Title of Collection: Parent Information and School Choice Evaluation.

OMB Control Number: 1850-NEW.

Type of Review: A new information collection.

Respondents/Affected Public: Individuals or Households.

Total Estimated Number of Annual Responses: 1,175.

Total Estimated Number of Annual Burden Hours: 769.

Abstract: Sponsored by the Institute of Education Sciences (IES), U.S. Department of Education, the Parent Information and School Choice Evaluation (PISCE) is an important first step toward filling the wide gap in knowledge about how to present school choice information to parents. This research is needed to provide guidance to districts where school choice is expanding. PISCE seeks to identify the format, amount, and organization of information that is most comprehensible and usable to parents. The study will target low-income parents of school-age children and will evaluate perceptions of different presentations of school information. The results of the study will be used to create a reader-friendly guide for school districts.

IES has contracted with Mathematica Policy Research to conduct the needed research. Most of the experiment will be conducted with members of a standing panel who already complete surveys on a regular basis for a variety of purposes. This approach provides a low-cost and

quick turnaround method to obtain findings related to the understandability of school choice information, which does not require respondents to be making actual school choices for their children. To enhance what can be learned from the standing panel, the research team also intends to recruit a sample of low-income parents of school-age children from locations where a public school choice marketplace with unified enrollment has been active for at least two years. Parents who have experienced public school choice or are at least exposed to open enrollment in their district may experience the experiment differently than the standing panel members, for whom considering schools other than one's default neighborhood school may be unfamiliar. This augmented sample of, presumably, less survey-savvy low-income parents will be used to provide a sensitivity check of the findings based on the standing panel alone.
