

relocated in some areas to protect natural and cultural resources.

Alternative C, the NPS preferred alternative, emphasizes the conservation legacy stories within the corridor. The intensity and timing of visitor use would be managed to effectively provide high quality visitor opportunities by reducing high traffic volumes and congestion. This would be accomplished using time sequencing techniques and the establishment of vehicle queuing lanes on the north and south ends of the corridor during peak visitation periods. Development within the corridor would generally be maintained within the existing development footprint.

Alternative D would enhance recreational opportunities with additional amenities, including the construction of a separated multi-use pathway parallel to Moose-Wilson Road. This alternative would integrate the Moose-Wilson corridor with the region's larger recreational network, and would enhance the recreational scenic driving experience by reducing high traffic volumes and congestion by establishing a reservation system during peak use periods.
