(1) also requires establishment and maintenance of records related to the cleaning and sanitizing machinery. We calculate that 13,156 very small farms (farms that are not currently cleaning and sanitizing machinery plus 50 percent of farms that are currently cleaning and sanitizing machinery) will incur the costs of recordkeeping related to cleaning and sanitizing machinery. Therefore, it is estimated that 1 recordkeeper on each of the 13,156 very small farms will spend an average of 8 hours per year on recordkeeping related to cleaning and sanitizing machinery. Therefore, 13,156 very small farms \times 1 recordkeeper \times 8 average hours per recordkeeper = 105,248 hours to meet the requirements of § 112.140(b)(1). We calculate that 7,073 small and large farms (farms that are not currently cleaning and sanitizing machinery plus 50 percent of farms that are currently cleaning and sanitizing

machinery) will incur the costs of recordkeeping related to cleaning and sanitizing machinery. Therefore, it is estimated that 1 recordkeeper on each of the 7,073 small and large farms will spend an average of 25 hours per year on recordkeeping related to cleaning and sanitizing machinery. Therefore, 7,073 small and large farms \times 1 recordkeeper \times 25 average hours per farm = 176,831 hours to meet the requirements of § 112.140(b)(1).

Testing Requirements Related to Sprouts

Sections 112.144(b) and (c), and 112.147 requires testing spent sprout irrigation water from each production batch of sprouts, or if such testing is not practicable, each production batch of sprouts at the in-process stage for certain pathogens, and § 112.150(b)(4) requires recordkeeping related to those tests. This burden is estimated to vary across farm size. It is estimated that the burden associated with testing is an average of 0.5 hour per test. This time burden is estimated to include collecting and preparing the sample. We estimate that 33 very small sprout farms produce 3,710 batches, 27 small sprout farms produce 2,976 batches, and 68 large sprout farms produce 33,623 batches. Each farm will have one recordkeeper for each test. Small and very small farms will average 125 (50 \times 2.5 one each for *E. coli* and *Salmonella* and 0.5 to reflect the uncertainty associated with applicability of testing requirements for additional pathogens) tests per farm; large farms will average 558 (223 \times 2.5) tests.

It is estimated that a total of 4,163 batches of sprouts will be tested annually for *E. coli* and *Salmonella* and, if certain criteria are met, emerging pathogens across 33 very small farms. Therefore, 4,163 tests \times 0.5 hour per test = 2,081 annual hours for very small farms to comply with §§ 112.144(b) and (c) and 112.147. It is estimated that a total of 3,375 batches of sprouts will be tested annually across 27 small farms. Therefore 3,375 tests \times 0.5 hour per test = 1,688 annual hours for small farms to comply with §§ 112.144(b) and (c) and 112.147. It is estimated that 37,882 batches of sprouts will be tested annually across 68 large farms. Therefore, 37,882 test \times 0.5 hour per = 18,941 annual hours for large farms to comply with §§ 112.144(b) and (c) and 112.147.

Sections 112.144(a) and 112.145 require testing the sprout growing, harvesting, packing, and holding environment for *Listeria* spp. or *L. monocytogenes*, and § 112.150(b)(4) requires recordkeeping related to those

tests. This burden is estimated to vary across farm size. It is estimated that the burden associated with testing is 0.15 hour to collect and prepare each sample. We expect that all firms will sample on a monthly basis; it is also expected that the number of samples will vary with the size of the farm. We expect very small farms to average five samples for each test; small farms to average ten samples per test; and large farms to average 15 samples. More samples are expected as the size of the farm increases because we estimate that the number and location of sampling sites, including appropriate food-contact surfaces and non-food-contact surfaces of equipment and other surfaces would increase as the farm size increases. It is estimated that one recordkeeper from each of the farms will be responsible for collecting samples. Therefore, to comply with the requirements of §§ 112.144(a) and 112.145, 33 very small farms will incur a total of 300 hours of burden annually (33 farms \times 5 samples \times 12 annual tests \times 0.15 hour per sample); 27 small farms will incur a total of 486 hours annually, (27 farms \times 10 samples \times 12 annual tests \times 0.15 hour per sample); and 68 large farms will incur a total of 1,835 hours (68 farms \times 15 samples \times 12 annual tests \times 0.15 hour per sample).

Recordkeeping Requirements Related to Sprouts

Section 112.150(b)(1) requires documentation of treatment of seeds or beans or documentation of previous seed treatment by a third party. This burden is expected to vary across farms; however, this documentation burden is estimated to be 0.2 hour per activity, estimated to consist of the time needed to record the treatment of seeds or beans. It is estimated that one recordkeeper per very small farm will document this activity 50 times annually. Therefore, 33 very small farms \times 50 records = 1,665 records \times 0.2 hours per record = 333 hours for very small farms to comply with § 112.150(b)(1). It is estimated that one recordkeeper per small farm will document this activity 50 times annually. Therefore, 27 small farms \times 50 records = 1,350 records \times 0.2 hours per record = 270 hours for small farms to comply with § 112.150(b)(1). It is estimated that one recordkeeper per large farm will document this activity about 223 times annually. Therefore, 68 large farms \times 223 records = 15,153 records \times 0.2 hours per record = 3,031 hours for large farms to comply with § 112.150(b)(1).

Section 112.150(b)(2) requires sprout operations to establish and keep a written environmental monitoring plan

in accordance with § 112.145. It is estimated that there is a one-time burden to establish this record (that is, determining the information needed to be included in the sampling plan and developing a template for the plan) and an annual burden to maintain this record (such as updating or making needed changes to the plan). For annual burdens, it is estimated that each record will require one recordkeeper to work 0.15 hour to maintain the environmental monitoring plan (such as updating or making needed changes to the plan), across all farm sizes. For 46 very small farms, it is estimated that one record will be generated annually. Therefore, $46 \text{ records} \times 0.15 \text{ hour per record} = 7$ total annual hours for very small farms to comply with § 112.150(b)(2). For 37 small farms, it is estimated that 37 total records will be generated annually. Therefore, $37 \text{ records} \times 0.15 \text{ hour per record} = 6$ total annual hours for small farms to comply with § 112.150(b)(2). For 94 large farms, it is estimated that 94 total records will be generated annually. Therefore, $94 \text{ records} \times 0.15 \text{ hour per record} = 14$ total annual hours for very small farms to comply with § 112.150(b)(2).

Section 112.150(b)(3) requires the documentation of the written sampling plan for each production batch of sprouts in accordance with § 112.147(a). It is estimated that there is a one-time burden to establish this record (that is, determining the information needed to be included in the sampling plan and developing a template for the plan) and an annual burden to maintain this record (such as updating or making needed changes to the plan). For each of 177 sprout farms, it is estimated that there will be an annual burden of 1 hour per farm to update and make needed changes to the plans. Therefore, $177 \text{ sprout farms} \times 1 \text{ hour} = 177$ annual hours for sprout farms to comply with § 112.150(b)(3).

Section 112.150(b)(4) requires records of all testing conducted in accordance with the requirements of § 112.144 for sprouting operations. To comply with this, records of testing for *E. coli* O157:H7 and *Salmonella* spp. and any pathogen meeting the criteria in § 112.144(c) will be kept, and it is estimated that each such record will represent a burden of 0.15 hour, estimated as the time needed to record the results of the tests, but the number of records will vary across farm sizes.

For 33 very small sprouting operations testing for *E. coli* O157:H7 and *Salmonella* and other pathogens as applicable, it is estimated that 2,498 total records will be generated annually (or an average of 50.13 per firm \times 1.5 to account for the uncertainty associated with applicability of testing requirements for additional pathogens). Therefore, $2,498 \times 0.15 = 375$ annual hours for very small sprouting operations to comply with § 112.150(b)(4). For 27 small sprouting operations it is estimated that 2,025 total records will be generated annually (or an average of about 49.6 per sprouting operation \times 1.5 to account for the uncertainty associated with applicability of testing requirements for additional pathogens). Therefore, $2,025 \text{ records} \times 0.15 \text{ hour per record} = 304$ annual hours for small sprouting operations to comply with § 112.150(b)(4) with respect to testing for *E. coli* O157:H7 and *Salmonella* and other pathogens as applicable. For 68 large sprouting operations it is estimated that 22,689 total records will be generated annually (or an average of about 222.6 per sprouting operation \times 1.5 to account for the uncertainty associated with applicability of testing requirements for additional pathogens). Therefore, $22,689 \text{ records} \times 0.15 \text{ hour per record} = 3,403$ annual hours for large sprouting operations to comply with § 112.150(b)(4) with respect to testing for *E. coli* O157:H7 and *Salmonella*, and other pathogens as applicable.

Section 112.150(b)(4) requires records of all testing conducted in accordance with the requirements of §§ 112.144 and 112.145 for sprouting operations. To comply with this, records of testing for *Listeria* spp. or *L. monocytogenes* will be kept, and it is estimated that each such record will represent a burden of 0.17 hour, estimated as the time needed to record the results of the tests, but the number of records will vary across sprouting operation sizes. For 33 very small sprouting operations, it is estimated that a total of 1,998 records will be kept annually (or an average of 60 per sprouting operation) with respect to testing for *Listeria* spp. or *L. monocytogenes*. Therefore, $1,998 \text{ records} \times 0.17 \text{ hour per record} = 340$ total annual hours for small sprouting operations to comply with § 112.150(b)(4) with respect to testing for *Listeria* spp. or *L. monocytogenes*.

For 27 small farms, it is estimated that a total of 3,240 records will be kept annually (or an average of 120 per sprouting operation). Therefore, $3,240 \text{ records} \times 0.17 \text{ hour per record} = 551$ total annual hours for small farms to comply with § 112.150(b)(4) with respect to testing for *Listeria* spp. or *L. monocytogenes*. For 68 large sprouting operations, it is estimated that a total of 12,231 records will be kept annually (or an average of 180 per sprouting operation). Therefore, $12,231 \text{ records} \times 0.17 \text{ hour per record} = 2,079$ total annual hours for large sprouting operations to comply with § 112.150(b)(4) with respect to testing for *Listeria* spp. or *L. monocytogenes*.

Section 112.150(b)(6) requires records of corrective actions conducted in accordance with the requirements of §§ 112.142(b)(2), 112.146, and 112.148 for sprouting operations. It is estimated that all sprouting operations may collectively perform approximately 285 corrective actions annually. For each of 285 sprout operations, it is estimated that there will be an annual burden of 0.5 hour per operation to make the required record documenting these corrective actions. Therefore, $285 \text{ sprout farms} \times 0.5 \text{ hour} = 143$ annual hours for sprout farms to comply with § 112.150(b)(6).

Commercial Processing Exemption Recordkeeping

Under § 112.2(b)(4), farms relying on the commercial processing exemption must establish and maintain records of their required disclosures to customers regarding produce that has not been commercially processed and the annual written assurances obtained from customers regarding such commercial processing. It is estimated that § 112.2(b)(4) represents a recordkeeping requirement for 4,568 entities (4,153 farms that only grow produce exempt from the rule due to commercial processing, who would otherwise be subject to the rule \times an additional 10 percent to account for covered farms relying on this exemption for only some of their produce, and other entities that will be required to make these records). We estimate that it will take approximately 5 minutes to make these records each year. Therefore, $4,568 \text{ entities} \times 0.08 \text{ hour per entity} = 366$ annual hours to comply with § 112.2(b)(4).

TABLE 32—ESTIMATED ANNUAL RECORDKEEPING BURDEN
[One-time hourly burden]

Annual Hourly Burden	1,112,641
Operating Costs	10.42

Third-Party Disclosure Burden

Under § 112.6(b) certain qualified exempt farms (those that would otherwise be covered by the rule but that meet the criteria in § 112.5) must comply with certain food labeling or disclosure requirements. A total of 21,666 non-sprout farms are estimated to be eligible for the qualified exemption in § 112.5. After subtracting the number of farms that are not covered by the rule because they have annual monetary value of produce sold of \$25,000 or less, 3,285 farms remain that must comply with § 112.6(b). It is estimated that it will take the farm operator approximately 5 minutes to buy and prepare one poster board. It is also estimated that the operator will buy posters bi-weekly. The total annual time required to buy and prepare a poster board is 24 hours [(60 minutes × 24)/60]. Therefore, 3,285 farms × 24 annual hours = 78,840 annual hours for these farms to comply with the requirement of § 112.6(b).

It is estimated that farms with other marketing channels will provide their name and complete business address on an invoice or receipt that accompanies their product. We estimate that a total of 3,083 farms will incur a cost to comply with this provision. It is estimated that it will take a farm operator 5 minutes (0.08 hour) to change this template for new invoices, and that this is a one-time burden. Therefore, 3,083 × 0.08 hour = about 247 hours to comply with § 112.6(b).

Under § 112.31(b)(2), covered farms are required to instruct personnel to notify their supervisor(s) if they are have, or if there is a reasonable possibility that they have an applicable health condition (such as communicable illnesses that present a public health risk in the context of normal work duties, infection, open lesion, vomiting, or diarrhea). The number of farms that will need to implement this disclosure

is based on the estimated number of farms that are not currently implementing the requirements imposed by the rule in the RIA. It is estimated that one worker from each of 29,175 farms will spend 5 minutes annually to comply with § 112.31(b)(2), which will consist of the employer giving verbal instructions to employees. Therefore, 29,175 × 5 minutes = 2,334 hours to comply with § 112.31(b)(2).

Under § 112.33(a), covered farms must make visitors aware of policies and procedures to protect covered produce and food-contact surfaces from contamination by people and take all steps reasonably necessary to ensure that visitors comply with such policies and procedures. It is estimated that farms with voluntary food safety programs in place will already have practices aligned with this provision; therefore no burden is estimated for those farms. After subtracting these farms, it is estimated that § 112.33(a) represents a third-party disclosure requirement for 35,556 farms. We estimate that it will take 8 hours annually for the operator to inform visitors of the farm policies, including showing them where the restrooms are, and to take reasonable steps to ensure their compliance, such as monitoring visitors to ensure they are following the policies and procedures. Therefore, 35,556 farms × 8 hours per farm = 284,448 annual hours to comply with § 112.33(a).

Under § 112.2(b)(2), farms must disclose in documents accompanying produce that is eligible for the commercial processing exemption that the food is “not processed to adequately reduce the presence of microorganisms of public health significance.” It is estimated that § 112.2(b)(2) represents a third-party disclosure requirement for 4,568 entities (4,153 farms that only grow produce exempt from the rule due to commercial processing, who would otherwise be subject to the rule × an

additional 10 percent to account for covered farms relying on this exemption for only some of their produce, and other entities that will be required to make these disclosures). We estimate that it will take 0.08 hours to provide this statement, and the statement will occur on average about 26 times per year (or once a week for half of the year). Therefore, 4,568 entities × 0.08 hours per entity × 26 shipments = 9,502 annual hours to comply with § 112.2(b)(2).

Under § 112.2(b)(3), farms relying on the commercial processing exemption must receive certain annual documentation from their buyers ensuring that the relevant produce will receive the required processing. It is estimated that § 112.2(b)(3) represents a third-party disclosure requirement for 4,568 entities (the same entities described previously regarding § 112.2(b)(2)). We estimate that it will take 1 hour to provide this documentation each year. Therefore, 4,568 entities × 1 hour per entity = 4,568 annual hours to comply with § 112.2(b)(3).

Under § 112.142(b)(2), with certain limited exceptions, if a sprouting operation knows or has reason to believe that a lot of seeds or beans may be contaminated with a pathogen, the sprouting operation must report that information to the seed grower, distributor, supplier, or other entity from whom the sprouting operation received the seeds or beans. We estimate that this requirement will apply to only a small percentage of sprouting operations; therefore this requirement represents a burden to 13 sprouting operations (128 × 10 percent). We estimate that it will take 1 hour to provide this documentation each year. Therefore, 13 sprouting operations × 1 hour per sprouting operations = 13 annual hours to comply with § 112.2(b)(3).

TABLE 33—ESTIMATED THIRD-PARTY DISCLOSURE BURDEN

21 CFR Section (or FDA Form #)	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total hours

XXIX. Federalism

FDA has analyzed this final rule in accordance with the principles set forth in Executive Order 13132. FDA has determined that the rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, FDA has concluded that the rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

List of Subjects

21 CFR Part 11

Administrative practice and procedure, Computer technology, Reporting and recordkeeping requirements.

21 CFR Part 16

Administrative practice and procedure.

21 CFR Part 112

Foods, Fruits and vegetables, Incorporation by reference, Packaging and containers, Recordkeeping requirements, Safety.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 11, 16, and 112 are amended as follows:

PART 11—ELECTRONIC RECORDS; ELECTRONIC SIGNATURES

■ 1. The authority citation for 21 CFR part 11 continues to read as follows:

Authority: 21 U.S.C. 321–393; 42 U.S.C. 262.

■ 2. In § 11.1, add paragraph (k) to read as follows:

§ 11.1 Scope.

* * * * *

(k) This part does not apply to records required to be established or maintained by part 112 of this chapter. Records that satisfy the requirements of part 112 of this chapter, but that also are required under other applicable statutory provisions or regulations, remain subject to this part.

* * * * *

PART 16—REGULATORY HEARING BEFORE THE FOOD AND DRUG ADMINISTRATION

■ 3. The authority citation for 21 CFR part 16 continues to read as follows:

Authority: 15 U.S.C. 1451–1461; 21 U.S.C. 141–149, 321–394, 467f, 679, 821, 1034; 28 U.S.C. 2112; 42 U.S.C. 201–262, 263b, 364.

■ 4. Amend § 16.1 by:

■ a. In paragraph (b)(1), adding an entry in numerical order.

■ b. In paragraph (b)(2), adding an entry in numerical order.

The additions read as follows:

§ 16.1 Scope.

* * * * *

(b) * * *

(1) * * *

Section 419(c)(2)(D) of the Federal Food, Drug, and Cosmetic Act relating to the modification or revocation of a variance from the requirements of section 419 (see part 112, subpart P of this chapter).

* * * * *

(2) * * *

§§ 112.201 through 112.213, (see part 112, subpart R of this chapter), relating to withdrawal of a qualified exemption.

* * * * *

■ 5. Add part 112 to read as follows:

PART 112—STANDARDS FOR THE GROWING, HARVESTING, PACKING, AND HOLDING OF PRODUCE FOR HUMAN CONSUMPTION**Subpart A—General Provisions**

Sec.

112.1 What food is covered by this part?

112.2 What produce is not covered by this part?

112.3 What definitions apply to this part?

112.4 Which farms are subject to the requirements of this part?

112.5 Which farms are eligible for a qualified exemption and associated modified requirements based on average monetary value of all food sold and direct farm marketing?

112.6 What modified requirements apply to me if my farm is eligible for a qualified exemption in accordance with § 112.5?

112.7 What records must I establish and keep if my farm is eligible for a qualified exemption in accordance with § 112.5?

Subpart B—General Requirements

112.11 What general requirements apply to persons who are subject to this part?

112.12 Are there any alternatives to the requirements established in this part?

Subpart C—Personnel Qualifications and Training

112.21 What requirements apply regarding qualifications and training for personnel who handle (contact) covered produce or food contact surfaces?

112.22 What minimum requirements apply for training personnel who conduct a covered activity?

112.23 What requirements apply regarding supervisors?

112.30 Under this subpart, what requirements apply regarding records?

Subpart D—Health and Hygiene

112.31 What measures must I take to prevent ill or infected persons from contaminating covered produce with microorganisms of public health significance?

112.32 What hygienic practices must personnel use?

112.33 What measures must I take to prevent visitors from contaminating covered produce and food contact surfaces with microorganisms of public health significance?

Subpart E—Agricultural Water

112.41 What requirements apply to the quality of agricultural water?

112.42 What requirements apply to my agricultural water sources, water distribution system, and pooling of water?

112.43 What requirements apply to treating agricultural water?

112.44 What specific microbial quality criteria apply to agricultural water used for certain intended uses?

112.45 What measures must I take if my agricultural water does not meet the requirements of § 112.41 or § 112.44?

112.46 How often must I test agricultural water that is subject to the requirements of § 112.44?

112.47 Who must perform the tests required under § 112.46 and what methods must be used?

112.48 What measures must I take for water that I use during harvest, packing, and holding activities for covered produce?

112.49 What alternatives may I establish and use in lieu of the requirements of this subpart?

112.50 Under this subpart, what requirements apply regarding records?

Subpart F—Biological Soil Amendments of Animal Origin and Human Waste

112.51 What requirements apply for determining the status of a biological soil amendment of animal origin?

112.52 How must I handle, convey, and store biological soil amendments of animal origin?

112.53 What prohibitions apply regarding use of human waste?

112.54 What treatment processes are acceptable for a biological soil amendment of animal origin that I apply in the growing of covered produce?

112.55 What microbial standards apply to the treatment processes in § 112.54?

112.56 What application requirements and minimum application intervals apply to biological soil amendments of animal origin?

112.60 Under this subpart, what requirements apply regarding records?

Subpart G—H—[Reserved]**Subpart I—Domesticated and Wild Animals**

112.81 How do the requirements of this subpart apply to areas where covered activities take place?

112.83 What requirements apply regarding grazing animals, working animals, and animal intrusion?

112.84 Does this regulation require covered farms to take actions that would constitute a “taking” of threatened or endangered species; to take measures to exclude animals from outdoor growing areas; or to destroy animal habitat or otherwise clear farm borders around outdoor growing areas or drainages?

Subpart J—[Reserved]**Subpart K—Growing, Harvesting, Packing, and Holding Activities**

112.111 What measures must I take if I grow, harvest, pack or hold both covered and excluded produce?

112.112 What measures must I take immediately prior to and during harvest activities?

112.113 How must I handle harvested covered produce during covered activities?

112.114 What requirements apply to dropped covered produce?

112.115 What measures must I take when packaging covered produce?

112.116 What measures must I take when using food-packing (including food packaging) material?

Subpart L—Equipment, Tools, Buildings, and Sanitation

- 112.121 What equipment and tools are subject to the requirements of this subpart?
- 112.122 What buildings are subject to the requirements of this subpart?
- 112.123 What requirements apply regarding equipment and tools subject to this subpart?
- 112.124 What requirements apply to instruments and controls used to measure, regulate, or record?
- 112.125 What requirements apply to equipment that is subject to this subpart used in the transport of covered produce?
- 112.126 What requirements apply to my buildings?
- 112.127 What requirements apply regarding domesticated animals in and around a fully-enclosed building?
- 112.128 What requirements apply regarding pest control in buildings?
- 112.129 What requirements apply to toilet facilities?
- 112.130 What requirements apply for hand-washing facilities?
- 112.131 What must I do to control and dispose of sewage?
- 112.132 What must I do to control and dispose of trash, litter, and waste in areas used for covered activities?
- 112.133 What requirements apply to plumbing?
- 112.134 What must I do to control animal excreta and litter from domesticated animals that are under my control?
- 112.140 Under this subpart, what requirements apply regarding records?

Subpart M—Sprouts

- 112.141 What commodities are subject to this subpart?
- 112.142 What requirements apply to seeds or beans used to grow sprouts?
- 112.143 What measures must I take for growing, harvesting, packing, and holding sprouts?
- 112.144 What testing must I do during growing, harvesting, packing, and holding sprouts?
- 112.145 What requirements apply to testing the environment for *Listeria* species or *L. monocytogenes*?
- 112.146 What actions must I take if the growing, harvesting, packing, or holding environment tests positive for *Listeria* species or *L. monocytogenes*?
- 112.147 What must I do to collect and test samples of spent sprout irrigation water or sprouts for pathogens?
- 112.148 What actions must I take if the samples of spent sprout irrigation water or sprouts test positive for a pathogen?
- 112.150 Under this subpart, what requirements apply regarding records?

Subpart N—Analytical Methods

- 112.151 What methods must I use to test the quality of water to satisfy the requirements of § 112.46?
- 112.152 What methods must I use to test the growing, harvesting, packing, and holding environment for *Listeria* species or *L. monocytogenes* to satisfy the requirements of § 112.144(a)?

- 112.153 What methods must I use to test spent sprout irrigation water (or sprouts) from each production batch of sprouts for pathogens to satisfy the requirements of § 112.144(b) and (c)?

Subpart O—Records

- 112.161 What general requirements apply to records required under this part?
- 112.162 Where must I store records?
- 112.163 May I use existing records to satisfy the requirements of this part?
- 112.164 How long must I keep records?
- 112.165 What formats are acceptable for the records I keep?
- 112.166 What requirements apply for making records available and accessible to FDA?
- 112.167 Can records that I provide to FDA be disclosed to persons outside of FDA?

Subpart P—Variances

- 112.171 Who may request a variance from the requirements of this part?
- 112.172 How may a State, tribe, or foreign country request a variance from one or more requirements of this part?
- 112.173 What must be included in the Statement of Grounds in a petition requesting a variance?
- 112.174 What information submitted in a petition requesting a variance or submitted in comments on such a petition are publicly available?
- 112.175 Who responds to a petition requesting a variance?
- 112.176 What process applies to a petition requesting a variance?
- 112.177 Can an approved variance apply to any person other than those identified in the petition requesting that variance?
- 112.178 Under what circumstances may FDA deny a petition requesting a variance?
- 112.179 When does a variance approved by FDA become effective?
- 112.180 Under what circumstances may FDA modify or revoke an approved variance?
- 112.181 What procedures apply if FDA determines that an approved variance should be modified or revoked?
- 112.182 What are the permissible types of variances that may be granted?

Subpart Q—Compliance and Enforcement

- 112.192 What is the applicability and status of this part?
- 112.193 What are the provisions for coordination of education and enforcement?

Subpart R—Withdrawal of Qualified Exemption

- 112.201 Under what circumstances can FDA withdraw a qualified exemption in accordance with the requirements of § 112.5?
- 112.202 What procedure will FDA use to withdraw an exemption?
- 112.203 What information must FDA include in an order to withdraw a qualified exemption?
- 112.204 What must I do if I receive an order to withdraw a qualified exemption applicable to my farm?

- 112.205 Can I appeal or request a hearing on an order to withdraw a qualified exemption applicable to my farm?
- 112.206 What is the procedure for submitting an appeal?
- 112.207 What is the procedure for requesting an informal hearing?
- 112.208 What requirements are applicable to an informal hearing?
- 112.209 Who is the presiding officer for an appeal and for an informal hearing?
- 112.210 What is the timeframe for issuing a decision on an appeal?
- 112.211 When is an order to withdraw a qualified exemption applicable to a farm revoked?
- 112.213 If my qualified exemption is withdrawn, under what circumstances would FDA reinstate my qualified exemption?

Authority: 21 U.S.C. 321, 331, 342, 350h, 371; 42 U.S.C. 243, 264, 271.

Subpart A—General Provisions**§ 112.1 What food is covered by this part?**

(a) Unless it is excluded from this part under § 112.2, food that is produce within the meaning of this part and that is a raw agricultural commodity (RAC) is covered by this part. This includes a produce RAC that is grown domestically and a produce RAC that will be imported or offered for import in any State or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico.

(b) For the purpose of this part and subject to the exemptions and qualified exemptions therein, covered produce includes all of the following:

(1) Fruits and vegetables such as almonds, apples, apricots, apriums, Artichokes-globe-type, Asian pears, avocados, babacos, bananas, Belgian endive, blackberries, blueberries, boysenberries, brazil nuts, broad beans, broccoli, Brussels sprouts, burdock, cabbages, Chinese cabbages (Bok Choy, mustard, and Napa), cantaloupes, carambolas, carrots, cauliflower, celeriac, celery, chayote fruit, cherries (sweet), chestnuts, chicory (roots and tops), citrus (such as clementine, grapefruit, lemons, limes, mandarin, oranges, tangerines, tangors, and unqi fruit), cowpea beans, cress-garden, cucumbers, curly endive, currants, dandelion leaves, fennel-Florence, garlic, genip, gooseberries, grapes, green beans, guavas, herbs (such as basil, chives, cilantro, oregano, and parsley), honeydew, huckleberries, Jerusalem artichokes, kale, kiwifruit, kohlrabi, kumquats, leek, lettuce, lychees, macadamia nuts, mangos, other melons (such as Canary, Crenshaw and Persian), mulberries, mushrooms, mustard greens, nectarines, onions, papayas, parsnips, passion fruit, peaches, pears, peas, peas-pigeon, peppers (such as bell

and hot), pine nuts, pineapples, plantains, plums, plumcots, quince, radishes, raspberries, rhubarb, rutabagas, scallions, shallots, snow peas, soursop, spinach, sprouts (such as alfalfa and mung bean), strawberries, summer squash (such as patty pan, yellow and zucchini), sweetsop, Swiss chard, taro, tomatoes, turmeric, turnips (roots and tops), walnuts, watercress, watermelons, and yams; and

(2) Mixes of intact fruits and vegetables (such as fruit baskets).

§ 112.2 What produce is not covered by this part?

(a) The following produce is not covered by this part:

(1) Produce that is rarely consumed raw, specifically the produce on the following exhaustive list: Asparagus; beans, black; beans, great Northern; beans, kidney; beans, lima; beans, navy; beans, pinto; beets, garden (roots and tops); beets, sugar; cashews; cherries, sour; chickpeas; cocoa beans; coffee beans; collards; corn, sweet; cranberries; dates; dill (seeds and weed); eggplants; figs; ginger; hazelnuts; horseradish; lentils; okra; peanuts; pecans; peppermint; potatoes; pumpkins; squash, winter; sweet potatoes; and water chestnuts.

(2) Produce that is produced by an individual for personal consumption or produced for consumption on the farm or another farm under the same management; and

(3) Produce that is not a raw agricultural commodity.

(b) Produce is eligible for exemption from the requirements of this part (except as noted in paragraphs (b)(1), (2), and (3) of this section) under the following conditions:

(1) The produce receives commercial processing that adequately reduces the presence of microorganisms of public health significance. Examples of commercial processing that adequately reduces the presence of microorganisms of public health significance are processing in accordance with the requirements of part 113, 114, or 120 of this chapter, treating with a validated process to eliminate spore-forming microorganisms (such as processing to produce tomato paste or shelf-stable tomatoes), and processing such as refining, distilling, or otherwise manufacturing/processing produce into products such as sugar, oil, spirits, wine, beer or similar products; and

(2) You must disclose in documents accompanying the produce, in accordance with the practice of the trade, that the food is “not processed to adequately reduce the presence of

microorganisms of public health significance;” and

(3) You must either:

(i) Annually obtain written assurance, subject to the requirements of paragraph (b)(6) of this section, from the customer that performs the commercial processing described in paragraph (b)(1) of this section that the customer has established and is following procedures (identified in the written assurance) that adequately reduce the presence of microorganisms of public health significance; or

(ii) Annually obtain written assurance, subject to the requirements of paragraph (b)(6) of this section, from your customer that an entity in the distribution chain subsequent to the customer will perform commercial processing described in paragraph (b)(1) of this section and that the customer:

(A) Will disclose in documents accompanying the food, in accordance with the practice of the trade, that the food is “not processed to adequately reduce the presence of microorganisms of public health significance”; and

(B) Will only sell to another entity that agrees, in writing, it will either:

(1) Follow procedures (identified in a written assurance) that adequately reduce the presence of microorganisms of public health significance; or

(2) Obtain a similar written assurance from its customer that the produce will receive commercial processing described in paragraph (b)(1) of this section, and that there will be disclosure in documents accompanying the food, in accordance with the practice of the trade, that the food is “not processed to adequately reduce the presence of microorganisms of public health significance”; and

(4) You must establish and maintain documentation of your compliance with applicable requirements in paragraphs (b)(2) and (3) in accordance with the requirements of subpart O of this part, including:

(i) Documents containing disclosures required under paragraph (b)(2) of this section; and

(ii) Annual written assurances obtained from customers required under paragraph (b)(3) of this section; and

(5) The requirements of this subpart and subpart Q of this part apply to such produce; and

(6) An entity that provides a written assurance under § 112.2(b)(3)(i) or (ii) must act consistently with the assurance and document its actions taken to satisfy the written assurance.

§ 112.3 What definitions apply to this part?

(a) The definitions and interpretations of terms in section 201 of the Federal

Food, Drug, and Cosmetic Act apply to such terms when used in this part.

(b) For the purpose of this part, the following definitions of very small business and small business also apply:

(1) *Very small business.* For the purpose of this part, your farm is a very small business if it is subject to any of the requirements of this part and, on a rolling basis, the average annual monetary value of produce (as defined in paragraph (c) of this section) you sold during the previous 3-year period is no more than \$250,000.

(2) *Small business.* For the purpose of this part, your farm is a small business if it is subject to any of the requirements of this part and, on a rolling basis, the average annual monetary value of produce (as defined in paragraph (c) of this section) you sold during the previous 3-year period is no more than \$500,000; and your farm is not a very small business as provided in paragraph (b)(1) of this section.

(c) For the purpose of this part, the following definitions also apply:

Adequate means that which is needed to accomplish the intended purpose in keeping with good public health practice.

Adequately reduce microorganisms of public health significance means reduce the presence of such microorganisms to an extent sufficient to prevent illness.

Agricultural tea means a water extract of biological materials (such as stabilized compost, manure, non-fecal animal byproducts, peat moss, pre-consumer vegetative waste, table waste, or yard trimmings), excluding any form of human waste, produced to transfer microbial biomass, fine particulate organic matter, and soluble chemical components into an aqueous phase. Agricultural teas are held for longer than one hour before application. Agricultural teas are soil amendments for the purposes of this rule.

Agricultural tea additive means a nutrient source (such as molasses, yeast extract, or algal powder) added to agricultural tea to increase microbial biomass.

Agricultural water means water used in covered activities on covered produce where water is intended to, or is likely to, contact covered produce or food contact surfaces, including water used in growing activities (including irrigation water applied using direct water application methods, water used for preparing crop sprays, and water used for growing sprouts) and in harvesting, packing, and holding activities (including water used for washing or cooling harvested produce and water used for preventing dehydration of covered produce).

Animal excreta means solid or liquid animal waste.

Application interval means the time interval between application of an agricultural input (such as a biological soil amendment of animal origin) to a growing area and harvest of covered produce from the growing area where the agricultural input was applied.

Biological soil amendment means any soil amendment containing biological materials such as stabilized compost, manure, non-fecal animal byproducts, peat moss, pre-consumer vegetative waste, sewage sludge biosolids, table waste, agricultural tea, or yard trimmings, alone or in combination.

Biological soil amendment of animal origin means a biological soil amendment which consists, in whole or in part, of materials of animal origin, such as manure or non-fecal animal byproducts including animal mortalities, or table waste, alone or in combination. The term "biological soil amendment of animal origin" does not include any form of human waste.

Composting means a process to produce stabilized compost in which organic material is decomposed by the actions of microorganisms under thermophilic conditions for a designated period of time (for example, 3 days) at a designated temperature (for example, 131 °F (55 °C)), followed by a curing stage under cooler conditions.

Covered activity means growing, harvesting, packing, or holding covered produce on a farm. Covered activity includes manufacturing/processing of covered produce on a farm, but only to the extent that such activities are performed on raw agricultural commodities and only to the extent that such activities are within the meaning of "farm" as defined in this chapter. Providing, acting consistently with, and documenting actions taken in compliance with written assurances as described in § 112.2(b) are also covered activities. This part does not apply to activities of a facility that are subject to part 110 of this chapter.

Covered produce means produce that is subject to the requirements of this part in accordance with §§ 112.1 and 112.2. The term "covered produce" refers to the harvestable or harvested part of the crop.

Curing means the final stage of composting, which is conducted after much of the readily metabolized biological material has been decomposed, at cooler temperatures than those in the thermophilic phase of composting, to further reduce pathogens, promote further decomposition of cellulose and lignin, and stabilize composition. Curing may

or may not involve insulation, depending on environmental conditions.

Direct water application method means using agricultural water in a manner whereby the water is intended to, or is likely to, contact covered produce or food contact surfaces during use of the water.

Farm means:

(i) *Primary Production Farm.* A Primary Production Farm is an operation under one management in one general (but not necessarily contiguous) physical location devoted to the growing of crops, the harvesting of crops, the raising of animals (including seafood), or any combination of these activities. The term "farm" includes operations that, in addition to these activities:

(A) Pack or hold raw agricultural commodities;

(B) Pack or hold processed food, provided that all processed food used in such activities is either consumed on that farm or another farm under the same management, or is processed food identified in paragraph (i)(C)(2)(i) of this definition; and

(C) Manufacture/process food, provided that:

(1) All food used in such activities is consumed on that farm or another farm under the same management; or

(2) Any manufacturing/processing of food that is not consumed on that farm or another farm under the same management consists only of:

(i) Drying/dehydrating raw agricultural commodities to create a distinct commodity (such as drying/dehydrating grapes to produce raisins), and packaging and labeling such commodities, without additional manufacturing/processing (an example of additional manufacturing/processing is slicing);

(ii) Treatment to manipulate the ripening of raw agricultural commodities (such as by treating produce with ethylene gas), and packaging and labeling treated raw agricultural commodities, without additional manufacturing/processing; and

(iii) Packaging and labeling raw agricultural commodities, when these activities do not involve additional manufacturing/processing (an example of additional manufacturing/processing is irradiation); or

(ii) *Secondary Activities Farm.* A Secondary Activities Farm is an operation, not located on a Primary Production Farm, devoted to harvesting (such as hulling or shelling), packing, and/or holding of raw agricultural commodities, provided that the Primary

Production Farm(s) that grows, harvests, and/or raises the majority of the raw agricultural commodities harvested, packed, and/or held by the Secondary Activities Farm owns, or jointly owns, a majority interest in the Secondary Activities Farm. A Secondary Activities Farm may also conduct those additional activities allowed on a Primary Production Farm in paragraphs (i)(B) and (C) of this definition.

Food means food as defined in section 201(f) of the Federal Food, Drug, and Cosmetic Act and includes seeds and beans used to grow sprouts.

Food contact surfaces means those surfaces that contact human food and those surfaces from which drainage, or other transfer, onto the food or onto surfaces that contact the food ordinarily occurs during the normal course of operations. "Food contact surfaces" includes food contact surfaces of equipment and tools used during harvest, packing and holding.

Ground water means the supply of fresh water found beneath the Earth's surface, usually in aquifers, which supply wells and springs. Ground water does not include any water that meets the definition of surface water.

Growth media means material that acts as a substrate during the growth of covered produce (such as mushrooms and some sprouts) that contains, may contain, or consists of components that may include any animal waste (such as stabilized compost, manure, non-fecal animal byproducts or table waste).

Harvesting applies to farms and farm mixed-type facilities and means activities that are traditionally performed on farms for the purpose of removing raw agricultural commodities from the place they were grown or raised and preparing them for use as food. Harvesting is limited to activities performed on raw agricultural commodities, or on processed foods created by drying/dehydrating a raw agricultural commodity without additional manufacturing/processing, on a farm. Harvesting does not include activities that transform a raw agricultural commodity into a processed food as defined in section 201(gg) of the Federal Food, Drug, and Cosmetic Act. Examples of harvesting include cutting (or otherwise separating) the edible portion of the raw agricultural commodity from the crop plant and removing or trimming part of the raw agricultural commodity (e.g., foliage, husks, roots or stems). Examples of harvesting also include cooling, field coring, filtering, gathering, hulling, removing stems and husks from, shelling, sifting, threshing, trimming of outer leaves of, and washing raw

agricultural commodities grown on a farm.

Hazard means any biological agent that has the potential to cause illness or injury in the absence of its control.

Holding means storage of food and also includes activities performed incidental to storage of a food (e.g., activities performed for the safe or effective storage of that food, such as fumigating food during storage, and drying/dehydrating raw agricultural commodities when the drying/dehydrating does not create a distinct commodity (such as drying/dehydrating hay or alfalfa)). Holding also includes activities performed as a practical necessity for the distribution of that food (such as blending of the same raw agricultural commodity and breaking down pallets), but does not include activities that transform a raw agricultural commodity into a processed food as defined in section 201(gg) of the Federal Food, Drug, and Cosmetic Act. Holding facilities could include warehouses, cold storage facilities, storage silos, grain elevators, and liquid storage tanks.

Known or reasonably foreseeable hazard means a biological hazard that is known to be, or has the potential to be, associated with the farm or the food.

Manufacturing/processing means making food from one or more ingredients, or synthesizing, preparing, treating, modifying or manipulating food, including food crops or ingredients. Examples of manufacturing/processing activities include: Baking, boiling, bottling, canning, cooking, cooling, cutting, distilling, drying/dehydrating raw agricultural commodities to create a distinct commodity (such as drying/dehydrating grapes to produce raisins), evaporating, eviscerating, extracting juice, formulating, freezing, grinding, homogenizing, labeling, milling, mixing, packaging (including modified atmosphere packaging), pasteurizing, peeling, rendering, treating to manipulate ripening, trimming, washing, or waxing. For farms and farm mixed-type facilities, manufacturing/processing does not include activities that are part of harvesting, packing, or holding.

Manure means animal excreta, alone or in combination with litter (such as straw and feathers used for animal bedding) for use as a soil amendment.

Microorganisms means yeasts, molds, bacteria, viruses, protozoa, and microscopic parasites and includes species having public health significance. The term “undesirable microorganisms” includes those microorganisms that are of public health

significance, that subject food to decomposition, that indicate that food is contaminated with filth, or that otherwise may cause food to be adulterated.

Mixed-type facility means an establishment that engages in both activities that are exempt from registration under section 415 of the Federal Food, Drug, and Cosmetic Act and activities that require the establishment to be registered. An example of such a facility is a “farm mixed-type facility,” which is an establishment that is a farm, but that also conducts activities outside the farm definition that require the establishment to be registered.

Monitor means to conduct a planned sequence of observations or measurements to assess whether a process, point or procedure is under control and, when required, to produce an accurate record of the observation or measurement.

Non-fecal animal byproduct means solid waste (other than manure) that is animal in origin (such as meat, fat, dairy products, eggs, carcasses, blood meal, bone meal, fish meal, shellfish waste (such as crab, shrimp, and lobster waste), fish emulsions, and offal) and is generated by commercial, institutional, or agricultural operations.

Packing means placing food into a container other than packaging the food and also includes activities performed incidental to packing a food (e.g., activities performed for the safe or effective packing of that food (such as sorting, culling, grading, and weighing or conveying incidental to packing or re-packing)), but does not include activities that transform a raw agricultural commodity, as defined in section 201(r) of the Federal Food, Drug, and Cosmetic Act, into a processed food as defined in section 201(gg) of the Federal Food, Drug, and Cosmetic Act.

Pest means any objectionable animals or insects, including birds, rodents, flies, and larvae.

Pre-consumer vegetative waste means solid waste that is purely vegetative in origin, not considered yard trash, and derived from commercial, institutional, or agricultural operations without coming in contact with animal products, byproducts or manure or with an end user (consumer). Pre-consumer vegetative waste includes material generated by farms, packing houses, canning operations, wholesale distribution centers and grocery stores; products that have been removed from their packaging (such as out-of-date juice, vegetables, condiments, and bread); and associated packaging that is vegetative in origin (such as paper or

corn-starch based products). Pre-consumer vegetative waste does not include table waste, packaging that has come in contact with materials (such as meat) that are not vegetative in origin, or any waste generated by restaurants.

Produce means any fruit or vegetable (including mixes of intact fruits and vegetables) and includes mushrooms, sprouts (irrespective of seed source), peanuts, tree nuts, and herbs. A fruit is the edible reproductive body of a seed plant or tree nut (such as apple, orange, and almond) such that fruit means the harvestable or harvested part of a plant developed from a flower. A vegetable is the edible part of an herbaceous plant (such as cabbage or potato) or fleshy fruiting body of a fungus (such as white button or shiitake) grown for an edible part such that vegetable means the harvestable or harvested part of any plant or fungus whose fruit, fleshy fruiting bodies, seeds, roots, tubers, bulbs, stems, leaves, or flower parts are used as food and includes mushrooms, sprouts, and herbs (such as basil or cilantro). Produce does not include food grains meaning the small, hard fruits or seeds of arable crops, or the crops bearing these fruits or seeds, that are primarily grown and processed for use as meal, flour, baked goods, cereals and oils rather than for direct consumption as small, hard fruits or seeds (including cereal grains, pseudo cereals, oilseeds and other plants used in the same fashion). Examples of food grains include barley, dent- or flint-corn, sorghum, oats, rice, rye, wheat, amaranth, quinoa, buckwheat, and oilseeds (e.g., cotton seed, flax seed, rapeseed, soybean, and sunflower seed).

Production batch of sprouts means all sprouts that are started at the same time in a single growing unit (e.g., a single drum or bin, or a single rack of trays that are connected to each other), whether or not the sprouts are grown from a single lot of seed (including, for example, when multiple types of seeds are grown in a single growing unit).

Qualified end-user, with respect to a food, means the consumer of the food (where the term consumer does not include a business); or a restaurant or retail food establishment (as those terms are defined in § 1.227) that is located:

- (i) In the same State or the same Indian reservation as the farm that produced the food; or
- (ii) Not more than 275 miles from such farm.

Raw agricultural commodity (RAC) means “raw agricultural commodity” as defined in section 201(r) of the Federal Food, Drug, and Cosmetic Act.

Sanitize means to adequately treat cleaned surfaces by a process that is

effective in destroying vegetative cells of microorganisms of public health significance, and in substantially reducing numbers of other undesirable microorganisms, but without adversely affecting the product or its safety for the consumer.

Sewage sludge biosolids means the solid or semi-solid residue generated during the treatment of domestic sewage in a treatment works within the meaning of the definition of "sewage sludge" in 40 CFR 503.9(w).

Soil amendment means any chemical, biological, or physical material (such as elemental fertilizers, stabilized compost, manure, non-fecal animal byproducts, peat moss, perlite, pre-consumer vegetative waste, sewage sludge biosolids, table waste, agricultural tea and yard trimmings) intentionally added to the soil to improve the chemical or physical condition of soil in relation to plant growth or to improve the capacity of the soil to hold water. The term soil amendment also includes growth media that serve as the entire substrate during the growth of covered produce (such as mushrooms and some sprouts).

Spent sprout irrigation water means water that has been used in the growing of sprouts.

Stabilized compost means a stabilized (*i.e.*, finished) biological soil amendment produced through a controlled composting process.

Static composting means a process to produce stabilized compost in which air is introduced into biological material (in a pile (or row) that may or may not be covered with insulating material, or in an enclosed vessel) by a mechanism that does not include turning. Examples of structural features for introducing air include embedded perforated pipes and a constructed permanent base that includes aeration slots. Examples of mechanisms for introducing air include passive diffusion and mechanical means (such as blowers that suction air from the composting material or blow air into the composting material using positive pressure).

Surface water means all water open to the atmosphere (rivers, lakes, reservoirs, streams, impoundments, seas, estuaries, etc.) and all springs, wells, or other collectors that are directly influenced by surface water.

Table waste means any post-consumer food waste, irrespective of whether the source material is animal or vegetative in origin, derived from individuals, institutions, restaurants, retail operations, or other sources where the food has been served to a consumer.

Turned composting means a process to produce stabilized compost in which

air is introduced into biological material (in a pile, row, or enclosed vessel) by turning on a regular basis. Turning is the process of mechanically mixing biological material that is undergoing a composting process with the specific intention of moving the outer, cooler sections of the material being composted to the inner, hotter sections.

Visitor means any person (other than personnel) who enters your covered farm with your permission.

Water distribution system means a system to carry water from its primary source to its point of use, including pipes, sprinklers, irrigation canals, pumps, valves, storage tanks, reservoirs, meters, and fittings.

We means the U.S. Food and Drug Administration (FDA).

Yard trimmings means purely vegetative matter resulting from landscaping maintenance or land clearing operations, including materials such as tree and shrub trimmings, grass clippings, palm fronds, trees, tree stumps, untreated lumber, untreated wooden pallets, and associated rocks and soils.

You, for purposes of this part, means the owner, operator, or agent in charge of a covered farm that is subject to some or all of the requirements of this part.

§ 112.4 Which farms are subject to the requirements of this part?

(a) Except as provided in paragraph (b) of this section, a farm or farm mixed-type facility with an average annual monetary value of produce (as "produce" is defined in § 112.3(c)) sold during the previous 3-year period of more than \$25,000 (on a rolling basis), adjusted for inflation using 2011 as the baseline year for calculating the adjustment, is a "covered farm" subject to this part. Covered farms subject to this part must comply with all applicable requirements of this part when conducting a covered activity on covered produce.

(b) A farm is not a covered farm if it satisfies the requirements in § 112.5 and we have not withdrawn the farm's exemption in accordance with the requirements of subpart R of this part.

§ 112.5 Which farms are eligible for a qualified exemption and associated modified requirements based on average monetary value of all food sold and direct farm marketing?

(a) A farm is eligible for a qualified exemption and associated modified requirements in a calendar year if:

(1) During the previous 3-year period preceding the applicable calendar year, the average annual monetary value of the food (as defined in § 112.3(c)) the farm sold directly to qualified end-users

(as defined in § 112.3(c)) during such period exceeded the average annual monetary value of the food the farm sold to all other buyers during that period; and

(2) The average annual monetary value of all food (as defined in § 112.3(c)) the farm sold during the 3-year period preceding the applicable calendar year was less than \$500,000, adjusted for inflation.

(b) For the purpose of determining whether the average annual monetary value of all food sold during the 3-year period preceding the applicable calendar year was less than \$500,000, adjusted for inflation, the baseline year for calculating the adjustment for inflation is 2011.

§ 112.6 What modified requirements apply to me if my farm is eligible for a qualified exemption in accordance with § 112.5?

(a) If your farm is eligible for a qualified exemption in accordance with § 112.5, you are subject to the requirements of:

- (1) This subpart (General Provisions);
- (2) Subpart O of this part (Records);
- (3) Subpart Q of this part (Compliance and Enforcement); and
- (4) Subpart R of this part (Withdrawal of Qualified Exemption).

(b) In addition, you are subject to the following modified requirements:

(1) When a food packaging label is required on food that would otherwise be covered produce under the Federal Food, Drug, and Cosmetic Act or its implementing regulations, you must include prominently and conspicuously on the food packaging label the name and the complete business address of the farm where the produce was grown.

(2) When a food packaging label is not required on food that would otherwise be covered produce under the Federal Food, Drug, and Cosmetic Act, you must prominently and conspicuously display, at the point of purchase, the name and complete business address of the farm where the produce was grown, on a label, poster, sign, placard, or documents delivered contemporaneously with the produce in the normal course of business, or, in the case of Internet sales, in an electronic notice.

(3) The complete business address that you must include in accordance with the requirements of paragraph (b)(1) or (2) of this section must include the street address or post office box, city, state, and zip code for domestic farms, and comparable full address information for foreign farms.

§ 112.7 What records must I establish and keep if my farm is eligible for a qualified exemption in accordance with § 112.5?

If your farm is eligible for a qualified exemption in accordance with § 112.5:

(a) You must establish and keep records required under this provision in accordance with the requirements of subpart O of this part, except that the requirement in § 112.161(a)(4) for a signature or initial of the person performing the activity is not required for sales receipts kept in the normal course of business. Such receipts must be dated as required under § 112.161(a)(4).

(b) You must establish and keep adequate records necessary to demonstrate that your farm satisfies the criteria for a qualified exemption that are described in § 112.5, including a written record reflecting that you have performed an annual review and verification of your farm's continued eligibility for the qualified exemption.

Subpart B—General Requirements

§ 112.11 What general requirements apply to persons who are subject to this part?

You must take appropriate measures to minimize the risk of serious adverse health consequences or death from the use of, or exposure to, covered produce, including those measures reasonably necessary to prevent the introduction of known or reasonably foreseeable hazards into covered produce, and to provide reasonable assurances that the produce is not adulterated under section 402 of the Federal Food, Drug, and Cosmetic Act on account of such hazards.

§ 112.12 Are there any alternatives to the requirements established in this part?

(a) You may establish alternatives to certain specific requirements of subpart E of this part, as specified in § 112.49, provided that you satisfy the requirements of paragraphs (b) and (c) of this section.

(b) You may establish and use an alternative to any of the requirements specified in paragraph (a) of this section, provided you have adequate scientific data or information to support a conclusion that the alternative would provide the same level of public health protection as the applicable requirement established in this part, and would not increase the likelihood that your covered produce will be adulterated under section 402 of the Federal Food, Drug, and Cosmetic Act, in light of your covered produce, practices, and conditions.

(c) Scientific data and information used to support an alternative to a requirement specified in paragraph (a)

of this section may be developed by you, available in the scientific literature, or available to you through a third party. You must establish and maintain documentation of the scientific data and information on which you rely in accordance with the requirements of subpart O of this part. You are not required to notify or seek prior approval from FDA regarding your decision to establish or use an alternative under this section.

Subpart C—Personnel Qualifications and Training

§ 112.21 What requirements apply regarding qualifications and training for personnel who handle (contact) covered produce or food contact surfaces?

All of the following requirements apply regarding qualifications and training for personnel who handle (contact) covered produce or food contact surfaces:

(a) All personnel (including temporary, part time, seasonal, and contracted personnel) who handle covered produce or food contact surfaces, or who are engaged in the supervision thereof, must receive adequate training, as appropriate to the person's duties, upon hiring, and periodically thereafter, at least once annually.

(b) All personnel (including temporary, part time, seasonal, and contracted personnel) who handle covered produce or food contact surfaces, or who are engaged in the supervision thereof, must have a combination of education, training, and experience necessary to perform the person's assigned duties in a manner that ensures compliance with this part.

(c) Training must be conducted in a manner that is easily understood by personnel being trained.

(d) Training must be repeated as necessary and appropriate in light of observations or information indicating that personnel are not meeting standards established by FDA in subparts C through O of this part.

§ 112.22 What minimum requirements apply for training personnel who conduct a covered activity?

(a) At a minimum, all personnel who handle (contact) covered produce during covered activities or supervise the conduct of such activities must receive training that includes all of the following:

(1) Principles of food hygiene and food safety;

(2) The importance of health and personal hygiene for all personnel and visitors, including recognizing symptoms of a health condition that is

reasonably likely to result in contamination of covered produce or food contact surfaces with microorganisms of public health significance; and

(3) The standards established by FDA in subparts C through O of this part that are applicable to the employee's job responsibilities.

(b) Persons who conduct harvest activities for covered produce must also receive training that includes all of the following:

(1) Recognizing covered produce that must not be harvested, including covered produce that may be contaminated with known or reasonably foreseeable hazards;

(2) Inspecting harvest containers and equipment to ensure that they are functioning properly, clean, and maintained so as not to become a source of contamination of covered produce with known or reasonably foreseeable hazards; and

(3) Correcting problems with harvest containers or equipment, or reporting such problems to the supervisor (or other responsible party), as appropriate to the person's job responsibilities.

(c) At least one supervisor or responsible party for your farm must have successfully completed food safety training at least equivalent to that received under standardized curriculum recognized as adequate by the Food and Drug Administration.

§ 112.23 What requirements apply regarding supervisors?

You must assign or identify personnel to supervise (or otherwise be responsible for) your operations to ensure compliance with the requirements of this part.

§ 112.30 Under this subpart, what requirements apply regarding records?

(a) You must establish and keep records required under this subpart in accordance with the requirements of subpart O of this part.

(b) You must establish and keep records of training that document required training of personnel, including the date of training, topics covered, and the persons(s) trained.

Subpart D—Health and Hygiene

§ 112.31 What measures must I take to prevent ill or infected persons from contaminating covered produce with microorganisms of public health significance?

(a) You must take measures to prevent contamination of covered produce and food contact surfaces with microorganisms of public health significance from any person with an

applicable health condition (such as communicable illnesses that present a public health risk in the context of normal work duties, infection, open lesion, vomiting, or diarrhea).

(b) The measures you must take to satisfy the requirements of paragraph (a) of this section must include all of the following measures:

- (1) Excluding any person from working in any operations that may result in contamination of covered produce or food contact surfaces with microorganisms of public health significance when the person (by medical examination, the person's acknowledgement, or observation) is shown to have, or appears to have, an applicable health condition, until the person's health condition no longer presents a risk to public health; and
- (2) Instructing personnel to notify their supervisor(s) (or a responsible party) if they have, or if there is a reasonable possibility that they have an applicable health condition.

§ 112.32 What hygienic practices must personnel use?

(a) Personnel who work in an operation in which covered produce or food contact surfaces are at risk of contamination with known or reasonably foreseeable hazards must use hygienic practices while on duty to the extent necessary to protect against such contamination.

(b) The hygienic practices that personnel use to satisfy the requirements of paragraph (a) of this section when handling (contacting) covered produce or food contact surfaces during a covered activity must include all of the following practices:

- (1) Maintaining adequate personal cleanliness to protect against contamination of covered produce and food contact surfaces;
- (2) Avoiding contact with animals other than working animals, and taking appropriate steps to minimize the likelihood of contamination of covered produce when in direct contact with working animals;
- (3) Washing hands thoroughly, including scrubbing with soap (or other effective surfactant) and running water that satisfies the requirements of § 112.44(a) (as applicable) for water used to wash hands, and drying hands thoroughly using single-service towels, sanitary towel service, electric hand dryers, or other adequate hand drying devices:
 - (i) Before starting work;
 - (ii) Before putting on gloves;
 - (iii) After using the toilet;
 - (iv) Upon return to the work station after any break or other absence from the work station;

(v) As soon as practical after touching animals (including livestock and working animals), or any waste of animal origin; and

(vi) At any other time when the hands may have become contaminated in a manner that is reasonably likely to lead to contamination of covered produce with known or reasonably foreseeable hazards;

(4) If you choose to use gloves in handling covered produce or food contact surfaces, maintaining gloves in an intact and sanitary condition and replacing such gloves when no longer able to do so;

(5) Removing or covering hand jewelry that cannot be adequately cleaned and sanitized during periods in which covered produce is manipulated by hand; and

(6) Not eating, chewing gum, or using tobacco products in an area used for a covered activity (however, drinking beverages is permitted in designated areas).

§ 112.33 What measures must I take to prevent visitors from contaminating covered produce and food contact surfaces with microorganisms of public health significance?

(a) You must make visitors aware of policies and procedures to protect covered produce and food contact surfaces from contamination by people and take all steps reasonably necessary to ensure that visitors comply with such policies and procedures.

(b) You must make toilet and hand-washing facilities accessible to visitors.

Subpart E—Agricultural Water

§ 112.41 What requirements apply to the quality of agricultural water?

All agricultural water must be safe and of adequate sanitary quality for its intended use.

§ 112.42 What requirements apply to my agricultural water sources, water distribution system, and pooling of water?

(a) At the beginning of a growing season, as appropriate, but at least once annually, you must inspect all of your agricultural water systems, to the extent they are under your control (including water sources, water distribution systems, facilities, and equipment), to identify conditions that are reasonably likely to introduce known or reasonably foreseeable hazards into or onto covered produce or food contact surfaces in light of your covered produce, practices, and conditions, including consideration of the following:

- (1) The nature of each agricultural water source (for example, ground water or surface water);

(2) The extent of your control over each agricultural water source;

(3) The degree of protection of each agricultural water source;

(4) Use of adjacent and nearby land; and

(5) The likelihood of introduction of known or reasonably foreseeable hazards to agricultural water by another user of agricultural water before the water reaches your covered farm.

(b) You must adequately maintain all agricultural water distribution systems to the extent they are under your control as necessary and appropriate to prevent the water distribution system from being a source of contamination to covered produce, food contact surfaces, areas used for a covered activity, or water sources, including by regularly inspecting and adequately storing all equipment used in the system.

(c) You must adequately maintain all agricultural water sources to the extent they are under your control (such as wells). Such maintenance includes regularly inspecting each source to identify any conditions that are reasonably likely to introduce known or reasonably foreseeable hazards into or onto covered produce or food contact surfaces; correcting any significant deficiencies (e.g., repairs to well cap, well casing, sanitary seals, piping tanks and treatment equipment, and control of cross-connections); and keeping the source free of debris, trash, domesticated animals, and other possible sources of contamination of covered produce to the extent practicable and appropriate under the circumstances.

(d) As necessary and appropriate, you must implement measures reasonably necessary to reduce the potential for contamination of covered produce with known or reasonably foreseeable hazards as a result of contact of covered produce with pooled water. For example, such measures may include using protective barriers or staking to keep covered produce from touching the ground or using an alternative irrigation method.

§ 112.43 What requirements apply to treating agricultural water?

(a) When agricultural water is treated in accordance with § 112.45:

- (1) Any method you use to treat agricultural water (such as with physical treatment, including using a pesticide device as defined by the U.S. Environmental Protection Agency (EPA); EPA-registered antimicrobial pesticide product; or other suitable method) must be effective to make the water safe and of adequate sanitary quality for its intended use and/or meet

the relevant microbial quality criteria in § 112.44, as applicable.

(2) You must deliver any treatment of agricultural water in a manner to ensure that the treated water is consistently safe and of adequate sanitary quality for its intended use and/or consistently meets the relevant microbial quality criteria in § 112.44, as applicable.

(b) You must monitor any treatment of agricultural water at a frequency adequate to ensure that the treated water is consistently safe and of adequate sanitary quality for its intended use and/or consistently meets the relevant microbial quality criteria in § 112.44, as applicable.

§ 112.44 What specific microbial quality criteria apply to agricultural water used for certain intended uses?

(a) When you use agricultural water for any one or more of these following purposes, you must ensure there is no detectable generic *Escherichia coli* (*E. coli*) in 100 milliliters (mL) of agricultural water, and you must not use untreated surface water for any of these purposes:

- (1) Used as sprout irrigation water;
- (2) Applied in any manner that directly contacts covered produce during or after harvest activities (for example, water that is applied to covered produce for washing or cooling activities, and water that is applied to harvested crops to prevent dehydration before cooling), including when used to make ice that directly contacts covered produce during or after harvest activities;
- (3) Used to contact food contact surfaces, or to make ice that will contact food contact surfaces; and
- (4) Used for washing hands during and after harvest activities.

(b) When you use agricultural water during growing activities for covered produce (other than sprouts) using a direct water application method, the following criteria apply (unless you establish and use alternative criteria in accordance with § 112.49):

- (1) A geometric mean (GM) of your agricultural water samples of 126 or less colony forming units (CFU) of generic *E. coli* per 100 mL of water (GM is a measure of the central tendency of your water quality distribution); and
- (2) A statistical threshold value (STV) of your agricultural water samples of 410 or less CFU of generic *E. coli* per 100 mL of water (STV is a measure of variability of your water quality distribution, derived as a model-based calculation approximating the 90th percentile using the lognormal distribution).

§ 112.45 What measures must I take if my agricultural water does not meet the requirements of § 112.41 or § 112.44?

(a) If you have determined or have reason to believe that your agricultural water is not safe or of adequate sanitary quality for its intended use as required under § 112.41 and/or if your agricultural water does not meet the microbial quality criterion for the specified purposes as required under § 112.44(a), you must immediately discontinue that use(s), and before you may use the water source and/or distribution system again for the intended use(s), you must either:

- (1) Re-inspect the entire affected agricultural water system to the extent it is under your control, identify any conditions that are reasonably likely to introduce known or reasonably foreseeable hazards into or onto covered produce or food contact surfaces, make necessary changes, and take adequate measures to determine if your changes were effective and, as applicable, adequately ensure that your agricultural water meets the microbial quality criterion in § 112.44(a); or
- (2) Treat the water in accordance with the requirements of § 112.43.

(b) If you have determined that your agricultural water does not meet the microbial quality criteria (or any alternative microbial quality criteria, if applicable) required under § 112.44(b), as soon as practicable and no later than the following year, you must discontinue that use, unless you either:

- (1) Apply a time interval(s) (in days) and/or a (calculated) log reduction by:
 - (i) Applying a time interval between last irrigation and harvest using either:
 - (A) A microbial die-off rate of 0.5 log per day to achieve a (calculated) log reduction of your geometric mean (GM) and statistical threshold value (STV) to meet the microbial quality criteria in § 112.44(b) (or any alternative microbial criteria, if applicable), but no greater than a maximum time interval of 4 consecutive days; or
 - (B) An alternative microbial die-off rate and any accompanying maximum time interval, in accordance with § 112.49; and/or
 - (ii) Applying a time interval between harvest and end of storage using an appropriate microbial die-off rate between harvest and end of storage, and/or applying a (calculated) log reduction using appropriate microbial removal rates during activities such as commercial washing, to meet the microbial quality criteria in § 112.44(b) (or any alternative microbial criteria, if applicable), and any accompanying maximum time interval or log reduction, provided you have adequate

supporting scientific data and information;

(2) Re-inspect the entire affected agricultural water system to the extent it is under your control, identify any conditions that are reasonably likely to introduce known or reasonably foreseeable hazards into or onto covered produce or food contact surfaces, make necessary changes, and take adequate measures to determine if your changes were effective and adequately ensure that your agricultural water meets the microbial quality criteria in § 112.44(b) (or any alternative microbial criteria, if applicable); or

(3) Treat the water in accordance with the requirements of § 112.43.

§ 112.46 How often must I test agricultural water that is subject to the requirements of § 112.44?

(a) There is no requirement to test any agricultural water that is subject to the requirements of § 112.44 when:

(1) You receive water from a Public Water System, as defined under the Safe Drinking Water Act (SDWA) regulations, 40 CFR part 141, that furnishes water that meets the microbial requirements under those regulations or under the regulations of a State (as defined in 40 CFR 141.2) approved to administer the SDWA public water supply program, and you have Public Water System results or certificates of compliance that demonstrate that the water meets that requirement;

(2) You receive water from a public water supply that furnishes water that meets the microbial quality requirement described in § 112.44(a), and you have public water system results or certificates of compliance that demonstrate that the water meets that requirement; or

(3) You treat water in accordance with the requirements of § 112.43.

(b) Except as provided in paragraph (a) of this section, you must take the following steps for each source of water used for purposes that are subject to the requirements of § 112.44(b):

(1) Conduct an initial survey to develop a microbial water quality profile of the agricultural water source.

(i) The initial survey must be conducted:

(A) For an untreated surface water source, by taking a minimum total of 20 samples of agricultural water (or an alternative testing frequency that you establish and use, in accordance with § 112.49) over a minimum period of 2 years, but not greater than 4 years.

(B) For an untreated ground water source, by taking a minimum total of four samples of agricultural water during the growing season or over a period of 1 year.

(ii) The samples of agricultural water must be representative of your use of the water and must be collected as close in time as practicable to, but prior to, harvest. The microbial water quality profile initially consists of the geometric mean (GM) and the statistical threshold value (STV) of generic *Escherichia coli* (*E. coli*) (colony forming units (CFU) per 100 milliliter (mL)) calculated using this data set. You must determine the appropriate way(s) in which the water may be used based on your microbial water quality profile in accordance with § 112.45(b).

(iii) You must update the microbial water quality profile annually as required under paragraph (b)(2) of this section, and otherwise required under paragraph (b)(3) of this section.

(2) Conduct an annual survey to update the microbial water quality profile of your agricultural water.

(i) After the initial survey described in paragraph (b)(1)(i) of this section, you must test the water annually to update your existing microbial water quality profile to confirm that the way(s) in which the water is used continues to be appropriate. You must analyze:

(A) For an untreated surface water source, a minimum number of five samples per year (or an alternative testing frequency that you establish and use, in accordance with § 112.49).

(B) For an untreated ground water source, a minimum of one sample per year.

(ii) The samples of agricultural water must be representative of your use of the water and must be collected as close in time as practicable to, but prior to, harvest.

(iii) To update the microbial water quality profile, you must calculate revised GM and STV values using your current annual survey data, combined with your most recent initial or annual survey data from within the previous 4 years, to make up a rolling data set of:

(A) At least 20 samples for untreated surface water sources; and

(B) At least 4 samples for untreated ground water sources.

(iv) You must modify your water use, as appropriate, based on the revised GM and STV values in your updated microbial water quality profile in accordance with § 112.45(b).

(3) If you have determined or have reason to believe that your microbial water quality profile no longer represents the quality of your water (for example, if there are significant changes in adjacent land use that are reasonably likely to adversely affect the quality of your water source), you must develop a new microbial water quality profile reflective of the time period at which

you believe your microbial water quality profile changed.

(i) To develop a new microbial water quality profile, you must calculate new GM and STV values using your current annual survey data (if taken after the time of the change), combined with new data, to make up a data set of:

(A) At least 20 samples for untreated surface water sources; and

(B) At least 4 samples for untreated ground water sources.

(ii) You must modify your water use based on the new GM and STV values in your new microbial water quality profile in accordance with § 112.45(b).

(c) If you use untreated ground water for the purposes that are subject to the requirements of § 112.44(a), you must initially test the microbial quality of each source of the untreated ground water at least four times during the growing season or over a period of 1 year, using a minimum total of four samples collected to be representative of the intended use(s). Based on these results, you must determine whether the water can be used for that purpose, in accordance with § 112.45(a). If your four initial sample results meet the microbial quality criteria of § 112.44(a), you may test once annually thereafter, using a minimum of one sample collected to be representative of the intended use(s). You must resume testing at least four times per growing season or year if any annual test fails to meet the microbial quality criteria in § 112.44(a).

§ 112.47 Who must perform the tests required under § 112.46 and what methods must be used?

(a) You may meet the requirements related to agricultural water testing required under § 112.46 using:

(1) Test results from your agricultural water source(s) performed by you, or by a person or entity acting on your behalf; or

(2) Data collected by a third party or parties, provided the water source(s) sampled by the third party or parties adequately represent your agricultural water source(s) and all other applicable requirements of this part are met.

(b) Agricultural water samples must be aseptically collected and tested using a method as set forth in § 112.151.

§ 112.48 What measures must I take for water that I use during harvest, packing, and holding activities for covered produce?

(a) You must manage the water as necessary, including by establishing and following water-change schedules for recirculated water, to maintain its safety and adequate sanitary quality and minimize the potential for contamination of covered produce and

food contact surfaces with known or reasonably foreseeable hazards (for example, hazards that may be introduced into the water from soil adhering to the covered produce).

(b) You must visually monitor the quality of water that you use during harvest, packing, and holding activities for covered produce (for example, water used for washing covered produce in dump tanks, flumes, or wash tanks, and water used for cooling covered produce in hydrocoolers) for buildup of organic material (such as soil and plant debris).

(c) You must maintain and monitor the temperature of water at a temperature that is appropriate for the commodity and operation (considering the time and depth of submersion) and is adequate to minimize the potential for infiltration of microorganisms of public health significance into covered produce.

§ 112.49 What alternatives may I establish and use in lieu of the requirements of this subpart?

Provided you satisfy the requirements of § 112.12, you may establish and use one or more of the following alternatives:

(a) An alternative microbial quality criterion (or criteria) using an appropriate indicator of fecal contamination, in lieu of the microbial quality criteria in § 112.44(b);

(b) An alternative microbial die-off rate and an accompanying maximum time interval, in lieu of the microbial die-off rate and maximum time interval in § 112.45(b)(1)(i);

(c) An alternative minimum number of samples used in the initial survey for an untreated surface water source, in lieu of the minimum number of samples required under § 112.46(b)(1)(i)(A); and

(d) An alternative minimum number of samples used in the annual survey for an untreated surface water source, in lieu of the minimum number of samples required under § 112.46(b)(2)(i)(A).

§ 112.50 Under this subpart, what requirements apply regarding records?

(a) You must establish and keep records required under this subpart in accordance with the requirements of subpart O of this part.

(b) You must establish and keep the following records:

(1) The findings of the inspection of your agricultural water system in accordance with the requirements of § 112.42(a);

(2) Documentation of the results of all analytical tests conducted on agricultural water for purposes of compliance with this subpart;

(3) Scientific data or information you rely on to support the adequacy of a

method used to satisfy the requirements of § 112.43(a)(1) and (2);

(4) Documentation of the results of water treatment monitoring under § 112.43(b);

(5) Scientific data or information you rely on to support the microbial die-off or removal rate(s) that you used to determine the time interval (in days) between harvest and end of storage, including other activities such as commercial washing, as applicable, used to achieve the calculated log reduction of generic *Escherichia coli* (*E. coli*), in accordance with § 112.45(b)(1)(ii);

(6) Documentation of actions you take in accordance with § 112.45. With respect to any time interval or (calculated) log reduction applied in accordance with § 112.45(b)(1)(i) and/or (ii), such documentation must include the specific time interval or log reduction applied, how the time interval or log reduction was determined, and the dates of corresponding activities such as the dates of last irrigation and harvest, the dates of harvest and end of storage, and/or the dates of activities such as commercial washing);

(7) Annual documentation of the results or certificates of compliance from a public water system required under § 112.46(a)(1) or (2), if applicable;

(8) Scientific data or information you rely on to support any alternative that you establish and use in accordance with § 112.49; and

(9) Any analytical methods you use in lieu of the method that is incorporated by reference in § 112.151(a).

Subpart F—Biological Soil Amendments of Animal Origin and Human Waste

§ 112.51 What requirements apply for determining the status of a biological soil amendment of animal origin?

(a) A biological soil amendment of animal origin is treated if it has been processed to completion to adequately reduce microorganisms of public health significance in accordance with the requirements of § 112.54, or, in the case of an agricultural tea, the biological materials of animal origin used to make the tea have been so processed, the water used to make the tea is not untreated surface water, and the water used to make the tea has no detectable

generic *Escherichia coli* (*E. coli*) in 100 milliliters (mL) of water.

(b) A biological soil amendment of animal origin is untreated if it:

(1) Has not been processed to completion in accordance with the requirements of § 112.54, or in the case of an agricultural tea, the biological materials of animal origin used to make the tea have not been so processed, or the water used to make the tea is untreated surface water, or the water used to make the tea has detectable generic *E. coli* in 100 mL of water;

(2) Has become contaminated after treatment;

(3) Has been recombined with an untreated biological soil amendment of animal origin;

(4) Is or contains a component that is untreated waste that you know or have reason to believe is contaminated with a hazard or has been associated with foodborne illness; or

(5) Is an agricultural tea made with biological materials of animal origin that contains an agricultural tea additive.

§ 112.52 How must I handle, convey, and store biological soil amendments of animal origin?

(a) You must handle, convey and store any biological soil amendment of animal origin in a manner and location such that it does not become a potential source of contamination to covered produce, food contact surfaces, areas used for a covered activity, water sources, water distribution systems, and other soil amendments. Agricultural teas that are biological soil amendments of animal origin may be used in water distribution systems provided that all other requirements of this rule are met.

(b) You must handle, convey and store any treated biological soil amendment of animal origin in a manner and location that minimizes the risk of it becoming contaminated by an untreated or in-process biological soil amendment of animal origin.

(c) You must handle, convey, and store any biological soil amendment of animal origin that you know or have reason to believe may have become contaminated as if it was untreated.

§ 112.53 What prohibitions apply regarding use of human waste?

You may not use human waste for growing covered produce, except sewage sludge biosolids used in

accordance with the requirements of 40 CFR part 503, subpart D, or equivalent regulatory requirements.

§ 112.54 What treatment processes are acceptable for a biological soil amendment of animal origin that I apply in the growing of covered produce?

Each of the following treatment processes are acceptable for a biological soil amendment of animal origin that you apply in the growing of covered produce, provided that the resulting biological soil amendments are applied in accordance with the applicable requirements of § 112.56:

(a) A scientifically valid controlled physical process (e.g., thermal), chemical process (e.g., high alkaline pH), biological process (e.g., composting), or a combination of scientifically valid controlled physical, chemical and/or biological processes that has been validated to satisfy the microbial standard in § 112.55(a) for *Listeria monocytogenes* (*L. monocytogenes*), *Salmonella* species, and *E. coli* O157:H7; or

(b) A scientifically valid controlled physical, chemical, or biological process, or a combination of scientifically valid controlled physical, chemical, and/or biological processes, that has been validated to satisfy the microbial standard in § 112.55(b) for *Salmonella* species and fecal coliforms. Examples of scientifically valid controlled biological (e.g., composting) processes that meet the microbial standard in § 112.55(b) include:

(1) Static composting that maintains aerobic (i.e., oxygenated) conditions at a minimum of 131 °F (55 °C) for 3 consecutive days and is followed by adequate curing; and

(2) Turned composting that maintains aerobic conditions at a minimum of 131 °F (55 °C) for 15 days (which do not have to be consecutive), with a minimum of five turnings, and is followed by adequate curing.

§ 112.55 What microbial standards apply to the treatment processes in § 112.54?

The following microbial standards apply to the treatment processes in § 112.54 as set forth in that section.

(a) For *L. monocytogenes*, *Salmonella* species, and *E. coli* O157:H7, the relevant standards in the table in this paragraph (a); or

For the microorganism—	The microbial standard is—
(1) <i>L. monocytogenes</i>	Not detected using a method that can detect one colony forming unit (CFU) per 5 gram (or milliliter, if liquid is being sampled) analytical portion.

For the microorganism—	The microbial standard is—
(2) <i>Salmonella</i> species	Not detected using a method that can detect three most probable numbers (MPN) per 4 grams (or milliliter, if liquid is being sampled) of total solids.
(3) <i>E. coli</i> O157:H7	Not detected using a method that can detect 0.3 MPN per 1 gram (or milliliter, if liquid is being sampled) analytical portion.

(b) *Salmonella* species are not detected using a method that can detect three MPN *Salmonella* species per 4 grams of total solids (dry weight basis); and less than 1,000 MPN fecal coliforms per gram of total solids (dry weight basis).

§ 112.56 What application requirements and minimum application intervals apply to biological soil amendments of animal origin?
 (a) You must apply the biological soil amendments of animal origin specified in the first column of the table in this

paragraph (a) in accordance with the application requirements specified in the second column of the table in this paragraph (a) and the minimum application intervals specified in the third column of the table in this paragraph (a).

If the biological soil amendment of animal origin is—	Then the biological soil amendment of animal origin must be applied—	And then the minimum application interval is—
(1)(i) Untreated	In a manner that does not contact covered produce during application and minimizes the potential for contact with covered produce after application.	[Reserved].
(ii) Untreated	In a manner that does not contact covered produce during or after application.	0 days.
(2) Treated by a scientifically valid controlled physical, chemical, or biological process, or combination of scientifically valid controlled physical, chemical, and/or biological processes, in accordance with the requirements of § 112.54(b) to meet the microbial standard in § 112.55(b).	In a manner that minimizes the potential for contact with covered produce during and after application.	0 days.
(3) Treated by a scientifically valid controlled physical, chemical, or biological process, or combination of scientifically valid controlled physical, chemical, or biological processes, in accordance with the requirements of § 112.54(a) to meet the microbial standard in § 112.55(a).	In any manner (<i>i.e.</i> , no restrictions)	0 days.

(b) [Reserved]

§ 112.60 Under this subpart, what requirements apply regarding records?

(a) You must establish and keep records required under this subpart in accordance with the requirements of subpart O of this part.

(b) For any biological soil amendment of animal origin you use, you must establish and keep the following records:

(1) For a treated biological soil amendment of animal origin you receive from a third party, documentation (such as a Certificate of Conformance) at least annually that:

(i) The process used to treat the biological soil amendment of animal origin is a scientifically valid process that has been carried out with appropriate process monitoring; and

(ii) The biological soil amendment of animal origin has been handled, conveyed and stored in a manner and location to minimize the risk of contamination by an untreated or in process biological soil amendment of animal origin; and

(2) For a treated biological soil amendment of animal origin you

produce for your own covered farm(s), documentation that process controls (for example, time, temperature, and turnings) were achieved.

Subpart G–H [Reserved]

Subpart I—Domesticated and Wild Animals

§ 112.81 How do the requirements of this subpart apply to areas where covered activities take place?

(a) The requirements of this subpart apply when a covered activity takes place in an outdoor area or a partially-enclosed building and when, under the circumstances, there is a reasonable probability that animals will contaminate covered produce.

(b) The requirements of this subpart do not apply:

- (1) When a covered activity takes place in a fully-enclosed building; or
- (2) To fish used in aquaculture operations.

§ 112.83 What requirements apply regarding grazing animals, working animals, and animal intrusion?

(a) You must take the steps set forth in paragraph (b) of this section if under

the circumstances there is a reasonable probability that grazing animals, working animals, or animal intrusion will contaminate covered produce.

(b) You must:

(1) Assess the relevant areas used for a covered activity for evidence of potential contamination of covered produce as needed during the growing season (based on your covered produce; your practices and conditions; and your observations and experience); and

(2) If significant evidence of potential contamination is found (such as observation of animals, animal excreta or crop destruction), you must evaluate whether the covered produce can be harvested in accordance with the requirements of § 112.112 and take measures reasonably necessary during growing to assist you later during harvest when you must identify, and not harvest, covered produce that is reasonably likely to be contaminated with a known or reasonably foreseeable hazard.

§ 112.84 Does this regulation require covered farms to take actions that would constitute a “taking” of threatened or endangered species; to take measures to exclude animals from outdoor growing areas; or to destroy animal habitat or otherwise clear farm borders around outdoor growing areas or drainages?

No. Nothing in this regulation authorizes the “taking” of threatened or endangered species as that term is defined by the Endangered Species Act (16 U.S.C. 1531–1544) (*i.e.*, to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct), in violation of the Endangered Species Act. This regulation does not require covered farms to take measures to exclude animals from outdoor growing areas, or to destroy animal habitat or otherwise clear farm borders around outdoor growing areas or drainages.

Subpart J—[Reserved]

Subpart K—Growing, Harvesting, Packing, and Holding Activities

§ 112.111 What measures must I take if I grow, harvest, pack or hold both covered and excluded produce?

If you grow, harvest, pack or hold produce that is not covered in this part (*i.e.*, excluded produce in accordance with § 112.2) and also conduct such activities on covered produce, and the excluded produce is not grown, harvested, packed or held in accordance with this part, you must take measures during these covered activities, as applicable, to:

(a) Keep covered produce separate from excluded produce (except when covered produce and excluded produce are placed in the same container for distribution); and

(b) Adequately clean and sanitize, as necessary, any food contact surfaces that contact excluded produce before using such food contact surfaces for covered activities on covered produce.

§ 112.112 What measures must I take immediately prior to and during harvest activities?

You must take all measures reasonably necessary to identify, and not harvest, covered produce that is reasonably likely to be contaminated with a known or reasonably foreseeable hazard, including steps to identify and not harvest covered produce that is visibly contaminated with animal excreta. At a minimum, identifying and not harvesting covered produce that is reasonably likely to be contaminated with animal excreta or that is visibly contaminated with animal excreta requires a visual assessment of the

growing area and all covered produce to be harvested, regardless of the harvest method used.

§ 112.113 How must I handle harvested covered produce during covered activities?

You must handle harvested covered produce during covered activities in a manner that protects against contamination with known or reasonably foreseeable hazards—for example, by avoiding, to the degree practicable, contact of cut surfaces of harvested produce with soil.

§ 112.114 What requirements apply to dropped covered produce?

You must not distribute dropped covered produce. Dropped covered produce is covered produce that drops to the ground before harvest. Dropped covered produce does not include root crops that grow underground (such as carrots), crops that grow on the ground (such as cantaloupe), or produce that is intentionally dropped to the ground as part of harvesting (such as almonds).

§ 112.115 What measures must I take when packaging covered produce?

You must package covered produce in a manner that prevents the formation of *Clostridium botulinum* toxin if such toxin is a known or reasonably foreseeable hazard (such as for mushrooms).

§ 112.116 What measures must I take when using food-packing (including food packaging) material?

(a) You must use food-packing material that is adequate for its intended use, which includes being:

(1) Cleanable or designed for single use; and

(2) Unlikely to support growth or transfer of bacteria.

(b) If you reuse food-packing material, you must take adequate steps to ensure that food contact surfaces are clean, such as by cleaning food-packing containers or using a clean liner.

Subpart L—Equipment, Tools, Buildings, and Sanitation

§ 112.121 What equipment and tools are subject to the requirements of this subpart?

Equipment and tools subject to the requirements of this subpart are those that are intended to, or likely to, contact covered produce; and those instruments or controls used to measure, regulate, or record conditions to control or prevent the growth of microorganisms of public health significance. Examples include knives, implements, mechanical harvesters, waxing machinery, cooling equipment (including hydrocoolers), grading belts, sizing equipment,

palletizing equipment, and equipment used to store or convey harvested covered produce (such as containers, bins, food-packing material, dump tanks, flumes, and vehicles or other equipment used for transport that are intended to, or likely to, contact covered produce).

§ 112.122 What buildings are subject to the requirements of this subpart?

Buildings subject to the requirements of this subpart include:

(a) Any fully- or partially-enclosed building used for covered activities, including minimal structures that have a roof but do not have any walls; and

(b) Storage sheds, buildings, or other structures used to store food contact surfaces (such as harvest containers and food-packing materials).

§ 112.123 What general requirements apply regarding equipment and tools subject to this subpart?

All of the following requirements apply regarding equipment and tools subject to this subpart:

(a) You must use equipment and tools that are of adequate design, construction, and workmanship to enable them to be adequately cleaned and properly maintained; and

(b) Equipment and tools must be:

(1) Installed and maintained as to facilitate cleaning of the equipment and of all adjacent spaces; and

(2) Stored and maintained to protect covered produce from being contaminated with known or reasonably foreseeable hazards and to prevent the equipment and tools from attracting and harboring pests.

(c) Seams on food contact surfaces of equipment and tools that you use must be either smoothly bonded, or maintained to minimize accumulation of dirt, filth, food particles, and organic material and thus minimize the opportunity for harborage or growth of microorganisms.

(d)(1) You must inspect, maintain, and clean and, when necessary and appropriate, sanitize all food contact surfaces of equipment and tools used in covered activities as frequently as reasonably necessary to protect against contamination of covered produce.

(2) You must maintain and clean all non-food-contact surfaces of equipment and tools subject to this subpart used during harvesting, packing, and holding as frequently as reasonably necessary to protect against contamination of covered produce.

(e) If you use equipment such as pallets, forklifts, tractors, and vehicles such that they are intended to, or likely to, contact covered produce, you must

do so in a manner that minimizes the potential for contamination of covered produce or food contact surfaces with known or reasonably foreseeable hazards.

§ 112.124 What requirements apply to instruments and controls used to measure, regulate, or record?

Instruments or controls you use to measure, regulate, or record temperatures, hydrogen-ion concentration (pH), sanitizer efficacy or other conditions, in order to control or prevent the growth of microorganisms of public health significance, must be:

- (a) Accurate and precise as necessary and appropriate in keeping with their purpose;
- (b) Adequately maintained; and
- (c) Adequate in number for their designated uses.

§ 112.125 What requirements apply to equipment that is subject to this subpart used in the transport of covered produce?

Equipment that is subject to this subpart that you use to transport covered produce must be:

- (a) Adequately clean before use in transporting covered produce; and
- (b) Adequate for use in transporting covered produce.

§ 112.126 What requirements apply to my buildings?

(a) All of the following requirements apply regarding buildings:

(1) Buildings must be suitable in size, construction, and design to facilitate maintenance and sanitary operations for covered activities to reduce the potential for contamination of covered produce or food contact surfaces with known or reasonably foreseeable hazards. Buildings must:

- (i) Provide sufficient space for placement of equipment and storage of materials;
- (ii) Permit proper precautions to be taken to reduce the potential for contamination of covered produce, food contact surfaces, or packing materials with known or reasonably foreseeable hazards. The potential for contamination must be reduced by effective design including the separation of operations in which contamination is likely to occur, by one or more of the following means: Location, time, partition, enclosed systems, or other effective means; and

(2) You must provide adequate drainage in all areas where normal operations release or discharge water or other liquid waste on the ground or floor of the building.

(b) You must implement measures to prevent contamination of your covered produce and food contact surfaces in

your buildings, as appropriate, considering the potential for such contamination through:

- (1) Floors, walls, ceilings, fixtures, ducts, or pipes; and
- (2) Drip or condensate.

§ 112.127 What requirements apply regarding domesticated animals in and around a fully-enclosed building?

(a) You must take reasonable precautions to prevent contamination of covered produce, food contact surfaces, and food-packing materials in fully-enclosed buildings with known or reasonably foreseeable hazards from domesticated animals by:

- (1) Excluding domesticated animals from fully-enclosed buildings where covered produce, food contact surfaces, or food-packing material is exposed; or
- (2) Separating domesticated animals in a fully enclosed building from an area where a covered activity is conducted on covered produce by location, time, or partition.

(b) Guard or guide dogs may be allowed in some areas of a fully enclosed building if the presence of the dogs is unlikely to result in contamination of produce, food contact surfaces, or food-packing materials.

§ 112.128 What requirements apply regarding pest control in buildings?

(a) You must take those measures reasonably necessary to protect covered produce, food contact surfaces, and food-packing materials from contamination by pests in buildings, including routine monitoring for pests as necessary and appropriate.

(b) For fully-enclosed buildings, you must take measures to exclude pests from your buildings.

(c) For partially-enclosed buildings, you must take measures to prevent pests from becoming established in your buildings (such as by use of screens or by monitoring for the presence of pests and removing them when present).

§ 112.129 What requirements apply to toilet facilities?

All of the following requirements apply to toilet facilities:

(a) You must provide personnel with adequate, readily accessible toilet facilities, including toilet facilities readily accessible to growing areas during harvesting activities.

(b) Your toilet facilities must be designed, located, and maintained to:

- (1) Prevent contamination of covered produce, food contact surfaces, areas used for a covered activity, water sources, and water distribution systems with human waste;
- (2) Be directly accessible for servicing,

be serviced and cleaned at a frequency

sufficient to ensure suitability of use, and be kept supplied with toilet paper; and

(3) Provide for the sanitary disposal of waste and toilet paper.

(c) During growing activities that take place in a fully-enclosed building, and during covered harvesting, packing, or holding activities, you must provide a hand-washing station in sufficiently close proximity to toilet facilities to make it practical for persons who use the toilet facility to wash their hands.

§ 112.130 What requirements apply for hand-washing facilities?

All of the following requirements apply to hand-washing facilities:

(a) You must provide personnel with adequate, readily accessible hand-washing facilities during growing activities that take place in a fully-enclosed building, and during covered harvest, packing, or holding activities.

(b) Your hand-washing facilities must be furnished with:

- (1) Soap (or other effective surfactant);
- (2) Running water that satisfies the requirements of § 112.44(a) for water used to wash hands; and
- (3) Adequate drying devices (such as single service towels, sanitary towel service, or electric hand dryers).

(c) You must provide for appropriate disposal of waste (for example, waste water and used single-service towels) associated with a hand-washing facility and take appropriate measures to prevent waste water from a hand-washing facility from contaminating covered produce, food contact surfaces, areas used for a covered activity, agricultural water sources, and agricultural water distribution systems with known or reasonably foreseeable hazards.

(d) You may not use antiseptic hand rubs as a substitute for soap (or other effective surfactant) and water.

§ 112.131 What must I do to control and dispose of sewage?

All of the following requirements apply for the control and disposal of sewage:

(a) You must dispose of sewage into an adequate sewage or septic system or through other adequate means.

(b) You must maintain sewage and septic systems in a manner that prevents contamination of covered produce, food contact surfaces, areas used for a covered activity, agricultural water sources, and agricultural water distribution systems with known or reasonably foreseeable hazards.

(c) You must manage and dispose of leakages or spills of human waste in a manner that prevents contamination of

covered produce, and prevents or minimizes contamination of food contact surfaces, areas used for a covered activity, agricultural water sources, or agricultural water distribution systems.

(d) After a significant event (such as flooding or an earthquake) that could negatively impact a sewage or septic system, you must take appropriate steps to ensure that sewage and septic systems continue to operate in a manner that does not contaminate covered produce, food contact surfaces, areas used for a covered activity, agricultural water sources, or agricultural water distribution systems.

§ 112.132 What must I do to control and dispose of trash, litter, and waste in areas used for covered activities?

All of the following requirements apply to the control and disposal of trash, litter, and waste in areas used for covered activities:

(a) You must convey, store, and dispose of trash, litter and waste to:

(1) Minimize the potential for trash, litter, or waste to attract or harbor pests; and

(2) Protect against contamination of covered produce, food contact surfaces, areas used for a covered activity, agricultural water sources, and agricultural water distribution systems with known or reasonably foreseeable hazards.

(b) You must adequately operate systems for waste treatment and disposal so that they do not constitute a potential source of contamination in areas used for a covered activity.

§ 112.133 What requirements apply to plumbing?

The plumbing must be of an adequate size and design and be adequately installed and maintained to:

(a) Distribute water under pressure as needed, in sufficient quantities, in all areas where used for covered activities, for sanitary operations, or for hand-washing and toilet facilities;

(b) Properly convey sewage and liquid disposable waste;

(c) Avoid being a source of contamination to covered produce, food contact surfaces, areas used for a covered activity, or agricultural water sources; and

(d) Not allow backflow from, or cross connection between, piping systems that discharge waste water or sewage and piping systems that carry water used for a covered activity, for sanitary operations, or for use in hand-washing facilities.

§ 112.134 What must I do to control animal excreta and litter from domesticated animals that are under my control?

(a) If you have domesticated animals, to prevent contamination of covered produce, food contact surfaces, areas used for a covered activity, agricultural water sources, or agricultural water distribution systems with animal waste, you must:

(1) Adequately control their excreta and litter; and

(2) Maintain a system for control of animal excreta and litter.

(b) [Reserved]

§ 112.140 Under this subpart, what requirements apply regarding records?

(a) You must establish and keep records required under this subpart in accordance with the requirements of subpart O of this part.

(b) You must establish and keep documentation of the date and method of cleaning and sanitizing of equipment subject to this subpart used in:

(1) Growing operations for sprouts; and

(2) Covered harvesting, packing, or holding activities.

Subpart M—Sprouts

§ 112.141 What commodities are subject to this subpart?

The requirements of this subpart apply to growing, harvesting, packing, and holding of all sprouts, except soil- or substrate-grown sprouts harvested without their roots.

§ 112.142 What requirements apply to seeds or beans used to grow sprouts?

In addition to the requirements of this part, all of the following requirements apply to seeds or beans used to grow sprouts.

(a) You must take measures reasonably necessary to prevent the introduction of known or reasonably foreseeable hazards into or onto seeds or beans that you will use for sprouting.

(b) Except as provided in paragraph (c) of this section, if you know or have reason to believe that a lot of seeds or beans may be contaminated with a pathogen (either because it has been associated with foodborne illness; or based on microbial test results, including a positive finding of a pathogen in tests required under § 112.144(b)), you must:

(1) Discontinue use of all seeds or beans from that lot for sprout production and ensure that sprouts grown from that lot of seeds or beans do not enter commerce; and

(2) Report the information (association with illness and/or findings of microbial testing) to the seed grower,

distributor, supplier, or other entity from whom you received the seeds or beans.

(c) If your reason to believe that a lot of seeds or beans may be contaminated was based only on microbial test results:

(1) You are not required to take the steps set forth in paragraph (b)(1) of this section if you treat your lot of seeds or beans with a process that is reasonably certain to achieve destruction or elimination in the seeds or beans of the most resistant microorganisms of public health significance that are likely to occur in the seeds or beans; or

(2) You are not required to take the steps set forth in paragraphs (b)(1) and (2) of this section if you later reasonably determine, through appropriate followup actions, that the lot of seeds or beans is not the source of contamination (e.g., the lot of seeds or beans is not the source of a pathogen found in spent sprout irrigation water or sprouts).

(d) You must visually examine seeds and beans, and packaging used to ship seeds or beans, for signs of potential contamination with known or reasonably foreseeable hazards.

(e) You must either:

(1) Treat seeds or beans that will be used to grow sprouts using a scientifically valid method to reduce microorganisms of public health significance; or

(2) Rely on prior treatment of seeds or beans conducted by a grower, distributor, or supplier of the seeds or beans (whether to fulfill this requirement completely or for the purpose of considering such prior treatment when applying appropriate additional treatment of the seeds or beans at the covered farm immediately before sprouting), provided that you obtain documentation (such as a Certificate of Conformance) from the grower, distributor, or supplier that:

(i) The prior treatment was conducted using a scientifically valid method to reduce microorganisms of public health significance; and

(ii) The treated seeds or beans were handled and packaged following the treatment in a manner that minimizes the potential for contamination.

§ 112.143 What measures must I take for growing, harvesting, packing, and holding sprouts?

You must take all of the following measures for growing, harvesting, packing, and holding sprouts:

(a) You must grow, harvest, pack, and hold sprouts in a fully-enclosed building.

(b) Any food contact surfaces you use to grow, harvest, pack, or hold sprouts must be cleaned and sanitized before

contact with sprouts or seeds or beans used to grow sprouts.

(c) You must conduct testing during growing, harvesting, packing, and holding sprouts, as specified in § 112.144.

(d) You must establish and implement a written environmental monitoring plan as specified in § 112.145.

(e) You must take certain actions if you detect *Listeria* species or *L. monocytogenes* in the growing, harvesting, packing, or holding environment, as specified in § 112.146.

(f) You must establish and implement a written sampling plan to test spent sprout irrigation water or sprouts for pathogens as specified in § 112.147.

(g) You must take certain actions if the samples of spent sprout irrigation water or sprouts test positive for a pathogen as specified in § 112.148.

§ 112.144 What testing must I do during growing, harvesting, packing, and holding sprouts?

All of the following testing must be done during growing, harvesting, packing, and holding sprouts:

(a) You must test the growing, harvesting, packing, and holding environment for *Listeria* species or *L. monocytogenes* in accordance with the requirements of § 112.145.

(b) You must either:

(1) Test spent sprout irrigation water from each production batch of sprouts for *E. coli* O157:H7, *Salmonella* species, and any pathogens meeting the criteria in paragraph (c) of this section, in accordance with the requirements of § 112.147; or

(2) If testing spent sprout irrigation water is not practicable (for example, soil-grown sprouts harvested with roots or for hydroponically grown sprouts that use very little water), test each production batch of sprouts at the in-process stage (*i.e.*, while sprouts are still growing) for *E. coli* O157:H7, *Salmonella* species, and any pathogens meeting the criteria in paragraph (c) of this section, in accordance with the requirements of § 112.147.

(c) In addition to *E. coli* O157:H7 and *Salmonella* species, you must conduct tests as provided in paragraph (b) of this section for additional pathogens when the following conditions are met:

(1) Testing for the pathogen is reasonably necessary to minimize the risk of serious adverse health consequences or death from use of, or exposure to, sprouts; and

(2) A scientifically valid test method for the pathogen is available to detect the pathogen in spent sprout irrigation water (or sprouts).

§ 112.145 What requirements apply to testing the environment for *Listeria* species or *L. monocytogenes*?

All of the following testing requirements apply for the growing, harvesting, packing, and holding environment for *Listeria* species or *L. monocytogenes*.

(a) You must establish and implement a written environmental monitoring plan that is designed to identify *L. monocytogenes* if it is present in the growing, harvesting, packing, or holding environment.

(b) Your written environmental monitoring plan must be directed to sampling and testing for either *Listeria* species or *L. monocytogenes*.

(c) Your written environmental monitoring plan must include a sampling plan that specifies:

(1) What you will test collected samples for (*i.e.*, *Listeria* species or *L. monocytogenes*);

(2) How often you will collect environmental samples, which must be no less than monthly, and at what point during production you will collect the samples; and

(3) Sample collection sites; the number and location of sampling sites must be sufficient to determine whether measures are effective and must include appropriate food contact surfaces and non-food-contact surfaces of equipment, and other surfaces within the growing, harvesting, packing, and holding environment.

(d) You must aseptically collect environmental samples and test them for *Listeria* species or *L. monocytogenes* using a method as set forth in § 112.152.

(e) Your written environmental monitoring plan must include a corrective action plan that, at a minimum, requires you to take the actions in § 112.146, and details when and how you will accomplish those actions, if the growing, harvesting, packing, or holding environment tests positive for *Listeria* species or *L. monocytogenes*.

§ 112.146 What actions must I take if the growing, harvesting, packing, or holding environment tests positive for *Listeria* species or *L. monocytogenes*?

You must, at a minimum, take the following actions if you detect *Listeria* species or *L. monocytogenes* in the growing, harvesting, packing, or holding environment:

(a) Conduct additional testing of surfaces and areas surrounding the area where *Listeria* species or *L. monocytogenes* was detected to evaluate the extent of the problem, including the potential for *Listeria* species or *L. monocytogenes* to have become established in a niche;

(b) Clean and sanitize the affected surfaces and surrounding areas;

(c) Conduct additional sampling and testing to determine whether the *Listeria* species or *L. monocytogenes* has been eliminated;

(d) Conduct finished product testing when appropriate;

(e) Perform any other actions necessary to prevent recurrence of the contamination; and

(f) Take appropriate action to prevent any food that is adulterated under section 402 of the Federal Food, Drug, and Cosmetic Act from entering into commerce.

§ 112.147 What must I do to collect and test samples of spent sprout irrigation water or sprouts for pathogens?

All of the following requirements apply for collecting and testing samples of spent sprout irrigation water or sprouts for pathogens as required in § 112.144(b):

(a) You must establish and implement a written sampling plan that identifies the number and location of samples (of spent sprout irrigation water or sprouts) to be collected for each production batch of sprouts to ensure that the collected samples are representative of the production batch when testing for contamination.

(b) In accordance with the written sampling plan required under paragraph (a) of this section, you must aseptically collect samples of spent sprout irrigation water or sprouts, and test the collected samples for pathogens using a method as set forth in § 112.153. You must not allow the production batch of sprouts to enter into commerce unless the results of the testing of spent sprout irrigation water or sprouts are negative for *E. coli* O157:H7, *Salmonella* species, and, if applicable, a pathogen meeting the criteria in § 112.144(c).

(c) Your written sampling plan must include a corrective action plan that at a minimum, requires you to take the actions in § 112.148, and details when and how you will accomplish those actions, if the samples of spent sprout irrigation water or sprouts test positive for *E. coli* O157:H7, *Salmonella* species, or a pathogen meeting the criteria in § 112.144(c).

§ 112.148 What actions must I take if the samples of spent sprout irrigation water or sprouts test positive for a pathogen?

You must, at a minimum, take the following actions if the samples of spent sprout irrigation water or sprouts test positive for *E. coli* O157:H7, *Salmonella* species, or a pathogen meeting the criteria in § 112.144(c):

(a) Take appropriate action to prevent any food that is adulterated under

section 402 of the Federal Food, Drug, and Cosmetic Act from entering into commerce;

(b) Take the steps required in § 112.142(b) with respect to the lot of seeds or beans used to grow the affected production batch of sprouts (except as allowed under § 112.142(c));

(c) Clean and sanitize the affected surfaces and surrounding areas; and

(d) Perform any other actions necessary to prevent reoccurrence of the contamination.

§ 112.150 Under this subpart, what requirements apply regarding records?

(a) You must establish and keep records required under this subpart in accordance with the requirements of subpart O of this part.

(b) You must establish and keep the following records:

(1) Documentation of your treatment of seeds or beans to reduce microorganisms of public health significance in the seeds or beans, at your farm; or alternatively, documentation (such as a Certificate of Conformance) from your seed supplier that seeds or beans are treated to reduce microorganisms of public health significance and are appropriately handled and packaged following the treatment, in accordance with the requirements of § 112.142(e);

(2) Your written environmental monitoring plan in accordance with the requirements of § 112.145;

(3) Your written sampling plan for each production batch of sprouts in accordance with the requirements of § 112.147(a) and (c);

(4) Documentation of the results of all analytical tests conducted for purposes of compliance with this subpart;

(5) Any analytical methods you use in lieu of the methods that are incorporated by reference in §§ 112.152 and 112.153; and

(6) Documentation of actions you take in accordance with §§ 112.142(b) and (c), 112.146, and 112.148.

Subpart N—Analytical Methods

§ 112.151 What methods must I use to test the quality of water to satisfy the requirements of § 112.46?

You must test the quality of water using:

(a) The method of analysis published by the U.S. Environmental Protection Agency (EPA), “Method 1603: *Escherichia coli* (*E. coli*) in Water by Membrane Filtration Using Modified membrane-Thermotolerant *Escherichia coli* Agar (Modified mTEC), EPA-821-R-09-007,” December, 2009. The Director of the Federal Register approves this incorporation by reference

in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. You may obtain a copy from EPA, Office of Water (4303T), 1200 Pennsylvania Avenue NW., Washington, DC 20460. You may inspect a copy at FDA’s Main Library, 10903 New Hampshire Ave., Bldg. 2, Third Floor, Silver Spring, MD 20993, 301-796-2039, or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html; or

(b)(1) A scientifically valid method that is at least equivalent to the method of analysis in § 112.151(a) in accuracy, precision, and sensitivity; or

(2) For any other indicator of fecal contamination you may test for pursuant to § 112.49(a), a scientifically valid method.

§ 112.152 What methods must I use to test the growing, harvesting, packing, and holding environment for *Listeria* species or *L. monocytogenes* to satisfy the requirements of § 112.144(a)?

You must test the growing, harvesting, packing, and holding environment for *Listeria* species or *L. monocytogenes* using:

(a) The method of analysis described in “Testing Methodology for *Listeria* species or *L. monocytogenes* in Environmental Samples,” Version 1, October 2015, U.S. Food and Drug Administration. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 5. You may obtain a copy from, and/or inspect a copy at, the Division of Produce Safety, Center for Food Safety and Applied Nutrition (CFSAN), U.S. Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740, 240-402-1600; FDA’s Main Library, 10903 New Hampshire Ave., Bldg. 2, Third Floor, Silver Spring, MD 20993, 301-796-2039; <http://www.fda.gov/fsma>; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulation/ibr_locations.html; or

(b) A scientifically valid method that is at least equivalent to the method of analysis in § 112.152(a) in accuracy, precision, and sensitivity.

§ 112.153 What methods must I use to test spent sprout irrigation water (or sprouts) from each production batch of sprouts for pathogens to satisfy the requirements of § 112.144(b) and (c)?

You must test spent sprout irrigation water (or sprouts) from each production batch for pathogens using:

(a) For *E. coli* O157:H7, *Salmonella* species:

(1) The method of analysis described in “Testing Methodologies for *E. coli* O157:H7 and *Salmonella* species in Spent Sprout Irrigation Water (or Sprouts),” Version 1, October 2015, U.S. Food and Drug Administration. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 5. You may obtain a copy from, and/or inspect a copy at, the Division of Produce Safety, Center for Food Safety and Applied Nutrition (CFSAN), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740, 240-402-1600; FDA’s Main Library, 10903 New Hampshire Ave., Bldg. 2, Third Floor, Silver Spring, MD 20993, 301-796-2039; <http://www.fda.gov/fsma>; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulation/ibr_locations.html; or

(2) A scientifically valid method that is at least equivalent to the method of analysis in § 112.153(a)(1) in accuracy, precision, and sensitivity; and

(b) For any other pathogen(s) meeting the criteria in § 112.144(c), a scientifically valid method.

Subpart O—Records

§ 112.161 What general requirements apply to records required under this part?

(a) Except as otherwise specified, all records required under this part must:

(1) Include, as applicable:

(i) The name and location of your farm;

(ii) Actual values and observations obtained during monitoring;

(iii) An adequate description (such as the commodity name, or the specific variety or brand name of a commodity, and, when available, any lot number or other identifier) of covered produce applicable to the record;

(iv) The location of a growing area (for example, a specific field) or other area (for example, a specific packing shed) applicable to the record; and

(v) The date and time of the activity documented;

(2) Be created at the time an activity is performed or observed;

(3) Be accurate, legible, and indelible; and

(4) Be dated, and signed or initialed by the person who performed the activity documented.

(b) Records required under §§ 112.7(b), 112.30(b)(2), 112.50(b)(2), (4), and (6), 112.60(b)(2), 112.140(b)(1) and (2), and 112.150(b)(1), (4), and (6), must be reviewed, dated, and signed, within a reasonable time after the records are made, by a supervisor or responsible party.

§ 112.162 Where must I store records?

(a) Offsite storage of records is permitted if such records can be retrieved and provided onsite within 24 hours of request for official review.

(b) Electronic records are considered to be onsite at your farm if they are accessible from an onsite location at your farm.

§ 112.163 May I use existing records to satisfy the requirements of this part?

(a) Existing records (*e.g.*, records that are kept to comply with other Federal, State, or local regulations, or for any other reason) do not need to be duplicated if they contain all of the required information and satisfy the requirements of this part. Existing records may be supplemented as necessary to include all of the required information and satisfy the requirements of this part.

(b) The information required by this part does not need to be kept in one set of records. If existing records contain some of the required information, any new information required by this part may be kept either separately or combined with the existing records.

§ 112.164 How long must I keep records?

(a)(1) You must keep records required by this part for at least 2 years past the date the record was created.

(2) Records that a farm relies on during the 3-year period preceding the applicable calendar year to satisfy the criteria for a qualified exemption, in accordance with §§ 112.5 and 112.7, must be retained as long as necessary to support the farm's status during the applicable calendar year.

(b) Records that relate to the general adequacy of the equipment or processes or records that relate to analyses, sampling, or action plans being used by a farm, including the results of scientific studies, tests, and evaluations, must be retained at the farm for at least 2 years after the use of such equipment or processes, or records related to analyses, sampling, or action plans, is discontinued.

§ 112.165 What formats are acceptable for the records I keep?

You must keep records as:

(a) Original records;

(b) True copies (such as photocopies, pictures, scanned copies, microfilm, microfiche, or other accurate reproductions of the original records); or

(c) Electronic records. Records that are established or maintained to satisfy the requirements of this part and that meet the definition of electronic records in § 11.3(b)(6) of this chapter are exempt from the requirements of part 11 of this chapter. Records that satisfy the requirements of this part, but that also are required under other applicable statutory provisions or regulations, remain subject to part 11 of this chapter.

§ 112.166 What requirements apply for making records available and accessible to FDA?

(a) You must have all records required under this part readily available and accessible during the retention period for inspection and copying by FDA upon oral or written request, except that you have 24 hours to obtain records you keep offsite and make them available and accessible to FDA for inspection and copying.

(b) If you use electronic techniques to keep records, or to keep true copies of records, or if you use reduction techniques such as microfilm to keep true copies of records, you must provide the records to FDA in a format in which they are accessible and legible.

(c) If your farm is closed for a prolonged period, the records may be transferred to some other reasonably accessible location but must be returned to your farm within 24 hours for official review upon request.

§ 112.167 Can records that I provide to FDA be disclosed to persons outside of FDA?

Records obtained by FDA in accordance with this part are subject to the disclosure requirements under part 20 of this chapter.

Subpart P—Variances

§ 112.171 Who may request a variance from the requirements of this part?

A State, Federally-recognized tribe (or "tribe"), or a foreign country from which food is imported into the United States may request a variance from one or more requirements of this part, where the State, tribe, or foreign country determines that:

(a) The variance is necessary in light of local growing conditions; and

(b) The procedures, processes, and practices to be followed under the variance are reasonably likely to ensure

that the produce is not adulterated under section 402 of the Federal Food, Drug, and Cosmetic Act and to provide the same level of public health protection as the requirements of this part.

§ 112.172 How may a State, tribe, or foreign country request a variance from one or more requirements of this part?

To request a variance from one or more requirements of this part, the competent authority (*i.e.*, the regulatory authority for food safety) for a State, tribe, or a foreign country must submit a petition under § 10.30 of this chapter.

§ 112.173 What must be included in the Statement of Grounds in a petition requesting a variance?

In addition to the requirements set forth in § 10.30 of this chapter, the Statement of Grounds in a petition requesting a variance must:

(a) Provide a statement that the applicable State, tribe, or foreign country has determined that the variance is necessary in light of local growing conditions and that the procedures, processes, and practices to be followed under the variance are reasonably likely to ensure that the produce is not adulterated under section 402 of the Federal Food, Drug and Cosmetic Act and to provide the same level of public health protection as the requirements of this part;

(b) Describe with particularity the variance requested, including the persons to whom the variance would apply and the provision(s) of this part to which the variance would apply;

(c) Present information demonstrating that the procedures, processes, and practices to be followed under the variance are reasonably likely to ensure that the produce is not adulterated under section 402 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 342) and to provide the same level of public health protection as the requirements of this part.

§ 112.174 What information submitted in a petition requesting a variance or submitted in comments on such a petition are publicly available?

We will presume that information submitted in a petition requesting a variance and comments submitted on such a petition, including a request that a variance be applied to its similarly situated persons, does not contain information exempt from public disclosure under part 20 of this chapter and will be made public as part of the docket associated with this request.

§ 112.175 Who responds to a petition requesting a variance?

The Director or Deputy Directors of the Center for Food Safety and Applied Nutrition (CFSAN), or the Director, Office of Compliance, CFSAN, responds to a request for a variance.

§ 112.176 What process applies to a petition requesting a variance?

(a) In general, the procedures set forth in § 10.30 of this chapter govern our response to a petition requesting a variance.

(b) Under § 10.30(h)(3) of this chapter, we will publish a notice in the **Federal Register**, requesting information and views on a filed petition, including information and views from persons who could be affected by the variance if the petition were to be granted (*e.g.*, because their farm is covered by the petition or as a person similarly situated to persons covered by the petition).

(c) Under § 10.30(e)(3) of this chapter, we will respond to the petitioner in writing and will also make public a notice on FDA's Web site announcing our decision to either grant or deny the petition.

(1) If we grant the petition, either in whole or in part, we will specify the persons to whom the variance applies and the provision(s) of this part to which the variance applies.

(2) If we deny the petition (including partial denials), our written response to the petitioner and our public notice announcing our decision to deny the petition will explain the reason(s) for the denial.

(d) We will make readily accessible to the public, and periodically update, a list of filed petitions requesting variances, including the status of each petition (for example, pending, granted, or denied).

§ 112.177 Can an approved variance apply to any person other than those identified in the petition requesting that variance?

(a) A State, tribe, or a foreign country that believes that a variance requested by a petition submitted by another State, tribe, or foreign country should also apply to similarly situated persons in its jurisdiction may request that the variance be applied to its similarly situated persons by submitting comments in accordance with § 10.30 of this chapter. These comments must include the information required in § 112.173. If FDA determines that these comments should instead be treated as a separate request for a variance, FDA will notify the State, tribe, or foreign country that submitted these comments that a separate request must be submitted in accordance with §§ 112.172 and 112.173.

(b) If we grant a petition requesting a variance, in whole or in part, we may specify that the variance also applies to persons in a specific location who are similarly situated to those identified in the petition.

(c) If we specify that the variance also applies to persons in a specific location who are similarly situated to those identified in the petition, we will inform the applicable State, tribe, or foreign country where the similarly situated persons are located of our decision in writing and will publish a notice on our Web site announcing our decision to apply the variance to similarly situated persons in that particular location.

§ 112.178 Under what circumstances may FDA deny a petition requesting a variance?

We may deny a variance request if it does not provide the information required under § 112.173 (including the requirements of § 10.30 of this chapter), or if we determine that the variance is not reasonably likely to ensure that the produce is not adulterated under section 402 of the Federal Food, Drug and Cosmetic Act and to provide the same level of public health protection as the requirements of this part.

§ 112.179 When does a variance approved by FDA become effective?

A variance approved by FDA becomes effective on the date of our written decision on the petition.

§ 112.180 Under what circumstances may FDA modify or revoke an approved variance?

We may modify or revoke a variance if we determine that such variance is not reasonably likely to ensure that the produce is not adulterated under section 402 of the Federal Food, Drug, and Cosmetic Act and to provide the same level of public health protection as the requirements of this part.

§ 112.181 What procedures apply if FDA determines that an approved variance should be modified or revoked?

(a) We will provide the following notifications:

(1) We will notify a State, tribe, or a foreign country directly, in writing at the address identified in its petition, if we determine that a variance granted in response to its petition should be modified or revoked. Our direct, written notification will provide the State, tribe, or foreign country with an opportunity to request an informal hearing under part 16 of this chapter.

(2) We will publish a notice of our determination that a variance should be modified or revoked in the **Federal Register**. This notice will establish a

public docket so that interested parties may submit written comments on our determination.

(3) When applicable, we will:

(i) Notify in writing any States, tribes, or foreign countries where a variance applies to similarly situated persons of our determination that the variance should be modified or revoked;

(ii) Provide those States, tribes, or foreign countries with an opportunity to request an informal hearing under part 16 of this chapter; and

(iii) Include in the **Federal Register** notice described in paragraph (a)(2) of this section public notification of our decision to modify or revoke the variance granted to States, tribes, or foreign countries in which similarly situated persons are located.

(b) We will consider submissions from affected States, tribes, or foreign countries and from other interested parties as follows:

(1) We will consider requests for hearings by affected States, tribes, or foreign countries under part 16 of this chapter.

(i) If FDA grants a hearing, we will provide the State, tribe, or foreign country with an opportunity to make an oral submission. We will provide notice on our Web site of the hearing, including the time, date, and place of the hearing.

(ii) If more than one State, tribe, or foreign country requests an informal hearing under part 16 of this chapter about our determination that a particular variance should be modified or revoked, we may consolidate such requests (for example, into a single hearing).

(2) We will consider written submissions submitted to the public docket from interested parties.

(c) We will provide notice of our final decision as follows:

(1) On the basis of the administrative record, FDA will issue a written decision, as provided for under part 16 of this chapter.

(2) We will publish a notice of our decision in the **Federal Register**. The effective date of the decision will be the date of publication of the notice.

§ 112.182 What are the permissible types of variances that may be granted?

A variance(s) may be requested for one or more requirements in subparts A through O of this part. Examples of permissible types of variances include:

(a) Variance from the microbial quality criteria when agricultural water is used during growing activities for covered produce (other than sprouts) using a direct water application method, established in § 112.44(b);

(b) Variance from the microbial die-off rate that is used to determine the time interval between last irrigation and harvest, and/or the accompanying maximum time interval, established in § 112.45(b)(1)(i); and

(c) Variance from the approach or frequency for testing water used for purposes that are subject to the requirements of § 112.44(b), established in § 112.46(b).

Subpart Q—Compliance and Enforcement

§ 112.192 What is the applicability and status of this part?

(a) The failure to comply with the requirements of this part, issued under section 419 of the Federal Food, Drug, and Cosmetic Act, is a prohibited act under section 301(vv) of the Federal Food, Drug, and Cosmetic Act.

(b) The criteria and definitions in this part apply in determining whether a food is:

(1) Adulterated within the meaning of:

(i) Section 402(a)(3) of the Federal Food, Drug, and Cosmetic Act in that the food has been grown, harvested, packed, or held under such conditions that it is unfit for food; or

(ii) Section 402(a)(4) of the Federal Food, Drug, and Cosmetic Act in that the food has been prepared, packed, or held under insanitary conditions whereby it may have become contaminated with filth, or whereby it may have been rendered injurious to health;

or

(2) In violation of section 361 of the Public Health Service Act (42 U.S.C. 264).

§ 112.193 What are the provisions for coordination of education and enforcement?

Under section 419(b)(2)(A) of the Federal Food, Drug, and Cosmetic Act, FDA coordinates education and enforcement activities by State, territorial, tribal, and local officials by helping develop education, training, and enforcement approaches.

Subpart R—Withdrawal of Qualified Exemption

§ 112.201 Under what circumstances can FDA withdraw a qualified exemption in accordance with the requirements of § 112.5?

(a) We may withdraw your qualified exemption under § 112.5:

(1) In the event of an active investigation of a foodborne illness outbreak that is directly linked to your farm; or

(2) If we determine that it is necessary to protect the public health and prevent or mitigate a foodborne illness outbreak based on conduct or conditions associated with your farm that are material to the safety of the food that would otherwise be covered produce grown, harvested, packed or held at your farm.

(b) Before FDA issues an order to withdraw your qualified exemption, FDA:

(1) May consider one or more other actions to protect the public health and prevent or mitigate a foodborne illness outbreak, including a warning letter, recall, administrative detention, refusal of food offered for import, seizure, and injunction;

(2) Must notify the owner, operator, or agent in charge of the farm, in writing, of circumstances that may lead FDA to withdraw the exemption, and provide an opportunity for the owner, operator, or agent in charge of the farm to respond in writing, within 15 calendar days of the date of receipt of the notification, to FDA's notification; and

(3) Must consider the actions taken by the farm to address the circumstances that may lead FDA to withdraw the exemption.

§ 112.202 What procedure will FDA use to withdraw an exemption?

(a) An FDA District Director in whose district the farm is located (or, in the case of a foreign farm, the Director of the Office of Compliance in the Center for Food Safety and Applied Nutrition), or an FDA official senior to either such Director, must approve an order to withdraw the exemption before the order is issued.

(b) Any officer or qualified employee of FDA may issue an order to withdraw the exemption after it has been approved in accordance with paragraph (a) of this section.

(c) FDA must issue an order to withdraw the exemption to the owner, operator, or agent in charge of the farm.

(d) FDA must issue an order to withdraw the exemption in writing, signed and dated by the officer or qualified employee of FDA who is issuing the order.

§ 112.203 What information must FDA include in an order to withdraw a qualified exemption?

An order to withdraw a qualified exemption applicable to a farm under § 112.5 must include the following information:

(a) The date of the order;

(b) The name, address and location of the farm;

(c) A brief, general statement of the reasons for the order, including

information relevant to one or both of the following circumstances that leads FDA to issue the order:

(1) An active investigation of a foodborne illness outbreak that is directly linked to the farm; or

(2) Conduct or conditions associated with a farm that are material to the safety of the food that would otherwise be covered produce grown, harvested, packed and held at such farm.

(d) A statement that the farm must either:

(1) Comply with subparts B through O of this part on the date that is 120 calendar days from the date of receipt of the order, or within a reasonable timeframe, agreed to by FDA, based on a written justification, submitted to FDA, for a timeframe that exceeds 120 calendar days from the date of receipt of the order; or

(2) Appeal the order within 15 calendar days of the date of receipt of the order in accordance with the requirements of § 112.206.

(e) A statement that a farm may request that FDA reinstate an exemption that was withdrawn by following the procedures in § 112.213;

(f) The text of section 419(f) of the Federal Food, Drug, and Cosmetic Act and of this subpart;

(g) A statement that any informal hearing on an appeal of the order must be conducted as a regulatory hearing under part 16 of this chapter, with certain exceptions described in § 112.208;

(h) The mailing address, telephone number, email address, and facsimile number of the FDA district office and the name of the FDA District Director in whose district the farm is located (or for foreign farms, the same information for the Director of the Office of Compliance in the Center for Food Safety and Applied Nutrition); and

(i) The name and the title of the FDA representative who approved the order.

§ 112.204 What must I do if I receive an order to withdraw a qualified exemption applicable to my farm?

The owner, operator, or agent in charge of a farm that receives an order to withdraw a qualified exemption applicable to that farm under § 112.5 must either:

(a) Comply with applicable requirements of this part within 120 calendar days of the date from receipt of the order or, if operations have ceased and will not resume within 120 calendar days, before the beginning of operations in the next growing season, or within a reasonable timeframe, agreed to by FDA, based on a written justification, submitted to FDA, for a

timeframe that exceeds 120 calendar days from the date of receipt of the order; or

(b) Appeal the order within 15 calendar days of the date of receipt of the order in accordance with the requirements of § 112.206.

§ 112.205 Can I appeal or request a hearing on an order to withdraw a qualified exemption applicable to my farm?

(a) Submission of an appeal, including submission of a request for an informal hearing, will not operate to delay or stay any administrative action, including enforcement action by FDA, unless the Commissioner of Food and Drugs, as a matter of discretion, determines that delay or a stay is in the public interest.

(b) If the owner, operator, or agent in charge of the farm appeals the order, and FDA confirms the order:

(1) The owner, operator, or agent in charge of the farm must comply with applicable requirements of this part within 120 calendar days from the date of receipt of the order, or, if operations have ceased and will not resume within 120 calendar days, before the beginning of operations in the next growing season, or within a reasonable timeframe, agreed to by FDA, based on a written justification, submitted to FDA, for a timeframe that exceeds 120 calendar days from the date of receipt of the order; and

(2) The owner, operator, or agent in charge of the farm is no longer subject to the modified requirements in §§ 112.6 and 112.7.

§ 112.206 What is the procedure for submitting an appeal?

(a) To appeal an order to withdraw a qualified exemption applicable to a farm under § 112.5, the owner, operator, or agent in charge of the farm must:

(1) Submit the appeal in writing to the FDA District Director in whose district the farm is located (or in the case of a foreign farm, the Director of the Office of Compliance in the Center for Food Safety and Applied Nutrition), at the mailing address, email address, or facsimile number identified in the order within 15 calendar days of the date of receipt of the order; and

(2) Respond with particularity to the facts and issues contained in the order, including any supporting documentation upon which the owner, operator or agent in charge of the farm relies.

(b) In a written appeal of the order withdrawing an exemption provided under § 112.5, the owner, operator, or agent in charge of the farm may include a written request for an informal hearing as provided in § 112.207.

§ 112.207 What is the procedure for requesting an informal hearing?

(a) If the owner, operator, or agent in charge of the farm appeals the order, the owner, operator, or agent in charge of the farm:

(1) May request an informal hearing; and

(2) Must submit any request for an informal hearing together with its written appeal submitted in accordance with § 112.206 within 15 calendar days of the date of receipt of the order.

(b) A request for an informal hearing may be denied, in whole or in part, if the presiding officer determines that no genuine and substantial issue of material fact has been raised by the material submitted. If the presiding officer determines that a hearing is not justified, a written notice of the determination will be given to the owner, operator, or agent in charge of the farm explaining the reason for the denial.

§ 112.208 What requirements are applicable to an informal hearing?

If the owner, operator, or agent in charge of the farm requests an informal hearing, and FDA grants the request:

(a) The hearing will be held within 15 calendar days after the date the appeal is filed or, if applicable, within a timeframe agreed upon in writing by the owner, operator, or agent in charge of the farm and FDA.

(b) The presiding officer may require that a hearing conducted under this subpart be completed within 1 calendar day, as appropriate.

(c) FDA must conduct the hearing in accordance with part 16 of this chapter, except that:

(1) The order withdrawing an exemption under § 112.5, rather than the notice under § 16.22(a) of this chapter, provides notice of the opportunity for a hearing under this section and is part of the administrative record of the regulatory hearing under § 16.80(a) of this chapter.

(2) A request for a hearing under this subpart must be addressed to the FDA District Director (or, in the case of a foreign farm, the Director of the Office of Compliance in the Center for Food Safety and Applied Nutrition) as provided in the order withdrawing an exemption.

(3) Section 112.209, rather than § 16.42(a) of this chapter, describes the FDA employees who preside at hearings under this subpart.

(4) Section 16.60(e) and (f) of this chapter does not apply to a hearing under this subpart. The presiding officer must prepare a written report of the hearing. All written material presented

at the hearing will be attached to the report. The presiding officer must include as part of the report of the hearing a finding on the credibility of witnesses (other than expert witnesses) whenever credibility is a material issue, and must include a proposed decision, with a statement of reasons. The hearing participant may review and comment on the presiding officer's report within 2 calendar days of issuance of the report. The presiding officer will then issue the final decision.

(5) Section 16.80(a)(4) of this chapter does not apply to a regulatory hearing under this subpart. The presiding officer's report of the hearing and any comments on the report by the hearing participant under § 112.208(c)(4) are part of the administrative record.

(6) No party shall have the right, under § 16.119 of this chapter to petition the Commissioner of Food and Drugs for reconsideration or a stay of the presiding officer's final decision.

(7) If FDA grants a request for an informal hearing on an appeal of an order withdrawing an exemption, the hearing must be conducted as a regulatory hearing under a regulation in accordance with part 16 of this chapter, except that § 16.95(b) does not apply to a hearing under this subpart. With respect to a regulatory hearing under this subpart, the administrative record of the hearing specified in §§ 16.80(a)(1), (2), (3), and (5) of this chapter and 112.208(c)(5) constitutes the exclusive record for the presiding officer's final decision. For purposes of judicial review under § 10.45 of this chapter, the record of the administrative proceeding consists of the record of the hearing and the presiding officer's final decision.

§ 112.209 Who is the presiding officer for an appeal and for an informal hearing?

The presiding officer for an appeal, and for an informal hearing, must be an FDA Regional Food and Drug Director or another FDA official senior to an FDA District Director.

§ 112.210 What is the timeframe for issuing a decision on an appeal?

(a) If the owner, operator, or agent in charge of a farm appeals the order without requesting a hearing, the presiding officer must issue a written report that includes a final decision confirming or revoking the withdrawal by the 10th calendar day after the appeal is filed.

(b) If the owner, operator, or agent in charge of a farm appeals the order and requests an informal hearing:

(1) If FDA grants the request for a hearing and the hearing is held, the

presiding officer must provide a 2 calendar day opportunity for the hearing participants to review and submit comments on the report of the hearing under § 112.208(c)(4), and must issue a final decision within 10 calendar days after the hearing is held; or

(2) If FDA denies the request for a hearing, the presiding officer must issue a final decision on the appeal confirming or revoking the withdrawal within 10 calendar days after the date the appeal is filed.

§ 112.211 When is an order to withdraw a qualified exemption applicable to a farm revoked?

An order to withdraw a qualified exemption applicable to a farm under § 112.5 is revoked if:

(a) The owner, operator, or agent in charge of the farm appeals the order and requests an informal hearing, FDA grants the request for an informal hearing, and the presiding officer does not confirm the order within the 10 calendar days after the hearing, or issues a decision revoking the order within that time; or

(b) The owner, operator, or agent in charge of the farm appeals the order and requests an informal hearing, FDA denies the request for an informal hearing, and FDA does not confirm the order within the 10 calendar days after the appeal is filed, or issues a decision revoking the order within that time; or

(c) The owner, operator, or agent in charge of the farm appeals the order without requesting an informal hearing, and FDA does not confirm the order

within the 10 calendar days after the appeal is filed, or issues a decision revoking the order within that time.

(d) Confirmation of a withdrawal order by the presiding officer is considered a final Agency action for purposes of 5 U.S.C. 702.

§ 112.213 If my qualified exemption is withdrawn, under what circumstances would FDA reinstate my qualified exemption?

(a) If the FDA District Director in whose district your farm is located (or, in the case of a foreign farm, the Director of the Office of Compliance in the Center for Food Safety and Applied Nutrition) determines that the farm has adequately resolved any problems with the conduct and conditions that are material to the safety of the food produced or harvested at such farm, and that continued withdrawal of the exemption is not necessary to protect the public health or prevent or mitigate a foodborne illness outbreak, the FDA District Director in whose district your farm is located (or, in the case of a foreign farm, the Director of the Office of Compliance in the Center for Food Safety and Applied Nutrition) will, on his own initiative or at the request of a farm, reinstate the qualified exemption.

(b) You may ask FDA to reinstate a qualified exemption that has been withdrawn under the procedures of this subpart as follows:

(1) Submit a request, in writing, to the FDA District Director in whose district your farm is located (or, in the case of a foreign farm, the Director of the Office

of Compliance in the Center for Food Safety and Applied Nutrition); and

(2) Present, in writing, data and information to demonstrate that you have adequately resolved any problems with the conduct and conditions that are material to the safety of the food produced and harvested at your farm, such that continued withdrawal of the exemption is not necessary to protect the public health and prevent or mitigate a foodborne illness outbreak.

(c) If your qualified exemption was withdrawn under § 112.201(a)(1) and FDA later determines, after finishing the active investigation of a foodborne illness outbreak, that the outbreak is not directly linked to your farm, FDA will reinstate your qualified exemption under § 112.5, and FDA will notify you in writing that your exempt status has been reinstated.

(d) If your qualified exemption was withdrawn under § 112.201(a)(1) and (2) and FDA later determines, after finishing the active investigation of a foodborne illness outbreak, that the outbreak is not directly linked to your farm, FDA will inform you of this finding, and you may ask FDA to reinstate your qualified exemption under § 112.5, in accordance with the requirements of paragraph (b) of this section.

Dated: October 30, 2015.

Leslie Kux,

Associate Commissioner for Policy.

Food and Drug Administration

21 CFR Parts 1, 11, and 16

Accreditation of Third-Party Certification Bodies To Conduct Food Safety Audits and To Issue Certifications; Final Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 1, 11, and 16

[Docket No. FDA-2011-N-0146]

RIN 0910-AG66

Accreditation of Third-Party Certification Bodies To Conduct Food Safety Audits and To Issue Certifications

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA or we) is adopting regulations to provide for accreditation of third-party certification bodies to conduct food safety audits of foreign food entities, including registered foreign food facilities, and to issue food and facility certifications, under the FDA Food Safety Modernization Act (FSMA). These certifications will be required for participation in the voluntary qualified importer program (VQIP) established under the Federal Food, Drug, and Cosmetic Act (FD&C Act). In addition, when the Agency has determined that an imported food is subject to certification under FSMA, the Agency may require a certification under this rule as a condition for admitting the food into the United States. FDA also expects that these regulations will increase efficiency by reducing the number of redundant food safety audits.

DATES: This rule is effective January 26, 2016.

FOR FURTHER INFORMATION CONTACT: Charlotte A. Christin, Office of Foods and Veterinary Medicine, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993, 301-796-7526.

Table of Contents

Executive Summary

I. Introduction and Background

- A. FDA Food Safety Modernization Act
- B. Purpose of This Rulemaking
- C. The Proposed Rule
- D. Public Comments

II. Legal Authority

III. Comments on What Definitions Apply to This Subpart (§ 1.600)

- A. Definitions, Generally
- B. Assessment
- C. Audit
- D. Audit Agent
- E. Consultative Audit
- F. Eligible Entity
- G. Facility

H. Facility Certification and Food Certification

I. Food

- J. Food Safety Audit
- K. Foreign Cooperative
- L. Regulatory Audit
- M. Self-Assessment
- N. Third-Party Auditor

IV. Comments on Who Is Subject to This Subpart (§ 1.601)

- A. Limiting the Scope of the Rule to Regulatory Audits and Certifications
- B. Exemption for Alcoholic Beverages
- C. USDA Regulated Products

V. Comments on Recognition of Accreditation Bodies Under This Subpart

- A. Who is eligible to seek recognition? (§ 1.610)
- B. What legal authority must an accreditation body have to qualify for recognition? (§ 1.611)
- C. What competency and capacity must an accreditation body have to qualify for recognition? (§ 1.612)
- D. What protections against conflicts of interest must an accreditation body have to qualify for recognition? (§ 1.613)
- E. What quality assurance procedures must an accreditation body have to qualify for recognition? (§ 1.614)
- F. What records procedures must an accreditation body have to qualify for recognition? (§ 1.615)

VI. Comments on Requirements for Accreditation Bodies That Have Been Recognized Under This Subpart

- A. How must a recognized accreditation body evaluate third-party certification bodies seeking accreditation? (§ 1.620)
- B. How must a recognized accreditation body monitor the performance of third-party certification bodies it accredited? (§ 1.621)
- C. How must a recognized accreditation body monitor its own performance? (§ 1.622)
- D. What reports and notifications must a recognized accreditation body submit to FDA? (§ 1.623)
- E. How must a recognized accreditation body protect against conflicts of interest? (§ 1.624)
- F. What records requirements must an accreditation body that has been recognized meet? (§ 1.625)

VII. Comments on Procedures for Recognition of Accreditation Bodies Under This Subpart

- A. How do I apply to FDA for recognition or renewal of recognition? (§ 1.630)
- B. How will FDA review my application for recognition or for renewal of recognition and what happens once FDA decides on my application? (§ 1.631)
- C. What is the duration of recognition? (§ 1.632)
- D. How will FDA monitor recognized accreditation bodies? (§ 1.633)
- E. When will FDA revoke recognition? (§ 1.634)
- F. What if I want to voluntarily relinquish recognition or do not want to renew recognition? (§ 1.635)
- G. How do I request reinstatement of recognition? (§ 1.636)

VIII. Comments on Accreditation of Third-Party Certification Bodies Under This Subpart

- A. Who is eligible to seek accreditation? (§ 1.640)
- B. What legal authority must a third-party certification body have to qualify for accreditation? (§ 1.641)
- C. What competency and capacity must a third-party certification body have to qualify for accreditation? (§ 1.642)
- D. What protections against conflicts of interest must a third-party certification body have to qualify for accreditation? (§ 1.643)
- E. What quality assurance procedures must a third-party certification body have to qualify for accreditation? (§ 1.644)
- F. What records procedures must a third-party certification body have to qualify for accreditation? (§ 1.645)

IX. Comments on Requirements for Third-Party Certification Bodies That Have Been Accredited Under This Subpart

- A. How must an accredited third-party certification body ensure its audit agents are competent and objective? (§ 1.650)
- B. How must an accredited third-party certification body conduct a food safety audit of an eligible entity? (§ 1.651)
- C. What must an accredited third-party certification body include in food safety audit reports? (§ 1.652)
- D. What must an accredited third-party certification body do when issuing food or facility certifications? (§ 1.653)

Executive Summary

Purpose and Coverage of the Final Rule

This rule is part of FDA's implementation of FSMA, which intends to better protect public health by, among other things, adopting a modern, preventive, and risk-based approach to food safety regulation. In this document, we establish a program for accreditation of third-party certification bodies¹ to conduct food safety audits and issue certifications of

¹ As explained more fully in Response 1, in response to comments and for clarity, this final rule uses the term "third-party certification body" rather than either the term "third-party auditor" or the term, "third party auditor/certification body" (except that we will use the term "third-party auditor" in the definitions of "accredited third-party certification body" and "third-party certification body" in 21 CFR 1.600(c) and in the preamble discussion of those definitions in section III.A).

foreign food facilities and foods for humans and animals for purposes of sections 801(q) and 806 of the FD&C Act. We are also codifying certain limited exemptions to mandatory import certification under 801(q) of the FD&C Act (21 U.S.C. 381).

FSMA added section 808 to the FD&C Act (21 U.S.C. 384d), which directs FDA to establish a new program for accreditation of third-party certification bodies to conduct food safety audits and to certify that eligible foreign entities (including registered foreign food facilities) and food produced by such entities meet applicable FDA requirements for purposes of sections 801(q) and 806 of the FD&C Act. This rulemaking implements section 808 of the FD&C Act; we will recognize accreditation bodies to accredit third-party certification bodies, except for limited circumstances in which we may directly accredit third-party certification bodies.

FSMA specifies two uses for the food and facility certifications issued by accredited third-party certification bodies under this program. First, facility certifications will be used by importers to establish eligibility for VQIP under section 806 of the FD&C Act (21 U.S.C. 384b(a)). VQIP offers participating importers expedited review and entry of food that is part of VQIP. One condition of participation is importation of food from facilities audited and certified by third-party certification bodies accredited under this subpart. FDA issued draft guidance on VQIP on June 5, 2015 (80 FR 32136); the draft guidance may be accessed at <http://www.fda.gov/downloads/Food/GuidanceRegulation/GuidanceDocumentsRegulatoryInformation/UCM448558.pdf>.

Second, section 801(q) of the FD&C Act gives FDA the authority to make a risk-based determination to require, as a condition of admissibility, that a food imported or offered for import into the United States be accompanied by a certification or other assurance that the food meets the applicable requirements of the FD&C Act. The authority to mandate import certification for food, based on risk, is one of the tools we can use to help prevent potentially harmful food from reaching U.S. consumers. When FDA has determined that a food import is subject to such certification under section 801(q) of the FD&C Act, FDA will require, as a condition of entry, a certification issued either by an accredited third-party certification body under this rule or by an agency or representative of the government of the country from which the food at issue originated, as designated by FDA.

In addition, facilities and importers may choose to use onsite audits conducted by third-party certification bodies accredited under the program set out in this rule in connection with meeting supplier verification requirements under FDA's final rules for Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Human Food (final human preventive controls regulation) (80 FR 55907, September 17, 2015); Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Food for Animals (final animal preventive controls regulation) (80 FR 56169, September 17, 2015); and the Foreign Supplier Verification Programs (FSVP) for Importers of Food for Humans and Animals (published elsewhere in this edition of the **Federal Register**) (implementing sections 418 and 805 of the FD&C Act, respectively). Under those rules, in circumstances where an onsite audit is the appropriate supplier verification activity, such audit must be conducted by a "qualified auditor." The definitions of "qualified auditor" in those rules make clear that an example of a potential qualified auditor includes, but is not limited to, an audit agent of a certification body that has been accredited in accordance with regulations in part 1, subpart M of this chapter (*i.e.*, this rule implementing section 808 of the FD&C Act).

Summary of Major Provisions of the Final Rule

This rule establishes the framework, procedures, and requirements for accreditation bodies and third-party certification bodies for purposes of section 808 of the FD&C Act. The rule sets requirements for the legal authority, competency, capacity, conflict of interest safeguards, quality assurance, and records procedures that accreditation bodies must demonstrate to be eligible for recognition. Accreditation bodies also must demonstrate capability to meet the FDA requirements that would apply upon recognition. Additionally, the rule establishes requirements for the legal authority, competency, capacity, conflict of interest safeguards, quality assurance, and records procedures that third-party certification bodies must demonstrate to be eligible for accreditation. Third-party certification bodies also must demonstrate capability to meet the applicable requirements of the rule that would apply upon accreditation.

Pursuant to FSMA section 307 (21 U.S.C. 384d), the rule requires accredited third-party certification

bodies to perform unannounced facility audits, to notify FDA upon discovering a condition that could cause or contribute to a serious risk to the public health, and to submit to FDA reports of regulatory audits conducted for certification purposes. The rule includes stringent requirements to prevent conflicts of interest from influencing the decisions of recognized accreditation

bodies and accredited third-party certification bodies. The rule does not, however, establish the audit criteria that accredited third-party certification bodies will use in examining eligible entities for compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, because those criteria appear elsewhere in FDA regulations and the FD&C Act.

Costs and Benefits

Costs of the Third-Party final rule include compliance costs of accreditation bodies and certification bodies that choose to participate in our third-party program, and user fees imposed by FDA on accreditation bodies and certification bodies for application review and monitoring of program participants.

TABLE 1—SUMMARY USER FEE, COMPLIANCE, UNDISCOUNTED AND ANNUALIZED COSTS OF THE THIRD-PARTY (TP) PROGRAM PER PARTICIPANT

Eligible entity	Audited by		Total
	Certification bodies (CBs) currently accredited under other programs	CBs not accredited under any program	
SCENARIO 1			
Number of section 801(q) Entities	10	65	75
Cost of Compliance with Program Requirements (TP Compliance Cost)	\$694	\$2,569
Section 801(q) Compliance Cost	\$6,940	\$166,985	\$173,925
Number of section 806 Entities	145	971	1,116
TP Compliance Cost	\$694	\$2,569
Section 806 Compliance Cost	\$100,630	\$2,494,499	\$2,595,129
Total TP Compliance Cost—Scenario 1	\$2,769,054
SCENARIO 2			
Number of section 801(q) Entities	10	65	75
TP Compliance Cost	\$322	\$2,197
Section 801(q) Compliance Cost	\$3,220	\$142,805	\$146,025
Number of § 806 Entities	459	3,068	3,527
TP Compliance Cost	\$322	\$2,197
Section 806 Compliance Cost	\$147,798	\$6,740,396	\$6,888,194
Total TP Compliance Cost—Scenario 2	\$7,034,219
SCENARIO 3			
Number of section 801(q) Entities	10	65	75
TP Compliance Cost	\$227	\$2,102
Section 801(q) Compliance Cost	\$2,270	\$136,630	\$138,900
Number of section 806 Entities	801	5,359	6,160
TP Compliance Cost	\$227	\$2,102
Section 806 Compliance Cost	\$181,827	\$11,264,618	\$11,446,445
Total TP Compliance Cost—Scenario 3	\$11,585,345

The costs that accreditation bodies and certification bodies incur in complying with the regulation are necessarily less than the private benefits they accrue by becoming recognized or accredited, respectively. Through the third-party accreditation program more effective regulatory oversight is achieved. FDA will recoup resources in managing its third-party accreditation program through user fees that FDA intends to impose on participating accreditation bodies and third-party certification bodies.

I. Introduction and Background

A. FDA Food Safety Modernization Act

FSMA (Pub. L. 111–353), signed into law by President Obama on January 4, 2011, is intended to allow FDA to better protect public health by helping to ensure the safety and security of the food supply. FSMA enables us to focus more on preventing food safety problems rather than relying primarily on reacting to problems after they occur. The law also provides new enforcement authorities to help achieve higher rates of compliance with risk-based, prevention-oriented safety standards and to better respond to and contain

problems when they do occur. In addition, the law contains important new tools to better ensure the safety of imported foods and encourages partnerships with State, local, tribal, and territorial authorities and international collaborations with foreign regulatory counterparts. A top priority for FDA are those FSMA-required regulations that provide the framework for industry’s implementation of preventive controls and enhance our ability to oversee their implementation for both domestic and imported food. To that end, we proposed the seven foundational rules listed in table 2 and

requested comments on all aspects of these proposed rules.

TABLE 2—PUBLISHED FOUNDATIONAL PROPOSED RULES FOR IMPLEMENTATION OF FSMA

Title	Abbreviation	Publication
Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Human Food.	2013 proposed human preventive controls regulation.	78 FR 3646, January 16, 2013.
Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption.	2013 proposed produce safety regulation	78 FR 3504, January 16, 2013.
Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Food for Animals.	2013 proposed animal preventive controls regulation.	78 FR 64736, October 29, 2013.
Foreign Supplier Verification Programs (FSVP) for Importers of Food for Humans and Animals.	2013 proposed FSVP regulation	78 FR 45730, July 29, 2013.
Accreditation of Third-Party Auditors/Certification Bodies to Conduct Food Safety Audits and to Issue Certifications.	2013 proposed third-party certification regulation (also referred to in this document as the proposed rule).	78 FR 45782, July 29, 2013.
Focused Mitigation Strategies To Protect Food Against Intentional Adulteration.	2013 proposed intentional adulteration regulation.	78 FR 78014, December 24, 2013.
Sanitary Transportation of Human and Animal Food	2014 proposed sanitary transportation regulation.	79 FR 7006, February 5, 2014.

We also issued a supplemental notice of proposed rulemaking for the rules listed in table 3 and requested comments on specific issues identified in each supplemental notice of proposed rulemaking.

TABLE 3—PUBLISHED SUPPLEMENTAL NOTICES OF PROPOSED RULEMAKING FOR THE FOUNDATIONAL RULES FOR IMPLEMENTATION OF FSMA

Title	Abbreviation	Publication
Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Human Food.	2014 supplemental human preventive controls notice.	79 FR 58524, September 29, 2014.
Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption.	2014 supplemental produce safety notice	79 FR 58434, September 29, 2014.
Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Food for Animals.	2014 supplemental animal preventive controls notice.	79 FR 58476, September 29, 2014.
FSVP for Importers of Food for Humans and Animals	2014 supplemental FSVP notice	79 FR 58574, September 29, 2014.

We finalized two of the foundational rulemakings listed in table 4 in September 2015.

TABLE 4—PUBLISHED FOUNDATIONAL FINAL RULES FOR IMPLEMENTATION OF FSMA

Title	Abbreviation	Publication
Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Human Food.	final human preventive controls regulation	80 FR 55908, September 17, 2015.
Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Food for Animals.	final animal preventive controls regulation	80 FR 56170, September 17, 2015.

As FDA finalizes these seven foundational rulemakings, we are putting in place a modern, risk-based framework for food safety that is based on the most recent science, that focuses efforts where the hazards are reasonably likely to occur, and that is flexible and practical given our current knowledge of food safety practices. To achieve this, FDA has engaged in a significant amount of outreach to the stakeholder community to find the right balance between flexibility and accountability in these regulations.

After FSMA was enacted in 2011, we have been involved in approximately 600 stakeholder engagements on FSMA and the proposed rules, including public meetings, webinars, listening sessions, farm tours, and extensive presentations and meetings with various stakeholder groups (Refs. 1, 2, 3). As a result of this stakeholder dialogue, FDA decided to issue the four supplemental notices of proposed rulemaking to share our current thinking on key issues and get additional stakeholder input on those issues. As we move forward into the next phase of FSMA

implementation, we intend to continue this dialogue and collaboration with our stakeholders, through guidance, education, training, and assistance, to ensure that stakeholders understand and engage in their respective roles in food safety. FDA believes these seven foundational final rules, when implemented, will affect the paradigm shift toward prevention that was envisioned in FSMA and be a major step forward for food safety that will help protect consumers into the future.

B. Purpose of This Rulemaking

FSMA added section 808 to the FD&C Act which directs FDA to establish a new voluntary program for accreditation of third-party certification bodies to conduct food safety audits and to issue food and facility certifications to eligible foreign entities (including registered foreign food facilities) that meet our applicable requirements for purposes of sections 801(q) and 806 of the FD&C Act. This rulemaking implements section 808 of the FD&C Act; we will recognize accreditation bodies to accredit third-party certification bodies, except for limited circumstances in which we may directly accredit third-party certification bodies.

FSMA specifies two uses for the food and facility certifications issued by accredited third-party certification bodies under this program. First, facility certifications will be used by importers to establish eligibility for VQIP under section 806 of the FD&C Act. VQIP offers participating importers expedited review and importation for food from facilities audited and certified by third-party certification bodies accredited under this subpart. FDA issued draft guidance on VQIP on June 5, 2015 (80 FR 32136); the draft guidance may be accessed at <http://www.fda.gov/downloads/Food/GuidanceRegulation/GuidanceDocumentsRegulatoryInformation/UCM448558.pdf>.

Second, section 801(q) of the FD&C Act gives FDA the authority to make a risk-based determination to require, as a condition of admissibility, that a food imported or offered for import into the United States be accompanied by a certification or other assurance that the food meets the applicable requirements of the FD&C Act. The authority to mandate import certification for food, based on risk, is one of the tools we can use to help prevent potentially harmful food from reaching U.S. consumers. When FDA has determined that a food import is subject to such certification under section 801(q) of the FD&C Act, FDA will require, as a condition of entry, a certification issued either by an accredited third-party certification body under this rule or by an agency or representative of the government of the country from which the food at issue originated, as designated by FDA.

This final rule will help FDA ensure the competence and independence of third-party certification bodies who are accredited to conduct foreign food safety audits to examine compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, among other things. The document also will help ensure the

validity and reliability of certifications offered to FDA for purposes of VQIP eligibility under section 806 of the FD&C Act and admissibility of an imported food subject to an FDA risk determination under section 801(q) of the FD&C Act.

The third-party certification program is part of FSMA's paradigm shift toward a modern, preventive, and risk-based approach to food safety regulation and new programs to facilitate global trade in safe food. Specifically, FSMA requires FDA to issue new preventive controls and produce safety standards that apply to domestic and foreign processors and producers. In addition, FSMA directs FDA to issue an FSVP regulation requiring importers to implement FSVPs that provide adequate assurances that their foreign suppliers produce food that is in compliance with processes and procedures, including risk-based preventive controls, that provide the same level of public health protection as those required under section 418 (concerning hazard analysis and preventive controls) or 419 (concerning produce safety) of the FD&C Act, as appropriate, and that is in compliance with sections 402 (concerning adulteration) and 403(w) (concerning misbranding regarding allergen labeling) of the FD&C Act. We emphasize that facilities and importers are not required to use third-party certification bodies accredited under this rule in meeting their supplier verification requirements under the final human or animal preventive controls or FSVP regulations. See section XIII.G.

By contrast, the third-party certification program established under section 808 of the FD&C Act focuses on food safety audits to certify that eligible foreign entities and the food produced by such entities meet applicable FDA requirements for purposes of sections 801(q) and 806 of the FD&C Act. Although importers must obtain facility certifications from accredited third-party certification bodies under this rule in order to be eligible for VQIP, we note that importers seeking to satisfy a requirement for certification as a condition of admissibility for an article of food under section 801(q) of the FD&C Act may offer a certification issued either by foreign governments designated by FDA to issue such certifications or by third-party certification bodies accredited under this rule.

Through FSMA we are transforming our role in the global food safety system, by building ever stronger partnerships with our foreign regulatory counterparts and by exploring opportunities to

leverage private food safety activities to benefit of our system of public food safety assurances. We value the role that private audits can play in enhancing food safety when done properly, and we share common purpose with the food industry in ensuring the rigor and objectivity of those audits.

The final rule on accreditation of third-party certification bodies reflects the results of significant stakeholder engagement to help ensure that the rule achieves its public health goal, reflects industry best practices, and strikes the right balance between flexibility and accountability.

C. The Proposed Rule

FDA published a proposed rule for "Accreditation of Third-Party Auditors/Certification Bodies to Conduct Food Safety Audits and to Issue Certifications" (the proposed rule) on July 29, 2013. The proposed rule included eligibility requirements for accreditation bodies to qualify for recognition and requirements that accreditation bodies choosing to participate in the FDA program must meet, once recognized. We also proposed eligibility requirements for third-party certification bodies to qualify for accreditation and requirements that third-party certification bodies choosing to participate in the FDA program must meet, once accredited. We intended the proposed requirements to ensure the competency and independence of the accreditation bodies and third-party certification bodies participating in the program.

We also proposed procedures for recognition and accreditation, as well as requirements relating to monitoring and oversight of participating accreditation bodies and third-party certification bodies. These included procedures that we would follow when removing a third-party certification body or an accreditation body from the program. Further, we proposed requirements relating to auditing and certification of foreign eligible entities under the program, and for notifying us of conditions in an audited facility that could cause or contribute to a serious risk to the public health. In response to several requests, we extended the proposed rule comment period until January 27, 2014.

D. Public Comments

We received over 150 comments from accreditation bodies, certification bodies, members of the food industry, industry associations, foreign governments, State governments, public health organizations, public advocacy

groups, individual consumers, consumer groups, and others. Some submissions included signatures and statements from multiple individuals. Taken as a whole, the comments address virtually every provision of the proposed rule. In the remainder of this document, we describe the comments that are within the scope of this rulemaking, respond to them, and explain any revisions we made from the proposed rule.

A number of comments focus on the overarching issues of: (1) Alignment with voluntary consensus standards; (2) the use of private food safety schemes; (3) the relationship between the third-party certification program, foreign competent authorities, and FDA's international activities; and (4) the possible implications of the lack of qualified auditors on the third-party certification program. We address these comments generally below.

We received several comments on the overarching issue of the use of voluntary international consensus standards issued by the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC), including the following ISO/IEC standards: ISO/IEC 17000:2004 Conformity assessment—Vocabulary and general principles (ISO/IEC 17000:2004) (Ref. 4); ISO/IEC 17011:2004, Conformity assessment—General requirements for accreditation bodies accrediting conformity assessment bodies (ISO/IEC 17011:2004) (Ref. 5); ISO/IEC 17021:2011, Conformity assessment—Requirements for bodies providing audit and certification of management systems (ISO/IEC 17021:2011) (Ref. 6); ISO/IEC 17065:2012, Conformity assessment—Requirements for bodies certifying products, processes and services (ISO/IEC 17065:2012) (Ref. 7); and ISO/IEC 19011:2011, Guidelines for auditing management systems (ISO/IEC 19011:2011) (Ref. 8).

Some comments support the approach to ISO/IEC standards that we used when developing the proposed rule; some comments state that the process for developing these standards makes them unbiased. Other comments suggest we should place greater reliance on ISO/IEC standards, including some comments asserting that we should incorporate ISO/IEC standards by reference into the final rule. These comments encourage us to follow the example of a proposed rule issued by the Environmental Protection Agency and entitled, "Formaldehyde; Third-Party Certification Framework for the Formaldehyde Standards for Composite Wood Products" (78 FR 34795, June 10,

2013), which proposed to incorporate by reference certain international standards. These comments assert that by placing greater reliance on ISO standards, we could allow ISO's broader oversight program to complement FDA's management of these bodies.

Implementation of section 808 of the FD&C Act occurs against the backdrop of the broader Federal policies on consensus standards and conformity assessment under the National Technology Transfer and Advancement Act of 1995 (NTTAA) (Pub. L. 104–113). The NTTAA, together with the Office of Management and Budget (OMB) Circular A–119, revised February 10, 1998 (63 FR 8546, February 19, 1998), directs Federal Agencies to use voluntary consensus standards in lieu of government-unique standards except where inconsistent with law or otherwise impractical. OMB Circular A–119 states that the use of voluntary standards, whenever practicable and appropriate, is intended to eliminate the cost to government of developing its own standards and decrease the cost of goods procured and the burden of complying with Agency regulation; provide incentives and opportunities to establish standards that serve national needs; encourage long-term growth for U.S. enterprises and promote efficiency and economic competition through harmonization of standards; and further the policy of reliance upon the private sector to supply government needs for goods and services.

As directed by OMB in Circular A–119, the National Institute of Standards and Technology (NIST), in the **Federal Register** of August 10, 2000 (65 FR 48894), issued policy guidance on Federal conformity assessment activities (defined as activities concerned with determining directly or indirectly that requirements for products, services, systems, and organizations are fulfilled) (15 CFR 287.2). The Federal conformity assessment guidance is codified at 15 CFR part 287 and applies to all Federal Agencies that set policy for, manage, operate, or use conformity assessment activities or results, domestically and internationally (except for activities conducted pursuant to treaties) and is intended to eliminate unnecessary duplication and complexity in conformity assessment requirements. (We note that OMB has announced it is currently revising Circular A–119, and NIST is revising the Federal conformity assessment guidance.)

We agree with comments on the value of promoting international consistency and tapping into an existing framework of consensus standards that is familiar

to industry, which may make it easier for accreditation bodies, third-party certification bodies, and eligible entities to comply with this rule. Therefore, we are revising the rule to allow for accreditation bodies and third-party certification bodies to use documentation of their conformance with ISO/IEC standards in meeting the program requirements under this rule, supplemented as necessary. We are not, however, incorporating these standards by reference into the rule as further discussed in our responses to comments in sections III. to XIII., except that we are not further responding to comments citing specific requirements of ISO/IEC Guide 65:1996, Conformity assessment—Requirements for bodies providing audit and certification of management systems (ISO/IEC Guide 65:1996) (Ref. 9) in sections III. to XIII., because that standard has been withdrawn and replaced by ISO/IEC 17065:2012 (Ref. 7) in September 2015. Comments referring to ISO/IEC 17020:2012, Conformity assessment—Requirements for the operation of various types of bodies performing inspection (ISO/IEC 17020:2012) (Ref. 10) are outside the scope of this rulemaking, because that standard relates to inspections and not the auditing and certification activities that will be performed under this rule. Therefore, we are not responding to comments citing to ISO/IEC 17020:2012, Conformity assessment—Requirements for the operation of various types of bodies performing inspection (ISO/IEC 17020:2012) (Ref. 10) in sections III. to XIII.

We also received several comments on the overarching issue of using private food safety schemes as audit criteria for regulatory audits conducted under the third-party certification program. Some comments suggest that FDA should rely on private food safety schemes, particularly those that have been benchmarked by the Global Food Safety Initiative (GFSI), as the audit criteria for regulatory audits of eligible entities under the third-party certification program. Other comments suggest that FDA should establish requirements for accreditation bodies and third-party certification bodies that are similar to those required by GFSI, such as GFSI requirements relating to accreditation under relevant ISO/IEC product certification or management system standards.

By way of background, a group of international retailers established GFSI in 2000 with the goal of reducing the need for duplicative third-party audits by benchmarking private food safety schemes against a harmonized set of

criteria for food safety and management systems (see 78 FR 45782 at 45788; July 29, 2013). Under current GFSI criteria, a food safety scheme must have a commitment with one or more accreditation bodies for certification bodies that operate in conformance with either the product certification standard, ISO/IEC Guide 65, or the management system standard, ISO/IEC 17021:2006 (supplemented by ISO/TS 22003). GFSI describes these standards as having similar requirements for how a certification body must operate—*e.g.*, in addressing issues of preventing conflict of interest, managing customer information, properly qualifying personnel, auditor calibration, and many other aspects involved with the certification process. However, as GFSI noted in a 2011 White Paper (Ref. 11), there is a distinct difference between the two. ISO 17021/ISO 22003 is not product specific. ISO/IEC Guide 65, on the other hand, is concerned with verifying that particular products or services meet specified requirements. The type and scope of GFSI benchmarked scheme selected, determines the accreditation standard which applies. The majority of GFSI recognized schemes fall under ISO/IEC Guide 65 accreditation requirements, whereas only two currently recognized schemes are management system schemes accredited to ISO 17021/ISO 22003.

Comments suggesting that we should rely on GFSI-benchmarked food safety schemes or other private food safety schemes as the criteria for certification under the third-party program are outside the scope of this rulemaking. This rule establishes the framework for the third-party certification program, and not the food safety standards that accredited third-party certification bodies will use to determine an eligible entity's compliance with the applicable food safety requirements of the FD&C Act and FDA regulations. We are however responding to relevant comments that address audit quality and auditor competency, consistency, and capacity, including comments referencing GFSI's work in these areas.

Other overarching comments ask how the FSMA third-party certification program relates to the roles of foreign competent authorities and to FDA's international activities. Some comments assert that competent authorities should be allowed to participate in the third-party certification program purely by administrative procedures without a formal review process. Other comments suggest that government agencies with both regulatory and trade promotion

missions face inherent conflicts of interest.

Some comments recommend that we should establish a different structure for accrediting third-party certification bodies that already have been approved by a foreign government accreditation body. Other comments suggest that FDA should reserve the role of accreditation body or third-party certification body for a national competent authority that requests it. The comments argue that the responsibility for monitoring the safety of food exports should remain with the national competent authorities in each country.

Some comments ask whether a national competent authority has a role in auditing and certification activities occurring in the country, including in countries where an FDA foreign office is located. Other comments ask whether the competent authority may perform other activities in the third-party certification program, such as authentication of audit information before it is submitted to FDA. Still other comments suggest that FDA require accredited third-party certification bodies to review correspondence between an audited eligible entity and the competent authorities in the country where the eligible entity is located.

Section 808 of the FD&C Act expressly provides for both public and private accredited third-party certification bodies. Public accreditation bodies and third-party certification bodies, as well as private accreditation bodies and third-party certification bodies that meet the eligibility requirements for recognition and accreditation under section 808 of the FD&C Act and this rule are equally eligible to participate in the third-party certification program. This includes government accreditation bodies and certification bodies in countries where FDA has a foreign office, as well as government agencies with the dual missions of food safety and trade promotion. We believe that both public and private third-party certification bodies and accreditation bodies are capable of exhibiting the competency, capacity, and impartiality necessary to meet the letter and spirit of the law and this regulation.

By becoming an accredited third-party certification body or a recognized accreditation body, a competent authority for food safety or a foreign accreditation body would establish a role in the third-party certification program. Only if competent authorities are accredited under this rule, may they issue food and facility certifications under section 808 of the FD&C Act. (We note, however, that FDA may require

certifications from competent authorities under section 801(q) of the FD&C Act for foods that FDA determines meet the criteria set forth in that section (see 801(q)(3)(A) of the FD&C Act), regardless of whether the competent authorities are accredited.) We acknowledge that the third-party certification program that is the subject of this rule is narrowly tailored and only a small piece of the much larger modernized, prevention-oriented food safety system we are establishing under FSMA. Broader FSMA activities are outside the scope of this rulemaking, as are matters covered by FDA's information sharing arrangements with foreign competent authorities.

We received other comments on the overarching issue of how the third-party certification program fits into FDA's international activities. Some comments assert that, for countries with a systems recognition agreement with FDA, there should be no need for a (direct or indirect) role for FDA in monitoring accredited third-party certification bodies. Other comments encourage us to recognize their national food safety system as equivalent to that of the United States.

The systems recognition initiative is a food safety regulatory cooperation program that allows FDA to take into account the role of food safety systems of exporting countries in our risk-based decisionmaking. We are using systems recognition as a tool to determine when we can rely on the implementation of science-based food safety programs by foreign regulatory authorities and take action based on information provided by such authorities.

We note that a competent authority with whom FDA has a systems recognition agreement must apply for recognition to make accreditation decisions and apply for accreditation to issue certifications under section 808 of the FD&C Act. If the competent authority applies for recognition or direct accreditation by FDA (assuming that the statutory criteria have been met for FDA to begin direct accreditation), FDA's review will be informed by the data, experiences, and insights into the foreign system that FDA gained through the systems recognition review. Except as described above, systems recognition activities are outside the scope of this rulemaking, as are equivalency determinations.

We also received several overarching comments noting that the lack of qualified food safety auditors is a problem in many countries. Some comments suggest that we may face similar problems with the availability of accredited third-party certification

bodies in our program. The comments assert that we should prioritize the review of applications from foreign countries with significant volumes of exports to the United States because of the cost and inconvenience to foreign suppliers and the likely trade disruption that would result if the only accredited third-party certification bodies were located in other countries. Some comments predict that rapid expansion in the field of food safety auditing may result in shortcuts in auditing. Other comments contend that because of the limited availability of qualified auditors we should adjust the timeframes for accredited third-party certification bodies to submit information to FDA under the regulations. The comments specifically request that we lengthen the 45-day timeframe for submitting regulatory audit reports.

We acknowledge the concerns about cost, inconvenience, and disruption resulting from auditor capacity issues. We are encouraging broad program participation to minimize the likelihood that capacity issues might emerge, because certifications issued by accredited third-party certification bodies under this program are intended to facilitate trade. The certifications are used in meeting the eligibility requirements of VQIP for expedited entry of food under section 806 of the FD&C Act and in satisfying a condition of admissibility for a food subject to an FDA determination under section 801(q) of the FD&C Act.

Revisions have been made to this rule made in response to comments, such as allowing accreditation bodies and third-party certification bodies to use documentation of their conformance with ISO/IEC standards in support of their applications. We also are modifying our “first in, first out” approach to processing applications, as comments request, to allow for prioritizing specific applications and requests based on program needs. We are unable to accommodate the request to lengthen the timeframe for submission of regulatory audit reports to FDA, because the 45-day deadline for submission is established in section 808(c)(3)(A) of the FD&C Act. Audit protocols and other requirements of the rule are designed to prevent audit agents (auditors) and third-party certification bodies from taking shortcuts that would jeopardize audit results.

Some comments addressed the Model Accreditation Standards that FDA is required to develop under section 808(b)(2) of the FD&C Act for use in qualifying third-party certification bodies for accreditation. Some of these comments suggest various criteria to be

included in the model standards. Other comments suggest the proposed rule was ambiguous with respect to the form of, and manner by which, FDA will establish the Model Accreditation Standards.

While the substance of the Model Accreditation Standards is outside the scope of this rulemaking, we note that on July 24, 2015, FDA published a draft guidance on Model Accreditation Standards. The draft guidance can be accessed at: <http://www.fda.gov/Food/GuidanceRegulation/Guidance/ucm455328.htm>. Additionally, a notice was published in the **Federal Register** (80 FR 44137, July 24, 2015) of the availability of the draft guidance and of the opening of a docket for public comments on the document. As explained in the draft guidance, section 808(b)(2) of the FD&C Act requires FDA to develop Model Accreditation Standards that recognized accreditation bodies shall use to qualify third-party certification bodies for accreditation, and in so doing, to look to existing standards for certification bodies (as of the date of enactment of FSMA) to avoid unnecessary duplication of efforts and costs. The draft guidance contains FDA recommendations on third-party certification body qualifications, including recommendations based on relevant provisions in the proposed rule. This final rule will serve as a framework for the Model Accreditation Standards final guidance, which will include more detailed recommendations on third-party certification body qualifications.

Some comments respond to our request for input on the question about the value of, and possible need for, FDA to establish a program for use of accredited third-party certification bodies to conduct domestic food safety audits (78 FR 45782 at 45823). We received comments on all sides, expressing various views. We are taking these comments under advisement at this time, as the focus of this final rule is on establishing and implementing the third-party certification program set forth in section 808 of the FD&C Act.

Other comments addressed the substance of VQIP, import certification, laboratory accreditation, and provisions in the proposed FSVP rule and/or other FSMA rules that are outside the scope of this rulemaking; accordingly we will not be responding to those comments here. Other comments that fall outside the scope of this rulemaking, and to which we will therefore not be responding, include comments on the value of a universal, mandatory food safety system; comments advocating for

policies promoting locally grown produce; comments addressing the information technology infrastructure needs of the third-party certification program; comments suggesting the value of student interns to the food safety system; and comments on factors beyond the use of third-party audits that FDA should consider in setting inspection priorities.

We also received a few comments concerning the rulemaking process. Comments suggest that we devise a new process for regularly updating the rule; they state that FDA has cumbersome requirements for modifying rules. FDA's current rulemaking process is consistent with FDA's obligations under the Administrative Procedure Act (5 U.S.C. 551–559).

II. Legal Authority

Section 307 of FSMA, Accreditation of Third-Party Auditors, amends the FD&C Act to create a new provision, section 808, under the same name. Section 808(b)(1)(A) of the FD&C Act requires us to establish a system, within 2 years of the enactment of FSMA, for the recognition of accreditation bodies that accredit third-party certification bodies to conduct food safety audits and to issue certifications for eligible foreign food entities and their products for purposes of sections 801(q) and 806 of the FD&C Act.

Section 808(c)(5)(C) of the FD&C Act directs us to issue implementing regulations for section 808 of the FD&C Act. The regulations must require audits to be unannounced and must contain protections against conflicts of interest between accredited third-party certification bodies (and their audit agents) and the entities they audit or certify, including requirements on timing and public disclosure of fees and appropriate limits on financial affiliations (21 U.S.C. 384d(c)(5)(C)(i), (ii), and (iii)).

This final rule establishes regulations implementing section 808 of the FD&C Act. The authority for the requirements in this rule comes primarily from section 808 of the FD&C Act. However, FDA also derives authority for this final rule from other sections of the FD&C Act, including section 701(a) of the FD&C Act (21 U.S.C. 371(a)), which authorizes us to issue regulations for the efficient enforcement of the FD&C Act. The regulations in this final rule ensure the competency and independence of recognized accreditation bodies and of accredited third-party certification bodies, which will help ensure the validity and reliability of certifications and other information resulting from the food safety audits conducted by

accredited third-party certification bodies. These features of the final rule are essential to the operation of the third-party program. This rule also is consistent with section 404 of FSMA (21 U.S.C. 2252), which states that nothing in FSMA should be construed in a manner that is inconsistent with the agreement establishing the World Trade Organization or any other treaty or international agreement to which the United States is a party.

This rule establishes requirements for accreditation bodies and third-party certification bodies seeking recognition and accreditation, respectively. These requirements will help ensure that any accreditation bodies that we recognize, and any certification bodies that are accredited, are capable of meeting all of the requirements of this program. This includes requirements, for example, for legal authority and competency and capacity. It also includes provisions for the direct accreditation of third-party certification bodies by FDA in accordance with section 808(b)(1)(A)(ii) of the FD&C Act. This rule also establishes requirements for accreditation bodies that have been recognized, and third-party certification bodies that have been accredited. This includes requirements designed to decrease the potential for conflicts of interest in accordance with section 808(c)(5)(C)(ii) of the FD&C Act. Additionally, this rule establishes requirements for eligible entities that want to be certified under this program. This includes requirements for onsite audits by FDA for the purpose of monitoring in accordance with section 808(f)(3) of the FD&C Act. Finally, this rule establishes general requirements related to the operation of this program. These include requirements for requesting a regulatory hearing on revocation of recognition or withdrawal of accreditation.

Some of the requirements under this final rule are also established, in part, under the authority in sections 806 and 801(q) of the FD&C Act. Section 806 of the FD&C Act describes a voluntary program to provide for the expedited review and importation of food offered for importation from certified facilities (VQIP). Section 801(q) of the FD&C Act gives FDA authority to require certifications for imported food in certain situations. This final rule does not set up the framework for participation in the program described under section 806 of the FD&C Act, nor does it describe the circumstances under which FDA might require certification under section 801(q) of the FD&C Act. However, this rule does describe circumstances under which

FDA might refuse to consider a certification issued under this program in determining the admissibility of an article of food for which the certification was offered under section 801(q) of the FD&C Act, or in determining eligibility for participation in VQIP under section 806 of the FD&C Act. Additionally, this rule creates limited exemptions from the certification requirements of section 801(q) of the FD&C Act for certain alcoholic beverages, including certain raw materials and ingredients that are used to manufacture/process alcoholic beverages. The exemptions are being promulgated consistent with section 116 of FSMA (21 U.S.C. 2206). Section 116(a) of FSMA states that, except as provided by certain listed sections in FSMA, nothing in FSMA, or the amendments made by FSMA, will be construed to apply to a facility that: (1) Under the Federal Alcohol Administration Act (27 U.S.C. 201 *et seq.*) or chapter 51 of subtitle E of the Internal Revenue Code of 1986 (26 U.S.C. 5001 *et seq.*) is required to obtain a permit or to register with the Secretary of the Treasury as a condition of doing business in the United States and (2) under section 415 of the FD&C Act (21 U.S.C. 350d) is required to register as a facility because such facility is engaged in manufacturing, processing, packing, or holding one or more alcoholic beverages (with respect to the activities of such facility that relate to the manufacturing, processing, packing, or holding of alcoholic beverages). This rule also creates exemptions from the certification requirements of section 801(q) of the FD&C Act for products subject to the requirements of the U.S. Department of Agriculture (USDA) under the Federal Meat Inspection Act (FMIA) (21 U.S.C. 601 *et seq.*), the Poultry Products Inspection Act (PPIA) (21 U.S.C. 451 *et seq.*), or the Egg Products Inspection Act (EPIA) (21 U.S.C. 1031 *et seq.*) at the time of importation. We conclude that this provision is consistent with section 403 of FSMA, entitled "Rule of Construction," which states that nothing in FSMA shall be construed to alter or limit the jurisdiction of the Secretary of the Department of Agriculture.

III. Comments on What Definitions Apply to This Subpart (§ 1.600)

We proposed to codify definitions of several terms used in the third-party certification regulations. We received several comments on this section. As discussed in the following paragraphs, we have revised many of the proposed definitions in response to comments as well as on our own initiative. Where we disagree with comments or decline a

suggested revision, we offer an explanation in response. Some definitions were finalized as proposed.

The definitions for terms used in the third-party certification regulations are codified in 21 CFR 1.600.

A. Definitions, Generally

(Comment 1) Several comments encourage us to more closely align the definitions in § 1.600 with international standards to promote consistency and common understanding of the rule. The comments explain that the terms and definitions used in section 808 of the FD&C Act and in the proposed rule convey a different meaning for accreditation bodies, certification bodies, and the standards community. To that end, some comments encourage us to avoid using the term "third-party auditor" synonymously with "certification body," to be consistent with international standards, which use the term "certification body" (*e.g.*, ISO/IEC 17065:2012 (Ref.7)).

Similarly, some comments indicate that, the language of the statute notwithstanding, it is not correct to use the term "third-party auditor" when describing the activities of a "third-party certification body." The comments explain that auditors are individuals contracted or employed by certification bodies to conduct audits, and they urge us to clarify the rule by substituting "certification body" for "third-party auditor."

(Response 1) We agree that alignment with the terminology used in international standards is preferable, wherever possible. Congress recognized the value of international standards in accreditation and certification, having instructed us in section 808(b)(2) of the FD&C Act to look to existing standards in developing our model accreditation standards to avoid unnecessary duplication of efforts and costs. We believe it is particularly useful to rely on definitions and terminology from international consensus standards when possible where, as here, the rule is establishing a voluntary program with an international focus. In addition, we agree that, notwithstanding the use of the term "third-party auditor" in the statute, the use of the term "third-party certification body" instead of the term "third-party auditor" provides some clarity for purposes of referring to bodies that employ or contract individuals to perform audits.

Therefore, in response to the comments suggesting the term "third-party auditor" is confusing and inconsistent with international standards, we are using the term "third-party certification body" in the

remainder of the preamble and in the codified of this final rule, except in the definitions of “Accredited third-party certification body” and “Third-party certification body” in § 1.600(c) and in the preamble discussion of those definitions.

On our own initiative, we are including the descriptor “third-party” before “certification body” throughout this final rule. We did not use that descriptor in the proposed rule when referring to a third-party auditor/certification body once accredited. We are doing so now in order that the term accurately reflects that, under this subpart, only third-party certification bodies are eligible for accreditation. We are making corresponding changes to the term “accredited auditor/certification body;” and in this final rule we will instead use the term, “accredited third-party certification body.”

Accordingly, we have revised the proposed definitions of “accreditation,” “accreditation body,” “accredited auditor/certification body,” “audit,” “audit agent,” “certification body,” “direct accreditation,” “eligible entity,” “facility certification,” “food certification,” “recognized accreditation body,” “relinquishment,” and “self-assessment,” to replace the term “third-party auditor” with the term “third-party certification body,” or “third-party certification bodies,” and to remove “auditor/” from in the term “third-party auditor/certification body” or “third-party auditors/certification bodies” that was used in the proposed rule.

On our own initiative, we added a sentence to the definition of “accredited third-party certification body” in § 1.600 of this final rule to explain that the term has the same meaning as “accredited third-party auditor” as defined in section 808(a)(4) of the FD&C Act. Similarly, we added language to the definition of “third-party certification body” in § 1.600 of this final rule explaining that the term has the same meaning as “third-party auditor” as defined in section 808(a)(3) of the FD&C Act.

(Comment 2) Some comments encourage us to make the definitions in this rule consistent with the definitions in other FSMA proposed rules, such as the 2013 proposed FSVP regulation, the 2013 proposed human preventive controls regulation, the 2013 proposed animal preventive controls regulation, and the 2012 proposed produce safety regulation, where feasible.

(Response 2) We agree with the comments on the overarching goal of alignment across regulations and accepted suggested revisions, where

feasible and appropriate. However, it is not always possible to develop uniform definitions due to the distinct statutory requirements and the framework of each program. In such cases where it was not feasible or appropriate, we declined the suggested revisions from comments. We discuss such comments and our responses under each relevant term.

B. Assessment

We did not define “assessment” in the proposed rule.

(Comment 3) Some comments recommend adding a definition of “assessment” based on ISO/IEC 17011:2004 (Ref. 5), clause 3.7, which describes the process for evaluating certification bodies. The comments explain that defining such evaluations as “audits,” as we had proposed, is inconsistent with international standards. The comments suggest consulting with other ISO/IEC standards for relevant terminology.

(Response 3) We agree that the term “assessment” should be used, in part, to refer to the activity undertaken to assess the competency and capacity of a third-party certification body under the rule. We reviewed ISO/IEC 17011:2004 (Ref. 5) (clause 3.7 and NOTE) and ISO/IEC 17000:2004 (Ref. 4), ISO/IEC 17040:2005 Conformity assessment—General requirements for peer assessment of conformity assessment bodies and accreditation bodies (ISO/IEC 17040:2005) (Ref. 12), and an International Accreditation Forum (IAF) document entitled, “IAF Endorsed Normative Documents” (Ref. 13).

After considering the comments and reviewing the referenced documents, we developed a definition of “assessment” that describes, with respect to accreditation bodies, the activity undertaken by FDA to evaluate the competency and capacity of the accreditation body under the applicable requirements of this rule. With respect to certification bodies, “assessment” describes the activity undertaken by a recognized accreditation body (or, in the case of direct accreditation, FDA) to evaluate the competency and capacity of a certification body under the applicable requirements of this rule. We also made corresponding changes to the definition of “audit” from proposed § 1.600(c) by removing clauses (1) and (2).

C. Audit

We proposed a definition of “audit” describing the examination of accreditation bodies, third-party certification bodies, and eligible entities. We proposed to define an audit of an accreditation body as an examination by FDA of the accreditation

body’s authority, qualifications, resources, policies, procedures, and performance, as well as of its capability to meet the requirements of the proposed rule. We proposed to define an audit of a third-party certification body as an examination by a recognized accreditation body (or, by FDA, for direct accreditation) of the third-party certification body’s authority, qualifications, resources, policies, procedures, and performance, as well as of its capability to meet the requirements of the proposed rule. We proposed to define an eligible entity as an examination by an accredited third-party certification body of the eligible entity to assess the entity, its facility, system(s), and food using audit criteria for consultative or regulatory audits, and, for consultative audits, also including an assessment of compliance with applicable industry standards and practices.

We received some comments on the proposed definition of “audit,” and the related definitions of “consultative audit” and “regulatory audit.” Comments specific to the definition of “consultative audit” are discussed in section III.E., and comments on the definition of “regulatory audit” are discussed in section III.L. As described in Response 3, we also removed clauses (1) and (2) from the proposed definition of “audit” because those evaluations are “assessments” as the term is defined in § 1.600(c).

On our own initiative, we are revising the definition of “audit” to clarify that an audit conducted under this subpart is not an inspection under section 704 of the FD&C Act (21 U.S.C. 374).

(Comment 4) Several comments encourage us to align our definition of audit with relevant international standards, and some comments request that we use the definition of “audit” from the Codex “Principles for Food Import and Export Inspection and Certification” (CAC/GL 20–1995) (Ref. 14), which defines “audit” as a “systematic and functionally independent examination to determine whether activities and related results comply with planned objectives.”

(Response 4) We agree with the general principle of creating consistency with international standards and have revised the definition of “audit” in § 1.600(c) accordingly. Rather than describing the determination of whether activities comply with “planned objectives” that appears in the Codex definition of “audit” (Ref. 14), we inserted a brief description of the objectives of consultative and regulatory audits from the definitions in section 808(a)(5) and (7) of the FD&C Act (*i.e.*,

the examination of an eligible entity under this rule).

(Comment 5) Some comments encourage us to remove the proposed definition of “audit” in § 1.600(c) and substitute the FSVP definition of “audit” instead, to promote consistency and a common understanding of terminology.

(Response 5) We disagree. We believe that it is more important for the definition in this rule to reflect international standards that are generally well known to the parties subject to this rule than it is for the definition to mirror the definition in FSVP, which has different applicability. FSVP applies to importers; this rule applies to accreditation bodies, third-party certification bodies, and eligible entities. Therefore, we are rejecting the suggestion to use the FSVP definition of “audit” as the definition of “audit” in § 1.600(c).

(Comment 6) We received some comments on the definition of “audit” regarding its relationship to the related definitions of “consultative audit” and “regulatory audit” in § 1.600(c). Some comments recommend that we revise the definition of “audit” to mean only regulatory audits, and not consultative audits, asserting that is how the word “audit” is used in the statute. These comments contend that the statute must be interpreted in light of the fact that section 808 of the FD&C Act is directed to food and facility certifications, which are only accomplished through regulatory audits. Other comments ask us to clarify that the services of an accredited third-party certification body that fall short of the definition of an “audit” (e.g., informal consulting, continuous improvement programs, and limited purpose audits) under this rule, are not subject to the requirements of the rule.

(Response 6) We decline the suggestion to interpret section 808 of the FD&C Act in a manner that would equate “audit” with “regulatory audit.” Section 808 of the FD&C Act defines two types of audits used under the program, consultative audits and regulatory audits, and contains requirements relating to each. (See, e.g., section 808(a)(5), (7), and (c)(3)(A) of the FD&C Act). In addition, section 808(c)(4)(B) of the FD&C Act expressly allows an accredited third-party certification body or an audit agent of such auditor to perform consultative and regulatory audits of eligible entities.

To the extent that other comments suggest creating a list of exceptions from the definition of “audit” in the codified for this rule, we decline to do so. To the extent that these comments were

seeking clarification of the definition of “consultative audit” in § 1.600(c), and what types of activities might fall outside of that definition as well as outside of this program, please see the discussion in Response 9 in section III.E.

(Comment 7) Some comments express confusion about the criteria that accredited third-party certification bodies will be using in conducting audits under subpart M and ask us to more clearly describe the “applicable requirements” against which compliance will be evaluated. Some comments are concerned that eligible entities might be audited against requirements that do not apply to their operations. For example, some comments note that firms subject to the final animal preventive controls regulation should not be assessed for compliance with the allergen cross contamination requirements of the final human preventive controls regulation. Other comments ask us to clarify whether the “applicable requirements” are limited to requirements that appear in the FD&C Act or FDA regulations, or both.

(Response 7) During regulatory and consultative audits, accredited third-party certification bodies will examine compliance with applicable food safety requirements of the FD&C Act and FDA regulations within the scope of the audit. In consultative audits, the third-party certification bodies also may be conducting an examination to determine conformance with applicable industry standards and practices.

The applicable requirements that accredited third-party certification bodies and their audit agents will use relate to the food safety standards under the FD&C Act, such as the adulterated food provisions in section 402 of the FD&C Act and the provisions on the misbranding of food allergens in section 403(w) of the FD&C Act. The applicable requirements of the FD&C Act and FDA regulations would depend on the type of eligible entity being audited. To use the example given by one of the comments, an eligible entity that is subject to the requirements of the final animal preventive controls regulation, but not the final human preventive controls regulation, would not be subject to an audit examining its practices relating to cross-contamination by food allergens under the final human preventive controls regulation because those are not “applicable food safety requirements” for such an entity.

To help clarify this rule for eligible entities, third-party certification bodies, and accreditation bodies who may be interested in participating in the

program and who may not yet be familiar with U.S. laws and regulations, we are using the phrase “applicable food safety requirements of the FD&C Act and FDA regulations” in place of the phrase “applicable requirements” in the definition of “audit” in § 1.600(c) and elsewhere throughout the rule where we are discussing the requirements that will be used in auditing eligible entities.²

D. Audit Agent

We proposed to define an “audit agent” as an individual who is an employee or other agent of an accredited third-party certification body who, although not individually accredited, is qualified to conduct food safety audits on behalf of an accredited third-party certification body. Under the proposed rule we also defined an audit agent to include a contractor of the accredited third-party certification body.

(Comment 8) Some comments express concern about our proposal to allow a contractor of an accredited third-party certification body to serve as an audit agent, asserting that “[w]ith each step that is further removed in this process, institutional control is lost exponentially.” The comments point out that a subcontractor conducted the audit and gave a passing audit score to a cantaloupe farm and packing facility that used “improper and unsafe processing equipment” and subsequently was linked to a deadly outbreak caused by *Listeria monocytogenes*. Other comments mentioning the incident cite to an article in Bloomberg News explaining that auditors often outsource to independent contractors over whom they do not have direct management control (Ref. 15). Still other comments offer the cantaloupe outbreak as an example of why auditors must be competent and accountable for their activities.

(Response 8) We understand that third-party certification bodies currently work with individual auditors under many different types of arrangements. We acknowledge concerns raised by comments about recent outbreaks at some domestic facilities that had received satisfactory scores in food safety audits. Further, we agree with the comments on the importance of an accredited third-party certification body exercising adequate control over an audit agent conducting audits on its

² Although we have elected to cite to both the FD&C Act and FDA regulations in this definition, we otherwise will follow the conventional practice of using the words “applicable requirements” to refer to the applicable requirements of the FD&C Act and FDA regulations.

behalf. We believe that principle is equally true whether the audit agent is an employee or a contract auditor.

International standards, such as ISO/IEC 17021:2011 (Ref. 6), specifically allow accredited third-party certification bodies to use contractors to perform audits if certain conditions are met. Among other conditions, contract auditors must meet the same level of qualifications (*e.g.*, knowledge, skills, and experience) and the same requirements for impartiality and objectivity as do the auditors the third-party certification body employs. The third-party certification body must exercise adequate control and oversight over a contractor such that the third-party certification body accepts the result of the contractor's audit as its own.

When we proposed to define "audit agent" to include a contractor, we were contemplating arrangements such as those described in ISO/IEC 17021:2011 (Ref. 6) that involve a direct relationship between the accredited third-party certification body and its auditors. We are revising the definition of "audit agent" to clarify that we are excluding subcontractors and other types of outsourcing arrangements; we have concluded that such arrangements fail to provide the degree of control and oversight necessary for an accredited third-party certification body to ensure that its audit agents are competent and objective. An accredited third-party certification body exercises direct supervision over the activities of its employees, and has a direct relationship with a contractor; but the relationship between the third-party certification body and a subcontractor or other type of outsourced staff is attenuated—the third-party certification body may not even choose such persons and may not have any direct authority over them. We do not believe such diminished oversight is appropriate, given the important role of audit agents in this program.

By revising the definition of "audit agent" we are not preventing an accredited third-party certification body from subcontracting for services in areas other than the conduct of audits. For example, an accredited third-party certification body may use subcontractors or other outsourcing arrangements to deliver annual training to its audit agents under § 1.650 or may use subcontractors or other outsourcing arrangements to investigate and decide on appeals of adverse regulatory audit results under § 1.651. However, we are limiting the role of "audit agent" to employees and contractors of the

accredited third-party certification body.

E. Consultative Audit

We proposed to define a "consultative audit" as an audit of an eligible entity: (1) To determine whether such entity is in compliance with applicable requirements of the FD&C Act and industry standards and practices and (2) the results of which are for internal purposes only and cannot be used to determine eligibility for a food or facility certification issued under this subpart or in meeting the requirements for an onsite audit of a foreign supplier under subpart L of this part.

(Comment 9) We received several comments on the definition of "consultative audit." Many comments express concern that the definition of "consultative audit" is overly broad and that some of the requirements that would apply to consultative audits under the proposed rule might create a disincentive to using accredited third-party certification bodies. Some comments urge FDA to remove all requirements associated with consultative audits from the rule. Other comments identify two requirements of particular concern: (1) Proposed § 1.656, requiring an accredited third-party certification body conducting a consultative audit or regulatory audit under the rule to notify FDA immediately upon discovering a condition that could cause or contribute to a serious risk to public health (the notification requirement) and (2) proposed § 1.652, requiring an accredited third-party certification body to provide FDA access to a consultative audit report when the criteria for records access under section 414 of the FD&C Act (21 U.S.C. 350c) are met (the records access requirement). The comments explain that many firms use certification bodies (and/or their consulting divisions) to help establish, maintain, and improve their food safety practices. For example, some firms use certification bodies (and/or their consulting divisions) to help in identifying root causes and remediating food safety problems. Comments also note that certification bodies (and/or their consulting divisions) provide informal counseling, perform preliminary evaluations, limited purpose audits, and activities in support of firms' continuous improvement programs.

Comments express concern that if these types of activities are subject to notification, records access, and other requirements of the rule, firms located outside the United States might not use accredited third-party certification

bodies, instead choosing unaccredited third-party certification bodies to avoid the requirements of this rule. The comments assert that unaccredited third-party certification bodies are less likely to have qualified auditors and their independence and objectivity is less certain, than third-party certification bodies that have been evaluated and issued accreditation.

Comments also argue that the definition of "consultative audit," which states that the results of such an audit are "for internal purposes only," is inconsistent with the requirements for notification and records access that would apply to consultative audits under the proposed rule. Other comments ask us to clarify that audits conducted for external purposes—for example, an audit for purposes of compliance with FSVP—do not satisfy the definition of a consultative audit because consultative audits are for internal purposes only.

Some comments suggest that the proposed definition of "consultative audit," taken together with the proposed definitions of "food safety audit" and "regulatory audit," could preclude third-party certification bodies from conducting any audits that are outside the scope of subpart M, once accredited. Based on that interpretation, the comments predict that few if any third-party certification bodies would want to participate in the program.

Many of the comments that express concern about disincentives also suggest that Congress intended the third-party program to be much narrower than our proposed definition of "consultative audit" would suggest. These comments suggest that the FSMA third-party certification program was intended to be focused on regulatory audits and the issuance of certifications to be used for two limited purposes: *i.e.*, in establishing an importer's eligibility for VQIP and in satisfying a condition of admissibility for a food subject to an FDA safety determination under section 801(q) of the FD&C Act. These comments argue further that Congress inserted the term "consultative audit" in the statute to be used only in reference to the conflicts of interest provisions in section 808(c)(4)(C) and (c)(5) of the FD&C Act; therefore, a broad interpretation of "consultative audit" is inconsistent with Congressional intent. The comments urge us to construe the term "consultative audit" as narrowly as possible.

(Response 9) We recognize that food firms use accredited third-party certification bodies (and their consulting divisions) in various

capacities that serve the ultimate goal of improving food safety. We do not want, nor do we believe Congress intended, for our third-party certification program to create disincentives for food firms seeking to use accredited third-party certification bodies for various purposes to improve food safety practices in their operations. Nevertheless, we decline the request to remove all requirements relating to consultative audits from this final rule. Section 808(c)(5)(C) of the FD&C Act directs us to issue implementing regulations for section 808 of the FD&C Act, which includes some specific provisions relating to consultative audits (e.g., section 808(c)(3)(A) and (C) on consultative audit reports and section 808 (c)(4)(C) of the FD&C Act on audit agents performing regulatory audits of eligible entities of which they performed consultative or regulatory audits within the preceding 13 months). We have, however, revised the definition of “consultative audit” as explained below and have made other revisions to the rule to clarify the scope of such audits and help mitigate possible disincentives to conduct consultative audits, while fulfilling the letter and spirit of the law.

With regard to the comments expressing concerns about an overly broad interpretation of “consultative audit,” we remind readers that the statute endows both regulatory and consultative audits with certain characteristics. For example, section 808(a)(6) of the FD&C Act indicates that an eligible entity must choose to be audited by an accredited third-party certification body, and section 808(c)(5)(C)(i) of the FD&C Act states that audits under this program must be unannounced. We understand these provisions to mean that, at the time the audit services are arranged, an eligible entity must specifically request from an accredited third-party certification body a food safety audit under this rule—that is the only way the accredited third-party certification body would know that the eligible entity is requesting an unannounced subpart M audit to determine compliance with the applicable food safety requirements of the FD&C Act and FDA regulations. Further, the eligible entity would need to specify whether it is seeking a regulatory or consultative audit. (In addition to determining whether the eligible entity is in compliance with the food safety requirements of the FD&C Act, consultative audits under section 808 of the FD&C Act also determine whether the eligible entity is in compliance with applicable industry standards and practices). Audits that fall

outside the purview of this rule—for example, audits that are conducted by third-party certification bodies that are not accredited under this program, audits that determine compliance with standards other than the food safety requirements of the FD&C Act and FDA regulations (e.g., audits that determine compliance with private standards), audits that are announced, and audits conducted solely for the purposes of supplier verification under the final human or animal preventive controls regulations or the final FSVP regulations—are not covered by, or subject to, the requirements of this rule.

It is impossible to describe or predict all of the audit scenarios that may occur. We emphasize that an accredited third-party certification body can continue to offer auditing and certification services that are outside the scope of this rule, such as on-site supplier verification audits under the final human or animal food preventive controls regulations or the final FSVP regulation. Such audits would not be subject to the requirements of this rule, including the reporting and notification requirements.

In response to comments, we revised the proposed definition of “consultative audit” to clarify that it is an audit conducted in preparation for a regulatory audit under the third-party certification program. A consultative audit would thus be a pre-examination or pre-assessment type of activity imbued with certain characteristics. We further clarify the characteristics of a consultative audit, as well as of a regulatory audit (the results of which can form the basis for issuance of certification under the rule), in the definition of “food safety audit” discussed in section III.J.

F. Eligible Entity

We proposed to define an “eligible entity” as a foreign entity that chooses to be subject to a food safety audit by an accredited third-party certification body. We further proposed that eligible entities include foreign facilities subject to the registration requirements in FDA regulations.

(Comment 10) We received several comments on the definition of “eligible entity.” Some comments request that we provide examples of specific types of entities that satisfy the definition. Some comments offer examples of “eligible entities,” including orchards or farms, packing houses, processing plants, and storage facilities. Other comments suggest we add “and foreign farms” to the end of the definition, to clarify that such entities are eligible to receive audits under subpart M. Some comments encourage us to adjust the

definition of “eligible entity” to make it mandatory for foreign food facilities to undergo food safety audits by accredited third-party certification bodies.

(Response 10) The proposed definition of “eligible entity” was based on the statutory definition, which includes facilities subject to the registration requirements in section 415 of the FD&C Act that choose to be audited under the program. At our own initiative we are revising the definition of “eligible entity” in the codified to more accurately track the statute, and we decline the suggestion to add specific examples, such as orchards or farms, that are not included in the statutory definition of “eligible entity.” However, as explained in Response 12 we are revising the definition of “facility” in § 1.600(c) to clarify that entities that grow, harvest, or raise animals for food for consumption in the United States are facilities that are eligible for auditing and certification under this subpart.

We disagree with the comment suggesting that we should make audits under this program mandatory for all foreign food firms by modifying the definition of “eligible entity.” The statute clearly indicates that participation in this program is intended to be voluntary, and only entities that choose to be audited under the program are subject to its requirements (see section 808(a)(6) of the FD&C Act).

(Comment 11) In the proposed rule, we specifically asked for comment on whether to allow for food or facility certification to be issued to a producer group, offering as an example the criteria for groups under the National Organic Program (NOP)—*i.e.*, having multiple sites operating under a single management system and whose farms are “uniform in most ways.” Several comments responded to this inquiry in relation to the definition of “eligible entity.”

Comments in support of certification of a group (e.g., a cooperative being audited as a single eligible entity) note that some producers are very small and might find it difficult on their own to obtain third-party certification, but taken as a group the task would likely be more manageable. Other comments note that treating multiples sites with a single management system as a single eligible entity could be particularly helpful in sectors or regions where there is a scarcity of accredited third-party certification bodies. Some comments argue in support of groups functioning as a single eligible entity as long as the central management system functions effectively, providing oversight to the

members. Comments also note that some multisite sampling protocols have been developed by international organizations, such as ISO.

Other comments encourage us to ensure that cooperatives are subject to this rule, so that all the links in a foreign supply chain are appropriately inspected, and so that they are subject to any applicable regulations before their product is exported to the United States.

Comments not in support of cooperatives being classified as eligible entities note that food safety practices and conditions are site-specific and can vary significantly even if the individual farms are located in the same geographic area (for example, due to soil composition, agricultural water runoff, or the manner in which the land was used in the past). They also note that organic production standards and scientifically-based food safety standards are not the same, so what works for the NOP may not be appropriate here.

Some comments encourage us to provide guidance on the acceptable parameters of a cooperative. Some comments encourage us to consider guidance available from other sources beyond the NOP, such as the International Federation of Organic Agriculture Movements.

(Response 11) We decline to revise the definition of eligible entities to include a group. We acknowledge that some very small producers might be daunted by the prospect of working individually with an accredited third-party certification body, and there would be obvious economies in banding together with other very small producers to gain certification. We also acknowledge that some sets of producers do currently function as a unit under a centralized management system, and that group certification may make it easier for entities to access accredited third-party certification bodies in areas or regions where they may be scarce. Nevertheless, after reviewing the NOP, the International Federation of Organic Agricultural Movements, the Canada Organic Office Operation Manual, the USDA Agricultural Marketing Service pilot program on group certification, and other recommended sources, we conclude that it would not be appropriate to allow groups to be certified under this program. Group certification raises a myriad of complicated issues such as establishing who may act as a group, determining the requisites of a central management system, and delineating the minimum

requirements for accredited third-party certification body audits of a group.

With regard to the comments contending that certifications from individual eligible entities that might otherwise act as a group would create redundant and unnecessary paperwork for FDA, we will take that sort of information into account as we gain experience with the program. Finally, with regard to the comments encouraging us to define “eligible entity” to include groups to ensure that all their members are examined for compliance with applicable food safety regulations before their food is exported to the United States, we note that this rule does not create audit obligations for all foreign suppliers or for all importers. The third-party certification program created by this rule is a voluntary program for eligible entities who wish to participate.

G. Facility

We proposed to define “facility” as any structure, or structures of an eligible entity under one ownership at one general physical location, or, in the case of a mobile facility, traveling to multiple locations, which manufactures/ processes, packs, or holds food for consumption in the United States. The definition went on to state that: (1) Transport vehicles are not facilities if they hold food only in the usual course of business as carriers; (2) a facility may consist of one or more contiguous structures, and a single building may house more than one distinct facility if the facilities are under separate ownership; (3) the private residence of an individual is not a facility; and (4) non-bottled water drinking water collection and distribution establishments and their structures are not facilities.

On our own initiative, we are clarifying that facilities for the purposes of this subpart are not limited to facilities required to be registered under Subpart H.

(Comment 12) Some comments encourage us to align the proposed definition of “facility” to the definition of “facility” in the human and animal preventive controls, produce safety, and FSVP regulations, to promote consistency and common understanding of the rules.

(Response 12) As previously noted, we agree with the comments on the importance of consistency across regulations, where feasible and appropriate. We reviewed the definitions of “facility” in the final FSVP and final human preventive controls regulations, and found those definitions to be too narrow in light of

the purpose of this rule to establish a voluntary program for certification of foods and facilities and the broad definition of “eligible entity” in section 808(a)(6) of the FD&C Act. Of our own initiative, in order to preserve the option for broad participation in the third-party program, we are expressly including in the definition of “facility” those entities that grow, harvest, or raise animals for food for consumption in the United States.

H. Facility Certification and Food Certification

We proposed to define “facility certification” as an attestation, issued for purposes of section 806 of the FD&C Act by an accredited third-party certification body, after conducting a regulatory audit and any other activities necessary to establish that a facility meets the applicable requirements of the FD&C Act. We proposed to define “food certification” as an attestation, issued for purposes of section 801(q) of the FD&C Act by an accredited third-party certification body, after conducting a regulatory audit and any other activities necessary to establish that a food meets the applicable requirements of the FD&C Act.

(Comment 13) We received some comments on the definitions of “facility certification” and “food certification.” Some of these comments raise group certification issues which we address above, in connection with the definition of “foreign cooperative.” Some comments state that “food certification” is improper terminology, because it implies a product certification model, whereas audits of eligible entities—particularly in the produce sector—generally assess processes and/or management systems.

(Response 13) The term “food certification” appears in the statute and is specifically discussed in the statute as a type of certification that may be used in meeting a condition of admissibility under section 801(q) of the FD&C Act. Under section 808(c)(2)(C) of the FD&C Act, food certifications may only issue upon conduct of a regulatory audit. In light of the statutory language, we decline to revise the term “food certification” in response to the comments on this rule.

We also note that section 801(q)(1) of the FD&C Act allows for FDA to accept “a listing of certified facilities that manufacture, process, pack, or hold food, or other assurances deemed appropriate by FDA” to satisfy the condition of admissibility. Of our own initiative, in light of this statutory language, we are clarifying in the definition of “facility certification” that

a facility certification may be issued for purposes of 801(q) of the FD&C Act.

I. Food

In proposed § 1.600(b), we stated unless otherwise defined in § 1.600(c) of the proposed rule, definitions of terms in section 201 of the FD&C Act would apply to terms used in this subpart. Section 201 of the FD&C Act defines “food” as “(1) articles used for food or drink for man or other animals, (2) chewing gum, and (3) articles used for components of any such article.” Proposed § 1.600(c) did not define the term “food.”

(Comment 14) Some comments request that we define “food” consistent with how it was defined in the FSVP proposed rule for consistency and to indicate that producers of food contact substances are eligible entities.

(Response 14) The proposed definition of “food” under § 1.600 would include pesticides when they meet the definition of “food” under section 201 of the FD&C Act. By contrast, the FSVP rule’s proposed definition of food explicitly does not include pesticides, as defined in 7 U.S.C. 136(u), consistent with the definition of “food” used in the rulemaking on the Prior Notice of Imported Food Under the Public Health Security and Bioterrorism Preparedness Act of 2002 (prior notice rule). FDA received comments during that rulemaking questioning the applicability of the rule to pesticides, so FDA clarified that “food” for the purposes of that rule did not include pesticides.

The final FSVP regulation, which is publishing elsewhere in this issue of the **Federal Register**, retains the exclusion of pesticides from the definition of “food.”

In response to comments suggesting revision of the definition of “food” in this rule to be consistent with the final FSVP regulation, we considered the purposes that certifications serve under this program and the nature of comments we received on the third-party proposed rule, including general comments requesting alignment across the FSMA rules and comments specifically requesting that we use the FSVP definition of “food.” Certifications issued by accredited third-party certification bodies may be used in establishing an importer’s eligibility to participate in VQIP and in satisfying a condition of admissibility for an imported food that we determine poses a safety risk under section 801(q) of the FD&C Act.

While certifications may be useful in addressing pesticide contamination of

food (e.g., pesticide levels in food that exceed established tolerances), we have not identified a need for certifications to address pesticides as articles of food, nor do we anticipate a role for food safety audits in pesticide manufacturing facilities. Accordingly, we are revising the final rule by adding to § 1.600(c) a definition of “food” that excludes pesticides.

We also agree with the comment that producers of food contact substances could be eligible entities under this rule and that food contact substances should be considered food for the purposes of this rule. Third-party food safety audits and certifications for food contact substances could potentially be useful given the possibility of migration of harmful food contact substances into food or contamination of food contact materials that directly contact food. Accordingly, we are revising the proposed definition of “food” to exclude pesticides and retain “food contact substances” in the definition of “food” in this final rule, consistent with the definition of “food” in the final FSVP regulation.

J. Food Safety Audit

We proposed to define “food safety audit” as a regulatory audit or a consultative audit.

(Comment 15) We received a few comments on the definition of “food safety audit.” Some comments request that we remove consultative audits from the definition of “food safety audit,” asserting that consultative audits should not be subject to the reporting and notification requirements associated with “food safety audits.” Other comments say we should replace the term “food safety audit” with “regulatory audit,” as a matter of statutory construction and sound policy. Finally, some comments suggest that we delete the definition of “food safety audit” altogether.

(Response 15) We are retaining the definition of “food safety audit” as a useful definition to describe regulatory and consultative audits that fall under the requirements of this rule. As described in Response 9, we have revised the definition of “consultative audit” to clarify that it is an audit conducted in preparation for a regulatory audit under the third-party certification program. Although an audit meeting that definition would be subject to certain reporting and notification requirements, there are many types of audits/arrangements that would not fall within the definition of “consultative audit” or “regulatory audit,” and would therefore not be subject to the requirements of this rule, including the

reporting and notification requirements. Therefore, including consultative audits in the definition of “food safety audit” will not prevent eligible entities from using accredited third-party certification bodies for auditing arrangements that fall outside of the scope of this rule and do not trigger the requirements of this rule. To further address comments’ concerns, we are modifying the definition of “food safety audit” to provide clarification regarding what types of audits/activities would fall outside of the scope of this rule. Specifically, we clarify that a food safety audit must be declared by an eligible entity at the time of audit planning and must be conducted on an unannounced basis consistent with sections 808(b)(6) and 808(c)(5)(C) of the FD&C Act.

K. Foreign Cooperative

We proposed to define “foreign cooperative” as an entity that aggregates food from growers or processors that is intended for export to the United States.

On our own initiative, we are replacing the phrase “entity that aggregates” with “autonomous association of persons, identified as members, who are united through a jointly owned enterprise to aggregate” for clarification purposes.

(Comment 16) Some comments suggest that we add a definition for “consolidator.” The comments contrast consolidators with cooperatives and argue that consolidators act essentially as brokers that purchase products from several sources and then export the total set to the United States. According to these comments, consolidators do not own or manage the individual sites and generally do not have control over or even knowledge of the processing procedures.

(Response 16) We agree with the comment that an entity without a single management system that exercises control over the manner in which individual sites meet the applicable food safety requirements of the FD&C Act and FDA regulations would not be an eligible entity. However, we disagree that adding a definition of “consolidator” would be helpful because whether an entity is a “consolidator” has no bearing on the requirements of this rule.

(Comment 17) Some comments point out that while the proposed rule indicates a foreign cooperative could be an accreditation body or a third-party certification body, in their countries the government is the accreditation body. Also, in some places the government authorizes certain parties to conduct audit activities and those parties are under the control and supervision of the

government. Accordingly, the comments suggest that we indicate in which countries and in which cases a foreign cooperative could be an accreditation body or a third-party certification body. Other comments recommend more detail on how cooperatives are defined, and how they would conform to FDA requirements for third-party certification bodies.

(Response 17) We currently are not in a position to be able to determine which countries or which foreign cooperatives may be adequately qualified to become accredited under the third-party certification program. We note that section 808 of the FD&C Act expressly allows foreign cooperatives to serve as accredited third-party certification bodies if they are adequately qualified and independent of the eligible entities they audit or certify under the third-party certification program. Therefore, we are not categorically excluding foreign cooperatives from the third-party certification program, nor are we making any categorical decisions on whether governmental accreditation bodies have conflicts that would preclude them from accrediting such foreign cooperatives under the program.

L. Regulatory Audit

We proposed to define a “regulatory audit” as an audit of an eligible entity to determine whether such entity is in compliance with the provisions of the FD&C Act and the results of which are used in determining eligibility for food certification under section 801(q) of the FD&C Act or facility certification under section 806 of the FD&C Act, and may be used by an importer in meeting the requirements for an onsite audit of a foreign supplier under the FSVP program.

(Comment 18) Some comments request that we clarify the definition of “regulatory audit.”

(Response 18) The comments requesting clarification failed to mention specific characteristics in the definition needing clarification and did not offer suggestions for clarification. Therefore, we decline to modify the definition based on these comments. However, on our own initiative we have revised the definition of “regulatory audit” by removing the clause “, and may be used by an importer in meeting the requirements for an onsite audit of a foreign supplier under subpart L of this part” that does not appear in the statute. We did this in part to avoid confusion. We emphasize that an audit conducted for the purposes of FSVP would not need to be conducted by a third-party certification body under this subpart. See section XIII.G. Nor are

facilities required to use third-party certification bodies accredited under this rule in meeting their supplier verification requirements under the final human or animal preventive controls regulations. On our own initiative, we are revising the definition of “regulatory audit” to clarify that the results of a regulatory audit may be used to determine eligibility for any certifications that may be used for purposes of section 801(q) or section 806 of the FD&C Act.

M. Self-Assessment

We proposed to define “self-assessment” as a systematic assessment conducted by an accreditation body or by a third-party certification body to determine whether it meets the applicable requirements of this subpart.

We received no adverse comments about our proposed definition. However, on our own initiative, we are revising the definition of “self-assessment” to improve clarity and to specify what is required of a recognized accreditation body and an accredited third-party certification body when performing these evaluations.

N. Third-Party Auditor

We proposed to define a “third-party auditor” as a foreign government, agency of a foreign government, foreign cooperative, or any other third-party that is eligible to be considered for accreditation to conduct food safety audits and to certify that eligible entities meet the applicable requirements of the FD&C Act. We further proposed that a third-party auditor may be a single individual or an organization and may use audit agents to conduct food safety audits. Finally, we proposed that “third-party auditor” has the same meaning as “certification body” as that term was defined in the proposed rule.

(Comment 19) As described in Comment 1, we received several comments urging us to align our definitions and terminology with international standards. Some comments state that the term “third-party auditor,” the language of the statute notwithstanding, is not correct terminology to use interchangeably with “third-party certification body.”

(Response 19) As discussed previously, we agree that it is beneficial to use terminology in this rule that is consistent with terminology used in international standards when feasible and appropriate. Therefore, we are deleting the definition of “third-party auditor” in the final rule and will use the term “third-party certification body” in this rule except that we will use the term “third-party auditor” in the

definitions of “Accredited third-party certification body” and “Third-party certification body” in § 1.600(c) and in the preamble discussion of those definitions in section III.A. We are clarifying in the definition of “third-party certification body” in § 1.600(c) that the term has the same meaning as “third-party auditor” as defined in section 808(a)(3) of the FD&C Act.

IV. Comments on Who Is Subject to This Subpart (§ 1.601)

We proposed in § 1.601 that this rule would apply to those accreditation bodies, third-party certification bodies, and eligible entities that seek to participate in this voluntary third-party certification program. We proposed two limited exemptions from section 801(q) of the FD&C Act: One related to alcoholic beverages from an eligible entity that is a facility that meets certain conditions, and another related to certain food constituting not more than 5 percent of the overall sales of a facility meeting the conditions of the first exemption.

A. Limiting the Scope of the Rule to Regulatory Audits and Certifications

Under proposed § 1.601(b), we proposed that subpart M would apply to third-party certification bodies seeking accreditation to conduct food safety audits and issue certifications for purposes of sections 801(q) and 806 of the FD&C Act.

(Comment 20) Some comments suggest we modify the language in § 1.601(b) regarding third-party certification bodies seeking accreditation to clarify that requirements of the rule apply only to imported foods that are subject to a condition of admissibility under section 801(q) of the FD&C Act and imported foods offered by an importer seeking to establish eligibility to participate in VQIP. In this view, the requirements of the rule (e.g., the notification requirements) should not apply to audits other than regulatory audits that are conducted for certification purposes.

(Response 20) We decline to make the suggested revisions to § 1.601(b) because § 1.601(b)(2) already describes the two types of certifications that may be issued by accredited third-party certification bodies under the final rule and the types of audits that they would conduct under this program (i.e., food safety audits, which include both consultative and regulatory audits). Audits conducted by third-party certification bodies that are outside of the scope of this program, and eligible entities receiving audits outside of the scope of this program, would not be

subject to the requirements of this final rule. With respect to the suggestion that the final rule should apply only to regulatory audits, and therefore not to consultative audits, we note, as previously discussed, that section 808 of the FD&C Act specifically defines “consultative audit” and contains requirements for the conduct of both regulatory and consultative audits (see, e.g., section 808(a)(5) and (c)(4)(B) of the FD&C Act). Therefore, this final rule establishes requirements for consultative audits that are consistent with the provisions on consultative audits in the statute.

B. Exemption for Alcoholic Beverages

Under proposed § 1.601(d), we proposed to exempt from the certification requirements under section 801(q) of the FD&C Act alcoholic beverages that are imported from an eligible entity that is a facility that meets the following two conditions:

- Under the Federal Alcohol Administration Act or chapter 51 of subtitle E of the Internal Revenue Code of 1986, the facility is a foreign facility of a type that, if it were a domestic facility, would require obtaining a permit from, registering with, or obtaining approval of a notice or application from the Secretary of the Treasury as a condition of doing business in the United States; and
- Under section 415 of the Federal Food, Drug, and Cosmetic Act, the facility is required to register as a facility because it is engaged in manufacturing/processing one or more alcoholic beverages.

We also proposed that the certification requirements under section 801(q) of the FD&C Act would not apply to food other than alcoholic beverages that is imported from a facility described in § 1.601(d)(1) provided that such food:

- (i) Is in prepackaged form that prevents any direct human contact with such food; and
- (ii) Constitutes not more than 5 percent of the overall sales of the facility, as determined by the Secretary of the Treasury.

We tentatively concluded that these provisions were consistent with the provisions on alcohol-related facilities in section 116 of FSMA.

(Comment 21) Some comments support the proposed exemption of imported beverage alcohol products, but encourage us to clarify and amplify the exemption to cover the raw materials and ingredients (e.g., grapes, grains, hops, flavors) used to produce alcoholic beverages. The comments assert that the requested exemption would provide for

consistency between domestic and foreign facilities and would be consistent with Congressional intent regarding section 116 of FSMA. The comments assert that the expanded exemption would be consistent with the regulations on preventive controls for human food. The comments urge us to consult their comments on the FSVP proposed rule.

(Response 21) As requested, we consulted comments submitted on proposed § 1.501(e) in the FSVP proposed rule, requesting an exemption from the FSVP requirements for the importation of the raw materials and ingredients (e.g., grapes, grains, hops, flavors) used to produce alcoholic beverages, and asserting that such an exemption would be consistent with Congressional intent regarding section 116 of FSMA.

We considered the comments’ request in light of the risk-based public health principles generally underlying FSMA and have concluded that Congress did not intend for FSMA’s core requirements to apply to the manufacture/processing, packing, and holding of alcoholic beverages. Congress may have made such a conclusion in light of the potential antimicrobial function of the alcohol content in such beverages and the concurrent regulation of alcoholic beverage-related facilities by both FDA and the Alcohol and Tobacco Tax and Trade Bureau. In light of this context, we have concluded that section 116 of FSMA should be interpreted to mean that the manufacturing, processing, packing, or holding of alcoholic beverages at most alcohol-related facilities should not be subject to this rule.

We believe the same rationale supports the comments’ request. Accordingly, and consistent with the final FSVP regulation, we are expanding the exemption from certification under section 801(q) of the FD&C Act in § 1.601(d) to cover raw materials or other ingredients that are used to manufacture/process, pack or hold alcoholic beverages by an importer required to be registered under section 415 of the FD&C Act, when such facilities are exempt from the preventive controls regulations under 21 CFR 117.5(i).

Also in this final rule, we are replacing the term “food other than alcoholic beverages,” to describe the applicability of the exemption, with the term “food that is not an alcoholic beverage.”

C. USDA Regulated Products

(Comment 22) Some comments suggest we explicitly exempt products

under USDA jurisdiction from the requirements of this rule.

(Response 22) We agree that an exemption to 801(q) is appropriate with respect to meat, poultry, and egg products regulated by USDA at the time of importation. The final rule adds a new § 1.601(d)(2) which states that any certification under 801(q) does not apply to meat, poultry, and egg products that at the time of importation are subject to the requirements of the USDA under FMIA (21 U.S.C. 601 *et seq.*), PPIA (21 U.S.C. 451 *et seq.*), or EPIA (21 U.S.C. 1031 *et seq.*). We conclude that this provision is consistent with section 403 of FSMA, entitled “Rule of Construction,” which states that nothing in FSMA shall be construed to alter or limit the jurisdiction of the Secretary of the Department of Agriculture. For many decades, USDA has exercised authority and responsibility over the import of such meat, poultry, and egg products, and has detailed regulations and procedures implementing this authority. In light of USDA’s role with respect to the importation of these products, and also in light of section 403 of FSMA, we believe that Congress did not intend for an FDA determination under section 801(q) of the FD&C Act to apply to meat, poultry, and egg products that at the time of importation are subject to USDA requirements under the MPIA, PPIA, and EPIA, respectively. We therefore conclude that final § 1.601(d)(2) is consistent with Congress’s intent in promulgating section 403 of FSMA.

With respect to the third-party program, we note that the program establishes a voluntary system of certification by accredited third-party certification bodies that food and facilities meet applicable requirements of the FD&C Act and FDA regulations. Certifications issued under this program will not be used to facilitate entry of meat, poultry, and egg products that are regulated by USDA at the time of importation, as defined above.

V. Comments on Recognition of Accreditation Bodies Under This Subpart

A. Who is eligible to seek recognition? (§ 1.610)

Proposed § 1.610 states that an accreditation body would be eligible for recognition if it could demonstrate that it meets the requirements related to legal authority, competency, capacity, conflicts of interest, quality assurance, and records in §§ 1.611 through 1.615. In our discussion of this section in the preamble of the proposed rule we stated our tentative conclusions that key

elements of ISO/IEC 17011:2004 (Ref. 5) would form a basis for our requirements, and that documented conformance to that standard would be relevant in demonstrating that an accreditation body is qualified for recognition.

(Comment 23) Some comments recommend that we require accreditation bodies to be signatories to IAF multilateral recognition agreements (IAF-MLAs) (which requires signatories, among other things, to conform to ISO/IEC 17011:2004) as a condition of recognition, and some contend it should be the sole criterion. Comments in favor of including signatory status as a requirement note that the process of becoming a signatory involves a thorough peer-review process, which helps ensure quality outcomes (e.g., signatories have to demonstrate conformance to ISO/IEC 17011:2004 as part of the peer review process). Comments note other aspects of IAF-MLA signatory status that would be beneficial to the program, such as periodic reevaluation by peer signatories to ensure continued compliance. These comments argue that when a foreign government is the accreditation body, it may be difficult for FDA to regulate a peer agency, so reliance on IAF-MLA signatory status would be helpful, in part because it would give an independent organization (IAF) a role in managing the accreditation body.

Some comments discourage us from requiring IAF-MLA signatory status as a condition of recognition. Some comments suggest that we consider signatory status as a factor in favor of recognition, noting many of the same advantages touted by proponents of requiring signatory status, but suggest that we not make IAF-MLA signatory status a condition of program participation.

Other comments explain that it would be premature to make IAF signatory status the sole requirement. The comments note that at the time of these comments the IAF-MLA does not yet include subsopes for specific food safety standards or schemes. Still other comments recommend that FDA study the issues surrounding signatory status further before making it a requirement, pointing out that some countries may not have signatory IAF-MLA members representing them.

Some comments cite to third-party food safety audit programs administered by other governments, noting those programs do not require IAF-MLA status as a condition for program participation. These comments argue

that it is more important to require conformance to ISO/IEC 17011:2004.

(Response 23) The comments uniformly agree on the value of an accreditation body's conformance to ISO/IEC 17011:2004 in establishing its qualifications for recognition. As discussed in section I.D., we agree that an accreditation body may use its documented conformance to ISO/IEC 17011:2004 to support its eligibility for recognition under this rule, supplemented as necessary (for example, to demonstrate capability to meet FDA requirements for reporting and notification under § 1.623, if recognized). We also agree that additional documentation relating to IAF-MLA signatory status may be useful in supporting an accreditation body's application for recognition under this program. However, we disagree with comments suggesting that we require IAF-MLA signatory status as the sole criterion or one of several criteria for recognition to accredit third-party certification bodies to conduct food safety audits and to certify that eligible entities meet the applicable food safety requirements of the FD&C Act and FDA regulations at this time. We currently lack (and the comments did not provide) adequate information to conclude that IAF-MLA signatory status should be the sole factual basis or one of several criteria for determining whether an accreditation body can fulfill the roles and responsibilities of a recognized accreditation body under this subpart. Further, we also want to allow accreditation bodies that are not signatories to participate in the program if they meet the statutory and regulatory criteria.

(Comment 24) As explained in section I.D., several comments support FDA's reliance on ISO/IEC 17011:2004 (Ref. 5) in developing the proposed rule. Other comments suggest FDA should place greater reliance on ISO/IEC 17011:2004 (Ref. 5), including some comments recommending that we incorporate the standard by reference into the rule.

(Response 24) We agree with comments on the value of promoting international consistency and tapping into an existing framework that is familiar to accreditation bodies, third-party certification bodies, and the food industry. Accordingly, in § 1.610 we are adding new language to state that an accreditation body may use documentation of conformance with ISO/IEC 17011:2004 (Ref. 5), supplemented as necessary, to demonstrate that it is eligible for recognition. This new language may make it easier for accreditation bodies that already conform to ISO/IEC

17011:2004 (Ref. 5) to apply for the program. We are also making conforming changes to §§ 1.622(d) and 1.623(b), 1.640(a), and 1.655(e).

We decline to incorporate ISO/IEC 17011:2004 (Ref. 5) by reference as the sole criterion or one of several criteria for recognition, because the standard contains some provisions that are inconsistent with section 808 of the FD&C Act or impractical for use in our program. For example, ISO/IEC 17011:2004 (Ref. 5), clause 4.3.7, allows an accreditation body to have "related bodies" that provide conformity assessment services (e.g., auditing and certification) in areas the accreditation body accredits. (A "related body" is linked to the accreditation body by common ownership or contractual arrangement, under clause 4.3.7 NOTE 1.) The only safeguards that a related body is expressly required to meet are as follows: (1) It must have different top management than the accreditation body's top management; (2) different personnel from those involved in the accreditation decisionmaking processes; (3) no possibility to influence the outcome of an assessment for accreditation; and (4) distinctly different names, logos, and symbols. While clause 4.3.7 of ISO/IEC 17011 (Ref. 5) speaks to issues of common management and control of the accreditation body and its related body, the standard does not expressly prohibit the accreditation body from accrediting its related body with which it shares common ownership or financial interests. For example, an accreditation body that provides financial support (directly or indirectly) to a related body could be viewed as lacking the impartiality necessary to make an objective decision about whether the related body it supports is appropriately qualified. The impartiality provisions in ISO/IEC 17011:2004 (Ref. 5) are impractical for our purposes because they fail to address the range of possible conflicts associated with shared financial interests and ownership between a recognized accreditation body and a "related" third-party certification body under this rule. To help ensure the credibility of our program, § 1.624 requires a recognized accreditation body to implement a program to ensure that the accreditation body and its officers, employees, and other agents involved in accreditation activities do not own or have a financial interest in a third-party certification body seeking its accreditation. Accordingly, it would be inappropriate for us to rely on the conflict of interest safeguards contained in ISO/IEC

17011:2004 (Ref. 5), in the third-party certification program we are establishing.

For the foregoing reasons, we decline the suggestion to incorporate ISO/IEC 17011:2004 (Ref. 5) by reference into this rule.

(Comment 25) Several comments express concern about our proposal to allow both public and private accreditation bodies to seek recognition. Some comments discourage us from allowing private entities to be accreditation bodies because of the concern that allowing for private accreditation bodies may cause conflicts of interest. Similarly, some comments contend that accreditation bodies must uphold public confidence and perform their duties objectively, which is the purview of governmental entities.

Other comments take a contrary view, suggesting that some government agencies have missions that may undermine the objectivity and independence required of a recognized accreditation body. Some comments encourage us to consider which government agency/ministry in a given country may be eligible for recognition, and to solicit input from stakeholders as to which agencies/ministries are best positioned to perform this function.

Still other comments assert that private and government entities are sufficiently different such that we should establish different conflict of interest provisions and requirements for each.

(Response 25) Comments on both sides of this issue express concern that any accreditation body we recognize must be independent and objective in the performance of its duties. We share that concern. However, none of the comments offered substantiation that would lead us to bar public or private accreditation bodies, as a class, from seeking recognition because of conflicts of interest inherent in the class.

Section 808 of the FD&C Act defines an "accreditation body" as an authority that accredits third-party certification bodies and makes no distinction between public and private accreditation bodies. We have concluded that both public and private accreditation bodies are potentially capable of exhibiting the impartiality necessary for recognition under this rule. Therefore in light of the broad definition of "accreditation body" and to maximize the opportunities for qualified accreditation bodies to participate in the program, FDA does not consider it to be appropriate to limit the program to only certain types of accreditation bodies.

With respect to the comments that suggest we apply different conflict of interest requirements to different types of accreditation bodies, none of these comments offered an adequate explanation to justify different requirements for public and private accreditation bodies. Again, we note that section 808 of the FD&C Act does not make distinctions for different types of accreditation bodies.

(Comment 26) Some comments request that we provide additional explanation regarding how an accreditation body that does not have experience accrediting third-party certification bodies for food safety scopes would become eligible for recognition under this program.

(Response 26) An accreditation body of the type described in the comments' hypothetical might face practical difficulties in providing adequate substantiation demonstrating that it meets the requirements described in § 1.610. However, we will consider each application on its own merits and do not foreclose the possibility for such an accreditation body to make the showing necessary to be granted recognition under this rule.

B. What legal authority must an accreditation body have to qualify for recognition? (§ 1.611)

We proposed to require an accreditation body seeking recognition to demonstrate that it has adequate legal authority (as a governmental entity or through contractual rights) to assess a third-party certification body for accreditation, including authority to review records and conduct performance assessments (e.g., authority to witness the performance of a statistically significant number of employees and other agents conducting assessments). We proposed to require that the accreditation body have adequate authority to remove or modify an accreditation status, once granted. We also proposed to require the accreditation body to demonstrate that it would be capable of exercising the legal authority necessary to meet the program requirements, if we granted recognition.

On our own initiative, in § 1.611(a)(2) we replaced, "personnel and other agents," with, "audit agents, or the third-party certification body in the case of a third-party certification body that is an individual" for clarity and consistency with section 808(a)(4) of the FD&C Act. We have also made corresponding changes throughout this subpart.

(Comment 27) Some comments provide support for this provision, and others encourage us to ensure that a

private accreditation body seeking recognition could have adequate legal authority to operate.

(Response 27) We agree with the comment urging us to ensure that a private accreditation body could have the necessary authority to act as a recognized accreditation body under this rule. As noted previously, we see no inherent reason why private entities could not theoretically meet the eligibility requirements for accreditation bodies under this rule. Therefore, we are revising § 1.611(a) and (b) to clarify that an accreditation body can be a legal entity with contractual rights. By the words "legal entity," we mean that the accreditation body must be duly authorized to operate as an accreditation body by governmental authorities responsible for such authorizations in any country or countries in which the accreditation body seeks to perform accreditation of third-party certification bodies under this rule.

(Comment 28) Some comments ask us to clarify what we mean by "statistically significant" as used in § 1.611(a)(2) and elsewhere in the proposed rule to provide adequate confidence in the results of an analysis of the sample. The comments encourage us to abandon the phrase "statistically significant" in favor of the language of ISO/IEC 17011:2004 (Ref. 5), which requires an accreditation body to witness the performance of a representative number of third-party certification body staff.

(Response 28) We understand from the comments that a body of knowledge and experience has developed among accreditation bodies conforming to ISO/IEC 17011:2004 (Ref. 5) on the meaning of "representative" numbers of observations and that no similar body of knowledge or experience exists on the meaning of "statistically significant" numbers of observations in this context. Accordingly, we are revising § 1.611 to require observations of a "representative sample" of audit agents and food safety audits. We are making similar revisions to other sections of the rule that require onsite observations.

For purposes of an accreditation body's observations of a third-party certification body under this rule, what constitutes a "representative sample" will be decided on a case-by-case basis, depending on various factors. These factors include the scope of accreditation, whether the third-party certification body is an individual who will conduct audits and make certification decisions, or whether the third-party certification body uses agents to conduct audits and, if so, whether such agents are centrally managed, conducting similar types of

audits, under a single set of operating procedures or whether the agents are managed from various locations, perform different types of audits, or follow different procedures such that these various locations, activities, or practices must be observed to ensure that the sample is sufficiently representative. A representative sample also must provide adequate confidence in the results of an analysis of the sample.

C. What competency and capacity must an accreditation body have to qualify for recognition? (§ 1.612)

We proposed to require an accreditation body seeking recognition to demonstrate that it has the resources required to adequately implement its accreditation program, including adequate numbers of qualified employees and other agents, adequate financial resources for its operations, and the capability to meet the resource demands of a recognized accreditation body, in the event the accreditation body is recognized.

(Comment 29) We received some comments on this provision, which also support the proposed rule's requirement that accreditation bodies demonstrate their competence and capacity based on the requirements of ISO/IEC 17011:2004 (Ref. 5). However, these comments disagree with our statement in the preamble that liability coverage requirements should not apply to this rule. The comments argue that we should include a requirement for accreditation bodies to carry liability coverage, noting that it is one of the requirements in ISO/IEC 17011:2004 (Ref. 5) and describing it as especially important because of the risks associated with food safety.

(Response 29) We agree with the comments that liability insurance may be useful in demonstrating the adequacy of an accreditation body's resources, for example, under ISO/IEC 17011:2004 (Ref. 5); however, FDA lacks experience in evaluating the adequacy of liability coverage for accreditation activities and we do not believe it would be appropriate for FDA to make recognition decisions primarily on this basis. We believe an accreditation body can demonstrate that it is adequately resourced in a number of different ways, including providing documentation of liability coverage as part of the information submitted to help to demonstrate that accreditation body is adequately resourced.

D. What protections against conflict of interest must an accreditation body have to qualify for recognition? (§ 1.613)

Proposed § 1.613 requires accreditation bodies to demonstrate that they have written measures to protect against conflicts of interest with third-party certification bodies and the capability to meet the rule's other conflict of interest requirements.

On our own initiative, we are clarifying that the scope of conflict of interest provisions in § 1.613(a) is limited to individuals involved in accreditation, auditing, and certification activities and not, for example, employees involved in purely administrative functions, such as payroll, or in positions that support administrative functions, such as computer technicians. Therefore, § 1.613(a) of this rule applies to interests between the officers, employees, and other agents of the accreditation body that are involved in accreditation activities and the officers, employees, and other agents of the third-party certification body involved in auditing and certification activities. We are making corresponding changes in the subsequent provisions for recognized accreditation bodies under § 1.624(a).

(Comment 30) Some comments take issue with our decision not to include the requirements of clause 4.3.2 of ISO/IEC 17011:2004 (Ref. 5), which requires the accreditation body to have documented and implemented a structure relating to conflicts of interest that provides for effective involvement by interested parties with balanced representation ensured.

(Response 30) We decline to require that recognized accreditation bodies establish and implement a structure for involving interested parties in matters relating to the conflict of interest requirements for recognized accreditation bodies. It would be administratively burdensome for FDA to establish a mechanism for monitoring the activities of interested parties that the accreditation body elects to involve to comply with such requirements. In our third-party certification program, impartiality will be protected by the conflict of interest provisions for accreditation bodies in § 1.624, the appeals provisions in § 1.620(d), and FDA's oversight activities.

E. What quality assurance procedures must an accreditation body have to qualify for recognition? (§ 1.614)

Proposed § 1.614 requires accreditation bodies to implement a written quality assurance program and

have the capability to meet the rule's other quality assurance requirements.

(Comment 31) Some comments encourage FDA to more closely align § 1.614 with established international standards on quality assurance programs. Some ask us to rely on the relevant provisions in ISO/IEC 17011:2004 (Ref. 5) in particular.

(Response 31) We agree with the comments and as described in section I.D., we are revising § 1.610 to allow accreditation bodies to use their demonstrated conformance to ISO/IEC 17011:2004 (Ref. 5), supplemented as necessary, in meeting the requirements for recognition.

(Comment 32) Some comments ask us to clarify the language in § 1.614(a)(1) and (2) regarding food safety problems and corrective actions.

(Response 32) We agree and have revised § 1.614(a)(1) and (2) to clarify that an accreditation body must demonstrate that it has procedures to identify deficiencies and procedures to execute corrective actions for such deficiencies, using language that better aligns with international standards (see, e.g., clause 5.5 in ISO/IEC 17011:2004 (Ref. 5)).

F. What records procedures must an accreditation body have to qualify for recognition? (§ 1.615)

Proposed § 1.615 would require accreditation bodies seeking recognition to demonstrate that they have developed and implemented adequate written procedures for establishing, controlling, and retaining records and to demonstrate the capability to meet the program's records, reporting, and notification requirements, if recognized.

(Comment 33) Some comments voice general concerns about confidentiality. Others state their concern with how confidentiality of third-party certification body records would be preserved when third-party certification bodies must share information with recognized accreditation bodies and FDA. Noting that such information can be sensitive in nature and sometimes includes confidential business information, these comments urge us to place certain limits—*i.e.*, only information related to food safety would be collected during audits of third-party certification bodies and such information would be shared only with the recognized accreditation body and FDA. Some comments suggest FDA require strict protective measures for information handled by third-party certification bodies and accreditation bodies, because the release of an eligible entity's confidential business information could have detrimental

effects on U.S. businesses and their foreign suppliers. These comments suggest the use of confidentiality protections such as “confidential disclosure agreements” so that the audit climate remains conducive to robust scrutiny and open dialogue.

Some comments also express concern with the proposed use of electronic records, because of the opportunity for sensitive electronic information to be compromised. Such comments recommend that the final rule include requirements for both third-party certification bodies and accreditation bodies to ensure that electronic records remain secure in transit and during storage.

(Response 33) We decline the suggestions to require confidentiality disclosure agreements between recognized accreditation bodies and third-party certification bodies under our program and to establish data protection requirements for electronic records and communications of recognized accreditation bodies and accredited third-party certification bodies. We understand that many accreditation bodies and third-party certification bodies have contractual agreements regarding confidentiality and disclosure by those parties. We expect accreditation bodies that become recognized under our program may elect to establish contracts that incorporate language on information sharing with FDA for third-party certification bodies seeking accreditation under this program. For such accreditation bodies, how they choose to accomplish this—*e.g.*, whether by establishing a separate confidentiality agreement or through revision of current contract language or creation of a new contract addendum—is a decision best made by the parties to those contracts. Accreditation bodies and third-party certification bodies will have common interests in safeguarding the electronic records they store and transmit to each other; therefore, we have no reason to believe that any separate agreements will lack adequate protections for confidentiality of information, including information stored and shared among the parties electronically.

This rule focuses on confidentiality and disclosure with respect to information shared with FDA. As explained in section XIII.F., FDA will protect the confidentiality of information accessed by or submitted to the Agency in accordance with § 1.695 of this subpart. With respect to the storage of electronic records and electronic transmission of information by FDA, we note that we are working the FDA IT security professionals in

establishing the electronic portal for the third-party certification program to apply adequate and appropriate controls to ensure the confidentiality and integrity of data submitted to FDA through the portal.

(Comment 34) In the proposed rule preamble discussion of this section we stated that, “[a]ccreditation bodies applying for recognition must demonstrate their capacity, if recognized, to grant us access to confidential information, including information contained in records, without prior written consent of the third-party certification body involved. Having access to records relating to accreditation activities (including confidential information) under this subpart is necessary to ensure the rigor, credibility, and independence of the program.” Some comments take issue with this point, arguing that accreditation bodies would not be able to grant such access—they would only be able to grant access to confidential information *with* prior written consent. That is, the accreditation body would first need to make arrangements for FDA access to confidential records with the third-party certification bodies it accredits and the eligible entities certified by those third-party certification bodies. Comments that express doubt about private sector foreign accreditation bodies actually granting FDA access to confidential records contend that such access is particularly unlikely without the prior written consent of the third-party certification body whose records are sought.

(Response 34) We agree with the comments that the contracts accreditation bodies currently use with their third-party certification body clients do not contemplate the program we are establishing. As comments suggest, we would expect that confidentiality provisions in standard contracts would need to be revised such that, in signing a contract for accreditation under the FDA program, the third-party certification body would be giving the accreditation body its prior consent to perform any reporting or notification necessary for the recognized accreditation body to fulfill its obligations under the rule. Indeed, we expect that accreditation bodies seeking recognition will demonstrate their ability to comply with the reporting and notification provisions of this rule by providing us examples of standard contract language that has been suitably revised as comments describe.

VI. Comments on Requirements for Recognized Accreditation Bodies Under This Subpart

A. How must a recognized accreditation body evaluate third-party certification bodies seeking accreditation? (§ 1.620)

Proposed § 1.620 would establish the criteria and procedures that a recognized accreditation body must use in assessing third-party certification bodies for accreditation. Paragraph (a) broadly addresses the different requirements for foreign governments and foreign cooperatives or other third parties. Paragraph (b) requires the accreditation body to require third-party certification bodies to satisfy the rule’s reporting and notification requirements. Paragraph (c) requires the accreditation body to maintain certain records, such as those related to withdrawal or suspension of a third-party certification body. Paragraph (d) requires an accreditation body to have written procedures for handling appeals from third-party certification bodies, and requires certain minimal appeal procedures.

On our own initiative, we are revising § 1.620(a)(2) and (3) to apply to accredited third-party certification bodies that are comprised of a single individual, as applicable. We are also removing, “and any requirements specified in FDA model accreditation standards regarding qualifications for accreditation, including legal authority, competency, capacity, conflicts of interest, quality assurance, and records” to follow good guidance practice. We are making corresponding changes to §§ 1.620(a)(1), 1.640(b), and 1.640(c). We are also revising § 1.620(c) to specify that recognized accreditation bodies must also include the date of the action in their records relating to any denial of accreditation or the withdrawal, suspension, or reduction in scope of accreditation of a third-party certification body. In addition, we are revising § 1.620(d) to clarify that the recognized accreditation body must notify any third-party certification body of an adverse decision associated with its accreditation under the subpart, including denial of accreditation or the withdrawal, suspension, or reduction in the scope of its accreditation.

(Comment 35) In paragraph (a)(3) of this proposed section we stated that a recognized accreditation body must observe “a statistically significant number of onsite audits” conducted by the third-party certification body seeking accreditation. Some comments request clarification of what we meant by “statistically significant,” so that accreditation bodies would know what

would be an adequate number of audits to observe to provide adequate confidence in the results of an analysis of such observations. The comments suggest that we should explain the criteria for determining the number of witness audits to be conducted under proposed § 1.620 and ask whether site-specific issues such as geographic factors should be considered. Other comments encourage us to abandon the phrase “statistically significant” in favor of the language of ISO/IEC 17011:2004 (Ref. 5), which requires an accreditation body to witness the performance of a representative number of third-party certification body staff.

(Response 35) We have removed the phrase “statistically significant” in § 1.620(a)(3) and inserted the phrase “representative sample.” We explain in Response 28 that comments presented compelling arguments that a significant body of knowledge and experience has developed around the meaning of a “representative” number of observations under ISO/IEC 17011:2004 (Ref. 5) to achieve an adequate level of confidence in the results. We have revised § 1.620(a)(3) accordingly. Site-specific issues may be relevant in determining the representative number of witness assessments to conduct, for example, where audit agents are located in remote offices or where food safety audits are managed by remote offices. The accrediting body, either a recognized accreditation body or FDA in the case of direct accreditation, will be best positioned to determine whether geographic issues are relevant for purposes of § 1.620(a)(3).

(Comment 36) Some comments ask us to revise § 1.620(d)(2) to clarify that the individuals used to hear appeals of adverse decisions by a recognized accreditation body could be individuals external to the accreditation body.

(Response 36) We agree with the comments and have revised this provision to clarify that individuals used to hear appeals may be external to the accreditation body, as well as a similar provision applying to appeals by eligible entities of adverse decisions by an accredited third-party certification body. We have also revised this provision to use language similar to language that is used in § 16.42(b), which describes the characteristics of a presiding officer that may be used for FDA regulatory hearings.

(Comment 37) In the preamble to the proposed rule we stated that we were not proposing to review the decisions of recognized accreditation bodies nor were we proposing to hear appeals from third-party certification bodies aggrieved by an accreditation body’s

decision(s). We sought comment on these matters. In response, some comments state their understanding that FDA would retain the authority to challenge a recognized accreditation body’s decisions, because we have authority over the entire program.

(Response 37) We agree with comments that our oversight extends to any accreditation body or third-party certification body participating in the program, including the authority to withdraw accreditation from a third-party certification body even if the accreditation was granted by a recognized accreditation body. However, FDA does not intend to serve as an appellate body for aggrieved third-party certification bodies, as this would be unworkable and unnecessary. Withdrawing the accreditation of a third-party certification body to remove it from our program is quite different than, for example, overturning an accreditation body’s decision to deny accreditation to a third-party certification body in the first place. Our program is designed to ensure the competency and independence of accreditation bodies. As part of this program, FDA will be recognizing accreditation bodies to make accreditation decisions based on a determination that the accreditation body is qualified to do so. FDA involvement in accreditation decisions would defeat the purpose of the program. Additionally, FDA retains the authority to revoke the recognition of accreditation bodies for good cause under § 1.634(a)(4) for failure to comply with this rule. For all of these reasons, FDA declines to codify a process to review appeals challenging recognized accreditation body decisions under this program.

(Comment 38) Several comments encourage us to expand on the requirement to use “independent” person(s) to hear an appeal of an adverse accreditation body decision. Some comments suggest that we clarify that an independent person is one who was not involved in the decision that is the subject of the appeal. A few comments suggest we further require the accreditation body to use person(s) who are external to the organization.

(Response 38) We agree with the suggestions to clarify § 1.620(d)(2) and are revising it to align with the impartiality provisions in 21 CFR part 16, which contains the regulations for regulatory hearings that we will generally apply under § 1.693 to an appeal of a revocation or withdrawal. Under the part 16 regulations, the person presiding over the hearing must be free from bias or prejudice and must

not have participated in the action that is the subject of the hearing or be subordinate to a person who participated in the action. We believe that the credibility of the third-party certification program will be enhanced by requiring recognized accreditation bodies to afford similar protections when considering appeals by certification bodies under this rule. While we decline the suggestion to require the use of external parties in deciding appeals, we note that a recognized accreditation body has flexibility to use an external party under § 1.620(d)(2).

B. How must a recognized accreditation body monitor the performance of third-party certification bodies it accredited? (§ 1.621)

We proposed to require a recognized accreditation body to conduct an annual evaluation of each of its accredited certification bodies that includes a review of the certification body’s self-assessments, its regulatory audit reports, notifications to FDA, and any other information reasonably available. We requested comment on whether the information we proposed to require would provide a solid basis for an evaluation. We asked stakeholders whether we should include a requirement in § 1.621 for onsite monitoring of accredited certification bodies and, if so, whether we should require the accreditation body to observe or visit the certification body’s headquarters.

(Comment 39) We received several comments on the annual assessment requirements of proposed § 1.621. Some comments agree with the requirement for an annual assessment. Some comments mention a Government Accountability Office (GAO) report entitled, “FDA Can Better Oversee Food Imports by Assessing and Leveraging Other Countries’ Oversight Resources” (GAO 12–933) and dated September 2012, which notes ongoing challenges with ensuring the competency of third parties to consistently apply standards and argues that annual assessments would improve certification body reliability and competency. Some of these comments state they would even support more frequent certification body evaluations.

In contrast, some comments argue that annual assessments would be burdensome. Comments variously focus on the burden on accreditation bodies, certification bodies, and eligible entities. Some comments disapprove of the cumulative burden of all the assessments (e.g., self-assessments and monitoring assessments) required

throughout the rule. Some comments suggest biennial assessments, and note that such a requirement would be consistent with ISO/IEC 17011:2004 (Ref. 5). Still others argue that when the accreditation body or certification body is a government entity we should allow for flexibility around the timing of assessments.

(Response 39) We agree with comments that express the view that annual assessments of certification bodies will help build confidence in the third-party certification program. Annual assessments will help accreditation bodies ensure certification bodies' continued compliance with the program requirements and quickly identify and address any deficiencies with a certification body before a situation escalates.

We also acknowledge the concerns about the efforts needed to comply with the monitoring and self-assessment requirements of the rule. Section 1.621 is part of a set of proposed monitoring and self-assessment requirements intended to work together in helping to ensure that the recognized accreditation bodies and accredited third-party certification bodies maintain compliance with the rule's requirements. The certification body self-assessment in § 1.655 is intended to serve, in part, as information for use in the accreditation body monitoring in § 1.621, the results of which we intend the accreditation body to use in its self-assessment under § 1.622. We do not intend for the assessments to require duplicative efforts, with each section requiring a discrete set of activities with no opportunity to use the results of one set of activities when performing another. As explained in the preamble to the proposed rule, the accreditation body assessments of certification bodies will not only help ensure that the certification bodies continue to comply with our requirements, but also can help the accreditation body identify trends and any deficiencies in its own performance. The proposed monitoring and self-assessment activities are an essential part of the program's safety net.

With respect to § 1.621, in particular, we believe this section will be far less burdensome in practice than some of the comments anticipate, because of the convergence between the ISO/IEC standards and this rule. The activities required by § 1.621 are similar in substance to surveillance activities under ISO/IEC 17011:2004 (Ref. 5), which includes review of audit reports, results of internal quality control, and management review records identified in clause 3.18 NOTE, and thus are likely

to be activities many accreditation bodies already perform. In light of the foregoing, we have concluded that requiring accreditation bodies to perform annual evaluations of each certification body they accredit under the program is not unduly burdensome. We disagree with comments suggesting that monitoring should be more frequent than once a year, because requiring assessments to be performed and reported twice each year, for example, would result in a nearly continuous cycle of assessments and reports. Semiannual assessments are likely to produce limited data sets that would be less helpful for evaluation purposes than would larger data sets, such as compilations of 12 months of data, which allow for tracking and trending performance over time. Requiring assessments to be performed more frequently than once a year also risks creating significant disruption of the operations of accredited third-party certification bodies and eligible entities and might have the unintended effect of serving as a disincentive to participation in the program. For these reasons, we have determined that an annual monitoring requirement is appropriate to verify the overall effectiveness of the accredited third-party certification body's operations and performance in activities relevant to the third-party certification program and the validity of its certification decisions. Accordingly, we are not revising the annual certification body monitoring requirements we proposed in § 1.621.

(Comment 40) We received some comments on proposed § 1.621(b) specifically, which would require an accreditation body to consider any other "reasonably available" information relevant to a determination of whether a certification body is in compliance with this rule. Comments encourage us to set limits around assessments conducted in the wake of an incident, noting that a problem involving one certification/type of product should not involve review of all certifications/products. These comments did not want an incident in one sector (*e.g.*, human food) to unnecessarily jeopardize an accreditation in a separate sector (*e.g.*, animal food). Some comments express concern that proposed § 1.621(b) would require an accreditation body to review every certificate issued by a certification body if one of the eligible entities it certified was placed on FDA import alert.

(Response 40) We decline the suggestions to narrow the scope of proposed § 1.621(b) or to direct how recognized accreditation bodies should consider other "reasonably available"

relevant information, because it will depend on the facts of a particular situation. In the wake of incidents, we expect the accreditation body to take appropriate steps to determine whether the certification body is in compliance with this subpart. Such steps may include a review of certifications for product areas other than the subject of the incident if the accreditation body deems it needed to assess the certification body's compliance. We reiterate, as we explained in the preamble to the proposed rule, we do not expect a recognized accreditation body launch investigations of each certification body it accredited absent cause, but we do expect the accreditation body to actively monitor public information about their certification bodies and not ignore public information about problems that might be associated with a certification body it accredited.

(Comment 41) In response to our preamble questions about whether to require observations and certification body headquarters visits in § 1.621, some comments state that observations are a useful tool and should be required. Similarly, some comments support a requirement for visiting the key location of the certification body. Some comments state that the accreditation body should visit any location of the accredited third-party certification body where the certification body manages its staff or agents conducting audits under this program, which the comments note may not be the certification body's headquarters. Other comments agree that onsite visits can be a useful tool, but encourage the use of remote assessments in certain circumstances (*e.g.*, after the certification body has successfully completed a set number of accreditation cycles).

Some comments suggest that we follow the requirements of relevant ISO/IEC standards in establishing requirements for observations and site visits under § 1.621. Some comments express concern about the cumulative burden of the monitoring and self-assessments we proposed to require of accreditation bodies and certification bodies. A few comments express concern we might impose duplicative requirements for observations under §§ 1.621 and 1.622(b). Some comments request guidance on how an eligible entity would be selected as a site for an observation.

(Response 41) We agree with the comments that state that observations are useful and should be required as part of accredited third-party certification body monitoring. Likewise, we agree with the comments that state

a recognized accreditation body should visit any location of the certification body where the certification body manages its staff or agents conducting audits under this program, if different than the certification body's headquarters, to get a better understanding of how different locations operate. While we acknowledge that some accreditation bodies may be successfully using remote assessments in certain circumstances (e.g., after the certification body has successfully completed a set number of accreditation cycles), we decline the suggestion to allow for remote assessments in this rulemaking.

In establishing requirements in § 1.621 for observations and accredited third-party certification body visits, we considered comments' concerns that such requirements might be duplicative of the observation requirements in § 1.622(b), might pose practical difficulties in arranging to observe audits, and might pose difficulties if a certification body had several "key" locations. We also considered comments' concerns about the cumulative burden of the monitoring and self-assessment requirements of the rule and the comments that urge us to align the requirements of § 1.621 with the relevant international standards.

Accordingly, in the final rule we are combining all of the paragraphs in proposed § 1.621 into new § 1.621(a), and we are adding a new paragraph (b) that requires the accreditation body to perform a representative sample of onsite observations of regulatory audits conducted by each accredited third-party certification body, as explained in Response 28, and visit the certification body's headquarters (or other certification body location if its audit agents are managed by the certification body at a location other than its headquarters). The observed audits and site visits must be performed by no later than 12 months after the certification body's initial accreditation and again every 2 years thereafter for the duration of its accreditation, including renewals. The requirements for the frequency of observed audits and site visits under § 1.621(b) are similar to the intervals for surveillance onsite assessments in one of the options under clause 7.11.3 of ISO/IEC 17011:2004 (Ref. 5). We are also requiring the accreditation body to consider information from activities conducted under paragraph (b) in the annual performance report of the accredited third-party certification body.

We also are making a corresponding revision to § 1.622(b) to clarify that the accreditation body should consider the

results of onsite observations and site visits conducted under § 1.621(b) as part of its self-assessment under § 1.622.

C. How must a recognized accreditation body monitor its own performance? (§ 1.622)

Proposed § 1.622 would require recognized accreditation bodies to conduct self-assessments on an annual basis, and as required under proposed § 1.664(g) (following FDA withdrawal of accreditation of a certification body it accredited). Under the proposed rule, the accreditation body's self-assessment would include evaluating the performance of its officers, employees, or other agents; observing regulatory audits by a statistically significant number of certification bodies it accredited under this program, and creating a written report of results.

(Comment 42) Some comments encourage a broader self-assessment. They contend that, in addition to requiring that accreditation bodies assess the consistency of their performance and their compliance with conflict of interest provisions, we should also require accreditation bodies to compare their performance against competitors, compare the certification bodies they accredit to other certification bodies, and look at industry best practices and benchmarks to set improvement objectives.

(Response 42) The self-assessments are intended to help the accreditation body determine whether it is in compliance with the requirements of this rule. While the report elements suggested by comments might be useful for an accreditation body to consider, we do not believe those elements are necessary to a determination of compliance with the rule. Therefore, we decline to revise the rule in response to these comments.

(Comment 43) Some comments question whether the requirements for accreditation body self-assessment would fit the government-to-government model. Other comments suggest that the different nature of private operators and public administration warrant different requirements for each. The comments further contend that the workload associated with the program would be significant for any government agency; therefore, the time limits and frequencies of reporting should be more flexible in the case of government agencies.

(Response 43) FDA uses self-assessment tools in various government-to-government programs. As one comment notes, we require State governments to conduct annual self-assessments for their work under the

Manufactured Food Regulatory Program Standards (MFRPS) and the Animal Feed Regulatory Program Standards. We also require a foreign government seeking a systems-recognition agreement with FDA to begin the process by completing the International Comparability Assessment Tool, which is a self-assessment tool that we developed based on the approach of the MFRPS self-assessment. Our experience in using self-assessment tools with foreign and State governments suggests to us that self-assessments would be feasible and appropriate in the context of this program as well.

We decline the suggestion to afford more flexibility in deadlines for government agencies serving as recognized accreditation bodies than we afford to other recognized accreditation bodies. Section 808 of the FD&C Act makes no distinction between public and private accreditation bodies, and the proposed rule would place the same workload burden on private accreditation bodies as it would on public accreditation bodies. The comments fail to explain why the differences in nature of public and private accreditation bodies justify flexible deadlines for governmental accreditation bodies but not private accreditation bodies.

(Comment 44) Some comments suggest that accreditation body self-assessments under proposed § 1.622 should be done in concert with its monitoring of certification bodies under proposed § 1.621, because it would be more efficient and would reduce the burden on eligible entities that were observed during regulatory audits. Other comments question the need for accreditation body self-assessments to include requirements for observations, because they read our preamble discussion of proposed § 1.621 as a signal that we would be requiring accreditation bodies to conduct annual onsite observations of each certification body under that provision.

(Response 44) We agree that self-assessments under § 1.622 can be done in concert with monitoring under § 1.621. As described in Response 39, we do not intend the self-assessment and monitoring requirements of the rule to be duplicative. Having added requirements for observations and certification body site visits to certification body monitoring requirements in the final rule, we are revising § 1.622(b) to clarify that accreditation bodies may consider the results of any observations or visits conducted under § 1.621(b) in its self-assessments.

(Comment 45) Comments also suggest that international standards could provide guidance on improving the efficiency and effectiveness of an accreditation body's self-assessment. Some comments specifically suggest that FDA could rely on the internal audits and management reviews that are required under ISO/IEC 17011:2004 (Ref. 5) instead of requiring its own self-assessments.

(Response 45) We agree that documentation of internal audits and management reviews required under ISO/IEC 17011:2004 (Ref. 5) could be useful to help demonstrate compliance with the requirement for self-assessments under this program. We have revised § 1.622(d) and made a conforming change to § 1.623(b) to specifically allow a recognized accreditation body to use reports of internal audits and management reviews prepared for conformance with ISO/IEC 17011:2004 (Ref. 5), supplemented as necessary, to demonstrate compliance with the accreditation body self-assessment requirements of § 1.622.

D. What reports and notifications must a recognized accreditation body submit to FDA? (§ 1.623)

Proposed § 1.623 would require recognized accreditation bodies to submit to FDA reports of its self-assessments and annual re-assessments of certification bodies within 45 days of completing the assessment. The proposed rule also would require notification to FDA of matters affecting recognition and accreditation status; notice of denials of accreditation and any significant change that would affect how the accreditation body complies with this rule would be required within 30 days, while immediate notification would be required for other matters (e.g., grant or withdrawing accreditation). Under the proposed rule the reports and notifications would have to be submitted electronically and in English.

On our own initiative, we are revising § 1.623(c)(1)(i) and (d)(1)(i) to require the recognized accreditation body to provide FDA the email address of any third-party certification body that was granted or denied accreditation (respectively) under our program. Having the email address will facilitate FDA's communications with such third-party certification bodies. We also are revising § 1.623(c)(1)(iv) on our own initiative to specify that a recognized accreditation body must also notify FDA of the expiration date of accreditation upon granting accreditation to a third-party certification body under this subpart.

(Comment 46) Some comments ask whether FDA intends to provide feedback in response to self-assessment reports.

(Response 46) While FDA will not be providing formal responses to the self-assessment reports, we will use the information in the reports in our oversight of the third-party certification program and will address any specific items of concern we identify in an accreditation body-self-assessment report directly with the accreditation body.

(Comment 47) We received several comments related to our proposal to require all reports and notifications to be submitted in English. Some comments agree that both the notifications and the reports should be submitted in English. Some comments agree that notifications should be in English, but suggested that reports of self-assessments and re-assessments of certification bodies could remain in their native language, and if FDA had any questions about such reports the accreditation body could furnish English translations.

Some comments note the difficulty and others the expense for recognized accreditation bodies in countries that do not officially or routinely conduct business in English. Some comments request a longer period of time (e.g., up to 4 months) to submit documents that must be translated into English. Other comments note that if we require documents to be in English, and the translations are not done well, the documents may be difficult to understand.

Some comments propose alternative solutions, including comments that suggest that FDA explore technical translation and recognition software, which in combination with standardized report/notification templates, might facilitate submission in languages other than English. Other comments suggest that if reports and notifications are submitted in languages other than English, the recognized accreditation body should be responsible for all translation costs.

Some comments ask whether supporting documents that accompany reports also would have to be in English. Other comments inquire whether there is any flexibility in the language requirement for governmental accreditation bodies that do not maintain their records in English.

(Response 47) We decline the suggestion to remove the requirement to submit reports and notifications in English. While allowing submissions in multiple languages might be helpful to some interested parties, the

accreditation body reports and notifications required by § 1.623 are essential to our oversight and management of the third-party certification program and the programs that rely on certifications issued by accredited third-party certification bodies, and thus, must be in English in order for FDA to properly review and evaluate. Some comments ask to have up to 4 months to prepare an English translation of a submission under proposed § 1.623. Such delays would be unworkable. For example, we cannot afford delays in translating an accreditation body's notification of withdrawal of accreditation, or an accreditation body's notification that a certification body has issued a food or facility certification without meeting the requirements of this rule. We are requiring immediate notification of these and other matters under § 1.623(c) because of the implications for the program and possibly for our acceptance of certifications issued by the certification body. Unless the notification is submitted in English, our actions will be delayed until the information is translated. Although the annual certification body monitoring reports and the accreditation body self-assessments reports are not required to be submitted until 45 days after completion under § 1.623(a) and (b)(i) (and 60 days following certification body withdrawal for self-assessment reports submitted under § 1.623(b)(ii)), we will use these reports to identify areas where FDA may need to promptly engage with an accreditation body or a certification body to address apparent misunderstandings or confusion about our program requirements. We plan to use these reports to identify emerging issues that need intervention. Therefore any additional time allotted for translation purposes would delay and possibly hinder our ability to use these reports for program evaluation and management.

(Comment 48) Some comments address the proposed timeframes for submitting reports and notifications, and suggest that instead of requiring reports within 45 days of completing the assessment/re-assessment, we should require submission every 6 months or annually.

(Response 48) We disagree with comments suggesting that we modify the timeframe for submission of reports of annual self-assessments and annual certification body monitoring reports from 45 days after completion to every 6 months or every year. We are concerned that the information could be outdated and our ability to use the

reports for early intervention would be significantly diminished.

(Comment 49) Some comments contend that the volume of reports and notifications we proposed to require would be burdensome to FDA to review and maintain. They suggest that instead we require recognized accreditation bodies and their certification bodies to maintain reports of self-assessment/re-assessment, and provide prompt access to FDA upon request.

(Response 49) We disagree. We are establishing an electronic portal for submission of applications, reports, notifications, and other information under this rule and an electronic repository of this information, which will allow us to access and use the information as needed. Therefore, we decline to revise § 1.623 in response to these comments.

(Comment 50) Some comments ask if all reports and notifications submitted to FDA will be subject to the Freedom of Information Act (FOIA) or if these submissions will be considered confidential information with reasonable protections from disclosure. Other comments suggest the importance of striking the appropriate balance between disclosure and confidentiality and note the following statements in ISO/IEC 17021:2011 (Ref. 6), clause 4.1.3 and NOTE: "Principles for inspiring confidence include: Impartiality, competence, responsibility, openness, confidentiality, and responsiveness to complaints. . . . An appropriate balance between the principles of openness and confidentiality, including responsiveness to complaints, is necessary in order to demonstrate integrity and credibility to all users of certification."

(Response 51) We agree with comments suggesting the importance of striking the appropriate balance between providing transparency to the public and maintaining the confidentiality of any trade secrets and confidential commercial information included in the applications, reports, notifications, and other information submitted to FDA. We are guided in this effort by FOIA as well as laws that protect trade secrets and confidential commercial information from disclosure. In response to comments, we are adding new § 1.695 on public disclosure, which is discussed in section XIII.F.

(Comment 51) Some comments urge us to eliminate or reduce the proposed reporting requirements in proposed § 1.623(a) and (b), for various reasons. Some of these comments suggest that we should only require regular submission

of a report or other document that shows the third-party certification bodies are maintaining their accreditation. Other comments recommend that when a certification body is first accredited, it should submit translated accreditation documents within 3 to 4 months of the accreditation body's decision. Then, as long as the accreditation is unchanged, it should not be necessary for the accreditation body to submit its—assessment reports under § 1.623(a).

Some comments suggest it should not be necessary for accreditation bodies to submit their self-assessment reports under § 1.623(b) if there is no significant change in their recognition. Other comments assert that signatories to IAF MLAs should not have to submit self-assessment reports to FDA, because IAF monitors accreditation bodies for continued compliance with ISO/IEC 17011:2004 (Ref. 5).

(Response 51) We disagree. As described in Response 47, the reports of annual certification body monitoring and accreditation body self-assessments are essential to our oversight and management of the third-party certification program and the programs that rely on certifications issued by accredited third-party certification bodies. We are not requiring accredited third-party certification bodies to submit their self-assessments to FDA (except for directly accredited third-party certification bodies); therefore, the reports that we receive of the recognized accreditation bodies' assessments of accredited third-party certification bodies are a fundamental piece of the monitoring system we are establishing, as are the self-assessment reports submitted by accreditation bodies we have recognized. Reducing or eliminating either of these reporting requirements would hinder our ability to properly oversee the program.

(Comment 52) We received some requests for clarification regarding required content of the accreditation self-assessment reports and reports of certification body annual monitoring. Some comments request that FDA either suggest a format for the reports, provide an opportunity for accreditation bodies to propose a format, or at least indicate the minimum required elements.

(Response 52) We believe we provided minimum requirements on the content of these reports in this rule and plan to provide additional information on the format and submission of these reports on our Web site.

(Comment 53) Comments suggest that to be consistent with ISO/IEC 17011:2004 (Ref. 5), a recognized accreditation body only would need to

notify FDA of the approval, suspension, or withdrawal of accreditation of a third-party certification body, as well as any changes in its scope of the accreditation scope or reduction of authorization. The comments assert that the notification should not need to include such details as the address and name of third-party certification body employees under § 1.624(c)(1).

(Response 53) We agree that submission of the information described in the comment and required by clause 8 of ISO/IEC 17011:2004 (Ref. 5) is necessary for our program management and oversight. For example, it will help us verify the identity of any certification body before taking an action to affect its status in the program based on a notification submitted under § 1.623. However, the notifications required under § 1.623(c)(3) and (d) are also necessary for our program management and oversight. Under § 1.623(c)(3), a recognized accreditation body would have to notify FDA if one of its accredited third-party certification bodies issued a food or facility certification without complying with the requirements of this rule. This notification will allow FDA to refuse to accept those improperly issued certifications and to coordinate with the accreditation body in determining appropriate next steps. Having information on a denial of accreditation under § 1.623(d) will allow FDA to monitor accreditation activities across the program, including any repeat denials of a third-party certification body.

With respect to providing the names of the audit agents of the accredited third-party certification body, we note that section 808(b)(1)(B) of the FD&C Act requires a recognized accreditation body to submit to FDA a list of all third-party certification bodies it accredited under the program and the audit agents of such accredited certification bodies. The list of audit agents we proposed to require a recognized accreditation body to submit under § 1.623(c)(1)(iii) is necessary for verification of compliance with the conflict of interest requirements by audit agents under section 808(c)(5)(A)(iii) and (B) of the FD&C Act and by proposed § 1.657, among other things. With respect to the proposed requirement to provide the address and name of one or more of the officers of the accredited third-party certification body, this information will be helpful in communicating with the accredited third-party certification body.

For the foregoing reasons, we decline the suggestion to eliminate the requirements for the recognized

accreditation body to provide FDA the name of one or more officers of the accredited third-party certification body under § 1.623(c)(1)(ii) and a list of audit agents of the accredited third-party certification body under § 1.623(c)(1)(iii).

E. How must a recognized accreditation body protect against conflicts of interest? (§ 1.624)

Proposed § 1.624 would require a recognized accreditation body to take certain steps to safeguard against conflicts of interest, including the requirement to implement a written conflict of interest program. The accreditation body would be prohibited from owning, having a financial interest in, or managing/controlling a certification body. Under the proposed rule, accreditation body employees would be unable to accept money, gifts or other items of value from the certification body, though we did exempt meals of de minimis value onsite where the assessment occurs. We also proposed to require that a recognized accreditation body maintain on its Web site a list of certification bodies it accredited under this program, the duration and scope of accreditation, and the date on which the certification bodies paid their fee or reimbursement associated accreditation. We sought comment on alternative approaches for public disclosure of payments.

On our own initiative, we are adding new provision § 1.624(b) to clarify when a recognized accreditation body can accept the payment of fees for its services so that the payment is not considered a conflict of interest for purposes of § 1.624(a).

(Comment 54) Some comments agree that a recognized accreditation body should be required to have a written program to protect against conflict of interest. Comments suggest that the written plans should include assurances of independence and safeguards to address any possibility of conflicts. Some comments state FDA should require accreditation bodies to make their conflict of interest policies public.

(Response 54) We agree with comments about the importance of a recognized accreditation body having a written program to safeguard against conflicts of interest that meets the requirements of this rule. While a recognized accreditation body may choose to make its conflicts of interest program publicly available, we are not imposing that as a program requirement because we do not believe it is necessary to ensure that accreditation bodies safeguard against conflicts of interest.

(Comment 55) We received several comments related to allowing certification bodies to provide onsite meals of de minimis value to accreditation body representatives conducting an audit. Several comments agree with the general concept of allowing meals of de minimis value. Some supporting comments state that allowing such meals would expedite the assessment, and could be necessary if the certification body is distant from meal service providers. With respect to the question of what constitutes “de minimis” value for these purposes, some comments endorse the idea of defining de minimis value in accordance with U.S. Government employee limits on accepting gifts or gratuities. Others simply encourage us to define it in some way that ensures consistency and clarity. Some comments state that we should not set a fixed amount for the de minimis value, because costs vary in different locations.

Some comments disagree with the proposal to allow meals of de minimis value, and contend that the financial relationship between the accreditation body and the certification body should be strictly limited to the fee paid for the accreditation audit/services.

(Response 55) We agree with the comments that suggest that allowing the certification body to provide meals of a de minimis value during an assessment and at the site where the assessment is being conducted might help facilitate the assessment, particularly for remote sites. We also agree with comments that state we should not set a fixed amount for the de minimis value because costs vary in different locations.

We disagree with comments suggesting that by providing meals of a de minimis value, a certification body might influence the outcome of an accreditation body assessment, particularly if the only allowable meals are ones of minimal value that are provided during the course of an activity and with the purpose of facilitating timeliness and efficiency. FDA follows a similar approach for investigators conducting foreign inspections—that is, FDA investigators performing foreign inspections are allowed to accept lunches (of little cost) provided by the firm during the course of a foreign inspection. We also note that the U.S. government allows its employees to accept meals, within per diem limits, when on official business in a foreign country, as an exception to the prohibition on the acceptance of gifts or gratuities from outside sources (5 CFR 2635.204(i)(1)), though we believe the FDA’s practices for foreign

inspections serve as a better model because foreign inspections are more analogous to foreign assessments than are the range of activities that covered by the general requirements applicable to all U.S. government employees on official business in foreign countries. Accordingly, in light of the comments received and analogous FDA guidelines, we have concluded that it is reasonable and appropriate to limit the meal exception in § 1.624(a)(3)(ii) to only lunches of de minimis value provided during the course of an assessment, on site at the premises where the assessment is being conducted, and only if necessary to facilitate the efficient conduct of the assessment. We believe these revisions help to address concerns regarding the threats to impartiality, while accommodating the practical considerations that apply to foreign assessments.

We offer the following additional input to recognized accreditation bodies seeking guidance on the application of § 1.624(a)(3)(ii). In considering whether a meal is allowable under this provision, we recommend that the assessor first consider whether accepting the lunch is necessary to facilitate the efficient conduct of the assessment. We recommend the assessor consider: (1) Whether the circumstances surrounding the travel would allow the assessor to pack a lunch to bring on site; (2) Whether the meal is being provided during the midday or early afternoon. A lunch provided in the midst of an assessment is different than a lunch or other meal provided at the completion of the audit; (3) Whether the site of the assessment is in close proximity to a retail food establishment, or is at a remote location far from a retail food establishment; (4) What is the estimated value (or cost) of the lunch in light of the costs associated with the area where the assessment is being conducted; and (5) other similar considerations.

For assessors seeking additional guidance on determining what constitutes a “de minimis” amount for purposes of complying with § 1.624(a)(3)(ii), we offer the following guidance that is based on the requirements applicable to U.S. government employees who accept certain meals while on official travel in foreign countries. Such employees must deduct from the per diem the value of that meal, calculated using a two-step process.

First, the individual must determine the per diem applicable to the foreign area where the lunch was provided, as specified in the U.S. Department of State’s Maximum Per Diem Allowances for Foreign Areas, Per Diem Supplement

Section 925 to the Standardized Regulations (GC,FA) available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, and available on the Department of State Web site at https://aoprals.state.gov/Web920/per_diem.asp. (Foreign per diem rates are established monthly by the Department of State's Office of Allowances as maximum U.S. dollar rates for reimbursement of U.S. Government civilians traveling on official business in foreign areas.)

Second, the individual must determine the appropriate allocation for the meal within the daily per diem rate which is broken down into Lodging and M&IE (Meals & Incidental Expenses) that are reported separately in Appendix B of the Federal Travel Regulation and available on the Department of State's Web site at https://aoprals.state.gov/content.asp?content_id=114&menu_id=78.

(Comment 56) Our proposal to require accreditation bodies to maintain a Web site listing of certification bodies, and information about each, drew several comments. Most comments agree with the Web site listing in principle. Some comments encourage us to require additional information in the Web site listing, such as requiring accreditation bodies to include in their Web site listing those certification bodies whose accreditations have been suspended or revoked. Some comments advise that the "scope" information required on the Web site should be specific (*e.g.*, whether the accreditation is for human food, animal food, or for specific rules).

Additionally, many comments address the proposed requirement to include fee information in the Web site listing. Some comments suggest that we require recognized accreditation bodies to specify what is included in the fee payment and what costs are reimbursable. We also received comments arguing that requiring payment schedules to be posted online is not sufficient to ensure that potential conflicts of interest will be identified; they suggested we require accreditation bodies to submit payment schedule information directly to FDA.

Some comments disagree with the proposed requirement to require the Web site posting of payment schedules contending, among other things, that such information is proprietary. Some suggest that, instead, FDA should require accreditation bodies to keep records of payments which would be available to FDA if we have reason to examine them. Others suggest it would be sufficient for the financial payment information to be maintained such that

FDA could review it during the recognition/renewal process. Still other comments seek clarification as to whether we would be requiring, in addition to the date of payment, the dollar value of payment. These comments are not in favor of such a requirement; they state such payment details constitute sensitive information and argue that FDA should instead require the amount of payment to be in the records required under § 1.625.

(Response 56) We agree with comments that state that an accreditation body's Web site posting under § 1.624(c), finalized as § 1.624(d), must include specific information about the scope(s) of accreditation, for example by relevant part of 21 CFR or by a designation, such as "part 123" or "Seafood HACCP" (Hazard Analysis Critical Control Point). We also are revising final § 1.624(d) to state that an accreditation body's Web site must identify a certification body whose accreditation was suspended, withdrawn, or reduced in scope, because we believe that this information would be important to eligible entities seeking information on accredited certification bodies. The suspension or withdrawal information must be maintained on the Web site for 4 years (the maximum duration of an accreditation under the rule) or until the suspension is lifted or the certification body is reaccredited by that accreditation body, whichever occurs first.

In the interest of transparency, we are maintaining the requirement for accreditation bodies to post information on the timing of fee payments and direct reimbursements by certification bodies. This posting requirement is similar to the posting requirements that apply to certification bodies under § 1.657(d) and will help build confidence in the impartiality of accreditation body accreditation decisions. We are not requiring posting of the amount of fees or reimbursement paid, because we do not think it is necessary to help build confidence in the impartiality of accreditation body accreditation decisions. We agree with the suggestion to specifically require fee payment records to be maintained and are revising § 1.625 accordingly.

(Comment 57) Some comments contend that § 1.624 is seriously flawed because it is inconsistent with "the latest science on the issue" and a 2009 Institute of Medicine (IOM) Report, "Conflicts of Interest in Medical Research, Education, and Practice." They encourage FDA to evaluate the most recent scientific research on conflicts of interest and consult with

leading academicians involved in such work. They contend that the fact of payment by the certification body to the accreditation body creates a conflict of interest that cannot be avoided so we should aim our regulation to minimize it. They recommend that we prohibit any financial relationship between the accreditation body and a certification body it audits for at least 1 year before accreditation was sought and 1 year after the last accreditation expires or was denied.

(Response 57) While we agree with the comments' suggestion to remain vigilant in ensuring that our conflict of interest protections represent current best practices, we disagree with the assertion that § 1.624 is seriously flawed and have concluded that the suggested revision would be infeasible and impractical. Third-party certification bodies currently accredited for food safety auditing by accreditation bodies that become recognized by FDA would have to apply to another recognized accreditation body to join our program if the comments' suggestion were adopted. This would create a disincentive to participation by experienced third-party certification bodies and would pose difficulties when the availability of recognized accreditation bodies is limited.

In response to comments citing the 2009 IOM report on financial conflicts of interest between medical researchers and medical products companies, we note that it identified some conflict of interest issues that also are relevant to our third-party certification program, such as the need to disclose payments from industry and to place limits on meals and gifts. However, the differences between the context of medical research and practice and the context of our third-party certification program pose difficulties in identifying practical implications of the analysis for our purposes—*i.e.*, the analysis of data suggesting that the acceptance of meals and gifts and other relationships may influence physicians to prescribe a company's medicines. Nor are the IOM recommendations readily adaptable to conflicts of interest in the third-party certification program. The "best practices" we employ must be suitable for the third-party certification program and may differ from the state of the art best practices for conflict of interests in medical research. For example, the recommendations to place limits on the use of drug samples for patients who lack financial access to medications and to prohibit the claiming of authorship for ghost-written publications are not applicable to this program. For the foregoing reasons, we decline the

suggestion to prohibit any financial relationship, such as the payment of fees, between a recognized accreditation body and a certification body for at least 1 year before seeking accreditation and 1 year after the last accreditation expires or is denied.

(Comment 58) Some comments reject the notion that there could be effective protections against conflict of interest. Such comments consider third-party food safety audits to possess inherent shortcomings and believe that FDA itself should conduct any food safety inspections required by FSMA.

(Response 58) We disagree with the notion that it is not possible to effectively protect against conflicts of interest. Currently, accreditation bodies and certification bodies operate under a number of private schemes successfully, with reasonably effective protections against conflicts of interest. We note that the primary regulatory functions of the third-party certification program are to facilitate participation in VQIP and to provide certifications for the purposes of section 801(q) of the FD&C Act. At this time, we do not intend for private third-parties to conduct food safety inspections required by FSMA.

F. What records requirements must an accreditation body that has been recognized meet? (§ 1.625)

Proposed § 1.625 identifies specific types of documents a recognized accreditation body would be required to establish, control, and maintain to document compliance with applicable requirements (including applications for accreditation and for renewal; regulatory audit reports and supporting information from its accredited auditors/certification bodies; reports and notifications required under proposed § 1.623, along with any supporting information). The recognized accreditation body would be required to provide FDA access to such records. The rule also proposed to require records to be maintained electronically and in English for 5 years.

In the proposed rule we acknowledged that the contracts between accreditation bodies and certification bodies frequently include confidentiality provisions that might otherwise prevent disclosure of certain records to FDA without prior approval of the certification body. We noted that any such contract provisions would need to be changed to allow the accreditation body to furnish FDA with the records identified in this section.

On our own initiative, we are including fee payment records as another type of record that an accreditation body that has been

recognized must maintain under § 1.625(a)(8).

(Comment 59) Several comments disagree with the proposed requirement for records to be maintained in English. Some comments, while noting their support for submission of reports and notifications in English under proposed § 1.623, disagree with our proposal to require that records maintained by the accreditation body be kept in English as well. Some comments, noting the cost of translating all records, request that we allow records to be maintained in the language of the country. They propose we could require the accreditation body to provide the records in English upon our request within a reasonable time; some suggest a reasonable time might be a week, depending on the volume of records requested. Other comments argue that the food industry is global and in recognition of that fact FDA should accept records in other languages. Some comments suggest that we allow three or four additional widely-used languages.

(Response 59) We agree with the recommendation to allow records held by the accreditation body to be maintained in a language other than English, coupled with a requirement that, upon FDA request, the accreditation body must provide an English translation of the records within a reasonable time.

The records required by § 1.625 are necessary to document the accreditation body's accreditation activities, and we expect to request access to the accreditation body's records as necessary to verify the accreditation body's continuing compliance with the requirements of this rule, such as when we are considering whether to renew its recognition. The accreditation body records also will be useful in helping to verify the compliance of certification bodies it accredited under the program. However, the records required by § 1.625 are generally distinguishable from the reports and notifications that must be directly submitted to us under § 1.623, which we are requiring to be submitted to FDA in English because the reports and notifications submitted directly to us are time sensitive in nature and essential to our management and oversight of the third-party certification program. For example, under § 1.623(c) we are requiring immediate notification, in English, of an accreditation body's withdrawal of accreditation from a certification body. We cannot afford delays in translating this information, because of its implications for the program and possibly for our acceptance of certifications issued by the certification

body. Unless the notification is submitted in English, our actions will be delayed until the information is translated.

By contrast, the records required under § 1.625 typically contain information that is less time sensitive; therefore, reasonable delays for translation purposes will not compromise our ability to manage or oversee the program. Accordingly, we are revising § 1.625 to allow other accreditation body records to be maintained and submitted to FDA in languages other than English, provided that an English language translation of such records is provided within a reasonable time thereafter. The circumstances surrounding each request will differ; therefore, we decline to set a specific (numerical) deadline for submission of the translation.

(Comment 60) We received several comments expressing confidentiality concerns. Some comments note that documents that are part of an audit process may contain critical business information that warrants some level of proprietary protection.

(Response 60) We acknowledge comments' concerns and note that we are including § 1.695 on public disclosure in section XIII.F. The new section explains that records obtained by FDA under this subpart are subject to the disclosure requirements under 21 CFR part 20.

(Comment 61) With regard to the proposed requirement that records must be maintained electronically, some comments discourage us from requiring compliance with 21 CFR part 11, which are regulations setting certain electronic records criteria. Comments contend that imposing part 11 requirements would be disproportionate to the need under this rule without an appreciable improvement in food safety and would create a tremendous and costly burden. They encourage FDA to explicitly exclude records under this rule from part 11. Comments propose that instead of imposing part 11 requirements, we require documentation of the chain of custody by requiring records to be signed and dated when created or modified.

(Response 61) We acknowledge comments' concerns and note that we are establishing § 1.694 on electronic records in section XIII.E. This new section will generally exempt records that are established or maintained to satisfy the requirements of this subpart from the requirements of part 11.

(Comment 61) Some comments express concern that our proposed record keeping requirement was too broad; and others express concern about

how we might use our authority to request records. Some comments request clarification of our proposed requirement that accreditation bodies' records include any supporting information for the reports and notifications required under § 1.623. Other comments suggest that our records requests should be narrower when the recognized accreditation body is a foreign government than a records request to a recognized, nonprofit accreditation body. Still other comments encourage us to clarify the circumstances under which FDA staff could request records and to include a method for an accreditation body to object to an FDA records request.

(Response 62) The records we are requiring an accreditation body to maintain under § 1.625 are necessary to document the accreditation body's accreditation activities and its compliance with the requirements of this rule. We expect to request access to the accreditation body's records in verifying an accreditation body's continuing compliance with the requirements of this rule. While the details of each records request will vary depending on its circumstances, we will tailor our records requests under § 1.625 as narrowly as possible to reach program-related records and exclude records that are irrelevant or insignificant to this program. For example, the information an accreditation body reports under § 1.623 may prompt us to request the underlying record to supplement the report as needed. Or, when an accreditation body is requesting renewal of its recognition, we may request records to supplement information provided in the application.

Therefore, we believe it is unnecessary to develop administrative procedures for accreditation body challenges to FDA records requests. We recommend accreditation bodies to fully consider the program requirements before deciding to pursue recognition under the voluntary third-party certification program.

(Comment 63) We proposed that if FDA requests records electronically, the recognized accreditation body provide the requested records within 10 days. Some comments contend that 10 days is insufficient time, and instead request a period of 3 months.

(Response 63) We believe that 10 days is ample time for accreditation bodies to electronically submit any requested records they are already required to maintain under this subpart. We note that we are revising the final rule to allow accreditation bodies to maintain and submit records in languages other

than English, provided that they electronically submit an English translation within a reasonable time thereafter. By allowing records to be submitted in a language other than English, accreditation bodies should be able to provide requested records electronically within 10 days.

VII. Comments on Procedures for Recognition of Accreditation Bodies Under This Subpart

A. How do I apply to FDA for recognition or renewal of recognition? (§ 1.630)

We proposed to establish procedures for accreditation bodies to follow when applying to FDA for recognition or for renewal of recognition. We proposed that the accreditation body must submit a signed application, accompanied by any supporting documents, electronically and in English, demonstrating that it meets the eligibility requirements in proposed § 1.610. We also proposed to require an applicant to provide any translation or interpretation services we need to process the application.

(Comment 64) Some comments assert that the proposed rule does not differentiate adequately between foreign governments and private entities that are serving as accreditation bodies and suggest that we provide a separate path for recognition of foreign government accreditation bodies that prioritizes their applications over those submitted by private accreditation bodies. The comments recommend that we draft additional rules to specifically cover recognition of foreign government accreditation bodies and/or direct accreditation of foreign government certification bodies.

(Response 64) We disagree with the recommendation to create a bifurcated system for recognition, because the line between governmental and private accreditation bodies is not always clear. Private accreditation bodies comprise approximately one third of the 72 accreditation bodies that accredit food safety certification bodies around the world, according to a report prepared by the Research Triangle Institute (RTI) (Ref. 16). In the report, RTI found that the distribution of accreditation bodies by private versus government agency is as follows: 24 private accreditation bodies, 38 governmental accreditation bodies, and 10 accreditation bodies with unknown private or government agency status. RTI found that the vast majority of the private accreditation bodies were non-profit entities. Many of the private accreditation bodies identified by RTI operate under government sanction or

in quasi-governmental roles. For example, the American National Standards Institute (ANSI) is a private, non-profit accreditation body that serves as the official U.S. representative to ISO (Ref. 17); the United Kingdom Accreditation Services is appointed as the national accreditation body for the United Kingdom, though it is independent of the government (Ref. 18); and the Danish Accreditation and Metrology Fund is a self-described "business fund" that is appointed by the Danish Safety Technology Authority as the national accreditation body for Denmark (Ref. 19). Additionally, we note that section 808 of the FD&C Act makes no distinction in the requirements or process for recognizing public or private accreditation bodies. Furthermore, we do not believe it practical to engage in additional rulemaking for foreign government accreditation bodies and certification applications, as the comments suggest.

(Comment 65) Some comments ask us to accept applications in other languages common to the major production areas exporting product to the United States. These comments assert that due to the global nature of produce supply chains allowing applications in other languages would encourage supply chain participation in third-party auditing programs as a tool to improve food safety. These comments suggest that we could develop a phased process where we only accept English applications initially, but increase flexibility to accept applications/renewal documents in other languages as the program builds up.

(Response 65) We acknowledge that accepting applications for recognition in languages other than English might be beneficial to some interested parties. However, requiring applications for recognition to be submitted in English will help us make well-informed and timely decisions. Further, FDA does not have the resources to translate or review documentation in other languages and generally requires documents submitted in other languages to be translated to English. Therefore, we decline the suggestion to develop long-term plans for accepting applications for recognition in languages other than English.

(Comment 66) Some comments ask what costs are associated with getting recognized as an accreditation body.

(Response 66) Pursuant to section 808(c)(8) of the FD&C Act, we issued proposed regulations to establish a reimbursement (user fee) program to assess fees and require reimbursement for the work performed to establish and administer the third-party certification

program. The proposed rule provides details on how user fees would be computed (80 FR 43987, July 24, 2015).

B. How will FDA review my application for recognition or for renewal of recognition and what happens once FDA decides on my application? (§ 1.631)

We proposed to establish procedures for reviewing and deciding on applications for recognition and for renewal of recognition. We proposed to order the application queue on a first in, first out basis and to only place complete applications in the queue.

On our own initiative, we are revising paragraph (a) to clarify that FDA will review submitted applications for completeness and will notify applicants of any identified deficiencies. We also are revising paragraph (b) to clarify that FDA's evaluation of any completed recognition or renewal application may include an onsite assessment of the accreditation body. In addition, we are redesignating proposed paragraph (e) as part of paragraph (b) for clarity.

On our own initiative we are adding new paragraphs (e) through (h) to § 1.631 to explain what happens when an accreditation body's renewal application is denied. We are adding provisions to clarify what the applicant must do, the manner in which FDA will notify accredited third-party certification bodies and the public of the denial, the effect of denial of an application for renewal of recognition on accredited third-party certification bodies, and the effect of denial of an application for renewal of recognition on food or facility certifications issued to eligible entities.

(Comment 67) Some comments ask us to clarify how we will recognize an accreditation body. Some comments ask that we clearly and comprehensively lay out the conditions and requirements governing the application for recognition, to ensure transparency, certainty, and predictability of the procedures and criteria governing recognition. Some comments specifically recommend that we use the IAF/ILAC/International Laboratory Accreditation Cooperation (ILAC) (A-series) documents as the foundation upon which to base our process for recognition of accreditation bodies.

(Response 67) This rule establishes the framework for the third-party certification program and generally describes procedures involved in the submission and processing of applications for recognition and will be supplemented by additional instructions. For example, we are developing an electronic portal that

accreditation bodies will use in submitting their applications for recognition, and we will be issuing directions for using the portal. We also are developing internal operational procedures for recognition of accreditation bodies and will consult the IAF/ILAC (A-series) documents in considering the types of materials that may be useful to accreditation bodies and other stakeholders interested in learning more about our program.

(Comment 68) Some comments express concern that we are limiting ourselves to a "first in, first out" review process that gives us no discretion to recognize foreign governments before we consider other applications from private accreditation bodies that apply. These comments recommend that we use guidance to industry or internal management documents, rather than this rule, to describe how we will establish the queue of applications for review.

(Response 68) For the reasons described in Response 64, we decline the suggestion to prioritize applications submitted by government accreditation bodies over applications submitted by private accreditation bodies. However, we are modifying the first in, first out approach to application review in proposed § 1.631(a) to allow FDA to prioritize an application for review based on program needs. We will consider the suggestion to use an internal management document to establish our procedures for reviewing applications for recognition as part of our operational planning.

(Comment 69) We received several comments on the timeliness of application review and decisionmaking. Some comments assert that our application review process must be comprehensive but also expedient. Some comments ask that our communications with applicants be timely. Other comments ask us to establish review timeframes by which accreditation bodies and other interested parties may expect a response to applications, asserting this will foster enhanced confidence and transparency with the review process. Some comments suggest that we review and act upon an accurately completed recognition application within 90 days and a completed recognition renewal application within 45 days.

(Response 69) We agree with the comments suggesting that our application review must be comprehensive and as expedient as possible. We decline the suggestion to establish review timelines in this rule because we lack the experience and data that would allow us to reasonably

estimate review timeframes. We also recognize that each review will differ depending on the circumstances, and we expect to become more efficient in application review as we gain experience in the program.

(Comment 70) Some comments express concern about the length of time it will take us to recognize and notify an applicant of any deficiencies in the application. These comments also assert that requiring applicants with deficiencies to resubmit their applications and sending them to the bottom of the review list would make for significant delays in the recognition and renewal processes.

(Response 70) FDA agrees that an application for recognition should be checked for completeness promptly after submission. The Agency intends to notify the submitter in a timely manner if the submission is not complete. FDA anticipates that this completeness determination could generally be made within 15 business days, because this is not a decision on the merits of the application. However, given the competing demands on Agency resources, including staff available to conduct review, the Agency declines to add a time restriction in the final rule for notifying an applicant of deficiencies that cause its application to be considered incomplete and thus not ready for processing.

(Comment 71) Some comments assert that we should include a mechanism for stakeholders to provide feedback to the Agency concerning the capacity and functioning of accreditation bodies and auditors/certification bodies because stakeholders have firsthand experience with such entities. These comments suggest that we modify § 1.631(b) to specify that FDA will also "solicit and consider information provided by stakeholders, including importers and foreign suppliers subject to the accreditation body's jurisdiction, to assist in the recognition or renewal application review process."

(Response 71) To the extent the comments suggest that the Agency's review and decisionmaking process on recognition applications should include a solicitation of comments from the public we disagree, as this would create unnecessary delay in the recognition process. FDA believes that the information it gains through the application process will be sufficient to make a recognition determination, and that this process and subsequent monitoring by FDA ensures robust oversight of the program. Nevertheless, stakeholders are always free to share with FDA any information relevant to the Agency's food safety programs. We

note that information shared with FDA is subject to the information disclosure regulations in part 20, as stated in § 1.695.

(Comment 72) Some comments note that there are no circumstances or conditions in the proposed rule that allow for an accreditation body to question or object to an FDA action or request if they believe it is not reasonable or relevant to the recognition and performance of the accreditation body.

(Response 72) We do not expect to make requests or actions of an accreditation body that are not relevant to the requirements of the third-party certification program. FDA's evaluation of accreditation bodies, as expressed in §§ 1.631(b), 1.633(a), and 1.634(a), is premised on the accreditation body's compliance with the applicable requirements of this rule.

We note that in this rulemaking, FDA has established a number of mechanisms to address challenges to FDA's decisions, including § 1.691 (for requests for reconsideration of the denial of an application for recognition, renewal, or reinstatement of recognition); § 1.692 (for internal Agency review of the denial of an accreditation body application upon reconsideration); and § 1.693 (for regulatory hearings on revocation of recognition).

We recommend accreditation bodies to fully consider the program requirements before deciding to pursue recognition under the voluntary third-party certification program.

(Comment 73) Some comments ask that we provide training and education documents regarding the application process as quickly as possible to ensure that accreditation bodies are clear on the process and its requirements. These comments assert that training and education would minimize the need for second reviews due to inaccurate or incomplete applications.

(Response 73) As indicated in Response 67, we are developing additional instructions for applications for recognition that will be useful to accreditation bodies interested in pursuing recognition.

C. What is the duration of recognition? (§ 1.632)

We proposed to grant recognition to an accreditation body for up to 5 years, though we will determine the length of recognition on a case-by-case basis.

(Comment 74) Some comments support our proposal to recognize accreditation bodies for a duration of up to 5 years, with shorter durations awarded early in the program for

accreditation bodies with little experience in accrediting third-party certification bodies.

(Response 74) We agree with comments suggesting that the duration of recognition may vary depending on a number of factors, including the accreditation body's history (or lack of history) in accrediting certification bodies. We believe the proposal allows FDA to consider such factors.

(Comment 75) Some comments express concern that we are not proposing a fixed duration of recognition and ask us to establish a specific time limit of 5 years. These comments assert that having a standardized duration of recognition for all accreditation bodies is administratively more viable for FDA to plan its resource needs and would provide consistency across the industry. Additionally, these comments assert that 5 years is a reasonable duration given the other reporting and monitoring requirements built into the system.

(Response 75) We acknowledge the advantages that certainty provides and, where appropriate, the Agency will grant recognition for the maximum duration of 5 years. However, as noted in our previous response, we also recognize it may be appropriate for the duration of recognition to vary depending on a number of factors. Where, for example, an accreditation body has little or no experience in accrediting food safety certification bodies, we may decide the initial grant of recognition should be less than 5 years.

(Comment 76) Some comments suggest that the duration of recognition for an accreditation body should be 4 years to be consistent with the duration proposed for accreditation of certification bodies in § 1.661. Other comments request clarification about the difference in durations proposed for recognition of accreditation bodies and accreditation of certification bodies.

(Response 76) We decline the suggestion to shorten the maximum duration of accreditation body recognition to 4 years and note that the comments suggesting it should be the same maximum duration as third-party certification body accreditation offered no information that would provide an adequate basis for shortening recognition such that an accreditation body could be recognized for no longer than a certification body's accreditation. Further, as stated in the proposed rule, we noted that other government programs such as the Substance Abuse and Mental Health Services Administration program for accredited

programs that use opioid agonist treatment medications approves accreditation bodies for up to 5 years (42 CFR 8.3). Under the FDA mammography program, we may approve accreditation bodies for terms up to 7 years (21 CFR 900.3(g)). As stated previously, FDA may establish a period of recognition of less than 5 years if appropriate for a particular applicant.

(Comment 77) Some comments assert that accreditation bodies that maintain their IAF signatory status should not be limited to a 5-year duration.

(Response 77) We decline the suggestion, noting that the comment lacks information demonstrating that a longer term of recognition is warranted for an accreditation body that is an IAF signatory.

D. How will FDA monitor recognized accreditation bodies? (§ 1.633)

We proposed to establish the frequency and manner for formal evaluations of recognized accreditation bodies. Specifically, we proposed to evaluate each recognized accreditation body by at least 4 years after the date of recognition of an accreditation body granted a 5-year term of recognition and by no later than the mid-term point for an accreditation body granted a term of recognition of less than 5 years. Proposed § 1.633 also notes that FDA may conduct additional assessments of recognized accreditation bodies at any time.

(Comment 78) While the comments generally support FDA performance assessments of recognized accreditation bodies, the comments express a wide range of views on how frequently such assessments should occur. Some comments support the proposed reevaluation frequency for recognized accreditation bodies. Some comments assert that we need to have a more suitable monitoring mechanism. Other comments suggest we incorporate a random, unannounced performance review for recognized accreditation bodies as a supplement to the proposed frequency. Some comments take a contrary view, asking us to clarify in the final rule the circumstances under which we may perform additional performance assessments of recognized accreditation bodies. These comments assert that FDA's ability to conduct additional audits, assessments, and investigations without the requirement to justify such actions creates the potential for a confrontational relationship and lack of trust. The comments question whether, without such clarification, any refusal by an accreditation body to grant FDA access or information would trigger revocation

of their recognition. Still other comments request clarification on the frequency of audits that will be conducted on accreditation bodies.

(Response 78) Monitoring assessments of accreditation bodies are one of several tools we will use for program oversight. Section 1.633(a) implements section 808(f) of the FD&C Act, which states that FDA must reevaluate a recognized accreditation body periodically, or at least once every 4 years, and take any other measures FDA deems necessary to ensure compliance. We anticipate that information gleaned from other monitoring tools, such as an accreditation body's self-assessment, may prompt additional performance assessments in certain instances. Although we decline to specifically codify random, unannounced performance reviews as a supplement to the proposed frequency as suggested by the comment, we note that under § 1.633(a) FDA may conduct additional assessments of recognized accreditation bodies, including unannounced assessments, at any time as it deems appropriate. We need to retain flexibility to conduct additional audits, assessments and investigations to support the credibility of the program.

With respect to the request to clarify whether any refusal to grant FDA access or information for a performance assessment would trigger revocation, under section § 1.634(a), refusal to allow FDA to conduct an assessment to ensure the accreditation body's continued compliance with the requirements of this subpart is grounds for revocation.

(Comment 79) Some comments assert that we should provide additional detail on our monitoring procedures under § 1.633(b). Some comments express concern about the ambiguity of the term "statistically significant" as well as the scope of onsite assessments and onsite audits for performance evaluation purposes. These comments assert that we must provide clear guidance to industry as to what we expect would be involved in such onsite assessments and make this guidance available for public comment. Other comments specifically request that we outline the procedures under which we will conduct audits on accreditation bodies and third-party certification bodies and specify a timeframe for when we will issue the results of the audits. Still other comments assert that we must provide guidance on how an eligible entity might be selected for an audit/inspection that relates to an accreditation body's reassessment of a certification body.

(Response 79) The objective of an assessment under § 1.633 will be to

determine an accreditation body's compliance with the requirements of this rule. When planning an assessment, we will establish the time period of activities covered by the assessment and may request records of an accreditation body under § 1.625. We also will develop plans for any locations to be visited, which may include the accreditation body's headquarters and any other locations where employees and other agents who conduct activities under this program are managed.

In conducting the assessment, we may review records, such as records relating to conflicts of interest and may interview officers, employees, and other agents of the accreditation body. We also may observe regulatory audits by certification bodies the accreditation body has accredited. For the reasons explained in Response 28, we have removed the phrase, "statistically significant" and revised the sentence to explain that we may observe a "representative sample" of certification body regulatory audits when conducting an assessment of its accreditation body. We will decide what constitutes a "representative sample" for purposes of § 1.633 on a case-by-case basis, based on factors such as how many certification bodies the accreditation body has accredited under the program, the scope of accreditation of the certification bodies accredited by the accreditation body, how many years the accreditation body has been in the program, how many prior assessments of the accreditation body we have performed, and the length of time since any prior assessments.

(Comment 80) Some comments ask that we inform recognized accreditation bodies prior to doing onsite assessments of accredited certification bodies and eligible entities as part of our performance evaluations.

(Response 80) In planning an assessment with onsite observations of certification bodies or an audit of certified eligible entities, we will consider whether to provide notice to the accreditation body and/or invite the accreditation body to be present. In some circumstances we may determine that it would be necessary or appropriate to conduct the assessment or audit without notice to the accreditation body.

(Comment 81) Some comments assert that to carry out performance evaluations for the purpose of monitoring recognized accreditation bodies, we must have an agreement directly with the certification bodies or request that recognized accreditation bodies include these requirements in

their agreements with certification bodies they have accredited.

(Response 81) We disagree that we must have an agreement directly in place with each accredited certification body for us to carry out performance evaluations, as § 1.633(b) states that FDA may include onsite assessments of a representative sample of third-party certification bodies the recognized accreditation body accredited and onsite audits of a representative sample of eligible entities certified by such third-party certification bodies under this subpart. We recommend that third-party certification bodies fully consider the program requirements before deciding to pursue accreditation under this voluntary third-party certification program. We also encourage recognized accreditation bodies to include language in their standard contracts with third-party certification bodies they accredit under this program that acknowledges FDA's ability to conduct such evaluations.

(Comment 82) Some comments ask who will cover the costs of audits on recognized accreditation bodies.

(Response 82) As discussed in Response 66, we are proposing in a separate rulemaking (80 FR 43987) the costs of FDA monitoring of recognized accreditation bodies will be covered by user fees that we will establish by regulation.

E. When will FDA revoke recognition? (§ 1.634)

Proposed § 1.634 establishes the criteria and procedures for revocation of recognition of an accreditation body, including requests for records and notifications. It describes several circumstances that warrant revocation of recognition and describes the effects (if any) of revocation on accreditations and certifications occurring prior to the revocation.

On our own initiative, we are revising § 1.634(c)(2) to require the accreditation body to notify FDA of the name and contact information of the custodian who will maintain the records required by § 1.625 instead of just providing us with a location to increase flexibility. We are making corresponding changes to §§ 1.635(a), 1.664(e)(2), and 1.665(a). We also are revising paragraphs (d) through (f) to clarify the manner of FDA's notice to affected third-party certification bodies and the public of the revocation, as well as the effect of such revocation on the accredited third-party certification bodies and certifications they issued prior to issuance of the revocation of recognition.

(Comment 83) Some comments recommend that when an accreditation

body's recognition is revoked, the information on the Web site includes the cause or causes of the revocation.

(Response 83) We agree and will include on the FDA Web site a brief description of the grounds whenever revoking the recognition of an accreditation body.

(Comment 84) Some comments agree that providing the certification body 1 year to transition and become accredited with another accreditation body is a reasonable concept, but express concerns that in many countries a limited number of accreditation bodies may make meeting that timeframe difficult. They also note that although audited entities' certifications may remain in effect until its expiration, it may be difficult for them to maintain their certifications beyond that date due to lack of accreditation bodies, or there may be instances in which their certification is set to expire in weeks or months following the revocation. These comments note a similar concern about the impact of a lack of capacity on scheduling certification audits should the certification body have to be reaccredited within 1 year. Comments recommend that FDA address this issue by performing an assessment of accreditation capacity in key production regions around the world and using that information as a baseline to inform timeframes on re-accreditation of third-party certification bodies. Other comments suggest that either FDA be required to renew the recognition of the recently revoked accreditation body or recognize a new accreditation body in time for any affected accredited certification body to comply, or FDA would be required to solicit applications for a new accreditation body after an accreditation body's recognition is revoked. Comments also recommend that certifications issued by a certification body accredited by the accreditation body whose recognition was revoked remain in effect for 1 year from the date of the revocation of the accreditation body in order to reduce the likelihood of a lapse in certification of eligible facilities.

(Response 84) We acknowledge that revocation of the recognition of an accreditation body may present difficulties for the certification bodies accredited by the accreditation body (and for the eligible entities those certification bodies certified), particularly in countries that have a single national accrediting authority. In such circumstances, we intend to work with recognized accreditation bodies and the certification bodies to identify opportunities and challenges. We believe 1 year is sufficient time for a

certification body to be reaccredited in such circumstances. The requirement for an eligible entity to become recertified after a certificate terminates by expiration is based on section 808(d) of the FD&C Act, which requires an eligible entity to apply for annual recertification. In light of the foregoing, we are declining the requests to extend the deadlines for reaccreditation and for recertification in the case of revocation of recognition of an accreditation body.

(Comment 85) Some comments request FDA provide specific provisions to address potential questions that may arise if recognition of an accreditation body is revoked, with particular emphasis on the validity of certificates or other documentation already issued when revocation occurs.

(Response 85) Section 1.634(d) specifically describes the impact of revocation of recognition of an accreditation body on the certification bodies that it accredited under this program, including that a certification body's accreditation will remain in effect if it provides a self-assessment to FDA within 60 days of issuance of the revocation and it is accredited by another recognized accreditation body or FDA no later than 1 year after the revocation or the original date of expiration of the accreditation, whichever comes first. Section 1.634(e) explains that in the case of revocation of an accreditation body's recognition, a food or facility certification issued by a certification body accredited by the accreditation body prior to the revocation of its recognition will remain in effect until the certification terminates by expiration.

(Comment 86) Some comments request that FDA clarify how individual holders of certifications would be made aware of the revocation of recognition. For example, they ask if FDA would contact certification holders directly or if the certification holder would be required to monitor the recognition status of the accreditation and certification bodies.

(Response 86) We will provide notice on the FDA Web site when we revoke the recognition of an accreditation body. We also will notify certification bodies that have been accredited by the accreditation body that has had its recognition revoked through the electronic portal we are establishing. Because revocation of recognition will not affect the duration of previously issued certificates, we will not directly contact eligible entities to inform them of the revocation. If the revocation of recognition results in the withdrawal of accreditation of a certification body, FDA will provide notice of such

withdrawal on our Web site as provided in § 1.664(h).

(Comment 87) Some comments recommend that FDA refer to the provisions in ISO/IEC 17011:2004 and ISO/IEC 17021:2011 to inform the provisions revocation of recognition in § 1.634 and withdrawal of accreditation in § 1.664 and to distinguish those actions from reduction in scope of recognition and accreditation and to establish the specific grounds and effects for those actions.

(Response 87) Neither of the ISO/IEC standards cited in the comments relate to revocation of recognition of an accreditation body; however, we reviewed ISO/IEC 17011:2004 (Ref. 5) for terminology, procedures, and grounds that might have relevance for revocation of recognition in § 1.634. We decline the suggestion to consider ISO/IEC 17021:2012 (Ref. 6), which applies to certification bodies, for purposes of this analysis as it is inapplicable.

Having reviewed ISO/IEC 17011:2004, we note that ISO/IEC 17011:2004 (Ref. 5) gives an accreditation body the flexibility to establish its own procedures for suspension, withdrawal, or reduction of the scope of an accreditation as explained in clause 7.13.1 and NOTE. FDA's procedures for revocation of recognition are thus not inconsistent with the ISO standards in this respect. Regarding the grounds for withdrawal of accreditation, ISO/IEC 17011:2004 (Ref. 5), clause 7.13, provides that an accreditation body must make decisions to suspend and/or withdraw accreditation when an accredited conformity assessment body (*i.e.*, third-party certification body) has persistently failed to meet the requirements of accreditation or to abide by the rules for accreditation. The standard for revocation of recognition under this program is established by section 808(b)(1)(C) of the FD&C Act, which requires FDA to "promptly revoke the recognition of any accreditation body found not to be in compliance with the requirements of this section," which is the standard that is used in proposed § 1.634. Therefore, we cannot incorporate this standard for withdrawal for purposes of this program.

(Comment 88) Some comments suggest FDA revise § 1.634(a)(3) and (4) to provide that FDA can make a decision to revoke recognition or withdraw accreditation only when it has objective evidence to demonstrate that the recognized accreditation body committed fraud or submitted material with significant false statements, demonstrated a significant bias or significant lack of objectivity when

conducting activities, or significantly failed to adequately support one or more decisions to grant accreditation.

(Response 88) We disagree. Section 808(b)(1)(C) requires FDA to promptly revoke the recognition of any recognized accreditation body found not to be in compliance with section 808 of the FD&C Act, which establishes the third-party program. This program is a system of assurances that begins with the recognition of qualified accreditation bodies, which in turn accredit certification bodies to make judgments about the compliance of eligible entities and the food they produce with the applicable food safety requirements of the FD&C Act and FDA regulations. FDA's ability to have swift recourse when a recognized accreditation fails to comply with the requirements of the third-party program is essential. Limiting FDA's ability to revoke the recognition of accreditation bodies to instances of "significant" fraud, bias, or lack of competence as the comment suggests would render the program unreliable to provide the assurance of food safety intended by this section.

F. What if I want to voluntarily relinquish recognition or do not want to renew recognition? (§ 1.635)

Proposed § 1.635 describes the procedures that an accreditation body must follow when it intends to relinquish its recognition.

FDA received comments in support of the proposed procedures for voluntary relinquishment of recognition. FDA received no adverse comments on this section. On our own initiative, we are revising the voluntary relinquishment provisions in § 1.635 to also address situations where a recognized accreditation body decides it does not want to renew its recognition once it expires. In addition we are including procedures for the certification bodies to follow after their accreditation bodies' recognitions are relinquished or not renewed.

G. How do I request reinstatement of recognition? (§ 1.636)

Proposed § 1.636 describes the procedures that an accreditation body would have to follow when seeking reinstatement of its recognition.

FDA received comments in support of the proposed procedures for reinstatement of recognition. FDA received no adverse comments on this section and is not making any substantive changes to this section in this final rule.

VIII. Comments on Accreditation of Third-Party Certification Bodies Under This Subpart

A. Who is eligible to seek accreditation? (§ 1.640)

Proposed § 1.640 states that a foreign government, agency of a foreign government, foreign cooperative, or other third-party would be eligible for accreditation from a recognized accreditation body (or, where direct accreditation is appropriate, FDA) to conduct food safety audits and issue food and facility certifications under the program. Proposed § 1.640(b) is based on section 808(c)(1)(A) of the FD&C Act and would require a foreign government/agency seeking accreditation to demonstrate that its food safety programs, systems, and standards would meet the requirements of proposed §§ 1.641 to 1.645, as specified in FDA's model standards on qualifications for accreditation, including legal authority, competency, capacity, conflicts of interest, quality assurance, and records. Proposed § 1.640(c) is based on section 808(c)(1)(B) of the FD&C Act and would require a foreign cooperative or other third-party certification body seeking accreditation to demonstrate that the training and qualifications of its audit agents and the internal systems used by the certification body would meet the requirements of proposed §§ 1.641 to 1.645, as specified in FDA's model standards on qualifications for accreditation, including legal authority, competency, capacity, conflicts of interest, quality assurance, and records.

At our own initiative, we revised § 1.640(c) to apply to accredited third-party certification bodies that are comprised of a single individual, as applicable.

(Comment 89) Some comments suggest that FDA should require third-party certification bodies conducting regulatory audits to be accredited to either: (1) ISO 17021:2011 (Ref. 6), with the complementary requirements of ISO/TS 22003:2007, Food safety management systems—Requirements for bodies providing audit and certification of food safety management systems (Ref. 20) or (2) ISO 17065:2012 (Ref. 7), with conformance to ISO 17021:2011 (Ref. 6) and ISO 22000:2005, Food safety management systems—Requirements for any organization in the food chain (Ref. 21).

Other comments suggest that ISO/IEC 17000:2004 (Ref. 4) and ISO/IEC 17021:2011 (Ref. 6) provide a common framework for managing the effectiveness of third-party certification activities and recommend incorporating

the standards by reference into the final rule. The comments assert that FDA's proposed rule, by failing to incorporate by reference the ISO standards, appears to unnecessarily establish a unique standard in contravention of the NTTAA and OMB Circular A-119 (63 FR 8546) without adequate justification. The comments include recommended revisions to § 1.640. Other comments note that ISO/IEC Guide 65:1996 (Ref. 9) will be phased out by September 2015; therefore, the wording in the final rule should be changed to reflect the successor standard, ISO/IEC 17065:2012 (Ref. 7). Some comments express concern about the additional costs to exporters from third-party audits and private interests over and above official systems.

(Response 89) As explained in section I.D., we have revised the rule to allow a third-party certification body to offer documentation of conformance to ISO/IEC 17021:2011 (Ref. 6) or ISO/IEC 17065:2013 (Ref. 7) in support of its application for accreditation, supplemented as necessary. However, we decline the suggestion to incorporate the standards by reference into this rule.

ISO/IEC ISO 17021:2011 (Ref. 6) and ISO/IEC 17065:2012 (Ref. 7), the successor to ISO Guide 65:1996 (Ref. 9), contain requirements that are inconsistent with section 808 of the FD&C Act and impractical for our program. For example, ISO/IEC 17021:2011 (Ref. 6), clause 5.2.6, prohibits a certification body, including a governmental certification body, from providing internal audits to its certified clients. Under this same clause, a certification body that has provided internal auditing services to a client must wait for 2 years before conducting an audit for certification purposes. Clause 5.2.5 of the standard also prohibits the certification body from offering or providing any management systems consultancy (defined as participation in designing, implementing, or maintaining a management system). We note that ISO/IEC 17065:2012 (Ref. 7), clause 4 contains similar requirements, e.g., in clauses 4.2.6 and 4.2.10 NOTE 1, as the requirements of clauses 5.2.5 and 5.2.6 of ISO/IEC 17011:2004 (Ref. 5).

The requirements of our third-party program are markedly different, because section 808 of the FD&C Act expressly allows an accredited third-party certification body to conduct both regulatory audits for certification purposes and consultative audits for internal purposes. Further, section 808(c)(4)(C) of the FD&C Act allows an accredited certification body to use the same audit agent in auditing the same

eligible entity, subject only to a limitation (that FDA may waive) on using the agent for a regulatory audit when the agent had conducted a consultative audit of the eligible entity in the preceding 13 months.

As another example, we note that ISO/IEC 17021:2011, clauses 6.2.1 to 6.2.3 (Ref. 6), require a certification body to establish an external committee for safeguarding impartiality that includes representation of key interests, such as audited firms. Clause 5.3.2 of the standard requires the certification body to demonstrate to the external committee that commercial, financial, or other pressures do not compromise its impartiality. Under clause 6.2.2(c), the committee has the right to take “independent action” if the top management of the certification body “does not respect the advice of this committee.” ISO/IEC 17065:2012 (Ref. 7), clause 5, contains similar requirements—*e.g.*, clause 5.2.1 NOTE 1 (committee) and 5.2.3 (right to take independent action).

It would be inappropriate and impractical for FDA to require an accredited third-party certification body to assemble a committee representing interests outside those of this program, and would be impractical for FDA to properly manage the program under such circumstances. We also are concerned about the disincentive these requirements of ISO/IEC 17011:2004 (Ref. 5) and ISO/IEC 17065:2012 (Ref. 7) might create, for example, for foreign competent authorities who have their own processes for stakeholder engagement.

Based on our review of the standard and explained in the examples provided above, we have determined that ISO/IEC 17011:2004 (Ref. 5) and ISO/IEC 17065:2012 (Ref. 7) are inconsistent with section 808 of the FD&C Act and impractical for purposes of this program and therefore deny the suggestion to incorporate by reference into this rule.

With respect to the suggestion to incorporate ISO/IEC 17000:2004 (Ref. 4) into this rule, we note that this standard uses terminology that is inconsistent with section 808 of the FD&C Act. We are concerned that incorporating the terms used in ISO/IEC 17000:2004 (Ref. 4) in this rule would create unnecessary confusion as to how the rule relates to the statute. For example, clause 7.5 of the standard uses the term “recognition” for the “acknowledgement of the validity of a conformity assessment result provided by another person or body,” while recognition is used in section 808 of the FD&C Act when describing FDA’s determination that an accreditation

body meets the requirements of this rule.

Based on our review of the standard and explained in the example provided above, we have determined that ISO/IEC 17000:2004 (Ref. 4) is inappropriate for incorporation by reference into this rule.

Although we decline to incorporate the standards mentioned in the comments, we are revising § 1.640 to allow a third-party certification body to offer documentation of its conformance to ISO/IEC 17021:2011 (Ref. 6) or ISO/IEC 17065:2013 (Ref. 7), supplemented as necessary, in support of its application for accreditation under the final rule. We conclude that this will serve to promote international consistency and allow third-party certification bodies to use a framework that is familiar to them when it can be used to meet the requirements of this rule.

(Comment 90) Some comments suggest the rule should impose different requirements on foreign government certification bodies and on other third-party certification bodies (*i.e.*, foreign cooperatives and other third-party certification bodies), because of the different nature of private operators and public administration.

(Response 90) Under section 808(a)(3) of the FD&C Act third-party certification bodies include Foreign government certification bodies, foreign cooperatives, and other third-party certification bodies. Section 808 of the FD&C Act for the most part does not distinguish between public and private certification bodies and states that both are subject to the same model accreditation standards discussed in 808(b)(2). The only difference in treatment of public and private certification bodies is set forth in section 808(c)(1) of the FD&C Act, describing what elements of oversight be assessed for accreditation. This difference is reflected in the eligibility criteria set forth in § 1.640(b) and (c). In all other areas, we decline the suggestion to impose different requirements on foreign government certification bodies and other third-party certification bodies.

(Comment 91) Some comments express skepticism about private auditing companies. Some comments note that foreign cooperatives have rarely if ever been engaged in true accredited third-party auditing/certification activities and are thus unproven in that role.

(Response 91) As stated above, section 808 of the FD&C Act expressly provides for both public and private accredited third-party certification bodies. FDA believes the system of oversight

established under this rulemaking will be sufficient to ensure the reliability of private certification bodies that are able to participate in the program. Foreign cooperatives are specifically listed in section 808 of the FD&C Act as a third party that could be a certification body, and must meet the same rigorous criteria to qualify for accreditation.

B. What legal authority must a third-party certification body have to qualify for accreditation? (§ 1.641)

Proposed § 1.641 would require third-party certification bodies to demonstrate that they have adequate legal authority, which may include authority established by contract or as a government entity to evaluate eligible entities for compliance with the applicable requirements of the FD&C Act and FDA regulations.

FDA received no adverse comments specific to this section. However, as discussed in Response 27, we have revised § 1.641 to specify that a third-party certification body has to be a legal entity.

C. What competency and capacity must a third-party certification body have to qualify for accreditation? (§ 1.642)

Proposed § 1.642 would require a third-party certification body to demonstrate it has adequate resources to fully implement its auditing and certification program and the capacity to implement the requirements of this program, if accredited.

(Comment 92) Some comments suggest that we require certification bodies to be bonded, to cover any Agency costs should the firm go bankrupt.

(Response 92) We decline the suggestion to require certification bodies to be bonded to cover any Agency costs if a certification body goes bankrupt. This requirement is unnecessary because the program is designed to operate using user fees. Additionally, § 1.642 of the final rule requires a third-party certification body to demonstrate that it has adequate resources to fully implement its auditing and certification program.

(Comment 93) Some comments recommend that we clearly define the necessary competencies of certification body staff and auditors. Some comments suggest that we require auditors to have at least 1 year of work experience in testing and assessing the conditions for food safety of certain food manufacturer(s) and to have attended at least 20 audits for management systems using hazards analysis and critical control point requirements.

(Response 93) Section 1.640 of this rule establishes the eligibility requirements for third-party certification bodies seeking to participate in the third-party certification program. Specific recommendations on qualifications such as the years and types of work experience in food safety and in conducting audits will be contained in FDA's Model Accreditation Standards final guidance, as explained in section I.D.

(Comment 94) Some comments emphasize the importance of having certification bodies accredited to the specific areas in which they will be conducting audits and issuing certifications. The comment explains that accredited auditors/certification bodies auditing pet food facilities must be adequately qualified and knowledgeable in pet food requirements. The comments express concern that human food standards might be misapplied to a facility producing raw materials, ingredients or finished food for pet food (e.g., cross-contact for allergens, ingredients destined for further processing).

(Response 94) A recognized accreditation body assessing a certification body for accreditation (or FDA under direct accreditation) must ensure that the certification body is qualified to conduct audits under the food safety requirements of the FD&C Act and FDA regulations that apply to the scope of accreditation sought. Therefore, a third-party certification body that is accredited to conduct audits under part 117 would not be accredited to perform audits under 21 CFR part 507, unless the accrediting body has assessed the certification body's qualifications and accredited it to perform audits under part 507 as well.

D. What protections against conflict of interest must a third-party certification body have to qualify for accreditation? (§ 1.643)

Proposed § 1.643 would require third-party certification bodies to have established programs to safeguard against conflicts of interest that might compromise their objectivity and independence.

On our own initiative, we are clarifying in § 1.643(a) that the conflict of interest provisions of this section apply to officers, employees, and other agents that are involved in auditing and certification activities, as relevant. We are making corresponding changes in the subsequent provisions for accredited third-party certification bodies under § 1.657(a) and (c).

(Comment 95) Some comments recommend that FDA ensure that auditors are competent and accountable and that there are adequate protections against conflicts of interest, with maximum transparency related to auditors' activities. The comments support requirements for documented safeguards against conflicts of interest to help ensure that decisions are accurate and unbiased and that auditors are independent.

(Response 95) We agree and are requiring third-party certification bodies seeking accreditation to demonstrate they have written conflict of interest measures and that they have the capacity to meet the requirements of the final rule, if accredited.

E. What quality assurance procedures must a third-party certification body have to qualify for accreditation? (§ 1.644)

Proposed § 1.644 would require a third-party certification body to have a written program for monitoring and assessing its performance, identifying deficiencies in its program or performance and quickly executing corrective actions.

FDA received no adverse comments specific to this section. However, as discussed in Response 32, we revised § 1.644(a) to clarify that a certification body must demonstrate that it has procedures to identify deficiencies and procedures to execute corrective actions for such deficiencies, which would better align with international standards (see, e.g., clause 5.5 in ISO/IEC 17011:2004 (Ref. 5)).

F. What records procedures must a third-party certification body have to qualify for accreditation? (§ 1.645)

Proposed § 1.645 would require a third-party certification body to have developed and implemented written procedures to establish, control, and retain the records. Such records are necessary to provide the recognized accreditation body (or FDA under direct accreditation) an adequate basis for assessing the certification body for accreditation under this program.

We received no adverse comments specific to § 1.645 and are making no substantive revisions to this section.

IX. Comments on Requirements for Third-Party Certification Bodies That Have Been Accredited Under This Subpart

A. How must an accredited third-party certification body ensure its audit agents are competent and objective? (§ 1.650)

Proposed § 1.650 would require an accredited third-party certification body that uses audit agents to ensure that each audit agent meets certain requirements for competency and objectivity under the final rule. Under paragraph (a), the audit agent would need to have knowledge and experience relevant to determining an eligible entity's compliance with the applicable food safety requirements of the FD&C Act and FDA regulations and, for consultative audits, conformance with industry standards and practices. The accredited certification body would have to determine the audit agent's competency to conduct food safety audits in part by observing a representative number of audits performed by the audit agent. The audit agent would have to complete annual food safety training under the accredited third-party certification body's training plan, comply with the conflict of interest requirements for audit agents, and agree to notify its certification body immediately upon discovering, during a food safety audit, any condition that could cause or contribute to a serious risk to the public health.

Under proposed § 1.650(b), the accredited third-party certification body would have to assign an audit agent qualified to conduct the food safety audit, based on the scope and purpose of the audit and the type of facility, its processes, and food. Proposed § 1.650(c) would prevent an accredited third-party certification body from using an audit agent to conduct a regulatory audit of an eligible entity if the agent had conducted a regulatory or consultative audit of the same eligible entity during the preceding 13 months, except FDA could waive the 13-month limitation for an accredited certification body that could demonstrate insufficient access to accredited third-party certification bodies in the country or region where the eligible entity is located.

Of our own initiative, we are revising § 1.650(a) to apply to accredited third-party certification bodies that are comprised of a single individual, as applicable. Section 808(a)(3) of the FD&C Act specifically allows an accredited third-party certification body to be an individual, which would not fall within the definition of "audit agent" in the statute or this rule.

Therefore, as part of establishing eligibility under § 1.640, an individual seeking accreditation must fulfill the requirements of § 1.650(a)(1) to become accredited under this rule and, once accredited, must comply with the annual food safety training requirements of § 1.650(a)(3). Pursuant to § 1.650(a)(4), an accredited third-party certification body also must comply with the conflict of interest provisions applicable to audit agents under § 1.657(a)(3).

We note that a recognized accreditation body that is assessing an individual seeking accreditation under this program also must assess the individual's knowledge and experience under § 1.650(a)(1) for the scope of accreditation requested and must consider the results of such assessment in determining the individual's eligibility for accreditation under § 1.640. The onsite observations of an individual seeking accreditation that are performed under § 1.620(a)(3) must be sufficient to determine competency consistent with § 1.650(a)(2).

(Comment 96) Some comments strongly support the proposed requirements of § 1.650, which would require an accredited certification body to ensure that the audit agents it uses have the knowledge and experience, within the scope of its accreditation, to examine facilities, processes, and foods for compliance with the FD&C Act and FDA regulations. The comments assert that audits are only as good as the education, training, and experience of the auditor. Other comments recommend that food safety audits under this rule should be performed by individuals that have training equivalent to FDA investigator training standards.

(Response 96) We agree with comments emphasizing the importance of ensuring that audit agents an accredited third-party certification body uses to conduct audits under the program are appropriately qualified within the scope of the third-party certification body's accreditation. Proposed § 1.650 would comprise the elements of a comprehensive assessment that an accredited third-party certification body would need to perform for each audit agent it would use to conduct a food safety audit under this rule. We further agree with comments suggesting that an auditor determined by a third-party certification body to be competent to conduct audits under private food safety schemes must nonetheless be assessed by the accredited third-party certification body for competency to conduct audits using the applicable food safety requirements

of the FD&C Act and FDA regulations as the audit criteria. Therefore, under § 1.650(a), an audit agent would need to demonstrate substantive knowledge of the applicable food safety requirements of the FD&C Act and FDA regulations relevant to the scope and purpose of the food safety audits the agent would conduct under the program. We do not agree to go so far as to require that all audit agents or individuals accredited as third-party certification bodies must have training equivalent to FDA investigator training standards, as we acknowledge that some investigator training would not be necessary to conduct audits under this program (e.g., evidence collection for enforcement purposes). Such a requirement would impose unnecessary costs and might serve as a disincentive to participation in the program.

(Comment 97) Some comments specifically endorse proposed § 1.650(a)(2), which would require each audit agent to be observed conducting audits to examine compliance with the FD&C Act in a representative number of facilities and foods. Other comments recommend that an accredited third-party certification body should observe an audit agent before the agent begins to conduct food safety audits of a different type of food, followed by random, periodic spot audits to confirm that the audit agent is applying the audit criteria consistently. The comments interpret proposed § 1.650(a)(2) to mean that the accredited third-party certification bodies would be required to "continually witness" each audit agent they use.

(Response 97) We agree that observations of audit agents under proposed § 1.650(a)(2) are essential in determining the competency of audit agents. We are revising proposed § 1.650(a)(2) to require the observation of a representative "sample" of audits, instead of a representative "number" of audits, because the focus of this provision was not intended to be on the number of audits the audit agents would be expected to conduct. Rather, we intend for the accredited third-party certification body to observe a sample of audits that are representative of the range of audits the audit agent might be assigned.

In determining what would constitute a "representative sample" for purposes of final § 1.650(a)(2), the accredited third-party certification body should consider the various types of food facilities that might be audited and the range of FDA regulations that would apply to such facilities. An accredited third-party certification body would need to observe the audit agent

conducting a number of audits across the range of facilities identified by the certification body, and the range of FDA regulations that would apply to those facilities, such that, taken together, the observed audits would be adequately representative of the facilities, processes, and foods the audit agent may be assigned to conduct. Generally, the more complex the regulations or the more complex the processes used by the facility, the greater the sample size should be, to help ensure the audit agent can apply the audit criteria consistently and reliably in various situations. The accredited third-party certification also should gather sufficient information to provide confidence in its determination of the audit agent's competency to conduct audits under this rule.

Contrary to the interpretation suggested by some comments, proposed § 1.650(a)(2) would not require an accredited third-party certification body to "continually witness" each of its audit agents. Such an approach is not practical, efficient, or necessary. However, we are clarifying in § 1.650(a)(2) that before an audit agent is used to conduct food safety audits under this rule the audit agent must be observed by the accredited third-party certification body and found to be competent to conduct food safety audits relevant to the audits they will be assigned to perform under this program. Such observations also must be performed whenever an audit agent will be assigned to perform food safety audits to determine compliance with additional food safety requirements under the FD&C Act and FDA regulations beyond what the certification body has previously observed.

Under this approach, once an accredited third-party certification body has determined an audit agent's competency and objectivity under § 1.650, the audit agent can be assigned to conduct audits for which they are qualified under § 1.650(a)(1) and (2), subject to requirements such as the annual training requirements in § 1.650(a)(3) and the accredited third-party certification body's self-assessment under § 1.655. Although we decline to require periodic observations of audit agents, once the accredited certification body has determined the competency of its audit agents under § 1.650(a)(2), we acknowledge the value of such observations in verifying audit agent competency and the rigor of the certification body's program for evaluating its audit agents.

(Comment 98) Some comments recommend that we include

requirements focusing on the performance of individual audit agents because, the comments assert, many audit complaints arise from individual auditor conduct and focusing on individual performance may help create more consistency in the process.

(Response 98) We agree, and have received similar input from other stakeholders during our public meetings. The comments and other stakeholder input underscore the importance of the requirements for an accredited third-party certification body to observe a representative sample of audits conducted by each audit agent under § 1.650(a)(2), to ensure that any audit agent it assigns to an audit is appropriately qualified under § 1.650(b), and to assess the performance of its audit agents and the consistency of performance across all its audit agents as part of the certification body's self-assessment under § 1.655.

(Comment 99) Some comments support the proposed requirement for annual food safety training under proposed § 1.650(a)(3), noting the importance of ensuring that audit agents have up-to-date training in areas relevant to their audit activities. The comments also suggest that FDA should communicate to training institutions any general audit agent training needs FDA identifies through its program management and oversight. Other comments recommend that the annual training requirement should relate to relevant food safety provisions of the FD&C Act and FDA regulations.

(Response 99) We agree and are revising § 1.650(a)(3) to clarify that an audit agent, or an individual accredited as a third-party certification body, must have annual food safety training that is relevant to activities conducted under this program. FDA works with a number of Alliances and other organizations to ensure training needs for regulatory requirements are met. For instance, having identified the need to train regulators and industry in the new FSMA preventive controls rules, FDA is working in collaboration with the Food Safety Preventive Controls Alliance (FSPCA) to develop training materials and establish training and technical assistance programs for the preventive controls rules. The Alliance includes members from FDA, state food protection agencies, the food industry, and academia and is funded by a grant to the Illinois Institute of Technology's Institute for Food Safety and Health. For more information about the FSPCA, see *e.g.*, <http://www.iit.edu/ifsh/alliance/>, <http://www.iit.edu/ifsh/alliance/>.

(Comment 100) Some comments suggest that in addition to the

requirements of the proposed rule, we should require conformance to ISO/IEC 19011:2011 (Ref. 8) on auditor competency.

(Response 100) FDA's recommendations on auditor competency, among other things, will be contained in FDA's Model Accreditation Standards. As noted in section I.D., comments that address matters covered by FDA's Model Accreditation Standards are outside the scope of this rulemaking.

The issuance of the Model Accreditation Standards draft guidance was announced through publication of a notice of availability in the **Federal Register** of July 24, 2015. We plan to finalize the Model Accreditation Standards after receiving public comments on the draft guidance.

(Comment 101) Some comments note that the audit agent's education, training, and experience must be specific to the industry or industries being audited. Some comments, for example, recommend that audit agents who examine eligible entities for compliance with food additive requirements should have industry experience with food additives and relevant knowledge, experience or training in auditing these types of facilities and processes.

(Response 101) We agree that a certification body must consider an audit agent's competency whenever assigning the audit agent to a specific audit. Therefore, § 1.650(b) requires the accredited third-party certification body to ensure that an audit agent it assigns to a specific audit is appropriately qualified, based on the audit scope and purpose, the specific type of facility, processes, and foods the audit agent would be required to examine, and the food safety requirements of the FD&C Act and FDA regulations that would apply.

We note that an accredited third-party certification body that is an individual would be determined during the accreditation process to be appropriately qualified to conduct audits within the scope of its accreditation.

(Comment 102) Some comments agree with proposed § 1.650(c) and assert that it is needed to protect against conflicts of interest. Some comments assert that, under current practices, auditors in many countries frequently conduct consecutive audits at the same premises. Other comments suggest that the 13-month limit is unnecessary because adequate mechanisms already exist to manage conflicts of interest and objectivity in ISO/IEC standards. Still other comments express concern that

the proposed limit of 13 months would be too short to avoid a conflict of interest. These comments contend a short interval between consultative audits and regulatory audits that are conducted by the same audit agent could create the appearance that the audit agent is auditing the results of the prior consultation. Other comments assert we should impose a 2-year limit, rather than a 13-month limit on audit agents conducting regulatory audits of the same eligible entity.

(Response 102) We disagree with comments opposed to proposed § 1.650(c). Proposed § 1.650(c) would implement the requirements of section 808(c)(4)(C) of the FD&C Act, which limits an accredited third-party certification body's ability to use an audit agent to conduct a regulatory audit of an eligible entity if the agent conducted a consultative or regulatory audit for the same eligible entity in the preceding 13 months, unless FDA waives the limitation under criteria described in the statute. While we recognize this requirement may differ from some international standards, it balances the concern of an audit agent auditing their own prior results if the subsequent audit happens too soon with auditor capacity concerns through a waiver provision. Under proposed § 1.663, FDA would issue waivers where we determine there is insufficient access to in the country or region where the eligible entity is located.

We note that the proposed rule was unclear with respect to whether the showing of insufficient access to support a waiver was based on a lack of certification bodies or individual audit agents in a country or region, and have therefore clarified in the final rule that the showing of insufficient access necessary for FDA to grant a waiver request is based on lack of audit agents (or in cases where individuals are accredited as third-party certification bodies, those individuals). Although we are finalizing additional conflict of interest requirements in § 1.657 of this rule, these provisions do not implement the 13-month limit in section 808(c)(4) of the FD&C Act. Section 1.650(c) complements the requirements in § 1.657 to provide additional conflict of interest protections. Note that though this response uses the term "audit agent" this provision also applies to accredited third-party certification bodies that are individuals.

(Comment 103) Several comments assert that proposed § 1.650(c) and the waiver process FDA proposes to establish would be impractical. The comments note that there is currently a significant shortage of experienced food

safety auditors around the world. Describing it as a “capacity” issue, the comments suggest that implementation of the FSMA rules will further exacerbate the problem. Some comments suggest that proposed § 1.650(c) would be impractical for small countries due to auditor capacity issues.

(Response 103) We acknowledge the concerns about the possible shortage of skilled food safety auditors to meet current global demand and are aware of efforts by GFSI, the food industry, scheme owners, and third-party food safety certification bodies to address auditor capacity, as described in section I.D. We also understand that FSMA implementation is likely to create further demand for auditors. Nonetheless, as explained in Response 102, we are required by section 808(c)(4)(C) of the FD&C Act to limit an accredited third-party certification body’s ability to use an audit agent; we have clarified in the final rule that the showing of insufficient access necessary for FDA to grant a waiver request is based on lack of audit agents (or in cases where individuals are accredited as third-party certification bodies, those individuals).

We disagree with comments suggesting that the waiver process we propose would be impractical. We are developing an IT portal that includes the capability for accepting electronic submissions of requests and electronic issuance of waivers, which will help facilitate the submission of waiver requests by accredited third-party certification bodies and FDA’s processing of such requests.

(Comment 104) Some comments contend that the proposal to require accredited third-party certification bodies to show insufficient accredited third-party certification body resources to obtain an FDA waiver of proposed § 1.650(c) would be unnecessarily burdensome because the proposed conflict of interest requirements adequately protect against concerns about “industry capture.” Some comments recommend that FDA research global food safety auditor capacity and proactively issue waivers of proposed § 1.650(c), absent waiver request(s). Still other comments suggest that eligible entities should be able to seek waivers of the 13-month limit on behalf of an accredited third-party certification body.

(Response 104) Under section 808(c)(4)(C) of the FD&C Act, the 13-month limit on audit agents conducting regulatory audits may be waived if FDA determines there is insufficient access to audit agents in a country or region.

While acknowledging capacity concerns raised in comments, we decline the suggestion that FDA should gather information to support waivers absent a request for a waiver under section 808(c)(4)(C)(ii) of the FD&C Act. We believe gathering such information would not be the best use of our limited resources, and that third-party certification bodies would be better positioned to inform FDA of audit agent capacity issues in their country or region of operation. Moreover, the final rule clarifies that accredited third-party certification bodies must demonstrate that there is insufficient access to audit agents in the country or region where the eligible entity is located in order to obtain a waiver. Because the 13-month limit is on individual audit agents, and not third-party certification bodies, this limitation is likely to be less burdensome than anticipated by the comments.

We decline the suggestion to allow eligible entities to request a waiver of proposed § 1.650(c) on behalf of an accredited third-party certification body, because we believe the accredited third-party certification body will be better suited to assess auditor capacity on a national or regional basis. Periodic rotation of audit agents is intended to help ensure that audits remain objective and do not become compromised by familiarity. The requirement to ensure an audit agent’s objectivity is placed on the accredited third-party certification body, not an eligible entity, under proposed § 1.650(a). Further, given that the accredited third-party certification body would ultimately need to agree to conduct an audit for an eligible entity, requiring the accredited third-party certification body to request the waiver would ensure that they are willing to accept the request for a food safety audit in the first place. In light of the foregoing, we have concluded that it is the accredited third-party certification body, not the eligible entity, who should seek a waiver of the 13-month limit in proposed § 1.650(c).

We disagree with comments suggesting waiver requests will be unduly burdensome or time-consuming for accredited third-party certification bodies. The IT portal we are developing for the third-party certification program includes the capability for accepting electronic submissions of requests and electronic issuance of waivers, which we believe will help minimize the administrative burden on certification bodies and FDA.

B. How must an accredited third-party certification body conduct a food safety audit of an eligible entity? (§ 1.651)

Proposed § 1.651 would establish requirements for planning and conducting consultative and regulatory audits in a manner that fulfills the purposes of section 808 of the FD&C Act. Under paragraph (a) on audit planning, the accredited third-party certification body would require the eligible entity to identify whether it was seeking a consultative or regulatory audit subject to the requirements of this subpart under the third-party certification program. The eligible entity would indicate the scope and purpose of the requested audit and, in the case of a regulatory audit, would indicate the type of certification sought. The accredited third-party certification body would also require the eligible entity to provide a 30-day operating schedule for the facility that would provide information relevant to scope and purpose of the audit. The accredited third-party certification body would then consider whether the requested audit is within the scope of its accreditation.

Proposed § 1.651(b) would require the accredited third-party certification body to ensure it would have adequate authority to conduct the requested audit, including authority to: (1) Conduct an unannounced audit; (2) access any area of the facility or any of its records relevant to the scope of the audit; (3) use an accredited laboratory in accordance with section 422 of the FD&C Act, (21 U.S.C. 350k), where FDA requires sampling and analysis; (4) notify FDA immediately upon discovering, during a consultative or regulatory audit, a condition that could cause or contribute to a serious risk to the public health; (5) prepare audit reports that would contain certain elements and, for regulatory audits, that would be submitted to FDA; and (6) allow FDA and its recognized accreditation body to observe any food safety audit under the program.

Proposed § 1.651(c) would require an unannounced audit to be conducted in a manner consistent with its scope and purpose and would include records review as well as an onsite examination of the facility, process(es), and food to determine compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, and for consultative audits, conformance with include industry standards and practices. Proposed § 1.651(c) would require the audit agent to document observations and corrective actions and, where appropriate, would include

environmental or product sampling and analysis using validated methodologies and a laboratory accredited in accordance with the requirements of section 422 of the FD&C Act.

At our own initiative, we are removing the requirement to use a laboratory consistent with section 422 of the FD&C Act and inserting a requirement in § 1.651(b)(3) to use a laboratory accredited under ISO/IEC 17025:2005 or another laboratory accreditation standard that provides at least a similar level of assurance in the validity and reliability of sampling methodologies, analytical methodologies, and analytical results.

On our own initiative, we are also revising § 1.651(c)(1) to clarify that the audit must be focused on determining whether the facility, its process(es), and food are in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, and for consultative audits, also includes conformance with applicable industry standards and practices. Based on comments received on § 1.653 and for the reasons described in Comment/Response 112 in section IX.C., we are revising § 1.651(c)(3) to clarify that an accredited third-party certification body (or its audit agent, where applicable) that identifies a deficiency requiring corrective action may verify the effectiveness of a corrective action once implemented by the eligible entity but must not recommend or provide input to the eligible entity in identifying, selecting, or implementing the corrective action.

(Comment 105) Some comments suggest that we should incorporate ISO/IEC 19011:2011 (Ref. 8), which contains guidelines on auditing management systems, by reference into the rule.

(Response 105) We disagree, because ISO/IEC 19011:2011 (Ref. 8) is inconsistent with the requirements of section 808 of the FD&C Act and this rule. For example, ISO/IEC 19011:2011 (Ref. 8) is premised on announced audits that are scheduled with the client, as described in clauses 6.2.2, and 6.2.3 of the standard; however, section 808(c)(5)(C)(i) of the FD&C Act requires audits conducted under this rule to be unannounced. As another example, clause 6.4.9 of ISO/IEC 19011:2011 (Ref. 8) suggests that an audit team should attempt to resolve any “diverging opinions” between the team and the audited entity regarding the audit conclusions, such as the extent of conformity with audit criteria (clause 6.4.8), during the closing meeting. We acknowledge that differences of opinions regarding audit conclusions are likely to occur between eligible

entities and accredited third-party certification bodies or audit agents. However, the credibility of our program rests in large part on the independence and objectivity of accredited third-party certification bodies and audit agents. This rule is intended to help ensure they are free from the influence of the eligible entities and any appearance that their judgment is compromised by eligible entities. Audit conclusions regarding an eligible entity’s compliance with the applicable food safety requirements of the FD&C Act and FDA regulations are the purview of the accredited third-party certification body and any audit agents it uses. The appropriate mechanism for an eligible entity seeking to challenge adverse decisions would be the accredited third-party certification body’s appeals process.

For the foregoing reasons, we decline to incorporate ISO/IEC 19011:2011 (Ref. 8) by reference into this rule.

(Comment 106) Some comments assert the guidelines for management systems auditing in ISO/IEC 19011:2011 (Ref. 8) would provide a useful guide for audits conducted under the program. Other comments suggest the audit agents should be conducting food safety audits using a quality systems approach. Citing the production of food additives as an example, these comments note that while it would be preferable to conduct an audit while a food additive is being produced it is not always feasible. The comments suggest that as long as the audit focuses on quality systems it should not be necessary for production of the food additive to occur during the audit.

(Response 106) As explained in Response 105, some elements of ISO/IEC 19011:2011 (Ref. 8) are inconsistent with the requirements of section 808 of the FD&C Act and this rule, thereby limiting its applicability for food safety audits conducted under this rule. We agree, however, with the general principle that a “systems” approach to food safety audits with a correctly identified scope and purpose, using appropriate audit criteria, and properly executed by a competent audit agent (or individual accredited as third-party certification body), should be sufficient to cover the food within the audited system(s) of the facility, without requiring direct observation of each type of food produced. We note that it is essential that the scope of the audit covers the appropriate physical locations, activities, and processes that are part of the management system to be audited, and information collected during the audit must be relevant to the audit scope, purpose, and criteria,

including information relating to interfaces between functions, activities, and processes of the food safety system.

We use the term “systems audits” generally, acknowledging that “management systems” audits, “product certification” audits, and “quality systems” audits have specific meanings in some contexts, such as ISO/IEC standards, but may have different meanings in different contexts. To the extent that the comments referencing a “quality systems” approach are suggesting that food safety audits should be conducted using a “systems auditing” approach, we agree. Accordingly, we are revising § 1.651(c)(1) to better align with the language of section 808 of the FD&C Act and this rule, as well as “systems” auditing principles.

Our goal is to ensure the rigor of the food safety audits conducted under our program, which will be accomplished through compliance with the requirements of this rule. It is intended to help ensure that food safety audits are conducted by competent audit agents (or individuals accredited as a third-party certification bodies), in accordance with a properly defined audit scope and purpose, using the applicable audit criteria required by this rule. As such, any food safety audit conducted under the rule should provide the information necessary for the accredited third-party certification body to make a determination on compliance with the applicable food safety requirements of the FD&C Act and FDA regulations. Whether or not a particular audit does, in fact, provide such information, with an appropriate level of confidence, is dependent on a number of factors, among them:

1. At the time that the food safety audit is procured, the eligible entity must declare the scope and purpose of the audit consistent with the requirements of this rule (and any additional criteria established in VQIP guidance for facility certifications for use in that program or, for certifications to be used for purposes of section 801(q) of the FD&C Act any additional criteria that may be established by FDA relating to the safety determination).

2. The accredited third-party certification body must assign an audit agent that is competent to perform the audit (or, for an accredited third-party certification body that is an individual, such audit must be within the scope of accreditation).

3. The audit agent (or individual accredited as a third-party certification body) must:

- a. Develop and successfully execute an audit plan that includes a records

review, which may be scheduled, and a subsequent onsite facility examination performed on an unannounced basis within a 30-day window of time according to the facility's operating schedule for the requested audit purpose and scope and using the appropriate audit criteria; and

b. during the audit collect and verify information that is relevant to the audit purpose, scope, and criteria and that will form the basis for the audit findings and conclusions.

We note that this rule establishes the requirements for the third-party certification program but does not establish requirements relating to the use of these certifications for purposes of sections 801(q) and 806 of the FD&C Act. To that end, we urge an eligible entity seeking a regulatory audit for certification to be used for VQIP purposes or for purposes of satisfying a requirement for certification under section 801(q) to ensure that the scope of the regulatory audit it procures, and any food and facility certifications that are issued as a result, will be sufficient to meet FDA requirements under sections 801(q) and 806 of the FD&C Act.

Under section 806 of the FD&C Act, FDA will require facility certifications issued by accredited third-party certification bodies under section 808 as a condition of an importer's eligibility for VQIP. We encourage eligible entities, importers, and accredited third-party certification bodies to consult the VQIP guidance, when finalized, to ensure the proper scope has been established for any regulatory audit conducted to obtain facility certification for VQIP purposes.

Any requirement for certification to satisfy a condition of admissibility under section 801(q) of the FD&C Act would be based on an FDA safety determination relating to specific circumstances, as described in section 801(q)(2). An eligible entity seeking certification from an accredited third-party certification body to meet the admissibility requirements under section 801(q) of the FD&C Act must ensure the proper scope has been established for the regulatory audit it procures to address the circumstances behind the 801(q) determination.

(Comment 107) Some comments assert that the audit requirements in proposed § 1.651 are overly detailed and inflexible, contending that accreditation bodies have their own requirements for good auditing practices. The comments also suggest that proposed § 1.651, would be problematic to implement and cite as an example the proposed requirement for unannounced audits,

which the comments say would be inconsistent with the requirements associated with planned audits that apply in other programs.

(Response 107) We understand that some of the requirements in proposed § 1.651 differ from the audit protocols currently used in conducting many third-party audits of food facilities. The comments do not identify the good auditing practices they assert accreditation bodies already require certification bodies to use; however, we are not incorporating ISO/IEC 17021:2011, ISO/IEC 17065:2012, or ISO/IEC 19011:2011 by reference into this rule for the reasons explained in section I.D. We are unable to identify a voluntary consensus standard that would encompass the audit practices required by section 808 of the FD&C Act (*e.g.*, unannounced audits and notification of conditions that could cause or contribute to a serious risk to public health) as well as other practices the statute allows (*e.g.*, audit agents conducting both consultative and regulatory audits). In the absence of existing standards that would adequately address the food safety audit requirements of section 808 of the FD&C Act, § 1.651 offers accredited third-party certification bodies and audit agents the requirements needed to conduct food safety audits in the manner the statute contemplates and requires.

The comment asserting that proposed § 1.651, would be problematic to implement cited as an example the proposed requirement for unannounced audits in § 1.651(c)(1). We acknowledge that most audits are scheduled, and a program involving unannounced audits will require changes in the current usual practices of accredited third-party certification bodies and eligible entities. However, section 808(c)(5)(C)(i) of the FD&C Act specifically requires audits performed under this rule to be unannounced. As described in Response 106, proposed § 1.651(c)(1) was designed to provide flexibility to accredited third-party certification bodies and eligible entities, while fulfilling this statutory requirement. Without additional examples or other details in the comments to explain why the other audit protocols in proposed § 1.651(a) would be problematic to implement, we decline to revise § 1.651(a)(2) to (4) in response to the comments.

(Comment 108) In addition to comments described in section III.E. regarding the impracticality of unannounced audits, some comments contend that unannounced audits would be impractical and inefficient for any food safety audit (*e.g.*, regulatory

audits) conducted under this rule. Other comments express concern about implementing unannounced audits at farms that may be geographically isolated, while offering support for unannounced audits in principle.

Other comments note that unannounced audits are conducted for operations participating in the Leafy Greens Marketing Agreements (LGMAs) in California and Arizona and in the California Cantaloupe Marketing Order (CCMO), asserting it is feasible to conduct audits of seasonal operations during harvest activities, observing practices and programs in the field and facility. Some comments suggest that unannounced audits provide a more realistic view of the entity's compliance status than planned audits do.

Some comments endorse the approach of a planned records review prior to an unscheduled site audit occurring at any point during a 30-day operating window. Other comments ask us to clarify in the final rule which parts of a food safety audit may be performed on a scheduled basis and which parts must be performed on an unannounced basis within a 30-day window.

(Response 108) We decline to revise our approach to unannounced audits under § 1.651, as section 808(c)(5)(C)(i) of the FD&C Act explicitly requires that audits be unannounced. We are, however, adding language to § 1.651(c)(1) to clarify that the records review portion of a food safety audit may be scheduled with an eligible entity and, through revisions to § 1.651(c)(2), are requiring the records review to occur before the onsite facility examination portion of the audit, consistent with the description in the preamble to the proposed rule (78 FR 45782 at 45811 to 45812). We are retaining the requirement in § 1.651(c)(1) to conduct an unannounced audit through an unscheduled onsite facility examination at any time during the 30-day timeframe identified pursuant to § 1.651(a)(1)(ii).

As discussed in the preamble to the proposed rule (78 FR 45782 at 45811), when developing the audit protocols to implement the statutory requirement for unannounced audits, we considered the British Retail Consortium (BRC) Global Standard for Food Safety (Ref. 22) unannounced audit option to help us ensure that our approach to unannounced audits would be practical and feasible to implement. The BRC unannounced audit option provides for a "Good Manufacturing Practices-type audit" to be unannounced, while a separate records review could occur during a planned visit. We have concluded that it is reasonable and appropriate to interpret the statutory

requirement for unannounced audits to allow a record review to be conducted during a planned visit to the eligible entity, provided that the onsite audit is conducted on an unannounced basis. In addition, as discussed previously, we have revised § 1.651(c)(2) to require that the records review must precede the onsite examination to facilitate the facility visit.

We agree with comments suggesting that unannounced audits are feasible and note, for example, that another GFSI-benchmarked scheme, the Safe Quality Food Code in July 2014 began implementing an unannounced audit component, wherein unannounced audits are mandatory for every third audit (Ref. 23). Additionally, while we appreciate the concern expressed by comments regarding the implementation of unannounced audits at farms that may be geographically isolated, we believe the examples cited by comments of unannounced audits of participants that are performed at least once each year under the LGMA and the CCMO are persuasive in demonstrating the feasibility of unannounced audits for primary production. Moreover, the requirements for audits specified in the statute and our experiences planning foreign inspections lead us to believe that the requirement for a 30-day operating window will assist in preventing logistic problems associated with unannounced audits in geographically isolated areas. For the foregoing reasons, we have concluded that the unannounced audit protocol in § 1.651(a)(1) is practical and efficient to implement, while meeting the requirements of section 808(c)(5)(C)(i) of the FD&C Act.

(Comment 109) Some comments suggest that FDA increase the window of time between the records review, which informs the audit planning, and the unannounced site audit, which examines the facility, its process(es), and food for compliance with the applicable food safety requirements of the FD&C Act and FDA regulations. To maximize the element of surprise while ensuring the relevance of the records review to the conduct of the site audit, the comments suggest we should expand the timeframe to allow the audit agent to conduct the site audit any time during a 90-day period.

(Response 109) Food safety audits conducted under this program, particularly regulatory audits for certification purposes, often are time sensitive in nature, because they are necessary for issuance of certifications that are used facilitate trade. Establishing a lengthy window of time during which an unannounced audit

could occur could have significant implications, for example, where certification is used in satisfying a condition of admissibility for a food subject an FDA safety determination under section 801(q) of the FD&C Act. A lengthy window of time for an unannounced audit to be conducted also could hinder participation in the VQIP program under section 806 of the FD&C Act, which requires an importer to provide facility certification as a condition of participation. In light of the foregoing, we do not believe it would be reasonable to extend the length of time between records review and the site audit from 30 to 90 days.

C. What must an accredited third-party certification body include in food safety audit reports? (§ 1.652)

Proposed § 1.652 would implement section 808(c)(3)(A) of the FD&C Act, which authorizes FDA to establish the requirements for audit reports that an accredited third-party certification body would need to prepare as a condition of its accreditation. The statute specifies that such report of an audit must include: (1) The identity of the persons at the eligible entity responsible for compliance with food safety requirements; (2) the dates and scope of the audit; and (3) any other information FDA requires that relates to or may influence an assessment of compliance.

Proposed § 1.652(a) would specify the form of consultative audit reports, which would include: The name, address, and unique facility identifier (UFI) of the facility subject to audit; the name, address, and UFI of the eligible entity (if it differs from the facility); the contact information for the person(s) responsible for food safety compliance at the facility; the dates and scope of the consultative audit; and any deficiency(ies) observed during the audit that require corrective action(s) and the date on which such corrective action(s) were completed. Proposed § 1.652(a) would require that a consultative audit report be prepared by no later than 45 days after completing the audit and would require preparing the report in English and maintaining it as a record under proposed § 1.658.

Proposed § 1.652(b) would specify the form of regulatory audit reports, which would include: (1) The name, address, and UFI of the facility subject to audit; (2) the FDA food facility registration number (where applicable); (3) the name, address, and UFI of the eligible entity (if it differs from the facility); (4) the contact information for the person(s) responsible for food safety compliance at the facility; (5) the dates and scope of the regulatory audit; (6) the process(es)

and food(s) observed during the audit; (7) whether sampling and laboratory analysis is used in the facility; (8) recent food recalls; (9) recent significant changes at the facility; and (10) any food or facility certifications recently issued to the entity. With respect to deficiencies and corrective actions, proposed § 1.652(b) would require the accredited third-party certification body to include in the regulatory audit report any deficiency(ies) observed during the audit that meet FDA's Class I and Class II recall standards—*i.e.*, the deficiency(ies) present(s) a reasonable probability that the use of or exposure to the violative product will cause serious adverse health consequences or death; or may cause temporary or medically reversible adverse health consequences or where the probability of serious adverse health consequences is remote, and the corrective action plan for any identified deficiency unless the corrective action was implemented immediately and verified onsite by the accredited third-party certification body. Proposed § 1.652(b) also would require that a regulatory audit report be submitted to FDA electronically, in English, by no later than 45 days after completing the audit.

Under proposed § 1.652(c), an accredited third-party certification body would have to submit to FDA an audit report for any regulatory audit it conducts, regardless of whether the certification body issued a certification based on the results of the regulatory audit. Proposed § 1.652(d) would require an accredited third-party certification body to implement written procedures for receiving and addressing challenges from eligible entities contesting adverse regulatory audit results and would require them to maintain records of such challenges under proposed § 1.658.

On our initiative, we revised paragraphs (a) and (b) of § 1.652 to clarify that an accredited third-party certification body must provide a copy of a consultative audit report or regulatory audit report (respectively) to the eligible entity. We also on our own initiative added a requirement for the accredited third-party certification body to include in the audit report the FDA Establishment Identifier (FEI) of the facility audited and the FEI of the eligible entity, if different than the FEI for the audited facility to help verify the identity of the facility and eligible entity based on information contained in FDA's database of FEIs. Further, we aligned the elements of the consultative audit report and regulatory audit report; for example, we redesignated proposed paragraph (a)(5) as (a)(6) and added a

new paragraph (a)(5) to require that the consultative audit report include the processes and foods observed during the consultative audit. Additionally, on our own initiative we revised § 1.652(d) to clarify that an accredited third-party certification body must notify an eligible entity of a denial of certification.

(Comment 110) Several comments raise concerns regarding the requirements that would apply to consultative audit reports under proposed § 1.652(a). The comments assert that because consultative audits are specifically intended to be for internal purposes, FDA should delete proposed § 1.652(a) and should not propose any requirements for consultative audit reports. Other comments suggest that we remove the proposed requirement to prepare a consultative audit report no later than 45 days after conducting the audit, asserting the deadline is infeasible. Still other comments suggested we should allow consultative audit reports to be prepared and maintained in languages other than English.

Some comments interpret proposed § 1.652(a) to require consultative audit reports to be submitted to FDA. Other comments urge us to emphasize to industry that proposed § 1.652(a) would only require accredited third-party certification bodies to maintain consultative audit reports in their records and not submit them to FDA, and that FDA could only access consultative audit reports in circumstances meeting the serious adverse health conditions or death to humans or animals (SAHCODHA) standard for records access under section 414 of the FD&C Act. Other comments note that the proposed rule was silent on the protection of proprietary information in audit reports.

(Response 110) We disagree with comments suggesting that because consultative audits are for internal purposes only, FDA is precluded from imposing any requirements for consultative audit reports prepared by accredited third-party certification bodies under this rule. Section 808(c)(3)(A) of the FD&C Act requires certain elements to be included in reports for all food safety audits. This includes both consultative audits and regulatory audits, which are the two types of audits described in section 808(c)(4)(B) of the FD&C Act. Section 808(c)(3)(A) sets a 45-day deadline for the preparation of all audit reports, including consultative audit reports, and sets a separate requirement that the audit reports for regulatory audits be submitted. Section 808(c)(3)(A) of the

FD&C Act also gives FDA discretion to designate the form and manner of audit reports and to require accredited third-party certification bodies to include in audit reports other information that relates to or may influence an assessment of compliance with the FD&C Act. In light of these statutory provisions, we decline the suggestions to delete proposed § 1.652(a) or to remove the proposed 45-day deadline for preparation of a consultative audit report.

We are, however, removing the proposed requirement in § 1.652(a) that consultative audit reports would need to be prepared and maintained in English in the accredited third-party certification body's records. As explained in Response 59, we are removing the proposed requirements for recognized accreditation bodies and accredited third-party certification bodies to create and maintain records that do not need to be submitted to FDA, outside of a specific request, under this rule in English.

We disagree with comments suggesting that § 1.652(a) should require accredited third-party certification bodies to submit consultative audit reports to FDA. We note that section 808(c)(3)(A) only requires the submission of regulatory audit reports. Because consultative audits are for internal purposes, we consider it appropriate to require the maintenance of these reports, but not the submission of the reports. Under section 808(c)(3)(C) of the FD&C Act, we could only access consultative audit reports in circumstances meeting the standard for records access under section 414 of the FD&C Act.

With respect to protection of proprietary information in consultative audit reports submitted to or obtained by FDA, we note that the final rule includes new provision § 1.695, which addresses disclosure and the protection of trade secrets and confidential commercial information under applicable law.

(Comment 111) Some comments support our proposal to require that consultative audit reports under proposed § 1.652(a)(2) and regulatory audit reports under proposed § 1.652(b)(1)(i) and (b)(2) include UFI for audited facilities and for eligible entities (where different from audited facilities). In the preamble to the proposed rule (78 FR 45782 at 45812), we solicited comment on whether a UFI should comprise a Data Universal Numbering System (DUNS®) number and Global Positioning System (GPS) coordinates for an audited facility and

for the eligible entity (if different from the audited facility).

Some comments support using DUNS® numbers in UFIs for eligible entities and audited facilities, asserting that approximately 230 million establishments around the world have DUNS® numbers. The comments assert that DUNS® numbers are easy to obtain and free to the establishment. Comments also emphasize that the use of DUNS® numbers would be particularly helpful under the third-party certification rule, because the numbers help to determine corporate “families”—*e.g.*, related establishments.

Other comments oppose using DUNS® numbers as UFIs, contending that DUNS® numbers are not widely used outside the United States and frequently have errors. Some of these comments propose alternatives to DUNS® numbers, including: GPS coordinates, FDA's food facility registration numbers, or the U.S. Internal Revenue Service taxpayer identification numbers which comments suggest foreign companies can request from U.S. Customs and Border Protection.

(Response 111) We received valuable input in response to our solicitation of comments on UFIs for audited facilities and eligible entities. Having a UFI for eligible entities (and audited facilities if different) would be useful to FDA in identifying an eligible entity that does not already have a numerical identifier in one of FDA's databases. For example, farms generally are not required to register with FDA under section 415 of the FD&C Act, so they would not have an FDA Food Facility Registration Number, unless they conduct activities for which such registration is required, and some eligible entities may not have been assigned an FDA Facility Establishment Identifier.

We note that FDA currently is considering whether to require UFIs for regulated establishments, such as facilities as defined in 21 CFR 1.227, and the types of numbering systems that might be used for UFIs. Under this final rule, an accredited third-party certification body will be required to include a UFI for an audited facility and for an eligible entity (if different from the audited facility) in a consultative audit report under § 1.652(a)(1)(i) and (a)(2), and a regulatory audit report under § 1.652(b)(1)(i) and (b)(2), if FDA designates a UFI system.

(Comment 112) Some comments focus on proposed § 1.652(a)(5), which would require a consultative audit report to include any deficiencies observed that require corrective action, the corrective action plan, and the date corrective

actions were completed. Some comments ask us to clarify what information about deficiencies should be included in consultative audit reports. The comments distinguish between FDA investigators who collect physical evidence during inspections and third-party certification bodies who typically observe process(es), review records, and cite nonconformity to standards—*e.g.*, “Canning retort time did not meet x temperature for y time of the scheduled process.” Other comments ask FDA to clarify that the eligible entity, not the audit agent, would be responsible for corrective actions, including analyzing the cause of the nonconformity and developing corrective actions to address the nonconformity. These comments support the proposed requirement to require documentation and verification of corrective actions, whether through document review or onsite audits.

(Response 112) As the comments suggest, third-party certification bodies commonly describe their audit findings in terms of conformity or nonconformity with audit criteria, such as a GFSI-benchmarked food safety scheme or the ISO/TS 22003:2013 series of food safety standards (Ref. 24). Under section 808 of the FD&C Act, accredited third-party certification bodies examine eligible entities and their foods for compliance with the applicable food safety requirements of the FD&C Act and FDA regulations and, for consultative audits, also assess conformity with applicable industry standards and practices.

Under proposed § 1.652(a)(5), a consultative audit report would identify any deficiencies observed by audit agent, which we intended would encompass any deficiency that relates to or may influence the accredited third-party certification body’s determination of whether the eligible entity is in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations. We were not proposing to require that consultative audit reports include information on an observation solely related to a nonconformity with industry standards or practices that FDA does not implement or enforce. An observation relating to both a nonconformity with an industry standard or practice and a deficiency that relates to or may influence a compliance determination would need to be included in the audit report as a deficiency under proposed § 1.652(a)(5). In response to comments, we are revising § 1.652(a)(5), renumbered as § 1.652(a)(6), to clarify that a consultative audit report must include any deficiency that relates to or may influence a determination of

compliance with the applicable food safety requirements of the FD&C Act and FDA regulations and information on the corrective action(s) to address such deficiency.

We agree with comments distinguishing between the roles of eligible entities (who must identify and implement effective corrective actions) and accredited third-party certification bodies and their audit agents (who identify deficiencies and verify that effective corrective actions have been implemented). After identifying deficiencies that will require corrective action, accredited third-party certification bodies and their audit agents must maintain their impartiality by allowing eligible entities to select the appropriate corrective actions to employ. To recommend or suggest corrective actions to eligible entities during consultative or regulatory audits would undermine the objectivity of the third-party certification bodies or audit agents in performing their critical task of verifying the effectiveness of the corrective actions once implemented. To address this concern, we have elected to revise § 1.651(c)(3) as described in section IX.B., because we believe this issue is better addressed as part of the protocols for audits conducted under subpart M.

(Comment 113) Some comments assert that proposed § 1.652(b) is unnecessary, because many of the elements of regulatory audit reports that we propose already are commonly included in audit reports. The comments contend that listing specific elements to be included in a regulatory audit report would be too prescriptive and would stifle creativity. Other comments suggest that proposed § 1.652(b) is overly broad, and the comments object to the elements of the audit reports. Some comments assert that reporting of recent recalls is unnecessary because this is information already in FDA’s possession. Still other comments note that documents that are routinely part of an audit process may contain critical business information. These comments suggest that FDA should consider a “tiered” approach, by requiring only summary reports on audit results to be submitted to FDA, not proprietary information.

Other comments support proposed § 1.652(b) and the data elements we proposed to require in regulatory audit reports. Some of these comments seek additional information on the form and manner of submitting this information to FDA. The comments also ask whether the regulatory audit reports will be publicly released.

(Response 113) We disagree with comments suggesting that proposed § 1.652(b) is unnecessary because the information we proposed to require in regulatory audit reports already is included in the audit reports prepared by third-party certification bodies. Although many of the elements required to be included in the reports under this rule are currently being included in audit reports prepared by third-party certification bodies, it is important that we require the elements included in this final rule because they are essential to the preparation of audit reports that are consistent with the purpose of this program.

We disagree with the comments asserting that proposed § 1.652(b) is overly broad and the comments contending that the provision is overly prescriptive. Section 808(c)(3)(A) of the FD&C Act requires that audit reports include the dates and scope of the audit and the identity of the persons at the audited eligible entity responsible for compliance with food safety requirements. Section 808(c)(3)(A) of the FD&C Act also gives FDA discretion to require that audit reports include other information that relates to or may influence an assessment of compliance with the FD&C Act. Under proposed § 1.652(b), a regulatory audit report would include the elements required by the statute, as well as the following information: Identifying information for the eligible entity (and for the facility, if different from the eligible entity); the food(s) and process(es) observed; any deficiencies observed during the audit that relate to an FDA Class I or Class II recall situation; and the corrective action plan for such deficiencies. We also proposed to require the regulatory audit report to indicate whether any sampling and laboratory analysis is used in the facility and whether in the 2 years preceding the audit the entity: Issued a food safety-related recall; made significant changes in the facility, its process(es), or products; or was issued any food or facility certifications.

As to the elements of the regulatory audit report in proposed § 1.652, we note that paragraphs (b)(1) and (2) provide identifying information for the eligible entity (and the facility audited, if different than the eligible entity) and paragraphs (b)(3) and (5) contain the elements required by section 808(c)(3)(A) of the FD&C Act. We agree with comments asserting that it is not necessary to include information in regulatory audit reports that is already in FDA records; therefore, we are removing the proposed requirements in § 1.652(b)(9) and (11) to report information on food-safety related

recalls conducted by the eligible entity and food and facility certifications issued to the eligible entity in the 2 years preceding the audit. We are retaining the other elements of the regulatory audit report under proposed § 1.652(b)(4), (6) to (8), and (10)—*i.e.*, whether the facility uses sampling and laboratory analysis, whether the entity has made significant changes to the facility, its process(es), or products during the 2 years preceding the audit; the foods and process(es) that were observed, as well as any deficiencies related to a Class I or Class II recall situation and the corrective action plans for deficiencies—because they are related to or influential to a determination of compliance with the applicable food safety standards of the FD&C Act and FDA regulations.

As discussed in Response 67, we intend to provide additional instructions relating to the form and manner of submitting information to FDA. We also acknowledge comments' concerns about the protection of proprietary information in regulatory audit reports submitted to FDA. Information submitted to FDA is subject to public disclosure and under part 20, and we are including new § 1.695 on public disclosure in section XIII.F of this final rule.

(Comment 114) Some comments contend that the submission of regulatory audit reports under proposed § 1.652 would “empower” accredited third-party certification bodies as “*de facto*” regulatory authorities.

(Response 114) We disagree. Nothing in section 808 of the FD&C Act or in the proposed rule would empower accredited third-party certification bodies to implement or enforce the FD&C Act or FDA regulations. Further, section 808(h) of the FD&C Act clearly states that audits performed under this section shall not be considered inspections under section 704 of the FD&C Act, which governs FDA inspections.

(Comment 115) Some comments assert that regulatory audit reports should be submitted to FDA only when there are questions about product safety. Some comments suggest that proposed § 1.652(b) could be onerous because it would require regulatory audit reports to be submitted to FDA in English by no later than 45 days after the audit was completed. The comments assert that a lack of auditor capacity in countries that export food to the United States could make it difficult for accredited third-party certification bodies to meet the 45-day deadline and suggest that FDA should consider adjusting the deadline for regulatory audit report submission in

light of factors such as auditor capacity and the needs of seasonal producers. Other comments support the proposed 45-day deadline for audit report submission, noting that many audit reports currently take more than 45 days to complete, some taking nearly a year to be issued. Still other comments focus on the proposed requirement in § 1.652(b) to submit regulatory audit reports in English, urging us to accept reports in various languages, including Spanish.

(Response 115) Section 808(c)(3)(A) of the FD&C Act requires as a condition of accreditation that regulatory audit reports to be submitted to FDA within 45 days after conducting the audit. Accordingly, we decline the suggestion to limit the submission of regulatory audit reports to circumstances where there are questions about product safety. We also decline to extend the statutory 45-day deadline for submission of a regulatory audit report.

We believe that allowing regulatory audit reports to be submitted in languages other than English, as some comments suggest, would create unnecessary obstacles to our program management and oversight. For example, we may review a regulatory audit report to assist us in deciding whether to accept a certification or to reject the certification after determining that is not valid or reliable. If we were to allow regulatory audit reports to be submitted in languages other than English, we might have to wait weeks for a translation. Such a delay would postpone our decision on whether to accept or refuse the certification and might have negative effects on the flow of trade.

(Comment 116) Some comments oppose a proposal to use DUNS® numbers in UFIs for audited facilities and eligible entities that would be required to be submitted to FDA in regulatory audit reports under proposed § 1.652(b)(1)(i) and (b)(2). The comments suggest that using DUNS® numbers in UFIs would create a monopoly for Dun and Bradstreet (D&B) and give D&B an unfair competitive advantage. The comments also express concern that establishments will face increased pressure to buy other D&B products. Other comments suggest that DUNS® numbers are not used outside the United States because, for example, DUNS® numbers require data such as street names, telephone numbers and other data points that small producers located outside the United States might not have. Instead, these comments suggest, FDA should use GPS latitude and longitude coordinates as UFIs.

Some other comments express support for UFI requirements that would include the use of DUNS® numbers in UFIs for audited facilities and eligible entities. The comments assert that because DUNS® numbers are widely used, it would be reasonable for FDA to require DUNS® numbers to be used in UFIs under the third-party certification program.

(Response 116) As explained in Response 111, FDA currently is considering whether to require regulated establishments to have UFIs and, if so, whether DUNS® numbers should be included in UFIs. As explained previously, under this final rule, an accredited third-party certification body will be required to include a UFI for an audited facility and for an eligible entity (if different from the audited facility) in a regulatory audit report under § 1.652(b)(1)(i) and (b)(2), if FDA designates a UFI system.

(Comment 117) Some comments agree with proposed § 1.652(b)(4), which would require regulatory audit reports to include information on the process(es) and food(s) observed during the audit. Some comments request clarification of what process(es) and food(s) would need to be observed in a facility with several processes, and other comments ask what information FDA is seeking about the process(es) that were observed during a regulatory audit.

(Response 117) As explained in Response 106, we do not believe that direct observation of each type of food produced under a management system is necessary when an audit covers the appropriate physical locations, activities, and processes that are part of the management system to be audited, and information collected during the audit must be relevant to the audit scope, purpose, and criteria, including information relating to interfaces between functions, activities, and processes of the management system. Therefore, information on the process(es) and food(s) observed by the audit agent (or accredited third-party certification body that is an individual) is useful in light of the scope of the audit and the management system(s) audited.

(Comment 118) Some comments endorse proposed § 1.652(b)(8), which would require the regulatory audit report to include information on whether sampling and analysis is used at the facility being audited. Of the comments that support proposed § 1.652(b)(8), some would further require regulatory audit reports to include reporting of sampling and analytical results of sampling by the

eligible entity. Others suggest including analytical results relating to any deficiencies observed during an audit and the effectiveness of corrective actions taken to address the deficiency.

(Response 118) We agree that it is useful for FDA to have information on whether an eligible entity uses sampling and analysis as a tool for verifying the effectiveness of its controls. Section 1.652 does not require sampling or analysis on a routine basis; however, analytical reports must be included in regulatory audit reports if the certification body finds them to be relevant to the any elements of an audit report, such as a verification of corrective actions or in support of a decision not to certify. We note that sampling or analytical reports that are collected as part of a regulatory audit must be maintained as required under § 1.658(a)(3).

(Comment 119) Some comments support proposed § 1.652(b)(9), which would require information on recent recalls to be included in regulatory audit reports. Other comments suggest that requiring recall information to be included in a regulatory audit report might lead to questions about the validity of a certification that the accredited third-party certification body might issue based on the results of its regulatory audit of the eligible entity. Some other comments suggest that requiring an accredited third-party certification body to include information on recent recalls in a regulatory audit report would be duplicative, because FDA should already have information on any recalls of regulated product exported to the United States, and recalls of product that was not exported to the United States would not be relevant to the regulatory audit report.

(Response 119) We agree with comments suggesting that it would be duplicative to require accredited third-party certification bodies to include information on recent recalls in regulatory audit reports and are removing proposed § 1.652(b)(9) in the final rule.

(Comment 120) Some comments ask for clarification on proposed § 1.652(b)(11), which would require information on recent certifications to be included in regulatory audit reports. The comments ask whether a certification issued outside of the third-party certification program should be included in a regulatory audit report and if so, should the report identify the standards under which the certification was issued.

(Response 120) Requiring information on certifications issued under the third-

party certification program would be duplicative because certifications previously issued by the accredited third-party certification body under the program already would have been submitted to FDA. Further, we see no benefit to requiring the submission of information on certifications issued outside of this program. Accordingly, we are removing proposed § 1.652(b)(11) from the final rule.

(Comment 121) Some comments urge us to create a clear mechanism for eligible entities to appeal adverse audit results.

(Response 121) Under proposed § 1.652(d) an accredited third-party certification body would have to implement written procedures for receiving, evaluating, and deciding on eligible entity challenges to adverse regulatory audit results. We believe this section provides a clear mechanism for eligible entities to be able to appeal adverse regulatory audit results. As explained in Response 36, we are clarifying that persons presiding over such appeals may be internal or external to the accredited third-party certification body.

D. What must an accredited third-party certification body do when issuing food or facility certifications? (§ 1.653)

The proposed rule describes the activities that an accredited third-party certification body would have to perform when issuing food and facility certifications. Proposed § 1.653 would require the certification body to have conducted a regulatory audit under proposed § 1.651 and to conduct any other activities necessary to determine compliance under the applicable food safety requirements of the FD&C Act and FDA regulations.

No certificate could be issued until the eligible entity took corrective actions to address any deficiencies reported under proposed § 1.652(b)(6), and the corrective actions were verified by the accredited third-party certification body. The verification would need to occur onsite, unless the deficiency was a minor issue. A single audit could result in food and facility certifications or multiple food certifications only if the regulatory audit requirements were met as to each.

Where a certification body uses audit agents, the certification body, not the audit agent, would make the determination whether to issue certification. However, the statute allows for individuals to be accredited as certification bodies; in that circumstance, the same individual would conduct the audit and also determine whether to issue certification.

On our own initiative, we are revising § 1.653(a)(3) to replace the phrase “assessment made during” with “the data and other information” to clarify what an accredited third-party certification body must consider when determining whether an eligible entity is in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations.

On our own initiative, we are making a number of revisions § 1.653(b). We are revising paragraph (b)(1) to clarify that the accredited third-party certification body may issue a food or facility certification under this subpart for a term of up to 12 months. Throughout paragraph (b)(2) we are specifying that the food or facility certification must contain information about regulatory audits. At our own initiative, we are revising § 1.653(b)(2)(ii) and (iii) to require accredited third-party certification bodies to provide the FEI of the audited facility and the FEI of the eligible entity, if different from the audited facility, and we revised § 1.653(b)(2) (iv) to require accredited third-party certification bodies to assign numbers to certifications they issue under the program. We are revising paragraph (b)(3) to clarify that FDA may refuse to accept any certification for purposes of section 801(q) or 806 of the FD&C Act if we determine that the certification is not valid or reliable. We are also adding new subparagraph (b)(3)(iii) to specify that if the certification was issued without reliable demonstration that the requirements of paragraph (a) were met, we may determine that the certification is not valid or reliable.

(Comment 122) Some comments contend that proposed § 1.653(a)(2) would require accredited third-party certification bodies to perform onsite verifications of corrective actions in situations where other methods of verification would be adequate. The comments assert that, by requiring onsite verification for any corrective action (other than an action taken to address recordkeeping deficiencies), the proposed rule would impose undue costs on eligible entities and would exacerbate issues of auditor capacity.

The comments suggest that we allow for remote verification of corrective actions through photographs, live webcam transmissions, and any other means that would provide evidence that corrective action has been taken and the eligible entity is in compliance with the FD&C Act. The comments suggest that FDA may, in its discretion, require onsite visits to confirm that corrective actions were taken in extraordinary situations where efforts short of onsite

observation would be insufficient to protect the public, such as in Class I recall situations. Some comments urge us to follow the requirements of ISO/IEC 17021:2011 (Ref. 6) for verification of corrective actions.

(Response 122) We agree that onsite verification of corrective actions would not be necessary to address every deficiency identified in a regulatory audit report under proposed § 1.652(b)(6). ISO/IEC 17021:2011 (Ref. 6) (clauses 9.1.12–9.1.13) describes a range of activities—from document review to onsite verification to additional full audits—that a third-party certification body may use verifying the effectiveness of corrective actions. Remote verification may be appropriate where it would provide an adequate basis for the accredited third-party certification body to determine that the eligible entity had implemented effective corrective action(s) to address the identified deficiency or deficiencies. Accordingly, we are revising § 1.653(a)(2) to expand the methods of verification an accredited third-party certification body may use to verify corrective actions for deficiencies identified in § 1.652(b)(6), except that corrective actions in a facility that was the subject of a notification under § 1.656(c) must be verified onsite.

(Comment 123) Some comments urge FDA to establish qualifications for the individuals accredited third-party certification bodies would use to make certification decisions. The comments suggest that an accredited third-party certification body should use a panel of experts with appropriate industry or regulatory experience to make certification decisions on behalf of the body. Other comments urge FDA to identify the criteria an accredited third-party certification body should use in determining whether to issue certification under section 808 of the FD&C Act.

(Response 123) We agree with the comments suggesting that individuals involved in compliance determinations and certification decisions under section 808 of the FD&C Act must be appropriately qualified for those responsibilities. We agree that decisions on certification should be made by individuals other than audit agents who conducted the regulatory audits that would form the basis for the decisions on certification, except individuals accredited as third-party certification bodies may perform regulatory audits and issue certifications based on the results of regulatory audits they performed. An assessment for accreditation of a third-party certification body under § 1.642 would

focus not only on its competency and capacity for auditing food facilities but also on its capacity to review audit results to determine compliance with applicable food safety requirements for purposes of certification. While an accredited third-party certification body may wish to use a panel of experts for certification decisions, it is not necessary under this rule.

(Comment 124) Some comments suggest that certifications issued under section 808 of the FD&C Act should clearly delineate the scope of products and processes covered by the certification.

(Response 124) Proposed § 1.653(b)(2)(iv) and (vi) would require the certification to include both the scope of the audit and the scope of the food or facility certification. We believe the concern about the scope of products and processes covered by the food or facility certification is adequately addressed by the proposed rule, and we are retaining these provisions in the final rule.

E. When must an accredited third-party certification body monitor an eligible entity that it has issued a food or facility certification? (§ 1.654)

Proposed § 1.654 would require an accredited third-party certification body to conduct monitoring of an eligible entity if the certification body has reason to believe that an eligible entity to which it issued a certification may no longer be in compliance with the FD&C Act.

(Comment 125) Comments endorsing proposed § 1.654 suggest that FDA establish criteria for the “reason to believe” standard—that is, the circumstances FDA believes would trigger a requirement for an accredited third-party certification body to monitor an eligible entity. The comment further suggests that FDA should make these criteria available for public comment.

(Response 125) FDA declines to codify specific criteria that would trigger the need for an accredited third-party certification body to conduct monitoring of an eligible entity to determine whether the entity is still in compliance with applicable requirements, as such criteria would be fact-specific and FDA cannot contemplate all situations that would require such monitoring. FDA envisions that the circumstances that might trigger monitoring under § 1.654 are ones that may affect the eligible entity’s capability to continue to comply with the applicable food safety requirements of the FD&C Act and FDA regulations, such as: (1) Significant changes to the audited facility, such as capital

improvements; (2) major changes to the eligible entity’s management system and processes; or (3) changes to the scope of operations, such as changes in manufacturing processes, that may affect the compliance status of an eligible entity.

(Comment 126) Other comments urge FDA to require an accredited third-party certification body to notify an eligible entity immediately upon determining that monitoring of the eligible entity prior to recertification would be necessary.

(Response 126) We decline the suggestion to require notification of an eligible entity prior to monitoring under § 1.654, as we believe it is more appropriate for the accredited third-party certification body to decide based on the circumstances whether it should alert an eligible entity it has certified that monitoring is necessary or conduct unannounced monitoring activities. An accredited third-party certification body may choose to notify an eligible entity before conducting monitoring activities that are unrelated to the eligible entity’s annual audit for recertification purposes, which must be conducted on an unannounced basis pursuant to § 1.651(c)(1).

F. How must an accredited third-party certification body monitor its own performance? (§ 1.655)

Proposed § 1.655 would require an accredited third-party certification body to conduct self-assessments annually and in the case of revocation of the recognition of its accreditation body and prepare a report of the results of each self-assessment.

On our own initiative, we are revising § 1.655(a)(1) to clarify that as part of the self-assessment, an accredited third-party certification body must evaluate the performance of its audit agents in examining facilities, process(es), and food using the applicable food safety requirements of the FD&C Act and FDA regulations, which will conform with other changes being made to the final rule.

(Comment 127) Some comments support the proposal to require accredited third-party certification bodies to conduct self-assessments. Other comments recommend that FDA should be more explicit in the requirements for self-assessments.

(Response 127) We decline the suggestion to be more explicit in the requirements for self-assessments, as the requirements in § 1.655 include sufficient details for conducting self-assessments. Comments did not provide adequate justification for adding

additional elements to the self-assessment.

(Comment 128) Some comments request that accredited governmental certification bodies be allowed to conduct self-assessments at a frequency different than other accredited third-party certification bodies.

(Response 128) We decline to create different timeframes for self-assessments for governmental versus private certifications bodies. As explained in Response 39, § 1.655 is part of a set of proposed monitoring and self-assessment requirements intended to work together in helping to ensure that the recognized accreditation bodies and accredited third-party certification bodies maintain compliance with the rule's requirements. The certification body self-assessment in § 1.655 is intended to serve, in part, as information for use in the annual accreditation body monitoring in § 1.621, the results of which we intend the accreditation body to use in its annual self-assessment under § 1.622. This system of assessments takes place on an annual basis and is an essential part of the program's safety net. Allowing different timeframes for assessments by different participants would undermine the credibility of the program and create undue administrative complexity. We believe this section will be far less burdensome in practice than some of the commenters may have anticipated. We note that to address general concerns about the burden of these requirements, similar to other sections of the final rule, FDA is adding a new § 1.655(e) to allow an accredited third-party certification body to use documentation of its conformance to ISO/IEC 17021:2011 or ISO/IEC 17065:2012, supplemented as necessary, to meet the requirements of this section.

(Comment 129) Some comments assert that accredited third-party certification bodies should not be required to be prepare self-assessment reports in English under proposed § 1.655(d).

(Response 129) In response to comments and consistent with revisions made elsewhere in the final rule, we are removing the English language requirement in § 1.655(d) for self-assessment reports prepared by third-party certification bodies accredited by a recognized accreditation body. However, we are now including a requirement in § 1.656(b) of submission in English for self-assessment reports prepared by third-party certification bodies directly accredited by FDA and self-assessments submitted to FDA as a result of an FDA request for cause or

due to the termination of an accreditation body's recognition due to denial of renewal, revocation, or relinquishment/failure to renew under § 1.631(f)(1)(i), 1.634(d)(1)(i), or 1.635(c)(1)(i), respectively.

G. What reports and notifications must an accredited third-party certification body submit? (§ 1.656)

Proposed § 1.656 would establish requirements for various reports and notifications that accredited third-party certification bodies would have to submit to FDA and, as appropriate, recognized accreditation bodies. Proposed § 1.656(a) would establish the requirements for submission of regulatory audit reports, and proposed § 1.656(b) would establish the requirements for submission of reports of accredited third-party certification body self-assessments.

Proposed § 1.656(c) would require an accredited third-party certification body to immediately notify us, in English, of a condition that could cause or contribute to a serious risk to the public health (notifiable condition) that the certification body (or its audit agent) discovered while conducting a regulatory or consultative audit of an eligible entity. In the preamble discussion of proposed § 1.656(c) (78 FR 45782 at 45815), we solicited examples of conditions that might and might not meet the standard in section 808(c)(4)(A) of the FD&C Act for notifying FDA. We asked for input on whether the FDA Class I and Class II recall standards, taken together, might adequately address any condition covered by section 808(c)(4)(A) of the FD&C Act.

Proposed § 1.656(d) would require an accredited third-party certification body to immediately notify us electronically, in English, upon withdrawing or suspending the food or facility certification of an eligible entity. Proposed § 1.656(e)(1) would require an accredited third-party certification body that notified FDA under proposed § 1.656(c) also to notify the eligible entity where the condition was discovered. Proposed § 1.656(e)(2) would require the accredited third-party certification body to notify its accreditation body (or, in the case of direct accreditation, to us) electronically, in English, within 30 days after making any significant change that may affect its compliance with the requirements of §§ 1.640 through 1.658.

On our own initiative we are revising § 1.656(c)(1) and (2) to clarify if a condition that could cause or contribute to a serious public risk to the public health is discovered, that in addition to

the name of the eligible entity and/or facility, an accredited third-party certification body must also provide the physical address, unique facility identifier (if designated by FDA), and the registration number under subpart H of this part (where applicable).

(Comment 130) Some comments support proposed § 1.656(a), which would require submission of regulatory audit reports to FDA, but would not require reports of consultative audits to be submitted. Other comments interpret the proposed rule as requiring submission of consultative audit reports to FDA and the reporting of laboratory analytical results under section 422 of the FD&C Act.

(Response 130) Under section 808(c)(3)(A) of the FD&C Act, an accredited third-party certification body or an audit agent of a third-party certification body, where applicable, "shall prepare, and, in the case of a regulatory audit, submit, the audit report for each audit conducted . . ." Based on the statutory language, it is clear that Congress only desired reports of regulatory audits to be submitted to FDA. We also note that section 808(c)(3)(C) of the FD&C Act limits the ability for FDA to access the results of consultative audits to circumstances described in the records access standard of section 414 of the FD&C Act. Some comments incorrectly interpreted the proposed rule to require the submission of the certification bodies' laboratory records and results. We are only requiring maintenance of such records and results under § 1.658.

(Comment 131) Some comments contend that we are interpreting the notification standard in section 808(c)(4)(A) of the FD&C Act too broadly, because the statute only requires accredited third-party certification bodies to notify FDA of notifiable conditions discovered during a regulatory audit. The comments assert that Congress did not intend us to require notification of conditions found during consultative audits, because those audits are for internal purposes; therefore, we should revise proposed § 1.656(c) to remove the reference to a consultative audit. Other comments assert that notifications submitted for conditions found during a consultative audit could overwhelm FDA with data that could make it difficult to identify the most serious risks to public health. Still other comments support our proposal to require notification of conditions found during consultative and regulatory audits.

Some comments describe a range of activities that generally may be referred to as consultative audits and suggest

that requiring notification to FDA of conditions found during these types of consultative audits may have unintended consequences. The comments note the important role of third-party audits (and consultative audits, in particular) in assisting the food industry identify and fix internal problems and drive continuous improvements. The comments suggest that requiring notification during consultative audits might create disincentives for firms who might otherwise use accredited third-party certification bodies to perform consultative audits and for third-party certification bodies who might otherwise be interested in participating in the program.

(Response 131) We decline the suggestion to limit § 1.656(c) to require notification only of conditions found during a regulatory audit, because section 808(c)(4)(A) and (B) of the FD&C Act require notification based on conditions found “at any time during an audit” and identifies “audits” as both consultative and regulatory audits.

Although we decline to limit § 1.656(c) as the comment suggests we believe that many of the concerns about notification during a consultative audit are mitigated by revisions that clarify the scope of the consultative audits that are, and are not, covered by the rule (see Sections III.E and III.J). Under the final rule, an accredited third-party certification body would only be required to notify FDA of a condition that could cause or contribute to a serious risk to the public health if the condition was discovered during an audit that an eligible entity has specifically declared to be a regulatory audit for certification purposes or a consultative audit in preparation for a regulatory audit under this rule.

(Comment 132) Several comments contend that “serious risk to the public health” has the same meaning as “serious adverse health conditions or death to humans or animals” (SAHCODHA) as that phrase is used throughout the FD&C Act. Specifically, the comments assert that FDA should only require accredited third-party certification bodies to notify FDA of conditions that pose a risk of SAHCODHA, as that standard is interpreted for purposes of the Reportable Food Registry (RFR) under section 417 of the FD&C Act (21 U.S.C. 350f).

The comments reject our tentative conclusion that the range of conditions that require notification under section 808(c)(4)(A) of the FD&C Act is broader than SAHCODHA, because the statute describes notifiable conditions as ones

that “could” cause or contribute to a serious risk to public health. In response to our request for input, the comments specifically reject an interpretation of “serious risk to the public health” that might include, for example, conditions that pose a risk of temporary or medically reversible adverse health consequences or where the probability of adverse health consequences is remote. Some comments suggest that accredited third-party certification bodies and audit agents would be more readily able to identify conditions that pose a SAHCODHA risk but would find it more difficult to identify other conditions that would need to be notified to FDA under proposed § 1.656(c). Other comments support our tentative conclusion that a “condition that could cause or contribute to a serious risk to the public health” is broader than a condition relating to a SAHCODHA risk.

(Response 132) We disagree with comments suggesting that the phrase “serious risk to public health” in section 808(c)(4)(A) of the FD&C Act should be interpreted as a risk of SAHCODHA. We note that Congress chose to incorporate SAHCODHA in section 808(c)(6)(A) to describe outbreak situations that would lead to withdrawal of accreditation, but did not use SAHCODHA in describing the conditions that must be notified to FDA under section 808(c)(4)(A) of the FD&C Act. Additionally, Congress chose to incorporate SAHCODHA in other sections of FSMA, such as in provisions on suspension of registration in section 102(b) amending section 415 of the FD&C Act. In light of the foregoing, we believe that Congress intended for a “serious risk to the public health” to be distinct from a risk of SAHCODHA and, therefore, reject the suggestion that accredited third-party certification bodies would only need to notify FDA of conditions that pose a risk of SAHCODHA under proposed § 1.656(c). We conclude that notifiable conditions include not only those that present a risk of SAHCODHA, but also other conditions that “could cause or contribute to a serious risk to the public health.”

Although it is difficult to predict the range of conditions or circumstances that accredited third-party certification bodies and audit agents might encounter, we offer some factors that may be useful in identifying whether a condition would need to be notified under § 1.656(c), such as whether the condition relates to incoming ingredients that will be subject to control within the facility, or an area of the facility where pre-production

materials are held; whether the condition relates to the post-processing environment or where finished product is held prior to distribution; and whether the condition relates to food, process(es), or areas of the facility associated with food that is destined for export to the United States, and not if it relates solely to food, process(es), or areas of the facility associated with food for consumption other than in the United States.

(Comment 133) Some comments urge us to revise proposed § 1.656(c) to incorporate the limitations on reporting that apply to the RFR under section 417(d)(2) of the FD&C Act, such that notification would only be submitted if food adulterated as a result of the notifiable condition had left the control of the eligible entity. The comments assert it would be reasonable for FDA to interpret section 808(c)(4)(A) of the FD&C Act such that an accredited third-party certification body would not need to alert FDA immediately upon discovering a notifiable condition if the eligible entity reworked adulterated product or destroyed it before the adulterated food was transferred to another person. Other comments suggest that proposed § 1.656(c) is redundant because such conditions are subject to RFR reporting.

(Response 133) We decline the suggestion to revise § 1.656(c) to incorporate an exception similar to section 417(d) of the FD&C Act as there is no exception to the notification requirement in section 808(c)(4) as there is in section 417(d). Further, we believe the notification requirement in section 808(c)(4) serves not only to inform FDA of potential risks to the public, but also enhances credibility of the program by giving FDA, accredited certification bodies, and recognized accreditation bodies information that may be relevant to our oversight of the food safety and third-party programs. We believe that given the statutory language and goals of the third-party certification program, it is appropriate for the notification requirement in this rule to have different requirements and exceptions than other notification provisions in the FD&C Act.

As such, we also disagree with comments suggesting the obligation of a responsible party to submit a report to FDA through the RFR makes proposed § 1.656(c) redundant. Among other things, RFR requirements only apply to facilities that are required to register with FDA under section 415 of the FD&C Act. An eligible entity that is a farm, for example, would not be subject to RFR requirements. Additionally, as discussed previously, the reporting

requirement under this rule contains no exception for circumstances when the food adulterated as a result of the notifiable condition has not left the control of the eligible entity. In light of the foregoing, we are retaining § 1.656(c) without the revisions suggested by the comments.

(Comment 134) Some comments urge us to revise proposed § 1.656(e)(1) to allow for concurrent notification of FDA and the eligible entity where the notifiable condition was discovered.

(Response 134) We agree and are adding to § 1.656(e)(1) a provision that allows, where feasible and reliable, for the accredited third-party certification body to contemporaneously notify its recognized accreditation body and/or the eligible entity when notifying FDA. We note that this provision does not affect the obligation for the accredited third-party certification body to notify FDA immediately of a notifiable condition under § 1.656(c).

H. How must an accredited third-party certification body protect against conflicts of interest? (§ 1.657)

Proposed § 1.657 sets out the elements of a conflict of interest program that an accredited third-party certification body would be required to have. Proposed § 1.657(a) would require the accredited third-party certification body to have a written program that covers the certification body itself and any of its officers, employees, or other agents (e.g., audit agents) conducting audits or certification activities under this program. Proposed § 1.657(b) would address the requirement, in section 808(c)(5)(C) of the FD&C Act, to issue implementing regulations that include a structure to decrease the potential for conflicts of interest, including timing and public disclosure, for fees paid by eligible entities to accredited third-party certification bodies. Proposed § 1.657(c) would impute to an accredited third-party certification body's officer, employee, or other agent the financial interests of his or her spouse and minor children, if any. Proposed § 1.657(d) would require an accredited third-party certification body to maintain on its Web site an up-to-date list of eligible entities to which it issued certifications under this subpart, the duration and scope of each such certifications, and the date on which the eligible entity paid any fee or reimbursement under proposed § 1.657(c).

On our own initiative, we are revising the accredited third-party certification body conflict of interest provisions in § 1.657(a)(1) to clarify that the certification body, its officers, employees, and other agents involved in

auditing and certification activities cannot own, operate, have a financial interest in, manage, or otherwise control an eligible entity to be certified. We also are redesignating proposed paragraphs (a)(2) to (4) as (a)(3) to (5) and adding a new paragraph (a)(2) to conform to section 808(c)(5)(A)(i) of the FD&C Act. Additionally, we are revising redesignated § 1.657(a)(3) to add financial interests, management, or control to the proposed list of prohibited interests for audit agents.

(Comment 135) Some comments support proposed § 1.657, asserting that it strikes the right balance between ensuring rigorous protections against conflicts of interest and protection of trade secrets and confidential commercial information. Other comments oppose the third-party certification program that is the subject of this rulemaking because private auditors are inherently conflicted and food safety inspections should be conducted only by FDA.

Other comments suggest various additional conflict of interest restrictions that should be placed, such as requiring an individual audit agent or an individual accredited as a third-party certification body to divest of all interests in FDA-regulated food firms; prohibiting such individual from conducting a regulatory audit of an eligible entity where the individual previously conducted a consultative audit or where the individual was previously employed; and prohibiting the individual from accepting an offer of employment from an audited eligible entity for 1 year following an audit. Still other comments urge FDA to prohibit meals or beverages from being provided during an audit or to define the de minimis value of meals and beverages that may be provided onsite during an audit.

(Response 135) We believe the accredited third-party certification program that Congress directed us to establish under section 808 of the FD&C Act will provide a valuable complement to FDA inspections and will allow us to leverage rigorous, independent third-party audits in helping to ensure the safety of the U.S. food supply. We disagree with comments contending that third-party certification programs are so inherently conflicted that such a program is not worthwhile.

We believe the conflict of interest restrictions for accredited third-party certification bodies and for their audit agents that are established by section 808 of the FD&C Act for public and private third-party certification bodies, as implemented by this rule, provide the safeguards necessary for a credible

third-party certification program. Accordingly, we decline suggestions to revise § 1.657 to place additional conflict of interest limitations that would be impractical and unnecessary, such as requiring: (1) Requiring full divestment by audit agents of interests in any FDA-regulated food firm; (2) prohibiting an individual who conducted a consultative audit of an eligible entity from ever conducting a regulatory audit of the same eligible entity; (3) prohibiting an individual who audited an eligible entity from accepting an offer of employment from the eligible entity for 1 year following the audit; and (4) prohibiting an individual conducting an audit from accepting a beverage or a meal of de minimis value that is provided onsite during audit.

We disagree with comments suggesting that by providing meals of a de minimis value, an eligible entity or facility might influence the outcome of an audit by an accredited third-party certification body, particularly if the only allowable meals are ones of minimal value that are provided during the course of an activity and with the purpose of facilitating timeliness and efficiency. As explained in Response 55, FDA follows a similar approach for investigators conducting foreign inspections—that is, FDA investigators performing foreign inspections are allowed to accept lunches (of little cost) provided by firms during the course of foreign inspections. We also note that the U.S. government allows its employees to accept meals, within per diem limits, when on official business in a foreign country, as an exception to the prohibition on the acceptance of gifts or gratuities from outside sources (5 CFR 2635.204(i)(1)), though we believe the FDA's practices for foreign inspections serve as a better model because foreign inspections are more analogous to foreign audits than are the range of activities that covered by the general requirements applicable to all U.S. government employees on official business in foreign countries. Accordingly, in light of the comments received and analogous FDA guidelines, we have concluded that it is reasonable and appropriate to limit the meal exception in § 1.657(a)(4)(ii) to only lunches of de minimis value provided during the course of an audit, on site at the premises where the assessment is being conducted, and only if necessary to facilitate the efficient conduct of the audit. We believe these revisions help to address concerns regarding the threats to impartiality, while accommodating the practical considerations that apply to foreign audits.

Consistent with our guidance to recognized accreditation bodies under Response 55, we offer the following additional input to accredited third-party bodies seeking guidance on the application of § 1.657(a)(4)(ii). In considering whether a meal is allowable under this provision, we recommend first considering whether accepting the lunch is necessary to facilitate the efficient conduct of the audit. We recommend considering: (1) Whether the circumstances surrounding the travel would allow a lunch to be packed bring on site; (2) Whether the meal is being provided during the midday or early afternoon. A lunch provided in the midst of an audit is different than a lunch or other meal provided at the completion of the audit; (3) Whether the site of the audit is in close proximity to a retail food establishment, or is at a remote location far from a retail food establishment; (4) What is the estimated value (or cost) of the lunch in light of the costs associated with the area where the audit is being conducted; and (5) other similar considerations.

For accredited third-party certification bodies or audit agents seeking additional guidance on determining what constitutes a “de minimis” amount for purposes of complying with § 1.624(a)(3)(ii), we offer the following guidance that is based on the requirements applicable to U.S. government employees who accept certain meals while on official travel in foreign countries. Such employees must deduct from the per diem the value of that meal, calculated using a two-step process.

First, the individual must determine the per diem applicable to the foreign area where the meal was provided, as specified in the U.S. Department of State’s Maximum Per Diem Allowances for Foreign Areas, Per Diem Supplement Section 925 to the Standardized Regulations (GC,FA) available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, and available on the Department of State Web site at https://aoprals.state.gov/Web920/per_diem.asp. (Foreign per diem rates are established monthly by the Department of State’s Office of Allowances as maximum U.S. dollar rates for reimbursement of U.S. Government civilians traveling on official business in foreign areas.)

Second, the individual must determine the appropriate allocation for the meal within the daily per diem rate which is broken down into Lodging and M&IE that are reported separately in Appendix B of the Federal Travel Regulation and available on the

Department of State’s Web site at https://aoprals.state.gov/content.asp?content_id=114&menu_id=78.

Accordingly, under § 1.657(a)(4)(ii), an accredited third-party certification body that is an individual or an audit agent of an accredited third-party certification body who is conducting a food safety audit of an eligible entity may accept lunch provided during an audit and on the premises where the audit is conducted, if necessary to facilitate the efficient conduct of the audit.

(Comment 136) Some comments raise concerns about possible conflicts of interests. Some comments urge us to attach additional controls to the accreditation of foreign cooperatives to prevent them from auditing and certifying their members’ facilities and food. Other comments recommend we further consider the difficulties involved with foreign governments demonstrating impartiality of their processes in auditing and certifying facilities owned by the foreign government.

(Response 136) We note that under proposed § 1.657, foreign cooperatives accredited as third-party certification bodies would not be able to audit or certify their members’ facilities or foods under the program, because of their shared financial interests.

We decline the suggestion to develop special sets of controls for one or more types of third-party certification bodies eligible to be considered for accreditation under section 808 of the FD&C Act. We note that the conflict of interest requirements in section 808(c)(5) of the FD&C Act apply equally to the foreign governments, agencies of foreign governments, foreign cooperatives, and other third-parties. That is, a foreign government accreditation body that is recognized by FDA under this program may accredit government auditors (*i.e.*, the competent authority for food safety) from the same nation, provided that the conflict of interest requirements in § 1.657 are met. Consistent with the approach taken in the statute, we believe that this comprehensive, rigorous set of conflict of interest requirements make it unnecessary for us to create a different or special controls for certain types of certification bodies.

(Comment 137) Some comments support the proposal to require accredited third-party certification bodies to maintain up-to-date lists of eligible entities to which food or facility certification were issued, together with the duration and scope of each such certification. The comments suggest that having this information readily

available would be helpful to importers seeking to participate in VQIP and those seeking to import food that is subject to import certification under section 801(q) of the FD&C Act.

Other comments suggest that requiring an accredited third-party certification body to maintain a list of certified eligible entities on its Web site, together with the dates each eligible entity paid certification fees, could create an unfair competition. The comments contend that the statute does not require disclosure of the date of payment of fees and seek clarification on the basis for disclosing the timing of fee payments. Other comments suggest that information on payment of fees should remain confidential between the accredited third-party certification body and the eligible entities it audited and suggest the information could be made available to FDA on request. Still other comments contend that FDA should only have access to information on fee payments by eligible entities upon a showing of cause.

(Response 137) We agree with comments suggesting that Web site listings of eligible entities to which food or facility certification were issued would be helpful to importers. We disagree that such information would create unfair competition, and the comment did not provide an explanation as to why this would be the case. To the contrary, publicizing this information will increase transparency and accountability of the program. We are not proposing to require disclosure of the amount of fees paid by eligible entities, because we are concerned that publicizing the amounts of fee payments may lead to certification bodies using this information to gain a competitive advantage by offering audits at discount rates. However, we believe proposed § 1.657(c) meets the requirement of section 808(c)(5)(C)(ii) of the FD&C Act to provide information on the timing of fee payments and will help build confidence in the third-party certification program by providing assurances that payments are not related to the results of regulatory audits. We decline to adopt the alternative approach suggested by comments—*i.e.*, such information should be disclosed to FDA only when needed to investigate problems if they occur, and publicly released only if disclosure would improve public health—as inadequate to satisfy the requirements of section 808(c)(5)(C)(ii) of the FD&C Act. In light of the foregoing, we are retaining § 1.657(c), redesignated as § 1.657(d), as proposed.

I. What records requirements must a third-party certification body that has been accredited meet? (§ 1.658)

Proposed § 1.658 would require accredited third-party certification bodies to maintain the following documents and data electronically, in English, for 4 years, to document compliance with the rule: (1) Requests for regulatory audits; (2) audit reports and other documents resulting from a consultative or regulatory audit; (3) any notification of a condition under proposed § 1.650(a)(5) or by the accredited third-party certification body to FDA under proposed § 1.656(c); (4) any food or facility certification issued under this program; (5) any challenge to an adverse regulatory audit decision and its disposition; (6) any monitoring it conducted of a certified eligible entity; (7) the auditor's/certification body's self-assessments and corrective actions; and (8) any significant change to the auditing and certification program that might affect compliance with this rule.

On our own initiative, we are requiring under § 1.658(a)(3) the maintenance of any laboratory testing records and results and documentation demonstrating that such laboratory is accredited in accordance with § 1.651(b)(3).

(Comment 138) Some comments recommend that we allow accredited third-party certification bodies to maintain their records in languages other than English, coupled with a requirement to provide an English language translation upon FDA request. Some comments suggest that we should allow for flexibility in the timeline for submission of translated records in the regulations, rather than establishing a specific deadline, because the circumstances of each records request will dictate what would be appropriate—*e.g.*, where there is a recall involving a certified facility, then the timeframe for providing translations should be very stringent, but where records are requested for routine verification purposes, the accredited third-party certification body should have more time to comply. Other comments note that a minimum of 5 business days would be required for English language translations of records.

(Response 138) We agree that records should not be required to be maintained in English, for the same reasons as we explained in Response 64 (regarding the records of recognized accreditation bodies) and are revising § 1.658 accordingly. We further agree with comments suggesting that we should have a flexible, rather than a fixed timeline for providing English language

translations of requested records to FDA and are requiring translations to be provided within a reasonable time after an FDA request.

(Comment 139) Some comments urge us ensure that § 1.658 fully incorporates the limitation on access to reports and documents relating to consultative audits in section 808(c)(3)(C) of the FD&C Act.

(Response 139) Section 808(c)(3)(C) of the FD&C Act states that reports or other documents resulting from a consultative audit are accessible to us only under circumstances that meet the requirements for records access under section 414 of the FD&C Act. Proposed § 1.658(a)(1) utilizes the language of section 808(c)(3)(C) of the FD&C Act in describing the types of records of consultative audits that an accredited third-party certification body must maintain, and proposed § 1.658(b) states that those records must be made available to FDA in accordance with 21 CFR part 1, subpart J, which implements section 414 of the FD&C Act. Therefore, the requirements in § 1.658 do fully incorporate the limitation on access to reports and documents relating to consultative audits as specified in section 808(c)(3)(C) of the FD&C Act.

(Comment 140) Some comments urge us to ensure that trade secrets and confidential commercial information contained in any records submitted to FDA would be adequately protected. The comments note that the proposed rule does not contain language on the protection of trade secrets, such as the language in 21 CFR parts 120 and 123 indicating that HACCP plans are trade secrets exempt from disclosure. Other comments suggest that FDA should consider examining accredited third-party certification body records without taking custody of them. The comments further suggest that FDA should establish an administrative process for requesting records from accredited third-party certification bodies participating in the program.

Some comments urge us to clarify that we will not be applying the records access and submission requirements of subpart M to audits that are not conducted under the rule or to records of the audited food facilities.

(Response 140) We acknowledge concerns about protecting proprietary information and are adding § 1.695 to address disclosure issues (see Section XIII.F).

We decline the suggestion to review records of accredited third-party certification bodies without taking custody of the records, because such an approach would be inconsistent with the records provisions in section

808(c)(3)(B) of the FD&C Act and would undermine the credibility of the program. We also decline the suggestion to establish separate administrative processes for handling records requests that might include, for example, procedures for challenges to records requests and appealing adverse decisions on records requests. Establishing and administering a process for FDA records requests would hinder our program oversight and would be overly burdensome. We note that in this rulemaking, FDA has established a number of mechanisms to address challenges to FDA's decisions, including § 1.691 (for requests for reconsideration of the denial of an application of waiver request); § 1.692 (for internal agency review of the denial of an application or waiver request upon reconsideration); and § 1.693 (for regulatory hearings on withdrawal of accreditation).

We recommend third-party certification bodies to fully consider the program requirements before deciding to pursue recognition under the voluntary third-party certification program. Once accredited a certification body may voluntarily relinquish its accreditation under § 1.665.

We note that the records maintenance and access requirements of subpart M apply only to records relating to an accreditation of a third-party certification body under this rule and to the audits and certification activities conducted under this program. Records of audits or certifications issued by an accredited third-party certification body for any other purpose outside of the scope of the program under subpart M are not covered by § 1.658. We also note that the rule does not affect the records maintenance and access requirements that apply to facilities under subpart J of this part.

X. Comments on Procedures for Accreditation of Third-Party Certification Bodies Under This Subpart

A. Where do I apply for accreditation or renewal of accreditation by a recognized accreditation body and what happens once the recognized accreditation body decides on my application? (§ 1.660)

Proposed § 1.660 states that auditors/certification bodies must apply directly to a recognized accreditation body for accreditation (except for circumstances meeting the requirements of § 1.670 for direct accreditation).

On our own initiative, we are adding new provisions (b) through (d) to § 1.660 to explain what happens when a third-party certification body's renewal

application is denied. We are adding provisions to clarify what the applicant must do, the effect of denial of an application for renewal of accreditation on food or facility certifications issued to eligible entities, and how FDA will notify the public.

(Comment 141) Some comments propose that we include a time limit for recognized accreditation bodies to issue an accreditation decision. They argue a time limit would set measurable standards for the process and would also help ensure an adequate supply of accredited auditors/certification bodies. Comments suggest the timeframe be 90 days. Some comments suggest the timeframe could be stipulated in the Model Accreditation Standards.

(Response 141) We acknowledge the interest in having timely accreditation decisions. However, the comments failed to provide an adequate basis to support a decision to impose a 90-day deadline for decisions on accreditation. No other information available to FDA provides an adequate basis for us to establish such a deadline, nor do we think it would be appropriate to do so at this time. We expect that the time required to perform various actions in the program will be longer in the early days of the program than it will when FDA, the accreditation bodies, and the third-party certification bodies gain experience with the program.

We decline to revise these regulations to impose a deadline for accreditation decisions, but may consider addressing the issue of deadlines for accreditation decisions in guidance, if we later determine it would be appropriate. We are mindful that section 808(c)(1)(C) of the FD&C Act requires revocation of recognition for failure to comply with the applicable requirements of the FD&C Act and FDA regulations. We would not want an accreditation body to take shortcuts in accreditation assessments to ensure that it could meet a regulatory deadline for its accreditation decisions out of concern for revocation for failure to comply with the deadline. The final rule reflects our view that the rigor of the accreditation assessment is essential in helping to ensure the credibility and success of the third-party certification program.

(Comment 142) Some comments ask whether the processes for accreditation are the same for governmental and private bodies.

(Response 142) Section 808(c)(1)(A) and (B) of the FD&C Act establishes different requirements for public certification bodies and for private certification bodies by specifying different criteria for the assessment of foreign governments/agencies than it

does for foreign cooperatives and other private third-party certification bodies seeking accreditation. However, the statute makes no distinction between public and private certification bodies in procedural matters for accreditation. Therefore, we are establishing a single set of accreditation procedures in this rule that apply to both public and private third-party certification bodies.

(Comment 143) Some comments ask how a third-party certification body could apply for accreditation under this program.

(Response 143) Third-party certification bodies seeking to apply for accreditation under our program may wish to review § 1.660 of this final rule, which describes the general procedures for applying for accreditation from a recognized accreditation body, as well as the eligibility requirements for certification bodies seeking accreditation in §§ 1.640 through 1.645. We will post on the FDA Web site a list of all recognized accreditation bodies and will include a description of the scope of recognition of each.

As provided in § 1.670(a)(3), FDA will announce on our Web site if we determine that the conditions for direct accreditation by FDA in section 808(b)(1)(A)(ii) of the FD&C Act have been met. We will accept applications for direct accreditation or renewal of direct accreditation only if we determine that we have not identified and recognized an accreditation body to meet the requirements of section 808 of the FD&C Act within 2 years after establishing the program. Unless and until FDA makes such a determination, third-party certification bodies must apply for accreditation from an accreditation body that FDA has recognized.

(Comment 144) Some comments suggest that third-party certification bodies who receive an adverse decision on accreditation from a recognized accreditation body should have access to a competent, independent person outside the recognized accreditation body to whom they could appeal.

Other comments contend that we have the authority to challenge the decisions of an accreditation body.

(Response 144) As explained in Response 36, we are revising § 1.620(d)(2) to require a recognized accreditation body must use competent persons, who may be external to the accreditation body, for investigating and deciding on certification body challenges to an adverse accreditation body decision. Such competent persons must meet the following criteria: (1) Are free from bias or prejudice; (2) did not participate in the accreditation decision

being appealed; and (3) are not subordinate to a person who participated in such accreditation decision. Although we are not requiring the accreditation body to use an external party for certification body appeals, we believe the enhanced requirements of § 1.620(d)(2) will be adequate to ensure any person the accreditation body would select for investigating and deciding on appeals—whether internal or external—would be objective and independent.

With respect to comments suggesting that we should exercise our authority over recognized accreditation bodies to challenge their accreditation decisions, we note that the enhanced requirements in § 1.620(d) align with the impartiality provisions in part 16, which contains the regulations for FDA regulatory hearings that we will generally apply under § 1.693 to an appeal of a revocation or withdrawal. We also note that FDA retains the authority to revoke the recognition of accreditation bodies for good cause under § 1.634(a)(4) for failure to comply with this rule. For these reasons, we decline to establish a process appealing recognized accreditation body decisions to FDA.

B. What is the duration of accreditation by a recognized accreditation body? (§ 1.661)

Proposed § 1.661 states that the accreditation of a third-party certification body may be granted for a period up to 4 years.

(Comment 145) Most comments agree with our proposed maximum 4-year accreditation timeframe. In this regard, some comments state they are comfortable with this length of time as long as accreditation bodies annually review the accreditation. Some comments contend that instead of allowing accreditation to last “up to 4 years,” we should establish a definite duration period and it should be 5 years. These comments contend that would align the duration of accreditation with the duration of recognition. They also argue that having a definite duration period would be more viable administratively.

(Response 145) We agree with the comments supporting our proposal to allow accreditation to be issued for a term of up to 4 years. The comments suggesting accreditation should be granted for 5 years offered no information that would provide an adequate basis for extending accreditation such that a third-party certification body could be accredited for as long as a recognized accreditation body. We note that the rigor and credibility of the program rests, in part,

on the extent of oversight of accredited third-party certification bodies. Through the renewal process, recognized accreditation bodies (and FDA, for directly accredited third-party certification bodies) look closely at all aspects of a certification body's and performance and have the opportunity to decide anew whether the certification body meets the eligibility requirements.

With respect to comments suggesting that we establish a definite duration of accreditation that would apply to any third-party certification body accredited under the program, we acknowledge the advantages that certainty provides and, where appropriate, we expect that recognized accreditation bodies will issue accreditation for the maximum duration of 4 years. Where, for example, a certification body has little or no experience conducting audits assessing the safety of food, a recognized accreditation body (or FDA under direct accreditation) may decide the initial grant of accreditation should be less than 4 years. A recognized accreditation body (or FDA under direct accreditation) will make its own decision on whether to approve a third-party's application for accreditation and has the flexibility to issue accreditation for a duration it believes appropriate, up to a 4-year maximum established by this rule.

C. How will FDA monitor accredited third-party certification bodies?
(§ 1.662)

We proposed in § 1.662 to monitor directly accredited certification bodies annually; we proposed to evaluate certification bodies accredited by a recognized accreditation body by not later than 3 years after the date of accreditation for a 4-year accreditation term or by no later than the mid-term point of a less-than-4-year accreditation term. We proposed to review a variety of records and information such as assessments by a recognized accreditation body, information regarding the auditor's/certification body's qualifications, and information obtained during onsite observations. We proposed to conduct our evaluation through onsite observations of performance during a food safety audit of an eligible entity or through document review.

(Comment 146) Some comments advocate for more clarity on the frequency and methods by which we'll be providing oversight of accredited third-party certification bodies. Some comments question whether we have sufficient resources to conduct onsite observation at any specific frequency. They advise that we further explain how

we are going to provide oversight and how compliance will be reported.

(Response 146) Monitoring assessments of accredited third-party certification bodies are one of several tools we will use for program oversight. Section 1.662(a) implements section 808(f) of the FD&C Act, which states that FDA must evaluate an accredited third-party certification body periodically, or at least once every 4 years, and take any other measures FDA deems necessary to ensure compliance. We anticipate that information gleaned from other monitoring tools, such as the accreditation body's annual assessment of the certification body, will also aid in program oversight and may perform additional assessments of certification bodies in certain instances.

The objective of an assessment under § 1.662 will be to determine the accredited third-party certification body's compliance with the requirements of this rule. FDA may conduct an assessment through a site visit of the third-party certification body's headquarters, onsite observation of an accredited third-party body's performance during a food safety audit, document review, or a combination of these activities. We will develop plans for assessing accredited third-party certification bodies based on risk and informed by data and other information available to FDA regarding their programs and performance in our program. The starting point for each assessment will be document review, and any additional assessment activities (e.g., site visits or onsite observations) will be conducted where circumstances may warrant or for spot-checks of randomly selected third-party certification bodies. When planning an assessment, we will establish the time period of activities covered by the assessment. We may request records of the certification body under § 1.658. We also may develop plans for any site visits or onsite observations, including locations to be visited. As part of the assessment, we may review records relating to conflicts of interest, and interview officers, employees, and audit agents, and other agents who participate in decisions on issuance of certification under this program. We are revising this section to explicitly state that FDA may visit the certification body's headquarters or other locations where audit agents are managed.

(Comment 147) Some comments propose alternative schedules for FDA monitoring of accredited third-party certification bodies. Some comments propose that if we revise the final rule to establish a fixed, 5-year duration for accreditation, we should monitor

accredited third-party certification bodies not later than 4 years after the date of accreditation. Other comments state that we should conduct our own assessments of certification bodies accredited by recognized accreditation bodies every 3 years. Still other comments ask who will cover the costs of such assessments.

(Response 147) As explained in Response 145, we decline the suggestion to lengthen the maximum duration of accreditation from 4 years to 5 years. We will use annual performance assessments by recognized accreditation bodies and information submitted to FDA as part of our ongoing monitoring of accredited third-party certification bodies. The FDA monitoring assessment under § 1.662 will occur at least once every 4 years and may occur more frequently depending on circumstances, including available resources. We are proposing that costs for FDA monitoring will be included in the user fees that are assessed under section 808(c)(8) of the FD&C Act to recover FDA's costs in administering the program (80 FR 43987).

(Comment 148) Some comments propose that FDA monitoring of accredited third-party certification bodies should periodically focus on compliance with food additive requirements.

(Response 148) Our monitoring will be tailored to the scope of accreditation under which the accredited third-party certification body may conduct food safety audits under this program. We will prioritize our monitoring activities to ensure compliance with the requirements of section 808(f)(2) based on factors such as our risk-based program priorities.

(Comment 149) Some comments suggest that, in addition to conducting onsite observations of accredited certification bodies when conducting a food safety audits, we could also do so when the recognized accreditation body assesses the auditor/certification body.

(Response 149) We agree and will do so as appropriate and as circumstances allow.

(Comment 150) Comments suggest that when FDA selects an accredited certification body for onsite observation, we should notify it 2 months in advance, to allow time to make the arrangements.

(Response 150) At this time, we have no basis for determining that we would be able to provide 2 months' notice prior to each certification body onsite observation; therefore, we decline the suggestion. We note that we may begin working with an accredited third-party

certification body well before we perform onsite observations, as feasible.

D. How do I request an FDA waiver or waiver extension for the 13-month limit for audit agents conducting regulatory audits? (§ 1.663)

Proposed § 1.663 would allow accredited third-party certification bodies to seek an FDA waiver of the limit on audit agents conducting regulatory audits of an eligible entity where they conducted a regulatory or consultative audit in the preceding 13 months. Under section 808(c)(4)(C)(ii) of the FD&C Act, we may waive the limit, which appears in § 1.650(c), where there is insufficient access to accredited certification bodies in the country or region where an eligible entity is located.

Of our own initiative, we are clarifying in the final rule that the showing of insufficient access is based on lack of audit agents (or in case where accredited third-party certification bodies are comprised of an individual, that individual), consistent with changes made to § 1.650 (see Section IX.A).

(Comment 151) Some comments note that capacity issues are currently problematic, even in regions with highly developed third-party food safety auditing systems, and are likely to increase once the FSMA rules are implemented. Some comments contend that we should allow the request for the waiver to come from other affected parties in addition to accredited certification bodies. In particular, comments suggest we should allow the requests to come from a foreign supplier and/or the importer. Some comments estimate that, with the increased demand from FSMA for audit services, it will take time for capacity to expand sufficiently to satisfy the increased demand. Accordingly, they urge us to act expeditiously on waiver and waiver extension requests. Other comments express concern that FDA will be overwhelmed with waiver requests and urge FDA to develop a process for expedited issuance of waivers.

(Response 151) We acknowledge the concerns and are aware capacity is an issue the food industry and certification bodies currently face. However, we decline the suggestion to allow importers and foreign suppliers to seek waivers on behalf of an accredited certification body, because we believe the certification body is better positioned to determine its own capacity than an importer or foreign supplier would be. Further, it would ultimately be the certification body's choice regarding whether to take on

additional auditing work. If an accredited third-party certification body concluded it needed a waiver to be able to perform a particular audit, the certification body would be motivated to seek a waiver.

We agree with the comments suggesting it will take time to build adequate food safety auditing capacity around the world and will be prepared to act on waiver requests as expeditiously as possible. It is difficult to estimate the amount of the time required to process waiver requests, because the program has not launched. We anticipate that we will be able to process most waiver requests within 15 business days, as permitted by resources and other program activities. In response to comments suggesting that we should prioritize certain types of waiver requests, we have modified the first-in, first-out rule of § 1.663(d) to allow specific waiver requests to be prioritized based on program needs.

We also note that as we gain experience with the program and with information offered in support of waiver requests, we expect to be able to process waiver requests more quickly and may reevaluate whether FDA has adequate information to support issuance of a waiver for a particular country or region.

E. When would FDA withdraw accreditation? (§ 1.664)

Proposed § 1.664 would establish the conditions under which we could withdraw accreditation from a third-party certification body, regardless of whether it was directly accredited or accredited by a recognized accreditation body. This section would implement section 808(c)(6)(A) of the FD&C Act, which requires us to withdraw accreditation in certain outbreak situations, whenever we find that an accredited third-party certification body is no longer meeting the requirements for accreditation, or following a refusal to allow U.S. officials to conduct audits and investigations to ensure compliance with these requirements. The statute directs us to withdraw accreditation if a food or facility certified by an accredited third-party certification body under our program is linked to an outbreak of foodborne illness that has a reasonable probability of causing serious adverse health consequences or death in human or animals. There is an exception if we conduct an investigation of the material facts of the outbreak, review the steps and actions taken by the third-party certification body, and determine that the accredited third-party certification body satisfied the

requirements for issuance of certification under this rule.

Section 808(c)(6)(B) of the FD&C Act allows us to withdraw accreditation from an accredited third-party certification body whose accrediting body had its recognition revoked, if we determine there is good cause for withdrawal. This statutory provision is reflected in proposed § 1.664(c), which also provides two examples of circumstances we believe provide good cause for withdrawal, including bias or lack of objectivity and performance calling into question the validity or reliability of its food safety audits and certifications.

In proposed § 1.664(d) we provide for records access when considering possible withdrawal of accreditation. In proposed § 1.664(e) we provide for notice of withdrawal of accreditation and describe the processes to challenge such withdrawal.

Proposed § 1.664(f) describes the effect of withdrawal on eligible entities. Proposed § 1.664(g)(1) explains that FDA will notify the recognized accreditation body that accredited the third-party certification body whose accreditation was withdrawn by FDA. Proposed § 1.664(g)(2) explains that FDA may revoke recognition of an accreditation body whenever FDA determines there is good cause for revocation under proposed § 1.634. Proposed § 1.664(h) provides for public notice of withdrawal of accreditation on FDA's Web site.

At our own initiative, we revised proposed § 1.664(c) on discretionary withdrawal of accreditation to allow for partial withdrawal of accreditation. For example, if FDA reviews a self-assessment submitted by an accredited third-party certification body following revocation of its accreditation body's recognition and determines the third-party certification body has failed to perform food safety audits consistent with this rule in some but not all areas for which it is accredited, FDA may partially withdraw the third-party certification body's accreditation as to those areas in which it has failed to comply with this rule.

(Comment 152) Some comments contend that FDA's interpretation of the statutory mandatory withdrawal provisions in section 808(c)(6)(A) of the FD&C Act is overly strict. The comments focus specifically on mandatory withdrawal when an eligible entity that was issued certification by an accredited third-party certification body is linked to a foodborne illness outbreak that meets the SAHOCODHA standard. The comments argue that one adverse event does not necessarily mean the

third-party certification body should lose its accreditation, emphasizing that a single certification body might conduct hundreds of audits in various regions of the world and in diverse product areas. The comments propose that we limit mandatory withdrawal following an SAHCOHDA outbreak to the country, region, type of food product and process involved in the event.

Some comments agree that, as described in proposed § 1.664(f), certifications issued by a third-party certification body prior to withdrawal of its accreditation should remain in effect until they expire. Other comments assert that withdrawal of accreditation might result in unfairly revoking a significant number of certifications at tremendous cost, adversely affect other eligible entities that depend on the certification body and its certifications, and disrupt the marketplace. Still other comments request greater detail on the withdrawal procedures.

(Response 152) We believe the concerns about mandatory withdrawal of accreditation in the outbreak situation described above or similar situations are satisfactorily addressed in § 1.664(b), codifying section 808(c)(6)(C) of the FD&C Act, which allows FDA to waive mandatory withdrawal if FDA investigates the material facts of the outbreak, reviews the steps and actions taken by the certification body, and determines that the certification body satisfied the criteria for issuance of certification under this subpart.

Regarding the comments expressing concerns about the possible adverse effects of withdrawal of accreditation on certifications issued by the certification body to other eligible entities, we note that § 1.664(f) states that certifications issued by an accredited third-party certification body prior to withdrawal of accreditation by FDA will remain in effect until they expire, except that FDA may refuse to consider a certification under sections 801(q) or 806 of the FD&C Act if FDA has reason to believe such certification is not valid or reliable.

The comments seeking additional detail on our withdrawal procedures did not specify what areas of § 1.664 required further explanation. We believe the procedures described in § 1.664 offer sufficient detail for interested parties to understand the standards for withdrawal of accreditation by FDA and the processes involved.

(Comment 153) Some comments suggest that a recognized accreditation body, not FDA, should withdraw accreditation from a certification body it accredited, except for certification bodies directly accredited by FDA.

Other comments urge us to include a requirement, in § 1.634(a), for FDA to consult with the appropriate accreditation body before withdrawal of an accreditation it had issued. The comments argue that consultation would facilitate coordination with the recognized accreditation body and would complement § 1.664(c), which addresses discretionary withdrawal of accreditation in the event we revoke our recognition of the accrediting accreditation body. Other comments recommend that we meet with the certification body's accrediting body when considering possible withdrawal of accreditation and that we allow for a formal appeal process.

(Response 153) We disagree with the comment asserting that only accreditation bodies may withdraw accreditations of certification bodies they have accredited, as FDA is mandated under section 808(c)(6) of the FD&C Act to withdraw accreditation of a certification body under the conditions set forth in the section, subject to the waiver provision in 808(c)(6)(C). We note that a third-party certification body whose accreditation was withdrawn by FDA may appeal the action by requesting a regulatory hearing under § 1.693. We further note that a recognized accreditation body has far broader authority to suspend, withdraw, reduce, or otherwise dispose of an accreditation it issued, than FDA does under section 808(c)(6) of the FD&C Act. Even in circumstances that meet the statutory criteria for withdrawal of accreditation, FDA believes it generally would not need to initiate withdrawal unless the recognized accreditation body failed to withdraw the certification body's accreditation in a timely manner.

We agree that in some cases, consultation with a certification body's accrediting body before withdrawal could have advantages to FDA and the accreditation body, if circumstances allow. Decisions on whether to consult with the certification body's accrediting body prior to withdrawal will be made on a case-by-case basis. Consultation might not be appropriate if, for example, the facts that support withdrawal of the third-party certification body's accreditation also support revocation of the accreditation body's recognition.

(Comment 154) Some comments ask how individual holders of food or facility certificates would be made aware of the withdrawal of accreditation of the third-party certification body that issued the certificate. Other comments recommended that FDA post on its Web site not only that fact that a certification body's accreditation has been

withdrawn, but also the reason for the withdrawal.

(Response 154) If we withdraw accreditation of any third-party certification body, whether accredited by a recognized accreditation body or by FDA through direct accreditation, we will post information regarding the withdrawal, including a description of the basis for the action, on the FDA Web site pursuant to § 1.664(h). We do not intend to contact each eligible entity that was issued a certification by the third-party certification body because, as indicated in Response 152, certifications issued to eligible entities prior to withdrawal of accreditation will remain in effect until they expire, except where FDA has reason to believe the certification is not valid or reliable and on that basis may refuse to consider the certification under sections 801(q) or 806 of the FD&C Act.

(Comment 155) Some comments recommend we use ISO/IEC 17011:2004 as the reference document for the requirements of this section.

(Response 155) We decline the suggestion, because the grounds for withdrawal under section 808(c)(6) of the FD&C Act are much broader than those described in ISO/IEC 17011:2004 (Ref. 5). For example, under section 808(c)(6)(A)(i) and (C) of the FD&C Act FDA may withdraw accreditation of a certification body if a food or facility it certified under our program is linked to an outbreak of foodborne illness that has a reasonable probability of causing SAHCOHDA, unless FDA determines the certification body satisfied the requirements for issuance of such certification. In such an outbreak situation, the statute contemplates that withdrawal of accreditation would occur after a single—albeit significant—failure by the certification body. By contrast ISO/IEC 17011:2004 allows for withdrawal of accreditation only when a certification body persistently fails to meet the requirements of accreditation or abide by the rules of accreditation.

We note that by declining to revise § 1.664 based on the comments, we are not suggesting that FDA will withdraw accreditation when the Agency identifies a single incident or mistake by a certification body, except where required by the statute. Any decision to withdraw accreditation will be based on the facts and circumstances of the situation and following due consideration by FDA.

(Comment 156) Some comments state that in a case where FDA withdraws an accredited certification body, the accreditation body should make an investigation and analysis and submit the analysis result to FDA within 3

months after the analysis report has been established.

(Response 156) We disagree. This rule does not require that the accreditation body make a full investigation and analysis and submit the analysis result to FDA within 3 months. Section 1.664(g) requires the accreditation body to perform a self-assessment and report the results of the self-assessment to FDA within 60 days. FDA may revoke the recognition of an accreditation body whenever FDA determines there is good cause for revocation of recognition under § 1.634. These procedures will help ensure that accreditation bodies remain in compliance with the requirements of the third-party program.

F. What if I want to voluntarily relinquish accreditation or do not want to renew accreditation? (§ 1.665)

Proposed § 1.665 offers a mechanism for an accredited third-party certification body to voluntarily relinquish its accreditation before it terminates by expiration.

Although we received no adverse comments on this section, we received comments on other sections of the rule that led us to identify a gap in procedural requirements when an accredited certification body decides to allow its accreditation to expire without renewing it. At our own initiative, we are revising the voluntary relinquishment provisions in § 1.665 to also address situations where a certification body decides it does not want to renew its accreditation once it expires.

G. How do I request reaccreditation? (Proposed § 1.666)

Proposed § 1.666 describes the procedures a certification body must follow when seeking to be reaccredited after its accreditation was withdrawn by FDA or after voluntarily relinquishing its accreditation.

FDA received no adverse comments on this section. On our own initiative we are revising paragraph (a)(2)(i) to conform to the changes in § 1.634(d) to clarify that the third-party certification body has to become accredited by another accreditation body or by FDA through direct accreditation no later than 1 year after the withdrawal or accreditation, or the original date of expiration of the accreditation, whichever comes first.

XI. Comments on Additional Procedures for Direct Accreditation of Third-Party Certification Bodies Under This Subpart

A. How do I apply to FDA for direct accreditation or renewal of direct accreditation? (§ 1.670)

Section 808(b)(1)(A)(ii) of the FD&C Act allows us to directly accredit third-party auditors/certification bodies if we have not identified and recognized an accreditation body to meet the requirements of section 808 within 2 years after establishing this program. We proposed circumstances and procedures that would apply for direct accreditation and renewal of direct accreditation.

(Comment 157) Some comments assert that the statute anticipates a bifurcated system for direct accreditation of certification bodies, because the standards for review for accreditation of foreign governments are distinct from those of the private auditing entities under section 808(c)(1) of the FD&C Act. The comments ask that we draft additional rules to specifically cover direct accreditation of foreign governments, asserting that we should provide a separate path for direct accreditation of foreign governments that prioritizes their applications based on, among other things, the language in section 808(c)(1) of the FD&C Act. Some comments ask whether the same eligibility requirements and procedures are required of both governmental and private bodies applying for direct accreditation.

(Response 157) We disagree with the suggestion to create a bifurcated system. We acknowledge that section 808(c)(1) of the FD&C Act contains different requirements for foreign governments/agencies than it does for foreign cooperatives and other private third-party certification bodies seeking accreditation. However, we do not interpret this language as suggesting a preference for public certification bodies over private certification bodies.

We believe sections 808(c)(1)(A) and (B) of the FD&C Act are tailored to reflect the objectives and scope of each type of assessment, which would vary because of the differences between public and private certification bodies. While governments typically are both auditors/inspectors and owners of food safety schemes, private certification bodies usually are not scheme owners, because of concerns about possible conflicts of interest associated with serving in dual roles. Therefore, a private certification body would not be assessed for its food safety program or standards; it would be assessed for the training and qualifications of its

auditors and its internal management system. In light of the foregoing, we decline the suggestion to interpret sections 808(c)(1)(A) and (B) of the FD&C Act as supporting provisions for direct accreditation that would prioritize the applications of foreign governments/agencies over applications from private third-party certification bodies.

(Comment 158) Some comments suggest that FDA should not serve as an accreditation body for third-party certification bodies because it would open the door for other countries with less capability to do the same. The comments contend that FDA and its foreign regulatory partners need to provide the oversight of the industry, but should not be accreditation bodies.

(Response 158) We disagree. Section 808 of the FD&C Act contemplates that FDA can provide proper oversight of the program, while directly accrediting third-party certification bodies. We are unable to comment on what effects, if any, this would have on the actions of other countries. However, we emphasize that FDA will not perform direct accreditation unless the circumstances of section 808(b)(1)(A)(ii) of the FD&C Act are met—that is, if FDA has not identified and recognized an accreditation body to meet the requirements of section 808 of the FD&C Act within 2 years after establishing this program.

(Comment 159) Some comments ask that we wait for more than 2 years after the program is established to accept applications for direct accreditation, to allow enough time for accreditation bodies applying for recognition to satisfy all the necessary requirements. Other comments assert that we should not directly accredit certification bodies in a country if we have already recognized an accreditation body in that country. Some comments ask us to clarify when, under what conditions, and how we would choose to directly accredit a certification body.

(Response 159) Under section 808(b)(1)(A)(ii) of the FD&C Act, 2 years after establishing the program is the earliest date that FDA may begin to directly accredit third-party certification bodies. Further, we may only do so if we determine that we have not identified and recognized an accreditation body to meet the requirements of section 808 of the FD&C Act 2 years after establishing the program. In the proposed rule, we provided examples of how we may make this determination, such as identifying a type of expertise or geographic location for which a recognized accreditation body is

lacking, and stated that we will only accept applications for direct accreditation and renewal applications that are within the scope of the determination. FDA declines to limit itself to a time period longer than 2 years before it can consider direct accreditation as any decision to directly accredit will depend on the circumstances the needs of the program, as determined by FDA under § 1.670(a).

(Comment 160) Some comments express concern that we will not have the capacity to undertake the responsibility of directly accrediting certification bodies.

(Response 160) Section 808(c)(8) of the FD&C Act requires FDA to create a user fee program to section 808 of the FD&C Act. FDA is in the process of establishing this program by rulemaking (80 FR 43987). For more information about the costs of this program, please see the regulatory analysis of this final rule.

(Comment 161) Some comments ask if we will have a contract agreement with directly accredited certification bodies. These comments assert that if we do, the contract should specify that we have the capacity to access confidential information without prior written consent of the certification body. The contract should also specify that having access to records relating to accreditation activities under this subpart is necessary to ensure the rigor, credibility, and independence of the program.

(Response 161) Under § 1.671(d), FDA will list any conditions associated with the accreditation in the issuance and may establish an agreement with the certification body at that time. With respect to access to records, a third-party certification body that is directly accredited by FDA must comply with the records maintenance and access requirements of § 1.658. Records obtained by FDA will be subject to the disclosure requirements of § 1.695.

B. How will FDA review my application for direct accreditation or renewal of direct accreditation and what happens once FDA decides on my application? (§ 1.671)

Proposed § 1.671 describes a process for reviewing and deciding on applications for direct accreditation and renewal that is consistent with the procedures for reviewing and deciding on applications under other provisions in this rule.

On our own initiative we are revising paragraph (a) to clarify that FDA will review submitted applications for completeness and notify applicants of any deficiencies. We also are adding

new paragraphs (e) through (h) to § 1.671 to explain what happens when a directly accredited certification body's renewal application is denied. We are adding provisions to clarify what the applicant must do, the effect of denial of an application for renewal of direct accreditation on food or facility certifications issued to eligible entities, and how FDA will notify the public.

(Comment 162) Some comments express concern that we are limiting ourselves to a "first in, first out" review process that gives us no discretion to accredit foreign governments before we consider other applications from private third-party entities that apply.

Some comments ask that we consider prioritizing approval of applications for direct accreditation on areas and regions where it is most needed to benefit our food safety mandates.

Some comments assert that priority for review of applications for direct accreditation should be for countries without an accreditation body or in circumstances where it is not economically feasible for a national accreditation body to expand its scope to include a certain single certification body.

(Response 162) As indicated Response 25, we intend to treat public and private certification bodies equally under this program, as both public and private certification bodies are capable of meeting the requirements of the program. Additionally, because we will only be accepting applications for direct accreditation in limited circumstances as discussed in Responses 158 and 159, all applications for direct accreditation will need to be able to demonstrate that there is a need for direct accreditation based on a determination made by FDA under § 1.670(a)(1). We note that we have revised § 1.671(a) to allow FDA to prioritize specific direct accreditation applications to meet the needs of the program.

(Comment 163) Some comments assert that our application review process must be comprehensive but also expedient. Some comments ask that our communications with applicants be timely.

Some comments express concern about the length of time it will take us to recognize and notify an applicant of any deficiencies in the application. These comments also assert that requiring applicants with deficiencies to resubmit their applications and sending it to the bottom of the review list would make for significant delays in the direct accreditation and renewal of direct accreditation application process.

(Response 163) We understand the concern expressed by comments with

regard to timeliness. Although we decline to set specific deadlines for this review, FDA anticipates that a completeness determination could generally be made within 15 business days, because this is not a decision on the merits of the application. Nonetheless, the time needed to identify deficiencies in any particular individual application will depend on a number of factors, including the quality of the submission, the availability of resources, and other competing priorities at the time the application is submitted. With respect to the concerns about requiring incomplete applications to be resubmitted and added to the bottom of the review list, we note that from our experience gained from the third-party certification pilot for aquacultured shrimp, extensive followup was needed with many of the applicants in order to gain sufficient information for a complete application. With this in mind, we are processing only complete applications so that we are not delaying others that have correctly prepared complete applications. Further, we are establishing an electronic portal for submission of applications, reports, notifications, and other information under this rule and an electronic repository of this information, which will allow us to communicate with applicants as needed.

C. What is the duration of direct accreditation? (§ 1.672)

We proposed that direct accreditation of a third-party certification body may be granted for a period up to 4 years. We tentatively concluded that 4 years is an appropriate duration for an accreditation because we believe the rigor and credibility of this program rests, in part, on the oversight of accredited certification bodies to conduct audits and to certify eligible foreign entities. We requested comment on this tentative conclusion.

(Comment 164) Some comments ask that we establish a specific fixed duration of 5 years for direct accreditation before renewal is required. These comments also ask that the duration for recognition of accreditation bodies and accreditation of third-party certifications bodies also be fixed at 5 years and assert that having a standardized accreditation term for all parties in the third-party program would be more administratively viable for us.

(Response 164) For the reasons we explained in Response 145 we decline to establish a fixed duration of accreditation and also decline to establish a standard term of 5 years for

accreditation for all parties in the third-party program.

XII. Comments on Requirements for Eligible Entities Under This Subpart

A. How and when will FDA monitor eligible entities? (§ 1.680)

Proposed § 1.680 would allow FDA to conduct onsite audits of eligible entities that have received certification from an accredited certification body at any time, with or without the accredited third-party certification body present. It also proposed that a food safety audit by an accredited certification body is not considered an inspection under section 704 of the FD&C Act. For clarification purposes at our own initiative, we are revising the second sentence of § 1.680(a) to add, “[w]here FDA determines necessary or appropriate,” before “the audit may be conducted with or without the accredited certification body or the recognized accreditation body (where applicable) present.”

(Comment 165) Some comments address the timing of FDA’s audits of eligible entities. Some comments encourage FDA to conduct audits of eligible entities regularly, particularly in the first years of the program, to ensure compliance with the program and to verify that certification is appropriate. Some comments encourage FDA to conduct random as well as targeted audits of eligible entities. For example, the comments suggest that if FDA withdraws the accreditation of a certification body, the Agency should conduct onsite audits of a sample of the eligible entities to which the withdrawn certification body issued certifications.

(Response 165) We agree that robust government oversight of the third-party program will be vital to its success and periodic audits of eligible entities will be conducted consistent with our risk-based priorities and resources.

(Comment 166) Some comments discuss the substance of FDA’s audits of eligible entities. Some of these comments encourage FDA to ensure that eligible entities implement corrective actions when deficiencies are identified. Some comments recommend that company data on tests of both products and the environment be made available to FDA auditors, and argue that without access to such data, FDA auditors would not be able to perform a thorough audit. Comments also maintain that, during an audit, FDA should be able to access results of the eligible entity’s testing of both products and the environment.

(Response 166) We currently are developing internal operational procedures for the third-party

certification program and will make these procedures public. As part of this process, we are developing protocols for FDA audits of eligible entities.

(Comment 167) Some comments argue that unannounced audits of eligible entities by FDA that have been certified by an accredited third-party certification body would likely result in incomplete audits and urge the agency to consider contacting the eligible entity to schedule such audits. Comments state that scheduled audits would be more efficient and less burdensome for both eligible entities and FDA because eligible entities would have a better understanding of what is needed during the audit and which employees should be present.

(Response 167) Section 808(c)(5)(C) of the FD&C Act directs FDA to promulgate regulations requiring that “audits performed under this section be unannounced.” Section 808(f)(3) of the FD&C Act allows FDA to, at any time, conduct an onsite audit of any eligible entity certified by an accredited third-party certification body to ensure compliance with the requirements of section 808. Given this statutory language, we are clarifying in § 1.680 that an FDA audit conducted under this section will be conducted on an unannounced basis and may be preceded by a request for a 30-day operating schedule. We note that it may not be appropriate at all times to precede audits for a 30-day operating schedule, such as in the case of a for-cause audit.

(Comment 168) Some comments state that when FDA has questions about eligible entities, it should notify the accreditation bodies and certification bodies to conduct a joint audit.

(Response 168) It is unclear what the comment means by conducting a joint audit, but § 1.680 would allow for the certification body and accreditation body to be present during the FDA audit when FDA determines it is necessary and appropriate.

(Comment 169) Some comments argue that the monitoring of eligible entities should be conducted by the competent authority of the exporting country, particularly where a systems recognition agreement is in place or where there is a robust national food control system in place.

(Response 169) We intend to coordinate as appropriate with our foreign regulatory counterparts; however, section 808(f)(3) of the FD&C Act specifically directs FDA to conduct onsite audits of eligible entities to ensure compliance with the requirements of section 808 of the FD&C Act. We believe onsite audits of certified

eligible entities are an important component of the robust oversight essential to the success of the third-party program. Without the ability to conduct onsite audits of a certified eligible entity, FDA would not be able to directly ascertain whether the certification body and/or its accreditation body are in fact making accurate determinations of compliance with FDA requirements. Such oversight is necessary to maintain confidence in the certifications issued by accredited certification bodies under this program.

(Comment 170) Some comments ask FDA to clarify why an onsite audit of an eligible entity is not considered an inspection under section 704 of the FD&C Act, particularly since the purpose of the audit is to determine if the entity is in compliance with the FD&C Act and since an FDA inspection may be used to meet the verification requirements under the proposed FSVP regulation. Other comments endorse FDA’s decision not to consider a food safety audit under this program an inspection under section 704 of the FD&C Act.

(Response 170) Section 808(h)(1) of the FD&C Act explicitly states that audits under the third-party certification program “shall not” be considered inspections under section 704. The inspections done under section 704 of the FD&C Act, unlike audits conducted under section 808(f)(3), are not conducted for the purpose of ensuring compliance with section 808 of the FD&C Act. The objective of an audit under § 1.680(a) extends beyond the eligible entity—through its audit of the eligible entity FDA is gathering information to use in its monitoring of the accredited certification body that audited the entity and the recognized accreditation body that accredited certification body that audited the eligible entity. We note that an audit under section 808(f)(3) is not a “food safety audit” under this subpart. As noted previously, the audits conducted under section 808(f)(3) are done specifically to ensure compliance with section 808 of the FD&C Act. As discussed in section III.C., we are clarifying that an audit conducted under this subpart is not an inspection under section 704 under the FD&C Act. Accordingly, we are removing § 1.680(b).

B. How frequently must eligible entities be recertified? (§ 1.681)

Proposed § 1.681 stated that an eligible entity seeking to maintain its facility certification must seek recertification prior to expiration of its certification. It also proposed that under

section 801(q)(4)(A) of the FD&C Act, FDA could require, at any time we deem appropriate, that an eligible entity renew a food certification.

We received no comments on this proposed section. However, to clarify certain matters, we are amending this section on our own initiative. We are adding to first sentence the words, “food or” before “facility certification” because the maximum duration of certifications under section 808(d) of the FD&C Act applies to both food and facility certifications. Additionally, we are revising this section to state that FDA can require an eligible entity to apply for recertification of both food and facility certifications at any time that FDA deems appropriate.

XIII. Comments on General Requirements of This Subpart

A. How will FDA make information about recognized accreditation bodies and accredited third-party certification bodies available to the public? (§ 1.690)

We proposed to post on our Web site a registry of recognized accreditation bodies and of accredited third-party certification bodies, including the name and contact information for each. The registry may provide information on certification bodies accredited by recognized accreditation bodies through links to the Web sites of such accreditation bodies. We requested comment on our proposed public registry.

(Comment 171) Some comments support our proposal to place a registry of recognized accreditation bodies and accredited certification bodies on our Web site and to provide links to the Web sites of recognized accreditation bodies. Some comments assert that such a web-based resource where members of the industry and public could access standards associated with accreditation/certification and a list of accreditation and certification bodies is a meaningful demonstration of FDA oversight. Some comments ask that this list be updated regularly so that it stays accurate. These comments also ask that we provide appropriate indexing and filtering functions so that the registry is easily searchable and stakeholders can conveniently and reliably find and use this information.

(Response 171) FDA agrees that the online registry will be a valuable tool. We intend for it to be updated regularly. We also intend for it to have indexing and filtering functions which will make searches more efficient and productive.

(Comment 172) Some comments ask that we not include the name(s) of audit agent(s) on our Web site or otherwise

publicly disclose such information could disrupt the marketplace for third-party certification services

Some comments assert that access to detailed, specific, and sensitive information is not necessary to gain credibility with consumers. These comments refer us to industry models that provide detailed information on the requirements of their program and posts a list of members in good standing along with a list of companies who have been decertified is an example of credible, balanced information that is actionable by consumers (*i.e.*, California Leafy Green Products Handler Marketing Agreement).

(Response 172) To clarify, we do not intend to disclose the names of audit agents on our Web site. We will be providing the business name and business contact information for each recognized accreditation body. The business name and business contact information for each accredited third-party certification body may be listed on our Web site or may be provided by link to Web sites of their accreditation bodies. The Web site will contain program information as well and may be similar to the industry models recommended by some comments.

(Comment 173) Some comments seek maximum transparency, asserting that we must also post on our Web site the audit reports, self-assessments, and notifications prepared by the third-party certification bodies and submitted to FDA. The comments contend that making this information public would increase program transparency and help to ensure that imported products do not receive an unfair competitive advantage over products available domestically.

Other comments suggest that we allow accreditation bodies and third-party certification bodies to submit redacted versions of these documents, where confidential information is blacked out, so that these documents can also be made publicly available without compromising confidential information. These comments assert that making public these reports, self-assessments, and notifications would improve self-assessments, reduce the Agency's burden of responding to FOIA requests, and allow independent analysis to complement the Agency's evaluation. Thus, comments ask us to specify in § 1.690 that we will also place on our Web site the reports and notifications submitted pursuant to §§ 1.623 and 1.656 and that we will allow a recognized accreditation body and accredited auditors/certification body to submit a redacted version of the report or notification that is intended to be made publicly available.

(Response 173) Generally, we do not intend to post redacted versions of reports on our Web site. Information submitted to the Agency, including reports and notifications submitted pursuant to §§ 1.623 and 1.656, becomes an Agency record. We have added a new § 1.695 to the final rule to clarify that records under this subpart are subject to part 20; part 20 provides protections for trade secrets and confidential commercial information (CCI) from public disclosure (*see, e.g.*, § 20.61).

(Comment 173) Some comments ask us to take action to ensure that third-party certification bodies act with maximum transparency and to ensure adequate protections against conflicts of interest. Some comments ask that we post on our Web site information concerning the scope of the recognized accreditation body recognition and accredited certification body accreditation, duration of accreditation, payments made to those accreditation bodies and certification bodies, and whether accreditation has been withdrawn or suspended. Some comments assert that requiring recognized accreditation bodies and accredited certification bodies to make this information available on their own Web sites does not ensure that all potential conflicts of interest will be identified, and suggest that we require that this information be submitted directly to us as well.

(Response 174) FDA agrees that it would be helpful to include on our Web site information concerning the scope of accreditation services that each recognized accreditation body is recognized for, and the scope of accreditation for each accredited certification body is accredited for. We also agree it would be useful and increase transparency to include the duration of recognition for each accreditation body, and the duration of accreditation for each certification body. Scope and duration information will make the site more practically useful and will increase transparency. Therefore, we intend to include this information on our Web site and we are revising § 1.690 to reflect this. In addition, we are revising this section to state that FDA will post on its Web site a list of accreditation bodies for which it has denied renewal of recognition, for which FDA has revoked recognition, and that have relinquished their recognition or have allowed their recognition to expire. Further, FDA will place on its Web site a list of certification bodies whose renewal of accreditation has been denied, for which FDA has withdrawn accreditation, and that have

relinquished their accreditations or have allowed their accreditations to expire. Finally, FDA will place on its Web site determinations under § 1.670(a)(1) and modifications of such determinations under § 1.670(a)(2). This additional information will help ensure maximum transparency under the program.

With regard to information on dates of payment, we have determined there is little additional value to posting such information on the FDA Web site, and it would create an additional administrative burden; we do not believe the value exceeds the burden. In our view, conflict of interest and transparency concerns are sufficiently satisfied by making information on dates of payment publicly available online via the Web sites of recognized accreditation bodies (see § 1.624(c)) and accredited certification bodies (see § 1.657(d)).

(Comment 175) Some comments request clarification concerning whether and what information we collect pursuant to this program will be made available to importers and the public. Some comments question the extent and format of the audit data that will be shared, and what might be held confidential. These comments assert that businesses have a need to protect proprietary information (e.g., sales lists, supplier lists, equipment designs and specific information about product attributes), and any sharing of such information might compromise their ability to carry out business functions or to maintain competitive advantage. Some comments inquire about the extent and formats of audit data we intend to make public, what might be held confidential, and whether we will take steps to protect information provided by certification bodies from FOIA requests.

Some comments express concern about our ability to develop and maintain a dynamic system that will be able to collect, update, and present audit data to consumers, and assert that it is important for industry to gain a better understanding of what type of audit data we will require.

Some comments suggest that we look to USDA's Food Safety and Inspection Service (FSIS) Public Health Information System for insight into how to develop a database system that seeks to define the boundary between increasing public access to data and addressing confidentiality concerns by companies. Some comments note that the FSIS program is the result of several years of effort to establish a mechanism for public access to data that can lead to research and analysis that improves

public health while protecting the proprietary rights of the establishments.

(Response 175) As discussed previously, newly added § 1.695 clarifies that records under this subpart are subject to part 20; part 20 provides protections for trade secrets and confidential commercial information from public disclosure (see, e.g., § 20.61).

FDA will provide periodic updates on program activities through our Web site, and our disclosures will be consistent with our statutory obligations to protect trade secrets and CCI from disclosure. With regard to the expressed concern about FDA's ability to develop and maintain an adequate data system to collect, update, and present audit data to consumers, we are aware of the size and importance of this undertaking and are diligently pursuing an effective system. We appreciate the suggestion to review the FSIS database system and intend to do so.

(Comment 176) Some comments encourage us to develop communication strategies to help consumers view the data in audit reports within the context of food production; specifically, to set proper program expectations and to provide proper context for consumers to understand what the data means. These comments assert that it is important to provide a frame of reference so that consumers have a basis for understanding what the audit data means and can then proceed to make informed decisions. The comments note that audits and certifications are not declarations or guarantees that products are safe, and that FDA and the industry need to feature this reality in communications strategies aimed to assist consumer groups and consumers in using any audit data that might be available for review.

(Response 176) As noted above, we do intend to share updates on program activities with the public; we will work to properly contextualize the data in our communications about and presentation of the information. As noted in Response 173, FDA does not generally intend to make audit reports public.

(Comment 177) Some comments assert that we must clearly describe how compliance with the program will be reported to the public.

(Response 177) As noted above, we intend to provide periodic updates on program activities through our Web site. Where appropriate, these updates may include aggregated program data. Additional information about program updates will be shared as we implement this program. Further, as noted in response to Comment 86, FDA will post information on its Web site regarding

accreditation bodies that have had their recognition revoked, accreditation bodies for which FDA fails to renew recognition, certification bodies that have had their accreditation withdrawn, and certification bodies whose renewal of accreditation has been denied.

B. How do I request reconsideration of a denial by FDA of an application or a waiver request? (§ 1.691)

We proposed procedures for accreditation bodies and certification bodies to seek reconsideration of a denial of an application or a waiver request. We also proposed that after completing our review and evaluation of the request for reconsideration, we will notify the requestor, in writing, of our decision to grant or deny the application or waiver request upon reconsideration.

On our own initiative, we are revising § 1.691(c) to specify that a request for reconsideration or a waiver request must be submitted electronically. We are making corresponding changes to § 1.692(b).

(Comment 178) Some comments suggest that we provide an opportunity for interested stakeholders, in addition to the accreditation body or third-party certification body seeking reconsideration, to provide information to us that will inform our decisionmaking on any reconsideration request.

(Response 178) We decline to adopt comments' suggestion to allow for others beyond the accreditation body or third-party certification body seeking reconsideration to engage in this process. Our reconsideration of a denial is not a public process nor do we wish to make it one. Applications often contain confidential information not appropriate for public comment. We note that information shared with FDA is subject to the information disclosure regulations in part 20, as stated in § 1.695.

(Comment 179) Some comments ask us to specify that we will notify the requestor of our decision within 20 business days after receiving a request for reconsideration. These comments assert that the open-ended timeframe for our review of reconsideration request may place an undue burden on the party seeking reconsideration.

(Response 179) FDA agrees that a request for reconsideration should be reviewed in a timely fashion. FDA would anticipate that this review will generally be made within 30 business days. However, given the conflicting demands on Agency resources at various times, the Agency declines to add this time restriction to § 1.691.

C. How do I request internal agency review of a denial of an application or waiver request upon reconsideration? (§ 1.692)

We proposed that the requestor who received a denial upon reconsideration under § 1.691 may seek internal Agency review of such denial under 21 CFR 10.75(c)(1).

(Comment 180) Some comments suggest that we provide an opportunity for interested stakeholders to provide information to us that will inform our decisionmaking on any such reconsideration request.

(Response 180) As with the parallel suggestion in the context of a request for reconsideration, we decline to adopt comments' suggestion. The Agency's review of a denial is not a public process nor do we wish to make it one. As noted previously, applications often contain confidential information not appropriate for public comment. We note that information shared with FDA is subject to the information disclosure regulations in part 20, as stated in § 1.695.

D. How do I request a regulatory hearing on a revocation of a recognition or withdrawal of accreditation? (§ 1.693)

We proposed procedures that would be used for challenges to revocation of recognition or withdrawal of accreditation.

On our own initiative, we revised § 1.693(f) to include the standard for denial of a request for a regulatory hearing under 21 CFR 16.26(a).

(Comment 181) Some comments suggest that we provide an opportunity for interested stakeholders, in addition to the accreditation body or third-party certification body seeking a regulatory hearing, to provide information to us that will inform our decisionmaking during a regulatory hearing.

(Response 181) Again, we decline to adopt comments' suggestion to allow for others beyond the accreditation body or third-party certification body seeking to challenge an FDA decision to engage in this process. For purposes of this final rule, we are not making the regulatory hearing a public process because issues pertaining to revocation and withdrawal generally contain confidential or sensitive information. We note that information shared with FDA is subject to the information disclosure regulations in part 20, as stated in § 1.695. We are amending proposed § 1.693(g)(3), redesignated as § 1.693(g)(2), to state that § 16.60(a) (public process) is inapplicable to hearings under this rule.

E. Are electronic records created under this subpart subject to the electronic records requirements of part 11? (§ 1.694)

We did not specify requirements for the retention of electronic records in the proposed rule. However, as discussed in relation to § 1.625, we received several comments regarding the potential application of the requirements for electronic records in part 11 to records under this subpart; several comments ask that we not apply the part 11 requirements here.

We agree that it would be unnecessarily burdensome to require that records under the third-party program comply with the requirements in part 11. Therefore, we are adding § 1.694 to the final rule which states that records that are established or maintained to satisfy the requirements of this subpart and that meet the definition of electronic records in § 11.3(b)(6) are exempt from the requirements of part 11. We further specify that records that satisfy the requirements of this subpart, but those that also are required under other applicable statutory provisions or regulations, remain subject to part 11 to the extent that they are not separately exempted. Consistent with these provisions, we are making a conforming change in part 11 to specify in § 11.1(m) that part 11 does not apply to records that meet the definition of electronic records in § 11.3(b)(6) required to be established or maintained under this subpart, and that records that satisfy the requirements of this subpart, but that also are required under other statutory provisions or regulations, remain subject to part 11 to the extent that they are not separately exempted.

F. Are the records required by this subpart subject to public disclosure? (§ 1.695)

In the proposed rule, we did not specify requirements regarding the public disclosure of records created and retained under this subpart. However, as discussed previously in the preamble, several comments express concerns about whether notifications, records, and reports required by this rule would be protected from public disclosure. The comments state that notifications, records, and reports will often contain commercially sensitive information. Some comments ask that the regulations specify that such information under this program have the same level of protection from public disclosure under FOIA as juice and seafood HACCP records.

Information submitted to the Agency, including reports and notifications submitted pursuant to §§ 1.623 and 1.656, becomes an Agency record. We note we have added a new § 1.695 to the final rule to clarify that records under this subpart are subject to part 20; part 20 provides protections for trade secrets and CCI from public disclosure (see, e.g., § 20.61).

G. May importers use reports of regulatory audits by accredited certification bodies for purposes of subpart L of this part? (§ 1.698)

We proposed that an importer as defined in § 1.500 of this part may use a regulatory audit of an eligible entity, documented in a regulatory audit report, in meeting the requirements for an onsite audit of a foreign supplier under subpart L of this part.

(Comment 182) Some comments agree with FDA's proposal to allow importers to use regulatory audit reports of foreign suppliers, conducted for VQIP or import certification purposes, in meeting the verification requirements under the proposed FSVP program. These comments state that the use of regulatory audits by accredited third-party certification bodies should not be required under FSVP. The comments assert that importers should be free to choose how best to meet the verification requirements. Some comments misunderstood proposed § 1.698 to require the use of accredited third-party certification bodies for FSVP purposes.

(Response 182) To clarify that the use of an accredited third-party certification body for FSVP purposes is not required by this rule, we are removing this provision. This rule establishes the framework and procedures for participation in the accredited third-party certification program for purposes of sections 808 of the FD&C Act and does not create substantive requirements for the FSVP program. However, regulatory audits may be used to meet supplier verification requirements under FDA's final preventive controls regulations and FSVP regulations if they comport with those requirements.

XIV. Editorial and Conforming Changes

The revised regulatory text includes several changes that we have made to clarify requirements and to improve readability. The revised regulatory text also includes several conforming changes that we have made when a change to one provision affects other provisions. We summarize the principal editorial and conforming changes in table 5. We also made very minor editorial corrections, such as inserting a

missing end parenthesis symbol; those changes are not included in this chart.

TABLE 5—PRINCIPAL EDITORIAL AND CONFORMING CHANGES

Designation in the revised regulatory text (section)	Revision	Explanation
Throughout part 1, subpart M	Where applicable, substituted the term “assessment”, or its derivations, for the terms “audit” or “review”, or their derivations, when describing an FDA evaluation of an accreditation body and when describing an evaluation of a third-party certification body performed by a recognized accreditation body or by FDA.	Conforming change.
Throughout part 1, subpart M	Where applicable, substituted “evaluate”, or its derivations, for “assess” or “determine”, or their derivations, when describing the nature of activities involved in an “assessment” (as defined in this rule) of an accreditation body or a third-party certification body.	Conforming change.
Throughout part 1, subpart M	Where applicable, substituted “examine”, or its derivations, for “audit”, “assess”, “determine”, or “evaluate”, or their derivations, when describing the nature of activities involved in an “audit,” as defined in this rule, of an eligible entity.	Conforming change.
Throughout part 1, subpart M	Where applicable, revised to refer to “audit agent” rather than “agent” when describing individuals who conduct audits for accredited third-party certification bodies. Use “agent(s) used to conduct audits” rather than, “audit agent(s)” when referring to individuals who conduct audits for a third-party certification body prior to its accreditation under this program.	Improve clarity.
Throughout part 1, subpart M	Revised to refer to “competency” rather than “competence”	Improve clarity.
Throughout part 1, subpart M	Where appropriate, revised to refer to “recognized accreditation bodies” rather than “accreditation bodies”.	Improve clarity.
Throughout part 1, subpart M	Where appropriate, revised to refer to “accredited third-party certification bodies” rather than “third-party certification bodies”.	Improve clarity.
Throughout part 1, subpart M	Where appropriate, rephrased “[i]f FDA has reason to believe that a food certification issued for purposes of section 801(q) of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification in determining the admissibility of the article of food for which the certification was offered.”	Improve clarity.
Throughout part 1, subpart M	Replaced “personnel” with “employees”	Improve clarity.
§ 1.600(c)	Deleted “, including the model accreditation standards” from the definition of “accreditation”.	Conforming change.
§ 1.600(c)	Revised the definition of “accredited third party certification body” to replace “is authorized” with “is accredited”.	Improve clarity.
§ 1.600(c)	Revised the definition of “eligible entity” to replace “subject to the registration requirements of” with “required to be registered under”.	Improve clarity.
§ 1.600(c)	Revised the definition of “facility certification” to replace “establish that a facility meets” with “establish whether a facility complies with”.	Improve clarity.
§ 1.600(c)	Revised the definition of “food certification” to replace “establish that a food meets” with “establish whether a food of an eligible entity complies with”.	Improve clarity.
§ 1.600(c)	Revised the definition of “relinquishment” to state that relinquishment occurs prior to the expiration of recognition or accreditation for accreditation bodies and certification bodies, respectively.	Improve clarity.
§ 1.601(a)	Changed “for conducting food safety audits and for issuing food and facility certifications to eligible entities” to “to conduct food safety audits and to issue food and facility certifications”.	Improve clarity.
§ 1.601(b)(2)	Changed “Issuing food and facility certifications” to “Issuing certifications”.	Improve clarity.
§ 1.601(c)	Changed “or in meeting the eligibility requirements” to “or issuing a facility certification for meeting the eligibility requirements”.	Improve clarity.
§ 1.601(c)	Replaced “except as provided in paragraph (d) of this section” with “under this subpart”.	Correction.
§ 1.601(d)	Redesignated paragraphs (1), (1)(i), (1)(ii), (2), (2)(i), and (2)(ii) as paragraphs (1)(i), (1)(i)(A), (1)(i)(B), (1)(ii), (1)(ii)(A), and (1)(ii)(B).	Editorial change.
§ 1.601(d)(1)(i)	Changed “[t]he certification of food under section 801(q)” to “[a]ny certification required under section 801(q)”.	Conforming change.
§ 1.601(d)(1)(ii)	Changed “[c]ertification of food under section 801(q)” to “Any certification required under section 801(q)”.	Conforming change.
§ 1.601(d)(1)(ii)	Changed “food other than alcoholic beverages that is from a facility” to “food that is not an alcoholic beverage that is received and distributed by a facility”.	Improve clarity.
§ 1.610	Section heading changed from “[w]ho is eligible for recognition,” to “[w]ho is eligible to seek recognition;” Text changed from “eligible for recognition” to “eligible to seek recognition.”	Improve clarity.

TABLE 5—PRINCIPAL EDITORIAL AND CONFORMING CHANGES—Continued

Designation in the revised regulatory text (section)	Revision	Explanation
§ 1.611(a)	Changed “through” to “as a legal entity with”	Improve clarity.
§ 1.611(a)(2)	Removed “such” from between “perform” and “assessments.” Changed “its capability to audit” to “its capability to conduct audits.” Replaced “personnel and other agents,” with “its agents, (or the third-party certification body in the case of a third-party certification body that is an individual, such individual)”.	Conforming change.
§§ 1.611(b), 1.612(b), 1.613(b), 1.614(b), 1.615(b), 1.623(d)(2), 1.630(b), 1.631(b), 1.641(b), 1.642(b), and 1.645(b).	In sentences referencing requirements for recognized accreditation bodies or accredited third-party certification bodies, replaced specific references to other sections of this rule with “the applicable [* * *] requirements of this subpart”.	Improve clarity.
§ 1.612(b)	Changed “capability to meet the* * *” to “capability to meet the applicable”.	Clarify that only the applicable assessment and monitoring requirements apply.
§ 1.615(a)	Added “pertaining to this subpart” between “legal obligations” and “and to provide”.	Improve clarity.
§ 1.615(b)	Replaced “[i]s capable of meeting,” with “The capability to meet”	Editorial change.
§ 1.620(a)(2)	Removed “that aggregates the products of growers or processor [sic],” after “foreign cooperative”.	Conforming change.
§ 1.620(d)	Replaced “including,” with, “and include”	Editorial change.
§ 1.621	Last word of section heading changed from “accredits” to “accredited”.	Editorial change.
§ 1.621(a)	At the end of the previously undesignated paragraph which is now paragraph (a), moved “recognized accreditation body . . . with this subpart”.	Improve clarity.
§ 1.622(a)	Added “compliance with this subpart, including” at the end of the opening phrase.	Improve clarity.
§ 1.622(a)(1)	Replaced “or other agents in activities under this subpart and the degree of consistency among such performances,” with “or other agents involved in accreditation activities and the degree of consistency in conducting accreditation activities”.	To clarify that the relevant activities under this subpart are accreditation activities.
§ 1.622(a)(2)	Added “involved in accreditation activities,” between “other agents,” and “with the conflict of interest requirements”.	Conforming change.
§ 1.622(c)(1)	Changed “area(s) needing improvement,” to “area(s) where deficiencies exist”.	Improve clarity.
§ 1.622(c)(2)	Changed “implement effective correction action(s) to address those area(s)” to “implement corrective action(s) that effectively address those deficiencies”.	Improve clarity.
§ 1.622(c)(3)	Inserted “any” between “records of,” and “such corrective action(s)”	Improve clarity.
§ 1.622(d)	Changed “includes:” to “includes the following elements.”	Conforming change.
§ 1.622(d)(2)	Added “involved in accreditation activities,” between, “other agents,” and “complied with the conflict of interest requirements”.	Conforming change.
§ 1.623(b)	Created subparagraphs by inserting, “(i)” before “a report of the results of an annual self-assessment” and “(ii)” before “for a recognized accreditation body subject to § 1.664(g)((1);” Removed “must submit” from between “§ 1.664(g)(1),” and “a report of such self-assessment;” Changed “to FDA within 2 months” to “to FDA within 60 days of the third party certification body’s withdrawal.”	Improve clarity.
§ 1.623(c)(1)	Added “(including expanding the scope of),” between “[g]ranting,” and “accreditation”.	Improve clarity.
§ 1.623(d)(1)(iv)	Added “scope and,” between “the” and “basis for such denial”	Improve clarity.
§ 1.624(a)	Changed from “other agents)” to “other agents involved in accreditation activities)”.	Conforming change.
§ 1.624(b) redesignated as § 1.624(c).	Rephrased “[t]he financial interests of the spouses and children younger than 18 years of age of officers, personnel, and other agents of a recognized accreditation body will be considered the financial interests of such officers, personnel, and other agents of the accreditation body”.	Improve clarity.
§ 1.624(d)	Changed “and date(s) on each the accredited” to “and the date(s) on which the accredited”.	Editorial change.
§ 1.625 title and paragraphs (a), (b), and (c).	Changed from “A recognized accreditation body,” to “An accreditation body that has been recognized”.	To clarify that the duties with respect to records as required under this subpart adhere to any accreditation body that has been recognized, including accreditation bodies that are no longer recognized.
§ 1.625(a)(2)	Added “expand or” after “withdraw, or”	Improve clarity.
§ 1.630(c)	Changed from “needed by FDA to process the application” to “needed by FDA during processing of the application”.	Improve clarity.

TABLE 5—PRINCIPAL EDITORIAL AND CONFORMING CHANGES—Continued

Designation in the revised regulatory text (section)	Revision	Explanation
§ 1.630(d)	Changed from “signed by the applicant or by any individual authorized” to “signed by an individual authorized”.	Improve clarity.
§ 1.631 heading	Changed heading from “How will FDA review applications for recognition and renewal of recognition?” to “How will FDA review my application for recognition or renewal of recognition and what happens once FDA decides on my application?”	Improve clarity.
§ 1.631(a)	Added “an accreditation body’s” after FDA will review, deleted “a”	Improve clarity.
§ 1.631(b)	Inserted “regarding” before “whether the application has been approved or denied.”	Editorial change.
§ 1.631(c)	Changed to state that the FDA will notify an applicant that its recognition or renewal application has been approved through issuance of recognition that will list any limitations associated with the recognition.	Improve clarity.
§ 1.631(d)	Changed to state that the FDA will notify an applicant that its recognition or renewal application has been denied through issuance of a denial of recognition that will state the basis for such denial and provide the procedures for requesting reconsideration of the application under § 1.691.	Improve clarity.
§ 1.632	Added “from the date of recognition” to the end of the sentence	Improve clarity.
§ 1.633(a)	Removed “periodically”	Improve clarity.
§ 1.633(a)	Rephrased “date of accreditation for a 5-year term of recognition, or by no later than mid-term point for recognition granted for less than 5 years.”	Improve clarity.
§ 1.633(b)	Rephrased “These may be conducted at any time, with or without the accreditation body or auditor/certification body present”.	Improve clarity.
§ 1.634(a)	Inserted “found not to be in compliance with the requirements of this subpart, including” after “of an accreditation body”.	Improve clarity.
§ 1.634(a)(2)(ii)	Changed “problem with the accreditation body” to “deficiency”	Improve clarity.
§ 1.634(a)(2)(iii)	Inserted “to do so” after “[d]irected”	Improve clarity.
§ 1.634(c)(1)	Changed “Upon revocation, FDA will notify that accreditation body, electronically, in English, stating * * *”.	Improve clarity.
§ 1.634(d)(1)	Removed “electronically and in English”	Improve clarity.
§ 1.634(d)(1)(i)	Rephrased from “[n]o later than 2 months after the revocation” to “[n]o later than 60 days after the date of issuance of the revocation”.	Improve clarity.
§ 1.634(d)(1)(ii)	Added “or the original date of the expiration of the accreditation, whichever comes first” after “revocation”.	Improve clarity.
§ 1.634(d)(2)	Changed from “a recognized” to, “another recognized”	Improve clarity.
§ 1.635 heading	Added “(c)” after “1.664”	Improve clarity.
§ 1.635 heading	Changed heading from “How do I voluntarily relinquish recognition?” to “What if I want to voluntarily relinquish recognition or do not want to renew recognition?”	Improve clarity.
§ 1.636(a)	Removed “or may be required to submit such application after a determination in a regulatory hearing under § 1.693”.	Improve clarity.
§ 1.640 heading	Changed heading from, “Who is eligible for accreditation?” to, “Who is eligible to seek accreditation?”	Improve clarity.
§ 1.641(a)	Changed “or through contractual rights” to “or as a legal entity with contractual rights” and added “and conformance with applicable” before “industry standards and practices”.	Conforming change.
§ 1.642(a)(1)	Changed “industry standards and practices and to issue” to “conformance with applicable industry standards and practices and issuance of”.	Improve clarity.
§ 1.641(a)(2)	Changed “of the eligible entity” to “of an eligible entity”	Conforming change.
§ 1.643(a)	Removed “such as witnessing the performance of a statistically significant number of personnel and other agents conducting audits of food facilities.”	Improve clarity.
§ 1.643(a)	Replaced “certification body (and its officers, personnel, and other agents) and eligible entities (and their owners and operators) seeking assessment and certification from,”	Improve clarity.
§ 1.644(a)(1)	Rephrased “[i]dentify areas in its auditing and certification program or performance that need improvement” to “[i]dentify deficiencies in its auditing and certification program or performance”.	Improve clarity.
§ 1.644(a)(2)	Rephrased from “Quickly execute corrective actions when problems are found” to “[q]uickly execute corrective actions that effectively address any identified deficiencies”.	Improve clarity.
§ 1.650 heading	Changed heading from “How must an accredited auditor/third-party certification body ensure its audit agents are competent and objective”, to “How must an accredited third-party certification body ensure competency and objectivity?”	Improve clarity.

TABLE 5—PRINCIPAL EDITORIAL AND CONFORMING CHANGES—Continued

Designation in the revised regulatory text (section)	Revision	Explanation
§ 1.650(a)(3)	Changed from “[p]articipates in annual food safety under the accredited auditor’s/certification body’s training plan,” to “[c]ompletes annual food safety training that is relevant to activities conducted under this subpart”.	Improve clarity.
Throughout §§ 1.651 and 1.652	Where appropriate, added “eligible” before “entity” and “food safety” before “audit”.	Improve clarity.
§ 1.651(a)(1)(i)	Inserted “subject to the requirements of this subpart” after “be conducted as a consultative or regulatory audit”.	Improve clarity.
§ 1.651(b)(1)	Changed from “[c]onduct an unannounced audit to verify whether the activities and results” to “[c]onduct an unannounced audit to determine whether the facility, process(es), and food”.	Conforming change.
§ 1.651(b)(2)	Removed “and, where appropriate, to issue food and facility certifications” from end of phrase.	Improve clarity.
§ 1.651(b)(5)	Inserted “audits conducted under this subpart as follows” after “[p]repare reports of”.	Improve clarity.
§ 1.651(b)(5)(i) (previously § 1.651(b)(5)).	Inserted “For” before “consultative audits,” Inserted “maintain such records, subject to FDA access in accordance with section 414 of the FD&C Act.”	Improve clarity.
§ 1.651(b)(5)	Created (i) and (ii) to more easily distinguish between the different requirements for consultative and regulatory audits.	Improve clarity.
§ 1.651(b)(6)	Inserted “under this subpart” after “food safety audit”	Improve clarity.
§ 1.651(c)(2)	Changed “to establish compliance with the FD&C Act” to “to determine compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, and, for consultative audits, also includes conformance with applicable industry standards and practices”.	Improve clarity.
§ 1.651(c)(3)	Rephrased “entity would be likely to remain in compliance with the applicable requirements of the FD&C Act for at least 12 months following the audit, provided that the facility and its process(es) are properly maintained and implemented.”	Improve clarity.
§ 1.651(c)(4)	Removed “assessment” and added “other data and information from the examination, including information on”. Removed “of the accredited auditor/certification body.”	Improve clarity.
Throughout §§ 1.652, 1.653	Where appropriate, inserted, “regulatory” before, “audit”	Improve clarity.
§ 1.652(a)	Reformatted requirements in § 1.652(a)(1) through (6) to more closely align with formatting of § 1.652(b)(1) through (6); Inserted “subject to FDA access in accordance with the requirements of section 414 of the FD&C Act.”	Editorial change.
§ 1.652(b)(1)	Replaced “audited facility” with “site or location where the regulatory audit was conducted”.	Improve clarity.
§ 1.652(b)(6)(i) and (ii)	Inserted “to humans or animals” after “serious adverse health consequences or death”.	Improve clarity.
§ 1.652(b)(8)	Rephrased from “is used in the facility” to “is performed in or used by the facility”.	Improve clarity.
§ 1.653 heading	Changed heading from “What must accredited auditor/certification body do when issuing food or facility certifications?” to “What must an accredited third-party certification body do when issuing food or facility certifications?”	Improve clarity.
§ 1.653(a)(1)	Changed “(or an audit agent” to “(or, where applicable, an audit agent”.	Improve clarity.
§ 1.653(a)(2)	Changed “to establish compliance” to “to determine compliance.”	Improve clarity.
§ 1.654 heading	Rephrased language in heading from “eligible entity with a food or facility certification” to “eligible entity that it has issued a food or facility certification”.	Improve clarity.
§ 1.654	Added “with such requirements” after “compliance” Changed “if it determines the eligible entity is no longer” to “if it withdraws or suspends a food or facility certification because it determines that the entity is no longer.”	Improve clarity.
§ 1.655(a)	Changed “must annually, and as required under § 1.631(f)(1)(i) or upon FDA request made for cause, conduct a self-assessment that includes evaluation of.”	Improve clarity.
§§ 1.655(a)(1), 1.655(a)(2), 1.655(a)(3), 1.655(d)(2), 1.657(a), 1.657(a)(1), 1.657(c).	Added “involved in auditing and certification activities,” after “other agents”.	Improve clarity.
§§ 1.655(a)(1), 1.655(a)(2)	Removed “under this subpart”	Improve clarity.
§ 1.655(a)(5)	Inserted “of” between “determination” and “whether”	Editorial change.
§ 1.655(c)(1)	Replaced “area(s) needing improvement” with, “deficiencies in complying with the requirements of this subpart”.	Improve clarity.

TABLE 5—PRINCIPAL EDITORIAL AND CONFORMING CHANGES—Continued

Designation in the revised regulatory text (section)	Revision	Explanation
§ 1.655(c)(2)	Rephrased from “effective corrective action(s) to address those area(s)” to “corrective action(s) that effectively address the identified deficiencies”.	Improve clarity.
§ 1.656(b)	Modified submission timeframe from 2 months to 60 days	Conforming change.
§ 1.656(c)	Rephrased “when any of its audit agents or the accredited auditor/ third-party certification body itself, discovers any condition found during a regulatory or consultative audit of an eligible entity, which”.	Improve clarity.
§ 1.657(a)(3) redesignated as § 1.657(a)(4).	Added “accredited third-party certification body’s” after “[p]rohibiting an”. Changed “other agent of the accredited auditor/certification body from accepting any money, gift, gratuity, or item of value” to “other agent involving in auditing and certification activities from accepting any money, gift, gratuity, or other item of value.”	Improve clarity.
§ 1.657(a)(4) redesignated as § 1.657(a)(5).	Changed reference from “(a)(3)” to “(a)(4)”	Editorial change.
§ 1.657(a)(4)(i) redesignated as § 1.657(a)(5)(i).	Changed from “accreditation” to, “auditing and certification”	Correction.
§ 1.657(c)	Added “accredited third-party certification body’s” before “officers” ... Changed “other agents of an accredited auditor/certification body” to “other agents involving in auditing and certification activities.”	Improve clarity.
§ 1.658 heading	Changed heading to “What records requirements must an accredited auditor/certification body that has been accredited meet?”	Improve clarity.
§ 1.658(a)	Rephrased from “certification body must maintain electronically for 4 years records” to “certification body that has been accredited must maintain electronically for 4 years records created during its period of accreditation”.	Improve clarity.
§ 1.658(a)(1)	Removed “laboratory testing records and results (as applicable)	Conforming change.
§§ 1.658(a)(1), 1.658(a)(3)	Rephrased from “and corrective actions” to “verification of any corrective action(s) taken”.	Improve clarity.
§ 1.658(a)(4)	Replaced “under § 1.650(a)(5) or by the accredited auditor/certification body to FDA under § 1.656(e)” with “in accordance with § 1.650(a)(5)”.	Conforming change.
§ 1.658(a)(5)–(a)(9) redesignated as § 1.658(a)(5)–(a)(8).	Removed paragraph (a)(5)	Conforming change.
§ 1.658(a)(8) redesignated as § 1.658(a)(7).	Rephrased from, “taken as a result” to “taken to address any deficiencies identified during a self-assessment”.	Improve clarity.
§ 1.658(a)(9) redesignated as § 1.658(a)(8).	Changed “the auditing or certification program” to “its auditing or certification program”.	Improve clarity.
§ 1.658(b)	Changed from “FDA in accordance with the requirements of subpart J of this chapter” to “FDA in accordance with section 414 of the FD&C Act”.	Correction.
§ 1.660 heading	Changed heading to “Where do I apply for accreditation or renewal of accreditation by a recognized accreditation body and what happens once the recognized accreditation body decides on my application?”	Improve clarity.
§ 1.661	Added “by a recognized accreditation body” at end of header	Improve clarity.
§ 1.662(a)	Rephrased “comply with the requirements of §§ 1.640 to 1.658 and whether there are deficiencies in the performance of the accredited auditor/certification body that, if not corrected, would warrant withdrawal of its accreditation under this subpart.”	Improve clarity.
§ 1.662(b)(4)	Rephrased from “regarding the accredited auditor’s/certification body’s authority, qualifications (including the expertise and training of its audit agents), conflict of interest program, internal quality assurance program, and monitoring by its accreditation body (or, in the case of direct accreditation, FDA);”	Improve clarity.
§ 1.663(d)	Rephrased from “submission was completed” to “completed submission is received”.	Improve clarity.
§ 1.663(e)	Removed “in writing” and “Such notification may be made electronically.”	Conforming change.
§ 1.663(f)	Replaced “conditions” with “limitations”	Improve clarity.
§ 1.663(f)	Replaced “notification” with “issuance of the waiver” and “issuance of a denial of a waiver request” as appropriate. Replaced “conditions” with “limitations.”	Improve clarity.
§ 1.664(a)(1)	Added “or chemical or physical hazard”	Correction.
§ 1.664(a)(2)	Changed “meets the requirements” to “complies with the applicable requirements”.	Improve clarity.
§ 1.664(b)(2)	Replaced “steps” with “relevant audit records” Replaced “to justify the food or facility certification” with “in support of its decision to certify”.	Improve clarity.
§ 1.664(c)(2)	Deleted “food or facility”	For flexibility.

TABLE 5—PRINCIPAL EDITORIAL AND CONFORMING CHANGES—Continued

Designation in the revised regulatory text (section)	Revision	Explanation
§ 1.664(e)(1)	Added “of its accreditation through issuance of a withdrawal that will state”.	Improve clarity.
§ 1.664(e)(1)	Deleted, “electronically, in English”	Conforming change.
§ 1.664(e)(2)	Added “issuance of the” between “date of” and “withdrawal”	Improve clarity.
§ 1.664(g)(1)	Replaced “bodies” with “body it accredited”	Improve clarity.
§ 1.664(g)(1)	Added “by FDA.”	
§ 1.664(g)(1)	Changed “2 months” to “60 days.”	
§ 1.664(g)(2)	Removed “electronically and in English.”	
§ 1.664(h)	Replaced “such” with “an”	Editorial change.
§ 1.664(h)	Replaced “and the status of recognition and food and facility certifications” in the heading with “accreditation”.	Improve clarity.
§ 1.664(h)	Replaced “under this subpart” with “and provide a description of the basis for withdrawal”.	Improve clarity.
§ 1.665 heading	Changed heading from “How do I voluntarily relinquish accreditation?” to “what if I want to voluntarily relinquish accreditation or do not want to renew?”	Improve clarity.
§ 1.665(a)	Changed “2 months” to “60 days”	Improve clarity.
§ 1.665(b)	Added “The accreditation body must establish and maintain records of such notification under § 1.625(a).”	Clarification.
§ 1.666(a)(1)	Replaced “requirements for accreditation” with “applicable requirements of this subpart”.	Improve clarity.
§ 1.666(a)(2)(i)	Replaced “a” with “another” and “not” with “no”	Editorial changes.
§ 1.670(a)(3)	Added “(a)(1) of this section, as described in paragraph (a)(2)”	Correction.
§ 1.670(b)(1)	Revised to specify provision “(a)(1)”	Improve clarity.
§ 1.670(b)(2)	Added subsection title “ <i>Submission</i> ”	Improve clarity.
§ 1.670(b)(3)	Added subsection title “ <i>Signature</i> ”	Improve clarity.
§ 1.671 heading	Changed title from “How will FDA review applications for direct accreditation and for renewal of direct accreditation?” to “How will FDA review my application for direct accreditation or for renewal of direct accreditation and what happens once FDA decides on my application?”	Improve clarity.
§ 1.671(b)	Reorganized the provision: Moved original (f) under (b)	Improve clarity.
§ 1.671(c) previously (c) and (d)	Redesignated as (c) to state that FDA will notify an applicant that its direct accreditation or renewal application has been approved through issuance of direct accreditation that will list any limitations associated with the accreditation.	Improve clarity.
§ 1.671(e)	Redesignated (e) to (d)	Improve clarity.
§ 1.671(e)	Replaced “denies” with “issues a denial”	
§ 1.671(e)	Added “for direct accreditation or for renewal of direct accreditation.”	
§ 1.671(e)	Replaced “notification” with “issuance of the denial of direct accreditation.”	
§ 1.681	Deleted “address and”	
§ 1.681	Combined (a) and (b)	Improve clarity.
§ 1.681	Replaced “seek” with “apply for”	
§ 1.691(a) and (b)	Replaced “decision” with “the issuance of such denial”	Improve clarity.
§ 1.691(c)	Replaced “it describes” with “described in the notice”	Editorial change.
§ 1.691(d)	Deleted “in writing”	Improve clarity.
§ 1.691(d)	Rephrased “of its decision to grant the application or waiver request upon reconsideration, or its decision to deny the application or waiver request upon reconsideration.”	
§ 1.692(a)	Replaced “FDA issued” to “of issuance of”	Editorial change.
§ 1.692(d)	Deleted “electronically”	Improve clarity.
§ 1.692(d)	Added phrases “through issuance of an application or waiver request upon reconsideration” and “application or waiver request upon reconsideration through issuance of a denial of.”	
§ 1.692(e)	Replaced “Affirmation” with “Issuance”	Improve clarity.
§ 1.693	Replaced “FDA issued” and “written notice” with “issuance of”	For consistency and to improve clarity.
§ 1.693(a)	Rephrased “the accreditation body or an individual authorized to act on its behalf” to “an individual authorized to act on the accreditation body’s behalf”.	Improve clarity.
§ 1.693(b)	Rephrased “the auditor/certification body or an individual authorized to act on its behalf” to “an individual authorized to act on the third-party certification body’s behalf”.	Improve clarity.

XV. Executive Order 13175

In accordance with Executive Order 13175, FDA has consulted with tribal government officials. A Tribal Summary Impact Statement has been prepared that includes a summary of Tribal officials' concerns and how FDA has addressed them (Ref. 26). Persons with access to the Internet may obtain the Tribal Summary Impact Statement at <http://www.regulations.gov>. Copies of the Tribal Summary Impact Statement also may be obtained by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**.

XVI. Analysis of Economic Impact

FDA has examined the impacts of the final rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct Agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The Agency believes that this final rule is a significant regulatory action under Executive Order 12866.

The Regulatory Flexibility Act requires Agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because the Third-Party program will be used primarily on voluntary basis where private enterprises determine that the benefits of participating in our program outweighs their associated user fee and compliance costs, the Agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that Agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$144 million, using the most current (2014) Implicit Price Deflator for the Gross Domestic Product. FDA does not expect this final rule to result in any 1-year expenditure that would meet or exceed this amount. Annualized cost of the

Third-Party final rule is estimated at approximately \$2.8 to \$11.6 million, depending on the scenario.

XVII. Paperwork Reduction Act of 1995

This final rule contains information collection provisions that are subject to review by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The title, description, and respondent description of the information collection provisions are shown in the following paragraphs with an estimate of the annual reporting and recordkeeping burdens. Included in the estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each collection of information.

Title: Accreditation of Third-Party Certification Bodies to Conduct Food Safety Audits and Issue Certifications (Third-Party final rule)

Description: FDA is amending its regulations to provide for accreditation of third-party certification bodies (CBs) to conduct food safety audits of eligible foreign food entities, including foreign food facilities, and to issue food and facility certifications, pursuant to the FDA Food Safety Modernization Act. Use of accredited third-party CBs and food and facility certifications will help us prevent potentially harmful food from reaching U.S. consumers and thereby improve the safety of the U.S. food supply. We also expect that these regulations will increase efficiency by reducing the number of redundant audits to assess compliance with applicable food safety requirements of the FD&C Act and FDA regulations.

Description of respondents: The coverage of the Third-Party final rule includes eligible entities seeking audits, certification, and/or recertification by accredited CBs participating in our program, accreditation bodies (ABs) seeking to comply with the recognition requirements of the Third-Party final rule, and CBs seeking to comply with the accreditation requirements of the Third-Party final rule (including those accredited by recognized ABs and those directly-accredited by FDA). An eligible entity is a foreign entity in the import supply chain of food for consumption in the United States that chooses to be subject to a food safety audit conducted by an accredited third-party certification body.

Based on FDA Operational and Administration System for Import Support database information, we estimate that there are 200,692 foreign food and feed exporters that offer their food and feed for import into the United

States. These foreign food and feed exporters include 129,757 food and feed production facilities and 70,935 farms. A proportion of these foreign food and feed exporters may offer food subject to mandatory certification requirements under section 801(q) of the FD&C Act. In that case, the eligible entities must either comply with the Third-Party final rule in order to obtain certification from a CB accredited under the third-party program to continue exporting their food products into the United States, or a foreign government designated by FDA, or lose their access to U.S. markets. In the economic analysis of the Third-Party final rule, we assume that in any given year 75 foreign food and feed exporters will be subject to section 801(q) of the FD&C Act.

In addition to the entities subject to § 801(q), some food exporters will seek certificates to participate in VQIP under section 806 of the FD&C Act. We consider three different scenarios for the participation rate of VQIP importers and their associated foreign suppliers in a 10-year period: (1) Constant number of VQIP importers in every year, (2) increasing participation over time, peaking at 20 percent of all importers of perishable products by the fifth year, with stagnant growth in subsequent years, (3) increasing participation over time, peaking at 40 percent of all importers of perishable products by the 10th year of the program.

The VQIP draft guidance document caps the acceptance of applications by importers for VQIP at 200 for the initial year of the program. Under Scenario 1, we consider 200 importers participating in each of first 10 years of VQIP (see table 6). Average number of foreign suppliers per importers is approximately 5.58; therefore, under Scenario 1, we expect that 200 importers and approximately 1,116 foreign suppliers (200 importers × 5.58 foreign supplier per importer) will be participating in VQIP every year for a 10-year period (see tables 6 and 7).

According to FDA's Office of Regulatory Affairs Reporting Analysis and Decision Support System database, the number of importers of perishable products is approximately 2,759. These importers would have an incentive to participate in VQIP in order to expedite entry of their perishable food products into the United States. Under Scenario 2, we consider 200 importers participating in the initial year of VQIP and increasing steadily until the fifth year of the program until 552 importers (20 percent × 2,759 importers of perishable products) are participating in the program. For years 6 through 10, we consider 3 percent increase in

participation of new importers in VQIP (see table 6). Multiplying the number of importers by the number of foreign suppliers per importers (5.58), we expect that the number of foreign suppliers participating in VQIP, under Scenario 2, would increase from 1,116 to 3,527 in a 10-year period (see table 7).

Under Scenario 3, we consider the number of importers will increase from 200 in the initial year of VQIP to 1,104 importers (40 percent \times 2,759 importers of perishable products) in the 10th year of the program. Tables 6 and 7 include the number of importers and their associated foreign suppliers for scenario 3. Table 9 includes total number of eligible entities in the Third-Party final rule based on the three considered

scenarios in the 10th year of the program.

The economic analysis of the Third-Party final rule estimates compliance costs under the assumption that expected efficiency gains, and foreign food suppliers' incentive to maintain continued importation of their food to the United States would lead all foreign suppliers subject to section 801(q) of the FD&C Act, and foreign suppliers who choose to use third-party food safety audits to satisfy requirements of FDA's VQIP, to become eligible entities and seek food safety audits under the Third-Party final rule.

Considering the demand for food safety audits under the Third-Party program by foreign suppliers subject to section 801(q) of the FD&C Act and those wanting to participate in VQIP, we

expect that some of the ABs and CBs operating globally will also have an incentive to participate and comply with the Third-Party final rule. Under the three different scenarios discussed above, we have estimated that 11 to 25 ABs will accredit CBs that will conduct food safety audits of foreign eligible entities that offer food or feed for import to the United States. We also estimate that approximately 91 to 207 CBs will be accredited by the potential 11 to 25 AB applicants; these CBs will comply with the Third-Party final rule in order to participate in the program. In addition, we expect that one CB will apply and participate in the third-party program via direct accreditation by FDA under the Third-Party final rule (see table 9).

ABs seeking recognition	11	17	25
CBs seeking accreditation by recognized ABs	91	140	207
CBs seeking accreditation by FDA	1	1	1
Total CBs accredited	92	141	208

Information Collection Burden Estimate: We estimate the burden for this information collection as follows:

Recordkeeping Burden

In summary, under Scenario 1, total one-time recordkeeping burden by 11 recognized ABs and 92 CBs accredited under the third-party program is

estimated at 25,792 hours (see table 10). Total annual recordkeeping burden by 11 recognized ABs and 92 CBs accredited under the third-party

program is estimated at 2,673 hours (see table 13).

Under Scenario 2, total one-time recordkeeping burden by 17 recognized ABs and 141 CBs accredited under the third-party program is estimated at 41,640 hours (see table 11). Total annual recordkeeping burden by 17 recognized ABs and 141 CBs accredited under the

third-party program is estimated at 4,553 hours (see table 14).

Under Scenario 3, total one-time recordkeeping burden by 25 recognized ABs and 208 CBs accredited under the third-party program is estimated at 58,570 hours (see table 12). Total annual recordkeeping burden by 25 recognized ABs and 208 CBs accredited under the

third-party program is estimated at 6,253 hours (see table 15).

For the purpose of this analysis we assume that all ABs that apply for recognition in the program become recognized and all CBs that apply for accreditation are accredited.

Total Annual Recordkeeping Burden					6,253

Note: There are no operations and maintenance costs associated with one-time recordkeeping burden.

Sections 1.615 and 1.645 of the Third-Party final rule require that at the time an AB submits an application for recognition (under § 1.630 of the Third-Party final rule) or a CB submits an application for direct accreditation (under § 1.660, or where applicable under § 1.670), the AB or CB must demonstrate that it has implemented written procedures to adequately establish, control, and maintain records for the period of time necessary to meet its contractual and legal obligations pertaining to the third-party program.

Currently, ABs maintain recordkeeping protocols relating to their operations; however, we expect that ABs will review their recordkeeping protocols and, if necessary, modify them to meet the requirements of § 1.615 of the Third-Party final rule before submitting applications for recognition. We believe that the records requirements for ABs in § 1.615 and CBs in § 1.645 would constitute a new one-time burden for the 11 to 25 ABs in each of the three considered scenario, and 92 to 208 CBs respectively. We expect that it would

take no more than 2 hours for an AB or a CB to modify its recordkeeping protocol to comply with the written recordkeeping requirements described in §§ 1.615 and 1.645 of the Third-Party final rule (see tables 10 to 12). Therefore, under Scenario 1, we estimate that it would take 22 hours (2 hours/AB × 11 ABs) for ABs to comply with § 1.615 (34 hours under Scenario 2, and 50 hours under Scenario 3) (see tables 10 to 12). We estimate 184 hours (2 hours/CB × 92 CBs) for CBs to comply with § 1.645 of the Third-Party final rule

(282 hours under Scenario 2, and 416 hours under Scenario 3) (see tables 10 to 12).

Section 1.625 of the Third-Party final rule requires that an AB that has been recognized maintain records documenting requests by CBs for accreditation from the AB (per § 1.660), challenges to adverse accreditation decisions (§ 1.620(c)), monitoring activities of its accredited CBs (§ 1.621), self-assessments and corrective actions (§ 1.622), copies of regulatory audit reports submitted by its accredited CBs (§ 1.656), and copies of records of reports or notifications made to us, as required by § 1.623. A recognized AB's requirements for reporting and notifications per § 1.623 of the Third-Party final rule include submission of results of its annual performance assessment of each of its accredited CBs (§ 1.623(a)) and the results of its self-assessment (§ 1.623(b)) (see tables 20 to 22). A recognized AB also must notify us immediately upon granting, withdrawing, suspending, reducing the scope of accreditation of a CB or upon its determination that a CB it accredited issued a food or facility certification in violation of subpart M, pursuant to § 1.623(c) of the Third-Party final rule. Additionally, a recognized AB must notify us within 30 days after making significant changes to its operations that would affect the manner in which it complies with the Third-Party final rule (§ 1.623(d)).

Under current practice, ABs maintain records documenting requests by CBs for accreditation, monitoring activities of CBs they have accredited, and self-assessments and corrective actions. The records currently maintained by ABs are similar to those that would be required of a recognized AB under § 1.623 of the Third-Party final rule. However, CBs do not currently send copies of audit reports of their clients (food facilities) to their ABs. Therefore, an AB's maintenance of records pertaining to regulatory audit reports submitted by CBs they have accredited is considered as a new recordkeeping burden for recognized ABs. We expect that it would take no more than 15 minutes (0.25 hour) for a recognized AB to file a regulatory audit report submitted by its accredited CBs. Under Scenario 1, we estimate the burden for 11 recognized ABs to maintain regulatory audit reports that were submitted to them by their accredited CBs. We estimate that following the implementation of the Third-Party final rule, under Scenario 1, each recognized AB will accredit approximately 8.27 CBs under the program (average of 10-year period) (8.23 CBs/AB under Scenario 2; 8.79

CBs/AB under Scenario 3). In addition, under Scenario 1, we estimate that each CB accredited under the third-party program, on average, will conduct regulatory audits on approximately 48 eligible entities a year (average of 10-year period) (55.4 foreign suppliers per CB under Scenario 2; 48.5 foreign suppliers per CB under Scenario 3). Under Scenario 1, we expect that each recognized AB will receive, on average, 397 regulatory audit reports (48 regulatory audit reports/CB × 8.27 CBs/AB) from its CBs annually resulting in a total of 4,367 records per year (397 audit reports/AB × 11 ABs). Under Scenario 2, we expect that each recognized AB will receive, on average, 456 regulatory audit reports (55.4 regulatory audit reports/CB × 8.23 CBs/AB) from its CBs annually resulting in a total of 7,752 records per year (456 audit reports/AB × 17 ABs). Under Scenario 3, we expect that each recognized AB will receive, on average, 426 regulatory audit reports (48.5 regulatory audit reports/CB × 8.79 CBs/AB) from its CBs annually resulting in a total of 10,650 records per year (426 audit reports/AB × 25 ABs). Total annual burden of recordkeeping requirement for recognized AB under § 1.625 of the Third-Party final rule is estimated at 1,092 hours (4,367 records × 0.25 hours/record) under Scenario 1 (1,938 hours under Scenario 2; 2,663 hours under Scenario 3) (see tables 13 to 15).

Section 1.624(d) of the Third-Party final rule requires each recognized AB maintain on its Web site an up-to-date list of CBs it has accredited under the Third-Party final rule and for each CB identify the duration and scope of accreditation and date(s) on which the CB paid the AB any fee or reimbursement associated with such accreditation. Recognized ABs must also include information about changes in accreditation status of third-party certification bodies. Our review of AB Web sites found that none of the ABs reviewed publish all the information that is required by § 1.620(d) of the Third-Party final rule on their Web sites. We estimate that each AB, on average, would initially spend approximately 160 hours to update its Web page to conform with this section of the Third-Party final rule. Under Scenario 1, the one-time burden of conforming to § 1.624(d) of the Third-Party final rule by 11 recognized ABs is estimated at approximately 1,760 hours (11 ABs × 160 hours/AB) (see table 10). Under Scenario 2, the one-time burden of conforming to § 1.624(d) of the Third-Party final rule by 17 recognized ABs is

estimated at approximately 2,720 hours (17 ABs × 160 hours/AB) (see table 11). Under Scenario 3, the one-time burden of conforming to § 1.624(d) of the Third-Party final rule by 25 recognized ABs is estimated at approximately 4,000 hours (25 ABs × 160 hours/AB) (see table 12). In addition, we estimate that each recognized AB would spend 8 hours annually, following the initial year, to update information as required by § 1.624(d) of the Third-Party final rule. Under Scenario 1, the annual hourly burden for 11 recognized ABs to update their Web pages to conform to disclosure of information requirement per § 1.624(d) of the Third-Party final rule is estimated at 88 hours (8 hours/AB × 11 ABs) (136 hours under Scenario 2; 200 hours under Scenario 3) (see tables 13 to 15).

Similarly, § 1.657(d) of the Third-Party final rule requires a CB accredited in compliance with the Third-Party final rule to maintain on its Web site an up-to-date list of eligible entities which it has issued certifications under this subpart. For each such eligible entity the Web site also must identify the duration and scope of the certification and date(s) on which the eligible entity paid the CB accredited under the third-party program any fee or reimbursement associated with such audit or certification. In the Third-Party final Regulatory Impact Analysis, we estimate that following the implementation of the Third-Party final rule and VQIP draft guidance, there will be approximately 91 CBs accredited by recognized ABs and 1 directly-accredited CB under Scenario 1 (140 CBs and one directly-accredited CB under Scenario 2; 207 CBs and 1 directly-accredited CB under Scenario 3). Under Scenario 1, the one-time recordkeeping burden of 92 CBs accredited under the third-party program to comply with § 1.657(d) of the Third-Party final rule is estimated at 14,720 hours (160 hours/CB × 92 CBs) (22,560 hours under Scenario 2; 33,280 hours under Scenario 3) (see tables 10 to 12). In addition, we estimate that each CB would spend 8 hours annually, following the initial year, to update information as required by § 1.657(d) of the Third-Party final rule. Under Scenario 1, annual hourly burden for 92 CBs accredited under the third-party program to update their Web pages to conform to disclosure of information requirement per § 1.657(d) of the Third-Party final rule is estimated at 736 hours (8 hours/CB × 92 CBs) (1,128 hours under Scenario 2; 1,664 hours under Scenario 3) (see tables 13 to 15).

There are certain provisions within the Third-Party final rule that may require ABs to modify their contracts

with their CBs in order to comply with the Third-Party final rule. Therefore, it is expected that recognized ABs will modify their contracts with their accredited CBs to be able to conduct activities such as conducting unannounced audits of their accredited CBs' facilities. Minor modifications or addenda to contracts with standard language provided by provisions in the Third-Party final rule would consist of no more than 1 hour by an AB executive and 1 hour by a legal counsel representing the AB. As we discussed, following the implementation of the Third-Party final rule, we expect that each recognized AB will accredit approximately 8.27 CBs (8.23 CBs/AB under Scenario 2; 8.79 CBs/AB under Scenario 3). Therefore, under Scenario 1, a total of 91 contracts (8.27 contracts/AB \times 11 ABs) (140 contracts under Scenario 2; 220 contracts under Scenario 3) are expected to be modified to reflect changes in contractual obligations between each recognized AB and its accredited CBs under the Third-Party final rule (see tables 10 to 12). The one-time burden of initial modification of 91 contracts between 11 recognized ABs and their respective accredited CBs is approximately 182 hours (91 contracts \times 2 hours/contract) (280 hours under Scenario 2; 440 hours under Scenario 3) (see tables 10 to 12).

Similarly, CBs accredited by recognized ABs would need to modify or create new contracts with their client eligible entities in order to gain access to any records and any area of the facility, its process(es), and food of the eligible entity relevant to the scope and purpose of audit being performed by the CB (§ 1.651). Considering that each of the expected 92 CBs accredited under the third-party program, under Scenario 1, will each have approximately 48 client eligible entities, we expect that approximately 4,416 contracts (48 contracts/CB \times 92 CBs) between CBs accredited under the third-party program and eligible entities will be modified (7,811 contracts scenario 2; 10,088 contracts under Scenario 3) (see tables 10 to 12). Under Scenario 1, the one-time burden of initial modification of 4,416 contracts between 92 CBs accredited under the third-party program and their respective client eligible entities is approximately 8,832 hours (4,416 contracts \times 2 hours/contract) (15,623 hours under Scenario 2; 20,176 hours under Scenario 3) (see tables 10 to 12).

Section 1.652 of the Third-Party final rule requires that CBs accredited under the third-party program include certain information in reports of food safety audits. We believe that some

information such as the FDA food facility registration number (where applicable) of the facility subject to the audit are currently not included in food safety audits conducted by CBs accredited under other programs. Although this information may not be required as part of the Third-Party program, we have conservatively included the burden of providing such information in this analysis. We expect that it would take about 5 minutes (0.083 hour), on average, by a CB accredited under the third-party program to include additional information, as required in § 1.652, in reports of food safety audits. Therefore, at a minimum, under Scenario 1, each CB accredited under the third-party program must modify a regulatory audit report for each of its 48 eligible entities (55.4 eligible entities per CB in Scenario 2; 48.5 eligible entities per CB in Scenario 3) every year. Under Scenario 1, total annual records of 92 CBs accredited under the third-party program modifying regulatory audit reports of their client eligible entities is estimated at 4,416 records (92 CBs \times 48 eligible entities/CB \times 1 record/eligible entity) (7,811 records under Scenario 2; 10,088 records under Scenario 3). Annual recordkeeping burden of CBs accredited under the third-party program, per § 1.652 of the Third-Party final rule, is estimated at 367 hours (4,416 records \times 0.083 hour/record) for Scenario 1 (648 hours for Scenario 2; 837 hours for Scenario 3) (see tables 13 to 15).

Accredited third-party CBs will incur additional recordkeeping costs associated with modifying existing certification templates to meet the requirements of § 1.653(b)(2). For example, we are requiring accredited CBs to provide a certification number that follows an FDA numeric designation. We have included the burden of providing such information in this analysis because we know that CBs currently do not use an FDA designation in numbering their certificates. To the extent that any of the elements in § 1.653(b)(2) are already included in current certificates issued by some CBs, such as the date(s) and scope of the audit, the recordkeeping burden may be overestimated. We expect that it will take no more than 1 hour, on average, to change the design of certifications issued by CBs accredited under the third-party program. Under Scenario 1, we estimate a one-time recordkeeping burden of modifying the design of the certifications of 92 CBs accredited under the third-party program at 92 hours (92 CBs \times 1 hour/CB) (141 hours under

Scenario 2; 208 hours under Scenario 3) (see tables 16 to 18).

We expect that the burden to fill additional information on a certification that is issued is 5 minutes (0.083 hour). Therefore, under Scenario 1, the annual burden of § 1.653(b)(2) is estimated at 367 hours (92 CBs \times 1 certificate/entity \times 48 entities/CB \times 0.083 hour/certificate) (see table 19). Under Scenario 2, the annual burden of § 1.653(b)(2) is estimated at 648 hours (141 CBs \times 1 certificate/entity \times 55.4 entities/CB \times 0.083 hour/certificate) (see table 20). Finally, under Scenario 3, the annual burden of § 1.653(b)(2) is estimated at 837 hours (208 CBs \times 1 certificate/entity \times 48.5 entities/CB \times 0.083 hour/certificate) (see table 21).

Section 1.656(c) of the Third-Party final rule requires that CBs accredited under the third-party program report to us any condition, found during a regulatory or consultative audit of an eligible entity, which could cause or contribute to a serious risk to the public health. We believe that these occurrences are rare and may occur once every 4 years, or 0.25 times per year. Reporting serious hazard conditions would consist of the onsite audit agent of a CB accredited under the third-party program to document the event as a record and to immediately submit the record to us. Therefore, under Scenario 1, the annual number of records prepared by 92 CBs accredited under the third-party program is estimated at 23 (0.25 records/CB \times 92 CBs) (35 records under Scenario 2; 52 records under Scenario 3). It is expected that a CB accredited under the third-party program would take no more than 1 hour to prepare such record (notification). Under Scenario 1, annual burden of preparation of records per § 1.656(c) of the Third-Party final rule by 92 CBs accredited under the third-party program is estimated at 23 hours (23 records \times 1 hour/record; see table 13) (35 hours for Scenario 2, and 52 hours for Scenario 3; see tables 14 to 15).

We also acknowledge that an accreditation body seeking to challenge a denial of its application for recognition, renewal of recognition, or reinstatement of recognition will incur costs in compiling information to support its request for reconsideration under § 1.691 or its request for internal Agency review under § 1.692. A third-party certification body seeking to challenge a denial of its application for direct accreditation, renewal of direct accreditation, or reaccreditation as a directly accredited third-party certification body will incur costs in compiling information to support its

request for reconsideration under § 1.691 or its request for internal Agency review under § 1.692, as will any accredited third-party certification body seeking to challenge a denial of its request for a waiver of the conflict of interest requirement of § 1.650(b) or a waiver extension. We anticipate that most accreditation bodies and third-party certification bodies who seek to participate in our program will carefully consider the program requirements before applying to, or joining, the program or before submitting a waiver request. We anticipate the submission of challenges under § 1.691 or § 1.692 to be an infrequent event, and one that most program participants will not encounter. Therefore, we are not calculating costs

associated with the compiling of information to support a request for reconsideration under § 1.691 or a request for internal agency review under § 1.692 by an accreditation body seeking to challenge a denial of its application for recognition, renewal of recognition, or reinstatement of recognition; by an third-party certification body seeking to challenge a denial of its application for direct accreditation, renewal of direct accreditation, or reaccreditation as a directly accredited third-party certification body; or by an accredited third-party certification body seeking to challenge a denial of its request for a waiver of the conflict of interest requirement of § 1.650(b) or a waiver extension.

Reporting Burden

In summary, under Scenario 1, total one-time reporting burden by 11 recognized ABs and 92 CBs accredited under the third-party program is estimated at 960 hours (see table 16). Under Scenario 2, total one-time reporting burden by 17 recognized ABs and 141 CBs accredited under the third-party program is estimated at 1,440 hours (see table 17). Under Scenario 3, total one-time reporting burden by 25 recognized ABs and 208 CBs accredited under the third-party program is estimated at 2,080 hours (see table 18). Total annual reporting burden, under Scenarios 1 to 3 is estimated between 3,466 and 7,919 hours (see tables 19 to 21).

TABLE 16—SCENARIO 1, ESTIMATED ONE-TIME REPORTING BURDEN

21 CFR Part 1, subpart M	Number of recordkeepers	Number of records per recordkeeper	Total one-time records	Average burden per recordkeeping (in hours)	Total hours
§ 1.630	11	1	11	80	880
§ 1.670(a-b)	1	1	1	80	80
Total One-Time Reporting Burden					960

Note: There are no operations and maintenance costs associated with one-time reporting burden.

TABLE 17—SCENARIO 2, ESTIMATED ONE-TIME REPORTING BURDEN

§ 1.656(e) ⁷	207	0.25	52	0.25 (15 minutes)	13
Total Annual Reporting Burden					7,919

Note: There are no operations and maintenance costs associated with annual reporting burden.

¹ Annual reporting of regulatory audit reports by CBs accredited by recognized ABs to their accrediting ABs.

² Annual reporting of regulatory audit reports by CBs accredited by recognized ABs to the FDA.

³ Annual reporting of regulatory audit reports by directly-accredited CBs to the FDA.

⁴ Annual reporting of self-assessment by CBs to their recognized ABs.

⁵ Annual reporting of self-assessment by directly-accredited CBs to the FDA.

⁶ Annual reporting of serious risk to public health by CBs accredited under the third-party program to eligible entities.

⁷ Annual reporting of serious risk to public health by CBs to their recognized ABs.

Section 1.630 of the Third-Party final rule allows for any AB to apply for recognition. Under Scenario 1, we estimate that approximately 11 ABs would apply for recognition. We estimate that it will take 80 person-hours to compile all the relevant information and complete the application for recognition. The initial application for recognition is a one-time burden for each AB that applies. Under Scenario 1, the one-time initial application burden for 11 ABs is estimated at 880 hours (11 applications × 80 hours/application) (see table 16). The one-time initial application burden for 17 ABs, under Scenario 2 (25 ABs under Scenario 3), is estimated at 1,360 hours (2,000 hours under Scenario 3) (see tables 17 and 18). The duration of recognition for a recognized AB will not exceed 5 years per § 1.632 of the Third-Party final rule. Therefore, it is expected that each of the recognized ABs would apply to renew its recognition every 5 years per § 1.634 of the Third-Party final rule. We expect that applications for renewal of recognition will take significantly less time to prepare. We use 50 percent of the amount of effort

to prepare and submit an application for renewal of recognition. Therefore, it is expected that, on average, each recognized AB will spend 40 hours every 5 years (after the initial application) to complete and submit an application for renewal of its recognition, or approximately 8 hours per year (40 hours ÷ 5 years) for each AB. Therefore, the annual burden of completing the renewal of recognition application by 11 ABs, under Scenario 1, is 88 hours (11 applications × 8 hours/application) per year (136 hours per year for 17 ABs under Scenario 2; 200 per hour for each of 25 ABs under Scenario 3) (see tables 19 to 21).

Similarly, § 1.670(a) and (b) of the Third-Party final rule allows for CBs to apply to us for direct accreditation, when the criteria for direct accreditation are met. We estimate that approximately one CB would apply for direct accreditation. It is expected that the application for direct accreditation would require the same amount of effort as does an AB's application for recognition. Hence, we estimate that the initial application for direct accreditation would take 80-person

hours. The one-time initial application burden for 1 CB, for each scenario, is estimated at 80 hours (1 application × 80 hours/application) (see tables 16 to 18). The duration of accreditation for a directly-accredited CB will not exceed 4 years, per § 1.671 of the Third-Party final rule. Therefore, it is expected that each of the expected directly-accredited CBs would apply to renew its accreditation every 4 years, per § 1.673 of the Third-Party final rule. We expect that directly accredited CBs use 50 percent amount of effort, or 40 person-hours, for their initial application for direct accreditation, yielding an average of 10 hours per year. Therefore, the annual burden of completing the application for renewal by 1 directly-accredited CB is 10 hours (1 application × 10 hours/application) per year (see tables 19 to 21).

For the purposes of the Third-Party final economic and PRA analyses, we have estimated costs assuming that, during the application process, affected entities will do their paperwork properly and completely the first time. If we assumed a less consistent outcome, one that would result in

recognition denials, the initial burden might increase.

Section 1.623(a) of the Third-Party final rule requires that recognized ABs annually conduct comprehensive assessments of the performance of CBs they have accredited and submit the results of the assessments to us within 45 days of their completion. We expect that it would take no more than 15 minutes (0.25 hour) for a recognized AB to electronically submit the assessment of each its accredited CBs. Following the implementation of the Third-Party final rule and VQIP draft guidance, we expect, on average, each recognized AB would accredit approximately 8.27 CBs (8.23 CBs under Scenario 2; 8.79 under Scenario 3). Therefore, under Scenario 1, each recognized AB would submit, on average, approximately 91 copies of assessments of performance of their accredited CBs (8.27 assessments/AB \times 11 ABs) (140 assessments under Scenario 2; 220 under Scenario 3). Under Scenario 1, annual reporting of 91 assessments by 11 recognized ABs is estimated at 23 hours (91 submission of assessments \times 0.25 hour/submission) (35 hours under Scenario 2; 55 hours under Scenario 3) (see tables 19 to 21).

Section 1.623(b) of the Third-Party final rule requires that recognized ABs annually conduct a self-assessment and submit the assessments within 45 days of their completion. We expect that it would take no more than 15 minutes for an AB to electronically submit a copy of its self-assessment. Under Scenario 1, annual reporting of 11 self-assessments by 11 recognized ABs is estimated at 3 hours (11 submission of self-assessments \times 0.25 hour/submission) (4 hours under Scenario 2; 6 hours under Scenario 3) (see tables 10 to 21).

Section 1.656(a) of the Third-Party final rule requires that a CB accredited under the third-party program must submit the regulatory audit reports it conducts to us and to the AB that granted its accreditation (where applicable) within 45 days after completing such audit. In the Third-Party final economic analysis, we estimate that following the implementation of the Third-Party final rule, there will be 11 recognized ABs that accredit 91 CBs (17 recognized ABs and 140 accredited CBs under Scenario 2; 25 recognized ABs and 207 accredited CBs under Scenario 3), and we will directly accredit one CB. In addition, we estimated that each CB accredited under the third-party program, on average, conducts food safety audits and certifies 48 eligible entities under Scenario 1 (55.4 eligible entities/CB under Scenario 2; 48.5 eligible entities/CB under Scenario 3). Therefore, under Scenario

1, CBs accredited by recognized ABs will annually submit 4,368 regulatory audit reports (91 CBs \times 48 reports/CB) to their accrediting ABs and 4,368 reports to us (see table 19). Similarly, under Scenarios 2 and 3, CBs accredited by recognized ABs will annually submit 7,756 and 10,040 regulatory audit reports to their accrediting ABs and the FDA, respectively (see tables 20 and 21). Under Scenario 1, the directly-accredited CB will annually submit 48 regulatory audit reports (1 CB \times 48 reports/CB) (see table 19). The number of eligible entities per directly-accredited CB increases to 55.4 in Scenario 2. We assume that the number of eligible entities per directly-accredited CBs remains the same for Scenario 3. We expect that it would take no more than 15 minutes (0.25 hour) for a CB accredited under the third-party program to electronically submit a copy of the regulatory report it conducts to us and to its AB (where applicable).

Under Scenario 1, annual reporting burden for CBs accredited by recognized ABs is estimated at 1,092 hours (4,368 reports \times 0.25 hours/report) for submitting copies of regulatory audit reports they have conducted to their accrediting ABs and 1,092 hours for submitting the same records to us (see table 19). Under Scenario 2, annual reporting burden for CBs accredited by recognized ABs is estimated at 1,939 hours (7,756 reports \times 0.25 hours/report) for submitting copies of regulatory audit reports they have conducted to their accrediting ABs and 1,939 hours for submitting the same records to us (see table 20). Similarly, under Scenario 3, annual reporting burden for CBs accredited by recognized ABs is estimated at 2,510 hours (10,040 reports \times 0.25 hours/report) for submitting copies of regulatory audit reports they have conducted to their accrediting ABs and 2,510 hours for submitting the same records to us (see table 21). Under Scenario 1, annual burden for submission of regulatory audit reports by directly-accredited CBs is estimated at 12 hours (48 reports \times 0.25 hours/report) (14 hours for Scenarios 2 and 3) (see tables 19 to 21).

Section 1.656(b) of the Third-Party final rule requires CBs accredited under the third-party program to submit reports of their annual self-assessments electronically to their ABs, or in the case of direct accreditation to us, within 45 days of the anniversary date of their accreditation under subpart M. We expect that it would take no more than 15 minutes (0.25 hour) for a CB accredited under the third-party program to electronically send a copy of its annual self-assessment to its AB or

us (as applicable). Under Scenario 1, the annual burden for CBs accredited by recognized ABs is estimated at 23 hours (91 self-assessments \times 0.25 hour/self-assessment; see table 19) (35 hours under Scenario 2 and 52 hours under Scenario 3; see tables 20 and 21). Annual burden for submission of self-assessments by one directly-accredited CB is estimated at 0.25 hour (1 self-assessment \times 0.25 hour/self-assessment; see tables 19 to 21) (rounded to 1 hour).

As we discussed, § 1.656(c) of the Third-Party final rule requires that a CB accredited under the third-party program report to us any condition, found during a regulatory or consultative audit of an eligible entity, which could cause or contribute to a serious risk to the public health. In the Recordkeeping Burden section above, we estimated that such events are expected to occur once every 4 years, or 0.25 per year. We expect that it would take no more than 15 minutes (0.25 hour) for a CB accredited under the third-party program to electronically send a copy of its notification to us. Therefore, under Scenario 1, the total number of notifications sent to us on an annual basis per § 1.656(c) of the Third-Party final rule is estimated at 23 (92 CBs \times 0.25 records/CB) (35 notifications under Scenario 2; 52 notifications under Scenario 3). Under Scenario 1, annual burden for submitting a notification under § 1.656(c) of the Third-Party final rule to us by CBs accredited under the third-party program is estimated at 6 hours (23 records \times 0.25 hour/record) (9 hours under Scenario 2; 13 hours under Scenario 3) (see tables 19 to 21).

Following reporting under § 1.656(c), a CB accredited under the third-party program is required under § 1.656(e) of the Third-Party final rule to immediately notify the eligible entity and its accrediting AB of any conditions identified during the audit which triggered the reporting requirement per § 1.656(c) of the Third-Party final rule. Under Scenario 1, total number of notification sent to eligible entities by 141 CBs accredited under the third-party program is estimated at 23 (92 CBs \times 0.25 records/CB) (35 notifications under Scenario 2; 52 notifications under Scenario 3) while the number of notifications sent to recognized ABs by their accredited CBs is estimated at 23 (91 CBs \times 0.25 records/CB) (35 under Scenario 2; 52 under Scenario 3). Under Scenario 1, annual burden of submitting a notification under § 1.656(e) of the Third-Party final rule to affected eligible entities and ABs by accredited CBs is estimated at 6 hours (9 hours under Scenario 2; 13 hours under Scenario 3) (see tables 19 to 21).

XVIII. Analysis of Environmental Impact

We have determined under 21 CFR 25.30(j) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

XIX. Federalism

We have analyzed the final rule in accordance with the principles set forth in Executive Order 13132. We have determined that the rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, we conclude that the rule does not contain policies that have federalism implications as defined in the Executive Order and, consequently, a federalism summary impact statement is not required.

Party Certification Bodies to Conduct Food Safety Audits and to Issue,” Docket No. FDA-2011-N-0146.

List of Subjects

21 CFR Part 1

Cosmetics, Drugs, Exports, Food labeling, Imports, Labeling, Reporting and recordkeeping requirements.

21 CFR Part 11

Administrative practice and procedure, Computer technology, Reporting and recordkeeping requirements.

21 CFR Part 16

Administrative practice and procedure.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 1, 11, and 16 are amended as follows:

PART 1—GENERAL ENFORCEMENT REGULATIONS

- 1. The authority citation for 21 CFR part 1 is revised to read as follows:

Authority: 15 U.S.C. 1333, 1453, 1454, 1455, 4402; 19 U.S.C. 1490, 1491; 21 U.S.C. 321, 331, 332, 333, 334, 335a, 343, 350c, 350d, 350j, 352, 355, 360b, 360ccc, 360ccc-1, 360ccc-2, 362, 371, 374, 381, 382, 384a, 384b, 384d, 387, 387a, 387c, 393; 42 U.S.C. 216, 241, 243, 262, 264, 271.

- 2. Add subpart M, consisting of §§ 1.600 through 1.695, to read as follows:

Subpart M—Accreditation of Third-Party Certification Bodies To Conduct Food Safety Audits and To Issue Certifications

Sec.

1.600 What definitions apply to this subpart?

1.601 Who is subject to this subpart?

Recognition of Accreditation Bodies Under This Subpart

1.610 Who is eligible to seek recognition?

1.611 What legal authority must an accreditation body have to qualify for recognition?

1.612 What competency and capacity must an accreditation body have to qualify for recognition?

1.613 What protections against conflicts of interest must an accreditation body have to qualify for recognition?

1.614 What quality assurance procedures must an accreditation body have to qualify for recognition?

1.615 What records procedures must an accreditation body have to qualify for recognition?

Requirements for Accreditation Bodies That Have Been Recognized Under This Subpart

1.620 How must a recognized accreditation body evaluate third-party certification bodies seeking accreditation?

1.621 How must a recognized accreditation body monitor the performance of third-party certification bodies it accredited?

1.622 How must a recognized accreditation body monitor its own performance?

1.623 What reports and notifications must a recognized accreditation body submit to FDA?

1.624 How must a recognized accreditation body protect against conflicts of interest?

1.625 What records requirements must an accreditation body that has been recognized meet?

Procedures for Recognition of Accreditation Bodies Under This Subpart

1.630 How do I apply to FDA for recognition or renewal of recognition?

1.631 How will FDA review my application for recognition or renewal of recognition and what happens once FDA decides on my application?

1.632 What is the duration of recognition?

1.633 How will FDA monitor recognized accreditation bodies?

1.634 When will FDA revoke recognition?

1.635 What if I want to voluntarily relinquish recognition or do not want to renew recognition?

1.636 How do I request reinstatement of recognition?

Accreditation of Third-Party Certification Bodies Under This Subpart

1.640 Who is eligible to seek accreditation?

1.641 What legal authority must a third-party certification body have to qualify for accreditation?

1.642 What competency and capacity must a third-party certification body have to qualify for accreditation?

1.643 What protections against conflicts of interest must a third-party certification body have to qualify for accreditation?

1.644 What quality assurance procedures must a third-party certification body have to qualify for accreditation?

1.645 What records procedures must a third-party certification body have to qualify for accreditation?

Requirements for Third-Party Certification Bodies That Have Been Accredited Under This Subpart

1.650 How must an accredited third-party certification body ensure its audit agents are competent and objective?

1.651 How must an accredited third-party certification body conduct a food safety audit of an eligible entity?

1.652 What must an accredited third-party certification body include in food safety audit reports?

1.653 What must an accredited third-party certification body do when issuing food or facility certifications?

1.654 When must an accredited third-party certification body monitor an eligible entity that it has issued a food or facility certification?

1.655 How must an accredited third-party certification body monitor its own performance?

1.656 What reports and notifications must an accredited third-party certification body submit?

- 1.657 How must an accredited third-party certification body protect against conflicts of interest?
- 1.658 What records requirements must a third-party certification body that has been accredited meet?

Procedures for Accreditation of Third-Party Certification Bodies Under This Subpart

- 1.660 Where do I apply for accreditation or renewal of accreditation by a recognized accreditation body and what happens once the recognized accreditation body decides on my application?
- 1.661 What is the duration of accreditation by a recognized accreditation body?
- 1.662 How will FDA monitor accredited third-party certification bodies?
- 1.663 How do I request an FDA waiver or waiver extension for the 13-month limit for audit agents conducting regulatory audits?
- 1.664 When would FDA withdraw accreditation?
- 1.665 What if I want to voluntarily relinquish accreditation or do not want to renew accreditation?
- 1.666 How do I request reaccreditation?

Additional Procedures for Direct Accreditation of Third-Party Certification Bodies Under This Subpart

- 1.670 How do I apply to FDA for direct accreditation or renewal of direct accreditation?
- 1.671 How will FDA review my application for direct accreditation or renewal of direct accreditation and what happens once FDA decides on my application?
- 1.672 What is the duration of direct accreditation?

Requirements for Eligible Entities Under This Subpart

- 1.680 How and when will FDA monitor eligible entities?
- 1.681 How frequently must eligible entities be recertified?

General Requirements of This Subpart

- 1.690 How will FDA make information about recognized accreditation bodies and accredited third-party certification bodies available to the public?
- 1.691 How do I request reconsideration of a denial by FDA of an application or a waiver request?
- 1.692 How do I request internal agency review of a denial of an application or waiver request upon reconsideration?
- 1.693 How do I request a regulatory hearing on a revocation of recognition or withdrawal of accreditation?
- 1.694 Are electronic records created under this subpart subject to the electronic records requirements of part 11 of this chapter?
- 1.695 Are the records obtained by FDA under this subpart subject to public disclosure?

Subpart M—Accreditation of Third-Party Certification Bodies To Conduct Food Safety Audits and To Issue Certifications

§ 1.600 What definitions apply to this subpart?

(a) The *FD&C Act* means the Federal Food, Drug, and Cosmetic Act.

(b) Except as otherwise defined in paragraph (c) of this section, the definitions of terms in section 201 of the *FD&C Act* apply when the terms are used in this subpart.

(c) In addition, for the purposes of this subpart:

Accreditation means a determination by a recognized accreditation body (or, in the case of direct accreditation, by FDA) that a third-party certification body meets the applicable requirements of this subpart.

Accreditation body means an authority that performs accreditation of third-party certification bodies.

Accredited third-party certification body means a third-party certification body that a recognized accreditation body (or, in the case of direct accreditation, FDA) has determined meets the applicable requirements of this subpart and is accredited to conduct food safety audits and to issue food or facility certifications to eligible entities. An accredited third-party certification body has the same meaning as accredited third-party auditor as defined in section 808(a)(4) of the *FD&C Act*.

Assessment means:

(i) With respect to an accreditation body, an evaluation by FDA of the competency and capacity of the accreditation body under the applicable requirements of this subpart for the defined scope of recognition. An assessment of the competency and capacity of the accreditation body involves evaluating the competency and capacity of the operations of the accreditation body that are relevant to decisions on recognition and, if recognized, an evaluation of its performance and the validity of its accreditation decisions under the applicable requirements of this subpart.

(ii) With respect to a third-party certification body, an evaluation by a recognized accreditation body (or, in the case of direct accreditation, FDA) of the competency and capacity of a third-party certification body under the applicable requirements of this subpart for the defined scope of accreditation. An assessment of the competency and capacity of the third-party certification body involves evaluating the competency and capacity of the operations of the third-party

certification body that are relevant to decisions on accreditation and, if accredited, an evaluation of its performance and the validity of its audit results and certification decisions under the applicable requirements of this subpart.

Audit means the systematic and functionally independent examination of an eligible entity under this subpart by an accredited third-party certification body or by FDA. An audit conducted under this subpart is not considered an inspection under section 704 of the *FD&C Act*.

Audit agent means an individual who is an employee or other agent of an accredited third-party certification body who, although not individually accredited, is qualified to conduct food safety audits on behalf of an accredited third-party certification body. An audit agent includes a contractor of the accredited third-party certification body but excludes subcontractors or other agents under outsourcing arrangements for conducting food safety audits without direct control by the accredited third-party certification body.

Consultative audit means an audit of an eligible entity:

(i) To determine whether such entity is in compliance with the applicable food safety requirements of the *FD&C Act*, FDA regulations, and industry standards and practices;

(ii) The results of which are for internal purposes only; and

(iii) That is conducted in preparation for a regulatory audit; only the results of a regulatory audit may form the basis for issuance of a food or facility certification under this subpart.

Direct accreditation means accreditation of a third-party certification body by FDA.

Eligible entity means a foreign entity in the import supply chain of food for consumption in the United States that chooses to be subject to a food safety audit under this subpart conducted by an accredited third-party certification body. Eligible entities include foreign facilities required to be registered under subpart H of this part.

Facility means any structure, or structures of an eligible entity under one ownership at one general physical location, or, in the case of a mobile facility, traveling to multiple locations, that manufactures/processes, packs, holds, grows, harvests, or raises animals for food for consumption in the United States. Transport vehicles are not facilities if they hold food only in the usual course of business as carriers. A facility may consist of one or more contiguous structures, and a single building may house more than one

distinct facility if the facilities are under separate ownership. The private residence of an individual is not a facility. Non-bottled water drinking water collection and distribution establishments and their structures are not facilities. Facilities for the purposes of this subpart are not limited to facilities required to be registered under subpart H of this part.

Facility certification means an attestation, issued for purposes of section 801(q) or 806 of the FD&C Act by an accredited third-party certification body, after conducting a regulatory audit and any other activities necessary to establish whether a facility complies with the applicable food safety requirements of the FD&C Act and FDA regulations.

Food has the meaning given in section 201(f) of the FD&C Act, except that food does not include pesticides (as defined in 7 U.S.C. 136(u)).

Food certification means an attestation, issued for purposes of section 801(q) of the FD&C Act by an accredited third-party certification body, after conducting a regulatory audit and any other activities necessary to establish whether a food of an eligible entity complies with the applicable food safety requirements of the FD&C Act and FDA regulations.

Food safety audit means a regulatory audit or a consultative audit that is conducted to determine compliance with the applicable food safety requirements of the FD&C Act, FDA regulations, and for consultative audits, also includes conformance with industry standards and practices. An eligible entity must declare that an audit is to be conducted as a regulatory audit or consultative audit at the time of audit planning and the audit will be conducted on an unannounced basis under this subpart.

Foreign cooperative means an autonomous association of persons, identified as members, who are united through a jointly owned enterprise to aggregate food from member growers or processors that is intended for export to the United States.

Recognized accreditation body means an accreditation body that FDA has determined meets the applicable requirements of this subpart and is authorized to accredit third-party certification bodies under this subpart.

Regulatory audit means an audit of an eligible entity:

(i) To determine whether such entity is in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations; and

(ii) The results of which are used in determining eligibility for certification

under section 801(q) or under section 806 of the FD&C Act.

Relinquishment means:

(i) With respect to an accreditation body, a decision to cede voluntarily its authority to accredit third-party certification bodies as a recognized accreditation body prior to expiration of its recognition under this subpart; and

(ii) With respect to a third-party certification body, a decision to cede voluntarily its authority to conduct food safety audits and to issue food and facility certifications to eligible entities as an accredited third-party certification body prior to expiration of its accreditation under this subpart.

Self-assessment means an evaluation conducted by a recognized accreditation body or by an accredited third-party certification body of its competency and capacity under the applicable requirements of this subpart for the defined scope of recognition or accreditation. For recognized accreditation bodies this involves evaluating the competency and capacity of the entire operations of the accreditation body and the validity of its accreditation decisions under the applicable requirements of this subpart. For accredited third-party certification bodies this involves evaluating the competency and capacity of the entire operations of the third-party certification body and the validity of its audit results under the applicable requirements of this subpart.

Third-party certification body has the same meaning as third-party auditor as that term is defined in section 808(a)(3) of the FD&C Act and means a foreign government, agency of a foreign government, foreign cooperative, or any other third party that is eligible to be considered for accreditation to conduct food safety audits and to certify that eligible entities meet the applicable food safety requirements of the FD&C Act and FDA regulations. A third-party certification body may be a single individual or an organization. Once accredited, a third-party certification body may use audit agents to conduct food safety audits.

§ 1.601 Who is subject to this subpart?

(a) *Accreditation bodies.* Any accreditation body seeking recognition from FDA to accredit third-party certification bodies to conduct food safety audits and to issue food and facility certifications under this subpart.

(b) *Third-party certification bodies.* Any third-party certification body seeking accreditation from a recognized accreditation body or direct accreditation by FDA for:

(1) Conducting food safety audits; and

(2) Issuing certifications that may be used in satisfying a condition of admissibility of an article of food under section 801(q) of the FD&C Act; or issuing a facility certification for meeting the eligibility requirements for the Voluntary Qualified Importer Program under section 806 of the FD&C Act.

(c) *Eligible entities.* Any eligible entity seeking a food safety audit or a food or facility certification from an accredited third-party certification body under this subpart.

(d) *Limited exemptions from section 801(q) of the FD&C Act—(1) Alcoholic beverages.* (i) Any certification required under section 801(q) of the FD&C Act does not apply with respect to alcoholic beverages from an eligible entity that is a facility that meets the following two conditions:

(A) Under the Federal Alcohol Administration Act (27 U.S.C. 201 *et seq.*) or chapter 51 of subtitle E of the Internal Revenue Code of 1986 (26 U.S.C. 5001 *et seq.*), the facility is a foreign facility of a type that, if it were a domestic facility, would require obtaining a permit from, registering with, or obtaining approval of a notice or application from the Secretary of the Treasury as a condition of doing business in the United States; and

(B) Under section 415 of the FD&C Act, the facility is required to register as a facility because it is engaged in manufacturing/processing one or more alcoholic beverages.

(ii) Any certification required under section 801(q) of the FD&C Act does not apply with respect to food that is not an alcoholic beverage that is received and distributed by a facility described in paragraph (d)(1)(i) of this section, provided such food:

(A) Is received and distributed in prepackaged form that prevents any direct human contact with such food; and

(B) Constitutes not more than 5 percent of the overall sales of the facility, as determined by the Secretary of the Treasury.

(iii) Any certification required under section 801(q) of the FD&C Act does not apply with respect to raw materials or other ingredients that are imported for use in alcoholic beverages provided that:

(A) The imported raw materials or other ingredients are used in the manufacturing/processing, packing, or holding of alcoholic beverages;

(B) Such manufacturing/processing, packing, or holding is performed by the importer;

(C) The importer is required to register under section 415 of the Federal Food, Drug, and Cosmetic Act; and

(D) The importer is exempt from the regulations in part 117 of this chapter in accordance with § 117.5(i).

(2) *Certain meat, poultry, and egg products.* Any certification required under section 801(q) of the FD&C Act does not apply with respect to:

(i) Meat food products that at the time of importation are subject to the requirements of the United States Department of Agriculture (USDA) under the Federal Meat Inspection Act (21 U.S.C. 601 *et seq.*);

(ii) Poultry products that at the time of importation are subject to the requirements of the USDA under the Poultry Products Inspection Act (21 U.S.C. 451 *et seq.*); and

(iii) Egg products that at the time of importation are subject to the requirements of the USDA under the Egg Products Inspection Act (21 U.S.C. 1031 *et seq.*).

Recognition of Accreditation Bodies Under This Subpart

§ 1.610 Who is eligible to seek recognition?

An accreditation body is eligible to seek recognition by FDA if it can demonstrate that it meets the requirements of §§ 1.611 through 1.615. The accreditation body may use documentation of conformance with International Organization for Standardization/International Electrotechnical Commission (ISO/IEC) 17011:2004, supplemented as necessary, in meeting the applicable requirements of this subpart.

§ 1.611 What legal authority must an accreditation body have to qualify for recognition?

(a) An accreditation body seeking recognition must demonstrate that it has the authority (as a governmental entity or as a legal entity with contractual rights) to perform assessments of a third-party certification body as are necessary to determine its capability to conduct audits and certify food facilities and food, including authority to:

(1) Review any relevant records;

(2) Conduct onsite assessments of the performance of third-party certification bodies, such as by witnessing the performance of a representative sample of its agents (or, in the case of a third-party certification body that is an individual, such individual) conducting a representative sample of audits;

(3) Perform any reassessments or surveillance necessary to monitor compliance of accredited third-party certification bodies; and

(4) Suspend, withdraw, or reduce the scope of accreditation for failure to comply with the requirements of accreditation.

(b) An accreditation body seeking recognition must demonstrate that it is capable of exerting the authority (as a governmental entity or as a legal entity with contractual rights) necessary to meet the applicable requirements of this subpart, if recognized.

§ 1.612 What competency and capacity must an accreditation body have to qualify for recognition?

An accreditation body seeking recognition must demonstrate that it has:

(a) The resources required to adequately implement its accreditation program, including:

(1) Adequate numbers of employees and other agents with relevant knowledge, skills, and experience to effectively evaluate the qualifications of third-party certification bodies seeking accreditation and to effectively monitor the performance of accredited third-party certification bodies; and

(2) Adequate financial resources for its operations; and

(b) The capability to meet the applicable assessment and monitoring requirements, the reporting and notification requirements, and the procedures of this subpart, if recognized.

§ 1.613 What protections against conflicts of interest must an accreditation body have to qualify for recognition?

An accreditation body must demonstrate that it has:

(a) Implemented written measures to protect against conflicts of interest between the accreditation body (and its officers, employees, and other agents involved in accreditation activities) and any third-party certification body (and its officers, employees, and other agents involved in auditing and certification activities) seeking accreditation from, or accredited by, such accreditation body; and

(b) The capability to meet the applicable conflict of interest requirements of this subpart, if recognized.

§ 1.614 What quality assurance procedures must an accreditation body have to qualify for recognition?

An accreditation body seeking recognition must demonstrate that it has:

(a) Implemented a written program for monitoring and evaluating the performance of its officers, employees, and other agents and its accreditation program, including procedures to:

(1) Identify areas in its accreditation program or performance where deficiencies exist; and

(2) Quickly execute corrective actions that effectively address deficiencies when identified; and

(b) The capability to meet the applicable quality assurance requirements of this subpart, if recognized.

§ 1.615 What records procedures must an accreditation body have to qualify for recognition?

An accreditation body seeking recognition must demonstrate that it has:

(a) Implemented written procedures to establish, control, and retain records (including documents and data) for the period of time necessary to meet its contractual and legal obligations pertaining to this subpart and to provide an adequate basis for evaluating its program and performance; and

(b) The capability to meet the applicable reporting and notification requirements of this subpart, if recognized.

Requirements for Accreditation Bodies That Have Been Recognized Under This Subpart

§ 1.620 How must a recognized accreditation body evaluate third-party certification bodies seeking accreditation?

(a) Prior to accrediting a third-party certification body under this subpart, a recognized accreditation body must perform, at a minimum, the following:

(1) In the case of a foreign government or an agency of a foreign government, such reviews and audits of the government's or agency's food safety programs, systems, and standards as are necessary to determine that it meets the eligibility requirements of § 1.640(b).

(2) In the case of a foreign cooperative or any other third-party seeking accreditation as a third-party certification body, such reviews and audits of the training and qualifications of agents conducting audits for such cooperative or other third party (or in the case of a third-party certification body that is an individual, such individual) and such reviews of internal systems and any other investigation of the cooperative or other third party necessary to determine that it meets the eligibility requirements of § 1.640(c).

(3) In conducting a review and audit under paragraph (a)(1) or (2) of this section, an observation of a representative sample of onsite audits examining compliance with the applicable food safety requirements of the FD&C Act and FDA regulations as conducted by the third-party

certification body or its agents (or, in the case of a third-party certification body that is an individual, such individual).

(b) A recognized accreditation body must require a third-party certification body, as a condition of accreditation under this subpart, to comply with the reports and notification requirements of §§ 1.652 and 1.656 and to agree to submit to FDA, electronically and in English, any food or facility certifications it issues for purposes of sections 801(q) or 806 of the FD&C Act.

(c) A recognized accreditation body must maintain records on any denial of accreditation (in whole or in part) and on any withdrawal, suspension, or reduction in scope of accreditation of a third-party certification body under this subpart. The records must include the name and contact information for the third-party certification body; the date of the action; the scope of accreditation denied, withdrawn, suspended, or reduced; and the basis for such action.

(d) A recognized accreditation body must notify any third-party certification body of an adverse decision associated with its accreditation under this subpart, including denial of accreditation or the withdrawal, suspension, or reduction in the scope of its accreditation. The recognized accreditation body must establish and implement written procedures for receiving and addressing appeals from any third-party certification body challenging such an adverse decision and for investigating and deciding on appeals in a fair and meaningful manner. The appeals procedures must provide similar protections to those offered by FDA under §§ 1.692 and 1.693, and include requirements to:

(1) Make the appeals procedures publicly available;

(2) Use competent persons, who may or may not be external to the recognized accreditation body, who are free from bias or prejudice and have not participated in the accreditation decision or be subordinate to a person who has participated in the accreditation decision to investigate and decide appeals;

(3) Advise third-party certification bodies of the final decisions on their appeals; and

(4) Maintain records under § 1.625 of appeals, final decisions on appeals, and the bases for such decisions.

§ 1.621 How must a recognized accreditation body monitor the performance of third-party certification bodies it accredited?

(a) A recognized accreditation body must annually conduct a comprehensive assessment of the performance of each

third-party certification body it accredited under this subpart by reviewing the accredited third-party certification body's self-assessments (including information on compliance with the conflict of interest requirements of §§ 1.643 and 1.657); its regulatory audit reports and notifications submitted to FDA under § 1.656; and any other information reasonably available to the recognized accreditation body regarding the compliance history of eligible entities the accredited third-party certification body certified under this subpart; or that is otherwise relevant to a determination whether the accredited third-party certification body is in compliance with this subpart.

(b) No later than 1 year after the initial date of accreditation of the third-party certification body and every 2 years thereafter for duration of its accreditation under this subpart, a recognized accreditation body must conduct onsite observations of a representative sample of regulatory audits performed by the third-party certification body (or its audit agents) (or, in the case of a third-party certification body that is an individual, such individual) accredited under this subpart and must visit the accredited third-party certification body's headquarters (or other location that manages audit agents conducting food safety audits under this subpart, if different than its headquarters). The recognized accreditation body will consider the results of such observations and visits in the annual assessment of the accredited third-party certification body required by paragraph (a) of this section.

§ 1.622 How must a recognized accreditation body monitor its own performance?

(a) A recognized accreditation body must annually, and as required under § 1.664(g), conduct a self-assessment that includes evaluation of compliance with this subpart, including:

(1) The performance of its officers, employees, or other agents involved in accreditation activities and the degree of consistency in conducting accreditation activities;

(2) The compliance of the recognized accreditation body and its officers, employees, and other agents involved in accreditation activities, with the conflict of interest requirements of § 1.624; and

(3) If requested by FDA, any other aspects of its performance relevant to a determination whether the recognized accreditation body is in compliance with this subpart.

(b) As a means to evaluate the recognized accreditation body's performance, the self-assessment must include onsite observation of regulatory audits of a representative sample of third-party certification bodies it accredited under this subpart. In meeting this requirement, the recognized accreditation body may use the results of onsite observations performed under § 1.621(b).

(c) Based on the evaluations conducted under paragraphs (a) and (b) of this section, the recognized accreditation body must:

(1) Identify any area(s) where deficiencies exist;

(2) Quickly implement corrective action(s) that effectively address those deficiencies; and

(3) Establish and maintain records of any such corrective action(s) under § 1.625.

(d) The recognized accreditation body must prepare, and as required by § 1.623(b) submit, a written report of the results of its self-assessment that includes the following elements. Documentation of conformance to ISO/IEC 17011:2004 may be used, supplemented as necessary, in meeting the requirements of this paragraph.

(1) A description of any corrective actions taken under paragraph (c) of this section;

(2) A statement disclosing the extent to which the recognized accreditation body, and its officers, employees, and other agents involved in accreditation activities, complied with the conflict of interest requirements in § 1.624; and

(3) A statement attesting to the extent to which the recognized accreditation body complied with applicable requirements of this subpart.

§ 1.623 What reports and notifications must a recognized accreditation body submit to FDA?

(a) *Reporting results of assessments of accredited third-party certification body performance.* A recognized accreditation body must submit to FDA electronically, in English, a report of the results of any assessment conducted under § 1.621, no later than 45 days after completing such assessment. The report must include an up-to-date list of any audit agents used by the accredited third-party certification body to conduct food safety audits under this subpart.

(b) *Reporting results of recognized accreditation body self-assessments.* A recognized accreditation body must submit to FDA electronically, in English:

(1) A report of the results of an annual self-assessment required under § 1.622, no later than 45 days after completing such self-assessment; and

(2) For a recognized accreditation body subject to § 1.664(g)(1), a report of such self-assessment to FDA within 60 days of the third-party certification body's withdrawal. A recognized accreditation body may use a report prepared for conformance to ISO/IEC 17011:2004, supplemented as necessary, in meeting the requirements this section.

(c) *Immediate notification to FDA.* A recognized accreditation body must notify FDA electronically, in English, immediately upon:

(1) Granting (including expanding the scope of) accreditation to a third-party certification body under this subpart, and include:

(i) The name, address, telephone number, and email address of the accredited third-party certification body;

(ii) The name of one or more officers of the accredited third-party certification body;

(iii) A list of the accredited third-party certification body's audit agents; and

(iv) The scope of accreditation, the date on which it was granted, and its expiration date.

(2) Withdrawing, suspending, or reducing the scope of an accreditation under this subpart, and include:

(i) The basis for such action; and

(ii) Any additional changes to accreditation information previously submitted to FDA under paragraph (c)(1) of this section.

(3) Determining that a third-party certification body it accredited failed to comply with § 1.653 in issuing a food or facility certification under this subpart, and include:

(i) The basis for such determination; and

(ii) Any changes to accreditation information previously submitted to FDA under paragraph (c)(1) of this section.

(d) *Other notification to FDA.* A recognized accreditation body must notify FDA electronically, in English, within 30 days after:

(1) Denying accreditation (in whole or in part) under this subpart and include:

(i) The name, address, telephone number, and email address of the third-party certification body;

(ii) The name of one or more officers of the third-party certification body;

(iii) The scope of accreditation requested; and

(iv) The scope and basis for such denial.

(2) Making any significant change that would affect the manner in which it complies with the applicable requirements of this subpart and include:

(i) A description of the change; and

(ii) An explanation for the purpose of the change.

§ 1.624 How must a recognized accreditation body protect against conflicts of interest?

(a) A recognized accreditation body must implement a written program to protect against conflicts of interest between the recognized accreditation body (and its officers, employees, and other agents involved in accreditation activities) and any third-party certification body (and its officers, employees, and other agents involved in auditing and certification activities) seeking accreditation from, or accredited by, such recognized accreditation body, including the following:

(1) Ensuring that the recognized accreditation body (and its officers, employees, or other agents involved in accreditation activities) does not own or have a financial interest in, manage, or otherwise control the third-party certification body (or any affiliate, parent, or subsidiary); and

(2) Prohibiting officers, employees, or other agents involved in accreditation activities of the recognized accreditation body from accepting any money, gift, gratuity, or item of value from the third-party certification body.

(3) The items specified in paragraph (a)(2) of this section do not include:

(i) Money representing payment of fees for accreditation services and reimbursement of direct costs associated with an onsite assessment of the third-party certification body; or

(ii) Lunch of de minimis value provided during the course of an assessment and on the premises where the assessment is conducted, if necessary to facilitate the efficient conduct of the assessment.

(b) A recognized accreditation body may accept the payment of fees for accreditation services and the reimbursement of direct costs associated with assessment of a certification body only after the date on which the report of such assessment was completed or the date of which the accreditation was issued, whichever comes later. Such payment is not considered a conflict of interest for purposes of paragraph (a) of this section.

(c) The financial interests of the spouses and children younger than 18 years of age of a recognized accreditation body's officers, employees, and other agents involved in accreditation activities will be considered the financial interests of such officers, employees, and other

agents involved in accreditation activities.

(d) A recognized accreditation body must maintain on its Web site an up-to-date list of the third-party certification bodies it accredited under this subpart and must identify the duration and scope of each accreditation and the date(s) on which the accredited third-party certification body paid any fee or reimbursement associated with such accreditation. If the accreditation of a certification body is suspended, withdrawn, or reduced in scope, this list must also include the date of suspension, withdrawal, or reduction in scope and maintain that information for the duration of accreditation or until the suspension is lifted, the certification body is reaccredited, or the scope of accreditation is reinstated, whichever comes first.

§ 1.625 What records requirements must an accreditation body that has been recognized meet?

(a) An accreditation body that has been recognized must maintain electronically for 5 years records created while it is recognized (including documents and data) demonstrating its compliance with this subpart, including records relating to:

(1) Applications for accreditation and renewal of accreditation under § 1.660;

(2) Decisions to grant, deny, suspend, withdraw, or expand or reduce the scope of an accreditation;

(3) Challenges to adverse accreditation decisions under § 1.620(c);

(4) Its monitoring of accredited third-party certification bodies under § 1.621;

(5) Self-assessments and corrective actions under § 1.622;

(6) Regulatory audit reports, including any supporting information, that an accredited third-party certification body may have submitted;

(7) Any reports or notifications to FDA under § 1.623, including any supporting information; and

(8) Records of fee payments and reimbursement of direct costs.

(b) An accreditation body that has been recognized must make records required by paragraph (a) of this section available for inspection and copying promptly upon written request of an authorized FDA officer or employee at the place of business of the accreditation body or at a reasonably accessible location. If the records required by paragraph (a) of this section are requested by FDA electronically, the records must be submitted to FDA electronically not later than 10 business days after the date of the request. Additionally, if the requested records are maintained in a language other than

English, the accreditation body must electronically submit an English translation within a reasonable time.

(c) An accreditation body that has been recognized must not prevent or interfere with FDA's access to its accredited third-party certification bodies and the accredited third-party certification body records required by § 1.658.

Procedures for Recognition of Accreditation Bodies Under This Subpart

§ 1.630 How do I apply to FDA for recognition or renewal of recognition?

(a) *Applicant for recognition.* An accreditation body seeking recognition must submit an application demonstrating that it meets the eligibility requirements in § 1.610.

(b) *Applicant for renewal of recognition.* An accreditation body seeking renewal of its accreditation must submit a renewal application demonstrating that it continues to meet the requirements of this subpart.

(c) *Submission.* Recognition and renewal applications and any documents provided as part of the application process must be submitted electronically, in English. An applicant must provide any translation and interpretation services needed by FDA during the processing of the application, including during onsite assessments of the applicant by FDA.

(d) *Signature.* Recognition and renewal applications must be signed in the manner designated by FDA, by an individual authorized to act on behalf of the applicant for purposes of seeking recognition or renewal of recognition.

§ 1.631 How will FDA review my application for recognition or renewal of recognition and what happens once FDA decides on my application?

(a) *Review of recognition or renewal application.* FDA will examine an accreditation body's recognition or renewal application for completeness and notify the applicant of any deficiencies. FDA will review an accreditation body's recognition or renewal application on a first in, first out basis according to the date on which the completed application was submitted; however, FDA may prioritize the review of specific applications to meet the needs of the program.

(b) *Evaluation of recognition or renewal.* FDA will evaluate any completed recognition or renewal application to determine whether the applicant meets the applicable requirements of this subpart. Such evaluation may include an onsite assessment of the accreditation body.

FDA will notify the applicant, in writing, regarding whether the application has been approved or denied. FDA may make such notification electronically. If FDA does not reach a final decision on a renewal application before an accreditation body's recognition terminates by expiration, FDA may extend such recognition for a specified period of time or until the Agency reaches a final decision on the renewal application.

(c) *Issuance of recognition.* FDA will notify an applicant that its recognition or renewal application has been approved through issuance of recognition that will list any limitations associated with the recognition.

(d) *Issuance of denial of recognition or renewal application.* FDA will notify an applicant that its recognition or renewal application has been denied through issuance of a denial of recognition or denial of a renewal application that will state the basis for such denial and provide the procedures for requesting reconsideration of the application under § 1.691.

(e) *Notice of records custodian after denial of an application for renewal of recognition.* An applicant whose renewal application was denied must notify FDA electronically, in English, within 10 business days of the date of issuance of a denial of a renewal application, of the name and contact information of the custodian who will maintain the records required by § 1.625(a) and make them available to FDA as required by § 1.625(b). The contact information for the custodian must include, at a minimum, an email address and the physical address where the records required by § 1.625(a) will be located.

(f) *Effect of denial of an application for renewal of recognition of an accreditation body on accredited third-party certification bodies.* (1) FDA will issue a notice of the denial of a recognition renewal to any third-party certification bodies accredited by the accreditation body whose renewal application was denied. The third-party certification body's accreditation will remain in effect so long as the third-party certification body:

(i) No later than 60 days after FDA's issuance of the notice of the denial of recognition renewal, conducts a self-assessment under § 1.655 and reports the results of the self-assessment to FDA under § 1.656(b); and

(ii) No later than 1 year after issuance of the notice of denial of recognition renewal or the original date of the expiration of the accreditation, whichever comes first, becomes accredited by another recognized

accreditation body or by FDA through direct accreditation.

(2) FDA may withdraw the accreditation of a third-party certification body whenever FDA determines there is good cause for withdrawal of accreditation under § 1.664(c).

(g) *Effect of denial of an application for renewal of recognition of an accreditation body on food or facility certifications issued to eligible entities.* A food or facility certification issued by a third-party certification body accredited by a recognized accreditation body prior to issuance of a denial of the renewal application will remain in effect until the certification expires. If FDA has reason to believe that a certification issued for purposes of section 801(q) or 806 of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification in determining the admissibility of the article of food for which the certification was offered or in determining the importer's eligibility for participation in the voluntary qualified importer program (VQIP).

(h) *Public notice of denial of an application for renewal of recognition of an accreditation body.* FDA will provide notice on the Web site described in § 1.690 of the date of issuance of a denial of a renewal application and will describe the basis for the denial.

§ 1.632 What is the duration of recognition?

FDA may grant recognition of an accreditation body for a period not to exceed 5 years from the date of recognition.

§ 1.633 How will FDA monitor recognized accreditation bodies?

(a) FDA will evaluate the performance of each recognized accreditation body to determine its compliance with the applicable requirements of this subpart. Such assessment must occur by at least 4 years after the date of recognition for a 5-year recognition period, or by no later than the mid-term point for a recognition period of less than 5 years. FDA may conduct additional assessments of a recognized accreditation body at any time.

(b) An FDA assessment of a recognized accreditation body may include onsite assessments of a representative sample of third-party certification bodies the recognized accreditation body accredited and onsite audits of a representative sample of eligible entities certified by such third-party certification bodies under this subpart. These may be conducted at any time and, as FDA determines necessary

or appropriate, may occur without the recognized accreditation body or, in the case of an audit of an eligible entity, the accredited third-party certification body present.

§ 1.634 When will FDA revoke recognition?

(a) *Grounds for revocation of recognition.* FDA will revoke the recognition of an accreditation body found not to be in compliance with the requirements of this subpart, including for any one or more of the following:

(1) Refusal by the accreditation body to allow FDA to access records required by § 1.625, or to conduct an assessment or investigation of the accreditation body or of a third-party certification body it accredited to ensure the accreditation body's continued compliance with the requirements of this subpart.

(2) Failure to take timely and necessary corrective action when:

(i) The accreditation of a third-party certification body it accredited is withdrawn by FDA under § 1.664(a);

(ii) A significant deficiency is identified through self-assessment under § 1.622, monitoring under § 1.621, or self-assessment by one or more of its accredited third-party certification bodies under § 1.655; or

(iii) Directed to do so by FDA to ensure compliance with this subpart.

(3) A determination by FDA that the accreditation body has committed fraud or has submitted material false statements to the Agency.

(4) A determination by FDA that there is otherwise good cause for revocation, including:

(i) Demonstrated bias or lack of objectivity when conducting activities under this subpart; or

(ii) Failure to adequately support one or more decisions to grant accreditation under this subpart.

(b) *Records request associated with revocation.* To assist in determining whether revocation is warranted under paragraph (a) of this section, FDA may request records of the accreditation body required by § 1.625 or the records, required by § 1.658, of one or more of the third-party certification bodies it accredited under this subpart.

(c) *Issuance of revocation of recognition.* (1) FDA will notify an accreditation body that its recognition has been revoked through issuance of a revocation that will state the grounds for revocation, the procedures for requesting a regulatory hearing under § 1.693 on the revocation, and the procedures for requesting reinstatement of recognition under § 1.636.

(2) Within 10 business days of the date of issuance of the revocation, the

accreditation body must notify FDA electronically, in English, of the name of the custodian who will maintain the records and make them available to FDA as required by § 1.625. The contact information for the custodian must provide, at a minimum, an email address and the physical address where the records will be located.

(d) *Effect of revocation of recognition of an accreditation body on accredited third-party certification bodies.* (1) FDA will issue a notice of the revocation of recognition to any accredited third-party certification body accredited by the accreditation body whose recognition was revoked. The third-party certification body's accreditation will remain in effect if the third-party certification body:

(i) No later than 60 days after FDA's issuance of the notice of revocation, conducts a self-assessment under § 1.655 and reports the results of the self-assessment to FDA under § 1.656(b); and

(ii) No later than 1 year after issuance of the notice of the revocation, or the original date of expiration of the accreditation, whichever comes first, becomes accredited by another recognized accreditation body or by FDA through direct accreditation.

(2) FDA may withdraw the accreditation of a third-party certification body whenever FDA determines there is good cause for withdrawal of accreditation under § 1.664(c).

(e) *Effect of revocation of recognition of an accreditation body on food or facility certifications issued to eligible entities.* A food or facility certification issued by a third-party certification body accredited by a recognized accreditation body prior to issuance of the revocation of recognition will remain in effect until the certificate terminates by expiration. If FDA has reason to believe that a certification issued for purposes of section 801(q) or 806 of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification in determining the admissibility of the article of food for which the certification was offered or in determining the importer's eligibility for participation in VQIP.

(f) *Public notice of revocation of recognition.* FDA will provide notice on the Web site described in § 1.690 of the issuance of the revocation of recognition of an accreditation body and will describe the basis for revocation.

§ 1.635 What if I want to voluntarily relinquish recognition or do not want to renew recognition?

(a) *Notice to FDA of intent to relinquish or not to renew recognition.* A recognized accreditation body must notify FDA electronically, in English, at least 60 days before voluntarily relinquishing recognition or before allowing recognition to expire without seeking renewal. The recognized accreditation body must provide the name and contact information of the custodian who will maintain the records required under § 1.625(a) after the date of relinquishment or the date recognition expires, as applicable, and make them available to FDA as required by § 1.625(b). The contact information for the custodian must include, at a minimum, an email address and the physical address where the records required by § 1.625(a) will be located.

(b) *Notice to accredited third-party certification bodies of intent to relinquish or not to renew recognition.* No later than 15 business days after notifying FDA under paragraph (a) of this section, the recognized accreditation body must notify any currently accredited third-party certification body that it intends to relinquish recognition or to allow its recognition to expire, specifying the date on which relinquishment or expiration will occur. The recognized accreditation body must establish and maintain records of such notification under § 1.625.

(c)(1) *Effect of voluntary relinquishment or expiration of recognition on third-party certification bodies.* The accreditation of a third-party certification body issued prior to the relinquishment or expiration of its accreditation body's recognition will remain in effect, so long as the third-party certification body:

(i) No later than 60 days after the date of relinquishment or the date of expiration of the recognition, conducts a self-assessment under § 1.655 and reports the results of the self-assessment to FDA under § 1.656(b); and

(ii) No later than 1 year after the date of relinquishment or the date of expiration of recognition, or the original date of the expiration of the accreditation, whichever comes first, becomes accredited by another recognized accreditation body or by FDA through direct accreditation.

(2) FDA may withdraw the accreditation of a third-party certification body whenever FDA determines there is good cause for withdrawal of accreditation under § 1.664(c).

(d) *Effect of voluntary relinquishment or expiration of recognition of an accreditation body on food or facility certifications issued to eligible entities.* A food or facility certification issued by a third-party certification body accredited by a recognized accreditation body prior to relinquishment or expiration of its recognition will remain in effect until the certification expires. If FDA has reason to believe that a certification issued for purposes of section 801(q) or 806 of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification in determining the admissibility of the article of food for which the certification was offered or in determining the importer's eligibility for participation in VQIP.

(e) *Public notice of voluntary relinquishment or expiration of recognition.* FDA will provide notice on the Web site described in § 1.690 of the voluntary relinquishment or expiration of recognition of an accreditation body under this subpart.

§ 1.636 How do I request reinstatement of recognition?

(a) *Application following revocation.* An accreditation body that has had its recognition revoked may seek reinstatement by submitting a new application for recognition under § 1.630. The accreditation body must submit evidence that the grounds for revocation have been resolved, including evidence addressing the cause or conditions that were the basis for revocation and identifying measures that have been implemented to help ensure that such cause(s) or condition(s) are unlikely to recur.

(b) *Application following relinquishment.* An accreditation body that previously relinquished its recognition under § 1.635 may seek recognition by submitting a new application for recognition under § 1.630.

Accreditation of Third-Party Certification Bodies Under This Subpart

§ 1.640 Who is eligible to seek accreditation?

(a) A foreign government, agency of a foreign government, foreign cooperative, or any other third party may seek accreditation from a recognized accreditation body (or, where direct accreditation is appropriate, FDA) to conduct food safety audits and to issue food and facility certifications to eligible entities under this subpart. An accredited third-party certification body may use documentation of conformance with ISO/IEC 17021: 2011 or ISO/IEC

17065: 2012, supplemented as necessary, in meeting the applicable requirements of this subpart.

(b) A foreign government or an agency of a foreign government is eligible for accreditation if it can demonstrate that its food safety programs, systems, and standards meet the requirements of §§ 1.641 through 1.645.

(c) A foreign cooperative or other third party is eligible for accreditation if it can demonstrate that the training and qualifications of its agents used to conduct audits (or, in the case of a third-party certification body that is an individual, such individual) and its internal systems and standards meet the requirements of §§ 1.641 through 1.645.

§ 1.641 What legal authority must a third-party certification body have to qualify for accreditation?

(a) A third-party certification body seeking accreditation from a recognized accreditation body or from FDA must demonstrate that it has the authority (as a governmental entity or as a legal entity with contractual rights) to perform such examinations of facilities, their process(es), and food(s) as are necessary to determine compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, and conformance with applicable industry standards and practices and to issue certifications where appropriate based on a review of the findings of such examinations. This includes authority to:

- (1) Review any relevant records;
- (2) Conduct onsite audits of an eligible entity; and
- (3) Suspend or withdraw certification for failure to comply with applicable requirements.

(b) A third-party certification body seeking accreditation must demonstrate that it is capable of exerting the authority (as a governmental entity or as legal entity with contractual rights) necessary to meet the applicable requirements of accreditation under this subpart if accredited.

§ 1.642 What competency and capacity must a third-party certification body have to qualify for accreditation?

A third-party certification body seeking accreditation must demonstrate that it has:

- (a) The resources necessary to fully implement its certification program, including:
 - (1) Adequate numbers of employees and other agents with relevant knowledge, skills, and experience to effectively examine for compliance with applicable FDA food safety requirements of the FD&C Act and FDA

regulations, conformance with applicable industry standards and practices, and issuance of valid and reliable certifications; and

(2) Adequate financial resources for its operations; and

(b) The competency and capacity to meet the applicable requirements of this subpart, if accredited.

§ 1.643 What protections against conflicts of interest must a third-party certification body have to qualify for accreditation?

A third-party certification body must demonstrate that it has:

(a) Implemented written measures to protect against conflicts of interest between the third-party certification body (and its officers, employees, and other agents involved in auditing and certification activities) and clients seeking examinations or certification from, or audited or certified by, such third-party certification body; and

(b) The capability to meet the conflict of interest requirements in § 1.657, if accredited.

§ 1.644 What quality assurance procedures must a third-party certification body have to qualify for accreditation?

A third-party certification body seeking accreditation must demonstrate that it has:

(a) Implemented a written program for monitoring and evaluating the performance of its officers, employees, and other agents involved in auditing and certification activities, including procedures to:

- (1) Identify deficiencies in its auditing and certification program or performance; and
- (2) Quickly execute corrective actions that effectively address any identified deficiencies; and

(b) The capability to meet the quality assurance requirements of § 1.655, if accredited.

§ 1.645 What records procedures must a third-party certification body have to qualify for accreditation?

A third-party certification body seeking accreditation must demonstrate that it:

(a) Implemented written procedures to establish, control, and retain records (including documents and data) for a period of time necessary to meet its contractual and legal obligations and to provide an adequate basis for evaluating its program and performance; and

(b) Is capable of meeting the reporting, notification, and records requirements of this subpart, if accredited.

Requirements for Third-Party Certification Bodies That Have Been Accredited Under This Subpart

§ 1.650 How must an accredited third-party certification body ensure its audit agents are competent and objective?

(a) An accredited third-party certification body that uses audit agents to conduct food safety audits must ensure that each such audit agent meets the following requirements with respect to the scope of its accreditation under this subpart. If the accredited third-party certification body is an individual, that individual is also subject to the following requirements, as applicable:

(1) Has relevant knowledge and experience that provides an adequate basis for the audit agent to evaluate compliance with applicable food safety requirements of the FD&C Act and FDA regulations and, for consultative audits, also includes conformance with applicable industry standards and practices;

(2) Has been determined by the accredited third-party certification body, through observations of a representative sample of audits, to be competent to conduct food safety audits under this subpart relevant to the audits they will be assigned to perform;

(3) Has completed annual food safety training that is relevant to activities conducted under this subpart;

(4) Is in compliance with the conflict of interest requirements of § 1.657 and has no other conflicts of interest with the eligible entity to be audited that might impair the audit agent's objectivity; and

(5) Agrees to notify its accredited third-party certification body immediately upon discovering, during a food safety audit, any condition that could cause or contribute to a serious risk to the public health.

(b) In assigning an audit agent to conduct a food safety audit at a particular eligible entity, an accredited third-party certification body must determine that the audit agent is qualified to conduct such audit under the criteria established in paragraph (a) of this section and based on the scope and purpose of the audit and the type of facility, its process(es), and food.

(c) An accredited third-party certification body cannot use an audit agent to conduct a regulatory audit at an eligible entity if such audit agent conducted a consultative audit or regulatory audit for the same eligible entity in the preceding 13 months, except that such limitation may be waived if the accredited third-party certification body demonstrates to FDA, under § 1.663, there is insufficient

access to audit agents in the country or region where the eligible entity is located. If the accredited third-party certification body is an individual, that individual is also subject to such limitations.

§ 1.651 How must an accredited third-party certification body conduct a food safety audit of an eligible entity?

(a) *Audit planning.* Before beginning to conduct a food safety audit under this subpart, an accredited third-party certification body must:

(1) Require the eligible entity seeking a food safety audit to:

(i) Identify the scope and purpose of the food safety audit, including the facility, process(es), or food to be audited; whether the food safety audit is to be conducted as a consultative or regulatory audit subject to the requirements of this subpart, and if a regulatory audit, the type(s) of certification(s) sought; and

(ii) Provide a 30-day operating schedule for such facility that includes information relevant to the scope and purpose of the audit; and

(2) Determine whether the requested audit is within its scope of accreditation.

(b) *Authority to audit.* In arranging a food safety audit with an eligible entity under this subpart, an accredited third-party certification body must ensure it has authority, whether contractual or otherwise, to:

(1) Conduct an unannounced audit to determine whether the facility, process(es), and food of the eligible entity (within the scope of the audit) comply with the applicable food safety requirements of the FD&C Act and FDA regulations and, for consultative audits, also includes conformance with applicable industry standards and practices;

(2) Access any records and any area of the facility, process(es), and food of the eligible entity relevant to the scope and purpose of such audit;

(3) When, for a regulatory audit, sampling and analysis is conducted, the accredited third-party certification body must use a laboratory that is accredited in accordance with:

(i) ISO/IEC 17025:2005; or

(ii) Another laboratory accreditation standard that provides at least a similar level of assurance in the validity and reliability of sampling methodologies, analytical methodologies, and analytical results.

(4) Notify FDA immediately if, at any time during a food safety audit, the accredited third-party certification body (or its audit agent, where applicable) discovers a condition that could cause

or contribute to a serious risk to the public health and provide information required by § 1.656(c);

(5) Prepare reports of audits conducted under this subpart as follows:

(i) For consultative audits, prepare reports that contain the elements specified in § 1.652(a) and maintain such records, subject to FDA access in accordance with section 414 of the FD&C Act; and

(ii) For regulatory audits, prepare reports that contain the elements specified in § 1.652(b) and submit them to FDA and to its recognized accreditation body (where applicable) under § 1.656(a); and

(6) Allow FDA and the recognized accreditation body that accredited such third-party certification body, if any, to observe any food safety audit conducted under this subpart for purposes of evaluating the accredited third-party certification body's performance under §§ 1.621 and 1.662 or, where appropriate, the recognized accreditation body's performance under §§ 1.622 and 1.633.

(c) *Audit protocols.* An accredited third-party certification body (or its audit agent, where applicable) must conduct a food safety audit in a manner consistent with the identified scope and purpose of the audit and within the scope of its accreditation.

(1) With the exception of records review, which may be scheduled, the audit must be conducted without announcement during the 30-day timeframe identified under paragraph (a)(1)(ii) of this section and must be focused on determining whether the facility, its process(es), and food are in compliance with applicable food safety requirements of the FD&C Act and FDA regulations, and, for consultative audits, also includes conformance with applicable industry standards and practices that are within the scope of the audit.

(2) The audit must include records review prior to the onsite examination; an onsite examination of the facility, its process(es), and the food that results from such process(es); and where appropriate or when required by FDA, environmental or product sampling and analysis. When, for a regulatory audit, sampling and analysis is conducted, the accredited third-party certification body must use a laboratory that is accredited in accordance with paragraph (b)(3) of this section. The audit may include any other activities necessary to determine compliance with applicable food safety requirements of the FD&C Act and FDA regulations, and, for consultative audits, also includes conformance with

applicable industry standards and practices.

(3) The audit must be sufficiently rigorous to allow the accredited third-party certification body to determine whether the eligible entity is in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, and for consultative audits, also includes conformance with applicable industry standards and practices, at the time of the audit; and for a regulatory audit, whether the eligible entity, given its food safety system and practices would be likely to remain in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations for the duration of any certification issued under this subpart. An accredited third-party certification body (or its audit agent, where applicable) that identifies a deficiency requiring corrective action may verify the effectiveness of a corrective action once implemented by the eligible entity but must not recommend or provide input to the eligible entity in identifying, selecting, or implementing the corrective action.

(4) Audit observations and other data and information from the examination, including information on corrective actions, must be documented and must be used to support the findings contained in the audit report required by § 1.652 and maintained as a record under § 1.658.

§ 1.652 What must an accredited third-party certification body include in food safety audit reports?

(a) *Consultative audits.* An accredited third-party certification body must prepare a report of a consultative audit not later than 45 days after completing such audit and must provide a copy of such report to the eligible entity and must maintain such report under § 1.658, subject to FDA access in accordance with the requirements of section 414 of the FD&C Act. A consultative audit report must include:

(1) The identity of the site or location where the consultative audit was conducted, including:

(i) The name, address and the FDA Establishment Identifier of the facility subject to the consultative audit and a unique facility identifier, if designated by FDA; and

(ii) Where applicable, the FDA registration number assigned to the facility under subpart H of this part;

(2) The identity of the eligible entity, if different from the facility, including the name, address, the FDA Establishment Identifier and unique facility identifier, if designated by FDA,

and, where applicable, registration number under subpart H of this part;

(3) The name(s) and telephone number(s) of the person(s) responsible for compliance with the applicable food safety requirements of the FD&C Act and FDA regulations

(4) The dates and scope of the consultative audit;

(5) The process(es) and food(s) observed during such consultative audit; and

(6) Any deficiencies observed that relate to or may influence a determination of compliance with the applicable food safety requirements of the FD&C Act and FDA regulations that require corrective action, the corrective action plan, and the date on which such corrective actions were completed. Such consultative audit report must be maintained as a record under § 1.658 and must be made available to FDA in accordance with section 414 of the FD&C Act.

(b) *Regulatory audits.* An accredited third-party certification body must, no later than 45 days after completing a regulatory audit, prepare and submit electronically, in English, to FDA and to its recognized accreditation body (or, in the case of direct accreditation, only to FDA) and must provide to the eligible entity a report of such regulatory audit that includes the following information:

(1) The identity of the site or location where the regulatory audit was conducted, including:

(i) The name, address, and FDA Establishment Identifier of the facility subject to the regulatory audit and a unique facility identifier, if designated by FDA; and

(ii) Where applicable, the FDA registration number assigned to the facility under subpart H of this part;

(2) The identity of the eligible entity, if different from the facility, including the name, address, FDA Establishment Identifier, and unique facility identifier, if designated by FDA, and, where applicable, registration number under subpart H of this part;

(3) The dates and scope of the regulatory audit;

(4) The process(es) and food(s) observed during such regulatory audit;

(5) The name(s) and telephone number(s) of the person(s) responsible for the facility's compliance with the applicable food safety requirements of the FD&C Act and FDA regulations;

(6) Any deficiencies observed during the regulatory audit that present a reasonable probability that the use of or exposure to a violative product:

(i) Will cause serious adverse health consequences or death to humans and animals; or

(ii) May cause temporary or medically reversible adverse health consequences or where the probability of serious adverse health consequences or death to humans or animals is remote;

(7) The corrective action plan for addressing each deficiency identified under paragraph (b)(6) of this section, unless corrective action was implemented immediately and verified onsite by the accredited third-party certification body (or its audit agent, where applicable);

(8) Whether any sampling and laboratory analysis (e.g., under a microbiological sampling plan) is performed in or used by the facility; and

(9) Whether the eligible entity has made significant changes to the facility, its process(es), or food products during the 2 years preceding the regulatory audit.

(c) *Submission of regulatory audit report.* An accredited third-party certification body must submit a completed regulatory audit report as required by paragraph (b) of this section, regardless of whether the certification body issued a food or facility certification to the eligible entity.

(d) *Notice and appeals of adverse regulatory audit results.* An accredited third-party certification body must notify an eligible entity of a denial of certification and must establish and implement written procedures for receiving and addressing appeals from eligible entities challenging such adverse regulatory audit results and for investigating and deciding on appeals in a fair and meaningful manner. The appeals procedures must provide similar protections to those offered by FDA under §§ 1.692 and 1.693, including requirements to:

(1) Make the appeals procedures publicly available;

(2) Use competent persons, who may or may not be external to the accredited third-party certification body, who are free from bias or prejudice and have not participated in the certification decision or be subordinate to a person who has participated in the certification decision, to investigate and decide appeals;

(3) Advise the eligible entity of the final decision on its appeal; and

(4) Maintain records under § 1.658 of the appeal, the final decision, and the basis for such decision.

§ 1.653 What must an accredited third-party certification body do when issuing food or facility certifications?

(a) *Basis for issuance of a food or facility certification.* (1) Prior to issuing a food or facility certification to an eligible entity, an accredited third-party

certification body (or, where applicable, an audit agent on its behalf) must complete a regulatory audit that meets the requirements of § 1.651 and any other activities that may be necessary to determine compliance with the applicable food safety requirements of the FD&C Act and FDA regulations.

(2) If, as a result of an observation during a regulatory audit, an eligible entity must implement a corrective action plan to address a deficiency, an accredited third-party certification body may not issue a food or facility certification to such entity until after the accredited third-party certification body verifies that eligible entity has implemented the corrective action plan through methods that reliably verify the corrective action was taken and as a result the identified deficiency is unlikely to recur, except onsite verification is required for corrective actions required to address deficiencies that are the subject of a notification under § 1.656(c).

(3) An accredited third-party certification body must consider each observation and the data and other information from a regulatory audit and other activities conducted under § 1.651 to determine whether the entity was in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations at the time of the audit and whether the eligible entity, given its food safety system and practices, would be likely to remain in compliance for the duration of any certification issued under this subpart.

(4) A single regulatory audit may result in issuance of one or more food or facility certifications under this subpart, provided that the requirements of issuance are met as to each such certification.

(5) Where an accredited third-party certification body uses an audit agent to conduct a regulatory audit of an eligible entity under this subpart, the accredited third-party certification body (and not the audit agent) must make the determination whether to issue a food or facility certification based on the results of such regulatory audit.

(b) *Issuance of a food or facility certification and submission to FDA.* (1) Any food or facility certification issued under this subpart must be submitted to FDA electronically and in English. The accredited third-party certification body may issue a food or facility certification under this subpart for a term of up to 12 months.

(2) A food or facility certification must contain, at a minimum, the following elements:

(i) The name and address of the accredited third-party certification body

and the scope and date of its accreditation under this subpart;

(ii) The name, address, FDA Establishment Identifier, and unique facility identifier, if designated by FDA, of the eligible entity to which the food or facility certification was issued;

(iii) The name, address, FDA Establishment Identifier, and unique facility identifier, if designated by FDA, of the facility where the regulatory audit was conducted, if different than the eligible entity;

(iv) The scope and date(s) of the regulatory audit and the certification number;

(v) The name of the audit agent(s) (where applicable) conducting the regulatory audit; and

(vi) The scope of the food or facility certification, date of issuance, and date of expiration.

(3) FDA may refuse to accept any certification for purposes of section 801(q) or 806 of the FD&C Act, if FDA determines, that such food or facility certification is not valid or reliable because, for example:

(i) The certification is offered in support of the admissibility of a food that was not within the scope of the certification;

(ii) The certification was issued by an accredited third-party certification body acting outside the scope of its accreditation under this subpart; or

(iii) The certification was issued without reliable demonstration that the requirements of paragraph (a) of this section were met.

§ 1.654 When must an accredited third-party certification body monitor an eligible entity that it has issued a food or facility certification?

If an accredited third-party certification body has reason to believe that an eligible entity to which it issued a food or facility certification may no longer be in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations, the accredited third-party certification body must conduct any monitoring (including an onsite audit) of such eligible entity necessary to determine whether the entity is in compliance with such requirements. The accredited third-party certification body must immediately notify FDA, under § 1.656(d), if it withdraws or suspends a food or facility certification because it determines that the entity is no longer in compliance with the applicable food safety requirements of the FD&C Act and FDA regulations. The accredited third-party certification body must maintain records of such monitoring under § 1.658.

§ 1.655 How must an accredited third-party certification body monitor its own performance?

(a) An accredited third-party certification body must annually, upon FDA request made for cause, or as required under § 1.631(f)(1)(i), § 1.634(d)(1)(i), or § 1.635(c)(1)(i), conduct a self-assessment that includes evaluation of compliance with this subpart, including:

(1) The performance of its officers, employees, or other agents involved in auditing and certification activities, including the performance of audit agents in examining facilities, process(es), and food using the applicable food safety requirements of the FD&C Act and FDA regulations;

(2) The degree of consistency among its officers, employees, or other agents involved in auditing and certification activities, including evaluating whether its audit agents interpreted audit protocols in a consistent manner;

(3) The compliance of the accredited third-party certification body and its officers, employees, and other agents involved in auditing and certification activities, with the conflict of interest requirements of § 1.657;

(4) Actions taken in response to the results of any assessments conducted by FDA or, where applicable, the recognized accreditation body under § 1.621; and

(5) As requested by FDA, any other aspects of its performance relevant to a determination of whether the accredited third-party certification body is in compliance with this subpart.

(b) As a means to assess its performance, the accredited third-party certification body may evaluate the compliance of one or more of eligible entities to which a food or facility certification was issued under this subpart.

(c) Based on the assessments and evaluations conducted under paragraphs (a) and (b) of this section, the accredited third-party certification body must:

(1) Identify any deficiencies in complying with the requirements of this subpart;

(2) Quickly implement corrective action(s) that effectively address the identified deficiencies; and

(3) Under § 1.658, establish and maintain records of such corrective action(s).

(d) The accredited third-party certification body must prepare a written report of the results of its self-assessment that includes:

(1) A description of any corrective action(s) taken under paragraph (c) of this section;

(2) A statement disclosing the extent to which the accredited third-party certification body, and its officers, employees, and other agents involved in auditing and certification activities, complied with the conflict of interest requirements in § 1.657; and

(3) A statement attesting to the extent to which the accredited third-party certification body complied with the applicable requirements of this subpart.

(e) An accredited third-party certification body may use a report, supplemented as necessary, on its conformance to ISO/IEC 17021: 2011 or ISO/IEC 17065: 2012 in meeting the requirements of this section.

§ 1.656 What reports and notifications must an accredited third-party certification body submit?

(a) *Reporting results of regulatory audits.* An accredited third-party certification body must submit a regulatory audit report, as described in § 1.652(b), electronically, in English, to FDA and to the recognized accreditation body that granted its accreditation (where applicable), no later than 45 days after completing such audit.

(b) *Reporting results of accredited third-party certification body self-assessments.* An accredited third-party certification body must submit the report of its annual self-assessment required by § 1.655 electronically to its recognized accreditation body (or, in the case of direct accreditation, electronically and in English, to FDA), within 45 days of the anniversary date of its accreditation under this subpart. For an accredited third-party certification body subject to an FDA request for cause, or § 1.631(f)(1)(i), § 1.634(d)(1)(i), or § 1.635(c)(1)(i), the report of its self-assessment must be submitted to FDA electronically, in English, within 60 days of the FDA request, denial of renewal, revocation, or relinquishment of recognition of the accreditation body that granted its accreditation. Such report must include an up-to-date list of any audit agents it uses to conduct audits under this subpart.

(c) *Notification to FDA of a serious risk to public health.* An accredited third-party certification body must immediately notify FDA electronically, in English, if during a regulatory or consultative audit, any of its audit agents or the accredited third-party certification body itself discovers a condition that could cause or contribute to a serious risk to the public health, providing the following information:

(1) The name, physical address, and unique facility identifier, if designated by FDA, of the eligible entity subject to

the audit, and, where applicable, the registration number under subpart H of this part;

(2) The name, physical address, and unique facility identifier, if designated by FDA, of the facility where the condition was discovered (if different from that of the eligible entity) and, where applicable, the registration number assigned to the facility under subpart H of this part; and

(3) The condition for which notification is submitted.

(d) *Immediate notification to FDA of withdrawal or suspension of a food or facility certification.* An accredited third-party certification body must notify FDA electronically, in English, immediately upon withdrawing or suspending any food or facility certification of an eligible entity and the basis for such action.

(e) *Notification to its recognized accreditation body or an eligible entity.* (1) After notifying FDA under paragraph (c) of this section, an accredited third-party certification body must immediately notify the eligible entity of such condition and must immediately thereafter notify the recognized accreditation body that granted its accreditation, except for third-party certification bodies directly accredited by FDA. Where feasible and reliable, the accredited third-party certification body may contemporaneously notify its recognized accreditation body and/or the eligible entity when notifying FDA.

(2) An accredited third-party certification body must notify its recognized accreditation body (or, in the case of direct accreditation, FDA) electronically, in English, within 30 days after making any significant change that would affect the manner in which it complies with the requirements of this subpart and must include with such notification the following information:

- (i) A description of the change; and
- (ii) An explanation for the purpose of the change.

§ 1.657 How must an accredited third-party certification body protect against conflicts of interest?

(a) An accredited third-party certification body must implement a written program to protect against conflicts of interest between the accredited third-party certification body (and its officers, employees, and other agents involved in auditing and certification activities) and an eligible entity seeking a food safety audit or food or facility certification from, or audited or certified by, such accredited third-party certification body, including the following:

(1) Ensuring that the accredited third-party certification body and its officers, employees, or other agents involved in auditing and certification activities do not own, operate, have a financial interest in, manage, or otherwise control an eligible entity to be certified, or any affiliate, parent, or subsidiary of the entity;

(2) Ensuring that the accredited third-party certification body and, its officers, employees, or other agents involved in auditing and certification activities are not owned, managed, or controlled by any person that owns or operates an eligible entity to be certified;

(3) Ensuring that an audit agent of the accredited third-party certification body does not own, operate, have a financial interest in, manage, or otherwise control an eligible entity or any affiliate, parent, or subsidiary of the entity that is subject to a consultative or regulatory audit by the audit agent; and

(4) Prohibiting an accredited third-party certification body's officer, employee, or other agent involved in auditing and certification activities from accepting any money, gift, gratuity, or other item of value from the eligible entity to be audited or certified under this subpart.

(5) The items specified in paragraph (a)(4) of this section do not include:

- (i) Money representing payment of fees for auditing and certification services and reimbursement of direct costs associated with an onsite audit by the third-party certification body; or
- (ii) Lunch of de minimis value provided during the course of an audit and on the premises where the audit is conducted, if necessary to facilitate the efficient conduct of the audit.

(b) An accredited third-party certification body may accept the payment of fees for auditing and certification services and the reimbursement of direct costs associated with an audit of an eligible entity only after the date on which the report of such audit was completed or the date a food or facility certification was issued, whichever is later. Such payment is not considered a conflict of interest for purposes of paragraph (a) of this section.

(c) The financial interests of the spouses and children younger than 18 years of age of accredited third-party certification body's officers, employees, and other agents involved in auditing and certification activities will be considered the financial interests of such officers, employees, and other agents involved in auditing and certification activities.

(d) An accredited third-party certification body must maintain on its Web site an up-to-date list of the eligible

entities to which it has issued food or facility certifications under this subpart. For each such eligible entity, the Web site also must identify the duration and scope of the food or facility certification and date(s) on which the eligible entity paid the accredited third-party certification body any fee or reimbursement associated with such audit or certification.

§ 1.658 What records requirements must a third-party certification body that has been accredited meet?

(a) A third-party certification body that has been accredited must maintain electronically for 4 years records created during its period of accreditation (including documents and data) that document compliance with this subpart, including:

(1) Any audit report and other documents resulting from a consultative audit conducted under this subpart, including the audit agent's observations, correspondence with the eligible entity, verification of any corrective action(s) taken to address deficiencies identified during the audit;

(2) Any request for a regulatory audit from an eligible entity;

(3) Any audit report and other documents resulting from a regulatory audit conducted under this subpart, including the audit agent's observations, correspondence with the eligible entity, verification of any corrective action(s) taken to address deficiencies identified during the audit, and, when sampling and analysis is conducted, laboratory testing records and results from a laboratory that is accredited in accordance with § 1.651(b)(3), and documentation demonstrating such laboratory is accredited in accordance with § 1.651(b)(3);

(4) Any notification submitted by an audit agent to the accredited third-party certification body in accordance with § 1.650(a)(5);

(5) Any challenge to an adverse regulatory audit decision and the disposition of the challenge;

(6) Any monitoring it conducted of an eligible entity to which food or facility certification was issued;

(7) Its self-assessments and corrective actions taken to address any deficiencies identified during a self-assessment; and

(8) Significant changes to its auditing or certification program that might affect compliance with this subpart.

(b) An accredited third-party certification body must make the records of a consultative audit required by paragraph (a)(1) of this section available to FDA in accordance with section 414 of the FD&C Act.

(c) An accredited third-party certification body must make the records required by paragraphs (a)(2) through (8) of this section available for inspection and copying promptly upon written request of an authorized FDA officer or employee at the place of business of the accredited third-party certification body or at a reasonably accessible location. If such records are requested by FDA electronically, the records must be submitted electronically not later than 10 business days after the date of the request. Additionally, if the records are maintained in a language other than English, an accredited third-party certification body must electronically submit an English translation within a reasonable time.

Procedures for Accreditation of Third-Party Certification Bodies Under This Subpart

§ 1.660 Where do I apply for accreditation or renewal of accreditation by a recognized accreditation body and what happens once the recognized accreditation body decides on my application?

(a) *Submission of accreditation or renewal application to a recognized accreditation body.* A third-party certification body seeking accreditation or renewal of accreditation by a recognized accreditation body identified on the Web site described in § 1.690.

(b) *Notice of records custodian after denial of application for renewal of accreditation.* An applicant whose renewal application was denied by a recognized accreditation body must notify FDA electronically, in English, within 10 business days of the date of issuance of a denial of accreditation or denial of the renewal application, of the name and contact information of the custodian who will maintain the records required by § 1.658(a) and make them available to FDA as required by § 1.658(b) and (c). The contact information for the custodian must include, at a minimum, an email address and the physical address where the records required by § 1.658(a) will be located.

(c) *Effect of denial of an application for renewal of accreditation on food or facility certifications issued to eligible entities.* A food or facility certification issued by an accredited third-party certification body prior to issuance of the denial of its renewal application will remain in effect until the certification expires. If FDA has reason to believe that a certification issued for purposes of section 801(q) or 806 of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification

in determining the admissibility of the article of food for which the certification was offered or in determining the importer's eligibility for participation in VQIP.

(d) *Public notice of denial of an application for renewal of accreditation.* FDA will provide notice on the Web site described in § 1.690 of the date of issuance of a denial of renewal of accreditation of a third-party certification body that had previous been accredited.

§ 1.661 What is the duration of accreditation by a recognized accreditation body?

A recognized accreditation body may grant accreditation to a third-party certification body under this subpart for a period not to exceed 4 years.

§ 1.662 How will FDA monitor accredited third-party certification bodies?

(a) FDA will periodically evaluate the performance of each accredited third-party certification body to determine whether the accredited third-party certification body continues to comply with the applicable requirements of this subpart and whether there are deficiencies in the performance of the accredited third-party certification body that, if not corrected, would warrant withdrawal of its accreditation under § 1.664. FDA will evaluate each directly accredited third-party certification body annually. For a third-party certification body accredited by a recognized accreditation body, FDA will evaluate an accredited third-party certification body not later than 3 years after the date of accreditation for a 4-year term of accreditation, or by no later than the mid-term point for accreditation granted for less than 4 years. FDA may conduct additional performance assessments of an accredited third-party certification body at any time.

(b) In evaluating the performance of an accredited third-party certification body under paragraph (a) of this section, FDA may review any one or more of the following:

(1) Regulatory audit reports and food and facility certifications;

(2) The accredited third-party certification body's self-assessments under § 1.655;

(3) Reports of assessments by a recognized accreditation body under § 1.621;

(4) Documents and other information relevant to a determination of the accredited third-party certification body's compliance with the applicable requirements of this subpart; and

(5) Information obtained by FDA, including during inspections, audits,

onsite observations, or investigations, of one or more eligible entities to which a food or facility certification was issued by such accredited third-party certification body.

(c) FDA may conduct its evaluation of an accredited third-party certification body through a site visit to an accredited third-party certification body's headquarters (or other location that manages audit agents conducting food safety audits under this subpart, if different than its headquarters), through onsite observation of an accredited third party certification body's performance during a food safety audit of an eligible entity, or through document review.

§ 1.663 How do I request an FDA waiver or waiver extension for the 13-month limit for audit agents conducting regulatory audits?

(a) An accredited third-party certification body may submit a request to FDA to waive the requirements of § 1.650(c) preventing an audit agent from conducting a regulatory audit of an eligible entity if the audit agent (or, in the case that the third-party certification body is an individual, the third-party certification body) has conducted a food safety audit of such entity during the previous 13 months. The accredited third-party certification body seeking a waiver or waiver extension must demonstrate there is insufficient access to audit agents and any third-party certification bodies that are comprised of an individual in the country or region where the eligible entity is located.

(b) Requests for a waiver or waiver extension and all documents provided in support of the request must be submitted to FDA electronically, in English. The requestor must provide such translation and interpretation services as are needed by FDA to process the request.

(c) The request must be signed by the requestor or by any individual authorized to act on behalf of the requestor for purposes of seeking such waiver or waiver extension.

(d) FDA will review requests for waivers and waiver extensions on a first in, first out basis according to the date on which the completed submission is received; however, FDA may prioritize the review of specific requests to meet the needs of the program. FDA will evaluate any completed waiver request to determine whether the criteria for waiver have been met.

(e) FDA will notify the requestor whether the request for a waiver or waiver extension is approved or denied.

(f) If FDA approves the request, issuance of the waiver will state the duration of the waiver and list any limitations associated with it. If FDA

denies the request, the issuance of a denial of a waiver request will state the basis for denial and will provide the address and procedures for requesting reconsideration of the request under § 1.691.

(g) Unless FDA notifies a requestor that its waiver request has been approved, an accredited third-party certification body must not use the audit agent to conduct a regulatory audit of such eligible entity until the 13-month limit in § 1.650(c) has elapsed.

§ 1.664 When would FDA withdraw accreditation?

(a) *Mandatory withdrawal.* FDA will withdraw accreditation from a third-party certification body:

(1) Except as provided in paragraph (b) of this section, if the food or facility certified under this subpart is linked to an outbreak of foodborne illness or chemical or physical hazard that has a reasonable probability of causing serious adverse health consequences or death in humans or animals;

(2) Following an evaluation and finding by FDA that the third-party certification body no longer complies with the applicable requirements of this subpart; or

(3) Following its refusal to allow FDA to access records under § 1.658 or to conduct an audit, assessment, or investigation necessary to ensure continued compliance with this subpart.

(b) *Exception.* FDA may waive mandatory withdrawal under paragraph (a)(1) of this section, if FDA:

(1) Conducts an investigation of the material facts related to the outbreak of human or animal illness;

(2) Reviews the relevant audit records and the actions taken by the accredited third-party certification body in support of its decision to certify; and

(3) Determines that the accredited third-party certification body satisfied the requirements for issuance of certification under this subpart.

(c) *Discretionary withdrawal.* FDA may withdraw accreditation, in whole or in part, from a third-party certification body when such third-party certification body is accredited by an accreditation body for which recognition is revoked under § 1.634, if FDA determines there is good cause for withdrawal, including:

(1) Demonstrated bias or lack of objectivity when conducting activities under this subpart; or

(2) Performance that calls into question the validity or reliability of its food safety audits or certifications.

(d) *Records access.* FDA may request records of the accredited third-party certification body under § 1.658 and,

where applicable, may request records under § 1.625 of an accreditation body that has been recognized under § 1.625, when considering withdrawal under paragraph (a)(1), (a)(2), or (c) of this section.

(e) *Notice to the third-party certification body of withdrawal of accreditation.* (1) FDA will notify a third-party certification body of the withdrawal of its accreditation through issuance of a withdrawal that will state the grounds for withdrawal, the procedures for requesting a regulatory hearing under § 1.693 on the withdrawal, and the procedures for requesting reaccreditation under § 1.666.

(2) Within 10 business days of the date of issuance of the withdrawal, the third-party certification body must notify FDA electronically, in English, of the name of the custodian who will maintain the records required by § 1.658, and provide contact information for the custodian, which will at least include an email address, and the street address where the records will be located.

(f) *Effect of withdrawal of accreditation on eligible entities.* A food or facility certification issued by a third-party certification body prior to withdrawal will remain in effect until the certification terminates by expiration. If FDA has reason to believe that a certification issued for purposes of section 801(q) or 806 of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification in determining the admissibility of the article of food for which the certification was offered or in determining the importer's eligibility for participation in VQIP.

(g) *Effect of withdrawal of accreditation on recognized accreditation bodies.* (1) FDA will notify a recognized accreditation body if the accreditation of a third-party certification body it accredited is withdrawn by FDA. Such accreditation body's recognition will remain in effect if, no later than 60 days after withdrawal, the accreditation body conducts a self-assessment under § 1.622 and reports the results of the self-assessment to FDA as required by § 1.623(b).

(2) FDA may revoke the recognition of an accreditation body whenever FDA determines there is good cause for revocation of recognition under § 1.634.

(h) *Public notice of withdrawal accreditation.* FDA will provide notice on the Web site described in § 1.690 of its withdrawal of accreditation of a third-party certification body and

provide a description of the basis for withdrawal.

§ 1.665 What if I want to voluntarily relinquish accreditation or do not want to renew accreditation?

(a) *Notice to FDA of intent to relinquish or not to renew accreditation.* A third-party certification body must notify FDA electronically, in English, at least 60 days before voluntarily relinquishing accreditation or before allowing accreditation to expire without seeking renewal. The certification body must provide the name and contact information of the custodian who will maintain the records required under § 1.658(a) after the date of relinquishment or the date accreditation expires, as applicable, and make them available to FDA as required by § 1.658(b) and (c). The contact information for the custodian must include, at a minimum, an email address and the physical address where the records required by § 1.658(a) will be located.

(b) *Notice to recognized accreditation body and eligible entities of intent to relinquish or not to renew accreditation.* No later than 15 business days after notifying FDA under paragraph (a) of this section, the certification body must notify its recognized accreditation body and any eligible entity with current certifications that it intends to relinquish accreditation or to allow its accreditation to expire, specifying the date on which relinquishment or expiration will occur. The recognized accreditation body must establish and maintain records of such notification under § 1.625(a).

(c) *Effect of voluntary relinquishment or expiration of accreditation on food or facility certifications issued to eligible entities.* A food or facility certification issued by a third-party certification body prior to relinquishment or expiration of its accreditation will remain in effect until the certification expires. If FDA has reason to believe that a certification issued for purposes of section 801(q) or 806 of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification in determining the admissibility of the article of food for which the certification was offered or in determining the importer's eligibility for participation in VQIP.

(d) *Public notice of voluntary relinquishment or expiration of accreditation.* FDA will provide notice on the Web site described in § 1.690 of the voluntary relinquishment or expiration of accreditation of a certification body under this subpart.

§ 1.666 How do I request reaccreditation?

(a) *Application following withdrawal.* FDA will reinstate the accreditation of a third-party certification body for which it has withdrawn accreditation:

(1) If, in the case of direct accreditation, FDA determines, based on evidence presented by the third-party certification body, that the third-party certification body satisfies the applicable requirements of this subpart and adequate grounds for withdrawal no longer exist; or

(2) In the case of a third-party certification body accredited by an accreditation body for which recognition has been revoked under § 1.634:

(i) If the third-party certification body becomes accredited by another recognized accreditation body or by FDA through direct accreditation no later than 1 year after withdrawal of accreditation, or the original date of the expiration of accreditation, whichever comes first; or

(ii) Under such conditions as FDA may impose in withdrawing accreditation.

(b) *Application following voluntary relinquishment.* A third-party certification body that previously relinquished its accreditation under § 1.665 may seek accreditation by submitting a new application for accreditation under § 1.660 or, where applicable, § 1.670.

Additional Procedures for Direct Accreditation of Third-Party Certification Bodies Under This Subpart

§ 1.670 How do I apply to FDA for direct accreditation or renewal of direct accreditation?

(a) *Eligibility.* (1) FDA will accept applications from third-party certification bodies for direct accreditation or renewal of direct accreditation only if FDA determines that it has not identified and recognized an accreditation body to meet the requirements of section 808 of the FD&C Act within 2 years after establishing the accredited third-party audits and certification program. Such FDA determination may apply, as appropriate, to specific types of third-party certification bodies, types of expertise, or geographic location; or through identification by FDA of any requirements of section 808 of the FD&C Act not otherwise met by previously recognized accreditation bodies. FDA will only accept applications for direct accreditation and renewal applications that are within the scope of the determination.

(2) FDA may revoke or modify a determination under paragraph (a)(1) of this section if FDA subsequently identifies and recognizes an accreditation body that affects such determination.

(3) FDA will provide notice on the Web site described in § 1.690 of a determination under paragraph (a)(1) of this section and of a revocation or modification of the determination under paragraph (a)(1) of this section, as described in paragraph (a)(2) of this section.

(b) *Application for direct accreditation or renewal of direct accreditation.* (1) A third-party certification body seeking direct accreditation or renewal of direct accreditation must submit an application to FDA, demonstrating that it is within the scope of the determination issued under paragraph (a)(1) of this section, and it meets the eligibility requirements of § 1.640.

(2) Applications and all documents provided as part of the application process must be submitted electronically, in English. An applicant must provide such translation and interpretation services as are needed by FDA to process the application, including during an onsite audit of the applicant.

(3) The application must be signed in the manner designated by FDA by an individual authorized to act on behalf of the applicant for purposes of seeking or renewing direct accreditation.

§ 1.671 How will FDA review my application for direct accreditation or renewal of direct accreditation and what happens once FDA decides on my application?

(a) *Review of a direct accreditation or renewal application.* FDA will examine a third-party certification body's direct accreditation or renewal application for completeness and notify the applicant of any deficiencies. FDA will review applications for direct accreditation and for renewal of direct accreditation on a first in, first out basis according to the date the completed submission is received; however, FDA may prioritize the review of specific applications to meet the needs of the program.

(b) *Evaluation of a direct accreditation or renewal application.* FDA will evaluate any completed application to determine whether the applicant meets the requirements for direct accreditation under this subpart. If FDA does not reach a final decision on a renewal application before the expiration of the direct accreditation, FDA may extend the duration of such direct accreditation for a specified

period of time or until the Agency reaches a final decision on the renewal application.

(c) *Notice of approval or denial.* FDA will notify the applicant that its direct accreditation or renewal application has been approved through issuance of or denied.

(d) *Issuance of direct accreditation.* If an application has been approved, the issuance of the direct accreditation that will list any limitations associated with the accreditation.

(e) *Issuance of denial of direct accreditation.* If FDA issues a denial of direct accreditation or denial of a renewal application, the issuance of the denial of direct accreditation will state the basis for such denial and provide the procedures for requesting reconsideration of the application under § 1.691.

(f) *Notice of records custodian after denial of application for renewal of direct accreditation.* An applicant whose renewal application was denied must notify FDA electronically, in English, within 10 business days of the date of issuance of a denial of a renewal application, of the name and contact information of the custodian who will maintain the records required by § 1.658(a) and make them available to FDA as required by § 1.658(b) and (c). The contact information for the custodian must include, at a minimum, an email address and the physical address where the records required by § 1.658(b) will be located.

(g) *Effect of denial of renewal of direct accreditation on food or facility certifications issued to eligible entities.* A food or facility certification issued by an accredited third-party certification body prior to issuance of the denial of its renewal application will remain in effect until the certification expires. If FDA has reason to believe that a certification issued for purposes of section 801(q) or 806 of the FD&C Act is not valid or reliable, FDA may refuse to consider the certification in determining the admissibility of the article of food for which the certification was offered or in determining the importer's eligibility for participation in VQIP.

(h) *Public notice of denial of renewal of direct accreditation.* FDA will provide notice on the Web site described in § 1.690 of the issuance of a denial of renewal application for direct accreditation under this subpart.

§ 1.672 What is the duration of direct accreditation?

FDA will grant direct accreditation of a third-party certification body for a period not to exceed 4 years.

Requirements for Eligible Entities Under This Subpart

§ 1.680 How and when will FDA monitor eligible entities?

FDA may, at any time, conduct an onsite audit of an eligible entity that has received food or facility certification from an accredited third-party certification body under this subpart. Where FDA determines necessary or appropriate, the unannounced audit may be conducted with or without the accredited third-party certification body or the recognized accreditation body (where applicable) present. An FDA audit conducted under this section will be conducted on an unannounced basis and may be preceded by a request for a 30-day operating schedule.

§ 1.681 How frequently must eligible entities be recertified?

An eligible entity seeking recertification of a food or facility certification under this subpart must apply for recertification prior to the expiration of its certification. For certifications used in meeting the requirements of section 801(q) or 806 of the FD&C Act, FDA may require an eligible entity to apply for recertification at any time FDA determines appropriate under such section.

General Requirements of This Subpart

§ 1.690 How will FDA make information about recognized accreditation bodies and accredited third-party certification bodies available to the public?

FDA will place on its Web site a registry of recognized accreditation bodies and accredited third-party certification bodies, including the name, contact information, and scope and duration of recognition or accreditation. The registry may provide information on third-party certification bodies accredited by recognized accreditation bodies through links to the Web sites of such recognized accreditation bodies. FDA will also place on its Web site a list of accreditation bodies for which it has denied renewal of recognition, for which FDA has revoked recognition, and that have relinquished their recognition or have allowed their recognition to expire. FDA will also place in its Web site a list of certification bodies whose renewal of accreditation has been denied, for which FDA has withdrawn accreditation, and that have relinquished their accreditations or have allowed their accreditations to expire. FDA will place on its Web site determinations under § 1.670(a)(1) and modifications of such determinations under § 1.670(a)(2).

§ 1.691 How do I request reconsideration of a denial by FDA of an application or a waiver request?

(a) An accreditation body may seek reconsideration of the denial of an application for recognition, renewal of recognition, or reinstatement of recognition no later than 10 business days after the date of the issuance of such denial.

(b) A third-party certification body may seek reconsideration of the denial of an application for direct accreditation, renewal of direct accreditation, reaccreditation of directly accredited third-party certification body, a request for a waiver of the conflict of interest requirement in § 1.650(b), or a waiver extension no later than 10 business days after the date of the issuance of such denial.

(c) A request to reconsider an application or waiver request under paragraph (a) or (b) of this section must be signed by the requestor or by an individual authorized to act on its behalf in submitting the request for reconsideration. The request must be submitted electronically in English and must comply with the procedures described in the notice.

(d) After completing its review and evaluation of the request for reconsideration, FDA will notify the requestor through the issuance of the recognition, direct accreditation, or waiver upon reconsideration or through the issuance of a denial of the application or waiver request under paragraph (a) or (b) of this section upon reconsideration.

§ 1.692 How do I request internal agency review of a denial of an application or waiver request upon reconsideration?

(a) No later than 10 business days after the date of issuance of a denial of an application or waiver request upon reconsideration under § 1.691, the requestor may seek internal agency review of such denial under § 10.75(c)(1) of this chapter.

(b) The request for internal agency review under paragraph (a) of this section must be signed by the requestor or by an individual authorized to act on its behalf in submitting the request for internal review. The request must be submitted electronically in English to the address specified in the denial upon reconsideration and must comply with procedures it describes.

(c) Under § 10.75(d) of this chapter, internal agency review of such denial must be based on the information in the administrative file, which will include any supporting information submitted under § 1.691(c).

(d) After completing the review and evaluation of the administrative file, FDA will notify the requestor of its decision to overturn the denial and grant the application or waiver request through issuance of an application or waiver request upon reconsideration or to affirm the denial of the application or waiver request upon reconsideration through issuance of a denial of an application or waiver request upon reconsideration.

(e) Issuance by FDA of a denial of an application or waiver request upon reconsideration constitutes final agency action under 5 U.S.C. 702.

§ 1.693 How do I request a regulatory hearing on a revocation of recognition or withdrawal of accreditation?

(a) *Request for hearing on revocation.* No later than 10 business days after the date of issuance of a revocation of recognition of an accreditation body under § 1.634, an individual authorized to act on the accreditation body's behalf may submit a request for a regulatory hearing on the revocation under part 16 of this chapter. The issuance of revocation issued under § 1.634 will contain all of the elements required by § 16.22 of this chapter and will thereby constitute the notice of an opportunity for hearing under part 16 of this chapter.

(b) *Request for hearing on withdrawal.* No later than 10 business days after the date of issuance of a withdrawal of accreditation of a third-party certification body under § 1.664, an individual authorized to act on the third-party certification body's behalf may submit a request for a regulatory hearing on the withdrawal under part 16 of this chapter. The issuance of withdrawal under § 1.664 will contain all of the elements required by § 16.22 of this chapter and will thereby constitute the notice of opportunity of hearing under part 16 of this chapter.

(c) *Submission of request for regulatory hearing.* The request for a regulatory hearing under paragraph (a) or (b) of this section must be submitted with a written appeal that responds to the basis for the FDA decision, as described in the issuance of revocation or withdrawal, as appropriate, and includes any supporting information upon which the requestor is relying. The request, appeal, and supporting information must be submitted in English to the address specified in the notice and must comply with the procedures it describes.

(d) *Effect of submission of request on FDA decision.* The submission of a request for a regulatory hearing under

paragraph (a) or (b) of this section will not operate to delay or stay the effect of a decision by FDA to revoke recognition of an accreditation body or to withdraw accreditation of a third-party certification body unless FDA determines that a delay or a stay is in the public interest.

(e) *Presiding officer.* The presiding officer for a regulatory hearing for a revocation or withdrawal under this subpart will be designated after a request for a regulatory hearing is submitted to FDA.

(f) *Denial of a request for regulatory hearing.* The presiding officer may deny a request for regulatory hearing for a revocation or withdrawal under § 16.26(a) of this chapter when no genuine or substantial issue of fact has been raised.

(g) *Conduct of regulatory hearing.* (1) If the presiding officer grants a request for a regulatory hearing for a revocation or withdrawal, the hearing will be held within 10 business days after the date the request was filed or, if applicable, within a timeframe agreed upon in writing by requestor, the presiding officer, and FDA.

(2) The presiding officer must conduct the regulatory hearing for revocation or withdrawal under part 16 of this chapter, except that, under § 16.5(b) of this chapter, such procedures apply only to the extent that the procedures are supplementary and do not conflict with the procedures specified for regulatory hearings under this subpart. Accordingly, the following requirements of part 16 are inapplicable to regulatory hearings under this subpart: § 16.22 (Initiation of a regulatory hearing); § 16.24(e) (timing) and (f) (contents of notice); § 16.40 (Commissioner); § 16.60(a) (public process); § 16.95(b) (administrative decision and record for decision); and § 16.119 (Reconsideration and stay of action).

(3) A decision by the presiding officer to affirm the revocation of recognition or the withdrawal of accreditation is considered a final agency action under 5 U.S.C. 702.

§ 1.694 Are electronic records created under this subpart subject to the electronic records requirements of part 11 of this chapter?

Records that are established or maintained to satisfy the requirements of this subpart and that meet the definition of electronic records in § 11.3(b)(6) of this chapter are exempt from the requirements of part 11 of this chapter. Records that satisfy the requirements of this subpart, but that

also are required under other applicable statutory provisions or regulations, remain subject to part 11 of this chapter.

§ 1.695 Are the records obtained by FDA under this subpart subject to public disclosure?

Records obtained by FDA under this subpart are subject to the disclosure requirements under part 20 of this chapter.

PART 11—ELECTRONIC RECORDS; ELECTRONIC SIGNATURES

■ 3. The authority citation for 21 CFR part 11 continues to read as follows:

Authority: 21 U.S.C. 321–393; 42 U.S.C. 262.

■ 4. In § 11.1, add paragraph (m) to read as follows:

§ 11.1 Scope.

* * * * *

(m) This part does not apply to records required to be established or maintained by subpart M of part 1 of this chapter. Records that satisfy the requirements of subpart M of part 1 of this chapter, but that also are required under other applicable statutory provisions or regulations, remain subject to this part.

PART 16—REGULATORY HEARING BEFORE THE FOOD AND DRUG ADMINISTRATION

■ 5. The authority citation for 21 CFR part 16 continues to read as follows:

Authority: 15 U.S.C. 1451–1461; 21 U.S.C. 141–149, 321–394, 467f, 679, 821, 1034; 28 U.S.C. 2112; 42 U.S.C. 201–262, 263b, 364.

■ 6. In § 16.1(b)(2), add the following entry in numerical order to read as follows:

§ 16.1 Scope.

* * * * *

(b) * * *

(2) * * *

§§ 1.634 and 1.664, relating to revocation of recognition of an accreditation body and withdrawal of accreditation of third-party certification bodies that conduct food safety audits of eligible entities in the food import supply chain and issue food and facility certifications.

[Docket No. FDA-2014-N-2244]

RIN 0910-AG35

Final Environmental Impact Statement and Record of Decision for the Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notification of availability.

SUMMARY: The Food and Drug Administration (FDA or we) has made available for public review the Final Environmental Impact Statement (EIS) and Record of Decision (ROD) for the standards for the growing, harvesting, packing, and holding of produce for human consumption. FDA prepared the Final EIS after taking into account public comment received on the corresponding Draft EIS and is publishing the ROD at the time of our decision. The Final EIS and ROD documents are available in Docket No. FDA-2014-N-2244.

DATES: FDA announces the availability of the EIS and ROD on November 27, 2015.

FOR FURTHER INFORMATION CONTACT: Annette McCarthy, Center for Food Safety and Applied Nutrition (HFS-205), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740, 240-402-1057.

SUPPLEMENTARY INFORMATION:

I. Background

The FDA Food Safety Modernization Act (FSMA) (Pub. L. 111-353), signed into law by President Obama on January 4, 2011, enables FDA to better protect public health by helping to ensure the safety and security of the food supply. FSMA amends the Federal Food, Drug, and Cosmetic Act (the FD&C Act) to establish the foundation of a modernized, prevention-based food safety system. As part of our implementation of FSMA, we published the proposed rule: Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption (hereafter referred to as “the 2013 proposed rule”) on January 16, 2013, to establish science-based minimum standards for the safe growing, harvesting, packing, and holding of produce (78 FR 3504). On September 29, 2014, FDA issued a

supplemental notice of proposed rulemaking (“the supplemental proposed rule”), amending certain specific provisions of the 2013 proposed rule (79 FR 58434). Taken together, these publications constitute FDA’s proposed standards for the growing, harvesting, packing, and holding of produce for human consumption (“the Produce Safety proposed rule”).

FDA announced a “Notice of Intent” (NOI) to prepare an EIS to evaluate the potential environmental effects of the Produce Safety Proposed Rule in the **Federal Register** on August 19, 2013 (78 FR 50358). In the NOI, FDA also announced the beginning of the scoping process and solicited public comments to identify issues to be analyzed in an EIS. The NOI asked for public comment by November 15, 2013, and FDA later extended the deadline for the comment period to March 15, 2014 (78 FR 69006; November 18, 2013), and then April 18, 2014 (79 FR 13593; March 11, 2014).

A public scoping meeting was held on April 4, 2014, in College Park, MD. FDA prepared a Draft EIS for the Produce Safety proposed rule and, on January 14, 2015, published a “Notification of public meeting” in the **Federal Register** to: (1) Announce the availability of the Draft EIS for public review and comment and (2) announce a public meeting to inform the public of the findings in the Draft EIS, provide information about the EIS process, solicit oral stakeholder and public comments on the Draft EIS, and provide clarification, as needed, about the contents of the Draft EIS (80 FR 1852). The public meeting was held on February 10, 2015, in College Park, MD. The comment period on the Draft EIS closed on March 13, 2015. FDA is now announcing the availability of the Final EIS, which FDA prepared, taking into account public comment received on the Draft EIS, and the ROD, which details FDA’s final decision, taking into account the findings of the Final EIS and the Agency’s stated purpose and need.

In the Produce Safety proposed rule, FDA proposed science-based minimum standards for the safe production and harvesting of produce. As discussed in the Final EIS (Ref. 1), out of these standards, we identified four provisions that could potentially significantly affect the quality of the human environment, if finalized (hereinafter referred to as “potentially significant provisions”). For each of the potentially significant provisions, FDA then identified alternative provisions to consider. The potentially significant provisions are: (1) Standards directed to agricultural water, (2) standards

directed to biological soil amendments (BSA) of animal origin, (3) standards directed to domesticated and wild animals, and (4) general provisions (*i.e.*, cumulative impacts). Additionally, an overarching “No Action” alternative was considered for the purpose of evaluating conditions in the absence of any final rule.

For standards directed to agricultural water, we considered the following alternatives: (1) As proposed by FDA, *i.e.*, a statistical threshold value (STV) not exceeding 410 colony forming units (CFU) of generic *Escherichia coli* per 100 milliliters (ml) of water and a geometric mean (GM) not exceeding 126 CFU of generic *E. coli* per 100 ml of water, along with options to achieve the standard by applying either a time interval between last irrigation and harvest using a microbial die-off rate of 0.5 log per day and/or a time interval between harvest and end of storage using an appropriate microbial die-off or removal rates, including during activities such as commercial washing (proposed 21 CFR 112.44(c)); (2) a microbial quality standard of no more than 235 CFU (or most probable number (MPN), as appropriate) generic *E. coli* per 100 ml for any single sample or a rolling GM (n=5) of more than 126 CFU (or MPN, as appropriate) per 100 ml of water, as was proposed in the 2013 proposed rule; (3) as proposed (*i.e.*, Alternative 1), but with an additional criterion establishing a maximum generic *E. coli* threshold; and (4) for each of the previous alternatives, consider the environmental impacts if each alternative includes root crops that are irrigated using low-flow methods.

For standards directed to BSAs of animal origin, FDA considered standards for both untreated and treated BSAs. For untreated BSAs of animal origin, the alternatives considered included a range of minimal application intervals (the time between application and harvest) when the BSA is applied in a manner that does not contact covered produce during application and minimizes the potential for contact with covered produce after application. The alternative application intervals evaluated were: (1) 9 months; (2) 0 months; (3) 90 and 120 days; consistent with the National Organic Program’s regulations in 7 CFR 205.203(c)(1); (4) 6 months; and (5) 12 months. For standards directed to treated BSAs, the alternatives considered included a range of application intervals when the BSA is composted in accordance with the requirements proposed in § 112.54(c) and applied in a manner that minimizes the potential for contact with covered produce during and after application.

The application intervals evaluated were: (1) As proposed by FDA, 0 days (proposed § 112.56(a)(4)(i)); (2) 45 days; and (3) 90 days.

For standards directed at domesticated animals, we considered alternatives under which, if working animals are used in a growing area where a crop has been planted, measures would be required to prevent the introduction of known or reasonably foreseeable hazards into or onto covered produce with the waiting period between grazing and harvesting varying by alternative. The following alternatives were evaluated: (1) As proposed by FDA, an adequate waiting period between grazing and harvesting for covered produce in any growing area that was grazed to ensure the safety of the harvested crop (proposed § 112.82(a)); (2) a minimum waiting period of 9 months; and (3) a minimum waiting period of 90 days and 120 days before harvest, depending upon whether the edible portion of the crop contacts the soil (applying the timeframes for raw manure set forth in the National Organic Program's regulations in 7 CFR 205.203(c)(1)). For standards directed to wild animals, we considered alternatives to the proposed requirement that under circumstances when there is a reasonable probability that animal intrusion will contaminate covered produce, the grower would be required to monitor those areas that are used for a covered activity for evidence of animal intrusion: (1) As needed during the growing season based on (i) the grower's covered produce and (ii) the grower's observations and experience; and (2) immediately prior to harvest. The alternatives evaluated were: (1) As proposed by FDA, if animal intrusion occurs—as made evident by observation of significant quantities of animals, animal excreta, or crop destruction via grazing—the grower must evaluate whether the covered produce can be harvested in accordance with the requirements of proposed § 112.112 (proposed § 112.83(a) and (b)); and (2) if animal intrusion is reasonably likely to occur, the grower must take measures to exclude animals from fields where covered produce is grown.

The cumulative impacts of the proposed rule were considered using a range of alternatives to the general provision in proposed § 112.4, which would specify the farms that would be covered under the rule based on the farm's annual sales of produce. The alternatives evaluated were to cover those farms that have: (1) As proposed by FDA, an average annual monetary value of produce sold during the previous 3-year period of more than

\$25,000 (on a rolling basis) (proposed § 112.4); (2) an average annual monetary value of food sold during the previous 3-year period of more than \$50,000 (on a rolling basis); (3) an average annual monetary value of food sold during the previous 3-year period of more than \$100,000 (on a rolling basis); and (4) an average annual monetary value of covered produce sold during the previous 3-year period of more than \$25,000 (on a rolling basis).

In the Final EIS, FDA identifies the "Agency's preferred alternative," *i.e.*, the alternative which the Agency believes will fulfill its statutory mission and responsibilities for this rulemaking, giving consideration to economic, environmental, technical, and other factors. Slight modifications to the preferred alternative were made in the ROD to reflect the Agency's final action. The Agency's preferred alternative, as described in the ROD, is comprised of the following alternatives for each of the potentially significant provisions listed previously:

For agricultural water and including root crops irrigated using low-flow methods, generic *E. coli*: GM of 126 CFU/100 ml and STV of 410 CFU/100 ml, with additional flexibility for microbial die-off and/or removal (§§ 112.44(b) and 112.45(b));

For treated biological soil amendments of animal origin, 0 day application interval (§ 112.56(a)(2)); and

For domesticated animals (grazing and working) and animal intrusion, visual assessment for significant evidence of animal potential contamination as needed during the growing season to identify and not harvest produce that is or is likely to be contaminated (§§ 112.83, 112.84, and 112.112).

As discussed in the supplemental proposed rule, FDA has chosen to defer decision on a minimum application interval for untreated BSAs of animal origin that are applied in a manner that does not contact covered produce during application and minimizes the potential for contact with covered produce after application (79 FR 58434) and, therefore, has not identified an alternative that would best meet the statutory mission and responsibilities. For the purpose of the aggregate environmental impact analysis in the Final EIS, in the absence of a decision on the alternative that would fulfill the statutory mission, the impacts associated with the 0-day application interval were included as the environmental impacts associated with this alternative.

FDA has made the Final EIS and ROD available for public review in Docket

No. FDA-2014-N-2244 (see Ref. 1 and 2).

Waiver of 30-Day Review of Final EIS

Under CEQ regulation 40 CFR 1506.10(b)(2), no decision on the proposed action shall be made or recorded by a Federal Agency under 40 CFR 1505.2 until 30 days after publication of the notice for a Final EIS. However, 40 CFR 1506.10(b)(2) also provides the following exception from the rules of timing: An agency engaged in rulemaking under the Administrative Procedure Act or other statute for the purpose of protecting the public health or safety, may waive the time period in paragraph (b)(2) and publish a decision on the final rule simultaneously with publication of the notice of the availability of the final environmental impact statement.

Consistent with the circumstances in 40 CFR 1506.10(b)(2) under which a waiver may be used, FDA is waiving the 30-day time period between the publication of the Final EIS and FDA's decision on the Produce Safety final rule. FDA is publishing this notice of availability of the Final EIS simultaneously with the publication of the Produce Safety final rule and ROD. FDA considers the use of the waiver to be appropriate, in order to enhance food safety and protect public health, consistent with the purpose of FSMA and the Produce Safety final rule and the urgency for its release. We explain our reasons as follows:

The Produce Safety final rule establishes standards to minimize the risk of serious adverse health consequences or death (SAHCOD) resulting from contaminated produce. This rule implements section 419 of the FD&C Act (21 U.S.C. 350h), which requires FDA to adopt a final produce safety regulation based on known safety risks, that sets forth procedures, processes, and practices to minimize the risk of serious adverse health consequences or death, including those that are reasonably necessary to prevent the introduction of known or reasonably foreseeable hazards into produce and to provide reasonable assurances that produce is not adulterated under section 402 of the FD&C Act (21 U.S.C. 342).

The history of foodborne illness outbreaks, including outbreaks resulting in severe illnesses and death associated with contaminated produce, make clear that produce-related outbreaks are a serious and ongoing food safety problem. From 1996 to 2010, approximately 131 produce-related reported outbreaks occurred, resulting in 14,132 outbreak-related illnesses; 1,360 hospitalizations; and 27 deaths.

These outbreaks were associated with approximately 20 different produce commodities (Ref. 3). Even after enactment of FSMA outbreaks from produce continue to occur, between January 2011 and 2014, there were 44 outbreaks; 3,120 illnesses; 735 hospitalizations; and 42 deaths associated with produce (Ref. 4). These outbreaks were associated with approximately 10 different produce commodities. The illness numbers cited previously are the reported illnesses; the Centers for Disease Control estimates that only a fraction of foodborne illness is reported (<http://www.cdc.gov/foodborneburden/estimates-overview.html>).

This history of produce-related outbreaks was the impetus for Congress, in FSMA, to require Federal produce safety standards to establish requirements for prevention-focused regulation in a sector of the food industry that had previously seen little Federal food safety oversight and underscores the urgent public health need for implementation of FDA produce safety standards to begin. Annualizing benefits over the first 10 years after publication of the rule, we expect benefits of the Produce Safety final rule to be approximately 362,059 illnesses averted per year, valued at \$976 million annually (see the Regulatory Impact Analysis accompanying the rule for additional information (Ref. 5)).

There is a public health need to publish the Produce Safety final rule and begin implementation of the produce safety standards. Congress conveyed its sense of urgency in the timeframes established in FSMA for the Produce Safety final rule: 1 year after enactment of FSMA for a proposed rule (section 419(a)(1)(A) of the FD&C Act) and 1 year after the close of the comment period for a final rule (section 419(b)(1) of the FD&C Act). Congress recognized the urgent need to establish standards for produce safety to prevent SAHCOD hazards and, therefore, included specific timeframes for issuance of the proposed and final produce safety rules within the statute. Although FDA was unable to meet these statutory timeframes, FDA has nonetheless acted as swiftly as possible to complete the rulemaking process to

establish the produce safety regulation in 21 CFR part 112.

Formulating the produce safety standards involved highly complex scientific, regulatory, and practical considerations. For example, establishing the appropriate microbial quality criteria for agricultural water that is used during growing activities involved extensive review of scientific literature on pathogen presence, transmission, and survival under various conditions; other relevant national and international standards; diverse uses and methods of application of water; and the wide array of commodities and practices that affect potential risk of contamination of produce. As another example, we considered various options before adopting a regulatory framework that is based on practices, procedures, and processes associated with growing, harvesting, packing, and holding of all covered produce, rather than one that (based solely on a history of outbreaks or illnesses associated with the commodity) would be applicable to individual commodities or classes of commodities. FDA's integrated approach to produce safety standards draws on our past experiences and appropriately reflects the need to tailor requirements to specific on-farm routes of contamination. Through this rule (along with other FSMA rules) FDA is putting in place a framework for food safety that is modern and brings to bear the most recent science on provisions to enhance food safety, that is risk-based and focuses effort where the hazards are reasonably likely to occur, and that is flexible and practical given our current knowledge of food safety practices.

The rule notably sets standards in an area that is extremely diverse. Therefore, FDA has spent considerable time to achieve the right balance in establishing standards that would adequately protect public health and yet be flexible and practicable to be implemented successfully by the highly diverse produce industry. This necessitated enormous outreach, including numerous farm visits all over the United States, throughout the rulemaking process, to solicit and consider stakeholder input in preparing the final rule. We believe we have acted responsibly in taking the time to craft a

regulation that provides critical public health protection and also is implementable by the produce industry. Implementation of the produce safety standards by covered farms engaged in the growing, harvesting, packing, and/or holding of produce is critical to achieve the public health goals set out in FSMA and, therefore, we set reasonable timeframes for compliance with the rule. It is important for FDA to finalize the rule as quickly as possible to enable farmers, packers, handlers, and others covered under the rule to begin taking the steps that will safeguard public health and safety.

E-mail

FEDREGTOC-L (Federal Register Table of Contents LISTSERV) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to <http://listserv.access.gpo.gov> and select *Online mailing list archives, FEDREGTOC-L, Join or leave the list (or change settings)*; then follow the instructions.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html> and select *Join or leave the list (or change settings)*; then follow the instructions.

FEDREGTOC-L and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: fedreg.info@nara.gov

The Federal Register staff cannot interpret specific documents or regulations.

CFR Checklist. Effective January 1, 2009, the CFR Checklist no longer appears in the Federal Register. This information can be found online at <http://bookstore.gpo.gov/>.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List November 24, 2015

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly

enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
