multiple distant metastasis as foxp3+ T-cells are generally believed to be critical to immune-tolerance found in cancers. By treating a single local site with this technology, systemic host immunity against in situ cancers can be dramatically activated, leading to rapid tumor regression at the treated lesion as well as distant metastatic lesions untreated with the near infrared light while inducing minimal side effects.

The prospective exclusive license will be royalty bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR part 404.7. The prospective exclusive license may be granted unless within fifteen (15) days from the date of this published notice, the National Cancer Institute receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.7.

Complete applications for a license in the prospective field of use that are filed in response to this notice will be treated as objections to the grant of the contemplated Exclusive Patent License Agreement. Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: September 16, 2016.

Richard U. Rodriguez,
Associate Director, Technology Transfer Center, National Cancer Institute.
