Abstract: On March 21, 2011, EPA finalized standards and procedures to be used to identify whether non-hazardous secondary materials are solid wastes when used as fuels or ingredients in combustion units. "Secondary material" is defined as any material that is not the primary product of a manufacturing or commercial process, and can include post-consumer material, off-specification commercial chemical products or manufacturing chemical intermediates, post-industrial material, and scrap (codified in § 241.2). "Non-hazardous secondary material" is a secondary material that, when discarded, would not be identified as a hazardous waste under 40 CFR part 261 (codified in § 241.2). This RCRA solid waste definition determines whether a combustion unit is required to meet the emissions standards for solid waste

incineration units issued under section 129 of the Clean Air Act (CAA) or the emissions standards for commercial, industrial, and institutional boilers issued under section 112 of the CAA. In this rule, EPA also finalized a definition of traditional fuels.

Form Numbers: None.

Respondents/affected entities: Private solid waste facilities.

Respondent's obligation to respond: Required to obtain benefit (Sections 1004 and 2002 of RCRA).

Estimated number of respondents: 1,471 (total).

Frequency of response: One-time.

Total estimated burden: 984 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$108,068 (per year), which includes \$1,343 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease of 25,467 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is due to a revised estimate of the number of petitions expected to be submitted by the respondents.

Acting Director, Collection Strategies Division.

Abstract: Owners and operators of affected facilities are required to comply with reporting and record-keeping requirements for the general provisions of 40 CFR part 60, subpart A, as well as for the specific requirements at 40 CFR part 60, subpart Y. This includes submitting initial notification reports, performance tests and periodic reports and results, and maintaining records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These reports are used by EPA to determine compliance with the standards.

Form Numbers: None.

Respondents/affected entities: Coal preparation and processing facilities.

Respondent's obligation to respond: Mandatory (40 CFR part 60, subpart Y).

Estimated number of respondents: 1,037 (total).

Frequency of response: Initially and semiannually.

Total estimated burden: 42,300 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$4,320,000 (per year), including \$65,600 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is an adjustment increase in the respondent labor hours due to a change in assumption. In this ICR, we assume all existing sources will take some time each year to re-familiarize themselves with the regulatory requirements.

In addition, there is a decrease in cost and number of responses due to a reduction in the estimated number of sources subject to the regulation. The previous ICR estimated that five new sources per year will be constructed such that they will become subject to the regulation. In consultation with
