This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF ENERGY

10 CFR Part 430

RIN 1904–AC07

Energy Conservation Program: Energy Conservation Standards for Standby Mode and Off Mode for Microwave Ovens; Correction

ACTION: Final rule; correction.

SUMMARY: On January 18, 2013, the U.S. Department of Energy (DOE) published a final rule amending the test procedures for microwave ovens to include provisions for measuring standby mode and off mode power. On June 17, 2013, DOE published a final rule adopting energy conservation standards for microwave oven standby mode. This document addresses a drafting error in the June 2013 standards final rule, which referenced the incorrect section 3.2.4 of Appendix I for determining standby power for microwave ovens. This document amends 10 CFR 430.23(i)(3) to correctly reference the correct section 3.2.4 of Appendix I. The relevant amendments to DOE's final rule became effective August 16, 2013.

DATES: This correction is effective on February 17, 2016.

SUPPLEMENTARY INFORMATION: DOE published a final rule in the Federal Register on January 18, 2013, which amended the test procedures for microwave ovens in Appendix I to include provisions for measuring standby mode and off mode power. 78 FR 4015. The provisions for the microwave oven test standby mode and off mode power measurements are contained in section 3.2.4 of Appendix I. On June 17, 2013, DOE published a final rule (the “June 2013 standards final rule”) to adopt energy conservation standards for microwave oven standby mode. 78 FR 36316. Due to a drafting error, in the June 2013 standards final rule, DOE amended 10 CFR 430.23 to add paragraph (i)(3) which incorrectly referenced section 3.2.3 of Appendix I instead of the correct section 3.2.4 for determining standby power for microwave ovens. This document amends 10 CFR 430.23(i)(3) to correctly reference section 3.2.4 of Appendix I for determining standby power for microwave ovens.

Procedural Issues and Regulatory Review

The regulatory reviews conducted for this rulemaking are those set forth in the June 2013 standards final rule that originally codified the relevant amendments to DOE's test procedures for microwave ovens. The relevant amendments in the June 2013 standards final rule became effective August 16, 2013.

Pursuant to the Administrative Procedure Act, 5 U.S.C. 553(b), DOE has determined that notice and prior opportunity for comment on this rule are unnecessary and contrary to the public interest. This rule contains a technical correction to remedy the error in the June 2013 standards final rule and to correct 10 CFR 430.23(i)(3) to reference section 3.2.4 of Appendix I for determining standby power for microwave ovens. The correction provides clarity as to the appropriate section of Appendix I to be used for determining standby power for microwave ovens and does not affect the substance or the conclusions reached in the June 2013 standards final rule.

List of Subjects in 10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Intergovernmental relations, Small businesses.

Issued in Washington, DC, on February 9, 2016.

Kathleen B. Hogan,
Deputy Assistant Secretary, Energy Efficiency and Renewable Energy.

For the reasons stated in the preamble, part 430 of title 10 of the Code of Federal Regulations is corrected by making the following correcting amendments:

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

1. The authority citation for part 430 continues to read as follows:

2. Section 430.23 is amended by revising paragraph (i)(3) to read as follows:

§ 430.23 Test procedures for the measurement of energy and water consumption.

(i) * * * *(i)(3) The standby power for microwave ovens shall be determined according to section 3.2.4 of Appendix I to this subpart. The standby power shall be rounded off to the nearest 0.1 watt. * * * *(i) * * * *(i)(3) The standby power for microwave ovens shall be determined according to section 3.2.4 of Appendix I to this subpart. The standby power shall be rounded off to the nearest 0.1 watt.

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA–2014–1077; Special Conditions No. 25–609–SC]

Special Conditions: Dassault Aviation Model Falcon 5X Airplane, Design Roll Maneuver Condition

AGENCY: Federal Aviation Administration (FAA), DOT.
**ACTION:** Final special conditions; request for comments.

**SUMMARY:** These special conditions are issued for the Dassault Aviation Model Falcon 5X airplane. This airplane will have novel or unusual design features when compared to the state of technology envisioned in the airworthiness standards for transport-category airplanes. This design feature is electronic flight controls that affect maneuvering. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

**DATES:** This action is effective on Dassault Aviation on February 17, 2016. We must receive your comments by April 4, 2016.

**ADDRESSES:** Send comments identified by docket number FAA–2014–1077 to the FAA, OAL, 800 Independence Avenue SW., Room W12–140, West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC 20590–0001.

- **Fax:** Fax comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- **Hand Delivery or Courier:** Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- **Mail:** Send comments to Docket Operations, M–30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

**SUPPLEMENTARY INFORMATION:** The FAA has determined that notice of, and opportunity for prior public comment on, these special conditions is impracticable because these procedures would significantly delay issuance of the design approval and thus delivery of the affected airplane.

In addition, the substance of these special conditions has been subject to the public-comment process in several prior instances with no substantive comments received. The FAA therefore finds that good cause exists for making these special conditions effective upon publication in the Federal Register.

**Comments Invited**

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data. We will consider all comments we receive by the closing date for comments. We may change these special conditions based on the comments we receive.

**Background**

On July 1, 2012, Dassault Aviation applied for a type certificate for their new Model Falcon 5X airplane. The Model Falcon 5X airplane is a transport-category airplane to be operated in private/corporate transportation with a maximum of 19 passengers. The airplane incorporates a low, swept-wing design with winglets; twin rear-fuselage-mounted engines; and the newest generation of Dassault Aviation’s EASy flightdeck.

The Model Falcon 5X will include electronic flight controls that affect maneuvering.

**Type Certification Basis**

Under the provisions of 14 CFR 21.17, Dassault Aviation must show that the Model Falcon 5X airplane meets the applicable provisions of 25.25 as amended by Amendments 25–1 through 25–136. If the Administrator finds that the applicable airworthiness regulations (i.e., 14 CFR part 25) do not contain adequate or appropriate safety standards for the Model Falcon 5X airplane because of a novel or unusual design feature, special conditions are prescribed under the provisions of §21.16.

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same novel or unusual design feature, these special conditions would also apply to the other model under §21.101.

In addition to the applicable airworthiness regulations and special conditions, the Model Falcon 5X airplane must comply with the fuel-vent and exhaust-emission requirements of 14 CFR part 34, and the noise-certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with §11.38, and they become part of the type certification basis under §21.17(a)(2).

**Novel or Unusual Design Features**

The Model Falcon 5X airplane will incorporate the following novel or unusual design feature:

This airplane is equipped with an electronic flight-control system that provides control through pilot inputs to the flight computer, thereby affecting maneuverability of the airplane as compared to conventional control systems.

**Discussion**

Current part 25 airworthiness regulations account for control laws for which aileron deflection is proportional to control-stick deflection. They do not address nonlinearities or other effects on aileron actuation that may be caused by electronic flight controls. Because this type of system may affect flight loads, and therefore the structural capability of the airplane, specific regulations are needed to address these effects.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

**Applicability**

As discussed above, these special conditions are applicable to the Model Falcon 5X airplane. Should Dassault Aviation apply at a later date for a

Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
change to the type certificate to include another model incorporating the same novel or unusual design feature, these special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on one model of airplane. It is not a rule of general applicability.

The substance of these special conditions has been subjected to the notice and comment period in several prior instances and has been derived without substantive change from those previously issued. It is unlikely that prior public comment would result in a significant change from the substance contained herein. Therefore, because a delay would significantly affect the certification of the airplane, which is imminent, the FAA has determined that prior public notice and comment are unnecessary and impracticable, and good cause exists for adopting these special conditions upon publication in the Federal Register. The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment described above.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for Dassault Aviation Model Falcon 5X airplanes.

In lieu of compliance to § 25.349(a), the following conditions, speeds, and cockpit roll-control motions (except as the motions may be limited by pilot effort) must be considered in combination with an airplane load factor of zero, and of two-thirds of the positive maneuvering factor used in design. In determining the resulting control-surface deflections, the torsional flexibility of the wing must be considered in accordance with § 25.301(b).

1. Conditions corresponding to steady rolling velocities must be investigated. In addition, conditions corresponding to maximum angular acceleration must be investigated for airplanes with engines or other weight concentrations outboard of the fuselage. For the angular acceleration conditions, zero rolling velocity may be assumed in the absence of a rational time-history investigation of the maneuver.

2. At $V_a$, sudden movement of the cockpit roll control up to the limit is assumed. The position of the cockpit roll control must be maintained until a steady roll rate is achieved, and then must be returned suddenly to the neutral position.

3. At $V_c$, the cockpit roll control must be moved suddenly and maintained so as to achieve a roll rate not less than that obtained in special condition 2, above.

4. At $V_p$, the cockpit roll control must be moved suddenly and maintained so as to achieve a roll rate not less than one-third of that obtained in special condition 2, above.

Issued in Renton, Washington, on February 4, 2016.

Michael Kaszycki,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are superseding Airworthiness Directive (AD) 2012–18–05 for The Boeing Company Model DC–9–10, DC–9–20, DC–9–30, DC–9–40, and DC–9–50 series airplanes; and Model DC–9–81 (MD–81), DC–9–82 (MD–82), DC–9–83 (MD–83), DC–9–87 (MD–87), MD–88, and MD–90–30 airplanes; equipped with a center wing fuel tank and Boeing original equipment manufacturer-installed auxiliary fuel tanks. AD 2012–18–05 required adding design features to detect electrical faults and to detect a pump running in an empty fuel tank. Since we issued AD 2012–18–05, we have determined that it is necessary to clarify the actions for airplanes on which the auxiliary fuel tanks are removed. This new AD allows certain actions as optional methods of compliance. This AD was prompted by our determination that it is necessary to clarify the actions for airplanes on which the auxiliary fuel tanks are removed. We are issuing this AD to reduce the potential of ignition sources inside fuel tanks, which, in combination with flammable fuel vapors, could result in fuel tank explosions and consequent loss of the airplane.

DATES: This AD is effective March 23, 2016.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of March 23, 2016.

Examining the AD Docket

You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2015–0249; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The address for the Docket Office (phone: 800–647–5527) is Docket Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

SUPPLEMENTARY INFORMATION:
Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR
