RIN 0694–AH20

Commerce Control List: Updates Based on the 2015 and 2016 Nuclear Suppliers Group (NSG) Plenary Meetings; Conforming Changes and Corrections to Certain Nuclear Nonproliferation (NP) Controls

ACTION: Final rule.

SUMMARY: The Bureau of Industry and Security (BIS) publishes this final rule to amend the Export Administration Regulations (EAR) to reflect the understandings reached at the June 2015 Nuclear Suppliers Group (NSG) Plenary meeting held in Bariloche, Argentina, and certain understandings reached at the 2016 NSG Plenary meeting held in Seoul, Republic of Korea. The amendments to the EAR based on the 2015 meeting address the nuclear nonproliferation (NP) controls that apply to certain centrifugal multipane balancing machines described on the Commerce Control List (CCL). The amendments to the EAR based on the 2016 meeting address the nuclear nonproliferation (NP) controls that apply to certain linear displacement measuring systems identified on the CCL. This rule also makes additional changes to the description of these systems on the CCL to fully conform to their description on the NSG Annex. This rule amends ECCN 2B206—Amended To Conform the NP Controls on Linear Displacement Measuring Systems With the NSG Annex (as Updated To Reflect the 2016 NSG Plenary Changes)

This rule amends ECCN 2B206 to more accurately and completely reflect the description of certain dimensional inspection machines listed in the NSG Annex. These changes are related to BIS’s September 20, 2016, final rule (81 FR 64656) that included certain amendments to ECCN 2B006 to reflect the December 2015 updates to the List of Dual-Use Goods and Technologies maintained by participating governments in the Wassenaar Arrangement (WA). The amendments to ECCN 2B006 also affected the scope of the NP controls in that ECCN. Specifically, the September 20, 2016, final rule revised the controls that applied to certain measuring systems by changing the technical parameters in a manner that removed certain linear displacement measuring systems identified on the NSG Annex from control under ECCN 2B006.

As a result of the aforementioned change in the scope of the NP controls in ECCN 2B006, this rule amends ECCN 2B206 by adding a new paragraph .c, consistent with the description of the measuring systems in NSG Annex 1.B.3.b.3. New 2B206.c controls linear displacement measuring systems that contain a “laser” and that maintain, for at least 12 hours over a temperature range of ± 1 K around a standard temperature and a standard pressure, both: (1) A “resolution” over their full scale of 0.1µm or better; and (2) a “measurement uncertainty” equal to or better (less) than (0.2 + L/2000) µm (L is the measured length in millimeters). This rule also adds a Control Note and a Technical Note for new 2B206.c. The Control Note to new paragraph .c indicates that 2B206.c does not control measuring interferometer systems, without closed or open loop feedback, that contain a “laser” to measure slide movement errors of machine tools, dimensional inspection machines, or similar equipment. The Technical Note to new paragraph .c states that “linear displacement” for purposes of 2B206.c, means the change of distance between the measuring probe and the measured object.
The text of new paragraph .c to ECCN 2B206 also reflects the updates to the NSG Annex based on the understandings reached at the 2016 NSG Plenary meeting held in Seoul, Republic of Korea. Specifically, paragraph .c.1 reads "Containing a laser," which replaces the phrase "Contain a laser" that was previously used in 1.B.3.b.3.a on the NSG Annex. In addition, paragraph .c.2 contains the phrase "Capable of maintaining," which replaces the word "Maintain" that was previously used in 1.B.3.b.3.b on the NSG Annex. Amendments to other ECCNs on the CCL, based on the 2016 NSG Plenary understandings, will be published by BIS in a separate rule.

This rule also moves the “Control Notes to ECCN 2B206” and the “Technical Note to ECCN 2B206,” which were previously located at the end of this ECCN, to the beginning of the “Items” paragraph for ECCN 2B206 (i.e., immediately before 2B206.a), because these notes apply to the entire ECCN, unlike the aforementioned notes for new 2B206. In addition, the “ECCN Controls” paragraphs, which were previously included under the “List of Items Controlled” for this ECCN, have been removed, because they duplicated the text of the “Control Notes to ECCN 2B206” and, as such, were redundant and potentially confusing.

In addition, this rule corrects two typographical errors in the “Items” paragraph of ECCN 2B206. First, the phrase “1.7 + 1/800 µm” threshold” in the Technical Note to 2B206.a2 is revised to read “1.7 + 1/800 µm threshold’’ to conform with the threshold indicated in 2B206.a2. Second, the word “simultaneously” in the introductory text of 2B206.b is replaced with the word “simultaneous’’.

ECCN 2B229—Amended To Reflect 2015 NSG Plenary Changes

This final rule amends ECCN 2B229 (Centrifugal multiplane balancing machines) by revising paragraph .b.3 to update certain scientific terminology and clarify the technical parameters, therein, to read as follows: “A minimum achievable residual specific unbalance equal to or less than 10 g-mm/kg per plane.” This change reflects the 2015 NSG Plenary changes to the description of centrifugal balancing machines in NSG Annex 3.B.3.b and does not affect the scope of the NP controls on these machines. Instead, this rule revises the previous text in ECCN 2B229.b.3 (i.e., “Capable of balancing to a residual imbalance equal to or less than 0.01 kg x mm/kg per plane,”) only to update and clarify the controls described therein, without changing their scope.

ECCN 6A203—Amended To Correct Controls on Radiation-Hardened TV cameras

This rule amends ECCN 6A203 to correct an error in the technical parameters for radiation-hardened TV cameras described in 6A203.d. Specifically, this rule revises the phrase “total radiation dose greater than 50 × 10^4 Gy (silicon)” to read “total radiation dose greater than 5 × 10^4 Gy (silicon),” consistent with the description of these cameras in NSG Annex 1.A.2. Specifically, this rule revises the phrase “total radiation dose greater than 50 × 10^4 Gy (silicon)” to read “total radiation dose greater than 5 × 10^4 Gy (silicon),” consistent with the description of these cameras in NSG Annex 1.A.2. Previously, as amended by BIS’s final rule published on September 5, 2014 (79 FR 52958), this technical parameter overstated the total radiation dose by a factor of ten (i.e., incorrectly indicating a multiple of “50,” instead of “5”).

License Requirements

All of the items affected by the amendments to ECCN 2B229, 2B206 or 6A203, as described above, require a license for NP reasons and AT reasons to the destinations indicated under NP Column 1 or AT Column 1, respectively, on the Commerce Country Chart (see Supplement No. 1 to part 738 of the EAR). In addition, these items may require a license for reasons described elsewhere in the EAR (e.g., the end-user/end-use controls described in part 744 of the EAR or the embargoes and other special controls described in part 746 of the EAR).

Effect of This Rule on the Scope of Certain EAR Controls

The changes made by this rule only marginally affect the scope of the EAR controls on the affected items in ECCN 2B206, 2B229, or 6A203. Specifically, the amendments in this rule, which add a new paragraph .c to ECCN 2B206 and revise ECCN 2B229.b.3 and ECCN 6A203.d, are not the result of any change in the scope of the controls for these items on the NSG Annex. Therefore, the purpose of this final rule is not to increase the scope of the NP controls in these ECCNs beyond what should have been the case, previously, but merely to accurately reflect the controls on the affected items, consistent with the descriptions in NSG Annex 1.B.3.b.3, 3.B.b.3, and 1.A.2, respectively.

The addition of a new paragraph .c to ECCN 2B206 to control linear displacement measuring systems, consistent with the description of these systems in NSG Annex 1.B.3.b.3, effectively reinstates the NP controls and anti-terrorism (AT) controls, but not the national security (NS) controls, that applied to such systems under ECCN 2B006, prior to the publication of BIS’s September 20, 2016, final rule (81 FR 64656) that amended ECCN 2B006 to reflect the December 2015 updates to the Wassenaar Arrangement (WA) List of Dual-Use Goods and Technologies. The September 20, 2016, amendments to ECCN 2B006 removed certain linear displacement measuring systems identified on the NSG Annex from control under ECCN 2B006. This final rule amends ECCN 2B206 to restate the NP and AT controls that applied to the affected linear displacement measuring systems prior to the September 20, 2016, final rule. The 2016 NSG Plenary updates reflected in new paragraph 2B206.c.1, and the corrections in the Technical Note to 2B206.a.2 and the introductory text of 2B206.b, do not affect the scope of the controls in ECCN 2B206. Therefore, BIS does not anticipate a significant change in the number of license applications that will have to be submitted, as a result of the amendments made to ECCN 2B206 by this rule.

The amendments to ECCN 2B229 do not affect the scope of the NP controls that apply to centrifugal multiplane balancing machines. These amendments revise 2B229.b.3, consistent with NSG Annex 3.B.3.b, to update certain scientific terminology and clarify the technical parameters, therein, and are not intended to affect the scope of the controls in this ECCN. Therefore, BIS does not anticipate a significant change in the number of license applications that will have to be submitted, as a result of the amendments made to ECCN 2B229 by this rule.

The amendments to ECCN 6A203 correct an error in the technical parameters for radiation-hardened TV cameras described in 6A203.d, which previously misstated the technical parameters for these cameras by indicating a multiple of “50,” instead of “5” (as indicated in NSG Annex 1.A.2), for the “total radiation dose.” Because only a small number of license applications are submitted to BIS for these cameras, BIS does not anticipate a significant change in the number of license applications that will have to be submitted, as a result of the amendments made to ECCN 6A203 by this rule.

Export Administration Act

Although the Export Administration Act expired on August 20, 2001, the President, through Executive Order 13222 of August 17, 2001, 3 CFR, 2001 Comp., p. 783 (2002), as amended by Executive Order 13657 of March 8, 2010 (75 FR 16129, March 13, 2010), and as extended by the Notice of August 4, 2016 (81 FR 52587 (Aug. 8, 2016)),
PART 774—[AMENDED]

1. The authority citation for 15 CFR part 774 continues to read as follows:

Supplement No. 1 to Part 774—[Amended]

2. In Supplement No. 1 to Part 774 (the Commerce Control List), Category 2—Materials Processing, ECCN 2B206 is amended, under the “List of Items Controlled” section, by removing the “ECCN Controls” paragraph and by revising the “Items” paragraph to read as follows:

2B206  Dimensional inspection machines, instruments or systems, other than those described in 2B006, as follows (see List of Items Controlled).

* * * * *

List of Items Controlled

Related Controls: * * *
Related Definitions: * * *

Items:

Control Notes to ECCN 2B206: (1) Machine tools that can be used as measuring machines are controlled by ECCN 2B206 if they meet or exceed the control parameters specified in this entry for the measuring machine function. (2) The machines described in ECCN 2B206 are controlled by this entry if they exceed the specified control threshold anywhere in their operating range.

Technical Note to ECCN 2B206: All parameters of measurement values in this entry represent plus/minus, i.e., not total band.

a. Computer controlled or numerically controlled coordinate measuring machines (CMM) with either of the following characteristics:

1. Having only two axes with a maximum permissible error of length measurement along any axis (one dimension), identified as any combination of \( E_{\text{MPE}} \), \( E_{\text{MPE}} \), or \( E_{\text{MPE}} \) equal to or less (better) than \( 1.25 + \frac{L}{1000} \) \( \mu \) (where \( L \) is the measured length in \( \text{mm} \)) at any point within the operating range of the machine (i.e., within the length of the axis), according to ISO 10360–2 (2009); or

2. Having three or more axes with a three dimensional (volumetric) maximum permissible error of length measurement, identified as \( E_{\text{MPE}} \) equal to or less (better) than \( 1.7 + \frac{L}{800} \) \( \mu \) (where \( L \) is the measured length in \( \text{mm} \)) at any point within the operating range of the machine (i.e.,
within the length of the axis), according to ISO 10360–2 (2009).

Technical Note to 2B206.a:2 The Eq. MPE of the most accurate configuration of the CMM specified according to ISO 10360–2 (2009) by the manufacturer (e.g., best of the following: Probe, stylus length, motion parameters, environment) and with all compensations available shall be compared to the 1.7 + L/800 μm threshold.

b. Systems for simultaneous linear-angular inspection of hemisheells, having both of the following characteristics:
   b.1. “Measurement uncertainty” along any linear axis equal to or less (better) than 3.5 μm per 5 mm; and
   b.2. “Angular position deviation” equal to or less than 0.02°.

c. Linear displacement measuring systems having both of the following characteristics:
   c.1. Containing a “laser;” and
   c.2. Capable of maintaining, for at least 12 hours over a temperature range of ± 1 K around a standard temperature and a standard pressure, both:
      c.2.a. A “resolution” over their full scale of 0.1 μm or better; and
      c.2.b. A “measurement uncertainty” equal to or less (better) than (0.2 + L/2000) μm (L is the measured length in millimeters).

Control Note to 2B206.c: 2B206.c does not control measuring interferometer systems, without closed or open loop feedback, containing a “laser” to measure slide movement errors of machine tools, dimensional inspection machines, or similar equipment.

Technical Note to 2B206.c: In 2B206.c, “linear displacement” means the change of distance between the measuring probe and the measured object.

3. In Supplement No. 1 to Part 774 (the Commerce Control List), Category 2—Materials Processing, ECCN 6B229 is amended in the “Items” paragraph, under the “List of Items Controlled” section, by revising paragraph .b.3 to read as follows:

2B229 Centrifugal multiplane balancing machines, fixed or portable, horizontal or vertical, as follows (see List of Items Controlled).

List of Items Controlled

* * * * *

Items:

* * * * * * * * * *

b. * * * * *

b.3. A minimum achievable residual specific unbalance equal to or less than 10 g-mm/kg per plane; and

* * * * * * * * *

4. In Supplement No. 1 to Part 774 (the Commerce Control List), Category 6—Sensors and Lasers, ECCN 6A203 is amended in the “Items” paragraph, under the “List of Items Controlled” section, by revising paragraph .d to read as follows:

6A203 High-speed cameras, imaging devices and “components” therefor, other than those controlled by 6A003 (see List of Items Controlled).

* * * * * *

List of Items Controlled

* * * * * *

Items:

* * * * * *

d. Radiation-hardened TV cameras, or lenses therefor, “specially designed” or rated as radiation hardened to withstand a total radiation dose greater than 5 x 10⁴ Gy (silicon) without operational degradation.

* * * * *

Dated: December 20, 2016.

Kevin J. Wolf,
Assistant Secretary for Export Administration.

Importations of Certain Vehicles and Engines Subject to Federal Antipollution Emission Standards

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document amends the U.S. Customs and Border Protection (CBP) regulations relating to the importation into the United States of certain vehicles and engines under the Clean Air Act (CAA) in order to harmonize the documentation requirements applicable to different classes of vehicles and engines that are subject to the Clean Air Act’s (CAA’s) emission standards. This document further amends the regulations to permit importers to file the required U.S. Environmental Protection Agency (EPA) Declaration Forms 3520–1 (for the importation of passenger vehicles, highway motorcycles and their corresponding engines) and 3520–21 (for the importation of heavy-duty engines and nonroad engines, including engines already installed in vehicles or equipment) for purposes of compliance with the CAA.

The final rule conforms the entry filing requirements applicable to EPA Declaration Form 3520–21 to those that are currently applicable to EPA Declaration Form 3520–1. Sections 12.73(i) and 12.74(b) and (d) are
