Use of Roseomonas species to treat atopic dermatitis (eczematous skin disease Description of Technology: Atopic dermatitis, also known as eczema, is a chronic itchy skin disease that affects over 20% of infants and young children in industrialized nations and may persist into adulthood for up to 50% of these cases, making it one of the most common skin diseases in the US and other developed countries. Scientists at NIAID have developed a method of treating or preventing atopic dermatitis via the topical application of selected probiotic strains of gram-negative Roseomonas mucosa bacteria. This approach avoids the exhausting treatment demands of standard therapies and has been shown to be beneficial in a preclinical mouse model of atopic dermatitis. Potential Commercial Applications:

• Treatment of eczema

Competitive Advantages:

• May be formulated as a cream or ointment
