

The Draft Breach Plan/EIS analyzes the impacts of these three alternatives on the human environment by examining five key issues:

(1) The wilderness breach is geologically bound by erosion-resistant clay in the geological record to the east and west of the breach; however, there is uncertainty regarding how the breach will evolve in the future (narrow or widen from existing conditions), how far it might migrate along the coast, and how it affects sediment transport.

(2) There is concern that the presence of the wilderness breach increases the potential for flooding on the mainland of Long Island during storm events, increasing the potential risk to life and property.

(3) The wilderness breach has altered the physical characteristics of the Fire Island Wilderness and Great South Bay, which has led to changes in the ecological communities.

(4) The wilderness breach resulted in the creation of a marine wilderness area that did not previously exist. The mechanical closure of the breach would alter the existing wilderness qualities of the area.

(5) Driving access has changed since formation of the wilderness breach. There is concern that changes in driving access for emergency response could increase risks to public health and safety in several Fire Island communities.

To examine these issues, the environmental analysis focuses on the following resources:

- Wilderness character;
- sediment transport and geomorphology;
- water quality;
- ecosystem structure and processes;
- benthic communities;
- finfish and decapod crustaceans;
- socioeconomics; and
- public health and safety.

Patchogue, New York. The public meeting will provide an opportunity to learn more about the plan and to ask questions about the plan. Written comments will be accepted during the public meeting.

Comments will not be accepted by fax, email, or in any form other than those specified above. All comments received on the Draft Breach Plan/EIS will be reviewed and considered. An analysis of substantive comments with NPS responses will be provided in a comment analysis report that will be included in the Final Breach Plan/EIS. A comment is considered to be substantive if it raises, debates, or questions a point of fact or policy discussed in the Draft Breach Plan/EIS. Comments that merely state support for or opposition to the proposed action, alternatives, or NPS policy, without providing supporting information, will not be considered substantive. Although all comments will be read and considered in shaping the Final Breach Plan/EIS, only those that are determined to be substantive will be explicitly addressed by the NPS response.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

History and Description of the Human Remains and Associated Funerary Objects

In 1929, human remains representing, at minimum, two individuals were removed from a coastal bluff facing the Pacific Ocean, north of the San Dieguito River mouth (SDM W-34) in Del Mar, San Diego County, CA. The remains were excavated by Malcolm J. Rogers, on behalf of the San Diego Museum of Man. Rogers was conducting archaeological reconnaissance work in the Southern California coastal, mountain and desert regions under a grant funded by the Smithsonian Institution. Later, he became a field archaeologist and Curator of Anthropology at the San Diego Museum of Man. Shortly after excavation, Rogers transferred control of the remains of these individuals to the San Diego Museum of Man. No known individuals were identified. The 98 associated funerary objects are 3 metates, 1 groundstone tool, 1 mano, 2 battered stones, 7 core tools, 2 ceramic pot sherds, 2 olivella beads, 1 chione pendant, 1 cottonwood biface, 1 biface tool, 28 utilized flakes, 10 fish vertebrae, 9 unidentified faunal remains, 1 fish palate, 5 stone ecofacts, 5 lots of various shell, 1 rock oyster, 2 argopectin shells, 3 limpets, 3 gastropods, 1 barnacle, 1 olivella shell, 1 moonshell, 2 lots of

small rock, 1 lot of charcoal, 1 abalone pry bar and 3 soil samples.

In 1972, human remains representing, at minimum, one individual were removed north of the La Zanja Canyon near Circo Diegueno Rd. (SDM W-467) in Del Mar, San Diego County, CA. The remains were removed by Mr. Phil McDonald during an independent excavation. The same year, McDonald donated the remains of this individual to the San Diego Museum of Man. No known individuals were identified. The 7 associated funerary objects are 6 core tools and 1 utilized flake.

Sites, SDM W-34 and SDM W-467, are located within territory traditionally occupied by the Kumeyaay Nation as represented by The Tribes. Based on collection research, archeological evidence, geographic location, ethnographic information, and oral history evidence, these remains have been identified as prehistoric Kumeyaay.

Determinations Made by the San Diego Museum of Man

- Pursuant to 25 U.S.C 3001(3)(A), the 105 associated funerary objects described in this notice are reasonably believed to have been placed with or near individual human remains at time of death or later as part of the death rite or ceremony.

- Pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the Native American human remains and associated funerary objects and The Tribes.

Additional Requestors and Disposition
