

severe weather conditions such as rain, snow, and extreme heat. The AC therefore recommends that airport operators consider protecting the outdoor SARA and the pathways to the SARA from the elements. For the indoor SARA, the AC recommends natural lighting whenever possible.

The FAA is also aware that it may be difficult for people with visual impairments to navigate within the SARA. To allow these people to familiarize themselves with the SARA's layout before entering, the AC recommends placing special signs, maps, and other orienting cues at the entrance to the SARA. In addition, this AC defines the airport terminal for the purpose of helping airports decide on the number and locations of required SARA. To enhance SARAs, the FAA is seeking input on new concept cleaning technology; like nano technology as a potential for self-cleaning SARA.

Way-Finding Technologies

The FAA understands that way-finding is necessary for safe and efficient mobility in a complex airport terminal. The FAA recognizes that wayfinding in a complex airport terminal might be a challenge for people who are blind or have vision impairments. Additionally, the FAA recognizes escorting is time consuming and diminishes independence for individuals with disabilities.

Accordingly, the FAA specifically seeks comments about:

- RFID (Radio Frequency Identification) systems for possible use in wayfinding and mobility in the airport terminal for people with visual impairments;
- Audio-haptic systems designed for enhancing orientation and mobility skills in people with visual impairments; and
- Other technology innovations to enhance wayfinding is interested in public input regarding the use of wayfinding technologies and other technology innovations at airports.
