SUPPLEMENTARY INFORMATION:

I. Information About IRIS

EPA's IRIS Program is a human health assessment program that evaluates quantitative and qualitative risk information on effects that may result from exposure to chemicals found in the environment. Through the IRIS Program, EPA provides the highest quality science-based human health assessments to support the Agency's regulatory activities and decisions to protect public health. The IRIS database contains information on chemicals that can be used to support the first two steps (hazard identification and dose-response evaluation) of the human health risk assessment process. When supported by available data, IRIS provides health effects information and toxicity values for health effects

(including cancer and effects other than cancer). Government and others combine IRIS toxicity values with exposure information to characterize public health risks of chemicals; this information is then used to support risk management decisions designed to protect public health.
