

the water pool and handle aircraft carrier naval spent nuclear fuel assemblies without prior disassembly for preparation and packaging for disposal. Such capability does not currently exist within the ECF water pools, mainly due to insufficient available footprint in areas of the water pool with the required depth of water.

The NNPP will continue to operate ECF during new facility construction, during a transition period, and after the new facility is operational for examination work. To keep the ECF infrastructure in a safe working order during these time periods, some limited upgrades and refurbishments may be necessary. Details are not currently available regarding which specific actions will be taken; therefore, they are not explicitly analyzed as part of the New Facility Alternative. The environmental impacts from these upgrades and refurbishments are considered to be bounded by the environmental impacts described in the Refurbishment Period of the Overhaul Alternative.

Changes From Draft EIS

The Draft EIS was published by the NNPP in June 2015. The NNPP has considered all public comments received in preparing this Final EIS, which includes the NNPP's responses to those comments. The Final EIS highlights changes that were made to address these comments as well as changes that have resulted from additional design and planning for the New Facility Alternative. Changes to the design and planning for the New Facility Alternative include changes to the seismic design strategy, water management strategy, and analysis of potential air emissions related to operation of concrete batch plants.
