

ships' watch teams, which is undue, given that the information collected does not contribute to any meaningful analysis. The Navy will continue to collect marine mammal sighting data during MTEs for every instance when any form of mitigation is employed, such as powering down or securing sonar, maneuvering the ship, or delaying an event—in other words, in instances where animals are closer to the sound source around which mitigation measures are implemented. This data is useful in supporting mitigation effectiveness analyses and also may be helpful in supporting an understanding of the frequency with which marine mammals (generally, not by species) may be encountered or detected in close proximity to a particular source (*e.g.*, where the likelihood of auditory or other injury is higher).
