

FEDERAL REGISTER

Vol. 81

Friday,

No. 10

January 15, 2016

Pages 2067–2724

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 81, No. 10

Friday, January 15, 2016

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 205

[Document Number AMS–NOP–14–0012; NOP–14–03]

National Organic Program: Notice of Final Guidance on Substances Used in Post-Harvest Handling of Organic Products

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice of availability of final guidance.

SUMMARY: The National Organic Program (NOP) is announcing the availability of a final guidance document intended for use by accredited certifying agents, and certified and exempt organic operations. The guidance document is entitled: Substances Used in Post-Harvest Handling of Organic Products (NOP 5023). This guidance document is intended to inform the public of NOP's current thinking on this topic.

DATES: The final guidance document announced by this document is effective on January 19, 2016.

FOR FURTHER INFORMATION CONTACT: Paul Lewis, Ph.D., Standards Division, National Organic Program, USDA–AMS–NOP, 1400 Independence Ave. SW., Room 2642–S., Ag Stop 0268, Washington, DC 20250–0268. Telephone: (202) 720–3252, Email: Paul.Lewis@ams.usda.gov; Telephone: (202) 260–9294.

SUPPLEMENTARY INFORMATION:

I. Background

On April 25, 2014, the National Organic Program (NOP) published in the **Federal Register** a notice of availability with request for public comment on a draft guidance document addressing the permitted substances that may be used

in post-harvest handling of organic products (79 FR 22886). The NOP selected the topic for the guidance document announced through this notice in response to questions raised by certifiers and organic operations. These stakeholders requested that the NOP clarify the requirements and limitations regarding the substances permitted in post-harvest handling. The NOP also discussed and received feedback on this topic at a training session for certifiers in Portland, Oregon, in February 2011. The draft NOP guidance can be viewed on the NOP Web site at <http://www.ams.usda.gov/rules-regulations/organic/>. The 60-day comment period closed on June 24, 2014.

NOP received 10 comments on the draft guidance document. Based upon the comments received, the NOP revised and is publishing a final guidance document on Substances Used in Post-Harvest Handling of Organic Products (NOP 5023). The guidance document includes an appendix (NOP 5023–1) where the NOP provides a complete discussion of the comments received and the rationale behind any changes made to the guidance documents.

This final guidance clarifies the USDA organic regulations regarding substances used in post-harvest handling activities such as washing, packing and storage of organic products. There is no discrete section of the National List of Allowed and Prohibited Substances (National List) (7 CFRs 205.600 through 205.607) designated for substances used in these post-harvest handling activities. Instead, the substances allowed for use in post-harvest handling appear in different sections of the National List (*e.g.*, section 205.601 for crop production, section 205.605 for processing), or are nonsynthetic substances, and are therefore not included on the National List for crop production. This has led to confusion about the point at which crop production for unprocessed commodities ends, when processing starts, and which substances may be used for post-harvest activities that may occur on farm or in a processing facility.

This final guidance provides information to all USDA-accredited certifying agents (certifiers) and certified and exempt organic operations about substances that may be used in post-harvest handling of organic products. More specifically, this final guidance

clarifies: (1) What substances may be used for post-harvest handling; (2) the difference between “post-harvest handling of raw agricultural commodities” and “further processing”; and (3) the regulatory requirements for facility pest management. This guidance also defines post-harvest substances and post-harvest handling.

This final guidance is available from the NOP through “The Program Handbook: Guidance and Instructions for Accredited Certifying Agents (ACAs) and Certified Operations”. This Handbook provides those who own, manage, or certify organic operations with guidance and instructions that can assist them in complying with the USDA organic regulations. The current edition of the Program Handbook is available online at <http://www.ams.usda.gov/rules-regulations/organic/handbook>.

II. Significance of Guidance

This final guidance document is being issued in accordance with the Office of Management and Budget (OMB) Bulletin on Agency Good Guidance Practices (GGPs) (January 25, 2007, 72 FR 3432–3440).

The purpose of GGPs is to ensure that program guidance documents are developed with adequate public participation, are readily available to the public, and are not applied as binding requirements. This final guidance represents NOP's current thinking on the topic. It does not create or confer any rights for, or on, any person and does not operate to bind the NOP or the public. Guidance documents are intended to provide a uniform method for operations to comply that can reduce the burden of developing their own methods and simplify audits and inspections. Alternative approaches that can demonstrate compliance with the Organic Foods Production Act (OFPA), as amended (7 U.S.C. 6501–6522), and its implementing regulations are also acceptable. As with any alternative compliance approach, NOP strongly encourages industry to discuss alternative approaches with NOP before implementing them to avoid unnecessary or wasteful expenditures of resources and to ensure the proposed alternative approach complies with the Act and its implementing regulations.

III. Electronic Access

Persons with access to Internet may obtain the final guidance at the USDA Agricultural Marketing Service Web site at <http://www.ams.usda.gov/rules-regulations/organic>. Requests for hard copies of the draft guidance documents can be obtained by submitting a written request to the person listed in the **ADDRESSES** section of this Notice.

Authority: 7 U.S.C. 6501–6522.

Dated: January 11, 2016.

Erin Morris,

Associate Administrator, Agricultural Marketing Service.

DEPARTMENT OF HOMELAND SECURITY

8 CFR Parts 204, 214, 248, and 274a

[CIS No. 2515–11; DHS Docket No. USCIS–2012–0005]

RIN 1615–AC00

Enhancing Opportunities for H–1B1, CW–1, and E–3 Nonimmigrants and EB–1 Immigrants

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: Final rule.

SUMMARY: In this final rule, the Department of Homeland Security (DHS) is revising its regulations affecting: highly skilled workers in the nonimmigrant classifications for specialty occupation from Chile, Singapore (H–1B1), and Australia (E–3); the immigrant classification for employment-based first preference (EB–1) outstanding professors and researchers; and nonimmigrant workers in the Commonwealth of the Northern Mariana Islands (CNMI)-Only Transitional Worker (CW–1) classification. DHS anticipates that these changes to the regulations will benefit these highly skilled workers and CW–1 nonimmigrant workers by removing unnecessary hurdles that place such workers at a disadvantage when compared to similarly situated workers in other visa classifications.

DATES: This final rule is effective February 16, 2016.

FOR FURTHER INFORMATION CONTACT: Paola Rodriguez Hale, Adjudications Officer (Policy), Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue NW., Washington, DC 20529–

2141. Contact telephone number is (202) 272–8377.

SUPPLEMENTARY INFORMATION: DHS is revising its regulations affecting: (1) Highly skilled workers in the nonimmigrant classifications for specialty occupation from Chile, Singapore (H–1B1), and Australia (E–3); (2) the immigrant classification for employment-based first preference (EB–1) outstanding professors and researchers; and (3) nonimmigrant workers in the Commonwealth of the Northern Mariana Islands (CNMI)-Only Transitional Worker (CW–1) classification.

Specifically, in this final rule, DHS is amending its regulations to include H–1B1 and principal E–3 classifications in the list of classes of foreign nationals authorized for employment incident to status with a specific employer, and to clarify that H–1B1 and principal E–3 nonimmigrants are allowed to work without having to separately apply to DHS for employment authorization.

DHS is also amending the regulations to provide H–1B1 and principal E–3 nonimmigrants with authorization for continued employment with the same employer if the employer has timely filed for an extension of the nonimmigrant's stay. DHS is providing this same authorization for continued employment for CW–1 nonimmigrants if a petitioner has timely filed a Petition for a CNMI-Only Nonimmigrant Transitional Worker, Form I–129CW, or successor form requesting an extension of stay.

In addition, DHS is updating the regulations describing the filing procedures for extensions of stay and change of status requests to include the principal E–3 and H–1B1 nonimmigrant classifications. These changes will harmonize and align the regulations for principal E–3, H–1B1, and CW–1 nonimmigrant classifications with the existing regulations for other, similarly situated nonimmigrant classifications.

Finally, DHS is expanding the current list of initial evidence for EB–1 outstanding professors and researchers to allow petitioners to submit evidence comparable to the other forms of evidence already listed in 8 CFR 204.5(i)(3)(i). This will harmonize the regulations for EB–1 outstanding professors and researchers with certain employment-based immigrant categories that already allow for submission of comparable evidence.

I. Executive Summary

A. Purpose of the Regulatory Action

DHS is amending its regulations in several ways to improve the programs serving the principal E–3, H–1B1, and CW–1 nonimmigrant classifications and the EB–1 immigrant classification for outstanding professors and researchers. These changes will harmonize the regulations governing these classifications with regulations governing similar visa classifications and remove unnecessary hurdles that have placed principal E–3, H–1B1, CW–1 and certain EB–1 workers at a disadvantage when compared to similarly situated workers in other visa classifications. DHS believes this rule also best achieves our goal of addressing unwarranted disparities involving continued employment authorization among and within particular nonimmigrant classifications.

B. Legal Authorities

Sections 103(a) and 214(a)(1) of the Immigration and Nationality Act (INA),

8 U.S.C. 1103(a) and 8 U.S.C. 1184(a)(1), authorize the Secretary of Homeland Security (Secretary) to administer and enforce the immigration and nationality laws and to establish by regulation the time and conditions of admission of nonimmigrants. *See also* section 451 of the Homeland Security Act of 2002, Public Law 107–296, 116 Stat. 2135, (6 U.S.C. 271) (describing responsibilities with respect to immigration services and adjudications). Further, section 274A(h)(3)(B) of the INA, 8 U.S.C. 1324a(h)(3)(B), recognizes the Secretary's authority to extend employment authorization to individuals who are not citizens or nationals of the United States. Finally, title VII of the Consolidated Natural Resources Act of 2008 (CNRA) extends U.S. immigration laws to the CNMI and authorized the CW nonimmigrant classification. Public Law 110–229, 122 Stat. 754, 853 (2008) (revising 48 U.S.C. 1806).

C. Summary of the Major Provisions of the Regulatory Action

On May 12, 2014, DHS published a proposed rule to amend regulations governing filing procedures and work authorization for principal E–3 and H–

1B1 nonimmigrants (8 CFR 214.1(c)(1) and 8 CFR 248.3(a) with respect to filing procedures and 8 CFR 274a.12(b)(9) and 8 CFR 274a.12(b)(25) with respect to work authorization), continued work authorization for principal E–3, H–1B1, and CW nonimmigrants (8 CFR 274a.12(b)(20)), and evidentiary requirements for EB–1 outstanding professors and researchers (8 CFR 204.5(i)(3)(ii)). By proposing this rule, DHS intended to remove current regulatory obstacles that may cause unnecessary disruptions to petitioning employers' productivity. DHS also intended to remove obstacles for these workers to remain in or enter the United States and to treat them in the same way as others under similar classifications are treated. *See Enhancing Opportunities for H–1B1, CW–1, and E–3 Nonimmigrants and EB–1 Immigrants*, 79 FR 26870 (May 12, 2014). After careful consideration of public comments, DHS is adopting the proposed regulatory amendments without change.

D. Cost and Benefits

This final rule will not impose any additional costs on employers, workers, or any governmental entity. Changing

the employment authorization regulations for H–1B1 and principal E–3 nonimmigrants will make those regulations consistent with the regulations of other similarly situated nonimmigrant worker classifications, which will provide qualitative benefits. In this final rule, DHS also amends its regulations to authorize continued employment for up to 240 days for H–1B1, principal E–3, and CW–1 nonimmigrant workers whose status has expired, provided that the petitioner timely filed the requests for extensions of stay with U.S. Citizenship and Immigration Services (USCIS). Such amendment will minimize the potential for employment disruptions for U.S. employers of H–1B1, principal E–3, and CW–1 nonimmigrant workers. Finally, this final rule may assist U.S. employers that recruit EB–1 outstanding professors and researchers by expanding the range of evidence that they may provide to support their petitions. A summary of the costs and benefits of the changes made by this rule is presented in Table 1.

TABLE 1—SUMMARY OF COSTS AND BENEFITS

Costs	Change	Benefits and avoided costs
E–3, H–1B1, and CW–1 Nonimmigrants		
None	Continued employment up to 240 days for an H–1B1, principal E–3 or CW–1 nonimmigrant workers while a timely filed request to extend stay is pending. Clarify that principal E–3 and H–1B1 nonimmigrants are work authorized incident to status, and specify current filing procedures for requesting change of status or extension of stay..	Avoided cost of lost productivity for U.S. employers of principal E–3, H–1B1, and CW–1 nonimmigrant workers and avoided lost wages by the nonimmigrant workers. Not quantified. Will provide equity for principal E–3 and H–1B1 nonimmigrants relative to other employment-based nonimmigrants listed in 8 CFR 274a.12 (b)(20), and provide equity for CW–1 nonimmigrants whose extension request is filed by the same employer relative to other CW–1 nonimmigrants who change employers. Qualitative benefit. Ensures the regulations are consistent with statutory authority, and codifies current practice. Qualitative benefit.
EB–1 Outstanding Professors and Researchers		
	Allow for the submission of comparable evidence to that listed in 8 CFR 204.5(i)(3)(i)(A)–(F) to establish that the EB–1 outstanding professor or researcher is recognized internationally as outstanding in his or her academic field.	May help U.S. employers recruit EB–1 outstanding professors and researchers. Not quantified. Will provide equity for EB–1 outstanding professors and researchers relative to certain employment-based immigrants listed in 8 CFR 204.5. Qualitative benefit.

II. Background

A. Current Framework

The Immigration Act of 1990 (IMMACT90), among other things, reorganized immigrant classifications and also created new employment-based immigrant classifications. *See* Public

Law 101–649, 104 Stat. 4978. The new employment-based immigration provisions were intended to cultivate a more competitive economy by encouraging skilled individuals to immigrate to the United States to meet

our economic needs.¹ Those

¹ *See Statement by President upon Signing of the Immigration Act of 1990*, 1990 U.S.C.A.N 6801–1 (Nov. 29, 1990), available at <http://www.presidency.ucsb.edu/ws/index.php?pid=19117#ixzz1KvDIYZqI>; *see also* H.R. Rep. No. 101–723(I), at 6721 (1990) (“[I]mmigration can and should be incorporated into an overall

Continued

IMMACT90 provisions addressed the need of American businesses for highly skilled, specially trained personnel to fill increasingly sophisticated jobs for which domestic personnel could not be found. *See Employment-Based Immigrants*, 56 FR 30703 (July 5, 1991). Lawmakers estimated the need for highly skilled workers based on an increasing skills gap in the current and projected U.S. labor pools. *Id.*

American businesses continue to need highly skilled nonimmigrant and immigrant workers, and the U.S. legal immigration system can be improved by removing regulatory barriers to lawful employment of these workers through a system that reflects our diverse values and needs.² Attracting and retaining highly skilled workers is critical to sustaining our Nation's global competitiveness. By attracting the best and brightest from around the world, the United States can harness their talents, skills, and ideas to help the U.S. economy grow.³ Governments seeking to make the most of highly skilled nonimmigrants and immigrants face the challenge of identifying, attracting, and retaining those with the best prospects for success.⁴

B. Proposed Rule

On May 12, 2014, DHS published a proposed rule in the **Federal Register** at 79 FR 26870, proposing to:

- Clarify that principal E-3 and H-1B1 nonimmigrants are authorized to work for the specific employer listed in their petition without requiring separate approval for work authorization from USCIS (8 CFR 274a.12(b)(25) and 8 CFR 274a.12(b)(9));
- Authorize continued employment authorization for CW-1, principal E-3, and H-1B1 nonimmigrants with pending, timely filed extension of stay requests (8 CFR 274a.12(b)(20));
- Update the regulations describing the filing procedures for extension of stay and change of status requests to

include the principal E-3 and H-1B1 nonimmigrant classifications (8 CFR 214.1(c)(1) and 8 CFR 248.1(a)); and

- Allow a petitioner who wants to employ an EB-1 outstanding professor or researcher to submit evidence comparable to the evidence otherwise described in 8 CFR 204.5(i)(3)(i), which may demonstrate that the beneficiary is recognized internationally as an outstanding professor or researcher.

C. Final Rule

Consistent with the vision of attracting and retaining foreign workers, this final rule removes unnecessary obstacles for principal E-3 and H-1B1 highly skilled workers and CW-1 nonimmigrant workers to continue working in the United States, and for EB-1 outstanding professors and researchers to seek admission as immigrants. For example, under current regulations, H-1B1, CW-1, and principal E-3 nonimmigrants are not included in the regulations that authorize continued employment while a timely filed extension of stay request is pending. The regulations at 8 CFR 274a.12(b)(20) authorize foreign nationals in specific nonimmigrant classifications to continue employment with the same employer for a 240-day period beyond the authorized period specified on the Arrival-Departure Record, Form I-94, as long as a timely request for an extension of stay is filed. This means that these individuals can continue to work with the specific employer listed in their petition, even after their authorized stay expires, as long as their extension of stay request is still pending. Because Congress created the E-3, H-1B1, and CW-1 nonimmigrant classifications after 8 CFR 274a.12(b)(20) was effective, these nonimmigrant workers are not included in this provision and cannot continue to work with the same employer beyond the existing authorization while waiting for USCIS to adjudicate an extension of stay request. DHS is amending its regulations at 8 CFR 274a.12(b)(20) to give H-1B1, CW-1, and principal E-3 nonimmigrants the same treatment as other, similarly situated nonimmigrants, such as H-1B, E-1, and E-2 nonimmigrants.

Moreover, E-3 and H-1B1 nonimmigrants are not listed in the regulations describing the filing procedures for extension of stay and change of status requests. Although the form instructions for H-1B1 and principal E-3 extension of stay and change of status requests (Instructions for Petition for a Nonimmigrant Worker, Form I-129) were updated to include H-1B1 and principal E-3

nonimmigrants when these categories were first established, the regulations were not. In this final rule, DHS is amending the regulations to add H-1B1 and principal E-3 nonimmigrants to the list of nonimmigrants that may extend their stay or change their status in the United States.

In addition, current regulations do not designate H-1B1 nonimmigrants and principal E-3 as authorized to accept employment with a specific employer incident to status, although such nonimmigrants are so authorized by statute. *See* INA section 212(t)[1st], 8 U.S.C. 1182(t)[1st], (noting the statutory requirements an employer must fulfill to petition for an H-1B1 or E-3 nonimmigrant); *see also* INA sections 101(a)(15)(E)(iii), 8 U.S.C. 1101(a)(15)(E)(iii), 101(a)(15)(H)(1)(b)(1), 8 U.S.C. 1101(a)(15)(H)(1)(b)(1), and 214(g)(8)(C), 8 U.S.C. 1184(g)(8)(C) (requiring "intending employers" of certain H-1B1 nonimmigrants to file an attestation with the Secretary of Labor). The E-3 and H-1B1 nonimmigrant classifications were established by statute in 2005 and 2003, respectively. *See* REAL ID Act of 2005, Public Law 109-13, section 501, 119 Stat. 231; United States-Singapore Free Trade Agreement Implementation Act, Public Law 108-78, section 402, 117 Stat. 948 (2003); United States-Chile Free Trade Agreement Implementation Act, Public Law 108-77, sections 402-404, 117 Stat. 909 (2003). Since that time, the DHS employment authorization regulations at 8 CFR 274a.12 have not been updated to include principal E-3 and H-1B1 nonimmigrants as foreign nationals authorized to accept employment with a specific employer, incident to status, in the United States as designated by statute.

Finally, the language of the current EB-1 regulations for outstanding professors and researchers may not fully encompass other types of evidence that may be comparable, such as evidence that the professor or researcher has important patents or prestigious peer-reviewed funding grants. In this final rule, DHS is modifying the regulations describing permissible initial evidence for outstanding professors and researchers to allow a petitioner to submit evidence that is comparable to the currently accepted evidence listed in 8 CFR 204.5(i)(3)(i) to demonstrate that such beneficiaries are recognized internationally as outstanding in their academic areas. *See* INA section 203(b)(1)(B), 8 U.S.C. 1153(b)(1)(B). A petitioner may submit such evidence instead of, or in addition to, the currently accepted evidence described under 8 CFR 204.5(i)(3)(i), as long as the

strategy that promotes the creation of the type of workforce needed in an increasingly competitive global economy without adversely impacting on the wages and working conditions of American workers.").

³ *See* White House, *Building a 21st Century Immigration System*, May 2011, at 1, available at http://www.whitehouse.gov/sites/default/files/rss_viewer/immigration_blueprint.pdf.

⁴ *See* Demetrios G. Papademetriou and Madeleine Sumption, *Attracting and Selecting from the Global Talent Pool, Policy Challenges*, Migration Policy Inst., Sept. 2013, at 4, available at <http://www.migrationpolicy.org/research/attracting-and-selecting-global-talent-pool-%E2%80%94-policy-challenges>.

petitioner establishes that the evidence is comparable to those listed under 8 CFR 204.5(i)(3)(i)(A)–(F) and the standards in 8 CFR 204.5(i)(3)(i) do not readily apply. This change provides greater flexibility for outstanding professors and researchers because the petitioner will no longer be limited to the list of initial evidence. Finally, these changes will further the goal of removing unnecessary obstacles for these workers to seek admission to the United States as an immigrant.

In preparing this final rule, DHS considered all the public comments received and all other materials contained in the docket. This final rule adopts the regulatory amendments set forth in the proposed rule without substantive change. The rationale for the proposed rule and the reasoning provided in its background section remain valid with respect to these regulatory amendments. Section II.B above and this section each describe the changes that are the focus of this rulemaking. This final rule does not address a number of comments that DHS considered beyond the scope of this rulemaking because the comments requested changes to the regulations that DHS had not proposed and that commenters could not have reasonably anticipated that DHS would make. Such comments include suggestions for expanding premium processing services and for providing expedited processing for certain family-based petitions, travel while an application for an adjustment of status is pending, re-entry permits, translations, grace periods, specific comments in reference to another DHS rulemaking⁵, numerical per-country limits, obligations to hire U.S. citizens first, or questions on a variety of CNMI-specific topics (for example, changes to CW-1 validity periods, CW-1 reentry permits, the reduction of CW-1 nonimmigrant workers, changes to USCIS processing of petitions for CW-1 workers, and suggestions for waivers of occupational certifications). Although DHS has carefully reviewed each of these comments, DHS considers these comments to be out-of-scope for the reasons stated, and will not take further action on these comments in connection with this specific rulemaking proceeding. All comments and other docket material are available for viewing at the Federal Docket Management System (FDMS) at <http://www.regulations.gov>, docket number USCIS-2012-0005.

⁵ These comments were forwarded to the appropriate docket and considered, as appropriate, in drafting the relevant regulation.

III. Public Comments on the Proposed Rule

A. Summary of Public Comments

In response to the proposed rule, DHS received 38 comments during the 60-day public comment period. Commenters included individuals, employers, workers, attorneys, nonprofit organizations, and one business organization.

While opinions on the proposed rule varied, a clear majority of the commenters supported the proposed changes in the rule. Specifically, supporters of the proposed rule welcomed the proposed employment authorization changes for principal E-3, H-1B1, and CW-1 nonimmigrants; the proposed update to the regulations clarifying the application requirements for E-3 and H-1B1 nonimmigrants requesting changes of status or extensions of stay; and the comparable evidence provision for EB-1 outstanding professors and researchers. Several commenters supported the comparable evidence provision and suggested additional evidence for DHS to consider when evaluating eligibility for EB-1 outstanding professors and researchers. Overall, the commenters supported DHS's efforts to harmonize the regulations to benefit highly skilled workers and CW-1 nonimmigrant workers and to remove unnecessary hurdles that place such workers at a disadvantage when compared to similarly situated workers.

Some commenters stated general opposition to the proposed rule, but did not offer any specific alternatives or suggestions relating to the proposals outlined in this rulemaking. Another commenter stated that the changes proposed with respect to EB-1 outstanding professors and researchers would be insufficient, and proposed a "point based system" instead.

DHS has reviewed all of the public comments received in response to the proposed rule, and responds to the issues raised by the comments below. The DHS responses are organized by subject area.

B. General Comments

1. Support

Multiple commenters provided general support for all the proposed changes in rule. One supporter stated that the proposed regulatory amendments will benefit many nonimmigrants. Another supporter indicated that the proposed changes will add to the much-needed math, science, and technology pool of workers in the United States. One commenter

noted the need for regulatory action in order to attract and retain workers, and supported the ongoing efforts to harmonize the rules that are applicable to similarly situated visa categories and bring them in line with actual agency practice. This same commenter added that the proposed changes will provide uniformity and predictability for U.S. employers and their employees and will enhance compliance at virtually no cost to DHS. Another commenter also underscored the importance of removing unnecessary regulatory barriers to improve the ability of U.S. higher education institutions to attract and retain talented and sought-after professionals. Some commenters supported the changes, but did not discuss perceived benefits. One commenter requested DHS to finalize the rule quickly.

2. Oppose

One commenter expressed general opposition to this rulemaking, but did not cite any specific provision or offer any specific alternatives or suggestions relating to the proposals outlined in this rulemaking. Another commenter opposed having temporary worker programs, in general, but did not offer any specific alternatives that would fall within the scope of this rule. DHS has not changed the final rule in response to these comments.

C. Employment Authorization for E-3 and H-1B1 Nonimmigrants

1. Employment Authorization Incident to Status With a Specific Employer

Three commenters supported the proposal to add the H-1B1 and principal E-3 classifications to the list of nonimmigrants authorized to work incident to status with a specific employer. They stated that the proposed change reflects the current practice, which allows work authorization based on approval of the [nonimmigrant] classification, but does not require a separate application for employment authorization. Therefore, the proposed change will produce consistency between current practice and regulatory language.

One commenter recommended that DHS amend the regulations to list B-1 nonimmigrant household employees in 8 CFR 274a.12(b) as authorized for employment with a specific employer incident to status. The commenter also recommended that DHS amend 8 CFR 274a.12(a) to include spouses of L-1, E-1, and E-2 nonimmigrants in the categories of individuals who are authorized for employment incident to status. DHS has determined that

expansion of employment authorization beyond the classifications identified in the proposed rule is not appropriate at this time, and it has therefore not included such an expansion in this final rule. DHS did not provide notice to the public or invite public comment on proposals to make changes to current employment authorization policies and procedures affecting these classes of nonimmigrants. For these reasons, DHS is not including the recommended expansion of 8 CFR 274a.12(a) or 8 CFR 274a.12(b) for these particular nonimmigrants in this final rule.

DHS appreciates commenters' support for the proposal to add the H-1B1 and principal E-3 classifications to the list of nonimmigrants authorized to work incident to status with a specific employer. The INA describes the employment of E-3 and H-1B1 nonimmigrants with a specific, petitioning employer as the very basis for their presence in the United States. See INA section 101(a)(15)(E)(iii), 8 U.S.C. 1101(a)(15)(E)(iii); INA section 101(a)(15)(H)(i)(b1), 8 U.S.C. 1101(a)(15)(H)(i)(b1). Similarly situated nonimmigrants, such as H-1B nonimmigrants, are classified in the regulations as employment authorized incident to status with a specific employer. See, e.g., 8 CFR 274a.12(b)(9). However, after statutory enactment of the E-3 and H-1B1 nonimmigrant categories, the provisions in 8 CFR 274a.12(b) were not updated to include principal E-3 and H-1B1 nonimmigrants. Therefore, in this final rule, DHS will update its regulations and adopt, without change, the proposed provision adding principal E-3 and H-1B1 nonimmigrants to the list of nonimmigrants authorized to work for the specific employer listed in their petition. Specifically, DHS is adding a new provision at 8 CFR 274a.12(b)(25) to include principal E-3 nonimmigrants in the list of foreign nationals who are employment authorized incident to status with a specific employer. DHS is also amending 8 CFR 274a.12(b)(9) to include the H-1B1 nonimmigrant classification as employment authorized incident to status with a specific employer.

2. Continued Employment Authorization While a Timely Extension of Stay Request Is Pending

DHS received multiple comments regarding the provision authorizing the continued employment of principal E-3 and H-1B1 nonimmigrants. Most of these comments supported the provision to authorize the continued employment for E-3 and H-1B1 nonimmigrants with timely filed,

pending extension of stay requests. One commenter explained that while employers file extension requests several months prior to the expiration of the workers' nonimmigrant status, unexpected processing delays can prevent the extension requests from being approved before such status expires. In turn, the nonimmigrant employees must stop working, causing serious disruptions to both the employers and their nonimmigrant workers. The commenters further stated that the current lack of continued work authorization results in lost wages to employees and loss in productivity to employers. The commenters noted that the continued employment authorization period, which may last up to 240 days, will protect against such interruptions by ensuring that U.S. employers who employ individuals in the E-3 and H-1B1 nonimmigrant classifications experience as little disruption as possible in the employment of their workers. These commenters therefore welcomed the proposed continued employment authorization because it will minimize disruption to employers and thereby promote economic growth. These commenters also supported the continued employment authorization proposal because it would harmonize the regulations applicable to E-3 and H-1B1 nonimmigrants with regulations applicable to similarly situated nonimmigrants. For example, one of these commenters noted that this change would allow colleges and universities to treat their similarly situated employees in a fair and consistent manner. One of these commenters also stated that the proposed change would substantially aid in attracting and retaining these workers.

Additionally, one commenter supported the proposed E-3 continued work authorization because comparable eligibility for continued work authorization for H-1B nonimmigrants has been extremely helpful in allowing the commenter's current tenure-track H-1B faculty, researchers, and staff to continue employment while USCIS is processing H-1B extension requests, and would permit similarly situated E-3 employees the same benefit. DHS appreciates the support from the public for this proposed provision. The potential gap in work authorization from unanticipated processing delays can burden both employers and employees alike. DHS also believes it is important to provide employers of H-1B1 and E-3 nonimmigrants the benefits that accrue from the predictability that

currently is available to employers of nonimmigrants in similar employment-based nonimmigrant classifications, who file timely requests for extensions of stay with the same employers. Therefore, DHS has determined that it will adopt this provision without change, thereby automatically extending employment authorization to principal E-3 and H-1B1 nonimmigrants with timely filed, pending extension of stay requests.

One commenter recommended expanding the 240-day rule to cover Q-1 nonimmigrants. The commenter stated that, as with other nonimmigrant classifications, government error can delay approval, leading to serious business disruptions to the employer and adverse consequences to the workers through no fault of their own.

DHS has determined that expansion of continued employment authorization beyond the classifications identified in the proposed rule is not appropriate at this time, and it has therefore not included such an expansion in this final rule. This suggestion is outside the scope of this rulemaking, which did not make any proposals or invite public comment with respect to Q-1 nonimmigrants. Therefore, in this final rule, DHS will update its regulations at 8 CFR 274a.12(b)(20) and adopt, without change, the proposed provision to authorize continued employment authorization for principal E-3 and H-1B1 nonimmigrants with pending, timely filed extension of stay requests.

D. Employment Authorization for CW-1 Nonimmigrants While a Timely Filed Extension of Stay Request Is Pending

Six commenters supported the provision for automatic employment authorization for CW-1 nonimmigrant workers with timely filed, pending extension of stay requests. One commenter explained that while employers file extension requests several months prior to the expiration of the workers' nonimmigrant status, unexpected processing delays can prevent the extension requests from being timely approved and cause serious disruptions to employers and nonimmigrants. Another commenter remarked that current adjudication delays for CW-1 nonimmigrant workers are burdensome on the beneficiaries and on the local economy, and therefore urged DHS to adopt the proposed continued work authorization provision for CW-1 nonimmigrant workers. Commenters commonly stated that the potential lack of work authorization due to a processing delay results in serious disruption to both an employer's business and to the employee's life. The

commenters noted that the 240-day continued employment authorization would protect against such interruptions by ensuring that U.S. employers of CW-1 nonimmigrants experience minimal disruption in the continued employment of their workers. One commenter stated that this proposed change would alleviate fear among employers and workers of interruptions in employment resulting from a lack of continued work authorization. Finally, one commenter stated that the proposed change would provide equity for CW-1 nonimmigrants by ensuring that they are afforded the same treatment as other similarly situated individuals.

DHS appreciates the support from the public for this proposed provision. The disruption of employment can create a burden for both employers and employees. As a matter of equity, it is also important to ensure that CW-1 nonimmigrants who are waiting for USCIS to adjudicate their extension of stay requests with the same employer also benefit from the continued employment authorization available to other CW-1 nonimmigrants who change employers or an employee under the previous CNMI immigration system. Current regulations for the continued employment of CW-1 nonimmigrant workers are also inconsistent. Specifically, the regulations currently only provide continued work authorization for CW-1 nonimmigrant workers seeking to change to a new employer, including a change in employer resulting from early termination, and not to CW-1 nonimmigrants seeking an extension of stay with the same employer. 8 CFR 214.2(w)(7). This disparity may serve as an incentive for CW-1 nonimmigrant workers to change employers just to maintain continued employment authorization, which will inconvenience the CW-1 nonimmigrant worker's current employer who might lose the worker to another employer.

One commenter strongly supported this proposed change and noted that various employers previously sought to have a continuing work authorization provision included in the initial CW regulations without success. The commenter stated that the DHS response to this request then was that such provision was not authorized by the CNRA.⁶

DHS notes that the interim rule amending 8 CFR 214.2(w) to create the

CW classification published on October 27, 2009, and provided a 30-day comment period.⁷ On December 9, 2009, DHS published a notice in the **Federal Register** reopening and extending the public comment period for an additional 30 days.⁸ The commenter did not indicate whether the commenter submitted the suggestion for the continued employment authorization provision in response to either of those comment periods. However, DHS did receive post-publication correspondence requesting continued employment authorization for workers with pending extensions.⁹ DHS responded to these post publication correspondence by stating that CW-1 nonimmigrants do not have continuing employment authorization while an extension of stay petition is pending. In that correspondence, DHS noted that it was not in the position to provide such authorization without a change to the applicable regulations.¹⁰ Although DHS believes that its implementing CW regulations are consistent with congressional intent, it subsequently proposed improvements to the regulations to permit continued employment authorization during an extension of stay request through this notice and rulemaking, pursuant to its authority under the INA and the CNRA to implement such regulations.¹¹

One of the commenters also supported the proposed change because it will help both employers and employees in the CNMI by providing employers with more time to file extension requests and by allowing employees to remain in lawful work-authorized status while awaiting the adjudication of the extension requests filed on their behalf. DHS appreciates

the support for the continued work authorization provision for CW-1 nonimmigrants. The regulatory changes aim to provide both the employer and employee with continued employment when an employer files a timely request for an extension of stay for the CW-1 nonimmigrant worker. However, this new provision does not change the filing requirements or allot more time for employers to file extension requests. Under 8 CFR 214.2 (w)(12)(ii), an employer may file up to 6 months before it actually needs the employee's services, and this rulemaking does not change this filing requirement. Instead, this rulemaking provides a mechanism that automatically extends employment authorization, for a period of up to 240 days, while the employer's timely filed, extension of stay request remains pending.

One commenter proposed allowing an employee who transfers to another employer to continue to work pending the adjudication of the new petition with the prospective employer. DHS's proposed rule did not suggest continued work authorization for CW-1 nonimmigrant workers seeking a change of employment because DHS regulations already allow continued work authorization for changes of employment so long as certain requirements are met. As described above, under 8 CFR 214.2(w)(7), a CW-1 nonimmigrant worker may work for a prospective new employer after the prospective employer files a non-frivolous Petition for a CNMI-Only Nonimmigrant Transitional Worker, Form I-129CW, for new employment. The employer must file the petition for new employment to classify the alien as a CW-1 nonimmigrant, before the CW-1 nonimmigrant worker's authorized period of stay expires. The CW-1 nonimmigrant worker must not have worked without authorization in the United States since being admitted. If the petitioner and CW-1 nonimmigrant worker meet these conditions, then employment authorization will continue until DHS adjudicates the new petition.

One commenter proposed allowing a terminated employee to continue to work without interruption, subject to certain conditions. DHS's proposed rule did not suggest continued work authorization for terminated CW-1 nonimmigrant workers because USCIS regulations already allow for continued work authorization for terminated CW-1 nonimmigrant workers under certain circumstances. Under 8 CFR 214.2(w)(7)(v), a terminated CW-1 nonimmigrant worker who has not otherwise violated the terms and conditions of his or her status may work

⁶ See Public Law 110-229, 122 Stat. 754, 853 (2008). Title VII of the CNRA (codified, in relevant part, at 48 U.S.C. 1806(d)) extends U.S. immigration laws to the CNMI.

for a prospective new employer after the prospective employer files a non-frivolous Petition for a CNMI-Only Nonimmigrant Transitional Worker, Form I-129CW, for new employment. However, the new employer must file the Petition for a Nonimmigrant Worker, Form I-129CW, within a 30-day period after the date of termination. Employment authorization then continues until DHS adjudicates the new petition.

While the commenters supported the continued employment authorization for CW-1 nonimmigrant workers, they also offered specific suggestions regarding various aspects of the CW-1 transitional worker program. One commenter remarked that the continued work authorization provision merely provides a temporary solution to meet the needs of the local investors, and that a permanent immigration status is necessary. The commenter encouraged the immediate passage of U.S. Senate bill S. 744 as a permanent solution to this CNMI foreign worker situation. Another commenter suggested that foreign workers in the CNMI should be provided with a “better” immigration status. The rulemaking focused on continued employment authorization for certain CW-1s with timely filed extension of stay requests. The CW program as a whole was not a subject of this rulemaking. These comments are outside the scope of this rulemaking.

DHS has determined that it will adopt this provision without change, thereby automatically extending employment authorization to CW-1 nonimmigrants who have timely filed, pending extension of stay requests for the same employer. Specifically, DHS will add the CW-1 nonimmigrant classification to the list of employment-authorized nonimmigrant classifications, at 8 CFR 274a.12(b)(20), that receive an automatic extension of employment authorization of up to 240 days while the employer’s timely filed extension of stay requests remain pending. This will ensure that the CW nonimmigrants are permitted continued employment authorization based on both pending change of employers requests and pending extension of stay requests.

E. Application Requirement for E-3 and H-1B1 Nonimmigrants Requesting Changes of Status or Extensions of Stay

DHS only received one comment on the proposal to add principal E-3 and H-1B1 nonimmigrants to the list of nonimmigrant classifications that must file a petition with USCIS to request an extension of stay or change of status. The commenter stated that the proposed changes, if adopted, will go far to enable

initial and uninterrupted continued employment of H-1B1 and E-3 nonimmigrants. The commenter added that the changes create equity for these nonimmigrant categories as compared to other similar nonimmigrant categories for specialty workers. For reasons previously stated, DHS will adopt this provision without change. Specifically, DHS will amend 8 CFR 214.1(c)(1) and 8 CFR 248.3(a) to add the E-3 and H-1B1 nonimmigrant classifications to the list of nonimmigrant classifications that must file a petition with USCIS to request an extension of stay or change of status. This updates the regulations so they conform to the filing procedures described in the form instructions.

F. Comparable Evidence for EB-1 Outstanding Professors and Researchers

DHS received a number of comments on the proposal to expand the current list of initial evidence for EB-1 outstanding professors and researchers to allow petitioners to submit evidence comparable to the other forms of evidence already listed in 8 CFR 204.5(i)(3)(i).

1. Support

Most of the commenters on the EB-1 comparable evidence provision supported it, for a variety of reasons. They cited the perceived positive effects on the United States, the need for harmonization of the regulations, and the need to submit evidence to allow beneficiaries to fully document their accomplishments. DHS notes that the same commenters remarked on more than one aspect of the comparable evidence provision.

Specifically, commenters remarked that the change would positively affect the United States in a variety of ways. Two commenters noted that the comparable evidence provision would expand the number of individuals eligible for this classification and would benefit the United States as a whole. Some commenters noted that the comparable evidence provision will improve the ability of U.S. employers, especially higher education employers, to attract, recruit, and retain talented foreign professors, researchers, and scholars. One of these commenters added that this regulatory change will improve the capability to recruit and retain talented individuals which conduct the research that allows U.S. businesses to develop and sell products. This improved capability to recruit these individuals will help the U.S. economy’s growth. Another commenter added that refining the EB-1 outstanding professors and researchers evidentiary list would benefit the

United States by boosting research, innovation, and development.

DHS appreciates the commenters’ support for the comparable evidence provision based on the perceived positive effects on United States’ competitiveness and the Nation’s economy. DHS agrees with the commenters that the proposed comparable evidence provision may also help U.S. employers recruit EB-1 outstanding professors and researchers.

A number of commenters supported expansion of the current list of evidentiary criteria for EB-1 outstanding professors and researchers to allow the submission of comparable evidence because it would harmonize the EB-1 outstanding professor and researcher regulations with those of other comparable employment-based immigrant classifications, eliminating unwarranted disparities with respect to these policies. Commenters emphasized that the proposed comparable evidence provision in turn would bring the criteria for proving eligibility for the outstanding professors and researchers classification in line with those that have long been permitted for other preference categories such as EB-1 aliens of extraordinary ability and EB-2 aliens of exceptional ability. These commenters stated that the proposed change is a logical extension of the existing regulatory provision listing the evidentiary criteria for EB-1 outstanding professors and researchers, especially since the similarly situated EB-1 extraordinary ability classification, which requires satisfaction of a higher evidentiary threshold, allows for consideration of comparable evidence.¹²

DHS appreciates commenters’ support for the comparable evidence provision based on the harmonization of the comparable regulations. DHS agrees that by allowing for the submission of comparable evidence, DHS will bring the evidentiary standards of the EB-1 outstanding professor and researcher category in line with those currently available to individuals qualifying under both the EB-1 extraordinary ability and EB-2 exceptional ability categories. This change in turn will provide equity for EB-1 outstanding professors and researchers with other

¹² The regulatory text stating when comparable evidence may be submitted uses the term “standards” when referring to the list of evidence that may be submitted to establish eligibility. *See, e.g.,* 8 CFR 204.5(h)(4) and 8 CFR 204.5(k)(3)(iii). Commenters, however, commonly used the term “criteria” or “criterion” when referring to the “comparable evidence” provisions and when responding to DHS’s proposal to allow petitioners to submit evidence comparable to the other forms of evidence already listed in 8 CFR 204.5(i)(3)(i).

similarly situated individuals. This change better enables petitioners to hire outstanding professors and researchers by providing a set of standards that are flexible enough to comprehensively encompass all evidence that may demonstrate their satisfaction of the statutory standard. DHS notes that although it is expanding the types of evidence that a petitioner may submit to establish eligibility, this rulemaking does not change the petitioner's burden to establish eligibility under the preponderance of the evidence standard of proof.

A number of commenters supported expanding the criteria for EB-1 outstanding professors and researchers because doing so would remove evidentiary limitations and allow employers to present full documentation of an employee's qualifications. One of these commenters added that the language in the proposed rule was well drafted and broad enough to include all evidence that may prove outstanding achievement. Under current regulation, petitioners need to fit evidence into specific evidentiary categories. For example, petitioners have submitted funding grants as documentation of major awards under 8 CFR 204.5(i)(3)(i)(A). In other instances, petitioners may have omitted relevant evidence that could have helped to demonstrate the beneficiary is recognized internationally as outstanding, such as high salary and affiliation with prestigious institutions, because they did not believe it would fit into any of the regulatory evidentiary category. Commenters noted that the proposed change adds necessary flexibility; for instance, this change will now potentially allow for the submission of important patents, grant funding and other such achievements that may not neatly fall into the previously existing evidentiary categories. Two of these commenters also commended DHS for recognizing that the types of evidence relevant to the determination of eligibility for this classification have changed greatly since these evidentiary criteria were first created, and will continue to evolve over time due to the changing needs of American businesses.

One of the commenters that supported the comparable evidence provision also expressed concern regarding how USCIS considers comparable evidence. The commenter reported that recent decisions in other employment-based categories suggest that adjudicators allow comparable evidence only when none of the listed criteria apply. The commenter added that comparable evidence should be presumed

acceptable, regardless of whether any of the otherwise enumerated criteria apply, as long as the evidence is relevant to the merits of the case. This commenter urged DHS to clarify this approach here, as well as with certain employment-based classifications where comparable evidence is currently in use.

DHS appreciates the commenter's concern regarding adjudicative trends in how USCIS considers comparable evidence. DHS regulations provide that petitions in the EB-1 extraordinary ability and EB-2 exceptional ability classifications must establish that one or more permissible standards are not readily applicable to the beneficiary's occupation in order to rely on the comparable evidence provision respective to those standards. *See* 8 CFR 204.5(h)(4), (k)(3)(iii). Accordingly, if any single evidentiary standard is inapplicable to the beneficiary's occupation, the petitioner may submit alternative, but comparable, evidence even though other standards may be applicable to the beneficiary's occupation.

For EB-1 outstanding professors and researchers, DHS confirms that a petitioner will be able to submit comparable evidence instead of, or in addition to, evidence targeted at the standards currently listed in 8 CFR 204.5(i)(3)(i) to demonstrate that the beneficiary is internationally recognized as outstanding if the currently listed standards do not readily apply. The intent of this provision is to allow petitioners, in cases where evidence of the beneficiary's achievements do not fit neatly into the enumerated list, to submit alternate, but qualitatively comparable, evidence. Under this provision, a petitioner may submit evidence falling within the standards listed under 8 CFR 204.5(i)(3)(i), and may also use the comparable evidence provision to submit additional types of comparable evidence that is not listed, or that may not be fully encompassed, in 8 CFR 204.5(i)(3)(i). DHS notes that a petitioner's characterization of existing standards as "not readily applying" to the submitted evidence will be considered in the totality of the circumstances, but USCIS ultimately will determine which standard is satisfied, if any, by any form of submitted evidence.

As noted in the proposed rule, limiting submission of comparable evidence for outstanding professors and researchers only to instances in which the standards do not readily apply "to the alien's occupation" would not adequately serve the goal of this regulatory change because unlike the standards for EB-1 aliens of

extraordinary ability and EB-2 aliens of exceptional ability, the standards for EB-1 outstanding professors and researchers are tailored to only these two occupations.¹³ Thus, a petitioner for an outstanding professor or researcher does not need to establish that a particular standard is not readily applicable "to the beneficiary's occupation" before they can rely on comparable evidence. A petitioner for an outstanding professor or researcher instead needs to establish that the evidentiary standards listed in 8 CFR 204.5(i)(3)(i) do not readily apply to the evidence that the petitioner proposes to submit before the petitioner can rely on the comparable evidence provision.

After establishing that the evidentiary standards listed in 8 CFR 204.5(i)(3)(i) does not readily apply to the evidence he or she is submitting, the petitioner may then submit alternative, but qualitatively comparable evidence for those standards. The existing evidentiary standards listed in 8 CFR 204.5(i)(3)(i) serve as a roadmap for determining, among other things, the quantity and types of evidence that should be submitted in order for such evidence to be considered "comparable."

Given the overwhelming support and strong justification for the comparable evidence provision as proposed, DHS will adopt it and amend 8 CFR 204.5(i)(3) to include a comparable evidence provision.

2. Oppose

Two commenters opposed the comparable evidence provision for outstanding professors and researchers. One commenter indicated that they opposed it because it will expand the number of eligible foreign nationals competing for high-tech jobs. The commenter stated that many engineers, computer professionals and scientists are unemployed or under-employed and asserted that the proposed change

¹³ In the proposed rule, DHS explained that the aliens of extraordinary ability and aliens of exceptional ability classifications encompass a broad range of occupations (sciences, arts, education, business, or athletics for extraordinary ability aliens; and the sciences, arts, or business for exceptional ability aliens). *See* 79 FR 26870, 26880 (citing INA section 203(b)(1)(A), (2)(A)). Employers filing petitions under such classifications may submit comparable evidence if they can establish that the standards listed in the regulation do not directly apply to the beneficiary's occupation. *See* 8 CFR 204.5(h)(4), (k)(3)(iii). In contrast, the outstanding professor or researcher classification involves only two overarching types of occupations, and generally, the current evidentiary standards readily apply to both. Therefore, the variance between the regulatory text of comparable evidence provision for EB-1 outstanding professors and researchers and that provision for the other two categories is necessary.

would lead to two negative effects on U.S. workers: (1) The change will depress the wages of U.S. citizens; and (2) it will increase a sense of job instability and in turn deter workers from speaking up for fear of retaliation.

While the commenter did not submit data to support the wage and instability concerns, DHS takes these comments seriously. DHS appreciates this viewpoint and has carefully considered the potential for any negative effects on the labor market as a result of this rulemaking. Congress imposed a numerical limitation for the number of EB-1 visas available annually. The annual cap on EB-1 visas generally is set by statute at 40,000, plus any visas left over from the fourth and fifth employment based preference categories (special immigrants and immigrant investors) described in section 203(b)(4) and (5) of the INA, 8 U.S.C. 1153(b)(4) and (5). In FY 14, USCIS received 3,549 petitions for EB-1 outstanding professors and researchers. DHS notes that this provision does not expand the visa numerical limitation beyond that set forth by Congress. Rather, DHS is simply expanding the list of evidentiary standards so that those who may be meritorious of classification under INA 203(b)(1)(B) can more readily demonstrate their eligibility, consistent with similar classifications. This provision provides greater flexibility for petitioners on what evidence they may submit to show that the beneficiary is recognized internationally as outstanding in the academic field specified in the petition. It does not change any of the remaining petitioning requirements (such as the job offer) or expand the types of individuals who can qualify for the EB-1 classification beyond those individuals authorized under the statute. Instead, this change better enables petitioners to hire outstanding professors and researchers by providing a set of standards that are flexible enough to encompass any evidence that may demonstrate that they are recognized internationally as outstanding.

Another commenter expressed concern regarding existing fraud and abuse in the H-1B and EB-1 programs, stating that the government should first focus on ways to prevent such abuse “before passing any law to ease the process” for these individuals. The commenter did not provide any data on the nature or extent of such fraud and abuse, and did not otherwise identify a connection between the proposed rule’s provisions and past instances of fraud and abuse. DHS takes concerns regarding fraud and abuse very seriously and has measures in place to detect and

combat fraud. Strict consequences are already in place for immigration-related fraud and criminal activities, including inadmissibility to the United States, mandatory detention, ineligibility for naturalization, and removability. *See, e.g.,* INA sections 101(f), 212(a)(2) & (a)(6), 236(c), 237(a)(1)(G) & (a)(2), 318; 8 U.S.C. 1101(f), 1182(a)(2) & (a)(6), 1226(c), 1227(a)(1)(G) & (a)(2), 1429.

Additionally, the USCIS Fraud Detection and National Security Directorate (FDNS) currently combats fraud and abuse, including in the H-1B and EB-1 programs, by developing and maintaining efficient and effective anti-fraud and screening programs, leading information sharing and collaboration activities, and supporting law enforcement and intelligence communities. FDNS’s primary mission is to determine whether individuals or organizations filing for immigration benefits pose a threat to national security, public safety, or the integrity of the nation’s legal immigration system. FDNS’s objective is to enhance USCIS’s effectiveness and efficiency in detecting and removing known and suspected fraud from the application process, thus promoting the efficient processing of legitimate applications and petitions. FDNS officers resolve background check information and other concerns that surface during the processing of immigration benefit applications and petitions. Resolution often requires communication with law enforcement or intelligence agencies to make sure that the information is relevant to the applicant or petitioner at hand and, if so, whether the information would have an impact on eligibility for the benefit. FDNS officers also perform checks of USCIS databases and public information, as well as other administrative inquiries, to verify information provided on, and in support of, applications and petitions. FDNS uses the Fraud Detection and National Security Data System (FDNS-DS) to identify fraud and track potential patterns.

USCIS has formed a partnership with U.S. Immigration and Customs Enforcement (ICE), in which FDNS pursues administrative inquiries into most application and petition fraud, while ICE conducts criminal investigations into major fraud conspiracies. Individuals with information regarding fraud and abuse in the immigration benefits system are encouraged to contact FDNS at FDNS@dhs.gov or by mail at 111 Massachusetts Ave. NW., Ste. 7002, Mail Stop 2280, Washington, DC 20529-2280. DHS believes that these collective measures

provide adequate safeguards to ensure that fraud and abuse does not occur, and that this rulemaking is unlikely to result in a significant additional risk of fraud and abuse, because there is a lack of a connection between the proposed rule’s provisions and past instances of fraud and abuse. Accordingly, DHS has not made any changes in response to these comments.

3. Suggestions for Other Evidence

Six commenters suggested additional categories of evidence that DHS should consider accepting as comparable evidence or initial evidence. One commenter suggested that DHS accept the number of years of experience working in a research field and an offer of employment by a research organization or institute of higher education as comparable evidence to the various criteria *See* 8 CFR 204.5(i)(3). The commenter noted that certain researchers face hurdles in publishing groundbreaking results and are therefore unable to obtain the scholarly authorship, recognition, or requisite awards to meet this criterion. The commenter suggested that permitting this evidence would help these researchers meet the eligibility requirements for this classification.

One commenter suggested that DHS give priority to U.S. doctoral degree holders applying as outstanding researchers or professors who already have a tenure-track faculty position. The commenter explained that these individuals teach and conduct research in narrowly focused fields and are therefore not heavily cited. As a result, they are not usually eligible for EB-1 positions because they cannot meet the existing criterion involving “published material in professional publications written by others” about the professor or researcher’s work. *See* 8 CFR 204.5(i)(3)(i)(C). The commenter stated that allowing more evidence to fit the criterion will help individuals in this type of scenario.

In general, three commenters suggested that DHS consider a U.S. earned doctoral degree as evidence to qualify for the EB-1 classification. Their comments varied in detail and scope. One commenter stated that DHS should grant the EB-1 classification to individuals who obtained their doctoral degrees from U.S. schools. This commenter did not provide any details or context to clarify this suggestion. Another commenter suggested that DHS should allow individuals with U.S. doctoral degrees in science, technology, engineering and mathematics (STEM) with a related job [offer] to qualify for the EB-1 category. DHS is unable to

determine whether these commenters suggested an automatic grant of the classification based on a U.S. earned doctoral degree or if the commenter suggested that the classification be limited only to U.S. earned doctoral degree holders.

One of these commenters suggested that DHS expand the list of initial evidence to include a STEM doctoral degree issued by a U.S. accredited university, and that DHS could publish a list of U.S. accredited universities to make the criteria more transparent. The commenter explained that a petitioner could satisfy the proposed criteria by submitting an “attested copy”¹⁴ of the STEM degree certificate and an unopened transcript from the university, to mirror the current criteria set forth for EB–2 petitions. The commenter added that this suggestion would provide a pathway for U.S. trained doctoral degree holders to stay in the United States, allowing the United States to retain technical excellence and continue its leadership in technology. The commenter also suggested that DHS could set parameters for eligibility criteria based on salary, and that a petitioner could satisfy this requirement by submitting occupational employment statistics from the Bureau of Labor Statistics (BLS). The commenter suggested that eligible EB–1 workers should have wages that are greater than the 75th percentile of the BLS wage figures for their occupation, such that beneficiaries making greater than \$100,000 a year would satisfy the criteria, a requirement the commenter believes would mirror the current criteria set forth for EB–1, Aliens of Extraordinary Ability.¹⁵ The commenter believes this suggestion would alleviate any concerns regarding financial exploitation of the immigrant worker

and the protection of domestic workers’ wage rights.

DHS carefully considered the commenters’ suggestions for initial and additional evidence for the EB–1 outstanding professors and researchers classification. DHS believes that the evidence suggested in the comments above regarding minimum number of years of experience and minimum education requirements generally would not be beneficial in an analysis of whether an individual is internationally recognized as outstanding in his or her academic field. The purpose of the proposed comparable evidence provision is to allow petitioners to present evidence that, although not on the enumerated list, may still serve to demonstrate that the professor or researcher is internationally recognized as outstanding. DHS appreciates that to achieve this goal, the standards listed in 8 CFR 204.5(i)(3)(i) need to have some measure of flexibility so they may continue to evolve over time in response to U.S. business needs and/or the changing nature of certain work environments or practices. It is not clear, however, whether the commenters’ suggestions regarding minimum number of years of experience, minimum education requirements, and salary requirements are intended to limit or expand the current evidentiary criteria for EB–1 outstanding professors or researchers. If they were intended to limit the criteria, then the commenters’ suggestions would have the effect of narrowing the eligibility criteria by requiring very specific evidence that is possessed by a specific subset of the potential population of outstanding professors and researchers. In direct contrast, the intended purpose of the comparable evidence provision is to provide flexibility for this population. If the commenter’s suggestions, however, were intended to expand the type of evidence that may be considered, that suggestion is consistent with the purpose of the comparable evidence provision as it provides needed flexibility to establish eligibility. Therefore, DHS declines to adopt these suggestions as amendments to the standards listed in 8 CFR 204.5(i)(3)(i) in favor of a broad comparable evidence provision.¹⁶

One commenter expressed concern that adding the proposed comparable

evidence provision will not improve the probability that an outstanding professor and researcher will qualify for the classification. The commenter explained that adjudicators analyze this classification under a two-part analysis, and therefore meeting the criteria is not enough to prove eligibility. Instead, the commenter suggested that DHS impose a point-based system as an alternative, transparent method for evaluating whether these individuals are eligible for the classification. The commenter added that this would eliminate any subjectivity in the process and allow a researcher or petitioner to predict whether he or she meets or does not meet the criteria.

DHS disagrees with the commenter’s assertion that the proposed comparable evidence provision will not benefit petitioners and these specific foreign workers. The stated purpose of the proposed comparable evidence provision is to allow petitioners to submit additional types of evidence and to fully document the beneficiary’s international recognition as an outstanding professor or researcher in order to demonstrate eligibility for the requested classification. However, this proposal does not change the eligibility standard for this classification. The petitioner must still demonstrate, by a preponderance of the evidence, that the beneficiary is recognized internationally as outstanding in the specific academic area.

The commenter correctly asserted that adjudicators analyze this classification using a two-part approach. The USCIS policy memo, *Evaluation of Evidentiary Criteria in Certain I-140 Petitions*, provides instructions to adjudicators regarding application of a two-step analysis for purposes of adjudicating extraordinary ability, outstanding professor and researcher, and exceptional ability Form I-140 petitions.¹⁷ The commenter stated that given this two-step analysis, a beneficiary may satisfy at least two of the outstanding professor and researcher regulatory standards but fail to prove eligibility. DHS believes that whether or not a beneficiary ultimately may prove eligibility by providing evidence satisfying at least two of the listed regulatory criteria is not a material question in considering whether to add this comparable evidence provision. Instead, by allowing submission and

¹⁴ The commenter references the evidentiary requirements for the EB–2, Members of Professions Holding Advanced Degrees or Aliens of Exceptional Ability. The relevant provision at 8 CFR 204.5(k)(3)(i)(A) requires an “official academic record showing that the alien has a United States advanced degree or a foreign equivalent degree.” Therefore, in this context, DHS infers that “attested copy” is a reference to “an official academic record.”

¹⁵ The commenter references the evidentiary requirements for the EB–1, Aliens of Extraordinary Ability. The relevant provision at 8 CFR 204.5(h)(3)(ix) requires “evidence that the alien has commanded a high salary or other high remuneration for services, in relation to others in the field.” In contrast, the evidentiary requirements for the EB–1, Outstanding Professors and Researchers, at 8 CFR 204.5(i)(3) does not contain a high salary criterion. DHS may consider any evidence submitted in the totality of the circumstances to determine whether an individual is internationally recognized as an outstanding professor or researcher.

¹⁶ Although DHS will not amend the regulations to add these very specific suggestions, please note that the comparable evidence provision is sufficiently broad to permit consideration of the evidence described in the comments, so long as the previously described requirements of the provision are satisfied.

¹⁷ See USCIS Policy Memorandum, “Evaluation of Evidence Submitted with Certain Form I-140 Petitions; Revisions to the Adjudicator’s Field Manual (AFM) Chapter 22.2, AFM Update AD11–14” (Dec. 22, 2010), available at <http://www.uscis.gov/USCIS/Laws/Memoranda/i-140-evidence-pm-6002-005-1.pdf>.

consideration of comparable evidence, which does not exist under current regulation, this rule promises to offer petitioners a more meaningful opportunity to establish a beneficiary's eligibility. Thus, although DHS recognizes that satisfaction of the newly added provision will not guarantee approval for the classification, if petitioners submit evidence that indeed is comparable and points to international recognition for being outstanding in the field, that evidence may improve the probability that the petition will be approved under the existing framework.

DHS appreciates the suggestion for an alternative framework for analysis of the EB-1 outstanding professors and researchers classification, but DHS declines to adopt the suggested point-based system as it would require a much broader reshaping of the current immigration system. This suggestion would require a wholesale rulemaking for all the other classifications, which is beyond the scope of this rulemaking.

DHS declines to adopt the suggestions for initial evidence, additional evidence, and an alternative framework. As previously noted, DHS is tailoring this regulation to provide EB-1 outstanding professors and researchers with a comparable evidence provision that mirrors the other employment-based immigrant categories that already allow for submission of comparable evidence.

G. Miscellaneous Comments

One commenter requested clarification as to whether the changes proposed in this rule would affect processing times for family immigration. The commenter did not state which aspects of the proposed changes he or she believes could impact family immigration processing times. While there is always a possibility that changes to one USCIS business process may trigger unanticipated downstream effects on other USCIS business processes, DHS does not anticipate that changes made by this rule will have a direct impact on family based immigration processing times.

Another commenter supported DHS's replacement of the more narrow term "employer" with the more general term "petitioner" in reference to who may file a request to change or extend status under 8 CFR 214.1(c)(1) and 248.3(a). The commenter explained that the term "employer" does not adequately

describe the array of individuals and entities that may file petitions under 8 CFR 214.2 and the term "petitioner" is a much more accurate descriptor. DHS agrees that the term "petitioner" is a more accurate depiction of the individual who may file in a variety of scenarios. Additionally, this change will generally eliminate inconsistency between the change of status and extension of stay provisions and the classification-specific provisions in 8 CFR 214.2. This change will eliminate any confusion that the current inconsistency between these provisions may have caused. DHS will adopt this provision without change.

IV. Statutory and Regulatory Requirements

A. Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This rule has not been designated a "significant regulatory action," under section 3(f) of Executive Order 12866. Accordingly, the rule has not been reviewed by the Office of Management and Budget (OMB).

This analysis updates the estimated costs and benefits discussed in the proposed rule. This final rule will not impose any additional compliance costs on employers, individuals, or government entities, and will not require additional funding for the Federal Government. However, DHS notes that there could be additional familiarization costs as employers read the final rule in the **Federal Register** to understand the benefits that this rule will provide. Also, USCIS may spend a de minimis amount of time updating training materials, but USCIS does not expect to hire additional personnel as a result of this rule. The final rule will make certain changes to the regulations governing the E-3, H-1B1, and CW-1 nonimmigrant worker classifications. Specifically, DHS will amend the regulation to allow principal E-3, H-

1B1, and CW-1 nonimmigrant workers up to 240 days of continued work authorization beyond the expiration date noted on their Arrival Departure Record, Form I-94, provided that their extension of stay request is timely filed. Employers or petitioners are already required to submit an extension of stay for such nonimmigrant classifications in order to extend their status beyond the expiration date noted on their Arrival Departure Record, Form I-94. Permitting continued employment while the extension of stay request is pending with USCIS places principal E-3, H-1B1, and CW-1 nonimmigrant workers on par with other, similarly situated nonimmigrants. The provisions will not result in any additional compliance costs, burdens, or procedures for the U.S. employer or the workers.

Additionally, DHS will allow petitioners of EB-1 outstanding professors and researchers to submit comparable evidence, instead of or in addition to the evidence listed in 8 CFR 204.5(i)(3)(i), to demonstrate that the professor or researcher is recognized internationally as outstanding in his or her academic field. Allowing comparable evidence for EB-1 outstanding professors and researchers will match the evidentiary requirements with those of similarly situated employment-based immigrant classifications.

DHS notes that the above-referenced changes are part of DHS's Retrospective Review Plan for Existing Regulations under Executive Order 13563.¹⁸ During the development of DHS's Retrospective Review Plan for Existing Regulations in 2011, DHS received one comment in response to the 2011 publication.¹⁹ DHS received more comments again in response to the 2014 publication. These public comments requested specific changes to the DHS regulations that govern continued work authorization for principal E-3 and H-1B1 nonimmigrants when an extension of status petition is timely filed, and requested that DHS expand the types of evidence allowable in support of immigrant petitions for outstanding researchers or professors. This rule responds to these comments according to the retrospective review principles of Executive Order 13563.

The costs and benefits of the final rule are summarized in Table 2.

¹⁸ See U.S. Department of Homeland Security Retrospective Review of Existing Regulations—Progress Report (Feb. 2015), available at <http://www.dhs.gov/publication/february-2015-retrospective-review-plan-report> for the latest

published update on DHS actions with respect to Retrospective Review.

¹⁹ See Letter from Marlene M. Johnson, Executive Director and CEO of NAFSA: Association of

International Educators, to Ivan K. Fong, General Counsel, DHS (Apr. 13, 2011), available at <http://www.nafsa.org/uploadedFiles/DHSregreviewcommentApr122011%20public.pdf>.

TABLE 2—SUMMARY OF COSTS AND BENEFITS

Costs	Change	Benefits and Avoided Costs
Minimal costs associated with reading the rule to understand the benefits that will accrue to employers and workers. This rule does not impose any additional compliance costs.	E3, H-1B1, and CW-1 Nonimmigrants	
	Continued employment authorization of up to 240 days for an H-1B1, principal E-3, or CW-1 nonimmigrant worker while a timely filed extension of stay petition is pending.	Avoided cost of lost productivity for U.S. employers of principal E-3, H-1B1, and CW-1 nonimmigrant workers. Not quantified. Would provide equity for principal E-3 and H-1B1 nonimmigrants relative to other employment-based nonimmigrants listed in 8 CFR 274a.12.(b)(20) and provides equity for CW-1 nonimmigrant workers whose extension is filed by the same employer, similar to other CW-1 nonimmigrant workers who change employers. Qualitative benefit.
	Clarify that principal E-3 and H-1B1 nonimmigrants are work authorized incident to status, and specify current filing procedures for requesting change of status or extension of stay.	Ensures the regulations are consistent with statutory authority and codifies current practice.
	EB-1 Outstanding Professor and Researcher Classification	
	Allow the use of comparable evidence to that listed in 8 CFR 204.5(i)(3)(i)(A)–(F) to establish that the EB-1 professor or researcher is recognized internationally as outstanding in his or her academic field.	May help U.S. employers recruit EB-1 outstanding professors and researchers for U.S. employers. Not quantified. Would provide equity for EB-1 outstanding professors and researchers relative to certain employment-based immigrants listed in 8 CFR 204.5. Qualitative benefit.

A summary of the classification types affected by this final rule is shown in Table 3.

TABLE 3—SUMMARY OF AFFECTED VISA TYPES

Visa type	Beneficiary restrictions	Immigration status	Maximum duration of stay	Annual limitations
E-3	Nationals of Australia ..	Nonimmigrant (temporary employment).	2 years, potentially indefinite extensions.	10,500 ²⁰ .
H-1B1	Nationals of Chile or Singapore.	Nonimmigrant (temporary employment).	1 year, potentially indefinite extensions.	1,400 for Chilean nationals; 5,400 for Singaporean nationals.
CW-1	Limited to workers in the CNMI during the transition to U.S. Federal immigration regulations.	Nonimmigrant (temporary employment during transition period).	1 year, extensions available through December 31, 2019.	Maximum of 12,999 in fiscal year (FY) 2016.
EB-1 outstanding professor and researcher.	Professors and researchers (any nationality) who are recognized internationally as outstanding in their academic area.	Immigrant (permanent residence and employment).	None	Apportioned from the approximate 40,040 generally available annually to first preference employment-based immigrant visas.

1. E-3 and H-1B1 Nonimmigrant Workers

Under current regulations, if employers of E-3 or H-1B1

²⁰ In accordance with INA section 214(g)(11)(C), this limit only applies to principal E-3s and does

nonimmigrants want to ensure continued employment authorization throughout the period that the extension request is pending, they generally must file a petition requesting the extension

not extend to spouses or children of the principal alien.

of the individual employee's stay well before the initial authorized period of stay expires. The Petition for a Nonimmigrant Worker, Form I-129, is used to request extensions of stay for these nonimmigrant workers. Currently, the petitioner may file a request for

extension of stay as early as 6 months before the authorized period of stay expires. As of December 31, 2014, the average processing time for USCIS to adjudicate these extension requests is 2 months.²¹ However, if the principal E-3 or H-1B1 nonimmigrant worker's authorized period of stay expires before USCIS grants the extension request, the worker cannot continue to work while his or her extension request remains pending.

In this rule, DHS amends its regulations to permit principal E-3 and H-1B1 nonimmigrants to continue their employment with the same employer for up to 240 days after their authorized period of stay expires (as specified on their Arrival-Departure Record, Form I-94) while requests for extension of stay on their behalf are pending. To obtain

authorization to continue employment for up to 240 days, employers or petitioners must timely file the Petition for Nonimmigrant Worker, Form I-129. Since employers are already required to file the Petition for Nonimmigrant Worker, Form I-129, in order to request an extension of stay on behalf of the nonimmigrant worker, there are no additional filing requirements or costs for employers or petitioners to comply with in this final rule. DHS notes there are minimal familiarization costs to employers associated with reading the rule in the **Federal Register** to understand the benefits of the rule. The benefits of the final rule will be to provide equity for principal E-3 and H-1B1 nonimmigrants relative to other employment-based nonimmigrants listed in 8 CFR 274a.12.(b)(20).

Additionally, this provision may allow employers of principal E-3 and H-1B1 nonimmigrant workers to avoid the cost of lost productivity that results from interruptions of work while an extension of stay request is pending.

Table 4 shows that USCIS received a total of 5,294 extension of stay requests for H-1B1 and principal E-3 nonimmigrant workers in the FYs from 2010 through 2014 (an average of 1,059 requests per year). USCIS approved 4,026 extensions of stay requests in the same period (an average of 805 per year). Extension of stay requests received and petition approvals are not meant for direct comparison because USCIS may receive a petition in one year but make a decision on it in another year.

TABLE 4—PETITION FOR NONIMMIGRANT WORKER, FORM I-129 FILED FOR AN EXTENSION OF STATUS FOR E-3 AND H-1B1 NONIMMIGRANTS

FY	Petitions received			Petitions approved		
	H-1B1	E-3	Total	H-1B1	E-3	Total
2010	444	624	1,068	185	571	756
2011	438	555	993	220	410	630
2012	489	563	1,052	180	380	560
2013	417	590	1,007	411	622	1,033
2014	441	733	1,174	447	600	1,047
Total	2,229	3,065	5,294	1,443	2,583	4,026

Source: Data provided by USCIS Office of Performance and Quality (OPQ), January 2015.

USCIS does not have an estimate of either: (a) the number of cases where principal E-3 and H-1B1 nonimmigrants are unable to continue employment with their employer because their employer's timely petition for an extension of stay was not adjudicated before their authorized period of stay expired, or (b) how long principal E-3 and H-1B1 nonimmigrants were unable to work when their employer's timely petition for an extension of stay was not adjudicated before their authorized period of stay expired.²² Because of this data limitation, we are unable to quantify the total aggregate estimated benefits of this provision of the rule. The rule, however, will benefit U.S. employers to the extent that this rule allows U.S. employers to avoid interruptions in productivity that could result if the timely extension of stay is not adjudicated before the authorized

period of stay expires, as noted on the nonimmigrant worker's Arrival-Departure Record, Form I-94. Unfortunately, DHS did not receive statistics or data from impacted stakeholders that permit us to quantitatively estimate the benefits of this rule.

In addition, DHS is amending the regulations to codify current practices. Specifically, DHS is amending 8 CFR 274a.12(b) to clarify in the regulations that the principal E-3 and H-1B1 nonimmigrant classifications are employment authorized incident to status with a specific employer. DHS is also amending 8 CFR 214.1(c)(1) and 8 CFR 248.3(a) to add the principal E-3 and H-1B1 nonimmigrant classifications to the list of nonimmigrant classifications that must file a petition with USCIS to make an extension of stay or change of status request. Again, both of these regulatory

clarifications are consistent with current practice.

2. CW-1 Nonimmigrant Workers

This provision of the final rule will apply to the CW-1 classification, which is issued solely to nonimmigrant workers in the CNMI. The CW-1 nonimmigrant visa classification was created to allow certain workers who are otherwise ineligible for any other nonimmigrant visa classification under the INA to work in the CNMI during the transition period to the U.S. Federal immigration system. This transition period was set to end on December 31, 2014. On June 3, 2014, the U.S. Secretary of Labor exercised statutory responsibility and authority by extending the CW transitional worker program for an additional 5 years, through December 31, 2019.²³

CW-1 nonimmigrant workers may be initially admitted to the CNMI for a

²¹ See *USCIS Processing Time Information*, available at <https://egov.uscis.gov/cris/processTimesDisplayInit.do>. The USCIS California Service Center and Vermont Service Center adjudicate Petition for a Nonimmigrant Worker, Form I-129, extension of stay requests for E and H-1B nonimmigrants.

²² USCIS acknowledges that in part 3 of the Petition for a Nonimmigrant Worker, Form I-129, information is collected about the beneficiary that is currently in the United States. While this information is collected and considered for the purposes of adjudicating the petition, this information is not captured in a database.

²³ See Secretary of Labor Extends the Transition Period of the Commonwealth of the Northern Mariana Islands-Only Transitional Worker Program, 79 FR 31988 (June 3, 2014).

period of 1 year, and USCIS may grant extensions in 1-year increments until the end of the transition period. The CW-1 nonimmigrant visa classification is valid only in the CNMI and does not require any certification from the DOL.

DHS has determined that current regulations contain an inconsistency. While current regulations provide continued work authorization for CW-1 nonimmigrant workers while petitions for a change of employers are pending and for certain beneficiaries of initial CW transitional worker petitions filed on or before November 27, 2011, continued work authorization is not currently provided for CW-1 nonimmigrant workers requesting extensions of stay with the same employer. This inconsistency in the regulations may create an incentive for CW-1 nonimmigrant workers to change employers, as they would have the advantage of uninterrupted work authorization.

DHS is revising the regulations to allow for equitable treatment of CW-1 nonimmigrant workers who remain with the same employer by extending continued employment authorization for up to 240 days while a timely filed, pending request for an extension of stay with the same employer is being adjudicated. As with the similar proposal in this rule regarding H-1B1 and principal E-3 nonimmigrants, current employers of CW-1 nonimmigrant workers may also avoid productivity losses that could occur if a CW-1 nonimmigrant worker cannot continue employment while the timely filed extension request is pending.

The CW-1 nonimmigrant classification is temporary. DHS has established numerical limitations on the number of CW-1 nonimmigrant classifications that may be granted (see Table 5). The numerical limitations apply to both initial petitions and extension of stay requests, including change of employer petitions, in a given FY. DHS has set the numerical limitation for CW-1 nonimmigrant workers at 12,999 for FY 2016.²⁴

TABLE 5—NUMERICAL LIMITATIONS OF CW-1 CLASSIFICATIONS

FY	Numerical Limit
2011	22,417
2012	22,416
2013	15,000
2014	14,000
2015	13,999
2016	12,999

DHS set the numerical limit of CW-1 nonimmigrant workers at 14,000 for FY 2014 and petitioning employers filed initial petitions for 1,133 beneficiaries; extension of stay requests from the same employer for 8,952 beneficiaries; and extension of stay requests from new employers for an additional 1,298 beneficiaries.²⁵ The population affected by this provision of the final rule will be those CW-1 nonimmigrant workers whose subsequent extensions of stay requests are filed by the same employer. Accordingly, if this proposal were in place in FY 2014, all of the 8,952 CW-1 nonimmigrant workers with extension of stay requests with the same employer would have received the continued 240-day employment authorization, if necessary, generally putting these workers on par with CW-1 nonimmigrant workers with extension of stay requests for new employers.

This provision will not impose any additional costs on any petitioning employer or for CW-1 nonimmigrant workers. The benefits of this final rule will be that DHS will treat CW-1 nonimmigrant workers whose extension of stay request is timely filed by the same employer similar relative to other CW-1 nonimmigrant workers whose request is timely filed by a new employer. Additionally, this provision will mitigate any potential distortion in the labor market for employers of CW-1 nonimmigrant workers created by the differing provisions for retained workers versus provisions for workers changing employers and prevent a potential loss of productivity for current employers. Under current law, these benefits would be limited in duration, as the transition period in which CW-1 nonimmigrant worker classifications are issued is now scheduled to end on December 31, 2019. Unfortunately, USCIS does not have data to permit a quantitative estimation of the benefits²⁶ of this provision.

²⁵ Source: USCIS Office of Performance and Quality, January, 2015.

²⁶ The aggregate value of benefits would depend on several non-quantifiable factors including: the number of CW-1 workers prompted to change employment because of the automatic extension versus those changing for reasons of promotion and advancement or termination by their previous employer.

Additionally, DHS did not receive data or additional information from impacted stakeholders that would permit DHS to quantitatively estimate the benefits of this rule as it relates to CW-1 nonimmigrant workers in the CNMI. DHS believes, however, that the inconsistent treatment of employment authorization for CW-1 nonimmigrant workers could have created hardships to the CNMI labor force.²⁷

3. EB-1 Outstanding Professors and Researchers

For the EB-1 outstanding professor and researcher immigrant classification, under current regulations, a petitioner must submit initial evidence to demonstrate that the beneficiary is recognized internationally as outstanding in his or her specific academic field. The type of evidence that is required is outlined in 8 CFR 204.5(i)(3).

To demonstrate that the EB-1 professor or researcher is recognized internationally as outstanding in his or her academic field, DHS, through this rulemaking, is allowing petitioners to substitute comparable evidence (examples might include award of important patents and prestigious, peer-reviewed funding or grants) for the evidence listed in 8 CFR 204.5(i)(3)(i)(A)–(F). See 8 CFR 204.5(i)(3)(ii). The other requirements remain unchanged. DHS made this change in response to stakeholder concerns that the current evidentiary list is dated and may not allow the beneficiary to present the full documentation of their achievements.²⁸

By allowing for comparable evidence, DHS will harmonize the evidentiary requirements of the EB-1 outstanding professor and researcher category with those currently available to the EB-1 extraordinary ability category as well as the EB-2 category for a person of exceptional ability.

This provision of the final rule will not create additional costs for any petitioning employer or for the EB-1 outstanding professor and researcher classification. The benefits of this provision are qualitative, as it will treat EB-1 outstanding professors and researchers the same as certain other individuals who seek similar

²⁷ See Joint letter to the Director, USCIS, from the Saipan Chamber of Commerce, the Hotel Association of the Northern Mariana Islands and the Society for Human Resource Management CNMI (Dec. 20, 2012).

²⁸ See Letter from Marlene M. Johnson, Executive Director and CEO of NAFSA: Association of International Educators, to Ivan K. Fong, General Counsel, DHS (Apr. 13, 2011), available at <http://www.nafsa.org/uploadedFiles/DHSregreviewcommentApr122011%20public.pdf>.

²⁴ See Commonwealth of the Northern Mariana Islands (CNMI)-Only Transitional Worker Numerical Limitation for Fiscal Year 2016, 80 FR 63911 (Oct. 22, 2015). On June 3, 2014, the Secretary of Labor exercised statutory responsibility and authority by extending the CW transitional worker program for an additional 5 years, through December 31, 2019. See Secretary of Labor Extends the Transition Period of the Commonwealth of the Northern Mariana Islands-Only Transitional Worker Program, 79 FR 31988 (June 3, 2014).

Source: FYs 2011 and 2012, 8 CFR 214(w)(viii). FY 2013, *Federal Register* volume 77, no. 231, page 71287. FY 2014, *Federal Register* volume 78, no. 186, page 58867. FY 2015, *Federal Register* volume 79, no. 188, page 58241. FY 2016, *Federal Register* volume 80, no. 204, page 63911.

employment-based immigrant status under 8 CFR 204.5. Because of the expanded types of evidence that could be used to support an EB-1 petition for outstanding professors and researchers, qualified U.S. employers may find it easier to recruit EB-1 outstanding professors and researchers due to this provision. Recruitment may provide EB-1 outstanding professors or researchers with additional

opportunities to contribute to his or her employer and field, furthering his or her international recognition.

As shown in Table 6, over the past 10 FY(s), USCIS approved an average of 93.23 percent of EB-1 petitions for outstanding professors and researchers under the current evidentiary standards. USCIS does not have data to indicate which, if any, of the 2,379 petitions that were not approved from FY 2005

through FY 2014 would have been approved under the proposed evidentiary standards. Furthermore, we are not able to estimate whether the proposed evidentiary standards would alter the demand for EB-1 outstanding professors and researchers by U.S. employers. Because of this data limitation, the further quantification of this benefit is not possible.

TABLE 6—IMMIGRANT PETITION FOR ALIEN WORKER (I-140) WITH OUTSTANDING PROFESSOR OR RESEARCHER PREFERENCE RECEIPTS AND COMPLETIONS, FY 2005–2014

FY	Receipts ²⁹	Approved ³⁰	Denied	Percent approved
2005	3,089	5,455	391	93.31

Source: Data provided by USCIS Office of Performance and Quality (OPQ), January 2015.

DHS welcomed public comments from impacted stakeholders, such as employers or prospective employers of an EB-1 outstanding professor or researcher, providing information or data that would enable DHS to calculate the resulting benefits of this provision. DHS did not receive any data on this request that would allow DHS to calculate quantitative benefits of this regulatory change. As indicated earlier in the preamble, DHS did receive comments suggesting that this change will benefit both U.S. employers that are petitioning for outstanding professors and researchers, and the individuals seeking immigration status under this classification.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121 (March 29, 1996), requires Federal agencies to consider the potential impact of regulations on small entities while they are developing the rules. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and

governmental jurisdictions with populations of less than 50,000. This final rule revises regulations to allow for additional flexibilities; harmonizes the conditions of employment of principal E-3, H-1B1, and CW-1 nonimmigrant workers with other, similarly situated nonimmigrant categories; and harmonizes the allowance of comparable evidence for EB-1 outstanding professors and researchers with evidentiary requirements of other similar employment-based immigrant categories. As discussed previously, DHS does not anticipate that the additional provisions will result in additional compliance costs for impacted U.S. employers, including any small entities, other than the minimal costs associated with reading and becoming familiar with benefits offered by the rule.

As discussed extensively in the regulatory assessment for Executive Orders 12866 and 13563 and elsewhere throughout the preamble, this final rule does not impose any additional compliance costs on U.S. employers. U.S. employers must continue filing extension of stay requests with DHS to extend the period of authorized stay of E-3, H-1B1, and CW-1 nonimmigrant employees, as is currently required. This final rule, however, will allow for a continued period of authorized employment for the nonimmigrant worker who is the beneficiary of this petition, provided that the petition is

timely filed. This will provide increased flexibilities for the U.S. petitioning employers without imposing any additional costs or compliance procedures.

Based on the foregoing, DHS certifies that this rule will not have a significant economic impact on a substantial number of small entities.

C. Unfunded Mandates Reform Act of 1995

This final rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of \$100 million or more in any 1 year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

D. Small Business Regulatory Enforcement Fairness Act of 1996

This final rule is not a major rule as defined by section 804 of the Small Business Regulatory Enforcement Act of 1996. This rule will not result in an annual effect on the economy of \$100 million or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based companies to compete with foreign-based companies in domestic and export markets.

²⁹ Receipts are those filed within the FY indicated and include petitions from new arrivals and those that are seeking to adjust status.

³⁰ Approved and denied petitions may have been receipted in a previous FY.

E. Executive Order 13132

This rule will not have substantial direct effects on the States, on the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Executive Order 12988

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

G. Paperwork Reduction Act

Under the Paperwork Reduction Act (PRA) of 1995, Public Law 104–13, agencies are required to submit to the Office of Management and Budget (OMB), for review and approval, any reporting requirements inherent in a rule. See 44 U.S.C. 3506.

The information collection requirement contained in this rule, Immigrant Petition for Alien Worker, Form I–140, has been previously approved for use by OMB under the PRA. The OMB control number for the information collection is 1615–0015.

This final rule requires a revision to the Immigrant Petition for Alien Worker, Form I–140, instructions to expand the current list of evidentiary standards to include comparable evidence so that U.S. employers petitioning for an EB–1 outstanding professor or researcher may be aware that they may submit additional or alternative documentation demonstrating the beneficiary's achievements if the evidence otherwise described in 8 CFR 204.5(i)(3)(i) does not readily apply. Specifically, DHS is adding a new paragraph “b” under the “Initial Evidence” section of the form instructions, to specify that employers filing for an outstanding professor or researcher may submit comparable evidence to establish the foreign national's eligibility if the listed standards under 8 CFR 204.5(i)(3)(i) do not readily apply. DHS is also providing minor clarifying language updates to the form instructions to maintain parity among USCIS forms. DHS has submitted the revised information collection request (ICR) to OMB for review, and OMB has conducted a preliminary review under 5 CFR 1320.11.

DHS has considered the public comments received in response to EB–1 provision in the proposed rule,

Enhancing Opportunities for H–1B1, CW–1, and E–3 Nonimmigrants and EB–1 Immigrants, published in the **Federal Register** at 79 FR 26870 on May 12, 2014. DHS's responses to these comments appear under Part III.F of this final rule.

DHS did not receive comments related to the Immigrant Petition for Alien Workers, Form I–140, revisions. As a result, DHS will not submit any further changes to the information collection.

USCIS has submitted the supporting statement to OMB as part of its request for approval of this revised information collection instrument. There is no change in the estimated annual burden hours initially reported in the proposed rule. Based on a technical and procedural update required in the ICRs for all USCIS forms, USCIS has newly accounted for estimates for existing out-of-pocket costs that respondents may incur to obtain tax, financial, or business records, and/or other evidentiary documentation depending on the specific employment-based immigrant visa classifications requested on the Immigrant Petition for Alien Worker, Form I–140. This change in the ICR is a technical and procedural update and is not a result of any change related to this final rule.

Regulatory Amendments**List of Subjects***8 CFR Part 204*

Administrative practice and procedure, Immigration, Reporting and recordkeeping requirements.

8 CFR Part 214

Administrative practice and procedure, Aliens, Cultural exchange programs, Employment, Foreign officials, Health professions, Reporting and recordkeeping, Students.

8 CFR Part 248

Aliens, Reporting and recordkeeping requirements.

8 CFR Part 274a

Administrative practice and procedure, Aliens, Employment, Penalties, Reporting and recordkeeping requirements.

Accordingly, chapter I of title 8 of the Code of Federal Regulations is amended as follows:

PART 204—IMMIGRANT PETITIONS

■ 1. The authority citation for part 204 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1151, 1153, 1154, 1182, 1184, 1186a, 1255, 1641; 8 CFR part 2.

■ 2. Section 204.5 is amended by redesignating paragraphs (i)(3)(ii) and (iii) as paragraphs (i)(3)(iii) and (iv), respectively, and adding a new paragraph (i)(3)(ii) to read as follows:

§ 204.5 Petitions for employment-based immigrants.

* * * * *

(i) * * *

(3) * * *

(ii) If the standards in paragraph (i)(3)(i) of this section do not readily apply, the petitioner may submit comparable evidence to establish the beneficiary's eligibility.

* * * * *

PART 214—NONIMMIGRANT CLASSES

■ 3. The authority citation for part 214 is revised to read as follows:

Authority: 8 U.S.C. 1101, 1102, 1103, 1182, 1184, 1186a, 1187, 1221, 1281, 1282, 1301–1305 and 1372; sec. 643, Public Law 104–208, 110 Stat. 3009–708; Public Law 106–386, 114 Stat. 1477–1480; section 141 of the Compacts of Free Association with the Federated States of Micronesia and the Republic of the Marshall Islands, and with the Government of Palau, 48 U.S.C. 1901 note, and 1931 note, respectively; 8 CFR part 2.

■ 4. Section 214.1 is amended in paragraph (c)(1) by:

■ a. Revising the paragraph heading; and

■ b. Removing the first and second sentences, and adding one sentence in their place.

The revision and addition read as follows:

§ 214.1 Requirements for admission, extension, and maintenance of status.

* * * * *

(c) * * *

(1) *Extension of stay for certain employment-based nonimmigrant workers.* A petitioner seeking the services of an E–1, E–2, E–3, H–1B, H–1B1, H–2A, H–2B, H–3, L–1, O–1, O–2, P–1, P–2, P–3, Q–1, R–1, or TN nonimmigrant beyond the period previously granted, must apply for an extension of stay on the form designated by USCIS, with the fee prescribed in 8 CFR 103.7(b)(1), with the initial evidence specified in § 214.2, and in accordance with the form instructions.

* * *

* * * * *

PART 248—CHANGE OF NONIMMIGRANT CLASSIFICATION

■ 5. The authority citation for part 248 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1184, 1258; 8 CFR part 2.

■ 6. Section 248.3 is amended by revising the section heading and paragraph (a) to read as follows:

§ 248.3 Petition and application.

* * * * *

(a) *Requests by petitioners.* A petitioner must submit a request for a change of status to E-1, E-2, E-3, H-1C, H-1B, H-1B1, H-2A, H-2B, H-3, L-1, O-1, O-2, P-1, P-2, P-3, Q-1, R-1, or TN nonimmigrant.

* * * * *

PART 274a—CONTROL OF EMPLOYMENT OF ALIENS

■ 7. The authority citation for part 274a continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1324a; 48 U.S.C. 1806; 8 CFR part 2.

■ 8. Section 274a.12 is amended by:

■ a. Revising the first sentence of paragraph (b)(9);

■ b. Revising the first sentence of paragraph (b)(20);

■ c. Removing the word “or” at the end of paragraph (b)(23);

■ d. Removing the period at the end of paragraph (b)(24) and adding in its place “; or”; and

■ e. Adding paragraph (b)(25).

The revisions and addition read as follows:

§ 274a.12 Classes of aliens authorized to accept employment.

* * * * *

(b) * * *

(9) A temporary worker or trainee (H-1, H-2A, H-2B, or H-3), pursuant to § 214.2(h) of this chapter, or a nonimmigrant specialty occupation worker pursuant to section 101(a)(15)(H)(i)(b1) of the Act. * * *

* * * * *

(20) A nonimmigrant alien within the class of aliens described in paragraphs (b)(2), (b)(5), (b)(8), (b)(9), (b)(10), (b)(11), (b)(12), (b)(13), (b)(14), (b)(16), (b)(19), (b)(23) and (b)(25) of this section whose status has expired but on whose behalf an application for an extension of stay was timely filed pursuant to § 214.2 or § 214.6 of this chapter. * * *

* * * * *

(25) A nonimmigrant treaty alien in a specialty occupation (E-3) pursuant to section 101(a)(15)(E)(iii) of the Act.

* * * * *

Jeh Charles Johnson,

Secretary of Homeland Security.

BILLING CODE 9111-97-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

Docket No. FAA-2015-6753; Airspace
Docket No. 15-ANM-29

Amendment of Class D Airspace;
Denver, CO

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends the city designation of the Class D airspace at Broomfield, CO, changing the designation to Denver, CO, and the airport name to Rocky Mountain Metropolitan Airport. The name and associated city location of the airport are updated to coincide with the FAA's aeronautical database. This does not affect the charted boundaries or operating requirements of the airspace.

DATES: Effective 0901 UTC, March 31, 2016. The Director of the Federal Register approves this incorporation by reference action under Title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.9Z, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at http://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: 202-267-8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.9Z at NARA, call 202-741-6030, or go to http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

FAA Order 7400.9, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Steve Haga, Federal Aviation Administration, Operations Support Group, Western Service Center, 1601 Lind Avenue SW., Renton, WA 98057; telephone (425) 203-4563.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code.

Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class D airspace at Denver, CO.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 modifies the legal description of the Class D airspace at Denver, CO, by updating the name and associated city designation of the airport to coincide with the FAA's aeronautical database. Jefferson County Airport is renamed Rocky Mountain Metropolitan Airport and the city designation is corrected from Broomfield, CO, to Denver, CO. This does not affect the boundaries or operating requirements of the airspace.

Class D airspace designations are published in paragraph 5000 of FAA Order 7400.9Z dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class D airspace designations listed in this document will be published subsequently in the Order.

This is an administrative change amending the airport name and city location to be in concert with the FAA's aeronautical database, and does not affect the boundaries, or operating requirements of the airspace, therefore, notice and public procedure under 5 U.S.C. 553(b) are unnecessary.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and

unlikely to result in adverse or negative comments. It, therefore: (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures," paragraph 5–6.5a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

- 1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

- 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, effective September 15, 2015, is amended as follows:

Paragraph 5000: Class D Airspace.

* * * * *

ANM CO D Denver, CO [Amended]

Rocky Mountain Metropolitan Airport, CO (Lat. 39°54'32" N., Long. 105°07'02" W.)

That airspace extending upward from the surface to, but not including, 8,000 feet MSL, within a 5-mile radius of Rocky Mountain Metropolitan Airport. This Class D airspace

area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

Issued in Seattle, Washington, on December 28, 2015.

Tracey Johnson,

Manager, Operations Support Group, Western Service Center.

RIN 1515–AD59

United States-Australia Free Trade Agreement

AGENCIES: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document adopts as a final rule, with one change, interim amendments to the U.S. Customs and Border Protection (CBP) regulations that were published in the **Federal Register** on February 10, 2015, as CBP Dec. 15–03, to implement the preferential tariff treatment and other customs-related provisions of the United States-Australia Free Trade Agreement.

DATES: Effective February 16, 2016.

FOR FURTHER INFORMATION CONTACT: Textile Operational Aspects: Anita Harris, Textile Operations Branch, Office of International Trade, (202) 863–6241.

Other Operational Aspects: Seth Mazze, Trade Policy and Programs, Office of International Trade, (202) 863–6567.

Legal Aspects: Yuliya Gulis, Regulations and Rulings, Office of International Trade, (202) 325–0042.

SUPPLEMENTARY INFORMATION:

Background

On May 18, 2004, the United States and Australia (the "Parties") signed the United States-Australia Free Trade Agreement ("AFTA" or "Agreement"). On August 3, 2004, the President signed into law the United States-Australian Free Trade Agreement Implementation Act (the "Act"), Public Law 108–286,

118 Stat. 919 (19 U.S.C. 3805 note), which approved and made statutory changes to implement the AFTA. On December 20, 2004, the President signed Proclamation 7857 to implement the AFTA. The Proclamation, which was published in the **Federal Register** on December 23, 2004 (69 FR 77133), modified the Harmonized Tariff Schedule of the United States ("HTSUS") as set forth in Annexes I and II of Publication 3722 of the U.S. International Trade Commission.

On February 10, 2015, CBP published CBP Dec. 15–03 in the **Federal Register** (80 FR 7303) setting forth interim amendments to implement the preferential tariff treatment and other customs-related provisions of the AFTA and the Act. The majority of the AFTA implementing regulations set forth in CBP Dec. 15–03 and adopted, with one change, as final in this document have been included within new Subpart L of Part 10 of the CBP regulations (19 CFR part 10). In those cases in which AFTA implementation is more appropriate in the context of an existing regulatory provision, however, the AFTA regulatory text has been incorporated into an existing part within the CBP regulations. CBP Dec. 15–03 also sets forth a number of cross-references and other consequential changes to existing regulatory provisions to clarify the relationship between those existing provisions and the new AFTA implementing regulations. Please refer to that document for further background information.

Although the interim regulatory amendments were promulgated without prior public notice and comment procedures and took effect on February 10, 2015, CBP Dec. 15–03 provided for the submission of public comments which would be considered before adoption of the interim regulations as a final rule. The prescribed public comment closed on April 13, 2015. CBP received one comment on CBP Dec. 15–03.

Discussion of Comments

One response was received to the solicitation of comments on the interim rule set forth in CBP Dec. 15–03. The comment is discussed below.

Comment

One commenter questioned whether the AFTA requires that Australian exporters be consulted before the interim regulations take effect.

CBP Response

The changes proposed in the interim regulations took effect on the date of publication of the interim regulations.

As indicated above, CBP Dec. 15–03 provided for the submission of public comments which would be considered before adoption of the interim regulations as a final rule. All interested parties, including Australian exporters, were given the opportunity to submit public comments. No such public comments were received from or submitted by any party in response to CBP Dec. 15–03 that objected to the changes in the interim rules being included in a final rule.

Other Amendment

This document clarifies 19 CFR 10.725(c) by removing the parenthetical cross reference to §§ 10.746 and 10.747 and, instead, stating that the importer's actions must be “pursuant to” those CBP regulations.

Conclusion

After further review of the matter, including consideration of the above-mentioned comment submitted in response to CBP's solicitation of public comment, CBP has determined to adopt as final, with a clarification, the interim rule published in the **Federal Register** (80 FR 7303) on February 10, 2015.

Executive Order 12866

This document is not a regulation subject to the provisions of Executive Order 12866 of September 30, 1993 (58 FR 51735, October 1993), because it pertains to a foreign affairs function of the United States and implements an international agreement, as described above, and therefore is specifically exempted by section 3(d)(2) of Executive Order 12866.

Regulatory Flexibility Act

CBP Dec. 15–03 was issued as an interim rule rather than a notice of proposed rulemaking because CBP had determined that the interim regulations involve a foreign affairs function of the United States pursuant to section 553(a)(1) of the Administrative Procedure Act (APA). As no notice of proposed rulemaking was required, the provisions of the Regulatory Flexibility Act, as amended (5 U.S.C. 601 *et seq.*), do not apply. Accordingly, this final rule is not subject to the regulatory analysis requirements or other requirements of 5 U.S.C. 603 and 604.

Paperwork Reduction Act

The collections of information contained in these regulations have previously been reviewed and approved by the Office of Management and Budget (OMB) in accordance with the requirements of the Paperwork Reduction Act (44 U.S.C. 3507) under

control number 1651–0117, which covers many of the free trade agreement requirements that CBP administers, and 1651–0076, which covers general recordkeeping requirements. The collections of information in these regulations are in §§ 10.723, 10.724, and 10.727 of title 19 of the Code of Federal Regulations (19 CFR 10.723, 10.724, and 10.727). This information is required in connection with general recordkeeping requirements (§ 10.727), as well as claims for preferential tariff treatment under the AFTA and the Act and will be used by CBP to determine eligibility for tariff preference under the AFTA and the Act. The likely respondents are business organizations including importers, exporters and manufacturers.

The estimated total annual reporting burden associated with the collection of information in this final rule is 4,000 hours. Under the Paperwork Reduction Act, an agency may not conduct or sponsor and a person is not required to respond to a collection of information, unless it displays a valid OMB control number.

Signing Authority

This document is being issued in accordance with § 0.1(a)(1) of the CBP regulations (19 CFR 0.1(a)(1)) pertaining to the authority of the Secretary of the Treasury (or his/her delegate) to approve regulations related to certain CBP revenue functions.

List of Subjects

19 CFR Part 10

Alterations, Bonds, Customs duties and inspection, Exports, Imports, Preference programs, Repairs, Reporting and recordkeeping requirements, Trade agreements.

19 CFR Part 24

Accounting, Customs duties and inspection, Financial and accounting procedures, Reporting and recordkeeping requirements, Trade agreements, User fees.

19 CFR Part 162

Administrative practice and procedure, Customs duties and inspection, Penalties, Trade agreements.

19 CFR Part 163

Administrative practice and procedure, Customs duties and inspection, Exports, Imports, Reporting and recordkeeping requirements, Trade agreements.

19 CFR Part 178

Administrative practice and procedure, Exports, Imports, Reporting and recordkeeping requirements.

Amendment to the CBP Regulations

For the reasons stated above, the interim rule amending Parts 10, 24, 162, 163, and 178 of the CBP regulations (19 CFR parts 10, 24, 162, 163, and 178), which was published at 80 FR 7303 on February 10, 2015, is adopted as a final rule with the following change:

PART 10—ARTICLES CONDITIONALLY FREE, SUBJECT TO A REDUCED RATE, ETC.

■ 1. The general authority citation for part 10, and the specific authority citation for Subpart L, continue to read as follows:

Authority: 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States), 1321, 1481, 1484, 1498, 1508, 1623, 1624, 3314.

* * * * *

Sections 10.721 through 10.748 also issued under 19 U.S.C. 1202 (General Note 28, HTSUS) and Pub. L. 108–286, 118 Stat. 919 (19 U.S.C. 3805 note).

* * * * *

§ 10.725 [Amended]

■ 2. In § 10.725, paragraph (c) is amended by removing the language, “(see §§ 10.746 and 10.747 of this subpart)” and adding in its place the language, “pursuant to §§ 10.746 and 10.747 of this subpart”.

R. Gil Kerlikowske,
Commissioner.

Approved: January 11, 2016.

Timothy E. Skud,
Deputy Assistant Secretary of the Treasury.

RIN 1515–AE07

Extension of Import Restrictions Imposed on Archaeological Material Originating in Italy and Representing the Pre-Classical, Classical, and Imperial Roman Periods

AGENCY: Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document amends Customs and Border Protection (CBP)

regulations to reflect the extension of import restrictions on certain categories of archaeological material originating in Italy and representing the pre-Classical, Classical, and Imperial Roman periods of its cultural heritage, ranging in date from approximately the 9th century B.C. through approximately the 4th century A.D. The restrictions, which were originally imposed by Treasury Decision (T.D.) 01–06 and extended by CBP Decision (CBP Dec.) 06–01 and CBP Dec. 11–03 are due to expire on January 19, 2016. The Assistant Secretary for Educational and Cultural Affairs, United States Department of State, has determined that factors continue to warrant the imposition of import restrictions and no cause for suspension exists. Accordingly, these import restrictions will remain in effect for an additional five years, and the CBP regulations are being amended to reflect this extension until January 19, 2021. These restrictions are being extended pursuant to determinations of the United States Department of State made under the terms of the Convention on Cultural Property Implementation Act that implemented the United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property. CBP Dec. 11–03 contains the Designated List of archaeological material originating in Italy and representing the pre-Classical, Classical, and Imperial Roman periods to which the restrictions apply.

DATES: *Effective Date:* January 19, 2016.

FOR FURTHER INFORMATION CONTACT: For legal aspects, Lisa L. Burley, Chief, Cargo Security, Carriers and Restricted Merchandise Branch, Regulations and Rulings, Office of International Trade, (202) 325–0215. For operational aspects, William R. Scopa, Branch Chief, Partner Government Agency Branch, Trade Policy and Programs, Office of International Trade, (202) 863–6554, William.R.Scopa@cbp.dhs.gov.

SUPPLEMENTARY INFORMATION:

Background

Pursuant to the provisions of the 1970 United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention, implemented by the Convention on Cultural Property Implementation Act (Pub. L. 97–446, 19 U.S.C. 2601 *et seq.*), the United States entered into a bilateral agreement with Italy on January 19, 2001, concerning the imposition of import restrictions on archaeological material originating in Italy and representing the pre-Classical, Classical, and Imperial Roman periods.

On January 23, 2001, the former U.S. Customs Service (now U.S. Customs and Border Protection (CBP)) published T.D. 01–06 in the **Federal Register** (66 FR 7399), which amended 19 CFR 12.104g(a) to indicate the imposition of these restrictions and included a list designating the types of archaeological material covered by the restrictions.

Import restrictions listed in 19 CFR 12.104g(a) are “effective for no more than five years beginning on the date on which the agreement enters into force with respect to the United States. This period can be extended for additional periods not to exceed five years if it is determined that the factors which justified the initial agreement still pertain and no cause for suspension of the agreement exists” (19 CFR 12.104g(a)).

Since the initial notice was published on January 23, 2001, the import restrictions were extended twice. First, on January 19, 2006, CBP published CBP Dec. 06–01 in the **Federal Register** (71 FR 3000) which amended 19 CFR 12.104g(a) to reflect the extension for an additional period of five years. Subsequently, on January 19, 2011, CBP published CBP Dec. 11–03 in the **Federal Register** (76 FR 3012) to extend the import restriction for an additional five-year period to January 19, 2016. CBP Dec. 11–03 also reflects an amendment to the Designated List to include the subcategory “Coins of Italian Types” as part of the category entitled “Metal,” pursuant to 19 U.S.C. 2604.

On December 23, 2014, the Department of State received a request by the Government of the Republic of Italy to extend the Agreement. Subsequently, the Department of State proposed to extend the Agreement. After considering the views and recommendations of the Cultural Property Advisory Committee, the Assistant Secretary for Educational and Cultural Affairs, United States Department of State, determined that the cultural heritage of Italy continues to be in jeopardy from pillage of archaeological material representing the pre-Classical, Classical, and Imperial Roman periods and made the necessary determinations to extend the import restrictions for an additional five years. Diplomatic notes have been exchanged, reflecting the extension of those restrictions for an additional five-year period. Accordingly, CBP is amending 19 CFR 12.104g(a) to reflect this extension of the import restrictions.

The Designated List of Pre-Classical, Classical and Imperial Roman Period Archaeological Material from Italy covered by these import restrictions is

set forth in CBP Dec. 11–03. The Designated List and accompanying image database may also be found at the following Internet Web site address: <http://eca.state.gov/cultural-heritage-center/cultural-property-protection/bilateral-agreements/italy>.

The restrictions on the importation of these archaeological materials from the Republic of Italy are to continue in effect for an additional five years. Importation of such material continues to be restricted unless the conditions set forth in 19 U.S.C. 2606 and 19 CFR 12.104c are met.

Inapplicability of Notice and Delayed Effective Date

This amendment involves a foreign affairs function of the United States and is, therefore, being made without notice or public procedure (5 U.S.C. 553(a)(1)). In addition, CBP has determined that such notice or public procedure would be impracticable and contrary to the public interest because the action being taken is essential to avoid interruption of the application of the existing import restrictions (5 U.S.C. 553(b)(3)). For the same reasons, a delayed effective date is not required under 5 U.S.C. 553(d)(3).

Regulatory Flexibility Act

Because no notice of proposed rulemaking is required, the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) do not apply.

Executive Order 12866

It has been determined that this rule is not a significant regulatory action under Executive Order 12866.

Signing Authority

This regulation is being issued in accordance with 19 CFR 0.1(a)(1).

List of Subjects in 19 CFR Part 12

Cultural property, Customs duties and inspection, Imports, Prohibited merchandise.

Amendment to CBP Regulations

For the reasons set forth above, part 12 of Title 19 of the Code of Federal Regulations (19 CFR part 12), is amended as set forth below:

PART 12—SPECIAL CLASSES OF MERCHANDISE

■ 1. The general authority citation for part 12 and the specific authority citation for § 12.104g continue to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1624;

* * * * *

Sections 12.104 through 12.104i also issued under 19 U.S.C. 2612;

* * * * *

§ 12.104g [Amended]

■ 2. In § 12.104g, paragraph (a), the table is amended in the entry for Italy by removing the reference to “CBP Dec. 11–03” and adding in its place “CBP Dec. 16–02”.

R. Gil Kerlikowske,
Commissioner, U.S. Customs and Border Protection.

Approved: January 12, 2016.

Timothy E. Skud,
Deputy Assistant Secretary of the Treasury.

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Final rule.

SUMMARY: This final rule amends the Pension Benefit Guaranty Corporation’s regulation on Benefits Payable in Terminated Single-Employer Plans to prescribe interest assumptions under the regulation for valuation dates in February 2016. The interest assumptions are used for paying benefits under terminating single-employer plans covered by the pension

insurance system administered by PBGC.

DATES: Effective February 1, 2016.

FOR FURTHER INFORMATION CONTACT:

Catherine B. Klion (*Klion.Catherine@pbgc.gov*), Assistant General Counsel for Regulatory Affairs, Pension Benefit Guaranty Corporation, 1200 K Street NW., Washington, DC 20005, 202–326–4024. (TTY/TDD users may call the Federal relay service toll-free at 1–800–877–8339 and ask to be connected to 202–326–4024.)

SUPPLEMENTARY INFORMATION: PBGC’s regulation on Benefits Payable in Terminated Single-Employer Plans (29 CFR part 4022) prescribes actuarial assumptions—including interest assumptions—for paying plan benefits under terminating single-employer plans covered by title IV of the Employee Retirement Income Security Act of 1974. The interest assumptions in the regulation are also published on PBGC’s Web site (*http://www.pbgc.gov*).

PBGC uses the interest assumptions in Appendix B to Part 4022 to determine whether a benefit is payable as a lump sum and to determine the amount to pay. Appendix C to Part 4022 contains interest assumptions for private-sector pension practitioners to refer to if they wish to use lump-sum interest rates determined using PBGC’s historical methodology. Currently, the rates in Appendices B and C of the benefit payment regulation are the same.

The interest assumptions are intended to reflect current conditions in the financial and annuity markets. Assumptions under the benefit payments regulation are updated monthly. This final rule updates the benefit payments interest assumptions for February 2016.¹

The February 2016 interest assumptions under the benefit payments regulation will be 1.25 percent for the period during which a benefit is in pay status and 4.00 percent during any years preceding the benefit’s placement in pay status. In comparison with the interest assumptions in effect for January 2016, these interest assumptions are unchanged.

PBGC has determined that notice and public comment on this amendment are impracticable and contrary to the public interest. This finding is based on the need to determine and issue new interest assumptions promptly so that

¹ Appendix B to PBGC’s regulation on Allocation of Assets in Single-Employer Plans (29 CFR part 4044) prescribes interest assumptions for valuing benefits under terminating covered single-employer plans for purposes of allocation of assets under ERISA section 4044. Those assumptions are updated quarterly.

the assumptions can reflect current market conditions as accurately as possible.

Because of the need to provide immediate guidance for the payment of benefits under plans with valuation dates during February 2016, PBGC finds that good cause exists for making the assumptions set forth in this amendment effective less than 30 days after publication.

PBGC has determined that this action is not a "significant regulatory action" under the criteria set forth in Executive Order 12866.

Because no general notice of proposed rulemaking is required for this amendment, the Regulatory Flexibility Act of 1980 does not apply. See 5 U.S.C. 601(2).

List of Subjects in 29 CFR Part 4022

Employee benefit plans, Pension insurance, Pensions, Reporting and recordkeeping requirements.

In consideration of the foregoing, 29 CFR part 4022 is amended as follows:

PART 4022—BENEFITS PAYABLE IN TERMINATED SINGLE-EMPLOYER PLANS

■ 1. The authority citation for part 4022 continues to read as follows:

Authority: 29 U.S.C. 1302, 1322, 1322b, 1341(c)(3)(D), and 1344.

■ 2. In appendix B to part 4022, Rate Set 268, as set forth below, is added to the table.

Appendix B to Part 4022—Lump Sum Interest Rates For PBGC Payments

* * * * *

Rate set	For plans with a valuation date		Immediate annuity rate (percent)	Deferred annuities (percent)				
	On or after	Before		i_1	i_2	i_3	n_1	n_2

BILLING CODE 7709-02-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG-2016-0021]

Drawbridge Operation Regulation; Lake Washington Ship Canal, Seattle, WA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating

schedule that governs the Montlake Bridge across the Lake Washington Ship Canal, mile 5.2, at Seattle, WA. The deviation is necessary to allow the bridge to operate in single leaf mode during day light hours, and a full closure (both bascule leaves in the closed-to-navigation position) during night time hours while work crews replace bridge decking. This deviation allows a single leaf opening with a one hour advance notice during the day, and remains in the closed-to-navigation position at night.

DATES: This deviation is effective from 6 a.m. on February 27, 2016 to 6 p.m. on February 28, 2016.

ADDRESSES: The docket for this deviation, [USCG-2016-0021] is available at <http://www.regulations.gov>. Type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary

deviation, call or email Mr. Steven Fischer, Bridge Administrator, Thirteenth Coast Guard District; telephone 206-220-7282, email d13-pf-d13bridges@uscg.mil.

SUPPLEMENTARY INFORMATION:

Washington Department of Transportation has requested a temporary deviation from the operating schedule for the Montlake Bridge across the Lake Washington Ship Canal, at mile 5.2, at Seattle, WA. The deviation is necessary to accommodate work crews conducting timely bridge deck repairs.

The Montlake Bridge in the closed position provides 30 feet of vertical clearance throughout the navigation channel, and 46 feet of vertical clearance throughout the center 60 feet of the bridge; vertical clearance references to the Mean Water Level of Lake Washington. When half the span is open with a single leaf, 46 feet of vertical clearance will be reduced

throughout the center to 30 feet of the bridge.

To facilitate this event, the north half of the bridge span, or single leaf, will open with at least a one hour advance notice provided to the bridge operator from 6 a.m. to 6 p.m. on February 27, 2016. From 6 p.m. on February 27, 2016 to 5 a.m. on February 28, 2016, the Montlake Bridge span will remain in the closed-to-navigation position, or full closure. Then, from 5 a.m. to 6 p.m. on February 28, 2016, the north half of the bridge span will open with at least a one hour advance notice to the bridge operator. The normal operating schedule for the Montlake Bridge operates in accordance with 33 CFR 117.1051(e).

The deviation period is from 6 a.m. on February 27, 2016 to 6 p.m. on February 27, 2016 (north single leaf opening if a one hour notice is given); from 6 p.m. on February 27, 2016 to 5 a.m. on February 28, 2016 (remain in the closed-to-navigation position); from 5 a.m. on February 28, 2016 to 6 p.m. on February 28, 2016 (north single leaf opening if a one hour notice is given).

Waterway usage on the Lake Washington Ship Canal ranges from commercial tug and barge to small pleasure craft. Vessels able to pass through the bridge in the closed-to-navigation position may do so at any time. The bridge will be able to open for emergency vessels in route to a call when an hour notice is given to the bridge operator, and a single leaf opening will be provided. The Lake Washington Ship Canal has no immediate alternate route for vessels to pass. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: January 11, 2016.

Steven M Fischer,

Bridge Administrator, Thirteenth Coast Guard District.

BILLING CODE 9110-04-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 52 and 70

[EPA-R07-OAR-2015-0790; FRL-9941-03-Region 7]

Approval of Missouri's Air Quality Implementation Plans; Reporting Emission Data, Emission Fees and Process Information

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: Environmental Protection Agency (EPA) is taking direct final action to approve revisions to the Operating Permits Program for the State of Missouri submitted on March 16, 2015. These revisions update the emissions fee for permitted sources as set by Missouri Statute from \$40 to \$48 per ton of air pollution emitted annually, effective January 1, 2016.

DATES: This direct final rule will be effective March 15, 2016, without further notice, unless EPA receives adverse comment by February 16, 2016. If EPA receives adverse comment, we will publish a timely withdrawal of the direct final rule in the **Federal Register** informing the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R07-OAR-2015-0790, to <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Stephen Krabbe, Environmental Protection Agency, Air Planning and

Development Branch, 11201 Renner Boulevard, Lenexa, Kansas 66219 at 913-551-7991 or by email at krabbe.stephen@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document “we,” “us,” or “our” refer to EPA. This section provides additional information by addressing the following:

- I. What is being addressed in this document?
- II. Have the requirements for approval of a SIP revision been met?
- III. What action is EPA taking?

I. What is being addressed in this document?

EPA is taking direct final action to approve the Operating Permits Program revision submitted by the state of Missouri for 10 CSR 10-6.110, “Reporting Emission Data, Emission Fees, and Process Information,” on March 16, 2015. Section (3)(A) revised the emission fees section, which is approved under the Operating Permits Program only, and updates the emissions fee for permitted sources as set by Missouri Statute from \$40 to \$48 per ton of air pollution emitted annually, effective January 1, 2016, as set by Missouri statute.

II. Have the requirements for approval of an operating permits program been met?

The state submission has met the public notice requirements for SIP submissions in accordance with 40 CFR 51.102. The submission also satisfied the completeness criteria of 40 CFR part 51, appendix V. In addition, the revision meets the substantive SIP requirements of the Clean Air Act (CAA), including section 110 and implementing regulations.

III. What action is EPA taking?

We are publishing this direct final rule without a prior proposed rule because we view this as a noncontroversial action and anticipate no adverse comment. However, in the “Proposed Rules” section of this **Federal Register**, we are publishing a separate document that will serve as the proposed rule to this Operating Permits Fee revision if adverse comments are received on this direct final rule. We will not institute a second comment period on this action. Any parties interested in commenting must do so at this time. For further information about commenting on this rule, see the **ADDRESSES** section of this document. If EPA receives adverse comment, we will publish a timely withdrawal in the **Federal Register** informing the public that this direct final rule will not take

effect. We will address all public comments in any subsequent final rule based on the proposed rule.

Incorporation by Reference

In this action, EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of the Missouri amendments to 40 CFR part 52 set forth below. EPA has made, and will continue to make, these documents generally available electronically through www.regulations.gov and at the appropriate EPA office (see the **ADDRESSES** section of this preamble for more information).

Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- Does not have Federalism implications as specified in Executive

Order 13132 (64 FR 43255, August 10, 1999);

- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The action is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States

Court of Appeals for the appropriate circuit by March 15, 2016. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

BILLING CODE 6560–50–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Administration for Children and Families****45 CFR Parts 262, 264, and 265**

RIN 0970—AC56

Temporary Assistance for Needy Families (TANF) Program, State Reporting On Policies and Practices To Prevent Use of TANF Funds in Electronic Benefit Transfer Transactions in Specified Locations

AGENCY: Office of Family Assistance (OFA), Administration for Children and

Families (ACF), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule makes regulatory changes to the Temporary Assistance for Needy Families (TANF) regulations to require states, subject to penalty, to maintain policies and practices that prevent TANF funded assistance from being used in any electronic benefit transfer transaction in any liquor store; any casino, gambling casino, or gaming establishment; or any retail establishment that provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment. This rule implements provisions of Section 4004 of the Middle Class Tax Relief and Job Creation Act of 2012.

DATES: *Effective Date:* Provisions of this final rule become effective January 15, 2016.

Compliance Date: For states, the District of Columbia, and territories (hereafter referred to as states), HHS will determine compliance with provisions in this final rule through review and approval of reports that states submit annually. Initial reports describing the policies and practices states implemented were due on February 22, 2014. All states submitted reports by this deadline. Hereafter, states will submit reports describing the policies and practices required by 45 CFR 264.60 and Section 4004 of the Middle Class Tax Relief and Job Creation Act of 2012 in the Annual Report on TANF and maintenance-of-effort (MOE) Programs in accordance with 45 CFR 265.9(b)(10). As provided at 45 CFR 265.10, this report is due by November 14 of each fiscal year, which is the same time as the fourth quarter TANF data report, as provided in 45 CFR 265.4.

I. Background

Authorized by title IV–A of the Social Security Act, TANF is a block grant that provides states, territories, and tribes federal funds to design and operate a program to accomplish the purposes of TANF. The purposes are to: (1) Assist needy families so that children can be cared for in their own homes or in the homes of relatives; (2) reduce the dependency of needy parents by promoting job preparation, work, and marriage; (3) prevent out-of-wedlock pregnancies; and (4) encourage the formation and maintenance of two-parent families. In addition to federal TANF block grant funds, each state must spend a certain minimum amount of non-federal funds to help eligible families in ways that further a TANF purpose. This is referred to as maintenance-of-effort (MOE).

In general, federal TANF and state MOE funds may be expended on benefits and services targeted to needy families, and activities that aim to prevent and reduce out-of-wedlock pregnancies or encourage the formation and maintenance of two-parent families, as well as administrative expenses. In particular, federal TANF and state MOE funds may be expended on “assistance,” defined at 45 CFR 260.31(a)(1) as including cash payments, vouchers, and other forms of benefits designed to meet a family’s ongoing basic needs (*i.e.*, food, clothing, shelter, utilities, household goods, personal care items, and general incidental expenses). Assistance also includes supportive services such as transportation and child care provided to families who are not employed (see 45 CFR 260.31(a)(3)). TANF funds also can be used for a wide range of benefits and services that do not fall within the definition of assistance; such expenditures are considered “non-assistance.” This rule pertains only to assistance expenditures.

Based on the most recent information provided to us by states, there are currently four means that states use to provide assistance payments to eligible low-income families with children: Paper checks, Electronic Funds Transfers (EFT), Electronic Benefit Transfer (EBT) cards, and Electronic Payment Cards (EPC). Most states have replaced paper checks with one or more of the other three delivery methods in order to provide benefits in a timelier manner, reduce theft and fraud, and eliminate the need for recipients to pay check-cashing fees. Some states automatically transfer assistance payments directly into a recipient’s own private bank account through EFT. However, this option is not available if

a recipient does not have access to or qualify for a checking account. Most states load the amount of assistance on EBT cards or EPCs, both of which allow recipients to use a debit-like card to access their benefits through automated teller machines (ATMs) and point-of-sale (POS) devices. EPCs differ from government EBT cards in that they are network-branded (*e.g.*, Visa or MasterCard) prepaid cards that recipients may use virtually anywhere the brand’s logo is displayed. EBT cards may be used in fewer locations, as retailers and ATMs must be authorized to accept EBT cards.

Among its provisions, the Middle Class Tax Relief and Job Creation Act of 2012, Public Law (Pub. L.) 112–96, requires states to maintain policies and practices to prevent TANF assistance from being used in any EBT transaction (as defined at 42 U.S.C. 608(a)(12)(B)(iii)) in any liquor store; any casino, gambling casino, or gambling establishment; or any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment.

The legislation at Section 4004(b) also imposes a new reporting requirement as well as a new penalty. Each state is required to report annually to the Department of Health and Human Services (HHS) on its implementation of policies and practices related to restricting recipients from using their TANF assistance in EBT transactions at the prohibited locations. HHS will reduce a state’s block grant by not more than five percent of the state family assistance grant in fiscal year (FY) 2014 and annually thereafter if the state fails to comply with this reporting requirement or if, based on the information that the state reports, HHS finds that the state has not implemented and maintained the required policies and practices. The statute provides the Secretary of HHS the authority to reduce the amount of the penalty based on the degree of noncompliance of the state.

Finally, states are required under Section 4004(c) of Public Law 112–96 to include in their state TANF plans a statement outlining how they intend to implement policies and procedures to prevent access to assistance through EFTs at casinos, liquor stores, and establishments providing adult-oriented entertainment. The state plan also must include an explanation of how the state will ensure that (1) recipients of the assistance have adequate access to their cash assistance, and (2) recipients of assistance have access to using or withdrawing assistance with minimal fees or charges, including an

opportunity to access assistance with no fee or charges; are provided information on applicable fees and surcharges that apply to electronic fund transactions involving the assistance; and that such information is made publicly available. This rule does not regulate the state plan provisions at Section 4004(c) of Public Law 112–96, but it incorporates the statutory state plan language under the Middle Class Job Creation and Tax Relief Act of 2012. Following publication of the final rule, HHS plans to issue additional guidance regarding the adequate access provision.

II. Notice of Proposed Rulemaking

HHS published a notice of proposed rulemaking (NPRM) (79 FR 7127) on February 6, 2014, to regulate the TANF provisions in Section 4004(a) and (b) of Public Law 112–96. The proposed rule added new penalties for failure to report or adequately demonstrate implementation of the requirements outlined in Public Law 112–96, defined terms relevant to the new requirements, specified when the penalty takes effect, and identified how HHS will determine whether a state warrants a penalty. It also provided details regarding what types of policies and practices HHS would accept as complying with the statutory requirements. In addition to general comments, the NPRM sought input from commenters regarding two specific issues: TANF assistance deposited directly in recipients’ bank accounts and accessed with a personal debit card, and internet transactions.

HHS received a total of 28 comments, including comments from six states, seven membership and research/advocacy organizations, and three EBT industry organizations. The remaining commenters were members of the public. We include a detailed summary of comments as well as HHS’s responses to comments in Section V of this final rule. Public comments on the proposed rule are available for review on www.regulations.gov.

III. Overview of Final Rule

The final rule amends the TANF program regulations in the following three ways: (1) It adds a requirement to implement policies and practices to prevent TANF assistance from being used in any electronic benefit transfer transaction in any: liquor store; any casino, gambling casino or gaming establishment; and any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment, (2) it adds a requirement to report on policies and practices in an annual report, and

(3) it adds a penalty for failure to report on implementation and maintenance of these policies and practices. In response to comments on the proposed rule, we have made changes in the final rule where appropriate to address policy and other concerns raised by commenters, as well as to incorporate suggested clarifications and improvements. In this section, we provide an overview of the final rule and generally describe major changes in response to comments. A more detailed summary of comments in each area and reason for changes is included in the section-by-section discussion of comments later in this final rule.

(1) When incorporating the requirement at 45 CFR 264.60 to implement policies and practices to prevent TANF assistance from being used in any electronic benefit transfer transaction in any liquor store; any casino, gambling casino or gaming establishment; and any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment, we mirror the statutory language at Section 4004(a) of Public Law 112–96. The preambles to the NPRM and the final rule provide details on the types of policies and practices HHS would accept as complying with the statutory requirements, and identify those that do not. In doing so, we identify that different approaches may be acceptable depending on the method of delivery (EBT, EPC, or direct deposit). We also correct an error we made in the NPRM suggesting that bank identification number (BIN) blocking was a potential approach to preventing TANF assistance from being used in POS terminals in the specified locations. Finally, we reiterate that states have a responsibility to develop appropriate policies for preventing TANF cash assistance administered by state programs from being used at any of the three types of businesses, including those located on tribal land. In general, we have provided flexibility in meeting the statutory and regulatory requirements so that states may develop cost-effective implementation strategies that fit within the existing structures of state operations.

We also have added the relevant accompanying definitions to the TANF regulations at 45 CFR 264.0. Regarding the definitions of the three types of establishments, we have made some changes to those we proposed in the NPRM. For example, we are striking from our definition of “retail establishment which provides adult-oriented entertainment in which

performers disrobe or perform in an unclothed state for entertainment,” the language, “such an establishment that prohibits the entrance of minors under the age specified by state law.” Commenters noted that local ordinances, rather than state law, apply to such establishments, and can vary considerably from jurisdiction to jurisdiction. Since we are no longer expanding upon the statutory definition, we have deleted the definition of “retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment” from § 264.0. Rather, we encourage states to exercise the flexibility provided by the statute to build on the required restrictions with respect to these establishments, consistent with state and local policies. Furthermore, in response to comments suggesting we quantify the term “primarily” in the definitions for “casino, gambling casino, or gaming establishment” and “liquor store,” we will defer to states’ reasonable interpretation of the law. Additionally, we interpret Congress’s use of “liquor” to refer to alcoholic beverages broadly, rather than a narrow definition that excludes alcoholic beverages such as beer and wine.

We are clarifying that the broad definition of “electronic benefit transfer transaction” includes transactions using or accessing TANF funds in private bank accounts because those funds may be accessed by a TANF recipient in a manner that the statutory definition specifies, *i.e.*, through use of a credit or debit card, ATM, point-of-sale terminal, or an online system for the withdrawal of funds or the processing of a payment. We subsequently discuss, see the discussion of § 264.60, examples of policies and practices that HHS considers acceptable with regard to personal accounts and debit cards. We reiterate that the language used demonstrates that Congress intended to apply the requirements in Public Law 112–96 to EPCs. At the same time, we agree with all commenters that Congress did not intend to apply the requirements to internet transactions, pointing to language in the statute such as “establishment,” “store,” “located in a place,” and “transactions in.”

(2) In order to add the requirement to report on relevant policies and practices to the TANF regulations, we are amending 45 CFR parts 262, 264, and 265. The regulations at 45 CFR 262.3 and 264.61 tie the reporting requirement to the penalty specified at 45 CFR 262.1(a)(16). We reiterate that we are requiring an annual EBT report in order to determine whether states have

maintained the required policies and practices in each fiscal year following FY 2014. One commenter suggested that the statute does not provide authority for annual reporting, maintaining that the statute obligates HHS to impose a penalty only if a state fails to submit one required report; that state would be subject to a penalty for FY 2014 (for its failure to report by February 22, 2014) and each fiscal year until it submits a report. We disagree with this interpretation and do not believe that it comports with the statute.

In response to suggestions for ways to ease the reporting burdens, we have incorporated this reporting requirement in the Annual Report on TANF and MOE Programs under 45 CFR 265.9(b)(10), rather than requiring the submission of a separate EBT report. Accordingly, we are amending the regulation at 45 CFR 265.9(b).

We continue to require that the reports address specific areas that will allow us to determine whether states have implemented policies and practices that comply with the statutory requirements. The NPRM identified these areas as follows: Identifying locations; methods to prevent use of TANF assistance via EBT transactions in restricted locations; monitoring; and enforcement of compliance. With this final rule, we are providing clearer descriptions of the type of information we are requesting. For example, we have amended the request for information on “monitoring,” to “ongoing monitoring to ensure policies are being carried out as intended,” and instead of “enforcement of compliance,” this component should read “responding to findings of non-compliance or program ineffectiveness.” This way, we do not imply that specific practices, such as monitoring of transaction reports, are required. At the same time, we would like reports to describe how states will review and evaluate the policies and practices implemented, and correct for non-compliance and ineffectiveness. In sum, in 45 CFR 265.9(b)(10), the four areas we are requiring states to address in their reports are: (1) Procedures for preventing the use of TANF assistance via electronic benefit transfer transactions in any liquor store; any casino, gambling casino, or gaming establishment; and any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment; (2) how the state identifies the locations specified in the statute; (3) procedures for ongoing monitoring to ensure policies are being carried out as intended; and (4) how the state

responds to findings of non-compliance or program ineffectiveness. Finally, we have reduced the burden hour estimate described in the Paperwork Reduction Act section of this final rule, as initial reports have been submitted and subsequent reports should not be as time-consuming.

(3) We are amending 45 CFR 262.1 and 264.61 to add the penalty for failure to report or demonstrate implementation and maintenance of these policies and practices. At 45 CFR 262.62, we specify that this penalty will be imposed for FY 2014 and each succeeding fiscal year in which a state fails to submit a report that demonstrates it has implemented and maintained the relevant policies and practices. Even though one commenter suggested that this approach exceeds our statutory authority, we maintain that the statute allows HHS to impose a penalty in “each succeeding fiscal year in which the State does not demonstrate that such State has implemented and maintained such policies and practices.” Furthermore, in response to commenters’ recommendations, we have added language to the regulation related to reducing the penalty based on the degree of noncompliance. We also clarify in the regulations that states are not held responsible for individuals’ fraudulent activities, as provided by the statute.

IV. Statutory Authority

This final rule is being issued under the authority granted to the Secretary of Health and Human Services (HHS) by the Middle Class Tax Relief and Job Creation Act of 2012 (Pub. L. 112–96), Section 408 of the Social Security Act (42 U.S.C. 608), Section 409 of the Social Security Act (42 U.S.C. 609), and Section 1102 of the Social Security Act (42 U.S.C. 1302), which authorizes the Secretary to make and publish such rules and regulations, not inconsistent with the Act, as may be necessary to the efficient administration of functions under the Act.

The statute at 42 U.S.C. 617 limits the authority of the federal government to regulate state conduct or enforce the TANF provisions of the Social Security Act, except as expressly provided. We have interpreted this provision to allow us to regulate where Congress has charged HHS with enforcing certain TANF provisions by assessing penalties. Because the legislation includes a TANF penalty, HHS has the authority to regulate in this instance.

V. Section-by-Section Discussion of Comments and Regulatory Provisions

Part 262—Accountability Provisions—General

The final rule in part 262 adds new penalties for failure to report or adequately implement the new requirements outlined in Public Law 112–96, specifies when a penalty takes effect, and identifies the reporting form that HHS will use to determine whether a state warrants a penalty.

Section 262.1 What penalties apply to States?

Sec. 4004(b) of Public Law 112–96 at Sec. 409(a)(16) of the Social Security Act (the Act) creates a new TANF penalty. As provided in the statute, the penalty will be imposed if a state fails to report to HHS its implementation of the policies and practices to prevent assistance provided under the state program funded under this part from being used in any electronic benefit transfer transaction in: (i) Any liquor store; (ii) any casino, gambling casino, or gaming establishment; or (iii) any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment. Furthermore, HHS may impose a penalty if it determines, based on the information provided in a state report, that the state has not demonstrated that it has implemented and maintained such policies and practices. This penalty may be imposed for FY 2014 and each succeeding fiscal year in which a state does not demonstrate that it has implemented and maintained such policies and practices. If HHS determines that the state should be subject to a penalty, it will reduce the state family assistance grant in the succeeding fiscal year by five percent, or a lesser amount based on the degree of noncompliance. States should note that the regulations at 45 CFR 262.4 through 262.7, concerning the processes for appealing a penalty, presenting a reasonable cause justification, and submitting a corrective compliance plan, apply to the new penalty added to 45 CFR 262.1.

Accordingly, this final rule adds paragraph (i) to § 262.1(a)(16) to provide that a penalty of not more than five percent of the adjusted State Family Assistance Grant (SFAG) will be applied for failure to report annually as part of the Annual Report on TANF and MOE Programs under 45 CFR 265.9(b)(10), on the state’s implementation of policies and practices related to these prohibited EBT transactions. The final rule also adds paragraph (a)(16)(ii) to provide that

a penalty likewise will be applied for FY 2014 and each succeeding fiscal year if the state does not demonstrate that it has implemented and maintained such policies and practices. Note that if a state fails to submit a report for a fiscal year and, when it ultimately submits a report, also fails to demonstrate its implementation of policies and practices, the combined penalty will not exceed five percent of its adjusted SFAG. Conforming changes have been made at § 262.1(c)(2) to add reference to the penalties in paragraphs (a)(16)(i) and (ii).

Comment: A few commenters remarked on the penalty calculation, suggesting that the rule mirror the statute’s allowance for the Secretary to reduce penalties based on the degree of noncompliance and clarify that states are not responsible for fraudulent activity by any individual receiving TANF assistance in an attempt to circumvent the policies and practices required by section 608(a)(12). Further, commenters were concerned that the proposed rule does not adequately explain how the “degree of noncompliance” will be determined or how it would be translated into the penalty amount.

Response: While we included language related to reducing the penalty based on the degree of noncompliance and clarifying that states are not held responsible for individuals’ fraudulent activities in the preamble of the NPRM, we agree that this language should also be added to the regulation. We have added language in §§ 262.1(a)(16) and 264.61 to address the statutory provisions. At the same time, we note that while states are not held responsible for an individual’s fraudulent activities, reoccurring fraudulent activity could be an indication of deficiencies in a state’s policies and practices and should be addressed.

When determining “degree of noncompliance” with respect to reports submitted after the deadline, the Secretary may take into account factors such as the length of time a report was late and any extenuating circumstances that may have caused late reporting. When determining “degree of noncompliance” with respect to inadequate policies and practices, the Secretary may consider the steps taken to develop policies to comply with the requirements (even if not fully implemented), whether there are procedures related to identifying some or all of the types of locations specified in the statute, whether procedures take into account transactions at both ATMs and POS terminals, and whether the

state provides information for some or all of the components required in the annual report (described later in this preamble).

Comment: One individual commented that imposing a penalty will be counterproductive because financial sanctions may inhibit a state's ability to implement EBT policies and practices, suggesting we increase the compliant states' block grants, provided that they consult and provide technical assistance to non-compliant states.

Response: The statute requires a penalty for failure to meet the requirements of the statute; however, before we impose a financial penalty, states may request reasonable cause or submit a corrective compliance plan in response to a penalty, as provided at sections 409(b) and (c) of the Social Security Act. We do not have the authority to increase compliant states' block grants.

Section 262.2 When do the TANF penalty provisions apply?

The final rule amends § 262.2 to add new paragraph (e) indicating that the penalty for failure to report on how the state is implementing and maintaining policies and practices to prevent assistance from being used in electronic benefit transfer transactions in specified locations will be imposed for FY 2014 and each succeeding fiscal year in which the state does not demonstrate it has implemented and maintained the policies and practices in accordance with 45 CFR 264.60.

Comment: One state commented that the statute does not require an annual reporting requirement. Rather, the commenter argued the statute required HHS to impose a penalty on an annual basis on states that had not submitted a report by February 22, 2014, and each subsequent year it had still not submitted a report. In other words, if a state submitted its initial report that describes the policies it implemented and how it will maintain them, it had met the requirements of the law and can no longer be subject to a penalty. On the other hand, a state that did not submit the initial report by February 22, 2014, would be subject to a penalty for FY 2014, as well as each fiscal year until it submits a report.

Response: We do not agree with this interpretation and do not believe that the statutory requirements, particularly the requirement that states demonstrate that they are implementing and maintaining the relevant policies and practices, can be met through a one-time report. The statute provides that HHS shall impose a penalty in "each succeeding fiscal year in which the

State does not demonstrate that such State has implemented and maintained such policies and practices." Through these reports, we must assess whether states are implementing and maintaining EBT policies and practices to determine whether or not we should impose a penalty.

Section 262.3 How will we determine if a State is subject to a penalty?

This final rule amends § 262.3 by adding a new paragraph (g) to specify that in order to determine if a state is subject to a penalty under 45 CFR 262(a)(16)(i) and (ii), HHS will use the submission of the initial report that was due by February 22, 2014, and beginning in FY 2015, the Annual Report on TANF and MOE Programs under 45 CFR 265.9(b)(10). We are amending the Annual Report on TANF and MOE Programs under 45 CFR 265.9(b) in order to include reporting for electronic benefit transfer transaction policies and practices. The Annual Report on TANF and MOE Programs at 45 CFR 265.9(b) is due at the same time as the fourth quarter TANF data report, within 45 days following the end of the fourth quarter. Note that this reporting requirement is distinct from the provisions of Public Law 112–96 related to additional state plan requirements (see Sec. 4004(c)).

Comment: We received a number of comments raising concerns about a separate annual electronic benefit transfer transaction report requirement. They argued this requirement places an undue reporting burden on states and contradicts the intent of the statute. One commenter believed that because the statute requires states to describe their EBT policies and practices in the state plan, they will already be providing consistent reports on implementation, and should not be required to submit an additional report. A number of states recommended we use the state plan or the Annual Report on TANF and MOE programs as the reporting mechanism.

Response: We agree that the Annual Report is an effective reporting mechanism and will ease the reporting burden on states. As described below, with this final rule, we are amending § 265.9(b) of the TANF regulations to add to the annual report a section for states to describe their policies and practices related to electronic benefit transfer transactions.

Part 264—Other Accountability Provisions

Subpart A—What specific rules apply for other program penalties?

The final part 264 explains in further detail what HHS expects of states when implementing the new requirements of Public Law 112–96 by specifying the policies and practices required, providing relevant definitions, and addressing consequences if a state fails to meet the requirement.

Section 264.0 What definitions apply to this part?

In order to clarify the types of locations where states are required to prohibit the use of TANF assistance via electronic benefit transfer transactions and to ensure that the policies and practices are applied consistently between states, we are amending § 264.0(b) to define the terms included in Section 4004 of Public Law 112–96. The following is a discussion of the definitions of the terms in alphabetical order.

Casino, Gambling Casino, or Gaming Establishment: As we mentioned in the NPRM, the statute provides exclusions to the phrase "casino, gambling casino, or gaming establishment," but does not provide a further definition. One such exclusion refers to establishments that offer casino, gambling, or gaming activities incidental to the principal purpose of the business. With this exclusion in mind, we proposed to interpret the statutory reference to "casino, gambling casino, or gaming establishment" to mean an establishment with a primary purpose of accommodating the wagering of money. Based on the statutory definition provided, this does not include a grocery store which also offers, or is located within the same building or complex as a, casino, gambling, or gaming activities, or any other establishments where such activities are incidental to the principal purpose of the business. We are not making any changes to this proposed definition in this final rule.

Comment: Generally, commenters agreed with our definition, but also provided suggestions to address specific concerns. For example, one state and one advocacy organization stated the definition does not address co-joined businesses such as a hotel, grocery store, or restaurant connected to or within the casino. In order to clarify the definition and ensure that it could not be interpreted broadly, one commenter recommended that we add language that prohibits the entrance of minors under the age specified by state law, similar to

that in the proposed definition of “Retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment.”

Response: We disagree that language that related to prohibiting the entrance of minors under the age specified by state law is necessary, and we do not believe it solves the problem the commenters identified. The law addresses co-joined businesses by excluding from the definition a grocery store which also offers, or is located within the same building or complex as a casino, gambling, or gaming activities. We defer to a state’s reasonable interpretation of the statute, to determine what other types of establishments that the statute excludes from the definition of “casino, gambling casino, or gaming establishment,” including co-joined businesses.

Comment: One state is concerned with the phrase, “an establishment with a primary purpose of accommodating the wagering of money.” The regulatory definition does not quantify what “primarily” means. Because this is one area where regulations could provide consistency between states, it recommends establishing criteria states can apply in making this determination.

Response: We defer to states’ reasonable interpretations on this part of the definition. States may have different approaches of determining whether a business satisfies this standard, and we do not find it necessary to draw a line, or to impose uniformity here, while we provide flexibility in other areas.

Electronic Benefit Transfer Transactions: The final rule will incorporate the statutory definition of “electronic benefit transfer transaction,” which is “the use of a credit or debit card service at an automated teller machine, point-of-sales terminal, or access to an online system for the withdrawal of funds or the processing of a payment for merchandise or service.”

Comment: Our NPRM noted the broad nature of this language and that questions had been raised about whether it includes TANF assistance deposited directly by a state into a recipient’s bank account (*i.e.*, via EFT) and accessed with a personal debit card. We requested comments related to whether states and banks have, or reasonably could have, the capacity to apply the EBT transaction restrictions to assistance funds deposited in private bank accounts and to monitor whether recipients use such funds in a prohibited manner. We received many comments responding to this request, all of which were in agreement that the requirements should not be applied to

personal debit cards, supporting their recommendations with information pertaining to the following: (1) Infeasibility, (2) negative consequences that would result from applying the requirements to personal debit cards, and (3) Congressional intent.

Although one commenter acknowledged that it may be theoretically possible for a deposit account to consist of a sub-account for TANF funds and a subaccount for all other funds, all agreed that implementing such a requirement would be practically infeasible. If implemented, the banks would face requirements to identify customers who receive cash benefits, determine the dollars in a checking or savings account that are “TANF” dollars versus wages or other income from the state, such as child support. Requiring the entire United States banking system to develop the appropriate capabilities (TANF funds recipients could have deposit accounts at any of the nearly 7,000 banks and thousands more credit unions in the U.S.) would result in an extraordinary burden and high costs. While one commenter stated that the banks would need to develop the ability to monitor where funds are used, as there is no current mechanism for a state to monitor the use of such funds, another stated that current bank infrastructure could not support identification of individual retailers. Commenters emphasized that the capacity and infrastructure to apply the requirements to personal bank accounts/debit cards simply do not exist at this point, and the costs that would need to be devoted to this effort would not outweigh the benefit.

A few commenters maintained that because states could not actually implement procedures in order to comply with this requirement, they would have to discontinue the option of direct deposit. One commenter maintained that even if states provided the option of direct deposit, the difficulties with applying the statutory requirement to TANF assistance in personal bank accounts would provide disincentives for banks to work with TANF customers. Commenters argued these would be unfortunate consequences of this legislation because there are many benefits of being “banked” (*e.g.*, the ability to avoid unnecessary fees for accessing benefits and paying bills, promoting savings and financial management, permitting TANF recipients to build a credit history, etc.). Commenters emphasized that diminishing the ability of TANF recipients to establish and maintain bank accounts conflicts with the broader

TANF goals of promoting work and self-sufficiency, and that HHS should be encouraging states to provide benefits through direct deposit, not discouraging it.

Finally, a number of commenters maintained that Congress did not intend to include transactions with personal debit cards within the definition of “electronic benefit transfer transaction” in Public Law 112–96, and that only accounts established by a government agency were intended to fall within Congress’s definition of EBT systems.

Ultimately, all commenters recommended that the restrictions not extend to TANF funds deposited into private bank accounts. One advocacy group recommended that if, in the future, there is sufficient evidence that TANF assistance recipients’ use of bank accounts to purchase prohibited goods and services threatens the integrity of the TANF program, any new expansion of the current restrictions should be added only within the context of a full TANF reauthorization.

Response: HHS considered all of the comments received. The broad statutory definition of “electronic benefit transfer transaction,” applies to TANF funds deposited in private bank accounts because the funds can be accessed using a credit or debit card, ATM, point-of-sale terminal, or an online system for the withdrawal of funds or the processing of a payment. However, HHS recognizes that TANF recipients may have private bank accounts that include TANF funds as well as income from other sources, including earnings from employment, refundable tax credits for working families, and child support. Because there is currently no feasible way to distinguish TANF funds from other sources in a private bank account, states are responsible for implementing policies and practices that apply to transactions using or accessing TANF funds directly deposited in private bank accounts, only in cases where TANF is the sole source of funds in those accounts. Further, given the current state of technology, we have concluded that there is no feasible enforcement mechanism for funds in private bank accounts, and therefore the state may meet the requirements of this regulation by providing notice to recipients that they cannot access TANF funds from private bank accounts at a prohibited location.

Comment: One state maintained that the definition of “electronic benefit transfer transaction” should not include EPCs, which the state described as “non-government issued, payee owned, pre-paid debit card loaded via ‘electronic funds transfer.’” The

commenter maintained that only accounts established by a government agency were intended to fall within Congress's definition of EBT systems.

Response: HHS disagrees with the state's reading of the statute, given the definition of "electronic benefit transfer transaction" is so broad, as discussed above.

Comment: We received many comments regarding whether or not internet transactions should be included in the definition of "electronic benefits transfer transaction." All commenters agreed that the regulations should not extend to internet transactions, particularly at this time. A few commenters noted that language in the statute, such as "establishment," "store," "located in a place," and "transaction in," suggests that the intent of Congress was to prevent TANF benefits from being used at certain physical locations. One commenter stated that the term "online system" in the definition of "electronic benefit transfer transaction" is vague because one may interpret it as payments made in near real time, such as the use of debit cards for purchases at a merchant location, or as the purchase of goods and services over the internet. The commenter argued most consumers understand "online system" to include purchases of goods and services via the internet, but suggests that we clarify this in the regulation. Another commenter argued that Congress intended to create an enforceable approach by limiting transactions to physical locations. While this comment did not object on principal to regulating internet transactions, it, along with responses from other commentators, explained that the logistics of applying this restriction to internet transactions would be unfeasible. Some comments suggested that the restrictions should apply if and when states can feasibly monitor such transactions and/or when data shows that online TANF assistance spending on prohibited goods and services becomes a major problem.

Response: We agree the terms "establishment," "store," "located in a place," and "transaction in" point to Congress's intent to apply the requirements only to physical locations and not internet transactions. Therefore, the regulations do not apply to web-based transactions. If the technology allows, a state has the flexibility to restrict internet transactions with EBT cards, but federal law does not require it.

Liquor Store: The final rule will incorporate the statutory definition of "liquor store," which is "any retail establishment which sells exclusively or

primarily intoxicating liquor. Such term does not include a grocery store which sells both intoxicating liquor and groceries including staple foods (within the meaning of section 3(r) of the Food and Nutrition Act of 2008 (7 U.S.C. 2012(r)))."

Comment: Five commenters commented on the definition of "liquor store," with most supporting the approach of mirroring the definition in the statute. We also received a few recommendations for clarifying the definition. For example, one state highlighted the fact that the regulatory definition does not quantify what "primarily" means, and that this is one area where regulations could provide consistency between states by establishing certain criteria states can apply in making this determination.

Response: Regarding the recommendation to quantify what "primarily" means, just as in the definition of "casino, gambling casino, or gaming establishment," we defer to states' reasonable interpretations on this part of the definition. States may have different ways of determining whether a business satisfies this standard, and we do not find it necessary to draw a line, or to impose uniformity here, while we provide flexibility in other areas.

Comment: A few commenters pointed out that "liquor" has a very specific definition that sets it apart from other types of alcoholic beverages such as beer and wine. The commenters maintained that since the term "liquor" is used instead of "alcohol," places that sell beer and wine only do not fall under this definition. They recommended that states should be given the flexibility to implement the definition in a way that best suits their state and local laws and population.

Response: We disagree and continue to interpret Congress's use of "liquor" to refer to alcohol broadly, including beer and wine, so that the term "liquor store" is inclusive of locations that serve primarily alcoholic beverages.

Retail Establishment which Provides Adult-Oriented Entertainment in which Performers Disrobe or Perform in an Unclothed State for Entertainment: In the NPRM we proposed to clarify the intended locations to which restrictions apply, by adding "such an establishment that prohibits the entrance of minors under the age specified by state law" to the statutory definition. However, after considering the comments received and for the reasons discussed in the response below, we have decided against adding this language to the statutory definition. Since we are no longer expanding upon the statutory definition, we are not

including this term in the list of definitions at 45 CFR 264.0 of the final regulation.

Comment: Seven commenters commented on the proposed definition of "retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment." Only one commenter believed that it accurately described the types of locations where Congress intended to restrict access, and provided states with sufficient clarity to implement these provisions. All other commenters expressed concern about the statement we proposed to add to the statutory definition. They believed the proposed regulation expands the scope of prohibited establishments as it might be read to include book stores or establishments that serve liquor by the drink, and maintained that the statutory wording is clear and should be retained. Some comments also noted that not all states have a state law establishing entrance restrictions based on age with respect to places that provide entertainment where performers disrobe or perform in an unclothed state. In many states, local ordinances rather than state law apply to such establishments, and can vary considerably from jurisdiction to jurisdiction.

Response: While we disagree that the addition of "such an establishment that prohibits the entrance of minors under the age specified by state law" expands the scope of prohibited establishments, we understand it can be problematic given the variation among states regarding whether state laws or local ordinances apply to these types of establishments. We are therefore removing this language and encourage states to exercise the flexibility provided by the statute to build on the required restrictions, with respect to any of these types of establishments, consistent with state and local policies. The term "retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment" itself is descriptive and specific, so we have decided it is not necessary to add a definition at § 264.0.

Comment: One commenter noted that we interpreted the statutory definition as applying beyond live entertainment, specifically to theaters and cinemas where state law prohibits entrance to minors under the age specified by state law. This commenter recommended that the restriction be limited to establishments that provide live entertainment.

Response: We disagree that the statute applies only to establishments that provide live adult entertainment. We see no reason to exclude stores and theaters that exclusively or primarily sell or feature adult-oriented videos and movies.

Section 264.60 What policies and practices must a State implement to prevent assistance from being used in electronic benefit transfer transaction in locations prohibited by the Social Security Act?

This final rule adds § 264.60 under subpart A, which requires states to implement policies and practices to prevent assistance (defined at § 260.31(a)) provided with federal TANF or state TANF MOE funds from being used in any electronic benefit transfer transaction in any: (a) Liquor store; (b) casino, gambling casino or gaming establishment; or (c) retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment. The NPRM often used the phrase “policies and procedures” in the discussion of this section. The final rule revises the language, instead referring to “policies and practices,” in order to mirror the statutory language. As we proposed in the NPRM, HHS will accept any reasonable approaches that further these goals and comply with the statutory and regulatory requirements. States’ policies and practices must prohibit the use of TANF funds at the specified locations, while ensuring reasonable access to cash assistance, as directed by Congress.

Comment: We received several comments from states supporting our statements in the NPRM that states would have “flexibility in determining appropriate policies and practices” and that we would accept “any reasonable approaches” states use to implement the transaction restrictions. For example, one commenter commented that we should not use our authority within this law to restrict state flexibility without a compelling reason, and that we should make reasonable choices that help promote employment and economic self-sufficiency (to the extent that the ambiguity in the statutory language allows). Additionally, a few commenters argued that as technology evolves rapidly, regulations should allow room for approaches that have not been developed at this time. On the other hand, a few commenters stated that we should “provide more of a standard so that there is more consistency in the calculation and then the implementation of the penalties.” One advised that an over-arching framework

for implementing the restrictions in the law should be shaped by the goals of TANF, and that we should avoid overly-broad interpretations of the law that would undercut rather than further the Congressional intent to bolster public confidence in TANF’s program integrity. Another suggested that the proposed rule needs to be more stringent.

Response: We believe that, given the various types of systems states use to deliver TANF assistance, it is important to provide states flexibility to implement policy and practices that comply with these statutory and regulatory requirements. Our intention is to inform states of their options while ensuring they fulfill the provisions of the law. These options include: Requiring that third-party processor agreements include language related to the TANF prohibitions; requiring retailers to meet certain eligibility criteria in order to accept EBT cards or EPCs; reviewing and revising state licensing requirements for casinos, liquor stores, and adult entertainment venues to include conditions for license issuance related to restricting TANF benefit use; amending or creating new educational materials for cardholders and retailers; pre-screening retailers prior to authorizing them to accept EBT cards; engaging EBT vendors to determine possible procedures for identifying electronic benefit transfer transactions with TANF assistance at prohibited locations; requiring cardholders to agree in writing not to use TANF assistance at prohibited locations as a condition of receipt; engaging relevant business owners, for example through the appropriate state licensing agencies, and instructing retailers to refuse EBT cards or EPCs at their locations; requiring that relevant business owners or ATM owners post a notification that EBT cards or EPCs may not be used for purchases or cash withdrawal at prohibited locations. While states may impose sanctions, assign a protective payee, or impose a conciliation process for individuals found in violation, the statute does not require that states do so.

In their initial reports, a few states described procedures that involve informing recipients and/or owners of the restricted businesses of the rules (e.g., via letter, flyer, or brochure; posting information on TANF and regulatory agencies’ Web sites; displaying posters that detail the EBT restrictions in relevant establishments or local welfare offices), without taking additional actions that aim to ensure the relevant parties are complying with the policy. Absent final rules, ACF accepted such approaches as complying with the

statutory requirements. However, with the publication of this final rule, we clarify that notification approaches are only sufficient in situations where further action is not feasible, such as in the case of TANF funds accessed from private bank accounts or TANF funds used in other states. Where possible, we expect states to implement procedures that enforce policies, and take corrective actions when instances of non-compliance or ineffectiveness are identified.

Comment: One state pointed out that § 264.60 leaves out the key words “as necessary” following the phrase, “states are required to implement policies and practices.” Another state suggested replacing the word “use” with “access” in the proposed § 264.60 heading and elsewhere in the narrative to carry a clearer meaning.

Response: We agree that the words “as necessary” should be added to the regulation in order to be consistent with the statute. Regarding the proposed language change from “use” to “access,” the statute itself refers to “use in electronic benefit transfer transaction.” We think the best approach is to track the statutory language as much as possible. Therefore, we maintain the current text.

Comment: A few commenters expressed concern with approaches that focus on penalizing individuals rather than preventing transactions in the first place, as they do not further public support for the program and place too much of the burden for compliance on recipients. Yet another commenter stated that we should not encourage states to have vendors post public signs because they unfairly stigmatize and shame public benefits recipients. These commenters suggested that we indicate to states that if a non-systemic approach to preventing TANF EBT use at prohibited locations (e.g., centralized electronic blocking of prohibited transactions) is not reasonably effective, then compliance actions will require a more systemic approach to prevention. They also argued that we should stress that prevention rather than severity of penalties furthers the goal of the legislation.

Response: We appreciate this suggestion, and while we encourage comprehensive policies and practices that involve more than one method of preventing TANF EBT use at prohibited locations (e.g., notices to merchants coupled with monitoring of transaction records), we do not prescribe one specific approach or set of approaches. The intent of the law is to prevent transactions in the designated locations, and there is good reason to believe that

prevention cannot be achieved by placing the entire burden on the individual. At the same time, given the broad discretion that states have under TANF, we do not believe that there is a basis for us to require any specific approach so long as a state's approach is reasonable.

We do encourage states to periodically evaluate the effectiveness of their policies and practices, and adapt or revise them as necessary. In doing so, they maintain the flexibility afforded by the regulation to implement either systemic or non-systemic approaches. We have suggested a number of options for how states may structure policies. We require states to describe how they plan to correct for non-compliance and ineffectiveness in the annual report.

Comment: Two commenters stated that bank identification number (BIN) blocking at the point of sale cannot be done systematically as of now, though they do point out it is possible at ATMs. One of these commenters also suggested that we require that a TANF agency or its EBT vendor notify relevant merchants that they must contact the third party processor (that routes electronic transactions through the commercial debit and credit networks) with which they have a processing agreement and request that the third party processor disable or remove EBT access from their (the relevant merchant's) account. Further, the commenter suggested that we require merchants to have their processors send the merchant category code in the authorization message when an EBT card is swiped at the point of sale, and the TANF agency or its EBT vendor could then make a decision to approve or decline the transaction based on the merchant category code. Yet another commenter suggested that it would be easiest for states to require that all existing ATMs be reprogrammed and merchants would then have to apply to determine if they could be authorized to use EBT funds.

Response: We apologize for our error in stating that a state may systematically prevent transactions via BIN blocking at the point of sale. Additionally, we appreciate these commenters' suggestions for ways states may comply with the statute, but note that, as we explained above, we do not prescribe any one approach for states to implement. Again, states may develop approaches that are cost effective and fit within the existing structure of state operations, yet at the same time meet the requirements of the law.

Comment: One state recommended that we identify and address the

differences between EBT and EPC when discussing the options for complying with the requirements, in particular with respect to the four components of reports. Specifically, HHS should acknowledge that EPC and EBT cards are subject to different federal laws and regulations, as well as industry and network standards depending on the type of card, then discuss options and any unique limitations or issues for policies and procedures related to each type of card within each component.

Response: We understand the unique challenges associated with EPCs, and we have been mindful of limitations as we have reviewed state reports. For example, we are aware that banking and privacy laws prevent states from receiving transaction information that would allow them to track the places where individuals redeem their benefits (with very limited exceptions). The Privacy Act of 1974 (at 5 U.S.C. 552a) protects individuals' information maintained by federal agencies and the federal Right to Financial Privacy Act (at 12 U.S.C. 3401) protects personal and financial information of bank customers from disclosure to governmental agencies by banks and their agents. We are mindful of the limitations and will take them into consideration as we review state reports. States that use EPCs described in their initial reports policies and practices including: Blocking certain merchant category classification codes so as to prohibit the usage of the cards in businesses meeting the definition within the law; conducting outreach to businesses to educate impacted vendors and retailers on the prohibition; ensuring recipients are aware of the prohibition by informing applicants and re-applicants through notification; and assigning a protective payee to cases where it comes to the attention of the county eligibility worker or the TANF program administrator that an adult member of the household has demonstrated inappropriate use of funds. Regarding monitoring procedures, in its initial EBT transaction report submitted by the February 22, 2014 deadline, one state described a process for sending an electronic file to IRS approximately once a month for all new and current recipients in order to identify any gambling winnings claimed on tax returns; this information is used as a lead to determine possible fraud. Another state's EBT transaction report explained that the state TANF program receives a monthly Program Market Segment Report from the financial institution that issues the state's EPCs. The Program Market Segment Report

displays merchant category codes, the cardholder count that completed a transaction at each type of business, the number of transactions completed, the percent of the total transactions by merchant category code, and the transaction amount by merchant category code. This information allows the state to monitor card and transaction activity.

Comment: One state commented that states that have commingled funds in EBT accounts, such as child support funds, should not be required to restrict access to non-TANF programs. One state suggested that regulations should allow flexibility in this area and allow states to define policies and practices that restrict TANF but allow access for the other cash program benefits comingled with the TANF funds in the EBT accounts.

Response: We agree that states have flexibility to define policies and practices that restrict TANF but allow access to the other cash program benefits that may be on a benefit card. We emphasize that the statutory restriction here solely applies to TANF assistance, not to child support funds or to other family benefits or resources other than TANF assistance.

Comment: A few commenters expressed concern that certain terms in the NPRM indicated we would not support state flexibility, namely "consistently applied," "required to block," and "adequately implement." The commenters suggested that using such terms may lead states to feel compelled to adopt specific suggestions. A few commenters requested that we not include a specific list of four required reporting components (which are identifying locations; methods to prevent use of TANF assistance via EBT transactions in restricted locations; monitoring; and enforcement of compliance) in regulations, as doing so limits flexibility.

Response: It was not our intention to limit state flexibility or be overly prescriptive, but rather to ensure that we receive complete reports describing the procedures states have chosen to implement to comply with the statutory requirements. We maintain that for states to demonstrate that they are implementing the required policies and practices, their implementation strategies must address all four components identified. At the same time, states have flexibility within each category with respect to the specific policies and practices they choose to implement. For further information on this topic, see the discussion related to § 265.9 below, which explains our actions in relation to this issue. As

stated there, we are revising the text of the four components, but not eliminating the requirement.

Comment: We received a few comments responding to suggestions presented in the NPRM for how states can identify locations specified in the law. In particular, one state seems to believe that we proposed requiring states to maintain a list of the establishments subject to the restrictions, and for state TANF agencies to provide a separate and additional notification to impacted merchants. The state recommended that we allow states to comply with the requirements of Public Law 112–96 by requiring the appropriate state licensing agency to notify the entities that license businesses that are subject to the prohibitions, through broader public notice of the requirements for such locations to restrict access, by conducting periodic targeted reviews of EBT transactions, by following up on suspect locations, and by establishing appropriate penalties for the venues violating the restrictions. Additionally, one commenter warned against relying on internet searches, and suggested that states attempt to work through national associations of these businesses and their state affiliates.

Response: We did not intend to imply that we are requiring a particular method for identifying locations subject to the requirements. Similarly, we do not require states to maintain a list of affected businesses. We want states to describe their processes for how they identify locations subject to these requirements in their reports. However, because the method or combination of methods states use for identifying locations depends on the policies and practices they implement, states should have flexibility in deciding how best to do so. For example, if a state's policy involves monitoring transaction reports, "identifying locations" could mean developing criteria for being able to recognize on the transaction reports that a transaction occurred at one of the three types of locations (e.g., what words or data elements do reviewers look for?). A state that blocks access at certain locations should describe its procedures for determining which locations should be blocked. Other ways states may identify locations subject to the TANF statutory requirements include working with entities that license businesses or national associations of these businesses and their state affiliates, using merchant category codes, or having states apply for an authorization to accept a state's benefit card based on the percentage of their gross revenue that is derived from

the sale of alcoholic beverages, legalized games of chance, sexually oriented materials, coin-operated amusement machines, etc.

Comment: We received one comment in relation to preventing access to TANF cash assistance by state programs at any type of business specified in the law that is located on tribal land. This commenter believed we inappropriately overstepped tribal authority because we "extended" the requirements to tribal programs.

Response: We reiterate that we are not extending the requirements to tribal TANF programs. We agree that Congress did not apply these requirements to TANF assistance administered by a tribal TANF program. However, states do have a responsibility to develop appropriate policies for preventing TANF cash assistance administered by state programs from being used at any of the three types of businesses, including those located on tribal land, to the extent practicable. As we stated in the NPRM, we encourage states to work with tribes to try to prevent state TANF assistance from being used at the prohibited locations on sovereign tribal land. We would consider it sufficient for states to provide notice to recipients that the prohibition of use extends to tribal lands.

Comment: We received two comments related to whether a state should be responsible for restricting use of its TANF assistance in another state. Both maintained that it would be too challenging and costly for states to attempt to block transactions in businesses located in other states and recommended that we not require states to restrict transactions at locations outside their borders. At the same time, Illinois pointed out that this would not prevent states from reviewing and following up on cardholders' out-of-state spending of TANF benefits in the three restricted types of businesses.

Response: We did not include a discussion of this issue in the preamble of the NPRM, and think it is important to provide clarity in the final rule. States are responsible for restricting transactions using state-provided assistance at prohibited locations whether or not the transaction occurs within the state. We recognize the infeasibility of restricting transactions in other states; and, therefore, the agency would consider providing a notice to recipients to be sufficient implementation of a policy or practice with respect to out-of-state transactions.

Comment: We received a few comments regarding access and fees, raising concerns about protections for those living in isolated areas and noted

that the regulations do not provide any exceptions or guidelines about how states may ensure access to cash assistance. Further, they highlighted that the statute's requirement to ensure access to cash assistance and minimal fees may benefit recipients, as the yearly amount of surcharges associated with cash assistance withdrawals is extraordinarily high. To minimize fees, they suggested that states allow a certain number of free withdrawals per month or eliminate withdrawal surcharges. One commenter suggested that the regulations should require states to allow TANF recipients to choose between benefits via direct deposit or an EBT card. It also suggested that the regulations should specify the ways in which states may implement guaranteed, surcharge free transactions (e.g., free ATM balance inquiries and surcharge subsidies), and HHS should provide technical assistance to states about promising practices for guaranteeing access.

Response: We believe it is critical that states take steps to ensure access to cash assistance and minimize, or eliminate, fees for families who are working toward self-sufficiency. We strongly encourage states to develop strategies to ensure adequate access to benefits, such as guaranteeing a minimum number of free cash withdrawals per month or providing new options for cash assistance withdrawal in isolated areas. We will continue to work with states on an individual basis regarding these strategies.

Finally, we want to reiterate that while one of the new state plan requirements at Sec. 4004(c) of Public Law 112–96 conveys a clear emphasis that states ensure adequate access to cash assistance for recipients, this language does not provide states the option to avoid imposing a restriction at an ATM or POS terminal located in any of the three types of specified businesses in order to ensure adequate access. Rather, it conveys a responsibility for states to take corrective actions to increase locations where TANF recipients may access their cash assistance if they find that there are an insufficient number of access points in a geographic area.

Section 264.61 What happens if a state fails to report or demonstrate it has implemented and maintained the policies and practices required in § 264.60 of this subpart?

We are adding a § 264.61 to address the penalty associated with the new requirements. Under paragraph (a), HHS will impose a penalty of not more than five percent of a state's adjusted SFAG

for failure to submit annually a report demonstrating the state's implementation of policies and practices to prevent EBT use in the locations specified in Public Law 112–96. Under paragraph (b), HHS will impose a penalty of not more than five percent of a state's adjusted SFAG each fiscal year succeeding FY 2014 in which the state does not demonstrate it has implemented and maintained the required policies and practices. Note that we have revised the phrasing we used in the NPRM for the title of this section in order to clarify that the penalty will be imposed for a state's failure to demonstrate in the report its implementation and maintenance of policies and practices, rather than a failure to implement and maintain the policies and practices.

In order to meet this requirement, states' reports must fully explain the policies and practices that are being implemented and maintained. Note that if a state submits a late report and once submitted, also fails to demonstrate its implementation of policies and practices, the combined penalty will not exceed five percent of its adjusted SFAG. Any deficiencies that arise with respect to a state's reporting of its EBT policies and practices in the Annual Report (*i.e.*, for failure to submit a complete or timely report) will not trigger a separate penalty under 45 CFR 262.1(a)(3) or 265.8.

All penalties will be imposed in accordance with 45 CFR part 262, which provides states with procedures for appealing a penalty, and submitting a reasonable cause justification or corrective compliance plan.

Furthermore, Sec. 409(a)(16)(C) of the Act, as amended by Sec. 4004(b) of Public Law 112–96 provides HHS the discretion to reduce the penalty amount based on the degree of noncompliance of the state. Sec. 409(a)(16)(C) of the Act, as amended by Sec. 4004(b) of Public Law 112–96, also specifies that “Fraudulent activity by any individual in an attempt to circumvent the policies and practices required by Sec. 408(a)(12) shall not trigger a state penalty under subparagraph (A);” as such, HHS will not base any penalty on such information. We have added paragraphs (c) and (d) in this section of the regulation, incorporating these two provisions of the statute.

Please see discussion after 45 CFR 262.1 for comments and responses related to these penalty provisions.

Part 265—Data Collection and Reporting Requirements

Section 265.9—What information must the state file annually?

In response to comments expressing concern over the burden of having a separate annual report due on February 22 of each fiscal year, we are amending § 265.9, by adding paragraph (b)(10) to state that in accordance with §§ 264.60 and 264.61, a report of policies and practices to prevent assistance (defined at § 260.31(a)) provided with federal TANF or state TANF MOE funds from being used in any electronic benefit transfer transaction in any liquor store; any casino, gambling casino, or gaming establishment; and any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment. In an effort to receive reports that demonstrate whether states have implemented and maintained the required policies and practices, we are revising the Annual Report on TANF and MOE Programs under 45 CFR 265.9(b). In doing so, we will require states to complete four sections, specifying: (1) Procedures for preventing the use of TANF assistance via electronic benefit transfer transactions in any liquor store; any casino, gambling casino, or gaming establishment; and any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment; (2) how the state identifies the locations specified in the statute; (3) procedures for ongoing monitoring to ensure policies are being carried out as intended; and (4) how the state plans to respond to findings of non-compliance or program ineffectiveness. We believe that for states to demonstrate that they are implementing the required policies and practices, their implementation strategies must address all four components identified. At the same time, states have flexibility within each category with respect to the specific policies and practices they choose to implement.

Comment: We received several comments responding to the expectation that states establish and report annually on policies and practices in four specific areas identified in the NPRM, namely: (1) Identifying locations; (2) preventing the use of TANF assistance via EBT transactions; (3) monitoring; and (4) enforcement of compliance. While two commenters agreed with our proposed framework and believed it would support the integrity of the program, other commenters argued that following

this requirement would be labor intensive, cost prohibitive, and contrary to the philosophy of state flexibility in a block grant program. Some argued that states should have the flexibility to develop policies and practices best suited to them, which might not match the four stated areas. One state argued that requiring that reports address these four areas exceeded statutory authority and suggested that the four specific areas serve as suggestions for state policy rather than requirements. This commenter further suggested that we could require states to report on all four specified components, but allow states to determine whether to establish policies in these areas or not. If a state chose not to, it would assert that in the report. One commenter characterized these four specific components as requirements beyond those in the statute, and that they should not be made mandatory.

Response: We disagree with the suggestion that requiring this reporting exceeds statutory authority, as the statute provides us the authority to reduce a state's block grant if the “Secretary determines, *based on the information provided in State reports*, that any State has not implemented and maintained such policies and practices.” We are requiring the four areas in the reports, but are changing the descriptions of the third and fourth to be clearer about what these terms mean. Instead of “monitoring,” the third component should read “ongoing monitoring to ensure policies are being carried out as intended;” and instead of “enforcement of compliance,” the fourth component should read “plans to respond to findings of non-compliance and/or program ineffectiveness.” This way, we do not imply that specific practices, such as monitoring of transaction reports, are required. At the same time, reports must describe how states will review and evaluate the policies and practices implemented, and correct any particular aspects that are not leading to the intended results.

Comment: Two commenters argued that states should be required to publish their annual reports online, in order to make this information publicly available. Commenters also argued that we should encourage information sharing among states by establishing venues for the exchange of information about program costs and successes.

Response: We are not requiring states to publish their annual TANF and MOE reports online, but encourage states to do so. States also have many existing means to share information with each other, and we support states continuing to do so. ACF's Office of Family

Assistance will explore the feasibility of posting these reports on their Web site.

VI. Paperwork Reduction Act

This rule establishes new information collection requirements in §§ 262.3(g) and 265.9(b)(10) of the TANF regulations. This collection is subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (the PRA) (44 U.S.C. 3501–3520). We did not receive any public comments on the specific burden hour estimate identified in the

proposed rule. The information collection requirements, as described below, are identical to those contained in the proposed rule (OMB control number 0970–0437). However, now that the initial reporting due February 22, 2014, has passed, we have reduced the burden hour estimate by half. We also note that we will incorporate this reporting requirement into the Annual Report on TANF and MOE Programs under 45 CFR 265.9(b), and will obtain OMB approval for a standard form

before the next information collection is due. The annual report is due at the same time as the fourth quarter TANF data report, or within 45 days following the end of the fourth quarter.

As required by the Paperwork Reduction Act of 1995, codified at 44 U.S.C. 3507, ACF will submit a copy of these sections to the Office of Management and Budget (OMB) for review and they will not be effective until they have been approved and assigned a clearance number.

Requirement	Number of respondents	Yearly submissions	Average burden per respondent (hours)	Total burden hours
Annual reporting on policies and practices to prevent TANF assistance from being used in electronic benefit transfer transactions in liquor stores; casinos, gambling casinos, or gaming establishments; or any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment	54	1	20	1,080

We estimate the costs of implementing these requirements will be approximately \$54,000 annually. We calculated this estimate by multiplying 1,080 hours by \$50 (average cost per hour).

VII. Regulatory Flexibility Act

The Secretary certifies under 5 U.S.C. 605(b), as enacted by the Regulatory Flexibility Act (Pub. L. 96–354), that this final regulation will not result in a significant impact on a substantial number of small entities. We note that any impact on businesses emanates from statutory mandate and the policies that states adopt in implementing the statutory requirement.

In order to address potential concerns of the types of establishments specified in the statute, as well as state EBT vendors, HHS has drafted the regulation in a manner that minimizes the impact on businesses, including small businesses, by providing states flexibility when implementing policies and practices that comply with the new requirements. In particular, states have the flexibility to implement approaches that do not place significant burden or impose large costs on their EBT vendors, small businesses, or any particular party. Therefore, any costs resulting from policies under which states require action by small entities, including small businesses, are the result of choices states make when implementing the statutory requirements.

The direct primary impact of this final regulation is on state governments. State governments are not considered small entities under the Act.

VIII. Regulatory Impact Analysis

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule meets the criteria for a significant regulatory action under E.O. 12866 and has been reviewed by OMB. For the reasons set forth below, ACF does not believe the impact of this regulatory action would be economically significant and that the annual cost would fall below the \$100 million threshold.

Costs. We received a few comments regarding the costs associated with the implementation of the regulation. Individual commentators raised general concerns about the regulation's cost/benefit ratio and the impact on TANF spending. A few commenters expressed concern that states will reallocate TANF money from direct services to resources for implementing this regulation.

Commenters also noted that the regulation's benefits do not outweigh its costs, as implementation costs are so large and the percentage of TANF cash assistance recipients using EBT cards on prohibited transactions is so small. One of these commenters noted that some states have considered ending EBT programs and reinstating paper checks

to exempt themselves from the regulatory requirements. They suggested increasing state flexibility in implementing the regulation by removing the four components that states must include in their implementation report listed in the proposed provision at 45 CFR 262.3(g).

We understand that this regulation will impose new costs on states. In response to this issue, we have provided flexibility in meeting the regulatory requirements so that states may develop cost-effective implementation strategies that fit within the existing structure of state operations. In general, the costs associated with implementation, and the parties that bear these costs, largely depend on the policies and practices a state chooses to in enact order to comply with the statutory requirements.

Nevertheless, regardless of the approach a state may take when implementing policies in order to comply with the statute and regulations, there will be, at a minimum, administrative costs for the state agency responsible for administering the TANF benefits. We recognize that states will spend funds on the following types of costs to implement the changes in order to complete the annual progress report to ACF:

- Costs to identify the prohibited locations;
- Costs to modify existing tracking of recipient use of electronic benefits and/or electronic banking;
- Costs to monitor recipient use of electronic benefit transfers;
- Costs to investigate and follow up on violations of electronic benefit transfers;
- Cost to process and respond to appeals.

With regard to the reporting requirement, based on our estimate described under the Paperwork Reduction Act section of this preamble, the total costs for all states to comply with this requirement would fall well below the \$100 million threshold. We will not remove the four components of the report, as commenters recommended. We do agree that the language in the components should be clarified (see discussion of regulation at § 265.9, above). It was not our intention to limit state flexibility or be overly prescriptive. The report components we have identified reflect general elements of all policies and practices that reflect full compliance with the statute, not specific policies and practices. As demonstrated by the initial reports states submitted in response to the statutory requirement, a majority of states have implemented sufficient policies and practices that take into account each of these components. Furthermore, by identifying these components in a standard form, we are ensuring that states take a comprehensive approach to composing their policies and practices, and that ACF receives complete reports describing the procedures states have chosen to implement.

Additionally, the statutory requirements and regulation provide potential benefits that coincide with the goal of financial responsibility. For example, the policies and practices that states implement may result in reductions in inappropriate expenditures of government funds, and emphasize to recipients that they should ensure assistance is spent only on basic needs. There may also be opportunities to educate recipients on financial management and on ways to minimize access fees.

Need for the Regulation: These regulations incorporate statutory changes to the TANF program enacted in the Middle Class Tax Relief and Job Creation Act of 2012 (Pub. L. 112–96). This regulation is limited to the penalty provisions of Section 4004 of Public Law 112–96. Because states have a range of systems for disbursement of assistance, and a number of questions have arisen regarding the applicability and requirements of the statutory language, HHS has published this regulation in order to clarify for states the information they should submit in order to avoid a penalty.

IX. Unfunded Mandates Reform Act of 1995

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that a covered agency prepare a

budgetary impact statement before promulgating a rule that includes any federal mandate that may result in the expenditure by state, tribal, and local governments, in the aggregate, or by the private sector, of \$100 million or more in any one year. HHS has determined that this rule will not result in the expenditure by state, local, and tribal governments, in the aggregate, or by the private sector, of more than \$100 million in any one year.

For more detail regarding estimated costs, see the section containing the Regulatory Impact Analysis.

X. Congressional Review

This regulation is not a major rule as defined in the Congressional Review Act or CRA (5 U.S.C. Chapter 8). The CRA defines a major rule as one that has resulted or is likely to result in: (1) An annual effect on the economy of \$100 million or more; (2) a major increase in costs or prices for consumers, individual industries, federal, state, or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, or innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. HHS has determined that this final rule does not meet any of these criteria. For more detail regarding estimated costs, see the section containing the Regulatory Impact Analysis.

XI. Executive Order 13132

Executive Order 13132, Federalism, prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial direct compliance costs on state and local governments and is not required by statute, or the rule preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive Order. This final rule does not have federalism implications as defined in the Executive Order. Consistent with Executive Order 13132, HHS specifically requested comments from state and local government officials in the proposed rule regarding federalism implications; we did not receive any comments in response to this specific solicitation.

XII. Treasury and General Government Appropriations Act of 1999

Section 654 of the Treasury and General Government Appropriations Act of 1999 (Pub. L. 105–277) requires federal agencies to determine whether a regulation may negatively impact family well-being. The Department has

concluded that this final rule does not have a negative impact on family well-being, but rather that it will have positive benefits. The statutory requirements and regulations promote the goal of financial responsibility, helping to ensure that families are using their TANF assistance for basic needs. States also may incorporate within their policies and practices opportunities to educate recipients on budgeting, and their state plans must include an explanation of how the state will ensure that recipients have access to using or withdrawing assistance with minimal fees.

List of Subjects in 45 CFR Parts 262, 264, and 265

Administrative practice and procedures, Day care, Employment, Grant programs-social programs, Loan programs-social programs, Manpower training programs, Penalties, Public assistance programs, Reporting and recordkeeping requirements, Vocational education.

Dated: January 11, 2016.

Mark H. Greenberg,

Acting Assistant Secretary for Children, and Families.

Approved: January 11, 2016.

Sylvia M. Burwell,

Secretary.

For the reasons set forth in the preamble, parts 262, 264, and 265 of 45 CFR are amended as follows:

PART 262—ACCOUNTABILITY PROVISIONS-GENERAL

■ 1. The authority citation for 45 CFR part 262 is revised to read as follows:

Authority: 31 U.S.C. 7501 *et seq.*; 42 U.S.C. 606, 609, and 610; Sec. 7102, Pub. L. 109–171, 120 Stat. 135; Sec. 4004, Pub. L. 112–96, 126 Stat. 197.

■ 2. Amend § 262.1 by adding paragraph (a)(16) and revising paragraph (c)(2) to read as follows:

§ 262.1 What penalties apply to states?

(a) * * *

(16)(i) A penalty of not more than five percent of the adjusted SFAG (in accordance with § 264.61(a) of this chapter), for failure to report annually on the state's implementation and maintenance of policies and practices required in § 264.60 of this chapter.

(ii) A penalty of not more than five percent of the adjusted SFAG (in accordance with § 264.61(b) of this chapter), for FY 2014 and each succeeding fiscal year in which the state does not demonstrate that it has implemented and maintained policies

and practices required in § 264.60 of this chapter.

(iii) The penalty under paragraphs (a)(16)(i) and (ii) of this section may be reduced based on the degree of noncompliance of the state.

(iv) Fraudulent activity by any individual receiving TANF assistance in an attempt to circumvent the policies and practices required by § 264.60 of this chapter shall not trigger a state penalty under paragraphs (a)(16)(i) and (ii) of this section.

* * * * *

(c) * * *

(2) We will take the penalties specified in paragraphs (a)(3) through (6) and (8) through (16) of this section by reducing the SFAG payable for the fiscal year that immediately follows our final decision.

* * * * *

■ 3. Amend § 262.2 by adding paragraph (e) to read as follows:

§ 262.2 When do the TANF penalty provisions apply?

* * * * *

(e) In accordance with § 264.61(a) and (b) of this chapter, the penalty specified in § 262.1(a)(16) will be imposed for FY 2014 and each succeeding fiscal year.

■ 4. Amend § 262.3 by adding paragraph (g) as follows:

§ 262.3 How will we determine if a State is subject to a penalty?

* * * * *

(g) To determine if a State is subject to a penalty under § 262.1(a)(16), we will use the information provided in annual state reports at § 265.9(b)(10) of this chapter, in accordance with Section 409(a)(16) of the Social Security Act.

PART 264—OTHER ACCOUNTABILITY PROVISIONS

■ 5. The authority citation for 45 CFR part 264 is revised to read as follows:

Authority: 31 U.S.C. 7501 *et seq.*; 42 U.S.C. 608, 609, 654, 1302, 1308, and 1337.

■ 6. Amend § 264.0(b) by adding definitions for “Casino, gambling casino, or gaming establishment”; “Electronic benefit transfer transaction”; and “Liquor store” in alphabetical order to read as follows:

§ 264.0 What definitions apply to this part?

* * * * *

(b) * * *

Casino, gambling casino, or gaming establishment means an establishment with a primary purpose of accommodating the wagering of money. It does not include:

(i) A grocery store which sells groceries including staple foods and

which also offers, or is located within the same building or complex as, casino, gambling, or gaming activities; or

(ii) Any other establishment that offers casino, gambling, or gaming activities incidental to the principal purpose of the business.

* * * * *

Electronic benefit transfer transaction means the use of a credit or debit card service, automated teller machine, point-of-sale terminal, or access to an online system for the withdrawal of funds or the processing of a payment for merchandise or a service.

* * * * *

Liquor store means any retail establishment which sells exclusively or primarily intoxicating liquor. Such term does not include a grocery store which sells both intoxicating liquor and groceries including staple foods (within the meaning of Section 3(r) of the Food and Nutrition Act of 2008 (7 U.S.C. 2012(r))).

* * * * *

■ 7. Add §§ 264.60 and 264.61 to subpart A to read as follows:

§ 264.60 What policies and practices must a state implement to prevent assistance use in electronic benefit transfer transactions in locations prohibited by the Social Security Act?

Pursuant to Section 408(a)(12) of the Act, states are required to implement policies and practices, as necessary, to prevent assistance (defined at § 260.31(a) of this chapter) provided with federal TANF or state TANF MOE funds from being used in any electronic benefit transfer transaction in any: liquor store; casino, gambling casino or gaming establishment; or retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment.

§ 264.61 What happens if a state fails to report or demonstrate it has implemented and maintained the policies and practices required in § 264.60?

(a) Pursuant to Section 409(a)(16) of the Act and in accordance with 45 CFR part 262, a penalty of not more than five percent of the adjusted SFAG will be imposed for failure to report by February 22, 2014 and each succeeding fiscal year on the state's implementation of policies and practices required in § 264.60. The penalty will be imposed in the succeeding fiscal year, subject to § 262.4(g) of this chapter.

(b) Pursuant to Section 409(a)(16) of the Act and in accordance with 45 CFR part 262, a penalty of not more than five percent of the adjusted SFAG will be imposed for FY 2014 and each

succeeding fiscal year in which the state fails to demonstrate the state's implementation of policies and practices required in § 264.60. The penalty will be imposed in the succeeding fiscal year subject to § 262.4(g) of this chapter.

(c) A penalty applied under paragraphs (a) and (b) of this section may be reduced based on the degree of noncompliance of the state.

(d) Fraudulent activity by any individual in an attempt to circumvent the policies and practices required by § 264.60 shall not trigger a state penalty under paragraphs (a) and (b) of this section.

PART 265—DATA COLLECTION AND REPORTING REQUIREMENTS

■ 8. The authority citation for 45 CFR part 265 continues to read as follows:

Authority: 42 U.S.C. 603, 605, 607, 609, 611, and 613; Pub. L. 109–171.

■ 9. Amend § 265.9 by adding paragraphs (b)(10) and (11) to read as follows:

§ 265.9 What information must a State file annually?

* * * * *

(b) * * *

(10) A comprehensive description of the state's policies and practices to prevent assistance (defined at § 260.31(a) of this chapter) provided with federal TANF or state TANF MOE funds from being used in any electronic benefit transfer transaction in any: liquor store; casino, gambling casino or gaming establishment; or retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment. Reports must address:

(i) Procedures for preventing the use of TANF assistance via electronic benefit transfer transactions in any liquor store; any casino, gambling casino, or gaming establishment; and any retail establishment which provides adult-oriented entertainment in which performers disrobe or perform in an unclothed state for entertainment;

(ii) How the state identifies the locations specified in the statute;

(iii) Procedures for ongoing monitoring to ensure policies are being carried out as intended; and

(iv) How the state responds to findings of non-compliance or program ineffectiveness.

(11) The state's TANF Plan must describe how the state will:

(i) Implement policies and procedures as necessary to prevent access to assistance provided under the State

program funded under this part through any electronic fund transaction in an automated teller machine or point-of-sale device located in a place described in section 408(a)(12) of the Act, including a plan to ensure that recipients of the assistance have adequate access to their cash assistance; and

(ii) Ensure that recipients of assistance provided under the State program funded under this part have access to using or withdrawing assistance with minimal fees or charges, including an opportunity to access assistance with no fee or charges, and are provided information on applicable fees and surcharges that apply to electronic fund transactions involving the assistance, and that such information is made publicly available.

[FR Doc. 2016-00608 Filed 1-13-16; 8:45 am]

BILLING CODE P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 90

[PS Docket No. 13-229, FCC 15-103]

Amendment of the Commission's Rules To Facilitate the Use of Vehicular Repeater Units

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This document implements certain changes to the rules governing six remote control and telemetry channels in the VHF band. We will allow the licensing and operation of vehicular repeater systems (VRS) and other mobile repeaters on these channels. In addition, we revise and update the technical rules for these channels to allow greater use of VRS systems while providing protection for incumbent telemetry users who rely on these frequencies for control of critical infrastructure systems.

DATES: Effective March 15, 2016, except for the addition of § 90.175(b)(4), containing new or modified information collection requirements that require approval by the Office of Management and Budget under the Paperwork Reduction Act of 1995, which will become effective after such approval, on the effective date specified in a notice that the Commission publishes in the **Federal Register** announcing such approval and effective date.

FOR FURTHER INFORMATION CONTACT: Roberto Mussenden, Policy and

Licensing Division, Public Safety and Homeland Security Bureau, (202) 418-1428. For additional information concerning the information collection requirements contained in this document, send an email to PRA@fcc.gov or contact Nicole Ongele, Office of Managing Director, Performance Evaluation and Records Management, 202-418-2991, or by email to Nicole.Ongele@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Report and Order* in PS Docket No. 13-229, FCC 15-103, released on August 10, 2015 and *Clarification Order* in PS Docket No. 13-229, FCC 15-165, released on December 11, 2015. These documents are available for download at http://fjallfoss.fcc.gov/edocs_public/. The complete text of these documents are also available for inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street SW., Room CY-A257, Washington, DC 20554. To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to FCC504@fcc.gov or call the Consumer & Governmental Affairs Bureau at 202-418-0530 (voice), 202-418-0432 (TTY).

In 2013, the Commission's *Notice of Proposed Rulemaking (NPRM)* sought comment on whether to make additional spectrum available to support mobile repeater capability. The Commission declined to seek comment on VRS operations on nine channels in the 170-172 MHz band, but proposed to allow mobile repeater use on six telemetry channels in the 173 MHz band. In addition, the Commission sought comment on whether other spectrum bands or frequencies could also be used for public safety mobile repeater operations; whether to allow Industrial/Business use of mobile repeater stations on these channels; whether to impose bandwidth restrictions on these frequencies; whether frequency coordination could protect telemetry users from interference; whether to allow wide-area mobile repeater operations on these frequencies; and whether to allow VRS units to exceed the 2 watt power limit that applies to these channels.

In the *Report and Order* the Commission decides to allow all users of these channels—including telemetry licensees—to operate using 11.25 kHz bandwidth. In addition, we will make these six telemetry channels co-primary with adjacent channel land mobile operations and remove the restrictions on omni-directional antennas, fixed

station power limits and antenna heights for telemetry stations. The Commission also decides that the only way to accommodate both telemetry and VRS on these frequencies is through frequency coordination to both ensure geographic separation as well as minimizing the risk of commingling voice and data operations. However, since no party provided the Commission with a specific coordination protocol, it directs the coordinator community to develop a consensus protocol for VRS coordination. The Commission also decides to only allow area-wide or state-wide authorizations on a secondary basis. The Commission imposes loading requirements for licensees seeking to license mobile repeaters on these frequencies. The Commission allows VRS to operate with 5 watts ERP but declines to increase the 2-watt power limit for telemetry and remote control use. As a result of our decision to allow the licensing of VRS units on these frequencies, we dismiss as moot several requests for waiver filed during the pendency of this rulemaking. On December 11, 2015, the Commission released a *Clarification Order* to ensure that the Commission's rules aligned with the text of the *August Report and Order*.

Procedural Matters

A. Final Regulatory Flexibility Analysis

The Final Regulatory Flexibility Analysis required by section 604 of the Regulatory Flexibility Act, 5 U.S.C. 604, is included in Appendix B of the Report and Order.

B. Paperwork Reduction Act of 1995 Analysis

This document contains new information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104-13. It will be submitted to the Office of Management and Budget (OMB) for review under 3507(d) of the PRA. OMB, the general public, and other Federal agencies will be invited to comment on the new information collection requirements contained in this proceeding. In addition, we note that pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, see 44 U.S.C. 3506(c)(4), we previously sought specific comment on how the Commission might further reduce the information collection burden for small business concerns with fewer than 25 employees.

The actions taken in the Report and Order in PS Docket No. 13-229 have been analyzed with respect to the Paperwork Reduction Act of 1995, Pub.

L. 104–13, and found to impose new or modified recordkeeping requirements or burdens on the public.

C. Congressional Review Act

The Commission will send a copy of this *Report and Order* to Congress and the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1)(A).

Final Regulatory Flexibility Analysis

As required by the Regulatory Flexibility Act (RFA), an Initial Regulatory Flexibility Analysis (IRFA) was incorporated into the *NPRM* of this proceeding. The Commission sought written public comment on the IRFA. The RFA requires that an agency prepare a regulatory flexibility analysis for notice-and-comment rulemaking proceedings, unless the agency certifies that “the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.” The RFA generally defines “small entity” as having the same meaning as the terms “small business,” “small organization,” and “small governmental jurisdiction.” In addition, the term “small business” has the same meaning as the term “small business concern” under the Small Business Act. A “small business concern” is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA). The present Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.

A. Need for, and Objectives of, the Proposed Rules

In the *Report and Order*, we amend the Commission’s rules we amend the Commission’s Rules to allow the licensing and operation of vehicular repeater systems (VRS) and other mobile repeaters on six remote control and telemetry channels in the VHF band. The rule changes adopted are intended to promote flexible and efficient use of these channels. In order to achieve these objectives, we:

- Allow the use of mobile repeaters on the following six telemetry channels: 173.2375, 173.2625, 173.2875, 173.3125, 173.3375, and 173.3625 MHz.
- Allow the use of bandwidths up to 11.25 kHz on these channels.
- Require frequency coordination for applications seeking primary status on these frequencies.
- Limit applicants to a license a maximum of three channels on a primary basis

B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

There were no comments filed that specifically addressed the rules and policies proposed in the IRFA.

C. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply

The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term “small entity” as having the same meaning as the terms “small business,” “small organization,” and “small governmental jurisdiction.” In addition, the term “small business” has the same meaning as the term “small business concern” under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

Public Safety Radio Licensees. As a general matter, Public Safety Radio Licensees include police, fire, local government, forestry conservation, highway maintenance, and emergency medical services. For the purpose of determining whether a Public Safety Radio Licensee is a small business as defined by the SBA, we use the broad census category, Wireless Telecommunications Carriers (except Satellite). This definition provides that a small entity is any such entity employing no more than 1,500 persons. For this category, census data for 2007 show that there were 11,163 establishments that operated for the entire year. Of this total, 10,791 establishments had employment of 999 or fewer employees and 372 had employment of 1000 employees or more. The Commission does not require Public Safety Radio Licensees to disclose information about number of employees, so the Commission does not have information that could be used to determine how many Public Safety Radio licensees constitute small entities under this definition. Nonetheless, the Commission estimates that the majority of Public Safety Radio Licensees are small entities.

Private Land Mobile Radio Licensees. The Private land mobile radio (PLMR) systems serve an essential role in a vast range of industrial, business, land transportation, and public safety activities. These radios are used by companies of all sizes operating in all U.S. business categories. Because of the

vast array of PLMR users, the Commission has not developed a small business size standard specifically applicable to PLMR users. The SBA rules, however, contain a definition for Wireless Telecommunications Carriers (except Satellite) which encompasses business entities engaged in *radiotelephone communications employing no more than 1,500 persons*. According to the Commission’s records, there are a total of 3,374 licenses in the frequencies range 173.225 MHz to 173.375 MHz, which is the range affected by this NPRM. Despite the lack of specific information, however, the Commission believes that a substantial number of PLMR licensees may be small entities.

Frequency Coordinators. Neither the Commission nor the SBA has developed a small business size standard specifically applicable to spectrum frequency coordinators. There are nine frequency coordinators certified by the Commission to coordinate frequencies allocated for public safety use. The Commission has not developed a small business size standard specifically applicable to frequency coordinators. The SBA rules, however, contain a definition for Wireless Telecommunications Carriers (except Satellite) which encompasses business entities engaged in *radiotelephone communications employing no more than 1,500 persons*. Under this category and size standard, we estimate that a majority of frequency coordinators can be considered small.

D. Description of Projected Reporting, Recordkeeping and Other Compliance Requirements

This *Report and Order* adopts a rule that will entail reporting, recordkeeping, and/or third-party consultation. Specifically, the *Report and Order* requires applicants for mobile repeater authorizations receive frequency coordination prior to filing a license application with the Commission. While the preparation of an application does not require the hiring of professionals, frequency coordinators do charge a fee for their services. Therefore, licensees will incur a one-time burden each time an application is filed with the Commission. The estimated burden and cost levels are described in more detail in the supporting statement for OMB 3060–1198, ICR Ref. No. 201404–30.

E. Steps Taken To Minimize Significant Economic Impact on Small Entities and Significant Alternatives Considered

The RFA requires an agency to describe any significant alternatives that it has considered in reaching its

approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

The *Report and Order* adopts changes to the rules covering operation on six telemetry channels in the 173 MHz band. In formulating rule changes in the *Report and Order*, we strived to promote efficient use of spectrum.

The *Report and Order* requires applicants obtain frequency coordination prior to filing a license application with the Commission. Given the Commission's previous reliance on frequency coordination as a mechanism to minimize the occurrence of harmful interference, we did not consider other alternatives to frequency coordination. In addition, we note that there are no methods by which to reduce the burden of frequency coordination on smaller entities. The *Report and Order* concludes that the benefits of frequency coordination outweigh any potential economic burden associated with frequency coordination.

F. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

None.

G. Report to Congress

The Commission will send a copy of the *Report and Order*, including the FRFA, in a report to be sent to Congress pursuant to the Small Business Regulatory Enforcement Fairness Act of 1996. In addition, the Commission will send a copy of the *Report and Order*, including this FRFA, to the Chief

Counsel for Advocacy of the Small Business Administration.

Ordering Clauses

Accordingly, *it is ordered* that, pursuant to sections 1, 4(i), 303, 316, 332 and 337 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i), 303, 316, 332 and 337, the Report and Order *is hereby adopted*.

It is further ordered that the amendments of the Commission's rules as set forth in Appendix B of the *Report and Order* are adopted, effective February 16, 2016, except for those rules and requirements in Section 90.175 containing new or modified information collection requirements that require approval by the Office of Management and Budget under the Paperwork Reduction Act of 1995, which *will become effective* after such approval, on the effective date specified in a notice that the Commission publishes in the **Federal Register** announcing such approval and effective date.

It is further ordered that, pursuant to Section 4(i) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), and Section 1.925(b)(3) of the Commission's rules, 47 CFR 1.925(b)(3), the Request for Waiver filed by the Washington Metropolitan Area Transit Authority on June 18, 2013, *is dismissed as moot*.

It is further ordered that, pursuant to Section 4(i) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), and Section 1.925(b)(3) of the Commission's rules, 47 CFR 1.925(b)(3), the Modification Application and associated Request for Waiver filed by Trinity County, California on January 31, 2014 *are dismissed*.

It is further ordered that, pursuant to Section 4(i) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), and Section 1.925(b)(3) of the Commission's rules, 47 CFR 1.925(b)(3), the Application and associated Request for Waiver filed by Williams County Sheriff's Department on December 26, 2013, *are dismissed*.

It is further ordered that, pursuant to Section 4(i) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), and Section 1.925(b)(3) of the Commission's rules, 47 CFR 1.925(b)(3), the Application and associated Request for Waiver filed by Panhandle Regional Planning Commission on August 5, 2013, *are dismissed*.

It is further ordered that the Commission *shall send* a copy of the *Report and Order* in a report to be sent to Congress and the General Accounting Office pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A).

List of Subjects in 47 CFR Part 90

Radio.

Federal Communications Commission.

Sheryl Todd,

Deputy Secretary.

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 90 as follows:

PART 90—PRIVATE LAND MOBILE RADIO SERVICES

■ 1. The authority citation for part 90 continues to read as follows:

Authority: Sections 4(i), 11, 303(g), 303(r), and 332(c)(7) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 161, 303(g), 303(r), and 332(c)(7), and Title VI of the Middle Class Tax Relief and Job Creation Act of 2012, Pub. L. 112–96, 126 Stat. 156.

■ 2. Amend § 90.20:

■ a. In the table in paragraph (c)(3) by revising the entries for 173.2375, 173.2625, 173.2875, 173.3125, 173.3375, and 173.3625; and

■ b. By adding paragraphs (d)(90) through (93).

The revisions and additions read as follows:

§ 90.20 Public Safety Pool.

* * * * *

Amend § 90.35: ■ a. In the table in paragraph (b)(3) by revising the entries for 173.2375, 173.2625, 173.2875, 173.3125, 173.3375 and 173.3625; and ■ b. By adding paragraphs (c)(92) through (95). The revisions and additions read as follows: § 90.35 Industrial/Business Pool. * * * * * (b) * * * (3) * * *	

INDUSTRIAL BUSINESS POOL FREQUENCY TABLE

Frequency or band	Class of station(s)	Limitations	Coordinator
* * * * *			
Megahertz			
173.2375	Fixed or mobile	92, 93, 94, 95.	
173.2625	Fixed or mobile	92, 93, 94, 95.	
173.2875	Fixed or mobile	92, 93, 94, 95.	
173.3125	Fixed or mobile	92, 93, 94, 95.	
173.3375	Fixed or mobile	92, 93, 94, 95.	
173.3625	Fixed or mobile	92, 93, 94, 95.	
* * * * *			

(c) * * *

(92) This frequency is available on a shared basis both for remote control and telemetry operations and for mobile repeater operations. The authorized bandwidth may not exceed 11.25 kHz.

(93) This frequency is available on a shared basis with the Public Safety Pool for remote control and telemetry operations. In cases where § 90.35(c)(95) applies to this frequency, licensees seeking primary status for the use of this frequency for mobile repeater stations

and hand-carried transmitters that communicate directly with mobile repeater stations must describe the area of normal day-to-day operations either in terms of operation in a specific county or in the terms of maximum distance from a geographic center (latitude and longitude) and shall be subject to the frequency coordination requirements of § 90.175.

(94) Mobile repeaters operating on this frequency are subject to a channel loading requirement of 50 transmitter-

receivers. Loading standards will be applied in terms of the number of units actually in use or to be placed in use within 8 months following authorization. A licensee will be required to show that an assigned frequency pair is at full capacity before it may be assigned a second or additional frequency. Channel capacity may be reached either by the requirements of a single licensee or by several users sharing a channel. Until a channel is loaded to capacity it will be

available for assignment to other users in the same area.

(95) The maximum effective radiated power (ERP) may not exceed 2 watts for mobile stations, and 5 watts for mobile repeater stations and hand-carried transmitters that communicate directly with mobile repeater stations.

* * * * *

■ 4. Section 90.175 is amended by adding paragraph (b)(4) to read as follows:

§ 90.175 Frequency coordinator requirements.

* * * * *

(b) * * *

(4) For any application for mobile repeater station operations on frequencies denoted by both § 90.20(d)(90) and (92), or by both § 90.35(c)(93) and (95) the frequency coordinator responsible for the application must determine and disclose to the applicant the call signs and the service areas of all active co-channel incumbent remote control and telemetry stations inside the applicant's proposed area of operation by adding a special condition to the application, except when the applicant has obtained written concurrence from an affected incumbent licensee, or when the applicant and the incumbent licensee are the same entity.

[FR Doc. 2016-00220 Filed 1-14-16; 8:45 am]

BILLING CODE 6712-01-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 300

RIN 0648-BE71

International Fisheries; Pacific Tuna Fisheries; 2016 Commercial Pacific Bluefin Tuna Catch Limit in the Eastern Pacific Ocean

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Announcement of 2016 Commercial Pacific bluefin tuna catch limit.

SUMMARY: NMFS is announcing that the Pacific bluefin tuna catch limit applicable to U.S. commercial fishing vessels in the eastern Pacific Ocean (EPO) in 2016 is 425 metric tons (mt). This notice is necessary to inform fishery participants of the catch limit established in a final rule published on July 8, 2015.

DATES: The catch limit is effective February 14, 2016, through 11:59 p.m. local time December 31, 2016.

FOR FURTHER INFORMATION CONTACT: Celia Barroso, NMFS West Coast Region, 562-432-1850.

SUPPLEMENTARY INFORMATION: The United States is a member of the Inter-American Tropical Tuna Commission (IATTC), which was established under the Convention for the Establishment of an Inter-American Tropical Tuna Commission (Convention) signed in 1949. The Convention is an international agreement that, among other matters, serves as a framework for international conservation and management of highly migratory species of fish in the IATTC Convention Area.

Fishing for tuna in the EPO is managed, in part, under the Tuna Conventions Act of 1950 (Act), as amended. Under the Act, NMFS must publish regulations to carry out

recommendations of the IATTC. Regulations governing fishing by U.S. vessels in accordance with the Act appear at 50 CFR part 300, subpart C, and these regulations implement IATTC recommendations for the conservation and management of highly migratory fish resources in the EPO.

In 2014, the IATTC adopted Resolution C-14-06 (*Measures for the Conservation and Management of Pacific Bluefin Tuna in the Eastern Pacific Ocean, 2015-2016*), which establishes catch and trip limits of Pacific bluefin tuna applicable to U.S. commercial fishing vessels in 2015 and 2016. NMFS implemented this resolution by notice-and-comment rulemaking under the Act (80 FR 38986, July 8, 2015, and codified at 50 CFR 300.25). According to the regulations at 50 CFR 300.25(h)(2)(i), if 175 mt or less are caught in 2015, as determined by NMFS, then the 2016 catch limit is 425 mt.

NMFS, through landings data and other available information, has determined that U.S. commercial vessels in the EPO have caught less than 175 mt of PBF in 2015; preliminary estimates indicate total landings to be approximately 96 mt. In accordance with 50 CFR 300.25(h), this **Federal Register** notice announces that a 425 mt catch limit for Pacific bluefin tuna applies to U.S. commercial fishing vessels in the EPO through the end of the 2016 calendar year.

As a reminder, in accordance with 50 CFR 300.25(h), a trip limit of 25 mt per vessel applies. When NMFS anticipates that the total catch for the U.S. fleet has reached 375 mt, NMFS will impose a 2 mt trip limit until 425 mt have been caught and the fishery is closed.

Authority: 16 U.S.C. 951 *et seq.*

Dated: January 11, 2016.

Emily H. Menashes,
Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

Proposed Rules

Federal Register

Vol. 81, No. 10

Friday, January 15, 2016

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

10 CFR Part 431

[Docket Numbers EERE-2013-BT-STD-0007 and EERE-2013-BT-STD-0021]

RIN 1904-AC95 and 1904-AD11

Energy Conservation Program for Certain Industrial Equipment: Energy Conservation Standards for Small, Large, and Very Large Air-Cooled Commercial Package Air Conditioning and Heating Equipment and Commercial Warm Air Furnaces

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Supplemental notice of proposed rulemaking.

SUMMARY: The Energy Policy and Conservation Act of 1975, as amended (EPCA), prescribes energy conservation standards for various consumer products and certain commercial and industrial equipment, including small, large, and very large air-cooled commercial package air conditioning and heating equipment and commercial warm air furnaces. EPCA also requires that the U.S. Department of Energy (DOE) periodically review and consider amending its standards for specified categories of industrial equipment, including commercial heating and air-conditioning equipment, in order to determine whether more-stringent, amended standards would be technologically feasible and economically justified, and save a significant additional amount of energy. In this document, DOE proposes to amend the energy conservation standards for both small, large, and very large air-cooled commercial package air conditioning and heating equipment and commercial warm air furnaces identical to those set forth in a direct final rule published elsewhere in this **Federal Register**. If DOE receives an adverse comment and determines that such comment may provide a reasonable basis for withdrawing the

direct final rule, DOE will publish a document withdrawing the direct final rule and will proceed with this proposed rule.

DATES: DOE will accept comments, data, and information regarding the proposed standards no later than May 4, 2016.

Comments regarding the likely competitive impact of the proposed standard should be sent to the Department of Justice contact listed in the **ADDRESSES** section before February 16, 2016.

ADDRESSES: *Instructions:* Any comments submitted must identify the proposed rule for Energy Conservation Standards for small, large, and very large air-cooled commercial package air conditioning and heating equipment (CUACs and CUHPs) and commercial warm air furnaces (CWAfFs), and provide docket number EERE-2013-BT-STD-0007 and/or regulatory information number (RIN) 1904-AC95 for CUACs and CUHPs and EERE-2013-BT-STD-0021 and/or RIN 1904-AD11 for CWAfFs. Comments may be submitted using any of the following methods:

1. *Federal eRulemaking Portal:* www.regulations.gov. Follow the instructions for submitting comments.
2. *Email:* For CUACs and CUHPs: CommPkgACHP2013STD0007@ee.doe.gov. For CWAfFs: CommWarmAirFurn2013STD0021@ee.doe.gov. Include the docket number and/or RIN for each equipment category in the subject line of the message. Submit electronic comments in WordPerfect, Microsoft Word, PDF, or ASCII file format, and avoid the use of special characters or any form of encryption.
3. *Postal Mail:* Ms. Brenda Edwards, U.S. Department of Energy, Building Technologies Office, Mailstop EE-5B, 1000 Independence Avenue SW., Washington, DC 20585-0121. If possible, please submit all items on a compact disc (CD), in which case it is not necessary to include printed copies.
4. *Hand Delivery/Courier:* Ms. Brenda Edwards, U.S. Department of Energy, Building Technologies Office, 950 L'Enfant Plaza SW., Room 6094, Washington, DC 20024. Telephone: (202) 586-2945. If possible, please submit all items on a CD, in which case it is not necessary to include printed copies.

No telefacsimilies (faxes) will be accepted.

For detailed instructions on submitting comments and additional information on the rulemaking process, see section III of this document ("Public Participation").

Written comments regarding the burden-hour estimates or other aspects of the collection-of-information requirements contained in this proposed rule may be submitted to Office of Energy Efficiency and Renewable Energy through the methods listed above and by email to Chad_S_Whiteman@omb.eop.gov.

EPCA requires the Attorney General to provide DOE a written determination of whether the proposed standard is likely to lessen competition. The U.S. Department of Justice Antitrust Division invites input from market participants and other interested persons with views on the likely competitive impact of the proposed standard. Interested persons may contact the Division at energy_standards@atr.usdoj.gov before February 16, 2016. Please indicate in the "Subject" line of your email the title and Docket Number of this rulemaking notice.

Docket: The dockets, which include **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at www.regulations.gov. All documents in the dockets are listed in the www.regulations.gov index. However, some documents listed in the index, such as those containing information that is exempt from public disclosure, may not be publicly available.

A link to the docket Web page for small, large, and very large air-cooled commercial package air conditioning and heating equipment can be found at: www.regulations.gov/#!docketDetail;D=EERE-2013-BT-STD-0007. A link to the docket Web page for commercial warm air furnaces can be found at: www.regulations.gov/#!docketDetail;D=EERE-2013-BT-STD-0021. The www.regulations.gov Web page will contain instructions on how to access all documents, including public comments, in the docket.

For further information on how to review the dockets, please contact Ms. Brenda Edwards at (202) 586-2945 or by email: Brenda.Edwards@ee.doe.gov.

FOR FURTHER INFORMATION CONTACT: Mr. John Cymbalsky, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies, EE-5B, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 286-1692. Email: John.Cymbalsky@ee.doe.gov.

I. Introduction and Authority

Title III, Part C¹ of the Energy Policy and Conservation Act of 1975 (“EPCA” or, in context, “the Act”), Public Law 94–163 (December 22, 1975), coupled with Title IV of the National Energy Conservation Policy Act, Public Law 95–619 (November 9, 1978), (collectively codified at 42 U.S.C. 6311–6317), established the Energy Conservation Program for Certain Industrial Equipment, which includes provisions covering the equipment addressed by this document.² In general, this program addresses the energy efficiency of certain types of commercial and industrial equipment. Relevant provisions of the Act specifically include definitions (42 U.S.C. 6311), energy conservation standards (42 U.S.C. 6313), test procedures (42 U.S.C. 6314), labeling provisions (42 U.S.C. 6315), and the authority to require information and reports from manufacturers (42 U.S.C. 6316).

Section 342(a) of EPCA, which was added as part of the Energy Policy Act of 1992, Public Law 102–486 (October 24, 1992) (“EPAct 1992”), introduced new provisions regarding DOE’s authority to regulate certain commercial and industrial equipment. Among the equipment EPAct 1992 required DOE to regulate were small and large air-cooled commercial package air conditioning and heating equipment, along with

commercial warm air furnaces (“CWAFFs”). See EPAct 1992, sec. 122 (codified as amended at 42 U.S.C. 6313(a)). As part of these changes, Congress specified energy conservation standards for this equipment to meet. See *id.* Later, the Energy Policy Act of 2005, Public Law 109–58 (August 8, 2005) (“EPACT 2005”), further amended DOE’s authority to include very large air-cooled commercial package air conditioning and heating equipment and added standards for this equipment to meet as well. See EPACT 2005, sec. 136 (codified as amended at 42 U.S.C. 6313(a)). (Small, large, and very large, air-cooled commercial package air conditioning and heating equipment are also known generally as air-cooled commercial unitary air conditioners and heat pumps (“CUACs” and “CUHPs”). Congress established standards for CUACs/CUHPs that have a rated capacity between 65,000 British thermal units per hour (Btu/h) and 760,000 Btu/h. Similarly, for CWAFFs, Congress established standards for equipment that (1) have a rated capacity (rated maximum input³) greater than or equal to 225,000 Btu/h, (2) can be gas-fired or oil-fired, and (3) are designed to heat commercial and industrial buildings. See 42 U.S.C. 6313(a)(4).

Collectively, CUACs/CUHPs and CWAFFs are designed to heat and cool commercial buildings and are often located on a building’s rooftop.

Section 342(a) of EPCA concerns energy conservation standards for small, large, and very large, CUACs and CUHPs. (42 U.S.C. 6313(a)) This category of equipment has a rated capacity between 65,000 Btu/h and 760,000 Btu/h. This equipment is designed to heat and cool commercial buildings and is often located on the building’s rooftop.

The initial Federal energy conservation standards for CWAFFs were added to EPCA by the Energy Policy Act of 1992 (EPACT 1992), Public Law 102–486 (Oct. 24, 1992). See 42 U.S.C. 6313(a)(4). These types of covered equipment have a rated capacity (rated maximum input⁴) greater than or equal to 225,000 Btu/h, can be gas-fired or oil-fired, and are designed to heat commercial and industrial buildings. *Id.*

Pursuant to section 342(a)(6) of EPCA, DOE is to consider amending the energy efficiency standards for certain types of commercial and industrial equipment whenever ASHRAE amends the

standard levels or design requirements prescribed in ASHRAE/IES Standard 90.1, and whenever more than 6 years had elapsed since the issuance of the most recent final rule establishing or amending a standard for the equipment as of the date of AEMTCA’s enactment, December 18, 2012. (42 U.S.C. 6313(a)(6)(C)(vi)) Because more than six years had elapsed since DOE issued a final rule with standards for CUACs and CUHPs or CWAFFs on October 18, 2005 (see 70 FR 60407), DOE initiated the process to review these standards.

Pursuant to EPCA, DOE’s energy conservation program for covered equipment consists essentially of four parts: (1) Testing; (2) labeling; (3) the establishment of Federal energy conservation standards; and (4) certification and enforcement procedures. Subject to certain criteria and conditions, DOE is required to develop test procedures to measure the energy efficiency, energy use, or estimated annual operating cost of covered equipment. (42 U.S.C. 6314) Manufacturers of covered equipment must use the prescribed DOE test procedure as the basis for certifying to DOE that their equipment comply with the applicable energy conservation standards adopted under EPCA and when making representations to the public regarding their energy use or efficiency. (42 U.S.C. 6314(d)) Similarly, DOE must use these test procedures to determine whether a given manufacturer’s equipment complies with standards adopted pursuant to EPCA. The DOE test procedures for small, large, and very large CUACs/CUHPs and CWAFFs currently appear at title 10 of the Code of Federal Regulations (“CFR”) 431.96 and 431.76, respectively.

When setting standards for the equipment addressed by this document, EPCA prescribes that in deciding whether a proposed standard is economically justified, DOE must determine whether the benefits of the standard exceed its burdens. DOE must make this determination after receiving comments on the proposed standard, and by considering, to the maximum extent practicable, the following seven statutory factors:

1. The economic impact of the standard on manufacturers and consumers of products subject to the standard;
2. The savings in operating costs throughout the estimated average life of the covered products in the type (or class) compared to any increase in the price, initial charges, or maintenance expenses for the covered products

¹ Part C was codified as Part A–1 of the corresponding portion of the U.S. Code.

² All references to EPCA in this document refer to the statute as amended through the Energy Efficiency Improvement Act of 2015, Public Law 114–11 (April 30, 2015).

³ “Rated maximum input” means the maximum gas-burning capacity of a CWAFF in Btus per hour, as specified by the manufacturer.

⁴ “Rated maximum input” means the maximum gas-burning capacity of a CWAFF in Btus per hour, as specified by the manufacturer.

which are likely to result from the standard;

3. The total projected amount of energy savings likely to result directly from the standard;

4. Any lessening of the utility or the performance of the covered products likely to result from the standard;

5. The impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from the standard;

6. The need for national energy conservation; and

7. Other factors the Secretary of Energy considers relevant. (42 U.S.C. 6313(a)(6)(B)(ii))

With respect to the types of equipment at issue in this document, EPCA also contains what is known as an “anti-backsliding” provision, which prevents the Secretary from prescribing any amended standard that either increases the maximum allowable energy use or decreases the minimum required energy efficiency of a covered product. (42 U.S.C. 6313(a)(6)(B)(iii)(I)) Also, the Secretary may not prescribe an amended or new standard if interested persons have established by a preponderance of the evidence that the standard is likely to result in the unavailability in the United States of any covered product type (or class) of performance characteristics (including reliability, features, sizes, capacities, and volumes) that are substantially the same as those generally available in the United States. (42 U.S.C. 6313(a)(6)(B)(iii)(II)(aa))

With respect to the equipment addressed by this document, DOE notes that EPCA prescribes limits on the Agency’s ability to promulgate a standard if DOE has made a finding that interested persons have established by a preponderance of the evidence that a standard is likely to result in the unavailability of any product type (or class) of performance characteristics that are substantially the same as those generally available in the United States at the time of the finding. See 42 U.S.C. 6313(B)(iii)(II).

Additionally, EPCA generally specifies criteria to follow when promulgating multiple energy conservation standards for covered products based on different subcategories. In these cases, DOE must specify a different standard level for a type or class of product that has the same function or intended use if DOE determines that products within such group: (A) Consume a different kind of energy from that consumed by other covered products within such type (or class); or (B) have a capacity or other performance-related feature which other

products within such type (or class) do not have and such feature justifies a higher or lower standard. See 42 U.S.C. 6295(q)(1). In determining whether a performance-related feature justifies a different standard for a group of products, DOE must consider such factors as the utility to the customer of such a feature and other factors DOE deems appropriate. Id. Any rule prescribing such a standard must include an explanation of the basis on which such higher or lower level was established. See 42 U.S.C. 6295(q)(2). With respect to the equipment addressed by this supplemental notice of proposed rulemaking (“SNOPR”), DOE notes that EPCA prescribes limits on the Agency’s ability to promulgate a standard if DOE has made a finding that interested persons have established by a preponderance of the evidence that a standard is likely to result in the unavailability of any product type (or class) of performance characteristics that are substantially the same as those generally available in the United States at the time of the finding. See 42 U.S.C. 6313(B)(iii)(II).

With particular regard to this document, the Energy Independence and Security Act of 2007 (“EISA 2007”), Public Law 110–140 (December 19, 2007), amended EPCA, in relevant part, to grant DOE authority to issue a type of final rule (*i.e.*, a “direct final rule”) establishing an energy conservation standard for a product on receipt of a statement that is submitted jointly by interested persons that are fairly representative of relevant points of view (including representatives of manufacturers of covered products, States, and efficiency advocates), as determined by the Secretary, and that contains recommendations with respect to an energy or water conservation standard. If the Secretary determines that the recommended standard contained in the statement is in accordance with 42 U.S.C. 6295(o) or 42 U.S.C. 6313(a)(6)(B), as applicable, the Secretary may issue a final rule establishing the recommended standard. A notice of proposed rulemaking (“NOPR”) that proposes an identical energy efficiency standard is published simultaneously with the direct final rule. A public comment period of at least 110 days is provided. See 42 U.S.C. 6295(p)(4). Not later than 120 days after the date on which a direct final rule issued under this authority is published in the **Federal Register**, the Secretary shall withdraw the direct final rule if the Secretary receives 1 or more adverse public comments relating to the direct final rule or any alternative joint

recommendation and based on the rulemaking record relating to the direct final rule, the Secretary determines that such adverse public comments or alternative joint recommendation may provide a reasonable basis for withdrawing the direct final rule under subsection 42 U.S.C. 6295(o), 6313(a)(6)(B), or any other applicable law. On withdrawal of a direct final rule, the Secretary shall proceed with the notice of proposed rulemaking published simultaneously with the direct final rule and publish in the **Federal Register** the reasons why the direct final rule was withdrawn. This direct final rule provision applies to the equipment at issue in this SNOPR. See 42 U.S.C. 6316(b)(1). In this instance, because DOE has already published NOPRs related to the amendment of standards both CUACs/CUHPs and CWAFFs, see 79 FR 58948 (September 30, 2014) (CUAC/CUHP proposal) and 80 FR 6182 (February 4, 2015), DOE is publishing an SNOPR consistent with the direct final rule’s statutory requirements.

Responding to comments received from interested parties with respect to DOE’s proposals, on April 1, 2015, DOE issued a Notice of Intent to Establish the Commercial Package Air Conditioners and Commercial Warm Air Furnaces Working Group to Negotiate Potential Energy Conservation Standards for Commercial Package Air Conditioners and Commercial Warm Air Furnaces. 80 FR 17363. The CUAC/CUHP–CWAFF Working Group (in context, “the Working Group”) was established under the Appliance Standards and Rulemaking Federal Advisory Committee (“ASRAC”) in accordance with the Federal Advisory Committee Act and the Negotiated Rulemaking Act with the purpose of discussing and, if possible, reaching consensus on a set of energy conservation standards to propose or finalize for CUACs, CUHPs and CWAFFs. The Working Group was to consist of fairly representative parties having a defined stake in the outcome of the proposed standards, and would consult, as appropriate, with a range of experts on technical issues.

DOE received 17 nominations for membership. Ultimately, the Working Group consisted of 17 members, including one member from ASRAC and one DOE representative.⁵ The Working

⁵ The group members were John Cymbalsky (U.S. Department of Energy), Marshall Hunt (Pacific Gas & Electric Company, San Diego Gas & Electric Company, Southern California Edison, and Southern California Gas Company), Andrew deLaski (Appliance Standards Awareness Project), Louis Starr (Northwest Energy Efficiency Alliance),

Group met six times (five times in-person and once by teleconference). The meetings were held on April 28, May 11–12, May 20–21, June 1–2, June 9–10, and June 15, 2015. As a result of these efforts, the Working Group successfully reached consensus on energy conservation standards for CUACs, CUHPs, and CWAFFs. On June 15, 2015, it submitted a Term Sheet to ASRAC outlining its recommendations, which ASRAC subsequently adopted.⁶ See <http://www.regulations.gov/#!documentDetail;D=EERE-2013-BT-STD-0007-0093>.

DOE has determined that the statement containing recommendations with respect to energy conservation standards for CUACs, CUHPs and CWAFFs was submitted jointly by interested persons that are fairly representative of relevant points of view, in accordance with 42 U.S.C. 6295(p)(4)(A) and 6313(a)(6)(B).⁷ In reaching this determination, DOE took into consideration the fact that the Working Group, in conjunction with ASRAC members who approved the recommendations, consisted of representatives of manufacturers of covered products, States, and efficiency advocates—all of which are groups specifically identified by Congress as relevant parties to any consensus recommendation. (42 U.S.C. 6295(p)(4)(A) As delineated above, the Term Sheet was signed and submitted

by a broad cross-section of interests, including the manufacturers of the subject equipment, trade associations representing these manufacturers and installation contractors, environmental and energy-efficiency advocacy organizations, and electric utility companies. The ASRAC Committee approving the Working Group's recommendations included at least two members representing States—one representing the National Association of State Energy Officials (NASEO) and one representing the State of California.⁸ By its plain terms, the statute contemplates that the Secretary will exercise discretion to determine whether a given statement is “submitted jointly by interested persons that are fairly representative of relevant points of view (including representatives of manufacturers of covered products, States, and efficiency advocates).” In this case, given the broad range of persons participating in the process that led to the submission—in the Working Group and in ASRAC—and given the breadth of perspectives expressed in that process, DOE has determined that the statement it received meets this criterion.

Pursuant to 42 U.S.C. 6295(p)(4), the Secretary must also determine whether a jointly-submitted recommendation for an energy or water conservation standard satisfies 42 U.S.C. 6295(o) or 42 U.S.C. 6313(a)(6)(B), as applicable. In making this determination, DOE has conducted an analysis to evaluate whether the potential energy conservation standards under consideration would meet these requirements. This evaluation is similar to the comprehensive approach that DOE typically conducts whenever it considers potential energy conservation standards for a given type of product or equipment. DOE applies the same principles to any consensus recommendations it may receive to satisfy its statutory obligation to ensure that any energy conservation standard that it adopts achieves the maximum improvement in energy efficiency that is technologically feasible and economically justified and will result in the significant conservation of energy. Upon review, the Secretary determined that the Term Sheet submitted in the instant rulemaking comports with the standard-setting criteria set forth under 42 U.S.C. 6313(a)(6)(B). As a result, DOE published a direct final rule establishing energy conservation standards for CUACs/CUHPs and CWAFFs elsewhere in this **Federal Register**. If DOE receives

adverse comments that may provide a reasonable basis for withdrawal and withdraws the direct final rule, DOE will consider those comments and any other comments received in determining how to proceed with this proposed rule.

For further background information on these proposed standards and the supporting analyses, please see the direct final rule published elsewhere in this **Federal Register**. That document includes additional discussion of the EPCA requirements for promulgation of energy conservation standards; the current standards for CUACs/CUHPs and CWAFFs; the history of the standards rulemakings establishing such standards; and information on the test procedures used to measure the energy efficiency of CUACs/CUHPs and CWAFFs. The document also contains an in-depth discussion of the analyses conducted in support of this rulemaking, the methodologies DOE used in conducting those analyses, and the analytical results.

II. Proposed Standards

When considering more stringent standards for the equipment at issue, DOE must determine, supported by clear and convincing evidence that adopting those standards would result in the significant additional conservation of energy and be technologically feasible and economically justified. See 42 U.S.C. 6313(a)(6)(A)(ii). In determining whether a standard is economically justified, the Secretary must determine whether the benefits of the standard exceed its burdens by, to the greatest extent practicable, considering the seven statutory factors discussed previously. (42 U.S.C. 6313(a)(6)(B)(ii)(I)–(VII))

DOE considered the impacts of amended standards for CUACs/CUHPs and CWAFFs at each TSL, beginning with the maximum technologically feasible level, to determine whether that level would be economically justified. Where the max-tech level was not justified, DOE then considered the next most efficient level and undertook the same evaluation until it reached the highest efficiency level that is both technologically feasible and economically justified and saves a significant amount of energy.

To aid the reader as DOE discusses the benefits and/or burdens of each TSL, tables in this section present a summary of the results of DOE's quantitative analysis for each TSL. In addition to the quantitative results presented in the tables, DOE also considers other burdens and benefits that affect economic justification.

Meg Waltner (Natural Resources Defense Council), Jill Hootman (Ingersoll Rand/Trane), John Hurst (Lennox), Karen Meyers (Rheem Manufacturing Company), Charlie McCrudden (Air Conditioning Contractors of America), Harvey Sachs (American Council for an Energy Efficient Economy), Paul Doppel (Mitsubishi Electric), Robert Whitwell (United Technologies Corporation), Michael Shows (Underwriters Laboratories), Russell Tharp (Goodman Manufacturing), Sami Zendah (Emerson Climate Technologies), Mark Tezigni (Sheet Metal and Air Conditioning Contractors National Association, Inc.), Nick Mislak (Air-Conditioning, Heating, and Refrigeration Institute).

⁶ Available at <http://www.regulations.gov/#!documentDetail;D=EERE-2013-BT-STD-0007-0093>. The following individuals served as members of ASRAC that received and approved the Term Sheet: Co-Chair John Mandyck (Carrier/United Technologies Corporation), Co-Chair Andrew deLaski (Appliance Standards Awareness Project), Ashley Armstrong (U.S. Department of Energy), John Caskey (National Electrical Manufacturers Association), Jennifer Cleary (Association of Home Appliance Manufacturers), Thomas Eckman (Northwest Power and Conservation Council), Charles Hon (True Manufacturing Company), Dr. David Hungerford (California Energy Commission), Dr. Diane Jakobs (Rheem Manufacturing Company), Kelley Kline (General Electric, Appliances), Deborah Miller (National Association of State Energy Officials), and Scott Blake Harris (Harris, Wiltshire & Grannis, LLP).

⁷ See 42 U.S.C. 6313(b) (applying 42 U.S.C. 6295(p)(4) to energy conservation standard rulemakings involving a variety of industrial equipment, including CUACs, CUHPs, and CWAFFs).

⁸ These individuals were Deborah E. Miller (NASEO) and David Hungerford (California Energy Commission).

A. Benefits and Burdens of TSLs Considered for Small, Large, and Very Large Air-Cooled Commercial Package Air Conditioning and Heating Equipment

Table II.1 and Table II.2 summarize the quantitative impacts estimated for

each TSL for CUACs and CUHPs. The national impacts are measured over the lifetime of CUACs and CUHPs purchased in the 2018–2048 period. The energy savings, emissions reductions, and value of emissions reductions refer to full-fuel-cycle results. The efficiency

levels contained in each TSL are described in section V.A of the direct final rule.

TABLE II.1—SUMMARY OF ANALYTICAL RESULTS FOR SMALL, LARGE, AND VERY LARGE AIR-COOLED COMMERCIAL PACKAGE AIR CONDITIONING AND HEATING EQUIPMENT: NATIONAL IMPACTS

Parentheses indicate negative (–) values.

* Weighted by shares of each equipment class in total projected shipments in the year of compliance.

DOE first considered TSL 5, which represents the max-tech efficiency levels. TSL 5 would save 23.4 quads of energy, an amount DOE considers significant. Under TSL 5, the NPV of consumer benefit would be \$18.8 billion using a discount rate of 7-percent, and \$68.2 billion using a discount rate of 3-percent.

The cumulative emissions reductions at TSL 5 are 1,383 million Mt of CO₂, 722 thousand tons of SO₂, 2,584 thousand tons of NO_x, 2.66 tons of Hg, 6,185 thousand tons of CH₄, and 15.16 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at TSL 5 ranges from \$8.127 billion to \$121.4 billion.

At TSL 5, the average LCC impact is a savings of \$5,326 for small CUACs, \$12,900 for large CUACs, and \$18,338 for very large CUACs. The simple payback period is 4.6 years for small CUACs, 4.6 years for large CUACs, and 6.3 years for very large CUACs. The fraction of consumers experiencing a net LCC cost is 16 percent for small CUACs, 11 percent for large CUACs, and 6 percent for very large CUACs. Although DOE did not estimate consumer impacts for CUHPs, the results would be very similar to those for CUACs for the reasons stated in section V.B.1 of the direct final rule.

At TSL 5, the projected change in INPV ranges from a decrease of \$881.9 million to an increase of \$93.1 million, which corresponds to a change of –53.7 percent and 5.7 percent, respectively. The industry is expected to incur \$591.0 million in total conversion costs at this level. DOE projects that 98.7 percent of current equipment listings would require redesign at this level to meet this standard level today. At this level, DOE recognizes that manufacturers could face technical resource constraints. Manufacturers stated they would require additional engineering expertise and additional test laboratory capacity. It is unclear whether manufacturers could complete the hiring of the necessary technical expertise and construction of the necessary test facilities in time to allow for the redesign of all equipment to meet max-tech by 2019. Furthermore, DOE recognizes that a standard set at max-tech could greatly limit equipment

differentiation in the CUAC/CUHP market. By commoditizing a key differentiating feature, a standard set at max-tech would likely accelerate consolidation in the industry.

The Secretary tentatively concludes that at TSL 5 for CUACs and CUHPs, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, and the estimated monetary value of the emissions reductions would be outweighed by the economic burden on some consumers, and the impacts on manufacturers, including the conversion costs and profit margin impacts that could result in a large reduction in INPV. Consequently, the Secretary has tentatively concluded that TSL 5 is not economically justified.

DOE then considered TSL 4. TSL 4 would save 19.7 quads of energy, an amount DOE considers significant. Under TSL 4, the NPV of consumer benefit would be \$19.2 billion using a discount rate of 7-percent, and \$64.1 billion using a discount rate of 3-percent.

The cumulative emissions reductions at TSL 4 are 1,167 million Mt of CO₂, 610 thousand tons of SO₂, 2,180 thousand tons of NO_x, 2.25 tons of Hg, 5,215 thousand tons of CH₄, and 12.80 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at TSL 4 ranges from \$6.860 billion to \$102.4 billion.

At TSL 4, the average LCC impact is a savings of \$3,035 for small CUACs, \$16,803 for large CUACs, and \$18,386 for very large CUACs. The simple payback period is 2.5 years for small CUACs, 2.5 years for large CUACs, and 5.6 years for very large CUACs. The fraction of consumers experiencing a net LCC cost is 25 percent for small CUACs, 1 percent for large CUACs, and 3 percent for very large CUACs. Although DOE did not estimate consumer impacts for CUHPs, the results would be very similar to those for CUACs for the reasons stated in section V.B.1 of the direct final rule.

At TSL 4, the projected change in INPV ranges from a decrease of \$619.6 million to an increase of \$16.3 million, which corresponds to a change of –37.7 percent and 1.0 percent, respectively. The industry is expected to incur \$538.8 million in total conversion costs at this

level. DOE projects that 96.0 percent of current equipment listings would require redesign at this level to meet this standard level today.

The Secretary tentatively concludes that at TSL 4 for CUACs and CUHPs, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, and the estimated monetary value of the emissions reductions would be outweighed by the economic burden on some consumers, and the impacts on manufacturers, including the conversion costs and profit margin impacts that could result in a reduction in INPV. Consequently, the Secretary has tentatively concluded that TSL 4 is not economically justified.

DOE then considered TSL 3.5. TSL 3.5 would save 16.4 quads of energy, an amount DOE considers significant. Under TSL 3.5, the NPV of consumer benefit would be \$17.1 billion using a discount rate of 7-percent, and \$55.3 billion using a discount rate of 3-percent.

The cumulative emissions reductions at TSL 3.5 are 973 million Mt of CO₂, 508 thousand tons of SO₂, 1,815 thousand tons of NO_x, 1.88 tons of Hg, 4,342 thousand tons of CH₄, and 10.67 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at TSL 3.5 ranges from \$5.729 billion to \$85.44 billion.

At TSL 3.5, the average LCC impact is a savings of \$3,517 for small CUACs, \$12,266 for large CUACs, and \$8,881 for very large CUACs. The simple payback period is 2.6 years for small CUACs, 2.6 years for large CUACs, and 7.2 years for very large CUACs. The fraction of consumers experiencing a net LCC cost is 13 percent for small CUACs, 1 percent for large CUAC, and 23 percent for very large CUACs. Although DOE did not estimate consumer impacts for CUHPs, the results would be very similar to those for CUACs for the reasons stated in section V.B.1 of the direct final rule.

At TSL 3.5, the projected change in INPV ranges from a decrease of \$506.4 million to an increase of \$25.7 million, which corresponds to a change of –30.8 percent and 1.6 percent, respectively. The industry is expected to incur \$489.2 million in total conversion costs at this level. DOE projects that 93.5 percent of current equipment listings would

require redesign at this level to meet this standard level today.

The Secretary tentatively concludes that at TSL 3.5 for CUACs and CUHPs, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, and the estimated monetary value of the emissions reductions would be outweighed by the economic burden on some consumers, and the impacts on manufacturers, including the conversion costs and profit margin impacts that could result in a reduction in INPV. Consequently, the Secretary has tentatively concluded that TSL 3.5 is not economically justified.

DOE then considered TSL 3. TSL 3 would save 15.9 quads of energy, an amount DOE considers significant. Under TSL 3, the NPV of consumer benefit would be \$16.8 billion using a discount rate of 7-percent, and \$53.7 billion using a discount rate of 3-percent.

The cumulative emissions reductions at TSL 3 are 943 million Mt of CO₂, 493 thousand tons of SO₂, 1,759 thousand tons of NO_x, 1.82 tons of Hg, 4,208 thousand tons of CH₄, and 10.34 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at TSL 3 ranges from \$5.556 billion to \$82.83 billion.

At TSL 3, the average LCC impact is a savings of \$4,233 for small CUACs, \$10,135 for large CUACs, and \$8,881 for very large CUACs. The simple payback period is 4.9 years for small CUACs, 2.6 years for large CUACs, and 7.2 years for very large CUACs. The fraction of consumers experiencing a net LCC cost is 5 percent for small CUACs, 2 percent for large CUAC, and 23 percent for very large CUACs. Although DOE did not estimate consumer impacts for CUHPs, the results would be very similar to those for CUACs for the reasons stated in section V.B.1 of the direct final rule.

At TSL 3, the projected change in INPV ranges from a decrease of \$447.2 million to an increase of \$52.4 million, which corresponds to a change of -27.2 percent and 3.2 percent, respectively. DOE projects that 81.6 percent of current equipment listings would require redesign at this level to meet this standard level today.

The Secretary tentatively concludes that at TSL 3 for CUACs and CUHPs, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, and the estimated monetary value of the emissions reductions would be outweighed by the economic burden on some consumers, and the impacts on manufacturers, including the conversion

costs and profit margin impacts that could result in a large reduction in INPV. Consequently, the Secretary has tentatively concluded that TSL 3 is not economically justified.

DOE then considered the Recommended TSL, which reflects the standard levels recommended by the Working Group. The Recommended TSL would save 14.8 quads of energy, an amount DOE considers significant. Under the Recommended TSL, the NPV of consumer benefit would be \$15.2 billion using a discount rate of 7-percent, and \$50.0 billion using a discount rate of 3-percent.

The cumulative emissions reductions at the Recommended TSL are 873 million Mt of CO₂, 454 thousand tons of SO₂, 1,634 thousand tons of NO_x, 1.68 tons of Hg, 3,917 thousand tons of CH₄, and 9.54 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at the Recommended TSL ranges from \$5.046 billion to \$75.94 billion.

At the Recommended TSL, the average LCC impact is a savings of \$4,233 for small CUACs, \$10,135 for large CUACs, and \$8,610 for very large CUACs. The simple payback period is 4.9 years for small CUACs, 2.6 years for large CUACs, and 6.2 years for very large CUACs. The fraction of consumers experiencing a net LCC cost is 5 percent for small CUACs, 2 percent for large CUACs, and 7 percent for very large CUACs. Although DOE did not estimate consumer impacts for CUHPs, the results would be very similar to those for CUACs for the reasons stated in section V.B.1 of the direct final rule.

The Recommended TSL, as presented by the Working Group and approved by ASRAC, aligns the effective dates of the CUAC/CUHP and CWAFF rulemakings. That approach adopts the ASHRAE 90.1-2013 efficiency levels in 2018 and a higher level in 2023 as recommended by the Working Group. DOE anticipates that aligning the effective dates will reduce total conversion costs and cumulative regulatory burden, while also allowing industry to gain clarity on potential regulations that could affect refrigerant availability before the higher appliance standard takes effect in 2023. DOE projects that 31.5 percent of current equipment listings would require redesign at this level to meet the 2018 standard level, while 79.6 percent of current equipment listings would require redesign at this level to meet the 2023 standard level.

At the Recommended TSL, the projected change in INPV ranges from a

decrease of \$440.4 million to a decrease of \$38.5 million, which corresponds to a change of -26.8 percent and -2.3 percent, respectively. The industry is expected to incur \$520.8 million in total conversion costs at this level. However, the industry members of the Working Group noted that aligning the compliance dates for the CUAC/CUHP and CWAFF standards in the manner recommended would allow manufacturers to coordinate their redesign and testing expenses for these equipment. (CUAC: AHRI and ACEEE, No. 80 at p. 1). With this coordination, manufacturers explained that there would be a reduction in the total conversion costs associated with the direct final rule. The resulting synergies from aligning the CUAC/CUHP and CWAFF compliance dates would produce INPV impacts that are less severe than the forecasted INPV range of -26.8 percent to -2.3 percent.

After considering the analysis and weighing the benefits and burdens, DOE has tentatively determined that the recommended standards are in accordance with 42 U.S.C. 6313(a)(6)(B), which contains provisions for adopting a uniform national standard more stringent than the amended ASHRAE Standard 90.1 for the equipment considered in this document. Specifically, the Secretary has tentatively determined, supported by clear and convincing evidence that such adoption would result in the significant additional conservation of energy and is technologically feasible and economically justified. In determining whether the recommended standards are economically justified, the Secretary has tentatively determined that the benefits of the recommended standards exceed the burdens. Namely, the Secretary has tentatively concluded that under the recommended standards for CUACs and CUHPs, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, the estimated monetary value of the emissions reductions, and positive average LCC savings would outweigh the negative impacts on some consumers and on manufacturers, including the conversion costs that could result in a reduction in INPV for manufacturers.

The proposed amended energy conservation standards for CUACs and CUHPs, which prescribe the minimum allowable IEER and, for commercial unitary heat pumps, COP, are shown in Table II.3.

TABLE II.3—PROPOSED ENERGY CONSERVATION STANDARDS FOR SMALL, LARGE, AND VERY LARGE AIR-COOLED COMMERCIAL PACKAGE AIR CONDITIONING AND HEATING EQUIPMENT

Equipment type		Heating type	Proposed energy conservation standard	Compliance date
Small Commercial Packaged AC and HP (Air-Cooled)—≥65,000 Btu/h and <135,000 Btu/h Cooling Capacity.	AC	Electric Resistance Heating or No Heating.	12.9 IEER 14.8 IEER	January 1, 2018. January 1, 2023.
		All Other Types of Heating	12.7 IEER ... 14.6 IEER	January 1, 2018. January 1, 2023.
	HP	Electric Resistance Heating or No Heating.	12.2 IEER ... 3.3 COP 14.1 IEER 3.4 COP	January 1, 2018. January 1, 2023.
		All Other Types of Heating	12.0 IEER ... 3.3 COP 13.9 IEER 3.4 COP	January 1, 2018. January 1, 2023.
Large Commercial Packaged AC and HP (Air-Cooled)—≥135,000 Btu/h and <240,000 Btu/h Cooling Capacity.	AC	Electric Resistance Heating or No Heating.	12.4 IEER 14.2 IEER	January 1, 2018. January 1, 2023.
		All Other Types of Heating	12.2 IEER ... 14.0 IEER	January 1, 2018. January 1, 2023.
	HP	Electric Resistance Heating or No Heating.	11.6 IEER ... 3.2 COP 13.5 IEER 3.3 COP	January 1, 2018. January 1, 2023.
		All Other Types of Heating	11.4 IEER ... 3.2 COP 13.3 IEER 3.3 COP	January 1, 2018. January 1, 2023.
Very Large Commercial Packaged AC and HP (Air-Cooled)—≥240,000 Btu/h and <760,000 Btu/h Cooling Capacity.	AC	Electric Resistance Heating or No Heating.	11.6 IEER 13.2 IEER	January 1, 2018. January 1, 2023.
		All Other Types of Heating	11.4 IEER ... 13.0 IEER	January 1, 2018. January 1, 2023.
	HP	Electric Resistance Heating or No Heating.	10.6 IEER ... 3.2 COP 12.5 IEER 3.2 COP	January 1, 2018. January 1, 2023.
		All Other Types of Heating	10.4 IEER ... 3.2 COP 12.3 IEER 3.2 COP	January 1, 2018. January 1, 2023.

The benefits and costs of the proposed standards—which mimic those found in the direct final rule—can also be expressed in terms of annualized values. The annualized net benefit is the sum of: (1) The annualized national economic value (expressed in 2014\$) of the benefits from operating equipment that meet the adopted standards (consisting primarily of operating cost savings from using less energy, minus increases in product purchase costs, and (2) the annualized monetary value of the benefits of CO₂ and NO_x emission reductions.⁹

Table II.4 shows the annualized values for CUACs and CUHPs under the Recommended TSL, expressed in 2014\$. The results under the primary estimate are as follows. Using a 7-percent discount rate for benefits and costs other than CO₂ reduction, (for which DOE used a 3-percent discount rate along with the SCC series that has a value of \$40.0/t in 2015),¹⁰ the estimated cost of the standards in this rule is \$708 million per year in increased equipment costs, while the estimated annual benefits are \$2,099 million in reduced equipment operating costs, \$1,320

million in CO₂ reductions, and \$147.5 million in reduced NO_x emissions. In this case, the net benefit amounts to \$2,859 million per year. Using a 3-percent discount rate for all benefits and costs and the SCC series has a value of \$40.0/t in 2015, the estimated cost of the standards is \$792 million per year in increased equipment costs, while the estimated annual benefits are \$3,441 million in reduced operating costs, \$1,320 million in CO₂ reductions, and \$267.3 million in reduced NO_x emissions. In this case, the net benefit amounts to \$4,237 million per year.

TABLE II.4—ANNUALIZED BENEFITS AND COSTS OF PROPOSED STANDARDS FOR SMALL, LARGE, AND VERY LARGE AIR-COOLED COMMERCIAL PACKAGE AIR CONDITIONING AND HEATING EQUIPMENT

	Discount rate (%)	Million 2014\$/year

	3	4,237	3,838	5,207

* This table presents the annualized costs and benefits associated with CUACs and CUHPs shipped in 2018–2048. These results include benefits to consumers which accrue after 2048 from the CUACs and CUHPs purchased in 2018–2048. The results account for the incremental variable and fixed costs incurred by manufacturers due to the standard, some of which may be incurred in preparation for the rule. The Primary, Low Benefits, and High Benefits estimates utilize projections of energy prices from the *AEO 2015* Reference case, Low Economic Growth case, and High Economic Growth case, respectively. In addition, incremental product costs reflect a constant price trend in the Primary estimate, a slightly increasing price trend in the Low Benefits estimate, and a slightly decreasing price trend in the Low Benefits estimate. The methods used to project price trends are explained in section IV.D.1.

** The CO₂ values represent global monetized values of the SCC, in 2014\$, in 2015 under several scenarios of the updated SCC values. The first three cases use the averages of SCC distributions calculated using 5%, 3%, and 2.5% discount rates, respectively. The fourth case represents the 95th percentile of the SCC distribution calculated using a 3% discount rate. The SCC time series incorporate an escalation factor. † Total Benefits for both the 3% and 7% cases are derived using the series corresponding to the average SCC with 3-percent discount rate (\$40.0/t) case. In the rows labeled “7% plus CO₂ range” and “3% plus CO₂ range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of CO₂ values.

⁹ To convert the time-series of costs and benefits into annualized values, DOE calculated a present value in 2014, the year used for discounting the NPV of total consumer costs and savings. For the benefits, DOE calculated a present value associated with each year's shipments in the year in which the

shipments occur (2020, 2030, etc.), and then discounted the present value from each year to 2015. The calculation uses discount rates of 3- and 7-percent for all costs and benefits except for the value of CO₂ reductions, for which DOE used case-specific discount rates. Using the present value,

DOE then calculated the fixed annual payment over a 30-year period, starting in the compliance year that yields the same present value.

¹⁰ DOE used a 3-percent discount rate because the SCC values for the series used in the calculation were derived using a 3-percent discount rate.

† The \$/ton values used for NO_x are described in section IV.L.2 of the direct final rule. DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “*Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants*,” published in June 2014 by EPA’s Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposalRIAFinal0602.pdf>.) For DOE’s Primary Estimate and Low Net Benefits Estimate, the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electric Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski et al., 2009). For DOE’s High Net Benefits Estimate, the benefit-per-ton estimates were based on the Six Cities study (Lepuele et al., 2011), which are nearly two-and-a-half times larger than those from the ACS study. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emission, DOE intends to investigate refinements to the agency’s current approach of one national estimate by assessing the regional approach taken by EPA’s Regulatory Impact Analysis for the Clean Power Plan Final Rule.

†† Total Benefits for both the 3% and 7% cases are derived using the series corresponding to the average SCC with 3-percent discount rate (\$40.0/t) case. In the rows labeled “7% plus CO₂ range” and “3% plus CO₂ range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of CO₂ values.

B. Benefits and Burdens of TSLs Considered for Commercial Warm Air Furnaces

Table II.5 and Table II.6 summarize the quantitative impacts estimated for

each TSL for CWAFFs. For TSL 2, the national impacts are projected over the lifetime of equipment sold in 2023–2048. For the other TSLs, the impacts are projected over the lifetime of equipment sold in 2019–2048. The

energy savings, emissions reductions, and value of emissions reductions refer to full-fuel-cycle results. The efficiency levels contained in each TSL are described in section V.A of the direct final rule.

TABLE II.5—SUMMARY OF ANALYTICAL RESULTS FOR COMMERCIAL WARM AIR FURNACES: NATIONAL IMPACTS

	Trial standard level				
	1	2	3	4	5
Cumulative FFC Energy Savings Quads	0.25	0.23	0.41	0.41	2.4
NPV of consumer costs and benefits 2014\$ billion					
3% discount rate	1.1	1.0	-0.1	-0.1	2.6
7% discount rate	0.4	0.3	-0.4	-0.4	-0.4
Cumulative FFC emissions reduction					
CO ₂ million metric tons	13.4	12.4	22.0	22.0	126
SO ₂ thousand tons	0.40	0.40	0.63	0.67	-10.2
NO _x thousand tons	43.0	41.2	70.5	72.2	473
Hg tons	0.001	0.001	0.002	0.002	-0.04
CH ₄ thousand tons	159	146	260	260	1,673
CH ₄ thousand tons CO ₂ eq*	4,440	4,096	7,289	7,292	46,831
N ₂ O thousand tons	0.03	0.03	0.05	0.06	0.08
N ₂ O thousand tons CO ₂ eq*	8.8	8.4	14.3	14.6	21.2
Value of emissions reduction					
CO ₂ 2014\$ million**	79.8 to 1,185	71.4 to 1,078	126 to 1,891	126 to 1,897	713 to 10,809
NO _x —3% discount rate 2014\$ million	120 to 264 ...	110 to 243 ...	188 to 414 ...	192 to 424 ...	1258 to 2772
NO _x —7% discount rate 2014\$ million	42.3 to 94.4	36.1 to 80.9	64.2 to 144 ..	65.9 to 147 ..	423 to 945

For TSL 2, the impacts are projected over the lifetime of equipment sold in 2023–2048. For the other TSLs, the impacts are projected over the lifetime of equipment sold in 2019–2048.

* CO₂eq is the quantity of CO₂ that would have the same global warming potential (GWP).

** Range of the economic value of CO₂ reductions is based on estimates of the global benefit of reduced CO₂ emissions.

TABLE II.6—SUMMARY OF ANALYTICAL RESULTS FOR COMMERCIAL WARM AIR FURNACES: MANUFACTURER AND CONSUMER IMPACTS*

Category	Trial standard level				
	1	2	3	4	5
Manufacturer Impacts					
Industry NPV (2014\$ million) (No-New-Standards Case INPV = 96.3).	85.8 to 92.6	83.0 to 90.5	65.5 to 125.2	60.4 to 124.8	(19.3) to 143.5
Industry NPV (% change)	(11.0) to (3.9).	(13.9) to (6.1).	(32.0) to 29.9	(37.3) to 29.5	(120.1) to 49.0

* Weighted by shares of each equipment class in total projected shipments in 2019.

† At max tech, the standard will likely require CWAFF manufacturers to make design changes to the cooling components of commercial HVAC products and to the chassis that houses the heating and cooling components. Because these cooling system changes are triggered by the CWAFF standard, they are taken into account in the MIA's estimate of conversion costs. The additional expense of updating the commercial cooling product contributes to an INPV loss that is greater than 100%.

DOE first considered TSL 5, which represents the max-tech efficiency levels. TSL 5 would save 2.4 quads of energy, an amount DOE considers significant. Under TSL 5, the NPV of consumer cost would be \$0.4 billion using a 7-percent discount rate, and the NPV of consumer benefit would be \$2.6 billion using a 3-percent discount rate.

The cumulative emissions reductions at TSL 5 are 126 Mt of CO₂, 473 thousand tons of NO_x, 1,673 thousand tons of CH₄, and 0.08 thousand tons of N₂O. Projected emissions show an increase of 10.2 thousand tons of SO₂ and 0.04 ton of Hg. The estimated monetary value of the CO₂ emissions reduction at TSL 5 ranges from \$713 million to \$10,809 million.

At TSL 5, the average LCC impact is a savings of \$766 for gas-fired CWAFFs and \$1,817 for oil-fired CWAFFs. The simple payback period is 11.3 years for gas-fired CWAFFs and 7.5 years for oil-fired CWAFFs. The fraction of consumers experiencing a net LCC cost is 58 percent for gas-fired CWAFF and 54 percent for oil-fired CWAFFs.

At TSL 5, the projected change in INPV ranges from a decrease of \$115.7 million to an increase of \$47.2 million, which corresponds to a change of –120.1 percent and 49.0 percent, respectively. The industry is expected to incur \$157.5 million in total conversion costs at this level. DOE projects that 99 percent of current equipment listings would require redesign at this level.

The Secretary tentatively concludes that at TSL 5 for CWAFFs, the benefits of energy savings, positive NPV of consumer benefits using a discount rate of 3 percent, emission reductions, and the estimated monetary value of the emissions reductions would be outweighed by the economic burden on most consumers, the negative NPV of

consumer benefits using a 7-percent discount rate, and the impacts on manufacturers, including the conversion costs and profit margin impacts that could result in a large reduction in INPV. Consequently, the Secretary has tentatively concluded that TSL 5 is not economically justified.

DOE then considered TSL 4. TSL 4 would save 0.41 quads of energy, an amount DOE considers significant. Under TSL 4, the NPV of consumer cost would be \$0.4 billion using a 7-percent discount rate, and \$0.1 billion using a 3-percent discount rate.

The cumulative emissions reductions at TSL 4 are 22 Mt of CO₂, 0.67 thousand tons of SO₂, 72.2 thousand tons of NO_x, 0.002 ton of Hg, 260 thousand tons of CH₄, and 0.06 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at TSL 4 ranges from \$126 million to \$1,897 million.

At TSL 4, the average LCC impact is a savings of \$75 for gas-fired CWAFFs and \$400 for oil-fired CWAFFs. The simple payback period is 12.3 years for gas-fired CWAFFs and 1.9 years for oil-fired CWAFFs. The fraction of consumers experiencing a net LCC cost is 58 percent for gas-fired CWAFFs, and 11 percent for oil-fired CWAFFs.

At TSL 4, the projected change in INPV ranges from a decrease of \$35.9 million to an increase of \$28.4 million, which corresponds to a change of –37.3 percent and 29.5 percent, respectively. The industry is expected to incur \$47.6 million in total conversion costs at this level. DOE projects that 94 percent of current product listings would require redesign at this level.

The Secretary tentatively concludes that at TSL 4 for CWAFFs, the benefits of energy savings, emission reductions, and the estimated monetary value of the

emissions reductions would be outweighed by the economic burden on many consumers, negative NPV of consumer benefits, and the impacts on manufacturers, including the conversion costs and profit margin impacts that could result in a large reduction in INPV. Consequently, the Secretary has tentatively concluded that TSL 4 is not economically justified.

DOE then considered TSL 3. TSL 3 would save 0.41 quads of energy, an amount DOE considers significant. Under TSL 3, the NPV of consumer cost would be \$0.4 billion using a 7-percent discount rate, and \$0.1 billion using a 3-percent discount rate.

The cumulative emissions reductions at TSL 3 are 22 Mt of CO₂, 0.63 thousand tons of SO₂, 70.5 thousand tons of NO_x, 0.002 ton of Hg, 260 thousand tons of CH₄, and 0.05 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at TSL 3 ranges from \$126 million to \$1,891 million.

At TSL 3, the average LCC impact is a savings of \$75 for gas-fired CWAFFs. The simple payback period is 12.3 years for gas-fired CWAFFs. The fraction of consumers experiencing a net LCC cost is 58 percent for gas-fired CWAFFs. The EL at TSL 3 for oil-fired CWAFFs is the baseline, so there are no LCC impacts for oil-fired CWAFFs at TSL 3.

At TSL 3, the projected change in INPV ranges from a decrease of \$30.9 million to an increase of \$28.8 million, which corresponds to a change of –32.0 percent and 29.9 percent, respectively. The industry is expected to incur \$41.0 million in total conversion costs at this level. DOE projects that 91 percent of current equipment listings would require redesign at this level.

The Secretary tentatively concludes that at TSL 3 for CWAFFs, the benefits of

energy savings, emission reductions, and the estimated monetary value of the emissions reductions would be outweighed by the economic burden on many consumers, negative NPV of consumer benefits, and the impacts on manufacturers, including the conversion costs and profit margin impacts that could result in a large reduction in INPV. Consequently, the Secretary has tentatively concluded that TSL 3 is not economically justified.

DOE then considered TSL 2, which corresponds to the recommendations by the Working Group. TSL 2 would save 0.23 quads of energy, an amount DOE considers significant. Under TSL 2, the NPV of consumer benefit would be \$0.3 billion using a 7-percent discount rate, and \$1.0 billion using a 3-percent discount rate.

The cumulative emissions reductions at TSL 2 are 12.4 Mt of CO₂, 0.40 thousand tons of SO₂, 41.2 thousand tons of NO_x, 0.001 ton of Hg, 146 thousand tons of CH₄, and 0.03 thousand tons of N₂O. The estimated monetary value of the CO₂ emissions reduction at TSL 2 ranges from \$71.4 million to \$1,078 million.

At TSL 2, the average LCC impact is a savings of \$284 for gas-fired CWAFFs and \$400 for oil-fired CWAFFs. The simple payback period is 1.4 years for gas-fired CWAFF and 1.9 years for oil-fired CWAFFs. The fraction of consumers experiencing a net LCC cost is 6 percent for gas-fired CWAFFs and 11 percent for oil-fired CWAFFs.

At TSL 2, 57 percent of current equipment listings would require redesign at this level. The projected change in INPV ranges from a decrease of \$13.4 million to a decrease of \$5.9 million, which corresponds to a decrease of 13.9 percent and 6.1 percent, respectively. The CWAFF industry is expected to incur \$22.2 million in total conversion costs. However, the industry noted that aligning the compliance dates for the CUAC/CUHP and CWAFF standards, as recommended by the Working Group, would allow manufacturers to coordinate their redesign and testing expenses for this equipment. If this occurs, there could be a reduction in the total conversion costs associated with

the DFR. The resulting synergies from aligning the compliance dates of the CUAC/CUHP and CWAFF standards would produce INPV impacts that are less severe than the forecasted INPV range of -13.9 percent to -6.1 percent.

After considering the analysis and weighing the benefits and burdens, DOE has tentatively determined that the recommended standards are in accordance with 42 U.S.C. 6313(a)(6)(B), which contains provisions for adopting a uniform national standard more stringent than the amended ASHRAE/IES Standard 90.1 for the equipment considered in this document. Specifically, the Secretary has tentatively determined, supported by clear and convincing evidence, that such adoption would result in significant additional conservation of energy and is technologically feasible and economically justified. In determining whether the recommended standards are economically justified, the Secretary has tentatively determined that the benefits of the recommended standards exceed the burdens. Namely, the Secretary has tentatively concluded that under the recommended standards for CWAFFs, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, the estimated monetary value of the emissions reductions, and positive average LCC savings would outweigh the negative impacts on some consumers and on manufacturers, including the conversion costs that could result in a reduction in INPV for manufacturers.

Based on the above analyses, DOE is proposing to amend the energy conservation standards for CWAFFs—as expressed in terms of thermal efficiency—in the manner shown in Table II.7.

TABLE II.7—PROPOSED ENERGY CONSERVATION STANDARDS FOR COMMERCIAL WARM AIR FURNACES

Equipment type	Input capacity (Btu/h)	Thermal efficiency (%)
Gas-fired CWAFFs.	≥225,000 Btu/h	81

TABLE II.7—PROPOSED ENERGY CONSERVATION STANDARDS FOR COMMERCIAL WARM AIR FURNACES—Continued

Equipment type	Input capacity (Btu/h)	Thermal efficiency (%)
Oil-fired CWAFFs.	≥225,000 Btu/h	82

The benefits and costs of the proposed standards can also be expressed in terms of annualized values. The annualized net benefit is the sum of: (1) The annualized national economic value (expressed in 2014\$) of the benefits from operating equipment that meet the adopted standards (consisting primarily of operating cost savings from using less energy, minus increases in equipment purchase costs), and (2) the annualized monetary value of the benefits of CO₂ and NO_x emission reductions.

Table II.8 shows the annualized values for CWAFFs under TSL 2, expressed in 2014\$. The results under the primary estimate are as follows. Using a 7-percent discount rate for benefits and costs other than CO₂ reductions, (for which DOE used a 3-percent discount rate along with the average SCC series corresponding to a value of \$40.0/ton in 2015 (2014\$)), the estimated cost of the adopted standards for CWAFFs is \$4.31 million per year in increased equipment costs, while the estimated benefits are \$49.0 million per year in reduced equipment operating costs, \$24 million per year in CO₂ reductions, and \$5.49 million per year in reduced NO_x emissions. In this case, the net benefit amounts to \$75 million per year.

Using a 3-percent discount rate for all benefits and costs and the average SCC series corresponding to a value of \$40.0/ton in 2015 (in 2014\$), the estimated cost of the adopted standards for CWAFFs is \$4.38 million per year in increased equipment costs, while the estimated benefits are \$71 million per year in reduced operating costs, \$24.3 million per year in CO₂ reductions, and \$8.76 million per year in reduced NO_x emissions. In this case, the net benefit amounts to \$100 million per year.

TABLE II.8—ANNUALIZED BENEFITS AND COSTS OF PROPOSED STANDARDS (TSL 2) FOR COMMERCIAL WARM AIR FURNACES

	Million 2014\$/year			
	Discount rate %	Primary estimate *	Low net benefits estimate *	High net benefits estimate *
Benefits				
Consumer Operating Cost Savings	7	49	48	54
CO ₂ Reduction Value (\$12.2/t case)**	3	71	70	81
CO ₂ Reduction Value (\$40.0/t case)**	5	6.99	7.08	7.37
CO ₂ Reduction Value (\$62.3/t case)**	3	24	25	26
CO ₂ Reduction Value (\$117/t case)**	2.5	36	36	38
NO _x Reduction Value†	3	74	75	79
NO _x Reduction Value†	7	5 to 11	5 to 11	5 to 11
NO _x Reduction Value†	3	8 to 17	8 to 17	8 to 18
Total Benefits††	7 plus CO ₂ range	61 to 134	60 to 134	67 to 144
Total Benefits††	7	78	78	85
Total Benefits††	3 plus CO ₂ range	86 to 162	84 to 162	96 to 177
Total Benefits††	3	103	102	114
Costs				
Consumer Incremental Installed Costs	7	4.31	5.04	3.92
Consumer Incremental Installed Costs	3	4.38	5.22	3.94
Net Benefits				
Total††	7 plus CO ₂ range	57 to 130	55 to 129	63 to 140
Total††	7	74	72	81
Total††	3 plus CO ₂ range	82 to 158	79 to 157	92 to 173
Total††	3	99	97	110

*This table presents the annualized costs and benefits associated with CWAFFs shipped in 2023–2048. These results include benefits to consumers which accrue after 2048 from the CWAFFs purchased from 2023–2048. The results account for the incremental variable and fixed costs incurred by manufacturers due to the standard, some of which may be incurred in preparation for the rule. The Primary, Low Benefits, and High Benefits Estimates utilize projections of energy prices from the AEO 2015 Reference case, Low Economic Growth case, and High Economic Growth case, respectively. In addition, incremental equipment costs reflect a medium decline rate in the Primary Estimate, a low decline rate in the Low Benefits Estimate, and a high decline rate in the High Benefits Estimate.

**The CO₂ values represent global monetized values of the SCC, in 2014\$, in 2015 under several scenarios of the updated SCC values. The first three cases use the averages of SCC distributions calculated using 5%, 3%, and 2.5% discount rates, respectively. The fourth case represents the 95th percentile of the SCC distribution calculated using a 3% discount rate. The SCC time series incorporate an escalation factor.

†The \$/ton values used for NO_x are described in the Direct Final Rule. DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants,” published in June 2014 by EPA’s Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposalRIAFinal0602.pdf>.) For DOE’s Primary Estimate and Low Net Benefits Estimate, the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electric Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski et al., 2009). For DOE’s High Net Benefits Estimate, the benefit-per-ton estimates were based on the Six Cities study (Lepule et al., 2011), which are nearly two-and-a-half times larger than those from the ACS study. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emission, DOE intends to investigate refinements to the agency’s current approach of one national estimate by assessing the regional approach taken by EPA’s Regulatory Impact Analysis for the Clean Power Plan Final Rule.

††Total Benefits for both the 3% and 7% cases are derived using the series corresponding to the average SCC with 3-percent discount rate (\$40.0/t case). In the rows labeled “7% plus CO₂ range” and “3% plus CO₂ range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of CO₂ values.

III. Public Participation

Submission of Comments

DOE will accept comments, data, and information regarding this proposed rule before or after the public meeting, but no later than the date provided in the DATES section at the beginning of this proposed rule. Interested parties may submit comments, data, and other information using any of the methods described in the ADDRESSES section at the beginning of this document.

Submitting comments via www.regulations.gov. The www.regulations.gov Web page will require you to provide your name and

contact information. Your contact information will be viewable to DOE Building Technologies staff only. Your contact information will not be publicly viewable except for your first and last names, organization name (if any), and submitter representative name (if any). If your comment is not processed properly because of technical difficulties, DOE will use this information to contact you. If DOE cannot read your comment due to technical difficulties and cannot contact you for clarification, DOE may not be able to consider your comment.

However, your contact information will be publicly viewable if you include

it in the comment itself or in any documents attached to your comment. Any information that you do not want to be publicly viewable should not be included in your comment, nor in any document attached to your comment. Otherwise, persons viewing comments will see only first and last names, organization names, correspondence containing comments, and any documents submitted with the comments.

Do not submit to www.regulations.gov information for which disclosure is restricted by statute, such as trade secrets and commercial or financial information (hereinafter referred to as

Confidential Business Information (“CBI”). Comments submitted through www.regulations.gov cannot be claimed as CBI. Comments received through the Web site will waive any CBI claims for the information submitted. For information on submitting CBI, see the Confidential Business Information section below.

DOE processes submissions made through www.regulations.gov before posting. Normally, comments will be posted within a few days of being submitted. However, if large volumes of comments are being processed simultaneously, your comment may not be viewable for up to several weeks. Please keep the comment tracking number that www.regulations.gov provides after you have successfully uploaded your comment.

Submitting comments via email, hand delivery/courier, or mail. Comments and documents submitted via email, hand delivery/courier, or mail also will be posted to www.regulations.gov. If you do not want your personal contact information to be publicly viewable, do not include it in your comment or any accompanying documents. Instead, provide your contact information in a cover letter. Include your first and last names, email address, telephone number, and optional mailing address. The cover letter will not be publicly viewable as long as it does not include any comments.

Include contact information each time you submit comments, data, documents, and other information to DOE. If you submit via mail or hand delivery/courier, please provide all items on a CD, if feasible, in which case it is not necessary to submit printed copies. No telefacsimiles (faxes) will be accepted.

Comments, data, and other information submitted to DOE electronically should be provided in PDF (preferred), Microsoft Word or Excel, WordPerfect, or text (ASCII) file format. Provide documents that are not secured, that are written in English, and that are free of any defects or viruses. Documents should not contain special characters or any form of encryption and, if possible, they should carry the electronic signature of the author.

Campaign form letters. Please submit campaign form letters by the originating organization in batches of between 50 to 500 form letters per PDF or as one form letter with a list of supporters’ names compiled into one or more PDFs. This reduces comment processing and posting time.

Confidential Business Information. Pursuant to 10 CFR 1004.11, any person submitting information that he or she believes to be confidential and exempt

by law from public disclosure should submit via email, postal mail, or hand delivery/courier two well-marked copies: one copy of the document marked “confidential” including all the information believed to be confidential, and one copy of the document marked “non-confidential” with the information believed to be confidential deleted. Submit these documents via email or on a CD, if feasible. DOE will make its own determination about the confidential status of the information and treat it according to its determination.

Factors of interest to DOE when evaluating requests to treat submitted information as confidential include: (1) A description of the items; (2) whether and why such items are customarily treated as confidential within the industry; (3) whether the information is generally known by or available from other sources; (4) whether the information has previously been made available to others without obligation concerning its confidentiality; (5) an explanation of the competitive injury to the submitting person that would result from public disclosure; (6) when such information might lose its confidential character due to the passage of time; and (7) why disclosure of the information would be contrary to the public interest.

It is DOE’s policy that all comments may be included in the public docket, without change and as received, including any personal information provided in the comments (except information deemed to be exempt from public disclosure).

IV. Procedural Issues and Regulatory Review

The regulatory reviews conducted for this proposed rule are identical to those conducted for the direct final rule published elsewhere in this **Federal Register**. Please see the direct final rule for further details.

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this proposed rule.

List of Subjects in 10 CFR Part 431

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Intergovernmental relations, Reporting and recordkeeping requirements, Small businesses.

Issued in Washington, DC, on December 17, 2015.

David T. Danielson,

Assistant Secretary, Energy Efficiency and Renewable Energy.

For the reasons set forth in the preamble, DOE proposes to amend part 431 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations, to read as set forth below:

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 1. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317.

■ 2. Section 431.77 is revised to read as follows:

§ 431.77 Energy conservation standards and their effective dates.

(a) *Gas-fired commercial warm air furnaces.* Each gas-fired commercial warm air furnace must meet the following energy efficiency standard levels:

(1) For gas-fired commercial warm air furnaces manufactured starting on January 1, 1994, until January 1, 2023, the TE at the maximum rated capacity (rated maximum input) must be not less than 80 percent; and

(2) For gas-fired commercial warm air furnaces manufactured starting on January 1, 2023, the TE at the maximum rated capacity (rated maximum input) must be not less than 81 percent.

(b) *Oil-fired commercial warm air furnaces.* Each oil-fired commercial warm air furnace must meet the following energy efficiency standard levels:

(1) For oil-fired commercial warm air furnaces manufactured starting on January 1, 1994, until January 1, 2023, the TE at the maximum rated capacity (rated maximum input) must be not less than 81 percent; and

(2) For oil-fired commercial warm air furnaces manufactured starting on January 1, 2023, the TE at the maximum rated capacity (rated maximum input) must be not less than 82 percent.

■ 3. Section 431.92 is amended by adding the definition of “Double-duct air conditioner or heat pump means air-cooled commercial package air conditioning and heating equipment” in alphabetical order to read as follows:

§ 431.92 Definitions concerning commercial air conditioners and heat pumps.

* * * * *

Double-duct air conditioner or heat pump means air-cooled commercial

package air conditioning and heating equipment that—

(1) Is either a horizontal single package or split-system unit; or a vertical unit that consists of two components that may be shipped or installed either connected or split;

(2) Is intended for indoor installation with ducting of outdoor air from the building exterior to and from the unit, as evidenced by the unit and/or all of its components being non-weatherized, including the absence of any marking (or listing) indicating compliance with UL 1995, “Heating and Cooling Equipment,” or any other equivalent requirements for outdoor use;

(3)(i) If it is a horizontal unit, a complete unit has a maximum height of 35 inches;

(ii) If it is a vertical unit, a complete unit has a maximum depth of 35 inches; and

(4) Has a rated cooling capacity greater than or equal to 65,000 Btu/h and up to 300,000 Btu/h.

* * * * *

■ 4. Section 431.97 is amended by:

a. Redesignating Tables 5 through 11 as Tables 7 through 13;

b. Revising paragraph (b) and the introductory text of paragraph (c);

c. In paragraph (d)(1) introductory text, removing “Table 7” and adding in its place “Table 9”;

d. In paragraph (d)(2) introductory text, removing “Table 8” and adding in its place “Table 10”; and

e. In paragraph (d)(3) introductory text, removing “Table 9” and adding in its place “Table 11”.

The revisions read as follows:

§ 431.97 Energy efficiency standards and their compliance dates.

* * * * *

(b) Each commercial air conditioner or heat pump (not including single package vertical air conditioners and single package vertical heat pumps, packaged terminal air conditioners and packaged terminal heat pumps, computer room air conditioners, and variable refrigerant flow systems) manufactured starting on the compliance date listed in the corresponding table must meet the applicable minimum energy efficiency standard level(s) set forth in Tables 1 through 6 of this section.

TABLE 1 TO § 431.97—MINIMUM COOLING EFFICIENCY STANDARDS FOR AIR CONDITIONING AND HEATING EQUIPMENT

[Not including single package vertical air conditioners and single package vertical heat pumps, packaged terminal air conditioners and packaged terminal heat pumps, computer room air conditioners, and variable refrigerant flow multi-split air conditioners and heat pumps]

Equipment type	Cooling capacity	Sub-category	Heating type	Efficiency level	Compliance date: Equipment manufactured starting on . . .
Small Commercial Package Air Conditioning and Heating Equipment (Air-Cooled, 3-Phase, Split-System).	<65,000 Btu/h	AC	All	SEER = 13	June 16, 2008.
Small Commercial Package Air Conditioning and Heating Equipment (Air-Cooled, 3-Phase, Single-Pack-age).	<65,000 Btu/h	HP	All	SEER = 13	June 16, 2008. ¹
		AC	All	SEER = 13	June 16, 2008. ¹
Small Commercial Package Air Conditioning and Heating Equipment (Air-Cooled).	≥65,000 Btu/h and <135,000 Btu/h.	HP	All	SEER = 13	June 16, 2008. ¹
		AC	No Heating or Electric Resist- ance Heating.	EER = 11.2	January 1, 2010. ²
		HP	All Other Types of Heating.	EER = 11.0	January 1, 2010. ²
			No Heating or Electric Resist- ance Heating.	EER = 11.0	January 1, 2010. ²
Large Commercial Package Air Con- ditioning and Heating Equipment (Air-Cooled).	≥135,000 Btu/h and <240,000 Btu/h.	AC	All Other Types of Heating.	EER = 10.8	January 1, 2010. ²
			No Heating or Electric Resist- ance Heating.	EER = 11.0	January 1, 2010. ²
		HP	All Other Types of Heating.	EER = 10.6	January 1, 2010. ²
			No Heating or Electric Resist- ance Heating.	EER = 10.4	January 1, 2010. ²
Very Large Commercial Package Air Conditioning and Heating Equip- ment (Air-Cooled).	≥240,000 Btu/h and <760,000 Btu/h.	AC	All Other Types of Heating.	EER = 10.0	January 1, 2010. ²
			No Heating or Electric Resist- ance Heating.	EER = 9.8	January 1, 2010. ²
		HP	All Other Types of Heating.	EER = 9.5	January 1, 2010. ²
			No Heating or Electric Resist- ance Heating.	EER = 9.3	January 1, 2010. ²
Small Commercial Package Air Con- ditioning and Heating Equipment (Water-Cooled).	<65,000 Btu/h	AC	All	EER = 12.1	October 29, 2003.

BILLING CODE 6450–01–P

SMALL BUSINESS ADMINISTRATION

13 CFR Part 120

RIN 3245–AG76

Economic Development Investments for Certified Development Companies

AGENCY: U.S. Small Business Administration.

ACTION: Advance notice of proposed rulemaking.

SUMMARY: The U.S. Small Business Administration (SBA) is soliciting

comments on whether Certified Development Companies (CDCs) should be required to invest specific amounts in local economic development activities (other than lending through the CDC program) and to reserve specific amounts for their future operations. SBA is also soliciting input into what types of activities may qualify as economic development activities.

DATES: Comments must be submitted on or before March 15, 2016.

ADDRESSES: You may submit comments, identified by RIN 3245–AG76, by any of the following methods: (1) Federal Rulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments; or (2) Mail/Hand Delivery/Courier: U.S. Small Business Administration, Attn: Linda Reilly, Acting Director, Office of Financial Assistance, 409 Third Street SW., 8th Floor, Washington, DC 20416. All comments will be posted on www.regulations.gov. If you wish to submit confidential business information (CBI) as defined in the User Notice at www.regulations.gov, you must submit such information to the U.S. Small Business Administration, Attn: Linda Reilly, Acting Director, Office of Financial Assistance, 409 Third Street SW., 8th Floor, Washington, DC 20416, or send an email to linda.reilly@sba.gov. Highlight the information that you consider to be CBI and explain why you believe SBA should hold this information as confidential. SBA will review your information and determine whether it will make the information public.

FOR FURTHER INFORMATION CONTACT: Linda Reilly, Acting Director, Office of Financial Assistance, U.S. Small Business Administration, 409 3rd Street SW., 8th Floor, Washington, DC 20416, telephone number (202) 205–9949 or linda.reilly@sba.gov.

SUPPLEMENTARY INFORMATION:

I. Background

The Certified Development Company (CDC) program, also referred to as the 504 Loan Program, is authorized pursuant to Title V of the Small Business Investment Act of 1958, 15 U.S.C. 695 *et seq.* The 504 Loan Program is an SBA financing program established to target companies in their growth cycle to create jobs, expand the tax base, and improve American communities. Specifically, the core mission of the 504 Loan Program is to provide long-term fixed asset financing (504 Loans) to small businesses for the purchase or improvement of land, buildings, and major equipment purchases, in an effort

to facilitate the creation of jobs and local economic development.

Under the 504 Loan Program, loans are made to small business applicants by CDCs, which are SBA's community-based partners for providing 504 Loans. With the exception of several for-profit CDCs grandfathered into the 504 Loan Program, a CDC is a nonprofit corporation that promotes economic development within its community through 504 Loans. CDCs are certified and regulated by the SBA, and work with SBA and participating lenders (typically banks) to provide financing to small businesses with the goal of facilitating the creation and retention of jobs and local economic development. There are over 260 CDCs nationwide each with a defined Area of Operations covering a specific geographic area. The Area of Operations for most CDCs is the state in which they are incorporated.

Under 13 CFR 120.825, CDCs are required to be able to sustain their operations continuously with reliable sources of funds, such as income from services rendered and contributions from government or other sponsors. This regulation also provides that any funds generated from loan activity in the 504 Loan Program that remain after payment of staff and overhead expenses (such funds referred to herein as "remaining funds") must be retained by the CDC as a reserve for future operations or for investment in other local economic development activity in the CDC's Area of Operations. In addition, on March 21, 2014, SBA issued a Final Rule (79 FR 15641) that requires each CDC's Board of Directors to ensure that the CDC establishes and maintains adequate reserves for operations (13 CFR 120.823(d)(9)) and invests in economic development in each State in its Area of Operations where the CDC has outstanding 504 Loans (13 CFR 120.823(d)(10)). Accordingly, in reading 13 CFR 120.823(d)(9) and (10) and 120.825 together, each CDC's Board of Directors must ensure that any remaining funds are either retained as a reserve or invested in the CDC's community, but the current rules do not require the CDC to retain or invest any specific amounts or percentages.

CDCs have requested that SBA provide guidance on the acceptable types and amounts of investments that should apply to the remaining funds. To address the issue raised by the CDCs, SBA is considering whether to issue a future Proposed Rulemaking that would require CDCs to set aside a certain amount of their revenues for investing in other local economic development activities. SBA is also considering

whether the rulemaking should address minimum and/or maximum requirements with respect to the size of the reserve that a CDC retains for its future operations. As stated above, 13 CFR 120.825 requires a CDC "to be able to sustain its operations continuously, with reliable sources of funds," and a minimum reserve requirement would assist CDCs in complying with this provision. Excessive reserves, however, could limit the amount a CDC would have available for investing in local economic development activities. To develop a proposed rule to address these issues, SBA needs additional information and invites interested parties to provide it by responding to the questions set forth below.

Finally, SBA is considering providing guidance, through an agency directive (e.g., Standard Operating Procedure, Procedural or Policy Notice), on what constitutes acceptable types of investment in other local economic development activities under 13 CFR 120.825, and is soliciting comments on how to define investments in economic development activity.

II. Comments Requested

To assist SBA in addressing the above issues, SBA requests comments from interested parties on the following questions:

1. What percentage of the CDC's 504 Loan Program revenues do remaining funds typically represent at the end of the CDC's fiscal year?

2. Should SBA require CDCs to use a certain amount or percentage of their remaining funds to invest in other local economic development activity in the CDC's Area of Operations? Please provide reasons for your response.

3. If the answer to question 2 is yes, how should the amount required to be invested in other local economic development activity in the CDC's Area of Operations be calculated? Some possibilities could include a percentage of the original loan amount of the CDC's 504 portfolio, a percentage of the current outstanding loan amount of the CDC's 504 portfolio, a percentage of the annual fees received by the CDC as a result of its 504 lending, or a percentage of the CDC's remaining funds. Should the percentage vary depending upon the dollar value of the CDC's portfolio or other factors? If so, describe how the percentage should vary and upon what factors.

4. Should SBA require CDCs to retain a minimum amount as a reserve for future operations if there are any remaining funds? If not, why not?

5. If the answer to question 4 is yes, how should the amount of a CDC's

required reserve be calculated? Some possibilities could include a percentage of the original loan amount of the CDC's 504 portfolio, a percentage of the current outstanding loan amount of the CDC's 504 portfolio, a percentage of the annual fees received by the CDC as a result of its 504 lending, or a percentage of the CDC's remaining funds. Another approach would be to calculate the required reserve as a dollar amount equal to at least six months, but no more than 12 months, of staff and overhead expenses of the CDC.

6. Should SBA limit the amount that CDCs may retain as a reserve for future operations? If not, why not? If yes, what would be a reasonable maximum amount to allow as a reserve?

7. Should a CDC be able to decide that the reserve option would be a more prudent use of its remaining funds than economic development investments to ensure that it has the ability to "sustain its operations continuously"? Why or why not?

8. Should SBA require CDCs to first apply any remaining funds to the reserve for future operations before using any remaining funds for investments? Please provide reasons for your response.

9. What requirements, if any, should apply to a CDC's remaining funds if it voluntarily decertifies or is removed from the 504 Loan Program? Should the CDC be required to invest these funds in local economic development activities prior to decertification or removal?

10. What types of economic development activities should be included in the definition of "acceptable investments in economic development"? Are there any activities that should not be included in the definition? Examples of such acceptable investments in economic development could include loans, grants or other forms of direct financial support that are issued by the CDC for: (1) Other federal, state or local lending programs, such as microlending or revolving loan funds; (2) Small Business Development Centers; (3) business incubators; (4) industrial development; and (5) other non-profit economic development entities. Should the definition include business or technical procurement assistance provided by the CDC or paid for by the CDC?

Interested parties are invited to provide any other comments that they may have relating to the issues described in this Advance Notice of Proposed Rulemaking. We ask that you provide a brief justification for any suggested changes.

Dated: January 7, 2016.

Maria Contreras-Sweet,
Administrator.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2015-2134; Directorate Identifier 2015-CE-012-AD]

RIN 2120-AA64

Airworthiness Directives; B/E Aerospace Protective Breathing Equipment Part Number 119003-11

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Supplemental notice of proposed rulemaking (NPRM); reopening of comment period.

SUMMARY: We are revising an earlier proposed airworthiness directive (AD) for certain B/E Aerospace protective breathing equipment (PBE) that is installed on airplanes. The NPRM proposed inspecting the PBE to determine if the pouch has the proper vacuum seal and replacing if necessary. The NPRM was prompted by reports of a compromise in the vacuum seal of the pouch that contains the PBE. This action revises the NPRM by requiring replacement of the PBE following newly issued service information regardless of inspection results. We are proposing this supplemental NPRM (SNPRM) to correct the unsafe condition on these products. Since these actions impose an additional burden over that proposed in the NPRM, we are reopening the comment period to allow the public the chance to comment on these proposed changes.

DATES: We must receive comments on this SNPRM by February 29, 2016.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* 202-493-2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE.,

Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed rule, contact B/E Aerospace, Inc., Commercial Aircraft Products Group, 10800 Pflumm Road, Lenexa, Kansas 66215; telephone: (913) 338-9800; fax: (913) 338-8419; Internet: www.beaerospace.com. You may review this referenced service information at the FAA, Small Airplane Directorate, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148.

Examining the AD Docket

You may examine the AD docket on the Internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA-2015-2134; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (telephone: 800-647-5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

David Enns, Aerospace Engineer, Wichita Aircraft Certification Office, FAA, 1801 S. Airport Road, Room 100, Wichita, Kansas 67209; telephone: (316) 946-4147; fax: (316) 946-4107; email: david.enns@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2015-2134; Directorate Identifier 2015-CE-012-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We issued an NPRM to amend 14 CFR part 39 by adding an AD that would apply to certain B/E Aerospace protective breathing equipment (PBE) that is installed on airplanes. The NPRM published in the **Federal Register** on June 16, 2015 (80 FR 34330). The NPRM proposed to require inspecting the PBE to determine if the pouch has the proper vacuum seal and replacing if necessary.

Actions Since Previous NPRM Was Issued

Since we issued the NPRM (80 FR 34330, June 16, 2015), further investigation into the fire of the PBE, part number (P/N) 119003–11, found that the ignitor candles from the PBE units that caught fire had a breach of the filter in the candle assembly. The breach of the filter in the candle assembly allowed hot particles from the igniter candle to enter the oxygen rich environment of the PBE hood, which could cause a fire. All ignitor candles that were examined after fire events showed a breach in the filter. Due to the complexities involved with the chemical reaction within the candle, a definitive cause for the breached filters has not been identified. B/E Aerospace PBE, P/N 119003–21, contains a stainless steel mesh in the outlet path of the igniter candle. It has been established that the installation of the stainless steel mesh will prevent hot particles from entering the PBE hood as a result of a breached filter. Also, it was initially believed that the fire events occurred only with PBEs that had compromised vacuum sealed pouches. Two recent events occurred with PBEs that were reported by the operators to be in serviceable conditions, although the FAA and PBE manufacturer could not verify the condition of the pouch or PBE before the event. Therefore, we can no longer conclude that a PBE, P/N 119003–11, with an intact vacuum seal will prevent the possibility of spark and fire.

This condition, if not corrected, could result in the PBE catching fire.

Comments

We gave the public the opportunity to comment on the NPRM (80 FR 34330, June 16, 2015). The following presents the comments received on the NPRM (80 FR 34330, June 16, 2015) and the FAA's response to each comment.

Request To Change Cost of Compliance Section

B/E Aerospace, Inc. requested that the labor cost stated for doing the inspection be changed from .5 work-hour to .1 work-hour.

The commenter stated that the manpower specified in the related service bulletin for doing the inspection is 1 minute for 1 person. By comparison, the labor cost stated in the NPRM is .5 work-hour. The commenter believes that 0.5 work-hour is unreasonably long based on experience with the PBE. The commenter also stated that as a consequence, this aspect of the NPRM incorrectly suggests a substantial burden on the industry given the number of PBE units requiring the inspection.

The commenter requested that the labor cost for doing the inspection be changed to be consistent with the related service information.

We partially agree with the commenter. Even though we agree that it may take less than .5 work-hour to inspect the PBE, it is FAA practice to present labor cost in .5 work-hour increments. We have not changed this proposed AD based on this comment.

Request To Change Applicability

Airbus stated that the Applicability section should also include PBE, P/N 119003–21, all FAA-approved PBEs.

The commenter stated that the candle in PBE, P/N 119003–21, is identical to the one in PBE, P/N 119003–11, and the abnormal behavior of the candle is also possible on the PBE, P/N 119003–21. The remaining effects of a candle malfunction from a PBE, P/N 119003–21, are still not sufficiently known, e.g. functional aspects, heat, or generation of noxious gases. A compromised seal could also lead to a malfunction of a PBE, P/N 119003–21, or other FAA-approved PBEs as well.

The commenter requested that the inspections also apply to PBE, P/N 119003–21, and all other FAA-approved PBEs as well.

We do not agree with the commenter. Our investigation revealed that the cause of the unsafe condition has been limited to PBE, P/N 119003–11. The manufacturer has tested PBE, P/N 119003–21, with candle assemblies that had a breach in the filter. The PBE, P/N 119003–21, has been shown to stop hot particles from entering the hood and causing a fire. Due to additional testing and investigation, this proposed AD now requires replacing the PBE, P/N 119003–11, with a PBE, P/N 119003–21, or other FAA-approved PBE. We are still allowing inspecting the PBE, P/N 119003–11, until the required replacement time.

We have not changed this proposed AD based on this comment.

Request To Include Allowance for Minimum Equipment List (MEL) Relief

United Airlines requested incorporating existing MEL procedures into the AD.

The commenter stated that the proposed AD requires replacing a PBE that has a compromised vacuum seal before further flight. The commenter requested a revision to the AD to allow airplane operation with a minimum equipment list (MEL).

We agree with the commenter. An MEL is intended to permit operation with inoperative instruments or equipment for a period of time until repairs can be done. Repairs must be done at the earliest opportunity. To maintain an acceptable level of safety and reliability, the MEL establishes limitations on the duration of and conditions for operation with inoperative equipment.

We have changed this proposed AD based on this comment.

Related Service Information Under 1 CFR Part 51

We reviewed B/E Aerospace Service Bulletin No. 119003–35–011, Rev. 000, dated February 4, 2015, and Service Bulletin 119003–35–009, Rev. 009, dated November 9, 2015. The B/E Aerospace Service Bulletin No. 119003–35–011, Rev. 000, dated February 4, 2015, describes procedures for inspecting PBE, P/N 119003–11, to determine if the vacuum seal of the pouch containing the PBE is compromised. B/E Aerospace Service Bulletin 119003–35–009, Rev. 009, dated November 9, 2015, describes procedures for replacing PBE, P/N 119003–11, with P/N 119003–21. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section of this SNPRM.

FAA's Determination

We are proposing this SNPRM because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design. Certain changes described above expand the scope of the NPRM (80 FR 34330, June 16, 2015). As a result, we have determined that it is necessary to reopen the comment period to provide additional opportunity for the public to comment on this SNPRM.

Proposed Requirements of This SNPRM

This SNPRM would require accomplishing the actions specified in the service information described

previously, except as discussed under “Differences Between this SNPRM and the Service Information.

Differences Between This SNPRM and the Service Information

B/E Aerospace Service Bulletin No. 119003–35–011, Rev. 000, dated February 4, 2015, applies to all PBE

with P/N 119003–11 and P/N 119003–21. We have determined that this proposed AD would apply only to a PBE with P/N 119003–11 with regard to the inspection requirement of paragraph (g) of this proposed AD. B/E Aerospace Service Bulletin 119003–35–009, Rev. 009, dated November 9, 2015, includes instructions for disposal. In this

proposed AD, we are requiring only the replacement action.

Costs of Compliance

We estimate that this proposed AD affects 9,000 products installed on airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspecting the pouch containing the PBE for proper vacuum seal.	.5 work-hour × \$85 per hour = \$42.50	Not applicable ...	\$42.50	\$382,500
Replace the PBE P/N 119003–11 with a PBE P/N 119003–21.	.5 work-hour × \$85 per hour = \$42.50	\$1,510	1,552.50	13,972,500

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. “Subtitle VII: Aviation Programs” describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
- (3) Will not affect intrastate aviation in Alaska, and
- (4) Will not have a significant economic impact, positive or negative,

on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

B/E Aerospace: Docket No. FAA–2015–2134; Directorate Identifier 2015–CE–012–AD.

(a) Comments Due Date

We must receive comments by February 29, 2016.

(b) Affected ADs

None.

(c) Applicability

This AD applies to B/E Aerospace Protective Breathing Equipment (PBE), part number (P/N) 119003–11, that is installed on airplanes.

(d) Subject

Joint Aircraft System Component (JASC)/Air Transport Association (ATA) of America Code 35; Oxygen.

(e) Unsafe Condition

This AD was prompted by a report of a PBE, P/N 119003–11, catching fire upon activation by a crewmember. We are issuing

this AD to correct the unsafe condition on these products.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Inspection

Within 3 months after the effective date of this AD, while still in the stowage box, physically inspect the PBE pouch to determine if it has an intact vacuum seal. Do this inspection following paragraph III.A.1. of the Accomplishment Instructions in B/E Aerospace Service Bulletin No. 119003–35–011, Rev. 000, dated February 4, 2015.

(h) Replacement

(1) *If a PBE pouch is found that does not have an intact vacuum seal during the inspection required in paragraph (g) of this AD:* Before further flight or following existing minimum equipment list (MEL) procedures, replace the PBE with a PBE, P/N 119003–21, following paragraphs III.C., III.D.(4), III.D.(6), and III.D.(7) of the Accomplishment Instructions in B/E Aerospace Service Bulletin No. 119003–35–009, Rev. 000, dated November 9, 2015, or replace it with another FAA-approved serviceable PBE.

(2) *If a PBE pouch is found during the inspection required in paragraph (g) of this AD where the vacuum seal is intact:* Within 18 months after the effective date of this AD, remove PBE, P/N 119003–11, and replace the PBE with PBE, P/N 119003–21, following paragraphs III.C., III.D.(4), III.D.(6), and III.D.(7) of the Accomplishment Instructions in B/E Aerospace Service Bulletin No. 119003–35–009, Rev. 000, dated November 9, 2015, or replace it with another FAA-approved serviceable PBE.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Wichita Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly

to the manager of the ACO, send it to the attention of the person identified in paragraph (j)(1) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

(1) For more information about this AD, contact David Enns, Aerospace Engineer, Wichita ACO, FAA, 1801 S. Airport Road, Room 100, Wichita, Kansas 67209; phone: (316) 946-4147; fax: (316) 946-4107; email: david.enns@faa.gov.

(2) For service information identified in this AD, contact B/E Aerospace, Inc., 10800 Pflumm Road, Commercial Aircraft Products Group, Lenexa, Kansas 66215; telephone: (913) 338-9800; fax: (913) 338-8419; Internet: www.beaerospace.com. You may review this referenced service information at the FAA, Small Airplane Directorate, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148.

Issued in Kansas City, Missouri, on January 6, 2016.

Kelly Broadway,

Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

[Docket No. FAA-2016-0068; Directorate Identifier 2015-CE-037-AD]

RIN 2120-AA64

Airworthiness Directives; SOCATA Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for SOCATA Models MS 880B, MS 885, MS 892A-150, MS 892E-150, MS 893A, MS 893E, MS 894A, MS 894E, Rallye 100S, Rallye 150ST, Rallye 150T, Rallye 235E, and Rallye 235C airplanes that would supersede AD 92-06-10. This proposed AD results from mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as fatigue failure of the nose landing gear wheel axle. We are issuing this proposed AD to require actions to

address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 29, 2016.

ADDRESSES: You may send comments by any of the following methods:

- **Federal eRulemaking Portal:** Go to <http://www.regulations.gov>. Follow the instructions for submitting comments.
- **Fax:** (202) 493-2251.
- **Mail:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- **Hand Delivery:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact SOCATA, Direction des services, 65921 Tarbes Cedex 9, France; phone: +33 (0) 5 62 41 73 00; fax: +33 (0) 5 62 41 76 54; email: info@socata.daher.com; Internet: <http://www.tbm.aero/>. For the United States, contact SOCATA NORTH AMERICA, North Perry Airport, 601 NE 10 Street, Pompano Beach, Florida 33060; phone: (954) 366-3331; Internet: <http://www.socatanorthamerica.com/default.htm>. You may review copies of the referenced service information at the FAA, Small Airplane Directorate, 901 Locust, Kansas City, Missouri 64106.

FOR FURTHER INFORMATION CONTACT:

Albert Mercado, Aerospace Engineer, FAA, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4119; fax: (816) 329-4090; email: albert.mercado@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2016-0068; Directorate Identifier 2015-CE-037-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We will also post a report summarizing each

substantive verbal contact we receive about this proposed AD.

Discussion

On February 25, 1992, we issued AD 92-06-10, Amendment 39-8190 (57 FR 8063; March 6, 1992) ("92-06-10"). That AD required actions intended to address an unsafe condition on SOCATA Models MS 880B, MS 885, MS 894A, MS 893A, MS 892A-150, MS 892E-150, MS 893E, MS 894E, Rallye 100S, Rallye 150T, Rallye 150ST, Rallye 235E, and Rallye 235C airplanes and was based on mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country.

Since we issued AD 92-06-10, new findings led to an adjustment of the inspection intervals.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA AD 2015-0203, dated October 7, 2015 (referred to after this as "the MCAI"), to correct an unsafe condition for the specified products. The MCAI states:

A nose landing gear (NLG) wheel axle rupture occurred in service. The results of the technical investigation revealed that this failure was due to premature wear.

This condition, if not detected and corrected, could lead to cracks in the axle and detachment of axle and wheel, possibly resulting in failure of the NLG with consequent damage to the aeroplane and injury to occupants.

To address this potential unsafe condition, DGAC France issued AD 91-163(A) (later revised twice) to require repetitive detailed inspections (DET) of the NLG wheel axle and replacement of the NLG wheel axle attachment screws in accordance with the instructions of SOCATA Service Bulletin (SB) 150-32.

Since DGAC France AD 91-163(A)R2 was issued, new findings led to an adjustment of the inspection interval. Consequently, SOCATA issued SB 150-32, now at Revision 3.

For the reasons described above, this new AD retains the requirements of the DGAC France AD 91-163(A)R2, which is superseded, but requires these actions to be accomplished within reduced intervals.

You may examine the MCAI on the Internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA-2016-0068.

Related Service Information Under 1 CFR Part 51

SOCATA has issued Daher-Socata Mandatory Service Bulletin SB 150-32, Revision 3, dated September 2015. The service bulletin describes procedures for inspection of the nose gear wheel axle. This service information is reasonably available because the interested parties

have access to it through their normal course of business or by the means identified in the **ADDRESSES** section of this NPRM.

FAA's Determination and Requirements of the Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with this State of Design Authority, they have notified us of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all information and determined the unsafe condition exists and is likely to exist or develop on other products of the same type design.

Costs of Compliance

We estimate that this proposed AD will affect 77 products of U.S. registry. We also estimate that it would take about 10 work-hours per product to comply with the basic requirements of this proposed AD. The average labor rate is \$85 per work-hour. Required parts would cost about \$500 per product.

Based on these figures, we estimate the cost of the proposed AD on U.S. operators to be \$103,950, or \$1,350 per product.

In addition, we estimate that any necessary follow-on actions would take about 3 work-hours and require parts costing \$1,450, for a cost of \$1,705 per product. We have no way of determining the number of products that may need these actions.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. "Subtitle VII: Aviation Programs," describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in "Subtitle VII, Part A, Subpart III, Section 44701: General requirements." Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
- (3) Will not affect intrastate aviation in Alaska, and
- (4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by removing Amendment 39–8190 (57 FR 8063; March 6, 1992), and adding the following new AD:

SOCATA: Docket No. FAA–2016–0068; Directorate Identifier 2015–CE–037–AD.

(a) Comments Due Date

We must receive comments by February 29, 2016.

(b) Affected ADs

This AD supersedes AD 92–06–10 Amendment 39–8190 (57 FR 8063; March 6, 1992) ("AD 92–06–10").

(c) Applicability

This AD applies to SOCATA Models MS 880B, MS 885, MS 892A–150, MS 892E–150, MS 893A, MS 893E, MS 894A, MS 894E, Rallye 100S, Rallye 150ST, Rallye 150T, Rallye 235E, and Rallye 235C airplanes, all serial numbers, certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 32: Landing Gear.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as fatigue failure of the nose landing gear wheel axle. We are issuing this proposed AD to detect and correct chafing and cracking of the nose gear wheel axle, which could lead to failure of the nose landing gear with consequent damage to the airplane and/or occupants.

(f) Actions and Compliance

Unless already done, do the following actions in paragraphs (f)(1) through (f)(5) of this AD, including all subparagraphs.

(1) Do a detailed visual inspection of the intersection between the axle radius and the nose landing gear fork area for chafing at whichever occurs later in paragraph (f)(1)(i) or (f)(1)(ii) of this AD and repetitively thereafter at intervals not to exceed 200 hours time-in-service (TIS) following Daher-Socata Mandatory Service Bulletin SB 150–32, Revision 3, dated September 2015:

(i) Upon accumulating 200 hours TIS since the airplane's first flight or 200 hours TIS since the last inspection required by AD 92–06–10; or

(ii) Within the next 50 hours TIS after the effective date of this AD or within 500 hours TIS since the last inspection required by AD 92–06–10, whichever occurs first.

(2) Do a dye penetrant inspection on the nose wheel axle for cracks, distortion, and nicks or wear at whichever occurs later in paragraph (f)(2)(i) or (f)(2)(ii) of this AD and repetitively thereafter at intervals not to exceed 200 hours time-in-service (TIS) following Daher-Socata Mandatory Service Bulletin SB 150–32, Revision 3, dated September 2015:

(i) Upon accumulating 200 hours TIS since the airplane's first flight or 200 hours TIS since the last inspection required by AD 92–06–10; or

(ii) Within the next 50 hours TIS after the effective date of this AD or within 500 hours TIS since the last inspection required by AD 92–06–10, whichever occurs first.

(3) If any cracks or damage is found in any inspection required by paragraphs (f)(1) or (f)(2) in this AD, contact SOCATA for FAA-approved repair or replacement instructions approved specifically for this AD and, before further flight, implement those instructions. Use the contact information found in paragraph (i) of this AD to contact SOCATA.

(4) Replace the nose landing gear wheel axle attachment screws with new screws at whichever occurs later in paragraph (f)(4)(i) or (f)(4)(ii) of this AD following Daher-Socata Mandatory Service Bulletin SB 150–32, Revision 3, dated September 2015:

(i) Upon accumulating 2,000 hours TIS since airplane's first flight or 2,000 hours TIS since last nose landing gear wheel attachment screw replacement with new screws; or

(ii) Within 50 hours TIS since April 17, 1992 (the effective date retained from AD 92–06–10).

(5) After the effective date of this AD, a used nose landing gear or a used nose landing gear wheel axle may be installed provided it has been inspected and found free of cracks and/or damage and the nose landing gear wheel axle attachment screws have been replaced with new screws as specified in paragraphs (f)(1), (f)(2), and (f)(4) of this AD.

(g) Credit for Actions Accomplished in Accordance With Previous Service Information

This AD allows credit for the inspections required in paragraph (f)(1) and (f)(2) of this AD, if done before the effective date of this AD, following Daher-Socata Mandatory Service Bulletin SB 150–32, Revision 2, dated January 1994.

(h) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) Alternative Methods of Compliance (AMOCs): The Manager, Standards Office, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Albert Mercado, Aerospace Engineer, FAA, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329–4119; fax: (816) 329–4090; email: albert.mercado@faa.gov. Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(2) Airworthy Product: For any requirement in this AD to obtain corrective actions from a manufacturer or other source, use these actions if they are FAA-approved. Corrective actions are considered FAA-approved if they are approved by the State of Design Authority (or their delegated agent). You are required to assure the product is airworthy before it is returned to service.

(i) Related Information

Refer to MCAI European Aviation Safety Agency (EASA) AD 2015–0203, dated October 7, 2015; and Daher-Socata Mandatory Service Bulletin SB 150–32, Revision 2, dated January 1994, for related information. You may examine the MCAI on the Internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA–2016–0068. For service information related to this AD, contact SOCATA, Direction des services, 65921 Tarbes Cedex 9, France; phone: +33 (0) 5 62 41 73 00; fax: +33 (0) 5 62 41 76 54; email: info@socata.daher.com; Internet: <http://www.tbm.aero/>. For the United States, contact SOCATA NORTH AMERICA, North Perry Airport, 601 NE 10 Street, Pompano Beach, Florida 33060;

phone: (954) 366–3331; Internet: <http://www.socatanorthamerica.com/default.htm>. You may review copies of the referenced service information at the FAA, Small Airplane Directorate, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148.

Issued in Kansas City, Missouri, on January 5, 2016.

Kelly Broadway,

Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2012–959; FRL–9941–14–Region 9]

Revisions to the California State Implementation Plan, Sacramento Metropolitan Air Quality Management District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing a partial approval and partial disapproval of revisions to the Sacramento Metropolitan (Metro) Air Quality Management District (SMAQMD or District) portion of the California State Implementation Plan (SIP). These revisions concern the District’s demonstration regarding Reasonably Available Control Technology (RACT) requirements for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS). We are proposing action on a local SIP revision under the Clean Air Act (CAA or the Act). We are taking comments on this proposal and plan to follow with a final action.

DATES: Any comments must arrive by February 16, 2016.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2012–959 at <http://www.regulations.gov>, or via email to Steckel.Andrew@epa.gov. For comments submitted at Regulations.gov, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from

Regulations.gov. For either manner of submission, the EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Stanley Tong, EPA Region IX, (415) 947–4122, tong.stanley@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document, “we,” “us” and “our” refer to the EPA.

I. The State’s Submittal

A. What documents did the State submit?

Table 1 lists the documents addressed by this proposal with the dates that they were adopted by the local air agency and submitted to the EPA by the California Air Resources Board (CARB).

TABLE 1—SUBMITTED DOCUMENTS

Local agency	Document	Adopted	Submitted
SMAQMD	Reasonably Available Control Technology (RACT) as Applicable to the 8-Hour Ozone Standard, dated October 26, 2006 (“2006 RACT SIP”).	10/26/06	07/11/07

TABLE 1—SUBMITTED DOCUMENTS—Continued

Local agency	Document	Adopted	Submitted
SMAQMD	Reasonably Available Control Technology (RACT) Update as Applicable to the 8-Hour Ozone Standard, dated October 23, 2008 ("Updated RACT SIP").	10/23/08	1/21/09

The 2006 RACT SIP and Updated RACT SIP became complete by operation of law under CAA section 110(k)(1)(B) on January 11, 2008 and July 21, 2009, respectively.

B. Are there other versions of these documents?

There are no previous versions of these documents in the SMAQMD portion of the California SIP.

C. What is the purpose of the RACT SIP submissions?

Volatile organic compounds (VOCs) and nitrogen oxides (NO_x) help produce ground-level ozone and smog, which harm human health and the environment. Section 110(a) of the CAA requires States to submit regulations that control VOC and NO_x emissions. Sections 182(b)(2) and (f) require that SIPs for ozone nonattainment areas classified as moderate or above implement RACT for any source covered by a Control Techniques Guidelines (CTG) document and any major stationary source of VOCs or NO_x. The Sacramento Metro area is subject to this requirement as it is designated and classified as a severe ozone nonattainment area for the 1997 8-hour ozone NAAQS. 40 CFR 81.305; 69 FR 23858 at 23887 (April 30, 2004) (final rule designating and classifying Sacramento Metro area as serious nonattainment for the 1997 8-hour ozone NAAQS); 75 FR 24409 (May 5, 2010) (final rule reclassifying the Sacramento Metro area as severe-15 nonattainment for the 1997 8-hour ozone NAAQS). Therefore, the SMAQMD must, at a minimum, adopt RACT-level controls for all sources covered by a CTG document and for all major non-CTG sources of VOCs or NO_x within the Sacramento Metro nonattainment area. Any stationary source that emits or has a potential to emit at least 25 tons per year (tpy) of VOCs or NO_x is a major stationary source in a severe ozone nonattainment area (CAA section 182(d) and (f)).

Section IV.G. of the preamble to the EPA's final rule to implement the 1997 8-hour ozone NAAQS (70 FR 71612, November 29, 2005) discusses RACT requirements. It states in part that where a RACT SIP is required, States implementing the 8-hour standard generally must assure that RACT is met

either through a certification that previously required RACT controls represent RACT for 8-hour implementation purposes or through a new RACT determination. The submitted documents provide SMAQMD's analyses of its compliance with the CAA section 182 RACT requirements for the 1997 8-hour ozone NAAQS. The EPA's technical support documents (TSDs) ("2006 RACT SIP TSD" and "RACT SIP Update TSD") have more information about the District's submissions and the EPA's evaluations thereof.

II. The EPA's Evaluation and Proposed Action

A. How is the EPA evaluating the RACT SIP submissions?

SIP rules must be enforceable (see CAA section 110(a)(2)), must not interfere with applicable requirements concerning attainment and reasonable further progress or other CAA requirements (see CAA section 110(l)), and must not modify certain SIP control requirements in nonattainment areas without ensuring equivalent or greater emissions reductions (see CAA section 193). Generally, SIP rules must require RACT for each category of sources covered by a CTG document as well as each major source of NO_x or VOCs in ozone nonattainment areas classified as moderate or above (see CAA section 182(b)(2)). The SMAQMD regulates a severe ozone nonattainment area (see 40 CFR 81.305), so the District's rules must implement RACT.

Guidance and policy documents that we use to evaluate enforceability and CAA section 182 RACT SIPs include the following:

1. "Final Rule to Implement the 8-Hour Ozone National Ambient Air Quality Standard—Phase 2" (70 FR 71612; November 29, 2005).
2. "State Implementation Plans, General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990" (57 FR 13498; April 16, 1992).
3. Issues Relating to VOC Regulation Cutpoints, Deficiencies, and Deviations: Clarification to Appendix D of November 24, 1987 **Federal Register**, May 25, 1988, Revised January 11, 1990, U.S. EPA, Air Quality Management Division, Office of Air Quality Planning and Standards ("The Blue Book").
4. Guidance Document for Correcting Common VOC and Other Rule Deficiencies,

August 21, 2001, U.S. EPA Region IX (the "Little Bluebook").

5. "State Implementation Plans; Nitrogen Oxides Supplement to the General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990" (57 FR 55620, November 25, 1992) ("the NO_x Supplement").

6. RACT SIPs, Letter dated March 9, 2006 from EPA Region IX (Andrew Steckel) to CARB (Kurt Karperos) describing Region IX's understanding of what constitutes a minimally acceptable RACT SIP.

7. Memorandum from William T. Harnett to Regional Air Division Directors, (May 18, 2006), "RACT Qs & As—Reasonably Available Control Technology (RACT) Questions and Answers".

8. RACT SIPs, Letter dated April 4, 2006 from EPA Region IX (Andrew Steckel) to CARB (Kurt Karperos) listing EPA's current CTGs, ACTs, and other documents which may help to establish RACT.

With respect to major stationary sources, because the Sacramento Metro nonattainment area was classified as "serious" nonattainment for the 1997 8-hour ozone NAAQS at the time that California submitted the 2006 RACT SIP to the EPA, the EPA evaluated this submission in accordance with the 50 ton per year (tpy) threshold for "major stationary sources" of VOC or NO_x emissions in serious ozone nonattainment areas. CAA section 182(c) and (f). The SMAQMD's Updated RACT SIP contains the District's RACT evaluation for additional major stationary sources based upon the 25 tpy major source threshold in severe ozone nonattainment areas (see CAA section 182(d) and (f)), which the EPA evaluated for compliance with the additional RACT requirements that became applicable following the EPA's reclassification of the Sacramento Metro area from "serious" to "severe" nonattainment for the 1997 8-hour ozone NAAQS. See 69 FR 23858 at 23887 (April 30, 2004) (final rule designating and classifying the Sacramento Metro area as serious nonattainment for the 1997 8-hour ozone NAAQS) and 75 FR 24409 (May 5, 2010) (final rule reclassifying the Sacramento Metro area as severe-15 nonattainment for the 1997 8-hour ozone NAAQS).

B. Do the RACT SIP submissions meet the evaluation criteria?

The 2006 RACT SIP and Updated RACT SIP provide the District's

conclusion that the applicable SIP for the Sacramento Metro area satisfies CAA section 182 RACT requirements for the 1997 8-hour ozone NAAQS. This conclusion is based on the District's analyses of SIP-approved requirements that apply to: (1) CTG source categories; (2) certain non-CTG source categories or emission units located at major stationary sources; and (3) all major stationary sources of VOC or NO_x emissions. *See* 2006 RACT SIP Staff Report at Appendices A–D and Updated RACT SIP Staff Report at Appendices A–B. SMAQMD's 2006 RACT SIP Staff Report and Updated RACT SIP Staff Report include detailed analyses of its SIP rules including discussions of how

those rules continue to implement RACT for the 1997 8-hour ozone NAAQS.

First, with respect to CTG source categories, Table 1 of the 2006 RACT SIP Staff Report and Table 1 of the Updated RACT SIP Staff Report lists all CTG source categories and match those CTG categories with corresponding District rules which implement RACT. SMAQMD also searched its database of permitted sources and telephone directories for potential sources belonging to those CTG categories for which the District did not have rules. Based on these evaluations, the District concluded that there were no CTG source categories for which the District had sources but no applicable RACT

requirement. *See* 2006 RACT SIP Staff Report at 2 and Updated RACT SIP Staff Report at 3. Our review of CARB's emissions inventory database for potential CTG sources did not uncover any CTG source categories missing from the District's analyses.

Where there are no existing sources covered by a particular CTG document, states may, in lieu of adopting RACT requirements for those sources, adopt negative declarations certifying that there are no such sources in the relevant nonattainment area. Table 2 below lists all of the source categories for which SMAQMD's 2006 RACT SIP and Updated RACT SIP provide negative declarations.

TABLE 2—SMAQMD NEGATIVE DECLARATIONS

CTG Source category	CTG Document title
Aerospace Coating	EPA-453/R-97-004 and 59 FR 29216 (6/06/94)—Control of Volatile Organic Compound Emissions from Coating Operations at Aerospace Manufacturing and Rework Operations.
Automobile Coating	EPA-450/2-77-008—Control of Volatile Organic Emissions from Existing Stationary Sources, Volume II: Surface Coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks.
Dry Cleaning (Petroleum Solvent)	EPA-450/3-82-009—Control of Volatile Organic Compound Emissions from Large Petroleum Dry Cleaners.
Graphic Arts (Rotogravure)	EPA-450/2-78-033—Control of Volatile Organic Emissions from Existing Stationary Sources, Volume VIII: Graphic Arts—Rotogravure and Flexography.
Large Appliance Coating	EPA-450/2-77-034—Control of Volatile Organic Emissions from Existing Stationary Sources, Volume V: Surface Coating of Large Appliances.
Magnetic Wire Coating	EPA-453/R-07-004—Control Techniques Guidelines for Large Appliance Coatings.
Metal Coil Coating	EPA-450/2-77-033—Control of Volatile Organic Emissions from Existing Stationary Sources, Volume IV: Surface Coating for Insulation of Magnetic Wire.
Natural Gas/Gasoline Processing	EPA-450/2-77-008—Control of Volatile Organic Emissions from Existing Stationary Sources, Volume II: Surface Coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks.
Paper and Fabric Coating	EPA-450/2-83-007—Control of Volatile Organic Compound Equipment Leaks from Natural Gas/Gasoline Processing Plants.
Resin Manufacturing (High-Density Polyethylene, Polypropylene, and Polystyrene).	EPA-450/2-77-008—Control of Volatile Organic Emissions from Existing Stationary Sources, Volume II: Surface Coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks.
Refineries	EPA-450/3-83-008—Control of Volatile Organic Compound Emissions from Manufacture of High-Density Polyethylene, Polypropylene, and Polystyrene Resins.
Rubber Tire Manufacturing	EPA-450/2-77-025—Control of Refinery Vacuum Producing Systems, Wastewater Separators and Process Unit Turnarounds.
Ship Coating	EPA-450/2-78-036—Control of Volatile Organic Compound Leaks from Petroleum Refinery Equipment.
Wood Coating (Flat Wood Paneling)	EPA-450/2-78-030—Control of Volatile Organic Emissions from Manufacture of Pneumatic Rubber Tires.
Paper, Film and Foil	61 FR 44050—Control Techniques Guidelines for Shipbuilding and Ship Repair Operations (Surface Coating).
	EPA-450/2-78-032—Control of Volatile Organic Emissions from Existing Stationary Sources, Volume VII: Factory Surface Coating of Flat Wood Paneling.
	EPA-453/R06-004—Control Techniques Guidelines for Flat Wood Paneling Coatings.
	EPA-453/R-07-004—Control Techniques Guidelines for Paper, Film, and Foil Coatings.

Source: 2006 RACT SIP at 1–2 and Updated RACT SIP at 2–3.

Subsequent to submitting its 2006 RACT SIP and Updated RACT SIP, SMAQMD submitted, and the EPA approved, negative declarations for the following CTG source categories: Coating Operations at Aerospace Manufacturing and Rework Operations (77 FR 23130, April 18, 2012), Fiberglass Boat Manufacturing Materials (77 FR 63743, October 17, 2012), and Automobile and Light-Duty Truck Assembly Coatings (77 FR 63743, October 17, 2012).

With the exception of the Pharmaceuticals Manufacturing CTG and the municipal landfill category, we are proposing to find that SMAQMD's 2006 RACT SIP and Updated RACT SIP, including the above negative declarations, largely demonstrate that the applicable SIP rules for the CTG source categories operating within the Sacramento Metro area satisfy RACT for the 1997 8-hour ozone NAAQS. We will discuss the deficiencies with Rule 455, Pharmaceuticals Manufacturing and the municipal landfill category, in the next section.

Our 2006 RACT SIP TSD provides a more detailed discussion of the EPA's rationale, including an overview of the District's analyses which were made available for public comment during the District's rulemaking process, together with recommendations for rule improvements.

Second, with respect to certain non-CTG source categories located at facilities that are major stationary sources of VOC or NO_x emissions, the 2006 RACT SIP Staff Report contains: (1) A summary of recommendations or requirements contained in applicable Alternative Control Technique (ACT) documents, federal and state RACT guidance documents, and/or regulations; (2) a summary of the applicable District rules; and (3) an evaluation of the District's rules in light of the applicable RACT guidance documents and/or regulations. See 2006 RACT SIP Staff Report at Appendix B. Based on these evaluations, SMAQMD concludes that non-CTG emission sources located within these VOC or NO_x major stationary sources are generally covered by SIP-approved rules that satisfy RACT for the 1997 8-hour ozone NAAQS. We are proposing to find that the SMAQMD's 2006 RACT SIP and Updated RACT SIP submissions adequately demonstrate that the applicable SIP rules for these non-CTG sources located at major stationary sources satisfy RACT for the 1997 8-hour ozone NAAQS.

Our 2006 RACT SIP TSD provides a more detailed discussion of the EPA's rationale for these proposals, including

an overview of the District's analyses which were made available for public comment during the District's rulemaking process.

Finally, with respect to all other major stationary sources of VOC or NO_x emissions, the 2006 RACT SIP and Updated RACT SIP identify the applicable SIP rules or SIP-approved permit provisions that the EPA has previously approved as satisfying RACT. Our review of CARB's emissions inventory database did not uncover any additional major stationary sources that were missed in the District's analyses. Based on the EPA's review of the District's evaluations, we propose to conclude that with the exception of the Pharmaceuticals Manufacturing rule and municipal waste landfill category, all of the identified SIP rules and permit conditions satisfy RACT for the 1997 8-hour ozone NAAQS.

C. What are the RACT deficiencies?

Rule 455, Pharmaceuticals Manufacturing, (amended 11/29/83 and 9/5/96) lacks test methods, recordkeeping, and monitoring requirements which are necessary to support enforcement of the rule. See CAA section 110(a). These are deficiencies listed in the EPA's "Blue Book" (Issues Relating to VOC Regulation Cutpoints, Deficiencies, and Deviations, May 25, 1988, revised January 11, 1990) and should be corrected.

The Kiefer landfill is a major source of VOCs located within the Sacramento Metro area. SMAQMD Rule 485, Municipal Landfill Gas, exempts landfills covered under the NSPS, 40 CFR part 60 Subpart WWW, including Kiefer Landfill. Although the District has been delegated authority to implement and enforce the NSPS, as well as the relevant NESHAP (40 CFR part 63 Subpart AAAA), those requirements have not been incorporated into the SIP. The District should amend the rule or submit relevant portions of the facility's permit for SIP approval.

D. EPA Recommendations To Further Improve the RACT SIP

Our TSDs for the 2006 RACT SIP and Updated RACT SIP provide additional recommendations for future rule improvements.

E. Proposed Action and Public Comment

For the reasons discussed above and explained more fully in our 2006 RACT SIP TSD and Updated RACT SIP TSD, the EPA proposes to partially approve and partially disapprove SMAQMD's

2006 RACT SIP and Updated RACT SIP. Under CAA section 110(k)(3), we propose to approve the 2006 RACT SIP and Updated RACT SIP, with the exception of Rule 455, Pharmaceutical Manufacturing and the municipal waste landfill category, as satisfying the RACT requirements of CAA section 182(b)(2) and (f).

Also under CAA section 110(k)(3), we propose to disapprove those elements of the 2006 RACT SIP and Updated RACT SIP that pertain to Rule 455 and the municipal waste landfill category, which the EPA has determined do not meet all of the applicable CAA requirements. We will not finalize this partial disapproval, however, if we fully approve revisions to Rule 455 and the municipal waste landfill category as satisfying RACT before finalizing action on the 2006 RACT SIP and Updated RACT SIP.

The EPA is committed to working with CARB and the District to resolve the Rule 455 and municipal waste landfill RACT deficiencies identified in this proposed action.

If finalized, this partial disapproval would trigger the 2-year clock for the federal implementation plan (FIP) requirement under section 110(c).

In addition, final disapproval would trigger sanctions under CAA section 179 and 40 CFR 52.31 unless the EPA approves subsequent SIP revisions that correct the RACT SIP deficiencies within 18 months of the effective date of the final action.

We will accept comments from the public on the proposed partial approval and partial disapproval for the next 30 days.

III. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <http://www2.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA because this action does not impose additional requirements beyond those imposed by state law.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities beyond those imposed by state law.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action does not impose additional requirements beyond those imposed by state law. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, will result from this action.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175, because the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, and will not impose substantial direct costs on tribal governments or preempt tribal law. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not impose additional requirements beyond those imposed by state law.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

Section 12(d) of the NTTAA directs the EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. The EPA believes that this action is not subject to the requirements of section 12(d) of the NTTAA because application of those requirements would be inconsistent with the CAA.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Population

The EPA lacks the discretionary authority to address environmental justice in this rulemaking.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: December 11, 2015.

[EPA–R09–OAR–2015–0048; FRL–9940–95–Region 9]

Clean Air Plans; 1-Hour and 1997 8-Hour Ozone Nonattainment Area Requirements; San Joaquin Valley, California

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a state implementation plan (SIP) revision submitted by the State of California to provide for attainment of the 1-hour ozone national ambient air quality standard in the San Joaquin Valley, California ozone nonattainment area

and to meet other Clean Air Act requirements. Specifically, with respect to the 1-hour ozone standard, the EPA is proposing to find the emissions inventories to be acceptable and to approve the reasonably available control measures demonstration, the rate of progress demonstrations, the attainment demonstration, contingency measures for failure to meet rate of progress milestones, the provisions for advanced technology/clean fuels for boilers, and the demonstration that the plan provides sufficient transportation control strategies and measures to offset emissions increases due to increases in motor vehicle activity. For the 1997 8-hour ozone standard, the EPA is proposing to approve the demonstration that the plan provides sufficient transportation control strategies and measures to offset emissions increases due to increases in motor vehicle activity.

DATES: Any comments must arrive by February 16, 2016.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R09–OAR–2015–0048, by one of the following methods:

1. <http://www.regulations.gov>: Follow the on-line instructions for submitting comments.

2. *Email:* ungvarsky.john@epa.gov.

3. *Mail or deliver:* John Ungvarsky (AIR–2), U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901. Deliveries are only accepted during the Regional Office’s normal hours of operation.

Instructions: All comments will be included in the public docket without change and may be made available online at <http://www.regulations.gov>, including any personal information provided, unless the comment includes Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Information that you consider CBI or otherwise protected should be clearly identified as such and should not be submitted through <http://www.regulations.gov> or email. <http://www.regulations.gov> is an anonymous access system, and the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email directly to the EPA, your email address will be automatically captured and included as part of the public comment. If the EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, the EPA may not be able to consider your comment.

Docket: The index to the docket and documents in the docket for this action are generally available electronically at www.regulations.gov and in hard copy at EPA Region IX, 75 Hawthorne Street, San Francisco, California. While all documents in the docket are listed at www.regulations.gov, some information may be publicly available only at the hard copy location (e.g., copyrighted material, large maps), and some may not be publicly available in either location (e.g., CBI). To inspect the hard copy materials, please schedule an appointment during normal business hours with the contact listed in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: John Ungvarsky, Air Planning Office (AIR-2), U.S. Environmental Protection Agency, Region 9, (415) 972-3963, ungvarsky.john@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document, “we,” “us” and “our” refer to the EPA.

 - G. Transportation Control Strategies and Transportation Control Measures to Offset Growth in Emissions from Growth in Vehicle Miles Traveled or Number of Vehicle Trips
- IV. Proposed Action
- V. Statutory and Executive Order Reviews

I. Regulatory Context

A. Ozone Standards, SIPs, and Area Designations

Ground-level ozone is formed when oxides of nitrogen (NO_x) and volatile organic compounds (VOC) react in the presence of sunlight.¹ These two pollutants, referred to as ozone precursors, are emitted by many types of pollution sources, including on- and off-

road motor vehicles and engines, power plants and industrial facilities, and smaller area sources such as lawn and garden equipment and paints. Scientific evidence indicates that adverse public health effects occur following exposure to ozone, particularly in children and adults with lung disease. Breathing air containing ozone can reduce lung function and inflame airways, which can increase respiratory symptoms and aggravate asthma or other lung diseases. See “Fact Sheet, Proposal to Revise the National Ambient Air Quality Standards for Ozone,” January 6, 2010 and 75 FR 2938 (January 19, 2010).

Under section 109 of the Clean Air Act (CAA), the EPA promulgates national ambient air quality standards (NAAQS or standards) for pervasive air pollutants, such as ozone. In 1979, the EPA established the NAAQS for ozone at 0.12 parts per million (ppm) averaged over a 1-hour period (“1-hour ozone standard”). 44 FR 8202 (February 8, 1979). An area is considered to have attained the 1-hour ozone standard if there are no violations of the standard, as determined in accordance with the regulation codified at 40 CFR 50.9, based on three consecutive calendar years of complete, quality assured and certified monitoring data. A violation occurs when the ambient ozone air quality monitoring data show greater than one (1.0) “expected number” of exceedances per year at any site in the area, when averaged over three consecutive calendar years.² An exceedance occurs when the maximum hourly ozone concentration during any day exceeds 0.124 ppm. For more information, see “National 1-hour primary and secondary ambient air quality standards for ozone” (40 CFR 50.9) and “Interpretation of the 1-Hour Primary and Secondary National Ambient Air Quality Standards for Ozone” (40 CFR part 50, appendix H).

In 1997, the EPA revised the NAAQS for ozone to set the acceptable level of ozone in the ambient air at 0.08 ppm, averaged over an 8-hour period (“1997 8-hour ozone standard”). 62 FR 38856 (July 18, 1997). The EPA determined that the 1997 8-hour standard would be more protective of human health, especially children and adults who are active outdoors, and individuals with a

pre-existing respiratory disease, such as asthma. In 2008, the EPA revised and further strengthened the NAAQS for ozone by setting the acceptable level of ozone in the ambient air at 0.075 ppm, averaged over an 8-hour period (“2008 8-hour ozone standard”). 73 FR 16436 (March 27, 2008). In 2015, the EPA further tightened the 8-hour ozone standard to 0.070 ppm. 80 FR 65292 (October 26, 2015). While both the 1979 1-hour ozone standard and the 1997 8-hour ozone standard have been revoked, certain requirements that had applied under the revoked standards continue to apply under the anti-backsliding provisions of CAA section 172(e).

Once the EPA has promulgated a NAAQS, states are required to develop and submit plans that provide for the implementation, maintenance, and enforcement of the NAAQS under CAA section 110(a)(1). The content requirements for such plans, which are referred to as state implementation plans (SIPs) are found in CAA section 110(a)(2). Under the Clean Air Act, as amended in 1977, the EPA designated all areas of the country as “attainment,” “nonattainment,” or “unclassifiable” for the various NAAQS depending upon the availability of ambient concentration data and depending upon whether violations of the NAAQS were occurring in a given area. The CAA further requires states with “nonattainment” areas to submit revisions to their SIPs that provide for, among other things, attainment of the relevant standard within certain prescribed periods.

In California, the California Air Resources Board (CARB) is responsible for adoption and submittal to the EPA of California SIPs and California SIP revisions and is the primary State agency responsible for regulation of mobile sources. Local and regional air pollution control districts are responsible for developing regional air quality plans and for regulation of stationary sources. For the San Joaquin Valley, the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD or “District”) develops and adopts air quality management plans to address CAA SIP planning requirements applicable to that region. Such plans are then submitted to CARB for adoption and submittal to the EPA as revisions to the California SIP.

B. The San Joaquin Valley Nonattainment Area

Under the 1977 CAA Amendments, the EPA designated the San Joaquin Valley Air Basin (“San Joaquin Valley” or “Valley”) as a “nonattainment” area for the photochemical oxidant (later, the 1-hour ozone) NAAQS. 43 FR 8962, at

¹ California plans sometimes use the term Reactive Organic Gases (ROG) for VOC. These terms are essentially synonymous. For simplicity, we use the term VOC herein to mean either VOC or ROG.

² An “expected number” of exceedances is a statistical term that refers to an arithmetic average. An “expected number” of exceedances may be equivalent to the number of observed exceedances plus an increment that accounts for incomplete sampling. See, 40 CFR part 50, appendix H. Because, in this context, the term “exceedances” refers to days (during which the daily maximum hourly ozone concentration exceeded 0.124 ppm), the maximum possible number of exceedances in a given year is 365 (or 366 in a leap year).

8972 (March 3, 1978). Initially, eight entire counties comprised the San Joaquin Valley: San Joaquin, Stanislaus, Merced, Madera, Fresno, Tulare, Kings, and Kern counties. In 2001, however, the EPA approved a request to revise the boundary of the San Joaquin Valley to exclude eastern Kern County. 66 FR 56476 (November 8, 2001). As such, the San Joaquin Valley ozone nonattainment area stretches over 250 miles from north to south, averages a width of 80 miles, and encompasses over 23,000 square miles. It is partially enclosed by the Coast Mountain range to the west, the Tehachapi Mountains to the south, and the Sierra Nevada range to the east. The San Joaquin Valley is one of the nation's leading agricultural areas, and in recent decades, has experienced a high rate of growth in population. From 1990 to 2010, the population in the Valley increased from approximately 2.7 million to 4 million people. For a precise description of the geographic boundaries of the San Joaquin Valley, see 40 CFR 81.305.

The CAA, as amended in 1977, required states to submit SIP revisions for nonattainment areas that, among other requirements, provided for attainment no later than 1987; however, like many areas of the country, the San Joaquin Valley failed to attain the ozone NAAQS by 1987. In the 1990 CAA Amendments, Congress established a classification system for ozone nonattainment areas under which areas with more severe ozone problems were given a higher classification and more time to attain the standard but were subject to a greater number of, and more stringent, SIP requirements. The classifications include "Marginal," "Moderate," "Serious," "Severe," and "Extreme." See CAA section 181(a)(1).

Under this classification system, the San Joaquin Valley was classified as a "Serious" ozone nonattainment area for the 1-hour ozone standard with an attainment date of no later than November 15, 1999. 56 FR 56694 (November 6, 1991). In response, in 1994, CARB submitted *The California Ozone State Implementation Plan* ("1994 California Ozone Plan"), a comprehensive ozone plan for the State of California that included a state strategy as well as certain regional ozone plans, such as the regional plan for the San Joaquin Valley. The EPA approved the 1994 California Ozone Plan in 1997. 62 FR 1150 (January 8, 1997).

In 2001, the EPA found that the San Joaquin Valley had failed to attain the 1-hour ozone standard by the "Serious" area deadline and reclassified the area to "Severe." 66 FR 56476 (November 8,

2001). In 2004, the EPA granted the State's request to voluntarily reclassify the San Joaquin Valley from "Severe" to "Extreme" for the 1-hour ozone standard and required the state to submit a SIP revision providing for the "Extreme" area SIP elements in CAA section 182(e), which include a demonstration of attainment of the standard as expeditiously as practicable, but no later than November 15, 2010. 69 FR 20550 (April 16, 2004).

In response, CARB and the District developed and adopted the *Extreme Ozone Attainment Demonstration Plan* ("2004 Ozone Plan") for the San Joaquin Valley, and, in 2004, CARB submitted the 2004 Ozone Plan to the EPA as a revision to the California SIP. The 2004 Ozone Plan was supported by certain measures and commitments contained in the state's "2003 State Strategy." The 2004 Ozone Plan was later amended and clarified, and the EPA approved the plan, as amended and clarified, in 2010. 75 FR 10420 (March 8, 2010).

Specifically, we approved the following elements of the 2004 Ozone Plan: (1) Rate-of-progress (ROP) demonstration as meeting the requirements of CAA section 172(c)(2) and 182(c)(2) and 40 CFR 51.905(a)(1)(i) and 51.900(f)(4); (2) ROP contingency measures as meeting the requirements of CAA section 172(c)(9) and 182(c)(9); (3) the attainment demonstration as meeting the requirements of 182(c)(2)(A) and 181(a) and 40 CFR 51.905(a)(1)(ii); (4) the attainment contingency measures as meeting the requirements of CAA section 172(c)(9); and (5), along with certain measures contained in the 2003 State Strategy, the demonstration of implementation of reasonably available control measures (RACT)(exclusive of RACT)³ as meeting the requirements of CAA section 172(c) and 40 CFR 51.905(a)(1)(ii). *Id.*, at 10436–10437. In connection with the control strategy of the attainment demonstration, we approved certain committal measures and aggregate emission reduction commitments made by CARB and the District. *Id.* We also found that the 2004 Ozone Plan met the following requirements: (1) CAA section 182(e)(3) and 40 CFR 51.905(a)(1)(i) and 51.900(f)(7) for clean fuel/clean technology boilers; and (2) CAA section 182(d)(1)(A) and 40 CFR 51.905(a)(1)(i) and 51.900(f)(11) for transportation control measures (TCMs) sufficient to offset growth in emissions from growth

in vehicle-miles-traveled (VMT) or the number of vehicle trips. Lastly, in our approval of the 2004 Ozone Plan, we approved a specific rule, District Rule 9310, related to school buses.

Our approval of the 2004 Ozone Plan was challenged, and the U.S. Court of Appeals for the Ninth Circuit remanded the approval of the plan back to the EPA based on its conclusion that the EPA had not adequately considered and addressed the implications of more recent emissions data in determining that the 2004 Ozone Plan had met all applicable CAA requirements. *Sierra Club v. EPA*, 671 F.3d 955 (9th Cir. 2012) ("*Sierra Club*").⁴ In response to the *Sierra Club* decision, the EPA withdrew its approval of the 2004 Ozone Plan. 77 FR 70376 (November 26, 2012).⁵ CARB indicated that it intended to withdraw the plan upon EPA's approval withdrawal action, and thus, in the same **Federal Register** document as the withdrawal of approval, the EPA issued a finding of failure to submit required SIP revisions to provide for attainment of the 1-hour ozone NAAQS in the San Joaquin Valley.

Meanwhile, as noted above, in 1997, the EPA established an 8-hour ozone standard to replace the 1-hour ozone standard, and in 2004, the EPA designated the San Joaquin Valley as a "Serious" nonattainment area for the 1997 8-hour ozone standard. 69 FR 23858, at 23888–23899 (April 30, 2004). In 2010, the EPA approved a request by CARB to reclassify the San Joaquin Valley as "Extreme" for the 1997 8-hour ozone standard. 75 FR 24409 (May 5, 2010). In 2004, the EPA also established regulations governing the transition from the 1-hour ozone standard to the 1997 8-hour ozone standard, and under these regulations, the 1-hour ozone standard was revoked in most areas of the country, including the San Joaquin Valley, effective June 15, 2005, but the SIP revision requirements that applied at the time of revocation of the standard continue to apply after revocation

⁴ For further background on this court decision, see our proposed rule at 77 FR 58078 (September 19, 2012).

⁵ The EPA's March 8, 2010 final rule taking action on the 2004 Ozone Plan also took final approval action on SJVUAPCD Rule 9310 ("School Bus Fleets"). Approval of District Rule 9310 was not affected by the decision in *Sierra Club*, and thus the EPA did not withdraw its approval of that rule when it withdrew its approval of the rest of the action taken on March 8, 2010. However, the EPA *did* intend to withdraw approval of all of the elements of the 2004 Ozone Plan but inadvertently failed to withdraw its approval of the 2008 Clarification submitted by CARB in support of the 2004 Ozone Plan. See 40 CFR 52.220(c)(371), and the EPA intends to fix this error by withdrawing that paragraph from 40 CFR 52.220(c) when it takes final action on the 2013 Ozone Plan.

³ We addressed the SIP requirements related to implementation of reasonably available control technology (RACT) for the 1-hour ozone standard in separately rulemakings. See, e.g., 77 FR 1417 (January 10, 2012)(final partial approval and partial disapproval of the San Joaquin Valley RACT SIP).

consistent with the anti-backsliding provisions in section 172(e). This means that, notwithstanding revocation of the 1-hour ozone standard, the San Joaquin Valley remained subject to “Extreme” area requirements for the 1-hour ozone standard and is also subject to the “Extreme” area requirements for the 1997 8-hour ozone standard.

In 2007, in response to SIP revision requirements for the 1997 8-hour ozone standard, CARB and the District developed and adopted the *2007 Ozone Plan* (“2007 Ozone Plan”) and related portions of the 2007 State Strategy and submitted them to the EPA as revisions to the SIP. The 2007 Ozone Plan was revised in 2008 and 2011, and in 2012, the EPA approved the plan, as revised, together with the related portions of the 2007 State Strategy. 77 FR 12652 (March 1, 2012). Our approval of the 2007 Ozone Plan and related portions of the 2007 State Strategy were challenged in the Ninth Circuit. In 2015, the Ninth Circuit upheld the EPA’s approval of CARB’s and the District’s committal measures but rejected the EPA’s longstanding interpretation of the CAA as allowing California to take emissions reduction credit for mobile source regulations that the EPA has waived or authorized under CAA section 209 notwithstanding their absence from the federally enforceable California SIP. See *Committee for a Better Arvin v. EPA*, 786 F.3d 1169 (9th Cir. 2015) (“*Committee for a Better Arvin*”). In light of the decision in *Committee for a Better Arvin*, the EPA has proposed approval as a revision to the California SIP of a number of CARB’s mobile source regulations for which preemption has been waived or authorized under CAA section 209. 80 FR 69915 (November 12, 2015).

As part of the approval of the 2007 Ozone Plan, the EPA approved the demonstration that the plan provides for transportation control strategies (TCS) and TCMs sufficient to offset any growth in emissions from growth in VMT or the number of vehicle trips as meeting the requirements of CAA section 182(d)(1)(A). *Id.*, at 12670.⁶ In approving the VMT emissions offset

demonstration in 2012, the EPA applied its then-longstanding interpretation of the VMT emissions offset requirement in CAA section 182(d)(1)(A), first explained in guidance in the General Preamble to Title I of the CAA (see 57 FR 13498, at 13521–13523, April 16, 1992) (herein referred to as the “General Preamble”), that no transportation control measures are necessary if aggregate motor vehicle emissions are projected to decline each year from the base year of the plan to the attainment year. See 76 FR 57872, at 57889 (September 16, 2011). The EPA approved the plan as meeting the requirements of CAA section 182(d)(1)(A) because the emissions inventories in the 2007 Ozone Plan showed decreases in aggregate year-over-year motor vehicle emissions in the San Joaquin Valley from a base year through the applicable attainment year.

However, between the time when the EPA’s approval of the 2007 Ozone Plan was signed and when it was published in the **Federal Register**, the EPA’s petition for rehearing in a case challenging the EPA’s longstanding interpretation of CAA section 182(d)(1)(A) was denied. See *Association of Irrigated Residents v. EPA*, 632 F.3d 584, at 596–597 (9th Cir. 2011), reprinted as amended on January 27, 2012, 686 F.3d 668, further amended February 13, 2012 (“*Association of Irrigated Residents*”). In the *Association of Irrigated Residents* case, the Court ruled that additional transportation control measures are required whenever vehicle emissions are projected to be higher than they would have been had VMT not increased, even when aggregate vehicle emissions are actually decreasing. In light of the *Association of Irrigated Residents* decision, the EPA withdrew its determination that the 2007 Ozone Plan provided sufficient TCMs to offset the growth in emissions from the growth in VMT in the same **Federal Register** document as the Agency’s withdrawal of the approval of the 2004 Ozone Plan and finding of failure to submit required SIP revisions. 77 FR 70376 (November 26, 2012).

In 2013, in response to the EPA’s withdrawal of approval of the 2004 Ozone Plan and the VMT emission offset demonstration for the 1997 8-hour ozone standard and the related finding of failure to submit, CARB and the District prepared, adopted, and submitted the *2013 Plan for the Revoked 1-Hour Ozone Standard* (“2013 Ozone Plan”). The 2013 Ozone Plan addresses the various 1-hour ozone SIP elements for which the EPA had withdrawn approval (*i.e.*, RACM, ROP and attainment demonstrations, ROP and

attainment contingency measures, clean fuels/clean technology boilers, and VMT emissions offset demonstration) and also addresses the VMT emissions offset requirement for the 1997 8-hour ozone standard. The 2013 Ozone Plan builds upon the regulatory foundation built by previous San Joaquin Valley attainment plans for ozone as well as for other nonattainment pollutants, including PM₁₀ and PM_{2.5}, including, but not limited to, dozens of District rules establishing VOC or NO_x emissions limits and other requirements for various types of stationary sources, and dozens of state regulations establishing such limits and requirements for various types of mobile sources, for vehicle inspection and maintenance, for gasoline and diesel fuels, for consumer products and pesticides. These various regulatory programs have resulted in significant emissions reductions of ozone precursors and corresponding ozone concentrations in the San Joaquin Valley despite high rates of growth in population and regional VMT. For instance, 1-hour ozone exceedance days within the Valley (*i.e.*, number of days in a year during which the 0.12 ppm standard was violated at a (*i.e.*, at least one) monitoring site) have decreased from 45 in 1990 to 3 in 2012. See table A–1 of 2013 Ozone Plan. However, as of 2012, the Valley continued to experience violations of the 1-hour ozone standard, and the 2013 Ozone Plan was developed to demonstrate attainment of that standard, and to meet the other remaining 1-hour ozone SIP obligations (and the VMT emissions offset requirement for the 1997 8-hour ozone standard).

Lastly, as noted above, the EPA tightened the 8-hour ozone standard in 2008 and tightened the standard further in 2015. The EPA has designated the San Joaquin Valley as an “Extreme” area for the 2008 8-hour ozone standard. 77 FR 30088 (May 21, 2012). The “Extreme” area plan for the San Joaquin Valley for the 2008 ozone standard is due in 2016. In establishing final implementation rules for the 2008 8-hour ozone standard, the EPA revoked the 1997 8-hour ozone standards and includes anti-backsliding requirements that apply upon revocation of the 1997 8-hour ozone standards. 80 FR 12264 (March 6, 2015). Consistent with the application of anti-backsliding provisions upon revocation of the 1-hour ozone standards, areas that remain designated as nonattainment for the 1997 8-hour ozone standard at the time of revocation of the 1997 8-hour ozone standard continue to be subject to certain SIP requirements that had

⁶ CAA section 182(d)(1)(A), which, in relevant part, requires the state, if subject to its requirements, to “submit a revision that identifies and adopts specific enforceable transportation control strategies and transportation control measures to offset any growth in emissions from growth in vehicle miles traveled or numbers of vehicle trips in such area.” Herein, we use “VMT” to refer to vehicle miles traveled, and refer to the related SIP requirement as the “VMT emissions offset requirement.” In addition, we refer to the SIP revision intended to demonstrate compliance with the VMT emissions offset requirement as the “VMT emissions offset demonstration.”

applied by virtue of the area's classifications for the now-revoked 1997 8-hour ozone standard as well as the revoked 1-hour ozone standard. *Id.* at 12296; 40 CFR 51.1105 and 51.1100(o). For the purposes of this proposed action, this means that outstanding SIP requirements linked to the San Joaquin Valley's "Extreme" nonattainment area classifications for the 1-hour ozone standard and 1997 8-hour ozone standard continue to apply notwithstanding the revocation of these two ozone NAAQS. The EPA has not yet established area designations for the 2015 8-hour ozone standard.

II. CARB's SIP Revision Submittal To Address Remaining 1-Hour and 1997 8-Hour Ozone Requirements in the San Joaquin Valley

A. CARB's SIP Submittal

The District adopted the 2013 Ozone Plan on September 19, 2013, and CARB approved the plan as a revision to the California SIP on November 21, 2013.⁷ CARB submitted the 2013 Ozone Plan to the EPA on December 20, 2013.⁸ The 2013 Ozone Plan includes base year and projected future year emissions inventories, air quality modeling, provisions demonstrating implementation of RACM, provisions for advanced technology/clean fuels for boilers, provisions for transportation control strategies and measures, an ROP demonstration, an attainment demonstration, and contingency measures for failure to make ROP or attain.

Appendix D of the 2013 Ozone Plan contains the VMT emissions offset demonstrations for the 1-hour ozone and 1997 8-hour ozone NAAQS. On June 19, 2014, CARB submitted a technical supplement to the VMT emissions offset demonstrations submitted as part of the 2013 Ozone Plan.⁹ CARB's technical supplement includes a revised set of motor vehicle emissions estimates reflecting technical changes to the inputs used to develop

the original set of calculations.¹⁰ While the vehicle emissions estimates in CARB's technical supplement differ from those contained in the demonstrations in the 2013 Ozone Plan, the conclusions of the analyses remain the same.

B. CAA Procedural Requirements for Adoption and Submittal of SIP Revisions

CAA sections 110(a)(1) and (2) and 110(l) require a state to provide reasonable public notice and opportunity for public hearing prior to the adoption and submittal of a SIP or SIP revision. To meet this requirement, every SIP submittal should include evidence that adequate public notice was given and an opportunity for a public hearing was provided consistent with the EPA's implementing regulations in 40 CFR 51.102.

Both the District and CARB have satisfied applicable statutory and regulatory requirements for reasonable public notice and hearing prior to adoption and submittal of the 2013 Ozone Plan. The District conducted a public workshop on April 16, 2013. On August 20, 2013, the District posted on its Web site an announcement and supporting documents for a September 19, 2013 public hearing and also sent out an email to ozone_plans@lists.valley.org informing interested individuals and parties about the public hearing and links to key documents and participation via webcast.¹¹ The District thereby provided the required public notice and opportunity for public comment prior to its public hearing on the 2013 Ozone Plan. On September 19, 2013, the District held a public hearing to adopt the 2013 Ozone Plan and adopted the plan on that date. See 2013 Ozone Plan, appendix J ("Summary of Significant Comments and Responses") and SJVUAPCD Governing Board Resolution 2013–9–13.

CARB also provided the required public notice and opportunity for public comment prior to its November 21, 2013 public hearing and approval of the 2013 Ozone Plan as a revision to the California SIP. See CARB "Notice of

Public Meeting" dated October 21, 2013, and CARB Resolution No. 13–45. As noted previously, on December 20, 2013, CARB submitted the 2013 Ozone Plan and related public process documentation to the EPA. The EPA determined that CARB's December 20, 2013 SIP revision submittal was complete on May 19, 2014.¹²

Based on information in the December 20, 2013 SIP submittal and subsequent email communication with District staff, the EPA has determined that all hearings were properly noticed. We find, therefore, that the submittal of the 2013 Ozone Plan meets the procedural requirements for public notice and hearing in CAA sections 110(a) and 110(l).

III. Evaluation of the 2013 Ozone Plan

A. Emissions Inventories

We have evaluated the emissions inventories in the 2013 Ozone Plan to determine if they are consistent with EPA guidance (General Preamble at 13502) and adequate to support that plan's RACM, ROP and attainment demonstrations. Appendix B of the 2013 Ozone Plan presents the base year and projected emission inventories relied on for the ROP and attainment demonstrations. Appendix B also discusses the methodology used to determine base year (2007) emissions and identifies the growth and control factors used to project emissions for the 2013 and 2016 (ROP milestone years) and 2017 (ROP increment and attainment) projected year inventories. The plan includes summer (May through October) average daily inventories for the base year of 2007 and projected inventories for years 2013 through 2022 for all major source categories (stationary sources, area sources, and on-road and nonroad mobile sources). Emissions are calculated for the two major ozone precursors—NO_x and VOC. See tables B–1 and B–2 of appendix B of the 2013 Ozone Plan. Additional documentation for the inventories prepared for the 2013 Ozone Plan are found in appendix E, section 6 of the 2013 Ozone Plan.

The emissions inventories in the 2013 Ozone Plan were developed using data provided by CARB, the California Department of Transportation, and the San Joaquin Valley's eight metropolitan planning organizations (MPO).¹³ These

⁷ See SJVUAPCD Governing Board Resolution 2013–09–13: In the Matter of Adopting the San Joaquin Valley Unified Air Pollution Control District 2013 Plan For The Revoked 1-Hour Ozone Standard, September 19, 2013; CARB Resolution No. 13–45, November 21, 2013.

⁸ Letter, Richard Corey, Executive Officer, CARB to Jared Blumenfeld, Regional Administrator, EPA Region 9, December 20, 2013 with enclosures.

⁹ See June 19, 2014 letter and enclosures from Lynn Terry, Deputy Executive Officer, CARB, to Deborah Jordan, Director, Air Division, EPA Region 9. On July 25, 2014, CARB sent the EPA a revised technical supplement that corrected a minor typographical error. See record of July 25, 2014 email and attachment from Jon Taylor, CARB, to Matt Lakin, EPA Region 9, included in the docket.

¹⁰ The principal difference between the two sets of calculations is that CARB's technical supplement includes running exhaust, start exhaust, hot soak, and running loss emissions of VOCs in all of the emissions scenarios. These processes are directly related to VMT and vehicle trips. The revised calculation excludes diurnal and resting loss emissions of VOCs from all of the emissions scenarios because such evaporative emissions are related to vehicle population rather than to VMT or vehicle trips.

¹¹ January 30, 2015 email from Elizabeth Melgoza, CARB, to John Ungvarsky, EPA Region 9; May 13, 2015 and May 19, 2015 emails from SJVUAPCD staff to John Ungvarsky, EPA Region 9.

¹² See letter from Deborah Jordan, Director, Air Division, EPA Region 9, to Richard W. Corey, Executive Officer, CARB, dated May 19, 2014.

¹³ These eight MPOs represent the eight counties in the San Joaquin Valley air basin: the San Joaquin Council of Governments, the Stanislaus Council of Governments, the Merced County Association of

agencies collect data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profiles, and emissions) and develop methodologies (e.g., model and demographic forecast improvements) used to generate comprehensive emissions inventories. CARB maintains statewide inventories in its California Emissions Inventory Development and Reporting System (CEIDARS) and uses the California Emission Forecasting and Planning Inventory System (CEFS) to forecast or backcast emissions. CEFS is designed to generate year-specific emissions estimates for each county/air basin/district combination taking into account two factors: the effects of growth, and the effects of adopted emission control rules. It does this by linking these growth and control factors directly to CEIDARS emission categories

for a particular base year. The 2007 inventory was used to project future years using CARB's CEFS v 1.06.

CARB also conducts periodic evaluations and updates of the growth profiles to ensure that emission forecasts are based on data that reflect historical trends, current conditions, and recent forecasts. CARB staff conducted a category-by-category review and update of the growth profile data for source categories that, in aggregate, comprise more than 95 percent of the NO_x or VOC emissions in the San Joaquin Valley. To capture the effects of the economic recession, CARB staff ensured that the growth profiles included historical data through at least 2008 (data through 2009 or 2010 were included when available). Growth forecasts for the years 2009 and beyond were obtained primarily from government entities with expertise in

developing forecasts for specific sectors, or in some cases, from econometric models.

Motor vehicle emissions were based on estimates of VMT provided by the regional transportation planning agencies and the California Department of Transportation. The plan uses CARB's Emission FAcT (EMFAC) model, version EMFAC2011, to calculate the emission factors for cars, trucks and buses. At the time that the 2013 Ozone Plan was developed, EMFAC2011 was the mobile source model approved for use in California SIPs.¹⁴ Nonroad emissions estimates were based on CARB's OFFROAD model.

Table 1 provides a summary of the emissions estimates prepared for the 2013 Ozone Plan for the base year (2007) and ROP and attainment years 2013, 2016, and 2017.

TABLE 1—SAN JOAQUIN VALLEY OZONE PRECURSOR BASE YEAR AND PROJECTED FUTURE YEAR EMISSIONS
[Summer average, tpd]

Category	NO _x				VOC			
	2007	2013	2016	2017	2007	2013	2016	2017
Stationary	57	40	30	30	100	96	97	97
Area	11	11	11	11	221	186	191	193
On-road Mobile	273	158	119	110	71	49	35	33
Off-road Mobile	144	108	99	97	65	49	45	43
Total	485	316	259	247	457	381	368	366

Source: 2013 Ozone Plan, appendix B.

NOTE: Because of rounding conventions, the totals may not reflect total of categories.

We have determined that the 2007 base year emission inventory in the 2013 Ozone Plan is comprehensive, accurate, and current and that this inventory as well as the 2013, 2016, and 2017 projected inventories have been prepared consistent with EPA guidance. Accordingly, we propose to find that these inventories provide an appropriate basis for the various other elements of the 2013 Ozone Plan, including RACM, and the ROP and attainment demonstrations.

B. Reasonably Available Control Measures Demonstration and Control Strategy

1. Requirements for RACM and Control Strategies

CAA section 172(c)(1) requires nonattainment area plans to provide for the implementation of all RACM. The

RACM demonstration requirement is a continuing applicable requirement for the San Joaquin Valley "Extreme" 1-hour ozone nonattainment area under EPA's anti-backsliding rules that apply once a standard has been revoked. See 40 CFR 51.1105(a)(1) and 51.1100(o)(17).

The EPA has previously provided guidance interpreting the RACM requirement in the General Preamble at 13560 and a memorandum entitled "Guidance on the Reasonably Available Control Measure Requirement and Attainment Demonstration Submissions for Ozone Nonattainment Areas," John Seitz, Director, OAQPS to Regional Air Directors, November 30, 1999 (Seitz memo). In summary, EPA guidance provides that states, in addressing the RACM requirement, should consider all potential measures for source categories

in the nonattainment area to determine whether they are reasonably available for implementation in that area and whether they would advance the area's attainment date by one or more years.

2. RACM and Control Strategy in the 2013 Ozone Plan

The District's RACM demonstration and control strategy for the 1-hour ozone standard in the 2013 Ozone Plan relies on control measures that have been adopted by CARB and the District under previous attainment plans. In the more recent years prior to the adoption of the 2013 Ozone Plan, CARB and the District have developed and implemented comprehensive plans for the 1997 8-hour ozone standards, 1997 PM_{2.5} standards, and 2006 PM_{2.5} standards that resulted in the adoption of many new rules and revisions to

Governments, the Madera County Transportation Commission, the Council of Fresno County Governments, Kings County Association of Governments, the Tulare County Association of Governments, and the Kern Council of Governments.

¹⁴ See 78 FR 14533 (March 6, 2013) regarding the EPA approval of the 2011 version of the California EMFAC model and announcement of its availability. The software and detailed information on the EMFAC vehicle emission model can be found on the following CARB Web site: <http://www.arb.ca.gov/msei/msei.htm>.

www.arb.ca.gov/msei/msei.htm. EMFAC2011 was the approved version of EMFAC at the time of adoption and submittal of the 2013 Ozone Plan. Recently, the EPA approved an updated version of the model, EMFAC2014. 80 FR 77337 (December 14, 2015).

existing rules for stationary, area, and mobile sources. These previously adopted measures generated significant reductions in NO_x and VOC emissions. The measures are listed in the Technical Support Document (TSD) for today's action. The control measures were developed and adopted under previous San Joaquin Valley attainment plans, including the 2007 Ozone Plan, the 2008 PM_{2.5} Plan (adopted April 30, 2008) ("2008 PM_{2.5} Plan"), and the 2012 PM_{2.5} Plan (adopted December 20, 2012) ("2012 PM_{2.5} Plan"), which were developed to provide, among other things, for attainment of the 1997 8-hour ozone standard, the 1997 PM_{2.5} standards, and the 2006 PM_{2.5} standard, respectively, and which relied on adoption and implementation by CARB of new or tightened mobile source regulations under CARB's 2007 State Strategy.¹⁵

a. The District's RACM Analysis and Adopted Control Strategy

The District's RACM analysis builds on previously adopted measures. Table 3–1 (p. 3–3) in the 2013 Ozone Plan lists currently adopted District rules that are contributing towards attainment of the 1-hour ozone standard. The 2013 Ozone Plan's RACM evaluation for NO_x and VOC sources is summarized in section 4.2 (p. 4–2) and detailed in appendix C

("Stationary and Area Source Control Strategy Evaluation") of the 2013 Ozone Plan. The evaluation of potential controls in the 2013 Ozone Plan is presented by source category. For stationary and area source categories, the evaluation is broken down by the current District rule or rules that fall within a given source category.

The following information is provided in appendix C of the 2013 Ozone Plan for each stationary or area source category or District rule:

- A description of the sources within the category or sources subject to the rule;
- Base year (2007) and projected baseline year emissions (for every year from 2013 to 2022) in the source category or affected by the rule;
- A discussion of the current rule requirements and/or listing and discussion of existing rules, regulations, or other control efforts that address the source category; and
- Identification and discussion of potential new controls, including in many cases, a discussion of the technological and economic feasibility of the new controls. Rules adopted by other agencies (including the EPA, South Coast Air Quality Management District (AQMD), and Bay Area AQMD) are discussed and compared to existing SJVUAPCD rules. Measures proposed by

the public for the source category/rule are also identified and discussed. In addition, non-regulatory approaches to reducing emissions in each stationary and area source category are discussed, including the use of incentives, opportunities for technology advancement programs, policy initiatives, and education/outreach programs.

Through its RACM evaluation process, the District identified two new control measures for adoption, and through adoption of the 2013 Ozone Plan, the District committed to adopt and submit these measures as a revision to the California SIP (see District Resolution 2013–9–13, page 5), although the District and State do not rely on reductions from these commitments in their attainment demonstration. See 2013 Ozone Plan, section 3.1.3 (p. 3–8).

The District's commitments have been fulfilled in that the anticipated rule amendments have been adopted and the rules have been submitted to the EPA as a revision to the California SIP. The current status of the rules is shown in table 2, and as shown there, the EPA has approved one of the two rules and has proposed approval of the other. We expect to take final action on the second rule prior to final action on the 2013 Ozone Plan.

TABLE 2—STATUS OF RULE ADOPTION COMMITMENTS IN THE 2013 OZONE PLAN

Rule	Measure description	Adoption date	Submittal date	Emission reductions	Status
4308	Boilers, Steam Generators, and Process Heaters 0.075 to <2 MMBtu/hr.	11/14/13	5/13/14	Minimal in 2017	Approved 2/12/15 (80 FR 7803).
4905	Natural Gas-Fired, Fan Type Residential Central Furnaces.	1/22/15	4/7/15	To Be Determined	Proposed Approval 11/5/15 (80 FR 68484).

Source: 2013 Ozone Plan, p. 3–9, table 3–3.

In light of the comprehensiveness of the District's stationary and area source program, and the stringency of the District's regulations, the 2013 Ozone Plan concludes that RACM is being implemented for sources under the District's jurisdiction. See section 4.2.1 of the 2013 Ozone Plan.

The District also identified a number of source categories for which existing information is inadequate to determine the feasibility of additional controls. These categories and the additional controls to be studied are discussed in section 3.1.4. (p. 3–9). The schedule for these studies is given in table 3–4 (see 2013 Ozone Plan, p. 3–10).

The TSD for today's action includes additional information on each District rule, including its status in terms of federal approval and the net inventory changes between 2007 and 2017.

b. CARB and Metropolitan Planning Organizations' RACM Analysis and Adopted Control Strategy

Given the need for significant emissions reductions in California nonattainment areas, CARB has been a leader in the development and adoption of stringent mobile source control measures nationwide and has unique authority under CAA section 209 (subject to a waiver or authorization by the EPA) to adopt and implement new

emissions standards for many categories of on-road vehicles and engines and new and in-use off-road engines. CARB has adopted standards and other requirements related to the control of emissions from numerous types of on-road motor vehicles and new and in-use off-road vehicles, such as passenger cars, trucks, buses, motorcycles, off-road engines (gasoline and diesel-powered), in-use off-road diesel fueled fleets, portable equipment, marine engines, and many others.

Historically, the EPA has allowed California to take into account emissions reductions from CARB regulations for which the EPA has issued waivers or authorizations under

¹⁵ The EPA approved the San Joaquin Valley 2007 Ozone Plan and related portions of the 2007 State Strategy at 77 FR 12652 (March 1, 2012); the San

Joaquin Valley 2008 PM_{2.5} Plan and related portions of the 2007 State Strategy at 76 FR 69896 (November 9, 2011). The EPA proposed to approve

portions of the 2012 PM_{2.5} Plan on January 13, 2015 (80 FR 1816).

CAA section 209 notwithstanding the fact that these regulations have not been approved as part of the California SIP. However, in response to the decision by the Ninth Circuit in *Committee for a Better Arvin v. EPA*, discussed previously, the EPA has now proposed to approve the current set of mobile source regulations for which waivers or authorizations have been issued as a revision to the California SIP. 80 FR 69915 (November 12, 2015). We expect to take final action on California's mobile source regulations prior to final action on the 2013 Ozone Plan.

CARB's mobile source program extends beyond regulations that are subject to the waiver or authorization process set forth in CAA section 209 to include standards and other requirements to control emissions from in-use heavy-duty trucks and buses, gasoline and diesel fuel specifications, and many other types of mobile sources. Generally, these regulations have been submitted and approved as revisions to the California SIP. See, e.g., 77 FR 20308 (April 4, 2012) (EPA approval of standards and other requirements to control emissions from in-use heavy-duty diesel-powered trucks).

Section 3.1.1.2 of the 2013 Ozone Plan discusses the emissions reductions from CARB's mobile source program and includes a table (table 3–2) that lists all of the regulations adopted or amended by CARB from 2000 through early 2012. While all of the listed measures contribute to some degree to attainment of the 1-hour ozone standard in the San Joaquin Valley, some are called out in particular as providing significant emissions reductions relied upon for attainment of the ozone standard under the 2013 Ozone Plan. These measures include the in-use heavy-duty diesel-powered truck regulation, the in-use off-road equipment regulation, and the advanced clean car program, among others. The 2013 Ozone Plan concludes that, in light of the comprehensiveness and stringency of CARB's mobile source program, all reasonable control measures under CARB's jurisdiction are being implemented.

With respect to TCMs, the 2013 Ozone Plan relies on the documentation found in appendix C of the 2012 PM_{2.5} Plan to conclude that all reasonably available control measures under the jurisdiction of the Valley's MPOs are being implemented. Appendix C of the 2012 PM_{2.5} Plan describes the efforts by the San Joaquin Valley's eight MPOs to implement cost-effective transportation control measures (TCMs). See section C.11.4 (p. C–33) of appendix C of the 2012 PM_{2.5} Plan. While no additional

TCMs were identified by the MPOs, the 2012 PM_{2.5} Plan includes a discussion of the on-going implementation of a broad range of TCMs in the Valley. There is also a discussion of the MPOs' Congestion Management and Air Quality funding policy, which is a standardized process across the Valley for distributing 20 percent of the Congestion Management and Air Quality funds to projects that meet a minimum cost-effectiveness. During the comment period for the 2012 PM_{2.5} Plan, a number of TCMs were suggested by the public for consideration. See appendix I, pp. I–10 to I–13 of the 2012 PM_{2.5} Plan. The feasibility of these measures is discussed in the District's responses to comments. *Id.*

c. RACM Demonstration

The 2013 Ozone Plan concludes that the RACM requirement is met through implementation of the measures described above under the District's jurisdiction, CARB's jurisdiction, and the MPOs' jurisdiction for stationary and area sources, mobile sources, and TCMs, respectively. The plan also concludes that to advance the attainment date by one year (*i.e.*, from 2017 to 2016) would require an additional reduction of 12.1 tpd of NO_x, and that there are no reasonable measures that collectively would reduce emissions in the Valley by that amount by 2016. In support for that conclusion, the plan notes that about 90 percent of NO_x emission reductions occurring between the 2007 base year and the 2017 attainment year come from mobile sources and that such reductions cannot be expedited through additional District action because, generally, the District does not have jurisdiction over mobile sources.

3. Proposed Action on RACM Demonstration

The process followed by the District in the 2013 Ozone Plan to identify RACM is generally consistent with the EPA's recommendations in the General Preamble. The process included compiling a comprehensive list of potential controls measures for sources of NO_x and VOC in the San Joaquin Valley. This list included measures suggested in public comments on the 2013 Ozone Plan. See 2013 Ozone Plan, appendix J. As part of this process, the District evaluated potential controls for all relevant source categories for economic and technological feasibility and provided justifications for the rejection of certain identified measures. *Id.* After completing this evaluation, the District committed to adopt and submit two measures (*i.e.*, Rules 4308 and

4905), which it has now done. See 2013 Ozone Plan, table 3–3, p. 3–10 and table 2 above.

We have reviewed the District's determination in the 2013 Ozone Plan that its stationary and area source control measures represent RACM for NO_x and VOC. In our review, we also considered our previous evaluations of the District's rules in connection with our approval of the San Joaquin Valley RACT SIP demonstration for the 1997 8-hour ozone standard, our comments on the 2012 PM_{2.5} Plan, and our comments on the District's RACT SIP demonstration for the 2008 8-hour ozone standard.¹⁶ We also reviewed measures suggested by the public in comments on the 2013 Ozone Plan. Based on this review, we believe that the District's rules provide for the implementation of RACM for stationary and area sources of NO_x and VOC.¹⁷

With respect to mobile sources, we recognize CARB as a leader in the development and implementation of stringent control measures for on-road and off-road mobile sources. Its current program addresses the full range of mobile sources in the San Joaquin Valley through regulatory programs for both new and in-use vehicles. See 2013 Ozone Plan, table 3–2 and appendix A of the TSD. With respect to transportation controls, we note that the MPOs have a program to fund cost-effective TCMs. See appendix C, p. C–33 of the 2012 PM_{2.5} Plan. Overall, we believe that CARB's and the MPOs' programs provide for the implementation of RACM for NO_x and VOC from mobile sources in the San Joaquin Valley.

Based on our review of the results of these RACM analyses, the District's and CARB's adopted rules, we propose to find that there are, at this time, no additional reasonably available measures that would advance attainment of the 1-hour ozone standard in the San Joaquin Valley. In the 2013 Ozone Plan, the District estimates that it would take a reduction between of 12.1 tpd of NO_x to advance attainment from

¹⁶ See 77 FR 1417 (January 10, 2012); EPA Region 9, Technical Support Document for the EPA's Notice of Proposed Rulemaking for the California State Implementation Plan—EPA's Evaluation of the San Joaquin Valley Unified Air Pollution Control District's Reasonably Available Control Technology (RACT) Demonstration for Ozone State Implementation Plan (SIP), Adopted April 16, 2009 (dated August 29, 2011); letter dated October 19, 2012, from Kerry Drake, Associate Director, Air Division EPA—Region 9 to Samir Sheikh, SJVUAPCD; and letter dated June 4, 2014, from Andrew Steckel, Chief, Rules Office, EPA Region 9 to Errol Villegas, Planning Manager, SJVUAPCD.

¹⁷ A full list of the District's rules, including citing to our most recent final or proposed rulemaking on each can be found in the TSD.

2017 to 2016 in the San Joaquin Valley. See section 4.2 (p. 4–3). We find that no reasonably available and unadopted measures identified in the 2013 Ozone Plan, either individually or collectively, could deliver this additional increment of reductions in 2016 because of the extent to which the emissions inventory reflects mobile sources (see table 1 above) and the extent to which the mobile source inventory already reflects CARB's emissions standards and other requirements for new and in-use on-road and off-road vehicles and engines.

For the foregoing reasons, we propose to find that the 2013 Ozone Plan provides for the implementation of all RACM as required by CAA section 172(c)(1) and 40 CFR 51.1105(a)(1) and 51.1100(o)(17).

C. Rate of Progress Demonstration

1. Requirements for Rate of Progress Demonstrations

CAA section 172(c) requires nonattainment area plans to provide for reasonable further progress (RFP) which is defined in section 171(1) as such annual incremental reductions in emissions as are required in part D or may reasonably be required by the Administrator in order to ensure attainment of the relevant ambient standard by the applicable date. CAA sections 182(c)(2) and (e) require that "Serious" and above area SIPs include ROP quantitative milestones that are to be achieved every 3 years after 1996

until attainment. For ozone areas classified as Serious and above, section 182(c)(2) requires that the SIP must provide for reductions in ozone-season, weekday VOC emissions of at least 3 percent per year net of growth averaged over each consecutive 3-year period. This is in addition to the 15 percent reduction over the first 6-year period required by CAA section 182(b)(1) for areas classified as moderate and above. The CAA requires that these milestones be calculated from the 1990 inventory after excluding, among other things, emission reductions from "[a]ny measure related to motor vehicle exhaust or evaporative emissions promulgated by the Administrator by January 1, 1990" and emission reductions from certain federal gasoline volatility requirements. CAA section 182(b)(1)(B)–(D). The EPA has issued guidance on meeting 1-hour ozone ROP requirements. See General Preamble at 13516 and "Guidance on the Post-1996 Rate-of-Progress Plan and the Attainment Demonstration," EPA-452/R-93-015, EPA Office of Air Quality Planning and Standards, February 18, 1994 (corrected).

CAA section 182(c)(2)(C) allows for NO_x reductions that occur after 1990 to be used to meet the post-1996 ROP emission reduction requirements, provided that such NO_x reductions meet the criteria outlined in the CAA and the EPA guidance. The criteria require that: (1) The sum of all

creditable VOC and NO_x reductions must meet the 3 percent per year ROP requirement; (2) the substitution is on a percent-for-percent of adjusted base year emissions for the relevant pollutant; and (3) the sum of all substituted NO_x reductions cannot be greater than the cumulative NO_x reductions required by the modeled attainment demonstration. See General Preamble at 13517 and "NO_x Substitution Guidance," EPA Office of Air Quality Planning and Standards, December 1993. Our guidance in the General Preamble states that by meeting the specific ROP milestones discussed above, the general RFP requirements in CAA section 172(c)(2) will also be satisfied. General Preamble at 13518.

The ROP demonstration requirement is a continuing applicable requirement for the San Joaquin Valley "Extreme" 1-hour ozone nonattainment area under the EPA's anti-backsliding rules that apply once a standard has been revoked. See 40 CFR 51.1105(a)(1) and 51.1100(o)(4).

2. ROP Demonstration in the 2013 Ozone Plan

Section 4.3.2 (beginning on page 4–5) of the 2013 Ozone Plan provides a demonstration that the San Joaquin Valley meets the 2010, 2013, and 2016 ROP milestones and 2017 increment.¹⁸ We have summarized the ROP demonstrations in table 3.

TABLE 3—SAN JOAQUIN ROP DEMONSTRATIONS

[Tpd or percent]

	2007	2010	2013	2016	2017
VOC Emission Calculations					
Baseline VOC inventory	457.2	440.5	380.5	368	366.3
Non-creditable FMVCP/RVP adjustments		5.6	3.7	2.7	0.7
Adjusted baseline VOC inventory in baseline year (Line 1–Line 2)		451.6	447.9	445.2	444.5
Basis for required VOC reductions		451.6	407.3	367.9	334.1
RFP Percent Reduction Required from prior milestone		9%	9%	9%	3%
Target level		411.0	370.6	334.8	324.1
Apparent Shortfall		29.5	9.9	33.2	42.2
Forecasted Percent VOC shortfall		6.5%	2.2%	7.5%	9.5%
VOC percent shortfall previously addressed provided by NO _x substitution		0%	6.5%	2.2%	7.5%
Actual VOC percent shortfall		6.5%	–4.3%	5.2%	2.0%
NO_x Emission Calculations					
Baseline NO _x inventory	484.9	368.2	316.0	259.2	247.1
Non-creditable FMVCP adjustments		4.9	–1.9	6.3	0.4
Adjusted baseline NO _x inventory for milestones		480.0	481.9	475.6	475.2

¹⁸In later 2014, i.e., after adoption and submittal of the 2013 Ozone Plan, CARB revised the state's Truck and Bus regulation (see <http://www.arb.ca.gov/regact/2014/truckbus14/truckbus14.htm>). The 2014 revisions resulted in a temporary emission reduction disbenefit of approximately 5 tpd of NO_x in the 2016 and 2017

milestone years in the San Joaquin Valley. See letter from Sylvia Vanderspek, Chief, Air Quality Planning Branch, CARB, to Matthew Lakin, Manager, Air Planning Office, EPA Region 9, dated April 23, 2015. The EPA has determined that because the 2013 Ozone Plan demonstrates that ROP milestones are met by a significant margin in

2016 and 2017, even if the 5 tpd NO_x disbenefit was added back into the 2016 and 2017 baselines, the 2013 Ozone Plan would still exceed the 2016 and 2017 ROP milestones by approximately 33% for both years.

TABLE 3—SAN JOAQUIN ROP DEMONSTRATIONS—Continued
[Tpd or percent]

	2007	2010	2013	2016	2017
Change since 2007		111.8	165.9	216.4	228.1
Forecasted Percent NO _x creditable reductions since 2007		23.3%	34.4%	45.5%	48.0%
NO _x percent previously used for VOC shortfall by NO _x substitution		0%	6.5%	6.5%	11.7%
NO _x percent available for VOC shortfall by NO _x substitution and contingency		23.3%	27.9%	39.0%	36.3%
NO _x percent substitution needed for VOC shortfall		6.5%	0.0%	5.2%	2.0%
Forecasted NO _x percent reduction surplus		16.7%	27.9%	33.8%	34.2%
Contingency measure reserve achieved?		Yes	Yes	Yes	Yes
ROP achieved?		Yes	Yes	Yes	Yes

Source: 2013 Ozone Plan, table 4–2 (page 4–6).

3. Proposed Action on the ROP Demonstration

Based on our review of the ROP calculations in the 2013 Ozone Plan, summarized in table 3 above, we conclude the 2013 Ozone Plan demonstrates that sufficient emission reductions have or will be achieved to meet the 2010, 2013, and 2016 ROP milestones and the 2017 increment. Therefore, we propose to approve the ROP demonstration in the 2013 Ozone Plan as meeting the requirements of CAA section 172(c)(2) and 182(c)(2)(B), and 40 CFR 51.1105(a)(1) and 51.1100(o)(4).

D. Attainment Demonstration

1. Requirements for Attainment Demonstrations

CAA section 182(c)(2)(A) requires states with ozone nonattainment areas classified as “Serious” or above to submit plans that demonstrate attainment of the 1-hour ozone standard by the applicable attainment date. Under the CAA, as amended in 1990, the San Joaquin Valley “Extreme” nonattainment area was to have attained the 1-hour ozone standard by November 15, 2010. In 2011, we determined that the San Joaquin Valley had failed to attain the standard by the 2010 attainment date. 76 FR 82133 (December 30, 2011). Given that the original statutory attainment date had passed and the 1-hour ozone standard had been revoked, in our 2012 final action withdrawing our approval of the 2004 Ozone Plan and issuing findings of failure to submit, we set a new attainment date by reference to CAA section 172(a)(2). 77 FR 70376, at 70377 (November 26, 2012), effective November 26, 2012. Application of the attainment date formulation in section 172(a)(2) means that the state was required to submit a revised San Joaquin Valley plan demonstrating attainment of the 1-hour ozone standard as

expeditiously as practicable, but no later than five years from the effective date of the findings of failure to submit, or, in this case, no later than November 26, 2017.

An attainment demonstration should include a control strategy that identifies specific measures to reduce emissions and photochemical modelling results showing that the emissions reductions from implementation of the control strategy is sufficient to attain the standard by the applicable attainment date. The attainment demonstration requirement is a continuing applicable requirement for the San Joaquin Valley “Extreme” 1-hour ozone nonattainment area under the EPA’s anti-backsliding rules that apply once a standard has been revoked. See 40 CFR 51.1105(a)(1) and 51.1100(o)(12).

2. One-Hour Ozone Attainment Demonstration in the 2013 Ozone Plan

a. Control Strategy for Attainment of the 1-Hour Ozone Standard

The 2013 Ozone Plan relies entirely on reductions from previously adopted measures. Tables 3–1 and 3–2 in the 2013 Ozone Plan documents District and State measures that contribute to attainment of the 1-hour ozone standard in 2017. Although the 2013 Ozone Plan includes two commitment measures (see table 3–3 in 2013 Ozone Plan), reductions from those measures were not relied on for attainment. Moreover, the two measures have been adopted and submitted to the EPA.

The future year inventories, which include reductions from adopted and creditable measures, were used in the 2013 Ozone Plan’s modeling analysis described in appendix E of the 2013 Ozone Plan. Based on the modeling analysis, the District determined that the 1-hour ozone standard could be attained in 2017. A summary of the base year (2007) and 2017 attainment-year emissions inventories is shown in table 1 above. It reflects reductions of 238 tpd

of NO_x and 91 tpd of VOCs from the 2007 base year emissions inventory. For a more detailed comparison of the 2007 base year and 2017 attainment year inventories, see appendix B of the 2013 Ozone Plan and the TSD for today’s action.

For purposes of evaluating the 2013 Ozone Plan, all of the measures relied on to satisfy the applicable control requirements are baseline measures. As the term is used here, baseline measures are federal, State, and District rules and regulations adopted prior by the end of January 2012 (*i.e.*, prior to the development of 2013 Ozone Plan) that continue to achieve emissions reductions through the projected 2017 attainment year and beyond.¹⁹

The District has adopted more than 50 prohibitory rules that limit emissions of either VOC or NO_x. These rules include controls for a variety of sources including boilers, oil field and refinery equipment, surface coatings operations, and open burning. The 2013 Ozone Plan lists many of these measures in table 3–1. Reductions from these measures are incorporated into the future year baseline inventories. Appendix C of the 2013 Ozone Plan includes inventory information that allows for a comparison of 2007 rule-specific emissions inventory data for stationary and area sources against future year rule-specific inventories. The net

¹⁹ These measures are typically rules that may have compliance dates that occur after the adoption date of a plan and mobile source measures that achieve reductions as older engines are replaced through attrition (*e.g.*, through fleet turnover). On December 31, 2014 and subsequent to the submittal of the 2013 Ozone Plan, the State of California’s Office of Administrative Law approved revisions to CARB’s Truck and Bus regulation (see <http://www.arb.ca.gov/regact/2014/truckbus14/truckbus14.htm>). The revisions resulted in a temporary emission reduction disbenefit of approximately 5 tpd of NO_x in 2017. In an April 23, 2015 letter from Sylvia Vanderspek, Chief, Air Quality Branch, CARB to Matt Lakin, Manager, Air Planning Office, EPA Region IX, the State provides an adequate technical justification showing that the demonstration of attainment in 2017 is not affected.

inventory impact of the rule reductions and growth is included in the TSD for today's proposal. We have also provided in the TSD a list of the District's prohibitory NO_x and VOC rules and SIP approval status.

The state's baseline measures fall within two categories: Measures for which the State has obtained a waiver or authorization of federal pre-emption under CAA section 209 ("waiver" measures) and those for which the state is not required to obtain a waiver ("non-waiver" measures). Non-waiver measures include: Improvements to California's inspection and maintenance (I/M) program, SmogCheck; cleaner burning gasoline and diesel regulations; and limits on the VOC content and reactivity of consumer products. Table 3–2 of the 2013 Ozone Plan lists many of the state's measures adopted since 2006 that are contributing to attainment of the 1-hour ozone standard.

Over the years, the EPA has approved the non-waiver measures and amendments to those measures as part of the California SIP. Historically, the EPA has allowed California to take credit for waiver measures (to meet CAA SIP requirements including ROP and attainment demonstrations) notwithstanding the fact that the regulations themselves have not been submitted or approved into the California SIP. However, in light of the Ninth Circuit's decision in *Committee for a Better Arvin v. EPA*, as discussed above, CARB has submitted the most recent set of waiver measures that contribute emissions reductions to the state's attainment plans as part of the SIP, and the EPA has proposed approval of the measures. 80 FR 69915 (November 12, 2015). We anticipate final action on the CARB mobile source SIP submittal prior to final action on the 2013 Ozone Plan.

The 2013 Ozone Plan also includes reductions from federal measures. These measures include, for example, the EPA's national emission standards for heavy duty diesel trucks,²⁰ certain new construction and farm equipment,²¹ and locomotives.²² States are allowed to rely

on reductions from federal measures in attainment and ROP demonstrations.

b. Air Quality Modeling in the 2013 Ozone Plan

CAA section 182(c)(2)(A) requires SIPs for ozone nonattainment areas to include a "demonstration that the plan, as revised, will provide for attainment of the ozone [NAAQS] by the applicable attainment date. This attainment demonstration must be based on photochemical grid modeling or any other analytical method determined by the Administrator, in the Administrator's discretion, to be at least as effective." Air quality modeling is used to establish emissions attainment targets, that is, the combination of emissions of ozone precursors that the area can accommodate without exceeding the relevant standard, and to assess whether the proposed control strategy will result in attainment of that standard. The procedures for modeling ozone as part of an attainment demonstration are contained in the EPA's Guidance on the Use of Models and Other Analyses for Demonstrating Attainment of Air Quality Goals for the 8-Hour Ozone and PM_{2.5} NAAQS and Regional Haze ("Modeling Guidance").²³ The Modeling Guidance recommends for a modeling protocol to be reviewed by the EPA prior to performance of the modeling. The Guidance includes recommendations for model input preparation, model performance evaluation, use of the model output for the attainment demonstration, and modeling documentation. Air quality modeling is performed using meteorology and emissions from a base year, and the modeled concentrations are compared to air quality monitoring data from that year to evaluate model performance. Once the performance is determined to be acceptable, future year emissions are simulated with the model. The relative (or percent) change in modeled concentration due to future emissions reductions provides a Relative Response Factor (RRF). For each monitoring site, the site's RRF is applied to its monitored base year design value to provide the future design value for comparison to the NAAQS. The Modeling Guidance also recommends supplemental air quality analyses, which may be used as part of a Weight of Evidence (WOE) analysis. A WOE

analysis assesses attainment by considering evidence other than the main air quality modeling attainment test, such as trends and additional monitoring and modeling analyses.

Older guidance for the 1-hour ozone NAAQS was provided in Guideline for Regulatory Application of the Urban Airshed Model;²⁴ however, much of its content is outdated. Most importantly, formerly photochemical models were used in an absolute sense for the modeled attainment test, whereas currently the EPA recommends that models be used in a relative sense. That is, formerly the modeled concentration due to future emissions (absolute model prediction) was used directly to compare to the NAAQS. Currently, the EPA recommends that the relative change in modeled concentration (RRF) due to future emission reductions be used; this is applied to the monitored design value and the result compared to the NAAQS. Given that the current guidance is aimed at the 8-hour standard, whereas the older guidance is aimed at the 1-hour standard but is outdated, the State has flexibility in the approach to be used. Discussions between the EPA, CARB, and the District resulted in the approach described in the Plan's Modeling Protocol, which mainly followed the more recent Modeling Guidance, but accommodated the form and level of the 1-hour standard and incorporated model performance goals from the older 1-hour guidance.

CARB performed the air quality modeling for the 2013 Ozone Plan, with assistance from the District. The 2013 Ozone Plan's modeling protocol is contained in appendix E ("Modeling Protocol"). This protocol was reviewed by the EPA, and contains all of the elements recommended in the Guidance, including selection of model, and modeling period, modeling domain, and model boundary conditions and initialization procedures; a thorough discussion of emission inventory development and their spatial and temporal allocation; and other model input preparation procedures, model performance evaluation procedures; selection of days and other details for calculating RRFs; and provisions for the archiving of and access to raw model inputs and outputs. While some additional detail on the input meteorological data could have been useful, overall the protocol adequately addresses all of the expected elements.

²⁰ 66 FR 5001 (January 18, 2001). CARB estimates that interstate trucks registered outside of California represent over 50 percent of the heavy duty trucks in California. See Table III–1 in "Staff Report: Initial Statement of Reason for Proposed Rulemaking, Proposed Regulation for In-Use, On-road Diesel Vehicles," California Air Resources Board (October 2008).

²¹ Tier 2 and 3 non-road engines standards, 63 FR 56968 (October, 23 1998); Tier 4 diesel non-road engine standard, 69 FR 38958 (June 29, 2004).

²³ "Guidance on the Use of Models and Other Analyses for Demonstrating Attainment of Air Quality Goals for the 8-Hour Ozone and PM_{2.5} NAAQS and Regional Haze," EPA-454/B-07-002, April 2007. Additional EPA modeling guidance can be found in the "Guideline on Air Quality Models" in 40 CFR part 51, appendix W.

²⁴ "Guideline for Regulatory Application of the Urban Airshed Model," EPA-450/4-91-013, July 1991.

The modeling analysis uses the Community Multiscale Air Quality (CMAQ) photochemical model, developed by the EPA. The SAPRC99 (State-wide Air Pollution Research Center, 1999 version) chemical mechanism was used in CMAQ, based on CARB's historical experience with it, its favorable scientific review and good performance over the years. The modeling incorporates routinely available meteorological and air quality data collected during 2007, the base year for the 2013 Ozone Plan. The WRF model (Weather and Research Forecasting model, from the National Center for Atmospheric Research) was used to prepare meteorological input for CMAQ. CMAQ and WRF are both recognized in the Modeling Guidance as technically sound, state-of-the-art models. Air quality modeling was performed for May through September, 2007, a period that spans the ozone season in the San Joaquin Valley. The overall air quality modeling domain includes the entire State of California with 12 km resolution, and a nested domain of finer 4 km resolution that covers the San Joaquin Valley. The overall meteorological modeling covers California's neighboring states, and major portions of the next outer ring of states, with 35 km resolution; it has nested domains at 12 km and 4 km, with the latter, innermost covering the entire State of California. The areal extent, and the horizontal and vertical resolution used in these models were more than adequate for modeling San Joaquin Valley ozone.

Model performance information is provided in appendix F of the 2013 Ozone Plan in the form of time series and scatter plots of modeled ozone compared to monitored ozone, for the May–September, 2007 period. The time series show a good match between predicted and observed concentrations. While there is some underprediction during the second half of the period (mid-July through September), performance is generally good, and the overall peaks were captured by the model. Scatter plots also show good performance, with very few outliers. Modeled values are generally within 20% of observations, and root-mean-square error (RMSE) values are typically near 0.7, showing good correlation between modeled and monitored concentrations. While current Modeling Guidance does not prescribe specific performance goals, the Modeling Protocol adopted goals from the older, 1991 EPA 1-hour ozone modeling guidance, section 5.2: Unpaired highest prediction accuracy: Within 20 percent;

Normalized bias within 15 percent; and Gross error of all pairs above 60 parts per billion (ppb) (*i.e.*, 0.060 ppm) within 35 percent (appendix F, section 1.4.1). The Modeling Protocol mentions evaluation of model performance within multiple geographic subregions, as well as additional performance statistics and spatial plots for ozone and precursor species, but these were not provided in the SIP submittal. The CARB Staff Report stated that all the performance goals were met. See CARB's "Staff Report, San Joaquin Valley 2013 Plan for the Federal 1-Hour Ozone Standard," dated November 8, 2013, page 8. The EPA agrees that the model performance is adequate for the San Joaquin Valley 1-hour ozone attainment demonstration.

The 2013 Ozone Plan used a "band-RRF" approach for the use of modeling results in the modeled attainment test. This a refinement of the approach in the Modeling Guidance, and is described in appendix F ("Modeling Approach and Results," section 1.4.1) of the 2013 Ozone Plan, as well as in the Modeling Protocol and in a journal paper.²⁵ The Modeling Guidance approach is briefly reviewed here before the band-RRF approach is described. As mentioned above, in simplest terms, an RRF is the relative model response to emissions changes, that is, the ratio of future modeled concentration to base year modeled concentration. Since the model provides concentrations for every grid square, for every hour of the simulated period, in actually implementing an RRF, a choice must be made of which particular model concentrations should be included in the calculation. The Modeling Guidance recommends that high concentration days selected from grid cells near the monitor be used; these will be most relevant for estimating the future design value at the monitor. Specifically, for the 1997 0.08 ppm (80 ppb) 8-hour ozone NAAQS in effect at the time, the Modeling Guidance recommends that the highest concentration among grid cells within 15 km of the monitor be used to represent the monitor, and that all modeled maximum daily 8-hour concentrations at or above 085 ppb²⁶

(0.085 ppm) be averaged. The RRF is the average for future days divided by the average for base year days; this ratio reflects the average response of high ozone concentrations near the monitor to future emission changes.

The 2013 Ozone Plan band-RRF approach parallels the Modeling Guidance, but differs in several specifics, especially in the choice of concentration levels to include in calculating the RRF. The 2013 Ozone Plan applied an initial performance screen: Only days that meet the model performance criteria cited above were retained for the calculation. For the choice of grid cell to represent the monitor, the 2013 Ozone Plan used the grid cell containing the monitor itself, rather than the maximum cell within 15 km; this puts a somewhat greater reliance on the spatial accuracy of the model, but is not necessarily less conservative. The 2013 Ozone Plan's choice of concentration days to include is more complex than in the Guidance. Instead of using an average over all high concentration days, in the band-RRF approach there is a different RRF for each 10 ppb-wide (0.010 ppm) band of ozone concentrations; the RRF used for a particular monitored day is computed from future and base year averages only within the concentration band relevant for that day, rather than from all high days.²⁷ This refinement has the advantage of allowing the model response to vary depending on the concentration, instead of assuming the relative response is always the same, as the Modeling Guidance procedure does. The Modeling Guidance acknowledges that there tends to be a greater model response to emission changes at higher ozone concentrations (Modeling Guidance, page 37), so the use of RRF bands is a reasonable refinement. The use of band-RRFs requires that each day be scaled by its corresponding RRF, and that the future design value be estimated from those scaled values concentrations. This is different than the Modeling

²⁵ Sarika Kulkarni, Ajith P. Kaduwela, Jeremy C. Avise, John A. DaMassa & Daniel Chau (2014), "An extended approach to calculate the ozone relative response factors used in the attainment demonstration for the National Ambient Air Quality Standards", *Journal of the Air & Waste Management Association*, 64:10, 1204–1213, DOI: 10.1080/10962247.2014.936984.

²⁶ The 1997 8-hour ozone NAAQS is actually 0.08 ppm; concentrations of 84.999 ppb or below round to 80 and comply with the NAAQS, and concentrations of 85.0 or higher exceed the NAAQS.

²⁷ Specifically, a linear regression between observed and modeled concentrations was used to choose a modeled concentration for each observed day; that modeled concentration predicted from the linear fit was then used to select a ppb band and the corresponding RRF. This indirect procedure avoids quirks of individual days, providing a typical model response appropriate for future projections. It also avoids introducing any inconsistency and model bias into the RRF calculation. If the observed value were used directly to choose a band, and the model happened to underpredict on that day, then the RRF, chosen on the basis of the higher observed value, would be the model response appropriate for a higher ozone concentration, rather than for the modeled base year concentration. In short, it keeps both the RRF numerator and denominator both as modeled values, consistent with the definition of an RRF.

Guidance approach, in which a single RRF is applied to the monitored design value itself. The “design value” for the 1-hour ozone standard is nearly equivalent to the 4th highest concentration.²⁸ In the 2013 Ozone Plan’s approach, the 10 days with the highest observed concentration were multiplied by their respective RRFs, and the 4th highest resulting concentration was used as the predicted future design value for the monitor. The inclusion of 10 candidate days accommodates any shifts in the concentration rank of the days as the result of controls; it ensures the inclusion of days that could contribute to the post-control design value. Applying different RRFs to different days and estimating the design value afterward is very similar to the EPA’s updated guidance procedure for PM_{2.5} attainment demonstrations.²⁹ The band-RRF approach is a refinement to the 8-hour ozone approach recommended in the Modeling Guidance for the modeled attainment test, and is adequate for the San Joaquin Valley 1-hour ozone attainment demonstration.

An additional difference between the 2013 Ozone Plan modeled attainment test and the Modeling Guidance is that

²⁸ The 1-hour ozone NAAQS is met when the “expected number of days per calendar year with maximum hourly average concentrations above 0.12 parts per million . . . is equal to or less than 1” (40 CFR 50.9); 40 CFR part 50, appendix H describes the procedure for calculating this, based on three calendar years. This is approximately the same as allowing one exceedance per year over three years, that is, the three highest values are allowed to exceed 0.12 ppm. Thus, the fourth highest concentration is a unbiased single-year value to use for comparison to the NAAQS level in a modeling context.

²⁹ “Update to the 24 Hour PM_{2.5} NAAQS Modeled Attainment Test,” EPA memorandum dated June 28, 2011, from Tyler Fox, Air Quality Modeling Group, EPA Office of Air Quality Planning and Standards. The updated guidance allowed for the shifting of PM_{2.5} day ranks. A shift is possible since emission controls affect PM_{2.5} species components differently, and species composition may be different for different seasons: Control could affect mainly winter days, with summer days little affected and so becoming higher ranked. The 2013 Ozone Plan’s RRF procedure was carried out for the top 10 observed days. This accommodates differences in ranking between the observed days and their corresponding modeled days and bands, ensuring that days that were not the highest before controls, but are so after control, are available for the design value calculation. It also accommodates the fact that applying controls may result in shifting in the ranks of the days; the particular day that is 4th highest before controls may not be the 4th highest post-control day. The 2013 Ozone Plan does explicitly state whether such rank shifts actually occurred in applying the band-RRF approach, but table 4 in appendix G of the 2013 Ozone Plan does not appear to show such shifts: The 2017 design values remain sorted from high to low as are the 2007 design values. Shifts might be expected to occur if a concentration near the bottom of a band with a relatively small RRF was reduced more than a concentration at the top of the next lower band.

it uses only the single 2005–2007 design value as the starting point, whereas for a 2007 base year the Modeling Guidance would recommend the average of the three design values for 2005–2007, 2006–2008, and 2007–2009. It is not clear how to use band-RRF approach in conjunction with this Guidance recommendation, but presumably it would involve using ozone observations from a longer period than 2005 through 2007. Using a longer period might make for more stable design value estimates, less subject to year-to-year meteorological variability; conversely it also introduces some inconsistency given that emissions changes during a longer period would generally be larger. The EPA estimated the effect of using an alternative starting point by applying modeled percent change in design value from the 2013 Ozone Plan to the 2006–2008 design value, and to the three-design value average mentioned above. The results were 120.2 and 119.6 ppb (0.1202 and 0.1196 ppm), respectively, both slightly higher than the 2013 Ozone Plan’s 119.3 ppb (0.1193 ppm), but both less than the NAAQS-compliant value of 124 ppb (or 0.124 ppm, which rounds to 0.12 ppm). Documentation on the rationale for the 2013 Ozone Plan choice of the 2005–2007 design value starting point would have strengthened the support for the attainment demonstration, but even in its absence, the EPA finds the procedure followed to be adequate for the San Joaquin Valley 1-hour ozone attainment demonstration.

The final model results appear in chapter 2 of the 2013 Ozone Plan (and are repeated in appendix F, section 1.4.2 “Attainment Demonstration”). These are tables of three-year design values for base year 2007 and for the projected year 2017. The highest monitored 2007 design value was 135 ppb (0.135 ppm) at the Edison monitor. The highest projected 2017 design value, accounting for emission reductions occurring during 2007–2017 was 119.3 ppb (0.1193 ppm) at Edison monitor. This is comfortably below the maximum 124 ppb (0.124 ppm) consistent with NAAQS attainment. The next highest 2017 design value was substantially less, 107.4 ppb (0.1074 ppm) at the Arvin monitor.

The 2013 Ozone Plan contains a “Weight of Evidence” (WOE) section in its appendix G. This section includes analyses of ambient concentration and emission trends, and additional analyses that strengthen the 2013 Ozone Plan’s attainment demonstration conclusion that NAAQS attainment will be achieved in 2017. The overall San Joaquin Valley design value trend from

1994 through 2012 is downward, despite some individual multi-year periods of little progress, and corroborates the projection of attainment in 2017 (appendix G, figure 1, page G–2). This pattern is also seen for individual monitoring site design values trends (appendix G, figures 4–6 and 8–10, pages G–6–G–10). An exception to this is the Fresno–Drummond site, for which the 2007–2011 trend is upward, though the number of NAAQS exceedance days remains small (appendix G, figure 6, page G–7). Since VOC and especially NO_x emission trends have been steadily downward (appendix G, figures 18–22, pages G–20–G–23), these stagnant periods are likely due to unfavorable meteorology. The 2013 Ozone Plan also includes trends adjusted for the effect of meteorology, based on a statistical analysis that estimates what ozone would have been had wind speeds and temperatures been more typical (appendix G, section G–2). Since a statistical analysis requires numerous data points, 20-day averages were examined rather than the design values, of which there are only one per year. While this means that the results cannot be used to directly adjust the design value trends, it is clear that for 2008–2011, unfavorable meteorology resulted in higher ozone concentrations (appendix G, figure 12, page G–14), and partly explains the slower recent progress in the design values at some monitoring sites.

The 2013 Ozone Plan includes NO_x vs. VOC diagrams showing the modeled sensitivity of ozone to reductions at each monitoring site (appendix G, figure 23, pages G–34–G–39.). The relatively flat slopes mean that ozone changes relatively little with VOC reductions. While the relative effectiveness varies by site and reduction amount, on a tpd basis NO_x reductions approximately 20 times as effective as VOC reductions; for the Edison design value site, the relative effectiveness is closer to 7. In conjunction with the pronounced downward NO_x emission trend referred to above, these findings provide confidence in the attainment strategy.

Finally, the 2013 Ozone Plan provides a supplemental attainment demonstration using a traditional “single RRF” approach, in addition to the “band-RRF” approach (appendix G, sections 6.1 and 6.2, pages G–26–G–33). (As described above, in the former approach, described in the Modeling Guidance for 8-hour ozone, a single RRF is used regardless of the ozone concentration. In the latter approach there is a different RRF for each “band” or range of ozone values.) The single

RRF approach is more conservative, giving slightly higher future concentrations; this was expected since the RRF includes model results from lower, less responsive, ozone levels. The single RRF approach nevertheless also shows 2017 attainment.

The various analyses provided in appendix G of the 2013 Ozone Plan provide assurance in the attainment demonstration's conclusion that the 1-hr ozone NAAQS will be attained in 2017.

c. Evaluation of the Air Quality Modeling in the 2013 Ozone Plan

The modeling showed that existing State and District control measures are sufficient to attain the 1979 1-hour Ozone NAAQS by 2017 at all monitoring sites in the San Joaquin Valley. Given the extensive discussion of modeling procedures, tests, and performance analyses called for in the Modeling Protocol and the good model performance, the EPA finds that the modeling is adequate for purposes of supporting the 1-hour ozone attainment demonstration.

3. Proposed Action on the Attainment Demonstration

To approve a SIP's attainment demonstration, the EPA must make several findings: First, we must find that the demonstration's technical bases—emissions inventories and air quality modeling—are adequate. As discussed above in section III.A, we propose to find that the inventories in the 2013 Ozone Plan provide an appropriate basis for the various other elements of the 2013 Ozone Plan, including the attainment demonstration, and for the reasons discussed above, we find the air quality modeling adequate to support the attainment demonstration.

Second, we must find that the SIP provides for expeditious attainment through the implementation of all RACM. As discussed above in section III.B, we are proposing to approve the RACM demonstration in the 2013 Ozone Plan.

Third, we must find that the emissions reductions that are relied on for attainment are creditable and are sufficient to provide for attainment. As stated previously in today's action, the EPA is proposing to approve the 2013 Ozone Plan in part based on the permanence and enforceability of the waiver measures flowing from the approval of the measures as part of the SIP. Thus, the EPA will not finalize approval of the 2013 Ozone Plan until the Agency takes final action to approve the waiver measures as part of the California SIP. Once that occurs, the 2013 Ozone Plan will rely entirely on

adopted and approved rules to achieve the emissions reductions needed to attain the 1-hour ozone standards in the San Joaquin Valley in 2017.

E. Contingency Measures

1. Requirements for Contingency Measures

Section 172(c)(9) and 182(c)(9) of the CAA require that SIPs contain contingency measures that will take effect without further action by the state or the EPA if an area fails to attain the ozone standard by the applicable attainment date (section 172(c)(9)) or fails to meet an ROP milestone (section 182(c)(9)). This requirement is a continuing applicable requirement for the San Joaquin Valley "Extreme" 1-hour ozone nonattainment area under the EPA's anti-backsliding rules that apply once a standard has been revoked. See 40 CFR 51.1105(a)(1) and 51.1100(o)(13).

The Act does not specify how many contingency measures are needed or the magnitude of emission reductions that must be provided by these measures. However, the EPA provided initial guidance interpreting the contingency measure requirements in the General Preamble at 13510. Our interpretation is based upon the language in sections 172(c)(9) and 182(c)(9) in conjunction with the control measure requirements of sections 172(c), 182(b) and 182(c)(2)(B), the reclassification and failure to attain provisions of section 181(b) and other provisions. In the General Preamble, the EPA indicated that states with moderate and above ozone nonattainment areas should include sufficient contingency measures so that, upon implementation of such measures, additional emissions reductions of three percent of the emissions in the adjusted base year inventory (or such lesser percentage what will cure the identified failure) would be achieved in the year following the year in which the failure is identified. These reductions should be beyond what is needed to meet the attainment and/or ROP requirement. States may use reductions of either VOC or NO_x or a combination of both to meet the contingency measure requirements. General Preamble at 13520, footnote 6. The states must show that the contingency measures can be implemented with minimal further action on their part and with no additional rulemaking actions.

In subsequent guidance,³⁰ the EPA indicated that contingency measures

could be implemented early, *i.e.*, prior to the milestone or attainment date. Consistent with this policy, states are allowed to use excess reductions from already adopted measures to meet the CAA sections 172(c)(9) and 182(c)(9) contingency measures requirement. This is because the purpose of contingency measures is to provide extra reductions that are not relied on for ROP or attainment that will provide continued progress while the plan is being revised to fully address the failure to meet the required milestone. Nothing in the CAA precludes a state from implementing such measures before they are triggered. This approach has been approved by the EPA in numerous SIPs. See 62 FR 15844 (April 3, 1997) (approval of the Indiana portion of the Chicago area 15 percent ROP plan); 62 FR 66279 (December 18, 1997) (approval of the Illinois portion of the Chicago area 15 percent ROP plan); 66 FR 30811 (June 8, 2001) (proposed approval of the Rhode Island post-1996 ROP plan); and 66 FR 586 and 66 FR 634 (January 3, 2001) (approval of the Massachusetts and Connecticut 1-hour ozone attainment demonstrations). In the only adjudicated challenge to this approach, the court upheld it. See *LEAN v. EPA*, 382 F.3d 575 (5th Cir. 2004). 70 FR 71611, 71651.

2. Contingency Measures in the 2013 Ozone Plan

Contingency measure provisions are described in Section 4.4 of the 2013 Ozone Plan. To provide for contingency measures for failure to meet the ROP milestones, the SIP relies on surplus NO_x reductions in the ROP demonstration. See 2013 Ozone Plan, table 4–2. See also table 3 above.

For the failure to attainment contingency measure, the 3 percent reduction from the 2007 baseline can come from either VOC or NO_x. A three percent reduction from the 2007 baseline is equivalent to 14.5 tpd of NO_x. VOC emission reductions are only 0.3 tpd between 2017 and 2018; thus, NO_x emission reductions are necessary to satisfy the attainment contingency measure requirement. Fleet turnover in 2018 is expected to reduce NO_x emissions by 11.0 tpd. See 2013 Ozone Plan, appendix B, Tables B–1 and B–2. In the 2013 Ozone Plan, the District relies on 3.5 tpd of NO_x reductions from unspecified incentive programs plus the NO_x reductions from fleet turnover to achieve the 14.5 tpd of NO_x necessary for the failure to attainment contingency

³⁰G.T. Helms, Chief, Ozone/Carbon Monoxide Programs Branch, EPA Office of Air Quality Planning and Standards, memorandum titled "Early

Implementation of Contingency Measures for Ozone and Carbon Monoxide (CO) Nonattainment Areas," August 13, 1993.

measure. See 2013 Ozone Plan, table 4–4.

3. Proposed Action on the Contingency Measures

Contingency measures for ROP. As discussed above in section III.C, we are proposing to approve the 2013 Ozone Plan's ROP demonstration. As seen in the second to last line on table 3 above (in the ROP demonstration), there are sufficient excess reductions of NO_x in each milestone year beyond those needed to meet the next ROP percent reduction requirement to provide the 3 percent of adjusted baseline emissions reductions needed to meet the RFP contingency measure requirement for 2010, 2013, 2016, and 2017.

Accordingly, we propose to approve the ROP contingency measures in the 2013 Ozone Plan under CAA section 182(c)(9) and 40 CFR 51.1105(a)(1) and 51.1100(o)(13).

Contingency measures for failure to attain. We are not proposing action on the plan's attainment contingency measures at this time. Attainment contingency measures are a distinct provision of the CAA that we may act on separately from the attainment demonstration.

F. Clean Fuels or Advanced Control Technology for Boilers

1. Requirements for Clean Fuels or Advanced Control Technology for Boilers

CAA section 182(e)(3) provides that SIPs must require each new, modified, and existing electric utility and industrial and commercial boiler that emits more than 25 tons per year (tpy) of NO_x to either burn as its primary fuel natural gas, methanol, or ethanol (or a comparably low polluting fuel), or use advanced control technology (such as catalytic control technology or other comparably effective control methods). This requirement is a continuing applicable requirement for the San Joaquin Valley "Extreme" 1-hour ozone nonattainment area under the EPA's anti-backsliding rules that apply once a standard has been revoked. See 40 CFR 51.1105(a)(1) and 51.1100(o)(6).

Further guidance on this requirement is provided in the General Preamble at 13523. According to the General Preamble, a boiler should generally be considered as any combustion equipment used to produce steam and generally does not include a process heater that transfers heat from combustion gases to process streams. General Preamble at 13523. In addition, boilers with rated heat inputs less than 15 million Btu (MMBtu) per hour which

are oil or gas fired may generally be considered de minimis and exempt from these requirements since it is unlikely that they will exceed the 25 tpy NO_x emission limit. General Preamble at 13524.

2. Provisions for Controls on Boilers in the San Joaquin Valley District Rules

The 2013 Ozone Plan, which addresses the CAA section 182(e)(3) requirements on page 4–10, states that District Rules 4306 and 4352 address NO_x from affected boilers and that these rules meet the requirements of the CAA.

Rule 4306 "Boilers, Steam Generators, and Process Heaters—Phase 3" as revised on October 16, 2008, applies to any gaseous fuel or liquid fuel fired boiler, steam generator, or process heater with a total rated heat input greater than 5 million Btu per hour. The emission limits in the rule (5 ppm to 30 ppm for gaseous fuels and 40 ppm for liquid fuels) cannot be achieved without the use of advanced control technologies. See "Alternative Control Techniques Document—NO_x Emissions from Industrial/Commercial/Institutional (ICI) Boilers," Emissions Standards Division, EPA, March 1994; see also 76 FR 57846 at 57864–57865 (September 11, 2011) and 77 FR 12652 at 12670 (March 1, 2012) (proposed and final rules approving 2007 Ozone Plan for the San Joaquin Valley). All units subject to Rule 4306 were required to comply with the limits in the rule no later than December 1, 2008. See Rule 4306, section 7.0. We most recently approved Rule 4306 as a SIP revision at 75 FR 1715 (January 13, 2010).

Rule 4352 "Solid Fuel Fired Boilers, Steam Generators And Process Heaters" as revised December 15, 2011, applies to any boiler, steam generator or process heater fired on solid fuel at a source that has a potential to emit more than 10 tpy of NO_x or VOC. All units subject to Rule 4352 were required to comply with the rule's most stringent limits no later than January 1, 2013. Rule 4352, section 5.1. We most recently approved Rule 4352 into the California SIP at 77 FR 66548 (November 6, 2012). In an EPA action on the previous version of Rule 4352, we determined that all of the NO_x emission limits in Rule 4352 effectively require operation of Selective Noncatalytic Reduction (SNCR) control systems, which are comparably effective to Selective Catalytic Reduction for the affected sources. SNCR also appears to achieve NO_x emission reductions comparable to combustion of clean fuels at these types of boilers. We therefore concluded that Rule 4352 satisfies the requirements of section 182(e)(3) for solid fuel-fired boilers in the San

Joaquin Valley. 75 FR 60623 (October 10, 2010).

New and modified boilers that will emit or have the potential to emit 25 tpy or more of NO_x are subject to the District's new source permitting rule, Rule 2201 "New and Modified Stationary Source Review Rule." This rule requires new and modified source to install and operate best available control technology/lowest achievable emissions reductions technology. The EPA most recently approved Rule 2201 into the California SIP at 79 FR 55637 (September 17, 2014).

3. Proposed Finding on the Clean Fuel/Advanced Technology for Boilers

Based on our review of, and previous approval of, the emission limitations in the District's rules discussed above, we propose to find that the 2013 Ozone Plan meets the clean fuels or advanced control technology for boilers requirement in CAA section 182(e)(3) and 40 CFR 40 CFR 51.1105(a)(1) and 51.1100(o)(6).

G. Transportation Control Strategies and Transportation Control Measures To Offset Growth in Emissions From Growth in Vehicle Miles Traveled or Number of Vehicle Trips

1. Requirements for VMT Emissions Offset Demonstrations

Section 182(d)(1)(A) of the Act requires, in relevant part, the state, if subject to its requirements for a given area, to "submit a revision that identifies and adopts specific enforceable transportation control strategies and transportation control measures to offset any growth in emissions from growth in vehicle miles traveled or number of vehicle trips in such area."³¹ This requirement is a continuing applicable requirement for the San Joaquin Valley "Extreme" ozone nonattainment area for the 1-hour and 1997 8-hour standards under the EPA's

³¹ CAA section 182(d)(1)(A) includes three separate elements. In short, under section 182(d)(1)(A), states are required to adopt transportation control strategies and measures (1) to offset growth in emissions from growth in VMT, and, (2) in combination with other emission reduction requirements, to demonstrate RFP, and (3) to demonstrate attainment. For more information on the EPA's interpretation of the three elements of section 182(d)(1)(A), please see 77 FR 58067, at 58068 (September 19, 2012) (proposed withdrawal of approval of South Coast VMT emissions offset demonstrations). The decision by the Ninth Circuit in the *Association of Irrigated Residents* case, and the EPA's related withdrawal of the San Joaquin Valley approvals and finding of failure to submit, relate only to the first element of CAA section 182(d)(1)(A) (i.e., the VMT emissions offset requirement). Accordingly, this proposed action relates only to the first element of CAA section 182(d)(1)(A).

anti-backsliding rules that apply once a standard has been revoked. See 40 CFR 40.1105(a)(1) and 51.1100(o)(10).

As described above, in 2012, 77 FR 70376 (November 26, 2012), the EPA withdrew the Agency's approvals of the VMT emissions offset demonstrations for the San Joaquin Valley for the 1-hour ozone and 1997 8-hour ozone standards. In both instances, the EPA had based its approvals on the Agency's long-standing interpretation of the VMT emissions offset requirement that was rejected by the Ninth Circuit in the *Association of Irrigated Residents* case. In response to the Court's decision, the EPA issued a memorandum titled "Guidance on Implementing Clean Air Act Section 182(d)(1)(A): Transportation Control Measures and Transportation Control Strategies to Offset Growth in Emissions Due to Growth in Vehicle Miles Travelled" (herein referred to as the "August 2012 guidance").³²

The August 2012 Guidance discusses the meaning of the terms, "transportation control strategies" (TCSs) and "transportation control measures" (TCMs), and recommends that both TCSs and TCMs be included in the calculations made for the purpose of determining the degree to which any hypothetical growth in emissions due to growth in VMT should be offset. Generally, TCSs is a broad term that encompasses many types of controls including, for example, motor vehicle emission limitations, inspection and maintenance (I/M) programs, alternative fuel programs, other technology-based measures, and TCMs, that would fit within the regulatory definition of "control strategy." See, e.g., 40 CFR 51.100(n). TCMs are defined at 40 CFR 51.100(r) as meaning "any measure that is directed toward reducing emissions of air pollutants from transportation sources. Such measures include, but are not limited to those listed in section 108(f) of the Clean Air Act[,] and generally refer to programs intended to reduce the VMT, the number of vehicle trips, or traffic congestion, such as programs for improved public transit, designation of certain lanes for passenger buses and high-occupancy vehicles (HOVs), trip reduction ordinances, and the like.

The August 2012 guidance explains how states may demonstrate that the VMT emissions offset requirement is

satisfied in conformance with the Court's ruling. States are recommended to estimate emissions for the nonattainment area's base year and the attainment year. One emission inventory is developed for the base year, and three different emissions inventory scenarios are developed for the attainment year. For the attainment year, the state would present three emissions estimates, two of which would represent hypothetical emissions scenarios that would provide the basis to identify the "growth in emissions" due solely to the growth in VMT, and one that would represent projected actual motor vehicle emissions after fully accounting for projected VMT growth and offsetting emissions reductions obtained by all creditable TCSs and TCMs. See the August 2012 guidance for specific details on how states might conduct the calculations.

The base year on-road VOC emissions should be based on VMT in that year and it should reflect all enforceable TCSs and TCMs in place in the base year. This would include vehicle emissions standards, state and local control programs such as I/M programs or fuel rules, and any additional implemented TCSs and TCMs that were already required by or credited in the SIP as of that base year.

The first of the emissions calculations for the attainment year would be based on the projected VMT and trips for that year, and assume that no new TCSs or TCMs beyond those already credited in the base year inventory have been put in place since the base year. This calculation demonstrates how emissions would hypothetically change if no new TCSs or TCMs were implemented, and VMT and trips were allowed to grow at the projected rate from the base year. This estimate would show the potential for an increase in emissions due solely to growth in VMT and trips. This represents a "no action" taken scenario. Emissions in the attainment year in this scenario may be lower than those in the base year due to the fleet that was on the road in the base year gradually being replaced through fleet turnover; however, provided VMT and/or numbers of vehicle trips will in fact increase by the attainment year, they would still likely be higher than they would have been assuming VMT had held constant.

The second of the attainment year's emissions calculations would also assume that no new TCSs or TCMs beyond those already credited have been put in place since the base year, but would also assume that there was no growth in VMT and trips between the base year and attainment year. This

estimate reflects the hypothetical emissions level that would have occurred if no further TCMs or TCSs had been put in place and if VMT and trip levels had held constant since the base year. Like the "no action" attainment year estimate described above, emissions in the attainment year may be lower than those in the base year due to the fleet that was on the road in the base year gradually being replaced by cleaner vehicles through fleet turnover, but in this case they would not be influenced by any growth in VMT or trips. This emissions estimate would reflect a ceiling on the attainment emissions that should be allowed to occur under the statute as interpreted by the Court because it shows what would happen under a scenario in which no offsetting TCSs or TCMs have yet been put in place and VMT and trips are held constant during the period from the area's base year to its attainment year. This represents a "VMT offset ceiling" scenario. These two hypothetical status quo estimates are necessary steps in identifying the target level of emissions from which states would determine whether further TCMs or TCSs, beyond those that have been adopted and implemented in reality, would need to be adopted and implemented in order to fully offset any increase in emissions due solely to VMT and trips identified in the "no action" scenario.

Finally, the state would present the emissions that are actually expected to occur in the area's attainment year after taking into account reductions from all enforceable TCSs and TCMs that in reality were put in place after the baseline year. This estimate would be based on the VMT and trip levels expected to occur in the attainment year (i.e., the VMT and trip levels from the first estimate) and all of the TCSs and TCMs expected to be in place and for which the SIP will take credit in the area's attainment year, including any TCMs and TCSs put in place since the base year. This represents the "projected actual" attainment year scenario. If this emissions estimate is less than or equal to the emissions ceiling that was established in the second of the attainment year calculations, the TCSs or TCMs for the attainment year would be sufficient to fully offset the identified hypothetical growth in emissions.

If, instead, the estimated projected actual attainment year emissions are still greater than the ceiling which was established in the second of the attainment year emissions calculations, even after accounting for post-baseline year TCSs and TCMs, the state would need to adopt and implement additional TCSs or TCMs to further offset the

³² Memorandum from Karl Simon, Director, Transportation and Climate Division, Office of Transportation and Air Quality, to Carl Edland, Director, Multimedia Planning and Permitting Division, EPA Region 6, and Deborah Jordan, Director, Air Division, EPA Region 9, August 30, 2012.

growth in emissions and bring the actual emissions down to at least the “had VMT and trips held constant” ceiling estimated in the second of the attainment year calculations, in order to meet the VMT offset requirement of section 182(d)(1)(A) as interpreted by the Court.

2. Revised San Joaquin Valley VMT Emissions Offset Demonstrations

For the revised San Joaquin Valley VMT emissions offset demonstrations, the State used EMFAC2011, the latest EPA-approved motor vehicle emissions model for California. The EMFAC2011 model estimates the on-road emissions from two combustion processes (*i.e.*, running exhaust and start exhaust) and four evaporative processes (*i.e.*, hot soak, running losses, diurnal losses, and resting losses). The EMFAC2011 model combines trip-based VMT data from the eight San Joaquin Valley MPOs (*e.g.*, Council of Fresno County Governments), starts data based on household travel surveys, and vehicle population data from the California Department of Motor Vehicles. These sets of data are combined with corresponding emission rates to calculate emissions.

Emissions from running exhaust, start exhaust, hot soak, and running losses are a function of how much a vehicle is driven. As such, emissions from these processes are directly related to VMT and vehicle trips, and the State included emissions from them in the calculations that provide the basis for the revised San Joaquin Valley VMT emissions offset demonstrations. The State did not include emissions from resting loss and diurnal loss processes in the analysis because such emissions are related to vehicle population, not to VMT or vehicle trips, and thus are not part of “any growth in emissions from growth in vehicle miles traveled or numbers of

vehicle trips in such area” (emphasis added) under CAA section 182(d)(1)(A).

The revised San Joaquin Valley VMT emissions offset demonstrations address both the 1-hour ozone standard and the 1997 8-hour ozone standard and include two different “base year” scenarios: 1990, for the purposes of the VMT emissions offset demonstration for the 1-hour ozone standard, and 2002, for the purposes of the VMT emissions offset demonstration for the 1997 8-hour ozone standard. The “base year” for VMT emissions offset demonstration purposes should generally be the same “base year” used for nonattainment planning purposes. In 2012, the EPA approved the 2002 base year inventory for the San Joaquin Valley for the purposes of the 1997 8-hour ozone standard, 77 FR 12652, at 12670 (March 1, 2012), and thus, the State’s selection of 2002 as the base year for the revised San Joaquin Valley VMT emissions offset demonstration for the 1997 8-hour ozone standard is appropriate. With respect to the 1-hour ozone standard, the attainment demonstration in the 2013 Ozone Plan relies on a base year of 2007, rather than 1990; however, the State’s selection of 1990 as the base year for the VMT offset demonstration is appropriate because 1990 was used as the base year for 1-hour ozone SIP planning purposes under the CAA Amendments of 1990, which established, among other requirements, the VMT emissions offset requirement in section 182(d)(1)(A).

The demonstrations also include the previously described three different attainment year scenarios (*i.e.*, no action, VMT offset ceiling, and projected actual) but the attainment year differs between the two demonstrations. Year 2017 was selected as the attainment year for the revised VMT emissions offset demonstration for the 1-hour ozone standard, and year 2023 was selected as the attainment year for

the revised demonstration for the 1997 8-hour ozone standard. For the 1997 8-hour ozone standard, the State’s selection of 2023 is appropriate given that the approved San Joaquin Valley 1997 8-hour ozone plan demonstrates attainment by the applicable attainment date of June 15, 2024 based on the 2023 controlled emissions inventory. See 76 FR 57846, at 57856–57861 (September 16, 2011) and 77 FR 12652, at 12670 (March 1, 2012).

The San Joaquin Valley 2013 Ozone Plan, which includes the revised VMT emissions offset demonstrations in appendix D, provides a demonstration of attainment by 2017. The revised San Joaquin Valley 1-hour ozone attainment demonstration thus provides a demonstration of attainment of the 1-hour ozone standard in the San Joaquin Valley by 2017 based on the controlled 2017 emissions inventory. As described in section III.D of this document, the EPA is proposing to approve 2017 as the attainment year for the 1-hour ozone standard in the San Joaquin Valley.³³ Based on the proposed approval of 2017 as the attainment year for the San Joaquin Valley for the 1-hour ozone standard, we find CARB’s selection of year 2017 as the attainment year for the revised VMT emissions offset demonstration for the 1-hour ozone standard to be acceptable. For additional background and justification regarding the 2017 attainment year, please see section III.D in today’s notice.

Tables 4 and 5 summarize the relevant distinguishing parameters for each of the emissions scenarios and show the State’s corresponding VOC emissions estimates. Table 4 provides the parameters and emissions estimates for the revised VMT emissions offset demonstration for the 1-hour ozone standard, and table 5 provides the corresponding values for the revised demonstration for the 1997 8-hour ozone standard.

TABLE 4—VMT EMISSIONS OFFSET INVENTORY SCENARIOS AND RESULTS FOR 1-HOUR OZONE STANDARD

Scenario	VMT		Starts		Controls	VOC Emissions
	Year	1000/day	Year	1000/day	Year	tpd
Base Year	1990	52,199	1990	7,730	1990	196
No Action	2017	115,070	2017	17,133	1990	178
VMT Offset Ceiling	1990	52,199	1990	7,730	1990	81
Projected Actual	2017	115,070	2017	17,133	2017	30

Source: CARB’s Technical Supplement, April 24, 2014. 2017 VMT based on 2013 Federal Transportation Improvement Plans from the eight San Joaquin Valley MPOs.

³³ In this context, “attainment year” refers to the ozone season immediately preceding a nonattainment area’s attainment date. In the case of

the San Joaquin Valley for the 1-hour ozone standard, the proposed applicable attainment date is November 26, 2017, and the ozone season

immediately preceding that date will occur in year 2017.

TABLE 5—VMT EMISSIONS OFFSET INVENTORY SCENARIOS AND RESULTS FOR 1997 8-HOUR OZONE STANDARD

Scenario	VMT		Starts		Controls	VOC Emissions
	Year	1000/day	Year	1000/day	Year	tpd
Base Year	2002	78,400	2002	11,307	2002	76
No Action	2023	130,431	2023	19,466	2002	49
VMT Offset Ceiling	2002	78,400	2002	11,307	2002	28
Projected Actual	2023	130,431	2023	19,466	2023	24

Source: CARB's Technical Supplement, April 24, 2014. 2023 VMT based on 2013 Federal Transportation Improvement Plans from the eight San Joaquin Valley MPOs.

For the two “base year” scenarios, the State ran the EMFAC2011 model for the applicable base year (*i.e.*, 1990 for the 1-hour ozone standard and 2002 for the 1997 8-hour ozone standard) using VMT and starts data corresponding to those years. As shown in tables 5 and 6, the State estimates the San Joaquin Valley VOC emissions at 196 tpd in 1990 and 76 tpd in 2002.

For the two “no action” scenarios, the State first identified the on-road motor vehicle control programs (*i.e.*, TCSs or TCMs) put in place since the base years and incorporated into EMFAC2011 and then ran EMFAC2011 with the VMT and starts data corresponding to the applicable attainment year (*i.e.*, 2017 for the 1-hour ozone standard and 2023 for the 1997 8-hour ozone standard) without the emissions reductions from the on-road motor vehicle control programs put in place after the base year. Thus, the “no action” scenarios reflect the hypothetical VOC emissions that would occur in the attainment years in the San Joaquin Valley if the State had not put in place any additional TCSs or TCMs after 1990 (for the 1-hour ozone VMT emissions offset demonstration) or after 2002 (for the 8-hour ozone demonstration). As shown in tables 5 and 6, the State estimates the “no action” San Joaquin Valley VOC emissions at 178 tpd in 2017 and 49 tpd in 2023. The principal difference between the two estimates is that the latter value (used for the revised VMT emissions offset demonstration for the 8-hour ozone standard) reflects the emissions reductions from TCSs and TCMs put in place by the end of 2002 whereas the former value (used for the revised demonstration for the 1-hour ozone standard) reflects only the emissions reductions from TCSs and TCMs put in place by the end of 1990. The most significant of the measures adopted since 1990 and relied upon for the 1-hour ozone VMT emissions offset demonstration include tiered (series of increasingly stringent limits) emissions standards for new motor vehicles (*i.e.*, Low Emissions Vehicles I, II, and III

standards), content specifications for gasoline (*i.e.*, California Reformulated Gasoline Phases 1, 2, and 3), and enhancements to the State's I/M program (*i.e.*, Smog Check II). See attachments A and B to appendix D of the 2013 Ozone Plan for lists of TCSs and TCMs adopted by the State and MPOs since 1990.³⁴

For the “VMT offset ceiling” scenarios, the State ran the EMFAC2011 model for the attainment years but with VMT and starts data corresponding to base year values. Like the “no action” scenarios, the EMFAC2011 model was adjusted to reflect the VOC emissions levels in the attainment years without the benefits of the post-base-year on-road motor vehicle control programs. Thus, the “VMT offset ceiling” scenarios reflect hypothetical VOC emissions in the San Joaquin Valley if the State had not put in place any TCSs or TCMs after the base years and if there had been no growth in VMT or vehicle trips between the base years and the attainment years.

The hypothetical growth in emissions due to growth in VMT and trips can be determined from the difference between the VOC emissions estimates under the “no action” scenarios and the corresponding estimates under the “VMT offset ceiling” scenarios. Based on the values in tables 5 and 6, the hypothetical growth in emissions due to growth in VMT and trips in the San Joaquin Valley would have been 97 tpd (*i.e.*, 178 tpd minus 81 tpd) for the purposes of the revised VMT emissions offset demonstration for the 1-hour ozone standard, and 21 tpd (*i.e.*, 49 tpd minus 28 tpd) for the purposes of the corresponding demonstration for the 8-hour ozone standard. These hypothetical differences establish the levels of VMT growth-caused emissions that need to be offset by the combination of post-baseline year TCMs

and TCSs and any necessary additional TCMs and TCSs.

For the “projected actual” scenario calculations, the State ran the EMFAC2011 model for the attainment years with VMT and starts data at attainment year values and with the full benefits of the relevant post-baseline year motor vehicle control programs. For this scenario, the State included the emissions benefits from TCSs and TCMs put in place since the base year. The most significant measures put in place during the 2002 to 2023 time frame include Low Emission Vehicles II and III standards, Zero Emissions Vehicle standards, and California Reformulated Gasoline Phase 3. These measures are also relied upon for the revised 1-hour ozone attainment demonstration (proposed for approval herein) and the approved 8-hour ozone attainment demonstration.

As shown in tables 5 and 6, the results from these calculations establish projected actual attainment-year VOC emissions of 30 tpd for the 1-hour standard demonstration and 24 tpd for the 1997 8-hour standard demonstration. The State then compared these values against the corresponding VMT offset ceiling values to determine whether additional TCMs or TCSs would need to be adopted and implemented in order to offset any increase in emissions due solely to VMT and trips. Because the “projected actual” emissions are less than the corresponding “VMT Offset Ceiling” emissions, the State concluded that the demonstration shows compliance with the VMT emissions offset requirement and that there are sufficient adopted TCSs and TCMs to offset the growth in emissions from the growth in VMT and vehicle trips in the San Joaquin Valley for both the 1-hour and 1997 8-hour standards. In fact, taking into account of the creditable post-baseline year TCMs and TCSs, the State showed that they offset the hypothetical differences by 148 tpd for the 1-hour standard and by 25 tpd for the 1997 8-hour standards,

³⁴ The docket for today's action includes an updated list of the post-1990 transportation control strategies in attachment A of appendix D to the 2013 Ozone Plan.

rather than merely the required 97 tpd and 21 tpd, respectively.³⁵

3. Proposed Action on the VMT Emissions Offset Demonstrations

Based on our review of revised San Joaquin Valley VMT emissions offset demonstrations in appendix D of the 2013 Ozone Plan and the related technical supplement, we find the State's analysis to be acceptable and agree that the State has adopted sufficient TCSs and TCMs to offset the growth in emissions from growth in VMT and vehicle trips in the San Joaquin Valley for the purposes of the 1-hour ozone and 1997 8-hour ozone standards. As such, we find that the revised San Joaquin Valley VMT emissions offset demonstrations comply with the VMT emissions offset requirement in CAA section 182(d)(1)(A). Therefore, we propose approval of the revised San Joaquin Valley VMT emissions offset demonstrations for the 1-hour ozone and 1997 8-hour ozone standards as a revision to the California SIP.

IV. Proposed Action

For the reasons discussed above, the EPA is proposing to approve, under CAA section 110(k)(3), CARB's submittal dated December 20, 2013 of the San Joaquin Valley 2013 Ozone Plan as a revision to the California SIP.³⁶ In so doing, the EPA is proposing to approve the following elements of the plan as meeting the specified requirements for the revoked 1-hour ozone standard:

- RACM demonstration as meeting the requirements of CAA section 172(c)(1) and 40 CFR 51.1105(a)(1) and 51.1100(o)(17);
- ROP demonstrations as meeting the requirements of CAA section 172(c)(2) and 182(c)(2)(B), and 40 CFR 51.1105(a)(1) and 51.1100(o)(4);

³⁵ The offsetting VOC emissions reductions from the TCSs and TCMs put in place after the respective base year can be determined by subtracting the "projected actual" emissions estimates from the "no action" emissions estimates in tables 5 and 6. For the purposes of the 1-hour ozone demonstration, the offsetting emissions reductions, 148 tpd (178 tpd minus 30 tpd), exceed the growth in emissions from growth in VMT and vehicle trips (97 tpd). For the purposes of the 8-hour ozone demonstration, the offsetting emissions reductions, 25 tpd (49 tpd minus 24 tpd), exceed the growth in emissions from growth in VMT and vehicle trips (21 tpd).

³⁶ In our final action, we also intend to remove a certain paragraph from the "Identification of Plan" section of 40 CFR part 52 for the State of California. In withdrawing our approval of the 2004 Ozone Plan, as revised and clarified, 77 FR 70376 (November 26, 2012), we inadvertently failed to remove 40 CFR 52.220(c)(371) which codified our March 8, 2010 final approval of the "2008 Clarifications" for the 2004 San Joaquin Valley (1-hour ozone) plan.

- Attainment demonstration as meeting the requirements of CAA section 182(c)(2)(A), and 40 CFR 51.1105(a)(1) and 51.1100(o)(12);
- ROP contingency measures as meeting the requirements of CAA sections 182(c)(9) and 40 CFR 51.1105(a)(1) and 51.1100(o)(13); and
- Provisions for clean fuels or advanced control technology for boilers as meeting the requirements of CAA section 182(e)(3) and 40 CFR 51.1105(a)(1) and 51.1100(o)(6).

The EPA is also proposing to approve the 2013 Ozone Plan as meeting the specified requirements for the revoked 1-hour ozone standard and the revoked 1997 8-hour ozone standard:

- VMT emissions offset demonstrations as meeting the requirements of CAA section 182(d)(1)(A) and 40 CFR 51.1105(a)(1) and 51.1100(o)(10).

The EPA is soliciting public comments on the issues discussed in this document or on other relevant matters. We will accept comments from the public on this proposal for the next 30 days. We will consider these comments before taking final action.

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this action merely proposes to approve a state plan as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this proposed action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- Does not have Federalism implications as specified in Executive

Order 13132 (64 FR 43255, August 10, 1999);

- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide the EPA with the discretionary authority to address disproportionate human health or environmental effects with practical, appropriate, and legally permissible methods under Executive Order 12898 (59 FR 7629, February 16, 1994).

Executive Order 13175, entitled "Consultation and Coordination with Indian Tribal Governments" (65 FR 67249, November 9, 2000), requires the EPA to develop an accountable process to ensure "meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications." "Policies that have Tribal implications" is defined in the Executive Order to include regulations that have "substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and the Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian Tribes."

Eight Indian tribes are located within the boundaries of the San Joaquin Valley air quality planning area for the 1-hour ozone and 1997 8-hours ozone standards: The Big Sandy Rancheria of Mono Indians of California, the Cold Springs Rancheria of Mono Indians of California, the North Fork Rancheria of Mono Indians of California, the Picayune Rancheria of Chukchansi Indians of California, the Santa Rosa Rancheria of the Tachi Yokut Tribe, the Table Mountain Rancheria of California, the Tejon Indian Tribe, and the Tule River Indian Tribe of the Tule River Reservation.

The EPA's proposed approval of the various SIP elements submitted by CARB to address the 1-hour ozone and 1997 8-hours ozone standards in the San Joaquin Valley would not have tribal implications because the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the proposed SIP approvals do not have tribal implications and will not

impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). Therefore, the EPA has concluded that the proposed action will not have tribal implications for the purposes of Executive Order 13175, and would not impose substantial direct costs upon the tribes, nor would it preempt Tribal law. We note that none of the tribes located in the San Joaquin Valley has requested eligibility to administer programs under the CAA.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental regulations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 52 and 70

[EPA-R07-OAR-2015-0790; FRL-9941-02-Region 7]

Approval of Missouri's Air Quality Implementation Plans; Reporting Emission Data, Emission Fees and Process Information

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) proposes to approve revisions to the Operating Permits Program for the State of Missouri submitted on March 16, 2015. These

revisions update the emissions fee for permitted sources as set by Missouri Statute from \$40 to \$48 per ton of air pollution emitted annually, effective January 1, 2016.

DATES: Comments on this proposed action must be received in writing by February 16, 2016.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R07-OAR-2015-0790, to <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Stephen Krabbe, Environmental Protection Agency, Air Planning and Development Branch, 11201 Renner Boulevard, Lenexa, Kansas 66219 at 913-551-7991, or by email at krabbe.stephen@epa.gov.

SUPPLEMENTARY INFORMATION: In the final rules section of this **Federal Register**, EPA is approving the state's Title V revision to 10 C.S.R. 10-6.110 "Reporting Emission Data, Emission Fees, and Process Information" as a

direct final rule without prior proposal because the Agency views this as a noncontroversial revision amendment and anticipates no relevant adverse comments to this action. A detailed rationale for the approval is set forth in the direct final rule. If no relevant adverse comments are received in response to this action, no further activity is contemplated in relation to this action. If EPA receives relevant adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed action. EPA will not institute a second comment period on this action. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on part of this rule and if that part can be severed from the remainder of the rule, EPA may adopt as final those parts of the rule that are not the subject of an adverse comment. For additional information, see the direct final rule which is located in the rules section of this **Federal Register**.

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Indiana Advisory Committee To Begin Planning a Series of Public Hearings To Study Civil Rights and the School to Prison Pipeline in Indiana

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act that the Indiana Advisory Committee (Committee) will hold a meeting on Wednesday, February 03, 2016, from 11:00 a.m.–12:00 p.m. EST for the purpose of reviewing testimony received during their January 20, 2016 Web hearing, and finalizing preparations for their February 17, 2016 hearing on Civil Rights and the School to Prison Pipeline in Indiana.

Members of the public may listen to the discussion. This meeting is available to the public through the following toll-free call-in number: 888-437-9445 conference ID: 3383741. Any interested member of the public may call this number and listen to the meeting. The conference call operator will ask callers to identify themselves, the organization they are affiliated with (if any), and an email address prior to placing callers into the conference room. Callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Persons with hearing impairments may also follow the proceedings by first calling the Federal Relay Service at 1-800-977-8339 and providing the Service with the

conference call number and conference ID number.

Members of the public are also invited to make statements during the open comment period at the end of the meeting. In addition, members of the public may submit written comments; the comments must be received in the regional office within 30 days after the meeting. Written comments may be mailed to the Regional Programs Unit, U.S. Commission on Civil Rights, 55 W. Monroe St., Suite 410, Chicago, IL 60615. They may also be faxed to the Commission at (312) 353-8324, or emailed to Administrative Assistant, Carolyn Allen at callen@usccr.gov. Persons who desire additional information may contact the Regional Programs Unit at (312) 353-8311.

Records and documents discussed during the meeting will be available for public viewing prior to and following the meeting at <https://database.faca.gov/committee/meetings.aspx?cid=247> and following the links for “Meeting Details” and then “Documents.” Records generated from this meeting may also be inspected and reproduced at the Regional Programs Unit, as they become available, both before and after the meeting. Persons interested in the work of this Committee are directed to the Commission’s Web site, <http://www.usccr.gov>, or may contact the Regional Programs Unit at the above email or street address.

Agenda

1. Welcome and Roll Call
2. Debriefing and Review of January 20 Web Hearing
3. Preparatory Discussion and Review Regarding Public Hearing “Civil Rights and the School to Prison Pipeline in Indiana”
 - a. Agenda of Panelists
 - b. Location
 - c. Date and Time
 - d. Schedule of Events
 - e. Other logistics
4. Open Comment
5. Adjournment

DATES: The meeting will be held on Wednesday February 3, 2016, from 11:00 a.m.–12:00 p.m. EST.

Public Call Information:

Dial: 888-437-9445
Conference ID: 3383741

FOR FURTHER INFORMATION CONTACT: Melissa Wojnaroski, DFO, at 312-353-8311 or mwojnaroski@usccr.gov.

Dated: January 11, 2016.

David Mussatt,

Chief, Regional Programs Unit.

BILLING CODE 6335-01-P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

Proposed Information Collection; Request

AGENCY: Bureau of Industry and Security.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this document announces that the Bureau of Industry and Security (BIS), Department of Commerce, will submit for the Office of Management and Budget (OMB) review, a request for an emergency extension of currently approved Information collection requests which will expire on January 31, 2016. The extension is being sought to evaluate the need for and scope of the existing instruments. The Agency expects that OMB will approve these emergency extensions by January 31, 2016 and approve any revised instruments (after appropriate notice and public comment periods).

FOR FURTHER INFORMATION CONTACT:

Requests for additional information or copies of the information collection instrument and instructions should be directed to Mark Crace, BIS ICB Liaison, (202) 482-8093, mark.crace@bis.doc.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

Over the years, BIS has worked with other Government agencies and the affected public to identify areas where export licensing requirements may be relaxed without jeopardizing U.S. national security or foreign policy. Many of these relaxations have taken the form of licensing exceptions and exclusions. Some of these license exceptions and exclusions have a reporting or recordkeeping requirement to enable the Government to continue to monitor exports of these items. Exporters may choose to utilize the license exception and accept the reporting or recordkeeping burden in lieu of submitting a license application.

II. Method of Collection

Electronic Information on Individual ICRs for Which an Emergency Extension Is Requested:

Title of Collections:

1. Simple Network Application Process and Multi-purpose Application Form.

2. Offsets in Military Exports.

3. Licensing Exemptions and Exclusions.

III. Data

1. Simple Network Application Process and Multi-purpose Application Form.

OMB Control Number: 0694–0088.

Form Number: None.

Type of Review: Extension of a currently approved information collection.

Affected Public: Non-profit institutions; State, local, or tribal government; business or other for-profit organizations.

Estimated Number of Respondents: 64,612.

Estimated Time per Response: 0.49 hours.

Estimated Total Annual Burden Hours: 31,833.

Estimated Total Annual Cost to Public: \$0.

2. Offsets in Military Exports.

OMB Control Number: 0694–0084.

Form Number: None.

Type of Review: Extension of a currently approved information collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 30.

Estimated Time per Response: 12 hours.

Estimated Total Annual Burden Hours: 360 hours.

Estimated Total Annual Cost to Public: \$0.

3. License Exemptions and Exclusions.

OMB Control Number: 0694–0137.

Form Number: None.

Type of Review: Extension of a currently approved information collection.

Affected Public: Non-profit institutions; State, local, or tribal government; business or other for-profit organizations.

Estimated Number of Respondents: 19,738.

Estimated Time per Response: 1.52 hours.

Estimated Total Annual Burden Hours: 29,998.

Estimated Total Annual Cost to Public: \$0.

Dated: January 12, 2016.

Glenna Mickelson,

Management Analyst, Office of the Chief Information Officer.

Kavakli San St. Fulya, Cad. Hazer Sok. No.14/A Silivri, Istanbul, Turkey.

Pursuant to Section 766.24 of the Export Administration Regulations, 15 CFR parts 730–774 (2015) (“EAR” or the “Regulations”),¹ I hereby grant the request of the Office of Export Enforcement (“OEE”) to renew the July 13, 2015 Temporary Denial Order (the “TDO”). The July 13, 2015 Order denied the export privileges of Mahan Airways, Pejman Mahmood Kosarayanifard, Mahmoud Amini, Kerman Aviation, Sirjanco Trading LLC, Ali Eslamian, Mahan Air General Trading LLC, Skyco (UK) Ltd., Equipco (UK) Ltd., Mehdi Bahrami, Al Naser Airlines, Ali Abdullah Alhay, Bahar Safwa General Trading, Sky Blue Bird Group, and Issam Shammout.² I find that renewal of the TDO is necessary in the public interest to prevent an imminent violation of the EAR.

I. Procedural History

On March 17, 2008, Darryl W. Jackson, the then-Assistant Secretary of Commerce for Export Enforcement (“Assistant Secretary”), signed a TDO denying Mahan Airways’ export privileges for a period of 180 days on the grounds that its issuance was necessary in the public interest to prevent an imminent violation of the Regulations. The TDO also named as denied persons Blue Airways, of Yerevan, Armenia (“Blue Airways of Armenia”), as well as the “Balli Group Respondents,” namely, Balli Group PLC, Balli Aviation, Balli Holdings, Vahid Alaghband, Hassan Alaghband, Blue Sky One Ltd., Blue Sky Two Ltd., Blue Sky Three Ltd., Blue Sky Four Ltd., Blue Sky Five Ltd., and Blue Sky Six Ltd., all of the United Kingdom. The TDO was issued *ex parte* pursuant to Section 766.24(a), and went into effect on March 21, 2008, the date it was published in the **Federal Register**.

¹ The Regulations, currently codified at 15 CFR parts 730–774 (2015), originally issued pursuant to the Export Administration Act of 1979. Since August 21, 2001, the Act has been in lapse and the President, through Executive Order 13222 of August 17, 2001 (3 CFR, 2001 Comp. 783 (2002)), which has been extended by successive Presidential Notices, the most recent being that of August 7, 2015 (80 FR 48,223 (Aug. 11, 2015)), has continued the Regulations in effect under the International Emergency Economic Powers Act (50 U.S.C. 1701, *et seq.* (2006 & Supp. IV 2010)).

² See note 3, *infra*.

The TDO subsequently has been renewed in accordance with Section 766.24(d), including most recently on July 13, 2015.³ As of March 9, 2010, the Balli Group Respondents and Blue Airways were no longer subject to the TDO. As part of the February 25, 2011 TDO renewal, Gatewick LLC (a/k/a Gatewick Freight and Cargo Services, a/k/a Gatewick Aviation Services), Mahmoud Amini, and Pejman Mahmood Kosarayanifard (“Kosarian Fard”) were added as related persons in accordance with Section 766.23 of the Regulations.⁴ On July 1, 2011, the TDO was modified by adding Zarand Aviation as a respondent in order to prevent an imminent violation.⁵ As part of the August 24, 2011 renewal, Kerman Aviation, Sirjanco Trading LLC, and Ali Eslamian were added to the TDO as related persons. Mahan Air General Trading LLC, Skyco (UK) Ltd., and Equipco (UK) Ltd. were added as related persons on April 9, 2012. Mehdi Bahrami was added to the TDO as a related person as part of the February 4, 2013 renewal order.

On May 21, 2015, the TDO was modified to add Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading as respondents. Sky Blue Bird Group and its chief executive officer Issam Shammout were added to the TDO as related persons as part of the July 13, 2015 renewal order.⁶

³ The July 13, 2015 Order was published in the *Federal Register* on July 28, 2015 (80 Fed Reg. 44,930, Jul. 28, 2015). The TDO previously had been renewed on September 17, 2008, March 16, 2009, September 11, 2009, March 9, 2010, September 3, 2010, February 25, 2011, August 24, 2011, February 15, 2012, August 9, 2012, February 4, 2013, July 31, 2013, January 24, 2014, July 22, 2014, and January 16, 2015. The August 24, 2011 renewal followed the modification of the TDO on July 1, 2011, which added Zarand Aviation as a respondent. The July 13, 2015 renewal followed the modification of the TDO on May 21, 2015, which added Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading as respondents. Each renewal or modification order was published in the *Federal Register*.

⁴ On August 13, 2014, BIS and Gatewick LLC resolved administrative charges against Gatewick, including a charge for acting contrary to the terms of a BIS denial order (15 CFR 764.2(k)). In addition to the payment of a civil penalty, the settlement includes a seven-year denial order. The first two years of the denial period are active, with the remaining five years suspended on condition that Gatewick LLC pays the civil penalty in full and timely fashion and commits no further violation of the Regulations during the seven-year denial period. The Gatewick LLC Final Order was published in the *Federal Register* on August 20, 2014. See 79 FR 49283 (Aug. 20, 2014).

⁵ As of July 22, 2014, Zarand Aviation was no longer subject to the TDO.

⁶ The U.S. Department of the Treasury’s Office of Foreign Assets Control (“OFAC”) designated Sky Blue Bird and Issam Shammout as Specially Designated Global Terrorists (“SDGTs”) on May 21, 2015, pursuant to Executive Order 13324, for “providing support to Iran’s Mahan Air.” See 80 FR 30762 (May 29, 2015).

On December 18, 2015, BIS, through its Office of Export Enforcement (“OEE”), submitted a written request for renewal of the TDO. The written request was made more than 20 days before the scheduled expiration of the current TDO, which issued on July 13, 2015.⁷ Notice of the renewal request also was provided to Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading in accordance with Sections 766.5 and 766.24(d) of the Regulations. No opposition to the renewal of the TDO has been received. Furthermore, no appeal of the related person determinations I made as part of the September 3, 2010, February 25, 2011, August 24, 2011, April 9, 2012, February 4, 2013, and July 13, 2015 renewal or modification orders has been made by Kosarian Fard, Mahmoud Amini, Kerman Aviation, Sirjanco Trading LLC, Ali Eslamian, Mahan Air General Trading LLC, Skyco (UK) Ltd., Equipco (UK) Ltd., Mehdi Bahrami, Sky Blue Bird Group, or Issam Shammout.⁸

II. Renewal of the TDO

A. Legal Standard

Pursuant to Section 766.24, BIS may issue or renew an order temporarily denying a respondent’s export privileges upon a showing that the order is necessary in the public interest to prevent an “imminent violation” of the Regulations. 15 CFR 766.24(b)(1) and 766.24(d). “A violation may be ‘imminent’ either in time or degree of likelihood.” 15 CFR 766.24(b)(3). BIS may show “either that a violation is about to occur, or that the general circumstances of the matter under investigation or case under criminal or administrative charges demonstrate a likelihood of future violations.” *Id.* As to the likelihood of future violations, BIS may show that the violation under investigation or charge “is significant, deliberate, covert and/or likely to occur again, rather than technical or negligent [.]” *Id.* A “lack of information establishing the precise time a violation may occur does not preclude a finding that a violation is imminent, so long as there is sufficient reason to believe the likelihood of a violation.” *Id.*

B. The TDO and BIS’s Request for Renewal

OEE’s request for renewal is based upon the facts underlying the issuance

⁷ The May 21, 2015 modification order did not affect the expiration date of the January 16, 2015 Order.

⁸ A party named or added as a related person may not oppose the issuance or renewal of the underlying temporary denial order, but may file an appeal of the related person determination in accordance with Section 766.23(c).

of the initial TDO and the TDO renewals in this matter and the evidence developed over the course of this investigation indicating a blatant disregard of U.S. export controls and the TDO. The initial TDO was issued as a result of evidence that showed that Mahan Airways and other parties engaged in conduct prohibited by the EAR by knowingly re-exporting to Iran three U.S.-origin aircraft, specifically Boeing 747s (“Aircraft 1–3”), items subject to the EAR and classified under Export Control Classification Number (“ECCN”) 9A991.b, without the required U.S. Government authorization. Further evidence submitted by BIS indicated that Mahan Airways was involved in the attempted re-export of three additional U.S.-origin Boeing 747s (“Aircraft 4–6”) to Iran.

As discussed in the September 17, 2008 renewal order, evidence presented by BIS indicated that Aircraft 1–3 continued to be flown on Mahan Airways’ routes after issuance of the TDO, in violation of the Regulations and the TDO itself.⁹ It also showed that Aircraft 1–3 had been flown in further violation of the Regulations and the TDO on the routes of Iran Air, an Iranian Government airline. Moreover, as discussed in the March 16, 2009, September 11, 2009 and March 9, 2010 Renewal Orders, Mahan Airways registered Aircraft 1–3 in Iran, obtained Iranian tail numbers for them (EP–MNA, EP–MNB, and EP–MNE, respectively), and continued to operate at least two of them in violation of the Regulations and the TDO,¹⁰ while also committing an additional knowing and willful violation when it negotiated for and acquired an additional U.S.-origin aircraft. The additional acquired aircraft was an MD–82 aircraft, which subsequently was painted in Mahan Airways’ livery and flown on multiple Mahan Airways’ routes under tail number TC–TUA.

The March 9, 2010 Renewal Order also noted that a court in the United Kingdom (“U.K.”) had found Mahan Airways in contempt of court on February 1, 2010, for failing to comply with that court’s December 21, 2009 and January 12, 2010 orders compelling Mahan Airways to remove the Boeing 747s from Iran and ground them in the Netherlands. Mahan Airways and the Balli Group Respondents had been litigating before the U.K. court

⁹ Engaging in conduct prohibited by a denial order violates the Regulations. 15 CFR 764.2(a) and (k).

¹⁰ The third Boeing 747 appeared to have undergone significant service maintenance and may not have been operational at the time of the March 9, 2010 renewal order.

concerning ownership and control of Aircraft 1–3. In a letter to the U.K. court dated January 12, 2010, Mahan Airways' Chairman indicated, *inter alia*, that Mahan Airways opposes U.S.

Government actions against Iran, that it continued to operate the aircraft on its routes in and out of Tehran (and had 158,000 “forward bookings” for these aircraft), and that it wished to continue to do so and would pay damages if required by that court, rather than ground the aircraft.

The September 3, 2010 renewal order discussed the fact that Mahan Airways' violations of the TDO extended beyond operating U.S.-origin aircraft and attempting to acquire additional U.S.-origin aircraft. In February 2009, while subject to the TDO, Mahan Airways participated in the export of computer motherboards, items subject to the Regulations and designated as EAR99, from the United States to Iran, via the United Arab Emirates (“UAE”), in violation of both the TDO and the Regulations, by transporting and/or forwarding the computer motherboards from the UAE to Iran. Mahan Airways' violations were facilitated by Gatewick LLC, which not only participated in the transaction, but also has stated to BIS that it acted as Mahan Airways' sole booking agent for cargo and freight forwarding services in the UAE.

Moreover, in a January 24, 2011 filing in the U.K. court, Mahan Airways asserted that Aircraft 1–3 were not being used, but stated in pertinent part that the aircraft were being maintained in Iran especially “in an airworthy condition” and that, depending on the outcome of its U.K. court appeal, the aircraft “could immediately go back into service . . . on international routes into and out of Iran.” Mahan Airways' January 24, 2011 submission to U.K. Court of Appeal, at p. 25, ¶¶ 108, 110. This clearly stated intent, both on its own and in conjunction with Mahan Airways' prior misconduct and statements, demonstrated the need to renew the TDO in order to prevent imminent future violations. Two of these three 747s subsequently were removed from Iran and are no longer in Mahan Airways' possession. The third of these 747s, with Manufacturer's Serial Number (“MSN”) 23480 and Iranian tail number EP–MNE, remained in Iran under Mahan's control. Pursuant to Executive Order 13324, it was designated a Specially Designated Global Terrorist (“SDGT”) by the U.S. Department of the Treasury's Office of Foreign Assets Control (“OFAC”) on

September 19, 2012.¹¹ Furthermore, as discussed in the February 4, 2013 Order, open source information indicated that this 747, painted in the livery and logo of Mahan Airways, had been flown between Iran and Syria, and was suspected of ferrying weapons and/or other equipment to the Syrian Government from Iran's Islamic Revolutionary Guard Corps. Open source information showed that this aircraft had flown from Iran to Syria as recently as June 30, 2013, and continues to show that it remains in active operation in Mahan Airways' fleet.

In addition, as first detailed in the July 1, 2011 and August 24, 2011 orders, and discussed in subsequent renewal orders in this matter, Mahan Airways also continued to evade U.S. export control laws by operating two Airbus A310 aircraft, bearing Mahan Airways' livery and logo, on flights into and out of Iran.¹² At the time of the July 1, 2011 and August 24, 2011 Orders, these Airbus A310s were registered in France, with tail numbers F–OJHH and F–OJHI, respectively.¹³

The August 2012 renewal order also found that Mahan Airways had acquired another Airbus A310 aircraft subject to the Regulations, with MSN 499 and Iranian tail number EP–VIP, in violation of the TDO and the Regulations.¹⁴ On September 19, 2012, all three Airbus A310 aircraft (tail numbers F–OJHH, F–OJHI, and EP–VIP) were designated as SDGTs.¹⁵

The February 4, 2013 Order laid out further evidence of continued and additional efforts by Mahan Airways

and other persons acting in concert with Mahan, including Kral Aviation and another Turkish company, to procure U.S.-origin engines—two GE CF6–50C2 engines, with MSNs 517621 and 517738, respectively—and other aircraft parts in violation of the TDO and the Regulations.¹⁶ The February 4, 2013 renewal order also added Mehdi Bahrami as a related person in accordance with Section 766.23 of the Regulations. Bahrami, a Mahan Vice-President and the head of Mahan's Istanbul Office, also was involved in Mahan's acquisition of the original three Boeing 747s (Aircraft 1–3) that resulted in the original TDO, and has had a business relationship with Mahan dating back to 1997.

The July 31, 2013 Order detailed additional evidence obtained by OEE showing efforts by Mahan Airways to obtain another GE CF6–50C2 aircraft engine (MSN 528350) from the United States via Turkey. Multiple Mahan employees, including Mehdi Bahrami, were involved in or aware of matters related to the engine's arrival in Turkey from the United States, plans to visually inspect the engine, and prepare it for shipment from Turkey.

Mahan sought to obtain this U.S.-origin engine through Pioneer Logistics Havacilik Turizm Yonetim Danismanlik (“Pioneer Logistics”), an aircraft parts supplier located in Turkey, and its director/operator, Gulnihal Yegane, a Turkish national who previously had conducted Mahan related business with Mehdi Bahrami and Ali Eslamian. Moreover, as referenced in the July 31, 2013 Order, a sworn affidavit by Kosol Surinanda, also known as Kosol Surinandha, Managing Director of Mahan's General Sales Agent in Thailand, stated that the shares of Pioneer Logistics for which he was the

¹¹ See <http://www.treasury.gov/resource-center/sanctions/OFAC-Enforcement/pages/20120919.aspx>.

¹² The Airbus A310s are powered with U.S.-origin engines. The engines are subject to the EAR and classified under Export Control Classification (“ECCN”) 9A991.d. The Airbus A310s contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR. They are classified under ECCN 9A991.b. The export or reexport of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

¹³ OEE subsequently presented evidence that after the August 24, 2011 renewal, Mahan Airways worked along with Kerman Aviation and others to de-register the two Airbus A310 aircraft in France and to register both aircraft in Iran (with, respectively, Iranian tail numbers EP–MHH and EP–MHI). It was determined subsequent to the February 15, 2012 renewal order that the registration switch for these A310s was cancelled and that Mahan Airways then continued to fly the aircraft under the original French tail numbers (F–OJHH and F–OJHI, respectively). Both aircraft apparently remain in Mahan Airways' possession.

¹⁴ See note 12, *supra*.

¹⁵ See <http://www.treasury.gov/resource-center/sanctions/OFAC-Enforcement/pages/20120919.aspx>. Mahan Airways was previously designated by OFAC as a SDGT on October 18, 2011. 77 FR 64,427 (October 18, 2011).

¹⁶ Kral Aviation was referenced in the February 4, 2013 Order as “Turkish Company No. 1.” Kral Aviation purchased a GE CF6–50C2 aircraft engine (MSN 517621) from the United States in July 2012, on behalf of Mahan Airways. OEE was able to prevent this engine from reaching Mahan by issuing a redelivery order to the freight forwarder in accordance with Section 758.8 of the Regulations. OEE also issued Kral Aviation a redelivery order for the second CF6–50C2 engine (MSN 517738) on July 30, 2012. The owner of the second engine subsequently cancelled the item's sale to Kral Aviation. In September 2012, OEE was alerted by a U.S. exporter that another Turkish company (“Turkish Company No. 2”) was attempting to purchase aircraft spare parts intended for re-export by Turkish Company No. 2 to Mahan Airways. See February 4, 2013 Order.

On December 31, 2013, Kral Aviation was added to BIS's Entity List, Supplement No. 4 to Part 744 of the Regulations. See 78 FR 75458 (Dec. 12, 2013). Companies and individuals are added to the Entity List for engaging in activities contrary to the national security or foreign policy interests of the United States. See 15 CFR 744.11.

listed owner were “actually the property of and owned by Mahan.” He further stated that he held “legal title to the shares until otherwise required by Mahan” but would “exercise the rights granted to [him] exactly and only as instructed by Mahan and [his] vote and/or decisions [would] only and exclusively reflect the wills and demands of Mahan[.]”¹⁷

The January 24, 2014 Order outlined OEE’s continued investigation of Mahan Airways’ activities and detailed an attempt by Mahan, which OEE thwarted, to obtain, via an Indonesian aircraft parts supplier, two U.S.-origin Honeywell ALF-502R-5 aircraft engines (MSNs LF5660 and LF5325), items subject to the Regulations, from a U.S. company located in Texas. An invoice of the Indonesian aircraft parts supplier dated March 27, 2013, listed Mahan Airways as the purchaser of the engines and included a Mahan ship-to address. OEE also obtained a Mahan air waybill dated March 12, 2013, listing numerous U.S.-origin aircraft parts subject to the Regulations—including, among other items, a vertical navigation gyroscope, a transmitter, and a power control unit—being transported by Mahan from Turkey to Iran in violation of the TDO.

The July 22, 2014 Order discussed open source evidence from the March–June 2014 time period regarding two BAE regional jets, items subject to the Regulations, that were painted in the livery and logo of Mahan Airways and operating under Iranian tail numbers EP-MOK and EP-MOI, respectively.¹⁸ In addition, aviation industry resources indicated that these aircraft were obtained by Mahan Airways in late November 2013 and June 2014, from Ukrainian Mediterranean Airline, a Ukrainian airline that was added to BIS’s Entity List (Supplement No. 4 to Part 744 of the Regulations) on August 15, 2011, for acting contrary to the national security and foreign policy interests of the United States.¹⁹ OEE’s

on-going investigation indicates that both BAE regional jets remain active in Mahan’s fleet, with open source information showing EP-MOI being used on flights into and out of Iran as recently as January 12, 2015. The continued operation of these aircraft by Mahan Airways violates the TDO.

The January 16, 2015 Order detailed evidence of additional attempts by Mahan Airways to acquire items subject to the Regulations in further violation of the TDO. Specifically, in March 2014, OEE became aware of an inertial reference unit bearing serial number 1231 (“the IRU”) that had been sent to the United States for repair. The IRU is subject to the Regulations, classified under ECCN 7A103, and controlled for missile technology reasons. Upon closer inspection, it was determined that IRU came from or had been installed on an Airbus A340 aircraft bearing MSN 056. Further investigation revealed that as of approximately February 2014, this aircraft was registered under Iranian tail number EP-MMB and had been painted in the livery and logo of Mahan Airways.

The January 16, 2015 Order described related efforts by the Departments of Justice and Treasury to further thwart Mahan’s illicit procurement efforts. Specifically, on August 14, 2014, the United States Attorney’s Office for the District of Maryland filed a civil forfeiture complaint for the IRU pursuant to 22 U.S.C. 401(b) that resulted in the court issuing an Order of Forfeiture on December 2, 2014. EP-MMB remains listed as active in Mahan Airways’ fleet.

Additionally, on August 29, 2014, OFAC blocked the property and interests in property of Asian Aviation Logistics of Thailand, a Mahan Airways affiliate or front company, pursuant to Executive Order 13224. In doing so, OFAC described Mahan Airways’ use of Asian Aviation Logistics to evade sanctions by making payments on behalf of Mahan for the purchase of engines and other equipment.²⁰

obtained these aircraft in November 2013, from Khors Air Company, another Ukrainian airline that, like Ukrainian Mediterranean Airlines, was added to BIS’s Entity List on August 15, 2011. Open source evidence indicates the two Airbus A320 aircraft may be transferred by Mahan Airways to another Iranian airline in October 2014, and issued Iranian tail numbers EP-APF and EP-APF, respectively.

²⁰ See <http://www.treasury.gov/resource-center/sanctions/OFAC-Enforcement/Pages/20140829.aspx>. See 79 FR 55073 (Sep. 15, 2014). OFAC also blocked the property and property interests of Pioneer Logistics of Turkey on August 29, 2014. *Id.* Mahan Airways’ use of Pioneer Logistics in an effort to evade the TDO and the Regulations was discussed in a prior renewal order, as summarized, *supra*, at 13–14. BIS added both

The May 21, 2015 modification order detailed the acquisition of two aircraft, specifically an Airbus A340 bearing MSN 164 and an Airbus A321 bearing MSN 550, that were purchased by Al Naser Airlines in late 2014/early 2015 and are currently located in Iran under the possession, control, and/or ownership of Mahan Airways.²¹ The sales agreements for these two aircraft were signed by Ali Abdullah Alhay for Al Naser Airlines.²² Payment information reveals that multiple electronic funds transfers (“EFT”) were made by Ali Abdullah Alhay and Bahar Safwa General Trading in order to acquire MSNs 164 and 550.

The May 21, 2015 modification order also laid out evidence showing the respondents’ attempts to obtain other controlled aircraft, including aircraft physically located in the United States in similarly-patterned transactions during the same recent time period. Transactional documents involving two Airbus A320s bearing MSNs 82 and 99, respectively, again showed Ali Abdullah Alhay signing sales agreements for Al Naser Airlines.²³ A review of the payment information for these aircraft similarly revealed EFTs from Ali Abdullah Alhay and Bahar Safwa General Trading that follow the pattern described for MSNs 164 and 550, *supra*. MSNs 82 and 99 were detained by OEE Special Agents prior to their planned export from the United States.

The July 13, 2015 Order outlined evidence showing that Al Naser Airlines’ attempts to acquire aircraft on behalf of Mahan Airways extended

Asian Aviation Logistics and Pioneer Logistics to the Entity List on December 12, 2013. See 78 FR 75458 (Dec. 12, 2013).

²¹ Both of these aircraft are powered by U.S.-origin engines that are subject to the Regulations and classified under ECCN 9A991.d. Both aircraft contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR regardless of their location. The aircraft are classified under ECCN 9A991.b. The export or re-export of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

²² Ali Abdullah Alhay is a 25% owner of Al Naser Airlines.

²³ Both aircraft were physically located in the United States and therefore are subject to the Regulations pursuant to Section 734.3(a)(1). Moreover, these Airbus A320s are powered by U.S.-origin engines that are subject to the Regulations and classified under Export Control Classification Number ECCN 9A991.d. The Airbus A320s contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR regardless of their location. The aircraft are classified under ECCN 9A991.b. The export or re-export of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

¹⁷ Pioneer Logistics, Gulnihal Yegane, and Kosol Surinanda also were added to the Entity List on December 12, 2013. See 78 FR 75458 (Dec. 12, 2013).

¹⁸ The BAE regional jets are powered with U.S.-origin engines. The engines are subject to the EAR and classified under ECCN 9A991.d. These aircraft contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR. They are classified under ECCN 9A991.b. The export or reexport of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

¹⁹ See 76 FR 50407 (Aug. 15, 2011). The July 22, 2014 TDO renewal order also referenced two Airbus A320 aircraft painted in the livery and logo of Mahan Airways and operating under Iranian tail numbers EP-MMK and EP-MML, respectively. OEE’s investigation also showed that Mahan

beyond MSNs 164 and 550 to include a total of nine aircraft.²⁴ Four of the aircraft, all of which are subject to the Regulations and were obtained by Mahan from Al Naser Airlines, had been issued the following Iranian tail numbers: EP-MMD (MSN 164), EP-MMG (MSN 383), EP-MMH (MSN 391) and EP-MMR (MSN 416), respectively.²⁵ Publicly available flight tracking information provided evidence that at the time of the July 13, 2015 renewal, both EP-MMH and EP-MMR were being actively flown on routes into and out of Iran in violation of the TDO and Regulations.²⁶

The December 18, 2015 renewal request highlights evidence that Mahan Airways continues to operate EP-MMH and EP-MMR on flights into and out of Iran in further violation of the TDO and Regulations. Evidence provided by OEE indicates that EP-MMD, another of the aircraft Mahan obtained from Al Naser Airlines as discussed in the July 13, 2015 renewal order, also is now in active service with Mahan and flew from Tehran, Iran to Bangkok, Thailand on January 4, 2016, and back to Iran on January 5, 2016. Additionally, publically available aviation databases and flight tracking information indicate that Mahan has acquired Iranian tail numbers for at least two more of the Airbus A340 aircraft it obtained from Al Naser Airlines: EP-MME (MSN 371) and EP-MMF (MSN 376), respectively.

²⁴ This evidence included a press release dated May 9, 2015, that appeared on Mahan Airways' Web site and stated that Mahan "added 9 modern aircraft to its air fleet[,] and that the newly acquired aircraft included eight Airbus A340s and one Airbus A321. See <http://www.mahan.aero/en/mahan-air/press-room/44>. The press release was subsequently removed from Mahan Airways' Web site. Publicly available aviation databases similarly showed that Mahan had obtained nine additional aircraft from Al Naser Airlines in May 2015, including MSNs 164 and 550. As also discussed in the July 13, 2015 renewal order, Sky Blue Bird Group, via Issam Shammout, was actively involved in Al Naser Airlines' acquisition of MSNs 164 and 550, and the attempted acquisition of MSNs 82 and 99 (which were detained by OEE).

²⁵ The Airbus A340s are powered by U.S.-origin engines that are subject to the Regulations and classified under ECCN 9A991.d. The Airbus A340s contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR regardless of the their location. The aircraft are classified under ECCN 9A991.b. The export or re-export of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

²⁶ There is some publically available information indicating that the aircraft Mahan Airways is flying under Iranian tail number EP-MMR is now MSN 615, rather than MSN 416. Both aircraft are Airbus A340 aircraft that Mahan acquired from Al Naser Airlines in violation of the TDO and the Regulations. Moreover, both aircraft were designated as SDGTs by OFAC on May 21, 2015, pursuant to Executive Order 13324. See 80 FR 30762 (May 29, 2015).

Moreover, both aircraft now bear Mahan Airways livery and logo, and since January 1, 2016, EP-MME has logged flights to and from Tehran, Iran involving various destinations, including Guangzhou, China and Dubai, United Arab Emirates.

C. Findings

Under the applicable standard set forth in Section 766.24 of the Regulations and my review of the entire record, I find that the evidence presented by BIS convincingly demonstrates that the denied persons have acted in violation of the EAR and the TDO, that such violations have been significant, deliberate and covert, and that there is a likelihood of future violations. Therefore, renewal of the TDO is necessary to prevent imminent violation of the EAR and to give notice to companies and individuals in the United States and abroad that they should continue to cease dealing with Mahan Airways and the other denied persons under the TDO in connection with export and reexport transactions involving items subject to the EAR.

IV. Order

It is therefore ordered:

First, that MAHAN AIRWAYS, Mahan Tower, No. 21, Azadegan St., M.A. Jenah Exp. Way, Tehran, Iran; PEJMAN MAHMOOD KOSARAYANIFARD A/K/A KOSARIAN FARD, P.O. Box 52404, Dubai, United Arab Emirates; MAHMOUD AMINI, G#22 Dubai Airport Free Zone, P.O. Box 393754, Dubai, United Arab Emirates, and P.O. Box 52404, Dubai, United Arab Emirates, and Mohamed Abdulla Alqaz Building, Al Maktoum Street, Al Rigga, Dubai, United Arab Emirates; KERMAN AVIATION A/K/A GIE KERMAN AVIATION, 42 Avenue Montaigne 75008, Paris, France; SIRJANCO TRADING LLC, P.O. Box 8709, Dubai, United Arab Emirates; ALI ESLAMIAN, 33 Cavendish Square, 4th Floor, London W1G0PW, United Kingdom, and 2 Bentinck Close, Prince Albert Road St. Johns Wood, London NW87RY, United Kingdom; MAHAN AIR GENERAL TRADING LLC, 19th Floor Al Moosa Tower One, Sheik Zayed Road, Dubai 40594, United Arab Emirates; SKYCO (UK) LTD., 33 Cavendish Square, 4th Floor, London, W1G 0PV, United Kingdom; EQUIPCO (UK) LTD., 2 Bentinck Close, Prince Albert Road, London, NW8 7RY, United Kingdom; and MEHDI BAHRAMI, Mahan Airways- Istanbul Office, Cumhuriye Cad. Sibil Apt No: 101 D:6, 34374 Emadad, Sisli Istanbul, Turkey; AL NASER AIRLINES A/K/A AL-NASER AIRLINES A/K/A ALNASER AIRLINES

AND AIR FREIGHT LTD., Home 46, Al-Karrada, Babil Region, District 929, St 21, Beside Al Jadriya Private Hospital, Baghdad, Iraq, and Al Amirat Street, Section 309, St. 3/H.20, Al Mansour, Baghdad, Iraq, and P.O. Box 28360, Dubai, United Arab Emirates, and P.O. Box 911399, Amman 11191, Jordan; ALI ABDULLAH ALHAY A/K/A ALI ALHAY A/K/A ALI ABDULLAH AHMED ALHAY, Home 46, Al-Karrada, Babil Region, District 929, St 21, Beside Al Jadriya Private Hospital, Baghdad, Iraq, and Anak Street, Qatif, Saudi Arabia 61177; BAHAR SAFWA GENERAL TRADING, P.O. Box 113212, Citadel Tower, Floor-5, Office #504, Business Bay, Dubai, United Arab Emirates, and P.O. Box 8709, Citadel Tower, Business Bay, Dubai, United Arab Emirates; SKY BLUE BIRD GROUP A/K/A SKY BLUE BIRD AVIATION A/K/A SKY BLUE BIRD LTD A/K/A SKY BLUE BIRD FZC, P.O. Box 16111, Ras Al Khaimah Trade Zone, United Arab Emirates; and ISSAM SHAMMOUT A/K/A MUHAMMAD ISAM MUHAMMAD ANWAR NUR SHAMMOUT A/K/A ISSAM ANWAR, Philips Building, 4th Floor, Al Fardous Street, Damascus, Syria, and Al Kolaa, Beirut, Lebanon 151515, and 17-18 Margaret Street, 4th Floor, London, W1W 8RP, United Kingdom, and Cumhuriyet Mah. Kavakli San St. Fulya, Cad. Hazar Sok. No.14/A Silivri, Istanbul, Turkey, and when acting for or on their behalf, any successors or assigns, agents, or employees (each a "Denied Person" and collectively the "Denied Persons") may not, directly or indirectly, participate in any way in any transaction involving any commodity, software or technology (hereinafter collectively referred to as "item") exported or to be exported from the United States that is subject to the Export Administration Regulations ("EAR"), or in any other activity subject to the EAR including, but not limited to:

A. Applying for, obtaining, or using any license, License Exception, or export control document;

B. Carrying on negotiations concerning, or ordering, buying, receiving, using, selling, delivering, storing, disposing of, forwarding, transporting, financing, or otherwise servicing in any way, any transaction involving any item exported or to be exported from the United States that is subject to the EAR, or in any other activity subject to the EAR; or

C. Benefitting in any way from any transaction involving any item exported or to be exported from the United States that is subject to the EAR, or in any other activity subject to the EAR.

Second, that no person may, directly or indirectly, do any of the following:

A. Export or reexport to or on behalf of a Denied Person any item subject to the EAR;

B. Take any action that facilitates the acquisition or attempted acquisition by a Denied Person of the ownership, possession, or control of any item subject to the EAR that has been or will be exported from the United States, including financing or other support activities related to a transaction whereby a Denied Person acquires or attempts to acquire such ownership, possession or control;

C. Take any action to acquire from or to facilitate the acquisition or attempted acquisition from a Denied Person of any item subject to the EAR that has been exported from the United States;

D. Obtain from a Denied Person in the United States any item subject to the EAR with knowledge or reason to know that the item will be, or is intended to be, exported from the United States; or

E. Engage in any transaction to service any item subject to the EAR that has been or will be exported from the United States and which is owned, possessed or controlled by a Denied Person, or service any item, of whatever origin, that is owned, possessed or controlled by a Denied Person if such service involves the use of any item subject to the EAR that has been or will be exported from the United States. For purposes of this paragraph, servicing means installation, maintenance, repair, modification or testing.

Third, that, after notice and opportunity for comment as provided in section 766.23 of the EAR, any other person, firm, corporation, or business organization related to a Denied Person by affiliation, ownership, control, or position of responsibility in the conduct of trade or related services may also be made subject to the provisions of this Order.

Fourth, that this Order does not prohibit any export, reexport, or other transaction subject to the EAR where the only items involved that are subject to the EAR are the foreign-produced direct product of U.S.-origin technology.

In accordance with the provisions of Sections 766.24(e) of the EAR, Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and/or Bahar Safwa General Trading may, at any time, appeal this Order by filing a full written statement in support of the appeal with the Office of the Administrative Law Judge, U.S. Coast Guard ALJ Docketing Center, 40 South Gay Street, Baltimore, Maryland 21202-4022. In accordance with the provisions of Sections 766.23(c)(2) and 766.24(e)(3) of the EAR,

Pejman Mahmood Kosarayanifard, Mahmoud Amini, Kerman Aviation, Sirjanco Trading LLC, Ali Eslamian, Mahan Air General Trading LLC, Skycro (UK) Ltd., Equipco (UK) Ltd., Mehdi Bahrami, Sky Blue Bird Group, and/or Issam Shammout may, at any time, appeal their inclusion as a related person by filing a full written statement in support of the appeal with the Office of the Administrative Law Judge, U.S. Coast Guard ALJ Docketing Center, 40 South Gay Street, Baltimore, Maryland 21202-4022.

In accordance with the provisions of Section 766.24(d) of the EAR, BIS may seek renewal of this Order by filing a written request not later than 20 days before the expiration date. A renewal request may be opposed by Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and/or Bahar Safwa General Trading as provided in Section 766.24(d), by filing a written submission with the Assistant Secretary of Commerce for Export Enforcement, which must be received not later than seven days before the expiration date of the Order.

A copy of this Order shall be provided to Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading and each related person, and shall be published in the **Federal Register**. This Order is effective immediately and shall remain in effect for 180 days.

Dated: January 7, 2016.

David W. Mills,

Assistant Secretary of Commerce for Export Enforcement.

Countervailing Duty Investigation of Certain Hot-Rolled Steel Flat Products From the Republic of Turkey: Preliminary Negative Countervailing Duty Determination and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) preliminarily determines that *de minimis* countervailable subsidies are being provided to producers and exporters of certain hot-rolled steel flat products (hot-rolled steel) from the Republic of

Turkey (Turkey). The period of investigation is January 1, 2014, through December 31, 2014. We invite interested parties to comment on this preliminary determination.

DATES: *Effective Date:* January 15, 2016.

FOR FURTHER INFORMATION CONTACT:

Emily Halle or Gene Calvert, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone (202) 482-0176, or (202) 482-3586, respectively.

SUPPLEMENTARY INFORMATION:

Scope of the Investigation

The products covered by this investigation are hot-rolled steel products from Turkey. For a complete description of the scope of this investigation, *see* Appendix II.

Methodology

The Department is conducting this countervailing duty (CVD) investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For a full description of the methodology underlying our preliminary conclusions, *see* the Preliminary Decision Memorandum. A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed Preliminary Decision Memorandum and the electronic version are identical in content.

Alignment

As noted in the Preliminary Decision Memorandum,¹ in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), we are aligning the final CVD determination in this investigation with the final determination in the

¹ See Department Memorandum, "Decision Memorandum for the Preliminary Negative Countervailing Duty Determination: Countervailing Duty Investigation of Certain Hot-Rolled Steel Flat Products from the Republic of Turkey," dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

companion AD investigation of hot-rolled steel from Turkey based on a request made by Petitioners. Consequently, the final CVD determination will be issued on the same date as the final AD determination, which is currently scheduled to be issued no later than May 22, 2016, unless postponed.

Preliminary Determination

In accordance with section 703(d)(1)(A)(i) of the Act, we calculated a CVD rate for each individually investigated producer/exporter of the subject merchandise. We preliminarily determine that *de minimis* countervailable subsidies are being provided with respect to the manufacture, production or exportation of the subject merchandise. Consistent with section 703(b)(4)(A) of the Act, we have disregarded *de minimis* rates. Consistent with section 703(d) of the Act, we have not calculated an all-others rate because we have not reached an affirmative preliminary determination. We preliminarily determine the countervailable subsidy rates to be:

Company	Subsidy rate
Colakoglu Dis Ticaret A.S.	* 0.38
Eregli Demir ve Celik Fabrikalari T.A.S.	* 0.23

* Percent (*de minimis*).

Because we preliminarily determine that the CVD rates in this investigation are *de minimis*, we will not direct U.S. Customs and Border Protection to suspend liquidation of entries of subject merchandise.

Verification

As provided in section 782(i)(1) of the Act, we intend to verify the information submitted by the respondents prior to making our final determination.

International Trade Commission Notification

In accordance with section 703(f) of the Act, we will notify the International Trade Commission (ITC) of our determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information relating to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order, without the written consent of the Assistant Secretary for Enforcement and Compliance.

In accordance with section 705(b)(2) of the Act, if our final determination is affirmative, the ITC will make its final determination within 45 days after the Department makes its final determination.

Disclosure and Public Comment

The Department intends to disclose to interested parties the calculations performed in connection with this preliminary determination within five days of its public announcement.² Interested parties may submit case and rebuttal briefs, as well as request a hearing.³ For a schedule of the deadlines for filing case briefs, rebuttal briefs, and hearing requests, see the Preliminary Decision Memorandum.

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: January 8, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Appendix II

Scope of the Investigation

The products covered by this investigation are certain hot-rolled, flat-rolled steel products, with or without patterns in relief, and whether or not annealed, painted, varnished, or coated with plastics or other non-metallic substances. The products covered do not include those that are clad, plated, or coated with metal. The products covered include coils that have a width or other lateral measurement ("width") of 12.7 mm or greater, regardless of thickness, and regardless of form of coil (*e.g.*, in successively superimposed layers, spirally oscillating, etc.). The products covered also include products not in coils (*e.g.*, in straight lengths) of a thickness of less than 4.75 mm and a width that is 12.7 mm or greater and that measures at least 10 times the thickness. The products described above may be rectangular, square, circular, or other shape and include products of either rectangular or non-rectangular cross-section where such cross-section is achieved subsequent to the rolling process, *i.e.*, products which have

been "worked after rolling" (*e.g.*, products which have been beveled or rounded at the edges). For purposes of the width and thickness requirements referenced above:

(1) Where the nominal and actual measurements vary, a product is within the scope if application of either the nominal or actual measurement would place it within the scope based on the definitions set forth above unless the resulting measurement makes the product covered by the existing antidumping⁴ or countervailing duty⁵ orders on Certain Cut-To-Length Carbon-Quality Steel Plate Products From the Republic of Korea (A-580-836; C-580-837), and

(2) Where the width and thickness vary for a specific product (*e.g.*, the thickness of certain products with non-rectangular cross-section, the width of certain products with non-rectangular shape, etc.), the measurement at its greatest width or thickness applies.

Steel products included in the scope of this investigation are products in which: (1) Iron predominates, by weight, over each of the other contained elements; (2) the carbon content is 2 percent or less, by weight; and (3) none of the elements listed below exceeds the quantity, by weight, respectively indicated:

- 2.50 percent of manganese, or
- 3.30 percent of silicon, or
- 1.50 percent of copper, or
- 1.50 percent of aluminum, or
- 1.25 percent of chromium, or
- 0.30 percent of cobalt, or
- 0.40 percent of lead, or
- 2.00 percent of nickel, or
- 0.30 percent of tungsten, or
- 0.80 percent of molybdenum, or
- 0.10 percent of niobium, or
- 0.30 percent of vanadium, or
- 0.30 percent of zirconium.

Unless specifically excluded, products are included in this scope regardless of levels of boron and titanium.

For example, specifically included in this scope are vacuum degassed, fully stabilized (commonly referred to as interstitial-free (IF)) steels, high strength low alloy (HSLA) steels, the substrate for motor lamination steels, Advanced High Strength Steels (AHSS), and Ultra High Strength Steels (UHSS). IF steels are recognized as low carbon steels with micro-alloying levels of elements such as titanium and/or niobium added to stabilize carbon and nitrogen elements. HSLA steels are recognized as steels with micro-alloying levels of elements such as chromium, copper, niobium, titanium, vanadium, and molybdenum. The substrate for motor lamination steels contains micro-alloying levels of elements such as silicon and

⁴ Notice of Amendment of Final Determinations of Sales at Less Than Fair Value and Antidumping Duty Orders: Certain Cut-To-Length Carbon-Quality Steel Plate Products From France, India, Indonesia, Italy, Japan and the Republic of Korea, 65 FR 6585 (February 10, 2000).

⁵ Notice of Amended Final Determinations: Certain Cut-to-Length Carbon-Quality Steel Plate From India and the Republic of Korea; and Notice of Countervailing Duty Orders: Certain Cut-To-Length Carbon-Quality Steel Plate From France, India, Indonesia, Italy, and the Republic of Korea, 65 FR 6587 (February 10, 2000).

² See 19 CFR 351.224(b).

³ See 19 CFR 351.309(c)-(d), 19 CFR 351.310(c).

aluminum. AHSS and UHSS are considered high tensile strength and high elongation steels, although AHSS and UHSS are covered whether or not they are high tensile strength or high elongation steels.

Subject merchandise includes hot-rolled steel that has been further processed in a third country, including but not limited to pickling, oiling, levelling, annealing, tempering, temper rolling, skin passing, painting, varnishing, trimming, cutting, punching, and/or slitting, or any other processing that would not otherwise remove the merchandise from the scope of the investigation if performed in the country of manufacture of the hot-rolled steel.

All products that meet the written physical description, and in which the chemistry quantities do not exceed any one of the noted element levels listed above, are within the scope of this investigation unless specifically excluded. The following products are outside of and/or specifically excluded from the scope of this investigation:

- Universal mill plates (*i.e.*, hot-rolled, flat-rolled products not in coils that have been rolled on four faces or in a closed box pass, of a width exceeding 150 mm but not exceeding 1250 mm, of a thickness not less than 4.0 mm, and without patterns in relief);
- Products that have been cold-rolled (cold-reduced) after hot-rolling;⁶
- Ball bearing steels;⁷
- Tool steels;⁸ and
- Silico-manganese steels;⁹

The products subject to this investigation are currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under item numbers: 7208.10.1500,

7208.10.3000, 7208.10.6000, 7208.25.3000, 7208.25.6000, 7208.26.0030, 7208.26.0060, 7208.27.0030, 7208.27.0060, 7208.36.0030, 7208.36.0060, 7208.37.0030, 7208.37.0060, 7208.38.0015, 7208.38.0030, 7208.38.0090, 7208.39.0015, 7208.39.0030, 7208.39.0090, 7208.40.6030, 7208.40.6060, 7208.53.0000, 7208.54.0000, 7208.90.0000, 7210.70.3000, 7211.14.0030, 7211.14.0090, 7211.19.1500, 7211.19.2000, 7211.19.3000, 7211.19.4500, 7211.19.6000, 7211.19.7530, 7211.19.7560, 7211.19.7590, 7225.11.0000, 7225.19.0000, 7225.30.3050, 7225.30.7000, 7225.40.7000, 7225.99.0090, 7226.11.1000, 7226.11.9030, 7226.11.9060, 7226.19.1000, 7226.19.9000, 7226.91.5000, 7226.91.7000, and 7226.91.8000. The products subject to the investigation may also enter under the following HTSUS numbers: 7210.90.9000, 7211.90.0000, 7212.40.1000, 7212.40.5000, 7212.50.0000, 7214.91.0015, 7214.91.0060, 7214.91.0090, 7214.99.0060, 7214.99.0075, 7214.99.0090, 7215.90.5000, 7226.99.0180, and 7228.60.6000.

The HTSUS subheadings above are provided for convenience and U.S. Customs and Border Protection purposes only. The written description of the scope of the investigation is dispositive.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

International Trade Administration

[C-351-846]

Countervailing Duty Investigation of Certain Hot-Rolled Steel Flat Products From Brazil: Preliminary Affirmative Determination and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to producers and exporters of certain hot-rolled steel flat products (hot-rolled steel) from Brazil. The period of investigation is January 1, 2014, through December 31, 2014. We invite interested parties to comment on this preliminary determination.

DATES: *Effective date:* January 15, 2016.

FOR FURTHER INFORMATION CONTACT: Nicholas Czajkowski or Lana Nigro, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-1395 or (202) 482-1779, respectively.

Scope of the Investigation

The products covered by this investigation are hot-rolled steel flat products from Brazil. For a complete description of the scope of this investigation, *see* Appendix II.

Methodology

The Department is conducting this countervailing duty (CVD) investigation in accordance with section 701 of the Tariff Act of 1930, as amended (Act). For each of the subsidy programs found countervailable, we preliminarily determine that there is a subsidy, *i.e.*, a financial contribution by an “authority” that gives rise to a benefit to the recipient, and that the subsidy is specific.¹ For a full description of the methodology underlying our preliminary conclusions, *see* the Preliminary Decision Memorandum.² A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically *via* Enforcement and Compliance’s Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed Preliminary Decision Memorandum and the electronic versions of the Preliminary Decision Memorandum are identical in content.

In making this preliminary determination, the Department relied, in part, on facts otherwise available.³ For further information, *see* “Use of Facts Otherwise Available” in the accompanying Preliminary Decision Memorandum.

Alignment

As noted in the Preliminary Decision Memorandum, in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), we are aligning the final

¹ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

² See Memorandum to Paul Piquado, Assistant Secretary for Enforcement and Compliance, from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations; Re: Decision Memorandum for the Preliminary Determination in the Countervailing Duty Investigation of Certain Hot-Rolled Steel Flat Products from Brazil, dated January 8, 2016.

³ See section 776(a) of the Act.

⁶ For purposes of this scope exclusion, rolling operations such as a skin pass, levelling, temper rolling or other minor rolling operations after the hot-rolling process for purposes of surface finish, flatness, shape control, or gauge control do not constitute cold-rolling sufficient to meet this exclusion.

⁷ Ball bearing steels are defined as steels which contain, in addition to iron, each of the following elements by weight in the amount specified: (i) Not less than 0.95 nor more than 1.13 percent of carbon; (ii) not less than 0.22 nor more than 0.48 percent of manganese; (iii) none, or not more than 0.03 percent of sulfur; (iv) none, or not more than 0.03 percent of phosphorus; (v) not less than 0.18 nor more than 0.37 percent of silicon; (vi) not less than 1.25 nor more than 1.65 percent of chromium; (vii) none, or not more than 0.28 percent of nickel; (viii) none, or not more than 0.38 percent of copper; and (ix) none, or not more than 0.09 percent of molybdenum.

⁸ Tool steels are defined as steels which contain the following combinations of elements in the quantity by weight respectively indicated: (i) More than 1.2 percent carbon and more than 10.5 percent chromium; or (ii) not less than 0.3 percent carbon and 1.25 percent or more but less than 10.5 percent chromium; or (iii) not less than 0.85 percent carbon and 1 percent to 1.8 percent, inclusive, manganese; or (iv) 0.9 percent to 1.2 percent, inclusive, chromium and 0.9 percent to 1.4 percent, inclusive, molybdenum; or (v) not less than 0.5 percent carbon and not less than 3.5 percent molybdenum; or (vi) not less than 0.5 percent carbon and not less than 5.5 percent tungsten.

⁹ Silico-manganese steel is defined as steels containing by weight: (i) Not more than 0.7 percent of carbon; (ii) 0.5 percent or more but not more than 1.9 percent of manganese, and (iii) 0.6 percent or more but not more than 2.3 percent of silicon.

CVD determination in this investigation with the final determination in the companion antidumping duty (AD) investigation of hot-rolled steel from Brazil based on a request made by Petitioners.⁴ Consequently, the final CVD determination will be issued on the same date as the final AD determination, which is currently scheduled to be issued no later than May 22, 2016,⁵ unless postponed.

Preliminary Determination

In accordance with section 703(d)(1)(A)(i) of the Act, we calculated a CVD rate for each individually investigated respondent company. Section 705(c)(5)(A)(i) of the Act states that, for companies not individually investigated, we will determine an “all-others” rate equal to the weighted-average countervailable subsidy rates established for exporters and producers individually investigated, excluding any zero and *de minimis* countervailable subsidy rates, and any rates determined entirely under section 776 of the Act.

Consistent with the Department’s practice, we normally calculate the all-others rate based on the weighted average of the mandatory respondents’ calculated subsidy rates.⁶ In this case however, the two mandatory respondents have the same rate. Therefore, it is unnecessary to calculate an all-others rate that is the weighted average of the mandatory respondents’ rates. The all-others rate is the rate calculated for both mandatory respondents.

We preliminarily determine the countervailable subsidy rates to be:

Company	Subsidy rate (percent)
Companhia Siderurgica Nacional (CSN)	7.42

⁴ AK Steel Corporation, ArcelorMittal USA LLC, Nucor Corporation, Steel Dynamics Inc., and the United States Steel Corporation (collectively, Petitioners). See letter from Petitioners, “Certain Hot-Rolled Steel Flat Products from Brazil and the Republic of Korea: Request to Align the Countervailing Duty Final Determinations with the Companion Antidumping Duty Final Determinations,” dated January 7, 2016 (Petitioners’ Request for Alignment).

⁵ The current deadline for the final AD determination, May 22, 2016, is a Sunday. Pursuant to Department practice, the signature date will be the next business day, which is Monday, May 23, 2016. See *Notice of Clarification: Application of “Next Business Day” Rule for Administrative Determination Deadlines Pursuant to the Tariff Act of 1930, As Amended*, 70 FR 24533 (May 10, 2005).

⁶ See, e.g., *Countervailing Duty Investigation of Certain Passenger Vehicle and Light Truck Tires From the People’s Republic of China: Final Affirmative Determination, and Final Affirmative Critical Circumstances Determination*, in Part, 80 FR 34888 (June 18, 2015).

Company	Subsidy rate (percent)
Usinas Siderurgicas de Minas Gerais S.A. (Usiminas)	7.42
All-Others	7.42

Suspension of Liquidation

In accordance with section 703(d)(2) of the Act, we will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of all entries of hot-rolled steel from Brazil as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. Section 703(e)(2) of the Act provides that, given an affirmative determination of critical circumstances, any suspension of liquidation shall apply to unliquidated entries of merchandise entered, or withdrawn from warehouse, for consumption on or after the later of (a) the date which is 90 days before the date on which the suspension of liquidation was first ordered, or (b) the date on which notice of initiation of the investigation was published. On December 9, 2015, we preliminarily found that critical circumstances exist for imports produced or exported by CSN and Usiminas.⁷ For CSN and Usiminas, in accordance with section 703(e)(2)(A) of the Act, suspension of liquidation of hot-rolled steel products from Brazil, as described in the “Scope of the Investigation” section, shall apply to unliquidated entries of merchandise entered, or withdrawn from warehouse, for consumption on or after the date which is 90 days before the publication of this notice, the date suspension of liquidation is first ordered. Because we preliminarily found critical circumstances do not exist for all other producers and exporters, we will begin suspension of liquidation for such firms on the date of publication of this notice in the **Federal Register**. In accordance with sections 703(d)(1)(B) and 703(e)(2)(A) of the Act, the Department will instruct CBP to require a cash deposit equal to the amounts indicated above.

Verification

As provided in section 782(i)(1) of the Act, we intend to verify the information

⁷ See *Antidumping Duty Investigations of Certain Hot-Rolled Steel Flat Products From Australia, Brazil, Japan, and the Netherlands and Countervailing Duty Investigation of Certain Hot-Rolled Steel Flat Products From Brazil: Preliminary Determinations of Critical Circumstances*, 80 FR 76444 (December 9, 2015).

submitted by the respondents prior to making our final determination.

International Trade Commission Notification

In accordance with section 703(f) of the Act, we will notify the International Trade Commission (ITC) of our determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information relating to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order, without the written consent of the Assistant Secretary for Enforcement and Compliance.

In accordance with section 705(b)(2) of the Act, if our final determination is affirmative, the ITC will make its final determination within 45 days after the Department makes its final determination.

Disclosure and Public Comment

The Department intends to disclose to interested parties the calculations performed in connection with this preliminary determination within five days of its public announcement.⁸ Interested parties may submit case and rebuttal briefs, as well as request a hearing.⁹ For a schedule of the deadlines for filing case briefs, rebuttal briefs, and hearing requests, see the Preliminary Decision Memorandum.

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: January 8, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

XV. Conclusion

Appendix II

Scope of the Investigation

The products covered by this investigation are certain hot-rolled, flat-rolled steel products, with or without patterns in relief, and whether or not annealed, painted, varnished, or coated with plastics or other non-metallic substances. The products covered do not include those that are clad, plated, or coated with metal. The products covered include coils that have a width or other lateral measurement ("width") of 12.7 mm or greater, regardless of thickness, and regardless of form of coil (e.g., in successively superimposed layers, spirally oscillating, etc.). The products covered also include products not in coils (e.g., in straight lengths) of a thickness of less than 4.75 mm and a width that is 12.7 mm or greater and that measures at least 10 times the thickness. The products described above may be rectangular, square, circular, or other shape and include products of either rectangular or non-rectangular cross-section where such cross-section is achieved subsequent to the rolling process, i.e., products which have been "worked after rolling" (e.g., products which have been beveled or rounded at the edges). For purposes of the width and thickness requirements referenced above:

(1) Where the nominal and actual measurements vary, a product is within the scope if application of either the nominal or actual measurement would place it within the scope based on the definitions set forth above unless the resulting measurement makes the product covered by the existing antidumping¹⁰ or countervailing duty¹¹ orders on Certain Cut-To-Length Carbon-Quality Steel Plate Products From the Republic of Korea (A-580-836; C-580-837), and

(2) where the width and thickness vary for a specific product (e.g., the thickness of certain products with non-rectangular cross-section, the width of certain products with non-rectangular shape, etc.), the measurement at its greatest width or thickness applies.

Steel products included in the scope of this investigation are products in which: (1) Iron predominates, by weight, over each of the other contained elements; (2) the carbon content is 2 percent or less, by weight; and (3) none of the elements listed below exceeds the quantity, by weight, respectively indicated:

- 2.50 percent of manganese, or
- 3.30 percent of silicon, or
- 1.50 percent of copper, or
- 1.50 percent of aluminum, or

- 1.25 percent of chromium, or
- 0.30 percent of cobalt, or
- 0.40 percent of lead, or
- 2.00 percent of nickel, or
- 0.30 percent of tungsten, or
- 0.80 percent of molybdenum, or
- 0.10 percent of niobium, or
- 0.30 percent of vanadium, or
- 0.30 percent of zirconium.

Unless specifically excluded, products are included in this scope regardless of levels of boron and titanium.

For example, specifically included in this scope are vacuum degassed, fully stabilized (commonly referred to as interstitial-free (IF)) steels, high strength low alloy (HSLA) steels, the substrate for motor lamination steels, Advanced High Strength Steels (AHSS), and Ultra High Strength Steels (UHSS). IF steels are recognized as low carbon steels with micro-alloying levels of elements such as titanium and/or niobium added to stabilize carbon and nitrogen elements. HSLA steels are recognized as steels with micro-alloying levels of elements such as chromium, copper, niobium, titanium, vanadium, and molybdenum. The substrate for motor lamination steels contains micro-alloying levels of elements such as silicon and aluminum. AHSS and UHSS are considered high tensile strength and high elongation steels, although AHSS and UHSS are covered whether or not they are high tensile strength or high elongation steels.

Subject merchandise includes hot-rolled steel that has been further processed in a third country, including but not limited to pickling, oiling, levelling, annealing, tempering, temper rolling, skin passing, painting, varnishing, trimming, cutting, punching, and/or slitting, or any other processing that would not otherwise remove the merchandise from the scope of the investigation if performed in the country of manufacture of the hot-rolled steel.

All products that meet the written physical description, and in which the chemistry quantities do not exceed any one of the noted element levels listed above, are within the scope of this investigation unless specifically excluded. The following products are outside of and/or specifically excluded from the scope of this investigation:

- Universal mill plates (i.e., hot-rolled, flat-rolled products not in coils that have been rolled on four faces or in a closed box pass, of a width exceeding 150 mm but not exceeding 1250 mm, of a thickness not less than 4.0 mm, and without patterns in relief);
- Products that have been cold-rolled (cold-reduced) after hot-rolling;¹²
- Ball bearing steels;¹³

¹² For purposes of this scope exclusion, rolling operations such as a skin pass, levelling, temper rolling or other minor rolling operations after the hot-rolling process for purposes of surface finish, flatness, shape control, or gauge control do not constitute cold-rolling sufficient to meet this exclusion.

¹³ Ball bearing steels are defined as steels which contain, in addition to iron, each of the following elements by weight in the amount specified: (i) Not less than 0.95 nor more than 1.13 percent of carbon; (ii) not less than 0.22 nor more than 0.48 percent of manganese; (iii) none, or not more than 0.03 percent of sulfur; (iv) none, or not more than 0.03

- Tool steels;¹⁴ and
- Silico-manganese steels;¹⁵

The products subject to this investigation are currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under item numbers: 7208.10.1500, 7208.10.3000, 7208.10.6000, 7208.25.3000, 7208.25.6000, 7208.26.0030, 7208.26.0060, 7208.27.0030, 7208.27.0060, 7208.36.0030, 7208.36.0060, 7208.37.0030, 7208.37.0060, 7208.38.0015, 7208.38.0030, 7208.38.0090, 7208.39.0015, 7208.39.0030, 7208.39.0090, 7208.40.6030, 7208.40.6060, 7208.53.0000, 7208.54.0000, 7208.90.0000, 7210.70.3000, 7211.14.0030, 7211.14.0090, 7211.19.1500, 7211.19.2000, 7211.19.3000, 7211.19.4500, 7211.19.6000, 7211.19.7530, 7211.19.7560, 7211.19.7590, 7225.11.0000, 7225.19.0000, 7225.30.3050, 7225.30.7000, 7225.40.7000, 7225.99.0090, 7226.11.1000, 7226.11.9030, 7226.11.9060, 7226.19.1000, 7226.19.9000, 7226.91.5000, 7226.91.7000, and 7226.91.8000. The products subject to the investigation may also enter under the following HTSUS numbers: 7210.90.9000, 7211.90.0000, 7212.40.1000, 7212.40.5000, 7212.50.0000, 7214.91.0015, 7214.91.0060, 7214.91.0090, 7214.99.0060, 7214.99.0075, 7214.99.0090, 7215.90.5000, 7226.99.0180, and 7228.60.6000.

The HTSUS subheadings above are provided for convenience and U.S. Customs purposes only. The written description of the scope of the investigation is dispositive.

DEPARTMENT OF COMMERCE**International Trade Administration**

[C-570-031]

Certain Iron Mechanical Transfer Drive Components From the People's Republic of China: Postponement of Preliminary Determination in the Countervailing Duty Investigation

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: *Effective date:* January 15, 2016.

FOR FURTHER INFORMATION CONTACT: Robert Galantucci at (202) 482-2923, AD/CVD Operations, Enforcement and Compliance, International Trade Administration, Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230.

SUPPLEMENTARY INFORMATION:**Background**

On November 17, 2015, the Department of Commerce (the Department) initiated the countervailing duty (CVD) investigation of certain iron mechanical transfer drive components from the People's Republic of China.¹ Currently, the preliminary determination is due no later than January 21, 2015.

Postponement of the Preliminary Determination

Section 703(b)(1) of the Tariff Act of 1930, as amended (the Act), requires the Department to issue the preliminary determination in a CVD investigation within 65 days after the date on which the Department initiated the investigation. However, if the Department concludes that the parties concerned are cooperating, and that the case is extraordinarily complicated such that additional time is necessary to make the preliminary determination, section 703(c)(1)(B) of the Act allows the Department to postpone making the preliminary determination until no later than 130 days after the date on which the administering authority initiated the investigation. We have concluded that the parties concerned are cooperating and that the case is extraordinarily complicated, such that we will need more time to make the preliminary determination. Specifically, the Department finds that the instant case is extraordinarily complicated by reason of the number and complexity of the alleged countervailable subsidy

practices, and the need to determine the extent to which particular alleged countervailable subsidies are used by individual manufacturers, producers and exporters.

Additionally, the Department notes that we issued questionnaires to the respondents in this case on December 18, 2015. The due date for these questionnaires is January 25, 2016, which is after the unextended preliminary determination date. For these reasons, the Department will extend the deadline for completion of the preliminary determination by 65 days (*i.e.*, 130 days after the date of initiation of this investigation). However, because 65 days following the current deadline falls on a Saturday, the new deadline is Monday, March 28, 2016.²

This notice is issued and published pursuant to section 703(c)(2) of the Act and 19 CFR 351.205(f)(1).³

Dated: January 11, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE**International Trade Administration**

[A-549-821]

Polyethylene Retail Carrier Bags From Thailand: Rescission of Antidumping Duty Administrative Review in Part; 2014-2015

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) is rescinding its administrative review in part on polyethylene retail carrier bags from Thailand for the period of review (POR) August 1, 2014, through July 31, 2015.

DATES: *Effective date:* January 15, 2016.

FOR FURTHER INFORMATION CONTACT: Andre Gziryan, AD/CVD Operations Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-2201.

² See *Notice of Clarification: Application of "Next Business Day" Rule for Administrative Determination Deadlines Pursuant to the Tariff Act of 1930, As Amended*, 70 FR 24533 (May 10, 2005).

³ We acknowledge that the Department inadvertently did not notify the parties to this investigation of this postponement within the timeframe provided in section 703(c)(2) of the Act.

SUPPLEMENTARY INFORMATION:**Background**

On August 3, 2015, we published a notice of opportunity to request an administrative review of the antidumping duty order on polyethylene retail carrier bags from Thailand for the POR August 1, 2014, through July 31, 2015.¹ On October 6, 2015, in response to timely requests from the petitioners² and in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.221(c)(1)(i), we initiated an administrative review of the antidumping duty order on polyethylene retail carrier bags from Thailand with respect to 45 companies.³ On December 18, 2015, the petitioners withdrew their request for an administrative review for 44 out of 45 companies.⁴ No other party requested a review.

Rescission of Administrative Review in Part

Pursuant to 19 CFR 351.213(d)(1), the Department will rescind an administrative review, "in whole or in part, if a party that requested a review withdraws the request within 90 days of

¹ See *Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity To Request Administrative Review*, 80 FR 45952 (August 3, 2015).

² Polyethylene Retail Carrier Bag Committee and its individual members, Hilex Poly Co., LLC and Superbag Corporation (collectively, the petitioners).

³ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 80 FR 60356 (October 6, 2015).

⁴ The 44 companies for which the petitioners have withdrawn their request for a review are as follows: 2 P Work Co., Ltd., 2PK Interplas Co., Ltd., Angkapol Plastech Co., Ltd., Asia Industry Co., Ltd., Asian Packaging Limited Partnership, Bags and Gloves Co., Ltd., Completely Co., Ltd., C.P. Poly Industry Co., Ltd., CT Import-Export Co., Ltd., Dpac Inter. Corporation Co., Ltd., DTOP Co., Ltd., Ecoplas (Thailand) Co., Ltd., Elite Poly and Packaging Co., Ltd., Firstpack Co. Ltd., G.L.K. (Thailand) Co., Ltd., Green Smile Supply Co., Ltd., Hinwiset Packaging Limited Partnership, King Bag Co., Ltd., King Pac Industrial Co., Ltd., KPA Packing & Product Co., Ltd., Napa Plastic Co., Ltd., Naraipak Co., Ltd., NKD Intertrade Limited Partnership, NNN Packaging Limited Partnership, Northeast Pack Company Limited, P.C.S. International Company Limited, Pasiam Ltd., Partnership, PMC Innopack Co., Ltd., Poly Plast (Thailand) Co., Ltd., Poly World Co., Ltd., PPN Plaspack Limited Partnership, Prepack Thailand Co., Ltd., PSSP Plaspack Co., Ltd., SSGT Products Limited Partnership, Super Grip Co., Ltd., T.P. Plaspack Co., Ltd., T.T.P. Packaging (Thailand) Co., Ltd., Thantawan Industry Public Co., Ltd., Triple B Pack Co., Ltd., Triyamook Vanich Limited Partnership, Two Path Plaspack Co., Ltd., Udomrutpanich Limited Partnership, Win Win and Pro Pack Co. Ltd., and Winbest Industrial (Thailand) Co., Ltd. See letter from the petitioners to the Department, "Polyethylene Retail Carrier Bags from Thailand: Partial Withdrawal of Request for Administrative Review" (December 18, 2015). No withdrawal was requested for K. International Packing Co., Ltd.

¹ See *Certain Iron Mechanical Transfer Drive Components From the People's Republic of China: Initiation of Countervailing Duty Investigation*, 80 FR 73722 (November 25, 2015).

the date of publication of notice of initiation of the requested review.” Because the petitioners withdrew their review request in a timely manner, and because no other party requested a review of these companies, we are rescinding the administrative review in part with respect to the aforementioned 44 companies.

Assessment

The Department will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries. For the aforementioned companies, for which the review is rescinded, antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). The Department intends to issue appropriate assessment instructions to CBP within 15 days after publication of this notice.

Notifications to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement may result in the Department’s presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO, in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.213(d)(4).

Dated: January 8, 2016.

Christian Marsh,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

DEPARTMENT OF COMMERCE

International Trade Administration

[C–580–884]

Countervailing Duty Investigation of Certain Hot-Rolled Steel Flat Products From the Republic of Korea: Preliminary Negative Determination and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the “Department”) preliminarily determines that *de minimis* countervailable subsidies are being provided to producers/exporters of certain hot-rolled steel flat products (“hot-rolled steel”) from the Republic of Korea (“Korea”). The period of investigation is January 1, 2014, through December 31, 2014. We invite interested parties to comment on this preliminary determination.

DATES: *Effective date:* January 15, 2016.

FOR FURTHER INFORMATION CONTACT: Katie Marksberry or Bob Palmer, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone (202) 482–7906 or (202) 482–9068, respectively.

SUPPLEMENTARY INFORMATION:

Scope of the Investigation

The products covered by this investigation are certain hot-rolled steel flat products from Korea. For a complete description of the scope of this investigation, *see* Appendix II.

Methodology

The Department is conducting this countervailing duty (“CVD”) investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the “Act”). For a full description of the methodology underlying our preliminary conclusions, *see* the Preliminary Decision Memorandum.¹ A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice. The Preliminary

¹ *See* Memorandum to Paul Piquado, Assistant Secretary for Enforcement and Compliance, from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations; Re: Decision Memorandum for the Preliminary Negative Determination: Countervailing Duty Investigation of Certain Hot-Rolled Steel Flat Products from the Republic of Korea, dated January 8, 2015 (“Preliminary Decision Memorandum”).

Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance’s Antidumping and Countervailing Duty Centralized Electronic Service System (“ACCESS”). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed Preliminary Decision Memorandum and the electronic version are identical in content.

The Department notes that, in making this preliminary determination, we relied, in part, on facts otherwise available.² For further information, *see* “Use of Facts Otherwise Available” in the accompanying Preliminary Decision Memorandum.

Alignment

As noted in the Preliminary Decision Memorandum,³ in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), we are aligning the final CVD determination in this investigation with the final determination in the companion AD investigation of hot-rolled steel from Korea based on a request made by Petitioners. Consequently, the final CVD determination will be issued on the same date as the final AD determination, which is currently scheduled to be issued no later than May 23, 2016, unless postponed.⁴

Preliminary Determination

In accordance with section 703(d)(1)(A)(i) of the Act, we calculated a CVD rate for each individually investigated producer/exporter of the subject merchandise. We preliminarily determine that *de minimis* countervailable subsidies are being provided with respect to the manufacture, production or exportation of the subject merchandise. Consistent with section 703(b)(4)(A) of the Act, we have disregarded *de minimis* rates. Consistent with section 703(d) of the Act, we have not calculated an all-others rate because we have not reached an affirmative preliminary

² *See* section 776(a) of the Act.

³ *See* Preliminary Decision Memorandum.

⁴ We note that the current deadline for the final AD determination is May 22, 2016, which is a Sunday. Pursuant to Department practice, the signature date will be the next business day, which is Monday, March 9, 2016. *See Notice of Clarification: Application of “Next Business Day” Rule for Administrative Determination Deadlines Pursuant to the Tariff Act of 1930, As Amended*, 70 FR 24533 (May 10, 2005).

determination. We preliminarily determine the countervailable subsidy rates to be:

Company	Subsidy rate
POSCO and Daewoo International Corporation	0.17
Hyundai Steel Co., Ltd	0.63

Percent (*de minimis*).

Because we preliminarily determine that the CVD rates in this investigation are *de minimis*, we will not direct U.S. Customs and Border Protection (“CBP”) to suspend liquidation of entries of subject merchandise.

Verification

As provided in section 782(i)(1) of the Act, we intend to verify the information submitted by the respondents prior to making our final determination.

International Trade Commission Notification

In accordance with section 703(f) of the Act, we will notify the International Trade Commission (“ITC”) of our determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information relating to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order, without the written consent of the Assistant Secretary for Enforcement and Compliance.

In accordance with section 705(b)(3) of the Act, if our final determination is affirmative, the ITC will make its final determination within 75 days after the Department makes its final determination.

Disclosure and Public Comment

The Department intends to disclose to interested parties the calculations performed in connection with this preliminary determination within five days of its public announcement.⁵ Interested parties may submit case and rebuttal briefs, as well as request a hearing.⁶ For a schedule of the deadlines for filing case briefs, rebuttal briefs, and hearing requests, see the Preliminary Decision Memorandum.

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: January 8, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Appendix II

Scope of the Investigation

The products covered by this investigation are certain hot-rolled, flat-rolled steel products, with or without patterns in relief, and whether or not annealed, painted, varnished, or coated with plastics or other non-metallic substances. The products covered do not include those that are clad, plated, or coated with metal. The products covered include coils that have a width or other lateral measurement (“width”) of 12.7 mm or greater, regardless of thickness, and regardless of form of coil (*e.g.*, in successively superimposed layers, spirally oscillating, etc.). The products covered also include products not in coils (*e.g.*, in straight lengths) of a thickness of less than 4.75 mm and a width that is 12.7 mm or greater and that measures at least 10 times the thickness. The products described above may be rectangular, square, circular, or other shape and include products of either rectangular or non-rectangular cross-section where such cross-section is achieved subsequent to the rolling process, *i.e.*, products which have been “worked after rolling” (*e.g.*, products which have been beveled or rounded at the edges). For purposes of the width and thickness requirements referenced above:

- (1) where the nominal and actual measurements vary, a product is within the scope if application of either the nominal or actual measurement would place it within the scope based on the definitions set forth above unless the resulting measurement makes the product covered by the existing antidumping⁷ or countervailing duty⁸ orders on Certain Cut-To-Length Carbon-Quality Steel Plate Products From the Republic of Korea (A-580-836; C-580-837), and
- (2) where the width and thickness vary for a specific product (*e.g.*, the thickness of

certain products with non-rectangular cross-section, the width of certain products with non-rectangular shape, etc.), the measurement at its greatest width or thickness applies.

Steel products included in the scope of this investigation are products in which: (1) Iron predominates, by weight, over each of the other contained elements; (2) the carbon content is 2 percent or less, by weight; and (3) none of the elements listed below exceeds the quantity, by weight, respectively indicated:

- 2.50 percent of manganese, or
- 3.30 percent of silicon, or
- 1.50 percent of copper, or
- 1.50 percent of aluminum, or
- 1.25 percent of chromium, or
- 0.30 percent of cobalt, or
- 0.40 percent of lead, or
- 2.00 percent of nickel, or
- 0.30 percent of tungsten, or
- 0.80 percent of molybdenum, or
- 0.10 percent of niobium, or
- 0.30 percent of vanadium, or
- 0.30 percent of zirconium.

Unless specifically excluded, products are included in this scope regardless of levels of boron and titanium.

For example, specifically included in this scope are vacuum degassed, fully stabilized (commonly referred to as interstitial-free (IF)) steels, high strength low alloy (HSLA) steels, the substrate for motor lamination steels, Advanced High Strength Steels (AHSS), and Ultra High Strength Steels (UHSS). IF steels are recognized as low carbon steels with micro-alloying levels of elements such as titanium and/or niobium added to stabilize carbon and nitrogen elements. HSLA steels are recognized as steels with micro-alloying levels of elements such as chromium, copper, niobium, titanium, vanadium, and molybdenum. The substrate for motor lamination steels contains micro-alloying levels of elements such as silicon and aluminum. AHSS and UHSS are considered high tensile strength and high elongation steels, although AHSS and UHSS are covered whether or not they are high tensile strength or high elongation steels.

Subject merchandise includes hot-rolled steel that has been further processed in a third country, including but not limited to pickling, oiling, levelling, annealing, tempering, temper rolling, skin passing, painting, varnishing, trimming, cutting, punching, and/or slitting, or any other processing that would not otherwise remove the merchandise from the scope of the investigations if performed in the country of manufacture of the hot-rolled steel.

All products that meet the written physical description, and in which the chemistry quantities do not exceed any one of the noted element levels listed above, are within the scope of these investigations unless specifically excluded. The following products are outside of and/or specifically excluded from the scope of this investigation:

- Universal mill plates (*i.e.*, hot-rolled, flat-rolled products not in coils that have been rolled on four faces or in a closed box pass, of a width exceeding 150 mm but not exceeding 1250 mm, of a thickness not less than 4.0 mm, and without patterns in relief);

⁵ See 19 CFR 351.224(b).

⁶ See 19 CFR 351.309(c)–(d), 19 CFR 351.310(c).

⁷ See Notice of Amendment of Final Determinations of Sales at Less Than Fair Value and Antidumping Duty Orders: Certain Cut-To-Length Carbon-Quality Steel Plate Products From France, India, Indonesia, Italy, Japan and the Republic of Korea, 65 FR 6585 (February 10, 2000).

⁸ See Notice of Amended Final Determinations: Certain Cut-to-Length Carbon-Quality Steel Plate From India and the Republic of Korea; and Notice of Countervailing Duty Orders: Certain Cut-To-Length Carbon-Quality Steel Plate From France, India, Indonesia, Italy, and the Republic of Korea, 65 FR 6587 (February 10, 2000).

- Products that have been cold-rolled (cold-reduced) after hot-rolling;⁹
- Ball bearing steels;¹⁰
- Tool steels;¹¹ and
- Silico-manganese steels;¹²

The products subject to this investigation are currently classified in the Harmonized Tariff Schedule of the United States (“HTSUS”) under item numbers:

7208.10.1500, 7208.10.3000, 7208.10.6000, 7208.25.3000, 7208.25.6000, 7208.26.0030, 7208.26.0060, 7208.27.0030, 7208.27.0060, 7208.36.0030, 7208.36.0060, 7208.37.0030, 7208.37.0060, 7208.38.0015, 7208.38.0030, 7208.38.0090, 7208.39.0015, 7208.39.0030, 7208.39.0090, 7208.40.6030, 7208.40.6060, 7208.53.0000, 7208.54.0000, 7208.90.0000, 7210.70.3000, 7211.14.0030, 7211.14.0090, 7211.19.1500, 7211.19.2000, 7211.19.3000, 7211.19.4500, 7211.19.6000, 7211.19.7530, 7211.19.7560, 7211.19.7590, 7225.11.0000, 7225.19.0000, 7225.30.3050, 7225.30.7000, 7225.40.7000, 7225.99.0090, 7226.11.1000, 7226.11.9030, 7226.11.9060, 7226.19.1000, 7226.19.9000, 7226.91.5000, 7226.91.7000, and 7226.91.8000. The products subject to the investigation may also enter under the following HTSUS numbers: 7210.90.9000, 7211.90.0000, 7212.40.1000, 7212.40.5000, 7212.50.0000, 7214.91.0015, 7214.91.0060, 7214.91.0090, 7214.99.0060, 7214.99.0075, 7214.99.0090, 7215.90.5000, 7226.99.0180, and 7228.60.6000.

The HTSUS subheadings above are provided for convenience and U.S. Customs purposes only. The written description of the scope of the investigation is dispositive.

BILLING CODE 3510–DS–P

⁹For purposes of this scope exclusion, rolling operations such as a skin pass, levelling, temper rolling or other minor rolling operations after the hot-rolling process for purposes of surface finish, flatness, shape control, or gauge control do not constitute cold-rolling sufficient to meet this exclusion.

¹⁰Ball bearing steels are defined as steels which contain, in addition to iron, each of the following elements by weight in the amount specified: (i) Not less than 0.95 nor more than 1.13 percent of carbon; (ii) not less than 0.22 nor more than 0.48 percent of manganese; (iii) none, or not more than 0.03 percent of sulfur; (iv) none, or not more than 0.03 percent of phosphorus; (v) not less than 0.18 nor more than 0.37 percent of silicon; (vi) not less than 1.25 nor more than 1.65 percent of chromium; (vii) none, or not more than 0.28 percent of nickel; (viii) none, or not more than 0.38 percent of copper; and (ix) none, or not more than 0.09 percent of molybdenum.

¹¹Tool steels are defined as steels which contain the following combinations of elements in the quantity by weight respectively indicated: (i) More than 1.2 percent carbon and more than 10.5 percent chromium; or (ii) not less than 0.3 percent carbon and 1.25 percent or more but less than 10.5 percent chromium; or (iii) not less than 0.85 percent carbon and 1 percent to 1.8 percent, inclusive, manganese; or (iv) 0.9 percent to 1.2 percent, inclusive, chromium and 0.9 percent to 1.4 percent, inclusive, molybdenum; or (v) not less than 0.5 percent carbon and not less than 3.5 percent molybdenum; or (vi) not less than 0.5 percent carbon and not less than 5.5 percent tungsten.

¹²Silico-manganese steel is defined as steels containing by weight: (i) Not more than 0.7 percent of carbon; (ii) 0.5 percent or more but not more than 1.9 percent of manganese, and (iii) 0.6 percent or more but not more than 2.3 percent of silicon.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XE291

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to a Marine Geophysical Survey in the South Atlantic Ocean, January to March 2016

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of an incidental harassment authorization.

SUMMARY: In accordance with the Marine Mammal Protection Act (MMPA) implementing regulations, we hereby give notice that we have issued an Incidental Harassment Authorization (Authorization) to Lamont-Doherty Earth Observatory (Lamont-Doherty), a component of Columbia University, in collaboration with the National Science Foundation (NSF), to take marine mammals, by harassment, in the South Atlantic Ocean, January through March 2016.

DATES: Effective January 4 through March 31, 2016.

ADDRESSES: A copy of the final Authorization and application and other supporting documents are available by writing to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910, by telephoning the contacts listed here, or by visiting the internet at: <http://www.nmfs.noaa.gov/pr/permits/incidental/research.htm>.

The NSF prepared a draft Environmental Analysis in accordance with Executive Order 12114, “Environmental Effects Abroad of Major Federal Actions” for their proposed federal action. The environmental analysis titled “Environmental Analysis of a Marine Geophysical Survey by the R/V *Marcus G. Langseth* in the South Atlantic Ocean, Austral Summer 2016,” prepared by LGL, Ltd. environmental research associates, on behalf of NSF and Lamont-Doherty is available at the same internet address.

NMFS prepared an Environmental Assessment (EA) titled, “Proposed Issuance of an Incidental Harassment Authorization to Lamont-Doherty Earth Observatory to Take Marine Mammals by Harassment Incidental to a Marine Geophysical Survey in the South Atlantic Ocean, January–March 2016,”

in accordance with NEPA and NOAA Administrative Order 216–6. To obtain an electronic copy of these documents, write to the previously mentioned address, telephone the contact listed here (see **FOR FURTHER INFORMATION CONTACT**), or download the files at: <http://www.nmfs.noaa.gov/pr/permits/incidental/research.htm>.

NMFS also issued a Biological Opinion under section 7 of the Endangered Species Act (ESA) to evaluate the effects of the survey and Authorization on marine species listed as threatened and endangered. The Biological Opinion is available online at: <http://www.nmfs.noaa.gov/pr/consultations/opinions.htm>.

FOR FURTHER INFORMATION CONTACT: Jeannine Cody, NMFS, Office of Protected Resources, NMFS (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

Section 101(a)(5)(D) of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*) directs the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals of a species or population stock, by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if, after NMFS provides a notice of a proposed authorization to the public for review and comment: (1) NMFS makes certain findings; and (2) the taking is limited to harassment.

An Authorization shall be granted for the incidental taking of small numbers of marine mammals if NMFS finds that the taking will have a negligible impact on the species or stock(s), and will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant). The Authorization must also set forth the permissible methods of taking; other means of effecting the least practicable adverse impact on the species or stock and its habitat (*i.e.*, mitigation); and requirements pertaining to the monitoring and reporting of such taking. NMFS has defined “negligible impact” in 50 CFR 216.103 as “an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.”

Except with respect to certain activities not pertinent here, the MMPA at 16 U.S.C. 1362(18)(A) defines “harassment” as: Any act of pursuit, torment, or annoyance which (i) has the

potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].

Summary of Request

On July 29, 2015, NMFS received an application from Lamont-Doherty requesting that NMFS issue an Authorization for the take of marine mammals, incidental to Texas A&M University and the University of Texas conducting a seismic survey in the South Atlantic Ocean, January through March 2016. Following the initial application submission, Lamont-Doherty submitted a revised application with revised take estimates. NMFS considered the revised application adequate and complete on October 30, 2015.

Lamont-Doherty proposes to conduct a two-dimensional (2-D), seismic survey on the R/V *Marcus G. Langseth* (*Langseth*), a vessel owned by NSF and operated on its behalf by Columbia University's Lamont-Doherty in international waters in the South Atlantic Ocean approximately 1,938 kilometers (km) (1,232 miles [mi]) southeast of the west coast of Brazil for approximately 22 days. The following specific aspect of the proposed activity has the potential to take marine mammals: Increased underwater sound generated during the operation of the seismic airgun array. We anticipate that take, by Level B harassment, of 38 species of marine mammals could result from the specified activity. Although unlikely, NMFS also anticipates that a small level of take by Level A harassment of 16 species of marine mammals could occur during the proposed survey.

Description of the Specified Activity

Overview

Lamont-Doherty plans to use one source vessel, the *Langseth*, an array of 36 airguns as the energy source, a receiving system of seven ocean bottom seismometers (OBS), and a single 8-kilometer (km) hydrophone streamer. In addition to the operations of the airguns, Lamont-Doherty intends to operate a multibeam echosounder and a sub-bottom profiler continuously throughout the proposed survey. However, Lamont-Doherty will not operate the multibeam echosounder and sub-bottom profiler during transits to and from the survey area and in

between transits to each of the five OBS tracklines (*i.e.*, when the airguns are not operating).

The purpose of the survey is to collect and analyze seismic refraction data from the Mid-Atlantic Ridge westward to the Rio Grande Rise to study the evolution of the South Atlantic Ocean crust on million-year timescales and the evolution and stability of low-spreading ridges over time. NMFS refers the public to Lamont-Doherty's application (see page 3) for more detailed information on the proposed research objectives.

Dates and Duration

Lamont-Doherty proposes to conduct the seismic survey for approximately 42 days, which includes approximately 22 days of seismic surveying with 10 days of OBS deployment and retrieval. The proposed study (*e.g.*, equipment testing, startup, line changes, repeat coverage of any areas, and equipment recovery) would include approximately 528 hours of airgun operations (*i.e.*, 22 days over 24 hours). Some minor deviation from Lamont-Doherty's requested dates of January through March 2016 is possible, depending on logistics, weather conditions, and the need to repeat some lines if data quality is substandard. Thus, the proposed Authorization, if issued, would be effective from early January through March 31, 2016.

Specified Geographic Region

Lamont-Doherty proposes to conduct the proposed seismic survey in the South Atlantic Ocean, located approximately between 10–35° W, 27–33° S (see Figure 1). Water depths in the survey area range from approximately 1,150 to 4,800 meters (m) (3,773 feet [ft] to 2.98 miles [mi]).

Principal and Collaborating Investigators

The proposed survey's principal investigators are Drs. R. Reece and R. Carlson (Texas A&M University) and Dr. G. Christeson (University of Texas at Austin).

Detailed Description of the Specified Activities

Transit Activities

The *Langseth* would depart and return from Cape Verde and transit to the survey area. Some minor deviations with the transit schedule and port locations are possible depending on logistics and weather.

Vessel Specifications

NMFS outlined the vessel's specifications in the notice of proposed Authorization (80 FR 75355, December 1, 2015). NMFS does not repeat the

information here as the vessel's specifications have not changed between the notice of proposed Authorization and this notice of an issued Authorization.

Data Acquisition Activities

NMFS outlined the details regarding Lamont-Doherty's data acquisition activities using the airguns, multibeam echosounder, and the sub-bottom profiler in the notice of proposed Authorization (80 FR 75355, December 1, 2015). NMFS does not repeat the information here as the data acquisition activities have not changed between the notice of proposed Authorization and this notice of an issued Authorization.

For a more detailed description of the authorized action (*i.e.*, vessel and acoustic source specifications, metrics, characteristics of airgun pulses, predicted sound levels of airguns, *etc.*) please see the notice of proposed Authorization (80 FR 75355, December 1, 2015) and associated documents referenced above this section.

Comments and Responses

NMFS published a notice of receipt of Lamont-Doherty's application and proposed Authorization in the **Federal Register** on December 1, 2015 (80 FR 75355). During the 30-day public comment period, NMFS received comments from the Marine Mammal Commission (Commission). NMFS has posted the comments online at: <http://www.nmfs.noaa.gov/pr/permits/incidental/research.htm>.

NMFS addresses any comments specific to Lamont-Doherty's application related to the statutory and regulatory requirements or findings that NMFS must make under the MMPA in order to issue an Authorization. The following is a summary of the public comments and NMFS' responses.

Modeling Exclusion and Buffer Zones

Comment 1: The Commission expressed concerns regarding Lamont-Doherty's method to estimate exclusion and buffer zones. It stated that the model is not the best available science because it assumes the following: Spherical spreading, constant sound speed, and no bottom interactions. In light of their concerns, the Commission recommended that NMFS require Lamont-Doherty to re-estimate the proposed exclusion and buffer zones incorporating site-specific environmental and operational parameters (*e.g.*, sound speed profiles, refraction, bathymetry/water depth, sediment properties/bottom loss, or absorption coefficients) into their model.

Response: NMFS acknowledges the Commission's concerns about Lamont-Doherty's current modeling approach for estimating exclusion and buffer zones and also acknowledges that Lamont-Doherty did not incorporate site-specific sound speed profiles, bathymetry, and sediment characteristics of the research area in the current approach to estimate those zones for this proposed seismic survey.

Lamont-Doherty's application (LGL, 2015) and the NSF's draft environmental analyses (NSF, 2015) describe the approach to establishing mitigation exclusion and buffer zones. In summary, Lamont-Doherty acquired field measurements for several array configurations at shallow- and deep-water depths during acoustic verification studies conducted in the northern Gulf of Mexico in 2003 (Tolstoy *et al.*, 2004) and in 2007 and 2008 (Tolstoy *et al.*, 2009). Based on the empirical data from those studies, Lamont-Doherty developed a sound propagation modeling approach that predicts received sound levels as a function of distance from a particular airgun array configuration in deep water. For this proposed survey, Lamont-Doherty developed the exclusion and buffer zones for the airgun array based on the empirically-derived measurements from the Gulf of Mexico calibration survey (Fig. 5a in Appendix H of the NSF's 2011 PEIS). Based upon the best available information (*i.e.*, the three data points, two of which are peer-reviewed, discussed in this response), NMFS finds that the exclusion and buffer zone calculations are appropriate for use in this particular survey.

In 2015, Lamont-Doherty explored solutions to this issue (*i.e.*, the question of whether the Gulf of Mexico calibration data adequately informs the model to predict exclusion isopleths in other areas) by conducting a retrospective sound power analysis of one of the lines acquired during Lamont-Doherty's seismic survey offshore New Jersey in 2014 (Crone, 2015). NMFS presented a comparison of the predicted radii (*i.e.*, modeled exclusion zones) with radii based on in situ measurements (*i.e.*, the upper bound [95th percentile] of the cross-line prediction) in a previous notice of issued Authorization (see Table 1, 80 FR 27635, May 14, 2015) for Lamont-Doherty.

Briefly, Crone's (2015) preliminary analysis, specific to the proposed survey site offshore New Jersey, confirmed that in-situ, site specific measurements and estimates of the 160- and 180-decibel (dB) isopleths collected by the

Langseth's hydrophone streamer in shallow water were smaller than the modeled (*i.e.*, predicted) exclusion and buffer zones proposed for use in two seismic surveys conducted offshore New Jersey in shallow water in 2014 and 2015. In that particular case, Crone's (2015) results show that Lamont-Doherty's modeled exclusion (180-dB) and buffer (160-dB) zones were approximately 28 and 33 percent smaller than the in situ, site-specific measurements confirming that Lamont-Doherty's model was conservative in that case, as emphasized by Lamont-Doherty in its application and in supporting environmental documentation. The following is a summary of two additional analyses of in-situ data that support Lamont-Doherty's use of the modeled exclusion and buffer zones in this particular case.

In 2010, Lamont-Doherty assessed the accuracy of their modeling approach by comparing the sound levels of the field measurements acquired in the Gulf of Mexico study to their model predictions (Diebold *et al.*, 2010). They reported that the observed sound levels from the field measurements fell almost entirely below the predicted mitigation radii curve for deep water (greater than 1,000 meters [m]; 3280.8 feet [ft]) (Diebold *et al.*, 2010).

In 2012, Lamont-Doherty used a similar process to model exclusion and buffer zones for a shallow-water seismic survey in the northeast Pacific Ocean offshore Washington in 2012. Lamont-Doherty conducted the shallow-water survey using the same airgun configuration proposed for this seismic survey (*i.e.*, 6,600 cubic inches [in³]) and recorded the received sound levels on the shelf and slope off Washington State using the *Langseth's* 8-kilometer (km) hydrophone streamer. Crone *et al.* (2014) analyzed those received sound levels from the 2012 survey and confirmed that in-situ, site specific measurements and estimates of the 160- and 180-dB isopleths collected by the *Langseth's* hydrophone streamer in shallow water were two to three times smaller than what Lamont-Doherty's modeling approach predicted. While the results confirm bathymetry's role in sound propagation, Crone *et al.* (2014) were able to confirm that the empirical measurements from the Gulf of Mexico calibration survey (the same measurements used to inform Lamont-Doherty's modeling approach for this seismic survey in the South Atlantic Ocean) overestimated the size of the exclusion and buffer zones for the shallow-water 2012 survey off Washington and were thus precautionary, in that particular case.

The model Lamont-Doherty currently uses does not allow for the consideration of environmental and site-specific parameters as requested by the Commission. NMFS continues to work with Lamont-Doherty and the NSF to address the issue of incorporating site-specific information to further inform the analysis and development of mitigation measures in oceanic and coastal areas for future seismic surveys with Lamont-Doherty. However, Lamont-Doherty's current modeling approach (supported by the three data points discussed previously) represents the best available information for NMFS to reach determinations for the Authorization. As described earlier, the comparisons of Lamont-Doherty's model results and the field data collected in the Gulf of Mexico, offshore Washington, and offshore New Jersey illustrate a degree of conservativeness built into Lamont-Doherty's model for deep water, which NMFS expects to offset some of the limitations of the model to capture the variability resulting from site-specific factors.

Lamont-Doherty has conveyed to NMFS that additional modeling efforts to refine the process and conduct comparative analysis may be possible with the availability of research funds and other resources. Obtaining research funds is typically through a competitive process, including those submitted to U.S. Federal agencies. The use of models for calculating buffer and exclusion zone radii and for developing take estimates is not a requirement of the MMPA incidental take authorization process. Furthermore, NMFS does not provide specific guidance on model parameters nor prescribe a specific model for applicants as part of the MMPA incidental take authorization process at this time. There is a level of variability not only with parameters in the models, but also the uncertainty associated with data used in models, and therefore, the quality of the model results submitted by applicants. NMFS considers this variability when evaluating applications and the take estimates and mitigation that the model informs. NMFS takes into consideration the model used and its results in determining the potential impacts to marine mammals; however, it is just one component of the analysis during the MMPA consultation process as NMFS also takes into consideration other factors associated with the proposed action, (*e.g.*, geographic location, duration of activities, context, intensity, etc.).

Monitoring and Reporting

Comment 2: The Commission has indicated that monitoring and reporting requirements should provide a reasonably accurate assessment of the types of taking and the numbers of animals taken by the proposed activity. They recommend that NMFS and Lamont-Doherty incorporate an accounting for animals at the surface but not detected [*i.e.*, g(0) values] and for animals present but underwater and not available for sighting [*i.e.*, f(0) values] into monitoring efforts. In light of the Commission's previous comments, they recommend that NMFS consult with the funding agency (*i.e.*, the NSF) and individual applicants (*e.g.*, Lamont-Doherty and other related entities) to develop, validate, and implement a monitoring program that provides a scientifically sound, reasonably accurate assessment of the types of marine mammal takes and the actual numbers of marine mammals taken, accounting

for applicable g(0) and f(0) values. They also recommend that Lamont-Doherty and other relevant entities continue to collect appropriate sightings data in the field which NMFS can then pool to determine g(0) and f(0) values relevant to the various geophysical survey types.

Response: NMFS agrees with the Commission's recommendation to improve the post-survey reporting requirements for NSF and Lamont-Doherty by accounting for takes using applicable g(0) and f(0) values. In December 2015, NMFS met with Commission representatives to discuss ways to develop and validate a monitoring program that provides a scientifically sound, reasonably accurate assessment of the types of marine mammal takes and the actual numbers of marine mammals taken, accounting for applicable g(0) and f(0) values. We will work with NSF to develop ways to improve their post-survey take estimates and have included a requirement in the

South Atlantic Authorization for them to do so in collaboration with us and the Commission.

Description of Marine Mammals in the Area of the Specified Activity

Table 1 in this notice provides the following: All marine mammal species with possible or confirmed occurrence in the proposed activity area; information on those species' regulatory status under the MMPA and the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*); abundance; and occurrence and seasonality in the proposed activity area. Based on the best available information, NMFS expects that there may be a potential for certain cetacean and pinniped species to occur within the survey area (*i.e.*, potentially be taken) and have included additional information for these species in Table 1 of this notice. NMFS will carry forward analyses on the species listed in Table 1 later in this document.

NMFS refers the public to Lamont-Doherty's application, NSF's draft environmental analysis (see **ADDRESSES**), NOAA Technical Memorandum NMFS—NE—231, U.S. Atlantic and Gulf of Mexico Marine Mammal Stock Assessments—2014 (Waring *et al.*, 2015); and the Draft 2015 U.S. Atlantic and Gulf of Mexico Marine Mammal Stock Assessments (*in review*, 2015) available

online at: <http://www.nmfs.noaa.gov/pr/sars/species.htm> for further information on the biology and local distribution of these species.

Potential Effects of the Specified Activities on Marine Mammals

NMFS provided a summary and discussion of the ways that the types of stressors associated with the specified

activity (e.g., seismic airgun operations, vessel movement, and entanglement) impact marine mammals (via observations or scientific studies) in the notice of proposed Authorization (80 FR 75355, December 1, 2015).

The "Estimated Take by Incidental Harassment" section later in this document will include a quantitative discussion of the number of marine

mammals anticipated to be taken by this activity. The “Negligible Impact Analysis” section will include the analysis of how this specific proposed activity would impact marine mammals and will consider the content of this section, the “Estimated Take by Incidental Harassment” section, the “Mitigation” section, and the “Anticipated Effects on Marine Mammal Habitat” section to draw conclusions regarding the likely impacts of this activity on the reproductive success or survivorship of individuals and from that on the affected marine mammal populations or stocks.

NMFS provided a background of potential effects of Lamont-Doherty’s activities in the notice of proposed Authorization (80 FR 75355, December 1, 2015). Operating active acoustic sources, such as airgun arrays, has the potential for adverse effects on marine mammals. The majority of anticipated impacts would be from the use of acoustic sources. The effects of sounds from airgun pulses might include one or more of the following: Tolerance, masking of natural sounds, behavioral disturbance, and temporary or permanent hearing impairment or non-auditory effects (Richardson *et al.*, 1995). However, for reasons discussed in the notice of proposed Authorization (80 FR 75355, December 1, 2015), it is unlikely that there would be any cases of temporary or permanent hearing impairment resulting from Lamont-Doherty’s activities. NMFS’ predicted estimates for Level A harassment take for some species are likely overestimates of the injury that will occur. NMFS expects that successful implementation of the required visual and acoustic mitigation measures would avoid Level A take in some instances.

As outlined in previous NMFS documents, the effects of noise on marine mammals are highly variable, often depending on species and contextual factors (based on Richardson *et al.*, 1995).

In the *Potential Effects of the Specified Activity on Marine Mammals* section (80 FR 75355, December 1, 2015); NMFS included a qualitative discussion of the different ways that Lamont-Doherty’s seismic survey may potentially affect marine mammals.

Behavior: Marine mammals may behaviorally react to sound when exposed to anthropogenic noise. These behavioral reactions are often shown as: Changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or

feeding); visible startle response or aggressive behavior (such as tail/fluke slapping or jaw clapping); avoidance of areas where noise sources are located; and/or flight responses (e.g., pinnipeds flushing into water from haulouts or rookeries).

Masking: Marine mammals use acoustic signals for a variety of purposes, which differ among species, but include communication between individuals, navigation, foraging, reproduction, avoiding predators, and learning about their environment (Erbe and Farmer, 2000; Tyack, 2000). Introduced underwater sound may through masking reduce the effective communication distance of a marine mammal species if the frequency of the source is close to that of a signal that needs to be detected by the marine mammal, and if the anthropogenic sound is present for a significant fraction of the time (Richardson *et al.*, 1995). For the airgun sound generated from Lamont-Doherty’s seismic survey, sound will consist of low frequency (under 500 Hz) pulses with extremely short durations (less than one second). Masking from airguns is more likely in low-frequency marine mammals like mysticetes. There is little concern that masking would occur near the sound source due to the brief duration of these pulses and relative silence between air gun shots (approximately 22 to 170 seconds). The sounds important to small odontocete communication are predominantly at much higher frequencies than the dominant components of airgun sounds, thus limiting the potential for masking in those species.

Hearing Impairment: Hearing impairment (either temporary or permanent) is also unlikely. Given the higher level of sound necessary to cause permanent threshold shift as compared with temporary threshold shift, it is considerably less likely that permanent threshold shift would occur during the seismic survey. Cetaceans generally avoid the immediate area around operating seismic vessels, as do some other marine mammals. Some pinnipeds show avoidance reactions to airguns, but their avoidance reactions are generally not as strong or consistent compared to cetacean reactions. Also, NMFS expects that some individuals would avoid the source at levels expected to result in injury. Nonetheless, although NMFS expects that Level A harassment is unlikely to occur, we have conservatively authorized and analyzed a low level of permanent threshold shift occurrences for certain species. We acknowledge that it is difficult to quantify the degree

to which the mitigation and avoidance will reduce the number of animals that might incur permanent threshold shift; however, we are proposing to authorize the modeled number of Level A takes, which does not take the mitigation or avoidance into consideration.

Vessel Movement and Entanglement: The *Langseth* will operate at a relatively slow speed (typically 4.6 knots [8.5 km/h; 5.3 mph]) when conducting the survey. Protected species observers would monitor for marine mammals, which would trigger mitigation measures, including vessel avoidance where safe. Therefore, NMFS does not anticipate nor do we authorize takes of marine mammals from vessel strike or entanglement.

NMFS refers the reader to Lamont-Doherty’s application and the NSF’s environmental analysis for additional information on the behavioral reactions (or lack thereof) by all types of marine mammals to seismic vessels. NMFS has reviewed these data and based our decision on the relevant information.

Anticipated Effects on Marine Mammal Habitat

NMFS included a detailed discussion of the potential effects of this action on marine mammal habitat, including physiological and behavioral effects on marine mammal prey items (e.g., fish and invertebrates) in the notice of proposed Authorization (80 FR 75355, December 1, 2015). While NMFS anticipates that the specified activity may result in marine mammals avoiding certain areas due to temporary ensonification, the impact to habitat is temporary and reversible. Further, NMFS also considered these impacts to marine mammals in detail in the notice of proposed Authorization as behavioral modification. The main impact associated with the activity would be temporarily elevated noise levels and the associated direct effects on marine mammals.

Mitigation

In order to issue an Incidental Harassment Authorization under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable adverse impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for taking for certain subsistence uses (where relevant).

Lamont-Doherty has reviewed the following source documents and has

incorporated a suite of proposed mitigation measures into their project description.

(1) Protocols used during previous Lamont-Doherty and NSF-funded seismic research cruises as approved by us and detailed in the NSF's 2011 PEIS and 2015 draft environmental analysis;

(2) Previous incidental harassment authorizations applications and authorizations that NMFS has approved and authorized; and

(3) Recommended best practices in Richardson *et al.* (1995), Pierson *et al.* (1998), and Weir and Dolman, (2007).

To reduce the potential for disturbance from acoustic stimuli associated with the activities, Lamont-Doherty, and/or its designees have proposed to implement the following mitigation measures for marine mammals:

(1) Vessel-based visual mitigation monitoring;

(2) Proposed exclusion zones;

(3) Power down procedures;

(4) Shutdown procedures;

(5) Ramp-up procedures; and

(6) Speed and course alterations.

NMFS reviewed Lamont-Doherty's proposed mitigation measures and has proposed an additional measure to effect the least practicable adverse impact on marine mammals. They are:

(1) Expanded power down procedures for concentrations of six or more whales that do not appear to be traveling (*e.g.*, feeding, socializing, etc.).

Vessel-Based Visual Mitigation Monitoring

Lamont-Doherty would position observers aboard the seismic source vessel to watch for marine mammals near the vessel during daytime airgun operations and during any start-ups at night. Observers would also watch for marine mammals near the seismic vessel for at least 30 minutes prior to the start of airgun operations after an extended shutdown (*i.e.*, greater than approximately eight minutes for this proposed cruise). When feasible, the observers would conduct observations during daytime periods when the

seismic system is not operating for comparison of sighting rates and behavior with and without airgun operations and between acquisition periods. Based on the observations, the *Langseth* would power down or shutdown the airguns when marine mammals are observed within or about to enter a designated exclusion zone for cetaceans or pinnipeds.

During seismic operations, at least four protected species observers would be aboard the *Langseth*. Lamont-Doherty would appoint the observers with NMFS concurrence, and they would conduct observations during ongoing daytime operations and nighttime ramp-ups of the airgun array. During the majority of seismic operations, two observers would be on duty from the observation tower to monitor marine mammals near the seismic vessel. Using two observers would increase the effectiveness of detecting animals near the source vessel. However, during mealtimes and bathroom breaks, it is sometimes difficult to have two observers on effort, but at least one observer would be on watch during bathroom breaks and mealtimes. Observers would be on duty in shifts of no longer than four hours in duration.

Two observers on the *Langseth* would also be on visual watch during all nighttime ramp-ups of the seismic airguns. A third observer would monitor the passive acoustic monitoring equipment 24 hours a day to detect vocalizing marine mammals present in the action area. In summary, a typical daytime cruise would have scheduled two observers (visual) on duty from the observation tower, and an observer (acoustic) on the passive acoustic monitoring system. Before the start of the seismic survey, Lamont-Doherty would instruct the vessel's crew to assist in detecting marine mammals and implementing mitigation requirements.

The *Langseth* is a suitable platform for marine mammal observations. When stationed on the observation platform, the eye level would be approximately 21.5 m (70.5 ft) above sea level, and the

observer would have a good view around the entire vessel. During daytime, the observers would scan the area around the vessel systematically with reticle binoculars (*e.g.*, 7 x 50 Fujinon), Big-eye binoculars (25 x 150), and with the naked eye. During darkness, night vision devices would be available (ITT F500 Series Generation 3 binocular-image intensifier or equivalent), when required. Laser range-finding binoculars (Leica LRF 1200 laser rangefinder or equivalent) would be available to assist with distance estimation. They are useful in training observers to estimate distances visually, but are generally not useful in measuring distances to animals directly. The user measures distances to animals with the reticles in the binoculars.

Lamont-Doherty would immediately power down or shutdown the airguns when observers see marine mammals within or about to enter the designated exclusion zone. The observer(s) would continue to maintain watch to determine when the animal(s) are outside the exclusion zone by visual confirmation. Airgun operations would not resume until the observer has confirmed that the animal has left the zone, or if not observed after 15 minutes for species with shorter dive durations (small odontocetes and pinnipeds) or 30 minutes for species with longer dive durations (mysticetes and large odontocetes, including sperm, pygmy sperm, dwarf sperm, killer, and beaked whales).

Lamont-Doherty would use safety radii to designate exclusion zones and to estimate take for marine mammals. Table 2 shows the distances at which one would expect to receive sound levels (160-, 180-, and 190-dB,) from the airgun array and a single airgun. If the protected species visual observer detects marine mammal(s) within or about to enter the appropriate exclusion zone, the *Langseth* crew would immediately power down the airgun array, or perform a shutdown if necessary (see Shut-down Procedures).

TABLE 2—PREDICTED DISTANCES TO WHICH SOUND LEVELS GREATER THAN OR EQUAL TO 160 RE: 1 μ PA COULD BE RECEIVED DURING THE PROPOSED SURVEY AREAS WITHIN THE SOUTH ATLANTIC OCEAN

[January through March, 2016]

Source and volume (in ³)	Tow depth (m)	Water depth (m)	Predicted RMS distances ¹ (m)		
			190 dB	180 dB	160 dB
Single Bolt airgun (40 in ³)	9	>1,000	100	100	388
36-Airgun Array (6,600 in ³)	9	>1,000	286	927	5,780

¹ Predicted distances based on information presented in Lamont-Doherty's application.

The 180- or 190-dB level shutdown criteria are applicable to cetaceans and pinnipeds respectively as specified by NMFS (2000). Lamont-Doherty used these levels to establish the exclusion zones as presented in their application.

Power Down Procedures

A power down involves decreasing the number of airguns in use such that the radius of the 180-dB or 190-dB exclusion zone is smaller to the extent that marine mammals are no longer within or about to enter the exclusion zone. A power down of the airgun array can also occur when the vessel is moving from one seismic line to another. During a power down for mitigation, the *Langseth* would operate one airgun (40 in³). The continued operation of one airgun would alert marine mammals to the presence of the seismic vessel in the area. A shutdown occurs when the *Langseth* suspends all airgun activity.

If the observer detects a marine mammal outside the exclusion zone and the animal is likely to enter the zone, the crew would power down the airguns to reduce the size of the 180-dB or 190-dB exclusion zone before the animal enters that zone. Likewise, if a mammal is already within the zone after detection, the crew would power-down the airguns immediately. During a power down of the airgun array, the crew would operate a single 40-in³ airgun which has a smaller exclusion zone. If the observer detects a marine mammal within or near the smaller exclusion zone around the airgun (Table 3), the crew would shut down the single airgun (see next section).

Resuming Airgun Operations After a Power Down

Following a power-down, the *Langseth* crew would not resume full airgun activity until the marine mammal has cleared the 180-dB or 190-dB exclusion zone. The observers would consider the animal to have cleared the exclusion zone if:

- The observer has visually observed the animal leave the exclusion zone; or
- An observer has not sighted the animal within the exclusion zone for 15 minutes for species with shorter dive durations (*i.e.*, small odontocetes or pinnipeds), or 30 minutes for species with longer dive durations (*i.e.*, mysticetes and large odontocetes, including sperm, pygmy sperm, dwarf sperm, and beaked whales); or

The *Langseth* crew would resume operating the airguns at full power after 15 minutes of sighting any species with short dive durations (*i.e.*, small odontocetes or pinnipeds). Likewise, the

crew would resume airgun operations at full power after 30 minutes of sighting any species with longer dive durations (*i.e.*, mysticetes and large odontocetes, including sperm, pygmy sperm, dwarf sperm, and beaked whales).

NMFS estimates that the *Langseth* would transit outside the original 180-dB or 190-dB exclusion zone after an 8-minute wait period. This period is based on the average speed of the *Langseth* while operating the airguns (8.5 km/h; 5.3 mph). Because the vessel has transited away from the vicinity of the original sighting during the 8-minute period, implementing ramp-up procedures for the full array after an extended power down (*i.e.*, transiting for an additional 35 minutes from the location of initial sighting) would not meaningfully increase the effectiveness of observing marine mammals approaching or entering the exclusion zone for the full source level and would not further minimize the potential for take. The *Langseth's* observers are continually monitoring the exclusion zone for the full source level while the mitigation airgun is firing. On average, observers can observe to the horizon (10 km; 6.2 mi) from the height of the *Langseth's* observation deck and should be able to say with a reasonable degree of confidence whether a marine mammal would be encountered within this distance before resuming airgun operations at full power.

Shutdown Procedures

The *Langseth* crew would shut down the operating airgun(s) if they see a marine mammal within or approaching the exclusion zone for the single airgun. The crew would implement a shutdown:

- (1) If an animal enters the exclusion zone of the single airgun after the crew has initiated a power down; or
- (2) If an observer sees the animal is initially within the exclusion zone of the single airgun when more than one airgun (typically the full airgun array) is operating.

Resuming Airgun Operations After a Shutdown: Following a shutdown in excess of eight minutes, the *Langseth* crew would initiate a ramp-up with the smallest airgun in the array (40-in³). The crew would turn on additional airguns in a sequence such that the source level of the array would increase in steps not exceeding 6 dB per five-minute period over a total duration of approximately 30 minutes. During ramp-up, the observers would monitor the exclusion zone, and if he/she sees a marine mammal, the *Langseth* crew would implement a power down or shutdown

as though the full airgun array were operational.

During periods of active seismic operations, there are occasions when the *Langseth* crew would need to temporarily shut down the airguns due to equipment failure or for maintenance. In this case, if the airguns are inactive longer than eight minutes, the crew would follow ramp-up procedures for a shutdown described earlier and the observers would monitor the full exclusion zone and would implement a power down or shutdown if necessary.

If the full exclusion zone is not visible to the observer for at least 30 minutes prior to the start of operations in either daylight or nighttime, the *Langseth* crew would not commence ramp-up unless at least one airgun (40-in³ or similar) has been operating during the interruption of seismic survey operations. Given these provisions, it is likely that the vessel's crew would not ramp up the airgun array from a complete shutdown at night or in thick fog, because the outer part of the zone for that array would not be visible during those conditions.

If one airgun has operated during a power down period, ramp-up to full power would be permissible at night or in poor visibility, on the assumption that marine mammals would be alerted to the approaching seismic vessel by the sounds from the single airgun and could move away. The vessel's crew would not initiate a ramp-up of the airguns if an observer sees the marine mammal within or near the applicable exclusion zones during the day or close to the vessel at night.

Ramp-Up Procedures

Ramp-up of an airgun array provides a gradual increase in sound levels, and involves a step-wise increase in the number and total volume of airguns firing until the full volume of the airgun array is achieved. The purpose of a ramp-up is to "warn" marine mammals in the vicinity of the airguns, and to provide the time for them to leave the area and thus avoid any potential injury or impairment of their hearing abilities. Lamont-Doherty would follow a ramp-up procedure when the airgun array begins operating after an 8 minute period without airgun operations or when shut down has exceeded that period. Lamont-Doherty has used similar waiting periods (approximately eight to 10 minutes) during previous seismic surveys.

Ramp-up would begin with the smallest airgun in the array (40 in³). The crew would add airguns in a sequence such that the source level of the array would increase in steps not exceeding

six dB per five minute period over a total duration of approximately 30 to 35 minutes. During ramp-up, the observers would monitor the exclusion zone, and if marine mammals are sighted, Lamont-Doherty would implement a power-down or shut-down as though the full airgun array were operational.

If the complete exclusion zone has not been visible for at least 30 minutes prior to the start of operations in either daylight or nighttime, Lamont-Doherty would not commence the ramp-up unless at least one airgun (40 in³ or similar) has been operating during the interruption of seismic survey operations. Given these provisions, it is likely that the crew would not ramp up the airgun array from a complete shut-down at night or in thick fog, because the outer part of the exclusion zone for that array would not be visible during those conditions. If one airgun has operated during a power-down period, ramp-up to full power would be permissible at night or in poor visibility, on the assumption that marine mammals would be alerted to the approaching seismic vessel by the sounds from the single airgun and could move away. Lamont-Doherty would not initiate a ramp-up of the airguns if an observer sights a marine mammal within or near the applicable exclusion zones.

Special Procedures for Concentrations of Large Whales

The *Langseth* would avoid exposing concentrations of large whales to sounds greater than 160 dB re: 1 μ Pa within the 160-dB zone and would power down the array, if necessary. For purposes of this proposed survey, a concentration or group of whales would consist of six or more individuals visually sighted that do not appear to be traveling (e.g., feeding, socializing, etc.).

Speed and Course Alterations

If during seismic data collection, Lamont-Doherty detects marine mammals outside the exclusion zone and, based on the animal's position and direction of travel, is likely to enter the exclusion zone, the *Langseth* would change speed and/or direction if this does not compromise operational safety. Due to the limited maneuverability of the primary survey vessel, altering speed, and/or course can result in an extended period of time to realign the *Langseth* to the transect line. However, if the animal(s) appear likely to enter the exclusion zone, the *Langseth* would undertake further mitigation actions, including a power down or shut down of the airguns.

Mitigation Conclusions

NMFS has carefully evaluated Lamont-Doherty's proposed mitigation measures in the context of ensuring that we prescribe the means of effecting the least practicable impact on the affected marine mammal species and stocks and their habitat. Our evaluation of potential measures included consideration of the following factors in relation to one another:

- The manner in which, and the degree to which, the successful implementation of the measure is expected to minimize adverse impacts to marine mammals;
- The proven or likely efficacy of the specific measure to minimize adverse impacts as planned; and
- The practicability of the measure for applicant implementation.

Any mitigation measure(s) prescribed by NMFS should be able to accomplish, have a reasonable likelihood of accomplishing (based on current science), or contribute to the accomplishment of one or more of the general goals listed here:

1. Avoidance or minimization of injury or death of marine mammals wherever possible (goals 2, 3, and 4 may contribute to this goal).
2. A reduction in the numbers of marine mammals (total number or number at biologically important time or location) exposed to airgun operations that we expect to result in the take of marine mammals (this goal may contribute to 1, above, or to reducing harassment takes only).
3. A reduction in the number of times (total number or number at biologically important time or location) individuals would be exposed to airgun operations that we expect to result in the take of marine mammals (this goal may contribute to 1, above, or to reducing harassment takes only).
4. A reduction in the intensity of exposures (either total number or number at biologically important time or location) to airgun operations that we expect to result in the take of marine mammals (this goal may contribute to 1, above, or to reducing the severity of harassment takes only).
5. Avoidance or minimization of adverse effects to marine mammal habitat, paying special attention to the food base, activities that block or limit passage to or from biologically important areas, permanent destruction of habitat, or temporary destruction/disturbance of habitat during a biologically important time.
6. For monitoring directly related to mitigation—an increase in the probability of detecting marine

mammals, thus allowing for more effective implementation of the mitigation.

Based on the evaluation of Lamont-Doherty's proposed measures, as well as other measures proposed by NMFS (i.e., special procedures for concentrations of large whales), NMFS has determined that the proposed mitigation measures provide the means of effecting the least practicable impact on marine mammal species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Monitoring

In order to issue an Incidental Harassment Authorization for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth "requirements pertaining to the monitoring and reporting of such taking." The MMPA implementing regulations at 50 CFR 216.104 (a)(13) indicate that requests for Authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that we expect to be present in the proposed action area.

Lamont-Doherty submitted a marine mammal monitoring plan in section XIII of the Authorization application. NMFS, NSF, or Lamont-Doherty may modify or supplement the plan based on comments or new information received from the public during the public comment period.

Monitoring measures prescribed by NMFS should accomplish one or more of the following general goals:

1. An increase in the probability of detecting marine mammals, both within the mitigation zone (thus allowing for more effective implementation of the mitigation) and during other times and locations, in order to generate more data to contribute to the analyses mentioned later;
2. An increase in our understanding of how many marine mammals would be affected by seismic airguns and other active acoustic sources and the likelihood of associating those exposures with specific adverse effects, such as behavioral harassment, temporary or permanent threshold shift;
3. An increase in our understanding of how marine mammals respond to stimuli that we expect to result in take and how those anticipated adverse effects on individuals (in different ways and to varying degrees) may impact the population, species, or stock (specifically through effects on annual

rates of recruitment or survival) through any of the following methods:

a. Behavioral observations in the presence of stimuli compared to observations in the absence of stimuli (*i.e.*, to be able to accurately predict received level, distance from source, and other pertinent information);

b. Physiological measurements in the presence of stimuli compared to observations in the absence of stimuli (*i.e.*, to be able to accurately predict received level, distance from source, and other pertinent information);

c. Distribution and/or abundance comparisons in times or areas with concentrated stimuli versus times or areas without stimuli;

4. An increased knowledge of the affected species; and

5. An increase in our understanding of the effectiveness of certain mitigation and monitoring measures.

Monitoring Measures

Lamont-Doherty proposes to sponsor marine mammal monitoring during the present project to supplement the mitigation measures that require real-time monitoring, and to satisfy the monitoring requirements of the Authorization. Lamont-Doherty understands that NMFS would review the monitoring plan and may require refinements to the plan. Lamont-Doherty planned the monitoring work as a self-contained project independent of any other related monitoring projects that may occur in the same regions at the same time. Further, Lamont-Doherty is prepared to discuss coordination of its monitoring program with any other related work that might be conducted by other groups working insofar as it is practical for Lamont-Doherty.

Vessel-Based Passive Acoustic Monitoring

Passive acoustic monitoring would complement the visual mitigation monitoring program, when practicable. Visual monitoring typically is not effective during periods of poor visibility or at night, and even with good visibility, is unable to detect marine mammals when they are below the surface or beyond visual range. Passive acoustic monitoring can improve detection, identification, and localization of cetaceans when used in conjunction with visual observations. The passive acoustic monitoring would serve to alert visual observers (if on duty) when vocalizing cetaceans are detected. It is only useful when marine mammals call, but it can be effective either by day or by night, and does not depend on good visibility. The acoustic observer would monitor the system in

real time so that he/she can advise the visual observers if they acoustically detect cetaceans.

The passive acoustic monitoring system consists of hardware (*i.e.*, hydrophones) and software. The “wet end” of the system consists of a towed hydrophone array connected to the vessel by a tow cable. The tow cable is 250 m (820.2 ft) long and the hydrophones are fitted in the last 10 m (32.8 ft) of cable. A depth gauge, attached to the free end of the cable, typically is towed at depths less than 20 m (65.6 ft). The *Langseth* crew would deploy the array from a winch located on the back deck. A deck cable would connect the tow cable to the electronics unit in the main computer lab where the acoustic station, signal conditioning, and processing system would be located. The PAMguard software amplifies, digitizes, and then processes the acoustic signals received by the hydrophones. The system can detect marine mammal vocalizations at frequencies up to 250 kHz.

One acoustic observer, an expert bioacoustician with primary responsibility for the passive acoustic monitoring system would be aboard the *Langseth* in addition to the other visual observers who would rotate monitoring duties. The acoustic observer would monitor the towed hydrophones 24 hours per day during airgun operations and during most periods when the *Langseth* is underway while the airguns are not operating. However, passive acoustic monitoring may not be possible if damage occurs to both the primary and back-up hydrophone arrays during operations. The primary passive acoustic monitoring streamer on the *Langseth* is a digital hydrophone streamer. Should the digital streamer fail, back-up systems should include an analog spare streamer and a hull-mounted hydrophone.

One acoustic observer would monitor the acoustic detection system by listening to the signals from two channels via headphones and/or speakers and watching the real-time spectrographic display for frequency ranges produced by cetaceans. The observer monitoring the acoustical data would be on shift for one to six hours at a time. The other observers would rotate as an acoustic observer, although the expert acoustician would be on passive acoustic monitoring duty more frequently.

When the acoustic observer detects a vocalization while visual observations are in progress, the acoustic observer on duty would contact the visual observer immediately, to alert him/her to the presence of cetaceans (if they have not

already been seen), so that the vessel's crew can initiate a power down or shutdown, if required. The observer would enter the information regarding the call into a database. Data entry would include an acoustic encounter identification number, whether it was linked with a visual sighting, date, time when first and last heard and whenever any additional information was recorded, position and water depth when first detected, bearing if determinable, species or species group (*e.g.*, unidentified dolphin, sperm whale), types and nature of sounds heard (*e.g.*, clicks, continuous, sporadic, whistles, creaks, burst pulses, strength of signal, etc.), and any other notable information. Acousticians record the acoustic detection for further analysis.

Observer Data and Documentation

Observers would record data to estimate the numbers of marine mammals exposed to various received sound levels and to document apparent disturbance reactions or lack thereof. They would use the data to help better understand the impacts of the activity on marine mammals and to estimate numbers of animals potentially ‘taken’ by harassment (as defined in the MMPA). They will also provide information needed to order a power down or shut down of the airguns when a marine mammal is within or near the exclusion zone.

When an observer makes a sighting, they will record the following information:

1. Species, group size, age/size/sex categories (if determinable), behavior when first sighted and after initial sighting, heading (if consistent), bearing and distance from seismic vessel, sighting cue, apparent reaction to the airguns or vessel (*e.g.*, none, avoidance, approach, paralleling, etc.), and behavioral pace.

2. Time, location, heading, speed, activity of the vessel, sea state, visibility, and sun glare.

The observer will record the data listed under (2) at the start and end of each observation watch, and during a watch whenever there is a change in one or more of the variables.

Observers will record all observations and power downs or shutdowns in a standardized format and will enter data into an electronic database. The observers will verify the accuracy of the data entry by computerized data validity checks during data entry and by subsequent manual checking of the database. These procedures will allow the preparation of initial summaries of data during and shortly after the field program, and will facilitate transfer of

the data to statistical, graphical, and other programs for further processing and archiving.

Results from the vessel-based observations will provide:

1. The basis for real-time mitigation (airgun power down or shutdown).
2. Information needed to estimate the number of marine mammals potentially taken by harassment, which Lamont-Doherty must report to the Office of Protected Resources.
3. Data on the occurrence, distribution, and activities of marine mammals and turtles in the area where Lamont-Doherty would conduct the seismic study.
4. Information to compare the distance and distribution of marine mammals and turtles relative to the source vessel at times with and without seismic activity.
5. Data on the behavior and movement patterns of marine mammals detected during non-active and active seismic operations.

Reporting

Lamont-Doherty would submit a report to us and to NSF within 90 days after the end of the cruise. The report would describe the operations conducted and sightings of marine mammals near the operations. The report would provide full documentation of methods, results, and interpretation pertaining to all monitoring. The 90-day report would summarize the dates and locations of seismic operations, and all marine mammal sightings (dates, times, locations, activities, associated seismic survey activities). The report would also include estimates of the number and nature of exposures that occurred above the harassment threshold based on the observations. The report would consider both published literature and previous monitoring results that could inform the detectability of different species and how that information affects post survey exposure estimates.

In the unanticipated event that the specified activity clearly causes the take of a marine mammal in a manner not permitted by the authorization (if issued), such as an injury, serious injury, or mortality (*e.g.*, ship-strike, gear interaction, and/or entanglement),

Lamont-Doherty shall immediately cease the specified activities and immediately report the take to the Division Chief, Permits and Conservation Division, Office of Protected Resources, NMFS. The report must include the following information:

- Time, date, and location (latitude/longitude) of the incident;
- Name and type of vessel involved;
- Vessel's speed during and leading up to the incident;
- Description of the incident;
- Status of all sound source use in the 24 hours preceding the incident;
- Water depth;
- Environmental conditions (*e.g.*, wind speed and direction, Beaufort sea state, cloud cover, and visibility);
- Description of all marine mammal observations in the 24 hours preceding the incident;
- Species identification or description of the animal(s) involved;
- Fate of the animal(s); and
- Photographs or video footage of the animal(s) (if equipment is available).

Lamont-Doherty shall not resume its activities until we are able to review the circumstances of the prohibited take. We shall work with Lamont-Doherty to determine what is necessary to minimize the likelihood of further prohibited take and ensure MMPA compliance. Lamont-Doherty may not resume their activities until notified by us via letter, email, or telephone.

In the event that Lamont-Doherty discovers an injured or dead marine mammal, and the lead visual observer determines that the cause of the injury or death is unknown and the death is relatively recent (*i.e.*, in less than a moderate state of decomposition as we describe in the next paragraph), Lamont-Doherty will immediately report the incident to the Division Chief, Permits and Conservation Division, Office of Protected Resources, NMFS. The report must include the same information identified in the paragraph above this section. Activities may continue while NMFS reviews the circumstances of the incident. NMFS would work with Lamont-Doherty to determine whether modifications in the activities are appropriate.

In the event that Lamont-Doherty discovers an injured or dead marine

mammal, and the lead visual observer determines that the injury or death is not associated with or related to the authorized activities (*e.g.*, previously wounded animal, carcass with moderate to advanced decomposition, or scavenger damage), Lamont-Doherty would report the incident to the Chief Permits and Conservation Division, Office of Protected Resources, NMFS, within 24 hours of the discovery. Lamont-Doherty would provide photographs or video footage (if available) or other documentation of the stranded animal sighting to NMFS.

Estimated Take by Incidental Harassment

Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines "harassment" as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].

Acoustic stimuli (*i.e.*, increased underwater sound) generated during the operation of the airgun array may have the potential to result in the behavioral disturbance of some marine mammals and may have an even smaller potential to result in permanent threshold shift (non-lethal injury) of some marine mammals. NMFS expects that the proposed mitigation and monitoring measures would minimize the possibility of injurious or lethal takes. However, NMFS cannot discount the possibility (*albeit small*) that exposure to energy from the proposed survey could result in non-lethal injury (Level A harassment). Thus, NMFS proposes to authorize take by Level B harassment and Level A harassment resulting from the operation of the sound sources for the proposed seismic survey based upon the current acoustic exposure criteria shown in Table 3 subject to the limitations in take described in Table 5 later in this notice.

TABLE 3—NMFS' CURRENT ACOUSTIC EXPOSURE CRITERIA

Criterion	Criterion definition	Threshold
Level A Harassment (Injury)	Permanent Threshold Shift (PTS) (Any level above that which is known to cause TTS).	180 dB re 1 microPa-m (cetaceans)/190 dB re 1 microPa-m (pinnipeds) root mean square (rms).
Level B Harassment	Behavioral Disruption (for impulse noises)	160 dB re 1 microPa-m (rms).

NMFS' practice is to apply the 160 dB re: 1 μ Pa received level threshold for underwater impulse sound levels to predict whether behavioral disturbance that rises to the level of Level B harassment is likely to occur. NMFS' practice is to apply the 180 dB or 190 dB re: 1 μ Pa received level threshold for underwater impulse sound levels to predict whether permanent threshold shift (auditory injury), which we consider as Level A harassment is likely to occur.

Acknowledging Uncertainties in Estimating Take

Given the many uncertainties in predicting the quantity and types of impacts of sound on marine mammals, it is common practice to estimate how many animals are likely to be present within a particular distance of a given activity, or exposed to a particular level of sound, and use that information to predict how many animals are taken. In practice, depending on the amount of information available to characterize daily and seasonal movement and distribution of affected marine mammals, distinguishing between the numbers of individuals harassed and the instances of harassment can be difficult to parse. Moreover, when one considers the duration of the activity, in the absence of information to predict the degree to which individual animals are likely exposed repeatedly on subsequent days, the simple assumption is that entirely new animals are exposed every day, which results in a take estimate that in some circumstances overestimates the number of individuals harassed.

The following sections describe NMFS' methods to estimate take by incidental harassment. We base these estimates on the number of marine mammals that could be potentially harassed by seismic operations with the airgun array during approximately 3,236 km (2,028 mi) of transect lines in the South Atlantic Ocean.

Modeled Number of Instances of Exposures: Lamont-Doherty would conduct the proposed seismic survey within the high seas in the South Atlantic Ocean. NMFS presents estimates of the anticipated numbers of instances that marine mammals could be exposed to sound levels greater than or equal to 160, 180, and 190 dB re: 1 μ Pa during the proposed seismic survey. Table 5 represents the numbers of instances of take that NMFS proposes to authorize for this survey within the South Atlantic Ocean.

NMFS' Take Estimate Method for Species with Density Information: In order to estimate the potential number

of instances that marine mammals could be exposed to airgun sounds above the 160-dB Level B harassment threshold and the 180-dB Level A harassment thresholds, NMFS used the following approach for species with density estimates derived from the Navy's Atlantic Fleet Training and Testing Navy Marine Species Density Database (NMSDD) maps for the survey area in the Southern Atlantic Ocean. NMFS used the highest density range for each species within the survey area.

(1) Calculate the total area that the *Langseth* would ensonify above the 160-dB Level B harassment threshold and above the 180-dB Level A harassment threshold for cetaceans within a 24-hour period. This calculation includes a daily ensonified area of approximately 1,377 square kilometers (km^2) (532 square miles [mi^2]) for the five OBS tracklines and 1,839 km^2 (710 mi^2) for the MCS trackline based on the *Langseth* traveling approximately 150 km [93 mi] in one day). Generally, the *Langseth* travels approximately 137 km (85 mi) in one day while conducting a seismic survey; thus, NMFS' estimate of a daily ensonified area based on 150 km is an estimation of the theoretical maximum that the *Langseth* could travel within 24 hours.

(2) Multiply each daily ensonified area above the 160-dB Level B harassment threshold by the species' density (animals/ km^2) to derive the predicted number of instances of exposures to received levels greater than or equal to 160-dB re: 1 μ Pa on a given day;

(3) Multiply each product (*i.e.*, the expected number of instances of exposures within a day) by the number of survey days that includes a 25 percent contingency (*i.e.*, a total of six days for the five OBS tracklines and a total of 22 days for the MCS trackline) to derive the predicted number of instances of exposures above 160 dB over the duration of the survey;

(4) Multiply the daily ensonified area by each species-specific density to derive the predicted number of instances of exposures to received levels greater than or equal to 180-dB re: 1 μ Pa for cetaceans on a given day (*i.e.*, Level A takes). This calculation includes a daily ensonified area of approximately 207 km^2 (80 mi^2) for the five OBS tracklines and 281 km^2 (108 mi^2) for the MCS trackline.

(5) Multiply each product by the number of survey days that includes a 25 percent contingency (*i.e.*, a total of six days for the five OBS tracklines and a total of 22 days for the MCS trackline). Subtract that product from the predicted number of instances of exposures to

received levels greater than or equal to 160-dB re: 1 μ Pa on a given day to derive the number of instances of exposures estimated to occur between 160 and 180-dB threshold (*i.e.*, Level B takes).

In many cases, this estimate of instances of exposures is likely an overestimate of the number of individuals that are taken, because it assumes 100 percent turnover in the area every day, (*i.e.*, that each new day results in takes of entirely new individuals with no repeat takes of the same individuals over the 22-day period (28 days with contingency). It is difficult to quantify to what degree this method overestimates the number of individuals potentially taken. Except as described later for a few specific species, NMFS uses this number of instances as the estimate of individuals (and authorized take) even though NMFS is aware that the number may be somewhat high due to the use of the maximum density estimate from the NMSDD.

Take Estimates for Species with Less than One Instance of Exposure: Using the approach described earlier, the model generated instances of take for some species that were less than one over the 28-day duration. Those species include the humpback, blue, Bryde's, pygmy sperm, and dwarf sperm whale. NMFS used data based on dedicated survey sighting information from the Atlantic Marine Assessment Program for Protected Species (AMAPPS) surveys in 2010, 2011, and 2013 (AMAPPS, 2010, 2011, 2013) to estimate take and assumed that Lamont-Doherty could potentially encounter one group of each species during the proposed seismic survey. NMFS believes it is reasonable to use the average (mean) group size (weighted by effort and rounded up) from the AMAPPS surveys for humpback whale (3), blue whale (2), Bryde's whale (2), pygmy sperm whale (2), and dwarf sperm whale (2) to derive a reasonable estimate of take for eruptive occurrences.

Take Estimates for Species with No Density Information: Density information for the Southern right whale, southern elephant seal, and Subantarctic fur seal in the South Atlantic Ocean is data poor or non-existent. When density estimates were not available, NMFS used data based on dedicated survey sighting information from the Atlantic Marine Assessment Program for Protected Species (AMAPPS) surveys in 2010, 2011, and 2013 (AMAPPS, 2010, 2011, 2013) to estimate take for the three species. NMFS assumed that Lamont-Doherty could potentially encounter one group

of each species during the seismic survey. NMFS believes it is reasonable to use the average (mean) group size (weighted by effort and rounded up) for North Atlantic right whales (3) from the AMMAPS surveys for the Southern right whale and the mean group size for

unidentified seals (2) from the AMMAPS surveys for southern elephant and Subantarctic fur seals multiplied by 28 days to derive an estimate of take from a potential encounter.

NMFS used sighting information from a survey off Namibia, Africa (Rose and

Payne, 1991) to estimate a mean group size for southern right whale dolphins (58) and also multiplied that estimate by 28 days to derive an estimate of take from a potential encounter with that species.

TABLE 4—DENSITIES AND/OR MEAN GROUP SIZE, AND ESTIMATES OF THE POSSIBLE NUMBERS OF MARINE MAMMALS AND POPULATION PERCENTAGES EXPOSED TO SOUND LEVELS GREATER THAN OR EQUAL TO 160, 180, AND 190 dB re: 1 μ Pa OVER 28 DAYS DURING THE PROPOSED SEISMIC SURVEY IN THE SOUTH ATLANTIC OCEAN

[January through March, 2016]

¹ Densities (where available) are expressed as number of individuals per km². Densities estimated from the Navy's Atlantic Fleet Training and Testing Navy Marine Species Density Database maps for the survey area in the Southern Atlantic Ocean. NA = Not available.

² See preceding text for information on NMFS' take estimate calculations. NA = Not applicable.

³ Modeled instances of exposures include adjustments for species with no density information. The Level A estimates are overestimates of predicted impacts to marine mammals as the estimates do not take into consideration the required mitigation measures for shutdowns or power downs if a marine mammal is likely to enter the 180 dB exclusion zone while the airguns are active.

⁴ Table 2 in this notice lists the stock species abundance estimates used in calculating the percentage of the population.

⁵ Population trend information from Waring *et al.*, 2015. ↑ = Increasing. ↓ = Decreasing. Unknown = Insufficient data.

Lamont-Doherty did not estimate any additional take from sound sources

other than airguns. NMFS does not expect the sound levels produced by the

echosounder and sub-bottom profiler to exceed the sound levels produced by

the airguns. Lamont-Doherty will not operate the multibeam echosounder and sub-bottom profiler during transits to and from the survey area, (*i.e.*, when the airguns are not operating) and in between transits to each of the five OBS tracklines, and, therefore, NMFS does not anticipate additional takes from these sources in this particular case.

NMFS considers the probability for entanglement of marine mammals as low because of the vessel speed and the monitoring efforts onboard the survey vessel. Therefore, NMFS does not believe it is necessary to authorize additional takes for entanglement at this time.

The *Langseth* will operate at a relatively slow speed (typically 4.6 knots [8.5 km/h; 5.3 mph]) when conducting the survey. Protected species observers would monitor for marine mammals, which would trigger mitigation measures, including vessel avoidance where safe. Therefore, NMFS does not anticipate nor do we authorize takes of marine mammals from vessel strike.

There is no evidence that the planned survey activities could result in serious injury or mortality within the specified geographic area for the requested proposed Authorization. The required mitigation and monitoring measures would minimize any potential risk for serious injury or mortality.

Analysis and Determinations

Negligible Impact

Negligible impact is “an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival” (50 CFR 216.103). The lack of likely adverse effects on annual rates of recruitment or survival (*i.e.*, population level effects) forms the basis of a negligible impact finding. Thus, an estimate of the number of takes, alone, is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be “taken” through behavioral harassment, NMFS must consider other factors, such as the likely nature of any responses (their intensity, duration, etc.), the context of any responses (critical reproductive time or location, migration, etc.), as well as the number and nature of estimated Level A harassment takes, the number of estimated mortalities, effects on habitat, and the status of the species.

In making a negligible impact determination, NMFS considers:

- The number of anticipated injuries, serious injuries, or mortalities;
- The number, nature, and intensity, and duration of harassment; and
- The context in which the takes occur (*e.g.*, impacts to areas of significance, impacts to local populations, and cumulative impacts when taking into account successive/contemporaneous actions when added to baseline data);
- The status of stock or species of marine mammals (*i.e.*, depleted, not depleted, decreasing, increasing, stable, impact relative to the size of the population);
- Impacts on habitat affecting rates of recruitment/survival; and
- The effectiveness of monitoring and mitigation measures to reduce the number or severity of incidental takes.

To avoid repetition, our analysis applies to all the species listed in Table 5, given that NMFS expects the anticipated effects of the seismic airguns to be similar in nature. Where there are meaningful differences between species or stocks, or groups of species, in anticipated individual responses to activities, impact of expected take on the population due to differences in population status, or impacts on habitat, NMFS has identified species-specific factors to inform the analysis.

Given the required mitigation and related monitoring, NMFS does not anticipate that serious injury or mortality would occur as a result of Lamont-Doherty’s proposed seismic survey in the South Atlantic Ocean. Thus the proposed authorization does not authorize any mortality.

NMFS’ predicted estimates for Level A harassment take for some species are likely overestimates of the injury that will occur. NMFS expects that successful implementation of the required visual and acoustic mitigation measures would avoid Level A take in some instances. Also, NMFS expects that some individuals would avoid the source at levels expected to result in injury. Nonetheless, although NMFS expects that Level A harassment is unlikely to occur at the numbers proposed to be authorized, because it is difficult to quantify the degree to which the mitigation and avoidance will reduce the number of animals that might incur PTS, we are proposing to authorize, and have included in our analyses, the modeled number of Level A takes, which does not take the mitigation or avoidance into consideration. However, because of the constant movement of the *Langseth* and the animals, as well as the fact that the boat is not staying in any one area in which individuals would be expected to

concentrate for any long amount of time (*i.e.*, since the duration of exposure to loud sounds will be relatively short), we anticipate that any PTS incurred would be in the form of only a small degree of permanent threshold shift and not total deafness.

Of the marine mammal species under our jurisdiction that are known to occur or likely to occur in the study area, the following species are listed as endangered under the ESA: Blue, fin, humpback, sei, Southern right whale, and sperm whales. The western north Atlantic population of humpback whales is known to be increasing. The other marine mammal species that may be taken by harassment during Lamont-Doherty’s seismic survey program are not listed as threatened or endangered under the ESA.

Cetaceans. Odontocete reactions to seismic energy pulses are usually thought to be limited to shorter distances from the airgun(s) than are those of mysticetes, in part because odontocete low-frequency hearing is assumed to be less sensitive than that of mysticetes. Given sufficient notice through relatively slow ship speed, NMFS generally expects marine mammals to move away from a noise source that is annoying prior to becoming potentially injurious, although Level A takes for a small group of species are proposed for authorization here.

Potential impacts to marine mammal habitat were discussed previously in this document (see the “Anticipated Effects on Habitat” section). Although some disturbance is possible to food sources of marine mammals, the impacts are anticipated to be minor enough as to not affect annual rates of recruitment or survival of marine mammals in the area. Based on the size of the South Atlantic Ocean where feeding by marine mammals occurs versus the localized area of the marine survey activities, any missed feeding opportunities in the direct project area will be minor based on the fact that other feeding areas exist elsewhere. Taking into account the planned mitigation measures, effects on cetaceans are generally expected to be restricted to avoidance of a limited area around the survey operation and short-term changes in behavior, falling within the MMPA definition of “Level B harassment.” Animals are not expected to permanently abandon any area that is surveyed, and any behaviors that are interrupted during the activity are expected to resume once the activity ceases. Only a small portion of marine mammal habitat will be affected at any time, and other areas within the South

Atlantic Ocean would be available for necessary biological functions.

Pinnipeds. During foraging trips, extralimital pinnipeds may not react at all to the sound from the proposed survey, ignore the stimulus, change their behavior, or avoid the immediate area by swimming away or diving. Behavioral responses can range from a mild orienting response, or a shifting of attention, to flight and panic. Research and observations show that pinnipeds in the water are tolerant of anthropogenic noise and activity. They may react in a number of ways depending on their experience with the sound source and what activity they are engaged in at the time of the exposure. Significant behavioral effects are more likely at higher received levels within a few kilometers of the source and activities involving sound from the proposed survey would not occur near any haulout areas where resting behaviors occur.

Many animals perform vital functions, such as feeding, resting, traveling, and socializing, on a diel cycle (*i.e.*, 24 hour cycle). Behavioral reactions to noise exposure (such as disruption of critical life functions, displacement, or avoidance of important habitat) are more likely to be significant if they last more than one diel cycle or recur on subsequent days (Southall *et al.*, 2007). While NMFS anticipates that the seismic operations would occur on consecutive days and the duration of the survey would last no more than 28 days, the seismic operations would increase sound levels in the marine environment in a relatively small area surrounding the vessel (compared to the range of most of the marine mammals within the proposed survey area), which is constantly travelling over distances, and some animals may only be exposed to and harassed by sound for less than a day.

For reasons stated previously in this document and based on the following factors, Lamont-Doherty's specified activities are not likely to cause long-term behavioral disturbance, serious injury, or death, or other effects that would be expected to adversely affect reproduction or survival of any individuals. They include:

- The anticipated impacts of Lamont-Doherty's survey activities on marine mammals are temporary behavioral changes due, primarily, to avoidance of the area;
- The likelihood that, given the constant movement of boat and animals and the nature of the survey design (not concentrated in areas of high marine mammal concentration), PTS incurred would be of a low level;

- The availability of alternate areas of similar habitat value for marine mammals to temporarily vacate the survey area during the operation of the airgun(s) to avoid acoustic harassment;

- The expectation that the seismic survey would have no more than a temporary and minimal adverse effect on any fish or invertebrate species that serve as prey species for marine mammals, and therefore consider the potential impacts to marine mammal habitat minimal; and

- The knowledge that the survey is taking place in the open ocean and not located within an area of biological importance for breeding, calving, or foraging for marine mammals.

Table 4 in this document outlines the number of requested Level A and Level B harassment takes that we anticipate as a result of these activities.

Required mitigation measures, such as special shutdowns for large whales, vessel speed, course alteration, and visual monitoring would be implemented to help reduce impacts to marine mammals. Based on the analysis herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS finds that Lamont-Doherty's proposed seismic survey would have a negligible impact on the affected marine mammal species or stocks.

Small Numbers

As mentioned previously, NMFS estimates that Lamont-Doherty's activities could potentially affect, by Level B harassment, 38 species of marine mammals under our jurisdiction. NMFS estimates that Lamont-Doherty's activities could potentially affect, by Level A harassment, up to 16 species of marine mammals under our jurisdiction.

For each species, the numbers of take being proposed for authorization are small numbers relative to the population sizes: Less than 16 percent for striped dolphins, less than 8 percent of Risso's dolphins, less than 6 percent for pantropical spotted dolphins, and less than 4 percent for all other species. NMFS has provided the regional population and take estimates for the marine mammal species that may be taken by Level A and Level B harassment in Table 4 in this notice. NMFS finds that the proposed incidental take described in Table 4 for the proposed activity would be limited to small numbers relative to the affected species or stocks.

Impact on Availability of Affected Species or Stock for Taking for Subsistence Uses

There are no relevant subsistence uses of marine mammals implicated by this action.

Endangered Species Act (ESA)

There are six marine mammal species listed as endangered under the Endangered Species Act that may occur in the proposed survey area. Under section 7 of the ESA, NSF initiated formal consultation with NMFS on the proposed seismic survey. NMFS (*i.e.*, National Marine Fisheries Service, Office of Protected Resources, Permits and Conservation Division) also consulted internally with NMFS on the proposed issuance of an Authorization under section 101(a)(5)(D) of the MMPA.

In January, 2016, the Endangered Species Act Interagency Cooperation Division issued a Biological Opinion with an Incidental Take Statement to us and to the NSF, which concluded that the issuance of the Authorization and the conduct of the seismic survey were not likely to jeopardize the continued existence of blue, fin, humpback, sei, South Atlantic right and sperm whales. The Biological Opinion also concluded that the issuance of the Authorization and the conduct of the seismic survey would not affect designated critical habitat for these species.

National Environmental Policy Act (NEPA)

NSF has prepared an environmental analysis titled "*Environmental Analysis of a Marine Geophysical Survey by the R/V Marcus G. Langseth in South Atlantic Ocean, Austral Summer 2016.*" NMFS has also prepared an environmental assessment (EA) titled, "Proposed Issuance of an Incidental Harassment Authorization to Lamont Doherty Earth Observatory to Take Marine Mammals by Harassment Incidental to a Marine Geophysical Survey in the South Atlantic Ocean, January–March 2016," which tiers off of NSF's environmental analysis. NMFS and NSF provided relevant environmental information to the public through the notice of proposed Authorization (80 FR 75355, December 1, 2015) and considered public comments received prior to finalizing our EA and deciding whether or not to issue a Finding of No Significant Impact (FONSI). NMFS concluded that issuance of an Incidental Harassment Authorization to Lamont-Doherty would not significantly affect the quality of the human environment and prepared and

issued a FONSI in accordance with NEPA and NOAA Administrative Order 216–6. NMFS' EA and FONSI for this activity are available upon request (see ADDRESSES).

Authorization

NMFS has issued an Incidental Harassment Authorization to Lamont-Doherty for the take of marine mammals, incidental to conducting a marine seismic survey in the South Atlantic Ocean January through March 2016.

Dated: January 11, 2016.

Perry F. Gayaldo,

Deputy Director, Office of Protected Resources, National Marine Fisheries Service.

[FR Doc. 2016–00660 Filed 1–14–16; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XE396

Endangered and Threatened Species; Take of Anadromous Fish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Issuance seven new scientific research permits, and fourteen renewal scientific research permits.

SUMMARY: Notice is hereby given that NMFS has issued Permit 1440–2R to the Interagency Ecological Program (IEP); Permit 13675–2R to the Fishery Foundation of California (FFC); Permit 13791–2R to the United States Fish and Wildlife Service (USFWS), Stockton Fish and Wildlife Office (SFWO); Permit 14516–2R to Dr. Jerry Smith, Associate Professor in the Department of Biological Sciences at San Jose State University; Permit 15215 to the California Department of Fish and Wildlife (CDFW), Fisheries Branch, Fish Health Laboratory; Permit 16274 to the Mendocino Redwood Company (MRC); Permit 17063 to the United States Forest Service (USFS), Redwood Sciences Laboratory; Permit 17077–2R to Dr. Peter Moyle, with the University of California at Davis, Department of Wildlife, Fish and Conservation Biology; Permit 17219 and Permit 19320 to the NMFS Southwest Fisheries Science Center (SWFSC), Fisheries Ecology Division; Permit 17272 to the USFWS, Arcata Fish and Wildlife Office Fisheries Program (AFWO); Permit 17351 to the Green Diamond Resource Company (GDRC); Permit 17396 to the

USFWS, Anadromous Fish Restoration Program (AFRP); Permit 17867 to the Humboldt Redwood Company (HRC); Permit 17877 to the Bureau of Reclamation (BOR); Permit 17916 to the Bureau of Land Management (BLM), Arcata Field Office; Permit 18012 to the CDFW, Bay Delta Region; Permit 18712 to H.T. Harvey & Associates; Permit 18937 to the Scripps Institution of Oceanography, University of California, San Diego, California Sea Grant College Program (CSGCP); Permit 19121 to the United States Geological Survey (USGS), California Water Survey; and Permit 19400 to ICF consulting.

ADDRESSES: The approved application for each permit is available on the Applications and Permits for Protected Species (APPS), <https://apps.nmfs.noaa.gov> Web site by searching the permit number within the Search Database page. The applications, issued permits and supporting documents are also available upon written request or by appointment: Protected Resources Division, NMFS, 777 Sonoma Avenue, Room 325, Santa Rosa, CA 95404 ph: (707) 575–6080, fax: (707) 578–3435).

FOR FURTHER INFORMATION CONTACT: Jeff Abrams, Santa Rosa, CA (ph.: 707–575–6080), Fax: 707–578–3435, email: Jeff.Abrams@noaa.gov.

SUPPLEMENTARY INFORMATION: The issuance of permits and permit modifications, as required by the Endangered Species Act of 1973 (16 U.S.C. 1531–1543) (ESA), is based on a finding that such permits/modifications: (1) Are applied for in good faith; (2) would not operate to the disadvantage of the listed species which are the subject of the permits; and (3) are consistent with the purposes and policies set forth in section 2 of the ESA. Authority to take listed species is subject to conditions set forth in the permits. Permits and modifications are issued in accordance with and are subject to the ESA and NMFS regulations (50 CFR parts 222–226) governing listed fish and wildlife permits.

Species Covered in This Notice

The following listed species are covered in this notice:

Chinook salmon (*Oncorhynchus tshawytscha*): Threatened Snake River spring/summer-run (SR spr/sum); threatened Lower Columbia River (LCR); threatened California Coastal (CC); threatened Central Valley spring-run (CVSR); endangered Sacramento River winter-run (SRWR).

Coho salmon (*O. kisutch*): Threatened Southern Oregon/Northern California

Coast (SONCC); endangered Central California Coast (CCC).

Steelhead (*O. mykiss*): Threatened Northern California (NC); threatened CCC; threatened California Central Valley (CCV); threatened South-Central California Coast (S–CCC); endangered Southern California (SC).

North American green sturgeon (*Acipenser medirostris*): Threatened southern distinct population segment (sDPS).

Eulachon (*Thaleichthys pacificus*): threatened sDPS.

Permits Issued

Permit 1440–2R

A notice of receipt of an application for scientific research permit renewal (1440–2R) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 1440–2R was issued to IEP on December 23, 2015 and expires on December 31, 2020.

Permit 1440–2R authorizes IEP to take CVSR Chinook salmon, SRWR Chinook salmon, CCV steelhead, CCC steelhead and sDPS green sturgeon while conducting 11 surveys in the San Francisco Bay-Delta region. The studies examine the abundance, and temporal and spatial distribution of various life stages of pelagic fishes of management concern, including listed species, and their food (e.g., zooplankton) resources, along with environmental conditions. These IEP studies are intended to monitor/inform the effectiveness of water operations, aquatic habitat restoration, and fish management practices, thereby providing a benefit to listed fish. The 11 studies included are: (1) Adult Striped Bass, a striped bass population study; (2) Fall Midwater Trawl, which monitors the relative abundance of native and introduced fish species; (3) Sturgeon Tagging, a white sturgeon tagging program; (4) Summer Trawl, which targets delta smelt and young-of-the-year striped bass; (5) Estuarine and Marine Fish, a San Francisco Bay trawl study; (6) 20mm Survey, a study to monitor juvenile delta smelt distribution and relative abundance; (7) Yolo Bypass, a research effort to understand fish and invertebrate use of the Yolo Bypass seasonal floodplain; (8) Upper Estuary Zooplankton, which targets multiple zooplankters; (9) Spring Kodiak Trawl, which determines the relative abundance and distribution of spawning delta smelt; (10) Suisun Marsh Survey, monitoring to determine the effects of the Suisun Marsh Salinity Control Gates operation on fish, including listed salmonids; and (11) Smelt Larva Survey, which provides distribution data for

longfin smelt larvae in the Delta. Listed fish may be captured by fyke net, gill net, midwater trawl, trammel net, hoop net, otter trawl, larval fish net, zooplankton net, Kodiak trawl net, rotary screw trap, and beach seine. The majority of captured fishes will be identified to species, enumerated, measured for standard length, and released. Juvenile SRWR and CVSR Chinook salmon will be identified using the Delta Model Length-at-Date-of-Capture Table. Listed species will be processed first and released. A subsample of wild juvenile SRWR and CVSR Chinook salmon sized captures will be tissue sampled for genetic analysis, and a subsample of hatchery juvenile SRWR and CVSR Chinook salmon sized captures will be sacrificed (*i.e.*, intentional directed mortality) in order to collect coded wire tag data for management purposes and for stock confirmation. To reduce handling mortality, investigators will conduct water to water transfers, use fish-friendly nets, avoid handling when possible, and will not release fish from a vessel under way.

Permit 13675–2R

A notice of receipt of an application for scientific research permit renewal (13675–2R) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 13675–2R was issued to the FFC on December 23, 2015 and expires on December 31, 2020.

Permit 13675–2R authorizes the FFC annually take juvenile-CVSR Chinook salmon, SRWR Chinook salmon, CCV steelhead, and sDPS green sturgeon while conducting research designed to monitor the use of the Fremont Landing Conservation Bank (FLCB) and the Bullock Bend Mitigation Bank (BBMB) at the confluence of the Sacramento and Feather rivers in California's Central Valley. The banks are restored areas that provides mitigation for impacts on listed salmonid species in the Central Valley. The monitoring will evaluate the use of the FLCB and the BBMB by listed fish, provide data directly related to success criteria described in the conservation/mitigation bank management plan, and benefit listed fish by informing adaptive management strategies being conducted at the FLCB and the BBMB. The researchers will use beach seines and fyke nets to capture listed fish. Once captured, all listed fish will be identified by species and released. A subsample will be measured for fork length. No anesthesia will be used, and no additional handling procedures would take place. Captured fish will remain completely wetted at all times to minimize stress. Any fish

exhibiting signs of physiological stress would be immediately released. The researchers are not proposing to kill any of the fish they capture, but some may die as an unintended result of the research.

Permit 13791–2R

A notice of receipt of an application for scientific research permit renewal (13791–2R) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 13791–2R was issued to the USFWS SFWO on December 23, 2015 and expires on December 31, 2020.

Permit 13791–2R authorizes the USFWS SFWO to annually take juvenile and smolt CVSR Chinook salmon, SRWR Chinook salmon, CCV steelhead, and juvenile and larval sDPS green sturgeon while conducting seven research studies. The purpose of the studies is to evaluate/monitor the: (1) Abundance, temporal and spatial distribution, and survival of salmonids and other fishes in the lower Sacramento and San Joaquin rivers and the San Francisco Estuary (SFE); (2) occurrence and habitat use of fishes, especially early life history stages, within the Liberty Island and Cache Slough Complex; (3) relative gear efficiencies for all IEP fish survey nets, and also the distribution of delta smelt; (4) littoral habitat use of juvenile Chinook salmon within the Delta; (5) the effect of projected water operations on delta smelt; (6) length at date race criteria of SRWR Chinook salmon sized juvenile Chinook salmon; and (7) SRWR and CVSR Chinook salmon floodplain usage in the Yolo bypass. These studies will result in capture/handle/release take, tissue sampling, and/or intentional directed mortality. Intentional directed mortality will apply to only juvenile hatchery adipose clipped salmonids and larval green sturgeon. Capture methods will include Kodiak trawl, midwater trawl, beach seine, zooplankton net, larval net, gill net, fyke net, purse seine, and boat electrofishing. All listed fish except adipose fin clipped SRWR and CVSR Chinook salmon will be immediately collected from the sampling gears, placed in containers filled with river water collected at the location being sampled, processed, held in a recovery container filled with aerated river water, and subsequently released at the sampled location. A fin tissue sample will be collected from a subset of natural origin SRWR and CVSR Chinook salmon for stock determination. The purpose of intentional mortality of hatchery origin (adipose clipped) SRWR and CVSR Chinook salmon will be to collect coded wire tags (CWT), and up ten green

sturgeon larvae will be killed during larval fish collections in order to identify the contents of the larval trawl net, which can only be achieved in the lab. The data provided by these studies will provide natural resource managers real-time biological and population data on fishes to evaluate the effect of water operations and fish management practices within the SFE, thereby benefiting listed fish.

Permit 14516–2R

A notice of receipt of an application for scientific research permit renewal (14516–2R) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 14516–2R was issued to Dr. Jerry Smith on December 23, 2015 and expires on December 31, 2020.

Permit 14516–2R authorizes Dr. Jerry Smith, Associate Professor in the Department of Biological Sciences at San Jose State University to annually take multiple life stages of CCC coho salmon and CCC steelhead while conducting two studies: (1) Stream and lagoon surveys in Gazos Creek, Waddell Creek, and Scott Creek; and (2) lagoon surveys in Pescadero Creek Lagoon and San Gregorio Lagoon. The purpose of the studies is to: (1) Provide an annual index of relative abundance for juvenile listed salmonids, provide data on lagoon and upstream habitat utilization and growth, and provide an assessment of trends and year to year response to variations in habitat conditions; and (2) determine juvenile listed salmonid abundance and growth, and provide adult life history information in the lagoons. Capture methods will include backpack electrofishing, and beach seine. Captured salmonids will be measured, and a subset of juvenile captures and all adults will have scale samples taken, before being released at the capture location. A subsample of juvenile steelhead will also be marked via caudal fin clip to perform a mark-recapture analysis. Scale and fin tissue samples will be taken from adult fish carcasses. Captured live fish will be held in flow-through live cars, covered with a towel to provide shade and cover to calm fish. Adult fish will be processed and released first. In lagoons, live cars will be kept in deeper water with cooler temperatures and less turbidity to prevent warming above ambient temperatures or a decrease in dissolved oxygen. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 15215

A notice of receipt of an application for scientific research permit (15215)

was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 15215 was issued to CDFW on December 23, 2015 and expires on December 31, 2020.

Permit 15215 authorizes the CDFW, Fisheries Branch, Fish Health Laboratory to take endangered SRWR Chinook salmon, CCC coho salmon and SC steelhead for a period of five years. The purpose of the research is to investigate wild fish kills/disease outbreaks that could occur in California that involve federally listed endangered species. The research will benefit the listed species by providing fisheries managers with the necessary information to help alleviate future outbreaks of fish disease through proper management of fishery and water resources. The research will only be conducted in the event of elevated and unexplained endangered species mortality or the presence of clinically diseased animals. Given such a triggering event, endangered fish will be collected in any of the state waters of California in which a disease outbreak/fish die-off occurred. Adult and juvenile endangered fish will be collected by hand or dip-net, as only dead and/or moribund fish, or fish displaying clinical signs of disease, will be collected. Moribund or clinically diseased fish will be euthanized (*i.e.*, intentional directed mortality). Trained CDFW pathologists and veterinarians will assess moribund or diseased fish prior to euthanasia, and only fish that will likely die regardless of the actions proposed by CDFW will be euthanized. Necropsies will be performed on dead and euthanized captured fish either in the laboratory or in the field, fish will be examined for signs of parasitic and bacterial infections, and fin and/or internal tissues will be collected for virology, histopathology, immunological testing and/or DNA testing.

Permit 16274

A notice of receipt of an application for scientific research permit renewal (16274) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 16274 was issued to the MRC on December 23, 2015 and expires on December 31, 2020.

Permit 16274 authorizes the MRC to take CC Chinook salmon, SONCC coho salmon, CCC coho salmon, NC steelhead, and CCC steelhead while conducting research and monitoring to assess juvenile and adult populations of salmonids and their distribution in streams within MRC's property. Research will be conducted in several watersheds within Mendocino and northern Sonoma counties. The data

gathered will benefit listed fish by informing a better understanding of salmonid distribution, abundance, and habitat utilization in these areas. Juvenile salmonids will be captured by backpack electrofishing, anesthetized, weighed, measured to fork length, and released. A subsample of juvenile salmonids will be fin clipped to mark and to collect tissue samples for genetic analysis. Live adults and/or juveniles will be observed via snorkel surveys and spawning surveys. Carcasses will be measured and then marked to ensure duplicate measurements were not made. Outmigrant trapping will be conducted using a rotary screw trap or weir/pipe trap; captured outmigrants will be anesthetized, measured, and released. A subsample of outmigrants will be marked (dye, elastomer, or fin clip) or Passive Integrated Transponder (PIT) tagged. All anesthetized fish will be allowed to recover in a bucket containing aerated natal water prior to being released back into the stream from which they were taken. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 17063

A notice of receipt of an application for scientific research permit renewal (17063) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17063 was issued to the USFS, Redwood Sciences Laboratory on December 23, 2015 and expires on December 31, 2020.

Permit 170963 authorizes the USFS, Redwood Sciences Laboratory to perform eight studies that together will take CC Chinook salmon, SONCC coho salmon, CCC coho salmon, NC steelhead, CC steelhead, and SC steelhead. The purposes of the eight studies are: (1) To investigate the invasion history of non-listed speckled dace in the Van Duzen River and the Eel River, (2) to investigate the invasion history of non-listed California roach in the Van Duzen River and the Eel River, (3) to develop an Individual Based Modeling (IBM) approach to predict the effects of management practices on salmonid population in Northern California, (4) to link abiotic factors (*e.g.*, distance to spawning ground) to the expression of an anadromous or resident life history for *O. mykiss* in the Eel River, (5) to link the distribution and movement of watershed products (*e.g.*, wood, sediment, and water) in tributaries and mainstem channels to fish diversity and abundance in Northern California rivers, (6) to provide managers with insights into the status

and relatedness of Sacramento sucker populations in northern California, (7) to document the speckled dace invasion of the Mad River, and (8) to provide managers with a tool to predict the effects of management decisions on Santa Ana suckers in the Santa Ana River. Listed adult and juvenile salmonids will be observed via snorkel surveys. Listed juvenile salmonids will be captured via backpack and/or boat electrofishing for all eight studies, and also via beach seine and/or fyke net for Study 6 (*i.e.*, Sacramento sucker relatedness and distribution). For most studies, listed salmonids that are captured will be anesthetized, measured and/or weighed, and released. Captured fishes will be held in multiple live cars to prevent overcrowding and to maintain acceptable water quality conditions. In addition to capturing, handling and releasing fish, Study 4 (*i.e.*, factors affecting the expression of an anadromous versus resident life history in *O. mykiss*) will also include intentional directed mortality for otolith microchemical analyses. A maximum of four *O. mykiss* will be sacrificed from each of seventy sample streams distributed throughout the Eel River, which will include both anadromous (listed as threatened) and resident (non-listed) life history forms.

Permit 17077-2R

A notice of receipt of an application for scientific research permit renewal (17077-2R) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17077-2R was issued to Dr. Peter Moyle on December 23, 2015 and expires on December 31, 2020.

Permit 17077-2R authorizes Dr. Peter Moyle, with the University of California at Davis, Department of Wildlife, Fish and Conservation Biology, to take listed species while conducting research designed to develop a better understanding of how physical habitat, flow and other factors interact to maintain assemblages of native and non-native aquatic species in the upper SFE. This study will provide knowledge about food web and habitat support for native fishes, including listed anadromous fish, which are suspected of utilizing such habitats during development. While listed fish are not the target species for this study, the study will benefit listed fish by improving management decisions regarding creating additional habitat, and helping to anticipate the effects of drought and climate change on food and habitat availability. Sampling will be conducted in three distinct regions of the SFE: (1) The Cache-Lindsey complex, (2) the Sherman Lake complex

and (3) Suisun Marsh, and will take juvenile and adult CVSR Chinook salmon, SRWR Chinook Salmon, CCV steelhead, and sDPS green sturgeon. Capture methods will be similar for each of these regions, and will include otter trawling, beach seining and boat electrofishing, however electrofishing will be suspended immediately upon encountering a listed species. All sampled fish will be placed in a bucket with ambient water and an aerator, examined for responsiveness and returned to the water as soon as possible with a minimum of handling, after identification and length estimates were made. Juvenile SRWR and CVSR Chinook salmon will be identified using published size-at-date criteria. Only adult green sturgeon captures will receive additional processing beyond identification and measuring for length. Adult green sturgeon will be scanned for the presence of a PIT tag, and a soft pelvic fin tissue sample will be collected. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 17219

A notice of receipt of an application for scientific research permit renewal (17219) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17219 was issued to the NMFS SWFSC, Fisheries Ecology Division on December 23, 2015 and expires on December 31, 2020.

Permit 17219 authorizes the NMFS SWFSC, Fisheries Ecology Division to conduct research throughout California that will include take of SRWR Chinook salmon, CVSR Chinook salmon, SONCC coho salmon, CCC coho salmon, NC steelhead, CCC steelhead, CCV steelhead, S-CCC steelhead, SC steelhead, and juvenile sDPS green sturgeon. The research will benefit listed fish by supporting conservation and management of listed anadromous salmonids and green sturgeon in California by directly addressing information needs identified by NMFS and other agencies. FED studies address priority topics identified in NMFS technical recovery team reports, NMFS recovery plans, joint programs such as the California Coastal Monitoring Program developed by NMFS and CDFW, and state programs such as the Fisheries Restoration Grant Program. Research objectives of specific studies include: (1) Estimating population abundance and dynamics; (2) evaluating factors affecting growth, survival, and life-history; (3) assessing life-stage specific habitat use and movement; (4) collecting data necessary to construct

various types of models (e.g., population, life-cycle, bioenergetics, and habitat-use models); (5) determining genetic structure of populations; (6) evaluating the effects of activities such as water management and habitat restoration on populations; and (7) developing improved sampling and monitoring methods.

Research and take will involve various life stages (juvenile, smolt, adult, and carcass). Listed fish will be observed during spawning surveys, and captured by electrofishing, beach seine, rotary screw trap, and/or hook-and-line. The majority of captured fish will be anesthetized, measured to fork length, and released. A subsample of captured fish will be further sampled by collection of scales, fin clips, gill clips or stomach contents; and/or marking or tagging including fin tissue clips, PIT tags, elastomer tags, acoustic tags, or radio tags. Species care after capture will include use of aerated buckets or live cars for holding and recovery, and minimization of handling time. The majority of fish captured will be released alive at their point of capture following recovery from handling. However, in limited cases some fish will be: (1) Retained in enclosures in streams for short-term growth and survival experiments and then released, or (2) euthanized for analysis of otoliths and/or parasitological/pathological studies of parasites and diseases of wild juvenile steelhead.

Permit 17272

A notice of receipt of an application for scientific research permit renewal (17272) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17272 was issued to the USFWS AFWO on December 23, 2015 and expires on December 31, 2020.

Permit 17272 authorizes the USFWS AFWO to take multiple life stages of hatchery and wild SONCC coho salmon via monitoring and research activities in Northwest California. The purposes of the five studies included are to monitor: (1) Chinook salmon fry production and disease incidence in the Klamath River below Iron Gate dam, (2) Chinook salmon escapement in the mainstem Klamath River below the Shasta River confluence, (3) Chinook salmon escapement in the mainstem Klamath River from Iron Gate dam to the Shasta River confluence, (4) coho salmon escapement between Iron Gate Dam and the Indian Creek confluence, and (5) long-term salmonid disease incidence in the lower Klamath River. Trained AFWO crews will conduct redd surveys, on foot and from rafts, which could observe/harass spawning SONCC coho

salmon. Crews will spend minimal time around redds and avoid walking on redds. Trained AFWO crews will also capture juvenile SONCC coho salmon using rotary-screw traps, frame nets, and beach seines. Juvenile coho salmon will be held in aerated holding buckets filled with fresh river water then anesthetized, measured for fork length, weighed, and released back into the river. There will be some intentional mortality of hatchery juvenile coho salmon for disease analysis. Aside from these hatchery fish, the researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities. The studies will benefit listed coho salmon by informing the AFWO goal to develop conservation strategies for aquatic resources and to evaluate the success of aquatic habitat restoration efforts that will lead to the recovery and conservation of fish populations and fisheries in northern California.

Permit 17351

A notice of receipt of an application for scientific research permit renewal (17351) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17351 was issued to the GDRC on December 23, 2015 and expires on December 31, 2020.

Permit 17351 authorizes the GDRC to take listed salmonids while conducting research and monitoring under an existing Aquatic Habitat Conservation Plan (AHCP). The AHCP, which was approved in 2007 and is valid until 2057, identifies potential threats to three listed fish species that may result from GDRC's timber harvest activities and describes minimization and mitigation measures and effectiveness monitoring to address potential threats. The requested take limits will allow for implementation of monitoring and research activities in several northern California watersheds including the Winchuk River, Smith River, Lower Klamath basin tributaries, Mad River, Little River, several Humboldt Bay tributaries, and Eel River. The three species identified which will be taken as a direct result of this monitoring are CC Chinook salmon, SONCC coho salmon, and NC steelhead. Research and take will involve various life stages (fry, juvenile, smolt, adult, and carcass). Trained GDRC crews will observe listed salmonids during snorkel surveys and spawning surveys. Crews will avoid walking in suitable spawning habitats (e.g., riffle crests). Listed salmonids will be captured by various capture methods including backpack electrofishing, kick net sampling, rotary screw trapping, v-notch weir outmigrant trapping, and

minnow trapping. Most captured fish will be measured and released. A subsample of captured fish will be anesthetized, then marked via dorsal fin clip, fin tissue sampled, scale sampled, and/or PIT tagged. Anesthetized individuals will be allowed to recover in mesh containers placed in the stream channel prior to release. Data collected will be used to document long-term population trends and better understand the potential impacts on the covered species and their habitats that may result from AHCP covered activities. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 17396

A notice of receipt of an application for scientific research permit (17396) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17396 was issued to the USFWS AFRP on December 23, 2015 and expires on December 31, 2020.

Permit 17396 authorizes the USFWS AFRP to take listed fish while conducting research designed to: (1) Provide data necessary to evaluate the effectiveness of AFRP restoration projects, including appraisal of spawning gravel augmentation, in-channel and floodplain habitat enhancement actions, and water allocation/flow regime alteration actions; and (2) provide reconnaissance-level population and biological data on contemporary anadromous fish population patterns within the Central Valley of California, in order to prioritize and select future restoration projects to benefit anadromous salmonids. All AFRP restoration monitoring projects will serve to benefit anadromous salmonids by providing data on restoration project effectiveness, and providing valuable information relating to adaptive management procedures. Take of listed species including various life stages of CVSR Chinook salmon, CCV steelhead, and sDPS green sturgeon will result from activities in the following five projects: (1) Bobcat flat restoration effectiveness monitoring in the lower Tuolumne River; (2) adult sturgeon acoustic telemetry in the lower San Joaquin basin; (3) San Joaquin River sturgeon spawning habitat assessment; (4) steelhead sampling and acoustic tracking in the lower Stanislaus, Tuolumne and Merced Rivers; and (5) fish reconnaissance in the San Joaquin River system. Observe/harass take will result from snorkel surveys. Capture methods will include beach seine, trammel nets, gill nets, fyke nets, hook-

and-line, egg mats, benthic d-nets, and boat and backpack electrofishing. The majority of captured listed fish will be handled and released; a subsample of captures will be anesthetized, scale sampled, fin clipped (to mark and to collect fin tissue for genetic analysis), acoustic tagged, and/or subject to intentional directed mortality. Green sturgeon eggs ($n = 100$) and larvae ($n = 5$) will be intentionally sacrificed, which will be necessary to provide voucher tissue specimens, and will benefit the species by providing critical information on green sturgeon spawning habitat. To minimize physiological stress, all sturgeon will be held in a net pen submerged in river or with flowing water through their gills while waiting to be handled. All listed salmonids will be immediately collected from the sampling gears, placed in five gallon buckets filled with fresh river water from the location being sampled, processed, held in another container filled with fresh river water for recovery, and subsequently released in the sampled location. The new information on these species generated by these projects will help prioritize future restoration projects, thus benefiting listed species.

Permit 17867

A notice of receipt of an application for scientific research permit renewal (17867) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17867 was issued to the HRC on December 23, 2015 and expires on December 31, 2020.

Permit 17867 authorizes the HRC to take juvenile and adult CC Chinook salmon, SONCC coho salmon and NC steelhead while conducting research and monitoring that satisfies two objectives: (1) To comply with CDFW's Restorable Class I policy by sampling reaches through snorkel and electrofishing methods to identify Class I habitat within proposed timber harvest plans, and (2) to monitor fish occupancy trends at the reach, sub basin, watershed and HRC property level over time by repeated snorkel surveys at index and randomly selected reaches. Adult and juvenile salmonids will be observed during snorkel surveys, and juvenile salmonids will be captured by backpack electrofishing. Snorkel surveys will be the preferred method of detecting presence/absence of fish species. Captured fish will be identified, and transported upstream of the project area. All captured specimens will be kept in aerated buckets, observed closely, and not released until fully recovered. The monitoring will help to achieve HRC's fisheries program's general goal, which

is to determine the occurrence, distribution, population and habitat conditions of anadromous fishes on HRC lands as well as to monitor, protect, restore and enhance the anadromous fishery resources in watersheds owned by HRC. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 17877

A notice of receipt of an application for scientific research permit renewal (17877) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17877 was issued to the BOR on December 23, 2015 and expires on December 31, 2020.

Permit 17877 authorizes the BOR to take juvenile, smolt, adult and carcasses of SONCC coho salmon via: (1) Observation/harassment by way of snorkel surveys, hand netting that specifically targets other species, and spawning surveys; and (2) capture by rotary screw trap, boat electrofishing, hook-and-line, beach seine, fyke net, or minnow trapping. The BOR applied for this permit as a contingent of the Trinity River Restoration Program (TRRP), an inter-agency partnership of the BOR, USFWS, Hoopa Valley Tribe, Yurok Tribe, CDFW, Trinity County, USFS, NMFS, and the California Department of Water Resources. The TRRP benefits listed species by conducting large-scale channel restoration and habitat restoration activities in the Trinity River mainstem and watershed as a means of restoring declining fishery resources. The following six specific studies are included: (1) Trinity River juvenile salmonid outmigrant monitoring, (2) juvenile Chinook salmon density monitoring, (3) Trinity River Chinook salmon redd and carcass survey, (4) Trinity River invasive brown trout predation on coho investigation, (5) Trinity River juvenile coho salmon ecology study, and (6) watershed rehabilitation/research. Fin tissue samples will be collected from carcasses. The majority of captured juvenile coho salmon will be anesthetized, measured to fork length and released, but a subsample will also be PIT tagged. Tagged fish will be held in recovery pens post tagging to monitor and enhance post-tagging health. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 17916

A notice of receipt of an application for scientific research permit renewal

(17916) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 17916 was issued to the BLM on December 23, 2015 and expires on December 31, 2020.

Permit 17916 authorizes the BLM to monitor the effects of current management actions related to the Northwest Forest Plan's Aquatic Conservation Strategy on anadromous salmonids and their habitats. In order to monitor land management actions and implement the Northwest Forest Plan in northern California, BLM needs to obtain updated information on fish distribution and habitat. Sampling will occur in various watersheds, including the Mattole River, Eel River, Lost Coast region tributaries to the Pacific Ocean, and Humboldt Bay tributaries. Take of CC Chinook salmon, SONCC coho salmon, and NC steelhead will result from this monitoring and research. The preponderance of requested take will result from spawning surveys, snorkel surveys, and presence/absence surveys from the bank, all of which will result in observe/harass take of juvenile and/or adult salmonids. Capture methods that will take juvenile salmonids include backpack electrofishing and beach seine. A small number of salmonid fry may also be captured during kick net activities intended to sample invertebrates. Electrofishing will be used only when stream conditions prohibit less invasive sampling methods. Personnel handling fish will have wet hands and experience in fish handling. After length measurements were complete, fish will be placed in a bucket of freshwater for longer than 30 minutes to allow for recovery prior to being released. Recovering fish will be kept in cool, shaded, aerated water and will not be overcrowded. This research will benefit listed fish by informing adaptive management strategies intended to aid in the recovery of at-risk anadromous salmonids. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 18012

A notice of receipt of an application for scientific research permit renewal (18012) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 18012 was issued to the CDFW, Bay Delta Region (Region III) on December 23, 2015 and expires on December 31, 2020.

Permit 18012 authorizes the CDFW, Bay Delta Region to take listed species while conducting two research projects, the Watershed Restoration Project (WRP) and the Fisheries Management

Project (FMP), designed to assess and restore the productivity of CC Chinook salmon, CCC coho salmon, NC steelhead, CCC steelhead, and S-CCC steelhead in Sonoma, Mendocino, Napa, Marin, San Mateo, Santa Cruz and Monterey counties in north central California. Program staff will accomplish this goal by conducting habitat and salmonid surveys to determine potential limiting factors and stock status in order to identify the specific measures and actions needed to protect and increase production of listed salmonids. The authorized studies include: (1) Juvenile salmonid occurrence, distribution and habitat monitoring; (2) adult salmonid occurrence, passage, and distribution; (3) spawning ground surveys; (4) life cycle station monitoring; and (5) juvenile steelhead lagoon beach seining. Listed fish will be observed/harassed during snorkel surveys, spawning surveys, carcass surveys, and by the use of electronic counting stations (*i.e.*, DIDSON camera, Vaki Riverwatcher and/or video weir). Listed salmonids will be captured using backpack electrofishing, beach seining, rotary screw traps, fyke/pipe traps, and potentially adults may be captured using a resistance board weir. The majority of juvenile captures will be handled (measured for fork length and weighed), and released. A subset of juvenile salmonid captures will be anesthetized, fin tissue sampled to collect tissue for genetic analysis, scale sampled, marked with an upper caudal fin clip, and/or PIT tagged. Only healthy fish with no signs of stress or injury will be subjected to marking or tagging. All fish will be allowed to recover fully and will be observed carefully for injury prior to release. Captured adult salmonids will be handled (*i.e.*, identified, measured, weighed, and scale and tissue samples taken), tagged (bi-colored Floy tags and/or opercular-hole-punched) and released upstream of the weir. All fish handled will be held in clean and decontaminated containers that are supplied with cool, aerated water and will be released back into the stream reach from which they were collected after recovery. Implementation of these activities under the WRP and the FMP will benefit listed species by informing recommendations on proposed habitat restoration projects and by determining the impacts of various management actions. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 18712

A notice of receipt of an application for scientific research permit (18712) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 18712 was issued to H.T. Harvey & Associates on December 23, 2015 and expires on December 31, 2020.

Permit 18712 authorizes H.T. Harvey & Associates to take juvenile and smolt CC Chinook salmon, SONCC coho salmon, CCC coho salmon, NC steelhead, and adult sDPS eulachon while completing a project that is intended to meet three Marine Protected Area (MPA) monitoring goals set by the MPA Monitoring Enterprise. The three monitoring goals are: (1) To assess trends in the condition of ecosystems inside and outside of MPA's, (2) to evaluate the effects of specific MPA design criteria such as MPA size and distance between MPAs, and (3) to evaluate the effect of visitors on MPAs. The project will contribute to the goals of the monitoring enterprise by describing the baseline biological community in four northern California estuaries: (1) Mad River Estuary in Humboldt County, (2) South Humboldt Bay State Marine Recreational Management Area in Humboldt County, (3) Ten Mile Estuary State Marine Conservation Area (SMCA) in Mendocino County, and (4) Big River Estuary SMCA in Mendocino County. Beach seines and fyke nets will be used to capture fish whereby take (*i.e.*, capture/handle/release) of listed salmonids will occur. Handling will consist of identifying and measuring fish to fork length. To ensure that handled fish will experience minimal adverse effects as a result of the sampling process, fish will be allowed to recover briefly either in live wells or in shaded, aerated buckets. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 18937

A notice of receipt of an application for scientific research permit (18937) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 18937 was issued to the Scripps Institution of Oceanography, University of California, San Diego, CSGCP on December 23, 2015 and expires on December 31, 2020.

Permit 18937 authorizes the Scripps Institution of Oceanography, University of California, San Diego, CSGCP to annually take listed CC Chinook salmon, CCC coho salmon, and CCC steelhead while monitoring the status

and trends of listed salmonids in the Russian River watershed. The CSGCP will collect data to estimate population metrics such as abundance, survival, growth, and spatial distribution of multiple life stages of salmonids, and relate them to different recovery actions including hatchery releases, habitat enhancement projects, and stream flow improvement projects. Data collection will be designed to meet four specific study objectives: (1) Evaluation of the Russian River Coho Salmon Captive Broodstock Program, (2) implementation of the California Coastal Salmonid Monitoring Plan, (3) comparing juvenile coho salmon oversummer survival with stream flow, and (4) evaluation of habitat enhancement projects. The four studies will provide resource agencies with valuable information that will help guide future decisions regarding recovery actions. Fish populations will be monitored in many tributaries of the Russian River watershed and several methods that could observe/harass and/or capture fish will be employed, including: Snorkel surveys, spawning surveys, redd surveys, downstream migrant trapping (pipe/funnel trap), minnow trapping, operation of PIT tag detection systems (*i.e.*, PIT tag arrays and PIT tag wand surveys), and backpack electrofishing. Handling of live fish captured in traps or during electrofishing surveys will include anesthetization, measuring for fork length, scanning for CWT and PIT tags, fin tissue sampling, scale sampling, PIT tagging, and/or gastric lavage. Adult salmonid carcasses encountered during spawning surveys will be scanned for PIT tags, measured, fin clipped, scale sampled, and otoliths will be extracted. All live fish will be released back into the stream following recovery in aerated buckets of cold water. Specific measures that will be taken to reduce the risk of injury or mortality to fish include minimizing the time that fish are handled, placing potential predators in separate holding buckets, running aerators in buckets, avoiding overcrowding in buckets, changing water in the anesthesia bucket frequently, placing a thermometer in holding buckets and replacing water frequently if the temperatures are rising, wetting measuring boards and weigh pans, processing listed species first, checking traps at least once per day and more frequently in high flow or windy conditions, and placing flow deflectors inside the trap box to provide refugia for fish. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 19121

A notice of receipt of an application for scientific research permit (19121) was published in the **Federal Register** on July 29, 2015 (80 FR 45197). Permit 19121 was issued to the USGS, California Water Survey on December 23, 2015 and expires on December 31, 2020.

Permit 19121 authorizes the USGS, California Water Survey take of listed species associated with completing two main objectives: (1) To examine research applications of the SmeltCam that have been developed and coordinated with the IEP, and (2) to provide fisheries science support for the BOR's compliance with Biological Opinions. The studies are intended to: (1) Provide new quantitative data addressing the potential benefits of habitat restoration to the SFE and Delta ecosystem and its native fish populations, and (2) determine the vertical and lateral distribution of delta smelt, and the continued evaluation and application of SmeltCam technology for studies of delta smelt and other fishes. The results of these studies are expected to provide net benefits to listed species by improving our understanding of their ecology and habitat use, and by informing the development of new research tools that can guide management decisions and habitat restoration actions. Sampling will be conducted in Suisun Bay, and will take multiple life stages of CVSR Chinook salmon, SRWR Chinook salmon, CCV steelhead, and sDPS green sturgeon. Capture methods will include beach seine, fyke trap, larval net, otter trawl, midwater trawl, boat electrofishing, set line, and gill net. All sampling will follow methods and protocols designed to minimize take of listed species while conducting research and monitoring. For example, sampling gear such as gill nets will be watched closely to monitor the status of any fishes entangled in the net. Set times will be short (approximately one hour), and nets will be set in habitats that listed fish are unlikely to inhabit. Listed salmonids captured in the course of sampling will be identified, carefully measured for length and released. Green sturgeon will be anesthetized using MS-222, scanned for a presence of a PIT tag, PIT tagged if no PIT tag is present, tissue sampled, and allowed to recover prior to release. All fishes collected in any sampling gear will be handled as gently as possible to facilitate safe release back to the water. The researchers are not proposing to kill any of the fish they capture, but a small number may die as an unintended result of the activities.

Permit 19320

A notice of receipt of an application for scientific research permit (19320) was published in the **Federal Register** on April 8, 2015 (80 FR 18820). Permit 19320 was issued to the NMFS SWFSC, Fisheries Ecology Division on December 1, 2015 and expires on October 29, 2020.

Permit 19320 authorizes the NMFS SWFSC, Fisheries Ecology Division to annually take sub-adult and juvenile listed salmon and steelhead for a period of five years. The permit will authorize research designed to (1) determine the inter-annual and seasonal variability in growth, feeding, and energy status among juvenile salmonids in the coastal ocean off northern and central California; (2) determine migration paths and spatial distribution among genetically distinct salmonid stocks during their early ocean residence; (3) characterize the biological and physical oceanographic features associated with juvenile salmon ocean habitat from the shore to the continental shelf break; (4) identify potential links between coastal geography, oceanographic features, and salmon distribution patterns; and (5) identify and test ecological indices for salmon survival. This research will benefit listed fish by informing comprehensive lifecycle models that incorporate both freshwater and marine conditions and recognize the relationship between the two habitats; it will also identify and predict sources of salmon mortality at sea and thereby help managers develop indices of salmonid survival in the marine environment.

Listed fish will be captured primarily via surface trawling, however midwater trawling and beach seining will be used occasionally. Sub-adult salmonids (*i.e.*, fish larger than 250 mm) that survive capture will have fin tissue and scale samples taken, and then be released. Any subadult salmonids that do not survive capture, and all juvenile salmonids (*i.e.*, fish larger than 80 mm but less than 250 mm) will be lethally sampled (*i.e.*, intentional directed mortality) in order to collect (1) otoliths for age and growth studies; (2) coded wire tags for origin and age of hatchery fish; (3) muscle tissue for stable isotopes and/or lipid assays; (4) stomachs and contents for diet studies; and (5) other tissues including the heart, liver, intestines, pyloric caeca, and kidney for special studies upon request.

Permit 19400

A notice of receipt of an application for scientific research permit (19400) was published in the **Federal Register**

on July 29, 2015 (80 FR 45197). Permit 19400 was issued to ICF consulting on December 23, 2015 and expires on December 31, 2020.

Permit 19400 authorizes ICF consulting to take juvenile CVSR Chinook salmon and SRWR Chinook salmon while conducting a study to investigate if longfin smelt in San Pablo Bay shift their vertical distribution under different environmental and biological conditions. Although this study principally targets longfin smelt, ESA listed Chinook salmon will be encountered during sampling. ICF will collect data that will be useful to local researchers on captured and/or photographed listed Chinook salmon, including abundance, length, and potentially tissue samples. Fish will be sampled using a midwater trawl, however the majority of tows will be conducted with only a video device (*i.e.*, SmeltCam) acting as the codend. Therefore, the majority of take will be observe/harass. The fish camera image program will be able to determine the length, and thereby an estimate of the race/run/listing status, of salmon that pass through the net. In order to verify the results of the SmeltCam, some tows will be conducted with both the video device and a traditional codend. Physically captured juvenile salmonids will be placed in a bucket with aerated water, handled (*i.e.*, measured to fork length and possibly fin tissue sampled for genetic analysis), and released. The researchers are not proposing to kill any of the fish they capture.

Dated: January 12, 2016.

Perry F. Gayaldo,

Deputy Director, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE394

Endangered and Threatened Species; Status Update on Preparation of Record of Decision, Mitchell Act Hatcheries Environmental Impact Statement

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration, Commerce.

ACTION: Notice.

SUMMARY: The National Marine Fisheries Service (NMFS) released its final Environmental Impact Statement

(EIS) to Inform Columbia River Basin Hatchery Operations and the Funding of Mitchell Act Hatchery Programs in September 2014 (also known as the Mitchell Act Hatchery EIS). This notice serves as an update on preparation of the agency's record of decision (ROD).

FOR FURTHER INFORMATION CONTACT:

James Dixon, (360) 534-9329 or email: james.dixon@noaa.gov.

SUPPLEMENTARY INFORMATION:

On September 3, 2004 (69 FR 53892), NMFS announced its intent to prepare an EIS pursuant to the National Environmental Policy Act (NEPA) (42 U.S.C. 4321 *et seq.*) and to conduct public scoping related to the allocation and distribution of Mitchell Act funds for Columbia River hatchery operations. Subsequently, in 2009, NMFS announced its decision to expand the scope of the EIS to include analysis of the environmental effects of all hatchery programs in the Columbia River Basin, regardless of the hatchery funding source, in a way that would inform future NMFS decisions about Endangered Species Act compliances for all Columbia River hatchery programs (74 FR 10724, March 12, 2009). A draft EIS was published in August 2010 (75 FR 47591, August 6, 2010). The final EIS was published in September 2014 (79 FR 54707, September 12, 2014) with a public review period through November 12, 2014.

NMFS has been preparing its ROD through careful consideration of a range of comments received during public review of the final EIS. NMFS is also considering the anticipated effects of its preferred policy direction on species listed under the Endangered Species Act. It is anticipated that the ROD will be published in 2016.

Dated: January 12, 2016.

Perry F. Gayaldo,

Deputy Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE348

Endangered Species; File No. 17225

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that the NMFS Northeast Fisheries Science Center [Responsible Party: William Karp], 166 Water Street, Woods Hole, MA 02543, has applied in due form for a permit to take Atlantic sturgeon (*Acipenser oxyrinchus oxyrinchus*), loggerhead (*Caretta caretta*), Kemp's ridley (*Lepidochelys kempii*), green (*Chelonia mydas*), hawksbill (*Eretmochelys imbricata*) and leatherback (*Dermochelys coraicea*) sea turtles for purposes of scientific research.

DATES: Written, telefaxed, or email comments must be received on or before February 16, 2016.

ADDRESSES: The application and related documents are available for review by selecting "Records Open for Public Comment" from the "Features" box on the Applications and Permits for Protected Species (APPS) home page, <https://apps.nmfs.noaa.gov>, and then selecting File No. 17225 from the list of available applications.

These documents are also available upon written request or by appointment in the Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 427-8401; fax (301) 713-0376.

Written comments on this application should be submitted to the Chief, Permits and Conservation Division, at the address listed above. Comments may also be submitted by facsimile to (301) 713-0376, or by email to NMFS.Pr1Comments@noaa.gov. Please include the File No. in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request to the Chief, Permits and Conservation Division at the address listed above. The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Malcolm Mohead or Amy Hapeman, (301) 427-8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222-226).

The applicant requests a five-year permit to conduct research on sea turtles and Atlantic sturgeon in the U.S. Atlantic exclusive economic zone from Massachusetts to Georgia. The purpose of the research is to evaluate bycatch reduction devices for commercial fishing gear to mitigate sea turtle and

sturgeon interactions under two projects: Project A (Northern region) and Project B (Southern region). For Project A, up to 223 Atlantic sturgeon, 51 loggerhead, six Kemp's ridley, six green, and six leatherback sea turtles could be targeted for research sampling over the course of the permit that have been legally bycaught in a Federal commercial fishery. For Project B, researchers would capture by experimental or control trawls or gillnets up to 204 Atlantic sturgeon, 148 loggerhead, 62 Kemp's ridley, 10 green, eight leatherback and eight hawksbill sea turtles over the course of the permit. All animals would be measured, weighed, tissue sampled, passive integrated transponder (PIT) and/or flipper tagged, and photographed before release. In addition, up to six sea turtles (any species) and six Atlantic sturgeon may accidentally die or be harmed as a result of research activities over the life of the permit.

Dated: December 22, 2015.

Julia Harrison,

*Chief, Permits and Conservation Division,
Office of Protected Resources, National
Marine Fisheries Service.*

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE395

Notice of Intent To Prepare an Environmental Impact Statement for Hatchery Programs Along the Oregon Coast

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of intent to prepare an environmental impact statement; request for comments.

SUMMARY: Pursuant to the National Environmental Policy Act (NEPA), this notice announces that NMFS intends to obtain information necessary to prepare an Environmental Impact Statement (EIS) for Hatchery and Genetic Management Plans (HGMPs) submitted by the Oregon Department of Fish and Wildlife (ODFW) for NMFS's evaluation and determination under Limit 5 of the Endangered Species Act (ESA) 4(d) Rule for threatened salmon and steelhead. The HGMPs specify the propagation of salmon, steelhead, and trout released in rivers, streams, and lakes throughout the Oregon Coast region.

NMFS provides this notice to: (1) Advise other agencies and the public of its plans to analyze effects related to the action, and (2) obtain suggestions and information that may be useful to the scope of issues and alternatives to include in the EIS. This notice further serves to notify the public of the availability of the HGMPs for comment prior to a decision by NMFS on whether to approve the proposed hatchery programs.

DATES: Written or electronic scoping comments must be received at the appropriate address or email mailbox (see **ADDRESSES**) no later than 5 p.m. Pacific Time February 16, 2016.

ADDRESSES: Written comments may be sent by any of the following methods:

- Email to the following address:

OregonCoastHatcheryEIS.wcr@noaa.gov with the following identifier in the subject line: Oregon Coast Hatchery EIS.

- Mail or hand-deliver to NMFS Sustainable Fisheries Division, 2900 NW Stewart Parkway, Roseburg, OR 97471.

- Fax to (541) 957-3386.

Comments received will be available for public inspection, by appointment, during normal business hours at the above address. All Personal Identifying Information (for example, name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information.

Additional information to assist with consideration of the notice of intent, as well as the HGMPs themselves, is available on the Internet at *www.westcoast.fisheries.noaa.gov*.

FOR FURTHER INFORMATION CONTACT:

Lance Kruczic, NMFS, by phone at (541) 957-3381, or email to *lance.kruczic@noaa.gov*.

SUPPLEMENTARY INFORMATION:

ESA-Listed Species Covered in This Notice

Coho salmon (*O. kisutch*): Threatened, naturally-produced and specified artificially-produced stocks in the Southern Oregon/Northern California Coast and Oregon Coast Evolutionarily Significant Units (ESUs).

Background

The ODFW has submitted HGMPs for all hatchery programs along the Oregon Coast to NMFS, pursuant to Limit 5 of the 4(d) Rule for salmon and steelhead promulgated under the ESA (65 FR 42422, July 10, 2000). Before a decision is made by NMFS on these HGMPs, NEPA requires Federal agencies to

conduct environmental analyses of proposed actions to fully consider their effects on the human environment. NMFS's action of evaluating ODFW's HGMPs under Limit 5 of the 4(d) Rule is a major Federal action subject to environmental review under NEPA. Therefore, NMFS is seeking public input on the scope of the required NEPA analysis, including the range of reasonable alternatives, recommendations for relevant analysis methods, and information associated with impacts of the alternatives to the resources listed below or other relevant resources.

The hatchery facilities to be considered in the analysis are Cole Rivers Hatchery, Indian Hatchery, Elk Hatchery, Bandon Hatchery, Rock Hatchery (Umpqua River), Alsea Hatchery, Salmon Hatchery, Cedar Hatchery, Trask Hatchery, Nehalem Hatchery, and associated satellite facilities. Hatchery fish are released into the following waterbodies: Chetco, Rogue, Elk, Coquille, Coos Umpqua, Siuslaw, Alsea, Yaquina, Siletz, Salmon, Nestucca, Trask, Wilson, and Nehalem Rivers, Tenmile Creek, and various coastal lakes. A list of all of the hatchery programs, including links to the HGMPs themselves, is available on the Internet (see **ADDRESSES**).

NMFS will perform an environmental review of the Oregon Coast HGMPs (and associated hatchery facilities) and prepare an EIS that will evaluate potentially significant direct, indirect, and cumulative impacts on the following resources identified to have a potential for effect from the proposed action:

- Water quantity and water quality
- Fish and wildlife species and their habitats
- Socioeconomics
- Environmental Justice
- Cumulative impacts

NMFS will rigorously explore and objectively evaluate a full range of reasonable alternatives in the EIS, including the proposed action (implementation of ODFW's HGMPs) and a no-action alternative. Additional alternatives could include a reduction in artificial production and/or elimination of the hatchery programs along the Oregon Coast.

For all potentially significant impacts, the EIS will identify measures to avoid, minimize, and mitigate the impacts, where feasible, to a level below significance.

Request for Comments

NMFS provides this notice to: (1) Advise other agencies and the public of

its plans to analyze effects related to the action, and (2) obtain suggestions and information that may be useful to the scope of issues and the full range of alternatives to include in the EIS.

NMFS invites comment from all interested parties to ensure that the full range of issues related to Oregon Coast HGMPs is identified. Comments should be as specific as possible.

Written comments concerning the proposed action and the environmental review should be directed to NMFS as described above (see **ADDRESSES**). All comments and materials received, including names and addresses, will become part of the administrative record and may be released to the public.

Authority

The environmental review of the Oregon Coast HGMPs will be conducted in accordance with requirements of the NEPA of 1969 as amended (42 U.S.C. 4321 *et seq.*), NEPA Regulations (40 CFR parts 1500–1508), other appropriate Federal laws and regulations, and policies and procedures of NMFS for compliance with those regulations. This notice is being furnished in accordance with 40 CFR 1501.7 to obtain suggestions and information from other agencies and the public on the scope of issues and alternatives to be addressed in the EIS.

Under section 4 of the ESA, the Secretary of Commerce is required to adopt such regulations as he deems necessary and advisable for the conservation of species listed as threatened. The ESA salmon and steelhead 4(d) rule (65 FR 42422, July 10, 2000, as updated in 70 FR 37160, June 28, 2005) specifies categories of activities that contribute to the conservation of listed salmonids and sets out the criteria for such activities. Limit 5 of the updated 4(d) rule (50 CFR 223.203(b)(5)) further provides that the prohibitions of paragraph (a) of the updated 4(d) rule (50 CFR 223.203(a)) do not apply to activities associated with artificial propagation programs provided that an HGMP has been approved by NMFS to be in accordance with the salmon and steelhead 4(d) rule (65 FR 42422, July 10, 2000, as updated in 70 FR 37160, June 28, 2005).

Dated: January 12, 2016.

Perry F. Gayaldo,

Deputy Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510-22-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Deletions from the Procurement List.

SUMMARY: The Committee is proposing to delete products from the Procurement List that was previously furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

COMMENTS MUST BE RECEIVED ON OR BEFORE: 2/14/2016.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603-7740, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51-2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Deletions

The following products are proposed for deletion from the Procurement List:

Products

NSN(s)—Product Name(s):

7195-01-567-9528—Bulletin Bar, Cork, Map Rail, 36" x 1", Aluminum Frame
7195-01-567-9529—Bulletin Board, Cork, Map Rail, 48" x 1", Aluminum Frame
7195-01-567-9530—Bulletin Bar, Cork, Map Rail, 24" x 1", Aluminum Frame

Mandatory Source(s) of Supply: The Lighthouse for the Blind, Inc. (Seattle Lighthouse), Seattle, WA

Contracting Activity(ies): Department of Veterans Affairs, NAC, Hines, IL; General Services Administration, FSS Household and Industrial Furniture, Arlington, VA

BILLING CODE 6353-01-P

BUREAU OF CONSUMER FINANCIAL PROTECTION

Academic Research Council Solicitation of Applications for Membership

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Notice of solicitation of applications.

SUMMARY: Section 1013(b)(1) of the Consumer Financial Protection Act, 12 U.S.C. 5493(b)(1), establishes the Consumer Financial Protection Bureau's (Bureau) Office of Research and assigns to it the responsibility of researching, analyzing, and reporting on topics relating to the Bureau's mission, including developments in markets for consumer financial products and services, consumer awareness, and consumer behavior. The Bureau established the Academic Research Council (Council) as a technical advisory body comprised of scholars to provide the Office of Research with guidance as it performs its responsibilities. Director Richard Cordray invites qualified individuals to apply for appointment to the Council. Appointments to the Council are typically for three years. However, the

Director may amend the Council charter from time to time during the charter terms as the Director deems necessary to accomplish the purpose of the Council. There are three vacancies on the Academic Research Council. The Bureau expects to announce the selection of new members in April 2016.

DATES: Only complete application packets received on or before 5 p.m. eastern standard time on February 12, 2016, will be given consideration for membership on the Council.

ADDRESSES: Complete application packets must include a curriculum vitae or résumé for each applicant and a completed application. The application can be accessed at: <https://consumer-financial-protection-bureau.forms.fm/application-to-serve-on-the-academic-research-council-arc>.

All applications for membership on the Council should be sent:

- **Electronically:** <https://consumer-financial-protection-bureau.forms.fm/application-to-serve-on-the-academic-research-council-arc>. We strongly encourage electronic submissions.

- **Mail:** Julian Alcazar, Outreach and Engagement Associate, Consumer Financial Protection Bureau, 1700 G Street NW., Washington, DC 20552. Applications must be post marked on or before 5 p.m. eastern standard time on February 12, 2016.

- **Hand Delivery/Courier in Lieu of Mail:** Julian Alcazar, Outreach and Engagement Associate, Consumer Financial Protection Bureau, 1275 First Street NE., 1223-C, Washington, DC 20002. Applications must be received on or before 5 p.m. eastern standard time on February 12, 2016.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Julian Alcazar, Outreach and Engagement Associate, Consumer Financial Protection Bureau, (202) 435-9885.

SUPPLEMENTARY INFORMATION:

I. Background

The Bureau is charged with regulating “the offering and provision of consumer financial products or services under the Federal consumer financial laws,” so as to ensure that “all consumers have access to markets for consumer financial products and services and that markets for consumer financial products and services are fair, transparent, and competitive.” Pursuant to section 1021(c) of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111-203 (Dodd-Frank Act), the Bureau's primary functions are:

1. Conducting financial education programs;

2. Collecting, investigating, and responding to consumer complaints;
3. Collecting, researching, monitoring, and publishing information relevant to the function of markets for consumer financial products and services to identify risks to consumers and to the proper functioning of such markets;
4. Supervising persons covered under the Dodd-Frank Act for compliance with Federal consumer financial law, and taking appropriate enforcement action to address violations of Federal consumer financial law;
5. Issuing rules, orders, and guidance implementing Federal consumer financial law; and
6. Performing such support activities as may be needed or useful to facilitate the other functions of the Bureau.

II. Academic Research Council

Section 1013(b)(1) of the Consumer Financial Protection Act, 12 U.S.C. 5493(b)(1), establishes the Consumer Financial Protection Bureau's Office of Research and assigns to it the responsibility of researching, analyzing, and reporting on topics relating to the Bureau's mission, including developments in markets for consumer financial products and services, consumer awareness, and consumer behavior. The Bureau established the Council as a technical advisory body comprised of scholars to provide the Office of Research with methodological and technical advice and feedback on its research work by framing research questions; suggesting new data collection strategies and methods of analysis; providing feedback, both backward and forward looking, on the Office of Research's research program; providing input into its research strategic planning process and research agenda; collaborating with the Bureau's research staff on high value research projects which will allow for transfer of specialized expertise; and supporting high quality recruitment.

III. Qualifications

In appointing members of the Council, the Office of Research seeks to recruit tenured academics with a world class research and publishing background, and a record of public or academic service. We are seeking prominent experts who are recognized for their professional achievements and objectivity in economics, statistics, psychology or behavioral science. In particular, academics with strong methodological and technical expertise in structural or reduced form econometrics, modeling of consumer decision-making, behavioral economics, experimental economics, program

evaluation, psychology, and financial choice. The members of the Council will collectively provide a balance of expertise across these areas.

The Council is composed of no more than nine members. Currently we have six Council members. We are looking to fill three additional seats on the Council in 2016. You can learn more about current Academic Research Council members here.

The Bureau has a special interest in ensuring that the perspectives of women and men, all racial and ethnic groups, and individuals with disabilities are adequately represented on the Council and therefore encourages applications from qualified candidates from these groups. The Bureau also has a special interest in establishing a Council that is represented by a diversity of viewpoints and constituencies, and therefore encourages nominations for qualified candidates who:

1. Represent the United States' geographic diversity; and
2. Understand the interests of special populations identified in the Dodd-Frank Act, including servicemembers, older Americans, students, and traditionally underserved consumers and communities.

IV. Application Procedures

Any interested person may apply for membership on the Council.

A complete application packet may include a cover letter and must include:

1. A complete résumé or curriculum vitae for the applicant; and
2. Completed application.

To evaluate potential sources of conflicts of interest, the Bureau will ask potential candidates to provide information related to financial holdings and/or professional affiliations, and to allow the Bureau to perform a background check. The Bureau will not review nominations and will not answer questions from internal or external parties regarding applications until the application period has closed.

The Bureau will not entertain nominations of federally registered lobbyists and individuals who have been convicted of a felony for a position on the Council.

Only complete applications will be given consideration for review of membership on the Council.

Dated: January 7, 2016.

Christopher D'Angelo,
Chief of Staff, Bureau of Consumer Financial Protection.

BILLING CODE 4810-AM-P

BUREAU OF CONSUMER FINANCIAL PROTECTION

Consumer Advisory Board and Councils Solicitation of Applications for Membership

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Notice.

SUMMARY: Pursuant to the authorities given to the Director of the Consumer Financial Protection Bureau (Bureau) under the Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) Director Richard Cordray invites the public to apply for membership for appointment to its Consumer Advisory Board (Board), Community Bank Advisory Council, and Credit Union Advisory Council (collectively, Advisory Councils). Membership of the Board and Councils includes representatives of consumers, communities, the financial services industry and academics. Appointments to the Board are typically for three years and appointments to the Councils are typically for two years. However, the Director may amend the respective Board and Council charters from time to time during the charter terms, as the Director deems necessary to accomplish the purpose of the Board and Councils. The Bureau expects to announce the selection of new members in August 2016.

DATES: Complete application packets received on or before February 29, 2016, will be given consideration for membership on the Board and Councils.

ADDRESSES: If electronic submission is not feasible, the completed application packet can be mailed to Julian Alcazar, Outreach and Engagement Associate, Consumer Financial Protection Bureau, 1700 G Street NW., Washington, DC 20552.

All applications for membership on the Board and Councils should be sent:

- *Electronically:* <https://consumer-financial-protection-bureau.forms.fm/application-to-serve-on-advisory-board-body-panel-committee-or-group>. We strongly encourage electronic submissions.

- *Mail:* Julian Alcazar, Outreach and Engagement Associate, Consumer Financial Protection Bureau, 1700 G Street NW., Washington, DC 20552. Submissions must be postmarked on or before 5 p.m. eastern standard time on February 29, 2016.

- *Hand Delivery/Courier in Lieu of Mail:* Julian Alcazar, Outreach and Engagement Associate, Consumer Financial Protection Bureau, 1275 First Street NE., 1223-C, Washington, DC

20002. Submissions must be received on or before 5 p.m. eastern standard time on February 29, 2016.

FOR FURTHER INFORMATION CONTACT:

Requests for additional information should be directed to Julian Alcazar, Outreach and Engagement Associate, Consumer Financial Protection Bureau, (202) 435-9885.

SUPPLEMENTARY INFORMATION:

I. Background

The Bureau is charged with regulating “the offering and provision of consumer financial products or services under the Federal consumer financial laws,” so as to ensure that “all consumers have access to markets for consumer financial products and services and that markets for consumer financial products and services are fair, transparent, and competitive.” Pursuant to section 1021(c) of the Wall Street Reform and Consumer Protection Act, Public Law 111-203, Dodd-Frank Act, the Bureau’s primary functions are:

1. Conducting financial education programs;
2. Collecting, investigating, and responding to consumer complaints;
3. Collecting, researching, monitoring, and publishing information relevant to the function of markets for consumer financial products and services to identify risks to consumers and the proper functioning of such markets;
4. Supervising persons covered under the Dodd-Frank Act for compliance with Federal consumer financial law, and taking appropriate enforcement action to address violations of Federal consumer financial law;
5. Issuing rules, orders, and guidance implementing Federal consumer financial law; and
6. Performing such support activities as may be needed or useful to facilitate the other functions of the Bureau.

As described in more detail below, section 1014 of the Dodd-Frank Act calls for the Director of the Bureau to establish a Consumer Advisory Board to advise and consult with the Bureau regarding its functions, and to provide information on emerging trends and practices in the consumer financial markets.

III. Qualifications

Pursuant to section 1014(b) of the Dodd-Frank Act, in appointing members to the Board, “the Director shall seek to assemble experts in consumer protection, financial services, community development, fair lending and civil rights, and consumer financial products or services and representatives of depository institutions that primarily

serve underserved communities, and representatives of communities that have been significantly impacted by higher-priced mortgage loans, and seek representation of the interests of covered persons and consumers, without regard to party affiliation.” The determinants of “expertise” shall depend, in part, on the constituency, interests, or industry sector the nominee seeks to represent, and where appropriate, shall include significant experience as a direct service provider to consumers.

Pursuant to section 5 of the Community Bank Advisory Council Charter, in appointing members to the Council the Director shall seek to assemble experts in consumer protection, financial services, community development, fair lending and civil rights, and consumer financial products or services and representatives of community banks that primarily serve underserved communities, and representatives of communities that have been significantly impacted by higher-priced mortgage loans, and shall strive to have diversity in terms of points of view. Only current bank or thrift employees (CEOs, compliance officers, government relations officials, etc.) will be considered for membership. Membership is limited to employees of banks and thrifts with total assets of \$10 billion or less that are not affiliates of depository institutions or credit unions with total assets of more than \$10 billion.

Pursuant to section 12 of the Credit Union Advisory Council Charter, in appointing members to the Council the Director shall seek to assemble experts in consumer protection, financial services, community development, fair lending and civil rights, and consumer financial products or services and representatives of credit unions that primarily serve underserved communities, and representatives of communities that have been significantly impacted by higher-priced mortgage loans, and shall strive to have diversity in terms of points of view. Only current credit union employees (CEOs, compliance officers, government relations officials, etc.) will be considered for membership. Membership is limited to employees of credit unions with total assets of \$10 billion or less that are not affiliates of depository institutions or credit unions with total assets of more than \$10 billion.

The Bureau has a special interest in ensuring that the perspectives of women and men, all racial and ethnic groups, and individuals with disabilities are adequately represented on the Board

and Councils, and therefore, encourages applications from qualified candidates from these groups. The Bureau also has a special interest in establishing a Board that is represented by a diversity of viewpoints and constituencies, and therefore encourages applications from qualified candidates who:

1. Represent the United States’ geographic diversity; and
2. Represent the interests of special populations identified in the Dodd-Frank Act, including service members, older Americans, students, and traditionally underserved consumers and communities.

IV. Application Procedures

Any interested person may apply for membership on the Board or Council.

A complete application packet must include:

1. A recommendation letter from a third party describing the applicant’s interests and qualifications to serve on the Board or Council;
2. A complete résumé or curriculum vitae for the applicant; and
3. A one-page cover letter, which summarizes the applicant’s expertise and provides reason(s) why he or she would like to join the Board or Council.
4. A complete application. <https://consumer-financial-protection-bureau.forms.fm/application-to-serve-on-advisory-board-body-panel-committee-or-group>.

To evaluate potential sources of conflicts of interest, the Bureau will ask potential candidates to provide information related to financial holdings and/or professional affiliations, and to allow the Bureau to perform a background check. The Bureau will not review applications and will not answer questions from internal or external parties regarding applications until the application period has closed.

The Bureau will not entertain applications of federally registered lobbyists for a position on the Board and Councils.

Only complete applications will be given consideration for review of membership on the Board and Councils.

Dated: January 7, 2016.

Christopher D’Angelo,
Chief of Staff, Bureau of Consumer Financial Protection.

BILLING CODE 4810-AM-P

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

Proposed Information Collection; Comment Request

AGENCY: Corporation for National and Community Service.

ACTION: Notice.

SUMMARY: The Corporation for National and Community Service (CNCS), as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) (44 U.S.C. Sec. 3506(c)(2)(A)). This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirement on respondents can be properly assessed.

Currently, CNCS is soliciting comments concerning its proposed establishment of the Disability Accommodation Reimbursement Request Form. This form will be used by grantees to submit required information when requesting reimbursement for the costs associated with the provision of reasonable accommodation services to facilitate accessibility by members with disabilities. Completion of the necessary information is required to obtain grant funding reimbursement support from AmeriCorps State & National.

Copies of the information collection request can be obtained by contacting the office listed in the Addresses section of this Notice.

DATES: Written comments must be submitted to the individual and office listed in the **ADDRESSES** section by March 15, 2016.

ADDRESSES: You may submit comments, identified by the title of the information collection activity, by any of the following methods:

(1) *By mail sent to:* Corporation for National and Community Service, AmeriCorps State and National; Attention: Sean R. Scott, Assistant Program Officer, Room 9518A; 1201 New York Avenue NW., Washington, DC 20525.

(2) *By hand delivery or by courier to:* CNCS mailroom at Room 8100 at the mail address given in paragraph (1) above, between 9:00 a.m. and 4:00 p.m. Eastern Time, Monday through Friday, except Federal holidays.

(3) *Electronically through* www.regulations.gov.

Individuals who use a telecommunications device for the deaf (TTY-TDD) may call 1-800-833-3722 between 8:00 a.m. and 8:00 p.m. Eastern Time, Monday through Friday.

FOR FURTHER INFORMATION CONTACT:

Sean R. Scott, 202-606-3866, or by email at accommodations@cns.gov.

SUPPLEMENTARY INFORMATION: CNCS is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of CNCS, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are expected to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (e.g., permitting electronic submissions of responses).

Background

Grantees provide the information to request reimbursement for services associated with reasonable accommodation of AmeriCorps service members. The information will be collected electronically via email by submission of this form and the receipt(s) for services.

Current Action

This is a new information collection request. The form requests a confirmation if outside resources were consulted, the name of the applying organization, grant number, single point of contact for the organization, POC email and telephone number, attention to and address to which the check should be remitted, member NSPID, type of disability, type of accommodation, a brief statement regarding how the accommodation helps the member achieve full participation, requested reimbursement amount, if the reimbursement is quarterly of one-time and the projected cost for ongoing requests. All measures have been taken to reduce the presence of personally identifiable information.

The information collection will otherwise be used in the same manner

as the existing application. CNCS also seeks to continue using the current application until the revised application is approved by OMB. The current application is due to expire on TBD.

Type of Review: New.

Agency: Corporation for National and Community Service.

Title: Disability Accommodation Reimbursement Request Form.

OMB Number: None.

Agency Number: None.

Affected Public: Grantees and service members.

Total Respondents: Unknown.

Frequency: Intermittent.

Average Time per Response: Averages 10 minutes.

Estimated Total Burden Hours: 20 minutes.

Total Burden Cost (capital/startup): None.

Total Burden Cost (operating/maintenance): None.

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Dated: January 11, 2016.

Jennifer Bastress Tahmasebi,

Deputy Director, AmeriCorps State and National.

BILLING CODE 3710-08-P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD-2015-OS-0033]

Submission for OMB Review; Comment Request

ACTION: Notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance, the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by February 16, 2016.

FOR FURTHER INFORMATION CONTACT: Fred Licari, 571-372-0493.

SUPPLEMENTARY INFORMATION:

Title, Associated Form and OMB Number: Office of the Secretary of Defense Confidential Conflict-of-Interest Statement for Office of the Secretary of Defense Advisory Committee Members; SD Form X682; 0704-XXXX.

Type of Request: Existing collection in use without an OMB Control Number.

Number of Respondents: 125.

Responses per Respondent: 1.

Annual Responses: 125.

Average Burden per Response: 1 hour.

Annual Burden Hours: 125.

Needs and Uses: The information requested on this form is required by Title I of the Ethics in Government Act of 1978 (5 U.S.C. App.), Executive Order 12674, and 5 CFR part 2634, subpart I, of the Office of Government Ethics regulations. The requested information

is necessary to prevent conflicts of interest and to identify potential conflicts of individuals serving on certain Office of the Secretary of Defense (OSD) Advisory Committees.

Affected Public: Individuals or households.

Frequency: Annually.

Respondent's Obligation: Required to obtain or retain benefits.

OMB Desk Officer: Ms. Jasmeet Seehra.

Comments and recommendations on the proposed information collection should be emailed to Ms. Jasmeet Seehra, DoD Desk Officer, at Oira_submission@omb.eop.gov. Please identify the proposed information collection by DoD Desk Officer and the Docket ID number and title of the information collection.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Mr. Frederick Licari.

Written requests for copies of the information collection proposal should be sent to Mr. Licari at WHS/ESD Directives Division, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350-3100.

Dated: January 12, 2016.

Aaron Siegel,
Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001-06-P

DEPARTMENT OF ENERGY

National Petroleum Council

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of Renewal.

Pursuant to Section 14(a)(2)(A) of the Federal Advisory Committee Act, App., and section 102-3.65, Title 41, Code of Federal Regulations, and following consultation with the Committee

Management Secretariat, General Services Administration, notice is hereby given that the National Petroleum Council has been renewed for a two-year period.

The Council will continue to provide advice, information, and recommendations to the Secretary of Energy on matters relating to oil and natural gas, or the oil and natural gas industries. The Secretary of Energy has determined that renewal of the National Petroleum Council is essential to the conduct of the Department's business and in the public interest in connection with the performance of duties imposed by law upon the Department of Energy. The Council will continue to operate in accordance with the provisions of the Federal Advisory Committee Act (Pub. L. 92-463), the General Services Administration Final Rule on Federal Advisory Committee Management, and other directives and instructions issued in implementation of those Acts.

FOR FURTHER INFORMATION CONTACT: Ms. Nancy Johnson at (202) 586-6458

Issued at Washington, DC, on January 8, 2016.

Amy Bodette,

Committee Management Officer.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Hanford

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Hanford. The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Wednesday, February 3, 2016—8:30 a.m.—5:00 p.m.

Thursday, February 4, 2016—9:00 a.m.—12:00 p.m.

ADDRESSES: Red Lion Hanford House, 802 George Washington Way, Richland, WA 99352.

FOR FURTHER INFORMATION CONTACT: Kristen Holmes, Federal Coordinator, Department of Energy Richland Operations Office, 825 Jadwin Avenue, P.O. Box 550, A7-75, Richland, WA, 99352; Phone: (509) 376-5803; or Email: Kristen.L.Holmes@rl.doe.gov.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations

to DOE-EM and site management in the areas of environmental restoration, waste management, and related activities.

Tentative Agenda

- Tri-Party Agreement Agencies' Updates
- Hanford Advisory Board Committee Reports
- Discussion of Potential Draft Advice

Public Participation: The meeting is open to the public. The EM SSAB, Hanford, welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Kristen Holmes at least seven days in advance of the meeting at the phone number listed above. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should contact Kristen Holmes at the address or telephone number listed above. Requests must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comments will be provided a maximum of five minutes to present their comments.

Minutes: Minutes will be available by writing or calling Kristen Holmes's office at the address or phone number listed above. Minutes will also be available at the following Web site: <http://www.hanford.gov/page.cfm/hab>.

Issued at Washington, DC, on January 8, 2016.

DEPARTMENT OF ENERGY

Basic Energy Sciences Advisory Committee

AGENCY: Office of Science, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Basic Energy Sciences Advisory Committee (BESAC). The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that

public notice of these meetings be announced in the **Federal Register**.

DATES:

Thursday, February 11, 2016—8:00 a.m.–5:00 p.m.

Friday, February 12, 2016—9:00 a.m.–12:00 p.m.

ADDRESSES: Bethesda North Hotel and Conference Center, 5701 Marinelli Road, Bethesda, MD 20852.

FOR FURTHER INFORMATION CONTACT:

Katie Runkles, Office of Basic Energy Sciences; U.S. Department of Energy; SC-22/Germantown Building, 1000 Independence Avenue SW.; Washington, DC 20585; Telephone: (301) 903-6529.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of this Board is to make recommendation to DOE-SC with respect to the basic energy sciences research program.

Tentative Agenda:

- Swearing in of New Members
 - Annual Ethics Briefing (BESAC Members Only)
 - Call to Order, Introductions, Review of the Agenda
 - News from the Office of Science (Budget)
 - News from the Office of Basic Energy Sciences (Budget)
 - New Charge to be Presented regarding the assessment of the proposed upgrades to x-ray scattering facilities (both free-electron laser-based sources and ring-based sources) and to the Spallation Neutron Source
 - Public Comments
 - Adjourn
- Breaks Taken As Appropriate

Public Participation: The meeting is open to the public. If you would like to file a written statement with the Committee, you may do so either before or after the meeting. If you would like to make oral statements regarding any of the items on the agenda, you should contact Katie Runkles at (301) 903-6594 (fax) or via email Katie.Runkles@science.doe.gov.

Reasonable provision will be made to include the scheduled oral statements on the agenda. The Chairperson of the Committee will conduct the meeting to facilitate the orderly conduct of business. Public comment will follow the 10-minute rule.

Minutes: The minutes of this meeting will be available for public review and copying within 45 days by contacting Katie Runkles at the address above.

Issued in Washington, DC, on January 11, 2016.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Secretary of Energy Advisory Board

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces an open meeting of the Secretary of Energy Advisory Board (SEAB). SEAB was reestablished pursuant to the Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) (the Act). This notice is provided in accordance with the Act.

DATES: Tuesday, January 26, 2016, 8:30 a.m.–12:30 p.m. PT.

ADDRESSES: Lawrence Berkeley National Laboratory, Joint BioEnergy Institute (JBEI), 5885 Hollis Street, 4th Floor, Emeryville, CA 94608.

FOR FURTHER INFORMATION CONTACT:

Karen Gibson, Designated Federal Officer, U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585; telephone (202) 586-3787; seab@hq.doe.gov.

SUPPLEMENTARY INFORMATION:

Background: The Board was established to provide advice and recommendations to the Secretary on the Department's basic and applied research, economic and national security policy, educational issues, operational issues, and other activities as directed by the Secretary.

Purpose of the Meeting: This meeting is the quarterly meeting of the Board.

Tentative Agenda: The meeting will start at 8:30 a.m. on January 26th. The tentative meeting agenda includes: Updates from SEAB's task forces, presentations from DOE and Berkeley Lab, and an opportunity for comments from the public. The meeting will conclude at 12:30 p.m. Agenda updates will be posted on the SEAB Web site prior to the meeting: www.energy.gov/seab.

Public Participation: The meeting is open to the public. Individuals who would like to attend must RSVP to Karen Gibson no later than 5 p.m. on Thursday, January 21, 2016 at seab@hq.doe.gov. Please provide your name, organization, citizenship, and contact information. Anyone attending the meeting will be required to present government-issued identification.

Individuals and representatives of organizations who would like to offer comments and suggestions may do so during the meeting. Those wishing to speak should register to do so beginning at 8:30 a.m. on January 26th. Approximately 30 minutes will be reserved for public comments. Time allotted per speaker will depend on the number who wish to speak but will not

exceed 5 minutes. The Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business.

This meeting is being published less than 15 days prior to the scheduled meeting to allow the public and Board to hear presentations that are unique to this facility, and for the Board to continue to meet their deadlines and reporting schedules. Scheduling conflicts resulted in a delay in securing the venue.

Those not able to attend the meeting or who have insufficient time to address the committee are invited to send a written statement to Karen Gibson, U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585, email to seab@hq.doe.gov.

Minutes: The minutes of the meeting will be available on the SEAB Web site or by contacting Ms. Gibson. She may be reached at the postal address or email address above, or by visiting SEAB's Web site at www.energy.gov/seab.

Issued in Washington, DC, on January 13, 2016.

Amy Bodette,

Committee Management Officer.

[Project No. 14439-001]

Hawks Nest Hydro, LLC; Notice of Application Tendered for Filing With the Commission and Establishing Procedural Schedule for Licensing and Deadline for Submission of Final Amendments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

- a. *Type of Application:* New Major License.
- b. *Project No.:* 14439-001.
- c. *Date Filed:* December 29, 2015.
- d. *Applicant:* Hawks Nest Hydro, LLC (Hawks Nest Hydro).
- e. *Name of Project:* Glen Ferris Hydroelectric Project.
- f. *Location:* The existing project is located on the Kanawha River, in Fayette County, West Virginia. The project does not occupy any federal lands.
- g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791 (a)-825(r).
- h. *Applicant Contact:* Steven Murphy, Manager, Licensing, Brookfield Renewable Energy Group, 33 West 1st Street South, Fulton, New York 13069; Telephone (315) 598-6130.
- i. *FERC Contact:* Monir Chowdhury, (202) 502-6736 or monir.chowdhury@ferc.gov.

j. This application is not ready for environmental analysis at this time.

k. **Project Description:** The existing Glen Ferris Hydroelectric Project consists of: (1) A low concrete dam with a maximum height of 12 feet above the river bed and a crest elevation of 651.0 feet National Geodetic Vertical Datum of 1929 (NGVD29), consisting of (from left to right—looking downstream) (i) a 590-foot-long spillway section that generally curves upstream; (ii) a 128-foot-long five-bay stoplog sluice; (iii) a 2,132-foot-long right spillway that runs diagonally in a downstream direction; (iv) a trash sluice section; (v) a 54-foot-long by 38-foot-wide east powerhouse with a 62-foot-wide intake structure; and (vi) a 64.5-foot-long by 63-foot-wide west powerhouse with a 82.3-foot-wide intake structure, with both powerhouses integral to the dam; (2) a 190-acre reservoir with a gross storage capacity of approximately 1,500 acre-feet at the dam crest elevation of 651.0 feet NGVD29; (3) two turbine-generator units in the east powerhouse, each with a rated capacity of approximately 1.9 megawatts (MW); (4) six turbine-generator units in the west powerhouse, each with a rated capacity of approximately 0.4 MW; (5) a 4-mile-long, 13.8-kilovolt transmission line; and (6) appurtenant facilities.

The project is currently operated in a run-of-river mode with no usable storage capacity. Hawks Nest Hydro proposes to continue run-of-river operation. The project generates an annual average of 41,482 megawatt-hours.

l. **Locations of the Application:** A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll-free at 1-866-208-3676, or for TTY, (202) 502-8659. A copy is also available for inspection and reproduction at the address in item (h) above.

m. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

n. **Procedural Schedule:** The application will be processed according to the following preliminary Hydro Licensing Schedule. Revisions to the schedule may be made as appropriate.

Milestone	Target date
Notice of Acceptance/Notice of Ready for Environmental Analysis.	February 2016.
Filing of recommendations, preliminary terms and conditions, and fishway prescriptions.	April 2016.
Commission issues EA	August 2016.
Comments on EA	September 2016.
Modified Terms and Conditions.	November 2016.
Commission Issues Final EA, if necessary.	February 2017.

o. Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: January 11, 2016.

Nathaniel J. Davis, Sr.,
Deputy Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP15-560-000]

Cameron LNG, LLC; Notice of Schedule for Environmental Review of the Cameron LNG Terminal Expansion Project

On September 28, 2015, Cameron LNG, LLC filed an application in Docket No. CP15-560-000 requesting Authorization pursuant to section 3 of the Natural Gas Act to construct and operate certain liquefied natural gas (LNG) facilities at the existing Cameron LNG Terminal. The proposed project is known as the Cameron LNG Terminal Expansion Project (Project), and would increase the terminal's capability to liquefy natural gas for export by 515 billion cubic feet per year.

On October 13, 2015, the Federal Energy Regulatory Commission (Commission or FERC) issued its Notice of Application for the Project. Among other things, that notice alerted agencies issuing federal authorizations of the requirement to complete all necessary reviews and to reach a final decision on a request for a federal authorization within 90 days of the date of issuance of the Commission staff's Environmental Assessment (EA) for the Project. This instant notice identifies the FERC staff's planned schedule for the completion of the EA for the Project.

Schedule for Environmental Review

Issuance of EA—February 12, 2016
90-day Federal Authorization Decision
Deadline—May 12, 2016

If a schedule change becomes necessary, additional notice will be provided so that the relevant agencies are kept informed of the Project's progress.

Project Description

Cameron LNG, LLC's Project would add an additional LNG storage tank (Tank 5) and two new systems to liquefy natural gas (Trains 4 and 5) to its existing LNG Terminal in Cameron and Calcasieu Parishes, Louisiana. No construction would occur outside of the existing terminal and no new shipping is proposed as a result of this Project.

Background

On June 18, 2015, the Commission issued a *Notice of Intent to Prepare an Environmental Assessment for the Planned Cameron LNG Expansion Project and Request for Comments on Environmental Issues* (NOI). The NOI was issued during the pre-filing review of the Project in Docket No. PF15-13-000 and was sent to affected landowners; federal, state, and local government agencies; elected officials; environmental and public interest groups; Native American tribes; other interested parties; and local libraries and newspapers. In response to the NOI, the Commission received comments from the U.S. Environmental Protection Agency (EPA). The primary issues raised by the EPA are alternatives, groundwater and water impacts, wildlife and habitat impacts, air quality, hazardous materials, tribal and state historic preservation office consultation, and environmental justice.

The U.S. Department of Transportation and U.S. Department of Energy are cooperating agencies in the preparation of the EA.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of all formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to www.ferc.gov/docs-filing/esubscription.asp.

Additional information about the Project is available from the Commission's Office of External Affairs at (866) 208-FERC or on the FERC Web

site (www.ferc.gov). Using the "eLibrary" link, select "General Search" from the eLibrary menu, enter the selected date range and "Docket Number" excluding the last three digits (*i.e.*, CP15-560), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208-3676, TTY (202) 502-8659, or at FERCOnlineSupport@ferc.gov. The eLibrary link on the FERC Web site also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

Dated: January 11, 2016.

Federal Energy Regulatory Commission

[Project No. 2512–075]

Hawks Nest Hydro, LLC; Notice of Application Tendered for Filing With the Commission and Establishing Procedural Schedule for Licensing and Deadline for Submission of Final Amendments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* New Major License.

b. *Project No.:* 2512–075.

c. *Date Filed:* December 29, 2015.

d. *Applicant:* Hawks Nest Hydro, LLC (Hawks Nest Hydro).

e. *Name of Project:* Hawks Nest Hydroelectric Project.

f. *Location:* The existing project is located on the New River, in Fayette County, West Virginia. The project does not occupy any federal lands.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791 (a)–825(r).

h. *Applicant Contact:* Steven Murphy, Manager, Licensing, Brookfield Renewable Energy Group, 33 West 1st Street South, Fulton, New York 13069; Telephone (315) 598–6130.

i. *FERC Contact:* Monir Chowdhury, (202) 502–6736 or monir.chowdhury@ferc.gov.

j. This application is not ready for environmental analysis at this time.

k. *Project Description:* The existing Hawks Nest Hydroelectric Project consists of: (1) A 948-foot-long concrete gravity dam with a crest elevation of 795.0 feet National Geodetic Vertical Datum of 1929 (NGVD29); (2) 14 ogee-type spillway bays extending almost the entire length of the dam, each with a 25-foot-high by 50-foot-wide Stoney-type steel lift gate and separated by a 9-foot-wide concrete pier; (3) a 243-acre reservoir with a gross storage capacity of 7,323 acre-feet at a normal pool elevation of 819.9 feet NGVD29; (4) an intake structure located at the right shoreline (looking downstream) of the reservoir just upstream of the dam and consisting of a 110-foot-wide by 50-foot-high trashrack structure and a Stoney-type 42-foot-high by 50-foot-wide bulkhead intake gate that sits back approximately 50 feet from the opening where the trashrack is located; (5) a 16,240-foot-long tunnel that runs along the right side of the river to convey water from the intake to the powerhouse downstream of the New River; (6) a 600-foot-long by 170-foot-wide surge basin

located at a point on the tunnel approximately 60 percent of the distance from the intake to the powerhouse; (7) a 116-foot-diameter and 56-foot-high differential surge tank located at the downstream end of the tunnel and before the powerhouse; (8) a 210-foot-long by 74.5-foot-wide powerhouse containing four turbine-generator units, each with a rated capacity of approximately 25.5 megawatts; (9) two parallel approximately 5.5-mile-long, 69-kilovolt transmission lines; and (10) appurtenant facilities.

Hawks Nest Hydro operates the project in a run-of-river mode. The existing license (Article 402) requires that the project release a continuous minimum flow of 100 cubic feet per second into the bypassed reach between the dam and the powerhouse. Hawks Nest Hydro proposes to continue run-of-river operation and a modified minimum flow schedule for the bypassed reach. The project generates an annual average of 544,253 megawatt-hours.

l. *Locations of the Application:* A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll-free at 1–866–208–3676, or for TTY, (202) 502–8659. A copy is also available for inspection and reproduction at the address in item (h) above.

m. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

n. *Procedural Schedule:* The application will be processed according to the following preliminary Hydro Licensing Schedule. Revisions to the schedule may be made as appropriate.

Milestone	Target date
Notice of Acceptance/Notice of Ready for Environmental Analysis.	February 2016.
Filing of recommendations, preliminary terms and conditions, and fishway prescriptions.	April 2016.
Commission issues EA Comments on EA	August 2016. September 2016.

Milestone	Target date
Modified Terms and Conditions.	November 2016.
Commission Issues Final EA, if necessary.	February 2017.

o. Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: January 11, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

[Project Nos. 2593–031; 2823–020]

Algonquin Power (Beaver Falls), LLC; Notice of Application Tendered for Filing With the Commission and Soliciting Additional Study Requests and Establishing Procedural Schedule for Relicensing and a Deadline for Submission of Final Amendments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* New Major License.

b. *Project Nos.:* 2593–031 and 2823–020.

c. *Date filed:* December 30, 2015.

d. *Applicant:* Algonquin Power (Beaver Falls), LLC.

e. *Name of Projects:* Upper Beaver Falls and Lower Beaver Falls projects.

f. *Location:* On the Beaver River, in the towns of Croghan and New Bremen, Lewis County, New York. The project does not occupy lands of the United States.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791 (a)–825(r).

h. *Applicant Contact:* Robert A. Gates, Executive Vice President, Eagle Creek Renewable Energy, 65 Madison Avenue, Suite 500, Morristown, New Jersey 07960; (973) 998–8400; bob.gates@eaglecreekre.com.

i. *FERC Contact:* Andy Bernick, (202) 502–8660 or andrew.bernick@ferc.gov.

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests

described in item l below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See*, 94 FERC ¶ 61,076 (2001).

k. Pursuant to section 4.32(b)(7) of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

l. *Deadline for filing additional study requests and requests for cooperating agency status:* February 28, 2016.

The Commission strongly encourages electronic filing. Please file additional study requests and requests for cooperating agency status using the Commission's eFiling system at <http://www.ferc.gov/docs-filing/efiling.asp>. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The first page of any filing should include docket numbers P–2593–031 and P–2823–020.

m. The application is not ready for environmental analysis at this time.

n. The existing project works are as follows:

The Upper Beaver Falls Project consists of: (1) A 328-foot-long, 25-foot-high concrete gravity dam with an uncontrolled overflow spillway; (2) a 48-acre reservoir with a storage capacity of 800 acre-feet at elevation 799.4 feet North American Vertical Datum of 1988 (NAVD 88); (3) a 17-foot-high, 26.5-foot-wide, 27.5-foot-long intake structure with a steel trash rack; (4) a 90-foot-long, 16-foot-wide, 8-foot-high concrete penstock; (5) a powerhouse containing one turbine-generator with a nameplate rating of 1,500 kilowatts (kW); (6) a tailrace excavated in the riverbed; (7) a 2,120-foot-long, 2.4-kilovolt (kV) overhead transmission line connecting to an existing National Grid substation; and (8) other appurtenances. The project generates about 8,685 megawatt-hours (MWh) annually.

The Lower Beaver Falls Hydroelectric Project consists of: (1) A 400-foot-long concrete gravity dam with a maximum height of 14 feet, including: (i) A 240-foot-long non-overflow section containing an 8-foot-wide spillway

topped with flashboards ranging from 6 to 8 inches in height and (ii) a 160-foot-long overflow section with an ice sluice opening; (2) a 4-acre reservoir with a storage capacity of 27.9 acre-feet at a normal elevation of 769.6 feet NAVD 88; (3) an intake structure with a steel trash rack, integral with a powerhouse containing two 500-kW turbine and generator units; (4) a tailrace; (5) a 250-foot-long, 2.4-kV transmission line connected to the Upper Beaver Falls powerhouse; and (6) appurtenant facilities. The project generates about 5,617 MWh annually.

The Lower Beaver Falls Project is located approximately 600 feet downstream of the Upper Beaver Falls Project. The dams and existing project facilities for both projects are owned by the applicant. The applicant proposes no new project facilities or operational changes, but proposes that both projects be combined under a single license.

o. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter one of the docket numbers excluding the last three digits in the docket number field to access the document. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208–3676 (toll free), or (202) 502–8659 (TTY). A copy is also available for inspection and reproduction at the address in item (h) above.

You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to these or other pending projects. For assistance, contact FERC Online Support.

p. *Procedural Schedule:* The application will be processed according to the following preliminary Hydro Licensing Schedule. Revisions to the schedule will be made as appropriate.

Issue Deficiency Letter (if necessary)—

February 2016

Request Additional Information—February 2016

Issue Acceptance Letter—May 2016

Issue Scoping Document 1 for comments—May 2016

Request Additional Information (if necessary)—July 2016

Issue Scoping Document 2—September 2016

Issue notice of ready for environmental analysis—September 2016

Commission issues EA, draft EA, or draft EIS—March 2017

Comments on EA, draft EA, or draft EIS—April 2017

Commission issues final EA or EIS—June 2017

Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: January 11, 2016.

Notice of Staff Attendance at the Midcontinent Independent System Operator, Inc. (MISO) Meetings of the Miso Competitive Retail Solution Task Team (CSRTT)

The Federal Energy Regulatory Commission (Commission) hereby gives notice that members of its staff may attend the January meetings of the MISO CSRTT. Their attendance is part of the Commission's ongoing outreach efforts.

The first meeting will be held by conference call on January 15, 2016, from 10:00 a.m. to 12:00 p.m. Eastern. Dial-in and webcast information may be found at <https://www.misoenergy.org/Events/Pages/CSRTT20160115.aspx>.

The second meeting will be held on January 29, 2016, from 11:00 a.m. to 4:00 p.m. Eastern at the Illinois Commerce Commission Hearing Room, 160 North LaSalle, Suite C-800, Chicago, IL 60601.

The discussions may address matters at issue in the following proceedings:

Docket No. ER11-4081, *Midwest Independent System Operator, Inc.*
Docket No. EL12-54, *Viridity Energy, Inc. v. PJM Interconnection, L.L.C.*
Docket No. ER13-535, *PJM Interconnection, L.L.C.*
Docket No. ER13-2108, *PJM Interconnection, L.L.C.*
Docket No. ER14-504, *PJM Interconnection, L.L.C.*
Docket No. ER14-822, *PJM Interconnection, L.L.C.*
Docket Nos. ER14-1461 and EL14-48, *PJM Interconnection, L.L.C.*
Docket No. ER14-2940, *PJM Interconnection, L.L.C.*
Docket No. ER15-135, *PJM Interconnection, L.L.C.*
Docket Nos. ER15-623 and EL15-29, *PJM Interconnection, L.L.C.*
Docket No. EL14-20, *Independent Market Monitor for PJM v. PJM Interconnection, L.L.C.*
Docket Nos. EL14-94 and EL14-36, *FirstEnergy Solutions Corp. and PJM Interconnection, L.L.C.*
Docket No. EL14-55, *FirstEnergy Service Company v. PJM Interconnection, L.L.C.*
Docket No. EL15-41, *Essential Power Rock Springs, L.L.C. et al. v. PJM Interconnection, L.L.C.*
Docket No. EL15-46, *Champion Energy Marketing L.L.C. v. PJM Interconnection, L.L.C.*
Docket No. EL15-80, *Advanced Energy Management Alliance Coalition v. PJM Interconnection, L.L.C.*
Docket No. EL15-83, *National Resources Defense Council, et al., v. PJM Interconnection, L.L.C.*
Docket No. EL15-70, *Public Citizen, Inc. v. Midcontinent Independent System Operator, Inc.*
Docket No. EL15-71, *People of the State of Illinois v. Midcontinent Independent System Operator, Inc.*
Docket No. EL15-72, *Southwestern Electric Cooperative, Inc. v. Midcontinent Independent System Operator, Inc.*
Docket No. EL15-82, *Illinois Industrial Energy Consumers v. Midcontinent Independent System Operator, Inc.*

The meeting is open to the public.

For more information, contact Patrick Clarey, Office of Energy Market Regulation, Federal Energy Regulatory Commission at (317) 249-5937 or patrick.clarey@ferc.gov.

Dated: January 11, 2016.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2727-092]

Black Bear Hydro Partners LLC; Notice of Application Tendered for Filing With the Commission and Establishing Procedural Schedule for Licensing and Deadline for Submission of Final Amendments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application*: New Major License.

b. *Project No.*: 2727-092.

c. *Date Filed*: December 30, 2015.

d. *Applicant*: Black Bear Hydro Partners LLC (Black Bear Hydro).

e. *Name of Project*: Ellsworth Hydroelectric Project (Ellsworth Project).

f. *Location*: The existing project is located on the Union River in Hancock County, Maine. The project does not occupy federal lands.

g. *Filed Pursuant to*: Federal Power Act, 16 U.S.C. 791(a)-825(r).

h. *Applicant Contact*: Ms. Kelly Maloney, Manager of Licensing and Compliance, Brookfield White Pine Hydro LLC, 150 Main Street, Lewiston, ME 04240; Telephone: (207) 755-5606.

i. *FERC Contact*: Dr. Nicholas Palso, (202) 502-8854 or nicholas.palso@ferc.gov.

j. This application is not ready for environmental analysis at this time.

k. *The Project Description*: The existing Ellsworth Project consists of two developments (Graham Lake and Ellsworth) with a total installed capacity of 8.9 megawatts (MW). The project's average annual generation is 30,511 megawatt-hours. The power generated by the project is sold on the open market through the regional grid.

Graham Lake Development

The existing Graham Lake Development consists of: (1) A 750-foot-long, 58-foot-high dam that includes: (i) An 80-foot-long, 58-foot-high concrete spillway section with three 20-foot-wide, 22.5-foot-high spillway gates and one 8-foot-wide sluice gate; and (ii) a 670-foot-long, 45-foot-high west earthen embankment section with a concrete

and sheet pile core wall; (2) a 10,000-acre impoundment (Graham Lake) with a useable storage volume of 123.97 million acre-feet at a normal maximum elevation of 104.2 National Geodetic Vertical Datum (NGVD); (3) a 720-foot-long, 58-foot-high concrete gravity flood control structure with a 65-foot-diameter, 55-foot-high stone-filled sheet pile retaining structure; (4) a 71-foot-long, 36.5-foot-high concrete wing wall; and (5) appurtenant facilities.

Ellsworth Development

The existing Ellsworth Development consists of: (1) A 377-foot-long, 62.75-foot-high dam that includes: (i) A 102-foot-long, 62.75-foot-high west concrete bulkhead section; and (ii) a 275-foot-long, 57-foot-high concrete overflow spillway with 1.7-foot-high flashboards; (2) an 85-foot-long, 71-foot-high concrete non-over flow wall at the west end of the bulkhead section; (3) a 26-foot-high abutment at the east end of the spillway; (4) a 90-acre impoundment (Lake Leonard) with a gross storage volume of 2.46 million acre-feet at a normal maximum elevation of 66.7 feet NGVD; (5) generating facility No. 1 that includes: (i) A headgate and a trashrack with 2.44-inch clear-bar spacing; (ii) a 10-foot-diameter, 74-foot-long penstock; and (iii) a 30-foot-long, 15-foot-wide concrete and masonry gatehouse that is integral with the dam and contains a single 2.5 MW turbine-generator unit; (6) generating facility No. 2 that includes: (i) An 88.4-foot-wide, 32-foot-high intake structure with three headgates and three trashracks with 1.0- to 2.37-inch clear-bar spacing; (ii) an 8-foot-diameter, 164-foot-long penstock, an 8-foot-diameter, 195-foot-long penstock, and a 12-foot-diameter, 225-foot-long penstock; and (iii) a 52.5-foot-long, 68-foot-wide concrete and masonry powerhouse that contains two 2.0-MW and one 2.4-MW turbine-generator units; (7) downstream fish passage facilities that include three 3-foot-wide surface weirs; (8) upstream fish passage facilities that include a 3-foot-wide vertical slot fishway and collection station; (9) a 320-foot-long transmission line connecting the turbine-generator units to the regional grid; and (10) appurtenant facilities.

The Graham Lake Development operates as a water storage facility where water is stored to reduce downstream flooding during periods of high flow and released during periods of low flow to augment generation at the Ellsworth Development. The Ellsworth Development operates as a peaking facility where Lake Leonard is fluctuated up to one foot on a daily basis to regulate downstream flows and

meet peak demands for hydroelectric generation.

The existing license requires an instantaneous minimum flow of 250 cubic feet per second (cfs), or inflow (whichever is less), downstream of each development from May 1 to June 30 each year. The minimum flow for each development is reduced to 105 cfs from July 1 to April 30 each year. In addition to the minimum flows, the existing license requires Black Bear Hydro to maintain Graham Lake and Lake Leonard between elevations 93.4 and 104.2 feet NGVD and 65.7 and 66.7 feet NGVD, respectively. Black Bear Hydro proposes to install upstream eel passage facilities at the Graham Lake and Ellsworth developments, construct a canoe portage at the Graham Lake Development, and improve angler access at the Graham Lake Development.

l. *Locations of the Application*: A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208-3676 (toll free), or (202) 502-8659 (TTY). A copy is also available for inspection and reproduction at the address in item (h) above.

m. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

n. Procedural Schedule:

The application will be processed according to the following preliminary Hydro Licensing Schedule. Revisions to the schedule may be made as appropriate.

Milestone	Target date ¹
Notice of Acceptance/Notice of Ready for Environmental Analysis (REA).	February 2017.
Filing of recommendations, preliminary terms and conditions, and fishway prescriptions.	April 2017.
Commission issues Non-Draft Environmental Assessment (EA).	October 2017.
Comments on EA	November 2017.

Milestone	Target date ¹
Modified terms and conditions.	January 2018.

¹This schedule has been adjusted to account for ongoing studies that must be filed with the Commission no later than December 31, 2016.

o. Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: January 11, 2016.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2008-0844; FRL-9940-82]

Imidacloprid Registration Review; Draft Pollinator Ecological Risk Assessment; Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the availability of EPA's draft pollinator-only ecological risk assessment for the registration review of imidacloprid and opens a public comment period on this document. Registration review is EPA's periodic review of pesticide registrations to ensure that each pesticide continues to satisfy the statutory standard for registration, that is, the pesticide can perform its intended function without unreasonable adverse effects on human health or the environment. As part of the registration review process, the Agency has completed a comprehensive draft pollinator-only ecological risk assessment for all registered agricultural uses of imidacloprid, with focus on agricultural crops that are attractive to pollinators. After reviewing comments received during the public comment period, EPA will issue a revised pollinator risk assessment, explain any changes to the draft risk assessment, and respond to comments and may request public input on risk mitigation before completing a proposed registration review decision for imidacloprid. The revised risk assessment will also address the ecological risks for all other taxa, as well as a comprehensive draft human health risk assessment. Through the registration review program, EPA is ensuring that each pesticide's registration is based on current scientific and other knowledge, including its effects on human health and the environment.

DATES: Comments must be received on or before March 15, 2016.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPP-2008-0844, by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001.

- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

For pesticide specific information contact: Kelly Ballard, Chemical Review Manager, Pesticide Re-Evaluation Division (7508P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (703) 305-8126; email address: ballard.kelly@epa.gov.

For general questions on the registration review program, contact: Rich Dumas, Pesticide Re-Evaluation Division (7508P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (703) 308-8015; email address: dumas.richard@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general, and may be of interest to a wide range of stakeholders including environmental, human health, farm worker, and agricultural advocates; the chemical industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides. Since others also may be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the applicability of this action to a particular entity, consult the Chemical Review Manager listed under **FOR FURTHER INFORMATION CONTACT**.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the

public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at <http://www.epa.gov/dockets/comments.html>.

3. *Environmental justice.* EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticide(s) discussed in this document, compared to the general population.

II. Authority

EPA is conducting its registration review of imidacloprid pursuant to section 3(g) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Procedural Regulations for Registration Review at 40 CFR part 155, subpart C. Section 3(g) of FIFRA provides, among other things, that the registrations of pesticides are to be reviewed every 15 years. Under FIFRA, a pesticide product may be registered or remain registered only if it meets the statutory standard for registration given in FIFRA section 3(c)(5) (7 U.S.C. 136a(c)(5)). When used in accordance with widespread and commonly recognized practice, the pesticide product must perform its intended function without unreasonable adverse effects on the environment; that is, without any unreasonable risk to man or the environment, or a human dietary risk from residues that result from the use of a pesticide in or on food.

III. Registration Reviews

As directed by FIFRA section 3(g), EPA is reviewing the pesticide registration for imidacloprid to ensure that it continues to satisfy the FIFRA standard for registration—that is, that imidacloprid can still be used without unreasonable adverse effects on human health or the environment. Imidacloprid is a neonicotinoid insecticide used for the control of sucking insects on a large variety of agricultural and non-agricultural sites, including vegetable crops, tree nuts, tree fruits, stone fruits,

cotton, tobacco, grapes, citrus, turf, and ornamentals. EPA has completed a comprehensive draft pollinator-only ecological risk assessment for all registered agricultural uses of imidacloprid, with focus on agricultural crops that are attractive to pollinators.

Pursuant to 40 CFR 155.53(c), EPA is providing an opportunity, through this notice of availability, for interested parties to provide comments and input concerning the Agency's draft pollinator-only ecological risk assessment for imidacloprid. Such comments and input could address, among other things, the Agency's risk assessment methodologies and assumptions, as applied to this draft pollinator-only risk assessment. The Agency will consider all comments received during the public comment period and make changes, as appropriate, to the draft pollinator-only risk assessment. EPA will then issue a revised pollinator risk assessment, explain any changes to the draft risk assessment, and respond to comments. In the **Federal Register** notice announcing the availability of the revised risk assessment, if the revised risk assessment indicates risks of concern, the Agency may provide a comment period for the public to submit suggestions for mitigating the risk identified in the revised risk assessment before developing a proposed registration review decision on imidacloprid. Additionally, the revised risk assessment will also address ecological risks for all other taxa, as well as a comprehensive draft human health risk assessment.

1. Other related information.

Additional information on imidacloprid is available on the Pesticide Registration Review Status Web page. Information on the Agency's registration review program and its implementing regulation is available at http://www.epa.gov/oppsrrd1/registration_review.

2. Information submission

requirements. Anyone may submit data or information in response to this document. To be considered during a pesticide's registration review, the submitted data or information must meet the following requirements:

- To ensure that EPA will consider data or information submitted, interested persons must submit the data or information during the comment period. The Agency may, at its discretion, consider data or information submitted at a later date.
- The data or information submitted must be presented in a legible and useable form. For example, an English translation must accompany any material that is not in English and a

written transcript must accompany any information submitted as an audiographic or videographic record. Written material may be submitted in paper or electronic form.

- Submitters must clearly identify the source of any submitted data or information.

- Submitters may request the Agency to reconsider data or information that the Agency rejected in a previous review. However, submitters must explain why they believe the Agency should reconsider the data or information in the pesticide's registration review.

As provided in 40 CFR 155.58, the registration review docket for each pesticide case will remain publicly accessible through the duration of the registration review process; that is, until all actions required in the final decision on the registration review case have been completed.

Authority: 7 U.S.C. 136 *et seq.*

Dated: January 8, 2016.

Michael Goodis,

Acting Director, Pesticide Re-Evaluation Division, Office of Pesticide Programs.

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Foreign Purchaser Acknowledgement Statement of Unregistered Pesticides

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has submitted the following information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (PRA): "Foreign Purchaser Acknowledgement Statement of Unregistered Pesticides" (FPAS) and identified by EPA ICR No. 0161.13 and OMB Control No. 2070-0027. The ICR, which is available in the docket along with other related materials, provides a detailed explanation of the collection activities and the burden estimate that is only briefly summarized in this document. EPA has addressed the comments received in response to the previously provided public review opportunity issued in the **Federal Register** on May 8, 2015 (80 FR 26554).

With this submission, EPA is providing an additional 30 days for public review.

DATES: Comments must be received on or before February 16, 2016.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPP-2015-0231, to both EPA and OMB as follows:

- To EPA online using <http://www.regulations.gov> (our preferred method) or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460.
- To OMB via email to oir_submission@omb.eop.gov. Address comments to OMB Desk Officer for EPA.

EPA's policy is that all comments received will be included in the docket without change, including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT:

Scott Drewes, Field and External Affairs, (7506P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (703) 347-0107; email address: drewes.scott@epa.gov.

SUPPLEMENTARY INFORMATION:

Docket: Supporting documents, including the ICR that explains in detail the information collection activities and the related burden and cost estimates that are summarized in this document, are available in the docket for this ICR. The docket can be viewed online at <http://www.regulations.gov> or in person at the EPA Docket Center, West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC. The telephone number for the Docket Center is (202) 566-1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

ICR status: This ICR is currently scheduled to expire on January 31, 2016. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB.

Under PRA, 44 U.S.C. 3501 *et seq.*, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers are

displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers for certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: This information collection request is designed to enable the EPA to provide notice to foreign purchasers of unregistered pesticides exported from the United States that the pesticide product cannot be sold in the United States. Section 17(a)(2) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) requires an exporter of any pesticide not registered under FIFRA section 3 or sold under FIFRA section 6(a)(1) to obtain a signed statement from the foreign purchaser acknowledging that the purchaser is aware that the pesticide is not registered for use in, and cannot be sold in, the United States. A copy of this FPAS must be transmitted to an appropriate official of the government in the importing country. This information is submitted in the form of annual or per-shipment statements to the EPA, which maintains original records and transmits copies thereof to appropriate government officials of the countries which are importing the pesticide. This information collection request also includes the burden imposed by export labeling requirements, which meet the definition of third-party disclosure. In addition to the export notification for unregistered pesticides, FIFRA requires that all pesticides include appropriate labeling. There are different requirements for registered and unregistered products. This information collection has been constant since the implementation of the 1993 pesticide export policy governing the export of pesticides, devices, and active ingredients used in producing pesticides.

Respondents/Affected Entities: Entities potentially affected by this ICR are individuals or entities that produce and export pesticides.

Respondent's obligation to respond: Mandatory.

Estimated total number of potential respondents: 50.

Frequency of response: Annual or on occasion.

Estimated total burden: 17,993 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Estimated total costs: \$ 1,224,655 (per year), includes no annualized capital investment or maintenance and operational costs.

Changes in the estimates: There is a decrease of 6,477 hours in the total estimated respondent burden compared

with that identified in the ICR currently approved by OMB. This decrease reflects EPA's updating of burden estimates for this collection based upon historical information on the number of responses per year. Based upon revised estimates, the number of exported products has decreased from 3,600 to 2,411, with a corresponding decrease in the associated burden. This change is an adjustment.

Courtney Kerwin,

Acting Director, Collection Strategies Division.

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-RCRA-2015-0605; FRL-9941-34-OEI]

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Standardized Permit for RCRA Hazardous Waste Management Facilities (Renewal)**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Notice.

SUMMARY: The Environmental Protection Agency has submitted an information collection request (ICR), "Standardized Permit for RCRA Hazardous Waste Management Facilities (Renewal)" (EPA ICR No. 1935.05, OMB Control No. 2050-0182) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). This is a proposed extension of the ICR, which is currently approved through January 31, 2016. Public comments were previously requested via the **Federal Register** (80 FR 55618) on September 16, 2015 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before February 16, 2016.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA-HQ-RCRA-2015-0605, to (1) EPA online using www.regulations.gov (our preferred method), by email to rcra-docket@epa.gov, or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460, and (2) OMB via email to oira_submission@omb.eop.gov. Address comments to OMB Desk Officer for EPA.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Jeff Gaines, Office of Resource Conservation and Recovery, (5303P), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone number: 703-308-8655; fax number: 703-308-8617; email address: gaines.jeff@epa.gov.

SUPPLEMENTARY INFORMATION:

Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The telephone number for the Docket Center is 202-566-1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

Abstract: Under the authority of sections 3004, 3005, 3008 and 3010 of the Resource Conservation and Recovery Act (RCRA), as amended, EPA revised the RCRA hazardous waste permitting program to allow a "standardized permit". The standardized permit is available to facilities that generate hazardous waste and routinely manage the waste on-site in non-thermal units such as tanks, containers, and containment buildings. In addition, the standardized permit is available to facilities that receive hazardous waste generated off-site by a generator under the same ownership as the receiving facility, and then store or non-thermally treat the hazardous waste in containers, tanks, or containment buildings. The RCRA standardized permit consists of two components: A uniform portion that is included in all cases, and a supplemental portion that the Director of a regulatory agency includes at his or her discretion. The uniform portion consists of terms and conditions, relevant to the unit(s) at the permitted facility, and is established on a national basis. The Director, at his or her discretion, may also issue a supplemental portion on a case-by-case basis. The supplemental portion imposes site-specific permit terms and conditions that the Director determines necessary to institute corrective action under section 264.101 (or State equivalent), or otherwise necessary to protect human health and the environment. Owners and operators have to comply with the terms and conditions in the supplemental portion, in addition to those in the uniform portion.

Form Numbers: None.

Respondents/affected entities: Private hazardous waste facilities.

Respondent's obligation to respond: Voluntary (40 CFR 270.275).

Estimated number of respondents: 86 (total).

Frequency of response: On occasion.
Total estimated burden: 13,948 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$1,242,205 (per year), includes \$579,727 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is no change in the total estimated respondent burden compared with the ICR currently approved by OMB.

Courtney Kerwin,

Acting Director, Collection Strategies Division.

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501-3520), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to

any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written comments should be submitted on or before February 16, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contacts below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, OMB, via email Nicholas.A.Fraser@omb.eop.gov; and to Cathy Williams, FCC, via email PRA@fcc.gov and to Cathy.Williams@fcc.gov. Include in the comments the OMB control number as shown in the **SUPPLEMENTARY INFORMATION** section below.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection, contact Cathy Williams at (202) 418–2918. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the Web page <http://www.reginfo.gov/public/do/PRAMain>, (2) look for the section of the Web page called “Currently Under Review,” (3) click on the downward-pointing arrow in the “Select Agency” box below the “Currently Under Review” heading, (4) select “Federal Communications Commission” from the list of agencies presented in the “Select Agency” box, (5) click the “Submit” button to the right of the “Select Agency” box, (6) when the list of FCC ICRs currently under review appears, look for the OMB control number of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

SUPPLEMENTARY INFORMATION:

OMB Control No.: 3060–1178.

Title: TV Broadcaster Relocation Fund Reimbursement Form, FCC Form 2100, Schedule 399; Section 73.3700(e), Reimbursement Rules.

Form No.: FCC Form 2100, Schedule 399.

Type of Review: Revision of an existing information collection.

Respondents: Business or other for-profit entities; Not for profit institutions.

Number of Respondents and Responses: 1,900 respondents and 22,800 responses.

Estimated Time per Response: 1–4 hours.

Frequency of Response: One-time reporting requirement; On occasion reporting requirement; Recordkeeping requirement.

Obligation to Respond: Required to obtain or retain benefits. The statutory

authority for this collection is contained in 47 U.S.C. 151, 154(i), 157 and 309(j) as amended; and Middle Class Tax Relief and Job Creation Act of 2012, Public Law 112–96, §§ 6402 (codified at 47 U.S.C. 309(j)(8)(G)), 6403 (codified at 47 U.S.C. 1452), 126 Stat. 156 (2012) (Spectrum Act).

Total Annual Burden: 31,100 hours.

Annual Cost Burden: \$5,625,000.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: There is some need for confidentiality with this collection of information. Invoices, receipts, contracts and other cost documentation submitted along with the form will be kept confidential in order to protect the identification of vendors and the terms of private contracts between parties. Vendor name and Employer Identification Numbers (EIN) or Taxpayer Identification Number (TIN) will not be disclosed to the public.

Needs and Uses: The collection is being made to the Office of Management (OMB) for the approval of information collection requirements contained in the Commission’s Incentive Auction Order, FCC 14–50, which adopted rules for holding an Incentive Auction, as required by the Middle Class Tax Relief and Job Creation Act of 2012 (Spectrum Act). The information gathered in this collection will be used to provide reimbursement to television broadcast stations that are relocated to a new channel following the Federal Communications Commission’s Incentive Auction, and to multichannel video programming distributors (MVPDs) that incur costs in carrying the signal of relocated television broadcast stations. Relocated television broadcasters and MVPDs (“eligible entities”) will be reimbursed for their reasonable costs incurred as a result of relocation from the TV Broadcaster Relocation Fund. Eligible entities will use the TV Broadcaster Relocation Fund Reimbursement Form (FCC Form 2100, Schedule 399) to submit an estimate of their eligible relocation costs; to submit actual cost documentation (such as receipts and invoices) throughout the construction period, as they incur expenses; and to account for the total expenses incurred at the end of the project.

Federal Communications Commission.

Marlene H. Dortch,

Secretary, Office of the Secretary.

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0856]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission’s burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

DATES: Written PRA comments should be submitted on or before March 15, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicole Ongele, FCC, via email PRA@fcc.gov and to Nicole.Ongele@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele at (202) 418–2991.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0856.

Title: Universal Service—Schools and Libraries Universal Service.

Program Reimbursement Forms.

Form Number: FCC Forms 472, 473 and 474.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for-profit entities, and state, local, or tribal government.

Number of Respondents and Responses: 24,700 respondents; 168,900 responses.

Estimated Time per Response: 1 hour per form.

Frequency of Response: On occasion, annual reporting requirement, and recordkeeping requirements.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. sections 1, 4(i), 4(j), 201–205, 214, 254, 312(d), 312(f), 403, and 503(b) of the Communications Act of 1934, as amended.

Total Annual Burden: 168,900 hours.

Total Annual Cost: No cost.

Privacy Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: The Commission does not request that respondents submit confidential information to the Commission. If the Commission requests applicants to submit information that the respondents believe is confidential, respondents may request confidential treatment under 47 CFR 0.459 of the Commission's rules.

Needs and Uses: The Commission seeks to revise OMB 3060–0856 to conform this information collection to changes implemented in the Report and Order and Further Notice of Proposed Rulemaking (*E-Rate Modernization Order*) (WC Docket No. 13–184, FCC 14–99, 79 FR 49160, August 19, 2014).

Collection of the information on FCC Form 472 is necessary to establish the process and procedure for an eligible applicant to seek reimbursement from the E-rate program for the discounts on services paid in full to a service provider. The Universal Service Administrative Company (USAC) reviews the information collected on FCC Form 472, along with invoices from the service provider, to verify the eligibility of the services for E-rate support, approve the amount that should be reimbursed, ensure that each service provider has provided discounted services within the current funding year for which it submits an invoice to USAC, and confirm that invoices submitted from service providers for the costs of discounted eligible services do not exceed the amount that has been approved.

Collection of information on FCC Form 473 is necessary to establish that the participating service provider is eligible to participate in the E-rate program, confirm that the invoice forms submitted by the service provide are in compliance with the Federal Communications Commission's E-rate rules, and enable the service provider to certify its compliance with the E-rate rules. The FCC Form 473 is also used by USAC to assure that the dollars paid out by the universal service fund go to eligible providers.

Collection of information on FCC Form 474 is necessary to establish the process and procedure for a service provider to seek payment for the discounted costs of services it provided to billed entities for eligible services. After receiving an invoice from the service provider, together with an FCC Form 474, USAC is able to verify that the eligible and approved amounts can be paid. The FCC Form 474 is also used to ensure that each service provider has provided discounted services within the current funding year for which it submits an invoice to USAC and that invoices submitted from service providers for the costs of discounted eligible services do not exceed the amount that has been approved.

This information collection is being revised pursuant to program and rule changes in the *E-Rate Modernization Order* that require the collection of information necessary to allow USAC to make direct payments to applicants, and add service provider certifications to the FCC Form 473, the Service Provider Annual Certification Form. The information collection is also being revised to accommodate USAC's new online portal and the *E-Rate Modernization Order* requirement that the forms in this collection be filed electronically.

All of the requirements contained in this information collection are necessary for the Commission to ensure compliance by applicants and/or vendors with the requirement of the E-rate program, to protect the program from waste, fraud and abuse and to evaluate the extent to which the E-rate program is meeting the statutory objectives specified in section 254(h) of the 1996 Act, and the Commission's own performance goals established in the *E-rate Modernization Order*.

Federal Communications Commission.

Marlene H. Dortch,
Secretary.

BILLING CODE 6712–01–P

FEDERAL DEPOSIT INSURANCE CORPORATION

Notice to All Interested Parties of the Termination of the Receivership of 10328, CommunitySouth Bank and Trust Easley, SC

Notice is hereby given that the Federal Deposit Insurance Corporation (“FDIC”) as Receiver for CommunitySouth Bank and Trust, Easley, SC (“the Receiver”) intends to terminate its receivership for said institution. The FDIC was appointed receiver of CommunitySouth Bank and Trust on January 21, 2011. The liquidation of the receivership assets has been completed. To the extent permitted by available funds and in accordance with law, the Receiver will be making a final dividend payment to proven creditors.

Based upon the foregoing, the Receiver has determined that the continued existence of the receivership will serve no useful purpose. Consequently, notice is given that the receivership shall be terminated, to be effective no sooner than thirty days after the date of this Notice. If any person wishes to comment concerning the termination of the receivership, such comment must be made in writing and sent within thirty days of the date of this Notice to: Federal Deposit Insurance Corporation, Division of Resolutions and Receiverships, Attention: Receivership Oversight Department 32.1, 1601 Bryan Street, Dallas, TX 75201.

No comments concerning the termination of this receivership will be considered which are not sent within this time frame.

Dated: January 12, 2016.

Federal Deposit Insurance Corporation.

Robert E. Feldman,
Executive Secretary.

BILLING CODE 6714–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies

owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than February 11, 2016.

A. Federal Reserve Bank of Chicago (Colette A. Fried, Assistant Vice President) 230 South LaSalle Street, Chicago, Illinois 60690-1414:

1. *First Busey Corporation*, Champaign, Illinois; to merge with Pulaski Financial Corp., Saint Louis, Missouri, and thereby indirectly acquire Pulaski Bank, National Association, Creve Coeur, Missouri.

B. Federal Reserve Bank of Dallas (Robert L. Triplett III, Senior Vice President) 2200 North Pearl Street, Dallas, Texas 75201-2272:

1. *First Commercial Financial Corp.*, Seguin Texas; to acquire by merger 100 percent of Jourdanon Bancshares, Inc., and indirectly, Jourdanon State Bank, both of Jourdanon, Texas.

Board of Governors of the Federal Reserve System, January 12, 2016.

Michael J. Lewandowski,

Associate Secretary of the Board.

BILLING CODE 6210-01-P

GENERAL SERVICES ADMINISTRATION

[Notice-2015-PM-04; Docket No. 2015-0002; Sequence No. 32]

Notice of Availability of the Final Supplemental Draft Environmental Impact Statement for the Federal Bureau of Investigation Central Records Complex in Winchester County, Virginia

AGENCY: General Services Administration (GSA).

ACTION: Notice of availability.

SUMMARY: Pursuant to the National Environmental Policy Act (NEPA) of 1969, as implemented by the Council on Environmental Quality regulations, the GSA has prepared and filed with the Environmental Protection Agency (EPA), a Supplement to the Final Environmental Impact Statement (SEIS), from May 2007, analyzing the environmental impacts of site acquisition and development of the Federal Bureau of Investigation (FBI), Central Records Complex (CRC), in Frederick County, Virginia.

DATES: *Effective Date:* The Final SEIS is now available for review. The GSA Record of Decision will be released no sooner than 30 days after EPA publishes its Notice of Availability of the Final SEIS in the **Federal Register**.

ADDRESSES: The Final SEIS may be viewed online at <http://www.fbicrc-seis.com>. Paper copies may be viewed at the repositories listed under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Ms. Courtenay Hoernemann, Project Environmental Planner, 100 S Independence Mall West, Philadelphia PA 19106; or email frederick.va.siteacquisition@gsa.gov.

SUPPLEMENTARY INFORMATION: The proposed FBI facility would consolidate the FBI's records currently housed within the Washington DC area, in addition to field offices and information technology centers nationwide. The project requirements are for an overall square footage of 256,425 gross square feet, and will include the records storage building, support area, visitor's screening facility, service center, and guard booth. Parking is proposed at 427 spaces.

A Notice of Intent to prepare a Supplemental Draft EIS was published in the **Federal Register** at 80 FR 8311 on February 17, 2015. A public scoping comment period was held for 30 days following publication of the Notice of Intent. GSA published the Notice of Availability of the Supplemental Draft EIS on August 20, 2015 at 80 FR 50631, which began a 45 day public comment period ending on October 5, 2015. A public meeting was held on September 10, 2015 from 6:00 p.m. to 8:00 p.m., Eastern Standard Time (EST), at the War Memorial Building Social Hall at Jim Barnett Park, War Memorial Drive, Winchester, VA.

The Supplemental Draft EIS incorporated by reference and built upon the analyses presented in the 2007 Final EIS, and documented the section 106 process under the National Historic Preservation Act (NHPA) of 1966, as amended (36 CFR part 800). The

Supplemental Draft EIS addressed changes to the proposed action relevant to environmental concerns and assessed any new circumstances or information relevant to potential environmental impacts. The alternatives fully evaluated in the Supplemental Draft EIS include the No Action Alternative, the Arcadia Route 50 property, and Whitehall Commerce Center.

The Final Supplemental EIS identifies XXX as the preferred alternative. The proposed action at XXX will result in impacts to water resources, traffic and transportation, biological resources, and geology/topography/soils. Changes between the Final and Draft Supplemental EIS include conclusion on consultation under section 106 of the NHPA, conclusion of consultation under section 7 of the Endangered Species Act with the U.S. Fish & Wildlife Service, and agreement with Virginia Department of Transportation on the Revised Traffic Impact Analysis and site access. The Final Supplemental EIS addresses and responds to agency and public comments on the Supplemental Draft EIS.

The Final Supplemental EIS has been distributed to various federal, state, and local agencies. The Final Supplemental EIS is available for review on the project Web site <http://www.fbicrc-seis.com>. A printed copy of the document is available for viewing at the following libraries:

- Handley Library, 100 West Piccadilly Street, P.O. Box 58, Winchester, VA 22604
- Bowman Library, 871 Tasker Road, P.O. Box 1300, Stephens City, VA 22655
- Smith Library, Shenandoah University, 718 Wade Miller Drive, Winchester, VA 22601

Dated: January 6, 2016.

John Hofmann,

Division Director, Facilities Management & Services Programs Division, General Services Administration, Mid-Atlantic Region.

BILLING CODE 6820-89-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Community Living

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Semi-Annual and Final Reporting Requirements for the Older Americans Act Title IV Discretionary Grants Program

AGENCY: Administration for Community Living, HHS.

ACTION: Notice.

SUMMARY: The Administration for Community Living (ACL) is announcing that the proposed collection of information listed below has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments on the collection of information by February 16, 2016.

ADDRESSES: Submit written comments on the collection of information by email to OIRA_submission@omb.eop.gov Attn: OMB Desk Officer for ACL, or by fax 202-395-6974, Office of Information and Regulatory Affairs, OMB.

FOR FURTHER INFORMATION CONTACT: Lori Stalbaum at (202) 357-3452, or lori.stalbaum@acl.hhs.gov.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, ACL has submitted the following proposed collection of information to OMB for review and clearance.

Describe Collection of Information

ACL is requesting to continue an existing approved collection of information for semi-annual and final reports pursuant to the requirements of its discretionary grant programs. ACL estimates the burden of this collection of information as follows: *Frequency:* Semi-annually with the Final report taking the place of the semi-annual report at the end of the final year of the grant. *Respondents:* States, public agencies, private nonprofit agencies, institutions of higher education, and organizations including tribal organizations. *Estimated Number of Responses:* 600. *Total Estimated Burden Hours:* 12,000.

Dated: January 12, 2016.

Kathy Greenlee,
Administrator and Assistant Secretary for Aging.

BILLING CODE 4154-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Food and Drug Administration**

[Docket No. FDA-2015-N-0001]

Navigating the Center for Drug Evaluation and Research: What You Should Know for Effective Engagement; Public Workshop

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public workshop.

SUMMARY: The Food and Drug Administration (FDA) Center for Drug Evaluation and Research (CDER), is sponsoring a public workshop entitled “Navigating CDER: What You Should Know for Effective Engagement.” The purpose of this public workshop is to help the public and patient advocacy groups gain a better understanding of how to effectively engage CDER.

DATES: The public workshop will be held on March 31, 2016, from 8:30 a.m. to 5 p.m.

ADDRESSES: The public workshop will be held at FDA’s White Oak campus, 10903 New Hampshire Ave., Building 31 (The Great Room A, B, and C), Silver Spring, MD 20993. Entrance for the public workshop participants (non-FDA employees) is through Building 1 where routine security check procedures will be performed. For parking and security information, please refer to <http://www.fda.gov/AboutFDA/WorkingatFDA/BuildingsandFacilities/WhiteOakCampusInformation/ucm241740.htm>.

FOR FURTHER INFORMATION CONTACT:

Shawn Brooks, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993-0002, 240-402-6509, email: NAV-CDER@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: FDA is announcing a public workshop entitled “Navigating CDER: What You Should Know for Effective Engagement.” This public workshop is intended to enhance the public and advocacy groups’ ability to effectively engage FDA’s CDER. The presentations are intended to provide information on how best to interact with CDER. There will be an opportunity for questions and answers following each presentation.

Registration: There is no registration fee to attend the public workshop. Early registration is recommended because seating is limited, and registration will be on a first-come, first-served basis. There will be no onsite registration. Persons interested in attending this workshop must register online at <http://www.fda.gov/Drugs/NewsEvents/ucm472604.htm> before March 24, 2016. For those without Internet access, please contact Shawn Brooks (see **FOR FURTHER INFORMATION CONTACT**) to register.

If you need special accommodations due to a disability, please contact Shawn Brooks (see **FOR FURTHER INFORMATION CONTACT**) at least 7 days in advance.

Transcripts: A transcript of the workshop will be available for review at

the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, and on the Internet at <http://www.regulations.gov> approximately 30 days after the workshop. Transcripts will also be available in either hard copy or on CD-ROM, after submission of a Freedom of Information request. The Freedom of Information office address is available on the Agency’s Web site at <http://www.fda.gov>.

Dated: January 8, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Food and Drug Administration**

[Docket No. FDA-2016-N-0001]

Advisory Committee: Vaccines and Related Biological Products Advisory Committee, Renewal

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; renewal of advisory committee.

SUMMARY: The Food and Drug Administration (FDA) is announcing the renewal of the Vaccines and Related Biological Products Advisory Committee by the Commissioner of Food and Drugs (the Commissioner). The Commissioner has determined that it is in the public interest to renew the Vaccines and Related Biological Products Advisory Committee for an additional 2 years beyond the charter expiration date. The new charter will be in effect until December 31, 2017.

DATES: Authority for the Vaccines and Related Biological Products Advisory Committee will expire on December 31, 2017, unless the Commissioner formally determines that renewal is in the public interest.

FOR FURTHER INFORMATION CONTACT:

Sujata Vijh, Division of Scientific Advisors and Consultants, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 6128, Silver Spring, MD 20993-0002, 240-402-7107, Sujata.vijh@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: Pursuant to 41 CFR 102-3.65 and approval by the Department of Health and Human Services pursuant to 45 CFR part 11 and by the General Services Administration, FDA is announcing the renewal of the

Vaccines and Related Biological Products Advisory Committee. The committee is a discretionary Federal advisory committee established to provide advice to the Commissioner. The Vaccines and Related Biological Products Advisory Committee advises the Commissioner or designee in discharging responsibilities as they relate to helping to ensure safe and effective vaccines and related biological products for human use and, as required, any other product for which the Food and Drug Administration has regulatory responsibility.

The Committee reviews and evaluates data concerning the safety, effectiveness, and appropriate use of vaccines and related biological products which are intended for use in the prevention, treatment, or diagnosis of human diseases, and, as required, any other products for which the Food and Drug Administration has regulatory responsibility. The Committee also considers the quality and relevance of FDA's research program which provides scientific support for the regulation of these products and makes appropriate recommendations to the Commissioner of Food and Drugs.

The Committee shall consist of a core of 15 voting members including the Chair. Members and the Chair are selected by the Commissioner or designee from among authorities knowledgeable in the fields of immunology, molecular biology, rDNA, virology; bacteriology, epidemiology or biostatistics, vaccine policy, vaccine safety science, federal immunization activities, vaccine development including translational and clinical evaluation programs, allergy, preventive medicine, infectious diseases, pediatrics, microbiology, and biochemistry. Members will be invited to serve for overlapping terms of up to four years. Almost all non-Federal members of this committee serve as Special Government Employees. Ex Officio voting members one each from the Department of Health and Human Services, the Centers for Disease Control and Prevention, and the National Institutes of Health may be included. The core of voting members may include one technically qualified member, selected by the Commissioner or designee, who is identified with consumer interests and is recommended by either a consortium of consumer-oriented organizations or other interested persons. In addition to the voting members, the Committee may include one non-voting member who is identified with industry interests. There may also be an alternate industry representative.

The Commissioner or designee shall have the authority to select members of other scientific and technical FDA advisory committees (normally not to exceed 10 members) to serve temporarily as voting members and to designate consultants to serve temporarily as voting members when: (1) Expertise is required that is not available among current voting standing members of the Committee (when additional voting members are added to the Committee to provide needed expertise, a quorum will be based on the combined total of regular and added members), or (2) to comprise a quorum when, because of unforeseen circumstances, a quorum is or will be lacking. Because of the size of the Committee and the variety in the types of issues that it will consider, FDA may, in connection with a particular committee meeting, specify a quorum that is less than a majority of the current voting members. The Agency's regulations (21 CFR 14.22(d)) authorize a committee charter to specify quorum requirements. If functioning as a medical device panel, a non-voting representative of consumer interests and a non-voting representative of industry interests will be included in addition to the voting members.

Further information regarding the most recent charter and other information can be found at <http://www.fda.gov/AdvisoryCommittees/CommitteesMeetingMaterials/BloodVaccinesandOtherBiologics/VaccinesandRelatedBiologicalProductsAdvisoryCommittee/ucm129571.htm> or by contacting the Designated Federal Officer (see **FOR FURTHER INFORMATION CONTACT**). In light of the fact that no change has been made to the committee name or description of duties, no amendment will be made to 21 CFR 14.100.

This document is issued under the Federal Advisory Committee Act (5 U.S.C. app.). For general information related to FDA advisory committees, please visit us at <http://www.fda.gov/AdvisoryCommittees/default.htm>.

Dated: January 11, 2016.

Jill Hartzler Warner,

Associate Commissioner for Special Medical Programs.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2012-N-1203]

Agency Information Collection Activities; Proposed Collection; Comment Request; Information To Accompany Humanitarian Device Exemption Applications and Annual Distribution Number Reporting Requirements

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on information to accompany humanitarian device exemption (HDE) applications and the collection of information regarding the annual distribution number (ADN).

DATES: Submit either electronic or written comments on the collection of information by March 15, 2016.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you

do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2012-N-1203 for “Agency Information Collection Activities; Proposed Collection; Comment Request; Information to Accompany Humanitarian Device Exemption Applications and Annual Distribution Number Reporting Requirements”. Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions**—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION”. The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other

applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: FDA PRA Staff, Office of Operations, Food and Drug Administration, 8455 Colesville Rd., COLE-14526, Silver Spring, MD 20993-0002, PRASStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. “Collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA’s functions, including whether the information will have practical utility; (2) the accuracy of FDA’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Information To Accompany Humanitarian Device Exemption Applications and Annual Distribution Number Reporting Requirements—OMB Control Number 0910-0661—Extension

Under section 520(m) of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 360j(m)), FDA is authorized to exempt a humanitarian use device (HUD) from the effectiveness requirements in sections 514 and 515 of the FD&C Act (21 U.S.C. 360d and 360e) provided that the device: (1) Is used to treat or diagnose a disease or condition that affects fewer than 4,000 individuals in the United States; (2) would not be available to a person with such a disease or condition unless the exemption is granted, and there is no comparable device, other than another HUD approved under this exemption, available to treat or diagnose the disease or condition; (3) the device will not expose patients to an unreasonable or significant risk of illness or injury; and (4) the probable benefit to health from using the device outweighs the risk of injury or illness from its use, taking into account the probable risks and benefits of currently available devices or alternative forms of treatment.

HUDs approved under an HDE cannot be sold for an amount that exceeds the costs of research and development, fabrication, and distribution of the device (*i.e.*, for profit), except in narrow circumstances. Section 613 of the Food and Drug Administration Safety and Innovation Act (FDASIA) (Pub. L. 112–144), signed into law on July 9, 2012, amended section 520(m) of the FD&C Act. Under section 520(m)(6)(A)(i) of the FD&C Act, as amended by FDASIA, a HUD approved under an HDE is eligible to be sold for profit if the device meets the following criteria: The device is intended for the treatment or diagnosis of a disease or condition that occurs in pediatric patients or in a pediatric subpopulation, and such device is labeled for use in pediatric patients or in a pediatric subpopulation in which the disease or condition occurs; or the device is intended for the treatment or diagnosis of a disease or condition that does not occur in pediatric patients, or that occurs in pediatric patients in such numbers that the development of the device for such patients is impossible, highly impracticable, or unsafe.

Section 520(m)(6)(A)(ii) of the FD&C Act, as amended by FDASIA, provides that the Secretary of Health and Human Services will assign an ADN for devices that meet the eligibility criteria to be permitted to be sold for profit. The ADN is defined as the number of devices

“reasonably needed to treat, diagnose, or cure a population of 4,000 individuals in the United States”, and therefore shall be based on the following information in a HDE application: The number of devices reasonably necessary to treat such individuals.

Section 520(m)(6)(A)(iii) of the FD&C Act (<http://www.fda.gov/RegulatoryInformation/Legislation/FederalFoodDrugandCosmeticAct/FDCAAct/FDCAChapterVDrugsandDevices/default.htm>) provides that an HDE holder immediately notify the Agency if the number of devices distributed during any calendar year exceeds the ADN. Section 520(m)(6)(C) of the FD&C Act provides that an HDE holder may

petition to modify the ADN if additional information arises.

On August 5, 2008, FDA issued a guidance entitled “Guidance for HDE Holders, Institutional Review Boards (IRBs), Clinical Investigators, and Food and Drug Administration Staff—Humanitarian Device Exemption (HDE) Regulation: Questions and Answers” (<http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/ucm110203.pdf>). The guidance was developed and issued prior to the enactment of FDASIA, and certain sections of this guidance may no longer be current as a result of FDASIA. In the **Federal Register** of March 18, 2014 (79 FR 15130), FDA announced the

availability of the draft guidance entitled “Humanitarian Device Exemption: Questions and Answers; Draft Guidance for Humanitarian Device Exemption Holders, Institutional Review Boards, Clinical Investigators, and Food and Drug Administration Staff”, that when finalized, will represent FDA’s current thinking on this topic.

FDA is requesting the extension of OMB approval for the collection of information required under the statutory mandate of sections 515A (21 U.S.C. 360e–1) and 520(m) of the FD&C Act as amended.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN

Activity/section of FD&C Act (as amended) or FDASIA	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Pediatric Subpopulation and Patient Information—515A(a)(2) of the FD&C Act	6	1	6	100	600
Exemption from Profit Prohibition Information—520(m)(6)(A)(i) and (ii) of the FD&C Act	3	1	3	50	150
Request for Determination of Eligibility Criteria—613(b) of FDASIA	2	1	2	10	20
ADN Notification—520(m)(6)(A)(iii) of the FD&C Act	1	1	1	100	100
ADN Modification—520(m)(6)(C) of the FD&C Act	5	1	5	100	500
Total					1,370

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

FDA’s Center for Devices and Radiological Health receives an estimated average of six HDE applications per year. FDA estimates that three of these applications will be indicated for pediatric use. We estimate that we will receive approximately two requests for determination of eligibility criteria per year. FDA estimates that very few or no HDE holders will notify the Agency that the number of devices distributed in the year has exceeded the ADN. FDA estimates that five HDE holders will petition to have the ADN modified due to additional information on the number of individuals affected by the disease or condition.

Dated: January 11, 2016.

Leslie Kux,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2008–D–0128 (formerly Docket No. 2007D–0396)]

How Should Liver Injury and Dysfunction Caused by Drugs Be Measured, Evaluated, and Acted Upon in Clinical Trials?

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public conference.

SUMMARY: The Food and Drug Administration (FDA) is announcing a public conference entitled “How Should Liver Injury and Dysfunction Caused by Drugs Be Measured, Evaluated, and Acted Upon in Clinical Trials?” This conference will be cosponsored with the Critical Path Institute (C-Path). The purpose of the conference is to discuss, debate, and share views among stakeholders in academia, patient groups, regulatory bodies, and the health care and pharmaceutical industries on how best to measure, evaluate, and act upon liver injury and

dysfunction caused by drugs used during clinical trials.

DATES: This public conference will be held on March 23, 2016, from 8 a.m. to 6 p.m., and on March 24, 2016, from 8 a.m. to 4 p.m.

ADDRESSES: This public conference will be held at the College Park Marriott Hotel & Conference Center, 3501 University Blvd., East Hyattsville, MD 20783. The hotel’s phone number is 301–985–7300.

FOR FURTHER INFORMATION CONTACT:

Lana L. Pauls, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 4478, Silver Spring, MD 20993–0002, 301–796–0518, lane.pauls@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

In July 2009, FDA announced the availability of a guidance for industry entitled “Drug-Induced Liver Injury: Premarketing Clinical Evaluation” (74 FR 38035, July 30, 2009, <https://www.gpo.gov/fdsys/pkg/FR-2009-07-30/pdf/E9-18135.pdf>). First, this guidance explains that drug-induced liver injury (DILI) has been the most frequent cause

of safety-related drug marketing withdrawals over the past 50 years and that hepatotoxicity has both limited the use of many drugs that have been approved and prevented the approval of others. Second, this guidance discusses methods of detecting DILI by periodic tests of serum enzyme activities and of bilirubin concentration and how changes in the results of these laboratory tests over time, along with symptoms and physical findings, may be used to estimate the severity of the injury. Third, this guidance suggests some “stopping rules” for interrupting drug treatment and mentions the need to obtain sufficient clinical information to assess causation. FDA published a draft of this guidance in 2006, and comments on that draft were taken into consideration when issuing the final guidance in July 2009.

II. Conference Information

The purpose of the 2016 conference is to invite participants to present their data and views and to hold an open discussion. The meetings in recent years have been attended by members of industry, regulatory bodies, and academic consultants, and the topics discussed have included several unresolved issues on which consensus was sought.

Registration: A registration fee (\$650 for industry registrants and \$325 for Federal government and academic registrants) will be charged to help defray the cost of renting the meeting space, providing meals and snacks, and covering the travel fees incurred by invited academic (but not government or industry) speakers, as well as any other expenses. The registration process will be handled by C-Path, an independent, nonprofit organization established in 2005 with public and private philanthropic support from the southern Arizona community, Science Foundation Arizona, and FDA.

Additional information on the conference, program, and registration procedures may be obtained on the Internet at <http://www.c-path.org>, and at <http://www.fda.gov> by typing “liver toxicity” into the search box. (FDA has verified the Web site addresses but is not responsible for any subsequent changes to the Web sites after this document publishes in the **Federal Register**.)

Transcripts: Please be advised that as soon as a transcript is available, it will be accessible at <http://www.regulations.gov>. It may be viewed at the Division of Dockets Management, Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD. A transcript will also be available in

either hardcopy or on CD-ROM, after submission of a Freedom of Information request. The Freedom of Information office address is available on the Agency’s Web site at <http://www.fda.gov>.

Materials presented at past programs (from 2007 to 2015) (including copies of slides shown, comments made about the slides, and discussions following the slides) may be accessed at <http://www.aasld.org/events-professional-development/drug-induced-liver-injury-2015-program>. (FDA has verified this Web site address but is not responsible for any subsequent changes to it after this document publishes in the **Federal Register**.)

Dated: January 8, 2016.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting Notice for the President’s Advisory Council on Faith-Based and Neighborhood Partnerships

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), the President’s Advisory Council on Faith-based and Neighborhood Partnerships announces the following meetings:

Name: President’s Advisory Council on Faith-based and Neighborhood Partnerships Council Meetings.

Time and Date: Monday, February 1st, 2016 1:00 p.m.–5:00 p.m. (EST) and Tuesday, February 2nd, 2016 10:00 a.m.–1:00 p.m. (EST).

Place: Meeting will be held at a location to be determined in the White House complex, 1600 Pennsylvania Ave NW., Washington, DC. Space is extremely limited. Photo ID and RSVP by January 25, 2016 are required to attend the event. Please RSVP to Ben O’Dell at partnerships@hhs.gov.

The meeting will be available to the public through a conference call line. Register to participate in the conference call on Monday, February 1st at the Web site <https://attendee.gotowebinar.com/register/7321886895235169026>. Register to participate in the conference call on Tuesday, February 2nd at the Web site <https://attendee.gotowebinar.com/register/4788059050490531842>.

Status: Open to the public, limited only by space available. Conference call limited only by lines available.

Purpose: The Council brings together leaders and experts in fields related to the work of faith-based and

neighborhood organizations in order to: Identify best practices and successful modes of delivering social services; evaluate the need for improvements in the implementation and coordination of public policies relating to faith-based and other neighborhood organizations; and make recommendations for changes in policies, programs, and practices.

Contact Person for Additional

Information: Please contact Ben O’Dell for any additional information about the President’s Advisory Council meeting at partnerships@hhs.gov.

Agenda: For February 1, the agenda will begin with an Opening and Welcome from the Chairperson and Executive Director for the President’s Advisory Council for Faith-based and Neighborhood Partnership. Then there will be presentation of any Recommendations for deliberation and vote. Lastly, there will be a discussion of subgroup deliberation as well as elements being considered for recommendations. For February 2, there will be presentations on work to address poverty and income inequality after a welcome and opening from the Chairperson and Executive Director for the President’s Advisory Council.

Public Comment: There will be an opportunity for public comment at the end of the meeting. Comments and questions can be sent in advance to partnerships@hhs.gov.

Dated: January 11, 2016.

Ben O’Dell,

Associate Director for Center for Faith-based and Neighborhood Partnerships at U.S. Department of Health and Human Services.

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which

would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA-15-319 Biomedical and Behavioral Research Innovations to Ensure Equity (BRITE).

Date: February 3, 2016.

Time: 1:00 p.m. to 2:30 p.m.

Agenda: To review and evaluate grant applications.

Place: San Diego Marriott Mission Valley, 8757 Rio San Diego Drive, San Diego, CA 92108.

Contact Person: Delia Olufokunbi Sam, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3158, MSC 7770, Bethesda, MD 20892, 301-435-0684, olufokunbisamd@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA-15-279 Strategies to Increase Delivery of Guideline-Based Care to Populations with Health Disparities.

Date: February 3, 2016.

Time: 2:30 p.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: San Diego Marriott Mission Valley, 8757 Rio San Diego Drive, San Diego, CA 90108.

Contact Person: Delia Olufokunbi Sam, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3158, MSC 7770, Bethesda, MD 20892, 301-435-0684, olufokunbisamd@csr.nih.gov.

Name of Committee: Healthcare Delivery and Methodologies Integrated Review Group; Health Disparities and Equity Promotion Study Section.

Date: February 4-5, 2016.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: San Diego Marriott Mission Valley, 8757 Rio San Diego Drive, San Diego, CA 92108.

Contact Person: Delia Olufokunbi Sam, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3158, MSC 7770, Bethesda, MD 20892, 301-435-0684, olufokunbisamd@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Physical Activity and Weight Control Interventions Among Cancer Survivors: Effects on Biomarkers of Prognosis.

Date: February 4, 2016.

Time: 1:30 p.m. to 5:30 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Denise Wiesch, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3138, MSC 7770, Bethesda, MD 20892, (301) 437-3478, wieschd@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Academic Research Enhancement Award.

Date: February 9, 2016.

Time: 1:00 p.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Bahia Resort Hotel, 998 West Mission Bay Drive, San Diego, CA 92109.

Contact Person: Inna Gorshkova, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, 301-435-1784, gorshkoi@csr.nih.gov.

Name of Committee: Bioengineering Sciences & Technologies Integrated Review Group; Modeling and Analysis of Biological Systems Study Section.

Date: February 10-11, 2016.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Renaissance Long Beach Hotel, 111 East Ocean Blvd., Long Beach, CA 90802.

Contact Person: Craig Giroux, Ph.D., Scientific Review Officer, BST IRG, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5150, Bethesda, MD 20892, 301-435-2204, girouxcn@csr.nih.gov.

Name of Committee: Digestive, Kidney and Urological Systems Integrated Review Group; Xenobiotic and Nutrient Disposition and Action Study Section.

Date: February 10, 2016.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Embassy Suites at the Chevy Chase Pavilion, 4300 Military Road, NW., Washington, DC 20015.

Contact Person: Martha Garcia, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 2186, Bethesda, MD 20892, 301-435-1243, garciamc@nih.gov.

Name of Committee: Digestive, Kidney and Urological Systems Integrated Review Group; Kidney Molecular Biology and Genitourinary Organ Development.

Date: February 10, 2016.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Crowne Plaza National Airport, 1480 Crystal Drive, Arlington, VA 22202.

Contact Person: Ryan G. Morris, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4205, MSC 7814, Bethesda, MD 20892, 301-435-1501, morrisr@csr.nih.gov.

Name of Committee: Infectious Diseases and Microbiology Integrated Review Group; Vector Biology Study Section.

Date: February 10, 2016.

Time: 8:30 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Marines Memorial Club & Hotel, 609 Sutter Street, San Francisco, CA 94102.

Contact Person: Liangbiao Zheng, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3214, MSC 7808, Bethesda, MD 20892, 301-402-5671, zhengli@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Musculoskeletal, Oral and Skin Sciences AREA review.

Date: February 10, 2016.

Time: 9:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Yanming Bi, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4214, MSC 7814, Bethesda, MD 20892, 301-451-0996, ybi@csr.nih.gov.

Name of Committee: Oncology 1-Basic Translational Integrated Review Group; Tumor Cell Biology Study Section.

Date: February 11-12, 2016.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Hotel Nikko San Francisco, 222 Mason Street, San Francisco, CA 94102.

Contact Person: Charles Morrow, MD, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 6202, MSC 7804, Bethesda, MD 20892, 301-408-9850, morrowcs@csr.nih.gov.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Surgical Sciences, Biomedical Imaging and Bioengineering Integrated Review Group; Clinical Molecular Imaging and Probe Development.

Date: February 8-9, 2016.

Time: 8:00 a.m. to 12:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Hilton Alexandria Mark Center, 5000 Seminary Road, Alexandria, VA 22311.

Contact Person: David L. Williams, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5110, MSC 7854, Bethesda, MD 20892, (301) 435-1174, williamsdl2@csr.nih.gov.

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group; Addiction Risks and Mechanisms Study Section.

Date: February 8-9, 2016.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Hotel Monaco, 480 King Street, Alexandria, VA 22314.

Contact Person: Kristen Prentice, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3112, MSC 7808, Bethesda, MD 20892, (301) 496-0726, prenticekj@mail.nih.gov.

Name of Committee: Vascular and Hematology Integrated Review Group; Molecular and Cellular Hematology Study Section.

Date: February 8-9, 2016.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Doubletree Guest Suites Santa Monica, 1707 Fourth Street, Santa Monica, CA 90401.

Contact Person: Luis Espinoza, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 6183, MSC 7804, Bethesda, MD 20892, 301-495-1213, espinozala@mail.nih.gov.

Name of Committee: Cell Biology Integrated Review Group; Cellular Signaling and Regulatory Systems Study Section.

Date: February 9-10, 2016.

Time: 7:00 a.m. to 6:30 p.m.

Agenda: To review and evaluate grant applications.

Place: Villa Florence Hotel, 225 Powell Street, San Francisco, CA 94102.

Contact Person: Elena Smirnova, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5187, MSC 7840, Bethesda, MD 20892, 301-357-9112, smirnov@csr.nih.gov.

Name of Committee: Biological Chemistry and Macromolecular Biophysics Integrated Review Group; Biochemistry and Biophysics of Membranes Study Section.

Date: February 9-10, 2016.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Bethesda North Marriott Hotel & Conference Center, 5701 Marinelli Road, Bethesda, MD 20852.

Contact Person: Nuria E. Assa-Munt, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4164, MSC 7806, Bethesda, MD 20892, (301) 451-1323, assamunu@csr.nih.gov.

Name of Committee: Molecular, Cellular and Developmental Neuroscience Integrated Review Group; Biophysics of Neural Systems Study Section.

Date: February 9, 2016.

Time: 8:00 a.m. to 7:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Melrose Hotel, 2430 Pennsylvania Avenue NW., Washington, DC 20037.

Contact Person: Geoffrey G. Schofield, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4040-A, MSC 7850, Bethesda, MD 20892, 301-435-1235, geoffreys@csr.nih.gov.

Name of Committee: Emerging Technologies and Training Neurosciences Integrated Review Group; Bioengineering of Neuroscience, Vision and Low Vision Technologies Study Section.

Date: February 9–10, 2016.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Pier 2620 Hotel Fisherman's Wharf, 2620 Jones Street, San Francisco, CA 94133.

Contact Person: Robert C. Elliott, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5190, MSC 7846, Bethesda, MD 20892, 301–435–3009, elliottro@csr.nih.gov.

Name of Committee: Biological Chemistry and Macromolecular Biophysics Integrated Review Group; Synthetic and Biological Chemistry A Study Section.

Date: February 9–10, 2016.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Hilton San Diego Mission Valley, 901 Camino Del Rio South, San Diego, CA 92108.

Contact Person: Mike Radtke, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4176, MSC 7806, Bethesda, MD 20892, 301–435–1728, rادتke@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Development and Application of PET and SPECT Imaging Ligands as Biomarkers for Drug Discovery and for Pathophysiological Studies of CNS Disorders (R21).

Date: February 9, 2016.

Time: 12:00 p.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Hilton Alexandria Mark Center, 5000 Seminary Road, Alexandria, VA 22311.

Contact Person: David L. Williams, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5110, MSC 7854, Bethesda, MD 20892, (301) 435–1174, williamsdl2@csr.nih.gov.

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Accreditation and Approval of Camin Cargo Control, Inc., as a Commercial Gauger and Laboratory

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: Notice of accreditation and approval of Camin Cargo Control, Inc., as a commercial gauger and laboratory.

SUMMARY: Notice is hereby given, pursuant to CBP regulations, that Camin Cargo Control, Inc., has been approved to gauge and accredited to test petroleum and certain petroleum products for customs purposes for the next three years as of December 2, 2014.

DATES: Effective dates: The accreditation and approval of Camin Cargo Control, Inc., as commercial gauger and laboratory became effective on December 2, 2014. The next triennial inspection date will be scheduled for December 2017.

FOR FURTHER INFORMATION CONTACT: Approved Gauger and Accredited Laboratories Manager, Laboratories and Scientific Services Directorate, U.S. Customs and Border Protection, 1300 Pennsylvania Avenue NW., Suite 1500N, Washington, DC 20229, tel. 202–344–1060.

SUPPLEMENTARY INFORMATION: Notice is hereby given pursuant to 19 CFR 151.12 and 19 CFR 151.13, that Camin Cargo Control, Inc., 1301 Metropolitan Ave., Thorofare, NJ 08086, has been approved to gauge and accredited to test petroleum and certain petroleum products for customs purposes, in

accordance with the provisions of 19 CFR 151.12 and 19 CFR 151.13. Camin Cargo Control, Inc., is approved for the following gauging procedures for petroleum and certain petroleum products set forth by the American Petroleum Institute (API):

API Chapters	Title
3	Tank gauging.
7	Temperature Determination.
8	Sampling.
12	Calculations.
17	Maritime Measurements.

Camin Cargo Control, Inc., is accredited for the following laboratory analysis procedures and methods for petroleum and certain petroleum products set forth by the U.S. Customs and Border Protection Laboratory Methods (CBPL) and American Society for Testing and Materials (ASTM):

CBPL No.	ASTM	Title
27-08	ASTM D-86	Standard Test Method for Distillation of Petroleum Products at Atmospheric Pressure.
27-48	ASTM D-4052	Standard test method for density and relative density of liquids by digital density meter.
27-58	ASTM D-5191	Standard Test Method for Distillation of Petroleum Products at Atmospheric Pressure.
N/A	ASTM D1319	Standard Test Method for Hydrocarbon Types in Liquid Petroleum Products by Fluorescent Indicator Adsorption.
N/A	ASTM D-3606	Standard Test Method for Determination of Benzene and Toluene in Finished Motor and Aviation Gasoline by Gas Chromatography.
N/A	ASTM D-5769	Determination of Benzene, Toluene, and Total Aromatics in Finished Gasolines by Gas Chromatography/Mass Spectrometry.
N/A	ASTM D-2699	Standard Test Method for Research Octane Number of Spark-Ignition Engine Fuel.
N/A	ASTM D-2700	Standard Test Method for Motor Octane Number of Spark-Ignition Engine Fuel.
N/A	ASTM D-4815	Standard Test Method for Determination of MTBE, ETBE, TAME, DIPE, tertiary-Amyl Alcohol and C1 to C4 Alcohols in Gasoline by Gas Chromatography.

Anyone wishing to employ this entity to conduct laboratory analyses and gauger services should request and receive written assurances from the entity that it is accredited or approved by the U.S. Customs and Border Protection to conduct the specific test or gauger service requested. Alternatively, inquiries regarding the specific test or gauger service this entity is accredited or approved to perform may be directed to the U.S. Customs and Border Protection by calling (202) 344-1060. The inquiry may also be sent to cbp.labhq@dhs.gov. Please reference the Web site listed below for the current CBP Approved Gaugers and Accredited Laboratories List.

<http://www.cbp.gov/about/labs-scientific/commercial-gaugers-and-laboratories>.

Dated: January 8, 2016.

Ira S. Reese,

Executive Director, Laboratories and Scientific Services Directorate.

BILLING CODE 9111-14-P

DEPARTMENT OF HOMELAND SECURITY

United States Immigration and Customs Enforcement

Agency Information Collection Activities: Comment Request; Extension of an Information Collection

ACTION: 60-Day Notice of Information Collection for review; I-395; Affidavit in Lieu of Lost Receipt of United States ICE

for Collateral Accepted as Security; OMB Control No. 1653-0045.

The Department of Homeland Security, U.S. Immigration and Customs Enforcement (USICE), is submitting the following information collection request for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection is published in the **Federal Register** to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for sixty day until March 15, 2016.

Written comments and suggestions regarding items contained in this notice and especially with regard to the estimated public burden and associated response time should be directed to the Office of Chief Information Office, Forms Management Office, U.S. Immigrations and Customs Enforcement, 801 I Street NW., Mailstop 5800, Washington, DC 20536-5800.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension of a currently approved information collection.

(2) *Title of the Form/Collection:* Affidavit in Lieu of Lost Receipt of United States ICE for Collateral Accepted as Security.

(3) *Agency form number, if any, and the applicable component of the Department of Homeland Security sponsoring the collection:* I-395; U.S. Immigration and Customs Enforcement.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: State, Local, or Tribal Government. Section 404(b) of the Immigration and Nationality Act (8 U.S.C. 1101 note) provides for the reimbursement of States and localities for assistance provided in meeting an immigration emergency. This collection of information allows for State or local governments to request reimbursement.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 10 responses at 30 minutes (.50 hours) per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* 300 annual burden hours.

Dated: January 12, 2016.

Scott Elmore,

*Program Manager, Forms Management Office,
Office of the Chief Information Officer, U.S.
Immigration and Customs Enforcement,
Department of Homeland Security.*

BILLING CODE 9111-28-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

[OMB Control Number 1615-0080]

Agency Information Collection Activities: USCIS Case Status Online; Extension of an Existing Information Collection; Comment Request

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: 30-Day notice.

SUMMARY: The Department of Homeland Security (DHS), U.S. Citizenship and Immigration Services (USCIS) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection notice was previously published in the **Federal Register** on October 19, 2015, at 80 FR 63243, allowing for a 60-day public comment period. USCIS did receive two comments in connection with the 60-day notice.

DATES: The purpose of this notice is to allow an additional 30 days for public comments. Comments are encouraged and will be accepted until February 16, 2016. This process is conducted in accordance with 5 CFR 1320.10.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, must be directed to the OMB USCIS Desk Officer via email at oir_submission@omb.eop.gov. Comments may also be submitted via fax at (202) 395-5806 (This is not a toll-free number). All submissions received must include the agency name and the OMB Control Number [1615-0080].

You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make. For additional information please read the Privacy Act notice that is available via the link in the footer of <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT:

USCIS, Office of Policy and Strategy, Regulatory Coordination Division, Samantha Deshombres, Acting Chief, 20 Massachusetts Avenue NW., Washington, DC 20529-2140, Telephone number (202) 272-8377 (This is not a toll-free number.

Comments are not accepted via telephone message). Please note contact information provided here is solely for questions regarding this notice. It is not for individual case status inquiries. Applicants seeking information about the status of their individual cases can check Case Status Online, available at the USCIS Web site at <http://www.uscis.gov>, or call the USCIS National Customer Service Center at (800) 375-5283; TTY (800) 767-1833.

SUPPLEMENTARY INFORMATION:

Comments

You may access the information collection instrument with instructions, or additional information by visiting the Federal eRulemaking Portal site at: <http://www.regulations.gov> and enter USCIS-2005-0033 in the search box. Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

- (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- (3) Enhance the quality, utility, and clarity of the information to be collected; and
- (4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection Request:* Extension, Without Change, of a Currently Approved Collection.

(2) *Title of the Form/Collection:* USCIS Case Status Online.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* No Agency Form Number (File No. OMB-33); USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Individuals or households, for-profit organizations, and not-for-profit organizations. This system allows individuals or their representatives to request case status of their pending application through USCIS' Web site.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection USCIS Case Status Online is 7,020,000 and the estimated hour burden per response is 0.075 hours (4.5 minutes).

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 526,500 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is \$0.

Dated: January 11, 2016.

Samantha Deshombres,

Acting Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security.

BILLING CODE 9111-97-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5907-N-03]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT:

Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402-3970; TTY number for the hearing- and speech-impaired (202) 708-2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800-927-7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney

Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless v. Veterans Administration*, No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for "off-site use only" recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to: Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 5B–17, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable

law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.*, acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: NAVY: Mr. Steve Matteo, Department of the Navy, Asset Management; Division, Naval Facilities Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202)685–9426. (This is not a toll-free number)

Dated: January 7, 2016.

Brian P. Fitzmaurice,

*Director, Division of Community Assistance,
Office of Special Needs Assistance Programs.*

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

**[Docket No. FWS–HQ–ES–2015–0169;
4500030113]**

Draft Methodology for Prioritizing Status Reviews and Accompanying 12-Month Findings on Petitions for Listing Under the Endangered Species Act

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce a draft methodology for prioritizing status reviews and accompanying 12-month findings on petitions for listing species under the Endangered Species Act. This draft methodology is intended to allow us to address outstanding workload strategically as our resources allow and to provide transparency to our partners and other stakeholders as to how we establish priorities within our upcoming workload.

DATES: We will accept comments from all interested parties until February 16, 2016. Please note that if you are using the Federal eRulemaking Portal (see **ADDRESSES** section, below), the deadline for submitting an electronic comment is 11:59 p.m. Eastern Time on this date.

ADDRESSES: You may submit comments by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. In the Search box, enter the FWS–HQ–ES–2015–0169, which is the docket number for this draft policy. Then click on the Search button. You may enter a comment by clicking on "Comment Now!" Please ensure that you have found the correct document before submitting your comment.

- *U.S. mail or hand delivery:* Public Comments Processing, Attn: Docket No. FWS–HQ–ES–2015–0169, U.S. Fish and Wildlife Service, MS: BPHC, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We will post all comments on <http://www.regulations.gov>. This generally means that we will post any personal information you provide us (see the Request for Information section, below, for more information).

FOR FURTHER INFORMATION CONTACT: Douglas Krofta, U.S. Fish and Wildlife Service, Division of Conservation and Classification, MS: ES, 5275 Leesburg Pike, Falls Church, VA 22041–3803; telephone 703/358–2171; facsimile 703/358–1735. If you use a telecommunications device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:**Background**

Under the Endangered Species Act, as amended (Act; 16 U.S.C. 1531 *et seq.*), the public can petition the Service to list, delist, or reclassify a species as an endangered species or a threatened species. The Act sets forth specific timeframes in which to complete initial findings on petitions: The Service has, to the maximum extent practicable, 90 days from receiving a petition to make a finding on whether the petition presents substantial information indicating that the petitioned action may be warranted; and subsequently 12 months from receiving a petition for which the Service has made a positive initial finding to make a finding on whether the petitioned action is warranted. However, these statutory deadlines have often proven not to be achievable given the workload in the listing program and the available resources.

Recently, as a result of petitions to list a large number of species under the Act, our workload includes more than 500 unresolved status reviews and accompanying 12-month findings on those petitions to complete. At the same time, our resources to complete these findings are limited. Over the last several years, we have streamlined, and continue to find efficiencies in, our procedures for evaluating petitions and conducting listing actions, but these efforts are not sufficient to keep up with the demands of our workload. This draft methodology is intended to allow us to address the outstanding workload of status reviews and accompanying 12-month findings strategically as our resources allow and to provide transparency to our partners and other stakeholders as to how we establish priorities within our upcoming workload.

To balance and manage this existing and anticipated future status review and accompanying 12-month finding workload in the most efficient manner, we have developed a draft methodology to help us use our resources wisely by working on the highest-priority status reviews and accompanying 12-month petition findings first. The draft methodology consists of identifying five prioritization categories for these actions, determining where (into which category) each action belongs, and using that information to establish the order in which we plan to complete status reviews and accompanying 12-month findings on petitions to list species under the Act. This prioritization of petition findings will inform a multi-year National Listing Workplan for

completing all types of actions in the listing program workload—including not only status reviews and accompanying 12-month findings, but also status reviews initiated by the Service, proposed and final listing determinations, and proposed and final critical habitat designations. We intend to make the National Listing Workplan publically available on our Web site (www.fws.gov/endangered/) and periodically update it as circumstances warrant. This draft methodology for prioritizing petitions to list species does not apply to actions to downlist a species from an endangered species to a threatened species or to delist a species. Further, this methodology does not replace our 1983 Endangered and Threatened Species Listing and Recovery Priority Guidelines (September 21, 1983; 48 FR 43098), which applies to species that have already been determined to warrant a listing proposal; rather, it complements it and can be used in conjunction with it. As with the 1983 guidelines, this draft methodology must be viewed as a guide and should not be looked upon as an inflexible framework for determining resource allocations (See 48 FR 43098). It is not intended to be binding. The draft methodology to be used in prioritizing actions and identified herein incorporates numerous objectives—including acting on the species that are most in need of, and that would most benefit from, listing under the Act first, and maximizing the efficiency of the listing program.

We plan to evaluate unresolved status reviews and accompanying 12-month findings for upcoming listing actions and prioritize them using the prioritization categories and additional considerations identified in this draft methodology to assign each action to one of five priority categories, or “bins,” as described below. In prioritizing status reviews and accompanying 12-month findings, we will consider information from the 90-day finding, any petitions, and any other information in our files. We recognize that we may not always have in our files the information necessary to assign an action to the correct bin, so we plan to also work with State fish and wildlife agencies, Native American Tribes, and other appropriate conservation partners who have management responsibility for these species or relevant scientific data to obtain the information necessary to allow us to accurately prioritize specific actions.

This priority system will assist us in compiling outstanding workload into a multi-year National Listing Workplan designed to address the species with the

highest need first. It is our intention that the National Listing Workplan balance addressing the large backlog of status reviews and accompanying 12-month findings with making progress on other listing actions, such as making final listing determinations for candidate species and designating critical habitat. While this draft methodology was developed primarily to prioritize the outstanding status reviews and accompanying 12-month petition findings, the considerations raised in our prioritization categories may also be useful in prioritizing other actions in the listing program as we develop the National Listing Workplan each year. Prior to the start of each fiscal year, we will update the National Listing Workplan as new information is obtained. We will share the National Listing Workplan with other Federal agencies, State fish and wildlife agencies, Native American Tribes, and other stakeholders and the public at large through posting on our Web site (www.fws.gov/endangered/).

Priority Bins

Below we describe the categories we have identified for prioritizing listing actions and the information that factors into placing specific actions into the appropriate priority bin. Note that an action need not meet every facet of a particular bin in order to be placed in that bin. If an action meets the conditions for more than one bin, the Service will seek to prioritize that action by taking into consideration any case-specific information relevant to determining what prioritization would, overall, best advance the objectives of this draft methodology—including protecting the species that are most in need of, and that would benefit most from, listing under the Act first, and maximizing the efficiency of the listing program.

(1) *Highest Priority—Critically Imperiled*: Highest priority will be given to a species experiencing severe threat levels across a majority of its range, resulting in severe population-level impacts. Species that are critically imperiled and need immediate listing action in order to prevent extinction will be given highest priority.

(2) *Strong Data Already Available on Status*: Species for which we currently have strong information concerning the species' status will receive next highest priority. We acknowledge that the Act requires that we base our decisions on the best available information at the time we make a determination, and we will continue to adhere to that requirement. Our experience implementing the Act has shown us that

high-quality scientific information leads to stronger, more defensible decisions that have increased longevity. Therefore, we will generally place species for which we have particularly strong scientific data supporting a clear decision on status—either a decision that the species warrants listing or does not warrant listing—at a higher priority than species in Bins 3, 4, and 5, discussed below.

(3) *New Science Underway to Inform Key Uncertainties:* As stated previously, a higher quality of scientific information leads to better decision-making, which focuses our resources on providing protections associated with endangered and threatened species listing on species most in need. Scientific uncertainty regarding a species' status is often encountered in listing decisions. For circumstances when that uncertainty can be resolved within a reasonable timeframe because emerging science (e.g., taxonomy, genetics, threats) is underway to answer key questions that may influence the listing determination, those species will be prioritized for action next after those with existing strong information bases. This bin is appropriate when the emerging science or study is already underway, or a report is expected soon, or the data exist, but they need to be compiled and analyzed. Placing a species in this bin does not put off working on the listing action; it just prioritizes work on species in Bins 1 and 2 for completion first. Moreover, species do not remain in this bin indefinitely; a species for which ongoing research is not expected to produce results in the near future would not be placed in this bin, and any species that is placed in this bin will be moved to another bin after the research results become available. With the new, emerging information, a more informed decision could be made (e.g., a species' status could be determined fairly readily through surveys or other research).

(4) *Conservation Opportunities in Development or Underway:* Where efforts to conserve species are organized, underway, and likely to address the threats to the species, we will consider these species as our fourth highest priority. In order for a species to be appropriately placed in this bin, conservation agreements and commitments should be completed in time for consideration in the status review and accompanying 12-month finding and in an amount of time that provides landowners or other entities adequate opportunity to enroll prior to any listing decision. Placing a species in this bin does not put off working on the listing action; it just prioritizes work on

species in Bins 1, 2, and 3 for completion first.

(5) *Limited Data Currently Available:* Species for which we know almost nothing about its threats or status will be given fifth highest priority. If we do not have much information about a species without conducting research or further analysis, the species would be suitably placed in this bin. Placing a species in this bin does not put off working on the listing action; it just prioritizes work on species in Bins 1, 2, 3, and 4 for completion first.

According to the standard under the Act, we need to make listing decisions based on the best available scientific and commercial data. Because the best available data for species in this bin may be very limited, even if the Service conducts further research, we will place a higher priority on work for those species for which we have more and better data already available.

Additional Considerations

The following considerations will also be used to inform implementation of the prioritization process, development of the National Listing Workplan, and any necessary internal ranking within each bin (i.e., as tie-breakers within a bin):

- The level of complexity surrounding the status review and accompanying 12-month finding, such as the degree of controversy, biological complexity, or whether the status review and accompanying 12-month finding covers multiple species or spans multiple regions of the Service.
- The extent to which the protections of the Act would be able to improve conditions for that species and its habitat or also provide benefits to many other species. For example, a species primarily under threat due to sea level rise from the effects of climate change is unlikely to have its condition much improved by the protections of the Act. By contrast, a species primarily under threat due to habitat destruction from grazing practices on public lands would more directly benefit from the protections of the Act.

- Whether there are opportunities to maximize efficiency by batching multiple species for the purpose of status reviews, petition findings, or listing determinations. For example, actions could be batched by taxon, by species with like threats, by similar geographic location, or other similar circumstances. Batching may result in lower-priority actions that are tied to higher-priority actions being completed earlier than they would otherwise.

- Whether there are any special circumstances whereby an action should be bumped up (or down) in

priority when internally ranking actions within a bin or developing the National Listing Workplan. One limitation that might result in divergence from priority order is when the current highest priorities are clustered in a geographic area, such that our scientific expertise at the field office level is fully occupied with their existing workload. We recognize that the geographic distribution of our scientific expertise will in some cases require us to balance workload across geographic areas.

Request for Information

Section 4(h) of the ESA requires that, when the Secretary establishes guidelines to insure that the purposes of Section 4 are achieved efficiently and effectively, the Secretary provide to the public notice of, and opportunity to submit written comments on, those guidelines. In addition, we intend that a final methodology for prioritizing status reviews and accompanying 12-month findings for listing will consider information and recommendations from all interested parties. We therefore solicit comments, information, and recommendations from governmental agencies, Native American Tribes, the scientific community, industry groups, environmental interest groups, and any other interested parties. All comments and materials we receive by the date listed above in **DATES** will be considered prior to the adoption of a final methodology.

If you submit information via <http://www.regulations.gov>, your entire submission—including any personal identifying information—will be posted on the Web site. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on <http://www.regulations.gov>.

We seek comments and recommendations in particular on:

(1) Whether this draft methodology sets out clearly defined conditions for the prioritization bins. If not, please provide detailed comments so that we can clarify our methodology.

(2) Whether there may be other factors or considerations that should be incorporated into our methodology.

(3) Whether our draft methodology makes logical sense and will result in an appropriate use of our limited resources.

Determinations Under Other Authorities

As mentioned above, we intend to use this methodology to prioritize work on

status reviews and accompanying 12-month findings and to assist with prioritizing actions in order to develop the National Listing Workplan for each fiscal year. Below we make determinations provided for under several Executive Orders and statutes that may apply where a Federal action is not a binding rule or regulation.

National Environmental Policy Act (NEPA)

We are analyzing this draft methodology in accordance with the criteria of the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*), the Department of the Interior regulations on Implementation of the National Environmental Policy Act (43 CFR 46.10–46.450), and the Department of the Interior Manual (516 DM 1–6 and 8). We invite the public to comment on the extent to which this draft methodology may have a significant impact on the human environment, or fall within one of the categorical exclusions for actions that have no individual or cumulative effect on the quality of the human environment. We will complete our analysis, in compliance with NEPA, before finalizing this methodology.

Paperwork Reduction Act of 1995

This draft methodology does not contain any collections of information that require approval by the Office of Management and Budget (OMB) under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). This draft methodology will not impose recordkeeping or reporting requirements on State or local governments, individuals, businesses, or organizations. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994, "Government-to-Government Relations with Native American Tribal Governments" (59 FR 22951), Executive Order 13175 "Consultation and Coordination with Indian Tribal Governments," and the Department of the Interior Manual at 512 DM 2, and the Department of Commerce *American Indian and Alaska Native Policy* (March 30, 1995), we have considered possible effects on federally recognized Indian tribes and have preliminarily determined that there are no potential adverse effects of issuing this draft methodology. Our intent with this draft methodology is to provide transparency

to Tribes and other stakeholders in the prioritization of our upcoming workload. We will continue to work with Tribes as we finalize this draft methodology and obtain the information necessary to accurately bin specific actions and develop our National Listing Workplan.

Authors

The primary authors of this draft policy are the staff members of the Division of Conservation and Classification, U.S. Fish and Wildlife Service, 5275 Leesburg Pike, Falls Church, VA 22041.

Authority

The authority for this action is the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Dated: January 6, 2016.

Stephen Guertin,

Acting Director, U.S. Fish and Wildlife Service.

Proposed Information Collection; National Underground Railroad Network to Freedom Program

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (National Park Service) will ask the Office of Management and Budget (OMB) to approve the information collection described below. As required by the Paperwork Reduction Act of 1995 and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this IC. This IC is scheduled to expire on July 31, 2016. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a valid OMB control number.

DATES: To ensure we are able to consider your comments, we must receive them on or before March 15, 2016.

ADDRESSES: Please send your comments on the ICR to Madonna L. Baucum, Information Collection Clearance Officer, National Park Service, 12201 Sunrise Valley Drive, Room 2C114, Mail Stop 242, Reston, VA 20192 (mail); or

madonna_baucum@nps.gov (email). Please reference OMB Control Number "1024–0232, NPS National Underground Railroad Network to Freedom" in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT:

Diane Miller, National Manager, National Underground Railroad Network to Freedom Program, National Park Service, c/o Blackwater National Wildlife Refuge, 2145 Key Wallace Drive, Cambridge, Maryland 21613; or via email at *diane_miller@nps.gov*.

SUPPLEMENTARY INFORMATION:

I. Abstract

Public Law 105–203 (National Underground Railroad Network to Freedom Act of 1998) authorizes the Secretary of the Interior to establish the Network to Freedom (Network). The Network is a collection of sites, facilities, and programs, both governmental and nongovernmental, around the United States. All entities must have a verifiable association with the historic Underground Railroad movement. The National Park Service administers the National Underground Railroad Network to Freedom Program. The program coordinates preservation and education efforts Nationwide and integrates local historical places, museums, and interpretive programs associated with the Underground Railroad into a mosaic of community, regional, and national stories.

Individuals; businesses; organizations; State, tribal and local governments; and Federal agencies that want to join the Network must complete an application form. The application and instructions are available on our Web site at <http://www.nps.gov/subjects/ugrr/index.htm>. Respondents must (1) verify associations and characteristics through descriptive texts that are the result of historical research and (2) submit supporting documentation; e.g., copies of rare documents, photographs, and maps. Much of the information is submitted in electronic format and used to determine eligibility to become part of the Network.

Upon approval by OMB of this extension request, the NPS will begin developing a HTML version of the 10–946, "National Park Service National Underground Railroad Network to Freedom Application Form" on the Department of the Interior's Enterprise Forms System (EFS) Web site. The EFS will consolidate all internal forms used by the Department and external forms used by the public into a centralized automated forms program. This will

increase efficiency and responsiveness through the centralization and automation of all Departmental forms. In addition, the forms process will be modernized through the implementation of a completely digital workflow, the integration of digital and electronic signatures, and the ability to utilize real-time workflow through the use of unified messaging.

One of the principal components of the Network to Freedom Program is to validate the efforts of local and regional organizations, and to make it easier for them to share expertise and communicate with us and each other. The vehicle through which this can happen is for these local entities to

become Network Partners. Partners of the Network to Freedom Program work alongside and often in cooperation with us to fulfill the program's mission. Prospective partners must submit a letter with the following information:

- Name and address of the agency, company or organization;
- Name, address, and phone, fax, and email information of principal contact;
- Abstract not to exceed 200 words describing the partner's activity or mission statement; and
- Brief description of the entity's association to the Underground Railroad.

II. Data

OMB Number: 1024-0232.

Title: National Underground Railroad Network to Freedom Program.

Form(s): NPS Form 10-946, "National Park Service National Underground Railroad Network to Freedom Application Form".

Type of Request: Extension of a currently approved collection of information.

Description of Respondents: Individuals; businesses; nonprofit organizations; and Federal, State, tribal, and local governments.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Activity	Number of respondents	Number of responses	Completion time per response (hours)	Total annual burden hours
Network Applications	35	35	25	875
Partner Requests	2	2	.5	1
Totals	37	37	26	876

Estimated Annual Nonhour Burden Cost: None.

III. Comments

We invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden to respondents, including use of automated information techniques or other forms of information technology.

Please note that the comments submitted in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this IC. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: January 11, 2016.

Madonna L. Baucum,

*Information Collection Clearance Officer,
National Park Service.*

Proposed Information Collection; Case Incident Report Request

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (National Park Service, NPS) will ask the Office of Management and Budget (OMB) to approve the information collection (IC) described below. As required by the Paperwork Reduction Act of 1995 and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this IC. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: You must submit comments on or before March 15, 2016.

ADDRESSES: Send your comments on the IC to Madonna L. Baucum, Information

Collection Clearance Officer, National Park Service, 12201 Sunrise Valley Drive (Room 2C114, Mail Stop 242), Reston, VA 20192 (mail); or madonna_baucum@nps.gov (email). Please include "1024—New Case Incident Report Request" in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this IC, contact Charis Wilson, National Park Service, 12795 W. Alameda Parkway, P.O. Box 25287, Denver, CO 80225-0287 (mail); (303) 969-2959 (phone), or charis_wilson@nps.gov (email).

SUPPLEMENTARY INFORMATION:

I. Abstract

The NPS maintains law enforcement incident reports in the Department of the Interior's Incident and Management Reporting System (IMARS), which is a Privacy Act System of Records (DOI-10). In accordance with the Privacy Act (5 U.S.C. 552a(b)), the NPS is barred from releasing copies of records contained within IMARS, including but not limited to motor vehicle accident reports, without the prior written request and/or consent of the individual to whom the record pertains unless authorized under appropriate routine-use exceptions.

The NPS requires the submission of NPS Form 10-945, "Case Incident Report Request" in order to verify a requester's identity and retrieve responsive records in order to respond

to requests for copies of incident records from persons involved or injured in incidents, owners of property damaged in such incidents, or these individuals' duly verified insurance companies, representatives, and/or attorneys. The information collected via NPS Form 10–945 includes:

- Full name of Requester;
- Case Number;

- Social Security Number;
- Current Address;
- Date of Birth; and
- Place of birth.

II. Data

OMB Control Number: 1024–New.
Title: Case Incident Report Request.
Service Form Number(s): NPS Form 10–945, “Case Incident Report Request”.

Type of Request: New.

Description of Respondents: Individuals requesting copies of NPS case incident reports that are maintained within the Department of Interior's Incident Management and Reporting System (IMARS), which is a Privacy Act system of records (DOI–10).

Respondent's Obligation: Voluntary.

Frequency of Collection: On occasion.

Activity	Estimated annual number of responses	Estimated completion time per response (minutes)	Estimated total annual burden hours
NPS Form 10–945, “Case Incident Report Request”	3,000	3	150
Totals	3,000	150

Estimated Annual Nonhour Burden Cost: None.

III. Comments

We invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: January 11, 2016.

Proposed Information Collection; National Park Service Common Learning Portal

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (National Park Service, NPS) will ask the Office of Management and Budget (OMB) to approve the information collection (IC) described below. As required by the Paperwork Reduction Act of 1995 and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this IC. This is a new collection. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: To ensure that we are able to consider your comments on this IC, we must receive them by March 15, 2016.

ADDRESSES: Send your comments on the IC to Madonna L. Baucum, Information Collection Clearance Officer, National Park Service, 12201 Sunrise Valley Dr., MS–242, Rm. 2C114, Reston, VA 20192 (mail); or madonna_baucum@nps.gov (email). Please include “1024–HAFE CLP” in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this IC, please contact Dale Carpenter at telephone (304) 535–6401 or via email at dale_carpenter@nps.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

The NPS Common Learning Portal (CLP) will serve as a common location for advertising national, regional, and park specific training events to NPS employees. The CLP is focused on increasing the visibility of training available to NPS employees and is also making the site available to the public to allow NPS partners, retired NPS employees, and other interested persons not directly affiliated with the NPS access. The CLP also establishes communities of practice using interest groups and forums in order to increase communication among the NPS training community. The CLP includes an Ask the Expert feature where industry experts or retired NPS employees who are experts in their field can field questions from NPS employees. Individuals may visit the Common Learning Portal to learn about upcoming training events without providing any information. However, in order to participate in community forum discussions, an account on the site must be created. Registering for an account requires the user provide the following information for use in the community discussion forums:

- Name,
- Email address, and
- Username.

Once registered, the user has the opportunity to voluntarily provide additional information on their portal profile, to include:

- Photo (optional)
- Title
- Location,
- Expertise,
- Duties, and
- Additional personal information such as hobbies or activities.

Additional information provided by the individual in these text fields such

as hobbies or activities in general are unbeknownst to us; however we reserve the right to remove offending information from the portal at any time.

II. Data

National Register of Historic Places; Notification of Pending Nominations and Related Actions

AGENCY: National Park Service, Interior.
ACTION: Notice.

SUMMARY: The National Park Service is soliciting comments on the significance of properties nominated before December 19, 2015, for listing or related actions in the National Register of Historic Places.

DATES: Comments should be submitted by February 1, 2016.

ADDRESSES: Comments may be sent via U.S. Postal Service to the National Register of Historic Places, National Park Service, 1849 C St. NW., MS 2280, Washington, DC 20240; by all other carriers, National Register of Historic Places, National Park Service, 1201 Eye St. NW., 8th floor, Washington, DC 20005; or by fax, 202-371-6447.

SUPPLEMENTARY INFORMATION: The properties listed in this notice are being considered for listing or related actions in the National Register of Historic Places. Nominations for their consideration were received by the National Park Service before December 19, 2015. Pursuant to section 60.13 of 36 CFR part 60, written comments are being accepted concerning the significance of the nominated properties under the National Register criteria for evaluation.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we

cannot guarantee that we will be able to do so.

**INTERNATIONAL TRADE
COMMISSION**

**[Investigation Nos. 701–TA–551–553 and
731–TA–1307–1308 (Preliminary)]**

**Certain New Pneumatic Off-the-Road-
Tires From China, India, and Sri Lanka;
Institution of Antidumping and
Countervailing Duty Investigations and
Scheduling of Preliminary Phase
Investigations**

AGENCY: United States International
Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the institution of investigations and commencement of preliminary phase antidumping and countervailing duty investigation Nos. 701–TA–551–553 and 731–TA–1307–1308 (Preliminary) pursuant to the Tariff Act of 1930 (“the Act”) to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of certain imports of new pneumatic off-the-road-tires from China, India and Sri Lanka provided for in subheadings 4011.20.10, 4011.20.50, 4011.61.00, 4011.62.00, 4011.63.00, 4011.69.00, 4011.92.00, 4011.93.40, 4011.93.80, 4011.94.40, 4011.94.80, 8431.49.90, 8709.90.00, and 8716.90.10 of the Harmonized Tariff Schedule of the United States.¹ The petitioners allege that these products are imported from China and India and sold in the United States at less-than-fair-value and that these imports are allegedly subsidized by the governments of China, India, and Sri Lanka. Unless the Department of Commerce extends the time for initiation, the Commission must reach preliminary determinations in antidumping and countervailing duty investigations in 45 days, or in this case by February 22, 2016. The Commission’s views must be transmitted to Commerce within five

¹ Certain new pneumatic off-the-road-tires may also enter under the following HTS subheadings: 4011.99.45, 4011.99.85, 8424.90.90, 8431.20.00, 8431.39.00, 8431.49.10, 8431.49.90, 8432.90.00, 8433.90.50, 8503.00.95, 8708.70.05, 8708.70.25, 8708.70.45, and 8716.90.50.

business days thereafter, or by February 29, 2016.

DATES: *Effective date:* January 8, 2016.

FOR FURTHER INFORMATION CONTACT:

Michael Szustakowski (202–205–3169), Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (<http://www.usitc.gov>). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at <http://edis.usitc.gov>.

SUPPLEMENTARY INFORMATION:

Background. These investigations are being instituted, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), in response to petitions filed on January 8, 2016, by Titan Tire Corporation of Des Moines, Iowa and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union, AFL–CIO, CLC of Pittsburgh, Pennsylvania.

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Participation in the investigation and public service list. Persons (other than petitioners) wishing to participate in the investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in sections 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations have the right to appear as parties in Commission antidumping duty and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO)

and BPI service list. Pursuant to section 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference. The Commission's Director of Investigations has scheduled a conference in connection with these investigations for 9:30 a.m. on Friday, January 29, 2016, at the U.S. International Trade Commission Building, 500 E Street SW., Washington, DC. Requests to appear at the conference should be emailed to William.bishop@usitc.gov and Sharon.bellamy@usitc.gov (do not file on EDIS) on or before January 27, 2016. Parties in support of the imposition of countervailing and antidumping duties in these investigations and parties in opposition to the imposition of such duties will each be collectively allocated one hour within which to make an oral presentation at the conference. A nonparty who has testimony that may aid the Commission's deliberations may request permission to present a short statement at the conference.

Written submissions. As provided in sections 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before February 3, 2016, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties may file written testimony in connection with their presentation at the conference. If briefs or written testimony contain BPI, they must conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission's rules. Please consult the Commission's rules, as amended, 76 FR 61937 (Oct. 6, 2011) and the Commission's Handbook on Filing Procedures, 76 FR 62092 (Oct. 6, 2011), available on the Commission's Web site at <http://edis.usitc.gov>.

In accordance with sections 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.12 of the Commission's rules.

By order of the Commission.

Issued: January 11, 2016.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–392]

Manufacturer of Controlled Substances Registration: Cambridge Isotope Lab

ACTION: Notice of registration.

SUMMARY: Cambridge Isotope Lab applied to be registered as a

manufacturer of a certain basic class of controlled substance. The Drug Enforcement Administration (DEA) grants Cambridge Isotope Lab registration as a manufacturer of this controlled substance.

SUPPLEMENTARY INFORMATION: By notice dated October 2, 2015, and published in the **Federal Register** on October 13, 2015, 80 FR 61470, Cambridge Isotope Lab, 50 Frontage Road, Andover, Massachusetts 01810 applied to be registered as a manufacturer of a certain basic class of controlled substance. No comments or objections were submitted for this notice.

The DEA has considered the factors in 21 U.S.C. 823(a) and determined that the registration of Cambridge Isotope Lab to manufacture the basic class of controlled substance is consistent with the public interest and with United States obligations under international treaties, conventions, or protocols in effect on May 1, 1971. The DEA investigated the company's maintenance of effective controls against diversion by inspecting and testing the company's physical security systems, verifying the company's compliance with state and local laws, and reviewing the company's background and history.

Therefore, pursuant to 21 U.S.C. 823(a), and in accordance with 21 CFR 1301.33, the above-named company is granted registration as a bulk manufacturer of morphine (9300), a basic class of controlled substance listed in schedule II.

The company plans to utilize small quantities of the listed controlled substance in the preparation of analytical standards.

Dated: January 11, 2016.

Louis J. Milione,

Deputy Assistant Administrator.

BILLING CODE 4410-09-P

DEPARTMENT OF JUSTICE

Notice of Filing of Proposed Stipulation and Settlement Agreement Under the Resource Conservation and Recovery Act

On January 12, 2016, a proposed Stipulation and Settlement Agreement establishing an Environmental Response Trust for the Gulfport, Mississippi Facility ("Gulfport Settlement Agreement") was filed with the United States Bankruptcy Court for the District of Delaware in the bankruptcy proceeding entitled *In re Reichhold Holdings US, Inc.*, No. 14-12237-MFW (Bankr. D. Del.).

Under the proposed Gulfport Settlement Agreement, an Environmental Response Trust will be created to take title to certain property owned by Reichhold Inc., located in Gulfport, Mississippi. The Environmental Response Trust will perform certain environmental actions with respect to the property. The Environmental Response Trust will receive the proceeds of a letter of credit in the approximate amount of \$3.5 million and \$750,000 provided by the Debtor. The Gulfport Settlement Agreement includes covenants not to sue under the Resource Conservation and Recovery Act ("RCRA"), 42 U.S.C. 6901 *et seq.*

The publication of this notice opens a period for public comment on the Gulfport Settlement Agreement. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *In re Reichhold Holdings US, Inc.*—Gulfport Environmental Response Trust—D.J. Ref. No. 90-11-2-11196. All comments must be submitted so that they are received no later than midnight (Eastern Time) January 29, 2016. Comments may be submitted either by email or by mail:

<i>To submit comments:</i>	<i>Send them to:</i>
By e-mail	pubcomment-ees.enrd@usdoj.gov .
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Under section 7003(d) of RCRA, a commenter may request an opportunity for a public meeting in the affected area.

During the public comment period, the Settlement Agreement may be examined and downloaded at this Justice Department Web site: <http://www.justice.gov/enrd/consent-decrees>. We will provide a paper copy of the Settlement Agreement—Gulfport upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Please enclose a check or money order for \$15.00 (25 cents per page reproduction cost) payable to the United States Treasury.

Henry Friedman,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

[FR Doc. 2016-00742 Filed 1-14-16; 8:45 am]

BILLING CODE 4410-15-P

DEPARTMENT OF JUSTICE

Notice of Filing of Proposed Stipulation and Settlement Agreement Under The Comprehensive Environmental Response, Compensation, and Liability Act

On January 12, 2016, a proposed Settlement Agreement between the United States and the Debtors ("Settlement Agreement") was filed with the United States Bankruptcy Court for the District of Delaware in the bankruptcy proceeding entitled *In re Reichhold Holdings US, Inc.*, No. 14-12237-MFW (Bankr. D. Del.).

The proposed Settlement Agreement will resolve certain proofs of claim asserted against Debtor Reichhold Inc. under the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"), 42 U.S.C. 9601-9675, for costs incurred and to be incurred by the United States in connection with certain sites, and for natural resource damages and costs of assessment at or in connection with certain sites.

Under the proposed Settlement Agreement the United States will have the following allowed general unsecured claims in the above referenced bankruptcy proceeding: 1) With respect to the Peterson/Puritan, Inc. Superfund Site in Rhode Island, the United States on behalf of EPA shall have an Allowed General Unsecured Claim of \$205,211; 2) With respect to the Berry's Creek Study Area operable unit of the Ventron/Velsicol Superfund Site in New Jersey, the United States on behalf of EPA shall have an Allowed General Unsecured Claim of \$400,000; 3) With respect to the Lower Passaic River Study Area of the Diamond Alkali Superfund Site in New Jersey, the United States on behalf of EPA shall have an Allowed General Unsecured Claim of \$8,000,000; 4) With respect to the Yosemite Slough Superfund Site in California, the United States on behalf of EPA shall have an Allowed General Unsecured Claim of \$268,000; 5) With respect to the Lower Duwamish Waterway Superfund Site in Washington: (i) The United States on behalf of EPA shall have an Allowed General Unsecured Claim of \$4,300,000; (ii) the United States on behalf of National Oceanic and Atmospheric Administration ("NOAA") shall have an Allowed General Unsecured Claim of \$5,937; and (iii) the United States on behalf of the Department of Interior ("DOI") shall have an Allowed General Unsecured Claim of \$558,897.74 (which includes DOI assessment costs of \$3,897.74); 6) With respect to the Kin-

Buc Landfill Superfund Site in New Jersey, the United States on behalf of NOAA shall have an Allowed General Unsecured Claim of \$29,487.47; 7) With respect to the Picketville Landfill Site in Florida, the United States, on behalf of EPA, shall have no allowed claim; 8) With respect to the Omega Chemical Site in California, the Omega PRP Organized Group ("OPOG") and the Debtors are attempting to negotiate a written agreement prior to the effective date of Debtors' Plan of Liquidation, providing that OPOG's proof of claim shall be allowed as a general unsecured claim in the amount of \$4,000,000. The United States on behalf of EPA shall have an contingent allowed general unsecured claim of \$4,000,000 with respect to the Omega Site, which contingent allowed general unsecured claim shall only be entitled to a distribution from the Debtors in the event that no settlement agreement is reached between the Debtors and OPOG prior to the effective date of the Debtors' Plan of Liquidation; 9) With respect to the Baldwin Park Operable Unit Site ("BPOU") in California, certain proofs of claim were filed by various PRPs. The Debtors are attempting to negotiate and enter into a written agreement with the BPOU PRP Group prior to the effective date of Debtors' Plan of Liquidation, providing that the BPOU Proofs of Claim shall be merged into a single proof of claim and shall be Allowed as a General Unsecured Claim in the amount of \$3,000,000. The United States on behalf of EPA shall have a contingent allowed general unsecured claim of \$3,000,000 with respect to the BPOU Site, which contingent allowed general unsecured claim shall only be entitled to a distribution from the Debtors in the event that no settlement agreement is reached between the Debtors and the BPOU PRP Group prior to the effective date of Debtors' Plan of Liquidation.

The Settlement Agreement includes certain covenants not to sue under Sections 106 and 107 of CERCLA, 42 U.S.C. 9606 or 9607, with respect to the above referenced Sites. DOI and NOAA are providing a covenant not to sue under Section 107 of CERCLA, 42 U.S.C. 9607 with respect to each Site for which they are receiving an allowed claim.

The publication of this notice opens a period for public comment on the Settlement Agreement—Gulfport. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *In re Reichhold Holdings US, INC., et al.*,—D.J. Ref. No. 90–11–2–11196. All comments must be submitted so that

they are received by no later than midnight (Eastern Time) January 29, 2016. Comments may be submitted either by email or by mail:

<i>To submit comments:</i>	<i>Send them to:</i>
By email	pubcomment-ees.enrd@usdoj.gov
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the Settlement Agreement may be examined and downloaded at this Justice Department Web site: <http://www.justice.gov/enrd/consent-decrees>. We will provide a paper copy of the Settlement Agreement upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611. Please enclose a check or money order for \$ 9.75 (25 cents per page reproduction cost) payable to the United States Treasury.

BILLING CODE 4410–15–P

DEPARTMENT OF JUSTICE

[OMB Number 1140–0016]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Application for Registration of Firearms Acquired by Certain Government Entities

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 30-day notice.

SUMMARY: The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** 80 FR 69699, on November 10, 2015, allowing for a 60-day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until February 16, 2016.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Andrew Ashton, NFA Branch Specialist, 244 Needy Road, Martinsburg, WV 25402, at: 304–616–4501 or Andrew.Ashton@atf.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* Extension of a currently approved collection.

2. *The Title of the Form/Collection:* Application for Registration of Firearms Acquired by Certain Government Entities.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:*

Form number: ATF F 10 (5320.10).
Component: Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: State Local or Tribal Governments.

Other: None.

Abstract: The form is required to be submitted by State and local government entities wishing to register

an abandoned or seized and previously unregistered National Firearms Act weapon. The form is required whenever application for such a registration is made.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* An estimated 1909 respondents will take 30 minutes to complete the questionnaire.

6. *An estimate of the total public burden (in hours) associated with the collection:* The estimated annual public burden associated with this collection is 955 hours.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Room 3E-405B, Washington, DC 20530.

Dated: January 12, 2016.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; Evaluate whether and if so how the quality, utility, and clarity of the information proposed to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* Extension of a currently approved collection.

2. *Title of the Form/Collection:* Application for Registration under Domestic Chemical Diversion Control Act of 1993; Renewal Application for Registration under Domestic Chemical Diversion Control Act of 1993.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* DEA Forms: 510, 510A. The applicable component within the Department of Justice is the Drug Enforcement Administration, Office of Diversion Control.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Affected public (Primary): Business or other for-profit.

Affected public (Other): None.

Abstract: The DEA implements the Controlled Substances Act (CSA) which requires that every person who manufactures or distributes a list I chemical shall annually obtain a registration for that purpose.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:*

	Number of annual respondents	Average time per response	Total annual burden hours
DEA-510 (paper)	14	0.20 hours (12 minutes)	2.80
DEA-510 (electronic)	116	0.17 hours (8 minutes)	15.47
DEA-510A (paper)	97	0.2 hours (10 minutes)	16.17
DEA-510A (electronic)	827	0.07 hours (4 minutes)	55.13
Total	1,054	89.57

6. *An estimate of the total public burden (in hours) associated with the proposed collection:* The DEA estimates that this collection takes 89.57 annual burden hours.

If additional information is required please contact: Jerri Murray, Department Clearance Officer, United States

Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution

Square, 145 N Street NE., Suite 3E.405B, Washington, DC 20530.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-09-P

DEPARTMENT OF JUSTICE**Office of Justice Programs****[OJP (BJA) Docket No. 1705]****Meeting of the Department of Justice's (DOJ's) National Motor Vehicle Title Information System (NMVTIS) Federal Advisory Committee****AGENCY:** Office of Justice Programs (OJP), Justice.**ACTION:** Notice of meeting.

SUMMARY: This is an announcement of a meeting of DOJ's National Motor Vehicle Title Information System (NMVTIS) Federal Advisory Committee to discuss various issues relating to the operation and implementation of NMVTIS.

DATES: The meeting will take place on Tuesday, February 9, 2016, from 9:00 a.m. to 4:00 p.m. ET.

ADDRESSES: The meeting will take place at the Office of Justice Programs, 810 7th Street NW., Washington, DC 20531.

FOR FURTHER INFORMATION CONTACT: Todd Brighton, Designated Federal Employee (DFE), Bureau of Justice Assistance, Office of Justice Programs, 810 7th Street NW., Washington, DC 20531; Phone: (202) 616-3879 [note: this is not a toll-free number]; Email: Todd.Brighton@usdoj.gov

SUPPLEMENTARY INFORMATION: This meeting is open to the public. Members of the public who wish to attend this meeting must register with Mr. Brighton at the above address at least seven (7) days in advance of the meeting. Registrations will be accepted on a space available basis. Access to the meeting will not be allowed without registration. Please bring photo identification and allow extra time prior to the meeting. Interested persons whose registrations have been accepted may be permitted to participate in the discussions at the discretion of the meeting chairman and with approval of the DFE.

Anyone requiring special accommodations should notify Mr. Brighton at least seven (7) days in advance of the meeting.

Purpose

The NMVTIS Federal Advisory Committee will provide input and recommendations to OJP regarding the operations and administration of NMVTIS. The primary duties of the NMVTIS Federal Advisory Committee will be to advise the Bureau of Justice Assistance Director on NMVTIS-related issues, including but not limited to: Implementation of a system that is self-

sustainable with user fees; options for alternative revenue-generating opportunities; determining ways to enhance the technological capabilities of the system to increase its flexibility; and options for reducing the economic burden on current and future reporting entities and users of the system.

Todd Brighton,*NMVTIS Enforcement Coordinator, Bureau of Justice Assistance, Office of Justice Programs.*

BILLING CODE 4410-18-P**OFFICE OF MANAGEMENT AND BUDGET****2015 Statutory Pay-As-You-Go Act Annual Report****AGENCY:** Office of Management and Budget (OMB).**ACTION:** Notice.

SUMMARY: This report is being published as required by the Statutory Pay-As-You-Go (PAYGO) Act of 2010, 2 U.S.C. 931 *et seq.* The Act requires that OMB issue (1) an annual report as specified in 2 U.S.C. 934(a) and (2) a sequestration order, if necessary.

FOR FURTHER INFORMATION CONTACT: Patrick Locke. 202-395-3672.

SUPPLEMENTARY INFORMATION: This report and additional information about the PAYGO Act can be found at http://www.whitehouse.gov/omb/paygo_default.

Authority: 2 U.S.C. 934**Courtney Timberlake,***Assistant Director for Budget.*

This Report is being published pursuant to section 5 of the Statutory Pay-As-You-Go (PAYGO) Act of 2010, Public Law 111-139, 124 Stat. 8, 2 U.S.C. 934, which requires that OMB issue an annual PAYGO report, including a sequestration order if necessary, no later than 14 working days after the end of a congressional session.

This Report describes the budgetary effects of all PAYGO legislation enacted during the first session of the 114th Congress, including legislative provisions designated as emergency requirements under section 4(g) of the PAYGO Act, and presents the 5-year and 10-year PAYGO scorecards maintained by OMB. Because neither the 5-year nor 10-year scorecard shows a debit for the budget year, which for purposes of this Report is fiscal year 2016,¹ a sequestration order under

subsection 5(b) of the PAYGO Act, 2 U.S.C. § 934(b), is not necessary.

During the first session of the 114th Congress, one law was enacted with emergency requirements under section 4(g) of the PAYGO Act, 2 U.S.C. 933(g) and one law was enacted that authorized a new purpose for prior emergency funding. The scorecards include no current policy adjustments made under section 4(c) of the PAYGO Act, 2 U.S.C. 933(c). The authority for current policy adjustments expired as of December 31, 2011, so the Report does not contain any information about or descriptions of any current policy adjustments.

I. PAYGO Legislation with Budgetary Effects

PAYGO legislation is authorizing legislation that affects direct spending or revenues, and appropriations legislation that affects direct spending in the years beyond the budget year or affects revenues in any year.² For a more complete description of the Statutory PAYGO Act, see the OMB Web site, http://www.whitehouse.gov/omb/paygo_description, and Chapter 9, "Budget Concepts," of the *Analytical Perspectives* volume of the 2016 Budget, https://www.whitehouse.gov/sites/default/files/omb/budget/fy2016/assets/ap_9_concepts.pdf.

The 5-year and 10-year PAYGO scorecards for each congressional session begin with the balances of costs or savings carried over from previous sessions and then tally the costs or savings of PAYGO laws enacted in that session. The 5-year PAYGO scorecard for the first session of the 114th Congress began with balances of costs of \$440 million in 2016, and balances of savings of \$1,440 million in 2017, \$601 million in 2018, and \$626 million in 2019. The completed 5-year scorecard for the session shows that PAYGO legislation enacted during the session was estimated to have PAYGO budgetary effects that reduced the deficit by an average of \$3,456 million each year from 2016 through 2020.³

² Provisions in appropriations acts that affect direct spending in the years beyond the budget year (also known as "outyears") or affect revenues in any year are considered to be budgetary effects for the purposes of the PAYGO scorecards except if the provisions produce outlay changes that net to zero over the current year, budget year, and the four subsequent years. As specified in section 3 of the PAYGO Act, off-budget effects are not counted as budgetary effects. Off-budget effects refer to effects on the Social Security trust funds (Old-Age and Survivors Insurance and Disability Insurance) and the Postal Service.

³ As provided in section 4(d) of the PAYGO Act, 2 U.S.C. § 933(d), budgetary effects on the PAYGO scorecards are based on congressional estimates for

Continued

¹ References to years on the PAYGO scorecards are to fiscal years.

These new savings on the scorecard eliminated the debit in 2016, increased the balances of savings in 2017 through 2019, and created new savings in 2020.

The 10-year PAYGO scorecard for the first session of the 114th Congress began with balances of savings of \$9,730 million in each year from 2016 to 2020, \$3,359 million in 2021, \$2,649 million in 2022, \$1,514 million in 2023, and \$1,521 million in 2024. The completed 10-year scorecard for the session shows that PAYGO legislation for the session reduced the deficit by an average of \$5,718 million each year from 2016 through 2025. These new savings increased the balances of savings in each year on the 10-year scorecard from 2016 through 2024, and created new savings in 2025.

In the first session of the 114th Congress, 35 laws were enacted that were determined to constitute PAYGO legislation. Of the 35 enacted PAYGO laws, 15 laws were estimated to have PAYGO budgetary effects (costs or savings) in excess of \$500,000 over one or both of the 5-year or 10-year PAYGO windows. These were:

- Terrorism Risk Insurance Program Reauthorization Act of 2015, Public Law 114–1;
- Construction Authorization and Choice Improvement Act, Public Law 114–19;
- Justice for Victims of Trafficking Act of 2015, Public Law 114–22;
- A bill to extend the authorization to carry out the replacement of the existing medical center of the Department of Veterans Affairs in Denver, Colorado, to authorize transfers of amounts to carry out the replacement of such medical center, and for other purposes, Public Law 114–25;
- Trade Preferences Extension Act of 2015, Public Law 114–27;
- Steve Gleason Act of 2015, Public Law 114–40;
- Surface Transportation and Veterans Health Care Choice Improvement Act of 2015, Public Law 114–41;
- Department of Veterans Affairs Expiring Authorities Act of 2015, Public Law 114–58;
- Protecting Affordable Coverage for Employees Act, Public Law 114–60;
- Adoptive Family Relief Act, Public Law 114–70;
- Bipartisan Budget Act of 2015, Public Law 114–74;
- National Defense Authorization Act for Fiscal Year 2016, Public Law 114–92;

bills including a reference to a congressional estimate in the Congressional Record, and for which such a reference is indeed present in the Record. Absent such a congressional cost estimate, OMB is

- Federal Perkins Loan Program Extension Act of 2015, Public Law 114–105;
- Consolidated Appropriations Act of 2016, Public Law 114–113; and
- Patient Access and Medicare Protection Act, Public Law 114–115.

In addition to the laws identified above, 20 laws enacted in this session were estimated to have negligible budgetary effects on the PAYGO scorecards—costs or savings of less than \$500,000 over both the 5-year and 10-year PAYGO windows.

II. Budgetary Effects Excluded from the Scorecard Balances

A. Legislation Designated as Emergency Requirements

As shown on the scorecards, one law was enacted in the first session of the 114th Congress with an emergency designation under the Statutory PAYGO Act: the Surface Transportation and Veterans Health Care Choice Improvement Act of 2015, Public Law 114–41. The effects of the provisions in this law that are designated as emergency requirements appear on the scorecard, but the effects are subtracted before computing the scorecard totals.

B. Repurposing of Prior Emergency Spending

Scorekeeping guidelines adopted by the Office of Management and Budget, the Congressional Budget Office, and the congressional budget committees preclude scoring savings for the subsequent repurposing of spending that was designated as emergency spending when enacted. Although the laws repurposing the emergency spending are reported on the PAYGO scorecards maintained by OMB, the associated savings are not included in the balances on the scorecards that are used to determine the need for a sequestration. In this congressional session, the Construction Authorization and Choice Improvement Act, Public Law 114–19, repurposed spending in the VA Choice program by expanding the eligibility for the program to additional veterans. This adjustment resulted in excluding \$47 million in savings over 2015–2020 from the scorecard totals.

C. Statutory Provisions Excluding Legislation from the Scorecards

Four laws enacted in the first session of the 114th Congress had estimated budgetary effects on direct spending and

required to use its own estimate for the scorecard. None of the bills enacted during the first session of the 114th Congress had such a congressional estimate and therefore OMB was required to

revenues that are not included in the calculations for the PAYGO scorecards due to provisions in law excluding all or part of the law from section 4(d) of the Statutory Pay-As-You-Go Act of 2010. Three laws included provisions excluding their budgetary effects from the PAYGO scorecards entirely: Public Law 114–10, the Medicare Access and CHIP Reauthorization Act of 2015; Public Law 114–26, the Defending Public Safety Employees' Retirement Act; and Public Law 114–94, the FAST Act. In addition, one law included a provision excluding certain portions of the law from the scorecards: Public Law 114–113, Consolidated Appropriations Act of 2016, for which Divisions M, N, O, P, and Q were excluded from the scorecards.

III. The Bipartisan Budget Act of 2015

The Bipartisan Budget Act of 2015 (BBA 2015), Public Law 114–74, increased the limits on discretionary spending for 2016 and 2017, reduced direct spending and increased revenues in a number of programs, extended to 2025 the sequestration of direct spending under the Joint Committee enforcement procedures of the Budget Control Act of 2011, and temporarily suspended the statutory limit on Federal debt. The PAYGO effects shown on the scorecard for BBA 2015 are limited to those effects stemming from changes in the authorizations for direct spending programs and revenues. The revised limits on discretionary appropriations and the extension of Joint Committee sequestration of direct spending are not included in the effects on the scorecard. Because the revisions to the discretionary spending limits apply only to future levels of discretionary appropriations and did not change the level of appropriations at the point that BBA 2015 was enacted, OMB determined that these provisions of BBA 2015 do not have budgetary effects under the PAYGO Act. Similarly, because future sequestration of direct spending is triggered one year at a time under the Joint Committee enforcement procedures, providing an opportunity for future congressional action to avoid these enforcement measures, OMB does not include future direct spending sequestration in the baseline it uses to estimate budgetary effects under the PAYGO Act and extension of direct spending sequestration therefore does not have a budgetary effect for purposes of OMB's PAYGO estimates.

provide an estimate for all PAYGO laws enacted during the session.

IV. PAYGO Scorecards

STATUTORY PAY-AS-YOU-GO SCORECARDS

[In millions of dollars, negative amounts portray decreases in deficits]

	2016	2017	2018	2019	2020					
Balances from Previous Sessions	440	-1,440	-601	-626	0
Budgetary effects for First session of the 114th Congress	-3,456	-3,456	-3,456	-3,456	-3,456
Total, 5-year PAYGO Scorecard	-3,016	-4,896	-4,057	-4,082	-3,456

	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025
Balances from Previous Sessions	-9,730	-9,730	-9,730	-9,730	-9,730	-3,359	-2,649	-1,514	-1,521	0
Budgetary Effects for First session of the 114th Congress	-5,718	-5,718	-5,718	-5,718	-5,718	-5,718	-5,718	-5,718	-5,718	-5,718
Total, 10-year PAYGO Scorecard	-15,448	-15,448	-15,448	-15,448	-15,448	-9,077	-8,367	-7,232	-7,239	-5,718

The total net budgetary effects of all PAYGO legislation enacted during the first session of the 114th Congress on the 5-year scorecard reduce the deficit by \$17,280 million. This total is averaged over the years 2016 to 2020 on the 5-year PAYGO scorecard, resulting in savings of \$3,456 million in each year. Combining these savings with balances carried over from prior sessions of the Congress creates total net savings in 2016 of \$3,016 million, \$4,896 million in 2017, \$4,057 million in 2018, and \$4,082 million in 2019. The 5-year PAYGO window extended only through 2019 in the second session of the 113th Congress, so there were no 5-year scorecard balances in 2020 to carry over and the 5-year scorecard total is the average \$3,456 million savings from this session.

The total 10-year net impact of legislation enacted during the first session of the 114th Congress was savings of \$57,183 million. The 10-year PAYGO scorecard shows the total net impact averaged over the 10-year period, resulting in savings of \$5,718 million in each year. Combining these savings with balances from prior sessions results in net savings of \$15,448 million in 2016 through 2020, \$9,077 million in 2021, \$8,367 million in 2022, \$7,232 million in 2023, and \$7,239 million in 2024. The 10-year PAYGO window extended only through 2024 in the second session of the 113th Congress, so there were no 10-year scorecard balances in 2025 to carry over and the 10-year scorecard total is the average \$5,718 million savings from this session.

V. Sequestration Order

As shown on the scorecards, the budgetary effects of PAYGO legislation enacted in the first session of the 114th Congress, combined with the balances left on the scorecard from previous sessions of the Congress, resulted in net savings on both the 5-year and the 10-

year scorecard in the budget year, which is 2016 for the purposes of this Report. Because the costs for the budget year, as shown on the scorecards, do not exceed savings for the budget year, there is no "debit" on either scorecard under section 3 of the PAYGO Act, 2 U.S.C. § 932, and there is no need for a sequestration order.

The savings shown on the scorecards for 2016 will be removed from the scorecards that are used to record the budgetary effects of PAYGO legislation enacted in the second session of the 114th Congress. The totals shown in 2017 through 2025 will remain on the scorecards and will be used in determining whether a sequestration order will be necessary in the future. All of the years of the 5-year and 10-year scorecards that will carry over into the second session of the 114th Congress will show balances of savings.

[FR Doc. 2016-00721 Filed 1-14-16; 8:45 am]

BILLING CODE 3110-01-P

MARINE MAMMAL COMMISSION

Notice of Public Meetings in Alaska

AGENCY: Marine Mammal Commission.

ACTION: Notice of public meetings.

SUMMARY: The Marine Mammal Commission (Commission) will hold a series of public meetings pursuant to the Government in the Sunshine Act and the Federal Advisory Committee Act in various locations in Alaska from February 3–February 11, 2016. This notice announces the date, time, and location of the public meetings.

DATES: Four public meetings will be held: February 3, 2016, 3 p.m.–5 p.m. (Barrow, AK); February 5, 2016, 1 p.m.–5 p.m. (Kotzebue, AK); February 9, 2016, 3 p.m.–6 p.m. (Nome, AK); February 11, 2016, 8 a.m.–1 p.m. (Anchorage, AK).

ADDRESSES: The public meetings will be held at the following locations: February 3, 2016, Inupiat Heritage Center, 5421 North Star Street, Barrow, AK 99723; February 5, 2016, Northwest Arctic Borough Assembly Room, 163 Lagoon St, Kotzebue, AK 99752; February 9, 2016, University of Alaska Fairbanks Northwest Campus, 400 East Front Street, Nome, AK 99762, Main Building, Nagozruk Conference Room; February 11, 2016, Bureau of Ocean Energy Management, 3801 Centerpoint Drive, Anchorage, AK 99503. The Anchorage meeting will also be accessible via webinar. Information for accessing the webinar will be posted at www.mmc.gov at least one week before the Anchorage meeting.

FOR FURTHER INFORMATION CONTACT: Luis Leandro, Program Specialist, Marine Mammal Commission, 301-504-0087, Luis.Leandro@mmc.gov.

SUPPLEMENTARY INFORMATION: The Marine Mammal Commission (Commission) will meet in Barrow, Kotzebue, and Nome to solicit information from these communities and surrounding Native villages regarding environmental changes being observed in these areas, changes in the availability of marine mammals for subsistence and handicraft purposes, and Alaska Native concerns regarding marine mammal and related issues in general. All of these meetings will be open to the public.

Following these meetings, the Commission and its Committee of Scientific Advisors on Marine Mammals will meet in Anchorage, and via webinar, to review the information and views provided at the other public meetings and discuss possible actions by the Commission. This meeting will be open to attendance by the public. The public may also participate in the Anchorage meeting via webinar. The meeting will include an opportunity for comments by the public. Detailed

information on how to access and participate in the webinar will be posted on the Commission's Web site (www.mmc.gov) at least one week in advance of the meeting.

These meetings are designed to further implementation of the Commission's Strategic Plan, which recognizes that the Arctic warrants special attention because its marine mammals, ecosystems, and marine mammal dependent coastal communities are being impacted profoundly by climate change. The Commission's focus on Alaska and the Arctic includes current work to promote effective consultation procedures between Alaska Native Tribes and federal agencies, efforts to improve understanding of the cumulative impacts of climate change and human activities on Arctic marine mammals, and engagement in domestic and international science and management programs for polar bears, walrus, ice seals, and beluga and bowhead whales.

A proposed agenda for the Anchorage meeting is posted on the Commission's Web site at www.mmc.gov, and may be subject to change based on the information provided by participants during the Barrow, Kotzebue, and Nome meetings.

Additional information about the Marine Mammal Commission, the Alaska meetings, and documents related to the Commission's consultations with Native communities can be found at www.mmc.gov.

Dated: January 11, 2016.

Rebecca J. Lent,
Executive Director.

BILLING CODE 6820-31-P

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice (15-118)]

Privacy Act of 1974; Privacy Act System of Records

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of proposed revisions to existing Privacy Act systems of records.

SUMMARY: Pursuant to the provisions of the Privacy Act of 1974 (5 U.S.C. 552a), the National Aeronautics and Space Administration is issuing public notice of its proposal to modify two of its previously noticed system of records. This notice publishes updates to systems of records as set forth below under the caption **SUPPLEMENTARY INFORMATION**.

DATES: Submit comments within 30 calendar days from the date of this publication. The changes will take effect at the end of that period, if no adverse comments are received.

ADDRESSES: Patti F. Stockman, Privacy Act Officer, Office of the Chief Information Officer, National Aeronautics and Space Administration Headquarters, Washington, DC 20546-0001, (202) 358-4787, [NASA-PAOfficer@nasa.gov](mailto:PAOfficer@nasa.gov).

FOR FURTHER INFORMATION CONTACT: NASA Privacy Act Officer, Patti F. Stockman, (202) 358-4787, [NASA-PAOfficer@nasa.gov](mailto:PAOfficer@nasa.gov).

SUPPLEMENTARY INFORMATION: Pursuant to the provisions of the Privacy Act of 1974, 5 U.S.C. 552a, and as part of its biennial System of Records review, NASA is making modifications to two human resource related systems of records including: Update of Locations and Categories of records; addition of Purpose statements; and elaboration of Safeguards sections. Changes for specific NASA systems of records are set forth below:

NASA Personnel and Payroll Systems/NASA 10NPPS: Updating Locations of Records, adding a Purpose section and elaborating the Safeguards section to be more precise. Special Personnel Records/NASA 10SPER: Updating Locations and Categories of Records, adding a Purpose section and elaborating the Safeguards section to be more complete.

Submitted by:

Renee P. Wynn,
NASA Chief Information Officer.

NASA 10NPPS

SYSTEM NAME: NASA PERSONNEL AND PAYROLL SYSTEMS.

SYSTEM LOCATION:

Locations 9 and 18, as set forth in Appendix A; in the Federal Personnel and Payroll System of the Department of Interior Federal agency Human Resources Shared Service Center located at National Business Center, 7301 W. Mansfield, Denver, Co. 80235; and in the Office of Personnel Management's Electronic Official Personnel File located at the National Business Center 7301 W. Mansfield, Denver, Co. 80235.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

This system maintains information on present and former NASA employees.

CATEGORIES OF RECORDS IN THE SYSTEM:

The data contained in this system of records includes payroll, employee leave, insurance, labor and human

resource distribution and overtime information.

PURPOSE(S):

Records in this system are used to facilitate NASA administration of payroll functions and personnel decisions.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

51 U.S.C. 20113(a); 44 U.S.C. 3101; 5 U.S.C. 5501 *et seq.*; 5 U.S.C. 6301 *et seq.*

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSE OF SUCH USES:

Any disclosures of information will be compatible with the purpose for which the Agency collected the information. The following are routine uses: (1) To furnish to a third party a verification of an employee's status upon written request of the employee; (2) to facilitate the verification of employee contributions and insurance data with carriers and collection agents; (3) to report to the Office of Personnel Management (a) withholdings of premiums for life insurance, health benefits, and retirements, and (b) separated employees subject to retirement; (4) to furnish the U.S. Treasury magnetic tape reports and/or electronic files on net pay, net savings allotments and bond transmittal pertaining to each employee; (5) to provide the Internal Revenue Service with details of wages taxable under the Federal Insurance Contributions Act and to furnish a magnetic tape listing on Federal tax withholdings; (6) to furnish various financial institutions itemized listings of employee's pay and savings allotments transmitted to the institutions in accordance with employee requests; (7) to provide various Federal, State, and local taxing authorities itemized listings of withholdings for individual income taxes; (8) to respond to requests for State employment security agencies and the U.S. Department of Labor for employment, wage, and separation data on former employees for the purpose of determining eligibility for unemployment compensation; (9) to report to various Combined Federal Campaign offices total contributions withheld from employee wages; (10) to furnish leave balances and activity to the Office of Personnel Management upon request; (11) to furnish data to labor organizations in accordance with negotiated agreements; (12) to furnish pay data to the Department of State for certain NASA employees located outside the United States; (13) to furnish data to a consumer reporting agency or bureau, private collection contractor or

debt collection center in accordance with section 3711 of Title 31 of the United States Code; (14) to forward delinquent debts, and all relevant information related thereto, to the U.S. Department of Treasury, for collection; (15) to the Office of Child Support Enforcement (OCSE), Administration for Children and Families, Department of Health and Human Services (DHHS), National Directory of New Hires, part of the Federal Parent Locator Service and the Federal Tax Offset System, DHHS/OCSE No. 09–90–0074, for the purpose of locating individuals to establish paternity, establishing and modifying orders of child support, identifying sources of income, and for other child support enforcement actions as required by the Personal Responsibility and Work Opportunity Reconciliation act (Pub. L. 104–193); (16) to consumer reporting agencies as required by the Fair Credit Reporting Act (15 U.S.C. 1681a(f)); (17) to private collection contractors as required by the Federal Claims Collection Act of 1966, as amended by the Debt Collection Improvement Act of 1966 (31 U.S.C. 3701, *et seq.*); and (18) NASA standard routine uses as set forth in Appendix B.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING,

RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records are maintained in electronic format.

RETRIEVABILITY:

Records are retrieved from the system by the individual's name, unique personal identification code and/or Social Security Number.

SAFEGUARDS:

Electronic records are maintained on secure NASA servers and protected in accordance with all Federal standards. Additionally, NASA server and data management environments employ infrastructure encryption technologies both in data transmission and at rest on servers. Electronic messages sent within and outside of the Agency that convey sensitive data are encrypted and transmitted by staff via pre-approved electronic encryption systems as required by NASA policy. Approved security plans are in place for information systems containing the records in accordance with FISMA and OMB Circular A–130, Management of Federal Information Resources. Only authorized personnel requiring information in the official discharge of their duties are authorized access to records through approved access or

authentication methods. Access to electronic records is achieved only from workstations within the NASA Intranet or via a secure Virtual Private Network (VPN) connection that requires two-factor hardware token authentication or via employee PIV badge authentication from NASA-issued computers. The Department of Interior and Office of Personnel Management Federal agency servers in Denver are also compliant with the FISMA and OMB Circular A–130 security standards and requirements.

RETENTION AND DISPOSAL:

Records are maintained and transferred to the National Personnel Records Center (NPRC) in accordance with NASA Records Retention Schedules, Schedule 3 Item 47. Records transferred to NPRC will be destroyed when 10 years old by NPRC.

SYSTEM MANAGERS AND ADDRESSES:

Director, Financial Management Division, Office of the Chief Financial Officer, and Assistant Administrator for Human Capital Management, Office of Human Capital Management, Location 1.

Subsystem Managers: Chief Financial Officers and Human Capital Officers, Locations 2 through 9, and 11, Director, Financial Management Division, and Director, Human Resources Division, Location 18. Locations are as set forth in Appendix A.

NOTIFICATION PROCEDURE:

Information may be obtained from the cognizant system or subsystem manager listed above.

RECORD ACCESS PROCEDURE:

Requests from individuals should be addressed to the same address as identified in the Notification section above.

CONTESTING RECORD PROCEDURES:

The NASA regulations for access to records and for contesting contents and appealing initial determinations by the individual concerned appear at 14 CFR part 1212.

RECORD SOURCE CATEGORIES:

Individual on whom the record is maintained, personnel office(s), and the individual's supervisor.

EXEMPTIONS:

None.

NASA 10SPER

SYSTEM NAME:

Special Personnel Records.

SECURITY CLASSIFICATION:

None.

SYSTEM LOCATION:

Locations 1 through 9 inclusive, and locations 11 and 18 as set forth in Appendix A, and at the Department of Interior Federal Agency Human Resources Shared Service Center located at National Business Center 7301 W. Mansfield, Denver Co, 80235.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

This system maintains information on candidates for and recipients of awards or NASA training; civilian and active duty military detailees to NASA; participants in enrollee programs; Faculty, Science, National Research Council and other Fellows, associates and guest workers including those at NASA Centers but not on NASA rolls; NASA contract and grant awardees and their associates having access to NASA premises and records; individuals with interest in NASA matters including Advisory Committee Members; NASA employees and family members, prospective employees and former employees; former and current participants in existing and future educational programs, including the Summer High School Apprenticeship Research Program (SHARP).

CATEGORIES OF RECORDS IN THE SYSTEM:

Special Program Files including: (1) Foreign National Scientist files; (2) Applications for, and issuance of, passports and visas together with other information for international government travel; (3) Award files; (4) Counseling files, Life and Health Insurance, Retirement, Upward Mobility, and Work Injury Counseling files; (5) Military and Civilian detailee files; (6) Personnel Development files such as nominations for and records of training or education, Upward Mobility Program files, Intern Program files, Apprentice files, and Enrollee Program files; (7) Special Employment files such as Federal Junior Fellowship Program files, Pathways Program files, Summer Employment files, Worker-Trainee Opportunity Program files, NASA Executive Position files, Expert and Consultant files, and Cooperative Education Program files; (8) Welfare to Work files; and (9) Supervisory Appraisals under Competitive Placement Plan. Correspondence and related information including: (1) Claims correspondence and records about insurance such as life, health, and travel; (2) Congressional and other Special Interest correspondence, including employment inquiries; (3) Correspondence and records concerning travel related to permanent change of address; (4) Debt complaint

correspondence; (5) Employment interview records; (6) Information related to outside employment and activities of NASA employees; (7) Placement follow-ups; (8) Preemployment inquiries and reference checks; (9) Preliminary records related to possible adverse actions; (10) Records related to reductions in force; (11) Records under administrative as well as negotiated grievance procedures; (12) Separation information including exit interview records, death certificates and other information concerning death, retirement records, and other information pertaining to separated employees; (13) Special planning analysis and administrative information; (14) Performance appraisal records; (15) Working papers for prospective or pending retirements.

Special Records and Rosters including: (1) Locator files, (2) Ranking lists of employees; (3) Promotion candidate lists; (4) Retired military employee records; (5) Retiree records; (6) Follow-up records for educational programs, such as the SHARP and other existing or future programs. Agencywide and Center automated personnel information: Rosters, applications, recommendations, assignment information and evaluations of Faculty, Science, National Research Council and other Fellows, associates and guest workers including those at NASA Centers but not on NASA rolls; also, information about NASA contract and grant awardees and their associates having access to NASA premises and records.

Information about members of advisory committees and similar organizations: All NASA-maintained information of the same types as, but not limited to, that information required in systems of records for which the Office of Personnel Management and other Federal personnel-related agencies publish Government wide Privacy Act Notices in the **Federal Register**.

PURPOSE

Records in this system enable NASA to manage Personnel records used to make personnel employment decisions and to facilitate decisions regarding employees' rights and benefits of employees, and other special personnel associated with NASA and listed in Categories of Individuals of this system notice.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

51 U.S.C. 20113(a); 44 U.S.C. 3101.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSE OF SUCH USES:

Any disclosures of information will be compatible with the purpose for which the Agency collected the information. The following are routine uses: (1) Disclosures to organizations or individuals having contract, legal, administrative or cooperative relationships with NASA, including labor unions, academic organizations, governmental organizations, non-profit organizations, and contractors and to organizations or individuals seeking or having available a service or other benefit or advantage. The purpose of such disclosures is to satisfy a need or needs, further cooperative relationships, offer information, or respond to a request; (2) disclosures to Federal agencies developing statistical or data presentations having need of information about individuals in the records; (3) responses to other Federal agencies and other organizations having legal or administrative responsibilities related to programs and individuals in the records; and (4) NASA standard routine uses as set forth in Appendix B.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are maintained as hard-copy documents and on electronic media.

RETRIEVABILITY:

Records are retrieved from the system by any one or a combination of name, birth date, Social Security Number, or NASA unique identification number.

SAFEGUARDS:

Electronic records are maintained on secure NASA servers and protected in accordance with all Federal standards and those established in NASA regulations at 14 CFR 1212.605. Additionally, NASA server and data management environments employ infrastructure encryption technologies both in data transmission and at rest on servers. Electronic messages sent within and outside of the Agency that convey sensitive data are encrypted and transmitted by staff via pre-approved electronic encryption systems as required by NASA policy. Approved security plans are in place for information systems containing the records in accordance with the Federal Information Security Management Act of 2002 (FISMA) and OMB Circular A-130, Management of Federal Information Resources. Only authorized personnel requiring information in the

official discharge of their duties are authorized access to records through approved access or authentication methods. Access to electronic records is achieved only from workstations within the NASA Intranet or via a secure Virtual Private Network (VPN) connection that requires two-factor hardware token authentication or via employee PIV badge authentication from NASA-issued computers. The Department of Interior Federal agency Human Resources Shared Service Center in Denver is also compliant with the FISMA and OMB Circular A-130 security standards and requirements.

Non-electronic records are secured in locked rooms or locked file cabinets. For information systems maintained by NASA partners, who collect, store and process records on behalf of NASA, NASA requires documentation and verification of commensurate safeguards in accordance with FISMA, NASA Procedural Requirements (NPR) 2810.1A, and NASA ITS-HBK-2810.02-05.

RETENTION AND DISPOSAL:

Records are maintained and dispositioned in accordance with NASA Records Retention Schedules (NRRS) 3, Item 19.

SYSTEM MANAGERS AND ADDRESSES:

Associate Administrator for Human Capital Management, Location 1. Subsystem Managers: Director, Personnel Division, Office of Inspector General, and Chief, Elementary and Secondary Programs Branch, Educational Division, Location 1; Director of Personnel, Locations 1, 3, 4, 6, and 8; Director of Human Resources, Location 2, 5, and 9; Director, Office of Human Resources, Location 7; Human Resources Officer, Location 11; Director, Human Resources Services Division, Location 18. Locations are as set forth in Appendix A.

NOTIFICATION PROCEDURE:

Apply to the System or Subsystem Manager at the appropriate location above. In addition to personal identification (name, Social Security Number), indicate the specific type of record, the appropriate date or period of time, and the specific category of individual applying (e.g., employee, former employee, contractor employee).

RECORD ACCESS PROCEDURE:

Same as Notification procedures above.

CONTESTING RECORD PROCEDURES:

The NASA regulations pertaining to access to records and for contesting contents and appealing initial

determinations by individual concerned are set forth in 14 CFR part 1212.

RECORD SOURCE CATEGORIES:

Individual on whom the record is maintained and Personnel Office(s).

EXEMPTIONS:

None.

[FR Doc. 2016-00689 Filed 1-14-16; 8:45 am]

BILLING CODE 7510-13-P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-003, 50-247, 50-286, 72-51, 50-333, 72-12, 50-220, 50-410, 72-1036, 50-244, 72-67, 50-275, 50-323, 72-26, 50-361, 50-362, and 72-41; EA-14-137, EA-14-135, EA-14-136, EA-14-138, EA-14-139, EA-14-134, and EA-14-140; NRC-2016-0007]

In the Matter of Entergy Nuclear Operations, Inc., Indian Point Nuclear Generating Unit Nos. 1, 2, and 3, and James A. Fitzpatrick Nuclear Power Plant; Exelon Generation Company, LLC, Nine Mile Point Nuclear Station, Units 1 and 2, and R.E. Ginna Nuclear Power Plant; Pacific Gas and Electric Company, Diablo Canyon Power Plant, Units 1 and 2; and Southern California Edison Company, San Onofre Nuclear Generating Station, Units 2 and 3, including Independent Spent Fuel Storage Installations for All Facilities

AGENCY: Nuclear Regulatory Commission.

ACTION: Confirmatory order; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is authorizing the licensees to transfer, receive, possess, transport, import, and use certain firearms and large-capacity ammunition feeding devices not previously permitted to be owned or possessed under Commission authority, notwithstanding certain local, State, or Federal firearms laws, including regulations that prohibit such actions, as reflected in the confirmatory orders for the nuclear plant facilities listed above.

DATES: Each confirmatory order was issued to the licensees on January 5, 2016. The effective dates are reflected in the attached orders.

ADDRESSES: Please refer to Docket ID: NRC-2016-0007 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID: NRC-2016-0007. Address

questions about NRC dockets to Carol Gallagher; telephone: 301-415-3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to pdr.resource@nrc.gov. Orders EA-14-135, EA-14-136, EA-14-137, EA-14-138, EA-14-139, EA-14-134, and EA-14-140 are available in ADAMS under Accession Nos. ML15176A264, ML15176A028, ML15176A306, ML15176A256, ML15174A020, and ML15174A102, respectively.

- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Siva P. Lingam, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-1564, email: Siva.Lingam@nrc.gov.

SUPPLEMENTARY INFORMATION: The text of each Order is attached.

Dated at Rockville, Maryland, this 7th day of January 2016.

For the Nuclear Regulatory Commission.

Anne T. Boland,

Director, Division of Operating Reactor Licensing, Office of Nuclear Reactor Regulation.

UNITED STATES OF AMERICA NUCLEAR REGULATORY COMMISSION

In the Matter of Entergy Nuclear Operations, Inc., Entergy Nuclear Indian Point 2, LLC, and Entergy Nuclear Indian Point 3, LLC

(Indian Point Nuclear Generating Unit Nos. 1, 2, and 3)

Docket Nos. 50-003, 50-247, 50-286, AND 72-51

License Nos. DPR-5, DPR-26, and DPR-64

EA-14-135 and EA-14-136

CONFIRMATORY ORDER MODIFYING LICENSE

I.

Entergy Nuclear Indian Point 2, LLC, is the owner of Indian Point Nuclear Generating Unit Nos. 1 and 2; Entergy Nuclear Indian Point 3, LLC, is the owner of Indian Point Nuclear Generating Unit No. 3, and Entergy Nuclear Operations, Inc. ("Entergy" or "the licensee") is the operator of Indian Point Nuclear Generating Unit Nos. 1, 2, and 3, including the general-licensed Independent Spent Fuel Storage Installation (hereinafter "Indian Point" or "the facility"), and holder of Provisional Operating License No. DPR-5, Facility Operating License Nos. DPR-26 and DPR-64, and Docket No. 72-51 issued by the U.S. Nuclear Regulatory Commission ("NRC" or "Commission") under Title 10, "Energy," of the *Code of Federal Regulations* (10 CFR) Part 50, "Domestic Licensing of Production and Utilization Facilities"; Part 70, "Domestic Licensing of Special Nuclear Material"; and Part 72, "Licensing Requirements for the Independent Storage of Spent Nuclear Fuel, High-Level Radioactive Waste, and Reactor-Related Greater Than Class C Waste." The licenses authorize the operation of Indian Point with the conditions specified therein. The facilities are located on the owner's site in Westchester County, New York.

II.

By application dated August 20, 2013 as supplemented by letters dated November 21, 2013, and May 13 and July 24, 2014, and citing letters dated April 27 and October 27, 2011, and January 4, 2012, Entergy requested, under Commission Order EA-13-092, that under the provisions of Section 161A of the Atomic Energy Act of 1954, as amended, the Commission permit the transfer, receipt, possession, transport, import, and use of certain firearms and large-capacity ammunition-feeding devices by security personnel who protect a facility owned or operated by a licensee or certificate holder of the Commission that is designated by the Commission. Section 161A confers on the Commission the authority to permit a licensee's security personnel to possess and use firearms, ammunition or devices, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use.

On review of the Entergy application for Commission authorization to use Section 161A preemption authority at Indian Point, the NRC staff has found the following:

(1) Entergy's application complies with the standards and requirements of Section 161A and the Commission's rules and regulations set forth in 10 CFR part 73, "Physical Protection of Plants and Materials";

(2) There is reasonable assurance that the facilities will operate in conformance to the application; the provisions of the Atomic Energy Act of 1954, as amended; and the rules and regulations of the Commission;

(3) There is reasonable assurance that the activities permitted by the proposed Commission authorization to use Section 161A preemption authority are consistent with the protection of public health and safety, and that such activities will be conducted in compliance with the Commission's regulations and the requirements of this confirmatory order;

(4) The issuance of Commission authorization to use Section 161A preemption authority will not be inimical to the common defense and security or to the health and safety of the public; and

(5) The issuance of this Commission authorization to use Section 161A preemption authority will be in accordance with the Commission's regulations in 10 CFR part 51, "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions."

The findings, set forth above, are supported by an NRC staff safety evaluation under Agencywide Documents Access and Management System (ADAMS) Accession No. ML14259A209.

III.

To carry out the statutory authority discussed above, the Commission has determined that the licenses for Indian Point must be modified to include provisions with respect to the Commission authorization to use Section 161A preemption authority as identified in Section II of this confirmatory order. The requirements needed to exercise the foregoing are set forth in Section IV below.

The NRC staff has found that the license modifications set forth in Section IV are acceptable and necessary. It further concluded that, with the effective implementation of these provisions, the licensee's physical protection program will meet the specific physical protection program requirements set forth in 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for nuclear power reactors); and in 10 CFR 72.212(b)(9), "Conditions of the

General License Issued Under § 72.210," and portions of 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for general-license independent spent fuel storage installations co-located with a reactor at the reactor site).

On January 16, 2015, Entergy consented to the issuance of this order. The licensee further agreed that this order will be effective 20 days after the date of issuance and that it has waived its right to a hearing on this order.

IV.

Accordingly, under Sections 53, 103 and/or 104b, 161b, 161i, 161o, 161A, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202, "Orders"; 10 CFR part 50; 10 CFR part 70; and 10 CFR part 72, IT IS HEREBY ORDERED that:

1. The Entergy application for Commission authorization to use Section 161A preemption authority at Indian Point is approved and permission for security personnel to possess and use weapons, devices, ammunition, or other firearms, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use, is granted.

2. The licensee shall review and revise its NRC-approved security plans, as necessary, to describe how the requirements of this confirmatory order and other applicable requirements of 10 CFR part 73, "Physical Protection of Plants and Materials," to include those of the appendices to 10 CFR part 73, will be met.

3. The licensee shall establish and maintain a program consistent with Commission Order EA-13-092 such that all security personnel who require access to firearms in the discharge of their official duties are subject to a firearms background check.

The Commission is engaged in an ongoing rulemaking to implement the Commission's authority under Section 161A. Subsequent to the effective date of that final rulemaking, the Director, Office of Nuclear Reactor Regulation (NRR), and the Director, Office of Nuclear Material Safety and Safeguards (NMSS) may take action to relax or rescind any or all of the requirements set forth in this confirmatory order.

The Director, NRR, and the Director, NMSS, may, in writing, relax or rescind this confirmatory order on demonstration by the licensee of good cause.

This confirmatory order is effective 20 days after the date of its issuance.

For further details with respect to this confirmatory order, see the staff's safety evaluation contained in a letter dated January 5, 2016 (ADAMS Accession No. ML14259A209), which is available for public inspection at the Commission's Public Document Room (PDR) located at One White Flint North, Public File Area 01 F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available documents created or received at the NRC are accessible electronically through ADAMS in the NRC Library at <http://www.nrc.gov/reading-rm/adams.html>. Persons who do not have access to ADAMS or who encounter problems in accessing the documents stored in ADAMS should contact the NRC PDR reference staff by telephone at 1-800-397-4209 or 301-415-4737 or by email to pdr.resource@nrc.gov.

In accordance with 10 CFR 2.202, any other person adversely affected by this order may submit an answer to this order within 20 days of its publication in the **Federal Register**. In addition, any other person adversely affected by this order may request a hearing on this order within 20 days of its publication in the **Federal Register**. Where good cause is shown, consideration will be given to extending the time to answer or request a hearing. A request for extension of time must be directed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, and must include a statement of good cause for the extension.

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order designating the time and place of any hearings. If a hearing is held, the issue to be considered at such hearing shall be whether this order should be sustained.

All documents filed in NRC adjudicatory proceedings (including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding before the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c)) must be filed in accordance with the NRC E-Filing rule (published at 72 FR 49139 on August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet or (in some cases) to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, the participant should contact the Office of the Secretary (at least 10 days before the

filing deadline) by email to hearing.docket@nrc.gov or by telephone at (301) 415-1677 to (1) request a digital ID certificate, which allows the participants (or its counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based on this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/getting-started.html>. System requirements for accessing the E-Submittal server are detailed in NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. Participants may attempt to use other software not listed on the Web site to file documents, but should note that the NRC's E-Filing system does not support unlisted software and that the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the participant must file the document using the NRC's Web-based online submission form. In order to serve documents through the Electronic Information Exchange, users will be required to install a web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>.

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be Portable Document Format (PDF) documents in accordance with NRC guidance available on the NRC public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59

p.m. eastern time on the due date. On receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request or petition to intervene is filed so that they can obtain access to the filed documents through the E-Filing system.

A person filing electronically using the agency's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call to (866) 672-7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m. eastern time, Monday through Friday, excluding Government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First Class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by First Class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service on depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the

reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, available to the public at <http://ehd1.nrc.gov/ehd/>, unless they are excluded under an order of the Commission or by the presiding officer. Participants are requested not to include personally private information such as social security numbers, home addresses, or home phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person other than the licensee requests a hearing, that person shall set forth with particularity the manner in which his or her interest is adversely affected by this order and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

In the absence of any request for hearing or of written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received.

Dated at Rockville, Maryland, this 5th day of January 2016.

FOR THE NUCLEAR REGULATORY COMMISSION.

/RA/

William M. Dean,
Director, Office of Nuclear Reactor Regulation.

/RA/

Scott W. Moore,
Acting Director, Office of Nuclear Material Safety and Safeguards.

UNITED STATES OF AMERICA NUCLEAR REGULATORY COMMISSION

**In the Matter of Entergy Nuclear
FitzPatrick, LLC, and Entergy Nuclear
Operations, Inc. (James A. Fitzpatrick
Nuclear Power Plant)**

Docket Nos. 50-333 and 72-12

License No. DPR-59

EA-14-137

**CONFIRMATORY ORDER
MODIFYING LICENSE****I.**

Entergy Nuclear FitzPatrick, LLC, is the owner and Entergy Nuclear Operations, Inc. ("Entergy" or "the licensee") is the operator of the James A. Fitzpatrick Nuclear Power Plant, including the general-licensed Independent Spent Fuel Storage Installation (hereinafter "JAFNPP" or "the facility"), and holder of Provisional Renewed Facility Operating License No. DPR-59 and Docket No. 72-12 issued by the U.S. Nuclear Regulatory Commission ("NRC" or "Commission") under Title 10, "Energy," of the *Code of Federal Regulations* (10 CFR) Part 50, "Domestic Licensing of Production and Utilization Facilities"; Part 70, "Domestic Licensing of Special Nuclear Material"; and Part 72, "Licensing Requirements for the Independent Storage of Spent Nuclear Fuel, High-Level Radioactive Waste, and Reactor-Related Greater Than Class C Waste." The license authorizes the operation of JAFNPP with the conditions specified therein. The facility is located on the owner's site in Oswego County, New York.

II.

By application dated August 30, 2013, as supplemented by letters dated November 12, 2013, and May 14 and July 11, 2014, Entergy requested, under Commission Order EA-13-092, that under the provisions of Section 161A of the Atomic Energy Act of 1954, as amended, the Commission permit the transfer, receipt, possession, transport, import, and use of certain firearms and large-capacity ammunition-feeding devices by security personnel who protect a facility owned or operated by a licensee or certificate holder of the Commission that is designated by the Commission. Section 161A confers on the Commission the authority to permit a licensee's security personnel to possess and use firearms, ammunition or devices, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use.

On review of the Entergy application for Commission authorization to use Section 161A preemption authority at JAFNPP, the NRC staff has found the following:

(1) Entergy's application complies with the standards and requirements of Section 161A and the Commission's rules and regulations set forth in 10 CFR part 73, "Physical Protection of Plants and Materials";

(2) There is reasonable assurance that the facilities will operate in conformance to the application; the provisions of the Atomic Energy Act of 1954, as amended; and the rules and regulations of the Commission;

(3) There is reasonable assurance that the activities permitted by the proposed Commission authorization to use Section 161A preemption authority are consistent with the protection of public health and safety, and that such activities will be conducted in compliance with the Commission's regulations and the requirements of this confirmatory order;

(4) The issuance of Commission authorization to use Section 161A preemption authority will not be inimical to the common defense and security or to the health and safety of the public; and

(5) The issuance of this Commission authorization to use Section 161A preemption authority will be in accordance with the Commission's regulations in 10 CFR part 51, "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions."

The findings, set forth above, are supported by an NRC staff safety evaluation under Agencywide Documents Access and Management System (ADAMS) Accession No. ML14259A164.

III.

To carry out the statutory authority discussed above, the Commission has determined that the license for JAFNPP must be modified to include provisions with respect to the Commission authorization to use Section 161A preemption authority as identified in Section II of this confirmatory order. The requirements needed to exercise the foregoing are set forth in Section IV below.

The NRC staff has found that the license modifications set forth in Section IV are acceptable and necessary. It further concluded that, with the effective implementation of these provisions, the licensee's physical protection program will meet the specific physical protection program requirements set forth in 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for nuclear power reactors); and in 10 CFR 72.212(b)(9), "Conditions of the General License Issued Under § 72.210," and portions of 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for general-license independent spent

fuel storage installations co-located with a reactor at the reactor site).

On January 15, 2015, Entergy consented to the issuance of this order. The licensee further agreed that this order will be effective 20 days after the date of issuance and that it has waived its right to a hearing on this order.

IV.

Accordingly, under Sections 53, 103 and/or 104b, 161b, 161i, 161o, 161A, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202, "Orders"; 10 CFR part 50; 10 CFR part 70; and 10 CFR part 72, IT IS HEREBY ORDERED that:

1. The Entergy application for Commission authorization to use Section 161A preemption authority at JAFNPP is approved and permission for security personnel to possess and use weapons, devices, ammunition, or other firearms, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use, is granted.

2. The licensee shall review and revise its NRC-approved security plans, as necessary, to describe how the requirements of this confirmatory order and other applicable requirements of 10 CFR part 73, "Physical Protection of Plants and Materials," to include those of the appendices to 10 CFR part 73, will be met.

3. The licensee shall establish and maintain a program consistent with Commission Order EA-13-092 such that all security personnel who require access to firearms in the discharge of their official duties are subject to a firearms background check.

The Commission is engaged in an ongoing rulemaking to implement the Commission's authority under Section 161A. Subsequent to the effective date of that final rulemaking, the Director, Office of Nuclear Reactor Regulation (NRR) may take action to relax or rescind any or all of the requirements set forth in this confirmatory order.

The Director, NRR, may, in writing, relax or rescind this confirmatory order on demonstration by the licensee of good cause.

This confirmatory order is effective 20 days after the date of its issuance.

For further details with respect to this confirmatory order, see the staff's safety evaluation contained in a letter dated January 5, 2016 (ADAMS Accession No. ML14259A164), which is available for public inspection at the Commission's Public Document Room (PDR), located at One White Flint North, Public File

Area 01 F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available documents created or received at the NRC are accessible electronically through ADAMS in the NRC Library at <http://www.nrc.gov/reading-rm/adams.html>. Persons who do not have access to ADAMS or who encounter problems in accessing the documents stored in ADAMS should contact the NRC PDR reference staff by telephone at 1-800-397-4209 or 301-415-4737, or by email to pdr.resource@nrc.gov.

In accordance with 10 CFR 2.202, any other person adversely affected by this order may submit an answer to this order within 20 days of its publication in the **Federal Register**. In addition, any other person adversely affected by this order may request a hearing on this order within 20 days of its publication in the **Federal Register**. Where good cause is shown, consideration will be given to extending the time to answer or request a hearing. A request for extension of time must be directed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, and must include a statement of good cause for the extension.

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order designating the time and place of any hearings. If a hearing is held, the issue to be considered at such hearing shall be whether this order should be sustained.

All documents filed in NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding before the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC E-Filing rule (published at 72 FR 49139, on August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, the participant should contact the Office of the Secretary (at least 10 days before the filing deadline) by email to hearing.docket@nrc.gov or by telephone at (301) 415-1677 to (1) request a digital ID certificate, which allows the participants (or its counsel or representative) to digitally sign documents and access the E-Submittal

server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based on this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/getting-started.html>. System requirements for accessing the E-Submittal server are detailed in NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. Participants may attempt to use other software not listed on the Web site to file documents, but should note that the NRC's E-Filing system does not support unlisted software and that the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the participant must file the document using the NRC's Web-based online submission form. In order to serve documents through the Electronic Information Exchange, users will be required to install a web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>.

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be Portable Document Format (PDF) documents in accordance with NRC guidance available on the NRC public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. eastern time on the due date. On receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the

document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request or petition to intervene is filed so that they can obtain access to the filed documents through the E-Filing system.

A person filing electronically using the agency's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call to (866) 672-7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m. eastern time, Monday through Friday, excluding Government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First Class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by First Class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service on depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, available to the public at <http://ehd1.nrc.gov/ehd/>, unless they are excluded under an order of the Commission or by the presiding

officer. Participants are requested not to include personally private information such as social security numbers, home addresses, or home phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person other than the licensee requests a hearing, that person shall set forth with particularity the manner in which his or her interest is adversely affected by this order and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

In the absence of any request for hearing or of written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received.

Dated at Rockville, Maryland, this 5th day of January 2016.

FOR THE NUCLEAR REGULATORY COMMISSION.

/RA/

William M. Dean,
Director, Office of Nuclear Reactor Regulation.

**UNITED STATES OF AMERICA
NUCLEAR REGULATORY
COMMISSION**

**In the Matter of Exelon Generation
Company, LLC (Nine Mile Point
Nuclear Station, Units 1 and 2)**

**Docket Nos. 50–220, 50–410, and 72–
1036**

**License Nos. DPR–63 and NPF–69
EA–14–138**

**CONFIRMATORY ORDER
MODIFYING LICENSE**

I.

Exelon Generation Company, LLC (Exelon, or the licensee) is the owner and operator of Nine Mile Point Nuclear Station, Units 1 and 2, including the general-licensed Independent Spent Fuel Storage Installation (hereinafter NMPNS or the facility), and holder of Provisional Facility Operating Licenses Nos. DPR–63, NPR–69, and Docket No.

72–1036 issued by the U.S. Nuclear Regulatory Commission (NRC or Commission) under Title 10 “Energy,” of the *Code of Federal Regulations* (10 CFR) Part 50, “Domestic Licensing of Production and Utilization Facilities,” Part 70, “Domestic Licensing of Special Nuclear Material;” and Part 72, “Licensing Requirements for the Independent Storage of Spent Nuclear Fuel, High-Level Radioactive Waste, and Reactor-Related Greater Than Class C Waste.” The licenses authorize the operation of NMPNS with the conditions specified therein. The facility is located on the owner’s site in Oswego County, New York.

II.

By application dated August 14, 2013, as supplemented by letters dated September 10, 2013, and May 14, 2014, Exelon requested, under Commission Order EA–13–092, that under the provisions of Section 161A of the Atomic Energy Act of 1954, as amended, the Commission permit the transfer, receipt, possession, transport, import, and use of certain firearms and large-capacity ammunition-feeding devices by security personnel who protect a facility owned or operated by a licensee or certificate holder of the Commission that is designated by the Commission. Section 161A confers on the Commission the authority to permit a licensee’s security personnel to possess and use firearms, ammunition or devices, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use.

On review of the Exelon application for Commission authorization to use Section 161A preemption authority at NMPNS, the NRC staff has found the following:

(1) The Exelon application complies with the standards and requirements of Section 161A and the Commission’s rules and regulations set forth in 10 CFR part 73, “Physical Protection of Plants and Materials”;

(2) There is reasonable assurance that the facilities will operate in conformance to the application; the provisions of the Atomic Energy Act of 1954, as amended; and the rules and regulations of the Commission;

(3) There is reasonable assurance that the activities permitted by the proposed Commission authorization to use Section 161A preemption authority are consistent with the protection of public health and safety, and that such activities will be conducted in compliance with the Commission’s regulations and the requirements of this confirmatory order;

(4) The issuance of Commission authorization to use Section 161A preemption authority will not be inimical to the common defense and security or to the health and safety of the public; and

(5) The issuance of this Commission authorization to use Section 161A preemption authority will be in accordance with the Commission’s regulations in 10 CFR part 51, “Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions.”

The findings set forth above are supported by an NRC staff safety evaluation under Agencywide Documents Access and Management System (ADAMS) Accession No. ML14254A450.

III.

To carry out the statutory authority discussed above, the Commission has determined that the license for NMPNS must be modified to include provisions with respect to the Commission authorization to use Section 161A preemption authority as identified in Section II of this confirmatory order. The requirements needed to exercise the foregoing are set forth in Section IV below.

The NRC staff has found that the license modifications set forth in Section IV are acceptable and necessary. It further concluded that, with the effective implementation of these provisions, the licensee’s physical protection program will meet the specific physical protection program requirements set forth in 10 CFR 73.55, “Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage” (for nuclear power reactors); and in 10 CFR 72.212(b)(9), “Conditions of the General License Issued Under § 72.210,” and portions of 10 CFR 73.55, “Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage” (for general-license independent spent fuel storage installations co-located with a reactor at the reactor site).

On January 16, 2015, Exelon consented to the issuance of this order. The licensee further agreed that this order will be effective 20 days after the date of issuance and that it has waived its right to a hearing on this order.

IV.

Accordingly, under Sections 53, 103 and/or 104b, 161b, 161i, 161o, 161A, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission’s regulations in 10 CFR 2.202, “Orders”; 10 CFR part 50; 10 CFR

part 70; and 10 CFR part 72, IT IS HEREBY ORDERED that:

1. The Exelon application for Commission authorization to use Section 161A preemption authority at NMPNS is approved and permission for security personnel to possess and use weapons, devices, ammunition, or other firearms, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use, is granted.

2. The licensee shall review and revise its NRC-approved security plans, as necessary, to describe how the requirements of this confirmatory order and other applicable requirements of 10 CFR part 73, "Physical Protection of Plants and Materials," to include those of the appendices to 10 CFR part 73, will be met.

3. The licensee shall establish and maintain a program consistent with Commission Order EA-13-092 such that all security personnel who require access to firearms in the discharge of their official duties are subject to a firearms background check.

The Commission is engaged in an ongoing rulemaking to implement the Commission's authority under Section 161A. Subsequent to the effective date of that final rulemaking, the Director, Office of Nuclear Reactor Regulation (NRR), may take action to relax or rescind any or all of the requirements set forth in this confirmatory order.

The Director, NRR, may, in writing, relax or rescind this confirmatory order on demonstration by the licensee of good cause.

This confirmatory order is effective 20 days after the date of its issuance.

For further details with respect to this confirmatory order, see the staff's safety evaluation contained in a letter dated January 5, 2016 (ADAMS Accession No. ML14254A450), which is available for public inspection at the Commission's Public Document Room (PDR), located at One White Flint North, Public File Area 01 F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available documents created or received at the NRC are accessible electronically through ADAMS in the NRC Library at <http://www.nrc.gov/reading-rm/adams.html>. Persons who do not have access to ADAMS or who encounter problems in accessing the documents stored in ADAMS should contact the NRC PDR reference staff by telephone at 1-800-397-4209 or 301-415-4737, or by email to pdr.resource@nrc.gov.

In accordance with 10 CFR 2.202, any other person adversely affected by this order may submit an answer to this order within 20 days of its publication

in the **Federal Register**. In addition, any other person adversely affected by this order may request a hearing on this order within 20 days of its publication in the **Federal Register**. Where good cause is shown, consideration will be given to extending the time to answer or request a hearing. A request for extension of time must be directed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, and must include a statement of good cause for the extension.

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order designating the time and place of any hearings. If a hearing is held, the issue to be considered at such hearing shall be whether this order should be sustained.

All documents filed in NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding before the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC E-Filing rule (published at 72 FR 49139, on August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, the participant should contact the Office of the Secretary (at least 10 days before the filing deadline) by email to hearing.docket@nrc.gov or by telephone at (301) 415-1677 to (1) request a digital ID certificate, which allows the participants (or its counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based on this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/>

[getting-started.html](http://www.nrc.gov/site-help/e-submittals.html). System requirements for accessing the E-Submittal server are detailed in NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. Participants may attempt to use other software not listed on the Web site to file documents, but should note that the NRC's E-Filing system does not support unlisted software and that the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the participant must file the document using the NRC's Web-based online submission form. In order to serve documents through the Electronic Information Exchange, users will be required to install a web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>.

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be Portable Document Format (PDF) documents in accordance with NRC guidance available on the NRC public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. eastern time on the due date. On receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request or petition to intervene is filed so that they can obtain access to the filed documents through the E-Filing system.

A person filing electronically using the agency's adjudicatory E-Filing system may seek assistance by

contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call to (866) 672-7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m. eastern time, Monday through Friday, excluding Government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First Class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by First Class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service on depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, available to the public at <http://ehd1.nrc.gov/ehd/>, unless they are excluded under an order of the Commission or by the presiding officer. Participants are requested not to include personally private information such as social security numbers, home addresses, or home phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person other than the licensee requests a hearing, that person shall set forth with particularity the manner in

which his or her interest is adversely affected by this order and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

In the absence of any request for hearing or of written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received.

Dated at Rockville, Maryland, this 5th day of January 2016.

FOR THE NUCLEAR REGULATORY COMMISSION.

/RA/

William M. Dean,

Director, Office of Nuclear Reactor Regulation.

**UNITED STATES OF AMERICA
NUCLEAR REGULATORY
COMMISSION**

**In the Matter of Exelon Generation
Company, LLC (R.E. Ginna Nuclear
Power Plant)**

Docket Nos. 50-244 and 72-67

License No. DPR-18

EA-14-139

**CONFIRMATORY ORDER
MODIFYING LICENSE**

I.

Exelon Generation Company, LLC (Exelon, or the licensee) is the owner and operator of R.E. Ginna Nuclear Power Plant (Ginna), including the general-licensed Independent Spent Fuel Storage Installation (hereinafter Ginna or the facility), and holder of Provisional Renewed Facility Operating Licenses No. DPR-18 and Docket No. 72-67 issued by the U.S. Nuclear Regulatory Commission (NRC or Commission) under Title 10, "Energy," of the *Code of Federal Regulations* (10 CFR) Part 50, "Domestic Licensing of Production and Utilization Facilities," Part 70, "Domestic Licensing of Special Nuclear Material;" and Part 72, "Licensing Requirements for the Independent Storage of Spent Nuclear Fuel, High-Level Radioactive Waste, and Reactor-Related Greater Than Class C Waste." The license authorizes the operation of Ginna with the conditions specified therein. The facility is located on the owner's site in Wayne County, New York.

II.

By application dated August 14, 2013, as supplemented by letters dated November 4, 2013, and May 14, 2014, Exelon requested, under Commission Order (EA-13-092), that under the provisions of Section 161A of the Atomic Energy Act of 1954, as amended, the Commission permit the transfer, receipt, possession, transport, import, and use of certain firearms and large capacity ammunition feeding devices, by security personnel who protect a facility owned or operated by a licensee or certificate holder of the Commission that is designated by the Commission. Section 161A confers on the Commission the authority to permit a licensee's security personnel to possess and use firearms, ammunition or devices, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use.

On review of the Exelon application for Commission authorization to use Section 161A preemption authority at Ginna, the NRC staff has found the following:

(1) The Exelon application complies with the standards and requirements of Section 161A and the Commission's rules and regulations set forth in 10 CFR part 73, "Physical Protection of Plants and Materials;"

(2) There is reasonable assurance that the facilities will operate in conformance to the application; the provisions of the Atomic Energy Act of 1954, as amended; and the rules and regulations of the Commission;

(3) There is reasonable assurance that the activities permitted by the proposed Commission authorization to use Section 161A preemption authority are consistent with the protection of public health and safety, and that such activities will be conducted in compliance with the Commission's regulations and the requirements of this confirmatory order;

(4) The issuance of Commission authorization to use Section 161A preemption authority will not be inimical to the common defense and security or to the health and safety of the public; and

(5) The issuance of this Commission authorization to use Section 161A preemption authority will be in accordance with the Commission's regulations in 10 CFR part 51, "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions."

The findings, set forth above, are supported by an NRC staff safety evaluation under Agencywide

Documents Access and Management System (ADAMS) Accession No. ML14260A166.

III.

To carry out the statutory authority discussed above, the Commission has determined that the license for Ginna, must be modified to include provisions with respect to the Commission authorization to use Section 161A preemption authority as identified in Section II of this confirmatory order. The requirements needed to exercise the foregoing are set forth in Section IV below.

The NRC staff has found that the license modifications set forth in Section IV are acceptable and necessary. It further concluded that, with the effective implementation of these provisions, the licensee's physical protection program will meet the specific physical protection program requirements set forth in 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for nuclear power reactors); and in 10 CFR 72.212(b)(9), "Conditions of the General License Issued Under § 72.210," and portions of 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for general-license independent spent fuel storage installations co-located with a reactor at the reactor site).

On January 16, 2015, Exelon consented to the issuance of this order. The licensee further agreed that this order will be effective 20 days after the date of issuance and that it has waived its right to a hearing on this order.

IV.

Accordingly, under Sections 53, 103 and/or 104b, 161b, 161i, 161o, 161A, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202, "Orders"; 10 CFR part 50; 10 CFR part 70; and 10 CFR part 72, IT IS HEREBY ORDERED that:

1. The Exelon application for Commission authorization to use Section 161A preemption authority at Ginna is approved and permission for security personnel to possess and use weapons, devices, ammunition, or other firearms, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use, is granted.

2. The licensee shall review and revise its NRC-approved security plans, as necessary, to describe how the requirements of this confirmatory order

and other applicable requirements of 10 CFR part 73, "Physical Protection of Plants and Materials," to include those of the appendices to 10 CFR part 73, will be met.

3. The licensee shall establish and maintain a program consistent with Commission Order EA-13-092 such that all security personnel who require access to firearms in the discharge of their official duties are subject to a firearms background check.

The Commission is engaged in an ongoing rulemaking to implement the Commission's authority under Section 161A. Subsequent to the effective date of that final rulemaking, the Director, Office of Nuclear Reactor Regulation (NRR) may take action to relax or rescind any or all of the requirements set forth in this confirmatory order.

The Director, NRR, may, in writing, relax or rescind this confirmatory order on demonstration by the licensee of good cause.

This confirmatory order is effective 20 days after the date of its issuance.

For further details with respect to this confirmatory order, see the staff's safety evaluation contained in a letter dated January 5, 2016 (ADAMS Accession Nos. ML14260A166 and ML14260A151), which is available for public inspection at the Commission's Public Document Room (PDR), located at One White Flint North, Public File Area 01 F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available documents created or received at the NRC are accessible electronically through ADAMS in the NRC Library at <http://www.nrc.gov/reading-rm/adams.html>. Persons who do not have access to ADAMS or who encounter problems in accessing the documents stored in ADAMS should contact the NRC PDR reference staff by telephone at 1-800-397-4209 or 301-415-4737, or by email to pdr.resource@nrc.gov.

In accordance with 10 CFR 2.202, any other person adversely affected by this order may submit an answer to this order within 20 days of its publication in the **Federal Register**. In addition, any other person adversely affected by this order may request a hearing on this order within 20 days of its publication in the **Federal Register**. Where good cause is shown, consideration will be given to extending the time to answer or request a hearing. A request for extension of time must be directed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, and must include a statement of good cause for the extension.

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order

designating the time and place of any hearings. If a hearing is held, the issue to be considered at such hearing shall be whether this order should be sustained.

All documents filed in NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding before the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC E-Filing rule (published at 72 FR 49139, on August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, the participant should contact the Office of the Secretary (at least 10 days before the filing deadline) by email to hearing.docket@nrc.gov or by telephone at (301) 415-1677 to (1) request a digital ID certificate, which allows the participants (or its counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based on this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/getting-started.html>. System requirements for accessing the E-Submittal server are detailed in NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. Participants may attempt to use other software not listed on the Web site to file documents, but should note that the NRC's E-Filing system does not support unlisted software and that the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in

accordance with the E-Filing rule, the participant must file the document using the NRC's Web-based online submission form. In order to serve documents through the Electronic Information Exchange, users will be required to install a web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>.

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be Portable Document Format (PDF) documents in accordance with NRC guidance available on the NRC public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. eastern time on the due date. On receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request or petition to intervene is filed so that they can obtain access to the filed documents through the E-Filing system.

A person filing electronically using the agency's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call to (866) 672-7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m. eastern time, Monday through Friday, excluding Government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper

filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First Class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by First Class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service on depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, available to the public at <http://ehd1.nrc.gov/ehd/>, unless they are excluded under an order of the Commission or by the presiding officer. Participants are requested not to include personally private information such as social security numbers, home addresses, or home phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person other than the licensee requests a hearing, that person shall set forth with particularity the manner in which his or her interest is adversely affected by this order and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

In the absence of any request for hearing or of written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received.

Dated at Rockville, Maryland, this 5th day of January 2016.

FOR THE NUCLEAR REGULATORY COMMISSION.

/RA/

William M. Dean,
Director, Office of Nuclear Reactor Regulation.

UNITED STATES OF AMERICA

NUCLEAR REGULATORY COMMISSION

In the Matter of Pacific Gas and Electric Company (Diablo Canyon Nuclear Power Plant, Units 1 and 2, and DCPPI Independent Spent Fuel Storage Installation)

Docket Nos. 50-275, 50-323, and 72-26

License Nos. DPR-80, DPR-82, and SNM-2511

EA-14-140

**CONFIRMATORY ORDER
MODIFYING LICENSE**

I.

Pacific Gas and Electric Company (PG&E), is the owner and operator of Diablo Canyon Nuclear Power Plant Units 1 and 2, including the specific-license Independent Spent Fuel Storage Installation (hereinafter "DCNPP" or "the facility"), and holder of Facility Operating License Nos. DPR-80, DPR-82, and SNM-2511 issued by the U.S. Nuclear Regulatory Commission ("NRC" or "Commission") under Title 10, "Energy," of the *Code of Federal Regulations* (10 CFR) Part 50, "Domestic Licensing of Production and Utilization Facilities"; Part 70, "Domestic Licensing of Special Nuclear Material"; and Part 72, "Licensing Requirements for the Independent Storage of Spent Nuclear Fuel, High-Level Radioactive Waste, and Reactor-Related Greater Than Class C Waste." The licenses authorize the operation of DCNPP with the conditions specified therein. The facilities are located on the owner's site in San Luis Obispo County, California.

II.

By application dated September 24, 2013 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML13268A398), as supplemented by letters dated December 18, 2013 (security-related), May 15, 2014 (ADAMS Accession No. ML14135A379), and March 26, 2015 (ADAMS Accession No. ML15090A278), PG&E requested, under Commission Order EA-13-092, that under the provisions of Section 161A of the Atomic Energy Act of 1954, as amended, the Commission permit the transfer,

receipt, possession, transport, import, and use of certain firearms and large-capacity ammunition-feeding devices by security personnel who protect a facility owned or operated by a licensee or certificate holder of the Commission that is designated by the Commission. Section 161A confers on the Commission the authority to permit a licensee's security personnel to possess and use firearms, ammunition, or devices, notwithstanding State, local, and certain Federal firearms laws that may prohibit such possession and use.

On review of the PG&E application for Commission authorization to use Section 161A Preemption authority at DCNPP, the NRC staff has found the following:

(1) PG&E's application complies with the standards and requirements of Section 161A and the Commission's rules and regulations set forth in 10 CFR part 73, "Physical Protection of Plants and Materials."

(2) There is reasonable assurance that the facilities will operate in conformance to the application; the provisions of the Atomic Energy Act of 1954, as amended; and the rules and regulations of the Commission.

(3) There is reasonable assurance that the activities permitted by the proposed Commission authorization to use Section 161A preemption authority is consistent with the protection of public health and safety, and that such activities will be conducted in compliance with the Commission's regulations and the requirements of this confirmatory order.

(4) The issuance of Commission authorization to use Section 161A preemption authority will not be inimical to the common defense and security or to the health and safety of the public, and

(5) The issuance of this Commission authorization to use Section 161A preemption authority will be in accordance with the Commission's regulations in 10 CFR part 51, "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions."

The findings set forth above are supported by an NRC staff safety evaluation under Accession Number ML15029A249.

III.

To carry out the statutory authority discussed above, the Commission has determined that the licenses for DCNPP must be modified to include provisions with respect to the Commission authorization to use Section 161A preemption authority as identified in Section II of this confirmatory order.

The requirements needed to exercise the foregoing are set forth in Section IV below.

The NRC staff has found that the license modifications set forth in Section IV are acceptable and necessary. It further concluded that, with the effective implementation of these provisions, the licensee's physical protection program will meet the specific physical protection program requirements set forth in 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for nuclear power reactors) and 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage" (for specific-license independent spent fuel storage installations co-located with a reactor at the reactor site).

On March 26, 2015, PG&E consented to the issuance of this order. The licensee further agreed that this order will be effective 20 days after the date of issuance and that it has waived its right to a hearing on this order.

IV.

Accordingly, under Sections 53, 103 and/or 104b, 161b, 161i, 161o, 161A, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202, "Orders"; 10 CFR part 50; 10 CFR part 70; and 10 CFR part 72, IT IS HEREBY ORDERED that:

1. The PG&E application for Commission authorization to use Section 161A preemption authority at DCNPP is approved, and permission for security personnel to possess and use weapons, devices, ammunition, or other firearms, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use, is granted.

2. The licensee shall review and revise its NRC-approved security plans, as necessary, to describe how the requirements of this confirmatory order and other applicable requirements of 10 CFR part 73 (including the related appendices) will be met.

3. The licensee shall establish and maintain a program consistent with Commission Order EA-13-092 such that all security personnel who require access to firearms in the discharge of their official duties are subject to a firearms background check.

The Commission is engaged in an ongoing rulemaking to implement the Commission's authority under Section 161A. Subsequent to the effective date of that final rulemaking, the Director,

Office of Nuclear Reactor Regulation, and the Director, Office of Nuclear Material Safety and Safeguards may take action to relax or rescind any or all of the requirements set forth in this confirmatory order.

The Directors of the Office of Nuclear Reactor Regulation and the Office of Nuclear Materials Safety and Safeguards may, in writing, relax or rescind this confirmatory order on demonstration by the licensee of good cause.

This confirmatory order is effective 20 days after the date of its issuance.

For further details with respect to this confirmatory order, see the staff's safety evaluation contained in a letter dated January 5, 2016 (ADAMS Accession No. ML15029A249), which is available for public inspection at the Commission's Public Document Room (PDR) located at One White Flint North, Public File Area 01 F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available documents created or received at the NRC are accessible electronically through ADAMS in the NRC Library at <http://www.nrc.gov/reading-rm/adams.html>. Persons who do not have access to ADAMS or who encounter problems in accessing the documents stored in ADAMS should contact the NRC PDR reference staff by telephone at 1-800-397-4209 or 301-415-4737 or by email to pdr.resource@nrc.gov.

In accordance with 10 CFR 2.202, any other person adversely affected by this order may submit an answer to this order within 20 days of its publication in the **Federal Register**. In addition, any other person adversely affected by this order may request a hearing on this order within 20 days of its publication in the **Federal Register**. Where good cause is shown, consideration will be given to extending the time to answer or request a hearing. A request for extension of time must be directed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, and must include a statement of good cause for the extension.

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order designating the time and place of any hearings. If a hearing is held, the issue to be considered at such hearing shall be whether this order should be sustained.

All documents filed in NRC adjudicatory proceedings (including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding before the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c)) must be filed in accordance with the

NRC E-Filing rule (published at 72 FR 49139 on August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the Internet or (in some cases) to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, the participant should contact the Office of the Secretary (at least 10 days before the filing deadline) by email to hearing.docket@nrc.gov or by telephone at 301-415-1677 to (1) request a digital identification (ID) certificate, which allows the participant (or his or her counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or his or her counsel or representative, already holds an NRC-issued digital ID certificate). Based on this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/getting-started.html>. System requirements for accessing the E-Submittal server are detailed in the NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. Participants may attempt to use other software not listed on the Web site to file documents, but they should note that the NRC's E-Filing system does not support unlisted software and that the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the participant must file the document using the NRC's Web-based online submission form. To serve documents through the Electronic Information Exchange, users will be required to install a Web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>.

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be Portable Document Format (PDF) documents in accordance with NRC guidance available on the NRC public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. eastern time on the due date. On receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request or petition to intervene is filed so that they can obtain access to the filed documents through the E-Filing system.

A person filing electronically using the agency's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call to (866) 672-7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m. eastern time, Monday through Friday, excluding Government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First Class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, 16th Floor, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852, Attention: Rulemaking and

Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by First Class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service on depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, available to the public at <http://ehd1.nrc.gov/ehd/>, unless they are excluded under an order of the Commission or by the presiding officer. Participants are requested not to include personally private information such as social security numbers, home addresses, or home phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person other than the licensee requests a hearing, that person shall set forth with particularity the manner in which his or her interest is adversely affected by this order and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

In the absence of any request for hearing or of written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received.

Dated at Rockville, Maryland, this 5th day of January 2016.

FOR THE NUCLEAR REGULATORY COMMISSION.

/RA/

William M. Dean,
Director, Office of Nuclear Reactor Regulation.

/RA/

Scott W. Moore,
Acting Director, Office of Nuclear Material Safety and Safeguards.

**UNITED STATES OF AMERICA
NUCLEAR REGULATORY
COMMISSION**

**In the Matter of Southern California
Edison Company (San Onofre Nuclear
Generating Station, Units 2 and 3, and
Independent Spent Fuel Storage
Installation)**

Docket Nos. 50–361, 50–362, and 72–41

License Nos. NPF–10 and NPF–15

EA–14–140

**CONFIRMATORY ORDER
MODIFYING LICENSE**

I.

Southern California Edison Company (SCE), is the owner and operator of the San Onofre Nuclear Generating Station, Units 2 and 3, including the general-license Independent Spent Fuel Storage Installation (hereinafter “SONGS” or “the facility”), and holder of Facility Operating License Nos. NPF–10, NPF–15, and Docket No. 72–41, issued by the U.S. Nuclear Regulatory Commission (“NRC” or “Commission”) under Title 10, “Energy,” of the *Code of Federal Regulations* (10 CFR) Part 50, “Domestic Licensing of Production and Utilization Facilities”; Part 70, “Domestic Licensing of Special Nuclear Material”; and Part 72, “Licensing Requirements for the Independent Storage of Spent Fuel, High-Level Radioactive Waste, and Reactor-Related Greater Than Class C Waste.” The licenses authorize the operation of SONGS with the conditions specified therein. The facilities are located on the owner’s site in San Diego County, California.

II.

By application dated August 28, 2013 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML13242A277), as supplemented by letters dated December 31, 2013 (ADAMS Accession No. ML14007A496), May 15, 2014 (ADAMS Accession No. ML14139A424), and February 10, 2015 (ADAMS Accession No. ML15044A047), SCE requested, under Commission Order EA–13–092, that under the provisions of Section 161A of the Atomic Energy Act of 1954, as amended, the Commission permit the transfer, receipt, possession, transport, import, and use of certain firearms and large-capacity ammunition-feeding devices by security personnel who protect a facility owned or operated by a licensee or certificate holder of the Commission that is designated by the Commission. Section 161A confers on the Commission the authority to permit a licensee’s security

personnel to possess and use firearms, ammunition, or devices, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use.

On review of the SCE application for Commission authorization to use Section 161A preemption authority at SONGS, the NRC staff has found the following:

(1) SCE’s application complies with the standards and requirements of Section 161A and the Commission’s rules and regulations set forth in 10 CFR part 73, “Physical Protection of Plants and Materials.”

(2) There is reasonable assurance that the facilities will operate in conformance to the application; the provisions of the Atomic Energy Act of 1954, as amended; and the rules and regulations of the Commission.

(3) There is reasonable assurance that the activities permitted by the proposed Commission authorization to use Section 161A preemption authority is consistent with the protection of public health and safety, and that such activities will be conducted in compliance with the Commission’s regulations and the requirements of this confirmatory order.

(4) The issuance of Commission authorization to use Section 161A preemption authority will not be inimical to the common defense and security or to the health and safety of the public.

(5) The issuance of this Commission authorization to use Section 161A preemption authority will be in accordance with the Commission’s regulations in 10 CFR part 51, “Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions.”

The findings set forth above are supported by an NRC staff safety evaluation under ADAMS Accession No. ML15027A221.

III.

To carry out the statutory authority discussed above, the Commission has determined that the licenses for SONGS must be modified to include provisions with respect to the Commission authorization to use Section 161A preemption authority as identified in Section II of this confirmatory order. The requirements needed to exercise the foregoing are set forth in Section IV below.

The NRC staff has found that the license modifications set forth in Section IV are acceptable and necessary. It further concluded that, with the effective implementation of these

provisions, the licensee’s physical protection program will meet the specific physical protection program requirements set forth in 10 CFR 73.55, “Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage” (for nuclear power reactors); in 10 CFR 72.212(b)(9), “Conditions of the General License Issued Under § 72.210,” and portions of 10 CFR 73.55, “Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage” (for general-license independent spent fuel storage installations co-located with a reactor at the reactor site).

On March 31, 2015 (ADAMS Accession No. ML15092A132) SCE consented to the issuance of this order. The licensee further agreed that this order will be effective 20 days after the date of issuance and that it has waived its right to a hearing on this order.

IV.

Accordingly, under Sections 53, 103 and/or 104b, 161b, 161i, 161o, 161A, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission’s regulations in 10 CFR 2.202, “Orders”; 10 CFR part 50; 10 CFR part 52, “Licenses, Certifications, and Approvals for Nuclear Power Plants”; 10 CFR part 70; and 10 CFR part 72, IT IS HEREBY ORDERED that:

1. The SCE application for Commission authorization to use Section 161A preemption authority at SONGS is approved, and permission for security personnel to possess and use weapons, devices, ammunition, or other firearms, notwithstanding local, State, and certain Federal firearms laws (including regulations) that may prohibit such possession and use, is granted.

2. The licensee shall review and revise its NRC-approved security plans, as necessary, to describe how the requirements of this confirmatory order and other applicable requirements of 10 CFR part 73, “Physical Protection of Plants and Materials,” to include those of the appendices of Part 73, will be met.

3. The licensee shall establish and maintain a program consistent with Commission Order EA–13–092 such that all security personnel who require access to firearms in the discharge of their official duties are subject to a firearms background check.

The Commission is engaged in an ongoing rulemaking to implement the Commission’s authority under Section 161A. Subsequent to the effective date of that final rulemaking, the Director, Office of Nuclear Material Safety and

Safeguards (NMSS) may take action to relax or rescind any or all of the requirements set forth in this confirmatory order.

The Director, NMSS, may, in writing, relax or rescind this confirmatory order on demonstration by the licensee of good cause.

This confirmatory order is effective 20 days after the date of its issuance.

For further details with respect to this confirmatory order, see the staff's safety evaluation contained in a letter dated January 5, 2016 (ADAMS Accession No. ML15027A221), which is available for public inspection at the Commission's Public Document Room (PDR) located at One White Flint North, Public File Area 01-F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available documents created or received at the NRC are accessible electronically through ADAMS in the NRC Library at <http://www.nrc.gov/reading-rm/adams.html>. Persons who do not have access to ADAMS or who encounter problems in accessing the documents stored in ADAMS should contact the NRC PDR reference staff by telephone at 1-800-397-4209 or 301-415-4737 or by email to pdr.resource@nrc.gov.

In accordance with 10 CFR 2.202, any other person adversely affected by this order may submit an answer to this order within 20 days of its publication in the **Federal Register**. In addition, any other person adversely affected by this order may request a hearing on this order within 20 days of its publication in the **Federal Register**. Where good cause is shown, consideration will be given to extending the time to answer or request a hearing. A request for extension of time must be directed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, and must include a statement of good cause for the extension.

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order designating the time and place of any hearings. If a hearing is held, the issue to be considered at such hearing shall be whether this Order should be sustained.

All documents filed in NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC's E-Filing rule (72 FR 49139; August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory

documents over the internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at hearing.docket@nrc.gov, or by telephone at 301-415-1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/getting-started.html>. System requirements for accessing the E-Submittal server are detailed in the NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. Participants may attempt to use other software not listed on the Web site, but should note that the NRC's E-Filing system does not support unlisted software, and the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the participant must file the document using the NRC's online, Web-based submission form. In order to serve documents through the Electronic Information Exchange System, users will be required to install a Web browser plug-in from the NRC's Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>.

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then

submit a request for hearing or petition for leave to intervene. Submissions should be in Portable Document Format (PDF) in accordance with NRC guidance available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>. A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request/petition to intervene is filed so that they can obtain access to the document via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call at 1-866-672-7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) first class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, Maryland, 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the

document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket which is available to the public at <http://ehd1.nrc.gov/ehd/>, unless excluded pursuant to an order of the Commission, or the presiding officer. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or home phone numbers in their filings, unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person other than the licensee requests a hearing, that person shall set forth with particularity the manner in which his or her interest is adversely affected by this order and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

In the absence of any request for hearing or of written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received.

Dated at Rockville, Maryland, this 5th day of January 2016.

FOR THE NUCLEAR REGULATORY COMMISSION.

/RA/

Scott Moore,

Acting Director, Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76871; File No. SR-NYSEArca-2015-114]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, To List and Trade Shares of the Market Vectors Dynamic Put Write ETF Under NYSE Arca Equities Rule 8.600

January 11, 2016.

I. Introduction

On November 16, 2015, NYSE Arca, Inc. ("Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to list and trade shares ("Shares") of the Market Vectors Dynamic Put Write ETF (the "Fund") under NYSE Arca Equities Rule 8.600. The proposed rule change was published for comment in the **Federal Register** on December 4, 2015.³ On December 11, 2015, the Exchange filed Amendment No. 1 to the proposed rule change.⁴ The Commission received no

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 76530 (Nov. 30, 2015), 80 FR 75883.

⁴ In Amendment No. 1, the Exchange clarified: (1) That the Fund may sell or invest in other U.S. exchange-traded put options on stock indexes, put

Continued

comments on the proposed rule change. The Commission is publishing this notice to solicit comments on Amendment No. 1 from interested persons, and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

II. The Exchange's Description of the Proposed Rule Change⁵

The Exchange proposes to list and trade the Shares under NYSE Arca Equities Rule 8.600, which governs the listing and trading of Managed Fund Shares. The Shares will be offered by Market Vectors ETF Trust ("Trust"), which is registered with the Commission as an investment company.⁶ Van Eck Absolute Return Advisers Corporation ("Adviser") will serve as the investment adviser of the Fund. Van Eck Absolute Return Advisers will also serve as the administrator for the Fund, and The Bank of New York Mellon will serve as the custodian for the Fund. Van Eck Securities Corporation will serve as the distributor of the Shares.

Principal Investments

The Fund's investment objective will be to seek a positive total return and income. Under normal circumstances,⁷

options on stock index futures contracts, put options on the Fund (if available), or put options on exchange-traded pooled investment vehicles (rather than shares of such vehicles); (2) how the Fund's put options, U.S. Treasuries, and cash equivalents generally would be valued to calculate the Fund's net asset value ("NAV"); Amendment No. 1 superseded the original filing in its entirety. Amendment No. 1 is available at: <http://www.sec.gov/comments/sr-nysearca-2015-114/nysearca2015114-1.pdf>.

⁵ The Commission notes that additional information regarding the Trust, the Fund, its investments, and the Shares, including investment strategies, risks, creation and redemption procedures, fees, portfolios holding disclosure policies, calculation of NAV, distribution, and taxes, among other things, can be found in Amendment No. 1, *supra* note 4, and the Registration Statement, *infra* note 6, as applicable.

⁶ The Exchange states that the Trust is registered under the Investment Company Act of 1940 (15 U.S.C. 80a-1) ("1940 Act"). On August 19, 2015, the Trust filed with the Commission a registration statement on Form N-1A under the Securities Act of 1933 (15 U.S.C. 77a), and under the 1940 Act relating to the Fund (File Nos. 333-123257 and 811-10325) ("Registration Statement"). The Exchange states that the Commission has issued an order granting certain exemptive relief to the Trust under the 1940 Act. See Investment Company Act Release No. 29496 (November 3, 2010) (File No. 812-13605).

⁷ The term "under normal circumstances" includes, but is not limited to, the absence of extreme volatility or trading halts in the domestic equity markets or the financial markets generally; operational issues causing dissemination of inaccurate market information; or force majeure type events such as systems failure, natural or man-made disaster, act of God, armed conflict, act of terrorism, riot or labor disruption or any similar intervening circumstance. For temporary defensive

the Fund will seek to achieve its investment objective by selling only exchange-listed, uncovered out-of-the-money put options, which typically expire between 30 and 60 days, on: (i) The S&P 500 Index; (ii) futures on the S&P 500 Index; and (iii) e-mini futures on the S&P 500 Index.⁸ The aggregate notional value (i.e., the underlying value) of the Fund's put option contracts (including those described below) will be approximately 200% of the Fund's net assets.⁹

Other Investments

Cash and cash equivalents, in which the Fund may hold, include U.S. Treasury Bills, repurchase agreements, money market instruments, or investment companies and exchange-traded funds ("ETFs")¹⁰ that invest principally in money market instruments. The Fund also may invest in other U.S. exchange-traded put options on stock indexes, put options on stock index futures contracts, put options on the Fund (if available) or put options exchange-traded pooled investment vehicles,¹¹ to the extent such investments are considered suitable for the Fund by the Adviser.

III. Discussion and Commission's Findings

After careful review, the Commission finds that the proposed rule change is consistent with the requirements of Section 6 of the Act¹² and the rules and regulations thereunder applicable to a

purposes, the Fund may hold cash and cash equivalents, including U.S. Treasury bills and/or invest without limit in money market instruments, repurchase agreements, or other funds which invest exclusively in money market instruments, as described further below. The Fund may take temporary defensive positions in anticipation of or in an attempt to respond to adverse market, economic, political or other conditions.

⁸ Options on the S&P 500 Index are traded on the Chicago Board Options Exchange. Options on futures on the S&P 500 Index and options on e-mini futures on the S&P 500 Index are traded on the Chicago Mercantile Exchange.

⁹ See Amendment No. 1, *supra* note 4, at 7.

¹⁰ The ETFs in which the Fund may invest will be registered under the 1940 Act and include Investment Company Units (as described in NYSE Arca Equities Rule 5.2(j)(3)); Portfolio Depositary Receipts (as described in NYSE Arca Equities Rule 8.100); and Managed Fund Shares (as described in NYSE Arca Equities Rule 8.600). All ETFs in which the Fund invests will be listed and traded in the U.S. on registered exchanges.

¹¹ Exchange-traded pooled investment vehicles include Trust Issued Receipts (as described in NYSE Arca Equities Rule 8.200); Commodity-Based Trust Shares (as described in NYSE Arca Equities Rule 8.201); Currency Trust Shares (as described in NYSE Arca Equities Rule 8.202); Commodity Index Trust Shares (as described in NYSE Arca Equities Rule 8.203); and Trust Units (as described in NYSE Arca Equities Rule 8.500).

¹² 15 U.S.C. 78f.

national securities exchange.¹³ In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,¹⁴ which requires, among other things, that the Exchange's rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. The Commission notes that the Fund and the Shares must comply with the requirements of NYSE Arca Equities Rule 8.600 for the Shares to be listed and traded on the Exchange.

The Commission also finds that the proposal to list and trade the Shares on the Exchange is consistent with Section 11A(a)(1)(C)(iii) of the Act,¹⁵ which sets forth Congress's finding that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure the availability to brokers, dealers, and investors of information with respect to quotations for, and transactions in, securities. According to the Exchange, quotation and last sale information for the Shares, ETFs and pooled investment vehicles will be available via the Consolidated Tape Association high-speed line. Quotation and last sale information for exchange-listed options cleared via the Options Clearing Corporation will be available via the Options Price Reporting Authority. Intra-day and closing price information regarding exchange-traded options (including options on futures) will be available from the exchange on which these instruments are traded. Intra-day and closing price information regarding money market instruments, repurchase agreements, and cash equivalents, including U.S. Treasuries, will be available from major market data vendors. Price information for non-exchange-traded investment company securities will be available from major market data vendors and from the Web site of the applicable investment company. In addition, the Indicative Per Share Portfolio Value will be disseminated every 15 seconds during the Exchange's Core Trading Session by major market data vendors. On each business day, before commencement of trading in Shares in the Core Trading Session (as defined in NYSE Arca

¹³ In approving this proposed rule change, the Commission notes that it has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹⁴ 15 U.S.C. 78f(b)(5).

¹⁵ 15 U.S.C. 78k-1(a)(1)(C)(iii).

Equities Rule 7.34(a)(2)), the Fund will disclose on its Web site the Disclosed Portfolio (as defined in NYSE Arca Equities Rule 8.600(c)(2)) that will form the basis for the Fund's calculation of NAV at the end of the business day.¹⁶ The Fund's NAV per Share will be calculated daily every day the NYSE is open. A basket composition file, which will include the security names and share quantities, if applicable, required to be delivered in exchange for the Shares, together with estimates and actual cash components, will be publicly disseminated daily prior to the opening of the Exchange via the National Securities Clearing Corporation. Information regarding market price and trading volume of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. Information regarding the previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers. The Web site for the Fund will include a form of the prospectus for the Fund and additional quantitative information.

The Commission further believes that the proposal to list and trade the Shares is reasonably designed to promote fair disclosure of information that may be necessary to price the Shares appropriately and to prevent trading when a reasonable degree of transparency cannot be assured. The Commission notes that the Exchange will obtain a representation from the issuer of the Shares that the NAV per Share will be calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time.¹⁷ In addition, trading in the Shares will be subject to NYSE Arca Equities Rule 8.600(d)(2)(D), which sets forth circumstances under which trading in the Shares may be halted. The Exchange may halt trading in the Shares if the Indicative Per Share Portfolio Value is not being disseminated as required, if

the Exchange becomes aware that the NAV for the Fund is not being disseminated to all market participants at the same time, if trading is not occurring in the securities and/or the financial instruments comprising the Disclosed Portfolio of the Fund, or if other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present.¹⁸ Further, the Commission notes that the Reporting Authority that provides the Disclosed Portfolio of the Fund must implement and maintain, or be subject to, procedures designed to prevent the use and dissemination of material, non-public information regarding the actual components of the portfolio.¹⁹ The Commission notes that the Financial Industry Regulatory Authority ("FINRA"), on behalf of the Exchange,²⁰ will communicate as needed regarding trading in the Shares, options contracts and options on futures contracts with other markets and other entities that are members of the Intermarket Surveillance Group ("ISG"), and FINRA, on behalf of the Exchange, may obtain trading information regarding trading in the Shares, options contracts, and options on futures contracts from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares, options contracts, and options on futures contracts from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. The Exchange states that it has a general policy prohibiting the distribution of material, non-public information by its employees. According to the Exchange, the Adviser is not a registered broker-dealer but is affiliated with a broker-dealer whose primary function is to serve as distributor and placement agent for its products. The Exchange states that the Adviser has implemented a fire wall with respect to its broker-dealer affiliate

regarding access to information concerning the composition and/or changes to the portfolio. In the event (a) the Adviser or any sub-adviser becomes registered as a broker-dealer or newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, the Exchange states that such Adviser, new adviser or sub-adviser, as applicable will implement a fire wall with respect to its relevant personnel or broker-dealer affiliate regarding access to information concerning the composition of or changes to the portfolio and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding the portfolio.

The Exchange deems the Shares to be equity securities, which subjects trading in the Shares to the Exchange's existing rules governing the trading of equity securities.²¹

In support of this proposal, the Exchange has made additional representations, including:

(1) The Shares will conform to the initial and continued listing criteria under NYSE Arca Equities Rule 8.600.²²

(2) The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions.²³

(3) The Exchange represents that the trading in the Shares will be subject to the existing trading surveillances, administered by the Exchange or FINRA on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws. The Exchange represents that these procedures are adequate to properly monitor Exchange trading of the Shares in all trading sessions and to deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.²⁴

(4) Prior to the commencement of trading, the Exchange will inform its Equity Trading Permit ("ETP") Holders in an Information Bulletin of the special characteristics and risks associated with trading the Shares. Specifically, the Bulletin will discuss the following: (a) The procedures for purchases and redemptions of Shares in Creation Unit (and that Shares are not individually redeemable); (b) NYSE Arca Equities Rule 9.2(a), which imposes a duty of due diligence on its ETP Holders to learn the essential facts relating to every customer prior to trading the Shares; (c)

¹⁶ On a daily basis, the Fund will disclose on the Fund's Web site the following information regarding each portfolio holding, as applicable to the type of holding: Ticker symbol, CUSIP number or other identifier, if any; a description of the holding (including the type of holding, such as the type of option); the identity of the security, commodity, index or other asset or instrument underlying the holding, if any; for options, the option strike price; quantity held (as measured by, for example, par value, notional value or number of shares, contracts or units); maturity date, if any; coupon rate, if any; effective date, if any; market value of the holding; and the percentage weighting of the holding in the Fund's portfolio. This information will be publicly available at no charge. See Amendment No. 1, *supra* note 4, at 13.

¹⁷ See NYSE Arca Equities Rule 8.600(d)(1)(B).

¹⁸ See NYSE Arca Equities Rule 8.600(d)(2)(C) (providing additional considerations for the suspension of trading in or removal from listing of Managed Fund Shares on the Exchange). With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares. Trading in the Shares will be halted if the circuit breaker parameters in NYSE Arca Equities Rule 7.12 have been reached. Trading also may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable.

¹⁹ See NYSE Arca Equities Rule 8.600(d)(2)(B)(ii).

²⁰ The Exchange states that, while FINRA surveils trading on the Exchange pursuant to a regulatory services agreement, the Exchange is responsible for FINRA's performance under this regulatory services agreement.

²¹ See Amendment No. 1, *supra* note 4, at 15.

²² See *id.*

²³ See *id.*

²⁴ See *id.*

the risks involved in trading the Shares during the Opening and Late Trading Sessions when an updated Intraday Indicative Value ("IIV") or Index value will not be calculated or publicly disseminated; (d) how information regarding the IIV and the Disclosed Portfolio will be disseminated; (e) the requirement that ETP Holders deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; and (f) trading information.²⁵

(5) For initial and continued listing, the Fund will be in compliance with Rule 10A-3²⁶ under the Act, as provided by NYSE Arca Equities Rule 5.3.

(6) A minimum of 100,000 Shares for the Fund will be outstanding at the commencement of trading on the Exchange.²⁷

This approval order is based on all of the Exchange's representations.

For the foregoing reasons, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act²⁸ and the rules and regulations thereunder applicable to a national securities exchange.

IV. Solicitation of Comments on Amendment No. 1

Interested persons are invited to submit written data, views, and arguments concerning whether Amendment No. 1 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an Email to rule-comments@sec.gov. Please include File Number SR-NYSEArca-2015-114 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-NYSEArca-2015-114. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's

Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2015-114 and should be submitted on or before February 5, 2016.

V. Accelerated Approval of Proposed Rule Change as Modified by Amendment No. 1

The Commission finds good cause to approve the proposed rule change, as modified by Amendment No. 1, prior to the thirtieth day after the date of publication of notice in the **Federal Register**. Amendment No. 1 supplements the proposed rule change by, among other things, clarifying the scope of the Fund's permitted investments and adding additional information about the availability of prices for the Shares and underlying assets. This clarifying information aided the Commission in evaluating the likelihood of effective arbitrage in the Shares. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,²⁹ to approve the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,³⁰ that the proposed rule change (SR-NYSEArca-2015-114), as modified by Amendment No. 1, be, and it hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³¹

Robert W. Errett,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76865; File No. SR-NYSE-2016-06]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Adopt a Trading License Fee for Calendar Year 2016, Effective January 4, 2016

January 11, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on January 4, 2016, New York Stock Exchange LLC ("NYSE" or the "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to adopt a trading license fee for calendar year 2016. The Exchange proposes to make the rule change operative on January 4, 2016. The proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below,

²⁵ See *id.* at 16.

²⁶ 17 CFR 240.10A-3.

²⁷ See Amendment No. 1, *supra* note 4, at 15.

²⁸ 15 U.S.C. 78f(b)(5).

²⁹ 15 U.S.C. 78s(b)(2).

³⁰ 15 U.S.C. 78s(b)(2).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Price List to adopt a trading license fee for calendar year 2016. The Exchange proposes to make the rule change operative on January 4, 2016.

NYSE Rule 300(b) provides that, in each annual offering, up to 1366 trading licenses for the following calendar year will be sold annually at a price per trading license to be established each year by the Exchange pursuant to a rule filing submitted to the Securities and Exchange Commission ("Commission") and that the price per trading license will be published each year in the Exchange's price list.

The Exchange proposes to leave the current trading license fees in place for 2016: \$50,000 for the first license held by a member organization and \$15,000 for each additional license held by a member organization. Such trading license fees have been in place since March 1, 2015.³ Fees will continue to be prorated for any portion of the year that a license may be outstanding. For a trading license that is in place for 10 calendar days or less in a calendar month, proration for that month will continue to be at a flat rate of \$100 per day with no tier pricing involved. For a trading license that is in place for 11 calendar days or more in a calendar month, proration for that month will continue to be computed based on the number of days as applied to the applicable annual fee for the license.

The proposed changes are not otherwise intended to address any other problem, and the Exchange is not aware of any significant problem that the affected market participants would have in complying with the proposed changes.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with

Section 6(b) of the Act,⁴ in general, and Section 6(b)(4) of the Act,⁵ in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among its members and other persons using its facilities. The Exchange believes that the trading license fee is reasonable because it maintains the existing fee schedule, which has been in place since March 1, 2015. The Exchange also believes that the proposal to maintain the current fee schedule is equitable and not unfairly discriminatory because all similarly situated member organizations would continue to be subject to the same trading license fee structure and because access to the Exchange's market would continue to be offered on fair and non-discriminatory terms. The Exchange also believes that the proposal to maintain the current fee schedule is equitable and not unfairly discriminatory because all member organizations would continue to have the opportunity to enjoy the benefits of the fee relief with respect to additional trading licenses.

The Exchange believes that it is subject to significant competitive forces, as described below in the Exchange's statement regarding the burden on competition.

For the foregoing reasons, the Exchange believes that the proposal is consistent with the Exchange Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change will keep trading license fees the same as they have been since March 1, 2015. As a result, the Exchange does not believe that the proposed rule change will place an unreasonable burden on current members because their trading license fees will remain the same. In addition, the Exchange does not believe that the proposed rule change will place an unreasonable burden on potential members because a potential member's fees will be the same as for a current member and pro-rated for licenses held for less than a year.

Finally, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive or rebate opportunities available at other venues to be more

favorable. In such an environment, the Exchange must continually adjust its fees and rebates to remain competitive with other exchanges and with alternative trading systems that have been exempted from compliance with the statutory standards applicable to exchanges. Because competitors are free to modify their own fees and credits in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited. As a result of all of these considerations, the Exchange does not believe that the proposed changes will impair the ability of member organizations or competing order execution venues to maintain their competitive standing in the financial markets.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)⁶ of the Act and subparagraph (f)(2) of Rule 19b-4⁷ thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)⁸ of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act.

³ See Securities Exchange Act Release No. 74407 [sic] (March 2, 2015), 80 FR 12228 (March 6, 2015) (SR-NYSE-2015-08). The trading license fee was initially set at \$40,000 in January 2009. See Securities Exchange Act Release No. 59140, 73 FR 80488 (December 31, 2008) (SR-NYSE-2008-130). In June 2011, the fee was changed to \$40,000 per license for the first two licenses and \$25,000 per license for any additional trading licenses. See Securities Exchange Act Release Nos. 64582 (June 2, 2011), 76 FR 33390 (June 8, 2011) (SR-NYSE-2011-23) and 66108 (January 5, 2012), 77 FR 1768 (January 11, 2012) (SR-NYSE-2011-71).

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSE-2016-06 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSE-2016-06. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSE-2016-06, and should be submitted on or before February 5, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁹

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76864; File No. SR-BATS-2015-122]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change to Rules 27.1, Definitions, and 27.4, Temporary Rule Governing Phase-Out of P and P/A Orders

January 11, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 28, 2015, BATS Exchange, Inc. (the "Exchange" or "BATS") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and Rule 19b-4(f)(6)(iii) thereunder,⁴ which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to authorize the BATS Options Market ("BATS Options") to delete its rule entitled "Temporary Rule Governing Phase-Out of P and P/A Orders" and amend any references in the rules to the Plan for the Purpose of Creating and Operating an Intermarket Linkage ("Linkage Plan").⁵

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the

proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to eliminate existing references to the Linkage Plan and also replace any references to the Linkage Plan with references to the Options Order Protection and Locked/Crossed Market Plan ("Plan") in order to clarify the current rules in effect.

On February 4, 2010, the Exchange filed the Plan, joining all other approved options exchanges in adopting the Plan.⁶ The Plan required each options exchange to adopt rules implementing various requirements specified in the Plan. The Plan replaced the former Linkage Plan. The Linkage Plan required Participating Exchanges⁷ to operate a standalone system or "Linkage" for sending order-flow between exchanges to limit trade-throughs.⁸ The Options Clearing Corporation ("OCC") operated the Linkage system (the "System").⁹ The Exchange adopted various rules in connection with the Plan to avoid trade-throughs and locked markets, among other things.¹⁰ The Exchange currently offers private routing directly to away markets.

The Exchange adopted a temporary rule entitled "Temporary Rule Governing Phase-Out of P and P/A Orders" ("Temporary Rule"),¹¹ in order to facilitate the participation of certain Participating Exchanges who may require the use of Principal Acting as Agent Orders ("P/A Orders")¹² and

⁶ See Securities Exchange Act Release Nos. 61546 (February 19, 2010), 75 FR 8762 (February 25, 2010) (Notice of Filing and Immediate Effectiveness of Amendment to the Options Order Protection and Locked/Crossed Markets Plan to Add the BATS Exchange, Inc. as a Participant).

⁷ The term "Participating Exchanges" refers to all options exchanges that had been approved to participate in the Linkage Plan.

⁸ See footnote 6.

⁹ See footnote 6.

¹⁰ See footnote 6.

¹¹ See Chapter XXVII, Intermarket Linkage Rules, Rule 27.4, "Temporary Rule Governing Phase-Out of P and P/A Orders".

¹² A P/A Order is an order for the principal account of a Primary Market Maker (or equivalent entity on another Eligible Exchange that is authorized to represent Public Customer orders), reflecting the terms of a related unexecuted Public Customer order for which the Primary Market

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b-4(f)(6)(iii).

⁵ See Chapter XXVII, Intermarket Linkage Rules, Rule 27.4., Temporary Rule Governing Phase-Out of P and P/A Orders.

⁹ 17 CFR 200.30-3(a)(12).

Principal Orders (“P”) ¹³ after implementation of the Plan. Certain Participating Exchanges required a temporary transition period during which they continued to utilize these order types that existed under the Linkage Plan. The Exchange proposed substantially similar rules with that of the other Participating Exchanges to accommodate the possibility of continued use of P/A Orders and P Orders. At this time all Participating Exchanges have discontinued use of the Linkage Plan. The Exchange proposes at this time to delete this Temporary Rule because it is no longer necessary in light of the discontinued use of the Linkage Plan. Additionally, the Exchange proposes to amend Section 17, *Definitions*, in Chapter XXVII, *Intermarket Linkage Rules*, to redefine “Plan” to comport with the Plan.

In addition to the changes set forth above, the Exchange proposes to add the letter “(a)” to Rule 27.1 to conform with the typical numbering used in Exchange rules.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.¹⁴ In particular, the proposal is consistent with Section 6(b)(5) of the Act¹⁵ because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest by proposing the elimination of the Temporary Rule, which reflects usage of the former Linkage Plan that has been replaced by the Plan. The Exchange believes that elimination of the reference to the Temporary Rule will help to avoid potential confusion by Members and other market participants because the Linkage Plan is and has been in full effect for some time, and, therefore, the

Temporary Rule is outdated and unnecessary.

(B) Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposal will simply eliminate the Temporary Rule, which is outdated and no longer necessary for the reasons described above. Accordingly, the Exchange does not believe that the proposal has any competitive effect.

(C) Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act¹⁶ and Rule 19b-4(f)(6) thereunder.¹⁷ Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b-4(f)(6) thereunder.¹⁸

A proposed rule change filed under Rule 19b-4(f)(6) normally does not become operative for 30 days after the date of filing. However, Rule 19b-4(f)(6)(iii) permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the Exchange may eliminate its Temporary Rule, which has been

replaced by the Plan. The Commission believes that removal of the obsolete rule could avoid potential confusion by Members and other market participants. Based on the foregoing, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest.¹⁹ The Commission hereby grants the Exchange’s request and designates the proposal operative upon filing.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BATS-2015-122 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.
- All submissions should refer to File No. SR-BATS-2015-122. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the

Maker is acting as agent. See Chapter XXVII, Rule 27.4(d)(4)(A).

¹³ A Principal Order is an order for the principal account of a market maker (or equivalent entity on another Eligible Exchange) and is not a P/A Order. See Chapter XXVII, Rule 27.4(d)(4)(B).

¹⁴ 15 U.S.C. 78f(b).

¹⁵ 15 U.S.C. 78f(b)(5).

¹⁶ 15 U.S.C. 78s(b)(3)(A)(iii).

¹⁷ 17 CFR 240.19b-4(f)(6).

¹⁸ In addition, Rule 19b-4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange’s intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁹ For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule’s impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-BATS-2015-122 and should be submitted on or before February 5, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁰

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76868; File No. SR-BX-2015-087]

Self-Regulatory Organizations; NASDAQ OMX BX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 7015

January 11, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 29, 2015, NASDAQ OMX BX, Inc. ("BX" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend BX Rule 7015 to clarify the connectivity

options and application of the fees assessed thereunder.

The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaqomxbx.cchwallstreet.com>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Rule 7015 provides the charges BX assesses for equity securities market connectivity to systems operated by BX. BX is amending Rule 7015 in three ways: (1) To clarify the term "port pair"; (2) to clarify the connectivity options available under the rule; and (3) to eliminate internet ports as a connectivity option.

First, BX is proposing to clarify the use of the term "port pair." For certain ports under Rule 7015 that are used for either trading or data, BX additionally provides a disaster recovery port at no cost. Such a disaster recovery port provides connectivity to BX's disaster recovery location in the event of a failure of BX's primary trading infrastructure. BX has provided disaster recovery ports at no cost since 2009 to encourage member firms to maintain such connectivity in the event of a market disruption so that the market as a whole could continue to operate. In the interest of clarity, the Exchange is proposing to eliminate the term port pair and to separately list disaster recovery ports as a connectivity option available at no cost under the rule.

Second, BX is reorganizing and adding language to Rule 7015 to list all connectivity provided by BX under the rule, which is currently subsumed in a connectivity option and related fee. Specifically, the Exchange currently offers connectivity for \$500 per port, per

month for each port pair other than Multicast ITCH data feed pairs and TCP ITCH data feed pairs. Under the \$500 per port, per month connectivity option a member firm may subscribe to an OUCH protocol trading port, a FIX Trading Port (either a FIX or FIX Lite protocol),³ RASH protocol trading port, and DROP ports. BX is listing separately each of the options available under the rule. BX also offers trading ports that may be used only in test mode. Member firms may subscribe to these test mode trading ports at no cost, which are exclusively used for testing purposes and may not be used for trading in securities in the System. The Exchange is adding rule text noting that these test ports may be subscribed to under the rule. The Exchange also provides data retransmission ports at no cost. Data retransmission ports allow a subscriber to replay market data, in the event the data was missed in a live feed or for verification purposes. Data retransmission ports only allow replay of the current trading day and do not provide data concerning prior trading days' data. The Exchange is adding rule text noting that data retransmission ports may be subscribed to under the rule.

Third, BX is proposing to eliminate Internet Ports. Internet ports are based on outdated technology and BX does not have any subscribers to this connectivity method.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with Section 6(b) of the Act,⁴ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,⁵ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility or system which BX operates or controls, and is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to

³ A FIX port is a trading port using a FIX-based telecommunication protocol. FIX, an abbreviation for Financial Information eXchange, is a standard message protocol that defines an electronic message exchange for communicating securities transactions between two parties. BX offers two FIX-based trading ports, which vary based on messaging formats and capability. BX is proposing to list these two protocols as options under the rule that a member firm may select when subscribing to a FIX trading port.

⁴ 15 U.S.C. 78f(b).

⁵ 15 U.S.C. 78f(b)(4) and (5).

²⁰ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest; and are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the clarifying changes to the rule protect investors and the public interest because they explicitly describe the fees assessed for all ports under the rule. Describing all services covered by the rule will serve to avoid investor confusion over the scope of what connectivity options are available, and the costs of such options. The Exchange notes that it is not adding new connectivity options or functionality, but is rather describing more specifically what is currently offered under the rule. In this regard, the Exchange is adding new rule text that describes all functionality available under each subparagraph of the rule and is reorganizing some rule text under the rule in an effort to make the rule clearer. The Exchange notes that much of the new text concerns testing ports and ports used in the event of a disaster or hardware failure. These ports help ensure that a fair and orderly market is maintained by allowing member firms to test their systems prior to connecting to the live trading environment and to provide backup connectivity in the event of a failure or disaster. Thus, the Exchange believes the proposed clarifying changes are consistent with the protection of investors and the public interest.

The Exchange believes that the proposed deletion of the Internet Port connectivity option is reasonable, equitably allocated, and not unfairly discriminatory because there are no subscribers to this connectivity option, which is based on outdated means of connecting to the Exchange. As a consequence, no member firms will be impacted by deletion of the connectivity option. The Exchange notes that it is not altering the charges assessed for the remaining connectivity options under Rule 7015.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Specifically, BX is making clarifying changes to Rule 7015, which does not impose any burden on competition whatsoever. To the contrary, the proposed change facilitates competition by clarifying what connectivity options are provided

by the Exchange, thereby informing other market venues a better understanding of what connectivity options are available for BX. With that better understanding, other market venues may improve existing connectivity options or offer new connectivity options to compete with BX. Accordingly, the proposed changes do not inhibit market participants' ability to compete among each other, nor do they impose any burden on competition among market venues, but rather may promote competition among market venues.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act⁶ and subparagraph (f)(6) of Rule 19b-4 thereunder.⁷ At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

⁶ 15 U.S.C. 78s(b)(3)(a)(ii).

⁷ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BX-2015-087 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BX-2015-087. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BX-2015-087 and should be submitted on or before February 5, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁸

Robert W. Errett,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76870; File No. SR-DTC-2016-001]

Self-Regulatory Organizations; The Depository Trust Company; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the DTC Custody Service Guide To Codify Its Current Procedures for Assigning a Value to Custody Service Securities for Shipping Insurance Valuation Purposes

January 11, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”)¹ and Rule 19b-4 thereunder,² notice is hereby given that on January 4, 2016, The Depository Trust Company (“DTC”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II and III below, which Items have been prepared by DTC. DTC filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and subparagraph (f)(1) of Rule 19b-4 thereunder.⁴ The proposed rule change was effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency’s Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change would update DTC’s Custody Service Guide (“Custody Guide”) to codify DTC’s current procedures for assigning a value to securities held in DTC’s Custody Service for shipping insurance valuation purposes, as more fully described below.⁵ The text of the proposed rule change to update the Custody Guide is set forth in Section II(A)(1) below.

II. Clearing Agency’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, DTC included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed

rule change. The text of these statements may be examined at the places specified in Item IV below. DTC has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule filing submitted by DTC is to update the text of the Custody Guide to codify its current procedures for assigning a value to securities held in DTC’s Custody Service for shipping insurance valuation purposes only, as described below.

The Custody Service enables Participants that hold physical securities that are not presently eligible for book-entry services at DTC to deposit those securities with DTC for safekeeping and certain limited depository services.⁶ Generally, DTC does not price securities held in DTC’s Custody Service.⁷ However, DTC applies pricing when instructed by a Participant to ship a Custody Service security from DTC to the Participant or to the Participant’s customers or agents, to ensure that its applicable insurance coverage limit is not exceeded. In response to internal review and to be more transparent with respect to its current procedures for assigning a value to securities held in its Custody Service, DTC is proposing to codify its current practice with respect to assigning such values. Following is an excerpt from the applicable section in the Custody Guide, text which is in bold and underlined indicates additions to the Custody Guide pursuant to the proposed rule change:

Insurance and Replacement of Certificates

DTC carries insurance relating to the replacement of certificates lost in transit or on its premises. Based on DTC’s insurance coverage, it is recommended that the depositing Participant review its holdings and, when possible, submit these high value certificates for breakdowns so that the dollar value remains within DTC’s insurance limits.

Prior to shipping high value certificates, when possible, arrangements are made with transfer agents or issuers to cancel these

certificates before shipment. DTC limits its liability for loss with respect to high-value certificates to the Limit, as defined below; however DTC’s liability for loss is not limited to the Limit to the extent that such loss is caused directly by DTC’s gross negligence or willful misconduct; provided that in no event shall DTC be liable for any special, consequential, exemplary, incidental, or punitive damages in this regard. The “Limit” is defined as DTC’s insurance coverage at the time of the loss in question, provided that with respect to a loss during shipment, the Limit is the lesser of DTC’s insurance coverage at the time of the loss in question and \$100 million. Participants may request from time to time information regarding the Limit.

DTC has internal procedures to control, safeguard and limit the risk of potential loss of a high value certificate. For example, DTC staff will work with the depositing Participant’s staff to breakdown the deposit into smaller workable denominations so that they fall within a more acceptable range of value. In addition, where possible, arrangements will be made with transfer agents/issuers to cancel these certificates prior to their shipment.

Shipping Insurance Valuation

Securities held by Participants through the Custody Service are segregated from DTC’s fungible mass held by Cede & Co., are not eligible for book-entry services, and cannot be used as collateral for DTC transactions.

DTC does not generally price securities held in the Custody Service. However, when DTC is instructed by a Participant to ship securities held in the Custody Service, DTC assigns a price to the securities being shipped to ensure that DTC’s Limit is not exceeded when shipping certificates. If a security being shipped is also a full depository eligible security, DTC will assign the full depository eligible security’s previous day’s closing price, to ensure that its Limit is not being exceeded. When DTC does not have a price for a Custody Service security based on the price of a full depository eligible security, and DTC is instructed by its Participant to ship the security, DTC will assign a price as follows:

- *DTC will use a default price of \$1.00 per share for equity issues and face value for debt issues (each, “Default Pricing”).*
- *Where Default Pricing would otherwise apply, Participants may instead provide DTC with a price for DTC to assign to the security for shipping insurance valuation purposes. DTC’s assignment of that price for*

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b-4(f)(1).

⁵ Each term not otherwise defined herein has its respective meaning as set forth in the DTC Rules, By-laws, and Organization Certificate (the “Rules”), available at <http://www.dtcc.com/legal/rules-and-procedures.aspx>, and the DTC Custody Service Guide, available at <http://www.dtcc.com/~media/Files/Downloads/legal/service-guides/Custody.pdf>.

⁶ See Custody Guide at pp. 5 and 12 for the types of securities and assets eligible for deposit to the Custody Service, *supra* note 5. DTC holds certain non-standard assets in its Custody Service, however, those are not the subject of this proposed rule change.

⁷ DTC typically only prices securities that are eligible for book-entry services.

shipping insurance valuation purposes shall not be deemed as an agreement to the price or valuation of the security, and in no event shall DTC be bound or required to use such price for this or any other purpose.

Default Pricing and Participant-provided pricing are subject to DTC's internal procedures to control, safeguard and limit the risk of potential loss of a high value certificate, as set forth above. Participants should consider use of their own insurance for high value certificates in excess of the Limit or in appropriate circumstances they deem to be appropriate, in their discretion.

Implementation Date

The proposed rule change would become effective immediately.

2. Statutory Basis

Section 17A(b)(3)(F) of the Act requires that the rules of the clearing agency be designed, *inter alia*, to assure the safeguarding of securities and funds which are in the custody or control of the clearing agency or for which it is responsible.⁸ By codifying DTC's current Default Pricing practice and the option for Participants to provide their own pricing, the proposed rule change provides transparency to DTC's shipping insurance valuation procedure for Custody Service securities, facilitating Participants' consideration of their insurance options for such securities. Therefore, DTC believes that the proposed rule change would aid in assuring the safeguarding of Custody Service securities and is consistent with the requirements of the Act, in particular, Section 17A(b)(3)(F) of the Act, cited above.

Rule 17Ad-22(d)(15) promulgated under the Act requires, *inter alia*, that a clearing agency establish, implement, maintain and enforce written policies and procedures reasonably designed to state to its participants the clearing agency's obligations with respect to physical deliveries and identify and manage the risks from these obligations.⁹ DTC believes the proposed rule change is consistent with this provision because codifying DTC's current practice would provide transparency with respect to DTC's procedures for assigning a value to physical securities held in the Custody Service for shipping insurance valuation purposes, and therefore is reasonably designed to identify and manage risks

associated with shipments of Custody Service securities.

(B) Clearing Agency's Statement on Burden on Competition

DTC does not believe that the proposed rule change would have any impact, or impose any burden, on competition because it merely codifies DTC's current practice with respect to shipping insurance valuation of Custody Service securities and DTC's identification and management of the risks therein and does not otherwise impact users of DTC's services.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments relating to the proposed rule change have not been solicited or received. DTC will notify the Commission of any written comments received by DTC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁰ and subparagraph (f)(1) of Rule 19b-4 thereunder.¹¹ At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-DTC-2016-001 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-DTC-2016-001. This file

number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of DTC and on DTCC's Web site (<http://dtcc.com/legal/sec-rule-filings.aspx>). All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-DTC-2016-001 and should be submitted on or before February 5, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹²

² 17 CFR 240.19b-4.

("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Chapter VIII of the Pricing Schedule to clarify the connectivity options and application of the fees assessed thereunder.

The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaqomxphlx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Chapter VIII of the Pricing Schedule provides the charges Phlx assesses for equity securities market connectivity to systems operated by Phlx. Phlx is amending Chapter VIII of the Pricing Schedule in four ways: (1) To clarify the term "port pair"; (2) to clarify the connectivity options available under the rule; (3) to eliminate internet ports as a connectivity option; and (4) to eliminate rule text concerning a waiver of fees of limited duration that has since expired.

First, Phlx is proposing to clarify the use of the term "port pair." For certain ports under Chapter VIII of the Pricing Schedule that are used for either trading or data, Phlx additionally provides a disaster recovery port at no cost. Such a disaster recovery port provides connectivity to Phlx's disaster recovery

location in the event of a failure of Phlx's primary trading infrastructure. Phlx has provided disaster recovery ports at no cost since 2010 to encourage member organization to maintain such connectivity in the event of a market disruption so that the market as a whole could continue to operate. In the interest of clarity, the Exchange is proposing to eliminate the term port pair and to separately list disaster recovery ports as a connectivity option available at no cost under the rule.

Second, Phlx is reorganizing and adding language to Chapter VIII of the Pricing Schedule to list all connectivity provided by Phlx under the rule, which is currently subsumed in a connectivity option and related fee. Specifically, the Exchange currently offers connectivity for \$400 per port, per month for each port pair other than Multicast ITCH data feed pairs. Under the \$400 per port, per month connectivity option a member organization may subscribe to an OUCH protocol trading port, a FIX Trading Port (either a FIX or FIX Lite protocol),³ RASH protocol trading port, and DROP ports. Phlx is listing separately each of the options available under the rule.⁴

Similarly, Phlx offers trading ports that may be used only in test mode. Member organizations may subscribe to these test mode trading ports at no cost, which are exclusively used for testing purposes and may not be used for trading in securities in the System. The Exchange is adding rule text noting that these test ports may be subscribed to under the rule. The Exchange also provides data retransmission ports at no cost. Data retransmission ports allow a subscriber to replay market data, in the event the data was missed in a live feed or for verification purposes. Data retransmission ports only allow replay of the current trading day and do not provide data concerning prior trading days' data. The Exchange is adding rule text noting that data retransmission ports may be subscribed to under the rule.

Third, Phlx is proposing to eliminate Internet Ports. Internet ports are based on outdated technology and Phlx does

³ A FIX port is a trading port using a FIX-based telecommunication protocol. FIX, an abbreviation for Financial Information eXchange, is a standard message protocol that defines an electronic message exchange for communicating securities transactions between two parties. Phlx offers two FIX-based trading ports, which vary based on messaging formats and capability. Phlx is proposing to list these two protocols as options under the rule that a member organization may select when subscribing to a FIX trading port.

⁴ The Exchange is also deleting rule text concerning a port fee waiver of this connectivity option, which has since expired.

not have any subscribers to this connectivity method.

Fourth, the Exchange is proposing to eliminate rule text concerning a fee waiver of all Access Services fees for the first full six months during which Phlx's equities trading market, NASDAQ OMX PSX, operates. NASDAQ OMX PSX began operations in October, 2010.⁵ Thus, the Exchange is proposing to eliminate the unneeded text.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with Section 6(b) of the Act,⁶ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,⁷ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility or system which Phlx operates or controls, and is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest; and are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the clarifying changes to the rule protect investors and the public interest because they explicitly describe the fees assessed for all ports under the rule. Describing all services covered by the rule will serve to avoid investor confusion over the scope of what connectivity options are available, and the costs of such options. The Exchange notes that it is not adding new connectivity options or functionality, but is rather describing more specifically what is currently offered under the rule. In this regard, the Exchange is adding new rule text that describes all functionality available under each subparagraph of the rule, and is reorganizing some rule text under the rule in an effort to make the rule clearer. The Exchange notes that much of the new text concerns testing ports, and ports used in the event of a disaster or hardware failure. These ports help ensure that a fair and orderly market is

⁵ Securities Exchange Act Release No. 62877 (September 9, 2010), 75 FR 56633 (September 16, 2010) (SR-Phlx-2010-79).

⁶ 15 U.S.C. 78f (b).

⁷ 15 U.S.C. 78f(b)(4) and (5).

maintained by allowing member organizations to test their systems prior to connecting to the live trading environment, and to provide backup connectivity in the event of a failure or disaster. Thus, the Exchange believes the proposed clarifying changes are consistent with the protection of investors and the public interest.

The Exchange believes that the proposed deletion of the Internet Port connectivity option is reasonable, equitably allocated, and not unfairly discriminatory because there are no subscribers to this connectivity option, which is based on outdated means of connecting to the Exchange. As a consequence, no member organizations will be impacted by deletion of the connectivity option. Likewise, the Exchange believes that the proposed deletion of the expired Access Services fee waiver rule text is reasonable, equitably allocated, and not unfairly discriminatory because the waiver is no longer in effect and therefore no member organizations will be impacted by the deletion. The Exchange notes that it is not altering the charges assessed for the remaining connectivity options under Chapter VIII of the Pricing Schedule.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Specifically, Phlx is making clarifying changes to Chapter VIII of the Pricing Schedule, which does not impose any burden on competition whatsoever. To the contrary, the proposed change facilitates competition by clarifying what connectivity options are provided by the Exchange, thereby informing other market venues a better understanding of what connectivity options are available for Phlx. With that better understanding, other market venues may improve existing connectivity options or offer new connectivity options to compete with Phlx. Accordingly, the proposed changes do not inhibit market participants' ability to compete among each other, nor do they impose any burden on competition among market venues, but rather may promote competition among market venues.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act⁸ and subparagraph (f)(6) of Rule 19b-4 thereunder.⁹ At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-Phlx-2015-115 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-Phlx-2015-115. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 31954; 812-14478]

Investment Managers Series Trust, et al.; Notice of Application

January 11, 2016.

AGENCY: Securities and Exchange Commission ("Commission").

ACTION: Notice of an application under section 6(c) of the Investment Company Act of 1940 ("Act") for an exemption from section 15(a) of the Act and rule 18f-2 under the Act, as well as from certain disclosure requirements in rule 20a-1 under the Act, Item 19(a)(3) of Form N-1A, Items 22(c)(1)(ii), 22(c)(1)(iii), 22(c)(8) and 22(c)(9) of Schedule 14A under the Securities Exchange Act of 1934, and Sections 6-07(2)(a), (b), and (c) of Regulation S-X ("Disclosure Requirements"). The requested exemption would permit an investment adviser to hire and replace certain sub-advisers without shareholder approval and grant relief

¹⁰ 17 CFR 200.30-3(a)(12).

from the Disclosure Requirements as they relate to fees paid to the sub-advisers.

APPLICANTS: Investment Managers Series Trust (the “Trust”), a Delaware statutory trust registered under the Act as an open-end management investment company with multiple series, on behalf of its series, the State Street/Ramius Managed Futures Strategy Fund (the “SS/R Fund”), Ramius Trading Strategies MF Ltd., a Cayman Islands corporation wholly owned by the SS/R Fund (the “SS/R Subsidiary”), and Ramius Trading Strategies LLC, a Delaware limited liability company registered as an investment adviser under the Investment Advisers Act of 1940 (“Ramius” or the “Advisor,” and collectively with the Trust and the SS/R Subsidiary, the “Applicants”).

DATES: *Filing Dates:* The application was filed June 3, 2015, and amended on September 10, 2015, November 3, 2015, December 18, 2015 and January 8, 2016.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission’s Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on February 5, 2016, and should be accompanied by proof of service on the applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer’s interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission’s Secretary.

ADDRESSES: Secretary, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090. Applicants: Gregory S. Rowland, Esq., Davis Polk & Wardwell LLP, 450 Lexington Avenue, New York, NY 10017.

FOR FURTHER INFORMATION CONTACT: Robert Shapiro, Senior Counsel, at (202) 551–7758, or Mary Kay Frech, Branch Chief, at (202) 551–6821 (Division of Investment Management, Chief Counsel’s Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission’s Web site by searching for the file number, or an applicant using the Company name box, at [http://](http://www.sec.gov/search/search.htm)

www.sec.gov/search/search.htm or by calling (202) 551–8090.

Summary of the Application

1. The Advisor will serve as the investment adviser to the Funds pursuant to an investment advisory agreement with the Trust (the “Advisory Agreement”).¹ The Advisor will provide the Funds with continuous and comprehensive investment management services subject to the supervision of, and policies established by, each Fund’s board of trustees (“Board”). The Advisory Agreement permits the Advisor, subject to the approval of the Board, to delegate to one or more sub-advisers (each, a “Subadvisor” and collectively, the “Subadvisors”) the responsibility to provide the day-to-day portfolio investment management of each Fund (either directly or through such Fund’s direct or indirect wholly-owned subsidiary), subject to the supervision and direction of the Advisor. The primary responsibility for managing the Funds will remain vested in the Advisor. The Advisor will hire, evaluate, allocate assets to and oversee the Subadvisors, including determining whether a Subadvisor should be terminated, at all times subject to the authority of the Board.

2. Each Fund may pursue its investment strategies by investing through a direct wholly-owned subsidiary (each such subsidiary, including the SS/R Subsidiary, a “Subsidiary”) or an indirect wholly-owned subsidiary (each, a “Trading Entity”).² Ramius has entered into an investment advisory agreement with the SS/R Subsidiary (the “SS/R Subsidiary Advisory Agreement”), and any future Subsidiary will enter into an investment advisory agreement with the respective Advisor (together with the SS/R Subsidiary Advisory Agreement, the “Subsidiary Advisory Agreements”).³

¹ Applicants request relief with respect to any existing and any future series of the Trust and any other registered open-end management company or series thereof that: (a) Is advised by Ramius or its successor or by a person controlling, controlled by, or under common control with Ramius or its successor (each, also an “Advisor”); (b) uses the manager of managers structure described in the application; and (c) complies with the terms and conditions of the application (any such series, including the SS/R Fund, a “Fund” and collectively, the “Funds”). For purposes of the requested order, “successor” is limited to an entity that results from a reorganization into another jurisdiction or a change in the type of business organization.

² For purposes of the application, a Subadvisor to a Trading Entity is referred to as a “Trading Advisor.”

³ The SS/R Subsidiary Advisory Agreement has been, and any future Subsidiary Advisory Agreement will be, approved by the Board, including a majority of the trustees who are not

The Subsidiary may pursue its investment strategy by investing some or all of its assets in wholly-owned Trading Entities managed by Trading Advisors and overseen by the Advisor. In all cases, an Advisor will be the entity providing general management services to each Fund, including overall supervisory responsibility for the general management and investment of the Fund’s assets (either directly or through such Fund’s Subsidiary or Trading Entities), and, subject to review and approval of the Board, will: (a) Set such Fund’s (including its Subsidiary’s and Trading Entities’) overall investment strategies; (b) evaluate, select and recommend Subadvisors to manage all or a part of the Fund’s assets (directly or through its Subsidiary and Trading Entities); (c) allocate and, when appropriate, reallocate the Fund’s assets among one or more Subadvisors (including by allocating and reallocating assets between and among the Fund, the Subsidiary and the Trading Entities); (d) monitor and evaluate the performance of Subadvisors; and (e) implement procedures reasonably designed to ensure that the Subadvisors comply with the investment objective, policies and restrictions of the Subsidiary, Trading Entity and the Fund.

3. Applicants request an order exempting Applicants from section 15(a) of the Act and rule 18f–2 thereunder to permit the Trust, on behalf of a Fund, and/or its Advisor, subject to the approval of the Board, to enter into and materially amend investment subadvisory agreements with Subadvisors (“Subadvisory Agreements”) without obtaining shareholder approval.⁴ Applicants also seek an exemption from the Disclosure Requirements to permit a Fund to disclose (as both a dollar amount and a percentage of the Fund’s net assets): (a) The aggregate fees paid to the Advisor and any Excluded Subadvisor; and (b) the aggregate fees paid to Subadvisors other than Excluded Subadvisors

“interested persons” (as defined in section 2(a)(19) of the Act) of the Trust or the Advisor, and the Fund’s shareholders.

⁴ The requested relief will not extend to (i) any sub-adviser who is an affiliated person, as defined in section 2(a)(3) of the Act, of a Fund, the Trust or the Advisor, other than by reason of serving as a sub-adviser to one or more Funds (or the Subsidiary or Trading Entity) or as an investment adviser or sub-adviser to any series of the Trust other than the Funds (“Affiliated Subadvisor”), or (ii) to SSGA Funds Management, Inc., a non-affiliated sub-adviser of the SS/R Fund, which manages a portion of the assets of the SS/R Fund and provides services to Ramius with respect to selecting, monitoring, evaluating and allocating assets among the other Subadvisors of the SS/R Fund (collectively with any Affiliated Subadvisor, “Excluded Subadvisors”).

(collectively, “Aggregate Fee Disclosure”). For any Fund that employs an Excluded Subadvisor, the Fund will provide separate disclosure of any fees paid to the Excluded Subadvisor.

4. Applicants agree that any order granting the requested relief will be subject to the terms and conditions stated in the application. Such terms and conditions provide for, among other safeguards, appropriate disclosure to Fund shareholders and notification about sub-advisory changes and enhanced Board oversight to protect the interests of the Funds’ shareholders.

5. Section 6(c) of the Act provides that the Commission may exempt any person, security, or transaction or any class or classes of persons, securities, or transactions from any provisions of the Act, or any rule thereunder, if such relief is necessary or appropriate in the public interest and consistent with the protection of investors and purposes fairly intended by the policy and provisions of the Act. Applicants believe that the requested relief meets this standard because, as further explained in the application, the Advisory Agreements will remain subject to shareholder approval, while the role of the Subadvisors is substantially similar to that of individual portfolio managers, so that requiring shareholder approval of Subadvisory Agreements would impose unnecessary delays and expenses on the Funds. Applicants believe that the requested relief from the Disclosure Requirements meets this standard because it will improve the Advisor’s ability to negotiate fees paid to the Subadvisors that are more advantageous for the Funds.

For the Commission, by the Division of Investment Management, under delegated authority.

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76863; File No. SR-BATS-2015-120]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Related to Fees for Use of BATS Exchange, Inc.

January 11, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the

“Act”),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 29, 2015, BATS Exchange, Inc. (the “Exchange” or “BATS”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II and III below, which Items have been prepared by the Exchange. The Exchange has designated the proposed rule change as one establishing or changing a member due, fee, or other charge imposed by the Exchange under Section 19(b)(3)(A)(ii) of the Act³ and Rule 19b-4(f)(2) thereunder,⁴ which renders the proposed rule change effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend the fee schedule applicable to Members⁵ and non-members of the Exchange pursuant to BATS Rules 15.1(a) and (c). The change to the fee schedule pursuant to this proposal is effective upon filing.

The text of the proposed rule change is available at the Exchange’s Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify its fee schedule applicable to the Exchange’s options platform to modify the criteria necessary to meet the Customer⁶ Step-Up Volume Tier under footnote 1. The Exchange currently offers a total of eight Customer Penny Pilot Add Volume Tiers under footnote 1 that provide enhanced rebates for Customer orders in Penny Pilot Securities that add liquidity under fee code PY.⁷ Under the Customer Step-Up Volume Tier, the Member would receive a rebate of \$0.53 per contract where they have an Options Step-Up Add TCV⁸ in Customer orders from September 2015 baseline equal to or greater than 0.40%. The Exchange proposes to ease the criteria necessary to qualify for the Customer Step-Up Volume Tier by requiring an Options Step-Up Add TCV in Customer orders from September 2015 baseline equal to or greater than 0.35%. The Exchange proposes to implement this amendment to its fee schedule on January 4, 2016.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6 of the Act. Specifically, the Exchange believes that the proposed rule change is consistent with Section 6(b)(4) of the Act, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and other persons using any facility or system which the Exchange operates or controls. The Exchange notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels to be excessive.

Volume-based rebates such as those currently maintained on the Exchange

⁶ As defined in the Exchange’s fee schedule available at http://www.batsoptions.com/support/fee_schedule/bzx/.

⁷ Fee code PY is appended to Customer orders that add liquidity in Penny Pilot Securities. *Id.* Penny Pilot Securities is defined in the Exchange’s fee schedule. *Id.* Orders yielding fee code PY receive a rebate of \$0.25 per share, absent achieving a tier and receiving an increased rebate under footnote 1.

⁸ As defined in the Exchange’s fee schedule available at http://www.batsoptions.com/support/fee_schedule/bzx/.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A)(ii).

⁴ 17 CFR 240.19b-4(f)(2).

⁵ The term “Member” is defined as “any registered broker or dealer that has been admitted to membership in the Exchange.” See Exchange Rule 1.5(n).

have been widely adopted by equities and options exchanges and are equitable because they are open to all Members on an equal basis and provide additional benefits or discounts that are reasonably related to the value to an exchange's market quality associated with higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns, and introduction of higher volumes of orders into the price and volume discovery processes. Easing the criteria for the Customer Step-Up Volume Tier is intended to incentivize Members to send additional orders to the Exchange in an effort to qualify for the enhanced rebate available by the respective tier.

The Exchange believes that this change is reasonable, fair and equitable and non-discriminatory, for the reasons set forth with respect to volume-based pricing generally and because such change will either incentivize participants to further contribute to market quality on the Exchange or will allow the Exchange to earn additional revenue that can be used to offset the addition of new pricing incentives. The Exchange also believes that the proposed rebate remains consistent with pricing previously offered by the Exchange as well as competitors of the Exchange and does not represent a significant departure from the Exchange's general pricing structure.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes the proposed amendment to its fee schedule would not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed change represents a significant departure from previous pricing offered by the Exchange or pricing offered by the Exchange's competitors. Additionally, Members may opt to disfavor the Exchange's pricing if they believe that alternatives offer them better value. Accordingly, the Exchange does not believe that the proposed change will impair the ability of Members or competing venues to maintain their competitive standing in the financial markets. The Exchange does not believe that the proposed change to the Exchange's tiered pricing structure burdens competition, but instead, enhances competition as it is intended to increase the competitiveness of the Exchange by easing the criteria necessary to qualify for the Customer Step-Up Volume tier. Also, the Exchange believes that the decrease to the tier's threshold contributes to, rather than burdens

competition, as such change is intended to incentivize participants to increase their participation on the Exchange.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act⁹ and paragraph (f) of Rule 19b-4 thereunder.¹⁰ At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BATS-2015-120 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.
- All submissions should refer to File No. SR-BATS-2015-120. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule

change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-BATS-2015-120 and should be submitted on or before February 5, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹¹

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76869; File No. SR-NYSEArca-2015-86]

Self-Regulatory Organizations; NYSE Arca, Inc.; Order Granting Approval of Proposed Rule Change, and Notice of Filing and Order Granting Accelerated Approval of Amendment Nos. 1 and 3 Thereto, Relating to Auctions for Pillar, the Exchange's New Trading Technology Platform

January 11, 2016.

I. Introduction

On September 22, 2015, NYSE Arca, Inc. ("Exchange" or "Arca") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt new equity trading rules relating to auctions for Pillar, the Exchange's new trading technology platform. The proposed rule change was published for comment in the **Federal**

¹¹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

⁹ 15 U.S.C. 78s(b)(3)(A).

¹⁰ 17 CFR 240.19b-4(f).

Register on October 13, 2015.³ The Commission received no comments on the proposed rule change. On November 20, 2015, the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to approve or disapprove the proposed rule change.⁴ On December 22, 2015, the Exchange filed Amendment No. 1 to the proposed rule change.⁵ On January 7, 2016, the Exchange filed Amendment No. 3 to the proposed rule change.⁶ The Commission is publishing this notice to solicit comment on Amendment Nos. 1 and 3 from interested persons, and is approving the proposed rule change, as modified by Amendment Nos. 1 and 3, on an accelerated basis.

II. Description of the Proposed Rule Change

The Exchange proposes to adopt Rule 7.35P, which relates to auctions for Pillar, the Exchange's new trading technology platform. The Exchange also proposes to amend existing definitions in Rule 1.1.⁷

³ See Securities Exchange Act Release No. 76085 (October 6, 2015), 80 FR 61513 ("Notice").

⁴ See Securities Exchange Act Release No. 76493, 80 FR 74169 (November 27, 2015).

⁵ In Amendment No. 1, the Exchange: (i) Amends proposed Rule 7.35P(h) to provide that the rule would address how orders would be handled not only in the transition to continuous trading following an auction, but also when transitioning from one trading session to the next trading session; (ii) amends proposed Rule 7.35P(h)(3)(B) to provide that, before continuous trading following a prior trading session or an auction begins, the display price and working price of orders would be adjusted as provided for in Rule 7.31P, and that when transitioning to continuous trading, the display price and working price of Day ISOs would be adjusted in the same manner as Arca Only Orders until the Day ISO is either traded in full or displayed at its limit price; and (iii) provides additional discussions related to certain proposed rules.

⁶ Amendment No. 3 superseded Amendment No. 2 in its entirety. In Amendment No. 3, the Exchange: (i) Specifies the percentages for the Auction Collar thresholds; (ii) removes the reference to the Trading Halt Auction in the definition of Auction Collar; (iii) states that the Exchange would provide prior notice to ETP Holders if additional UTP Securities are to be designated as Auction-Eligible Securities; (iv) includes cross-references to Rule 7.16P in Commentary .01 to proposed Rule 7.35P to clarify where certain terms are defined; and (v) provides additional discussions related to certain proposed rules.

⁷ The Exchange proposes to amend Rules 1.1(r) and (s) to specify that the definition of "Imbalance" and "Indicative Match Price" in those rules would be applicable only for auctions conducted on the current trading platform. The Exchange states that these changes would remove impediments to and perfect the mechanism of a fair and orderly market because they would not make any substantive changes, but rather are designed to reduce confusion by specifying that Rules 1.1(r) and (s) would be applicable to auctions on the current trading platform only. See Notice at 61525.

A. Background

The Exchange represents that Pillar is an integrated trading technology platform designed to use a single specification for connecting to the equities and options markets operated by Arca and its affiliates, New York Stock Exchange LLC ("NYSE") and NYSE MKT LLC ("NYSE MKT").⁸ On April 30, 2015, the Exchange filed the first rule filing relating to the implementation of Pillar, which adopted rules relating to Trading Sessions, Order Ranking and Display, and Order Execution.⁹ On July 7, 2015, the Exchange filed the second rule filing relating to the implementation of Pillar, which adopted rules relating to Orders and Modifiers and the Retail Liquidity Program.¹⁰ On July 1, 2015, the Exchange filed the third rule filing relating to the implementation of Pillar, which adopted rules relating to Trading Halts, Short Sales, Limit Up-Limit Down, and Odd Lots and Mixed Lots.¹¹

This filing is the fourth set of proposed rule changes to support Pillar implementation. As proposed, the new rule governing trading on Pillar would have the same numbering as the current rule, but with the modifier "P" appended to the rule number. Specifically, Rule 7.35, which governs auctions, would remain unchanged and continue to apply to any trading in symbols on the current trading platform. Proposed Rule 7.35P would govern auctions for trading in symbols migrated to the Pillar platform.

B. Proposed Modifications

As stated in the Notice, the Exchange proposes new Rule 7.35P to describe auctions on Pillar, which would be based on Rule 7.35 and Rules 1.1(r) and (s).¹² The Exchange states that auctions on Pillar would function similarly to auctions on the current trading

⁸ See Notice at 61513.

⁹ See Securities Exchange Act Release No. 74951 (May 13, 2015), 80 FR 28721 (May 19, 2015) (SR-NYSEArca-2015-38) ("Pillar I Filing"). The Commission approved the Pillar I Filing on July 20, 2015. See Securities Exchange Act Release No. 75494 (July 20, 2015), 80 FR 44170 (July 24, 2015).

¹⁰ See Securities Exchange Act Release No. 75497 (July 21, 2015), 80 FR 45022 (July 28, 2015) (SR-NYSEArca-2015-56) ("Pillar II Filing"). The Commission approved the Pillar II Filing on October 26, 2015. See Securities Exchange Act Release No. 76267 (October 26, 2015), 80 FR 66951 (October 30, 2015).

¹¹ See Securities Exchange Act Release No. 75467 (July 16, 2015), 80 FR 43515 (July 22, 2015) (SR-NYSEArca-2015-58) ("Pillar III Filing"). The Commission approved the Pillar III Filing on October 20, 2015. See Securities Exchange Act Release No. 76198 (October 20, 2015), 80 FR 65274 (October 26, 2015). See also Securities Exchange Act Release No. 76198A (October 28, 2015), 80 FR 67822 (November 3, 2015).

¹² See Notice at 61513.

platform.¹³ According to the Exchange, proposed Rule 7.35P would use Pillar terminology and include both substantive and non-substantive differences and clarifications from the current rule text.¹⁴ The proposed changes that are more substantive in nature are noted in Section III below and are discussed in the Notice.

III. Discussion and Commission Findings

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.¹⁵ In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,¹⁶ which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest and that the rules are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission notes that, in the proposal, the Exchange states its belief that proposed Rule 7.35P, together with rules from the three previous Pillar filings, would remove impediments to and perfect the mechanism of a free and open market because they would promote transparency by using consistent terminology for rules governing equities trading, thereby ensuring that members, regulators, and the public can more easily navigate the Exchange's rulebook and better understand how equity trading would be conducted on Pillar.¹⁷ The Exchange also states that the proposed use of Pillar terminology would promote consistency in the Exchange's rulebook regarding how the Exchange would process orders during an auction.¹⁸ Moreover, the Exchange states that adding new rules with the modifier "P" to denote the rules that would be

¹³ See Notice at 61513-14.

¹⁴ See Notice at 61514.

¹⁵ In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹⁶ 15 U.S.C. 78f(b)(5).

¹⁷ See Notice at 61525.

¹⁸ See *id.*

operative for Pillar would remove impediments to and perfect the mechanism of a free and open market by providing transparency regarding which rules govern trading once a symbol has been migrated to Pillar.¹⁹

The Commission also notes that, with respect to the substantive differences between proposed Rule 7.35P and the current rules, the Exchange states that they would remove impediments to and perfect the mechanism of a fair and orderly market.²⁰ In particular, the Exchange proposes to make several changes that are more substantive in nature, which include:

Definitions

Auction-Eligible Security: The Exchange proposes a new definition for the term “Auction-Eligible Security.”²¹ According to the Exchange, as with the current rule, all securities for which the Exchange is the primary listing market would be Auction-Eligible Securities.²² However, for Pillar, the Exchange would designate UTP Securities²³ that would be Auction-Eligible Securities for the Early Open Auction, the Core Open Auction, and the Closing Auction.²⁴ According to the Exchange, this approach would support the initiatives of the Exchange, NYSE, and the NASDAQ Stock Market LLC (“Nasdaq”) to increase resiliency by having auctions on Arca serve as a backup to either NYSE or Nasdaq if one of those markets is unable to conduct an auction.²⁵

Auction Imbalance Information: The Exchange proposes to define “Auction Imbalance Information” to mean the information that is disseminated by the Corporation²⁶ for an auction.²⁷ As proposed, Auction Imbalance Information would be updated at least every second (unless there is no change to the information), rather than on a real-time basis.²⁸ According to the Exchange, by updating Auction Imbalance Information on a one-second basis, ETP Holders that are interested in entering offsetting interest during an

Auction Imbalance Freeze would have greater certainty of the Imbalance in effect at the time of order entry.²⁹

Auction NBBO: The Exchange proposes to define “Auction NBBO” to mean an NBBO that is used for purposes of pricing an auction. As proposed, an NBBO is an Auction NBBO when (i) there is an NBB above zero and NBO for the security and (ii) the NBBO is not crossed.³⁰ In addition, for the Core Open Auction, an NBBO is an Auction NBBO when the midpoint of the NBBO, when multiplied by a designated percentage, is greater than or equal to the spread of that NBBO.³¹ According to the Exchange, this approach would promote transparency regarding how the Exchange determines pricing for its auctions.³² Moreover, according to the Exchange, the proposed method for determining the Auction NBBO for the Core Open Auction is designed to validate whether an NBBO bears a relation to the value of the security.³³

Auction Ranking: The Exchange proposes to define “Auction Ranking” to mean how orders on the side of an Imbalance would be ranked for allocation in an Auction. Specifically, orders on the side of the Imbalance would be ranked in price-time priority under Rule 7.36P(c)–(g) consistent with the priority ranking associated with each order, provided that: (i) MOO and MOC Orders would be ranked Priority 1—Market Orders; (ii) LOO and LOC Orders would be ranked Priority 2—Display Orders; and (iii) the limit price of Limit, LOO, and LOC orders would be used for ranking purposes.³⁴ According to the Exchange, the only order ranked Priority 3—Non-Display Orders that would be eligible to participate in an auction would be the non-displayed quantity of a Reserve Order.³⁵ The Exchange states that the proposed approach would promote transparency in Exchange rules by consolidating into a single location how orders would be ranked for auctions.³⁶ The Exchange also states that using the same methodology to rank and allocate orders on the side of the Imbalance for all auctions based on the priority ranking described in Rule 7.36P would promote consistency in how the Exchange would rank orders on Pillar, whether for continuous trading or for

auctions.³⁷ In addition, during a Short Sale Period (as defined in Rule 7.16P(f)(4)), for purposes of pricing an auction and ranking orders for allocation in an auction, sell short Market Orders that are adjusted to a Permitted Price (as defined in Rule 7.16P(f)(5)(A)) would be processed as Limit Orders ranked Priority 2—Display Orders, and would not be included in the Market Imbalance.³⁸ The Exchange states that, once adjusted to a Permitted Price, a sell short Market Order has a price and such price could be used for purposes of determining the price of the auction.³⁹ As such, the Exchange believes that it is appropriate to treat these re-priced Market Orders as Limit Orders for purposes of determining allocation in an auction, and that this approach would promote transparency by processing all orders that have a price similarly in an auction.⁴⁰

Market Orders: The Exchange proposes that, for purposes of Rule 7.35P, unless otherwise specified, the term “Market Orders” would include MOO Orders (for the Core Open Auction and Trading Halt Auction) and MOC Orders (for the Closing Auction).⁴¹ According to the Exchange, consistent with Rule 7.31P(c)(2), the term “Market Orders” in proposed Rule 7.35P would include MOO Orders for the Trading Halt Auction.⁴² Also, the Exchange states that because unexecuted Market Orders that are held at a Trading Collar or NBBO would be eligible to participate in the Closing Auction and would be included in Closing Auction Imbalance Information, proposed Rule 7.35P would refer to Market Orders generally for the Closing Auction, which would include MOC Orders.⁴³

Market Imbalance: As proposed, the term “Market Imbalance” would mean the imbalance of any remaining buy (sell) Market Orders that are not matched for trading in an auction against any interest, and not just Market Orders not matched for trading against

¹⁹ See *id.*

²⁰ See *id.*

²¹ See proposed Rule 7.35P(a)(1).

²² See Notice at 61515.

²³ The term “UTP Security” means a security that is listed on a national securities exchange other than the Exchange and that trades on the NYSE Arca Marketplace pursuant to unlisted trading privileges. See Rule 1.1(ii).

²⁴ See Notice at 61515. According to the Exchange, consistent with Rule 7.18P(b), for the Trading Halt Auction, Auction-Eligible Securities means securities for which Arca is the primary listing market. See *id.*

²⁵ See *id.*

²⁶ The term “Corporation” means NYSE Arca Equities, Inc. See Rule 1.1(k).

²⁷ See proposed Rule 7.35P(a)(4).

²⁸ See proposed Rule 7.35P(a)(4)(A).

²⁹ See Amendment No. 1.

³⁰ See proposed Rule 7.35P(a)(5).

³¹ See *id.* The designated percentage would be determined by the Corporation from time to time upon prior notice to ETP Holders. See *id.*

³² See Notice at 61516 and 61526.

³³ See Notice at 61516.

³⁴ See proposed Rule 7.35P(a)(6).

³⁵ See Notice at note 29.

³⁶ See Notice at 61526.

³⁷ See *id.*

³⁸ See proposed Rule 7.35P, Commentary .01(a). As proposed, sell short orders that are included in the Auction Imbalance Information, but are not eligible for continuous trading before the applicable auction, would be adjusted to a Permitted Price as the NBB moves both up and down. See proposed Rule 7.35P, Commentary .01(b). The Exchange states that continuously re-pricing sell short orders consistent with Rule 7.16P(f)(5), even though they are not yet eligible to trade, would provide greater transparency regarding the price at which such orders would be included in the Auction Imbalance Information. See Notice at 61525 and Amendment No. 1.

³⁹ See Notice at 61525 and Amendment No. 1.

⁴⁰ See Notice at 61526.

⁴¹ See proposed Rule 7.35P(a).

⁴² See Notice at 61514–15.

⁴³ See Notice at 61515.

other Market Orders.⁴⁴ The Exchange states its belief that the proposed approach would provide transparency regarding the volume of Market Orders not paired up against any interest.⁴⁵

Indicative Match Price: As proposed, the term “Indicative Match Price” would mean the best price at which the maximum volume of shares, including the non-displayed quantity of Reserve Orders, is tradable in the applicable auction, subject to the Auction Collars.⁴⁶ If there are two or more prices at which the maximum volume of shares is tradable, the Indicative Match Price would be the price closest to the “Auction Reference Price” (provided that the Indicative Match Price would not be lower (higher) than the price of an order to buy (sell) ranked Priority 2 that was eligible to participate in the auction).⁴⁷ If the Matched Volume for an auction consists of Market Orders only, the Indicative Match Price would be: (i) for the Core open Auction, the Auction Reference Price; (ii) for the Closing Auction, the midpoint of the Auction NBBO as of the time the auction is conducted, provided that if the Auction NBBO is locked, the locked price, and if there is no Auction NBBO, the Auction Reference Price; and (iii) for the Trading Halt Auction, the Auction Reference Price.⁴⁸ In addition, if there is a BBO but no Matched Volume, the Indicative Match Price and Total Imbalance for the Auction Imbalance Information would be the side of the

BBO that has the higher volume, and if the volume of BB equals the volume of BO, the BB.⁴⁹ As proposed, if there is no Matched Volume and Market Orders on only one side of the market, the Indicative Match Price would be zero.⁵⁰

Auction Reference Price: The Auction Reference Price for the Core Open Auction would be the midpoint of an Auction NBBO or, if the Auction NBBO is locked, the locked price. If there is no Auction NBBO, the Exchange would use the prior trading day’s Official Closing Price.⁵¹ The Exchange states its belief that using the midpoint of the Auction NBBO for the Core Open Auction would better reflect the most recent value of the security, as compared to a closing price from the prior trading day.⁵² The Auction Reference Price for the Trading Halt Auction and the Closing Auction would be the last consolidated round-lot price of that trading day and, if none, the prior trading day’s Official Closing Price.⁵³ The Exchange states that the Auction Reference Price for the Trading Halt Auction and the Closing Auction is based on Rule 1.1(s), with additional specificity that it would be a last consolidated round-lot price of that trading day, and to specify the reference price if there were no last consolidated round-lot trades that day.⁵⁴ The Exchange states its belief that the last consolidated round-lot price prior to a Trading Halt Auction would reflect the most recent value for a security, and that the last consolidated round-lot

price would be representative of the value of the security going into the Closing Auction.⁵⁵ With respect to the IPO Auction, the Exchange proposes that the Auction Reference Price would be zero, unless the Corporation is provided with a price for the security.⁵⁶ The Exchange states that it proposes to use zero (unless the Corporation is provided with a price for the security) because there would not be any prior trading in that security.⁵⁷

Auction Collar: The Exchange proposes to define “Auction Collar” to mean the price collar thresholds for the Indicative Match Price for the Core Open Auction and Closing Auction.⁵⁸ As proposed, the Auction Collar would be based on a price that is a specified percentage away from the Auction Reference Price.⁵⁹ An Indicative Match Price that is equal to or outside the Auction Collar would be adjusted to be one minimum price variation (“MPV”) inside the Auction Collar, and orders eligible to participate in the applicable auction would trade at the collared Indicative Match Price.⁶⁰ According to the Exchange, if the Auction Collars are based on the clearly erroneous execution thresholds (which is currently the case for the Core Open Auction), pricing an auction one MPV inside the Auction Collar would potentially prevent an auction from being a clearly erroneous execution.⁶¹ Under the proposal, the specified percentages for the Auction Collar would be:⁶²

Auction reference price	Core open auction (%)	Closing auction (%)
\$25.00 or less	10	5
Greater than \$25.00 but less than or equal to \$50.00	5	2
Greater than \$50.00	3	1

Early Open Auction

Similar to the Core Open Auction, the non-displayed quantity of Reserve Orders eligible to participate in the Early Open Auction would not be included in the Matched Volume or

Total Imbalance until the Early Open Auction Imbalance Freeze begins.⁶³

There would not be any order entry or cancellation restrictions during the one-minute Auction Imbalance Freeze before the Early Open Auction. According to

the Exchange, there is not any trading occurring before the Early Open Auction, and therefore the risk to manipulate market prices before the Early Open Auction is minimal.⁶⁴ The Exchange also notes that, because an

⁴⁴ See proposed Rule 7.35P(a)(7)(B).

⁴⁵ See Notice at 61517.

⁴⁶ See proposed Rule 7.35P(a)(8). As proposed, the Indicative Match Price would be determined for all securities in the same manner, regardless of whether the Exchange is the primary listing market for a security or the security is a UTP Security. See Notice at 61514. The Exchange states that this would promote clarity and transparency in Exchange rules and streamline how auctions would be processed. See Notice at 61526.

⁴⁷ See proposed Rule 7.35P(a)(8)(A). If there are two prices at which the maximum volume of shares is tradable and both prices are equidistant to the Auction Reference Price, the Indicative Match Price

would be the Auction Reference Price. See proposed Rule 7.35P(a)(8)(B).

⁴⁸ See proposed Rule 7.35P(a)(8)(C).

⁴⁹ See proposed Rule 7.35P(a)(8)(D). According to the Exchange, while there would be no Matched Volume, the Indicative Match Price would be a benchmark price that could attract more interest for participation in the auction, thereby promoting price discovery. See Notice at 61526.

⁵⁰ See proposed Rule 7.35P(a)(8)(E).

⁵¹ See proposed Rule 7.35P(a)(8).

⁵² See Amendment No. 1.

⁵³ See proposed Rule 7.35P(a)(8).

⁵⁴ See Notice at 61518.

⁵⁵ See Amendment No. 1.

⁵⁶ See proposed Rule 7.35P(a)(8).

⁵⁷ See Notice at 61518. As with the current rule, the Auction Reference Price for the Early Open Auction would be the prior day’s Official Closing Price. See proposed Rule 7.35P(a)(8).

⁵⁸ See proposed Rule 7.35P(a)(10) and Amendment No. 3.

⁵⁹ See proposed Rule 7.35P(a)(10)(A).

⁶⁰ See proposed Rule 7.35P(a)(10)(B).

⁶¹ See Notice at 61526.

⁶² See proposed Rule 7.35P(a)(10) and Amendment No. 3. These thresholds are the same as the current price collar thresholds for the Market Order Auction and the Closing Auction.

⁶³ See proposed Rule 7.35P(b)(1) and discussion below regarding the Core Open Auction.

⁶⁴ See Notice at 61526.

Early Open Auction would occur at 4:00 a.m. Eastern Time, which is well before regular market hours, the Exchange generally does not receive sufficient buying and selling interest to warrant conducting such an auction in the vast majority of Exchange-listed securities.⁶⁵ The Exchange notes that, because it generally conducts an Early Open Auction in fewer than 20 securities on a given trading day, the need for order entry or cancellation restrictions in advance of such auctions is abated.⁶⁶

Core Open Auction

As proposed, the non-displayed quantity of Reserve Orders eligible to participate in the Core Open Auction would not be included in the Matched Volume, Total Imbalance, or Market Imbalance until the Core Open Auction Imbalance Freeze begins.⁶⁷ The Exchange states its belief that it is appropriate to exclude the volume of the non-displayed portion of Reserve Orders until the Core Open Auction Imbalance Freeze begins because it reduces the potential for market participants to identify the volume of interest that is intended to be non-displayed.⁶⁸ The Exchange also states its belief that it is appropriate to include this information once the Core Open Auction Imbalance Freeze begins so that market participants can have greater certainty of the full size of the Imbalance in order to assess whether to enter offsetting interest and to promote transparency regarding the pricing of an auction.⁶⁹

As proposed, the Core Open Auction Imbalance Freeze would be five seconds, instead of one minute.⁷⁰ According to the Exchange, this shorter Freeze period would provide additional time for market participants to enter orders for the Core Open Auction without restriction, thereby promoting

price discovery for the auction.⁷¹ The Exchange also states its belief that, with today's faster technology, five seconds provides sufficient time for industry participants to respond to a published Imbalance and enter offsetting interest, if applicable.⁷²

Under the proposal, because of the shorter Freeze period, MOO and LOO Orders entered during the Freeze would be rejected regardless of side.⁷³ The Exchange states its belief that rejecting all MOO and LOO Orders would remove the potential for such orders to impact the Imbalance.⁷⁴ As proposed, during the Freeze, the Exchange would accept Market Orders (other than MOO Orders) and Limit Orders designated for the Core Trading Session on both sides of the market, but such orders would be eligible to participate in the auction only to offset the Imbalance that remains after all orders entered before the Freeze are allocated in the Core Open Auction.⁷⁵ The Exchange states that this approach would eliminate the possibility for these orders to create or increase an Imbalance.⁷⁶ The Exchange also states that it proposes to process Market Orders (other than MOO Orders) and Limit Orders differently from MOO and LOO Orders because Market Orders (other than MOO Orders) and Limit Orders would not expire at the end of the auction.⁷⁷ Therefore, rather than rejecting these orders upon entry, they would be accepted and would be eligible to be offsetting interest for the auction.⁷⁸ If these orders do not participate in the Core Open Auction, they would become eligible to participate in the Core Trading Session.⁷⁹ As proposed, during the Freeze, requests to cancel and requests to cancel and replace Market Orders (other than MOO Orders) and Limit Orders designated for the Core Trading Session only would be accepted but would not be processed until after the Core Open Auction concludes.⁸⁰ All other order instructions would be accepted during the Freeze.⁸¹

Closing Auction

As with the Core Open Auction, the non-displayed quantity of Reserve Orders eligible to participate in the Closing Auction would not be included

in the Matched Volume, Total Imbalance, or Market Imbalance until the Closing Auction Imbalance Freeze begins.⁸²

As proposed, the Exchange would conduct a Closing Auction in Pillar even if there are only Market Orders eligible to participate in the Closing Auction.⁸³ According to the Exchange, this proposal would increase the potential for market participants that have entered MOC Orders to receive an execution in an auction that is priced based on the prevailing value of the security.⁸⁴

Trading Halt Auction

As proposed, a Trading Halt Auction would be conducted to re-open trading in an Auction-Eligible Security following a halt or pause of trading in that security in the Early Trading Session, Core Trading Session, or Late Trading Session, as applicable.⁸⁵ As proposed, during a trading halt or pause in an Auction-Eligible Security, entry and cancellation of orders eligible to participate in the Trading Halt Auction would be processed as provided for in Rule 7.18P(c).⁸⁶

Under current Rule 7.35(f)(3)(C), the Corporation, if it deems such action necessary, will disseminate the time, prior to the time that orders are matched pursuant to the Trading Halt Auction, at which orders may no longer be cancelled. The Exchange states that, on the current trading platform, it has not invoked this authority, and it proposes to not include it in the Pillar rules.⁸⁷

IPO Auction

As proposed, an IPO Auction would be conducted during the Core Trading Session on the first day of trading for any security, including a Derivative Securities Product,⁸⁸ for which Arca is

⁶⁵ See Amendment No. 1.

⁶⁶ See *id.*

⁶⁷ See proposed Rule 7.35P(c)(1).

⁶⁸ See Amendment No. 1. According to the Exchange, the Indicative Match Price would include the volume of the non-displayed portion of Reserve Orders at all times because that data point only provides pricing information, and not volume of shares eligible to trade. See *id.*

⁶⁹ See Amendment No. 3. Also, according to the Exchange, because the proposed rule would specify that reserve interest would be included in specified Auction Imbalance Information, ETP Holders that enter these orders would be on notice that certain information about the reserve quantity of their orders would be included in the information provided in advance of an auction. See *id.*

⁷⁰ See proposed Rule 7.35P(c)(3). However, similar to the current rule, the Exchange would reject requests to cancel and requests to cancel and replace MOO and LOO Orders beginning one minute before the scheduled time for the Core Open Auction. See proposed Rule 7.35P(c)(2).

⁷¹ See Notice at 61521 and 61526.

⁷² See Amendment No. 1.

⁷³ See proposed Rule 7.35P(c)(3)(A).

⁷⁴ See Notice at 61526.

⁷⁵ See proposed Rule 7.35P(c)(3)(B).

⁷⁶ See Notice at 61526.

⁷⁷ See Notice at 61521.

⁷⁸ See *id.*

⁷⁹ See *id.*

⁸⁰ See proposed Rule 7.35P(c)(3)(C).

⁸¹ See proposed Rule 7.35P(c)(3)(D).

⁸² See proposed Rule 7.35P(d)(1).

⁸³ See discussion above regarding the determination of Indicative Match Price where the Matched Volume for an auction consists of Market Orders only.

⁸⁴ See Notice at 61526. The Exchange states that the midpoint of the Auction NBBO in effect as of the scheduled time of the Closing Auction as bound by Auction Collars that would be based on the last consolidated round-lot price of that trading day would reflect the most recent quoting activity and price in a stock. See Amendment No. 3. In addition, the Exchange states that pricing an auction with only Market Orders on both sides of the market based on the midpoint of an uncrossed NBBO is not novel. See *id.*

⁸⁵ See proposed Rule 7.35P(e).

⁸⁶ See proposed Rule 7.35P(e)(3).

⁸⁷ See Amendment No. 1.

⁸⁸ The Exchange notes that although the first day of trading of a Derivative Securities Product may not technically be an initial public offering, it proposes to use the term IPO as signifying that this would be the auction on the first day of trading of a new listing on the Exchange. See Notice at 61523.

the primary listing market, excluding transfers.⁸⁹ As proposed, an IPO Auction would follow the processing rules of a Core Open Auction, provided that NYSE Arca Marketplace would specify the time that an IPO Auction would be conducted.⁹⁰ Also, there would be no Auction Imbalance Freeze, Auction Collars, or restrictions on the entry or cancellation of orders for an IPO Auction.⁹¹ According to the Exchange, because an IPO Auction would not be set at a specific time, nor would there be any trading in the security before the IPO Auction, the Exchange does not believe that an Auction Imbalance Freeze or Auction Collars would assist in the price discovery process or would be necessary to prevent fraudulent and manipulative acts and practices.⁹² Moreover, according to the Exchange, because the time of an IPO Auction may change, the Exchange does not believe that there needs to be any restrictions on the entry or cancellation of orders before an IPO Auction.⁹³ The Exchange states that if there is an Imbalance going into an IPO Auction, the Exchange could extend the time for the IPO Auction in order to attract additional offsetting interest or allow ETP Holders to cancel orders that are on the side of the Imbalance.⁹⁴ Finally, an IPO Auction would not be conducted if there are only Market Orders on both sides of the market.⁹⁵ According to the Exchange, if there are only Market Orders on both sides of the market, the Exchange has the flexibility to change the time in order to attract more interest for the auction.⁹⁶

Auction Processing Period

As proposed, new orders, requests to cancel, and requests to cancel and replace an order that are received during the Auction Processing Period⁹⁷ would be accepted but would not be processed until after the auction concludes.⁹⁸ The Exchange states its belief that it is appropriate to wait to process such new order instructions until after the auction processing concludes in order to provide certainty regarding the timing and pricing of an auction.⁹⁹ Moreover,

as proposed, a request to cancel and replace an order that was entered during the Auction Processing Period for an order that was also entered during the Auction Processing Period would be rejected.¹⁰⁰

Transition to Continuous Trading

As proposed, after auction processing concludes, including if there is no Matched Volume and an auction is not conducted, or when transitioning from one trading session to another, orders that are no longer eligible to trade would expire.¹⁰¹ Orders that are designated for a trading session and that were received during a prior trading session or during the Auction Processing Period and that did not participate in the auction would become eligible to trade.¹⁰² Also, before continuous trading following a prior trading session or an auction begins, any order instructions received during either the Auction Imbalance Freeze or Auction Processing Period that were not processed would be processed.¹⁰³ The display price and working price of orders would be adjusted based on the PBBO or NBBO as provided in Rule 7.31P.¹⁰⁴ Moreover, when transitioning to continuous trading, the display price and working price of Day ISOs would be adjusted in the same manner as Arca Only Orders until the Day ISO is either traded in full or displayed at its limit price.¹⁰⁵

As proposed, if orders eligible to trade in the next trading session are marketable, such orders would trade and/or route based on price-time priority of individual orders, as provided in Rule 7.37P.¹⁰⁶ According to the Exchange, if such orders are marketable, they would trade or route, as applicable, rather than publishing a locked or crossed quote from the NYSE Arca Book.¹⁰⁷ After marketable orders have traded or routed, the NYSE Arca Marketplace would publish a quote for the next trading session.¹⁰⁸

Based on the Exchange's representations, the Commission

believes that the proposed rule change does not raise any novel regulatory considerations and should provide greater specificity with respect to the functionality available on the Exchange as symbols are migrated to the Pillar platform. For these reasons, the Commission believes that the proposal should help prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest.

IV. Accelerated Approval of Amendment Nos. 1 and 3

As noted above, in Amendment No. 1, the Exchange: (i) Amends proposed Rule 7.35P(h) to provide that the rule would address how orders would be handled not only in the transition to continuous trading following an auction, but also when transitioning from one trading session to the next trading session; (ii) amends proposed Rule 7.35P(h)(3)(B) to provide that, before continuous trading following a prior trading session or an auction begins, the display price and working price of orders would be adjusted as provided for in Rule 7.31P, and that when transitioning to continuous trading, the display price and working price of Day ISOs would be adjusted in the same manner as Arca Only Orders until the Day ISO is either traded in full or displayed at its limit price; and (iii) provides additional discussions related to certain proposed rules. In addition, in Amendment No. 3, the Exchange: (i) Specifies the percentages for the Auction Collar thresholds; (ii) removes the reference to the Trading Halt Auction in the definition of Auction Collar; (iii) states that the Exchange would provide prior notice to ETP Holders if additional UTP Securities are to be designated as Auction-Eligible Securities; (iv) includes cross-references to Rule 7.16P in Commentary .01 to proposed Rule 7.35P to clarify where certain terms are defined; and (v) provides additional discussions related to certain proposed rules. The Commission believes that the changes proposed in Amendment Nos. 1 and 3 do not raise novel regulatory issues and provide further discussions regarding the proposed rules governing Pillar. Accordingly, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,¹⁰⁹ to approve the proposed

⁸⁹ See proposed Rule 7.35P(f).

⁹⁰ See proposed Rule 7.35P(f)(1).

⁹¹ See proposed Rule 7.35P(f)(2).

⁹² See Notice at 61523.

⁹³ See *id.*

⁹⁴ See Amendment No. 1.

⁹⁵ See proposed Rule 7.35P(f)(3).

⁹⁶ See Notice at 61523–24.

⁹⁷ The Exchange proposes to define "Auction Processing Period" to mean the period during which the applicable auction is being processed. See proposed Rule 7.35P(a)(2).

⁹⁸ See proposed Rule 7.35P(g).

⁹⁹ See Amendment No. 1.

¹⁰⁰ See proposed Rule 7.35P(g).

¹⁰¹ See proposed Rule 7.35P(h)(1) and Amendment No. 1.

¹⁰² See proposed Rule 7.35P(h)(2) and Amendment No. 1.

¹⁰³ See proposed Rule 7.35P(h)(3)(A) and Amendment No. 1.

¹⁰⁴ See proposed Rule 7.35P(h)(3)(B) and Amendment No. 1.

¹⁰⁵ See proposed Rule 7.35P(h)(3)(B) and Amendment No. 1. The Exchange states its belief that this proposed treatment of Day ISO orders would be consistent with the original terms of the order. See Amendment No. 1.

¹⁰⁶ See proposed Rule 7.35P(h)(3)(C) and Amendment No. 1.

¹⁰⁷ See Amendment No. 1.

¹⁰⁸ See proposed Rule 7.35P(h)(3)(D).

¹⁰⁹ 15 U.S.C. 78s(b)(2).

rule change, as modified by Amendment Nos. 1 and 3, on an accelerated basis.

V. Solicitation of Comments on Amendment Nos. 1 and 3

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment Nos. 1 and 3 are consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEArca-2015-86 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-NYSEArca-2015-86. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2015-86 and should be submitted on or before February 5, 2016.

VI. Conclusion

IT IS THEREFORE ORDERED, pursuant to Section 19(b)(2) of the

Act,¹¹⁰ that the proposed rule change (SR-NYSEArca-2015-86), as modified by Amendment Nos. 1 and 3, be, and hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹¹¹

Robert W. Errett,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-76862; File No. SR-BATS-2015-94]

Self-Regulatory Organizations; BATS Exchange, Inc., Notice of Filing of Proposed Rule Change To List and Trade Shares of the SPDR DoubleLine Emerging Markets Fixed Income ETF of the SSgA Active Trust

January 11, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 28, 2015, BATS Exchange, Inc. (the "Exchange" or "BATS") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is proposing a rule change to list and trade shares of the SPDR® DoubleLine® Emerging Markets Fixed Income ETF (the "Fund") of the SSgA Active Trust (the "Trust") under BATS Rule 14.11(i) ("Managed Fund Shares"). The shares of the Fund are collectively referred to herein as the "Shares."

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

¹¹⁰ 15 U.S.C. 78s(b)(2).

¹¹¹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to list and trade the Shares under BATS Rule 14.11(i), which governs the listing and trading of Managed Fund Shares on the Exchange.³ The Fund will be an actively managed fund. The Shares will be offered by the Trust, which was established as a Massachusetts business trust on March 30, 2011. The Trust is registered with the Commission as an open-end investment company and has filed a registration statement on behalf of the Fund on Form N-1A ("Registration Statement") with the Commission.⁴

Description of the Shares and the Fund

SSGA Funds Management, Inc. will be the investment adviser ("SSGA FM" or "Adviser") to the Fund. The Adviser will serve as the administrator for the Fund (the "Administrator"). DoubleLine Capital LP will be the Fund's sub-adviser ("Sub-Adviser"). State Street Global Markets, LLC (the "Distributor") will be the principal underwriter and distributor of the Fund's Shares. State Street Bank and Trust Company (the "Sub-Administrator", "Custodian", "Transfer Agent" or "Lending Agent") will serve as sub-administrator, custodian, transfer agent, and, where applicable, lending agent for the Fund.

³ The Commission approved BATS Rule 14.11(i) in Securities Exchange Act Release No. 65225 (August 30, 2011), 76 FR 55148 (September 6, 2011) (SR-BATS-2011-018).

⁴ See Registration Statement on Form N-1A for the Trust, dated October 8, 2015 (File Nos. 333-173276 and 811-22542). The descriptions of the Fund and the Shares contained herein are based, in part, on information in the Registration Statement. The Commission has issued an order granting certain exemptive relief to the Trust under the Investment Company Act of 1940 (15 U.S.C. 80a-1) ("1940 Act") (the "Exemptive Order"). See Investment Company Act Release No. 29524 (December 13, 2010) (File No. 812-13487).

BATS Rule 14.11(i)(7) provides that, if the investment adviser to the investment company issuing Managed Fund Shares is affiliated with a broker-dealer, such investment adviser shall erect a “fire wall” between the investment adviser and the broker-dealer with respect to access to information concerning the composition and/or changes to such investment company portfolio.⁵ In addition, Rule 14.11(i)(7) further requires that personnel who make decisions on the investment company’s portfolio composition must be subject to procedures designed to prevent the use and dissemination of material nonpublic information regarding the applicable investment company portfolio. Rule 14.11(i)(7) is similar to BATS Rule 14.11(b)(5)(A)(i), however, Rule 14.11(i)(7) in connection with the establishment of a “fire wall” between the investment adviser and the broker-dealer reflects the applicable open-end fund’s portfolio, not an underlying benchmark index, as is the case with index-based funds. The Adviser and Sub-Adviser are not registered as a broker-dealer but the Adviser is affiliated with a broker-dealer and has implemented a “fire wall” with respect to such broker-dealer regarding access to information concerning the composition and/or changes to the Fund’s portfolio. The Sub-Adviser is not affiliated with a broker-dealer. In the event (a) the Adviser or Sub-Adviser becomes registered as a broker-dealer or newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, it will

⁵ An investment adviser to an open-end fund is required to be registered under the Investment Advisers Act of 1940 (the “Advisers Act”). As a result, the Adviser and its related personnel as well as the Sub-Adviser and its related personnel are subject to the provisions of Rule 204A–1 under the Advisers Act relating to codes of ethics. This Rule requires investment advisers to adopt a code of ethics that reflects the fiduciary nature of the relationship to clients as well as compliance with other applicable securities laws. Accordingly, procedures designed to prevent the communication and misuse of non-public information by an investment adviser must be consistent with Rule 204A–1 under the Advisers Act. In addition, Rule 206(4)–7 under the Advisers Act makes it unlawful for an investment adviser to provide investment advice to clients unless such investment adviser has (i) adopted and implemented written policies and procedures reasonably designed to prevent violation, by the investment adviser and its supervised persons, of the Advisers Act and the Commission rules adopted thereunder; (ii) implemented, at a minimum, an annual review regarding the adequacy of the policies and procedures established pursuant to subparagraph (i) above and the effectiveness of their implementation; and (iii) designated an individual (who is a supervised person) responsible for administering the policies and procedures adopted under subparagraph (i) above.

implement a fire wall with respect to its relevant personnel or broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio, and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio.

SPDR® DoubleLine Emerging Markets Fixed Income ETF

According to the Registration Statement, the Fund will seek to provide high total return from current income and capital appreciation. To achieve its objective, the Fund will invest, under normal circumstances, at least 80% of its net assets (plus the amount of borrowings for investment purposes) in emerging market fixed income securities, as described further in the Principal Holding, Other Portfolio Holdings, and Investment Restrictions sections below.⁶ The Fund is an actively-managed fund that does not seek to replicate the performance of a specified index.

Under normal market conditions, the Sub-Adviser intends to seek to construct an investment portfolio with a weighted average effective duration of no less than two years and no more than eight years. The effective duration of the portfolio may vary materially from its target, from time to time, and there is no assurance that the effective duration of the Fund’s investment portfolio will not exceed its target.

The Fund may invest without limit in investments denominated in any currency, but currently expects to invest a substantial amount of its assets in investments denominated in the U.S. dollar. Securities held by the Fund may be sold at any time. By way of example, sales may occur when the Sub-Adviser perceives deterioration in the credit fundamentals of the issuer, when the

⁶ Generally, as used in this proposed rule change, the terms debt security, debt obligation, bond, fixed income instrument and fixed income security are used interchangeably. These terms should be considered to include any evidence of indebtedness, including, by way of example, a security or instrument having one or more of the following characteristics: A security or instrument issued at a discount to its face value, a security or instrument that pays interest at a fixed, floating, or variable rate, or a security or instrument with a stated principal amount that requires repayment of some or all of that principal amount to the holder of the security. These terms are interpreted broadly to include any instrument or security evidencing what is commonly referred to as an IOU rather than evidencing the corporate ownership of equity unless that equity represents an indirect or derivative interest in one or more debt securities. For this purpose, the terms also include instruments that are intended to provide one or more of the characteristics of a direct investment in one or more debt securities.

Sub-Adviser believes there are negative macro geo-political considerations that may affect the issuer, when the Sub-Adviser determines to take advantage of a better investment opportunity, or the individual security has reached the Sub-Adviser’s sell target.

In allocating investments among various emerging market countries, the Sub-Adviser attempts to analyze internal political, market and economic factors. These factors may include public finances, monetary policy, external accounts, financial markets, foreign investment regulations, stability of exchange rate policy, and labor conditions. In certain situations or market conditions, the Fund may temporarily depart from its normal investment policies and strategies provided that the alternative is in the best interest of the Fund. For example, the Fund may hold a higher than normal proportion of its assets in cash in times of extreme market stress.

Principal Holdings

The Fund intends to achieve its investment objective by investing, under normal circumstances,⁷ at least 80% of its net assets (plus the amount of borrowings for investment purposes) in fixed income instruments (“Fixed Income Securities”), subject to certain limits described below. For purposes of this filing, Fixed Income Securities will be, where applicable and unless otherwise noted, U.S. dollar-denominated and are defined as the following instruments: Fixed income securities issued or guaranteed by foreign corporations or foreign governments, including securities issued or guaranteed by companies (including hybrid securities),⁸ financial institutions, or government entities in emerging market countries; corporate or government bonds; sovereign debt; structured securities;⁹ foreign currency

⁷ The term “under normal circumstances” includes, but is not limited to, the absence of extreme volatility or trading halts in the fixed income markets or the financial markets generally; operational issues causing dissemination of inaccurate market information; or force majeure type events such as systems failure, natural or man-made disaster, act of God, armed conflict, act of terrorism, riot or labor disruption or any similar intervening circumstance.

⁸ A third party or the Sub-Adviser may create a hybrid security by combining an income-producing debt security and the right to receive payment based on the change in the price of an equity security. The Fund may invest in hybrid securities related to emerging market countries.

⁹ Structured securities generally includes [sic] privately-issued and publicly-issued structured securities, including certain publicly-issued structured securities that are not agency securities. Examples include, but are not limited to: Asset-backed securities backed by assets such as

transactions; certain derivatives; exchange-traded foreign equity securities and preferred securities; zero coupon bonds; credit linked notes; pass through notes; bank loans;¹⁰ perpetual maturity bonds; and convertible securities. Fixed Income Securities may have fixed or variable interest rates¹¹ and any maturity.

The Fund will generally invest in Fixed Income Securities from at least five emerging market countries,¹² with no more than 20% allocated to a single country. The Fund may invest in Fixed Income Securities of any credit quality, but seeks to invest no more than 20%, at the time of investment, in Fixed Income Securities that are unrated, rated BB+ or lower by Standard & Poor's Rating Service or Ba1 or lower by Moody's Investor Service, Inc. or the equivalent by any other nationally recognized statistical rating organization. Corporate bonds and certain other Fixed Income Securities rated below investment grade, or such instruments that are unrated and are determined by the Sub-Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds.

The Fund may invest in corporate bonds.¹³ The investment return of corporate bonds reflects interest on the bond and changes in the market value

of the bond. The market value of a corporate bond may be affected by the credit rating of the corporation, the corporation's performance and perceptions of the corporation in the market place. Such corporate bonds may be investment grade or may be below investment grade.

The Fund may purchase exchange-traded common stocks and exchange-traded preferred securities of foreign corporations. The Fund's investments in common stock of foreign corporations may also be in the form of American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs") and European Depositary Receipts ("EDRs") (collectively "Depository Receipts").¹⁴

The Fund may invest in sovereign debt. Sovereign debt obligations are issued or guaranteed by foreign governments or their agencies. Sovereign debt may be in the form of conventional securities or other types of debt instruments such as loans or loan participations. Sovereign debt obligations may be either investment grade or below investment grade.

The Fund may conduct foreign currency transactions on a spot (*i.e.*, cash) or forward basis (*i.e.*, by entering into forward contracts to purchase or sell foreign currencies). The Fund may also invest in the following derivatives: Foreign currency futures; credit default swaps; and options, swaps, futures, and forward contracts on Fixed Income Securities. These practices may be used to hedge the Fund's portfolio as well as for investment purposes; however, such practices sometimes may reduce returns or increase volatility. All such derivatives will be exchange traded or centrally cleared.

In the case of a credit default swap ("CDS"), the contract gives one party (the buyer) the right to recoup the

economic value of a decline in the value of debt securities of the reference issuer if the credit event (a downgrade or default) occurs. This value is obtained by delivering a debt security of the reference issuer to the party in return for a previously agreed payment from the other party (frequently, the par value of the debt security).¹⁵

CDSs may require initial premium (discount) payments as well as periodic payments (receipts) related to the interest leg of the swap or to the default of a reference obligation. The Fund will segregate assets necessary to meet any accrued payment obligations when it is the buyer of CDSs. In cases where the Fund is a seller of a CDS, if the CDS is physically settled or cash settled, the Fund will be required to segregate the full notional amount of the CDS. Such segregation will not limit the Fund's exposure to loss.

Other Portfolio Holdings

While the Adviser and Sub-Adviser, under normal circumstances, will invest at least 80% of the Fund's net assets in the instruments described above, the Adviser and Sub-Adviser may invest up to 20% of the Fund's net assets in other securities and financial instruments, as described below.

The Fund may invest in U.S. Government obligations. U.S. Government obligations are a type of bond. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities.

The Fund may invest in U.S. equity securities. Equity securities are securities that represent an ownership interest (or the right to acquire such an interest) in a company and include common and preferred stock. The Fund's investments in such U.S. equity securities may include securities traded over-the-counter as well as those traded on a securities exchange.

The Fund may invest in repurchase agreements with commercial banks, brokers or dealers to generate income from its excess cash balances and to invest securities lending cash collateral. A repurchase agreement is an agreement under which a fund acquires a financial instrument (*e.g.*, a security issued by the U.S. Government or an agency thereof, a banker's acceptance or a certificate of deposit) from a seller, subject to resale to the seller at an agreed upon price and date (normally, the next business day).

consumer receivables, credit cards, student loans, and equipment leases; asset-backed commercial paper; credit linked notes; and secured funding notes.

¹⁰ The Fund may invest up to 20% of its portfolio in junior bank loans.

¹¹ A variable rate security provides for the automatic establishment of a new interest rate on set dates. Variable rate obligations whose interest is readjusted no less frequently than annually will be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate. The Fund may also purchase floating rate securities. A floating rate security provides for the automatic adjustment of its interest rate whenever a specified interest rate changes. Interest rates on these securities are ordinarily tied to, and are a percentage of, a widely recognized interest rate, such as the yield on 90-day U.S. Treasury bills or the prime rate of a specified bank. These rates may change as often as twice daily.

¹² An "emerging market country" is a country that, at the time the Fund invests in the related fixed income instruments, is classified as an emerging or developing economy by any supranational organization such as the World Bank or the United Nations, or related entities, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

¹³ While the Fund is permitted to invest without restriction in corporate bonds, the Sub-Adviser expects that, under normal circumstances, the Fund will generally seek to invest in corporate bond issuances that have at least \$100,000,000 par amount outstanding. Further, component corporate bonds that in the aggregate account for at least 75% of the weight of corporate bonds will have a minimum original principal outstanding of \$100 million or more.

¹⁴ Depository Receipts are receipts, typically issued by a bank or trust company, which evidence ownership of underlying securities issued by a foreign corporation. For ADRs, the depository is typically a U.S. financial institution and the underlying securities are issued by a foreign issuer. For other Depository Receipts, the depository may be a foreign or a U.S. entity, and the underlying securities may have a foreign or a U.S. issuer. Depository Receipts will not necessarily be denominated in the same currency as their underlying securities. Generally, ADRs, in registered form, are designed for use in the U.S. securities market, and EDRs, in bearer form, are designated for use in European securities markets. GDRs are tradable both in the United States and in Europe and are designed for use throughout the world. The Fund may invest in sponsored or unsponsored ADRs; however, not more than 10% of the net assets of the Fund will be invested in unsponsored ADRs. All exchange-traded equity securities in which the Fund may invest will trade on markets that are members of the Intermarket Surveillance Group ("ISG") or that have entered into a comprehensive surveillance agreement with the Exchange.

¹⁵ The Fund will enter into CDS agreements only with counterparties that meet certain standards of creditworthiness.

The Fund may also enter into reverse repurchase agreements, which involve the sale of securities with an agreement to repurchase the securities at an agreed-upon price, date and interest payment and have the characteristics of borrowing. The Fund's exposure to reverse repurchase agreements will be covered by securities having a value equal to or greater than such commitments. Under the 1940 Act, reverse repurchase agreements are considered borrowings. Although there is no limit on the percentage of Fund assets that can be used in connection with reverse repurchase agreements, the Fund does not expect to engage, under normal circumstances, in reverse repurchase agreements with respect to more than 10% of its net assets.

The Fund may lend its portfolio securities in an amount not to exceed 33¹/₃% of the value of its total assets via a securities lending program through the Lending Agent, to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. A securities lending program allows the Fund to receive a portion of the income generated by lending its securities and investing the respective collateral. The Fund will receive collateral for each loaned security which is at least equal to 102% of the market value of that security, marked to market each trading day.

The Fund may invest in convertible securities traded on an exchange or OTC. Convertible securities are bonds, debentures, notes, or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio.

In addition to repurchase agreements, the Fund may invest in short-term instruments, including money market instruments, (including money market funds advised by the Adviser), cash and cash equivalents, on an ongoing basis to provide liquidity or for other reasons. Money market instruments are generally short-term investments that may include but are not limited to: (i) Shares of money market funds (including those advised by the Adviser); (ii) obligations issued or guaranteed by the U.S. government, its agencies or instrumentalities (including government-sponsored enterprises); (iii) negotiable certificates of deposit ("CDs"), bankers' acceptances, fixed time deposits and other obligations of U.S. and foreign banks (including foreign branches) and similar institutions; (iv) commercial paper rated at the date of purchase "Prime-1" by

Moody's or "A-1" by S&P, or if unrated, of comparable quality as determined by the Adviser; (v) non-convertible corporate debt securities (e.g., bonds and debentures) with remaining maturities at the date of purchase of not more than 397 days and that satisfy the rating requirements set forth in Rule 2a-7 under the 1940 Act; and (vi) short-term U.S. dollar-denominated obligations of foreign banks (including U.S. branches) that, in the opinion of the Adviser, are of comparable quality to obligations of U.S. banks which may be purchased by the Fund. Any of these instruments may be purchased on a current or a forward-settled basis. Time deposits are non-negotiable deposits maintained in banking institutions for specified periods of time at stated interest rates. Bankers' acceptances are time drafts drawn on commercial banks by borrowers, usually in connection with international transactions.

The Fund may invest in Restricted Securities. Restricted Securities are securities that are not registered under the Securities Act, but which can be offered and sold to "qualified institutional buyers" under Rule 144A under the Securities Act or securities purchased after the lapse of the appropriate distribution compliance period under Regulation S under the Securities Act.

The Fund may invest in the securities of other investment companies, including affiliated funds and money market funds, subject to applicable limitations under Section 12(d)(1) of the 1940 Act.

Investment Restrictions

The Fund may hold up to an aggregate amount of 15% of its net assets in illiquid assets (calculated at the time of investment), including Restricted Securities deemed illiquid by the Adviser or Sub-Adviser¹⁶ under the 1940 Act.¹⁷ The Fund will monitor its

¹⁶ In reaching liquidity decisions, the Adviser and Sub-Adviser may consider factors including: The frequency of trades and quotes for the security; the number of dealers wishing to purchase or sell the security and the number of other potential purchasers; dealer undertakings to make a market in the security; the nature of the security and the nature of the marketplace in which it trades (e.g., the time needed to dispose of the security, the method of soliciting offers, and the mechanics of transfer).

¹⁷ The Commission has stated that long-standing Commission guidelines have required open-end funds to hold no more than 15% of their net assets in illiquid securities and other illiquid assets. See Investment Company Act Release No. 28193 (March 11, 2008), 73 FR 14618 (March 18, 2008), footnote 34. See also, Investment Company Act Release No. 5847 (October 21, 1969), 35 FR 19989 (December 31, 1970) (Statement Regarding "Restricted Securities"); Investment Company Act Release No. 18612 (March 12, 1992), 57 FR 9828 (March 20,

portfolio liquidity on an ongoing basis to determine whether, in light of current circumstances, an adequate level of liquidity is being maintained, and will consider taking appropriate steps in order to maintain adequate liquidity if, through a change in values, net assets, or other circumstances, more than 15% of the Fund's net assets are held in illiquid assets. Illiquid assets include securities subject to contractual or other restrictions on resale and other instruments that lack readily available markets as determined in accordance with Commission staff guidance.

The Fund intends to qualify each year as a regulated investment company (a "RIC") under Subchapter M of the Internal Revenue Code of 1986, as amended.¹⁸ The Fund will invest its assets, and otherwise conduct its operations, in a manner that is intended to satisfy the qualifying income, diversification, and distribution requirements necessary to establish and maintain RIC qualification under Subchapter M.

The Fund's investments will be consistent with its investment objective and will not be used to seek to achieve leveraged or inverse leveraged returns (i.e. two times or three times the Fund's benchmark).

Net Asset Value

According to the Registration Statement, the net asset value ("NAV") of the Fund's Shares generally will be calculated once daily Monday through Friday as of the close of regular trading on the Exchange, generally 4:00 p.m. Eastern Time (the "NAV Calculation Time") on each day that the Exchange is open for trading, based on prices at the NAV Calculation Time. NAV per Share is calculated by dividing the Fund's net assets by the number of Fund Shares outstanding. The Fund's net assets are valued primarily on the basis of market quotations. Expenses and fees, including the management fees, will be accrued daily and taken into account for purposes of determining NAV.

Restricted Securities, repurchase agreements, and reverse repurchase agreements will generally be valued at bid prices received from independent pricing services as of the announced

1992) (Revisions of Guidelines to Form N-1A). A fund's portfolio security is illiquid if it cannot be disposed of in the ordinary course of business within seven days at approximately the value ascribed to it by the fund. See Investment Company Act Release No. 14983 (March 12, 1986), 51 FR 9773 (March 21, 1986) (adopting amendments to Rule 2a-7 under the 1940 Act); Investment Company Act Release No. 17452 (April 23, 1990), 55 FR 17933 (April 30, 1990) (adopting Rule 144A under the Securities Act of 1933).

¹⁸ 26 U.S.C. 851.

closing time for trading in such instruments. Spot currency transactions will generally be valued at mid prices received from an independent pricing service converted into U.S. dollars at current market rates on the date of valuation. Foreign currency forwards normally will be valued on the basis of quotes obtained from broker-dealers or third party pricing services.

According to the Adviser, U.S. Government obligations; U.S.-registered, dollar-denominated bonds of foreign corporations, governments, agencies and supra-national entities; sovereign debt; corporate bonds; and short-term instruments will generally be valued at bid prices received from independent pricing services as of the announced closing time for trading in such instruments in the respective market. In determining the value of such instruments, pricing services determine valuations for normal institutional-size trading units of such securities using valuation models or matrix pricing, which incorporates yield and/or price with respect to bonds that are considered comparable in characteristics such as rating, interest rate and maturity date and quotations from securities dealers to determine current value. Investments having a maturity of 60 days or less are generally valued at amortized cost.

Listed futures will generally be valued at the settlement price determined by the applicable exchange. Listed options will generally be valued at the last sale price on the applicable exchange. Non-exchange traded derivatives, including OTC-traded options, swaps, forwards, and structured investments, will normally be valued on the basis of quotations or equivalent indication of value supplied by a third-party pricing service or broker-dealer who makes markets in such instruments. The Fund's OTC-traded derivative instruments will generally be valued at bid prices.

Common stocks and other exchange-traded equity securities (including shares of preferred securities, convertible securities, and exchange traded investment companies ("ETPs")) generally will be valued at the last reported sale price or the official closing price on that exchange where the security is primarily traded on the day that the valuation is made. Foreign equities and exchange-listed Depositary Receipts will be valued at the last sale or official closing price on the relevant exchange on the valuation date. If, however, neither the last sale price nor the official closing price is available, each of these securities will be valued at either the last reported sale price or

official closing price as of the close of regular trading of the principal market on which the security is listed. Unsponsored ADRs, which are traded in the OTC market, will be valued at the last reported sale price from the OTC Bulletin Board or OTC Link LLC on the valuation date. OTC-traded preferred securities and OTC-traded convertible securities will be valued based on price quotations obtained from a broker-dealer who makes markets in such securities or other equivalent indications of value provided by a third-party pricing service. Securities of non-exchange traded investment companies will be valued at NAV.

According to the Registration Statement, in the event that current market valuations are not readily available or are deemed unreliable, the Trust's procedures require the Oversight Committee ("Committee") to determine a security's fair value, in accordance with the 1940 Act.¹⁹ In determining such value, the Committee may consider, among other things, (i) price comparisons among multiple sources, (ii) a review of corporate actions and news events, and (iii) a review of relevant financial indicators (e.g., movement in interest rates and market indices). In these cases, the Fund's NAV may reflect certain portfolio securities' fair values rather than their market prices.

Creation and Redemption of Shares

The NAV of Shares of the Fund will be determined once each business day, normally 4:00 p.m. Eastern time. The Fund currently anticipates that a Creation Unit will consist of 50,000 Shares, though this number may change from time to time, including prior to the listing of the Fund. The exact number of Shares that will comprise a Creation Unit will be disclosed in the Registration Statement of the Fund. The

¹⁹ If a security's market price is not readily available or is deemed unreliable, the security will be valued by another method that the Board believes will better reflect fair value in accordance with the Trust's valuation policies and procedures and in accordance with the 1940 Act. The Board has delegated the process of valuing securities for which market quotations are not readily available or are deemed unreliable to the Committee. The Committee, subject to oversight by the Board, may use fair value pricing in a variety of circumstances, including but not limited to, situations when trading in a security has been suspended or halted. Accordingly, the Fund's NAV may reflect certain securities' fair values rather than their market prices. Fair value pricing involves subjective judgments and it is possible that the fair value determination for a security is materially different than the value that could be received on the sale of the security. The Committee has implemented procedures designed to prevent the use and dissemination of material, non-public information regarding the Fund.

Trust will issue and sell Shares of the Fund only in Creation Units on a continuous basis, without a sales load (but subject to transaction fees), at their NAV per Share next determined after receipt of an order, on any business day, in proper form. Creation and redemption will typically occur in cash, however, the Trust retains discretion to conduct such transactions on an in-kind basis or a combination of cash and in-kind, as further described below.

The consideration for purchase of a Creation Unit of the Fund generally will consist of either (i) the in-kind deposit of a designated portfolio of securities (the "Deposit Securities") per each Creation Unit and the Cash Component (defined below), computed as described below, or (ii) the cash value of the Deposit Securities ("Deposit Cash") and the "Cash Component," computed as described below. When accepting purchases of Creation Units for cash, the Fund may incur additional costs associated with the acquisition of Deposit Securities that would otherwise be provided by an in-kind purchaser. Together, the Deposit Securities or Deposit Cash, as applicable, and the Cash Component constitute the "Fund Deposit," which represents the minimum initial and subsequent investment amount for a Creation Unit of the Fund. The "Cash Component" is an amount equal to the difference between the NAV of the Shares (per Creation Unit) and the market value of the Deposit Securities or Deposit Cash, as applicable. If the Cash Component is a positive number (*i.e.*, the NAV per Creation Unit exceeds the market value of the Deposit Securities or Deposit Cash, as applicable), the Cash Component shall be such positive amount. If the Cash Component is a negative number (*i.e.*, the NAV per Creation Unit is less than the market value of the Deposit Securities or Deposit Cash, as applicable), the Cash Component will be such negative amount and the creator will be entitled to receive cash in an amount equal to the Cash Component. The Cash Component serves the function of compensating for any differences between the NAV per Creation Unit and the market value of the Deposit Securities or Deposit Cash, as applicable.

The Custodian, through the National Securities Clearing Corporation ("NSCC"), will make available on each business day, prior to the opening of business on the Exchange, the list of the names and the required amount of each Deposit Security or the required amount of Deposit Cash, as applicable, to be included in the current Fund Deposit

(based on information at the end of the previous business day) for the Fund. Such Fund Deposit is subject to any applicable adjustments as described in the Registration Statement, in order to effect purchases of Creation Units of the Fund until such time as the next-announced composition of the Deposit Securities or the required amount of Deposit Cash, as applicable, is made available.

Shares may be redeemed only in Creation Units at their NAV next determined after receipt of a redemption request in proper form by the Fund through the Transfer Agent and only on a business day.

With respect to the Fund, the Custodian, through the NSCC, will make available immediately prior to the opening of business on the Exchange (9:30 a.m. Eastern time) on each business day, the list of the names and share quantities of the Fund's portfolio securities that will be applicable (subject to possible amendment or correction) to redemption requests received in proper form on that day ("Fund Securities"). Fund Securities received on redemption may not be identical to Deposit Securities.

Redemption proceeds for a Creation Unit will be paid either in-kind or in cash or a combination thereof, as determined by the Trust. With respect to in-kind redemptions of the Fund, redemption proceeds for a Creation Unit will consist of Fund Securities as announced by the Custodian on the business day of the request for redemption received in proper form plus cash in an amount equal to the difference between the NAV of the Shares being redeemed, as next determined after a receipt of a request in proper form, and the value of the Fund Securities (the "Cash Redemption Amount"), less a fixed redemption transaction fee and any applicable additional variable charge as set forth in the Registration Statement. In the event that the Fund Securities have a value greater than the NAV of the Shares, a compensating cash payment equal to the differential will be required to be made by or through an authorized participant by the redeeming shareholder. Notwithstanding the foregoing, at the Trust's discretion, an authorized participant may receive the corresponding cash value of the securities in lieu of the in-kind securities value representing one or more Fund Securities.²⁰

²⁰ The Adviser represents that, to the extent that the Trust permits or requires a "cash in lieu" amount, such transactions will be effected in the same or equitable manner for all Authorized Participants.

The creation/redemption order cut-off time for the Fund is expected to be 4:00 p.m. Eastern time. Creation/redemption order cut-off times may be earlier on any day that the Securities Industry and Financial Markets Association ("SIFMA") (or applicable exchange or market on which the Fund's investments are traded) announces an early closing time. On days when the Exchange closes earlier than normal, the Fund may require orders for Creation Units to be placed earlier in the day.

Availability of Information

The Fund's Web site, which will be publicly available prior to the public offering of Shares, will include a form of the prospectus for the Fund that may be downloaded. The Web site will include additional quantitative information updated on a daily basis, including, for the Fund: (1) The prior business day's reported NAV, mid-point of the bid/ask spread at the time of calculation of such NAV (the "Bid/Ask Price"),²¹ daily trading volume, and a calculation of the premium and discount of the Bid/Ask Price against the NAV; and (2) data in chart format displaying the frequency distribution of discounts and premiums of the daily Bid/Ask Price against the NAV, within appropriate ranges, for each of the four previous calendar quarters. Daily trading volume information for the Fund will also be available in the financial section of newspapers, through subscription services such as Bloomberg, Thomson Reuters, and International Data Corporation, which can be accessed by authorized participants and other investors, as well as through other electronic services, including major public Web sites. On each business day, before commencement of trading in Shares during Regular Trading Hours²² on the Exchange, the Fund will disclose on its Web site the identities and quantities of the portfolio of securities and other assets (the "Disclosed Portfolio") held by the Fund that will form the basis for the Fund's calculation of NAV at the end of the business day.²³ The Disclosed

²¹ The Bid/Ask Price of the Fund will be determined using the midpoint of the highest bid and the lowest offer on the Exchange as of the time of calculation of the Fund's NAV. The records relating to Bid/Ask Prices will be retained by the Fund and its service providers.

²² Regular Trading Hours are 9:30 a.m. to 4:00 p.m. Eastern Time.

²³ Under accounting procedures to be followed by the Fund, trades made on the prior business day ("T") will be booked and reflected in NAV on the current business day ("T+1"). Accordingly, the Fund will be able to disclose at the beginning of the business day the portfolio that will form the basis for the NAV calculation at the end of the business day.

Portfolio will include, as applicable: The ticker symbol; CUSIP number or other identifier, if any; a description of the holding (including the type of holding, such as the type of swap); the identity of the security, commodity, index or other asset or instrument underlying the holding, if any; for options, the option strike price; quantity held (as measured by, for example, par value, notional value or number of shares, contracts, or units); maturity date, if any; coupon rate, if any; effective date, if any; market value of the holding; and the percentage weighting of the holding in the Fund's portfolio. The Web site and information will be publicly available at no charge.

In addition, for the Fund, an estimated value, defined in BATS Rule 14.11(i)(3)(C) as the "Intraday Indicative Value," that reflects an estimated intraday value of the Fund's portfolio, will be disseminated. Moreover, the Intraday Indicative Value will be based upon the current value for the components of the Disclosed Portfolio and will be updated and widely disseminated by one or more major market data vendors at least every 15 seconds during the Exchange's Regular Trading Hours.²⁴ In addition, the quotations of certain of the Fund's holdings may not be updated during U.S. trading hours if such holdings do not trade in the United States or if updated prices cannot be ascertained.

The dissemination of the Intraday Indicative Value, together with the Disclosed Portfolio, will allow investors to determine the value of the underlying portfolio of the Fund on a daily basis and provide a close estimate of that value throughout the trading day.

Intraday, closing, and settlement prices of common stocks and other exchange-listed instruments (including Depositary Receipts, preferred securities, convertible securities, common stock, and ETPs) will be readily available from the national securities exchanges trading such securities as well as automated quotation systems, published or other public sources, or online information services such as Bloomberg or Reuters. Intraday and closing price information for exchange-traded options and futures will be available from the applicable exchange and from major market data vendors. In addition, price information for U.S. exchange-traded options will be available from the Options Price Reporting Authority. Quotation

²⁴ Currently, it is the Exchange's understanding that several major market data vendors display and/or make widely available Intraday Indicative Values published via the Consolidated Tape Association ("CTA") or other data feeds.

information from brokers and dealers or pricing services will be available for Fixed Income Securities. Price information regarding spot currency transactions and OTC-traded derivative instruments, including options, swaps, and forward currency transactions, as well as non-exchange listed equity securities traded in the OTC market, including Restricted Securities, repurchase and reverse repurchase agreements, OTC equity securities, OTC-traded preferred securities, and OTC-traded convertible securities, is available from major market data vendors.

Information regarding market price and volume of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. The previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers. Quotation and last sale information for the Shares will be available on the facilities of the CTA.

Initial and Continued Listing

The Shares will be subject to BATS Rule 14.11(i), which sets forth the initial and continued listing criteria applicable to Managed Fund Shares. The Exchange represents that, for initial and/or continued listing, the Fund must be in compliance with Rule 10A-3 under the Act.²⁵ A minimum of 100,000 Shares will be outstanding at the commencement of trading on the Exchange. The Exchange will obtain a representation from the issuer of the Shares that the NAV per Share will be calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time.

Trading Halts

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of the Fund. The Exchange will halt trading in the Shares under the conditions specified in BATS Rule 11.18. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. These may include: (1) The extent to which trading is not occurring in the securities and/or the financial instruments composing the Disclosed Portfolio of the Fund; or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly

market are present. Trading in the Shares also will be subject to Rule 14.11(i)(4)(B)(iv), which sets forth circumstances under which Shares of the Fund may be halted.

Trading Rules

The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. BATS will allow trading in the Shares from 8:00 a.m. until 5:00 p.m. Eastern Time. The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions. As provided in BATS Rule 14.11(i)(2)(C), the minimum price variation for quoting and entry of orders in Managed Fund Shares traded on the Exchange is \$0.01.

Surveillance

The Exchange believes that its surveillance procedures are adequate to properly monitor the trading of the Shares on the Exchange during all trading sessions and to deter and detect violations of Exchange rules and the applicable federal securities laws. Trading of the Shares through the Exchange will be subject to the Exchange's surveillance procedures for derivative products, including Managed Fund Shares. The Exchange may obtain information regarding trading in the Shares and the underlying shares in exchange traded investment companies, U.S. equity securities, foreign securities, futures, and options via the ISG, from other exchanges who are members or affiliates of the ISG, or with which the Exchange has entered into a comprehensive surveillance sharing agreement.²⁶ In addition, the Exchange is able to access, as needed, trade information for certain fixed income instruments reported to FINRA's Trade Reporting and Compliance Engine ("TRACE"). The Exchange prohibits the distribution of material non-public information by its employees.

Information Circular

Prior to the commencement of trading, the Exchange will inform its members in an Information Circular of the special characteristics and risks

²⁶ For a list of the current members and affiliate members of ISG, see www.isgportal.com. The Exchange notes that not all components of the Disclosed Portfolio for the Fund may trade on markets that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. The Exchange also notes that all exchange-traded instruments, including investment company securities, futures, and options will trade on markets that are a member of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

associated with trading the Shares. Specifically, the Information Circular will discuss the following: (1) The procedures for purchases and redemptions of Shares in Creation Units (and that Shares are not individually redeemable); (2) BATS Rule 3.7, which imposes suitability obligations on Exchange members with respect to recommending transactions in the Shares to customers; (3) how information regarding the Intraday Indicative Value and the Disclosed Portfolio is disseminated; (4) the risks involved in trading the Shares during the Pre-Opening²⁷ and After Hours Trading Sessions²⁸ when an updated Intraday Indicative Value will not be calculated or publicly disseminated; (5) the requirement that members deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; and (6) trading information.

In addition, the Information Circular will advise members, prior to the commencement of trading, of the prospectus delivery requirements applicable to the Fund. Members purchasing Shares from the Fund for resale to investors will deliver a prospectus to such investors. The Information Circular will also discuss any exemptive, no-action, and interpretive relief granted by the Commission from any rules under the Act.

In addition, the Information Circular will reference that the Fund is subject to various fees and expenses described in the Registration Statement. The Information Circular will also disclose the trading hours of the Shares of the Fund and the applicable NAV Calculation Time for the Shares. The Information Circular will disclose that information about the Shares of the Fund will be publicly available on the Fund's Web site. In addition, the Information Circular will reference that the Trust is subject to various fees and expenses described in the Fund's Registration Statement.

2. Statutory Basis

The Exchange believes that the proposal is consistent with Section 6(b) of the Act²⁹ in general and Section 6(b)(5) of the Act³⁰ in particular in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and

²⁷ The Pre-Opening Session is from 8:00 a.m. to 9:30 a.m. Eastern Time.

²⁸ The After Hours Trading Session is from 4:00 p.m. to 5:00 p.m. Eastern Time.

²⁹ 15 U.S.C. 78f.

³⁰ 15 U.S.C. 78f(b)(5).

²⁵ See 17 CFR 240.10A-3.

coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in BATS Rule 14.11(i). The Exchange believes that its surveillance procedures are adequate to properly monitor the trading of the Shares on the Exchange during all trading sessions and to deter and detect violations of Exchange rules and the applicable federal securities laws. If the investment adviser to the investment company issuing Managed Fund Shares is affiliated with a broker-dealer, such investment adviser to the investment company shall erect a "fire wall" between the investment adviser and the broker-dealer with respect to access to information concerning the composition and/or changes to such investment company portfolio. The Adviser is not a registered broker-dealer, but is affiliated with a broker-dealer and has implemented a "fire wall" with respect to such broker-dealer regarding access to information concerning the composition and/or changes to the Fund's portfolio. In the event (a) the Adviser or Sub-Adviser becomes registered as a broker-dealer or newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, it will implement a fire wall with respect to its relevant personnel or broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio, and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio. The Exchange may obtain information regarding trading in the Shares and the underlying shares in Depositary Receipts that are not OTC ADRs and exchange traded investment companies, U.S. equity securities, futures, and options via the ISG, from other exchanges who are members or affiliates of the ISG, or with which the Exchange has entered into a comprehensive surveillance sharing agreement.³¹ In addition, the Exchange

is able to access, as needed, trade information for certain fixed income instruments reported to FINRA's TRACE.

According to the Registration Statement, the Fund intends to achieve its investment objective by investing, under normal circumstances, at least 80% of its net assets in Fixed Income Securities from at least five emerging market countries, with no more than 20% allocated to a single country. The Fund's investments will be consistent with the Fund's investment objective and will not be used to achieve leveraged or inverse leveraged returns, as stated above. While the Fund is permitted to invest without restriction in corporate bonds, the Sub-Adviser expects that, under normal circumstances, the Fund will generally seek to invest in corporate bond issuances that have at least \$100,000,000 par amount outstanding. Further, component corporate bonds that in the aggregate account for at least 75% of the weight of corporate bonds will have a minimum original principal outstanding of \$100 million or more.

In addition to the holdings in Fixed Income Securities described above as part of the Fund's principal investment strategy, the Fund may also, to a limited extent (under normal circumstances, less than 20% of the Fund's net assets) and as further described above, engage in transactions in the following:

U.S. Government obligations, U.S. equity securities, repurchase agreements, reverse repurchase agreements, portfolio lending, convertible securities, short-term instruments, Restricted Securities, and securities of other investment companies.

The Fund may hold up to an aggregate amount of 15% of its net assets in illiquid assets (calculated at the time of investment), including Restricted Securities deemed illiquid by the Adviser or Sub-Adviser³² under the

markets that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. The Exchange also notes that all of the exchange-listed investment company securities, futures, and options will trade on markets that are a member of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

³² In reaching liquidity decisions, the Adviser and Sub-Adviser may consider factors including: The frequency of trades and quotes for the security; the number of dealers wishing to purchase or sell the security and the number of other potential purchasers; dealer undertakings to make a market in the security; the nature of the security and the nature of the marketplace in which it trades (e.g., the time needed to dispose of the security, the method of soliciting offers, and the mechanics of transfer).

1940 Act.³³ The Fund will monitor its portfolio liquidity on an ongoing basis to determine whether, in light of current circumstances, an adequate level of liquidity is being maintained, and will consider taking appropriate steps in order to maintain adequate liquidity if, through a change in values, net assets, or other circumstances, more than 15% of the Fund's net assets are held in illiquid assets. Illiquid assets include securities subject to contractual or other restrictions on resale and other instruments that lack readily available markets as determined in accordance with Commission staff guidance.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that the Exchange will obtain a representation from the issuer of the Shares that the NAV per Share will be calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time. In addition, a large amount of information is publicly available regarding the Fund and the Shares, thereby promoting market transparency. Moreover, the Intraday Indicative Value will be disseminated by one or more major market data vendors at least every 15 seconds during Regular Trading Hours. On each business day, before commencement of trading in Shares during Regular Trading Hours, the Fund will disclose on its Web site the Disclosed Portfolio that will form the basis for the Fund's calculation of NAV at the end of the business day. Pricing information will be available on the Fund's Web site including: (1) The prior business day's reported NAV, the Bid/Ask Price of the Fund, and a calculation of the premium and discount of the Bid/Ask Price against the NAV; and (2) data in chart format displaying the frequency distribution of discounts and premiums of the daily Bid/Ask Price against the

³³ The Commission has stated that long-standing Commission guidelines have required open-end funds to hold no more than 15% of their net assets in illiquid securities and other illiquid assets. See Investment Company Act Release No. 28193 (March 11, 2008), 73 FR 14618 (March 18, 2008), footnote 34. See also, Investment Company Act Release No. 5847 (October 21, 1969), 35 FR 19989 (December 31, 1970) (Statement Regarding "Restricted Securities"); Investment Company Act Release No. 18612 (March 12, 1992), 57 FR 9828 (March 20, 1992) (Revisions of Guidelines to Form N-1A). A fund's portfolio security is illiquid if it cannot be disposed of in the ordinary course of business within seven days at approximately the value ascribed to it by the fund. See Investment Company Act Release No. 14983 (March 12, 1986), 51 FR 9773 (March 21, 1986) (adopting amendments to Rule 2a-7 under the 1940 Act); Investment Company Act Release No. 17452 (April 23, 1990), 55 FR 17933 (April 30, 1990) (adopting Rule 144A under the Securities Act of 1933).

³¹ For a list of the current members and affiliate members of ISG, see www.isgportal.com. The Exchange notes that not all components of the Disclosed Portfolio for the Fund may trade on

NAV, within appropriate ranges, for each of the four previous calendar quarters. Additionally, information regarding market price and trading of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services, and quotation and last sale information for the Shares will be available on the facilities of the CTA. The Web site for the Fund will include a form of the prospectus for the Fund and additional data relating to NAV and other applicable quantitative information. Trading in Shares of the Fund will be halted under the conditions specified in BATS Rule 11.18. Trading may also be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. Finally, trading in the Shares will be subject to BATS Rule 14.11(i)(4)(B)(iv), which sets forth circumstances under which Shares of the Fund may be halted. In addition, the Exchange is able to access, as needed, trade information for certain fixed income instruments reported to FINRA's TRACE. As noted above, investors will also have ready access to information regarding the Fund's holdings, the Intraday Indicative Value, the Disclosed Portfolio, and quotation and last sale information for the Shares.

Intraday, closing, and settlement prices of common stocks and other exchange-listed instruments (including Depositary Receipts, preferred securities, convertible securities, common stock, and ETPs) will be readily available from the national securities exchanges trading such securities as well as automated quotation systems, published or other public sources, or online information services such as Bloomberg or Reuters. Intraday and closing price information for exchange-traded options and futures will be available from the applicable exchange and from major market data vendors. In addition, price information for U.S. exchange-traded options will be available from the Options Price Reporting Authority. Quotation information from brokers and dealers or pricing services will be available for Fixed Income Securities. Price information regarding spot currency transactions and OTC-traded derivative instruments, including options, swaps, and forward currency transactions, as well as non-exchange listed equity securities traded in the OTC market, including Restricted Securities, repurchase and reverse repurchase agreements, OTC equity securities, OTC-traded preferred securities, and OTC-

traded convertible securities, is available from major market data vendors.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of an additional type of actively-managed exchange-traded product that will enhance competition among market participants, to the benefit of investors and the marketplace. As noted above, the Exchange has in place surveillance procedures relating to trading in the Shares and may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered into a comprehensive surveillance sharing agreement. In addition, as noted above, investors will have ready access to information regarding the Fund's holdings, the Intraday Indicative Value, the Disclosed Portfolio, and quotation and last sale information for the Shares.

For the above reasons, the Exchange believes that the proposed rule change is consistent with the requirements of Section 6(b)(5) of the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The Exchange notes that the proposed rule change will facilitate the listing and trading of an additional actively-managed exchange-traded product that will enhance competition among market participants, to the benefit of investors and the marketplace.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BATS-2015-94 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BATS-2015-94. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BATS-2015-94 and should be submitted on or before February 5, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³⁴

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 35988]

East Penn Railroad, LLC—Lease Exemption Containing Interchange Commitment—Norfolk Southern Railway Company

East Penn Railroad, LLC (ESPN), a Class III rail carrier, has filed a verified notice of exemption under 49 CFR 1150.41 to lease from Norfolk Southern Railway Company (NSR) 1.8 miles of rail line located between milepost VE 0.00 and milepost VE 1.80 near Philadelphia, Pa. (the Line). ESPN will be the operator on the Line.

ESPN states that it will shortly enter into an agreement with NSR for the lease of the Line. As required by 49 CFR 1150.43(h), ESPN has disclosed in this notice that the lease agreement contains a provision that will enable ESPN to reduce its lease payments by receiving a credit for each car interchanged with NSR.¹ ESPN states that it requested the lease credit option in order to provide it with an opportunity to earn lower rental payment so that ESPN will be able to invest in improvements on the Line to increase traffic levels. The affected interchange point is West Falls Yard, Philadelphia, Pa.

ESPN has certified that its projected annual revenues as a result of the proposed transaction will not result in ESPN becoming a Class II or Class I rail carrier. ESPN has further certified that its projected annual rail freight revenues from operation of the Line, when combined with ESPN's projected revenues from current rail freight operations, would not exceed \$5 million.

ESPN states that it intends to consummate the transaction on or after January 29, 2016, the effective date of the exemption (30 days after the exemption was filed).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of

the exemption. Petitions for stay must be filed no later than January 22, 2016 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 35988, must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423-0001. In addition, a copy of each pleading must be served on Karl Morell, Karl Morell & Associates, Suite 225, 655 15th Street NW., Washington, DC 20005.

According to ESPN, this action is categorically excluded from environmental review under 49 CFR 1105.6(c).

Board decisions and notices are available on our Web site at www.stb.dot.gov.

Decided: January 12, 2016.

By the Board, Rachel D. Campbell,
Director, Office of Proceedings.

Jeffrey Herzig,
Clearance Clerk.

BILLING CODE 4915-01-P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 55 (Sub-No. 749X)]

CSX Transportation, Inc.—Discontinuance of Service Exemption—in Harnett County, NC

CSX Transportation, Inc. (CSXT) filed a verified notice of exemption under 49 CFR part 1152 subpart F—*Exempt Abandonments and Discontinuances of Service* to discontinue service over an approximately 0.34-mile rail line between mileposts SDS 56.66 and SDS 57.00 (the Line) on its Southern Region, Florence Division, South End Subdivision, in Harnett County, NC. The Line traverses United States Postal Service Zip Code 28334.

CSXT has certified that: (1) No local traffic has moved over the Line for at least two years; (2) there is no overhead traffic on the Line that would have to be rerouted over other lines; (3) no formal complaint filed by a user of rail service on the Line (or by a state or local government entity acting on behalf of such user) regarding cessation of service over the Line is pending either with the Surface Transportation Board or any U.S. District Court or has been decided in favor of a complainant within the two-year period; and (4) the requirements at 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the

discontinuance shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho*, 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) to subsidize continued rail service has been received, this exemption will become effective on February 17, 2016, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues and formal expressions of intent to file an OFA to subsidize continued rail service under 49 CFR 1152.27(c)(2)¹ must be filed by January 25, 2016.² Petitions to reopen must be filed by February 4, 2016, with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423-0001.

A copy of any petition filed with the Board should be sent to CSXT's representative: Louis E. Gitomer, Law Offices of Louis E. Gitomer, LLC, 600 Baltimore Ave., Suite 301, Towson, MD 21204.

If the verified notice contains false or misleading information, the exemption is void ab initio.

Board decisions and notices are available on our Web site at www.stb.dot.gov.

Decided: January 11, 2016.

By the Board, Rachel D. Campbell,
Director, Office of Proceedings.

Raina S. Contee,
Clearance Clerk.

BILLING CODE 4915-01-P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA-2015-0372]

Notice of Availability of a Draft Environmental Assessment for the City of El Paso, Texas, Commercial Zone Expansion

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

¹ Each OFA must be accompanied by the filing fee, which is currently set at \$1,600. See 49 CFR 1002.2(f)(25).

² Because this is a discontinuance proceeding and not an abandonment, interim trail use/rail banking and public use conditions are not appropriate. Because there will be an environmental review during abandonment, this discontinuance does not require an environmental review.

³⁴ 17 CFR 200.30-3(a)(12).

¹ ESPN has filed the lease agreement under seal pursuant to 49 CFR 1150.43(h)(1)(ii).

ACTION: Notice of availability; request for comments.

SUMMARY: FMCSA announces the availability of a draft Environmental Assessment (EA) prepared for the expansion of the City of El Paso, Texas, commercial zone. The EA was prepared in compliance with the National Environmental Policy Act of 1969 (NEPA); the Council on Environmental Quality Regulations; and FMCSA NEPA Order 5610.1 (NEPA Implementing Procedures and Policy for Considering Environmental Impacts). Interested persons are invited to comment on the draft EA.

DATES: Comments on the draft environmental assessment must be received on or before January 28, 2016.

ADDRESSES: You may submit comments bearing the Federal Docket Management System Docket ID [FMCSA–2015–0372] using any of the following methods:

Federal eRulemaking Portal: Go to <http://www.regulations.gov>. Follow the online instructions for submitting comments.

Mail: Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 0590–0001.

Hand Delivery or Courier: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays.

Fax: 1–202–493–2251.

Each submission must include the Agency name and the docket number for this notice. Note that DOT posts all comments received without change to www.regulations.gov, including any personal information included in a comment. Please see the Privacy Act heading below.

Docket: For access to the docket to read background documents or comments, go to www.regulations.gov at any time or visit Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The online Federal document management system is available 24 hours each day, 365 days each year. If you want acknowledgment that we received your comments, please include a self-addressed, stamped envelope or postcard or print the acknowledgement page that appears after submitting comments online.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these

comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at www.dot.gov/privacy.

FOR FURTHER INFORMATION CONTACT: Ms. Andrea Pahlevanpour, Environmental Program Analyst, Regulatory Evaluation Division, U.S. Department of Transportation, Federal Motor Carrier Safety Administration, 1200 New Jersey Ave SE., Washington, DC 20590–0001, Telephone number: 202–366–5370, andrea.pahlevanpour@dot.gov. If you have questions on viewing or submitting material to the docket, contact Docket Services, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

Background

The County of El Paso submitted a Presidential Permit application on April 14, 2003, to the U.S. Department of State for replacement of the Fabens-Caseta International Bridge (Fabens, Texas connecting Caseta, Chihuahua, Mexico) and port of entry. The Department of State, under its authority under Executive Order 11423, “Delegation of Functions to Secretary of State Respecting Certain Facilities Constructed and Maintained on United States Borders,” 33 FR 11741 (Aug. 16, 1968), for the construction, maintenance, and operation of U.S.-Mexico cross-border facilities, issued the Presidential Permit on March 16, 2005.

Presidential Permit 05–01 is titled “Authorizing the County of El Paso, Texas, to Construct, Operate, and Maintain an International Bridge, Its Approaches and Facilities, at the International Boundary Between the United States and Mexico.” This permit granted permission, subject to the conditions of the permit, to the County of El Paso, Texas, to construct, operate and maintain an international bridge. The permit noted that the name of the bridge was proposed as the “Tornillo-Guadalupe New International Bridge.” The bridge was to be constructed, “approximately 1,950 feet upstream” from the existing Fabens-Caseta International Bridge. The permit specified that, “[T]he proposed Tornillo International Bridge will facilitate passenger vehicles, commercial trucks, and pedestrian traffic.” In June 2011, the General Services Administration (GSA) announced the kick-off of construction of the new port facility, including a six-lane replacement bridge.

Construction is complete on the United States’ side of the crossing, and non-commercial passenger-vehicle

crossings are ongoing at this location. Northbound traffic is using the existing bridge, built in 1938 that is to be destroyed and replaced along with the port-of-entry facilities, with the traffic detoured to the new Tornillo inspection facilities. The construction of facilities, interchanges, and roads on the Mexican side of the border has been delayed but is expected to be completed in the near future.

The commercial zone of the City of El Paso, Texas (which had a population of 649,121 as of the 2010 census) is currently defined by the general provisions of 49 CFR Sections 372.239, 372.241 and 372.243. It includes the municipality of the City of El Paso, all municipalities contiguous to the City of El Paso, and all other municipalities and all unincorporated areas that are adjacent to the City of El Paso. It also includes “when the base municipality has a population of 500,000 but less than 1 million, all unincorporated areas within 15 miles of its corporate limits and all of any other municipality any part of which is within 15 miles of the corporate limits of the base municipality.” 49 CFR 372.241(c)(6). The unincorporated community of Tornillo, Texas, as well as the area near the location of the new Port of Entry, are more than 15 miles from the closest municipal boundary of the City of El Paso. Therefore, these areas are not included as part of the current City of El Paso, Texas commercial zone.

FMCSA will expand the City of El Paso, TX, commercial zone to include all unincorporated areas within 15 miles of the corporate boundaries of the City of San Elizario, TX. The City of San Elizario (located southeast of the City of El Paso) was incorporated on November 18, 2013 under the general laws of Texas and is thus included within the present commercial zone of the City of El Paso because it is within 15 miles of the boundary of the City of El Paso. By expanding the commercial zone to include those unincorporated areas within 15 miles of the boundaries of San Elizario, the new Tornillo-Guadalupe POE and the roads and highways providing access to the POE will be within the commercial zone of the City of El Paso, TX. Most motor carriers operating entirely in a border commercial zone such as at El Paso are not required to obtain operating authority to perform such transportation. But under 49 U.S.C. 13902(c) and 49 CFR part 368, Mexico-domiciled motor carriers of property must obtain a certificate of registration to operate in border commercial zones. Allowing all of these carriers to continue their operations at El Paso

necessitates ensuring that the new bridge and port of entry are in a commercial zone.

Environment

NEPA (42 U.S.C. 4371 *et seq.*) requires Federal agencies to integrate environmental values into their decision-making processes by requiring Federal agencies to consider the potential environmental impacts of their proposed actions. In accordance with NEPA, the Council on Environmental Quality's regulations implementing NEPA (40 CFR parts 1500–1508), FMCSA's NEPA Order 5610.1, NEPA Implementing Procedures and Policy for Considering Environmental Impacts, and other applicable requirements (March 1, 2004 (69 FR 9680)), FMCSA has prepared a draft EA to review the potential impacts of the expansion of the El Paso commercial zone. FMCSA concludes that the action of expanding the existing commercial zone will not impact endangered species, cultural resources protected under the National Historic Preservation Act, wetlands, and resources protected under Section 4(f) of the DOT Act of 1966 49 U.S.C. 303, as amended by Public Law 109–59 (Aug. 10, 2005). The impact areas that may be affected and were evaluated in the Draft EA include air quality, noise, socioeconomic, environmental justice, land use public health and safety, and hazardous materials. FMCSA anticipates that expanding the El Paso commercial zone will have certain minor impacts related principally to air emissions and land use from economic growth; however, neither of these impacts individually or collectively will cause significant impacts. In addition, the economic impact will have potentially beneficial impacts on the quality of life in terms of job creation. The Draft EA is available for inspection or copying in the Regulations.gov Web site at <http://www.regulations.gov>.

The draft EA also provides an analysis under the Clean Air Act, as amended (CAA), section 176(c) (42 U.S.C. 42 U.S.C. 7506(c)), and implementing regulations promulgated by the Environmental Protection Agency. None of the alternatives considered in the Draft EA are located in a nonattainment or maintenance area for any of the criteria pollutants; therefore, FMCSA has determined that it is not required to perform the CAA general conformity analysis.

Subject to public notice and comment, FMCSA anticipates issuing a Finding of No Significant Impact (FONSI) related to this action.

Issued pursuant to authority delegated in 49 CFR 1.87 on:

Issued on: January 7, 2016.
T.F. Scott Darling, III,
Acting Administrator.

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

[FTA Docket No. FTA–2015–0034]

Agency Information Collection Activity Under OMB Review

AGENCY: Federal Transit Administration, DOT.

ACTION: Notice of request for comments.

SUMMARY: The Federal Transit Administration invites public comment about its intention to request the Office of Management and Budget's (OMB) approval to renew the following information collection:

Bus Testing Program

The information to be collected for the Bus Testing Program is necessary to ensure that buses have been tested at the Bus Testing Center for maintainability, reliability, safety, performance (including breaking performance), structural integrity, fuel economy, emissions, and noise. Specifically, this notice invites comment on FTA's proposal to adopt new streamlined online procedures for accepting and reviewing applications for entry into the New Bus Model Testing Program. The **Federal Register** notice with a 60-day comment period soliciting comments for the Bus Testing Program was published on November 4, 2015 (Citation 80 FR 213). No comments were received from that notice.

DATES: Comments must be submitted before February 16, 2016. A comment to OMB is most effective, if OMB receives it within 30 days of publication.

FOR FURTHER INFORMATION CONTACT: Tia Swain, Office of Administration, Office of Management Planning, (202) 366–0354.

SUPPLEMENTARY INFORMATION:

Title: Bus Testing Program.

OMB Number: 2132–0550.

Abstract: The Bus Testing Program is a series of tests performed on new transit vehicles or existing vehicles that have been previously tested, but have undergone significant/major changes to their design. Bus Testing is required by law, for any model bus that will be purchased using federal funds. Before federal funds can be expended, the grantee certifies to FTA that the bus models being procured are compliant

with 49 CFR 665 *Bus Testing*. In turn, FTA grantees delegate the burden of demonstrating compliance to the bus manufacturers. The Bus Testing Program provides assistance to transit bus manufacturers with achieving compliance with the testing requirement. A variety of information is collected from bus manufacturers during the bus testing process.

Estimated Total Burden: 205 hours.

ADDRESSES: All written comments must refer to the docket number that appears at the top of this document and be submitted to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW., Washington, DC 20503, Attention: FTA Desk Officer.

Comments are Invited On: Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

William Hyre,

Deputy Associate Administrator for Administration.

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2015–0179]

Pipeline Safety: Information Collection Activities

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Notice and request for comments.

SUMMARY: On October 5, 2015, in accordance with the Paperwork Reduction Act of 1995, PHMSA published a notice in the **Federal Register** (80 FR 60242) inviting comments on information collections titled “Pipeline Integrity Management in High Consequence Areas Gas Transmission Pipeline Operators; Control Room Management/Human Factors; Integrity Management Program for Gas Distribution Pipelines, and

Response Plans for Onshore Oil Pipelines,” identified by Office of Management and Budget (OMB) control numbers 2137–0610, 2137–0624, 2137–0625, and 2137–0589. These information collections will expire on March 31, 2016. PHMSA will request an extension with no change for the information collections 2137–0610, 0624, and 0625. PHMSA will request a renewal with revisions to the information collection 2137–0589 to revise the number of respondents PHMSA expected to comply with this information collection.

During the 60-day comment period, PHMSA received no comments in response to these collections. PHMSA is publishing this notice to provide the public with an additional 30 days to comment on the renewal of these information collections and announce that these information collections will be submitted to OMB for approval.

DATES: Interested persons are invited to submit comments on or before February 16, 2016.

ADDRESSES: You may submit comments identified by the docket number PHMSA–2015–0009 by any of the following methods:

- *Fax:* 1–202–395–5806.

- *Mail:* Office of Information and Regulatory Affairs, Records Management Center, Room 10102 NEOB, 725 17th Street NW., Washington, DC 20503, ATTN: Desk Officer for the U.S. Department of Transportation/PHMSA.

- *Email:* Office of Information and Regulatory Affairs, Office of Management and Budget, at the following email address: *OIRA_Submission@omb.eop.gov*.

Requests for a copy of the Information Collection should be directed to Jenny Donohue by telephone at 202–366–4046 or by email at *jenny.donohue@dot.gov*.

FOR FURTHER INFORMATION CONTACT: Angela Dow by telephone at 202–366–1246 or by email at *angela.dow@dot.gov*.

SUPPLEMENTARY INFORMATION: Section 1320.8(d), Title 5, Code of Federal Regulations, requires PHMSA to provide interested members of the public and affected agencies an opportunity to comment on information collection and recordkeeping requests. This notice identifies several information collection requests that PHMSA will submit to OMB for renewal. The following information is provided for each information collection: (1) Title of the information collection; (2) OMB control number; (3) Current expiration date; (4) Type of request; (5) Abstract of the information collection activity; (6) Description of affected public; (7)

Estimate of total annual reporting and recordkeeping burden; and (8) Frequency of collection. PHMSA will request a three-year term of approval for each information collection activity. PHMSA requests comments on the following information collections:

1. *Title:* Pipeline Integrity Management in High Consequence Areas Gas Transmission Pipeline Operators.

OMB Control Number: 2137–0610.

Current Expiration Date: 3/31/2016.

Type of Request: Extension without change of a currently approved collection.

Abstract: The Federal Pipeline Safety Regulations in 49 CFR part 192, subpart O require operators of gas pipelines to develop and implement integrity management programs. The purpose of these programs is to enhance safety by identifying and reducing pipeline integrity risks. The regulations also require that operators maintain records demonstrating compliance with these requirements.

Affected Public: Gas transmission operators.

Annual Reporting and Recordkeeping Burden:

Estimated number of responses: 733.

Estimated annual burden hours: 1,018,807.

Frequency of collection: On occasion.

2. *Title:* Control Room Management/ Human Factors.

OMB Control Number: 2137–0624.

Current Expiration Date: 3/31/2016.

Type of Request: Extension without change of a currently approved collection.

Abstract: The Federal Pipeline Safety Regulations in 49 CFR parts 192 and 195 require operators of hazardous liquid pipelines and gas pipelines to develop and implement a human factors management plan designed to reduce risk associated with human factors in each pipeline control room and to maintain records demonstrating compliance with these requirements.

Affected Public: Private sector; Operators of both natural gas and hazardous liquid pipeline systems.

Annual Reporting and Recordkeeping Burden:

Estimated number of responses: 2,702.

Estimated annual burden hours: 127,328.

Frequency of Collection: On occasion.

3. *Title:* Pipeline Safety: Integrity Management Program for Gas Distribution Pipelines.

OMB Control Number: 2137–0625.

Current Expiration Date: 3/31/2016.

Type of Request: Extension without change of a currently approved collection.

Abstract: The Federal Pipeline Safety Regulations require operators of gas distribution pipelines to develop and implement integrity management programs. The purpose of these programs is to enhance safety by identifying and reducing pipeline integrity risks. The regulations require that operators maintain records demonstrating compliance with these requirements.

Affected Public: Operators of gas distribution pipeline systems.

Annual Reporting and Recordkeeping Burden:

Estimated number of responses: 9,343.

Estimated annual burden hours: 865,178.

Frequency of collection: On occasion.

4. *Title:* Response Plans for Onshore Oil Pipelines.

OMB Control Number: 2137–0589.

Current Expiration Date: 3/31/2016.

Type of Request: Revision of a currently approved information collection.

Abstract: The Oil Pipeline Response Plan regulations in 49 CFR part 194 require an operator of an onshore oil pipeline facility to prepare and submit an oil spill response plan to PHMSA for review and approval. This revision only updates the number of respondents to accurately reflect the current usage of this collection.

Affected Public: Operators of onshore oil pipeline facilities.

Estimated number of responses: 434.

Estimated annual burden hours: 59,458.

Frequency of collection: On occasion.

Comments are invited on:

(a) The need for the renewal and revision of these collections of information for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(d) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.48.

Issued in Washington, DC, on January 11, 2016, under authority delegated in 49 CFR 1.97.

John A. Gale,

Director, Office of Standards and Rulemaking.

[FR Doc. 2016-00626 Filed 1-14-16; 8:45 am]

BILLING CODE 4910-60-P

DEPARTMENT OF THE TREASURY

Departmental Offices; Debt Management Advisory Committee Meeting

Notice is hereby given, pursuant to 5 U.S.C. App. 2, 10(a)(2), that a meeting will be held at the Hay-Adams Hotel, 16th Street and Pennsylvania Avenue NW., Washington, DC, on February 2, 2016 at 11:30 a.m. of the following debt management advisory committee:

Treasury Borrowing Advisory Committee of The Securities Industry and Financial Markets Association.

The agenda for the meeting provides for a charge by the Secretary of the Treasury or his designate that the Committee discuss particular issues and conduct a working session. Following the working session, the Committee will present a written report of its recommendations. The meeting will be closed to the public, pursuant to 5 U.S.C. App. 2, 10(d) and Public Law 103-202, 202(c)(1)(B) (31 U.S.C. 3121 note).

This notice shall constitute my determination, pursuant to the authority placed in heads of agencies by 5 U.S.C. App. 2, 10(d) and vested in me by Treasury Department Order No. 101-05, that the meeting will consist of discussions and debates of the issues presented to the Committee by the Secretary of the Treasury and the making of recommendations of the Committee to the Secretary, pursuant to Public Law 103-202, 202(c)(1)(B). Thus, this information is exempt from disclosure under that provision and 5 U.S.C. 552b(c)(3)(B). In addition, the meeting is concerned with information that is exempt from disclosure under 5 U.S.C. 552b(c)(9)(A). The public interest requires that such meetings be closed to the public because the Treasury Department requires frank and full advice from representatives of the financial community prior to making its final decisions on major financing operations. Historically, this advice has been offered by debt management advisory committees established by the several major segments of the financial community. When so utilized, such a committee is recognized to be an

advisory committee under 5 U.S.C. App. 2, 3.

Although the Treasury's final announcement of financing plans may not reflect the recommendations provided in reports of the Committee, premature disclosure of the Committee's deliberations and reports would be likely to lead to significant financial speculation in the securities market. Thus, this meeting falls within the exemption covered by 5 U.S.C. 552b(c)(9)(A).

Treasury staff will provide a technical briefing to the press on the day before the Committee meeting, following the release of a statement of economic conditions and financing estimates. This briefing will give the press an opportunity to ask questions about financing projections. The day after the Committee meeting, Treasury will release the minutes of the meeting, any charts that were discussed at the meeting, and the Committee's report to the Secretary.

The Office of Debt Management is responsible for maintaining records of debt management advisory committee meetings and for providing annual reports setting forth a summary of Committee activities and such other matters as may be informative to the public consistent with the policy of 5 U.S.C. 552(b). The Designated Federal Officer or other responsible agency official who may be contacted for additional information is Fred Pietrangeli, Director for Office of Debt Management (202) 622-1876.

Dated: January 8, 2016.

James Clark,

Deputy Assistant Secretary for Federal Finance.

[FR Doc. 2016-00527 Filed 1-14-16; 8:45 am]

BILLING CODE 4810-25-M

UNITED STATES SENTENCING COMMISSION

Sentencing Guidelines for United States Courts

AGENCY: United States Sentencing Commission.

ACTION: Notice of proposed amendments to sentencing guidelines, policy statements, and commentary. Request for public comment, including public comment regarding retroactive application of any of the proposed amendments; public hearing.

SUMMARY: Pursuant to section 994(a), (o), and (p) of title 28, United States Code, the United States Sentencing Commission is considering promulgating certain amendments to the

sentencing guidelines, policy statements, and commentary. This notice sets forth the proposed amendments and, for each proposed amendment, a synopsis of the issues addressed by that amendment. This notice also sets forth a number of issues for comment, some of which are set forth together with the proposed amendments, and one of which (regarding retroactive application of proposed amendments) is set forth in the **SUPPLEMENTARY INFORMATION** portion of this notice.

The proposed amendments and issues for comment in this notice are as follows:

(1) A multi-part proposed amendment to the *Guidelines Manual* to respond to recently enacted legislation and miscellaneous guideline issues, including (A) revisions to Appendix A (Statutory Index) to respond to new offenses established by the Uniting and Strengthening America by Fulfilling Rights and Ensuring Effective Discipline Over Monitoring Act (USA FREEDOM Act) of 2015, Public Law 114-23 (June 2, 2015), and related issues for comment; (B) revisions to Appendix A (Statutory Index) to respond to changes made by the Bipartisan Budget Act of 2015, Public Law 114-74 (Nov. 2, 2015), to existing criminal statutes, and related issues for comment; (C) a revision to Appendix A (Statutory Index) to reference offenses under 18 U.S.C. 1715 (Firearms as nonmailable items) to § 2K2.1 (Unlawful Receipt, Possession, or Transportation of Firearms or Ammunition; Prohibited Transactions Involving Firearms or Ammunition) and a revision to § 2K2.1 to establish a base offense level for such offenses, and a related issue for comment; and (D) a technical amendment to the Background Commentary to § 2T1.6 (Failing to Collect or Truthfully Account for and Pay Over Tax);

(2) a two-part proposed amendment to the policy statement pertaining to "compassionate release," § 1B1.13 (Reduction in Term of Imprisonment as a Result of Motion by Director of Bureau of Prisons), including (A) a detailed request for comment on whether any changes should be made to the policy statement and (B) a proposed amendment illustrating one possible set of changes to the policy statement, *i.e.*, to reflect the criteria set forth in the program statement used by the Bureau of Prisons;

(3) a proposed amendment to §§ 5B1.3 (Conditions of Probation) and 5D1.3 (Conditions of Supervised Release) to revise, clarify, and rearrange the provisions in the *Guidelines Manual* on

conditions of probation and supervised release, and related issues for comment;

(4) a proposed amendment to § 2E3.1 (Gambling; Animal Fighting Offenses) to provide higher penalties for animal fighting offenses and to respond to two new offenses relating to attending an animal fighting venture that were established by section 12308 of the Agricultural Act of 2014, Public Law 113–79 (Feb. 7, 2014), and related issues for comment;

(5) a proposed amendment to the child pornography guidelines, §§ 2G2.1 (Sexually Exploiting a Minor by Production of Sexually Explicit Visual or Printed Material; Custodian Permitting Minor to Engage in Sexually Explicit Conduct; Advertisement for Minors to Engage in Production), 2G2.2 (Trafficking in Material Involving the Sexual Exploitation of a Minor; Receiving, Transporting, Shipping, Soliciting, or Advertising Material Involving the Sexual Exploitation of a Minor; Possessing Material Involving the Sexual Exploitation of a Minor with Intent to Traffic; Possessing Material Involving the Sexual Exploitation of a Minor), and 2G2.6 (Child Exploitation Enterprises), to address circuit conflicts and application issues that have arisen when applying these guidelines, including issues in (A) application of the vulnerable victim adjustment when the offense involves minors who are unusually young and vulnerable (such as infants or toddlers) and (B) application of the tiered distribution enhancement and, in particular, determining the appropriate tier of enhancement to apply when the offense involves a peer-to-peer file-sharing program or network, and related issues for comment; and

(6) a multi-part proposed amendment to the guidelines for immigration offenses, including (A) revisions to § 2L1.1 (Smuggling, Transporting, or Harboring an Unlawful Alien) to provide options for raising the base offense level for alien smuggling offenses and address offenses involving unaccompanied minors in alien smuggling offenses, and a related issue for comment, and (B) revisions to § 2L1.2 (Unlawfully Entering or Remaining in the United States) to (i) generally reduce the use of the “categorical approach” in applying the guidelines by measuring the seriousness of a defendant’s prior conviction by the length of the sentence imposed on the prior conviction rather than by the type of offense (e.g., “crime of violence”); (ii) provide higher alternative base offense levels for defendants who have one or more prior convictions for illegal reentry offenses; (iii) provide a new

tiered enhancement for defendants who engage in criminal conduct after reentering the United States; (iv) correspondingly reduce the existing tiered enhancement at subsection (b)(1) for defendants who had one or more prior convictions before being deported; and (v) related issues for comment.

DATES: (1) Written Public Comment.—Written public comment regarding the proposed amendments and issues for comment set forth in this notice, including public comment regarding retroactive application of any of the proposed amendments, should be received by the Commission not later than March 21, 2016.

(2) Public Hearings.—The Commission plans to hold public hearings regarding the proposed amendments and issues for comment set forth in this notice on February 17, 2016, and March 16, 2016. Further information regarding the public hearings, including requirements for testifying and providing written testimony, as well as the location, time, and scope of the hearings, will be provided by the Commission on its Web site at www.ussc.gov.

ADDRESSES: Public comment should be sent to the Commission by electronic mail or regular mail. The email address for public comment is PublicComment@ussc.gov. The regular mail address for public comment is United States Sentencing Commission, One Columbus Circle NE., Suite 2–500, Washington, DC 20002–8002, Attention: Public Affairs.

FOR FURTHER INFORMATION CONTACT: Matt Osterrieder, Legislative Specialist, (202) 502–4500, pubaffairs@ussc.gov.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent agency in the judicial branch of the United States Government. The Commission promulgates sentencing guidelines and policy statements for federal courts pursuant to 28 U.S.C. 994(a). The Commission also periodically reviews and revises previously promulgated guidelines pursuant to 28 U.S.C. 994(o) and submits guideline amendments to the Congress not later than the first day of May each year pursuant to 28 U.S.C. 994(p).

The proposed amendments in this notice are presented in one of two formats. First, some of the amendments are proposed as specific revisions to a guideline or commentary. Bracketed text within a proposed amendment indicates a heightened interest on the Commission’s part in comment and suggestions regarding alternative policy choices; for example, a proposed

enhancement of [2][4][6] levels indicates that the Commission is considering, and invites comment on, alternative policy choices regarding the appropriate level of enhancement. Similarly, bracketed text within a specific offense characteristic or application note means that the Commission specifically invites comment on whether the proposed provision is appropriate. Second, the Commission has highlighted certain issues for comment and invites suggestions on how the Commission should respond to those issues.

The Commission requests public comment regarding whether, pursuant to 18 U.S.C. 3582(c)(2) and 28 U.S.C. 994(u), any proposed amendment published in this notice should be included in subsection (d) of § 1B1.10 (Reduction in Term of Imprisonment as a Result of Amended Guideline Range (Policy Statement)) as an amendment that may be applied retroactively to previously sentenced defendants. The Commission lists in § 1B1.10(d) the specific guideline amendments that the court may apply retroactively under 18 U.S.C. 3582(c)(2). The background commentary to § 1B1.10 lists the purpose of the amendment, the magnitude of the change in the guideline range made by the amendment, and the difficulty of applying the amendment retroactively to determine an amended guideline range under § 1B1.10(b) as among the factors the Commission considers in selecting the amendments included in § 1B1.10(d). To the extent practicable, public comment should address each of these factors.

Publication of a proposed amendment requires the affirmative vote of at least three voting members and is deemed to be a request for public comment on the proposed amendment. See Rules 2.2 and 4.4 of the Commission’s Rules of Practice and Procedure. In contrast, the affirmative vote of at least four voting members is required to promulgate an amendment and submit it to Congress. See Rule 2.2; 28 U.S.C. 994(p).

Additional information pertaining to the proposed amendments described in this notice may be accessed through the Commission’s Web site at www.ussc.gov

Authority: 28 U.S.C. 994(a), (o), (p), (x); USSC Rules of Practice and Procedure, Rule 4.4.

Patti B. Saris,
Chair.

1. Miscellaneous

Synopsis of Proposed Amendment: This proposed amendment responds to recently enacted legislation and miscellaneous guideline issues.

A. USA FREEDOM Act of 2015

Part A of the proposed amendment responds to the Uniting and Strengthening America by Fulfilling Rights and Ensuring Effective Discipline Over Monitoring Act (USA FREEDOM Act) of 2015, Pub. L. 114–23 (June 2, 2015), which, among other things, set forth changes to statutes related to maritime navigation and provided new and expanded criminal offenses to implement certain provisions in international conventions relating to maritime and nuclear terrorism. The Act also added these new offenses to the list of offenses specifically enumerated at 18 U.S.C. 2332b(g)(5) as federal crimes of terrorism.

The USA FREEDOM Act created a new criminal offense at 18 U.S.C. 2280a (Violence against maritime navigation and maritime transport involving weapons of mass destruction) to prohibit certain terrorism acts and threats against maritime navigation committed in a manner that causes or is likely to cause death, serious injury, or damage, when the purpose of the conduct is to intimidate a population or to compel a government or international organization to do or abstain from doing any act. The prohibited acts include (i) the use against or on a ship, or discharge from a ship, of any explosive or radioactive material, biological, chemical, or nuclear weapon or other nuclear explosive device; (ii) the discharge from a ship of oil, liquefied natural gas, or other hazardous or noxious substance; (iii) any use of a ship that causes death or serious injury or damage; and (iv) the transportation aboard a ship of any explosive or radioactive material. Section 2280a also prohibits the transportation on board a ship of any biological, chemical or nuclear weapon or other nuclear explosive device, and any components, delivery means, or materials for a nuclear weapon or other nuclear explosive device, under specified circumstances, but this conduct does not contain a mens rea requirement. Further, section 2280a prohibits the transportation onboard a ship of a person who committed an offense under section 2280 or 2280a, with the intent of assisting that person evade criminal prosecution. The penalties for violations of section 2280a are a fine, imprisonment for no more than 20 years, or both, or, if the death of a person results, imprisonment for any term of years or life. Section 2280a also prohibits threats to commit the offenses not related to transportation on board a ship and provides a penalty of imprisonment of up to five years.

Part A of the proposed amendment addresses these new offenses at section 2280a by referencing them in Appendix A (Statutory Index) to the following Chapter Two guidelines: §§ 2A1.1 (First Degree Murder); 2A1.2 (Second Degree Murder); 2A1.3 (Voluntary Manslaughter); 2A1.4 (Involuntary Manslaughter); 2A2.1 (Assault with Intent to Commit Murder; Attempted Murder); 2A2.2 (Aggravated Assault); 2A2.3 (Assault); 2A6.1 (Threatening or Harassing Communications); 2B1.1 (Fraud); 2B3.2 (Extortion); 2K1.3 (Unlawful Receipt, Possession, or Transportation of Explosive Materials; Prohibited Transactions Involving Explosive Materials); 2K1.4 (Arson); 2M5.2 (Exportation of Arms, Munitions, or Military Equipment or Services Without Required Validated Export License); 2M5.3 (Providing Material Support or Resources to Designated Foreign Terrorist Organizations or Specially Designated Global Terrorists, or For a Terrorist Purpose); 2M6.1 (Nuclear, Biological, and Chemical Weapons, and Other Weapons of Mass Destruction); 2Q1.1 (Knowing Endangerment Resulting From Mishandling Hazardous or Toxic Substances, Pesticides or Other Pollutants); 2Q1.2 (Mishandling of Hazardous or Toxic Substances or Pesticides); 2X1.1 (Conspiracy); 2X2.1 (Aiding and Abetting); and 2X3.1 (Accessory After the Fact).

The USA FREEDOM Act also created a new criminal offense at 18 U.S.C. § 2281a (Additional offenses against maritime fixed platforms) to prohibit certain maritime terrorism acts that occur either on a fixed platform or to a fixed platform committed in a manner that may cause death, serious injury, or damage, when the purpose of the conduct is to intimidate a population or to compel a government or international organization to do or abstain from doing any act. Section 2281a prohibits specific conduct, including (i) the use against or discharge from a fixed platform, of any explosive or radioactive material, or biological, chemical, or nuclear weapon and (ii) the discharge from a fixed platform of oil, liquefied natural gas, or another hazardous or noxious substance. The penalties for violations of section 2281a are a fine, imprisonment for no more than 20 years, or both, or, if the death of a person results, imprisonment for any term of years or life. Section 2281a also prohibits threats to commit the offenses related to acts on or against fixed platforms and provides a penalty of imprisonment of up to five years.

Part A of the proposed amendment amends Appendix A (Statutory Index)

so the new offenses at 18 U.S.C. 2281a are referenced to §§ 2A1.1, 2A1.2, 2A1.3, 2A1.4, 2A2.1, 2A2.2, 2A2.3, 2A6.1, 2B1.1, 2B3.2, 2K1.4, 2M6.1, 2Q1.1, 2Q1.2, and 2X1.1.

In addition, the USA FREEDOM Act created a new criminal offense at 18 U.S.C. 2332i that prohibits (i) the possession or production of radioactive material or a device with the intent to cause death or serious bodily injury or to cause substantial damage to property or the environment; and (ii) the use of a radioactive material or a device, or the use, damage, or interference with the operation of a nuclear facility that causes the release of radioactive material, radioactive contamination, or exposure to radiation with the intent (or knowledge that such act is likely) to cause death or serious bodily injury or substantial damage to property or the environment, or with the intent to compel a person, international organization or country to do or refrain from doing an act. Section 2332i also prohibits threats to commit any such acts. The penalties for violations of section 2332i are a fine for not more than \$2,000,000 and imprisonment for any term of years or life.

Part A of the proposed amendment amends Appendix A (Statutory Index) to reference the new offenses at 18 U.S.C. 2332i to §§ 2A6.1, 2K1.4, 2M2.1 (Destruction of, or Production of Defective, War Material, Premises, or Utilities), 2M2.3 (Destruction of, or Production of Defective, National Defense Material, Premises, or Utilities), and 2M6.1.

Finally, Part A makes clerical changes to Application Note 1 to § 2M6.1 (Nuclear, Biological, and Chemical Weapons, and Other Weapons of Mass Destruction) to reflect the redesignation of a section in the United States Code by the USA FREEDOM Act.

Part A of the proposed amendment also sets forth two issues for comment.

B. Bipartisan Budget Act of 2015

Part B of the proposed amendment responds to the Bipartisan Budget Act of 2015, Pub. L. 114–74 (Nov. 2, 2015), which, among other things, amended three existing criminal statutes concerned with fraudulent claims under certain Social Security programs.

The three criminal statutes amended by the Bipartisan Budget Act of 2015 are sections 208 (Penalties [for fraud involving the Federal Old-Age and Survivors Insurance Trust Fund]), 811 (Penalties for fraud [involving special benefits for certain World War II veterans]), and 1632 (Penalties for fraud [involving supplemental security income for the aged, blind, and

disabled]) of the Social Security Act (42 U.S.C. 408, 1011, and 1383a, respectively). The three amended statutes are currently referenced in Appendix A (Statutory Index) of the *Guidelines Manual* to § 2B1.1 (Theft, Property Destruction, and Fraud). The Act added new subdivisions criminalizing conspiracy to commit fraud for selected offense conduct already in the three statutes. For each of the three statutes, the new subdivision provides that whoever “conspires to commit any offense described in any of [the] paragraphs” enumerated shall be imprisoned for not more than five years, the same statutory maximum penalty applicable to the substantive offense.

Part B amends Appendix A (Statutory Index) so that sections 408, 1011, and 1383a of Title 42 are referenced not only to § 2B1.1 but also to § 2X1.1 (Attempt, Solicitation, or Conspiracy (Not Covered by a Specific Office Guideline)).

Part B of the proposed amendment also includes issues for comment.

C. 18 U.S.C. 1715 (Firearms as Nonmailable Items)

Section 1715 of title 18, United States Code (Firearms as nonmailable items), makes it unlawful to deposit for mailing or delivery by the mails pistols, revolvers, and other firearms capable of being concealed on the person and declared nonmailable (as prescribed by Postal Service regulations). For any violation of section 1715, the statutory maximum term of imprisonment is two years. The current *Guidelines Manual* does not provide a guideline reference in Appendix A for offenses under section 1715.

The Department of Justice in its annual letter to the Commission has proposed that section 1715 offenses should be assigned a guideline reference, base offense level, and appropriate specific offense characteristics. The Department indicates that in recent years the United States Attorney’s Office for the Virgin Islands has brought several cases charging section 1715, where firearms were illegally brought onto the islands by simply mailing them from mainland United States.

Part C of the proposed amendment amends Appendix A (Statutory Index) to reference offenses under section 1715 to § 2K2.1 (Unlawful Receipt, Possession, or Transportation of Firearms or Ammunition; Prohibited Transactions Involving Firearms or Ammunition). It also adds 18 U.S.C. 1715 to subsection (a)(8) of § 2K2.1, establishing a base offense level of 6 for such offenses.

Part C of the proposed amendment also includes an issue for comment regarding section 1715 offenses and whether other changes to the guidelines are appropriate to address these offenses.

D. Technical Amendment to § 2T1.6

The Internal Revenue Code (Title 26, United States Code) requires employers to withhold from their employees’ paychecks money representing the employees’ personal income and Social Security taxes. The Code directs the employer to collect taxes as wages are paid, but only requires a periodic payment of such taxes to the IRS. If an employer willfully fails to collect, truthfully account for, or pay over such taxes, 26 U.S.C. 7202 provides both civil and criminal remedies. Section 7202 provides as criminal penalty a term of imprisonment with a statutory maximum of five years.

Section 7202 is referenced in Appendix A (Statutory Index) to § 2T1.6 (Failing to Collect or Truthfully Account for and Pay Over Tax). The Background commentary to § 2T1.6 states that “[t]he offense is a felony that is infrequently prosecuted.” The Department of Justice in its annual letter to the Commission has proposed that the “infrequently prosecuted” statement should be deleted. The Department points out that while that statement may have been accurate when the relevant commentary was originally written (in 1987), the number of prosecutions under section 7202 have since increased substantially. The use of § 2T1.6 increased from three cases in 2002 to 46 cases in 2014. See United States Sentencing Commission, Use of Guidelines and Specific Offense Characteristics: Guideline Calculation Based (Fiscal Year 2002), at <http://www.ussc.gov/research-and-publications/federal-sentencing-statistics/guideline-application-frequencies/guideline-application-frequencies-2002>; United States Sentencing Commission, Use of Guidelines and Specific Offense Characteristics: Guideline Calculation Based (Fiscal Year 2014), at http://www.ussc.gov/sites/default/files/pdf/research-and-publications/federal-sentencing-statistics/guideline-application-frequencies/2014/Use_of_SOC_Guideline_Based.pdf.

Part D of the proposed amendment amends the Background Commentary to § 2T6.1 to delete the sentence that states “The offense is a felony that is infrequently prosecuted.”

Proposed Amendment:

(A) USA FREEDOM Act of 2015

The Commentary to § 2M6.1 captioned “Application Notes” is amended in Note 1 by striking “831(f)(2)” and inserting “831(g)(2)”, and by striking “831(f)(1)” and inserting “831(g)(1)”.

Appendix A (Statutory Index) is amended by inserting after the line referenced to 18 U.S.C. § 2280 the following:

“18 U.S.C. § 2280a 2A1.1, 2A1.2, 2A1.3, 2A1.4, 2A2.1, 2A2.2, 2A2.3, 2A6.1, 2B1.1, 2B3.2, 2K1.3, 2K1.4, 2M5.2, 2M5.3, 2M6.1, 2Q1.1, 2Q1.2, 2X1.1, 2X2.1, 2X3.1”;

by inserting after the line referenced to 18 U.S.C. § 2281 the following:

“18 U.S.C. 2281a 2A1.1, 2A1.2, 2A1.3, 2A1.4, 2A2.1, 2A2.2, 2A2.3, 2A6.1, 2B1.1, 2B3.2, 2K1.4, 2M6.1, 2Q1.1, 2Q1.2, 2X1.1”;

and by inserting after the line referenced to 18 U.S.C. 2332h the following:

“18 U.S.C. 2332i 2A6.1, 2K1.4, 2M2.1, 2M2.3, 2M6.1”.

Issues for Comment:

1. The USA FREEDOM Act was enacted as a reauthorization of the USA PATRIOT Act, Pub. L. 107–56 (October 26, 2001), relating to the collection of telephone metadata by various national security agencies. Title VII of the Act also amended four existing criminal statutes and created three new criminal statutes to implement certain provisions in international conventions relating to maritime and nuclear terrorism. One of the existing criminal statutes amended by the USA FREEDOM Act was 18 U.S.C. 2280. Although the Act did not amend the substantive offense conduct in section 2280, it added 19 new definitions and terms to the statute and made them applicable to other criminal statutes, including the new offenses created by the Act.

The Commission seeks comment on whether the guidelines should be amended to address the changes made by the USA FREEDOM Act. Are the existing provisions in the guidelines adequate to address the changes to existing criminal statutes and the new offenses created by the Act? If not, how should the Commission amend the guidelines to address them?

2. The proposed amendment would reference the offenses under 18 U.S.C. 2280a, 18 U.S.C. 2281a, and 18 U.S.C. 2332i to various guidelines. The Commission invites comment on offenses under these new statutes, including in particular the conduct involved in such offenses and the nature

and seriousness of the harms posed by such offenses. Do the guidelines covered by the proposed amendment adequately account for these offenses? If not, what revisions to the guidelines would be appropriate to account for these offenses? In particular, should the Commission provide one or more new alternative base offense levels, specific offense characteristics, or departure provisions in one or more of these guidelines to better account for these offenses? If so, what should the Commission provide?

In addition, the Commission seeks comment on whether the Commission should reference these new offenses to other guidelines instead of, or in addition to, the guidelines covered by the proposed amendment. Alternatively, should the Commission defer action in response to these new offenses this amendment cycle, undertake a broader review of the guidelines pertaining to offenses involving terrorism and weapons of mass destruction, and include responding to the new offenses as part of that broader review?

(B) Bipartisan Budget Act of 2015

Appendix A (Statutory Index) is amended in each of the lines referenced to 42 U.S.C. 408, 1011, and 1383a(a) by inserting “, 2X1.1” at the end.

Issues for Comment:

1. Part B of the proposed amendment would reference the new conspiracy offenses under 42 U.S.C. 408, 1011, and 1383a to § 2X1.1 (Attempt, Solicitation, or Conspiracy (Not Covered by a Specific Office Guideline)). The Commission invites comment on whether the guidelines covered by the proposed amendment adequately account for these offenses. If not, what revisions to the guidelines would be appropriate to account for these offenses?

2. In addition to the amendments to the criminal statutes described above, the Bipartisan Budget Act of 2015 also amended sections 408, 1011, and 1383a of Title 42 to add increased penalties for certain persons who commit fraud offenses under the relevant social security programs. The Act included a provision in all three statutes identifying such persons as:

a person who receives a fee or other income for services performed in connection with any determination with respect to benefits under this title (including a claimant representative, translator, or current or former employee of the Social Security Administration), or who is a physician or other health care provider who submits, or causes the submission of,

medical or other evidence in connection with any such determination

In light of this new provision, a person who meets this criteria and is convicted of a fraud offense under one of the three amended statutes may be imprisoned for not more than ten years, double the otherwise applicable five-year penalty for other offenders. The new increased penalties apply to all of the fraudulent conduct in subsection (a) of the three statutes.

The Commission seeks comment on whether the guidelines should be amended to address cases involving defendants convicted of a fraud offense under one of the three amended statutes and who meet this new criteria set forth by the Bipartisan Budget Act of 2015. Are the existing provisions in the guidelines, such as the provisions at § 2B1.1 and the Chapter Three adjustment at § 3B1.3 (Abuse of Position of Trust or Use of Special Skill), adequate to address these cases? If not, how should the Commission amend the guidelines to address them?

(C) 18 U.S.C. 1715 (Firearms as Non-mailable Items)

Section 2K2.1 is amended in subsection (a)(8) by inserting “, or § 1715” before the period at the end.

The Commentary to § 2K2.1 captioned “Statutory Provisions” is amended by inserting after “(k)–(o),” the following: “1715,”.

Appendix A (Statutory Index) is amended by inserting after the line referenced to 18 U.S.C. 1712 the following:

“18 U.S.C. 1715 2K2.1”.

Issue for Comment:

1. Part C of the proposed amendment would reference offenses under 18 U.S.C. 1715 to § 2K2.1. The Commission invites comment on offenses under section 1715, including in particular the conduct involved in such offenses and the nature and seriousness of the harms posed by such offenses. What guideline or guidelines are appropriate for these offenses? Does § 2K2.1 adequately account for these offenses? To the extent the Commission does provide a reference to one or more guidelines, what revisions, if any, to those guidelines would be appropriate to account for offenses under section 1715?

(D) Technical Amendment to § 2T1.6

The Commentary to § 2T1.6 captioned “Background” is amended by striking “The offense is a felony that is infrequently prosecuted.”.

2. Compassionate Release

Synopsis of Proposed Amendment: In August 2015, the Commission indicated that one of its policy priorities would be “possible consideration of amending the policy statement pertaining to ‘compassionate release,’ § 1B1.13 (Reduction in Term of Imprisonment as a Result of Motion by Director of Bureau of Prisons).” See United States Sentencing Commission, “Notice of Final Priorities,” 80 FR 48957 (Aug. 14, 2015). The Commission is publishing this proposed amendment to inform the Commission’s consideration of the issues related to this policy priority.

The proposed amendment contains two parts. Part A sets forth a detailed request for comment on whether any changes should be made to the Commission’s policy statement at § 1B1.13 (Reduction in Term of Imprisonment as a Result of Motion by Director of Bureau of Prisons). Part B illustrates one possible set of changes to the policy statement at § 1B1.13.

(A) Request for Public Comment on Whether Any Changes Should Be Made to the Commission’s Policy Statement at § 1B1.13 (Reduction in Term of Imprisonment as a Result of Motion by Director of Bureau of Prisons)

Issue for Comment:

1. *Statutory Provisions Related to Compassionate Release.* Section 3582(c)(1)(A) of title 18, United States Code, authorizes a federal court, upon motion of the Director of the Bureau of Prisons, to reduce the term of imprisonment of a defendant in certain circumstances, *i.e.*, if “extraordinary and compelling reasons” warrant such a reduction or the defendant is at least 70 years of age and meets certain other criteria. Such a reduction must be consistent with applicable policy statements issued by the Sentencing Commission. See 18 U.S.C. 3582(c)(1); *see also* 28 U.S.C. 994(t) (stating that the Commission, in promulgating any such policy statements, “shall describe what should be considered extraordinary and compelling reasons for sentence reduction, including the criteria to be applied and a list of specific examples”).

Policy Statement at § 1B1.13. The Commission’s policy statement, § 1B1.13 (Reduction in Term of Imprisonment as a Result of Motion by Director of Bureau of Prisons), provides that “extraordinary and compelling reasons” exist if (1) the defendant is suffering from a terminal illness; (2) the defendant is suffering from certain permanent physical or medical conditions, or experiencing

deteriorating physical or mental health because of the aging process; or (3) the defendant has a minor child and the defendant's only family member capable of caring for the child has died or is incapacitated. See § 1B1.13, comment. (n.1(A)(i)–(iii)). In addition, the policy statement provides that extraordinary and compelling reasons exist if, as determined by the Director of the Bureau of Prisons, there exists in the defendant's case an extraordinary and compelling reason other than, or in combination with, the reasons described above. See § 1B1.13, comment. (n.1(A)(iv)). The policy statement was last amended in 2007 to provide the current criteria to be applied and a list of the specific circumstances which constitute “extraordinary and compelling reasons” for compassionate release consideration.

Bureau of Prisons Program Statement on Compassionate Release. On August 12, 2013, the Bureau of Prisons issued a new program statement, 5050.49, that changes how the Bureau implements section 3582(c)(1)(A). Among other things, the new program statement expands and details the range of circumstances that the Bureau may consider “extraordinary and compelling reasons” warranting such a reduction. Under the program statement, a sentence reduction may be based on the defendant's medical circumstances (e.g., a terminal or debilitating medical condition; see 5050.49(3)(a)–(b)) or on certain non-medical circumstances (e.g., an elderly defendant, the death or incapacitation of the family member caregiver, or the incapacitation of the defendant's spouse or registered partner; see 5050.49(4), (5), (6)).

Report of the Department of Justice's Office of the Inspector General. In May 2015, the Department of Justice's Office of the Inspector General (OIG) released a report on the Bureau of Prisons' implementation of the compassionate release program provisions related to elderly inmates. See U.S. Department of Justice, Office of the Inspector General, *The Impact of the Aging Inmate Population on the Federal Bureau of Prisons*, E–15–05 (May 2015), available at <https://oig.justice.gov/reports/2015/e1505.pdf>. The report found that while aging inmates (age 50 years or older) make up a disproportionate share of the inmate population, are more costly to incarcerate (primarily due to medical needs), engage in less misconduct while in prison, and have a lower rate of re-arrest once released than their younger counterparts, “BOP policies limit the number of aging inmates who can be considered for early release and, as a result, few are actually released early.”

In addition, the report found that the eligibility requirements for both medical and non-medical provisions as applied to inmates 65 years or older are “unclear” and “confusing.”

In light of its review, the OIG recommended that the Bureau of Prisons should consider revising its compassionate release program to facilitate the release of appropriate elderly inmates. The report provided the following specific recommendations, among others: (1) Revising the inmate age provisions to define an aging inmate as age 50 or above; and (2) revising the time-served provision for those inmates 65 and older without medical conditions to remove the requirement that they serve 10 years, and require only that they serve 75 percent of their sentence. In April 2015, the Bureau of Prisons responded to a draft of the OIG report and concurred with each of the recommendations made by the OIG.

Issue for Comment. The Commission seeks comment whether any changes should be made to the Commission's policy statement at § 1B1.13 (Reduction in Term of Imprisonment as a Result of Motion by Director of Bureau of Prisons). Should the Commission amend the current policy statement describing what constitutes “extraordinary and compelling reasons” and, if so, how?

Should the list of extraordinary and compelling reasons in the *Guidelines Manual* closely track the criteria set forth by the Bureau of Prisons in its program statement? Should the Commission develop further criteria and examples of what circumstances constitute “extraordinary and compelling reasons”? If so, what specific criteria and examples should the Commission provide? Should the Commission further define and expand the medical and non-medical criteria provided in the Bureau's program statement?

In addition, the Commission seeks comment on how, if at all, the policy statement at § 1B1.13 should be revised to address the recommendations in the OIG report. Should the Commission adopt the recommendations in the OIG report as part of its revision of the policy statement at § 1B1.13? Should the Commission expand upon these recommendations to revise the Bureau's requirements that limit the availability of compassionate release for aging inmates? Alternatively, should the Commission defer action on this issue during this amendment cycle to consider any possible changes that the Bureau of Prisons might promulgate to its compassionate release program statement in response to the OIG report?

Finally, the Commission adopted the policy statement at § 1B1.13 to implement the directive in 28 U.S.C. 994(t). As noted above, the directive requires the Commission to “describe what should be considered extraordinary and compelling reasons for sentence reduction, including the criteria to be applied and a list of specific examples.” The Commission also has authority to promulgate general policy statements regarding application of the guidelines or other aspects of sentencing that in the view of the Commission would further the purposes of sentencing (18 U.S.C. 3553(a)(2)), including, among other things, the appropriate use of the sentence modification provisions set forth in 18 U.S.C. 3582(c). See 28 U.S.C. 994(a)(2)(C). Under this general authority, should the Commission further develop the policy statement at § 1B1.13 to provide additional guidance or limitations regarding the circumstance in which sentences may be reduced as a result of a motion by the Director of the Bureau of Prisons? If so, what should the specific guidance or limitations be? For example, should the Commission provide that the Director of the Bureau of Prisons should not withhold a motion under 18 U.S.C. 3582(c)(1)(A) if the defendant meets any of the circumstances listed as “extraordinary and compelling reasons” in § 1B1.13?

(B) Proposed Amendment

Synopsis of Proposed Amendment: This part of the proposed amendment illustrates one possible set of changes to the Commission's policy statement at § 1B1.13. The proposed amendment would revise the list of “extraordinary and compelling reasons” for compassionate release consideration in the Commentary to § 1B1.13 to reflect the criteria set forth in the Bureau of Prisons' program statement. The language used in this part parallels the language in the Bureau's program statement.

Proposed Amendment:

The Commentary to § 1B1.13 captioned “Application Notes” is amended in Note 1(A) by striking “following circumstances” and inserting “circumstances set forth below”; by redesignating clause (iv) as clause (viii); by striking clauses (i) through (iii) and inserting the following:

- “(i) The defendant (I) has been diagnosed with a terminal, incurable disease; and (II) has a life expectancy of 18 months or less.
- (ii) The defendant has an incurable, progressive illness.

(iii) The defendant has suffered a debilitating injury from which he or she will not recover.

(iv) The defendant meets the following criteria—

(I) the defendant is at least 65 years old;

(II) the defendant has served at least 50 percent of his or her sentence;

(III) the defendant suffers from a chronic or serious medical condition related to the aging process;

(IV) the defendant is experiencing deteriorating mental or physical health that substantially diminishes his or her ability to function in a correctional facility; and

(V) conventional treatment promises no substantial improvement to the defendant's mental health or physical condition.

(v) The defendant (I) is at least 65 years old; and (II) has served at least 10 years or 75 percent of his or her sentence, whichever is greater.

(vi) The death or incapacitation of the family member caregiver of the defendant's child.

["Incapacitation" means the family member caregiver suffered a severe injury or suffers from a severe illness that renders the caregiver incapable of caring for the child. "Child" means an individual who had not attained the age of 18 years.]

(vii) The incapacitation of the defendant's spouse or registered partner when the defendant would be the only available caregiver for the spouse or registered partner.

["Incapacitation" means the spouse or registered partner (I) has suffered a serious injury or suffers from a debilitating physical illness and the result of the injury or illness is that the spouse or registered partner is completely disabled, meaning that the spouse or registered partner cannot carry on any self-care and is totally confined to a bed or chair; or (II) has a severe cognitive deficit, caused by an illness or injury, that has severely affected the spouse's or registered partner's mental capacity or function but may not be confined to a bed or chair. "Spouse" means an individual in a relationship with the defendant, where that relationship has been legally recognized as a marriage, including a legally-recognized common-law marriage. "Registered partner" means an individual in relationship with the defendant, where the relationship has been legally recognized as a civil union or registered domestic partnership.];

and in clause (viii), as so redesignated, by striking "(i), (ii), and (iii)" and inserting "(i) through (vii)".

3. Conditions of Probation and Supervised Release

Synopsis of Proposed Amendment:

This proposed amendment revises, clarifies, and rearranges the conditions of probation and supervised release. It is a result of the Commission's multi-year review of federal sentencing practices relating to conditions of probation and supervised release. *See* United States Sentencing Commission, "Notice of Final Priorities," 80 FR 48957 (Aug. 14, 2015). It is also informed by a series of opinions issued by the Seventh Circuit in recent years.

Specifically, the Seventh Circuit has found several of the standard conditions to be unduly vague, overbroad, or inappropriately applied. *See, e.g., United States v. Adkins*, 743 F.3d 176 (7th Cir. 2014); *United States v. Goodwin*, 717 F.3d 511 (7th Cir. 2013); *United States v. Quinn*, 698 F.3d 651 (7th Cir. 2012); *United States v. Siegel*, 753 F.3d 705 (7th Cir. 2014). The Seventh Circuit has also suggested that the language of the conditions be revised to be more comprehensible to defendants and probation officers, and to contain a stated mens rea requirement where one was lacking. *United States v. Kappes*, 782 F.3d 828, 848 (7th Cir. 2015) ("We have suggested that sentencing judges define the crucial terms in a condition in a way that provides clear notice to the defendant (preferably through objective rather than subjective terms), and/or includes a mens rea requirement (such as intentional conduct). We have further suggested that the judge make sure that each condition imposed is simply worded, bearing in mind that, with rare exceptions, neither the defendant nor the probation officer is a lawyer and that when released from prison the defendant will not have a lawyer to consult." (quotation and alteration marks omitted)).

The Statutory and Guidelines Framework

When imposing a sentence of probation, the court is required to impose certain conditions of probation listed by statute. *See* 18 U.S.C. 3563(a). In addition, the court has discretion to impose additional conditions of probation "to the extent that such conditions are reasonably related to the factors set forth in sections 3553(a)(1) and (a)(2) and to the extent that such conditions involve only such deprivations of liberty or property as are reasonably necessary for the purposes indicated in section 3553(a)(2)." *See* 18 U.S.C. 3563(b). Similarly, when imposing a sentence of supervised

release, the court is required to impose certain conditions of supervised release listed by statute, and the court has discretion to impose additional conditions of supervised release, to the extent that the additional condition "is reasonably related to the factors set forth in section 3553(a)(1), (a)(2)(B), (a)(2)(C), and (a)(2)(D)" and "involves no greater deprivation of liberty than is reasonably necessary for the purposes set forth in section 3553(a)(2)(B), (a)(2)(C), and (a)(2)(D)." *See* 18 U.S.C. 3583(d). The additional condition of supervised release must also be consistent with any pertinent policy statements issued by the Sentencing Commission. *See* 18 U.S.C. 3583(d)(3).

In addition, the court is required to direct that the probation officer provide the defendant with a written statement that sets forth all the conditions to which he or she is subject, which must be "sufficiently clear and specific to serve as a guide for the defendant's conduct and for such supervision as is required." *See* 18 U.S.C. 3563(d), 3583(f). The Judgment in a Criminal Case Form, AO 245B, sets forth a series of mandatory and "standard" conditions in standardized form and provides space for the court to impose additional "standard" and "special" conditions devised by the court.

The Commission is directed by its organic statute to promulgate policy statements on the appropriate use of the conditions of probation and supervised release. *See* 28 U.S.C. 994(a)(2)(B). Sections 5B1.3 (Conditions of Probation) and 5D1.3 (Conditions of Supervised Release) implement this directive. Subsections (a) and (b) of § 5B1.3 set forth the conditions of probation that are required by statute. Subsections (c), (d), and (e) of § 5B1.3 provide guidance on discretionary conditions of probation, which are categorized as "standard" conditions, "special" conditions, and "additional" special conditions, respectively. Subsections (a) through (e) of § 5D1.3 follow the same structure in setting forth the mandatory conditions of supervised release and providing guidance on discretionary conditions of supervised release.

The Proposed Changes to §§ 5B1.3 and 5D1.3

The changes made by the proposed amendment would revise, clarify, and rearrange the provisions in the *Guidelines Manual* on conditions of probation and supervised release. These changes would not necessarily affect the conditions of probation and supervised release as set forth in the Judgment in a Criminal Case Form, AO 245B. However, in light of the responsibilities

of the Judicial Conference of the United States and the Administrative Office of the United States Courts in this area, the Commission works with the Criminal Law Committee and the Probation and Pretrial Services Office on these issues and anticipates that the Commission's work on this proposed amendment may inform their consideration of possible changes to the judgment form.

In general, the changes are intended to make the conditions more focused and precise as well as easier for defendants to understand and probation officers to enforce. For some conditions that do not have a mens rea standard, a "knowing" standard is inserted.

First, the proposed amendment amends the "mandatory" conditions set forth in subsection (a) of §§ 5B1.3 and 5D1.3. It inserts new language directing that, if there is a court-established payment schedule for making restitution or paying a special assessment, the defendant shall adhere to the schedule. See 18 U.S.C. 3572(d). This new language is similar to paragraph (14) of the "standard" conditions; accordingly, paragraph (14) of the "standard" conditions is deleted, as described below.

Second, the proposed amendment amends the "standard" conditions set forth in subsection (c) of §§ 5B1.3 and 5D1.3. Paragraphs (1)–(3), (5)–(6), and (9)–(13) are revised, clarified, and rearranged into a new set of paragraphs (1) through (12). A new paragraph (13) is added, which provides that the defendant "must follow the instructions of the probation officer related to the conditions of supervision."

Several provisions are moved from the "standard" conditions list to the "special" conditions list, or vice versa. Specifically, paragraph (1) of the "special" conditions list (relating to possession of a firearm or dangerous weapon) is moved to the "standard" conditions list. Paragraphs (4) and (7) of the "standard" conditions list (relating to support of dependents and child support, and alcohol use, respectively) are moved to the "special" conditions list. In addition, as mentioned above, paragraph (14) on the "standard" conditions list (relating to payment of special assessment) is incorporated into the "mandatory" conditions list. Finally, paragraph (8) of the "standard" conditions list (relating to frequenting places where controlled substances are trafficked) is deleted.

Third, the proposed amendment adds two new provisions to the "special" conditions set forth in subsection (d) of §§ 5B1.3 and 5D1.3. The first new provision, based on paragraph (7) of the "standard" conditions, would specify

that the defendant must not use or possess alcohol. The second new provision, based on paragraph (4) of the "standard" conditions, would specify that, if the defendant has one or more dependents, the defendant must support his or her dependents; and if the defendant is ordered by the government to make child support payments or to make payments to support a person caring for a child, the defendant must make the payments and comply with the other terms of the order.

Issues for comment are also included.

Proposed Amendment:

Section 5B1.3 is amended in subsection (a)(6) by inserting before the semicolon at the end the following: ". If there is a court-established payment schedule for making restitution or paying the assessment (see 18 U.S.C. 3572(d)), the defendant shall adhere to the schedule";

in subsection (b) by striking "The" and inserting the following:

"Discretionary Conditions

The";

in subsection (c) by striking "(Policy Statement) The" and inserting the following:

"'Standard' Conditions (Policy Statement)

The";

and by striking paragraphs (1) through (14) and inserting the following:

"(1) The defendant must report to the probation office in the federal judicial district where he or she is authorized to reside within 72 hours of the time the defendant was sentenced, unless the probation officer tells the defendant to report to a different probation office or within a different time frame.

(2) After initially reporting to the probation office, the defendant will receive instructions from the court or the probation officer about how and when to report to the probation officer, and the defendant must report to the probation officer as instructed.

(3) The defendant must not knowingly leave the federal judicial district where he or she is authorized to reside without first getting permission from the court or the probation officer.

(4) The defendant must [answer truthfully][be truthful when responding to] the questions asked by the probation officer.

(5) The defendant must live at a place approved by the probation officer. If the defendant plans to change where he or she lives or anything about his or her living arrangements (such as the people the defendant lives with), the defendant must notify the probation officer at least

10 calendar days before the change. If notifying the probation officer in advance is not possible due to unanticipated circumstances, the defendant must notify the probation officer within 72 hours of becoming aware of a change or expected change.

(6) The defendant must allow the probation officer to visit the defendant at his or her home or elsewhere, and the defendant must permit the probation officer to take any items prohibited by the conditions of the defendant's supervision that he or she observes in plain view.

(7) The defendant must work full time (at least 30 hours per week) at a lawful type of employment, unless the probation officer excuses the defendant from doing so. If the defendant does not have full-time employment he or she must try to find full-time employment, unless the probation officer excuses the defendant from doing so. If the defendant plans to change where the defendant works or anything about his or her work (such as the position or the job responsibilities), the defendant must notify the probation officer at least 10 calendar days before the change. If notifying the probation officer in advance is not possible due to unanticipated circumstances, the defendant must notify the probation officer within 72 hours of becoming aware of a change or expected change.

(8) The defendant must not communicate or interact with someone the defendant knows is engaged in criminal activity. If the defendant knows someone has been convicted of a felony, the defendant must not knowingly communicate or interact with that person without first getting the permission of the probation officer.

(9) If the defendant is arrested or has any official contact with a law enforcement officer, the defendant must notify the probation officer within 72 hours.

(10) The defendant must not own, possess, or have access to a firearm, ammunition, destructive device, or dangerous weapon (i.e., anything that was designed, or was modified for, the specific purpose of causing bodily injury or death to another person, such as nunchakus or tasers).

(11) The defendant must not act or make any agreement with a law enforcement agency to act as a confidential human source or informant without first getting the permission of the court.

(12) If the probation officer determines that the defendant poses a risk to another person (including an organization), the probation officer may require the defendant to tell the person

about the risk and the defendant must comply with that instruction. The probation officer may contact the person and confirm that the defendant has told the person about the risk.

(13) The defendant must follow the instructions of the probation officer related to the conditions of supervision.”;

and in subsection (d) by striking “(Policy Statement) The” and inserting the following:

“‘*Special*’ Conditions (Policy Statement)

The”;

by striking paragraph (1) and inserting the following:

“(1) *Support of Dependents*

If the defendant—

(A) has one or more dependents—a condition specifying that the defendant must support his or her dependents; and

(B) is ordered by the government to make child support payments or to make payments to support a person caring for a child—a condition specifying that the defendant must make the payments and comply with the other terms of the order.”;

and in paragraph (4) by striking “*Program Participation*” in the heading; by inserting “(A)” before “a condition requiring”; and by inserting “; and (B) a condition specifying that the defendant must not use or possess alcohol” before the period at the end.

Section 5D1.3 is amended in subsection (a)(6) by inserting before the semicolon at the end the following: “. If there is a court-established payment schedule for making restitution or paying the assessment (see 18 U.S.C. 3572(d)), the defendant shall adhere to the schedule”;

in subsection (b) by striking “The” and inserting the following:

“*Discretionary Conditions*

The”;

in subsection (c) by striking “(Policy Statement) The” and inserting the following:

“‘*Standard*’ Conditions (Policy Statement)

The”;

and by striking paragraphs (1) through (15) and inserting the following:

“(1) The defendant must report to the probation office in the federal judicial district where he or she is authorized to reside within 72 hours of release from imprisonment, unless the probation officer tells the defendant to report to a different probation office or within a different time frame.

(2) After initially reporting to the probation office, the defendant will receive instructions from the court or

the probation officer about how and when to report to the probation officer, and the defendant must report to the probation officer as instructed.

(3) The defendant must not knowingly leave the federal judicial district where he or she is authorized to reside without first getting permission from the court or the probation officer.

(4) The defendant must [answer truthfully][be truthful when responding to] the questions asked by the probation officer.

(5) The defendant must live at a place approved by the probation officer. If the defendant plans to change where he or she lives or anything about his or her living arrangements (such as the people the defendant lives with), the defendant must notify the probation officer at least 10 calendar days before the change. If notifying the probation officer in advance is not possible due to unanticipated circumstances, the defendant must notify the probation officer within 72 hours of becoming aware of a change or expected change.

(6) The defendant must allow the probation officer to visit the defendant at his or her home or elsewhere, and the defendant must permit the probation officer to take any items prohibited by the conditions of the defendant’s supervision that he or she observes in plain view.

(7) The defendant must work full time (at least 30 hours per week) at a lawful type of employment, unless the probation officer excuses the defendant from doing so. If the defendant does not have full-time employment he or she must try to find full-time employment, unless the probation officer excuses the defendant from doing so. If the defendant plans to change where the defendant works or anything about his or her work (such as the position or the job responsibilities), the defendant must notify the probation officer at least 10 calendar days before the change. If notifying the probation officer in advance is not possible due to unanticipated circumstances, the defendant must notify the probation officer within 72 hours of becoming aware of a change or expected change.

(8) The defendant must not communicate or interact with someone the defendant knows is engaged in criminal activity. If the defendant knows someone has been convicted of a felony, the defendant must not knowingly communicate or interact with that person without first getting the permission of the probation officer.

(9) If the defendant is arrested or has any official contact with a law enforcement officer, the defendant must

notify the probation officer within 72 hours.

(10) The defendant must not own, possess, or have access to a firearm, ammunition, destructive device, or dangerous weapon (*i.e.*, anything that was designed, or was modified for, the specific purpose of causing bodily injury or death to another person, such as nunchakus or tasers).

(11) The defendant must not act or make any agreement with a law enforcement agency to act as a confidential human source or informant without first getting the permission of the court.

(12) If the probation officer determines that the defendant poses a risk to another person (including an organization), the probation officer may require the defendant to tell the person about the risk and the defendant must comply with that instruction. The probation officer may contact the person and confirm that the defendant has told the person about the risk.

(13) The defendant must follow the instructions of the probation officer related to the conditions of supervision.

(14) The defendant shall notify the probation officer of any material change in the defendant’s economic circumstances that might affect the defendant’s ability to pay any unpaid amount of restitution, fines, or special assessments.”;

and in subsection (d) by striking “(Policy Statement) The” and inserting the following:

“‘*Special*’ Conditions (Policy Statement)

The”;

by striking paragraph (1) and inserting the following:

“(1) *Support of Dependents*

If the defendant—

(A) has one or more dependents—a condition specifying that the defendant must support his or her dependents; and

(B) is ordered by the government to make child support payments or to make payments to support a person caring for a child—a condition specifying that the defendant must make the payments and comply with the other terms of the order.”;

and in paragraph (4) by striking “*Program Participation*” in the heading; by inserting “(A)” before “a condition requiring”; and by inserting “; and (B) a condition specifying that the defendant must not use or possess alcohol” before the period at the end.

Issues for Comment:

1. The Commission seeks comment on the bracketed options in paragraph (3) of the “special” conditions, which would

become (4) under the proposed amendment. Specifically, the proposed amendment brackets whether the defendant should “answer truthfully” the questions of the probation officer or, instead, should “be truthful when responding to” the questions of the probation officer. The Commission seeks comment on the policy implications and the Fifth Amendment implications of each of these bracketed options. Which option, if any, is appropriate? Should the Commission clarify that an offender’s legitimate invocation of the Fifth Amendment privilege against self-incrimination in response to a probation officer’s question shall not be considered a violation of this special condition?

2. The Commission seeks comment on the standard condition of supervised release in § 5D1.3(c)(15), which states that the defendant “shall notify the probation officer of any material change in the defendant’s economic circumstances that might affect the defendant’s ability to pay any unpaid amount of restitution, fines, or special assessments.” Under the proposed amendment, this would remain a standard condition and would be redesignated as subsection (c)(14). The Commission seeks comment on whether this condition should be made a special condition rather than a standard condition.

4. Animal Fighting

Synopsis of Proposed Amendment:

This proposed amendment revises § 2E3.1 (Gambling; Animal Fighting Offenses) to provide higher penalties for animal fighting offenses and to respond to two new offenses, relating to attending an animal fighting venture, established by section 12308 of the Agricultural Act of 2014, Public Law 113–79 (Feb. 7, 2014).

Animal fighting ventures are prohibited by the Animal Welfare Act, 7 U.S.C. 2156. Under that statute, an “animal fighting venture” is an event that involves a fight between at least two animals for purposes of sport, wagering, or entertainment. *See* 7 U.S.C. 2156(g)(1). Section 2156 prohibits a range of conduct relating to animal fighting ventures, including making it unlawful to knowingly—

- sponsor or exhibit an animal in an animal fighting venture, *see* § 2156(a)(1);
- sell, buy, possess, train, transport, deliver, or receive an animal for purposes of having the animal participate in an animal fighting venture, *see* § 2156(b);
- advertise an animal (or a sharp instrument designed to be attached to the leg of a bird) for use in an animal

fighting venture or promoting or in any other manner furthering an animal fighting venture, *see* § 2156(c); and

- sell, buy, transport, or deliver a sharp instrument designed to be attached to the leg of a bird for use in an animal fighting venture, *see* § 2156(e).

The criminal penalties for violations of section 2156 are provided in 18 U.S.C. 49. For any violation of section 2156 listed above, the statutory maximum term of imprisonment is 5 years. *See* 18 U.S.C. 49(a).

However, two new types of animal fighting offenses were added by the Agricultural Act of 2014. They make it unlawful to knowingly—

- attend an animal fighting venture, *see* § 2156(a)(2)(A); or
- cause an individual under 16 to attend an animal fighting venture, *see* § 2156(a)(2)(B).

The statutory maximum is 3 years if the offense of conviction is causing an individual under 16 to attend an animal fighting venture, *see* 18 U.S.C. 49(c), and 1 year if the offense of conviction is attending an animal fighting venture, *see* 18 U.S.C. 49(b).

All offenses under section 2156 are referenced in Appendix A (Statutory Index) to § 2E3.1 (Gambling Offenses; Animal Fighting Offenses). Under the penalty structure of that guideline, a defendant convicted of an animal fighting offense receives a base offense level of 12 if the offense involved gambling—specifically, if the offense was engaging in a gambling business, transmitting wagering information, or part of a commercial gambling operation—and a base offense level of 10 otherwise. The guideline contains no specific offense characteristics. There is an upward departure provision if an animal fighting offense involves exceptional cruelty.

Higher Penalties for Animal Fighting Offenses

First, the proposed amendment revises § 2E3.1 to provide a base offense level of [14][16] if the offense involved an animal fighting venture.

In addition, it revises the existing upward departure provision to cover not only offenses involving exceptional cruelty but also offenses involving animal fighting on an exceptional scale.

New Offenses Relating to Attending an Animal Fighting Venture

Next, the proposed amendment responds to the two new offenses relating to attendance at an animal fighting venture. It establishes new base offense levels for such offenses. Specifically, a base offense level of

[8][10] in § 2E3.1 would apply if the defendant was convicted under section 2156(a)(2)(B) (causing an individual under 16 to attend an animal fighting venture). The class A misdemeanor at section 2156(a)(2)(A) (attending an animal fighting venture) would not be referenced in Appendix A (Statutory Index) to § 2E3.1; it would receive a base offense level of 6 in § 2X5.2 (Class A Misdemeanors (Not Covered by Another Specific Offense Guideline)).

Issues for comment are also included.

Proposed Amendment:

Section 2E3.1 is amended in subsection (a) by striking subsection (a)(2); by redesignating subsections (a)(1) and (a)(3) as subsections (a)(2) and (a)(4), respectively; by striking “or” in subsection (a)(2), as so redesignated; by inserting before subsection (a)(2) (as so redesignated) the following new subsection (a)(1):

“(1) [14][16], if the offense involved an animal fighting venture, except as provided in subdivision (3) below;”

and by inserting before subsection (a)(4), as so redesignated, the following new subsection (b)(3):

“(3) [8][10], if the defendant was convicted under 7 U.S.C. 2156(a)(2)(B); or”.

The Commentary to § 2E3.1 captioned “Statutory Provisions” is amended by inserting after “7 U.S.C. 2156” the following: “(felony provisions only)”.

The Commentary to § 2E3.1 captioned “Application Notes” is amended in Note 2 by striking “If the offense involved extraordinary cruelty to an animal that resulted in, for example, maiming or death to an animal, an upward departure may be warranted.”, and inserting “There may be cases in which the offense level determined under this guideline substantially understates the seriousness of the offense. In such cases, an upward departure may be warranted. For example, an upward departure may be warranted if (A) the offense involved extraordinary cruelty to an animal; or (B) the offense involved animal fighting on an exceptional scale (such as an offense involving an unusually large number of animals).”.

Appendix A (Statutory Index) is amended in the line referenced to 7 U.S.C. 2156 by inserting after “§ 2156” the following: “(felony provisions only)”.

Issues for Comment:

1. The Commission seeks comment on offenses involving animal fighting. How prevalent are these offenses, and do the guidelines adequately address these offenses? If not, how should the

Commission revise the guidelines to provide appropriate penalties in such cases?

What, if any, aggravating and mitigating factors are involved in these offenses that the guidelines should take into account? Should the Commission provide new departure provisions, enhancements, adjustments, or minimum offense levels to account for such aggravating or mitigating factors? If so, what should the Commission provide, and with what penalty levels?

For example, should the Commission provide an enhancement if the defendant possessed a dangerous weapon (including a firearm)? Should the Commission provide an enhancement if the defendant was in the business of breeding, selling, buying, possessing, training, transporting, delivering, or receiving animals for use in animal fighting ventures, or brokering such activities?

2. The proposed amendment includes an upward departure provision if the offense involved animal fighting “on an exceptional scale (such as an offense involving an unusually large number of animals).” What additional guidance, if any, should the Commission provide on what constitutes animal fighting on an exceptional scale?

Under the proposed amendment, the factors of exceptional cruelty and exceptional scale are departure provisions. Should the Commission provide enhancements, rather than departure provisions, for these factors? If so, what penalty levels should be provided?

3. The Commission seeks comment on how the multiple count rules should operate when the defendant is convicted of multiple counts of animal fighting offenses. How, if at all, should the guideline calculation be affected by the presence of multiple counts of conviction? For example, should the Commission specify that multiple counts involving animal fighting ventures are to be grouped together under subsection (d) of § 3D1.2 (Groups of Closely Related Counts)? Should the Commission specify that multiple counts involving animal fighting ventures are not to be grouped together?

5. Child Pornography Circuit Conflicts

Synopsis of Proposed Amendment: This proposed amendment addresses circuit conflicts and application issues that have arisen when applying the guidelines to child pornography offenses. One of the issues typically arises under both the child pornography production guideline and the child pornography distribution guideline when the offense involves victims who

are unusually young and vulnerable. The other two issues typically arise when the offense involves a peer-to-peer file-sharing program or network. These issues were noted by the Commission in its 2012 report to Congress on child pornography offenses. *See* United States Sentencing Commission, “Report to the Congress: Federal Child Pornography Offenses” at 33–35 (2012), available at <http://www.ussc.gov/news/congressional-testimony-and-reports/sex-offense-topics/report-congress-federal-child-pornography-offenses>.

Offenses Involving Unusually Young and Vulnerable Minors

First, the proposed amendment responds to differences among the circuits in cases in which the offense involves minors who are unusually young and vulnerable (such as infants or toddlers). The production guideline provides a 4-level enhancement if the offense involved a minor who had not attained the age of 12 years and a 2-level enhancement if the minor had not attained the age of 16 years. *See* § 2G2.1(b)(1). A similar tiered enhancement is contained in § 2G2.6 (Child Exploitation Enterprises). *See* § 2G2.6(b)(1). The non-production guideline provides a 2-level enhancement if the material involved a prepubescent minor or a minor who had not attained the age of 12 years. *See* § 2G2.2(b)(2).

These three guidelines do not provide a further enhancement for cases in which the victim was unusually young and vulnerable. However, the adjustment at § 3A1.1(b)(1) provides a 2-level increase if the defendant knew or should have known that the victim was a “vulnerable victim,” *i.e.*, a victim “who is unusually vulnerable due to age, physical or mental condition, or who is otherwise particularly susceptible to the criminal conduct.” *See* § 3A1.1, comment. (n.2). The Commentary further provides:

Do not apply subsection (b) if the factor that makes the person a vulnerable victim is incorporated in the offense guideline. For example, if the offense guideline provides an enhancement for the age of the victim, this subsection would not be applied unless the victim was unusually vulnerable for reasons unrelated to age. *See* § 3A1.1, comment. (n.2).

There are differences among the circuits over whether the vulnerable victim adjustment applies when the victim is extremely young, such as an infant or toddler. The Ninth Circuit has indicated that the under-12 enhancement “does not take especially vulnerable stages of childhood into

account” and that, “[t]hrough the characteristics of being an infant or toddler tend to correlate with age, they can exist independently of age, and are not the same thing as merely not having ‘attained the age of twelve years.’” *United States v. Wright*, 373 F.3d 935, 943 (9th Cir. 2004). Accordingly, it held, a vulnerable victim adjustment may be applied based on extreme youth and small physical size, such as when the victim is in the infant or toddler stage. *Id.* Similarly, the Fifth Circuit has stated, “we do not see any logical reason why a ‘victim under the age of twelve’ enhancement should bar application of the ‘vulnerable victim’ enhancement when the victim is especially vulnerable, even as compared to most children under twelve.” *United States v. Jenkins*, 712 F.3d 209, 214 (5th Cir. 2013).

The Fourth Circuit, in contrast, has indicated that the vulnerable victim adjustment may not be applied based solely on extreme youth or on factors that are for conditions that “necessarily are related to . . . age.” *United States v. Dowell*, 771 F.3d 162, 175 (4th Cir. 2014). The line drawn by the under-12 enhancement “implicitly preclude[s] courts from drawing additional lines below that point,” and “once the offense involves a child under twelve, any additional considerations based solely on age simply are not appropriate to the Guidelines calculation.” *Id.*

The proposed amendment generally adopts the approach of the Fifth and Ninth Circuits. It amends the Commentary in the child pornography guidelines to provide that application of the age enhancement does not preclude application of the vulnerable victim adjustment. Specifically, if the minor’s extreme youth and small physical size made the minor especially vulnerable compared to most minors under the age of 12 years, § 3A1.1(b) applies, assuming the mens rea requirement of § 3A1.1(b) is also met (*i.e.*, the defendant knew or should have known of this vulnerability).

Two Issues Relating to the Tiered Enhancement for Distribution in § 2G2.2

Second, the proposed amendment responds to differences among the circuits in applying the tiered enhancement for distribution in § 2G2.2(b)(3), which provides an enhancement ranging from 2 levels to 7 levels depending on specific factors.

There are two related issues that typically arise in child pornography cases when the offense involves a peer-to-peer file-sharing program or network. The first issue is when a participant’s use of a peer-to-peer file sharing

program or network warrants at minimum a 2-level enhancement under subsection (b)(3)(F). The second issue is when, if at all, the use of a peer-to-peer file sharing program or network warrants a 5-level enhancement under (b)(3)(B) instead.

(1) *The 2-Level Distribution Enhancement at Subsection (b)(3)(F)*

The Fifth, Tenth, and Eleventh Circuits have each held that the 2-level distribution enhancement applies if the defendant used a file sharing program, regardless of whether he did so purposefully, knowingly, or negligently. *See, e.g., United States v. Baker*, 742 F.3d 618, 621 (5th Cir. 2014) (the enhancement applies “regardless of the defendant’s mental state”); *United States v. Ray*, 704 F.3d 1307, 1312 (10th Cir. 2013) (the enhancement “does not require that a defendant know about the distribution capability of the program he is using”; the enhancement “requires no particular state of mind”); *United States v. Creel*, 783 F.3d 1357, 1360 (11th Cir. 2015) (“No element of *mens rea* is expressed or implied . . . The definition requires only that the ‘act . . . relates to the transfer of child pornography.’”).

The Second, Fourth, and Fifth Circuits, in contrast, have held that the 2-level distribution enhancement requires a showing that the defendant knew, or at least acted in reckless disregard of, the file sharing properties of the program. *See, e.g., United States v. Baldwin*, 743 F.3d 357, 361 (2nd Cir. 2015) (requiring knowledge); *United States v. Robinson*, 714 F.3d 466, 468 (7th Cir. 2013) (knowledge); *United States v. Layton*, 564 F.3d 330, 335 (4th Cir. 2009) (knowledge or reckless disregard).

Other circuits appear to follow somewhat different approaches. The Eighth Circuit has stated that knowledge is required, but knowledge may be inferred from the fact that a file sharing program was used, absent “concrete evidence” of ignorance. *United States v. Dodd*, 598 F.3d 449, 452 (8th Cir. 2010). The Sixth Circuit has stated in an unpublished opinion that there is a “presumption” that “users of file-sharing software understand others can access their files.” *United States v. Conner*, 521 Fed. App’x 493, 499 (6th Cir. 2013).

The proposed amendment generally adopts the approach of the Second, Fourth, and Fifth Circuits. It amends subsection (b)(3)(F) to provide that the 2-level enhancement requires “knowing” distribution by the defendant.

As a conforming change, the proposed amendment also revises the 2-level distribution enhancement at § 2G2.1(b)(3) to provide that the enhancement requires that the defendant knowingly distributed.

(2) *The 5-Level Distribution Enhancement at Subsection (b)(3)(B)*

The 5-level distribution enhancement at subsection (b)(3)(B) applies if the offense involved distribution “for the receipt, or expectation of receipt, of a thing of value, but not for pecuniary gain.” The Commentary provides, as one example, that in a case involving the bartering of child pornographic material, the “thing of value” is the material received in exchange.

The circuits have taken different approaches to this issue. The Fifth Circuit has indicated that when the defendant knowingly uses file sharing software, the requirements for the 5-level enhancement are generally satisfied. *See United States v. Groce*, 784 F.3d 291, 294 (5th Cir. 2015) (“Generally, when a defendant knowingly uses peer-to-peer file sharing software . . . he engages in the kind of distribution contemplated by” the 5-level enhancement).

The Fourth Circuit appears to have a higher standard. It has required the government to show that the defendant (1) “knowingly made child pornography in his possession available to others by some means”; and (2) did so “for the specific purpose of obtaining something of valuable consideration, such as more pornography.” *United States v. McManus*, 734 F.3d 315, 319 (4th Cir. 2013).

The proposed amendment revises subsection (b)(3)(B) to clarify that the enhancement applies if the defendant distributed in exchange for any valuable consideration. Specifically, this means that the defendant agreed to an exchange with another person under which the defendant knowingly distributed to that other person for the specific purpose of obtaining something of valuable consideration from that other person, such as other child pornographic material, preferential access to child pornographic material, or access to a child.

Proposed Amendment:

Section 2G2.1 is amended in subsection (b)(3) by striking “offense involved distribution” and inserting “defendant knowingly distributed”.

The Commentary to § 2G2.1 captioned “Application Notes” is amended by redesignating Notes 2 through 6 as Notes 3 through 7, respectively, and by

inserting after Note 1 the following new Note 2:

“2. *Interaction of Age Enhancement (Subsection (b)(1)) and Vulnerable Victim (§ 3A1.1(b)).*—If subsection (b)(1) applies, § 3A1.1(b) ordinarily would not apply unless the minor was unusually vulnerable for reasons unrelated to age. *See* § 3A1.1, comment. (n.2). However, if the minor’s extreme youth and small physical size made the minor especially vulnerable compared to most minors under the age of 12 years, and the defendant knew or should have known this, apply § 3A1.1(b).”

Section 2G2.2 is amended in subsection (b)(3) by striking “If the offense involved”;

in subparagraphs (A), (C), (D), and (E) by striking “Distribution” and inserting “If the offense involved distribution”;

in subparagraph (B) by striking “Distribution for the receipt, or expectation of receipt, of a thing of value,” and inserting “If the defendant distributed in exchange for any valuable consideration,”;

and in subparagraph (F) by striking “Distribution” and inserting “If the defendant knowingly distributed,”.

The Commentary to § 2G2.2 captioned “Application Notes” is amended in Note 1 by striking the paragraph that begins “‘Distribution for the receipt, or expectation of receipt, of a thing of value, but not for pecuniary gain’ means” and inserting “‘The defendant distributed in exchange for any valuable consideration’ means the defendant agreed to an exchange with another person under which the defendant knowingly distributed to that other person for the specific purpose of obtaining something of valuable consideration from that other person, such as other child pornographic material, preferential access to child pornographic material, or access to a child.”;

and by redesignating Notes 2 through 7 as Notes 3 through 8, respectively, and by inserting after Note 1 the following new Note 2:

“2. *Interaction of Age Enhancement (Subsection (b)(2)) and Vulnerable Victim (§ 3A1.1(b)).*—If subsection (b)(2) applies, § 3A1.1(b) ordinarily would not apply unless the minor was unusually vulnerable for reasons unrelated to age. *See* § 3A1.1, comment. (n.2). However, if the minor’s extreme youth and small physical size made the minor especially vulnerable compared to most minors under the age of 12 years, and the defendant knew or should have known this, apply § 3A1.1(b).”

The Commentary to § 2G2.6 captioned “Application Notes” is amended by redesignating Notes 2 and 3 as Notes 3

and 4, respectively, and by inserting after Note 1 the following new Note 2:

“2. *Interaction of Age Enhancement (Subsection (b)(1)) and Vulnerable Victim (§ 3A1.1(b)).*—If subsection (b)(1) applies, § 3A1.1(b) ordinarily would not apply unless the minor was unusually vulnerable for reasons unrelated to age. See § 3A1.1, comment. (n.2). However, if the minor’s extreme youth and small physical size made the minor especially vulnerable compared to most minors under the age of 12 years, and the defendant knew or should have known this, apply § 3A1.1(b).”

Issues for Comment

1. With respect to the interaction of the age enhancements and the vulnerable victim adjustment, the proposed amendment would respond to the circuit conflict by clarifying the circumstances under which the vulnerable victim adjustment would also apply. Should the Commission use a different approach to resolving the circuit conflict? If so, what approach should the Commission use to clarify how the age enhancements interact with the vulnerable victim adjustment? For example, should the Commission revise the tiered age enhancements to provide an additional tier, 2 levels higher than the existing tiers, for cases involving unusually young and vulnerable victims, such as infants or toddlers? In the alternative, should the Commission provide an upward departure provision to address this factor?

Application Note 2 to § 3A1.1 provides that, “if the offense guideline provides an enhancement for the age of the victim, this subsection would not be applied unless the victim was unusually vulnerable for reasons unrelated to age.” Should the Commission revise this provision to change or clarify how age enhancements in the guidelines (whether for child pornography offenses or otherwise) interact with the vulnerable victim adjustment? For example, should the Commission change “unless the victim was unusually vulnerable for reasons unrelated to age” to “unless the victim was unusually vulnerable for reasons not based on age *per se*”?

2. With respect to the 2-level distribution enhancement, the proposed amendment generally adopts the approach of the circuits that require “knowing” distribution. The Commission seeks comment on whether a different approach should be used, particularly in cases involving a file sharing program or network. For example, should the Commission provide a bright-line rule that use of a file sharing program qualifies for the 2-

level enhancement, even in cases where the defendant was in fact ignorant that use of the program would result in files being shared to others?

3. With respect to the 5-level distribution enhancement, the proposed amendment would generally require an agreement with another person in which the defendant trades child pornography for other child pornography or another thing of value, such as access to a child. The Commission seeks comment on whether a different approach should be used, particularly in cases involving a file sharing program or network. For example, should the Commission provide a bright-line rule that use of a file sharing program qualifies for the 5-level enhancement?

4. The proposed amendment amends § 2G2.2 to provide that the 2-level enhancement at subsection (b)(3) requires “knowing” distribution by the defendant. Should the Commission change any other enhancements in subsection (b) from an “offense involved” approach to a “defendant-based” approach? If so, should the Commission include a culpable state of mind requirement, such as, for example, requiring “knowing” distribution by the defendant?

5. The guideline for obscenity offenses, § 2G3.1 (Importing, Mailing, or Transporting Obscene Matter; Transferring Obscene Matter to a Minor; Misleading Domain Names), contains a tiered distribution enhancement similar to the tiered distribution enhancement in § 2G2.2. If the Commission were to make revisions to the tiered distribution enhancement in § 2G2.2, should the Commission make similar revisions to § 2G3.1?

6. Immigration

Synopsis of Proposed Amendment:

This proposed amendment is a result of the Commission’s multi-year study of the guidelines applicable to immigration offenses and related criminal history rules. See United States Sentencing Commission, “Notice of Final Priorities,” 80 FR 48957 (Aug. 14, 2015). The Commission is publishing this proposed amendment to inform the Commission’s consideration of these issues.

The proposed amendment contains two parts. The Commission is considering whether to promulgate any one or both of these parts, as they are not necessarily mutually exclusive. They are as follows—

Part A revises the alien smuggling guideline at § 2L1.1 (Smuggling, Transporting, or Harboring an Unlawful Alien). An issue for comment is also provided.

Part B revises the illegal reentry guideline at § 2L1.2 (Unlawfully Entering or Remaining in the United States). Issues for comment are also included.

(A) Alien Smuggling

Synopsis of Proposed Amendment:

This part of the proposed amendment revises the alien smuggling guideline at § 2L1.1 (Smuggling, Transporting, or Harboring an Unlawful Alien). The Commission has received comment expressing concern that the guideline provides for inadequate sentences for alien smugglers, particularly those who smuggle unaccompanied minors. See, e.g., Annual Letter from the Department of Justice to the Commission (July 24, 2015), at <http://www.ussc.gov/sites/default/files/pdf/amendment-process/public-comment/20150727/DOJ.pdf>.

First, the proposed amendment revises the alternative base offense levels at § 2L1.1(a). Two options are provided. Option 1 would raise the base offense level at subsection (a)(3) from 12 to [16]. Option 2 adds an alternative base offense level of [16] if the defendant smuggled, transported, or harbored an unlawful alien as part of an ongoing commercial organization.

Second, the proposed amendment addresses offenses involving unaccompanied minors in alien smuggling offenses. The Department of Justice in its annual letter to the Commission has suggested that the enhancement for smuggling, transporting, or harboring unaccompanied minors under § 2L1.1(b)(4) is inadequate in light of the serious nature of such offenses. The Department states that “[t]hese smugglers often treat children as human cargo and subject them to a multitude of abuses throughout a long and dangerous journey, including sexual assault, extortion, and other crimes.” The proposed amendment would amend § 2L1.1 to address the issue of unaccompanied minors. The proposed amendment first amends § 2L1.1(b)(4) to make the enhancement offense-based (with a mens rea requirement) as opposed to exclusively defendant-based. The proposed amendment would also amend the commentary to § 2L1.1 to clarify that the term “serious bodily injury” included in subsection (b)(7)(B) has the meaning given to that term in the Commentary to § 1B1.1 (Application Instructions), which states that “serious bodily injury” is deemed to have occurred if the offense involved conduct constituting criminal sexual abuse under 18 U.S.C. 2241 or § 2242 or any similar offense under state law.

Finally, the proposed amendment would revise the definition of “minor” for purposes of the “unaccompanied minor” enhancement at § 2L1.1(b)(4) and change it from minors under the age of 16 to minors under the age of [18]. The proposed amendment also brackets the possibility of including a new departure provision in the commentary to § 2L1.1 for cases in which the offense involved the smuggling, transporting, or harboring of six or more unaccompanied minors.

An issue for comment is also provided.

Proposed Amendment

Section 2L1.1 is amended—

[Option 1:
in subsection (a)(3) by striking “12, otherwise” and inserting “[16], otherwise”];

[Option 2:
in subsection (a) by redesignating paragraph (3) as paragraph (4), and by inserting after paragraph (2) the following new paragraph (3):

“(3) [16], if the defendant smuggled, transported, or harbored an unlawful alien as part of an ongoing commercial organization; or”];

and in subsection (b)(4) by striking “If the defendant smuggled, transported, or harbored a minor who was unaccompanied by the minor’s parent or grandparent” and inserting “If the offense involved the smuggling, transporting, or harboring of a minor who the defendant knew [or had reason to believe] was unaccompanied by the minor’s parent or grandparent”.

The Commentary to § 2L1.1 captioned “Application Notes” is amended—

in Note 1—

[Option 2 (continued):

by inserting before the paragraph that begins “‘The offense was committed other than for profit’ means” the following new paragraph:

“‘As part of an ongoing commercial organization’ means that the defendant participated (A) in a continuing organization or enterprise of five or more persons that had as one of its primary purposes the smuggling, transporting, or harboring of unlawful aliens for profit, and (B) with knowledge [or reason to believe] that the members of the continuing organization or enterprise smuggled, transported, or harbored different groups of unlawful aliens on more than one occasion.”];

in the paragraph that begins “‘Minor’ means” by striking “16 years” and inserting “[18] years”;

and by inserting after the paragraph that begins “‘Parent’ means” the following new paragraph:

“‘Bodily injury,’ ‘serious bodily injury,’ and ‘permanent or life-

threatening bodily injury’ have the meaning given those terms in the Commentary to § 1B1.1 (Application Instructions).”];

by redesignating Notes 2 through 6 as Notes 3 through 7, respectively, and by inserting after Note 1 the following new Note 2:

“2. *Application of Subsection (b)(7) to Conduct Constituting Criminal Sexual Abuse.*—Consistent with Application Note 1(L) of § 1B1.1 (Application Instructions), ‘serious bodily injury’ is deemed to have occurred if the offense involved conduct constituting criminal sexual abuse under 18 U.S.C. 2241 or § 2242 or any similar offense under state law.”;

and in Note 4, as so redesignated, by inserting at the end the following new subdivision:

“[(D) The offense involved the smuggling, transporting, or harboring of six or more minors who were unaccompanied by their parents or grandparents.]”.

Issue for Comment

1. The Department of Justice has stated that alien smuggling offenses often involved sexual abuse of the aliens smuggled, transported, or harbored, particularly of unaccompanied minors. The proposed amendment would amend the commentary to § 2L1.1 to clearly state that the term “serious bodily injury” included in subsection (b)(7)(B) has the meaning given to that term in the Commentary to § 1B1.1 (Application Instructions), which is deemed to have occurred if the offense involved conduct constituting criminal sexual abuse under 18 U.S.C. 2241 or § 2242 or any similar offense under state law. The Commission invites comment on whether the 4-level enhancement at § 2L1.1(b)(7)(B) adequately accounts for cases in which the offense covered by this guideline involved sexual abuse of an alien who was smuggled, transported, or harbored. If not, what revisions to § 2L1.1 would be appropriate to account for this conduct? For example, should the Commission provide one or more specific offense characteristics or departure provisions to better account for this conduct? If so, what should the Commission provide?

(B) Illegal Reentry

Synopsis of the Proposed

Amendment: This part of the proposed amendment is also informed by the Commission’s recent report on offenders sentenced under § 2L1.2 (Unlawfully Entering or Remaining in the United States). See United States Sentencing Commission, *Illegal Reentry Offenses* (2015), available at [http://www.ussc.gov/](http://www.ussc.gov/sites/default/files/pdf/research-and-publications/research-projects-and-surveys/immigration/2015_Illegal-Reentry-Report.pdf)

[sites/default/files/pdf/research-and-publications/research-projects-and-surveys/immigration/2015_Illegal-Reentry-Report.pdf](http://www.ussc.gov/sites/default/files/pdf/research-and-publications/research-projects-and-surveys/immigration/2015_Illegal-Reentry-Report.pdf).

The key findings from the report include—

- the average sentence for illegal reentry offenders was 18 months;
- all but two of the 18,498 illegal reentry offenders—including the 40 percent with the most serious criminal histories triggering a statutory maximum penalty of 20 years under 8 U.S.C. 1326(b)(2)—were sentenced at or below the ten-year statutory maximum under 8 U.S.C. 1326(b)(1) for offenders with less serious criminal histories (*i.e.*, those without “aggravated felony” convictions);

- the rate of within-guideline range sentences was significantly lower among offenders who received 16-level enhancements pursuant to § 2L1.2(b)(1)(A) for predicate convictions (31.3%), as compared to the within-range rate for those who received no enhancements under § 2L1.2(b) (92.7%);

- significant differences in the rates of application of the various enhancements in § 2L1.2(b) appeared among the districts where most illegal reentry offenders were prosecuted;

- the average illegal reentry offender was deported 3.2 times before his instant illegal reentry prosecution, and over one-third (38.1%) were previously deported after a prior illegal entry or illegal reentry conviction;

- 61.9 percent of offenders were convicted of at least one criminal offense after illegally reentering the United States;

- 4.7 percent of illegal reentry offenders had no prior convictions and not more than one prior deportation before their instant illegal reentry prosecutions; and

- most illegal reentry offenders were apprehended by immigration officials at or near the border.

The statutory penalty structure for illegal reentry offenses is based on whether the defendant had a criminal conviction *before* he or she was deported. The offense of illegal reentry, set forth in 8 U.S.C. 1326, applies to defendants who previously were deported from, or unlawfully remained in, the United States. Specifically, the statutory maximum term of imprisonment is—

- **two years**, in general (*see* 8 U.S.C. 1326(a)); but

- **10 years**, if the defendant was deported after sustaining (A) three misdemeanor convictions involving drugs or crimes against the person, or

both, or (B) one felony conviction (*see* 8 U.S.C. § 1326(b)(1)); or

- **20 years**, if the defendant was deported after sustaining an “aggravated felony”—a term that covers a range of offense types, listed in 8 U.S.C. § 1101(a)(43), that includes such different offense types as murder and tax evasion (*see* 8 U.S.C. § 1326(b)(2)).

The penalty structure of the guideline is similar to the statutory penalty structure. The guideline provides a base offense level of 8 and a tiered enhancement based on whether the defendant had a criminal conviction before he or she was deported. Specifically, the enhancement is—

- **4 levels**, for (A) three misdemeanor convictions for crimes of violence or drug trafficking offenses, or (B) any felony (*see* § 2L1.2(b)(1)(D),(E));
- **8 levels**, for an “aggravated felony” (*see* § 2L1.2(b)(1)(C));
- **12 levels**, for a felony drug trafficking offense for which the sentence imposed was 13 months or less (*see* § 2L1.2(b)(1)(B)); and
- **16 levels**, for specific types of felonies: a drug trafficking offense for which the sentence imposed was more than 13 months, a crime of violence, a firearms offense, a child pornography offense, a national security or terrorism offense, a human trafficking offense, or an alien smuggling offense (*see* § 2L1.2(b)(1)(A)).

The penalties in the illegal reentry statute apply based on the criminal convictions the defendant had before he or she was deported, regardless of the age of the prior conviction. Likewise, until 2011, the enhancements in § 2L1.2 applied regardless of the age of the prior conviction. In 2011, the Commission revised the guideline to provide that the 16- and 12-level enhancements would be reduced to 12 and 8 levels, respectively, if the conviction was too remote in time (too “stale”) to receive criminal history points under the timing limits set forth in Chapter Four (Criminal History and Criminal Livelihood). *See* USSG App. C, Amend. 754 (effective Nov. 1, 2011). The other enhancements continue to apply regardless of the age of the prior conviction (*i.e.*, without regard to whether the conviction receives criminal history points). *See* § 2L1.2, comment. (n.1(C)).

Part B of the proposed amendment amends § 2L1.2 to lessen the emphasis on pre-deportation convictions by providing new enhancements for more recent, post-reentry convictions and a corresponding reduction in the enhancements for past, pre-deportation convictions. The enhancements for these convictions would be based on the

sentence imposed rather than on the type of offense (*e.g.*, “crime of violence”)—in other words, the proposed amendment would eliminate the use of the “categorical approach” for predicate felony convictions in § 2L1.2. Also, the proposed amendment accounts for prior convictions for illegal reentry separately from other types of convictions.

First, the proposed amendment amends subsection (a) of § 2L1.2 to provide alternative base offense levels of [14] and [12] if the defendant had one or more prior convictions for illegal reentry offenses under 8 U.S.C. 1253, § 1325(a), or § 1326. For defendants without such prior convictions, the proposed amendment increases the otherwise applicable base offense level from 8 to [10]. The alternative base offense levels at subsection (a) apply without regard to whether the prior conviction receives criminal history points.

Second, the proposed amendment changes how subsection (b)(1) accounts for pre-deportation convictions—basing them not on the type of offense (*e.g.*, “crime of violence”) but on the length of the sentence imposed for a felony conviction. The proposed amendment incorporates these new enhancements in subdivision (A) through (C) at subsection (b)(1). Specifically, if the defendant had a felony conviction and the sentence imposed was [24] months or more, an enhancement of [8] levels would apply. If the defendant had a felony conviction and the sentence imposed was at least [12] months but less than [24] months, an enhancement of [6] levels would apply. If the defendant had a felony conviction and the sentence imposed was less than [12] months, an enhancement of [4] levels would apply. Finally, an enhancement of [2] levels would apply if the defendant had three or more convictions for misdemeanors involving drugs or crimes against the person. If more than one of these enhancements apply, the court is instructed to apply the greatest.

Third, the proposed amendment would permit prior convictions to be considered under subsection (b)(1) only if they receive criminal history points under Chapter Four.

To account for post-reentry criminal activity, the proposed amendment inserts a new subsection (b)(2) to provide a tiered enhancement for a defendant who engaged in criminal conduct resulting in a conviction for one or more felony offenses after the defendant’s first deportation or first order of removal. The structure of the new subsection (b)(2) parallels the proposed changes to subsection (b)(1),

both in the sentence length required and the level of enhancement to be applied. As with subsection (b)(1), prior convictions would be considered under subsection (b)(2) only if they receive criminal history points under Chapter Four.

Finally, the proposed amendment provides a new departure provision for cases in which the defendant was previously deported on multiple occasions not reflected in prior convictions under 8 U.S.C. 1253, § 1325(a), or § 1326. It also revises the departure provision based on seriousness of a prior conviction to bring it more into parallel with § 4A1.3 (Adequacy of Criminal History Category) and provide examples related to: (1) cases in which serious offenses do not qualify for an adjustment under subsection (b)(1) and the new subsection (b)(2) because they did not receive criminal history points; and (2) for cases in which a defendant committed one or more felony offenses but no conviction resulted from the commission of such offense or offenses. The proposed amendment also brackets the possibility of deleting the departure based on time served in state custody.

In addition, the proposed amendment would make conforming changes to the application notes, including the consolidation of all guideline definitions in one place.

Issues for comment are also included.

Proposed Amendment

Section 2L1.2 is amended—
in subsection (a) by striking “Base Offense Level: 8” and inserting the following:

“Base Offense Level (Apply the Greatest):

(1) [14], if the defendant committed the instant offense of conviction after sustaining two or more convictions for illegal reentry offenses;

(2) [12], if the defendant committed the instant offense of conviction after sustaining a conviction for an illegal reentry offense;

(3) [10], otherwise.”;

in subsection (b) by striking “Characteristic” in the heading and inserting “Characteristics”; by striking subsection (b)(1) and inserting the following new subsection (b)(1):

“(1) Apply the Greatest:

If, before the defendant’s first deportation or first order of removal, the defendant sustained—

(A) a conviction for a felony offense (other than an illegal reentry offense) for which the sentence imposed was [24] months or more, increase by [8] levels;

(B) a conviction for a felony offense (other than an illegal reentry offense) for

which the sentence imposed was at least [12] months but less than [24] months, increase by [6] levels;

(C) a conviction for a felony offense (other than an illegal reentry offense) for which the sentence imposed was less than [12] months, increase by [4] levels; or

(D) three or more convictions for misdemeanors involving drugs, crimes against the person, or both, increase by [2] levels.”;

and by inserting at the end the following new subsection (b)(2):

“(2) Apply the Greatest:

If, at any time after the defendant’s first deportation or first order of removal, the defendant engaged in criminal conduct resulting in—

(A) a conviction for a felony offense (other than an illegal reentry offense) for which the sentence imposed was [24] months or more, increase by [8] levels;

(B) a conviction for a felony offense (other than an illegal reentry offense) for which the sentence imposed was at least [12] months but less than [24] months, increase by [6] levels;

(C) a conviction for a felony offense (other than an illegal reentry offense) for which the sentence imposed was less than [12] months, increase by [4] levels; or

(D) three or more convictions for misdemeanors involving drugs, crimes against the person, or both, increase by [2] levels.”.

The Commentary to § 2L1.2 captioned “Statutory Provisions” is amended by inserting after “8 U.S.C.” the following: “§ 1253.”.

The Commentary to § 2L1.2 captioned “Application Notes” is amended—

in Note 1, in the heading, by striking “Subsection (b)(1)” and inserting “Subsections (b)(1) and (b)(2)”;

in Note 1(A) by striking “For purposes of subsection (b)(1)” and inserting “For purposes of this guideline”;

by striking Notes 1(B) and 1(C), and inserting the following new Note 1(B):

“(B) *Interaction of Subsections (b)(1) and (b)(2).*—Subsections (b)(1) and (b)(2) are intended to divide the defendant’s criminal history into two time periods. Subsection (b)(1) reflects the convictions, if any, that the defendant sustained before his first deportation or order of removal (whichever event occurs first). Subsection (b)(2) reflects the convictions, if any, that the defendant sustained after that event (when the criminal conduct that resulted in the conviction took place after that event).”;

by striking Notes 2 through 7 and inserting the following new Notes 2, 3, 4, and 5:

“2. *Definitions.*—For purposes of this guideline:

‘Felony’ means any federal, state, or local offense punishable by imprisonment for a term exceeding one year.

‘Illegal reentry offense’ means (A) an offense under 8 U.S.C. 1253 or § 1326, or (B) a second or subsequent offense under 8 U.S.C. 1325(a) (regardless of whether the conviction was designated a felony or misdemeanor).

‘Misdemeanor’ means any federal, state, or local offense punishable by a term of imprisonment of one year or less.

‘Sentence imposed’ has the meaning given the term ‘sentence of imprisonment’ in Application Note 2 and subsection (b) of § 4A1.2 (Definitions and Instructions for Computing Criminal History), without regard to the date of the conviction. The length of the sentence imposed includes any term of imprisonment given upon revocation of probation, parole, or supervised release, but only if the revocation occurred before the defendant was deported or unlawfully remained in the United States.

‘Three or more convictions’ means at least three convictions for offenses that are not treated as a single sentence pursuant to subsection (a)(2) of § 4A1.2 (Definitions and Instructions for Computing Criminal History).

3. *Criminal History Points.*—The alternative base offense levels at subsection (a) apply without regard to whether a conviction for an illegal reentry offense receives criminal history points. However, for purposes of applying subsections (b)(1) and (b)(2), use only those convictions that receive criminal history points under § 4A1.1(a), (b), or (c), and that are counted separately under § 4A1.2(a)(2).

A conviction taken into account under subsection (a) or (b) is not excluded from consideration of whether that conviction receives criminal history points pursuant to Chapter Four, Part A (Criminal History).

4. *Departure Based on Multiple Prior Deportations not Reflected in Prior Convictions.*—There may be cases in which the alternative base offense levels at subsections (a)(1) and (a)(2) do not apply and the defendant was previously deported (voluntarily or involuntarily) on multiple occasions not reflected in prior convictions under 8 U.S.C. 1253, § 1325(a), or § 1326. In such a case, an upward departure may be warranted to reflect both the increased culpability of a defendant with multiple prior deportations, as well as the increased risk of future illegal reentry (as reflected in the defendant’s record of multiple prior deportations). For example, an upward departure may be warranted for

a defendant who is convicted under 8 U.S.C. 1326 for the first time but was deported five times prior to the instant offense of illegal reentry.

5. *Departure Based on Seriousness of Criminal History.*—There may be cases in which the applicable offense level substantially overstates or understates the seriousness of a defendant’s criminal history. In such a case, a departure may be warranted. See § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)). *Examples:* (A) In a case in which an adjustment under subsection (b)(1) or (b)(2) does not apply because a prior serious conviction (*e.g.*, murder) is not within the time limits set forth in § 4A1.2(e) and did not receive criminal history points, an upward departure may be warranted to reflect the serious nature of the defendant’s prior conviction. (B) In a case in which a defendant committed one or more felony offenses but subsections (b)(1) and (b)(2) do not apply because no conviction resulted from the commission of such offense or offenses, an upward departure may be warranted.”;

[by striking Note 8 as follows:

8. *Departure Based on Time Served in State Custody.*—In a case in which the defendant is located by immigration authorities while the defendant is serving time in state custody, whether pre- or post-conviction, for a state offense, the time served is not covered by an adjustment under § 5G1.3(b) and, accordingly, is not covered by a departure under § 5K2.23 (Discharged Terms of Imprisonment). See § 5G1.3(a). In such a case, the court may consider whether a departure is appropriate to reflect all or part of the time served in state custody, from the time immigration authorities locate the defendant until the service of the federal sentence commences, that the court determines will not be credited to the federal sentence by the Bureau of Prisons. Any such departure should be fashioned to achieve a reasonable punishment for the instant offense.

Such a departure should be considered only in cases where the departure is not likely to increase the risk to the public from further crimes of the defendant. In determining whether such a departure is appropriate, the court should consider, among other things, (A) whether the defendant engaged in additional criminal activity after illegally reentering the United States; (B) the seriousness of any such additional criminal activity, including (1) whether the defendant used violence or credible threats of violence or possessed a firearm or other dangerous

weapon (or induced another person to do so) in connection with the criminal activity, (2) whether the criminal activity resulted in death or serious bodily injury to any person, and (3) whether the defendant was an organizer, leader, manager, or supervisor of others in the criminal activity; and (C) the seriousness of the defendant's other criminal history.”];

and by redesignating Note 9 as Note 6.

Issues for Comment

1. Some commentators have expressed concern about the operation of the illegal reentry guideline and the severity of the enhancements available in subsection (b) for some offenders. The Commission's recent report found that the rate of within-range sentences differed substantially depending on the level of enhancement under § 2L1.2(b)(1). The rate of within-guideline range sentences was significantly lower among defendants who received the 16-level enhancement (31.3%) as compared to the within-range rate for those who received no enhancements (92.7%). The report showed that the greater enhancements result in the lowest within-range sentences (52.5% within range for 4-level enhancement, 46.7% within range for 8-level enhancement, 32.8% within range for 12-level enhancement).

The Commission seeks comment on whether illegal reentry offenses are adequately addressed by the guidelines. Should the Commission consider amending § 2L1.2 and, if so, how?

2. Currently, § 2L1.2 requires the court to classify the defendant's prior convictions by type (e.g., is it a “crime of violence” or is it an “aggravated felony”?), a task that involves the Supreme Court's “categorical approach.” In recent years, the Commission has received commentary from stakeholders in the federal criminal justice system—including district and circuit judges, federal probation officers, the Department of Justice, and some defense counsel—that the use of a “categorical approach” to determine if a predicate conviction qualifies for an enhancement under § 2L1.2(b) requires a cumbersome, overly detailed, and resource-intensive legal analysis that often is under- or over-inclusive regarding the actual seriousness of offenders' predicate convictions. See, e.g., Comment Received by the Commission in Response to Request for Public Comment on Proposed Priorities from 2010 to 2015 (available on the Commission's Web site at www.ussc.gov/amendment-process/

public-comment). Cf. *Almanza-Arenda v. Lynch*, ___ F.3d ___, 2015 WL 9462976 at *8–*9 (9th Cir. Dec. 28, 2015) (Owens, J., concurring, joined by Tallman, Bybee & Callahan) (“The bedeviling . . . [‘]categorical approach’ will continue to spit out intra- and inter-circuit splits and confusion, which are inevitable when we have hundreds of federal judges reviewing thousands of criminal state laws and certain documents to determine if an offense is ‘categorically[.]’ [a predicate offense]. . . . A better mousetrap is long overdue. Rather than compete with Rube Goldberg, we instead should look to a more objective standard, such as the length of the underlying sentence [to determine what is a predicate offense].”).

The proposed amendment would eliminate the use of the “categorical approach” for predicate felony convictions and provide for enhancements based on the sentence imposed rather than on the type of offense. What are the advantages and disadvantages of basing the enhancement on the type of the prior conviction? What are the advantages and disadvantages of basing the enhancement on the length of the sentence imposed on the prior conviction? If the Commission were to adopt the sentence-imposed model, are the 24- and 12-month gradations included in the proposed amendment appropriate? Should the Commission adopt different gradations, such as the ones currently used in Chapter Four of the *Guidelines Manual* (i.e., “exceeding one year and one month” and “at least sixty days”), or more or fewer gradations? If the Commission were to provide a different approach to apply the enhancements at § 2L1.2, what should that different approach be?

3. As noted in the Commission's recent report, both the illegal reentry statute and § 2L1.2 provide enhanced penalties only if the defendant sustained a conviction before being deported. A defendant receives at most a single enhancement under § 2L1.2—based on the most serious conviction. Additional convictions that occurred before the defendant's most recent deportation, and convictions that occurred after the defendant's most recent illegal reentry, are not taken into account in the calculation of the offense level (although they may be taken into account in the criminal history score).

Should the Commission amend how the enhancements at § 2L1.2 work and, if so, how? Should the Commission amend § 2L1.2 to account not only for pre-deportation convictions but also for other aggravating factors relevant to a

defendant's culpability and need for incapacitation and deterrence?

For example, the proposed amendment would amend subsection (a) of § 2L1.2 to provide alternative base offense levels if the defendant had one or more prior convictions for illegal reentry offenses under 8 U.S.C. § 1253, § 1325(a), or § 1326. What are the advantages and disadvantages of basing alternative base offense levels on illegal reentry convictions? Should the Commission use a different approach for such alternative base offense levels?

Should the Commission use deportations and orders of removal instead to apply the base offense levels?

If the Commission provided additional enhancements to account for aggravating factors relevant to a defendant's culpability other than pre-deportation convictions, how should these enhancements interact? How much weight should be given to pre-deportation convictions in relation to prior illegal reentry convictions or post-reentry convictions in driving the guideline range? Should the guideline provide greater emphasis on one or more of these factors? For example, should the guideline give more weight to post-reentry convictions and less weight to pre-deportation convictions (e.g., a 10-level enhancement for a post-reentry conviction for which the sentence imposed was 24 months or more with a corresponding 6-level enhancement for a pre-deportation conviction for which the sentence imposed was 24 months or more)?

What other aggravating factors, if any, should the Commission incorporate into § 2L1.2, and how should the Commission incorporate them? Should the factor be an enhancement, an alternative base offense level, a minimum offense level, an upward departure provision, or some combination of these? If so, what level of enhancement should apply?

What mitigating factors, if any, should the Commission incorporate into § 2L1.2, and how should the Commission incorporate them? For example, should the Commission provide a new departure provision for cases in which the defendant's predicate felony conviction is based on an offense that was classified by the laws of the state as a misdemeanor?

4. Currently, § 2L1.2 provides enhanced penalties based on convictions sustained prior to the defendant's most recent deportation from the United States. The proposed amendment would modify how the enhancements work in the illegal reentry guideline. Specifically, it would divide the defendant's criminal history

into two time periods. Subsection (b)(1) would reflect the convictions that the defendant sustained before his or her first deportation or order of removal (whichever event occurs first). Subsection (b)(2) would then reflect the convictions that the defendant sustained after that event (when the criminal conduct that resulted in the conviction took place after that event).

What are the advantages and disadvantages of using a particular deportation or order of removal as the determining event for whether a prior conviction qualifies for an enhancement under subsection (b)(1) or subsection (b)(2)? Should the Commission use a different approach to distinguish pre-deportation convictions from post-reentry convictions? For example, should the Commission provide instead that a prior conviction sustained before any deportation would qualify for an enhancement for pre-deportation convictions? If so, how should such enhancement interact with an enhancement based on post-reentry convictions as provided in the proposed amendment?

5. In 2014, the Commission amended the Commentary to § 2L1.1 to add a departure provision for cases in which the defendant is located by immigration authorities while the defendant is in state custody for a state offense unrelated to the federal illegal reentry offense. In such a case, the time served is not covered by adjustment under § 5G1.3 (Imposition of a Sentence on a Defendant Subject to an Undischarged Term of Imprisonment or Anticipated State Term of Imprisonment) and, accordingly, is not covered by a departure under § 5K2.23 (Discharged Terms of Imprisonment). Under the current guideline, the departure allows courts to depart to reflect all or part of the time served in state custody for the unrelated offense, from the time federal immigration authorities locate the defendant until the service of the federal sentence commences, that the court determines will not be credited to the federal sentence by the Bureau of Prisons. The proposed amendment brackets the possibility of deleting the departure provision at Application Note 8 to § 2L1.2.

If the Commission were to promulgate the proposed amendment revising how the enhancements at the illegal reentry guideline work, should the Commission delete the departure based on time served in state custody? If not, how should the new enhancements at § 2L1.2 interact with the departure provision? For example, should the Commission limit the applicability of the departure provision?

6. The Commission recently promulgated an amendment that amends the definition of “crime of violence” in subsection (a) of § 4B1.2 (Definitions of Terms Used in Section 4B1.1), effective August 1, 2016 (to be published in a forthcoming edition of the **Federal Register**). The changes made by that amendment include revising the list of enumerated offenses and adding definitions for the enumerated offenses of extortion and a forcible sex offense. Finally, the amendment includes a downward departure provision in § 4B1.1 for cases in which the defendant’s prior “crime of violence” or “controlled substance offense” is based on an offense that was classified by the laws of the state as a misdemeanor.

The proposed amendment would eliminate the use of the term “crime of violence” in § 2L1.2. In the event that the Commission does not promulgate the proposed amendment, and retains the term “crime of violence” in § 2L1.2, should the Commission incorporate all or part of the definition of “crime of violence” provided in the recently amended § 4B1.2 into § 2L1.2? If the Commission were to conform § 2L1.2 to the new definition in § 4B1.2(a), are there any particular offenses that would no longer qualify as a “crime of violence” but that nonetheless should receive an enhancement under subsection (b)(1) (e.g., statutory rape or burglary of a dwelling)?

[FR Doc. 2016–00766 Filed 1–14–16; 8:45 am]

BILLING CODE 2210–40–P

DEPARTMENT OF VETERANS AFFAIRS

Funding Availability Under Supportive Services for Veteran Families Program

AGENCY: Veterans Health Administration, VA.

ACTION: Notice of fund availability.

SUMMARY:

Funding Opportunity Title: Supportive Services for Veteran Families Program.

Announcement Type: Initial.

Funding Opportunity Number: VA–SSVF–011516.

Catalog of Federal Domestic Assistance Number: 64.033, VA Supportive Services for Veteran Families Program.

The Department of Veterans Affairs (VA) is announcing the availability of funds for supportive services grants under the Supportive Services for Veteran Families (SSVF) Program. This Notice of Fund Availability (NOFA)

contains information concerning the SSVF Program, initial supportive services grant application processes, and the amount of funding available. Awards made for supportive services grants will fund operations beginning October 1, 2016.

DATES: Applications for supportive services grants under the SSVF Program must be received by the SSVF Program Office by 4:00 p.m. Eastern Time on February 5, 2016. In the interest of fairness to all competing applicants, this deadline is firm as to date and hour, and VA will treat as ineligible for consideration any application that is received after the deadline. Applicants should take this practice into account and make early submission of their materials to avoid any risk of loss of eligibility brought about by unanticipated delays, computer service outages, or other delivery-related problems.

ADDRESSES: For a Copy of the Application Package: Copies of the application can be downloaded directly from the SSVF Program Web site at: www.va.gov/homeless/ssvf.asp. Questions should be referred to the SSVF Program Office via email at SSVF@va.gov. For detailed SSVF Program information and requirements, see part 62 of Title 38, Code of Federal Regulations (38 CFR part 62).

Submission of Application Package: Applicants are strongly encouraged to submit applications electronically following instructions found at www.va.gov/homeless/ssvf.asp. Alternatively, applicants can mail in applications. If mailed, applicants must submit two completed, collated, hard copies of the application and two compact discs (CDs) containing electronic versions of the entire application are required. Each application copy must (i) be fastened with a binder clip, and (ii) contain tabs listing the major sections of and exhibits to the application. Each CD must be labeled with the applicant’s name and must contain an electronic copy of the entire application. A budget template must be attached in Excel format on the CD, but all other application materials may be attached in a PDF or other format. The application copies and CDs must be submitted to the following address: Supportive Services for Veteran Families Program Office National Center on Homelessness Among Veterans, 4100 Chester Avenue, Suite 201, Philadelphia, PA 19104. Applicants must submit two hard copies and two CDs. Applications may not be sent by facsimile (FAX). Applications must be received in the SSVF Program Office by

4:00 p.m. Eastern Time on the application deadline date. Applications must arrive as a complete package. Materials arriving separately will not be included in the application package for consideration and may result in the application being rejected. See Section II.C. of this NOFA for maximum allowable grant amounts.

Technical Assistance: Information regarding how to obtain technical assistance with the preparation of an initial supportive services grant application is available on the SSVF Program Web site at: <http://www.va.gov/HOMELESS/SSVF.asp>.

FOR FURTHER INFORMATION CONTACT: Mr. John Kuhn, Supportive Services for Veteran Families Program Office, National Center on Homelessness Among Veterans, 4100 Chester Avenue, Suite 201, Philadelphia, PA 19104; SSVF@va.gov.

SUPPLEMENTARY INFORMATION:

I. Funding Opportunity Description

A. Purpose: The SSVF Program's purpose is to provide supportive services grants to private non-profit organizations and consumer cooperatives, who will coordinate or provide supportive services to very low-income Veteran families who: (i) Are residing in permanent housing; (ii) are homeless and scheduled to become residents of permanent housing within a specified time period; or (iii) after exiting permanent housing within a specified time period, are seeking other housing that is responsive to such very low-income Veteran family's needs and preferences.

B. Funding Priorities: VA will provide up to \$300 million for existing grantees seeking to renew their grants.

C. Definitions: Part 62 of title 38, Code of Federal Regulations (38 CFR part 62), contains definitions of terms used in the SSVF Program.

D. Approach: Respondents to this NOFA should base their proposals and applications on the current requirements of part 62. Grantees will be expected to leverage supportive services grant funds to enhance the housing stability of very low-income Veteran families who are occupying permanent housing. In doing so, grantees are required to establish relationships with local community resources. Therefore, agencies must work through coordinated partnerships built either through formal agreements or the informal working relationships commonly found amongst strong social service providers. The scoring criteria for grantees applying for renewal supportive services grants are at 38 CFR

62.24, which provides for points to be awarded based on the success of the grantee's program. As part of the application, all applicants are strongly encouraged to provide letters of support from their respective VA Network Homeless Coordinator (or their designee). In addition, applicants are strongly encouraged to provide letters of support from the Continuum of Care (CoC) where they plan to deliver services that reflect the applicant's engagement in the CoC's efforts to coordinate services. The CoC may elect to provide VA with a rank order of their support in lieu of providing individual letters of support. A CoC is a community plan to organize and deliver housing and services to meet the needs of people who are homeless as they move to stable housing and maximize self-sufficiency. It includes action steps to end homelessness and prevent a return to homelessness (CoC locations and contact information can be found at the Department of Housing and Urban Development's (HUD) Web site, <http://www.hudhre.info/index.cfm?do=viewCocMaps>). The CoC's letter of support should describe the applicant's participation in the CoC's coordinated assessment efforts (coordinated assessment refers to a common process for accessing homeless assistance services including: Prevention, diversion, emergency shelter, transitional housing, rapid re-housing, supportive services and even permanent supportive housing). In addition, any applicant proposing to serve an Indian Tribal area is strongly encouraged to provide a letter of support from the relevant Indian Tribal Government. The aim of the provision of supportive services is to assist very low-income Veteran families residing in permanent housing to remain stably housed and to rapidly transition those not currently in permanent housing to stable housing. SSVF emphasizes the placement of homeless Veteran families who are described in regulation as (i) very low-income Veteran families who are homeless and scheduled to become residents of permanent housing within 90 days, and (ii) very low-income Veteran families who have exited permanent housing within the previous 90 days to seek other housing that is responsive to their needs and preferences. As a crisis intervention program, the SSVF Program is not intended to provide long-term support for participants, nor will it be able to address all of the financial and supportive services needs of participants that affect housing stability. Rather, when participants require long-

term support, grantees should focus on connecting such participants to income supports, such as employment and mainstream Federal and community resources (e.g., HUD-VA Supportive Housing program, HUD Housing Choice Voucher programs, McKinney-Vento funded supportive housing programs, Temporary Assistance for Needy Families (TANF), and Social Security Income/Social Security Disability Insurance (SSI/SSDI) etc.) that can provide ongoing support as required.

Assistance in obtaining or retaining permanent housing is a fundamental goal of the SSVF Program. Grantees must provide case management services in accordance with 38 CFR 62.31. Such case management should include tenant counseling, mediation with landlords and outreach to landlords.

E. Authority: Funding applied for under this NOFA is authorized by 38 U.S.C. 2044. VA implements the SSVF Program by regulation in 38 CFR part 62. Funds made available under this NOFA are subject to the requirements of the aforementioned regulations and other applicable laws and regulations.

F. Requirements for the Use of Supportive Services Grant Funds: The grantee's request for funding must be consistent with the limitations and uses of supportive services grant funds set forth in 38 CFR part 62 and this NOFA. In accordance with the regulations and this NOFA, the following requirements apply to supportive services grants awarded under this NOFA:

1. Grantees may use a maximum of 10 percent of supportive services grant funds for administrative costs identified in 38 CFR 62.70.

2. Grantees must use a minimum of 60 percent of the temporary financial assistance portion of their supportive services grant funds to serve very low-income Veteran families who qualify under 38 CFR 62.11(b). (NOTE: Grantees may request a waiver to decrease this minimum, as discussed in section V.B.3.a.)

3. Grantees may use a maximum of 50 percent of supportive services grant funds to provide the supportive service of temporary financial assistance paid directly to a third party on behalf of a participant for child care, emergency housing assistance, transportation, rental assistance, utility-fee payment assistance, security deposits, utility deposits, moving costs, and general housing stability assistance (which includes emergency supplies) in accordance with 38 CFR 62.33 and 38 CFR 62.34.

G. Guidance for the Use of Supportive Services Grant Funds: It is VA policy to support a "Housing First" model in

addressing and ending homelessness. Housing First establishes housing stability as the primary intervention in working with homeless persons. The Housing First approach is based on research that shows that a homeless individual or household's first and primary need is to obtain stable housing, and that other issues that may affect the household can and should be addressed as housing is obtained. Research supports this approach as an effective means to end homelessness. Housing is not contingent on compliance with mandated therapies or services; instead, participants must comply with a standard lease agreement and are provided with the services and supports that are necessary to help them do so successfully.

Grantees must develop plans that will ensure that Veteran participants have the level of income and economic stability needed to remain in permanent housing after the conclusion of the SSVF intervention. Both employment and benefits assistance from VA and non-VA sources represent a significant underutilized source of income stability for homeless Veterans. The complexity of program rules and the stigma some associate with entitlement programs contributes to their lack of use. To this effect, grantees are encouraged to consider strategies that can lead to prompt and successful access to employment and benefits that are essential to retaining housing.

1. Consistent with the Housing First model supported by VA, grantees are expected to offer the following supportive services: Housing counseling; assisting participants in understanding leases; securing utilities; making moving arrangements; providing representative payee services concerning rent and utilities when needed; and mediation and outreach to property owners related to locating or retaining housing. Grantees may also assist participants by providing rental assistance, security or utility deposits, moving costs or emergency supplies; or using other Federal resources, such as the HUD's ESG, or supportive services grant funds subject to the limitations described in this NOFA and 38 CFR 62.34.

2. As SSVF is a short-term crisis intervention, grantees must develop plans that will produce sufficient income to sustain Veteran participants in permanent housing after the conclusion of the SSVF intervention. Grantees must ensure the availability of employment and vocational services either through the direct provision of these services or their availability through formal or informal service

agreements. Agreements with Homeless Veteran Reintegration Programs funded by the U.S. Department of Labor are strongly encouraged. For participants unable to work due to disability, income must be established through available benefits programs.

3. Per 38 CFR 62.33, grantees must assist participants in obtaining public benefits. Grantees must screen all participants for eligibility for a broad range of entitlements such as TANF, Social Security, the Supplemental Nutrition Assistance Program (SNAP), the Low Income Home Energy Assistance Program (LIHEAP), the Earned Income Tax Credit (EITC), and local General Assistance programs. Grantees are expected to access the Substance Abuse and Mental Health Services Administration's SSI/SSDI Outreach, Access, and Recovery (SOAR) program either through community linkages or by training staff to deliver SOAR services. In addition, where available grantees should access information technology tools to support case managers in their efforts to link participants to benefits.

4. Grantees are encouraged to provide, or assist participants in obtaining, legal services relevant to issues that interfere with the participants' ability to obtain or retain permanent housing. (**Note:** Information regarding legal services provided may be protected from being released to the grantee or VA under attorney-client privilege, although grantee must provide sufficient information to demonstrate the frequency and type of service delivered.) Support for legal services can include paying for court filing fees to assist a participant with issues that interfere with the participant's ability to obtain or retain permanent housing or supportive services, including issues that affect the participant's employability and financial security. Grantees (in addition to employees and members of grantees) may represent participants before VA with respect to a claim for VA benefits, but only if they are recognized for that purpose pursuant to 38 U.S.C. Chapter 59. Further, the individual providing such representation must be accredited pursuant to 38 U.S.C. Chapter 59.

5. Access to mental health and addiction services are required by SSVF; however, grantees cannot fund these services directly through the SSVF grant. Therefore, applicants must demonstrate, through either formal or informal agreements, their ability to promote rapid access and engagement to mental health and addiction services for the Veteran and family members.

6. VA recognizes that extremely low-income Veterans, with incomes below 30 percent of the area median income, face greater barriers to permanent housing placement. Grantees should consider how they can support these participants.

7. When serving participants who are residing in permanent housing, the defining question to ask is: "Would this individual or family be homeless but for this assistance?" The grantee must use a VA-approved screening tool with criteria that targets those most at-risk of homelessness. To qualify for SSVF services, a participant who is served under 38 CFR 62.11(a) (homeless prevention) must not have sufficient resources or support networks (*e.g.*, family, friends, faith-based or other social networks) immediately available to prevent them from becoming homeless. To further qualify for services under 38 CFR 62.11(a), the grantee must document that the participant meets at least one of the following conditions:

(a) Has moved because of economic reasons two or more times during the 60 days immediately preceding the application for homelessness prevention assistance;

(b) Is living in the home of another because of economic hardship;

(c) Has been notified in writing that their right to occupy their current housing or living situation will be terminated within 21 days after the date of application for assistance;

(d) Lives in a hotel or motel and the cost of the hotel or motel stay is not paid by charitable organizations or by Federal, State, or local government programs for low-income individuals;

(e) Is exiting a publicly funded institution or system of care (such as a health care facility, a mental health facility, or correctional institution) without a stable housing plan; or

(f) Otherwise lives in housing that has characteristics associated with instability and an increased risk of homelessness, as identified in the recipient's approved screening tool.

8. SSVF grantees are required to participate in local planning efforts designed to end Veteran homelessness. Grantees may use grant funds to support SSVF involvement in such community planning by sub-contracting with CoCs, when such funding is essential to create or sustain the development of these data driven plans.

9. When other funds from community resources are not readily available to assist program participants, grantees may choose to utilize supportive services grants, to the extent described in this NOFA and in 38 CFR 62.33 and 62.34, to provide temporary financial

assistance. Such assistance may, subject to the limitations in this NOFA and 38 CFR part 62, be paid directly to a third party on behalf of a participant for child care, transportation, family emergency housing assistance, rental assistance, utility-fee payment assistance, security or utility deposits, moving costs and general housing stability assistance as necessary.

II. Award Information

A. Overview: This NOFA announces the availability of funds for supportive services grants under the SSVF Program and pertains to proposals for renewal of existing supportive services grant programs. New applications for SSVF grant awards will not be funded through this NOFA. Up to \$300 million will be available through this NOFA.

B. Funding: To be eligible for renewal of a supportive services grant, the grantee's program concept must be substantially the same with the program concept of the grantee's current grant award. Renewal applications can request funding that is equal to or less than their current award. If sufficient funding is available, VA may provide an increase of up to 2 percent from the previous year's award. Any percentage increase, if provided, will be awarded uniformly to all grant recipients regardless of their grant award. As provided in section V.5., VA may in its discretion offer to award a non-renewed grant to the highest-ranked applicant that is awarded a renewal grant in the same community as, or a proximate community to, the non-renewed grant, so long as that applicant has the capacity to promptly begin providing services in connection with all awards. In such instance, the amount of the award will be equal to or less than the prior award which was not renewed.

C. Allocation of Funds: Funding will be awarded under this NOFA to existing grantees for a 1- to 3-year period beginning October 1, 2016. The following requirements apply to supportive services grants awarded under this NOFA:

1. In response to this NOFA, only existing grantees can apply.
2. Each grant request cannot exceed the current award.
3. Applicants may request an amount less than their current award (this will not be considered a substantial change to the program concept).
4. If a grantee failed to use all of awarded funds in the previous fiscal year (2016), VA may elect to limit renewal award to the amount of funds used in the previous fiscal year.

5. Applicants should fill out separate applications for each supportive services renewal funding request.

D. Supportive Services Grant Award Period: Grant awards are generally made for a 1-year period, although selected grants may be eligible for a 3-year award (see VI.C.6). All grants are eligible to be renewed subject to the availability of funding.

III. Eligibility Information

A. Eligible Applicants: Only eligible entities that are existing grantees can apply in response to this NOFA. In order to be eligible, an applicant must qualify as a private non-profit organization (section 501(c)(3) or 501(c)(19) tax exempt status is required) or a consumer cooperative as defined in 38 U.S.C. 2044(f). In addition, tribally designated housing entities (as defined in section 4 of the Native American Housing Assistance and Self-Determination Act of 1996 (25 U.S.C. 4103)) are eligible.

B. Cost Sharing or Matching: None.

IV. Application and Submission Information

A. Address to Request Application Package: Download directly from the SSVF Program Web site at www.va.gov/homeless/ssvf.asp or send a written request for an application to SSVF Program Office, National Center on Homelessness Among Veterans, 4100 Chester Avenue, Suite 201, Philadelphia, PA 19104. Any questions regarding this process should be referred to the SSVF Program Office via phone at (877) 737-0111 (toll-free number) or via email at ssvf@va.gov. For detailed SSVF Program information and requirements, see 38 CFR 62.

B. Content and Form of Application: Applicants are strongly encouraged to submit applications electronically following instructions found at www.va.gov/homeless/ssvf.asp. Alternatively, applicants can mail in applications. If mailed, applicants must submit two completed collated, hard copies of the application and two CDs containing electronic versions of the entire application are required. Each application copy must (i) be fastened with a binder clip, and (ii) contain tabs listing the major sections of and exhibits to the application. Each CD must be labeled with the applicant's name and must contain an electronic copy of the entire application. A budget template must be attached in Excel format on the CD, but all other application materials may be attached in a PDF or other format.

C. Submission Dates and Times: Applications for supportive services

grants under the SSVF Program must be received by the SSVF Program Office by 4:00 p.m. Eastern Time on February 5, 2016. Awards made for supportive services grants will fund operations beginning October 1, 2016. Applications must arrive as a complete package. Materials arriving separately will not be included in the application package for consideration and may result in the application being rejected. Additionally, in the interest of fairness to all competing applicants, this deadline is firm as to date and hour, and VA will treat as ineligible for consideration any application that is received after the deadline. Applicants should take this practice into account and make early submission of their materials to avoid any risk of loss of eligibility brought about by unanticipated delays, computer service outages, or other delivery-related problems.

D. Intergovernmental Review: This section is not applicable to the SSVF Program.

E. Funding Restrictions: Up to \$300 million may be awarded depending on funding availability and subject to available appropriations for supportive services grants to be funded under this NOFA. Applicants should fill out separate applications for each supportive services funding request. Funding will be awarded under this NOFA to existing grantees for a 1- to 3-year period beginning October 1, 2016.

F. Other Submission Requirements:

1. Applicants may apply only as renewal applicants using the application designed for renewal grants.
2. At the discretion of VA, multiple grant proposals submitted by the same lead agency may be combined into a single grant award if the proposals provide services to contiguous areas. Any funds awarded pursuant to section V.5. will be combined into a single award.
3. Additional supportive services grant application requirements are specified in the application package. Submission of an incorrect or incomplete application package will result in the application being rejected during threshold review. The application packages must contain all required forms and certifications. Selections will be made based on criteria described in 38 CFR part 62 and this NOFA. Applicants and grantees will be notified of any additional information needed to confirm or clarify information provided in the application and the deadline by which to submit such information. Applicants are strongly encouraged to submit applications electronically. If mailed, applications and CDs must be submitted

to the following address: SSVF Program Office, National Center on Homelessness Among Veterans, 4100 Chester Avenue, Suite 201, Philadelphia, PA 19104. Applicants must submit two hard copies and two CDs. Applications may not be sent by facsimile (FAX).

V. Application Review Information

A. Criteria:

1. VA will only score applicants that meet the following threshold requirements:

(a) The application is filed within the time period established in the NOFA, and any additional information or documentation requested by VA under 38 CFR 62.20(c) is provided within the time frame established by VA;

(b) The application is completed in all parts;

(c) The applicant is an eligible entity;

(d) The activities for which the supportive services grant is requested are eligible for funding under 38 CFR part 62;

(e) The applicant's proposed participants are eligible to receive supportive services under this part;

(f) The applicant agrees to comply with the requirements of 38 CFR part 62;

(g) The applicant does not have an outstanding obligation to the Federal Government that is in arrears and does not have an overdue or unsatisfactory response to an audit; and

(h) The applicant is not in default by failing to meet the requirements for any previous Federal assistance.

2. VA will use the following criteria to score grantees applying for renewal of a supportive services grant:

(a) VA will award up to 55 points based on the success of the grantee's program.

(b) VA will award up to 30 points based on the cost-effectiveness of the grantee's program.

(c) VA will award up to 15 points based on the extent to which the grantee's program complies with SSVF Program goals and requirements.

3. VA will use the following process to select applicants to receive supportive services grants: VA will score all applicants that meet the threshold requirements set forth in 38 CFR 62.21 using the scoring criteria set forth in 38 CFR 62.24.

B. Review and Selection Process: VA will review all supportive services renewal grant applications in response to this NOFA according to the following steps:

1. Score all applications that meet the threshold requirements described in 38 CFR 62.21.

2. Rank those applications who score at least 75 cumulative points and receive at least one point under each of the categories identified for renewal applicants in 38 CFR 62.24. The applications will be ranked in order from highest to lowest scores in accordance with 38 CFR 62.25.

3. Utilize the ranked scores of applications as the primary basis for selection. However, VA will also utilize the following considerations in 38 CFR 62.23(d) to select applicants for funding:

(a) Give preference to applications that provide or coordinate the provision of supportive services for very low-income Veteran families transitioning from homelessness to permanent housing. Consistent with this preference, where other funds from community resources are not readily available for temporary financial assistance, applicants are required to spend no less than 60 percent of all budgeted temporary financial assistance on participants occupying permanent housing as defined in 38 CFR 62.11(b)). Waivers to this 60 percent requirement may be requested when grantees can demonstrate significant local progress towards eliminating homelessness in the target service area. Waiver requests must include data from authoritative sources such as HUD's Annual Homeless Assessment Report, annual Point-In-Time Counts and evidence of decreased demand for emergency shelter and transitional housing. Waivers for the 60 percent requirement may also be requested for services provided to rural Indian tribal areas and other rural areas where shelter capacity is insufficient to meet local need. Waiver requests must include an endorsement by the impacted CoC explicitly stating that a shift in resources from rapid re-housing to prevention will not result in an increase in homelessness.

(b) To the extent practicable, ensure that supportive services grants are equitably distributed across geographic regions, including rural communities and tribal lands. This equitable distribution criteria will be used to ensure that SSVF resources are provided to those communities with the highest need as identified by authoritative sources such as HUD's Annual Homeless Assessment Report, annual Point-In-Time Counts and VA Homeless Registry data.

4. Subject to the considerations noted in paragraph B.3 above, VA will fund the highest-ranked applicants for which funding is available.

5. VA may in its discretion offer to award a non-renewed grant to the highest-ranked applicant that is

awarded a renewal grant in the same community as, or a proximate community to, the non-renewed grant, so long as that applicant has the capacity to promptly begin providing services in connection with all awards. If that applicant declines the award, VA will offer the award to the next highest-ranked applicant and continue in that manner until a qualifying grantee accepts the award.

VI. Award Administration Information

A. Award Notices: Although subject to change, the SSVF Program Office expects to announce grant recipients for all applicants in the fourth quarter of fiscal year 2016 with grants beginning October 1, 2016. Prior to executing a funding agreement, VA will contact the applicants and make known the amount of proposed funding and verify that the applicant would still like the funding. Once VA verifies that the applicant is still seeking funding, VA will execute an agreement and make payments to the grant recipient in accordance with 38 CFR part 62 and this NOFA.

B. Administrative and National Policy Requirements: It is VA policy to support a "Housing First" model in addressing and ending homelessness. Housing First establishes housing stability as the primary intervention in working with homeless persons. The Housing First approach is based on research that shows that a homeless individual or household's first and primary need is to obtain stable housing, and that other issues that may affect the household can and should be addressed as housing is obtained. Housing is not contingent on compliance with services; instead, participants must comply with a standard lease agreement and are provided with the services and supports that are necessary to help them do so successfully. Research supports this approach as an effective means to end homelessness.

Consistent with the Housing First model supported by VA, grantees are expected to offer the following supportive services: Housing counseling; assisting participants in understanding leases; securing utilities; making moving arrangements; providing representative payee services concerning rent and utilities when needed; and mediation and outreach to property owners related to locating or retaining housing. Grantees may also assist participants by providing rental assistance, security or utility deposits, moving costs or emergency supplies, using other Federal resources, such as the ESG, or supportive services grant funds to the extent described in this NOFA and 38 CFR 62.34.

As SSVF grants cannot be used to fund treatment for mental health or substance use disorders, applicants must provide evidence that they can provide access to such services to all program participants through formal and informal agreements with community providers.

C. Reporting: VA places great emphasis on the responsibility and accountability of grantees. As described in 38 CFR 62.63 and 62.71, VA has procedures in place to monitor supportive services provided to participants and outcomes associated with the supportive services provided under the SSVF Program. Applicants should be aware of the following:

1. Upon execution of a supportive services grant agreement with VA, grantees will have a VA regional coordinator assigned by the SSVF Program Office who will provide oversight and monitor supportive services provided to participants.

2. Grantees will be required to enter data into a Homeless Management Information System (HMIS) Web-based software application. This data will consist of information on the participants served and types of supportive services provided by grantees. Grantees must treat the data for activities funded by the SSVF Program separate from that of activities funded by other programs. Grantees will be required to work with their HMIS Administrators to export client-level data for activities funded by the SSVF Program to VA on at least a monthly basis.

3. VA shall complete annual monitoring evaluations of each grantee. Monitoring will also include the submittal of quarterly and annual financial and performance reports by the grantee. The grantee will be expected to demonstrate adherence to the grantee's proposed program concept, as described in the grantee's application. All grantees are subject to audits conducted by the VA Financial Services Center.

4. Grantees will be required to provide each participant with a satisfaction survey which can be submitted by the participant directly to VA within 30 days of such participant's pending exit from the grantee's program.

5. Grantees will be assessed based on their ability to meet critical performance measures. In addition to meeting program requirements defined by the regulations and applicable NOFA(s), grantees will be assessed on their ability to place participants into housing and the housing retention rates of participants served. Higher placement for homeless participants and higher

housing retention rates for at-risk participants are expected for very-low income Veteran families when compared to extremely low-income Veteran families with incomes below 30 percent of the area median income.

6. Organizations receiving renewal awards and that have had ongoing SSVF program operation for at least 1 year (as measured from the start of initial SSVF services until January 16, 2016) may be eligible for a 3-year award. Grantees meeting outcome goals defined by VA and in substantial compliance with their grant agreements (defined by meeting targets and having no outstanding corrective action plans) and who, in addition, receive 3-year accreditation from the Commission on Accreditation of Rehabilitation Facilities (CARF) in Employment and Community Services: Rapid Rehousing and Homeless Prevention standards or a 4-year accreditation from the Council on Accreditation's (COA) accreditation in Supported Community Living Services standards are eligible for a 3-year grant renewal subject to funding availability (NOTE: Multi-year awards are contingent on funding availability). If awarded a multiple year renewal, grantees may be eligible for funding increases as defined in NOFAs that correspond to years 2 and 3 of their renewal funding.

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT: John Kuhn, Supportive SSVF Program Office, National Center on Homelessness Among Veterans, 4100 Chester Avenue, Suite 201, Philadelphia, PA 19104; (877) 737-0111 (this is a toll-free number); SSVF@va.gov.

VIII. Other Information

A. VA Goals and Objectives for Funds Awarded Under this NOFA: In accordance with 38 CFR 62.24(c), VA will evaluate an applicant's compliance with VA goals and requirements for the SSVF Program. VA goals and requirements include the provision of supportive services designed to enhance the housing stability and independent living skills of very low-income Veteran families occupying permanent housing across geographic regions and program administration in accordance with all applicable laws, regulations, and guidelines. For purposes of this NOFA, VA goals and requirements also include the provision of supportive services designed to rapidly re-house or prevent homelessness among people in the following target populations who also meet all requirements for being part of a very low-income Veteran family occupying permanent housing:

1. Veteran families earning less than 30 percent of area median income as most recently published by HUD for programs under section 8 of the United States Housing Act of 1937 (42 U.S.C. 1437f) (<http://www.huduser.org>).

2. Veterans with at least one dependent family member.

3. Veterans returning from Operation Enduring Freedom, Operation Iraqi Freedom, or Operation New Dawn.

4. Veteran families located in a community, as defined by HUD's CoC, or a county not currently served by a SSVF grantee.

5. Veteran families located in a community, as defined by HUD's CoC, where current level of SSVF services is not sufficient to meet demand of Category 2 and 3 (currently homeless) Veteran families.

6. Veteran families located in a rural area.

7. Veteran families located on Indian Tribal Property.

B. Payments of Supportive Services Grant Funds: Grantees will receive payments electronically through the U.S. Department of Health and Human Services Payment Management System. Grantees will have the ability to request payments as frequently as they choose subject to the following limitations:

1. During the first quarter of the grantee's supportive services annualized grant award period, the grantee's cumulative requests for supportive services grant funds may not exceed 35 percent of the total supportive services grant award without written approval by VA.

2. By the end of the second quarter of the grantee's supportive services annualized grant award period, the grantee's cumulative requests for supportive services grant funds may not exceed 60 percent of the total supportive services grant award without written approval by VA.

3. By the end of the third quarter of the grantee's supportive services annualized grant award period, the grantee's cumulative requests for supportive services grant funds may not exceed 80 percent of the total supportive services grant award without written approval by VA.

4. By the end of the fourth quarter of the grantee's supportive services annualized grant award period, the grantee's cumulative requests for supportive services grant funds may not exceed 100 percent of the total supportive services grant award.

Signing Authority

The Secretary of Veterans Affairs, or designee, approved this document and authorized the undersigned to sign and

submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs. Robert L. Nabors II, Chief of Staff,

Department of Veterans Affairs, approved this document on January 7, 2016, for publication.

Dated: January 12, 2016.

Michael P. Shores,

Chief Impact Analyst, Office of Regulation Policy & Management, Office of the General Counsel, Department of Veterans Affairs.

Energy Conservation Program: Energy Conservation Standards for
Residential Boilers; Final Rule

DEPARTMENT OF ENERGY**10 CFR Part 430**

[Docket Number EERE-2012-BT-STD-0047]

RIN 1904-AC88

Energy Conservation Program: Energy Conservation Standards for Residential Boilers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule.

SUMMARY: The Energy Policy and Conservation Act of 1975 (EPCA), as amended, prescribes energy conservation standards for various consumer products and certain commercial and industrial equipment, including residential boilers. EPCA also requires the U.S. Department of Energy (DOE) to periodically determine whether more-stringent, amended standards would be technologically feasible and economically justified, and would save a significant amount of energy. In this final rule, DOE is adopting more-stringent energy conservation standards for residential boilers. It has determined that the amended energy conservation standards for these products would result in significant conservation of energy, and are technologically feasible and economically justified.

DATES: The effective date of this rule is March 15, 2016. Compliance with the amended standards established for residential boilers in this final rule is required on and after January 15, 2021.

ADDRESSES: The docket for this rulemaking, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at www.regulations.gov. All documents in the docket are listed in the www.regulations.gov index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

A link to the docket Web page can be found at: <http://www.regulations.gov/#/docketDetail;D=EERE-2012-BT-STD-0047>. The www.regulations.gov Web page contains simple instructions on how to access all documents, including public comments, in the docket.

For further information on how to review the docket, contact Ms. Brenda Edwards at (202) 586-2945 or by email: Brenda.Edwards@ee.doe.gov.

FOR FURTHER INFORMATION CONTACT: Mr. John Cymbalsky, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE-5B, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 287-1692. Email: residential_furnaces_and_boilers@ee.doe.gov.

Mr. Eric Stas, U.S. Department of Energy, Office of the General Counsel, GC-33, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 586-9507. Email: Eric.Stas@hq.doe.gov.

I. Synopsis of the Final Rule

Title III, Part B¹ of the Energy Policy and Conservation Act of 1975 (EPCA or the Act), Public Law 94–163 (42 U.S.C. 6291–6309, as codified), established the Energy Conservation Program for Consumer Products Other Than Automobiles.² These products include residential boilers, the subject of this document.

Pursuant to EPCA, any new or amended energy conservation standard must be designed to achieve the maximum improvement in energy efficiency that DOE determines is technologically feasible and economically justified. (42 U.S.C. 6295(o)(2)(A)) Furthermore, the new or amended standard must result in a significant conservation of energy. (42 U.S.C. 6295(o)(3)(B)) EPCA specifically provides that DOE must conduct a second round of energy conservation standards rulemaking for residential boilers. (42 U.S.C. 6295(f)(4)(C)) The statute also provides that not later than 6 years after issuance of any final rule establishing or amending a standard, DOE must publish either a notice of determination that standards for the product do not need to be amended, or a notice of proposed rulemaking including new proposed energy conservation standards (proceeding to a

final rule, as appropriate). (42 U.S.C. 6295(m)) DOE initiated this rulemaking as required by 42 U.S.C. 6295(f)(4)(C), but once complete, this rulemaking will also satisfy the 6-year review provision under 42 U.S.C. 6295(m).

Furthermore, EISA 2007 amended EPCA to require that any new or amended energy conservation standard adopted after July 1, 2010, shall address standby mode and off mode energy consumption pursuant to 42 U.S.C. 6295(o). (42 U.S.C. 6295(gg)(3)) If feasible, the statute directs DOE to incorporate standby mode and off mode energy consumption into a single standard with the product's active mode energy use. If a single standard is not feasible, DOE may consider establishing a separate standard to regulate standby mode and off mode energy consumption.

In accordance with these and other statutory provisions discussed in this document, DOE is adopting amended annual fuel utilization efficiency (AFUE) energy conservation standards and adopting new standby mode off mode electrical energy conservation standards for residential boilers. The AFUE standards for residential boilers are expressed as minimum AFUE, as determined by the DOE test method (described in section III.B), and are shown in Table I.1, as are the design requirements. Table I.2 shows the standards for standby mode and off mode. These standards apply to all residential boilers listed in Table I.1 and Table I.2 and manufactured in, or imported into, the United States starting on the date five years after January 15, 2021.

TABLE I.1—AFUE ENERGY CONSERVATION STANDARDS FOR RESIDENTIAL BOILERS

[Compliance starting January 15, 2021]

Product class *	AFUE ** (%)	Design requirement
Gas-fired hot water boiler	84	Constant-burning pilot not permitted. Automatic means for adjusting water temperature required (except for boilers equipped with tankless domestic water heating coils).
Gas-fired steam boiler	82	Constant-burning pilot not permitted.
Oil-fired hot water boiler	86	Automatic means for adjusting temperature required (except for boilers equipped with tankless domestic water heating coils).
Oil-fired steam boiler	85	None.
Electric hot water boiler	None	Automatic means for adjusting temperature required (except for boilers equipped with tankless domestic water heating coils).
Electric steam boiler	None	None.

* Product classes are separated by fuel source—gas, oil, or electricity—and heating medium—steam or hot water. See section IV.A.2 for a discussion of product classes.

** AFUE is an annualized fuel efficiency metric that fully accounts for fossil-fuel energy consumption in active, standby, and off modes. See section III.B for a discussion of the AFUE test method.

¹ For editorial reasons, upon codification in the U.S. Code, Part B was redesignated Part A.

² All references to EPCA in this document refer to the statute as amended through the Energy

Efficiency Improvement Act of 2015 (EEIA 2015), Public Law 114–11 (April 30, 2015).

TABLE I.2—ENERGY CONSERVATION STANDARDS FOR RESIDENTIAL BOILERS STANDBY MODE AND OFF MODE ELECTRICAL ENERGY CONSUMPTION

Product class	Standard: $P_{W,SB}$ (watts)	Standard: $P_{W,OFF}$ (watts)
Gas-fired hot water boiler	9	9
Gas-fired steam boiler	8	8
Oil-fired hot water boiler	11	11
Oil-fired steam boiler	11	11
Electric hot water boiler	8	8
Electric steam boiler	8	8

A. Benefits and Costs to Consumers

Table I.3 presents DOE's evaluation of the economic impacts of the adopted AFUE and standby mode and off mode standards on consumers of residential boilers, as measured by the average life-cycle cost (LCC) savings and the simple

payback period (PBP).³ Table I.4 presents the same results for standby mode and off mode. The average LCC savings are positive for all product classes, and the PBP is less than the average boiler lifetime, which is estimated to be 26.6 years for gas-fired hot water boilers and electric hot water

boilers, 23.6 years for gas-fired steam boilers and electric steam boilers, 24.7 for oil-fired hot water boilers, and 19.3 years for oil-fired steam boilers.⁴ DOE has not conducted an analysis of an AFUE standard level for electric boilers as the efficiency of these products already approaches 100 percent AFUE.

TABLE I.3—IMPACTS OF AMENDED AFUE ENERGY CONSERVATION STANDARDS ON CONSUMERS OF RESIDENTIAL BOILERS

Product class	Average LCC savings (2014\$)	Simple payback period (years)
Gas-fired Hot Water Boiler	364	1.2
Gas-fired Steam Boiler	333	2.7
Oil-fired Hot Water Boiler	626	5.8
Oil-fired Steam Boiler	434	6.7
Electric Hot Water Boiler	(*)	(*)
Electric Steam Boiler	(*)	(*)

* N/A (No Standard).

TABLE I.4—IMPACTS OF STANDBY MODE AND OFF MODE ELECTRICAL ENERGY CONSERVATION STANDARDS ON CONSUMERS OF RESIDENTIAL BOILERS

Product class	Average LCC savings (2014\$)	Simple payback period (years)
Gas-fired Hot Water Boiler	15	6.7
Gas-fired Steam Boiler	18	6.4
Oil-fired Hot Water Boiler	20	6.2
Oil-fired Steam Boiler	13	6.1
Electric Hot Water Boiler	8	8.9
Electric Steam Boiler	6	8.8

Estimates of the combined impact of the adopted AFUE and standby mode and off mode standards on consumers are shown in Table I.5.

TABLE I.5—COMBINED IMPACTS OF ADOPTED AFUE AND STANDBY MODE AND OFF MODE ENERGY CONSERVATION STANDARDS ON CONSUMERS OF RESIDENTIAL BOILERS

Product class	Average LCC savings (2014\$)	Simple payback period (years)
Gas-Fired Hot Water Boiler	379	2.3
Gas-Fired Steam Boiler	351	4.2
Oil-Fired Hot Water Boiler	646	6.6
Oil-Fired Steam Boiler	447	7.4
Electric Hot Water Boiler	8	8.9
Electric Steam Boiler	6	8.8

³ The average LCC savings are measured relative to the efficiency distribution in the no-new-standards case, which depicts the market in the compliance year in the absence of standards (see

section IV.F.8). The simple PBP, which is designed to compare specific efficiency levels, is measured relative to the baseline model (see section IV.C.1.a and chapter 5 of the final rule TSD).

⁴ DOE used a distribution of boiler lifetimes that ranges from 1 to 60 years. See appendix 8F of the final rule TSD for details of the derivation of the average boiler lifetime.

DOE's analysis of the impacts of the adopted standards on consumers is described in section IV.F of this document.

B. Impact on Manufacturers

The industry net present value (INPV) is the sum of the discounted cash flows to the industry from the base year through the end of the analysis period (2014 to 2050). Using a real discount rate of 8.0 percent, DOE estimates that the (INPV) for manufacturers of residential boilers in the base case without amended standards is \$367.83 million in 2014\$.

DOE analyzed the impacts of AFUE energy conservation standards and standby/off mode electrical energy consumption energy conservation standards on manufacturers separately. Under the adopted AFUE standards, DOE expects that the change in INPV will range from -0.71 to 0.44 percent, which is approximately equivalent to a reduction of -\$2.63 million to an increase of \$1.62 million. DOE estimates industry conversion costs from the amended AFUE standards to total \$2.27 million.

Under the adopted standby mode and off mode standards, DOE expects the change in INPV will range from -0.46 to 0.12 percent, which is approximately equivalent to a decrease of \$1.71 million to an increase of \$0.45 million. DOE estimates industry conversion costs from the standby mode and off mode standards to total \$0.21 million.

DOE's analysis of the impacts of the adopted standards on manufacturers is described in section IV.J of this final rule.

C. National Benefits⁵

DOE's analyses indicate that the adopted AFUE energy conservation standards for residential boilers are expected to save a significant amount of energy. Relative to the case without amended standards, the lifetime energy savings for residential boilers purchased in the 30-year period that begins in the

first full year of compliance with the amended standards (2021–2050) amount to 0.16 quadrillion Btu (quads).⁶ This represents a savings of 0.6 percent relative to the energy use of these products in the case without amended standards (referred to as the “no-new-standards case”).

The cumulative net present value (NPV) of total consumer costs and savings for the amended residential boilers AFUE standards ranges from \$0.35 billion to \$1.20 billion at 7-percent and 3-percent discount rates, respectively. This NPV expresses the estimated total value of future operating-cost savings minus the estimated increased product costs for residential boilers purchased in 2021–2050.

In addition, the amended AFUE standards for residential boilers are expected to have significant environmental benefits. DOE estimates that the AFUE standards would result in cumulative emission reductions (over the same period as for energy savings) of 9.33 million metric tons (Mt)⁷ of carbon dioxide (CO₂), 2.075 thousand tons of sulfur dioxide (SO₂), 122.3 tons of nitrogen oxides (NO_x), 71.9 thousand tons of methane (CH₄), 0.09 thousand tons of nitrous oxide (N₂O), and 0.45 pounds of mercury (Hg).⁸ The cumulative reduction in CO₂ emissions through 2030 amounts to 0.77 Mt, which is equivalent to the emissions resulting from the annual electricity use of more than 70,000 homes.

⁶ A quad is equal to 10¹⁵ British thermal units (Btu). The quantity refers to full-fuel-cycle (FFC) energy savings. FFC energy savings includes the energy consumed in extracting, processing, and transporting primary fuels (*i.e.*, coal, natural gas, petroleum fuels), and, thus, presents a more complete picture of the impacts of energy efficiency standards. For more information on the FFC metric, see section IV.H.2.

⁷ A metric ton is equivalent to 1.1 short tons. Results for gases other than CO₂ are presented in short tons.

⁸ DOE calculated emissions reductions relative to the no-new-standards-case, which reflects key assumptions in the *Annual Energy Outlook 2015* (AEO 2015) Reference case, which generally represents current legislation and environmental regulations for which implementing regulations were available as of October 31, 2014. DOE notes that the amended AFUE standards are estimated to cause a very slight increase in mercury emissions due to associated increase in boiler electricity use.

The value of the CO₂ reductions is calculated using a range of values per metric ton of CO₂ (otherwise known as the “Social Cost of Carbon”, or SCC) developed by a Federal interagency working group (IWG).⁹ The derivation of the SCC values is discussed in section IV.L. Using discount rates appropriate for each set of SCC values, DOE estimates that the net present monetary value of the CO₂ emissions reduction (not including CO₂-equivalent emissions of other gases with global warming potential) from residential boiler AFUE standards is between \$0.053 billion and \$0.802 billion, with a value of \$0.263 billion using the central SCC case represented by \$40.0/t in 2015. DOE also estimates that the net present monetary value of the NO_x emissions reduction to be \$0.109 billion at a 7-percent discount rate, and \$0.328 billion at a 3-percent discount rate.¹⁰

Table I.6 summarizes the national economic benefits and costs expected to result from the adopted AFUE standards for residential boilers.

⁹ *Technical Update of the Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866*, Interagency Working Group on Social Cost of Carbon, United States Government (May 2013; revised July 2015) (Available at: <https://www.whitehouse.gov/sites/default/files/omb/inforeg/scc-ts-d-final-july-2015.pdf>).

¹⁰ DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants,” published in June 2014 by EPA's Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposalRIAfinal0602.pdf>.) See section IV.L.2 for further discussion. Note that the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electricity Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski et al., 2009). If the benefit-per-ton estimates were based on the Six Cities study (Lepule et al., 2011), the values would be nearly two-and-a-half times larger. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emissions, DOE intends to investigate refinements to the agency's current approach of one national estimate by assessing the regional approach taken by EPA's Regulatory Impact Analysis for the Clean Power Plan Final Rule. Note that DOE is currently investigating valuation of avoided and SO₂ and Hg emissions.

⁵ All monetary values in this document are expressed in 2014 dollars and, where appropriate, are discounted to 2015 unless explicitly stated otherwise. Energy savings in this section refer to full-fuel-cycle savings (see section IV.H for discussion).

TABLE I.6—SUMMARY OF NATIONAL ECONOMIC BENEFITS AND COSTS OF AMENDED AFUE ENERGY CONSERVATION STANDARDS FOR RESIDENTIAL BOILERS (TSL 3) *

Category	Present value billion 2014\$	Discount rate %
Benefits		
Consumer Operating Cost Savings	0.500	7
	1.468	3
CO ₂ Reduction Value (\$12.2/t case) **	0.053	5
CO ₂ Reduction Value (\$40.0/t case) **	0.263	3
CO ₂ Reduction Value (\$62.3/t case) **	0.425	2.5
CO ₂ Reduction Value (\$117/t case) **	0.802	3
NO _x Reduction Value †	0.109	7
	0.328	3
Total Benefits ††	0.872	7
	2.058	3
Costs		
Consumer Incremental Installed Costs	0.150	7
	0.270	3
Total Net Benefits		
Including Emissions Reduction Value ††	0.722	7
	1.789	3

* This table presents the costs and benefits associated with residential boilers shipped in 2021–2050. These results include benefits to consumers which accrue after 2050 from the products purchased in 2021–2050.

** The CO₂ values represent global monetized values of the SCC, in 2014\$, in 2015 under several scenarios of the updated SCC values. The first three cases use the averages of SCC distributions calculated using 5%, 3%, and 2.5% discount rates, respectively. The fourth case represents the 95th percentile of the SCC distribution calculated using a 3% discount rate. The SCC time series incorporate an escalation factor.

† The \$/ton values used for NO_x are described in section IV.L.2. DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants,” published in June 2014 by EPA’s Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposalRIAFinal0602.pdf>.) See section IV.L.2 for further discussion. Note that the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electricity Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski et al., 2009). If the benefit-per-ton estimates were based on the Six Cities study (Lepuele et al., 2011), the values would be nearly two-and-a-half times larger. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emissions, DOE intends to investigate refinements to the agency’s current approach of one national estimate by assessing the regional approach taken by EPA’s Regulatory Impact Analysis for the Clean Power Plan Final Rule.

†† Total Benefits for both the 3% and 7% cases are derived using the series corresponding to average SCC with 3-percent discount rate (\$40.0/t case).

For the adopted standby mode and off mode standards, the lifetime energy savings for residential boilers purchased in the 30-year period that begins in the first full year of compliance with amended standards (2021–2050) amount to 0.0026 quads. This is a savings of 1.2 percent relative to the standby energy use of these products in the no-new-standards case.

The cumulative NPV of total consumer costs and savings for the adopted standby mode and off mode standards for residential boilers ranges from \$0.003 billion to \$0.014 billion at 7-percent and 3-percent discount rates, respectively. This NPV expresses the estimated total value of future operating-cost savings minus the estimated increased product costs for residential boilers purchased in 2021–2050.

In addition, the standby mode and off mode standards are expected to have significant environmental benefits. The energy savings are expected to result in cumulative emission reductions (over the same period as for energy savings) of 0.154 Mt of CO₂, 0.087 thousand tons of SO₂, 0.278 thousand tons of NO_x, 0.669 thousand tons of CH₄, 0.0018 thousand tons of N₂O, and 0.642 pounds of Hg. The cumulative reduction in CO₂ emissions through 2030 amounts to 0.013 Mt, which is equivalent to the emissions resulting from the annual electricity use of approximately 1,200 homes.

As noted above, the value of the CO₂ reductions is calculated using a range of values per metric ton of CO₂ (otherwise known as the SCC) developed by a Federal interagency IWG. The derivation of the SCC values is

discussed in section IV.L. Using discount rates appropriate for each set of SCC values, DOE estimates that the net present monetary value of the CO₂ emissions reduction from standby mode and off mode standards for residential boilers is between \$0.001 billion and \$0.013 billion, with a value of \$0.004 billion using the central SCC case represented by \$40.0/t in 2015. DOE also estimates that the net present monetary value of the NO_x emissions reduction to be \$0.0002 billion at a 7-percent discount rate, and \$0.0007 billion at a 3-percent discount rate.

Table I.7 summarizes the national economic benefits and costs expected to result from the adopted standby mode and off mode standards for residential boilers.

TABLE I.7—SUMMARY OF NATIONAL ECONOMIC BENEFITS AND COSTS OF ADOPTED STANDBY MODE AND OFF MODE ENERGY CONSERVATION STANDARDS FOR RESIDENTIAL BOILERS (TSL 3) *

* This table presents the costs and benefits associated with residential boilers shipped in 2021–2050. These results include benefits to consumers which accrue after 2050 from the products purchased in 2021–2050.

** The CO₂ values represent global monetized values of the SCC, in 2014\$, in 2015 under several scenarios of the updated SCC values. The first three cases use the averages of SCC distributions calculated using 5%, 3%, and 2.5% discount rates, respectively. The fourth case represents the 95th percentile of the SCC distribution calculated using a 3% discount rate. The SCC time series incorporate an escalation factor.

† The \$/ton values used for NO_x are described in section IV.L.2. DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants,” published in June 2014 by EPA’s Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposalRIAFinal0602.pdf>.) See section IV.L.2 for further discussion. Note that the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electricity Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski *et al.*, 2009). If the benefit-per-ton estimates were based on the Six Cities study (Lepuele *et al.*, 2011), the values would be nearly two-and-a-half times larger. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emissions, DOE intends to investigate refinements to the agency’s current approach of one national estimate by assessing the regional approach taken by EPA’s Regulatory Impact Analysis for the Clean Power Plan Final Rule.

†† Total Benefits for both the 3% and 7% cases are derived using the series corresponding to average SCC with 3-percent discount rate (\$40.0/t case).

The benefits and costs of the adopted energy conservation standards, for residential boiler products sold in 2021–2050, can also be expressed in terms of annualized values. Benefits and costs for the AFUE standards are considered separately from benefits and costs for the standby mode and off mode electrical consumption standards, because for the reasons explained in section I.D below, it was not technically feasible to develop a single, integrated standard. The monetary values for the total annualized net benefits are the sum of: (1) The national economic value of the benefits in reduced consumer operating cost, minus (2) the increases in product purchase price and installation costs, plus (3) the value of the benefits of CO₂ and NO_x emission reductions, all annualized.¹¹

¹¹ To convert the time-series of costs and benefits into annualized values, DOE calculated a present value in 2015, the year used for discounting the NPV of total consumer costs and savings. For the benefits, DOE calculated a present value associated with each year’s shipments in the year in which the shipments occur (*e.g.*, 2021 or 2030), and then

Although the value of operating cost savings and CO₂ emission reductions are both important, two issues are relevant. First, the national operating cost savings are domestic U.S. consumer monetary savings that occur as a result of market transactions, whereas the value of CO₂ reductions is based on a global value. Second, the assessments of operating cost savings and CO₂ savings are performed with different methods that use different time frames for analysis. The national operating cost savings is measured for the lifetime of residential boilers shipped in 2021–2050. Because CO₂ emissions have a very long residence time in the atmosphere,¹² the SCC values in future

discounted the present value from each year to 2015. The calculation uses discount rates of 3 and 7 percent for all costs and benefits except for the value of CO₂ reductions, for which DOE used case-specific discount rates, as shown in Table I.7. Using the present value, DOE then calculated the fixed annual payment over a 30-year period, starting in the compliance year, that yields the same present value.

¹² The atmospheric lifetime of CO₂ is estimated of the order of 30–95 years. Jacobson, MZ (2005),

years reflect future CO₂-emissions impacts that continue beyond 2100.

Estimates of annualized benefits and costs of the adopted AFUE standards for residential boilers are shown in Table I.8.

The results under the primary estimate are as follows. Using a 7-percent discount rate for benefits and costs other than CO₂ reduction (for which DOE used a 3-percent discount rate along with the SCC series that has a value of \$40.0/t in 2015),¹³ the estimated cost of the AFUE standards in this rule is \$17.0 million per year in increased equipment costs, while the estimated annual benefits are \$56.5 million in reduced equipment operating costs, \$15.5 million in CO₂ reductions, and \$12.3 million in reduced NO_x

“Correction to ‘Control of fossil-fuel particulate black carbon and organic matter, possibly the most effective method of slowing global warming,’” *J. Geophys. Res.* 110. pp. D14105.

¹³ DOE used a 3-percent discount rate because the SCC values for the series used in the calculation were derived using a 3-percent discount rate (see section IV.L).

emissions. In this case, the net benefit amounts to \$67.4 million per year. Using a 3-percent discount rate for all benefits and costs and the SCC series that has a value of \$40.0/t in 2015, the

estimated cost of the AFUE standards is \$15.9 million per year in increased equipment costs, while the estimated annual benefits are \$86.8 million in reduced operating costs, \$15.5 million

in CO₂ reductions, and \$19.4 million in reduced NO_x emissions. In this case, the net benefit amounts to \$105.8 million per year.

	3	105.8	96.9	138.5

This table presents the annualized costs and benefits associated with residential boilers shipped in 2021–2050. These results include benefits to consumers which accrue after 2050 from the products purchased in 2021–2050. The Primary, Low Benefits, and High Benefits Estimates utilize projections of energy prices from the AEO 2015 Reference case, Low Economic Growth case, and High Economic Growth case, respectively. In addition, incremental product costs reflect a medium decline rate in the Primary Estimate, a low decline rate in the Low Benefits Estimate, and a high decline rate in the High Benefits Estimate. The methods used to derive projected price trends are explained in section IV.F.1.

** The CO₂ values represent global monetized values of the SCC, in 2014\$, in 2015 under several scenarios of the updated SCC values. The first three cases use the averages of SCC distributions calculated using 5%, 3%, and 2.5% discount rates, respectively. The fourth case represents the 95th percentile of the SCC distribution calculated using a 3% discount rate. The SCC time series incorporate an escalation factor.

† The \$/ton values used for NO_x are described in section IV.L. DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants,” published in June 2014 by EPA’s Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposal/RIAFinal0602.pdf>.) For DOE’s Primary Estimate and Low Net Benefits Estimate, the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electric Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski et al., 2009). For DOE’s High Net Benefits Estimate, the benefit-per-ton estimates were based on the Six Cities study (Lepuele et al., 2011), which are nearly two-and-a-half times larger than those from the ACS study. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emission, DOE intends to investigate refinements to the agency’s current approach of one national estimate by assessing the regional approach taken by EPA’s Regulatory Impact Analysis for the Clean Power Plan Final Rule.

†† Total benefits for both the 3% and 7% cases are derived using the series corresponding to the average SCC with the 3-percent discount rate (\$40.0/t) case. In the rows labeled “7% plus CO₂ range” and “3% plus CO₂ range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of CO₂ values.

Estimates of annualized benefits and costs of the adopted standby mode and off mode standards are shown in Table I.9. The results under the primary estimate are as follows. Using a 7-percent discount rate for benefits and costs other than CO₂ reduction (for which DOE used a 3-percent discount rate along with the SCC series that has a value of \$40.0/t in 2015), the estimated cost of the residential boiler

standby mode and off mode standards in this rule is \$0.46 million per year in increased equipment costs, while the estimated annual benefits are \$0.84 million in reduced equipment operating costs, \$0.25 million in CO₂ reductions, and \$0.03 million in reduced NO_x emissions. In this case, the net benefit amounts to \$0.66 million per year. Using a 3-percent discount rate for all benefits and costs and the SCC series

that has a value of \$40.0/t in 2015, the estimated cost of the AFUE standards is \$0.46 million per year in increased equipment costs, while the estimated annual benefits are \$1.28 million in reduced operating costs, \$0.25 million in CO₂ reductions, and \$0.04 million in reduced NO_x emissions. In this case, the net benefit amounts to \$1.11 million per year.

The fourth case represents the 95th percentile of the SCC distribution calculated using a 3% discount rate. The SCC time series incorporate an escalation factor.

† The \$/ton values used for NO_x are described in section IV.L. DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants,” published in June 2014 by EPA’s Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposal/RIAFinal0602.pdf>.) For DOE’s Primary Estimate and Low Net Benefits Estimate, the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electric Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski et al., 2009). For DOE’s High Net Benefits Estimate, the benefit-per-ton estimates were based on the Six Cities study (Lepuele et al., 2011), which are nearly two-and-a-half times larger than those from the ACS study. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emission, DOE intends to investigate refinements to the agency’s current approach of one national estimate by assessing the regional approach taken by EPA’s Regulatory Impact Analysis for the Clean Power Plan Final Rule.

†† Total benefits for both the 3% and 7% cases are derived using the series corresponding to the average SCC with the 3-percent discount rate (\$40.0/t) case. In the rows labeled “7% plus CO₂ range” and “3% plus CO₂ range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of CO₂ values.

DOE’s analysis of the national impacts of the adopted standards is described in sections IV.H, IV.K, and IV.L of this notice.

Based on the analyses culminating in this final rule, DOE found the benefits to the Nation of the standards (energy savings, positive NPV of consumer benefits, consumer LCC savings, and emission reductions) for both AFUE as well as standby mode and off would outweigh the burdens (loss of INPV for manufacturers and LCC increases for some consumers). DOE has concluded that the standards in this final rule represent the maximum improvement in energy efficiency that is technologically feasible and economically justified, and

would result in significant conservation of energy.

DOE also added the annualized benefits and costs from the individual annualized tables to provide a combined benefit and cost estimate of the adopted AFUE and standby mode and off mode standards, as shown in Table I.10.¹⁴ The results under the primary estimate are as follows. Using a 7-percent discount rate for benefits and costs other than CO₂ reduction (for which DOE used a 3-percent discount rate along with the SCC series that has a value of \$40.0/t in 2015), the estimated cost of the residential boiler AFUE and standby

¹⁴ To obtain the combined results, DOE added the results for the AFUE standards in Table I.8 with the results for the standby standards in Table I.9.

mode and off mode standards in this rule is \$17.4 million per year in increased equipment costs, while the estimated annual benefits are \$57.4 million in reduced equipment operating costs, \$15.8 million in CO₂ reductions, and \$12.4 million in reduced NO_x emissions. In this case, the net benefit amounts to \$68.1 million per year. Using a 3-percent discount rate for all benefits and costs and the SCC series that has a value of \$40.0/t in 2015, the estimated cost of the residential boiler AFUE and standby mode and off mode standards in this rule is \$16.4 million per year in increased equipment costs, while the estimated annual benefits are \$88.1 million in reduced equipment operating costs, \$15.8 million in CO₂

reductions, and \$19.4 million in net benefit amounts to \$106.9 million reduced NO_x emissions. In this case, the per year.

	3%	106.9	98.0	139.7.

* This table presents the annualized costs and benefits associated with residential boilers shipped in 2021–2050. These results include benefits to consumers which accrue after 2050 from the products purchased in 2021–2050. The Primary, Low Benefits, and High Benefits Estimates utilize projections of energy prices from the AEO 2015 Reference case, Low Economic Growth case, and High Economic Growth case, respectively. In addition, incremental product costs reflect a medium decline rate in the Primary Estimate, a low decline rate in the Low Benefits Estimate, and a high decline rate in the High Benefits Estimate. The methods used to derive projected price trends are explained in section IV.F.1.

** The CO₂ values represent global monetized values of the SCC, in 2014\$, in 2015 under several scenarios of the updated SCC values. The first three cases use the averages of SCC distributions calculated using 5%, 3%, and 2.5% discount rates, respectively. The fourth case represents the 95th percentile of the SCC distribution calculated using a 3% discount rate. The SCC time series incorporate an escalation factor.

† The \$/ton values used for NO_x are described in section IV.L. DOE estimated the monetized value of NO_x emissions reductions using benefit per ton estimates from the Regulatory Impact Analysis titled, “Proposed Carbon Pollution Guidelines for Existing Power Plants and Emission Standards for Modified and Reconstructed Power Plants,” published in June 2014 by EPA’s Office of Air Quality Planning and Standards. (Available at: <http://www3.epa.gov/ttnecas1/regdata/RIAs/111dproposal/RIAFinal0602.pdf>.) For DOE’s Primary Estimate and Low Net Benefits Estimate, the agency is presenting a national benefit-per-ton estimate for particulate matter emitted from the Electric Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski et al., 2009). For DOE’s High Net Benefits Estimate, the benefit-per-ton estimates were based on the Six Cities study (Lepuele et al., 2011), which are nearly two-and-a-half times larger than those from the ACS study. Because of the sensitivity of the benefit-per-ton estimate to the geographical considerations of sources and receptors of emission, DOE intends to investigate refinements to the agency’s current approach of one national estimate by assessing the regional approach taken by EPA’s Regulatory Impact Analysis for the Clean Power Plan Final Rule.

†† Total benefits for both the 3% and 7% cases are derived using the series corresponding to the average SCC with the 3-percent discount rate (\$40.0/t) case. In the rows labeled “7% plus CO₂ range” and “3% plus CO₂ range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of CO₂ values.

D. Standby Mode and Off Mode

As discussed in section II.A of this final rule, any final rule for amended or new energy conservation standards that is published on or after July 1, 2010 must address standby mode and off mode energy use. (42 U.S.C. 6295(gg)(3)) As a result, DOE has analyzed and is adopting new energy conservation standards for the standby mode and off mode electrical energy consumption of residential boilers.

AFUE, the statutory metric for residential boilers, does not incorporate standby mode or off mode use of electricity, although it already fully addresses use in these modes of fossil fuels by gas-fired and oil-fired boilers. In the October 2010 test procedure final rule for residential furnaces and boilers, DOE determined that incorporating standby mode and off mode electricity consumption into a single standard for residential furnaces and boilers is not

technically feasible. 75 FR 64621, 64626–27 (Oct. 20, 2010). DOE concluded that a metric that integrates standby mode and off mode electricity consumption into AFUE is not technically feasible, because the standby mode and off mode energy usage, when measured, is essentially lost in practical terms due to rounding conventions for certifying furnace and boiler compliance with Federal energy conservation standards. *Id.* Therefore, in this final

rule, DOE is adopting amended boiler standards that are AFUE levels, which exclude standby mode and off mode electricity use; furthermore, DOE is adopting separate standards that are maximum wattage (W) levels to address the standby mode ($P_{W,SB}$) and off mode ($P_{W,OFF}$) electrical energy use of boilers. DOE also presents corresponding trial standard levels (TSLs) for energy consumption in standby mode and off mode. DOE has decided to use a maximum wattage requirement to regulate standby mode and off mode for boilers. DOE believes using an annualized metric could add unnecessary complexities, such as trying to estimate an assumed number of hours that a boiler typically spends in standby mode. Instead, DOE believes that a maximum wattage standard is the most straightforward metric for regulating standby mode and off mode energy consumption of boilers and will result in the least amount of industry and consumer confusion.

DOE is using the metrics just described—AFUE, $P_{W,SB}$, and $P_{W,OFF}$ —in the amended energy conservation standards in this rulemaking for residential boilers. This approach satisfies the mandate of 42 U.S.C. 6295(gg)(3) that amended standards address standby mode and off mode energy use. The various analyses performed by DOE to evaluate minimum standards for standby mode and off mode electrical energy consumption for boilers are discussed further in section IV.E of this final rule.

II. Introduction

The following section briefly discusses the statutory authority underlying this final rule, as well as some of the relevant historical background related to the establishment of standards for residential boilers.

A. Authority

Title III, Part B of the Energy Policy and Conservation Act of 1975 (EPCA or the Act), Pub. L. 94–163 (codified as 42 U.S.C. 6291–6309) established the Energy Conservation Program for Consumer Products Other Than Automobiles, a program covering most major household appliances (collectively referred to as “covered products”). These products include the residential boilers that are the subject of this rulemaking. (42 U.S.C. 6292(a)(5)) EPCA, as amended, prescribed energy conservation standards for these products (42 U.S.C. 6295(f)(1) and (3)), and directed DOE to conduct future rulemakings to determine whether to amend these standards (42 U.S.C. 6295(f)(4)). Under 42 U.S.C. 6295(m),

the agency must periodically review its already-established energy conservation standards for a covered product no later than 6 years from the issuance of a final rule establishing or amending a standard for a covered product. This rulemaking satisfies both statutory provisions (42 U.S.C. 6295(f)(4) and (m)).

Pursuant to EPCA, DOE’s energy conservation program for covered products consists essentially of four parts: (1) Testing; (2) labeling; (3) establishment of Federal energy conservation standards; and (4) certification and enforcement procedures. The Federal Trade Commission (FTC) is primarily responsible for labeling, and DOE implements the remainder of the program. Subject to certain criteria and conditions, DOE is required to develop test procedures to measure the energy efficiency, energy use, or estimated annual operating cost of each covered product. (42 U.S.C. 6295(o)(3)(A) and (r)) Manufacturers of covered products must use the prescribed DOE test procedure as the basis for certifying to DOE that their products comply with the applicable energy conservation standards adopted under EPCA and when making representations to the public regarding the energy use or efficiency of those products. (42 U.S.C. 6293(c) and 6295(s)) Similarly, DOE must use these test procedures to determine whether the products comply with standards adopted pursuant to EPCA. (42 U.S.C. 6295(s)) The DOE test procedure for residential boilers appears at title 10 of the Code of Federal Regulations (CFR) part 430, subpart B, appendix N. In 2012, DOE initiated a rulemaking to review the residential furnaces and boilers test procedure. In March 2015, DOE published a notice of proposed rulemaking (NPR) outlining the proposed changes to the test procedure. 80 FR 12876 (March 11, 2015). In January 2016, DOE published a final rule outlining the final changes made to the test procedure. (See EERE–2012–BT–TP–0024). Details regarding this rulemaking are discussed in section III.B.

DOE must follow specific statutory criteria for prescribing new or amended standards for covered products, including residential boilers. Any new or amended standard for a covered product must be designed to achieve the maximum improvement in energy efficiency that is technologically feasible and economically justified. (42 U.S.C. 6295(o)(2)(A) and (3)(B)) Furthermore, DOE may not adopt any standard that would not result in the significant conservation of energy. (42

U.S.C. 6295(o)(3)) Moreover, DOE may not prescribe a standard: (1) For certain products, including residential boilers, if no test procedure has been established for the product, or (2) if DOE determines by rule that the standard is not technologically feasible or economically justified. (42 U.S.C. 6295(o)(3)(A)–(B)) In deciding whether a proposed standard is economically justified, after receiving comments on the proposed standard, DOE must determine whether the benefits of the standard exceed its burdens. (42 U.S.C. 6295(o)(2)(B)(i)) DOE must make this determination by, to the greatest extent practicable, considering the following seven statutory factors:

(1) The economic impact of the standard on manufacturers and consumers of the products subject to the standard;

(2) The savings in operating costs throughout the estimated average life of the covered products in the type (or class) compared to any increase in the price, initial charges, or maintenance expenses for the covered products that are likely to result from the standard;

(3) The total projected amount of energy (or as applicable, water) savings likely to result directly from the standard;

(4) Any lessening of the utility or the performance of the covered products likely to result from the standard;

(5) The impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from the standard;

(6) The need for national energy and water conservation; and

(7) Other factors the Secretary of Energy (Secretary) considers relevant. (42 U.S.C. 6295(o)(2)(B)(i)(I)–(VII))

Further, EPCA, as codified, establishes a rebuttable presumption that a standard is economically justified if the Secretary finds that the additional cost to the consumer of purchasing a product complying with an energy conservation standard level will be less than three times the value of the energy savings during the first year that the consumer will receive as a result of the standard, as calculated under the applicable test procedure. (42 U.S.C. 6295(o)(2)(B)(iii))

EPCA, as codified, also contains what is known as an “anti-backsliding” provision, which prevents the Secretary from prescribing any amended standard that either increases the maximum allowable energy use or decreases the minimum required energy efficiency of a covered product. (42 U.S.C. 6295(o)(1)) Also, the Secretary may not prescribe an amended or new standard if interested persons have established by

a preponderance of the evidence that the standard is likely to result in the unavailability in the United States in any covered product type (or class) of performance characteristics (including reliability), features, sizes, capacities, and volumes that are substantially the same as those generally available in the United States. (42 U.S.C. 6295(o)(4))

Additionally, EPCA specifies requirements when promulgating an energy conservation standard for a covered product that has two or more subcategories. DOE must specify a different standard level for a type or class of product that has the same function or intended use, if DOE determines that products within such group: (A) Consume a different kind of energy from that consumed by other covered products within such type (or class); or (B) have a capacity or other performance-related feature that other products within such type (or class) do not have and such feature justifies a higher or lower standard. (42 U.S.C. 6295(q)(1)) In determining whether a performance-related feature justifies a

different standard for a group of products, DOE must consider such factors as the utility to the consumer of such a feature and other factors DOE deems appropriate. *Id.* Any rule prescribing such a standard must include an explanation of the basis on which such higher or lower level was established. (42 U.S.C. 6295(q)(2))

Federal energy conservation requirements generally supersede State laws or regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6297(a)–(c)) DOE may, however, grant waivers of Federal preemption for particular State laws or regulations, in accordance with the procedures and other provisions set forth under 42 U.S.C. 6297(d).

Finally, pursuant to the amendments contained in the Energy Independence and Security Act of 2007 (EISA 2007), Pub. L. 110–140, any final rule for new or amended energy conservation standards promulgated after July 1, 2010, is required to address standby mode and off mode energy use. (42 U.S.C. 6295(gg)(3)) Specifically, when

DOE adopts a standard for a covered product after that date, it must, if justified by the criteria for adoption of standards under EPCA (42 U.S.C. 6295(o)), incorporate standby mode and off mode energy use into a single standard, or, if that is not feasible, adopt a separate standard for such energy use for that product. (42 U.S.C. 6295(gg)(3)(A)–(B)). DOE's current test procedures for residential boilers address standby mode and off mode energy use. In this rulemaking, DOE adopts separate energy conservation standards to address standby mode and off mode energy use.

B. Background

1. Current Standards

In a final rule published on July 28, 2008 (2008 final rule), DOE prescribed energy conservation standards for residential boilers manufactured on or after September 1, 2012. 73 FR 43611. These standards are set forth in DOE's regulations at 10 CFR 430.32(e)(2)(ii) and are repeated in Table II.1 below.

TABLE II.1—FEDERAL ENERGY EFFICIENCY STANDARDS FOR RESIDENTIAL BOILERS

Product class	Minimum annual fuel utilization efficiency (%)	Design requirements
Gas-fired Hot Water Boiler	82	No Constant-Burning Pilot, Automatic Means for Adjusting Water Temperature.*
Gas-fired Steam Boiler	80	No Constant-Burning Pilot.
Oil-fired Hot Water Boiler	84	Automatic Means for Adjusting Temperature.*
Oil-fired Steam Boiler	82	None.
Electric Hot Water Boiler	None	Automatic Means for Adjusting Temperature.*
Electric Steam Boiler**	None	None.

* Excluding boilers equipped with a tankless domestic water heating coil.

** Although the “Electric steam boiler” product class is not included in the table at 10 CFR 430.32(e)(2)(ii), according to 42 U.S.C. 6295(f), there are no minimum AFUE or design requirements for these products. In order to clarify their status, DOE is including these products in both the AFUE and standby/off standards tables as part of this final rule.

2. History of Standards Rulemaking for Residential Boilers

Given the somewhat complicated interplay of recent DOE rulemakings and statutory provisions related to residential boilers, DOE provides the following regulatory history as background leading to the present rulemaking. On November 19, 2007, DOE published a final rule in the **Federal Register** (November 2007 final rule) revising the energy conservation standards for furnaces and boilers, which addressed the first required review of standards for boilers under 42 U.S.C. 6295(f)(4)(B). 72 FR 65136. Compliance with the standards in the November 2007 final rule would have been required by November 19, 2015. However, on December 19, 2007, EISA 2007, Pub. L. 110–140, was signed into

law, which further revised the energy conservation standards for residential boilers. More specifically, EISA 2007 amended EPCA to revise the AFUE requirements for residential boilers and set design requirements for most product classes. (42 U.S.C. 6295(f)(3)) EISA 2007 required compliance with the amended energy conservation standards for residential boilers beginning on September 1, 2012.

Only July 15, 2008, DOE issued a final rule technical amendment to the 2007 final rule, which was published in the **Federal Register** on July 28, 2008, to codify the energy conservation standard levels, the design requirements, and compliance dates for residential boilers outlined in EISA 2007. 73 FR 43611. For gas-fired hot water boilers, oil-fired hot water boilers, and electric hot water

boilers, EISA 2007 requires that residential boilers manufactured after September 1, 2012 have an automatic means for adjusting water temperature. (42 U.S.C. 6295(f)(3)(A)–(C); 10 CFR 430.32(e)(2)(ii)–(iv)) The automatic means for adjusting water temperature must ensure that an incremental change in the inferred heat load produces a corresponding incremental change in the temperature of the water supplied by the boiler. EISA 2007 also disallows the use of constant-burning pilot lights in gas-fired hot water boilers and gas-fired steam boilers.

DOE initiated this rulemaking pursuant to 42 U.S.C. 6295(f)(4)(C), which requires DOE to conduct a second round of amended standards rulemaking for residential boilers. EPCA, as amended by EISA 2007, also

requires that not later than 6 years after issuance of any final rule establishing or amending a standard, DOE must publish either a notice of the determination that standards for the product do not need to be amended, or a notice of proposed rulemaking including proposed energy conservation standards (proceeding to a final rule, as appropriate). (42 U.S.C. 6295(m)) This rulemaking will satisfy both statutory provisions.

Furthermore, EISA 2007 amended EPCA to require that any new or amended energy conservation standard adopted after July 1, 2010, shall address standby mode and off mode energy consumption pursuant to 42 U.S.C. 6295(o). (42 U.S.C. 6295(gg)(3)) If feasible, the statute directs DOE to incorporate standby mode and off mode energy consumption into a single standard with the product's active mode energy use. If a single standard is not feasible, DOE may consider establishing a separate standard to regulate standby mode and off mode energy consumption. Consequently, DOE considered standby mode and off mode energy use as part of this rulemaking for residential boilers.

DOE initiated this current rulemaking by issuing an analytical Framework Document, "Rulemaking Framework for Residential Boilers" (February 11, 2013). DOE published the notice of public meeting and availability of the Framework Document for residential boilers in the **Federal Register** on February 11, 2013. 78 FR 9631. The residential boiler energy conservation standards rulemaking docket is EERE-2012-BT-STD-0047. See: http://www1.eere.energy.gov/buildings/appliance_standards/rulemaking.aspx?ruleid=112.

The Framework Document explained the issues, analyses, and process that DOE anticipated using to develop energy conservation standards for residential boilers. DOE held a public meeting on March 13, 2013, to solicit comments from interested parties regarding DOE's analytical approach. The comment period for the Framework Document closed on March 28, 2013.

To further develop the energy conservation standards for residential boilers, DOE gathered additional information and performed an initial technical analysis. This process culminated in publication in the **Federal Register** on February 11, 2014, of the notice of data availability (NODA), which announced the availability of analytical results and modeling tools. 79 FR 8122. In that document, DOE presented its initial analysis of potential amended energy conservation standards for residential

boilers, and requested comment on the following matters discussed in the analysis: (1) The product classes and scope of coverage; (2) the analytical framework, models, and tools that DOE is using to evaluate potential standards; and (3) the results of the preliminary analyses performed by DOE. *Id.* DOE also invited written comments on these subjects, as well as any other relevant issues, and announced the availability of supporting documentation on its Web site at: <http://www.regulations.gov/#!documentDetail;D=EERE-2012-BT-STD-0047-0015>.

A PDF copy of the supporting documentation is available at <http://www.regulations.gov/#!documentDetail;D=EERE-2012-BT-STD-0047-0011>. The comment period closed on March 13, 2014.

On March 31, 2015, DOE published a notice of proposed rulemaking in the **Federal Register** (March 2015 NOPR). 80 FR 17222. In the March 2015 NOPR, DOE addressed in detail the comments received in earlier stages of the rulemaking, and proposed amended energy conservation standards for residential boilers. In conjunction with the March 2015 NOPR, DOE also published on its Web site the complete technical support document (TSD) for the proposed rule, which incorporated the analysis DOE conducted and technical documentation for each analysis. Also published on DOE's Web site were the LCC analysis spreadsheet and the national impact analysis standard spreadsheet. These materials are available at: https://www1.eere.energy.gov/buildings/appliance_standards/product.aspx?productid=89.

In the March 2015 NOPR, DOE identified twenty four issues on which it was particularly interested in receiving comments and views of interested parties. 80 FR 17222, 17303–17304 (March 31, 2015). The comment period was initially set to end June 1, 2015, but it was subsequently extended to July 1, 2015 in a **Federal Register** notice published on May 20, 2015. 80 FR 28852. After the publication of the March 2015 NOPR, DOE received written comments on these and other issues. DOE also held a public meeting in Washington, DC, on April 30, 2015 to discuss and receive comments regarding the tools and methods DOE used in the NOPR analysis, as well as the results of that analysis. DOE also invited written comments and announced the availability of a NOPR analysis technical support document (NOPR TSD). The NOPR TSD is available at: <http://www.regulations.gov/>

[#!documentDetail;D=EERE-2012-BT-STD-0047-0036](#).

The NOPR TSD described in detail DOE's analysis of potential standard levels for residential boilers. The document also described the analytical framework used in considering standard levels, including a description of the methodology, the analytical tools, and the relationships between the various analyses. In addition, the NOPR TSD presented each analysis that DOE performed to evaluate residential boilers, including descriptions of inputs, sources, methodologies, and results. DOE included the same analyses that were conducted at the preliminary analysis stage, with revisions based on comments received and additional research.

Statements received after publication of the Framework Document, at the Framework public meeting, and comments received after the publication of the NODA and NOPR have helped identify issues involved in this rulemaking and have provided information that has contributed to DOE's resolution of these issues. The Department considered these statements and comments in developing revised engineering and other analyses for this final rule.

III. General Discussion

DOE developed this final rule after considering verbal and written comments, data, and information from interested parties that represent a variety of interests. The following discussion addresses issues raised by these commenters.

DOE received 21 comments in response to the March 2015 NOPR. These commenters include: A joint comment from the American Council for an Energy-Efficient Economy (ACEEE), the Appliance Standards Awareness Project (ASAP), the Alliance to Save Energy (ASE), the Consumer Federation of America (CFA), the National Consumer Law Center (NCLC), the Natural Resources Defense Council (NRDC), and the Northeast Energy Efficiency Partnerships (NEEP); four comments from the Air-Conditioning, Heating, and Refrigeration Institute (AHRI); a comment from the Air Conditioning Contractors of America (ACCA); a comment from the Plumbing-Heating-Cooling Contractors National Association (PHCC); a comment from U.S. Chamber of Commerce; a comment from the Cato Institute; a comment from Oilheat Manufacturers Association; a comment from Exquisite Heat; and an anonymous comment. Manufacturers submitting written comments include: Energy Kinetics, Weil-McLain, Burnham

Holdings (Burnham), and Lochinvar. Gas utilities and associations who submitted written comments include: A joint comment from the American Gas Association (AGA) and the American Public Gas Association (APGA); Philadelphia Gas Works (PGW); National Propane Gas Association (NPGA); the Laclede Group; and the Laclede Gas Company. This final rule summarizes and responds to the issues raised in these comments. A parenthetical reference¹⁵ at the end of a comment quotation or paraphrase provides the location of the item in the public record.

A. Product Classes and Scope of Coverage

When evaluating and establishing energy conservation standards, DOE divides covered products into product classes by the type of energy used or by capacity or other performance-related features that justify differing standards. In making a determination whether a performance-related feature justifies a different standard, DOE must consider such factors as the utility of the feature to the consumer and other factors DOE determines are appropriate. (42 U.S.C. 6295(q))

Existing energy conservation standards divide residential boilers into six product classes based on the fuel type (*i.e.*, gas, oil, or electricity) and heating medium of the product (*i.e.*, hot water or steam). For this rulemaking, DOE maintains the scope of coverage defined by its current regulations for the analysis of standards, so as to include six product classes of boilers: (1) Gas-fired hot water boilers; (2) gas-fired steam boilers; (3) oil-fired hot water boilers; (4) oil-fired steam boilers; (5) electric hot water boilers; and (6) electric steam boilers. DOE has not conducted an analysis of an AFUE standard level for electric boilers, as the AFUE of these products already approaches 100 percent. DOE also did not conduct an analysis of a standard level for combination appliances, as the DOE test procedure does not include a method with which to test these products. These reasons are explained in greater detail in section IV.A.1 of this final rule. However, DOE did include electric boilers within the scope of its

analysis of standby mode and off mode energy conservation standards.

The scope and product classes analyzed for this final rule are the same as those initially set forth in the Framework Document and examined in DOE's initial analysis, as well as what was proposed in the NOPR. Comments received relating to the scope of coverage are described in section IV.A of this final rule.

B. Test Procedure

DOE's current energy conservation standards for residential boilers are expressed in terms of AFUE (*see* 10 CFR 430.32(e)(2)(ii)). AFUE is an annualized fuel efficiency metric that fully accounts for fossil-fuel energy consumption in active, standby, and off modes. The existing DOE test procedure for determining the AFUE of residential boilers is located at 10 CFR part 430, subpart B, appendix N. The current DOE test procedure for residential boilers was originally established by a May 12, 1997 final rule, which incorporates by reference the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE)/American National Standards Institute (ANSI) Standard 103–1993, *Method of Testing for Annual Fuel Utilization Efficiency of Residential Central Furnaces and Boilers* (1993). 62 FR 26140, 26157.

On October 20, 2010, DOE updated its test procedures for residential boilers in a final rule published in the **Federal Register** (October 2010 test procedure final rule). 75 FR 64621. This rule amended DOE's test procedure for residential furnaces and boilers to establish a separate metric for measuring the electrical energy use in standby mode and off mode for gas-fired, oil-fired, and electric boilers pursuant to requirements established by EISA 2007. In the final rule, DOE determined that due to the magnitude of the electrical standby/off mode versus active mode, a single efficiency metric is technically infeasible. The test procedure amendments were primarily based on and incorporate by reference provisions of the International Electrotechnical Commission (IEC) Standard 62301 (First Edition), "Household electrical appliances—Measurement of standby power." On December 31, 2012, DOE published a final rule in the **Federal Register** that updated the incorporation by reference of the standby mode and off mode test procedure provisions to refer to the latest edition of IEC Standard 62301 (Second Edition). 77 FR 76831.

On July 10, 2013, DOE published a final rule in the **Federal Register** (July

2013 final rule) that modified the existing testing procedures for residential furnaces and boilers. 78 FR 41265. The modification addressed the omission of equations needed to calculate AFUE for two-stage and modulating condensing furnaces and boilers that are tested using an optional procedure provided by section 9.10 of ASHRAE 103–1993 (incorporated by reference into DOE's test procedure), which allows the test engineer to omit the heat-up and cool-down tests if certain conditions are met. Specifically, the DOE test procedure allows condensing boilers and furnaces to omit the heat-up and cool-down tests, provided that the units have no measurable airflow through the combustion chamber and heat exchanger (HX) during the burner off period and have post-purge period(s) of less than 5 seconds. For two-stage and modulating condensing furnaces and boilers, ASHRAE 103–1993 (and by extension the DOE test procedure) does not contain the necessary equations to calculate the heating seasonal efficiency (which contributes to the ultimate calculation of AFUE) when the option in section 9.10 is selected. The July 2013 final rule adopted two new equations needed to account for the use of section 9.10 for two-stage and modulating condensing furnaces and boilers. *Id.*

EPCA, as amended by EISA 2007, requires that DOE must review test procedures for all covered products at least once every 7 years. (42 U.S.C. 6293(b)(1)(A)) Accordingly, on March 11, 2015, DOE published a NOPR for the test procedure in the **Federal Register** (March 2015 test procedure NOPR), a necessary step toward fulfillment of the requirement under 42 U.S.C. 6293(b)(1)(A) for residential furnaces and boilers. 80 FR 12876. After a stakeholder comment and review period, DOE published a final rule for the test procedure in January 2016 (January 2016 test procedure final rule). (See EERE–2012–BT–TP–0024). DOE must base the analysis of amended energy conservation standards on the most recent version of its test procedures, and accordingly, DOE used the amended test procedure when considering product efficiencies, energy use, and efficiency improvements in its analyses. Major changes adopted in the January 2016 test procedure final rule included:

- Clarifying the definition of the electrical power term PE;
- Adopting a smoke stick test for determining the use of minimum default draft factors;

¹⁵ The parenthetical reference provides a reference for information located in the docket of DOE's rulemaking to develop energy conservation standards for residential boilers. (Docket No. EERE–2012–BT–0047, which is maintained at <http://www.regulations.gov/#/docketDetail;D=EERE-2012-BT-STD-0047>). The references are arranged as follows: (commenter name, comment docket ID number, page of that document).

- Allowing for the measurement of condensate under steady-state conditions;
- Referencing the manufacturer's installation and operations (I&O) manual and providing clarification if the I&O manual does not specify test set up;
- Specifying ductwork for units installed without a return duct;
- Specifying testing requirements for units with multiposition configurations; and
- Revising the required reporting precision for AFUE.
- Adopting a verification method for determining whether a boiler incorporates an automatic means for adjusting water temperature and whether this design requirement functions as required.

DOE received several comments from stakeholders relating to the residential furnace and boiler test procedure. These comments were considered and addressed in that rulemaking proceeding.

C. Technological Feasibility

1. General

In each energy conservation standards rulemaking, DOE conducts a screening analysis based on information gathered on all current technology options and prototype designs that could improve the efficiency of the products or equipment that are the subject of the rulemaking. As the first step in such an analysis, DOE develops a list of technology options for consideration in consultation with manufacturers, design engineers, and other interested parties. DOE then determines which of those means for improving efficiency are technologically feasible. DOE considers technologies incorporated in commercially-available products or in working prototypes to be technologically feasible. 10 CFR part 430, subpart C, appendix A, section 4(a)(4)(i).

After DOE has determined that particular technology options are technologically feasible, it further evaluates each technology option in light of the following additional screening criteria: (1) Practicability to manufacture, install, and service; (2) adverse impacts on product utility or availability; and (3) adverse impacts on health or safety. 10 CFR part 430, subpart C, appendix A, section 4(a)(4)(ii)–(iv). Additionally, it is DOE policy not to include in its analysis any proprietary technology that is a unique pathway to achieving a certain efficiency level. Section IV.B of this notice discusses the results of the

screening analysis for residential boilers, particularly the designs DOE considered, those it screened out, and those that are the basis for the standards in this rulemaking. For further details on the screening analysis for this rulemaking, see chapter 4 of the final rule technical support document (TSD).

2. Maximum Technologically Feasible Levels

When DOE proposes to adopt an amended standard for a type or class of covered product, it must determine the maximum improvement in energy efficiency or maximum reduction in energy use that is technologically feasible for such product. (42 U.S.C. 6295(p)(1)) Accordingly, in the engineering analysis, DOE determined the maximum technologically feasible (“max-tech”) improvements in energy efficiency for residential boilers, using the design parameters for the most efficient products available on the market or in working prototypes. The max-tech levels that DOE determined for this rulemaking are described in section IV.C of this final rule and in chapter 5 of the final rule TSD.

D. Energy Savings

1. Determination of Savings

For each trial standard level (TSL), DOE projected energy savings from application of the TSL to residential boilers purchased in the 30-year period that begins in the year of compliance with any amended standards (2021–2050).^{16 17} The savings are measured over the entire lifetime of products purchased in the 30-year analysis period.¹⁸ DOE quantified the energy savings attributable to each TSL as the difference in energy consumption between each standards case and the no-new-standards case. The no-new-standards case represents a projection of energy consumption that reflects how the market for a product would likely evolve in the absence of amended energy conservation standards, and it considers market forces and policies

¹⁶ The expected compliance year at the time of the NOPR was 2020. For the final rule, the expected compliance year is 2021.

¹⁷ DOE also presents a sensitivity analysis that considers impacts for products shipped in a 9-year period.

¹⁸ In the past, DOE presented energy savings for only the 30-year period that begins in the year of compliance. In the calculation of economic impacts, however, DOE considered operating cost savings measured over the entire lifetime of equipment shipped in the 30-year period. DOE has chosen to modify its presentation of national energy savings to be consistent with the approach used for its national economic analysis.

that affect demand for more-efficient products.

DOE used its national impact analysis (NIA) spreadsheet model to estimate national energy savings (NES) from potential amended standards for residential boilers. The NIA spreadsheet model (described in section IV.H of this final rule) calculates energy savings in terms of site energy, which is the energy directly consumed by products at the locations where they are used. For electricity, DOE calculates NES on an annual basis in terms of primary energy¹⁹ savings, which is the savings in the energy that is used to generate and transmit the site electricity. To calculate primary energy savings from site electricity savings, DOE derived annual conversion factors from the model used to prepare the Energy Information Administration (EIA)'s *AEO 2015*. For natural gas and oil, the primary energy savings are considered equal to the site energy savings because they are supplied to the user without transformation from another form of energy.

In addition to primary energy savings, DOE also calculates full-fuel-cycle (FFC) energy savings. As discussed in DOE's statement of policy and notice of policy amendment, the FFC metric includes the energy consumed in extracting, processing, and transporting primary fuels (e.g., coal, natural gas, petroleum fuels), and, thus, presents a more complete picture of the impacts of energy conservation standards. 76 FR 51281 (August 18, 2011), as amended at 77 FR 49701 (August 17, 2012). For FFC energy savings, DOE's approach is based on the calculation of an FFC multiplier for each of the energy types used by covered equipment. For more information on FFC energy savings, see section IV.H.2 of this notice. For natural gas, the primary energy savings are considered to be equal to the site energy savings.²⁰

2. Significance of Savings

To adopt standards for a covered product, DOE must determine that such action would result in “significant” energy savings. (42 U.S.C. 6295(o)(3)(B)) Although the term “significant” is not defined in the Act, the U.S. Court of Appeals for the District of Columbia Circuit, in *Natural Resources Defense*

¹⁹ Primary energy consumption refers to the direct use at source, or supply to users without transformation, of crude energy; that is, energy that has not been subjected to any conversion or transformation process.

²⁰ U.S. Energy Information Administration/Annual Energy Review 2011, Glossary, p.365 (Available at: <http://www.eia.gov/totalenergy/data/annual/pdf/sec18.pdf>).

Council v. Herrington, 768 F.2d 1355, 1373 (D.C. Cir. 1985), opined that Congress intended “significant” energy savings in the context of EPCA to be savings that are not “genuinely trivial.” The energy savings for all the TSLs considered in this rulemaking, including the adopted standards, are nontrivial, and, therefore, DOE considers them “significant” within the meaning of section 325 of EPCA.

E. Economic Justification

1. Specific Criteria

As noted above, EPCA provides seven factors to be evaluated in determining whether a potential energy conservation standard is economically justified. (42 U.S.C. 6295(o)(2)(B)(i)(I)–(VII)) The following sections discuss how DOE has addressed each of those seven factors in this rulemaking.

a. Economic Impact on Manufacturers and Consumers

In determining the impacts of a potential amended standard on manufacturers, DOE conducts a manufacturer impact analysis (MIA), as discussed in section IV.J. DOE first uses an annual cash-flow approach to determine the quantitative impacts. This step includes both a short-term assessment—based on the cost and capital requirements during the period between when a regulation is issued and when entities must comply with the regulation—and a long-term assessment over a 30-year period. The industry-wide impacts analyzed include: (1) Industry net present value (INPV), which values the industry on the basis of expected future cash flows; (2) cash flows by year; (3) changes in revenue and income; and (4) other measures of impact, as appropriate. Second, DOE analyzes and reports the impacts on different types of manufacturers, including impacts on small manufacturers. Third, DOE considers the impact of standards on domestic manufacturer employment and manufacturing capacity, as well as the potential for standards to result in plant closures and loss of capital investment. Finally, DOE takes into account cumulative impacts of various DOE regulations and other regulatory requirements on manufacturers.

For individual consumers, measures of economic impact include the changes in LCC and PBP associated with new or amended standards. These measures are discussed further in the following section. For consumers in the aggregate, DOE also calculates the national net present value of the economic impacts applicable to a particular rulemaking.

DOE also evaluates the LCC impacts of potential standards on identifiable subgroups of consumers that may be affected disproportionately by a national standard.

b. Savings in Operating Costs Compared to Increase in Price (LCC and PBP)

EPCA requires DOE to consider the savings in operating costs throughout the estimated average life of the covered product in the type (or class) compared to any increase in the price of, or in the initial charges for, or maintenance expenses of, the covered product that are likely to result from a standard. (42 U.S.C. 6295(o)(2)(B)(i)(II)) DOE conducts this comparison in its LCC and PBP analysis.

The LCC is the sum of the purchase price of a product (including its installation) and the operating cost (including energy, maintenance, and repair expenditures) discounted over the lifetime of the product. The LCC analysis requires a variety of inputs, such as product prices, product energy consumption, energy prices, maintenance and repair costs, product lifetime, and discount rates appropriate for consumers. To account for uncertainty and variability in specific inputs, such as product lifetime and discount rate, DOE uses a distribution of values, with probabilities attached to each value.

The PBP is the estimated amount of time (in years) it takes consumers to recover the increased purchase cost (including installation) of a more-efficient product through lower operating costs. DOE calculates the PBP by dividing the change in purchase cost due to a more-stringent standard by the change in annual operating cost for the year that standards are assumed to take effect.

For its LCC and PBP analysis, DOE assumes that consumers will purchase the covered products in the first year of compliance with amended standards. The LCC savings for the considered efficiency levels are calculated relative to the case that reflects projected market trends in the absence of amended standards. DOE’s LCC and PBP analysis is discussed in further detail in section IV.F.

c. Energy Savings

Although significant conservation of energy is a separate statutory requirement for adopting an energy conservation standard, EPCA requires DOE, in determining the economic justification of a standard, to consider the total projected energy savings that are expected to result directly from the standard. (42 U.S.C. 6295(o)(2)(B)(i)(III))

As discussed in section IV.H, DOE uses the NIA spreadsheet model to project national energy savings.

d. Lessening of Utility or Performance of Products

In establishing product classes and in evaluating design options and the impact of potential standard levels, DOE evaluates potential standards that would not lessen the utility or performance of the considered products. (42 U.S.C. 6295(o)(2)(B)(i)(IV)) Based on data available to DOE, the standards adopted in this final rule will not reduce the utility or performance of the products under consideration in this rulemaking.

e. Impact of Any Lessening of Competition

EPCA directs DOE to consider the impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from a standard. (42 U.S.C. 6295(o)(2)(B)(i)(V)) It also directs the Attorney General to determine the impact, if any, of any lessening of competition likely to result from a standard and to transmit such determination to the Secretary within 60 days of the publication of a proposed rule, together with an analysis of the nature and extent of the impact. (42 U.S.C. 6295(o)(2)(B)(ii)) To assist the Department of Justice (DOJ) in making such a determination, DOE transmitted copies of both its proposed rule and NOPR TSD to the Attorney General for review, with a request that DOJ provide its determination on this issue. In its assessment letter responding to DOE, DOJ concluded that the proposed energy conservation standards for residential boilers are unlikely to have a significant adverse impact on competition. DOE is publishing the Attorney General’s assessment at the end of this final rule.

f. Need for National Energy Conservation

DOE also considers the need for national energy conservation in determining whether a new or amended standard is economically justified. (42 U.S.C. 6295(o)(2)(B)(i)(VI)) The energy savings from the adopted standards are likely to provide improvements to the security and reliability of the nation’s energy system. Reductions in the demand for electricity also may result in reduced costs for maintaining the reliability of the nation’s electricity system. DOE conducts a utility impact analysis to estimate how standards may affect the nation’s needed power generation capacity, as discussed in section IV.M.

The adopted standards also are likely to result in environmental benefits in the form of reduced emissions of air pollutants and greenhouse gases associated with energy production and use. DOE conducts an emissions impacts analysis to estimate how potential standards may affect these emissions, as discussed in section IV.K; the emissions impacts are reported in section V.B.6 of this final rule. DOE also estimates the economic value of emissions reductions resulting from the considered TSLs, as discussed in section IV.L.

g. Other Factors

EPCA allows the Secretary of Energy, in determining whether a standard is economically justified, to consider any other factors that the Secretary deems to be relevant. (42 U.S.C. 6295(o)(2)(B)(i)(VII)) To the extent interested parties submit any relevant information regarding economic justification that does not fit into the other categories described above, DOE could consider such information under "other factors." For this final rule, DOE did not consider other factors.

2. Rebuttable Presumption

As set forth in 42 U.S.C. 6295(o)(2)(B)(iii), EPCA creates a rebuttable presumption that an energy conservation standard is economically justified if the additional cost to the consumer of a product that meets the standard is less than three times the value of the first year's energy savings resulting from the standard, as calculated under the applicable DOE test procedure. DOE's LCC and PBP analyses generate values used to calculate the effect potential amended energy conservation standards would have on the payback period for consumers. These analyses include, but are not limited to, the 3-year payback period contemplated under the rebuttable-presumption test. In addition, DOE routinely conducts an economic analysis that considers the full range of impacts to consumers, manufacturers, the Nation, and the environment, as required under 42 U.S.C. 6295(o)(2)(B)(i). The results of this analysis serve as the basis for DOE's evaluation of the economic justification for a potential standard level (thereby supporting or rebutting the results of any preliminary determination of economic justification). The rebuttable presumption payback calculation is discussed in section V.B.1 of this final rule.

F. General Comments

During the April 30, 2015 public meeting, and in subsequent written comments in response to the March 2015 NOPR, stakeholders provided input regarding general issues pertinent to the rulemaking, such as issues regarding the proposed standard levels, as well as issues related to changes made to the test procedure. These issues are discussed in this section.

1. Proposed Standard Levels

In response to the levels proposed in the NOPR (TSL 3), the joint efficiency commenters stated their support for the proposed standard levels and encouraged DOE to evaluate condensing levels for hot water boilers, noting that the national energy savings at TSL 4 would be more than five times greater than the savings at TSL 3. (The joint efficiency commenters, No. 62 at pp. 1–2)

AHRI, Burnham, Lochinvar, Weil-McLain, and PHCC stated their opposition to the proposed standards at TSL 3 based on their concerns about several areas within the analysis. (AHRI, No. 64 at p. 1; Burnham, No. 60 at p. 1; Lochinvar, No. 63 at p. 1; Weil-McLain, No. 55 at p. 1; PHCC, No. 61 at p. 1) Lochinvar encouraged DOE to consider adopting TSL 2, and PHCC suggested that DOE make minimal increases (one percentage point) to standards. (Lochinvar, No. 63 at p. 5; PHCC, No. 61 at p. 1) AHRI and Lochinvar also suggested that the efficiency levels presented in the NOPR at TSL 4 are not economically justified as minimum standards. (AHRI, No. 64 at p. 1; Lochinvar, No. 63 at p. 5)

Burnham stated that under the proposed standards, tens of thousands of consumers will lose choice, be effectively required to retain and repair old, inefficient units, or be forced into costly and even dangerous retrofits. (Burnham, No. 60 at p. 1) Burnham stated that DOE's proposed standards are based in part on energy use characterizations, installation costs, operating costs, and lifecycle costs which are flawed and tend to overstate the benefit of the proposed standards, and thereby, they do not meet EPCA's requirements of maximum improvements in energy efficiency that are technologically feasible and economically justified. Burnham stated that after correcting for the various technical issues, the LCC savings for 85-percent AFUE and higher gas-fired hot water boilers decrease substantially, even becoming negative. (Burnham, No. 60 at pp. 2, 4) Burnham stated that the DOE analysis either needs to be

reanalyzed or that DOE needs to set standards for gas-fired hot water boilers at a level below 85-percent AFUE. (Burnham, No. 60 at p. 20)

Weil-McLain stated that significant additional costs will be imposed on consumers to achieve a hypothetical increase in energy savings by installing an 85-percent AFUE gas hot water boiler rather than an 82- or 83-percent AFUE boiler that would not entail all of these additional costs. (Weil-McLain, No. 55 at p. 3)

U.S. Boiler stated that a better alternative to the proposed rule would be to set a minimum efficiency level of 83 percent AFUE, which would allow most existing chimneys to stay in use without alteration. U.S. Boiler stated that such a standard gives homeowners choices regarding installation of higher-efficiency boilers. (U.S. Boiler, Public Meeting Transcript, No. 50 at p. 291)

ACCA stated that, if not properly addressed, the issues with the analysis can lead to unintended consequences, such as driving some homeowners to repair and maintain older systems instead of replacing their equipment. (ACCA, No. 65 at p. 3)

The Department appreciates stakeholder comments with regard to the TSL selection and notes that DOE is required to set a standard that achieves the maximum energy savings that is determined to be technologically feasible and economically justified. In making such a determination, DOE must consider, to the extent practicable, the benefits and burdens based on the seven criteria described in EPCA (see 42 U.S.C. 6295(o)(2)(B)(i)(I)–(VII)). DOE's weighing of the benefits and burdens based on the final rule analysis and rationale for the TSL selection is discussed in section V. DOE notes that much of the commentary regarding the selection of TSL levels for the standards is based on more detailed comments regarding specific portions of the final rule analysis. These comments related to specific analyses are addressed within the specific analysis section to which they pertain. However, as a general matter, DOE notes that in light of the comments and data provided by stakeholders, the agency carefully reexamined its data and analyses for residential boilers, ultimately reassessing the appropriate efficiency levels for some product classes. Specifically, DOE determined to adopt a standard level at 84-percent AFUE for gas-fired hot water boilers and 85-percent AFUE for oil-fired steam boilers, which DOE determined meet the criteria for TSL 3 without causing harms described by the stakeholders. Regarding safety issues at 84-percent

AFUE for gas-fired hot water boilers, DOE determined that at this efficiency, there is no difference in terms of their ability to meet minimum NFGC safety requirements, as compared to 82-percent and 83-percent AFUE models. Section III.F.3 further discusses the 84-percent efficiency level safety considerations. In regards to 85-percent AFUE for oil-fired steam boilers, such efficiency level results in oil-fired steam boilers being one AFUE point lower than the oil-fired hot water boilers standards, which is at 86-percent AFUE. This addresses stakeholder concerns about manufacturing burden associated with having separate tooling for oil-fired steam models and for oil-fired hot water models, because as AHRI noted, an oil-fired steam boiler will operate slightly less efficiently than an oil-fired hot water boiler of the same design. (AHRI No. 67, at p. 2) DOE reviewed the oil-fired boiler market, and found that a 1-percent AFUE difference between oil-fired steam and hot water boilers is typical, so the adopted standards of 86-percent AFUE for oil-fired hot water boilers and 85-percent AFUE for oil-fired steam boilers will allow manufacturers to maintain one design for both oil-fired steam and oil-fired hot water boilers. Results are discussed further in section V of this document and in the final rule TSD.

2. Simultaneous Changes in Test Procedures and Energy Conservation Standards

Several stakeholders expressed legal, procedural, and practical concerns regarding the timing of the proposed test procedures and energy conservation standards revisions for residential boilers. Several stakeholders requested that DOE delay any further work on the rulemakings to amend efficiency standards for residential boilers until after the finalization of the test procedure. (AHRI, No. 64 at p. 2; Lochinvar, No. 63 at p. 1; Burnham, No. 60 at p. 5; AGA/APGA, No. 54 at p. 11; ACCA, No. 65 at p. 1) Specifically, AHRI requested that DOE reopen the docket for the March 2015 residential boiler standards NOPR once the test procedure has been finalized. (AHRI, No. 64 at p. 2) AHRI argued that the non-final status of the test procedure inhibits stakeholders' fair evaluation of the proposed standards and stressed the importance of having a known efficiency test procedure. AHRI commented that when a test procedure is in flux, manufacturers must spend resources collecting potentially unusable data which undermines their ability to effectively provide input on the proposed efficiency standards.

Similarly, AHRI added that when a test procedure is not finalized, a manufacturer has no way of determining whether the test procedure will affect its ability to comply with a proposed revised standard. (AHRI, No. 64 at p. 2)

Many of these commenters were concerned about the timing of the energy conservation standards and test procedures rulemakings, given their expectation that the proposed changes to the test procedures for residential boilers would result in changes to the AFUE rating metric. Specifically, AHRI, Burnham, and Weil-McLain stated that the changes to the test procedure presented in the March 2015 TP NOPR would result in significant changes to the AFUE measurement. (AHRI, No. 64 at p. 1; Burnham, No. 60 at p. 6; Weil-McLain, No. 55 at p. 7) Burnham noted that the fact that the test procedure rulemaking is ongoing makes it impossible to gauge the effects of its final rule on proposed energy conservation standards. (Burnham, No. 60 at p. 6) AHRI stated that the proposed test procedure, if finalized, is not neutral and will require an adjustment of the AFUE standard to accommodate for the test effects. AHRI disagreed with DOE's tentative determination in the March 2015 TP NOPR that the proposed updates to the AFUE test method would not affect the AFUE ratings. AHRI stated that test data it is collecting shows that the proposed test procedure changes the resulting AFUE measurement. AHRI noted that one such change affecting AFUE is the proposed change to the procedure for burner set-up. (AHRI, No. 64 at p. 3)

Several stakeholders also contended that the timing of the test procedures and standards rulemakings violated certain procedural requirements, or DOE's own procedural policies. Burnham asserted that the simultaneous test procedure and standards rulemaking raises concerns under the Data Quality Act, and stated that the law and OMB guidelines require agency actions aimed at "maximizing the quality, objectivity, utility, and integrity of information (including statistical information) disseminated by the agency." Burnham commented that DOE has considerable work ahead to comply with this requirement, and cited section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106-554; HR 5658) at section 515(b)(2)(a). (Burnham, No. 60 at pp. 3, 6) AHRI, ACCA, and Burnham stated that by publishing the March 2015 TP NOPR within weeks of the proposed efficiency standards, DOE has failed to abide by its codified procedures at 10 CFR part 430, subpart

C, appendix A(7)(c). (AHRI, No. 64 at p. 2; ACCA, No. 65 at p. 1; Burnham, No. 60 at p. 6) AHRI stated that The Administrative Procedure Act (APA) requires agencies to abide by their policies and procedures, especially where those rules have a substantive effect, and that the non-final test procedure has the substantive effect of increasing costs to stakeholders and diminishing their ability to comment on the efficiency standards. (AHRI, No. 64 at p. 2) AHRI noted that DOE is required to give stakeholders the opportunity to provide meaningful comments (see 42 U.S.C. 6295(p)(2), 6306(a)), and asserted that the close timing of the test procedures and standards NOPRs diminishes that opportunity. (AHRI, No. 64 at p. 2)

DOE does not believe that the timing of the test procedure and standards rulemakings has negatively impacted stakeholder's ability to provide comment. DOE has afforded interested parties an opportunity to provide comment on both the residential boiler standards rulemaking and the residential furnace and boiler test procedure rulemaking, consistent with the requirements of EPCA and all other relevant statutory provisions. Further, given the publication of the boilers test procedure final rule and the fact that none of the adopted changes will impact AFUE, DOE has determined it is not necessary to delay this standards rulemaking.

With regard to the specific concerns raised by stakeholders regarding changes to the AFUE metric, DOE determined in the March 2015 TP NOPR that the proposed test procedure amendments would have a *de minimis* impact on products' measured efficiency. 80 FR 12876, 12878 (March 11, 2015). However, as discussed above, DOE received comments from stakeholders both in response to the March 2015 test procedure NOPR and to the March 2015 standards NOPR suggesting that several provisions within the March 2015 test procedure NOPR would significantly impact AFUE ratings. In the January 2016 test procedure final rule, DOE responded to each of these comments and ultimately did not adopt those provisions which were suggested to cause changes to the AFUE ratings. The specific comments and proposals that were and were not adopted are discussed in detail in the January 2016 TP final rule. As discussed in the January 2016 TP final rule, because DOE ultimately did not adopt the proposed changes that were suggested to impact the AFUE ratings, the Department has concluded that all of the recent updates to the test

procedure will have a *de minimis* impact on AFUE ratings. Furthermore, DOE is adopting its amended and new standards for residential boilers based upon use of the revised test procedures, so any changes to the test procedure that could affect measured energy efficiency were fully taken into account in those standards.

Second, with regard to Burnham's assertion that DOE has not met the requirements of the Data Quality Act (DQA), DOE does not believe that the timing of the test procedure and standards rulemakings are matters within the Department's guidelines implementing the DQA. DOE has concluded that the data, analysis, and models it has used in this rulemaking adhered to the requirements of the Data Quality Act. Further, DOE strived to maximize the quality, objectivity, utility, and integrity of the information disseminated in this rulemaking (see section VI.J for more information on these requirements and DOE's determination). As noted above, the January 2016 test procedure final rule removed all of the provisions within the March 2015 test procedure NOPR that could significantly impact AFUE ratings.

Finally, with regard to the comments stating that DOE has failed to abide by its codified procedures at 10 CFR 430, subpart C, appendix A (7)(c), Appendix A establishes procedures, interpretations, and policies to guide DOE in the consideration and promulgation of new or revised appliance efficiency standards under EPCA. (See section 1 of 10 CFR 430 subpart C, appendix A) Those procedures are a general guide to the steps DOE typically follows in promulgating energy conservation standards. The guidance recognizes that DOE can and will, on occasion, deviate from the typical process. Accordingly, DOE has concluded that there is no basis to delay the final rule adopting standards for residential boilers.

3. Safety Issues

Lochinvar stated that the DOE analysis does not account for the impact of the proposed residential boiler standards on public safety. Specifically, Lochinvar stated that if 85-percent AFUE becomes the standard for gas-fired hot water boilers, the likelihood that the boilers will consistently have proper product installations and venting system design diminishes. (Lochinvar, No. 63 at p. 5) AHRI stated that the consumer safety impacts should eliminate consideration of a minimum efficiency standard appreciably above the current minimum standards for gas-

fired and oil-fired boilers. (AHRI, No. 64 at pp. 3–4) Burnham stated that consumer safety hazards, along with the imposition of liability on manufacturers concordant with such safety hazards, alone justify the exclusion of Category I gas boilers at the 85-percent and 84-percent efficiency levels. (Burnham, No. 60 at p. 13)

Burnham stated that an 85-percent AFUE standard will risk hazards associated with old products being left in service long after it should be replaced due to higher replacement costs, and old boilers being replaced by less safe alternatives such as kerosene heaters. (Burnham, No. 60 at p. 3) Burnham stated that for 85-percent AFUE boilers, there are too many potential installations which breach acceptable safety levels. Furthermore, low-income consumers who do not have the resources to afford the necessary venting system upgrades required with condensing or near-condensing products will be imperiled. (Burnham, No. 60 at p. 7)

Burnham also stated that by selecting an 85-percent AFUE standard for gas-fired hot water boilers, DOE is risking carbon monoxide poisoning in situations where there are venting approaches used that meet building codes but which may not be adequate for full safety. (Burnham, No. 60 at pp. 3–4) Lochinvar stated that the condensation of flue gasses in venting will corrode conventional venting and may lead to spilling carbon monoxide into occupied spaces and death. (Lochinvar, No. 63 at p. 3)

Weil-McLain stated that the issues associated with the proposed retrofit venting requirements also create a potential safety hazard because positive pressure venting could push flue gases into the building. (Weil-McLain, No. 55 at p. 3) ACCA and Weil-McLain stated that there will be some less-skilled installers or do-it-yourselfers who may install the higher efficiency models incorrectly, resulting in safety problems. (ACCA, No. 65 at pp. 2–3; Weil-McLain, No. 55 at p. 3)

AHRI stated that the results of the analysis done by Gas Technology Institute (GTI), as contained in a report prepared for AHRI using a Vent-II tool, show that at an 84-percent or 85-percent AFUE level, the potential for excessive wetting in the vent system increases. As explained in the report, the "wet time" limits are values that have been used to establish the coverage for properly sized and configured vent systems for atmospheric gas-fired boilers in the National Fuel Gas Code (NFGC). When the Vent-II analysis shows wet times exceeding these limits,

it is an indication of excessive condensation which increases the potential for condensate-induced corrosion and subsequent vent system failure, resulting in safety problems. (AHRI, No. 67 at p. 1)

In response, DOE has concluded that manufacturers will provide adequate guidance for installers to ensure that the venting system is safe. Furthermore, DOE assumed that 85-percent AFUE boilers would either be Category I or Category III appliances, and DOE accounted for a fraction of installations that would require a stainless steel vent connector or stainless steel venting to mitigate the dangers of potential corrosion issues. In any case, DOE is not adopting a standard at 85-percent AFUE for gas-fired boilers, so the potential problems raised by the stakeholders will not be an issue.

Regarding safety issues at to 84-percent AFUE, based on Burnham's data, AHRI's contractors' survey, and models available in the AHRI directory, DOE determined that the fraction of shipments and model availability with mechanical draft for the 82-percent to 84-percent AFUE boilers is about the same. In addition, AHRI's Vent-II analysis showed that for all 21 different scenario cases, 82-percent to 84-percent AFUE boilers demonstrated no difference in terms of their ability to meet the dryout wet times required to achieve the minimum NFGC safety requirements.²¹

4. Other

The Laclede group stated that DOE is not adhering to the process transparency and scientific integrity policies as set forth in 1996 "Process Improvement Rule" and outlined in 10 CFR 430, subpart C, appendix A (7)(g). 61 FR 36974 (July 15, 1996). Laclede also asserted that through the inconsistent application of the process improvement rule, DOE is not adhering to the consistency and transparency requirements outlined in the Treasury and General Government Appropriations Act of 2001, the Paperwork Reduction Act of 1995 (primarily Section 515), and the "Presidential Scientific Integrity Memorandum" issued on March 9, 2009, which was further clarified by the Director of the Office of Science and Technology Policy "Memorandum to the Heads of Departments and Agencies" of December 17, 2010. (Laclede, No. 58 at pp. 7–9)

²¹ National Fire Protection Association, *NFPA 54 (ANSI Z223.1): National Fuel Gas Code* (2015) (Available at: <http://www.nfpa.org/codes-and-standards/document-information-pages?mode=code&code=54>).

As discussed in sections VI.C, J, and L and illustrated elsewhere in this document, DOE has developed analytical processes and data that ensure the quality of its information and the transparency of its analytical processes. In furtherance of these objectives and requirements, DOE has offered several opportunities for public comment on multiple documents, including documents made available prior to proposing any rule, and addressed stakeholder concerns at the April 30, 2015 public meeting, providing clarifications in an open and transparent fashion.

The Laclede group also stated that DOE failed to meet the requirements of Executive Order 12866, "Regulatory Planning and Review," through the refusal to consider the alternative of not regulating. (Laclede, No. 58 at p. 7) DOE considered alternatives to regulating, including no new regulatory action. A full discussion of the non-regulatory alternatives considered by DOE is presented in the regulatory impact analysis found in chapter 17 of the final rule TSD.

As discussed previously, DOE believes it is in compliance with the requirements of 515 of the Treasury and Gen. Government Appropriations Act for fiscal year 2001 (Public Law 106–554; HR 5658) at section 515(b)(2)(a). (See section VI.J of this document.) For the final rule stage, DOE has incorporated feedback from interested parties, as appropriate, related to the energy use characterization, installation costs, operating costs, and lifecycle costs, leading to revisions in this analysis as compared to the analysis presented for the March 2015 NOPR. The specific comments and any related revisions are discussed in more detail in the applicable subsections of section IV of this document.

AHRI stated that DOE bears the burden, on the basis of substantial evidence, to demonstrate that the proposed standards are technologically feasible and economically justified. AHRI claimed that the DOE has attempted to impermissibly shift its statutory burden of data production onto stakeholders by forcing them to disprove several unreasonable assumptions including the price elasticity of boilers, as well as the lifetime of condensing boilers. AHRI stated that at a minimum, DOE has the responsibility to explain the basis for its assumptions. (AHRI, No. 64 at p. 4)

In response to AHRI, DOE notes that it conducts its analyses with the best available information that it is aware of, and seeks comment from interested parties as a way to ensure analytical

robustness and verify the accuracy of the assumptions and information used in the rulemaking process. DOE then revises its analyses based on comments, information, and data collected through additional research and presented by stakeholders, as applicable, in later rulemaking stages. In some cases, additional relevant but unpublished data may reside with the regulated community and can be considered by DOE only if provided by those regulated parties. DOE has provided detailed comment responses regarding the specific assumptions outlined by AHRI in sections IV.F.2.d and IV.G.

In response to the NOPR, Weil-McLain stated that DOE had changed its position outlined in the NODA to not amend energy conservation standards for residential boilers. Weil-McLain added that DOE did so without explanation for the change in recommendation. (Weil-McLain, No. 55 at p.8)

In response, DOE emphasizes that the 2014 NODA was not a determination on whether to amend standards for residential boilers. Rather, it was a publication of the analysis and results at a preliminary stage (*i.e.*, before the NOPR) so that stakeholders could review and comment on the analytical output, the underlining assumptions, and the calculations that may ultimately be used to support amended standards. The DOE statement to which Weil-McLain refers is correct in that the 2014 NODA did not propose any amendments to the standards because at that early stage, DOE was not prepared to do so. It was not a statement that it had determined not to propose standards. Therefore, DOE did not change its position from the publication of the 2014 NODA to the publication of the 2015 NOPR.

IV. Methodology and Discussion of Related Comments

This section addresses the analyses DOE has performed for this rulemaking with regard to residential boilers. Separate subsections address each component of DOE's analyses.

DOE used several analytical tools to estimate the impact of the standards considered in this document. The first tool is a spreadsheet that calculates the LCC and BPB of potential amended or new energy conservation standards. The national impact analysis uses a second spreadsheet set that provides shipments forecasts and calculates national energy savings and net present value of total consumer costs and savings expected to result from potential energy conservation standards. DOE uses the third spreadsheet tool, the Government

Regulatory Impact Model (GRIM), to assess manufacturer impacts of potential standards. These spreadsheet tools are available on the DOE Web site for this rulemaking at: http://www1.eere.energy.gov/buildings/appliance_standards/rulemaking.aspx?ruleid=112.

Additionally, DOE used output from the latest version of EIA's *Annual Energy Outlook (AEO)*, a widely known energy forecast for the United States for the emissions and utility impact analyses.

A. Market and Technology Assessment

DOE develops information in the market and technology assessment that provides an overall picture of the market for the products concerned, including the purpose of the products, the industry structure, manufacturers, market characteristics, and technologies used in the products. This activity includes both quantitative and qualitative assessments, based primarily on publicly-available information. The subjects addressed in the market and technology assessment for this rulemaking include: (1) A determination of the scope of the rulemaking and product classes; (2) manufacturers and industry structure; (3) existing efficiency programs; (4) shipments information; (5) market and industry trends; and (6) technologies or design options that could improve the energy efficiency of residential boilers. The key findings of DOE's market assessment are summarized below. See chapter 3 of the final rule TSD for further discussion of the market and technology assessment.

1. Scope of Coverage

In the NOPR, DOE proposed to maintain the scope of coverage as defined by its current regulations for this analysis of new and amended standards, which includes six product classes of residential boilers: (1) Gas-fired hot water boilers, (2) gas-fired steam boilers, (3) oil-fired hot water boilers, (4) oil-fired steam boilers, (5) electric hot water boilers, and (6) electric steam boilers. As discussed in further detail in the paragraphs below, DOE excluded several types of residential boilers from the analysis in both the March 2015 NOPR and, subsequently, in this final rule.

DOE did not consider combination space and water heating appliances for this final rule. Combination appliances provide both space heating and domestic hot water to a residence. These products are available on the market in two major configurations, including a water heater fan-coil combination unit and a boiler tankless coil combination unit. Currently, manufacturers certify

combination appliances by rating the efficiency of the unit when performing their primary function (*i.e.*, space heating for boiler tankless coil combination units or water heating for water heater fan-coil units). As explained in the March 2015 NOPR, DOE proposed to exclude such products from the analysis conducted for this rulemaking. 80 FR 17222, 17238 (March 31, 2015). DOE did not receive any comments related to the coverage of combination appliances, and, thus, has not include them in this final rule.

DOE did not include electric boilers in the analysis of amended AFUE standards. (However, DOE has considered standby mode and off mode standards for electric boilers.) Electric boilers do not currently have an AFUE requirement under 10 CFR 430.32(e)(2)(ii). Electric boilers typically use electric resistance coils as their heating elements, which are highly efficient. Furthermore, the current DOE test procedure for determining AFUE classifies boilers as indoor units and, thus, considers jacket losses to be usable heat, because those losses would go to the conditioned space. The efficiency of these products already approaches 100 percent AFUE. Therefore, there are no options for increasing the rated AFUE of this product, and the impact of setting AFUE energy conservation standards for these products would be negligible. DOE proposed not to analyze amended AFUE standards for electric boilers in the March 2015 NOPR and did not receive any comments relating to this proposal. 80 FR 17222, 17238 (March 31, 2015).

DOE also did not include boilers that are manufactured to operate without the need for electricity in the analysis of amended AFUE standards. As was noted in the March 2015 NOPR, an exception already exists for boilers which are manufactured to operate without any need for electricity. (42 U.S.C. 6295(f)(3)(C); 10 CFR 430.32(e)(2)(iv)) 80 FR 17222, 17238 (March 31, 2015). Thus, DOE did not consider such products in the course of this analysis, and such products are not covered by the amended standards. DOE did not receive any comments in response to its proposal to exclude these products in the March 2015 NOPR.

In summary, DOE did not receive any comments in response to the NOPR regarding scope of coverage. Therefore, the scope used for the analysis of this final rule is the same as the scope used for the NOPR analysis.

2. Product Classes

When evaluating and establishing energy conservation standards, DOE

divides covered products into product classes by the type of energy used or by capacity or other performance-related features that justify a different standard. In making a determination whether a performance-related feature justifies a different standard, DOE must consider such factors as the utility to the consumer of the feature and other factors DOE determines are appropriate. (42 U.S.C. 6295(q)) For this rulemaking, as discussed in the preceding section, DOE proposes to maintain the scope of coverage as defined by its current regulations for this analysis of standards, which includes six product classes of boilers. Table IV.1 lists the six product classes examined in the final rule.

TABLE IV.1—PRODUCT CLASSES FOR RESIDENTIAL BOILERS

Boiler by fuel type	Heat transfer medium
Gas-fired Boiler	Steam. Hot Water.
Oil-fired Boiler	Steam. Hot Water.
Electric Boiler	Steam. Hot Water.

In response to the proposed product classes included in the March 2015 NOPR, AGA, APGA, and PGW requested that DOE establish separate product classes for residential condensing and non-condensing boilers. (AGA, No. 54 at p. 11; PGW, No. 57 at p. 2) AGA stated that non-condensing boilers provide customers unique performance-related characteristics and consumer utility due to distinct venting characteristics and building constraints on installations. AGA stated that failure to adopt separate product classes would be inconsistent with DOE precedent. (AGA, No. 54 at p. 6)

Burnham stated that loss of the ability to use Category I venting (suitable for non-condensing boilers) is a loss in utility because the circumstances of many real world installations offer no practical alternatives to Category I venting, particularly in urban areas with closely-spaced residences. Burnham argued that providing heat and hot water are not the only utility functions, features, and performance characteristics of boilers, and that designs that allow proper installation in a variety of dwellings are a critical aspect of utility so that such products can be installed and used safely. Burnham stated limited exterior wall space and building or safety code or physical restrictions on where exhaust terminals can be located can cause venting issues, and that these

constraints can be a particular problem in urban areas with homes that are either closely spaced or conjoined. Burnham gave the example of older “row homes” found in Northeastern cities, which Burnham asserted represent a large part of the U.S. residential boiler market. (Burnham, No. 60 at p. 14) In addition, Burnham stated that there is a point at which increasing installation costs become large enough to effectively create a “loss of utility,” and this situation in the real world is as likely to “result in the unavailability” of appropriate non-condensing boilers as a pure design issue. Burnham stated that this is a direct violation of the “safe harbor rule” in 42 U.S.C. 6295(o)(4), among other provisions. (Burnham, No. 60 at pp. 4–16)

DOE received similar comments in response to the February 11, 2014 NODA and preliminary analysis, and addressed the comments in the March 31, 2015 NOPR. 79 FR 8122; 80 FR 17222. DOE maintains its position from the NOPR and reiterates that the utility derived by consumers from boilers is in the form of the space heating function that a boiler performs, rather than the type of venting the boiler uses. Condensing and non-condensing boilers perform equally well in providing this heating function. Likewise, a boiler requiring Category I venting and a boiler requiring Category IV venting are capable of providing the same heating function to the consumer, and, thus, provide virtually the same utility with respect to their primary function. DOE does not consider reduced costs associated with Category I venting in certain installations as a special utility, but rather, as was done in the March 2015 NOPR, the costs were considered as an economic impact on consumers that is considered in the rulemaking’s cost-benefit analysis. DOE does not agree with Burnham’s assertion that costs can become so prohibitively expensive that they should be considered a loss of utility of the product. Rather, the larger expense should be considered as an economic impact on consumers in the rulemaking’s cost-benefit analysis and ultimately the analysis will determine if a cost is economically prohibitive. DOE considered the additional cost of adding vent length required to change the vent location to avoid the code limitations outlined by Burnham. Details regarding installation costs can be located in section IV.F.2. DOE maintains that this final rule is not in violation of the 42 U.S.C. 6295(o)(4), because it does not result in the unavailability of any covered product class of performance

characteristics, features, sizes, capacities and volumes. DOE does not consider the type of venting to be a “feature” that would provide utility to consumers, other than the economic benefits of the venting type which are properly considered in the economic analysis.

3. Technology Options

As part of the market and technology assessment, DOE develops a comprehensive list of technologies to improve the energy efficiency of residential boilers. In the final rule analysis, DOE identified ten technology options that would be expected to improve the AFUE of residential boilers, as measured by the DOE test procedure: (1) Heat exchanger improvements; (2) modulating operation; (3) dampers; (4) direct vent; (5) pulse combustion; (6) premix burners; (7) burner derating; (8) low-pressure air-atomized oil burner; (9) delayed-action oil pump solenoid valve; and (10) electronic ignition.²² In addition, DOE identified three technologies that would reduce the standby mode and off mode energy consumption of residential boilers: (1) Transformer improvements; (2) control relay for models with brushless permanent magnet motors; and (3) switching mode power supply.

DOE received no comments suggesting additional technology options in response to the NOPR analysis, and thus, DOE has maintained the same list of technologies in the final rule analysis. After identifying all potential technology options for improving the efficiency of residential boilers, DOE performed the screening analysis (see section IV.B of this final rule or chapter 4 of the final rule TSD) on these technologies to determine which could be considered further in the analysis and which should be eliminated.

B. Screening Analysis

DOE uses the following four screening criteria to determine which technology options are suitable for further consideration in an energy conservation standards rulemaking:

1. *Technological feasibility.* Technologies that are not incorporated in commercial products or in working prototypes will not be considered further.

2. *Practicability to manufacture, install, and service.* If it is determined

that mass production and reliable installation and servicing of a technology in commercial products could not be achieved on the scale necessary to serve the relevant market at the time of the compliance date of the standard, then that technology will not be considered further.

3. *Impacts on product utility or product availability.* If it is determined that a technology would have significant adverse impact on the utility of the product to significant subgroups of consumers or would result in the unavailability of any covered product type with performance characteristics (including reliability), features, sizes, capacities, and volumes that are substantially the same as products generally available in the United States at the time, it will not be considered further.

4. *Adverse impacts on health or safety.* If it is determined that a technology would have significant adverse impacts on health or safety, it will not be considered further.

(10 CFR part 430, subpart C, appendix A, 4(a)(4) and 5(b))

In sum, if DOE determines that a technology, or a combination of technologies, fails to meet one or more of the above four criteria, it will be excluded from further consideration in the engineering analysis. Additionally, it is DOE policy not to include in its analysis any proprietary technology that is a unique pathway to achieving a certain efficiency level. The reasons for eliminating any technology are discussed below.

The subsequent sections include comments from interested parties pertinent to the screening criteria, DOE’s evaluation of each technology option against the screening analysis criteria, and whether DOE determined that a technology option should be excluded (“screened out”) based on the screening criteria.

1. Screened-Out Technologies

During the NODA and NOPR phases, DOE screened out pulse combustion as a technology option for improving AFUE and screened out control relay for boiler models with brushless permanent magnet motors as a technology option for reducing standby electric losses. DOE decided to screen out pulse combustion based on manufacturer feedback during the Framework public meeting indicating that pulse combustion boilers have had reliability issues in the past, and therefore, manufacturers do not consider this a viable option to improve efficiency. Further, manufacturers indicated that

similar or greater efficiencies than those of pulse combustion boilers can be achieved using alternative technologies. DOE did not receive any comments related to screening out pulse combustion and maintained this position for the final rule, and accordingly, maintained its position from the NOPR to screen out pulse combustion as a technology option.

In the NODA and NOPR analysis, DOE decided to screen out the option of using a control relay to depower BPM motors due to feedback received during the residential furnace rulemaking (which was reconfirmed during manufacturer interviews for the residential boiler rulemaking), which indicated that using a control relay to depower brushless permanent magnet motors could reduce the lifetime of the motors. The result of such a design would likely be excessively frequent repair and maintenance of the boiler to replace the motor.

DOE also screened out burner derating as a technology option in the NOPR and final rule analysis. Burner derating reduces the burner firing rate while keeping heat exchanger geometry and surface area and the fuel-air ratio the same, which increases the ratio of heat transfer surface area to energy input, and increases the efficiency. However, the lower energy input means that less heat is provided to the user than with conventional burner firing rates. As a result of the decreased heat output of the boiler with derated burners, DOE has screened out burner derating as a technology option, as it could reduce consumer utility.

The efficiency advocates recommended that DOE assess whether the de-powering could be done in a manner to minimize the number of power cycles to address concerns regarding potential product life impacts, for example by only disconnecting when the boiler has been inactive for more than 24 hours. The efficiency advocates suggested that this approach would achieve the desired results during long periods of inactivity, such as during the summer, without cycling on and off during periods of regular activity. (Efficiency Advocates, No. 62 at p. 2)

DOE has not found any residential boilers which utilize control relays to completely depower the BPM motors. The feedback received from the residential furnace rulemaking indicated that it was not only the number of power cycles which could reduce product utility but the potential for large current upon start up. Therefore, DOE has maintained its position from the NOPR in this final

²² Although DOE has identified vent dampers and electronic ignition as technologies that improve residential boiler efficiency, DOE did not consider these technologies further in the analysis as options for improving efficiency of baseline units, because they are already included in baseline residential boilers.

rule and screened out control relays for models with brushless permanent magnet motors as a technology option, as it would reduce consumer utility. However, DOE will continue to evaluate this technology further in future rulemakings if motor technology develops that would allow for the inclusion of such a design.

2. Remaining Technologies

Through a review of each technology, DOE found that all of the other identified technologies met all four screening criteria and consequently, are suitable for further examination in DOE's analysis. In summary, DOE did not screen out the following technology options to improve AFUE: (1) heat exchanger improvements; (2) modulating operation; (3) direct vent; (4) premix burners; (5) low-pressure air-atomized oil burner; and (6) delayed-action oil pump solenoid valve. DOE also maintained the following technology options to improve standby mode and off mode energy consumption: (1) transformer improvements; and (2) switching mode power supply. All of these technology options are technologically feasible, given that the evaluated technologies are being used (or have been used) in commercially-available products or working prototypes. Therefore, all of the trial standard levels evaluated in this notice are technologically feasible. DOE also finds that all of the remaining technology options also meet the other screening criteria (*i.e.*, practicable to manufacture, install, and service, and do not result in adverse impacts on consumer utility, product availability, health, or safety). For additional details, please see chapter 4 of the final rule TSD.

C. Engineering Analysis

In the engineering analysis (corresponding to chapter 5 of the final rule TSD), DOE establishes the relationship between the manufacturer selling price (MSP) and improved residential boiler energy efficiency. This relationship serves as the basis for cost-benefit calculations for individual consumers, manufacturers, and the Nation. DOE typically structures the engineering analysis using one of three approaches: (1) design option; (2) efficiency level; or (3) reverse engineering (or cost-assessment). The design-option approach involves adding the estimated cost and efficiency of various efficiency-improving design changes to the baseline to model different levels of energy efficiency. The efficiency-level approach uses estimates of cost and efficiency at distinct levels

of efficiency from publicly-available information, and information gathered in manufacturer interviews that is supplemented and verified through technology reviews. The reverse-engineering approach involves testing products for efficiency and determining cost from a detailed bill of materials (BOM) derived from the reverse-engineering of representative products. The efficiency values under consideration range from that of a least-efficient boiler sold today (*i.e.*, the baseline) to the maximum technologically feasible efficiency level. At each efficiency level examined, DOE determines the manufacturer production cost (MPC) and MSP; this relationship is referred to as a cost-efficiency curve.

As noted in section III.B, the AFUE metric fully accounts for the fossil-fuel energy consumption in active, standby and off modes, whereas the electrical energy consumption in standby mode and off mode is accounted for with separate metrics that measure the power drawn during standby mode and off mode ($P_{W,SB}$ and $P_{W,OFF}$ for standby mode and off mode, respectively). In analyzing the technologies that would likely be employed to effect changes in these metrics, DOE found that the changes that would be implemented to increase AFUE were mostly independent from the changes that would be implemented to reduce the electrical standby mode and off mode energy consumption ($P_{W,SB}$ and $P_{W,OFF}$). For example, the primary means of improving AFUE is to improve the heat exchanger design, which DOE expects would have little or no impact on standby mode and off mode electrical energy consumption. Similarly, the design options considered likely to be implemented for reducing standby mode and off mode electrical energy consumption are not expected to impact the AFUE. Therefore, DOE conducted separate engineering and cost-benefit analyses for the AFUE metric and the standby mode and off mode metrics and their associated systems (fuel and electrical). In order to account for the total impacts of both considered standards, DOE added the monetized impacts from these two separate analyses in the NIA, LCC, and MIA as a means of providing a cumulative impact of both residential boilers standards. For the PBB, to estimate the cumulative impact for both standards, DOE determined the combined installed cost to the consumer and the first-year operating costs for each household.

For the NOPR analysis of AFUE efficiency levels, DOE conducted the engineering analysis for residential boilers using a combination of the

efficiency level and cost-assessment approaches. More specifically, DOE identified the efficiency levels for analysis and then used the cost-assessment approach to determine the technologies used and the associated manufacturing costs at those levels.

For the standby mode and off mode analyses, DOE adopted a design option approach, which allowed for the calculation of incremental costs through the addition of specific design options to a baseline model. DOE decided on this approach because it did not have sufficient data to execute an efficiency-level analysis, as manufacturers typically do not rate or publish data on the standby mode and or off mode energy consumption of their products.

DOE continued to use the same analytical approaches for the final rule as used in the NOPR. In response to the NOPR, DOE received specific comments from interested parties on certain aspects of the engineering analysis. A brief overview of the methodology, a discussion of the comments DOE received, and DOE's response to those comments, as well as any adjustments made to the engineering analysis methodology or assumptions as a result of those comments, are presented in the sections below. See chapter 5 of the final rule TSD for additional details about the engineering analysis.

1. Efficiency Levels

As noted previously, for analysis of amended AFUE standards, DOE used an efficiency-level approach to identify incremental improvements in efficiency for each product class. The efficiency-level approach enabled DOE to identify incremental improvements in efficiency for efficiency-improving technologies that boiler manufacturers already incorporate in commercially-available models. After identifying efficiency levels for analysis, DOE used a cost-assessment approach (section IV.C.2) to determine the MPC at each efficiency level identified for analysis. This method estimates the incremental cost of increasing product efficiency. For the analysis of amended standby mode and off mode energy conservation standards, DOE used a design-option approach and identified efficiency levels that would result from implementing certain design options for reducing power consumption in standby mode and off mode.

a. Baseline Efficiency Level and Product Characteristics

In its analysis, DOE selected baseline units typical of the least-efficient commercially-available residential boilers. DOE selected baseline units as

reference points for each product class, against which it measured changes resulting from potential amended energy conservation standards. The baseline efficiency level in each product class represents the basic characteristics of products in that class. A baseline unit is a unit that just meets current Federal energy conservation standards and provides basic consumer utility.

DOE uses the baseline unit for comparison in several phases of the analyses, including the engineering analysis, LCC analysis, PBP analysis, and the NIA. To determine energy savings that will result from an amended energy conservation standard, DOE compares energy use at each of the higher energy efficiency levels to the energy consumption of the baseline unit. Similarly, to determine the changes in price to the consumer that will result from an amended energy conservation standard, DOE compares the price of a baseline unit to the price of a unit at each higher efficiency level.

DOE received no comments regarding the baseline efficiency levels chosen for the NOPR analysis of amended AFUE standards. Thus, DOE has maintained these baseline efficiency levels for the final rule analysis, which are equal to the current Federal minimum standards for each product class in the final rule analysis. Table IV.2 presents the baseline AFUE levels identified for each product class. Additional details on the selection of baseline AFUE efficiency levels are in chapter 5 of the final rule TSD.

TABLE IV.2—BASELINE AFUE EFFICIENCY LEVELS

Product class	AFUE (%)
Gas-Fired Hot Water Boilers	82
Gas-Fired Steam Boilers	80
Oil-Fired Hot Water Boilers ..	84
Oil-Fired Steam Boilers	82

The input capacity is a factor that influences the MPC of a residential boiler. The impact of efficiency ratings on residential boiler prices can be captured by calculating the incremental price for each efficiency level higher than the baseline at a given input capacity. To provide a singular set of incremental price results for the engineering analysis, DOE selected a single input capacity for each product class analyzed for AFUE standards. DOE selected these input capacities by referencing a number of sources, including information obtained during manufacturer interviews, information collected for the market and technology

assessment, as well as information obtained from product literature.

In response to the representative input capacities selected in the engineering analysis from each product class, Burnham presented shipment information of their aggregated subsidiaries indicating the average input capacity sold in for each product class. Based upon this data, Burnham suggested that the representative input capacity for gas-fired hot water boilers should be changed to 120 kBtu/hr. (Burnham, No. 60 at p. 20)

In response, DOE notes that the representative input capacity is meant to describe the most typical boiler sold. Therefore, DOE believes that although the average of all shipments sold may be 120 kBtu/hr, the most often sold would be 100 kBtu/hr. AHRI stated that the analysis does not adequately evaluate the effect of revised efficiency standards on larger input boilers. AHRI stated that boilers are a very small segment of the U.S. residential heating market and commented that larger input boilers are the smallest segment of the residential boiler market. For these larger input models, AHRI argued that there is no economy of scale, and because relatively so few are manufactured, the costs of components are higher. The units are physically larger and weigh more so their shipping costs are larger. Accordingly, AHRI asserted that the information developed by the tear down analysis cannot be validly scaled up to these models which have input rates 2 to 2.5 times higher than the baseline models. (AHRI, No. 64 at p. 14) Similarly, Burnham stated that due to the size of the residential boiler market, the manufacturing costs for a 250,000 Btu/hr boiler may not be a simple linear scale. (Burnham, public meeting transcript, No. 50 at p. 34)

In response to these comments, DOE examined the parts catalogs of various manufacturers for a variety of boiler types within each product class. From this examination, DOE determined that the same materials, as well as purchase parts are utilized in the manufacture of both representative and larger capacity boilers. For example, a representative capacity heat exchanger may be comprised of four cast iron sections, including two end sections with two intermediate sections. A larger capacity unit would generally be comprised of a larger number of the same sections, typically two end sections with six intermediate sections for a 250 kBtu/hr boiler. Although the amount of material used increases as capacity increases, DOE has not found reason to believe that the cost of the material would

increase due to a lack of economy of scale.

In addition, DOE found that the large majority of components used for larger-capacity boilers were identical to those used in lower capacity boilers, although larger quantities of those components may be necessary in the manufacturing of higher-capacity boilers. For example, a larger-capacity burner may require a larger number of burner tubes. In several cases, the cost of the higher-capacity unit could be expected to be less than the result of a linear scaling upward of the cost, due to the need for only one component per unit regardless of capacity. In other words, there are certain fixed production costs that are present no matter the size of the boiler and only the variable costs increase with boiler size. For instance, a larger boiler would utilize the same controls and wiring harness as a smaller boiler, the cost of which would remain fixed regardless of the input capacity. DOE did find one relevant example, a higher-capacity premix burner, which may be purchased at a higher cost due to a lack of economy of scale. However, DOE believes that the potential increase in price of this purchase part would be offset by the many instances in which the production costs remain fixed regardless of capacity.

DOE notes that shipping costs are considered a sales expense and not a production cost. As discussed in section IV.C.2.e, when translating MPCs to MSPs, DOE applies a manufacturer mark-up to the MPC. This mark-up, based on an analysis of manufacturer SEC 10-K reports, includes outbound freight costs. Therefore, any increase in MPC would account for larger shipping costs via a higher MSP.

“Standby mode” and “off mode” power consumption are defined in the DOE test procedure for residential furnaces and boilers. DOE defines “standby mode” as “any mode in which the furnace or boiler is connected to a mains power source and offers one or more of the following space heating functions that may persist: a.) To facilitate the activation of other modes (including activation or deactivation of active mode) by remote switch (including thermostat or remote control), internal or external sensors, or timer; b.) Continuous functions, including information or status displays or sensor based functions.” 10 CFR part 430, subpart B, appendix N, section 2.12. “Off mode” is defined as “a mode in which the furnace or boiler is connected to a mains power source and is not providing any active mode or standby mode function, and where the mode may persist for an indefinite time.

The existence of an off switch in off position (a disconnected circuit) is included within the classification of off mode.” 10 CFR part 430, subpart B, appendix N, section 2.9. Finally, an “off switch” is defined as “the switch on the furnace or boiler that, when activated, results in a measurable change in energy consumption between the standby and off modes.” 10 CFR part 430, subpart B, appendix N, section 2.10.

Through review of product literature and discussions with manufacturers, DOE has found that boilers typically do not have an off switch. Manufacturers stated that if a switch is included with a product, it is primarily used as a service/repair switch, not for turning off the product during the off season. However, these switches could possibly

be used as off switches by the consumer. In cases where no off switch is present, no separate measurement for off mode is taken during testing, and the DOE test procedure sets off mode power equal to standby mode power ($P_{W,OFF} = P_{W,SB}$). In the case where an off switch is present, a measurement for off mode is required. 10 CFR part 430, subpart B, appendix N, section 8.11.2. Because DOE’s review of product literature and discussions with manufacturers revealed that most boilers do not have seasonal off switches, DOE assumed that the standby mode and the off mode power consumption are equal for its analysis.

To determine the baseline standby mode and off mode power consumption, DOE identified baseline components as those that consume the most electricity

during the operation of those modes. Since it would not be practical for DOE to test every boiler on the market to determine the baseline and since manufacturers do not currently report standby mode and off mode energy consumption, DOE “assembled” the most consumptive baseline components from the models tested to model the electrical system of a boiler with the expected maximum system standby mode and off mode power consumption observed during testing of boilers and similar equipment. The baseline standby mode and off mode power consumption levels used in the NOPR and final rule analysis are presented in Table IV.3.

TABLE IV.3—BASELINE STANDBY MODE AND OFF MODE POWER CONSUMPTION

Component	Standby mode and off mode power consumption (watts)					
	Gas-fired hot water	Oil-fired hot water	Gas-fired steam	Oil-fired steam	Electric hot water	Electric steam
Transformer	4	4	4	4	4	4
ECM Burner Motor	1	N/A	N/A	N/A	N/A	N/A
Controls	2.5	2.5	2.5	2.5	2.5	2.5
Display	4	4	4	4	4	4
Oil Burner	N/A	3	N/A	3	N/A	N/A
Total (watts)	11.5	13.5	10.5	13.5	10.5	10.5

In response to the NOPR standby mode and off mode analysis, Lochinvar suggested DOE should not regulate standby electricity consumption, because the standby electrical power consumption releases useful heat inside the home. Lochinvar highlighted that DOE’s test method for residential boilers affirms its position by assigning a jacket loss factor of 0 for “boilers intended to be installed indoors.” However, Lochinvar agreed that DOE should regulate off mode power consumption. Lochinvar also agreed with DOE’s assumption that most consumers do not turn off power to their boilers seasonally and suggested that DOE should invest effort in promoting turning off power to the boiler when there is no need for heating. Lochinvar stated that baseline power consumption predicted by DOE is reasonable, but that the assumption that the standby mode energy consumption is the same as the off mode energy consumption is erroneous. (Lochinvar, No. 63 at pp. 1–4)

In response to the suggestion that DOE not regulate standby mode, DOE notes that it is statutorily required to consider both standby mode and off mode electrical power consumption under EPCA at 42 U.S.C. 6295(gg)(3). As outlined in section III.B, the DOE test

procedure references two industry standards, ASHRAE 103–1993, which is used to determine the heating efficiency of a residential boiler, and IEC 62301, which is used to determine the standby mode and off mode energy consumption of a residential boiler. As noted by Lochinvar, ASHRAE 103 considers the jacket losses as usable heat for boilers intended to be installed indoors. However, the power consumption as measured by IEC Standard 62301 is a consumption metric and not an efficiency metric and is considered separately from the AFUE. The DOE test procedure for standby mode does not treat those boilers intended to be installed indoors any differently than those intended to be installed outdoors or in other unconditioned spaces, where the heat produced by the standby mode use would be a loss. While the majority of residential boilers may be installed indoors (as is assumed by the DOE test procedure), there are boilers available on the market that are designed for installation in unconditioned spaces or outdoors where any heat released by standby electrical power consumption would not be useful. Therefore, DOE has concluded it is appropriate to regulate the standby mode power consumption.

In response to the assertion that standby mode and off mode consumption are not equal, DOE agrees that standby mode energy consumption and off mode energy consumption are not equal in all cases (*i.e.*, if there is an off switch present). However, DOE notes that in cases where no off switch is present (which based on DOE’s review of the market and information obtained during manufacturer interviews is the most common situation), off mode use is equal to the standby mode use when tested according to DOE’s test method. 10 CFR part 430, subpart B, appendix N, section 8.11.2. DOE notes that Lochinvar agreed with DOE’s assumption that most consumers do not turn off power to their boilers seasonally. As noted, DOE has determined that an off switch is generally not present, so DOE has maintained its assumption that standby mode and off mode are equivalent under the DOE test method.

In response to the methodology presented in the NOPR for determining the efficiency levels by focusing on energy consumptive components, AHRI stated the component analysis methodology did not include any analysis of the standby mode and off mode energy consumptions of current

boiler models. AHRI stated that information from their members indicated that some boiler models have standby mode and off mode energy consumptions significantly above the baseline values used in the analysis. AHRI added that depending on how they are counted, accessories can influence the final standby power consumption which might impact the decisions about which accessories are provided with the boiler. For example, AHRI commented that outdoor temperature reset controls, which are used by many equipment manufacturers to comply with DOE design requirements, were not included in the baseline model analysis. AHRI recommended that DOE recalibrate this analysis with a higher baseline reflective of current models. (AHRI, No. 64 at p. 14) Burnham provided standby mode and off mode power measurements in terms of Volt-Amps (VA),²³ rather than watts, for each representative product class and indicated that, with the possible exception of the gas-fired steam product class, DOE's baseline models for standby/off mode power overstate current consumption significantly. (Burnham, No. 60 at p. 21) Burnham also stated that the availability of data from actual control systems, not a hypothetical construct, should be used to determine baselines, and suggested that DOE should expend the time and resources needed to obtain a reasonable amount of data upon which to form a conclusion before proceeding with this rulemaking. (Burnham, No. 60 at p. 21)

In response, DOE tested the standby consumption of several boilers, including those with outdoor reset controls. However, DOE chose to use a component analysis approach in the standby mode and off mode analysis in order to take into account the energy use of all possible accessories so as to prevent any possible limitation on the use of such accessories. For each product class, the baseline selected was greater than any model tested by DOE. During manufacturer interviews, no manufacturer indicated that any of their models exceeded the baseline selected by DOE for each product class. In the absence of any data showing that the standby mode and off mode energy consumption is higher than the DOE baseline levels, DOE has maintained the same levels for the final rule. DOE believes that this approach benefits manufacturers by allowing for flexibility of designs and ensuring that the standard will be set at a reasonable level that does not restrict the inclusion of technologies that could improve energy efficiency or provide consumer utility. DOE notes that AHRI's comment regarding higher baselines contradicts Burnham's comment which indicate that the standby mode and off mode baseline levels are high for most product classes. Further, Lochinvar's comment indicated that the baseline power consumption predicted by DOE is reasonable.

Regarding the standby mode data provided by Burnham, DOE notes that the DOE test procedure measures standby and off mode electricity

consumption in terms of real power (watts) rather than apparent power (VA). The data provided by Burnham cannot be incorporated into the standby mode and off mode analysis without the power factor of the units tested. DOE notes that there are hundreds of residential boiler models on the market with varying accessories, control systems, and power supplies. The assumptions made in the component analysis used for the determination for the baseline levels are rooted upon actual test data. DOE used a component-focused analysis that considered the most energy consumptive individual components in order to prevent setting a standard which could limit manufacturers' ability to utilize accessories which may consume power in standby mode, but reduce active mode energy use, or provide other consumer utility.

b. Other Energy Efficiency Levels

Table IV.4 through Table IV.7 show the efficiency levels DOE selected for the final rule analysis of amended AFUE standards, along with a description of the typical technological change at each level. These efficiency levels are the same as were presented in the NOPR, and following the same rationale, they are based upon the most common efficiency levels found on the market or a significant technology (e.g., condensing technology). In addition, DOE is statutorily required to consider the maximum technologically feasible efficiency level ("max-tech").

TABLE IV.4—AFUE EFFICIENCY LEVELS FOR GAS-FIRED HOT WATER BOILERS

Efficiency level	AFUE (%)	Technology options
0—Baseline	82	Baseline.
1	83	EL0 + Increased Heat Exchanger (HX) Area, Baffles.
2	84	EL1 + Increased HX Area.
3	85	EL2 + Increased HX Area.
4	90	Condensing HX.
5	92	EL4 + Improved HX.
6—Max-Tech	96	EL5 + Improved HX.

TABLE IV.5—AFUE EFFICIENCY LEVELS FOR GAS-FIRED STEAM BOILERS

Efficiency level	AFUE (%)	Technology options
0—Baseline	80	Baseline.
1	82	EL0 + Increased HX Area.
2—Max-Tech	83	EL1+ Increased HX Area.

²³ The voltage and current of an AC circuit constantly change over time. Due to this, the following terms are used to describe energy flow in a system. Real power performs work and is

measured in Watts (W). Reactive power does not perform work and is measured in VA reactive (VAr). Complex power is the vector sum of real and reactive power measurement in volt amps (VA).

Apparent power is the magnitude of the complex power measured in volt amps (VA).

TABLE IV.6—AFUE EFFICIENCY LEVELS FOR OIL-FIRED HOT WATER BOILERS

Several stakeholders raised concerns in response to the consideration of efficiency levels 1 through 3 selected for the gas-fired hot water boiler product class in the NOPR analysis. (Burnham, No. 60 at p. 17; Lochinvar, No. 63 at p. 2; AGA, No. 54 at p. 11) Lochinvar and Burnham expressed concern that the designs necessary to reach these efficiency levels increase the cost of the boiler, as well as the risk of condensation and carbon monoxide issues occurring. Lochinvar and Burnham argued that more frequent and prolonged exposure to condensate as a result of these designs, as well as the automatic means requirement, will increase the potential of condensation-related problems, such as nuisance faults, blocked heat exchangers, and corroding vents. Lochinvar and Burnham further argued that the corrosion of conventional venting by condensate may lead to the spilling of carbon monoxide into occupied spaces, thereby resulting in safety concerns. (Lochinvar, No. 63 at p. 2; Burnham No. 60 at p. 4) Lochinvar also stated that the sizing, installation, and operating conditions also influence the potential for condensation. (Lochinvar, No. 63 at p. 3)

The Department recognizes that certain efficiency levels could pose

health or safety concerns under certain conditions if they are not installed properly in accordance with manufacturer specifications. However, these concerns can be resolved with proper product installations and venting system design. This is evidenced by the significant shipments of products that are currently commercially available at these efficiency levels, as well as the lack of restrictions on the installation location of these units in installation manuals. In addition, DOE notes that products achieving these efficiency levels have been on the market since at least 2002, which demonstrates their reliability, safety, and consumer acceptance. Given the significant product availability and the amount of time products at these efficiency levels have been available on the market, DOE continues to believe that products at these efficiency levels are safe and reliable when installed correctly. Therefore, DOE has maintained the efficiency levels above 82 percent and below 90 percent in its final rule analysis. Discussion related to the costs associated with the installation of venting systems to prevent condensation and corrosion issues are outlined in section IV.F.2 of this final rule.

In addition, DOE considered whether changes to the residential furnaces and boilers test procedure adopted by the January 2016 test procedure final rule would necessitate changes to the AFUE levels being analyzed. The primary changes adopted in the test procedure are listed in section III.B. Adopting these provisions was assessed as having no impact on the AFUE for residential boilers. (See EERE-2012-BT-TP-0024) In response to the March 2015 NOPR, several stakeholders submitted comments suggesting that the proposed changes outlined in the March 2015 TP NOPR would impact the measured AFUE of products and ultimately impact the standards rulemaking. As described in section III.F, the January 2016 TP FR did not adopt any provisions impacting AFUE. Consequently, DOE used the same AFUE efficiency levels in the final rule analysis as were used in the NOPR analysis.

Table IV.8 through Table IV.13 show the efficiency levels DOE selected for the final rule analysis of standby mode and off mode standards, along with a description of the typical technological change at each level. DOE maintained the efficiency levels used in the NOPR stage of the analysis.

2. Cost-Assessment Methodology

At the start of the engineering analysis, DOE identified the energy efficiency levels associated with residential boilers on the market using data gathered in the market assessment.

DOE also identified the technologies and features that are typically incorporated into products at the baseline level and at the various energy efficiency levels analyzed above the baseline. Next, DOE selected products

for the physical teardown analysis having characteristics of typical products on the market at the representative input capacity. DOE gathered information by performing a physical teardown analysis (see section

IV.C.2.a) to create detailed BOMs, which included all components and processes used to manufacture the products. DOE used the BOMs from the teardowns as an input to a cost model, which was then used to calculate the MPC for products at various efficiency levels spanning the full range of efficiencies from the baseline to the max-tech. DOE reexamined and revised its cost assessment performed for the NOPR analysis based on response to comments received on the NOPR analysis.

During the development of the engineering analysis for the NOPR, DOE held interviews with manufacturers to gain insight into the residential boiler industry, and to request feedback on the engineering analysis and assumptions that DOE used. DOE used the information gathered from these interviews, along with the information obtained through the teardown analysis and public comments, to refine the assumptions and data in the cost model. Next, DOE derived manufacturer markups using publicly-available residential boiler industry financial data in conjunction with manufacturers' feedback. The markups were used to convert the MPCs into MSPs. Further information on comments received and the analytical methodology is presented in the subsections below. For additional detail, see chapter 5 of the final rule TSD.

a. Teardown Analysis

To assemble BOMs and to calculate the manufacturing costs for the different components in residential boilers, DOE disassembled multiple units into their base components and estimated the materials, processes, and labor required for the manufacture of each individual component, a process referred to as a "physical teardown." Using the data gathered from the physical teardowns, DOE characterized each component according to its weight, dimensions, material, quantity, and the manufacturing processes used to fabricate and assemble it.

DOE also used a supplementary method, called a "virtual teardown," which examines published manufacturer catalogs and supplementary component data to estimate the major physical differences between a product that was physically disassembled and a similar product that was not. For supplementary virtual teardowns, DOE gathered product data such as dimensions, weight, and design features from publicly-available information, such as manufacturer catalogs. The initial teardown analysis for the NODA included 6 physical and 5 virtual teardowns of residential

boilers. The NOPR teardown analysis included 16 physical and 4 virtual teardowns of residential boilers. DOE performed no further teardowns in the final rule analysis, but updated the costs data inputs based on the most recent materials and purchased part price information available.

DOE selected the majority of the physical teardown units in the gas hot water product class because it has the largest number of shipments. DOE conducted physical teardowns of twelve gas hot water boilers, five of which were non-condensing cast iron boilers, two of which were non-condensing copper boilers, and the remaining five of which were condensing boilers. DOE performed an additional two virtual teardowns of gas hot water boilers.

DOE also performed physical teardowns on two gas-fired steam boilers, as well as two oil-fired hot water boilers. DOE conducted one virtual teardown of an oil-fired steam boiler, as well as a virtual teardown of an oil-fired hot water boiler.

The teardown analysis allowed DOE to identify the technologies that manufacturers typically incorporate into their products, along with the efficiency levels associated with each technology or combination of technologies. The end result of each teardown is a structured BOM, which DOE developed for each of the physical and virtual teardowns. The BOMs incorporate all materials, components, and fasteners (classified as either raw materials or purchased parts and assemblies), and characterize the materials and components by weight, manufacturing processes used, dimensions, material, and quantity. The BOMs from the teardown analysis were then used as inputs to the cost model to calculate the MPC for each product that was torn down. The MPCs resulting from the teardowns were then used to develop an industry average MPC for each product class analyzed.

More information regarding details on the teardown analysis can be found in chapter 5 of the final rule TSD.

b. Cost Model

The cost model is a spreadsheet that converts the materials and components in the BOMs into dollar values based on the price of materials, average labor rates associated with manufacturing and assembling, and the cost of overhead and depreciation, as determined based on manufacturer interviews. To convert the information in the BOMs to dollar values, DOE collected information on labor rates, tooling costs, raw material prices, and other factors. For purchased parts, the cost model estimates the purchase price based on volume-

variable price quotations and detailed discussions with manufacturers and component suppliers. For fabricated parts, the prices of raw metal materials²⁴ (e.g., tube, sheet metal) are estimated on the basis of 5-year averages (from 2009 to 2014). The cost of transforming the intermediate materials into finished parts is estimated based on current industry pricing.²⁵

c. Manufacturing Production Costs

Once the cost estimates for all the components in each teardown unit were finalized, DOE totaled the cost of materials, labor, and direct overhead used to manufacture a product in order to calculate the manufacturer production cost. The total cost of the product was broken down into two main costs: (1) The full manufacturer production cost, referred to as MPC; and (2) the non-production cost, which includes selling, general, and administration (SG&A) expenses; the cost of research and development; and interest from borrowing for operations or capital expenditures. DOE estimated the MPC at each efficiency level considered for each product class, from the baseline through the max-tech. After incorporating all of the assumptions into the cost model, DOE calculated the percentages attributable to each element of total production cost (*i.e.*, materials, labor, depreciation, and overhead). These percentages are used to validate the assumptions by comparing them to manufacturers' actual financial data published in annual reports, along with feedback obtained from manufacturers during interviews. DOE uses these production cost percentages in the manufacturer impact analysis (MIA) (see section IV.J).

DOE considered the draft type (*i.e.*, natural draft or fan-assisted draft) and whether the model would have fan-assisted draft at a given efficiency level. Some boilers utilize natural draft, in which the natural buoyancy of the combustion gases is sufficient to vent those gases. Other boilers employ fan-assisted draft to help vent the products of combustion. As product efficiency increases, more heat is extracted from the flue gases, thereby resulting in less natural buoyancy that can be used to vent the flue gases. Through market review, DOE determined that the use of fan-assisted draft was based not only on efficiency, but also on installation considerations that impact draft.

²⁴ American Metals Market (Available at: <http://www.amm.com/>) (Last accessed January, 2015).

²⁵ U.S. Department of Labor, Bureau of Labor Statistics, Producer Price Indexes (Available at: <http://www.bls.gov/ppi/>) (Last accessed January, 2015).

Therefore, DOE estimated the additional cost of adding an inducer fan to a product, and the costs were added to a certain percentage of boilers at each efficiency level in the LCC analysis (see section IV.F.2 of this final rule).

In response to the MPC's presented in the NOPR, Weil-McLain stated that increasing efficiencies would require not just larger heat exchangers, but also different burners and flue dampers, in addition to the mechanical venting inducer necessary for fan-assisted draft. Weil-McLain added that non-product cost increases would be created by additional electric power consumption required to run the inducer or blower, new electric service installation in some instances, new venting and/or chimney lining, re-piping, and higher maintenance costs due to inducers/blowers and positive pressure vent systems. (Weil-McLain, No. 55 at p. 3)

Similarly, AHRI stated that DOE mischaracterized the design changes required to achieve the proposed minimum standards, and, therefore, the resulting cost to manufacturers is underestimated. Specifically, AHRI stated that DOE assumed that the only design change necessary to achieve the proposed revised minimum AFUE levels is to increase the heat exchanger area. AHRI argued that this analysis is incomplete because it fails to recognize the additional changes. AHRI suggested that in some cases models may become

bigger to accommodate the larger heat exchanger. In those cases, a larger model will require more material for the jacket and other design modifications. (AHRI, No. 64 at p. 12) Burnham stated that DOE did not include the cost of the system pump that manufacturers send along with the residential boiler. (Burnham, No. 60 at p. 24)

In response to the commenters' statements, DOE notes that the intent of listing the technology option corresponding to each efficiency level was to give stakeholders information on the specific design change that has been observed as the primary driver of improved efficiency; it was not intended to convey every component that will change from one efficiency level to the next. The increase in heat exchanger surface area was the primary technological driver in improving efficiency for many of the efficiency levels, and is, therefore, the technology option listed in those cases. The ancillary costs associated with increasing efficiency were included in the development of the MPC's at all efficiency levels, including those that primarily rely on increases in heat exchanger surface area noted by AHRI and Weil-McLain. When DOE performed the physical teardown analysis, it observed and accounted for any differences in other ancillary components at higher efficiency levels. DOE notes that the cost of the system

pump is included in the manufacturer production costs for hot water boilers. The non-product costs highlighted by Weil-McLain related to installation and energy costs are captured in the installation and maintenance cost of the LCC analysis, described in section IV.F of this final rule.

Burnham suggested there would be a significant cost increase for oil-fired and steam boilers as a result of a reduction in the production of cast iron gas-fired hot water boilers due to standards. Burnham stated that the fixed cost associated with foundry operation would be spread over a smaller number of castings. (Burnham, No. 60 at p. 17)

DOE notes that the standard level set for gas-fired hot water boilers still allows for the use of cast iron heat exchanger designs. DOE does not anticipate a reduction in shipments for this product class as a result of new standards. Therefore, DOE does not anticipate an increase cost for oil-fired and steam product classes.

In the final rule analysis, DOE revised the cost model assumptions it used for the NOPR analysis based on updated pricing information (for raw materials and purchased parts). These changes resulted in refined MPCs and production cost percentages. Table IV.14 through Table IV.17 present DOE's estimates of the MPCs by AFUE efficiency level for this rulemaking.

Chapter 5 of the final rule TSD presents more information regarding the development of DOE's estimates of the MPCs for this rulemaking.

d. Cost-Efficiency Relationship

The result of the engineering analysis is a cost-efficiency relationship. DOE created cost-efficiency curves representing the cost-efficiency relationship for each product class that it examined. To develop the cost-efficiency relationships for residential boilers, DOE examined the cost differential to move from one efficiency level to the next for each manufacturer. DOE used the results of teardowns on a market-share-weighted average basis to determine the industry average cost increase to move from one efficiency level to the next. Additional details on how DOE developed the cost-efficiency relationships and related results are available in chapter 5 of the final rule TSD, which also presents these cost-efficiency curves in the form of energy efficiency versus MPC.

The results indicate that cost-efficiency relationships are nonlinear. In other words, as efficiency increases, manufacturing becomes more costly. A

large cost increase is evident between non-condensing and condensing efficiency levels due to the requirement for a heat exchanger that can withstand corrosive condensate.

e. Manufacturer Markup

To account for manufacturers' non-production costs and profit margin, DOE applies a non-production cost multiplier (the manufacturer markup) to the full MPC. The resulting MSP is generally the price at which the manufacturer can recover all production and non-production costs and earn a profit. To meet new or amended energy conservation standards, manufacturers typically introduce design changes to their product lines that increase manufacturer production costs. Depending on the competitive environment for these particular products, some or all of the increased production costs may be passed from manufacturers to retailers and eventually to consumers in the form of higher purchase prices. As production costs increase, manufacturers typically incur additional overhead. For a profitable business, the MSP should be high enough to recover the full cost of

the product (*i.e.*, full production and non-production costs) and yield a profit. The manufacturer markup has an important bearing on profitability. A high markup under a standards scenario suggests manufacturers can readily pass along the increased variable costs and some of the capital and product conversion costs (the one-time expenditures) to consumers. A low markup suggests that manufacturers will not be able to recover as much of the necessary investment in plant and equipment.

To calculate the manufacturer markups, DOE used 10-K reports²⁶ submitted to the U.S. Securities and Exchange Commission (SEC) by the three publicly-owned residential boiler companies. The financial figures necessary for calculating the manufacturer markup are net sales, costs of sales, and gross profit. For boilers, DOE averaged the financial figures spanning the years 2008 to 2012 in order to calculate the markups. DOE used this approach because amended

²⁶ U.S. Securities and Exchange Commission, Annual 10-K Reports (Various Years) (Available at: <http://sec.gov>).

standards may transform high-efficiency products (which currently are considered premium products) into typical products. DOE acknowledges that there are numerous manufacturers of residential boilers that are privately-held companies, which do not file SEC 10-K reports. In addition, while the publicly-owned companies file SEC 10-K reports, the financial information summarized may not be exclusively for the residential boiler portion of their business and can also include financial information from other product sectors, whose margins could be quite different from the residential boiler industries. DOE discussed the manufacturer markup with manufacturers during interviews, and used the feedback to validate the markup calculated through review of SEC 10-K reports. DOE received no comments regarding the manufacturer markup used in the NODA and NOPR analysis. See chapter 5 of the final rule TSD for more details about the manufacturer markup calculation.

f. Manufacturer Interviews

Throughout the rulemaking process, DOE has sought feedback and insight from interested parties that would improve the information used in its analyses. DOE interviewed manufacturers as a part of the manufacturer impact analysis (see section IV.J.3). During the interviews, DOE sought feedback on all aspects of its analyses for residential boilers. For the engineering analysis, DOE discussed the analytical inputs, assumptions, and estimates, and cost-efficiency curves with residential boiler manufacturers. DOE considered all the information manufacturers provided when refining its analytical inputs and assumptions. However, DOE incorporated equipment and manufacturing process figures into the analysis as averages in order to avoid disclosing sensitive information about individual manufacturers' products or manufacturing processes. More details about the manufacturer interviews are contained in chapter 12 of the final rule TSD.

D. Markups Analysis

DOE uses appropriate markups (e.g., manufacturer markups, retailer markups, distributor markups, contractor markups) and sales taxes to convert the manufacturer selling price (MSP) estimates from the engineering analysis to consumer prices, which are then used in the LCC and PBP analysis and in the manufacturer impact analysis. DOE develops baseline and incremental markups based on the product markups at each step in the

distribution chain. The markups are multipliers that represent increases above the MSP for residential boilers. The incremental markup relates the change in the manufacturer sales price of higher-efficiency models (the incremental cost increase) to the change in the consumer price. Before developing markups, DOE defines key market participants and identifies distribution channels.

Commenting on the NOPR, AHRI stated that based on preliminary survey feedback, contractors only apply a single markup regardless of the product efficiency. (AHRI, Public Meeting Transcript, No. 50 at pp. 71–72) Burnham further stated that AHRI's comments demonstrate that DOE's use of "incremental" markups through the distribution channel has no foundation either in theory or actual practice. Burnham stated that DOE must eliminate the use of incremental markups before it promulgates a new rule for boilers. (Burnham, No. 60 at pp. 19–20)

DOE believes that AHRI's comments on the NOPR referred to more extensive comments that it provided in response to the 2014 NOPR for small, large, and very large commercial package air conditioning and heating equipment. (EERE–2013–BT–STD–0007) In these comments, AHRI included a report that laid out three main arguments: (1) The incremental markup approach relies on an assumption of perfect competition, which is an outdated model of the economy; (2) relatively constant percent gross margins observed in aggregated HVAC industry data imply the use of fixed-percent markups over time; and (3) interview responses from wholesalers and contractors are consistent with the use of fixed-percent markups. (Docket No. EERE–2013–BT–STD–0007, AHRI, No. 68 at p. 29)

DOE responds to these points as follows:

(1) DOE's incremental markup approach is based on the widely accepted economic view that prices closely reflect marginal costs in competitive markets and in those with a limited degree of concentration. Economic theory permits that an incremental cost can have a markup on it that is different from the markup on the baseline product, and DOE's incremental markup approach follows this assumption. AHRI does not provide sufficient proof that such theory should be abandoned in the case of the HVAC industry.

(2) In examining the relatively constant HVAC percent margin trend and its underlying prices, DOE found that the average inflation-adjusted

prices of HVAC products are relatively fixed during this period as well. This set of historical data has no bearing on firm markup behavior under product price increases, such as DOE projects would occur when higher-efficiency products are introduced. If prices are relatively constant, the incremental markup approach will arrive at the same price prediction as applying fixed-percent margin; hence, the historically constant percent margins do not necessarily imply a constant percent margin in the future, especially in the case of increased input prices. DOE evaluated time series margin and price data from three industries that experienced rapidly changing input prices—the LCD television retail market, the U.S. oil and gasoline market, and the U.S. housing market. The results indicate that dollar margins vary across different markets to reflect changes in input price, but the percent margins do not remain fixed over time in any of these industries. Appendix 6B in the final rule TSD describes DOE's findings.

(3) It is not clear whether the interview responses received by AHRI reflect an accurate understanding of DOE's incremental markup approach. In contrast to the characterization of those responses by AHRI, an in-depth interview with an HVAC consultant conducted by DOE indicates that while HVAC contractors aim to maintain fixed percent markups, market pressures force them to reevaluate and adjust markups over time to stay competitive.

DOE concludes that there is not sufficient evidence to support the application of fixed percent markups to the cost increment on efficient equipment. Further discussion is found in section 6.4 and appendix 6B of the final rule TSD. In spite of their efforts to do so, firms in this market generally cannot maintain fixed percent margins in the long run under changing cost conditions. DOE's incremental markup approach allows the part of the cost that is thought to be affected by the standard to scale with the change in manufacturer price.

For the NOPR, DOE characterized three distribution channels to describe how residential boiler products pass from the manufacturer to residential and commercial consumers: (1) Replacement market; (2) new construction, and (3) national accounts.²⁷ 80 FR 17222,

²⁷ The national accounts channel is an exception to the usual distribution channel that is only applicable to those residential boilers installed in the small to mid-size commercial buildings where the on-site contractor staff purchase equipment directly from the wholesalers at lower prices due

17249–50 (March 31, 2015). The replacement market distribution channel is characterized as follows:

Manufacturer → Wholesaler → Mechanical contractor → Consumer

The new construction distribution channel is characterized as follows:

Manufacturer → Wholesaler → Mechanical contractor → General contractor → Consumer

In the third distribution channel, the manufacturer sells the product to a wholesaler and then to the commercial consumer through a national account:

Manufacturer → Wholesaler → Consumer (National Account)

DOE did not receive any comments on the distribution channels, and used the same distribution channels for the final rule.

To develop markups for the parties involved in the distribution of the product, for the NOPR, DOE utilized several sources, including: (1) The Heating, Air-Conditioning & Refrigeration Distributors International (HARDI) 2012 Profit Report²⁸ to develop wholesaler markups; (2) U.S. Census Bureau's 2007 Economic Census data²⁹ for the commercial and institutional building construction industry to develop mechanical and general contractor markups. In addition, DOE used the 2005 Air Conditioning Contractors of America's (ACCA) Financial Analysis for the Heating, Ventilation, Air-conditioning, and Refrigeration (HVACR) Contracting Industry Report³⁰ to disaggregate the mechanical contractor markups into replacement and new construction markets.

Commenting on the NOPR, ACCA expressed its concern that DOE used ACCA's 2005 Financial Analysis for the HVACR Contracting Industry Report for its markup analysis because this report is more than a decade old and not a relevant resource. (ACCA, No. 65 at p. 2) In response, DOE only uses the ACCA 2005 Report to derive the ratios of the markup in new construction applications and in replacement applications to the markup for all

installations. ACCA's 2005 Financial Analysis is the only public source available that disaggregates HVAC contracting industry into replacement and new construction markets. DOE acknowledges that many financial conditions of the HVAC contracting industry have changed since 2005, but DOE believes that markups would tend to fluctuate in a similar manner for both new construction and replacement applications, and, thus, the ratios for 2005 mentioned above are not likely to change significantly over time. Therefore, DOE continued to use ACCA's 2005 Financial Analysis in the markup analysis for the final rule for this limited purpose.

In addition to the markups, DOE derived State and local taxes from data provided by the Sales Tax Clearinghouse.³¹ These data represent weighted-average taxes that include county and city rates. DOE derived shipment-weighted-average tax values for each region considered in the analysis.

Chapter 6 of the final rule TSD provides further detail on the estimation of markups.

E. Energy Use Analysis

The energy use analysis determines the annual energy consumption of residential boilers at different efficiencies in representative U.S. single-family homes, multi-family residences, and commercial buildings, and assesses the energy savings potential of increased boiler efficiency. DOE estimated the annual energy consumption of residential boilers at specified energy efficiency levels across a range of climate zones, building characteristics, and heating applications. The annual energy consumption includes the natural gas, liquid petroleum gas (LPG), oil, and/or electricity use by the boiler for space and water heating. The annual energy consumption of residential boilers is used in subsequent analyses, including the LCC and PBP analysis and the national impacts analysis.

1. Building Sample

For the NOPR, for the residential sector, DOE used the Energy Information Administration's (EIA) 2009 Residential Energy Consumption Survey (RECS 2009) to establish a sample of households using residential boilers for each boiler product class.³² The RECS

data provide information on the vintage of the home, as well as heating and water heating energy use in each home. The survey also included household characteristics such as the physical characteristics of housing units, household demographics, information about other heating and cooling products, fuels used, energy consumption and expenditures, and other relevant data. DOE used the household samples not only to determine boiler annual energy consumption, but also as the basis for conducting the LCC and PBP analysis. DOE used data from RECS 2009 together with AHRI shipment data by State³³ to project household weights and characteristics in 2020, the expected compliance date of any amended energy conservation standards for residential boilers at the time of the NOPR.

Commenting on the NOPR, AHRI stated that it appears that DOE significantly overestimated the number of buildings that use a residential boiler for space heating, as RECS 2009 indicates 11 million housing units use a gas-fired or oil-fired hydronic heating system, and not 16.6 million as shown in the NOPR TSD. (AHRI, No. 64 at p. 10) In response, it appears that AHRI is referring to Table 7.2.1 in the NOPR TSD, which shows the number of RECS records (and the corresponding number of houses represented by those records) used for each boiler product class. The total of these records and corresponding number of houses is not an estimate of the number of buildings that use a residential boiler for space heating. In fact, the total is not relevant in any way. Because RECS 2009 does not report the heating medium (hot water or steam), DOE used samples for hot water and steam boiler product classes that include all houses that might use either hot water or steam. For steam boilers in particular, this results in a sample size that represents many more houses than actually use steam boilers.

DOE accounted for applications of residential boilers in commercial buildings because the intent of the analysis of consumer impacts is to capture the full range of usage conditions for these products. DOE considers the definition of "residential boiler" to be limited only by its capacity.³⁴ DOE determined that these applications represent about 7 percent of the residential boiler market. DOE

to the large volume of equipment purchased, and perform the installation themselves.

used the EIA's 2003 Commercial Building Energy Consumption Survey³⁵ (CBECS 2003) to establish a sample of commercial buildings using residential boilers for each boiler product class.³⁶ Criteria were developed to help size these boilers using several variables, including building square footage and estimated supply water temperature. For boilers used in multi-family housing, DOE used the RECS 2009 sample discussed above, accounting for situations where more than one residential boiler is used to heat a building.

AHRI stated that an analysis that uses national data is not adequately evaluating the market for residential boilers in the U.S., which is concentrated in the Northeast and in older homes, and for which national average statistics are not representative. (AHRI, No. 64 at p. 10) In response, DOE is well aware of the regionality of the residential boiler market. The LCC analysis does not select buildings across the nation at random, but rather selects the homes and buildings reported by RECS 2009 and CBECS 2003 that have residential boilers; the RECS 2009- and CBECS 2003-derived sample reflects the actual distribution of residential gas-fired or oil-fired boilers in the U.S., and the weighting of the samples is adjusted to match the shipments by State from 2008–2012 provided by AHRI.³⁷ Additionally, DOE did not use national average values in its LCC analysis, but rather the specific data for each household or building reported by RECS 2009 and CBECS 2003 to determine the energy use of each boiler. Most of the data used in the LCC analysis are disaggregated by RECS 2009 regions or CBECS 2003 Census divisions. See appendix 7A of the final rule TSD for more details.

2. Space Heating Energy Use

For the NOPR, to estimate the annual energy consumption of boilers meeting higher efficiency levels, DOE first calculated the heating load based on the RECS and CBECS estimates of the annual energy consumption of the boiler for each household. DOE estimated the

house heating load by reference to the existing boiler's characteristics, specifically its capacity and efficiency (AFUE), as well as by the heat generated from the electrical components. DOE used an oversize factor of 0.7 (*i.e.*, the boiler is 70 percent larger than it needs to be to fulfil the house heating load) from the DOE test procedure to determine the capacity of the existing boiler. The AFUE of the existing boilers was determined using the boiler vintage (the year of installation of the product) from RECS and historical data on the market share of boilers by AFUE. DOE then used the house heating load to determine the burner operating hours, which are needed to calculate the fossil fuel consumption and electricity consumption based on the DOE residential furnace and boiler test procedure.

Commenting on the NOPR, AHRI stated that DOE's average annual energy use estimates (95.3 MMBtu/year for gas-fired hot water boilers, 98.1 MMBtu/year for gas-fired steam boilers, 98.1 MMBtu/year for oil-fired hot water boilers, 99.9 MMBtu/year for oil-fired steam boilers) are almost twice the RECS national average annual space heating energy consumption for housing units using natural gas of 51.4 million Btus and almost 40 percent higher than the RECS national average annual space heating energy consumption for housing units using fuel oil of 70.3 million Btus. (AHRI, No. 64 at p. 12)

The primary reasons for the differences between the national RECS result and DOE's estimates are: (1) DOE's analysis recognizes that the boilers are mostly installed in colder climates, and (2) DOE accounts for residential boilers in commercial buildings. Since boilers are mostly installed in colder climates, the average energy use of boilers is significantly higher than the average space heating national energy use. Based on 2008–2012 AHRI shipments data by State and RECS 2009 households, almost 70 percent of gas-fired boilers and 90 percent of oil-fired boilers are installed in the Northeast. In 2009, based on RECS 2009 and 2008–2012 AHRI shipments data, the average annual space heating energy consumption is 75.8 MMBtu/yr for housing units with gas-fired hot water boilers. For the NOPR, DOE assumed that 7 percent of residential boilers are installed in commercial applications. In 2003, based on CBECS 2003 data and 2008–2012 AHRI shipments data, DOE estimated that average annual space heating energy consumption is 356.8 MMBtu/yr for buildings with gas-fired hot water boilers. The resulting weighted average

results are 95.3 MMBtu/yr for buildings with gas-fired hot water boilers. For the NOPR and final rule, these numbers are adjusted to take into account: 2008–2012 AHRI shipments data by State, typical heating degree days (HDD) for an average year, HDD trends, building shell efficiency, number of boilers per household or building, automatic means, and secondary heating equipment. Based on these adjustments, for the final rule, DOE estimated that the average annual shipment-weighted energy use is 56.7 MMBtu/yr for gas-fired hot water boilers in residential applications and 205.9 MMBtu/yr in commercial applications in 2021 (or 68.6 MMBtu/yr for both residential and commercial buildings). For gas-fired hot water boilers, the 2021 estimates are about 30 percent lower than the estimated values in RECS 2009 or CBECS 2003. The results for the other boiler product classes are similar. See chapter 7 of the final rule TSD for more details about the energy use methodology and results.

Commenting on the NOPR, Energy Kinetics stated that DOE should use both the 0.7 oversizing factor and the demonstrated oversizing factors between three and four used in the NODA for the installed base of equipment. (Energy Kinetics, No. 52 at p. 3) DOE agrees that the oversize factor varies for each household. For the final rule, DOE revised the equipment sizing criteria to match historical shipments by capacity, which accounts for the variability of the oversize factor found in the field.

DOE adjusted the energy use to normalize for weather by using long-term heating degree-day (HDD) data for each geographical region.³⁸ For the NOPR, DOE also accounted for change in building shell characteristics between 2009 and 2020 by applying the building shell efficiency indexes in the National Energy Modeling System (NEMS) based on EIA's *Annual Energy Outlook 2013* (AEO 2013).³⁹ DOE also accounted for future heating season climate based on AEO 2013 HDD projections.

AHRI questioned the applicability of the building shell efficiency index to multi-family or row houses with shared walls. (AHRI, Public Meeting Transcript, No. 50 at p. 83) In response, the AEO building shell efficiency index

is an average intended to reflect all building types in general. Indexes that are specific to building types are not available. In any case, if DOE were to assume that the building shell efficiency of multi-family or row houses increases less than all buildings in general (as is likely to be the case), the projected heating load of such buildings would be higher than assumed in DOE's analysis, and the energy savings for the higher-efficiency boilers would be greater. DOE prefers to be conservative and not overestimate the savings for this building sub-type. For the final rule, DOE used the building shell efficiency index from *AEO 2015* and a compliance year of 2021.⁴⁰ DOE also used the latest HDD projections from *AEO 2015* and updated the long-term HDD data.⁴¹

a. Impact of Return Water Temperature on Efficiency

For the NOPR, DOE accounted for boiler operational efficiency in specific installations by adjusting the AFUE of the sampled boiler based on an average system return water temperature. The criteria used to determine the return water temperature of the boiler system included consideration of building vintage, product type (condensing or non-condensing, single-stage or modulating), and whether the boiler employed an automatic means for adjusting water temperature. Using product type and system return water temperature, DOE developed and applied the AFUE adjustments based on average heating season return water temperatures.

Commenting on the NOPR, Burnham tested a condensing gas boiler and a non-condensing oil boiler to determine the impact of return water temperature on boiler efficiency. Burnham stated that, based on its test results, DOE is overstating the impact of water temperature on both gas-fired and oil-fired non-condensing boilers. Burnham recommended that the correction factor for non-condensing boilers should be about half that estimated by DOE for the NOPR (which was 1 percent). (Burnham, No. 60 at pp. 21–22) For condensing boilers, Burnham stated that DOE's assumed 2.5-percent reduction to adjust for return water temperature is low, especially at 92-percent and 96-percent AFUE, where the reduction is

probably more like 4.5 percent and 6.5 percent, respectively. (Burnham, No. 60 at p. 66)

For the final rule, for non-condensing boilers, DOE used the data provided by Burnham to determine the impact of return water temperature on boiler efficiency. To determine the adjustment for condensing boilers, DOE collected data on several more model series in addition to the data provided by Burnham, which appear to refer to a 91-percent AFUE boiler and to show a decrease of approximately 3.3 to 3.5 percent in efficiency for boilers operating with return water temperatures between 120 and 140 °F. The other sources indicate a lower decrease than the data on a single Burnham boiler. Based upon all of the data, DOE estimated a reduction in efficiency of about 2.1 percent for condensing boilers. Regarding Burnham's comment that the reduction is higher at 92-percent and 96-percent AFUE, DOE did not find sufficient evidence to justify varying the percent decrease by AFUE. See appendix 7B of the final rule TSD for additional details.

b. Impact of Automatic Means for Adjusting Water Temperature on Energy Use

For the NOPR, DOE incorporated the impact of automatic temperature reset means on boiler energy use by adjusting AFUE based on a reduction in average return water temperature (RWT). DOE calculated the reduction in average RWT for single-stage boilers based on the duration of burner operating hours at reduced RWT. For modulating boilers, DOE used the average relationship⁴² between RWT and thermal efficiency to establish the magnitude of the efficiency adjustment required for the high- and low-temperature applications. DOE maintained the same approach for the final rule. See appendix 7B of the final rule TSD for details on how DOE calculated the adjustment for automatic means.

AHRI stated that DOE's underestimated the benefit of the "automatic means" that is now provided with residential boilers. AHRI acknowledged that the TSD provides the calculation for adjusting the AFUE to account for the benefit of the automatic means; however, the adjustment for

single-stage non-condensing boilers results in only a 0.05-percent AFUE improvement, which is based on the improvement of steady-state efficiency with a 2 °F reduction of the return water temperature. According to AHRI, studies have shown that this device or control feature does reduce the energy consumption of boilers in the field. A conservative estimate of the savings from automatic means would be 5 percent, but a more realistic range is 5 to 8 percent. (AHRI, No. 64 at p. 12)

DOE found that the majority of single-stage products sampled utilized a pre-purge control function that allows the purging of residual heat within the boiler prior to ignition of the burner. DOE also found that the majority of boiler models sampled incorporate a time limit and a low temperature limit function within the control strategy. The time limits range from two to three minutes (by default), with some boilers allowing for user-defined durations. DOE's research has shown that there is limited field and test data on the effectiveness of the pre-purge technology, which is the primary technology in single-stage non-condensing boilers to implement the automatic means design requirement. Based on the logic described in appendix 7B of the final rule TSD, the impact on boiler steady-state efficiency appears to be small. In its analysis, DOE accounts for the variability of idle losses during the non-heating season, which already takes into account for some automatic means improvements from different technologies (e.g., outdoor reset). For the rule, because of limited availability of field and test data, DOE kept its NOPR approach for determining the impact of the automatic means on residential boiler efficiency.

c. Impact of Jacket Losses on Energy Use

For the NOPR, DOE also accounted for jacket losses when the boiler is located in a non-conditioned space (i.e., unconditioned basement or garage). For boilers located in conditioned spaces, DOE assumed that jacket losses contribute to space heating as useful heat. See appendix 8C of the final rule TSD for details about how DOE determined the installation location of boilers.

AHRI stated that DOE assumes that 35 percent of residential gas-fired boilers and 53 percent of residential oil-fired boilers are installed in unconditioned spaces. AHRI questioned the validity of these estimates, since most boilers in homes in the Northeast Census region are installed in unconditioned basements that are part of the home, which still adds heat to the interior of

⁴⁰ U.S. Department of Energy-Energy Information Administration, *Annual Energy Outlook 2015 with Projections to 2040* (Available at: <<http://www.eia.gov/forecasts/aeo/>>).

⁴¹ National Oceanic and Atmospheric Administration, NNDC Climate Data Online (Available at: <http://www7.ncdc.noaa.gov/CDO/CDODivisionalSelect.jsp>) (Last accessed October 15, 2015).

⁴² Appendix 7B includes a list of references used to derive the relationship. No information is available about the relationship between AFUE and RWT, while manufacturers publish data on the relationship between boiler thermal efficiency and the RWT. DOE assumed that AFUE scales according to the relationship reported for the thermal efficiency.

the structure, such that it is not totally wasted energy. According to AHRI, the analysis should recognize that. Furthermore, AHRI argued that the jacket losses assumed in DOE's analysis randomly favor condensing boilers. According to AHRI, DOE assumes that jacket losses for high-mass boilers are equal to the jacket loss factor, CJ, for boilers installed as isolated combustion systems (ICS), but decides to assume that CJ for low-mass boilers is a tenth of this value (*i.e.*, 0.24), instead of using the value provided in ASHRAE 103–2007 for finned-tube boilers (*i.e.*, 0.5). This assumes that condensing boilers, which account for a greater proportion of low-mass boilers, will have lower jacket loss values than those assumed in the test procedure. Additionally, these jacket loss factors are only one portion of the total jacket loss, which is the jacket loss factor multiplied by the jacket loss measured during steady-state operation. Assuming these factors, DOE has made a determination that the jacket loss is equal to 1.0 percent, which is the default jacket loss used if this value is not measured by test. According to AHRI, the 1.0 percent value is a conservative estimate, and DOE should evaluate the total jacket losses with a more representative jacket loss value, suggesting that a value closer to 0.5 percent would be more appropriate. (AHRI, No. 64 at p. 14)

DOE estimates the location of the boiler based on the household characteristics in the RECS 2009 housing sample.⁴³ This takes into account that the majority of the boilers are installed in Northeast or Midwest, where basements are a commonly used to install boilers. RECS 2009 reports both if the household has a basement and whether the basement is conditioned or unconditioned. For the final rule, DOE used the same approach for determining the installation location of boilers. In regards to the jacket loss values, since there are very limited test data and because some of the jacket losses could contribute to heating the conditioned space, for the final rule, DOE revised its jacket loss factor value for condensing boilers so that it is equal to on average 0.5 (ASHRAE 103–2007 for finned-tube boilers), which would more closely approximate condensing boiler designs, and assumed 0.5 percent for the jacket loss fraction.

3. Water Heating Energy Use

DOE is aware that some residential boilers have the ability to provide both

space heating and domestic water heating, and that these products are widely available and may vary greatly in design. For these applications, DOE accounted for the boiler energy used for domestic water heating, which is part of the total annual boiler energy use. For the NOPR, DOE used the RECS 2009 and/or CBECS 2003 data to identify households or buildings with boilers that use the same fuel type for space and water heating, and then assumed that a fraction of these identified households/buildings use the boiler for both applications.

Burnham stated that gas-fired steam boilers are seldom used to make domestic hot water due to technological challenges, and gas-fired steam boilers that can produce domestic hot water are not readily available in the market. Burnham believes that the fraction of gas-fired steam boilers used to make domestic hot water is less than 10 percent of all such boilers. Burnham stated that there is greater incentive to use oil-fired steam boilers to also make domestic hot water, in order to eliminate the additional maintenance and potential fuel piping complexities of a second oil burner. (Burnham, No. 60 at pp. 22–24, 66) For the final rule, based on AHRI's contractor survey, DOE assumed that 5 percent of gas-fired steam boilers and 10 percent of oil-fired steam boilers are used to make domestic hot water.

For the NOPR, to calculate the annual water-heating energy use for each boiler efficiency level, DOE first calculated the water-heating load by multiplying the annual fuel consumption for water heating (derived from RECS or CBECS) by the recovery efficiency for water heating of the existing boiler, which was calculated based on an adjustment to AFUE. DOE then calculated the boiler energy use for each efficiency level by multiplying the water-heating load by the recovery efficiency of the selected efficiency level.

Commenting on the NOPR, AHRI stated that the average water heating energy use values seem high. (AHRI, Public Meeting Transcript, No. 50 at p. 114) In response, the water heating energy use is higher for the boiler sample than the national average because boilers are primarily located in the northeast, with colder inlet water and colder ambient temperature. In addition, the NOPR-reported value included idle losses and commercial applications, which comprise seven percent of the entire boiler sample and use significantly more hot water than residential households.

a. Idle Loss

Idle loss, as the term applies to residential heating boilers, is heat wasted when the burner is not firing. The idle losses are the heat from combustion that is not transferred to the heating of water, including the products of combustion up the flue, the loss out of the heat exchanger walls and boiler's jacket (in the form of radiant, conductive, or convective transfer), and the loss down the drain as a condensate. Because no fuel is being consumed in the off-cycle, off-cycle losses are important only to the extent that they must be replaced during the on-cycle by the burning of extra fuel (*i.e.*, longer burner on times or higher firing rates). The DOE test procedure accounts for idle losses associated with space heating in the heating season efficiency value, but the idle losses during non-space heating operation (*i.e.*, domestic water heating) are not captured in the existing DOE test procedure.

For the NOPR analysis, DOE accounted for idle losses during non-space heating operation based on the installation location of the boiler (conditioned or unconditioned space), type of boiler (high mass or low mass), and whether or not the boiler served domestic hot water loads. For boilers that serve only space heating loads, the idle losses are accounted for in the heating season efficiency. For boilers that provided domestic hot water heating, idle losses occur in both heating and non-heating seasons. These idle losses were accounted for by applying heat loss values to the boiler and storage tank (when necessary) for a fraction of the off-cycle time. DOE also accounted for the losses for boilers that are installed with indirect tanks or tankless coils.

Energy Kinetics and PHCC stated that for non-condensing boilers, increasing the heat exchanger area to increase efficiency will add mass to the boiler, thereby increasing the idle loss of the system. Energy Kinetics stated that this significantly impacts the actual annual efficiency, and PHCC further elaborated that the increased losses could offset the operating efficiency gains. (Energy Kinetics, Public Meeting Transcript, No. 50 at p. 286; PHCC, No. 61 at p. 1)

For non-condensing boilers, DOE assumes that the idle loss does not necessarily increase with increased efficiency, based upon DOE's models series at different efficiency and available test data.⁴⁴ In addition to

⁴³ DOE assumed that all residential boilers in commercial buildings are installed in a conditioned space.

⁴⁴ Butcher, Thomas A., *Performance of Integrated Hydronic Heating Systems*, Brookhaven National

increasing heat exchanger area, manufacturers have a number of ways they can achieve higher efficiency for non-condensing boilers, including applying improved heat transfer measures or adding mechanical draft. For the final rule, DOE's approach accounts for the idle losses varying significantly regardless of AFUE or mass based on the test data. See appendix 7B of the final rule TSD for additional details on the consideration of idle losses.

4. Electricity Use

For the NOPR, DOE calculated boiler electricity consumption for the circulating pump, the draft inducer,⁴⁵ and the ignition system. In addition, DOE included the electricity use for a condensate pump or heat tape, which is sometimes installed with higher-efficiency products. For single-stage boilers, DOE calculated the electricity consumption as the sum of the electrical energy used during boiler operation for space heating, water heating, and standby energy consumption. For two-stage and modulating products, this formula includes parameters for the operation at full, modulating, and reduced load.

Commenting on the NOPR, Weil-McLain and Burnham stated that boilers at 85-percent AFUE are likely to require mechanical draft assistance, which would increase electricity use. (Weil-McLain, No. 55 at pp. 2–3; Burnham, No. 60 at p. 25) As stated in section IV.F.2, for the final rule, DOE revised the mechanical draft fractions for 85-percent AFUE gas-fired hot water boilers based on shipments data from Burnham, AHRI's contractor survey, and the updated reduced set of residential boiler models (hereinafter referred to as the "reduced set"; see appendix 7D of the final rule TSD for details). (See Burnham, No. 60 at p. 18, 25; AHRI, No. 66 at p. 10–11)

Burnham stated that natural draft burner systems generally use a 40VA transformer to power the burner and controls, rendering DOE's estimate of 40W for non-condensing gas-fired hot water boilers and gas-fired steam boilers very conservative. (Burnham, No. 60 at p. 66) For the final rule, DOE revised the boiler power use estimates based on the

updated reduced set of residential boiler models, which resulted in an estimate of 92 W for non-condensing gas-fired hot water boilers and 84 W for non-condensing gas-fired steam boilers.

Burnham stated that all oil-fired boilers are equipped with a fan as part of burner, so it is unclear what model DOE would consider an oil-fired boiler without an induced/forced draft. (Burnham, No. 60 at p. 24) For the final rule, DOE agrees that all oil-fired boilers are equipped with burner fans and revised the boiler power use estimates to include the burner fan electricity.

Burnham stated that DOE's analysis failed to recognize that condensing boilers typically have a separate pump to circulate water through the boiler's heat exchanger in addition to the pump used to circulate water through the heating system. (Burnham, No. 60 at p. 24, 66) In addition, Burnham stated that the power consumption for the boiler pump should be at least 160W. (Burnham, No. 60 at p. 24) For the final rule, for condensing boilers, DOE included the electricity use of both a boiler pump and circulating pump. DOE maintained the NOPR assumption that the circulating pump uses 80W. The engineering analysis determined that the most commonly used boiler pumps (*i.e.*, pumps that circulate water through the hot water boiler heat exchanger) are the Taco 0015 or Grundfos UPS 15, which use 120W. DOE utilized this value for all boiler pumps used in condensing boiler installations.

a. Standby Mode and Off Mode Losses

Lochinvar stated that the DOE erroneously presumes that standby power consumption is lost energy, but because boilers are typically installed inside homes, standby power consumption is converted into heat that is transmitted into the home. In contrast, Lochinvar stated that off mode power consumption should be considered a loss because there is likely no need for heating when the boiler is in off mode. (Lochinvar, No. 63 at pp. 2–3) For the final rule, DOE assumed that a fraction of standby power used by boilers installed indoors contributes to heating the home during the heating season. DOE agrees that off mode energy use does not contribute to heating the home.

b. Air Conditioner Electricity Use

For the NOPR, DOE accounted for the impact of water heating energy use during the non-heating season on air conditioner (AC) electricity use for boilers installed in conditioned spaces. DOE assumed that only boilers installed in indoor spaces impact the cooling load

and that a fraction of this electricity use impacts the cooling load. EEI stated that if the boiler is not located near the thermostat, it will not have an impact on the cooling load, especially because the heat losses of the boiler are miniscule compared to the cooling load. (EEI, Public Meeting Transcript, No. 50 at p. 120) In NOPR and in the final rule, DOE assumed that about half of the energy use losses related water heating by the boiler as impacting cooling load to account boiler installation location, distance from thermostat, and non-coincidental loads.

5. Standby Mode and Off Mode

DOE calculated boiler standby mode and off mode electricity consumption for times when the boiler is not in use for each efficiency level identified in the engineering analysis for standby mode and off mode standards. DOE calculated boiler standby mode and off mode electricity consumption by multiplying the power consumption at each efficiency level by the number of standby mode and off mode hours. To calculate the annual number of standby mode and off mode hours for each sample household, DOE subtracted the estimated total burner operating hours (for both space heating and water heating) from the total hours in a year (8,760). Details of the method are provided in chapter 7 of the final rule TSD.

F. Life-Cycle Cost and Payback Period Analysis

DOE conducted LCC and PBP analyses to evaluate the economic impacts on individual consumers of potential energy conservation standards for residential boilers. The effect of new or amended energy conservation standards on individual consumers usually involves a reduction in operating cost and an increase in purchase cost. DOE used the following two metrics to measure consumer impacts:

- The LCC (life-cycle cost) is the total consumer expense of an appliance or product over the life of that product, consisting of total installed cost (manufacturer selling price, distribution chain markups, sales tax, and installation costs) plus operating costs (expenses for energy use, maintenance, and repair). To compute the operating costs, DOE discounts future operating costs to the time of purchase and sums them over the lifetime of the product.

- The PBP (payback period) is the estimated amount of time (in years) it takes consumers to recover the increased purchase cost (including installation) of a more-efficient product

Laboratory (December 2007) (Available at: <<https://www.bnl.gov/isd/documents/41399.pdf>>).

⁴⁵ In the case of modulating condensing boilers, to accommodate lower firing rates, the inducer will provide lower combustion airflow to regulate the excess air in the combustion process. DOE assumed that modulating condensing boilers are equipped with inducer fans with permanent split capacitor (PSC) motors and two-stage controls. The inducers are assumed to run at a 70-percent airflow rate when the modulating unit operates at low-fire.

through lower operating costs. DOE calculates the PBP by dividing the change in purchase cost at higher efficiency levels by the change in annual operating cost for the year that amended or new standards are assumed to take effect.

For any given efficiency level, DOE measures the change in LCC relative to the LCC in the no-new-standards case, which reflects the estimated efficiency distribution of residential boilers in the absence of new or amended energy conservation standards. In contrast, the PBP for a given efficiency level is measured relative to the baseline product.

For each considered efficiency level in each product class, DOE calculated the LCC and PBP for a nationally representative set of housing units and commercial buildings. As stated previously, DOE developed household and building samples from the RECS 2009 and CBECS 2003. For each sample building, DOE determined the energy consumption for the residential boilers and the appropriate energy prices. By developing a representative sample of buildings, the analysis captured the variability in energy consumption and energy prices associated with the use of residential boilers.

Inputs to the calculation of total installed cost include the cost of the product—which includes MPCs, manufacturer markups, retailer and distributor markups, and sales taxes—and installation costs. Inputs to the calculation of operating expenses include annual energy consumption, energy prices and price projections, repair and maintenance costs, product lifetimes, and discount rates. DOE created distributions of values for product lifetime, discount rates, and sales taxes, with probabilities attached to each value, to account for their uncertainty and variability.

DOE conducts a stochastic analysis that employs a computer spreadsheet model to calculate the LCC and PBP, which incorporates Crystal Ball™ (a

commercially-available software program) and relies on a Monte Carlo simulation to incorporate uncertainty and variability (e.g., energy prices, installation costs, and repair and maintenance costs) into the analysis. The Monte Carlo simulations randomly sample input values from the probability distributions and residential boiler user samples. It uses weighting factors to account for distributions of shipments to different building types and States to generate LCC savings by efficiency level. The model calculated the LCC and PBP for products at each efficiency level for 10,000 buildings per simulation run.

Commenting on the NOPR, AHRI stated that information from a recently completed study conducted by the Gas Technology Institute (GTI)⁴⁶ indicates that the random-choice Monte Carlo methodology used in the LCC fails to acknowledge the rational, economic factors involved in purchasing heating equipment, including boilers. AHRI stated that these factors may vary, but the ultimate decision on what unit is purchased is based on some logic underscored by the consumer's economic situation. (AHRI, No. 64 at p. 10) Burnham supported AHRI's position. (Burnham, No. 60 at p. 19)

In response, the method used to estimate the boiler efficiency that a given sample household would choose in the no-new-standards case is not entirely random. For gas boilers, DOE assigned a higher fraction of condensing boilers to regions with a higher fraction of condensing shipments, as reported in the shipments data. That is, the method assumes that the factors that currently cause consumers to choose condensing boilers in specific areas will continue to operate in the future. Development of a complete consumer choice model for boiler efficiency would require data that are not currently available, as well as recognition of the various factors that impact the purchasing decision, such as incentives, the value that some consumers place on efficiency apart

from economics (i.e., “green behavior”), and whether the purchaser is a homeowner, landlord, or builder. For the final rule, DOE used the same general method to assign boiler efficiency in the no-new-standards case, but made use of updated shipments data.

DOE calculated the LCC and PBP for all consumers of residential boilers as if each were to purchase a new product in the expected year of required compliance with amended standards. Any amended standards would apply to residential boilers manufactured 5 years after the date on which any amended standard is published.⁴⁷ At this time, DOE estimates publication of a final rule in 2016. Therefore, for purposes of its final rule analysis, DOE used 2021 as the first year of compliance with any amended standards for residential boilers.

As noted above, DOE's LCC and PBP analyses generate values that calculate the payback period for consumers under potential energy conservation standards, which includes, but is not limited to, the three-year payback period contemplated under the rebuttable presumption test. However, DOE routinely conducts a full economic analysis that considers the full range of impacts, including those to the consumer, manufacturer, Nation, and environment, as required under 42 U.S.C. 6295(o)(2)(B)(i). The results of this analysis serve as the basis for DOE to definitively evaluate the economic justification for a potential standard level (thereby supporting or rebutting the results of any preliminary determination of economic justification).

Table IV.24 summarizes the approach and data DOE used to derive inputs to the LCC and PBP calculations. The subsections that follow provide further discussion. Details of the spreadsheet model, and of all the inputs to the LCC and PBP analyses, are contained in chapter 8 of the final rule TSD and its appendices.

TABLE IV.24—SUMMARY OF INPUTS AND METHODS FOR THE FINAL RULE LCC AND PBP ANALYSIS*

Inputs	Source/method
Product Cost	Derived by multiplying MPCs by manufacturer, wholesaler, and contractor markups and sales tax, as appropriate. Used a constant product price trend to forecast product costs.
Installation Costs	Baseline installation cost determined with data from RS Means. Assumed cost changes with efficiency level.
Annual Energy Use	The total space heating and water heating fuel use plus electricity use per year. Number of operating hours and energy use based on RECS 2009 and CBECS 2003.

⁴⁶ Available at: http://www.gastechnology.org/reports_software/Documents/21693-Furnace-NOPR-Analysis-FinalReport_2015-07-15.pdf.

⁴⁷ DOE is conducting this rulemaking pursuant to 42 U.S.C. 6295(f)(4)(C), which provides a 5-year lead time for compliance with amended standards.

This rulemaking also satisfies DOE's 6-year-lookback review requirement under 42 U.S.C. 6295(m), which provides the same 5-year lead time.

TABLE IV.24—SUMMARY OF INPUTS AND METHODS FOR THE FINAL RULE LCC AND PBP ANALYSIS*—Continued

Inputs	Source/method
Energy Prices	Natural Gas: Based on EIA's Natural Gas Navigator data for 2013. Fuel Oil and LPG: Based on EIA's State Energy Consumption, Price, and Expenditures Estimates (SEDS) for 2013. Electricity: Based on EIA's Form 861 data for 2013. Variability: Regional energy prices determined for 30 regions for RECS 2009 sample and 9 Census divisions for the CBECS 2003 sample.
Energy Price Trends	Based on AEO 2015 price forecasts.
Repair and Maintenance Costs	Based on RS Means data and other sources. Assumed variation in cost by efficiency.
Product Lifetime	Based on shipments data, multi-year RECS and American Housing Survey data, and AHRI contractor survey.
Discount Rates	Approach involves identifying all possible debt or asset classes that might be used to purchase the considered appliances, or might be affected indirectly. Primary data source was the Federal Reserve Board's Survey of Consumer Finances.
Compliance Date	2021.

* References for the data sources mentioned in this table are provided in the sections following the table or in chapter 8 of the final rule TSD.

1. Product Cost

To calculate consumer product costs, DOE multiplied the MPCs developed in the engineering analysis by the markups described in section IV.D (along with sales taxes). DOE used different markups for baseline products and higher-efficiency products, because DOE applies an incremental markup to the increase in MSP associated with higher-efficiency products.

To project future product prices, DOE considered the historic trend in the Producer Price Index (PPI) for cast iron heating boilers and steel heating boilers⁴⁸ to estimate the change in price between the present and the compliance years. Due to the variability in the historical price trends, DOE assumed a constant product price trend.

2. Installation Cost

Installation cost includes labor, overhead, and any miscellaneous materials and parts needed to install the product, such as venting and piping modifications and condensate disposal that might be required when installing products at various efficiency levels. DOE estimated the costs associated with installing a boiler in a new housing unit or as a replacement for an existing boiler.

a. Basic Installation Cost

For the NOPR, DOE calculated the basic installation cost, which is applicable to both replacement and new construction boiler installations and includes the cost of putting in place and setting up the boiler, permitting, and removal or disposal fees.

b. Replacement Installations

For the NOPR, DOE considered additional costs ("adders") for a fraction

of replacement installations of non-condensing and condensing boilers. These additional costs may account for chimney relining, updating of flue vent connectors, vent resizing, and the costs for a stainless steel vent, if required. Each of these cost adders is discussed in further detail below.

(1) Chimney Relining

To determine the installations that would require chimney relining upon boiler replacement, DOE assumed for the NOPR that all boilers that were installed before 1995, the year that the National Fuel Gas Code (the first building code to require chimney lining) was established for all buildings built before 1995, would require relining upon boiler replacement in 2020.

Commenting on the NOPR, for the replacement of a non-condensing boiler with another non-condensing boiler, Crown Boiler stated that the National Fuel Gas Code (NFGC) does not always require relining indoor terracotta chimneys for all efficiency levels, and assuming that all boilers installed in homes built before 1995 or replaced before 1995 require relining upon replacement is incorrect and overstates the cost of a non-condensing boiler replacement. (Crown Boiler, Public Meeting Transcript, No. 50 at pp. 163–164, 197) Weil-McLain and AHRI stated that section 12.6.4.2 of the NFGC does not require chimneys to be relined when an appliance is replaced by an appliance of similar type. Therefore, the majority of boiler replacements involving a non-condensing cast iron boiler being replaced with the same type of equipment would not have included chimney relining, regardless of whether such replacement occurred prior to or after 1995. (Weil-McLain, No. 55 at p. 5; AHRI, No. 64 at p. 11)

For the final rule, DOE did not change its methodology to determine the fraction of unlined chimneys that would require relining applied in the NOPR

analysis. Similar to the NOPR, DOE estimated that only 6 percent of all replacement boiler installations in 2021 would require relining of unlined chimneys, which overall seems to coincide with stakeholder input regarding the fraction of non-condensing replacement installations requiring venting modifications. Regarding the comments by Weil-McLain and AHRI, DOE notes that the exception in section 12.6.4.2 of the NFGC states that existing chimneys shall be permitted to have their use continued when an appliance is replaced by an appliance of similar type, input rating, and efficiency. However, DOE has concluded that many of the current non-condensing boiler designs (82-percent to 83-percent AFUE) cannot be considered to be of similar input rating and efficiency compared to old boilers below 80-percent AFUE that were primarily installed before 1992. Furthermore, DOE notes that section 12.6.4.4 of the NFGC states that "When inspection reveals that an existing chimney is not safe for the intended application, it shall be repaired, rebuilt, relined, or replaced with a vent or chimney to conform to National Fire Protection Association (NFPA) 211."⁴⁹ Because the amended standard will be effective in 2021, many boilers installed before 1995 will be close to the end of their lifetime and they may be vented in chimneys that would require the relining of the existing chimney to meet safety requirements. Thus, for the final rule, DOE maintained the assumption that boilers that replace boilers installed before 1995, or first-time boilers installed in homes built before 1995, would require relining of the chimney.

⁴⁹ National Fire Protection Association, *NFPA 211: Standard for Chimneys, Fireplaces, Vents, and Solid Fuel-Burning Appliances* (2013) (Available at: <http://www.nfpa.org/codes-and-standards/document-information-pages?mode=code&code=211>).

⁴⁸ Cast iron heating boiler PPI series ID: PCU 3334143334141; Steel heating boiler PPI series ID: PCU 3334143334145 (Available at: <http://www.bls.gov/ppi/>).

Weil-McLain stated that DOE used incorrect assumptions to calculate the percentage of households with an unlined chimney and the percentage of masonry chimneys that would need to be relined in 2021, because DOE incorrectly applied the NFGC in determining the number of relined chimneys. Weil-McLain also stated that there are significantly more households with a boiler in the north than in the south; therefore, using a midpoint between the percentages assigned to the north and to the south significantly underestimates the actual percentage of households with unlined chimneys. (Weil-McLain, No. 55 at p. 5)

DOE did not apply a national average fraction to determine the number of chimneys that would need to be relined in 2021. Rather, DOE used regional fractions of the number of masonry chimneys and the age of each individual boiler to determine whether a chimney would need to be relined in 2021. For both the NOPR and the final rule, DOE assumed that 73 percent of buildings in the Northeast, 53 percent of buildings in the Midwest, 10 percent of buildings in the South, and 27 percent of buildings in the West have masonry chimneys.

For the NOPR, DOE assumed that any chimney relining would require an aluminum liner. Burnham questioned whether the unit costs DOE used for double wall kit “aluminum liners” are actually for “all fuel” stainless steel liner kits (which are appropriate for oil-fired boilers). (Burnham, No. 60 at p. 26) For the NOPR, DOE used an average cost of different liners, including double wall kit “aluminum liners” that are actually for “all fuel” stainless steel liner kits. Burnham also stated that DOE does not need to extrapolate costs for 5” and 6” liners, as costs that better reflect true market costs are provided by DOE’s data source.⁵⁰ (Burnham, No. 60 at p. 26) Furthermore, Weil-McLain stated that the fact that a chimney was re-lined for a non-condensing boiler does not necessarily mean that it was relined with stainless steel to meet the requirements for a condensing unit. (Weil-McLain, No. 55 at p. 5)

For the final rule, DOE updated its liner prices for different liner types and sizes (including 5” and 6”) from the mentioned data source. It also applied the “aluminum liner” kit costs to Category I non-condensing gas-fired boilers and AL29–4C stainless steel liner kit costs to Category III non-condensing gas-fired boilers to meet the requirements of each venting category.

Burnham stated that DOE erroneously assumed that aluminum would be used as the liner material for oil-fired boilers, when it should be stainless steel. Burnham provided the cost for stainless steel liner systems for use with fuel oil from DOE’s online vent source.⁵¹ (Burnham, No. 60 at p. 26) For the final rule, DOE assumed that oil-fired boilers require stainless steel chimney liners, and used the cost from the online vent source.

(2) Venting Characterization

For the NOPR, to determine the venting installation costs, DOE considered vent categories as defined in the National Fuel Gas Code. DOE determined that all natural draft boilers and a fraction of mechanical draft boilers would be vented as a Category I appliance (negative pressure vent system with high temperature flue gases). DOE determined that the remaining fraction of mechanical draft boilers would be vented as a Category III appliance (positive pressure vent system with high temperature flue gases). DOE determined that very few non-condensing would be installed as a Category II appliance (negative pressure vent system with low temperature flue gases) or a Category IV appliance (positive pressure vent system with low flue gases temperatures). However, DOE determined that all condensing installations would be vented as a Category IV appliance.

DOE included additional venting cost associated with Category III stainless steel venting for a fraction of non-condensing installations that require such venting. Such inclusion addresses potential safety concerns by preventing the corrosive impacts of condensation in the venting system. Because use of an inducer or forced draft fan is associated with conditions under which stainless steel venting is necessary to avoid condensation in some cases, DOE based the fraction of boilers requiring stainless steel venting on the percentage of models with inducer or forced draft fans in the AHRI directory⁵² and manufacturer literature. The fraction of stainless steel venting installations ranged from 11 percent for the baseline efficiency models to 32 percent for the 85-percent AFUE models.

Commenting on the NOPR, Weil-McLain, Burnham, AGA/APGA and

PGW stated that replacement of existing non-condensing boilers (installed with current venting systems) with near-condensing boilers that do not use an inducer or forced draft fan requires Category II venting, because such units operate with a non-positive vent static pressure and with vent gas temperature that may cause excessive condensate production in the vent. Such venting uses materials (such as stainless steel alloy, AL29–4C) that can resist the corrosive nature of the condensate. (Weil-McLain, No. 55 at pp. 1–2, 4; Burnham, No. 60 at p. 9; AGA and APGA, No. 54 at p. 2; PGW, No. 57 at p. 1)

For the final rule, DOE estimated that in cases of replacement with near-condensing gas-fired boilers (85–89 percent AFUE), instead of using Category II stainless steel venting, installers would use Category III stainless steel venting with mechanical draft.⁵³ Category II venting presents reliability issues, even with stainless steel venting, because of the variety of operating conditions encountered in the field. For this analysis, DOE assumed that such installations (that otherwise would require Category II venting) would have less safety and reliability issues by installing a mechanical draft boiler with Category III venting, which requires stainless steel venting. DOE included the cost of AL29–4C stainless steel venting for all Category III installations. DOE also determined that the installation costs associated with Category III vent installations would be equal to or higher than Category II vent installations in most cases.

Burnham stated that the ANSI Z223.1 code defers to the manufacturer’s installation and operation manual for Category II, III, and IV boilers. If the boiler has ANSI Z21.13 certification, the boiler manufacturer must either supply or specify venting materials meeting certain requirements for corrosion resistance and/or gas tightness in its manual. For Category II, III, and IV non-condensing boilers, the most common method of meeting this requirement is to specify the AL29–4C stainless steel special gas vent. (Burnham, No. 60 at p. 10) Burnham found from its review of 61 models in the AHRI directory that almost all non-condensing, non-Category I boilers are vented with an AL29–4C special gas vent, which increases the installation cost of these products. (Burnham, No. 60 at p. 27) For the NOPR and final rule, as stated

⁵⁰ Available at: <http://www.ventingpipe.com/gas-fuel-chimney-liners/c1650>.

⁵¹ Available at: <http://www.ventingpipe.com/gas-fuel-chimney-liners/c1650?f3378=oil>.

⁵² Air Conditioning, Heating, and Refrigeration Institute, Consumer’s Directory of Certified Efficiency Ratings for Heating and Water Heating Equipment (AHRI Directory) (September 2013) (Available at: <http://www.ahridirectory.org/ahridirectory/pages/home.aspx>) (Last accessed September 2013).

⁵³ For replacement with an 84-percent AFUE boiler, DOE found that it is necessary to use special venting in a small fraction of cases based on shipments data provided by Burnham.

above, DOE did not consider Category II or IV venting for non-condensing boilers, but instead for all category III non-condensing boilers, DOE included the cost for AL29–4C stainless steel venting.

Burnham stated that horizontal venting of a Category III or IV gas-fired boiler at 85-percent AFUE is limited by safety codes, building codes, I&O manuals, location of surrounding buildings, and limited access to an eligible exterior wall. It noted that this is particularly a problem in urban areas with homes that are closely spaced. Burnham stated that in cases where horizontal venting is impossible, it may be unreasonably expensive to use the old chimney as a chase for a special gas vent system. (Burnham, No. 60 at pp. 14–15) PGW stated that the installation of Category II and IV venting systems presents particular problems in Philadelphia's 400,000 row houses because replacing a boiler will require a new venting system, including abandonment of the existing venting system, structural changes to accommodate a new venting system path, and relocation of the boiler to meet the code and installation requirements of a new condensing boiler system. (PGW, No. 57 at p. 2) In addition, Burnham stated that conversion from a non-condensing Category I boiler to a non-condensing or condensing Category II, III, or IV boiler can result in an orphaned water heater. Burnham stated that if there is no way to horizontally vent the new boiler, and if the old chimney is used as a chase for the special vent system, the water heater and any other appliances vented into that chimney will need to be removed. Burnham stated that DOE needs to include the additional installation costs associated with complete replacement of "orphaned water heaters" for a fraction of installations. (Burnham, No. 60 at p. 28)

DOE acknowledges that a small fraction of replacement installations may be difficult, but DOE does not believe that the difficulties are insurmountable. DOE's analysis accounts for additional costs for those installations that would require re-routing of the vent system for Category III non-condensing boilers and Category IV condensing boilers to account for the limitations described by Burnham and PGW. The analysis does not include installations that would require the use of existing chimneys in lieu of horizontal venting, but rather included the cost for longer vent runs. DOE notes that in response to the NOPR for the current residential furnaces rulemaking, the American Council for an Energy-

Efficient Economy (ACEEE) stated that the Energy Coordinating Agency, a major weatherization program in Philadelphia that has installed many condensing furnaces in row houses, has developed moderate cost solutions (at most \$350) to common problems such as having no place to horizontally vent directly from the basement. ([Docket No. EERE–2014–BT–STD–0031], ACEEE, No. 113 at p. 7) Both in the NOPR and final rule, DOE accounted for a fraction of installations that would require chimney relining or vent resizing for the orphaned water heater. DOE did not consider the complete replacement of the orphaned water heater, but instead added additional installation costs associated with venting of the Category III or IV boiler, so that the orphaned water heater could be vented through the chimney.

Boilers that use mechanical draft (Category I) are required to meet the NFGC venting requirements, while Category III systems require mechanical draft and stainless steel venting. Burnham and Weil-McLain stated that DOE overstated the market share of units that use mechanical draft (Category I or III) because DOE used number of models instead of shipments. (Burnham, No. 60 at pp. 24–25; Weil-McLain, No. 55 at p. 5) In addition to data on models from the AHRI directory, for the final rule, DOE also used shipments data from Burnham and AHRI's contractor survey to estimate the share of installations that would use mechanical draft. (AHRI, No. 67) For the final rule, DOE also took into account a fraction of mechanical draft (Category I) gas-fired boilers that would need the vents to be resized to meet the NFGC venting requirements.

Weil-McLain stated that the vast majority of near-condensing gas-fired boilers⁵⁴ sold would have an inducer or fan (*i.e.*, mechanical draft). Weil-McLain stated that because boilers at 85 percent AFUE produce flue gases that have a low enough temperature that they do not have enough buoyancy to naturally be removed, they are more likely to require mechanical draft to vent the flue gases. Weil-McLain stated that in addition, the mandated use of an automatic means for adjusting water temperature also reduces the buoyancy of the flue gases, thereby necessitating mechanical draft. Weil-McLain also stated that the addition of a draft inducer or blower motor would increase the installation costs associated with new electric service installation (in

some instances), new venting and/or chimney lining, and re-piping. (Weil-McLain, No. 55 at pp. 2–3)

For the final rule, DOE used shipments data from Burnham⁵⁵ and the AHRI contractor survey, which resulted in about half of 85-percent AFUE gas-fired hot water boilers shipped in 2021 being mechanical draft. Using this data, DOE also estimated that 5 percent of gas-fired hot water boilers at efficiency levels below 85-percent AFUE use mechanical draft in 2021. For the NOPR and final rule, DOE assumed that adding mechanical draft would significantly increase the venting costs due to new flue venting and/or chimney lining. For the final rule, DOE updated its installation costs for mechanical draft as mentioned above. DOE did not assume additional cost for new electric service, since all new gas-fired boilers utilize electronic ignition, which already requires an electrical outlet. In addition, DOE did not assume additional re-piping (to change the installation location of the boiler), but instead assumed that the boiler would remain in the same installation location, which might require additional vent length to address restrictions on horizontal venting.

Commenting on the NOPR, Burnham stated that in addition to straight pipes, the installation manuals of the models in the AHRI directory require at least one other fitting (90 degree elbow) in almost all Category III/IV installations. (Burnham, No. 60 at p. 28) For the NOPR and the final rule, DOE accounted for other fittings, such as a 90 degree elbow, for all venting installations.

For the NOPR, the additional installation costs for condensing boilers in replacement installations included new either 2-inch or 3-inch polyvinyl chloride (PVC), polypropylene (PP), or chlorinated polyvinyl chloride (CPVC) combustion air venting for direct vent installations (PVC); concealing vent pipes for indoor installations, addressing an orphaned water heater (by updating flue vent connectors, vent resizing, or chimney relining), and condensate removal.

Weil-McLain stated that with a Category IV boiler, the venting system must be able to handle positive pressure. This often eliminates the ability for the boiler to continue to use the same chimney as other appliances, which makes a retrofit with such an appliance all the more costly to the

⁵⁴ Weil-McLain considers near-condensing gas-fired boilers to be those with AFUE from 84 percent to 89 percent.

⁵⁵ Burnham shipments data from 2014 showed that 38.7 percent of its 85-percent AFUE gas-fired hot water boilers shipped in 2014 were mechanical draft.

consumer because alternative venting and piping configurations would be necessary. It stated that the additional costs for installing a boiler as a Category IV appliance are at least \$1,000 to over \$1,400, if there are no further complications. (Weil-McLain, No. 55 at p. 3) For the NOPR and the final rule, DOE accounted for the additional installation cost of adding a category IV vent for condensing boiler designs, including eliminating the ability of the boiler to continue to use the same chimney when it is also being used by water heater, resizing of orphaned water heater, and all necessary installation costs for adding a new flue vent.

Commenting on the NOPR, Burnham reviewed 44 condensing boiler models in the AHRI directory and found that most of the units with an input capacity of 100 MBH use 3-inch venting. Burnham stated that if DOE uses a representative gas-fired hot water boiler input capacity of 120 MBH as it recommends, the use of 3-inch venting is almost universal. (Burnham, No. 60 at p. 28) AHRI stated that after a certain input level, the standard PVC pipe in the vent system will be 3 inches. (AHRI, Public Meeting Transcript, No. 50 at p. 168) Crown Boiler added that with input rates at the upper limit of the residential range, some condensing boilers may need 4-inch vents. (Crown Boiler, Public Meeting Transcript, No. 50 at p. 169) For the final rule, DOE assumed that most condensing boilers use 3-inch PVC, PP, or CPVC pipes, and those at the highest capacities use 4-inch vents.

The Advocates encouraged DOE to incorporate the lower-cost DuraVent technologies in the analysis, and more broadly to consider innovative installation technology that would likely emerge with increasing experience and learning. The Advocates stated that the DuraVent technology can help address difficult installation situations with condensing boilers by allowing for venting both a new condensing boiler and an existing atmospheric water heater through the existing chimney. (The Advocates, No. 62 at p. 2) DOE did not include lower-cost venting solutions for condensing boilers because these technologies are still immature.⁵⁶ However, DOE agrees that if the new venting technologies are successful in the market, they could decrease the installation cost of

condensing boilers in replacement situations.

(3) Other Issues

In the NOPR and final rule, DOE added condensate withdrawal costs for condensing boilers. Burnham stated that according to the I&O manuals of the boilers it examined, the vast majority of Category II, III, and IV vent systems require a means of disposing of condensate for non-condensing boilers, which DOE did not account for in its installation cost calculations. (Burnham, No. 60 at p. 28) Lochinvar stated that even non-condensing boilers will condense when the heat exchanger is cold. Lochinvar also stated that automatic means measures extend the time that heat exchangers are exposed to condensate, and increases the potential for condensate-related problems. (Lochinvar, No. 63 at pp. 2–3)

For the final rule, based on a review of installation manuals, DOE assumed that 75 percent of non-condensing mechanical draft category III boilers require condensate collection. DOE accounted for condensate issues in the venting by including a condensate trap and piping to either a collector or drain. DOE has determined that these measures also address the impact of automatic means as part of the overall condensate collection process.

For the NOPR, DOE assumed that the circulating pump and boiler pump are provided by the manufacturer, and, therefore, included the cost of both pumps as part of the product cost. Commenting on the NOPR, Burnham stated that in some cases, neither the circulation pump nor the boiler pump are supplied with the boiler, thereby increasing the installation cost. Burnham added that a second ramification of the need for two pumps are the associated piping requirements. In most cases, this piping is not supplied with the boiler and must be fabricated by the installer, which results in an additional cost. Burnham estimated that the contractor's cost associated with the second (boiler) pump and the piping is \$239. (Burnham, No. 60 at pp. 29–31) For the final rule, DOE assumed that neither the circulation pump nor the boiler pump is supplied with the boiler. DOE included the installation of the secondary and primary piping 75 percent of the time for condensing boiler installations.

Burnham stated that 35 percent of the condensing gas-fired hot water boiler models it investigated requires a Y strainer. Burnham estimated that the contractor's cost of a 1-inch Y strainer is \$45. (Burnham, No. 60 at pp. 29–31) For the final rule, DOE included the cost

of a Y-strainer for one-third of condensing boiler installations based on a review of condensing model installation manuals, with an average installed cost of \$48 (including labor and parts) from RS Means 2015.

c. New Construction Installations

DOE also included installation adders for new construction, as well as for new owner installations for hot water gas-fired boilers. For non-condensing boilers, the only adder is a new metal flue vent (including a fraction with stainless steel venting) and condensate withdrawal for a fraction of category III models. For condensing gas boilers, the additional costs for new construction installations related to potential amended standards include a new flue vent, combustion air venting for direct vent installations and accounting for a commonly-vented water heater, and condensate withdrawal.

d. Total Installation Cost

ACCA stated that its members found the installation cost for gas-fired hot water boilers, regardless of efficiency level or existing venting options, to be nearly twice as high as the average basic installation cost assumed by DOE of \$2,741. ACCA stated that, for gas-fired steam boilers, the DOE analysis produced an average basic installation cost of \$2,917, but feedback from ACCA's contractors suggest the real costs are twice that amount. ACCA also stated that the same discrepancy applies to both the oil-fired hot water boilers and the oil-fired steam boilers. (ACCA, No. 65 at p. 2)

In response, DOE notes that the basic installation cost, which consists of the installation costs that are common to all boilers, is only part of the total installation cost. In addition to the basic installation cost, the total installation cost includes venting costs and additional costs for condensing boiler installations. For the final rule, DOE's updated installation cost analysis, based on updated RS Means 2015 and stakeholder comments discussed above, resulted in an average total installation cost of \$4,288 for a baseline (82-percent AFUE) gas-fired hot water boiler, which is close to the value suggested by ACCA. DOE's value is also close to the \$4,500 installation cost for gas-fired hot water boilers (natural draft) from 82.0 to 83.9 percent AFUE in AHRI's contractor survey.

3. Annual Energy Consumption

For each sampled building, DOE determined the energy consumption for a residential boiler at different efficiency levels using the approach

⁵⁶ The chimney vent option, which would be most applicable to residential boilers, is still under development. The non-condensing (Category I) Type B vent + condensing (Category IV) venting option is currently available in the market: <http://duravent.com/Product.aspx?hProduct=49>.

described above in section IV.E of this document. The product energy consumption is the site energy use associated with providing space heating (and water heating in some cases) to the building.

DOE considered whether boiler energy use would likely be impacted by a direct rebound effect, which occurs when a product that is made more efficient is used more intensively, such that the expected energy savings from the efficiency improvement may not fully materialize. Such change in behavior when operating costs decline is known as a (direct) rebound effect. The take-back in energy consumption associated with the rebound effect provides consumers with increased value (e.g., more comfortable indoor temperature). DOE believes that, if it were able to monetize the increased value to consumers of the rebound effect, this value would be similar in value to the foregone energy savings. Therefore, the economic impacts on consumers with or without the rebound effect, as measured in the LCC analysis, are the same.

4. Energy Prices

For the NOPR, DOE derived 2012 average and marginal monthly residential and commercial natural gas, fuel oil, LPG, and electricity prices using monthly data by State from Energy Information Administration. DOE assigned an appropriate energy price to each household or commercial building in the sample, depending on its location. To do this, DOE used the average 2008–2012 fraction of boiler shipments by State⁵⁷ to assign average and marginal prices for 30 geographical regions and 9 Census divisions to match the residential boiler samples derived from RECS 2009 sample and CBECS 2003. For the final rule, DOE derived 2013 average and marginal monthly residential and commercial natural gas, fuel oil, LPG, and electricity prices using updated data for 2013.^{58 59 60}

Commenting on the NOPR, AGA and APGA argued that DOE's method of calculating marginal energy prices overstates the operating cost savings of higher-efficiency boilers. AGA and APGA stated that the marginal prices that AGA derived by deducting the fixed charge portion of the bill from the total bill range from 7 percent to 16 percent lower than the prices developed by DOE. (AGA and APGA, No. 54 at p. 2) Laclede stated that DOE's estimates for what is called "marginal monthly natural gas prices" are much higher than actual marginal prices that customers pay as reflected by impacts in energy consumption changes in their utility bills. (Laclede, No. 58 at p. 3)

In response to similar comments provided on the Residential Furnace notice of proposed rulemaking,⁶¹ DOE developed seasonal marginal price factors for 23 gas tariffs provided by the Gas Technology Institute.⁶² These marginal price factors can be compared to those developed by DOE from the EIA data. The winter price factors used by DOE are generally comparable to those computed from the tariff data, indicating that DOE's marginal price estimates are reasonable at average usage levels. The summer price factors, which are less relevant for analysis of boilers, are also generally comparable. Of the 23 tariffs analyzed, eight have multiple tiers, and of these eight, six have ascending rates and two have descending rates. Because this analysis uses an average of the two tiers as the commodity price, it will generally underestimate the marginal prices for consumers subject to the second tier. A full tariff-based analysis would require information about the household's total baseline gas usage (to establish which tier the consumer is in), and a weight factor for each tariff that determines how many customers are served by that utility on that tariff. These data are generally not available in the public domain. DOE's use of EIA State-level data effectively averages overall

consumer sales in each State, and so incorporates information about all utilities. DOE's approach is, therefore, more likely to provide prices representative of a typical consumer than any individual tariff. For more details on this comparative analysis, refer to Appendix 8D of the final rule TSD.

For the NOPR, to estimate energy prices in future years, DOE multiplied the average regional energy prices by the forecast of annual change in national-average residential energy prices in the Reference case from *AEO 2013*, which has an end year of 2040. To estimate price trends after 2040, DOE used the average annual rate of change in prices from 2020 to 2040.

AHRI and Laclede stated that DOE should use *AEO 2015* rather than *AEO 2013*. (AHRI, No. 64 at p. 9; Laclede, No. 58 at p. 4) AHRI stated that it is incumbent on DOE to issue a supplemental notice of proposed rulemaking that revises the analysis based on *AEO 2015* data so that stakeholders may comment upon the analysis done using the most up-to-date inputs. (AHRI, No. 64 at p. 9) For the final rule, DOE has updated its analysis using *AEO 2015*. DOE has concluded that the differences between *AEO 2013* and *AEO 2015* are not large enough to warrant a supplemental notice of proposed rulemaking.

For a detailed discussion of the development of energy prices, see appendix 8D of the final rule TSD.

5. Maintenance and Repair Costs

Maintenance costs are associated with maintaining the operation of the product. For the NOPR, DOE estimated maintenance costs at each considered efficiency level using a variety of sources, including *2013 RS Means Facility Repair and Maintenance Data*⁶³ and manufacturer product literature. For AFUE standards analysis, DOE accounted for additional maintenance costs for condensing boilers associated with checking the condensate withdrawal system, replacing the neutralizer filter, and flushing the secondary heat exchanger for condensing oil boilers in high-sulfur oil-fuel regions. For standby and off mode standards, DOE assumed no additional maintenance costs for the baseline or higher-efficiency design options. The frequency with which the maintenance occurs was derived from RECS 2009 and CBECS 2003, as well as a 2008

consumer survey⁶⁴ that provided the frequency with which owners of different types of boilers perform maintenance. For oil-fired boilers, the high quantity of sulfur in the fuel in States without regulation of sulfur content results in frequent cleaning of the heat exchanger, which DOE included in its analysis.

For the final rule, DOE update the maintenance cost using the latest *2015 RS Means Facility Repair and Maintenance Data*.⁶⁵ In addition, DOE updated the list of States that require low-sulfur oil (15 PPM or less) for space heating to reflect regulations that will take effect by the compliance date of amended boiler standards (2021) based on data provided by Energy Kinetics. (Energy Kinetics, No. 52 at pp. 2–3)

The repair cost is the cost to the consumer for replacing or repairing components in the boiler that have failed (such as ignition, controls, gas valve, and inducer fan). For the NOPR, DOE estimated repair costs at each considered efficiency level using a variety of sources, including *2013 RS Means Facility Repair and Maintenance Data* and manufacturer literature. Higher repair costs for ignition, controls, gas valve, and inducer fan were included for condensing boilers. To determine components service lifetime, DOE used a Gas Research Institute (GRI) study.⁶⁶

Crown Boiler questioned the applicability of the GRI data from the 1990s on the lifetimes of boiler parts because at that time, there were far fewer condensing boilers. (Crown Boiler, Public Meeting Transcript, No. 50 at p. 207) DOE understands that data from the GRI survey are still representative of the major furnace and boiler components. Further, due to improvements in the components of condensing boilers since the 1990s, the estimated service lifetime applied in DOE's analysis is likely conservative.

Based on typical contractor prices that Burnham collected from wholesalers for six non-condensing models and six condensing models, Burnham found

that the cost to repair non-condensing boiler parts (e.g., gas valve, blower, and controls) is significantly less than for condensing boilers. Furthermore, integrated controls for non-condensing boilers are on average significantly cheaper than a condensing boiler control. (Burnham, No. 60 at pp. 32–33) Weil-McLain stated that mechanical draft boilers would have higher repair costs due to the addition of draft inducers or blower motors, since there are more devices that will need adjustment, repair, and replacement, and the devices will need more frequent work. (Weil-McLain, No. 55 at p. 3) For the final rule, DOE updated its cost with the data provided by Burnham. For both the NOPR and final rule, DOE accounted for the additional repair cost associated with the draft inducers in boilers with mechanical draft.

For more details on DOE's methodology for calculating maintenance and repair costs, see appendix 8E of the final rule TSD.

6. Product Lifetime

Product lifetime is the age at which an appliance is retired from service. For the NOPR, DOE conducted an analysis of boiler lifetimes using a combination of historical boiler shipments (see section IV.G), American Housing Survey data on historical stock of boilers,⁶⁷ and RECS data⁶⁸ on the age of the boilers in homes. The data allowed DOE to develop a Weibull lifetime distribution function, which results in average and median lifetimes for the NOPR analysis of 25 years for all boiler product classes. In addition, DOE reviewed a number of sources to validate the derived boiler lifetime, including research studies (from the U.S. and Europe) and field data reports.⁶⁹

U.S. Boiler, Crown Boiler, Energy Kinetic, Burnham, Lochinvar, and AHRI stated that condensing boilers generally have a shorter lifetime than non-condensing boilers. Lochinvar, Burnham, Energy Kinetics, and Crown Boiler stated that various sources cite condensing boilers as having a lifetime of 15 years or less. (US Boiler, Public

Meeting Transcript, No. 50 at pp. 210–211; Crown Boiler, Public Meeting Transcript, No. 50 at p. 212; Energy Kinetic, No. 52 at p. 2; Burnham, No. 60 at pp. 33–36, pp. 54–55; Lochinvar, No. 63 at p. 4; AHRI, No. 64 at p. 4). Both Burnham and AHRI commented that their contractor surveys show a clear difference between condensing and non-condensing boiler lifetimes. (Burnham, No. 60 at pp. 35–36; AHRI, No. 66 at pp. 17–18) Burnham added that DOE's sources that are specific to condensing boilers^{70 71} indicate the life expectancy of condensing boilers is approximately 15 years, which is significantly shorter than the life of non-condensing boilers (at least 23 years). Burnham stated that sources listed by DOE that pre-date 2003 (i.e., around the time that the number of condensing boilers started to increase in the U.S.) cannot be used to estimate the life expectancy of condensing boilers. Burnham stated that references after 2003 should not be used either because statistically significant condensing boiler life expectancy data will take years to accumulate after these boilers were introduced into the U.S. market. Burnham also stated that a sample of manufacturers' warranties shows that condensing boilers have much shorter warranties than non-condensing boilers. (Burnham, No. 60 at pp. 33–36)

After carefully considering these comments, DOE has concluded that there is not enough data available to accurately distinguish the lifetime of condensing boilers because, as Burnham stated, they have not been prevalent in the U.S. market long enough to demonstrate whether their average lifetime is less than or greater than 15 years. In addition, condensing boiler technologies have been improving since their introduction to the U.S. market; therefore, the lifetime of the earliest condensing boilers may not be representative of current or future condensing boiler designs. Therefore, condensing lifetime results from the Burnham's and AHRI's contractor survey might be biased towards earliest condensing boiler designs and lack the number of condensing boilers installed 15 years or older. Based on the lack of clear and convincing information that condensing boilers have a shorter lifetime, DOE maintained the same
