

FEDERAL REGISTER

Vol. 81

Wednesday,

No. 164

August 24, 2016

Pages 57743–58380

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

Proclamation 9474 of August 19, 2016

The President

National Employer Support of the Guard and Reserve Week, 2016

By the President of the United States of America

A Proclamation

For more than two centuries, brave patriots have given of themselves to secure our fundamental rights to life, liberty, and the pursuit of happiness—and in times of both war and peace, members of the National Guard and Reserve have stood ready to don our uniform, answer our Nation's call, and protect our way of life. This week, we recognize the important role played by the families, employers, and communities of these men and women in ensuring they can step forward and serve our country when they are needed most.

There are more than one million members of our National Guard and Reserve. Throughout the year, they dutifully train and prepare so that when they are called at a moment's notice to serve their Nation, they are able to serve with the honor and dedication that have long been hallmarks of our Armed Forces. Balancing their lives as civilians with their responsibilities in uniform, they defend and protect our people at home and abroad. In the face of natural disasters and humanitarian crises, they are quick to respond and offer assistance; during periods of conflict and strife, they help keep us safe and protect our national interests.

These citizen-Soldiers, Sailors, Airmen, Marines, and Coast Guardsmen deserve the full backing of their civilian employers and the promise of a secure and stable life here at home. From the businesses that seek to recruit and retain these patriots in the workplace to the supporters who provide leadership and resources, this unconditional care for our Guardsmen and Reservists and their families is part of what makes our military the greatest fighting force the world has ever known.

Americans who volunteer to serve their country should always be able to partake in its opportunities. First Lady Michelle Obama and Dr. Jill Biden's Joining Forces initiative has worked to make it easier for military spouses and veterans to find employment and ensure they are supported in the workforce. And my Administration has worked across all sectors to encourage communities to hire veterans and match members of the Guard and Reserve to the jobs they deserve. We must never waver in our commitment to fight for those who have fought for us, and we must continue striving to connect each of them with opportunities to keep their families strong and our country competitive.

During National Employer Support of the Guard and Reserve Week, let us honor the members of our Guard and Reserve for their steadfast dedication to us all—both in and out of uniform. And let us acknowledge the families, employers, and businesses whose encouragement and flexibility have enabled our military to thrive, and whose support has been vital to the success, stability, and security of our Nation.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim August 21 through August 27, 2016, as National Employer Support of the Guard and Reserve

Week. I call upon all Americans to join me in expressing our heartfelt thanks to the members of the National Guard and Reserve and their civilian employers. I also call on State and local officials, private organizations, and all military commanders to observe this week with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this nineteenth day of August, in the year of our Lord two thousand sixteen, and of the Independence of the United States of America the two hundred and forty-first.

A handwritten signature in black ink, appearing to be Barack Obama's, consisting of a large 'B' followed by a circle and a horizontal line.

Rules and Regulations

Federal Register

Vol. 81, No. 164

Wednesday, August 24, 2016

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

AGENCY: U.S. Office of Personnel Management.

ACTION: Final rule.

SUMMARY: The U.S. Office of Personnel Management (OPM) is issuing a proposed rule to redefine the geographic boundaries of the Asheville, NC, and Charlotte, NC, appropriated fund Federal Wage System (FWS) wage areas. The final rule will redefine Alexander and Catawba Counties, NC, from the Charlotte wage area to the Asheville wage area. These changes are based on a consensus recommendation of the Federal Prevailing Rate Advisory Committee (FPRAC) to best match the counties proposed for redefinition to a nearby FWS survey area.

DATES: *Effective date:* This regulation is effective on August 24, 2016.

Applicability date: This change applies on the first day of the first applicable pay period beginning on or after September 23, 2016.

FOR FURTHER INFORMATION CONTACT: Madeline Gonzalez, by telephone at (202) 606-2858 or by email at *pay-leave-policy@opm.gov*.

SUPPLEMENTARY INFORMATION: On April 27, 2016, OPM issued a proposed rule (81 FR 24737) to redefine Alexander and Catawba Counties, NC, from the Charlotte, NC, wage area to the Asheville, NC, wage area. FPRAC, the national labor-management committee responsible for advising OPM on matters concerning the pay of FWS employees, reviewed and recommended

these changes by consensus. There are no FWS employees stationed in Alexander or Catawba Counties.

The proposed rule had a 30-day comment period, during which OPM received no comments.

Regulatory Flexibility Act

I certify that these regulations will not have a significant economic impact on a substantial number of small entities because they will affect only Federal agencies and employees.

DEPARTMENT OF ENERGY

10 CFR Parts 430 and 431

RIN 1904-AD63

[Docket Number EERE-2016-BT-PET-0016]

Energy Conservation Program: Notice of Partial Grant and Partial Denial of Petitions To Amend the Error Correction Rule

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule; partial grant and partial denial of petitions.

SUMMARY: The U.S. Department of Energy (“DOE”) is granting in part and denying in part a series of petitions to amend a recently published rule that established a procedure through which a party can, within a prescribed period after DOE posts a rule establishing or amending an energy conservation standard, identify a possible error in such a rule and request that DOE correct the error before the rule is published in the **Federal Register** (“error correction rule”). DOE also provided an

opportunity for the public to comment on these petitions. This document responds to both the petitions and related comments that were submitted and received in accordance with the timelines established in a prior **Federal Register** notice inviting such petitions and comments.

DATES: This partial grant and partial denial is effective September 23, 2016.

ADDRESSES: All petitions and comments filed in accordance with the timelines set forth in the prior **Federal Register** notice have been entered into docket number EERE-2016-BT-PET-0016. The docket is available for review at <http://www.regulations.gov>. For further information on how to review the docket, contact Mr. John Cymbalsky at

(202) 287-1692 or by email: John.Cymbalsky@ee.doe.gov.

FOR FURTHER INFORMATION CONTACT: Mr. John Cymbalsky, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Program, EE-5B, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 287-1692 or John.Cymbalsky@ee.doe.gov.

SUPPLEMENTARY INFORMATION:

I. Background

The Department of Energy (“DOE” or the “Department”) recently published a final rule establishing a procedure through which an interested party can, within a 30-day period after DOE posts a rule establishing or amending an energy conservation standard, identify a

possible error in such a rule and request that DOE correct the error before its publication in the **Federal Register**. See 81 FR 26998 (May 5, 2016). In that same issue of the **Federal Register**, DOE also invited the public to submit petitions to amend the error correction rule. DOE provided that it would use its best efforts to issue a public document by August 10, 2016, responding to any such petitions submitted by June 6, 2016, and any timely filed comments responding to those petitions. See 81 FR 27054 (May 5, 2016).

DOE received four petitions to amend the rule and several comments responding to those petitions. The submitters of these documents, along with their affiliations, are identified in Table 1.

TABLE 1—LIST OF PETITIONERS/COMMENTERS

Petitioners (P)/Commenters (C)	Organization type	Identifier/Acronym
Air Conditioning, Heating and Refrigeration Institute (P, C)	Heating, Ventilation and Air Conditioning (“HVAC”) Industry Trade Organization.	AHRI.
American Gas Association and American Public Gas Association (C).	Energy Industry Trade Organization	AGA-AGPA.
Appliance Standards Awareness Project, Earth Justice, and Natural Resources Defense Council (P, C).	Energy Efficiency Advocates	Joint Advocates.
Association of Home Appliance Manufacturers (C)	Home Appliance Industry Trade Organization	AHAM.
Husmann Corporation (P, C)	Refrigeration Equipment Manufacturer	Husmann.
Lennox International (P, C)	HVAC Manufacturer	Lennox.
Traulsen and Kairak (C)	Refrigeration Product and Equipment Manufacturers	Traulsen-Kairak.
Zero Zone (C)	Refrigeration Equipment Manufacturer	Zero Zone.

NOTE: AHAM filed both joint comments with AHRI as well as separate comments on its own behalf.

II. Summary of and Responses to Comments

At the outset, DOE notes that the petitioners agreed with the fundamental underpinnings supporting the basis for the error correction rule. First, the petitioners—AHRI, Husmann, the Joint Advocates, and Lennox—all agreed with the stated purpose of the error correction rule—that is, to prevent errors from affecting energy conservation standards applicable to consumer products or commercial equipment. AHRI Petition to Amend, EERE-2016-BT-PET-0016-0005, at 1–2; Husmann Petition to Amend, EERE-2016-BT-PET-0016-0003, at 1; Joint Advocates Petition to Amend, EERE-2016-BT-PET-0016-0006, at 1; and Lennox Petition to Amend, EERE-2016-BT-PET-0016-0004, at 1. They also generally agreed that errors in need of correction are not common, see Lennox Petition, No. 0004, at 1 and Joint Advocates Petition, No. 0006, at 1, and that the process laid out in the error correction rule should not be used as a means to revisit and re-argue issues that have already been raised and addressed

during the rulemaking process. See AHRI Petition, No. 0005, at 1–2 and Lennox Petition, No. 0004, at 1. AHRI and Lennox also acknowledged that applying the error correction process to direct final rules established under 42 U.S.C. 6295(p)(4) was not warranted, assuming that identification of an error would qualify as an “adverse comment” for purposes of 6295(p)(4). See AHRI Petition, No. 0005, at 10–11 and Lennox Petition, No. 0004, at 4.

While the petitioners agreed with the need and rationale for the error correction rule, they also suggested several changes to the rule. These suggestions are discussed in the following sections.

A. Time Within Which To File an Error Correction Request, Statutory Deadlines

The error correction rule requires that a party must submit a request for correction “within 30 calendar days of the posting of the rule.” 10 CFR 430.5(d)(1). The timelines also prescribe a period within which DOE will submit any corrected rule for publication in the **Federal Register**. See 10 CFR 430.5(d)

through (f). Petitioners and commenters responded to each of these issues.

First, with respect to potential modifications to the rule, each of the industry petitioners asked that DOE consider providing a longer period of time than the 30 days prescribed by the rule within which to submit an error correction request. See 81 FR at 27005. The petitioners asserted that because DOE’s standards rulemakings are often both complex and lengthy, additional time beyond the prescribed 30 days should be provided to ensure that any errors in the standards final rule are identified to DOE. The suggested timelines from these petitioners ran from 45 days up to 60 days. See Husmann Petition, No. 0003, at 1; Lennox Petition, No. 0004, at 3; and AHRI Petition, No. 0005, at 8. Among these petitioners, one—AHRI—also suggested that DOE consider extending the time period for submitting error correction requests until the effective date of a rule. According to AHRI, extending the period in this way would “not further delay the effective date of the rule,” although AHRI also stated that its approach is “consistent with the

APA power to postpone effective dates.” AHRI Petition, No. 0005, at 8–9. In AHRI’s view, such an option would also be consistent with DOE’s prior view of the meaning of the term “effective date” and is supported by the fact that a rule is not necessarily effective upon publication in the **Federal Register**. AHRI Petition, No. 0005, at 8–9. AHRI also asserted that the inadequacy of a 30-day review period is recognized in EPCA by virtue of its inclusion of a 60-day period for parties to challenge a final rule establishing an energy conservation standard in court. *Id.* at 8.

Second, the Joint Advocates argued in favor of an exception to the error correction rule when following the rule’s timing provisions for review would conflict with statutorily mandated rulemaking deadlines. In their view, case law suggests that there are only limited circumstances when federal agencies can extend statutory deadlines, none of which apply in the case of an error correction rule. In the event it is needed to avoid potential timing conflicts with statutory deadlines, the Joint Advocates suggested that DOE publicly post a draft of a standards final rule once it is transmitted to the Office of Management and Budget for pre-posting review, in order to provide more lead-time for parties to check for errors. Joint Advocates Petition, No. 0006, at 1–2.

Others disagreed with the Joint Advocates’ suggestion. *See* Zero Zone, No. 0007, at 1; Lennox, No. 0009, at 2–3; AHRI–AHAM, No. 0012, at 2–5. Zero Zone argued that the Secretary should not be held to an exact time period because it is better to achieve a correct rule through an error correction process than through a court challenge. Zero Zone, No. 0007, at 1. Lennox as well as AHRI and AHAM raised several criticisms of the Joint Advocates’ approach. First, they commented that the Joint Advocates’ approach would result in prioritizing statutory mandates regarding timing over the statutory mandate providing that DOE may not adopt energy conservation standards unless it finds that the standards are technologically feasible and economically justified. Lennox, AHRI, and AHAM suggest that this statutory conflict should be resolved by prioritizing the correction of errors, particularly because of EPCA’s anti-backsliding provision, 42 U.S.C. 6295(o)(1). AHRI and AHAM further stated that this position is supported by case law. *See* AHRI–AHAM, No. 0012, at 3–4. Second, these commenters asserted that rushing to meet a deadline is a type of situation that could lead to rulemaking errors. Third, they warned

that not allowing for the correction of errors in a rule could lead to errors resulting in litigation, which could lead to a delay in implementing new standards and result in less energy savings. Fourth, they argued that DOE would be able to manage the competing needs of satisfying any relevant statutorily mandated lead-times and the reviewing period provisions under the error correction rule. Finally, the commenters stated that allowing deadlines to prevail over the error correction process could create an incentive for DOE to delay rulemaking in order to avoid addressing errors. Lennox, No. 0009, at 2–3; AHRI–AHAM, No. 0012, at 2–5.

After further consideration, DOE is extending the amount of time for the submission of error correction requests by 15 additional days—for a total of 45 days after the posting of a final rule. Providing this additional time will better ensure that any potential errors are addressed and corrected prior to the publication of a standards final rule, which will reduce the possibility of promulgating an incorrect energy conservation standard. By taking this step, DOE seeks to increase the likelihood that the public will identify any errors of the types addressed by the error correction rule. Correction of these errors will be beneficial for the reasons discussed in the Final Rule. With respect to providing a longer period of time, such as the 60 days suggested by industry petitioners, in DOE’s view, offering a 60-day period as a matter of routine practice for identifying the types of errors addressed by this rule is unnecessary, as these kinds of errors typically can be readily identified well within the time period provided in this rule. DOE also notes that, contrary to AHRI’s contention, its approach is consistent with the provision in EPCA that provides entities with 60 days from the date a rule is published in the **Federal Register**¹ to file a petition for review in a court of appeals. Such petitions may address a range of grounds for challenging a final rule, whereas the error correction rule is limited in scope.² Accordingly, it should take parties substantially less time to identify errors as defined in the error correction rule and to prepare an error correction request.

AHRI also suggested that DOE extend the period for submitting error correction requests until the effective

date of a rule. This suggestion misapprehends the purpose and operation of the error correction rule. AHRI’s request, by its nature, would permit error correction requests to be submitted after publication of a rule in the **Federal Register**, because the effective date of a rule necessarily occurs after such publication. But applying the error correction rule to rules that have already been published in the **Federal Register** would make little sense, because the central features of the error correction rule are that DOE delays publishing a rule in the **Federal Register** (for 45 days after posting the rule) to allow for the submission of error correction requests, and that DOE commits to considering properly submitted error correction requests before publishing the rule in the **Federal Register**. After DOE has published a rule in the **Federal Register**, neither outcome is available. As DOE explained in establishing the error correction rule, the anti-backsliding provision in EPCA, 42 U.S.C. 6295(o)(1), makes it particularly important to be able to correct regulatory text before DOE publishes a rule in the **Federal Register**. By contrast, a person submitting an error correction request after publication could just as easily make use of existing statutory mechanisms to ask DOE to amend the published rule. DOE does not see, and AHRI did not explain, why those mechanisms would be inadequate so that a special post-publication error correction process would be warranted.³

DOE believes that the pre-publication error correction process set forth in the amended rule is superior to an error correction process permitting the submission of error correction requests during the existing 30-day pre-publication period through the effective date of a rule, which post-dates the publication of a rule in the **Federal Register**. The Joint Advocates argue that “[e]xtending the error correction process

³ DOE recognizes that because the error correction rule required parties to submit error correction requests within 30 days of a rule’s posting (45 days per the amendment described above), while DOE might not publish the rule in the **Federal Register** until later (pursuant to § 430.5(f)), there may, for a given rule, be a period of time in which DOE has not yet published a rule in the **Federal Register** but is not accepting requests under the error correction process. That period is important, because DOE must have some time in which it is able to conclude its consideration of error correction requests and proceed to publish a rule. If DOE committed that it would not publish a rule until it had considered every error correction request submitted before publication—even those submitted well after the 30-day (now 45-day) period—the publication of rules could be significantly delayed. Because compliance dates depend on the dates of publication, that outcome would upset the balance that DOE has struck in committing to a short delay for the sake of correcting errors.

¹ Henceforward in this document, the words “published” and “publication” refer to a document being published in the **Federal Register**.

² AHRI’s request for a reconsideration process that would allow for the consideration of any type of issue with a posted rule is discussed *infra*.

beyond a rule's publication in the **Federal Register** would ignore that DOE lacks the authority to weaken or postpone a standard beyond that point" under 42 U.S.C. 6295(o)(1), EPCA's anti-backsliding provision. Joint Advocates, No. 0013, at 1. If the Joint Advocates are correct, then AHRI's suggestion that DOE extend the time period for submitting error correction requests beyond publication of a rule in the **Federal Register** is obviously unworkable because DOE would be precluded from granting error correction requests unless doing so resulted in more stringent energy conservation standards.

DOE need not, however, decide in this rulemaking whether the Joint Advocates are correct because, even if EPCA and the APA granted DOE the authority to grant any error correction request submitted after the publication of a standards rule in the **Federal Register**, DOE would still decline to adopt AHRI's suggestion that it extend the current 30-day pre-publication period for submitting error correction requests until the effective date of a rule. Contrary to AHRI's assertion (AHRI Petition, No. 0005, at 8), adopting that suggestion would further delay the energy savings benefits of a standards rule where, among other circumstances, DOE decides to change a standards rule in response to an error correction request submitted after publication of a rule in the **Federal Register**. That is so because such a changed rule would need to be published in the **Federal Register**, and EPCA provides that compliance dates must be set a certain period of time after the "publication" of rules in the **Federal Register**. See 81 FR at 27,002; see also *supra* note 2. Such a delay is unacceptable, particularly given that DOE has determined that the 45-day period DOE is adopting for the submission of error correction requests is sufficient to permit the public to identify possible errors in its standards rules. Moreover, AHRI's approach would result in substantial uncertainty for the regulated community because manufacturers would not know whether they would be required to conform to standards set forth in rules published in the **Federal Register** until DOE subsequently announced its decision on pending error correction requests. But the very purpose of the EPCA provisions setting compliance dates a certain amount of time after publication of a standard in the **Federal Register** is to provide manufacturers enough time to prepare to implement the new standards. AHRI's suggestion would effectively reduce this period of time in

many circumstances (such as where DOE decides, after a rule is published in the **Federal Register**, that it will make no changes to a rule), to the detriment of the regulated community. For all of these reasons, even if DOE could adopt AHRI's suggestion without running afoul of the anti-backsliding provision and other requirements set forth in EPCA and the APA (a question that DOE need not decide), it would not—and does not—adopt that approach.

DOE is also declining to adopt the approach suggested by the Joint Advocates. In DOE's view, ensuring that its energy conservation standards published in the **Federal Register** comport with the judgments DOE has made heavily outweighs the potential costs associated with a modest delay in the **Federal Register** publication of a given standards rule. Moreover, the error correction rule promotes compliance with the statutory mandate that DOE not adopt a standard unless it determines, *inter alia*, that the standard is technologically feasible and economically justified. See, e.g., 42 U.S.C. 6295(o)(2) and 6316(a). By providing the opportunity to file an error correction request to notify DOE of potential errors in the final rule's regulatory text, DOE can more readily identify and correct these errors prior to the rule's publication in the **Federal Register**. An error that could have been identified, if given this opportunity, might otherwise become the basis of a legal challenge that could delay the rule yet further. DOE's error correction process seeks to avoid those legal challenges. In addition, as noted earlier, correcting an error means bringing the regulatory text into harmony with DOE's policy judgment, as reflected in the rest of the rulemaking documents. The resulting regulatory text can be expected to fulfill and balance the multiple goals of EPCA better than the erroneous text would have.

While providing a pre-publication error correction process may require the expenditure of a modest amount of additional time, in DOE's view, weighing the potential energy savings losses of this relatively small delay against the benefits of correcting errors, given that errors, on occasion, can occur, cuts in favor of providing potential error correction requesters with the additional time provided by the error correction rule to review and identify errors to the Secretary.

B. Overly Narrow Definitions

The error correction rule defined a number of terms related to the error correction process. Among these terms were definitions for "Error," "Party,"

and "Rule." The rule defined "Error" as "an aspect of the regulatory text of a rule that is inconsistent with what the Secretary intended regarding the rule at the time of posting." 10 CFR 430.5(b). That definition also provided three examples of possible mistakes that could give rise to "Errors"—typographical mistakes, calculation mistakes, and numbering mistakes. See *id.* The term "Party" was defined as "any person who has provided input during the proceeding that led to a rule by submitting timely comments (including ex parte communications properly made within the relevant comment period) in response to a notice seeking comment or by providing substantive input at a public meeting regarding the rulemaking." *Id.* Finally, a "Rule" was defined as "a rule establishing or amending an energy conservation standard under the Act." 10 CFR 430.5(b).

Industry petitioners viewed these definitions as overly narrow. First, in their view, the definition for "Error" should be broadened to include not only the regulatory text of a final rule but errors contained within the accompanying Technical Support Document ("TSD") and the final rule's preamble discussion. With respect to TSD-related errors, the petitioners noted that the analysis within the TSD may be needed to help identify potential errors, which would necessitate including these TSD-related errors as part of the error correction rule. Additionally, they noted that new information presented in the preamble should be subject to comment since that information is often intertwined with the regulatory text itself. Lennox argued that errors in the preamble should be included because stakeholders will not have had a prior opportunity to comment on new information presented in the preamble discussion of a final rule. AHRI argued that the definition should be amended to make it objective, not subjective, and that stakeholders cannot guess the "intent" of the Secretary. Furthermore, AHRI expressed concern that a subjective definition could give rise to unfairness if DOE makes "post hoc assertions" about the Secretary's intent that did not in fact exist at the time of the posting of a final rule. See AHRI Petition, No. 0005, at 11–13; Lennox Petition, No. 0004, at 5.

Second, some industry petitioners suggested that the rule's definition of the term "Party" was too narrow. See Hussmann Petition, No. 0003, at 2; Lennox Petition, No. 0004, at 5–6. In their view, this term should be expanded to include contributors to group responses that are filed as

comments during an on-going rulemaking and should not be limited to only the organizations that filed comments responding to a proposal. Lennox stated that an individual's status as a commenter in a rulemaking is irrelevant if the goal of the error correction rule is to correct errors in a given rule. Citing 42 U.S.C. 6305(b), in Lennox's view, the ability to file an error correction request should not hinge on whether a potential error correction requester filed comments in the underlying rulemaking proceeding. It also suggested that both this term and the related requirement that an individual demonstrate how it satisfies the "Party" requirement when submitting an error correction request (see 10 CFR 430.5(d)(4)) be dropped from the rule. Lennox Petition, No. 0004, at 5–6.

Finally, the industry petitioners viewed the definition of "Rule" as too narrow. In their view, this term should include rules besides energy conservation standard rulemakings. The petitioners asserted that this term should include test procedure rulemakings in addition to energy conservation standard rulemakings. According to Lennox, test procedure rules are complex and can have an impact on efficiency ratings when intertwined with energy conservation standards. Lennox Petition, No. 0004, at 2–3. In AHRI's view, adding test procedure rules to the definition would promote transparency. It asserted that test procedure rulemakings are intertwined with efficiency standards and contain voluminous, technical data; are often not issued until after, or simultaneously with, efficiency standards; and have the same "real-world effect" as do energy conservation standards. AHRI Petition, No. 0005, at 4–5 n.2 & 7; Lennox Petition, No. 0004, at 2–3. Hussmann suggested that "all rule types" should be included as part of this definition. Hussmann Petition, No. 0003, at 1–2.

Commenters responding to these points largely agreed with the industry petitioners. Most commenters generally agreed with AHRI's criticisms of the definition for "Error." Zero Zone, No. 0007, at 1; AHAM, No. 0008, at 2; Lennox, No. 0009, at 1; AGA-APGA, No. 0010, at 1; Traulsen-Kairak, No. 0011, at 1. Most commenters also agreed that the definition of "Party" is too narrow. Zero Zone, No. 0007, at 1; Lennox, No. 0009, at 2; AGA-APGA, No. 0010, at 1; Traulsen-Kairak, No. 0011, at 1; AHRI-AHAM, No. 0012, at 2. Zero Zone stated that someone seeing the information for the first time might catch errors that someone familiar with

the subject might miss. Zero Zone, No. 0007, at 1. Lennox agreed with Hussmann's petition, stating that the definition should be eliminated entirely because the goal of error correction is to detect errors. Lennox, No. 0009, at 2. AHRI and AHAM added that the source reporting an error is irrelevant because the purpose of error correction is to identify errors. AHRI-AHAM, No. 0012, at 2. Most commenters also agreed that the definition of "Rule" is too narrow. Zero Zone, No. 0007, at 1; AHAM, No. 0008, at 2; Lennox, No. 0009 at 1; AGA-APGA, No. 0010, at 2; Traulsen-Kairak, No. 0011, at 1. Zero Zone commented that expanding the definition to include "[a]ll rules and test procedures" would ensure accurate federal documents. Zero Zone, No. 0007, at 1. AHAM echoed AHRI's petition, commenting that the error correction process will be more transparent if the definition is broadened. AHAM, No. 0008, at 2.

DOE is declining to adopt any of the suggested changes to the definitions of "Error" and "Rule," but it is amending the rule in accordance with the suggested changes regarding the rule's definition of "Party." With respect to the definition of "Error," DOE disagrees that the error correction process should be available to correct mistakes that are not in the regulatory text itself. The purpose of the error correction rule is to prevent an erroneous energy conservation standards regulation from being published because after the compliance date, products (or equipment) subject to a standard may not be sold in the United States unless they meet the standard. As a result, errors in the standards adopted in an energy conservation standards rulemaking can have large economic consequences. By contrast, preambles and technical support documents are generally not legally binding in the same way. An error in one of those documents would not have the consequences that an error in the regulatory text might.

DOE does not rule out the possibility that a mistake contained in a preamble, TSD, or other supporting material might lead the resulting regulatory text to be inconsistent with DOE's determinations in the rulemaking. In such a case, a person might properly file an error correction request that pointed out the mistake in the supporting material in the course of identifying the error in the regulatory text. But accepting input, during the brief error correction window, on mistakes in a preamble, TSD, or other supporting document that did not result in errors in the regulatory text would either be pointless (because the error was harmless) or would

essentially mean being open to revisiting the entirety of the rulemaking. DOE declines to establish a general procedure, applicable to every standards rulemaking, requiring it to reconsider every aspect of the rulemaking documents. As discussed in this preamble, having such a general reconsideration procedure would create substantially more delay than the error correction rule; and the delay would not be warranted, because DOE would generally adhere to the policy decisions it has already made.

Because the regulatory text forms the basis of what a regulated entity is legally obligated to perform, this aspect of the final rule should, in DOE's view, remain the focus of the error correction process. While DOE acknowledges that there may be potential value in addressing issues that may arise in the context of the preamble discussion or TSD (and related supporting documents), these documents, by themselves, do not impose any legal requirements on the affected regulated entities. And, to the extent that certain information in these documents creates a question regarding the validity of a particular rule, individuals are free to exercise their options under 42 U.S.C. 6306 to seek a remedy to address any applicable issues that would fall outside of the ambit of the error correction rule.

While DOE appreciates the value of ensuring that the preamble discussion and other supporting documents are free from potential errors, DOE emphasizes that, because regulated entities are held accountable for the provisions contained within the regulatory text, it is vital that this aspect of a standards final rule be correct. To the extent that a given preamble discussion warrants further clarification, DOE is willing—and has—provided supplemental guidance regarding its views. As for corrections to erroneous items within a given TSD or related DOE supporting document, DOE may address these types of issues on a case-by-case basis to eliminate any potential confusion that may arise from conflicts between those supporting documents and the final rule's regulatory text.

AHRI also criticized the definition of "Error" as involving an assessment of DOE's "intent" regarding a rule. AHRI urged DOE to adopt a definition of "Error" that is objective. Although AHRI did not suggest an alternative definition, AHRI contends that without some different definition DOE will be encouraged to provide *post hoc* rationalizations if litigation over a rule arises. DOE does not agree that the definition of "Error," as it stands, encourages *post hoc* rationalizations

during litigation. In the error correction rule, DOE explained that petitions for judicial review of standards rules should be filed after publication of the rule. Consequently, litigation over a given standards rule would arise, if at all, only after the conclusion of the error correction process.

Moreover, DOE does not agree that because the definition of “Error” refers to what DOE “intended,” the concept of “Error” is inherently subjective. Objective conceptions of intent are common in the law. For example, in interpreting a contract, objective manifestations of intent ordinarily prevail over any contrary claims about what one or the other party actually subjectively intended. With respect to the error correction process, the rule states that a claim of error must be based on evidence in the rulemaking record. Thus, the objective evidence in the rulemaking record will ordinarily illustrate whether the regulatory text contained an Error.

Finally, AHRI noted that in some circumstances a person may conclude that a regulation contains an Error but may not be able to determine what the correct version of the regulation should be. DOE acknowledges that such a situation is in principle possible, and the Department’s being notified of the potential Error would be valuable even if the submitter could not state what the correction version of the rule should be. Accordingly, DOE is amending paragraph (d)(2)(i) to permit a person to submit an error correction request without stating the correct substitute text, so long as the person states that it is unable to determine the correct text and explains why.

With respect to the definition of “Party,” which delineates who can file an error correction request, DOE is adopting the suggestion that the rule should not restrict to commenters alone the opportunity to submit such requests. As the error correction rule explained, DOE believes that individuals who have availed themselves of the opportunity to comment on DOE’s standards rulemakings, at public meetings or via written comments, are in the best position to identify potential errors with a given final rule. Those participating individuals who have provided comments to assist the agency in crafting the final rule’s standards have demonstrated both the interest and requisite familiarity with the relevant rulemaking and its underlying analyses and data to help DOE in readily identifying errors that may appear in the final rule’s regulatory text. However, DOE recognizes that other persons may, on occasion, be able to identify errors.

DOE’s original decision to define “Party” based on prior participation was based on a desire to avoid the burden of responding to voluminous input from persons who, generally lacking familiarity with a rulemaking, might submit suggestions that were really revisiting the substantive decisions behind the rule rather than error correction requests. In light of the petitions and comments, DOE has become convinced that such improper submissions would probably not be as common as it had thought. A person will likely not undertake the effort to prepare and submit a request during the error correction period without making some assessment that the submission will probably be proper. Improper submissions might occur, of course, but because they would represent unfruitful effort, DOE expects that submitters will try to avoid them. In light of this revised balancing of the considerations related to the term “Party,” DOE is dropping the definition and modifying its regulations to reflect that any person may submit an error correction request.

Finally, with respect to which rules would be subject to the error correction rule’s provisions, DOE is declining to extend the rule’s application beyond rulemakings that establish or amend energy conservation standards. While it is also important to ensure that other rules such as those for test procedures are error-free, DOE has more flexibility to address errors in such rulemakings because there is no question that test procedures can be modified without regard to whether they have already been published or become effective. Accordingly, in DOE’s view, while test procedure rulemakings can be complex, potential problems that are discovered in a test procedure’s regulatory text can be addressed more readily than with standards rules. DOE also notes that the complexity of test procedure rules, which stems in large part from the very detailed and comprehensive text of the test procedure itself—along with related industry-based testing protocols that are often incorporated by reference—weighs in favor of not including test procedure rulemakings as part of the error correction process. While DOE believes that errors contained in the regulatory text of a standards final rule can be identified within the window prescribed in this rule, the variations in both length and complexity of the regulatory text of test procedures makes the application of this process less workable for these rulemakings. And if a person believed that DOE needed to correct an error discovered in the test procedure, it would be free to file a

petition for rulemaking asking DOE to initiate a rulemaking to correct that rule. See 5 U.S.C. 553(e).

C. Publication Timing

The error correction rule prescribes a timeline under which DOE will submit a rule to the Office of the Federal Register for publication. If the Secretary determines that a correction is necessary after receipt of a properly filed request, the Secretary will submit a corrected rule for publication in the **Federal Register** within 30 days after the 30-day Request for Correction window (which, as noted above, is being changed to a 45-day window), “absent extenuating circumstances.” 10 CFR 430.5(f)(3).

The Joint Advocates objected to the quoted language and argued that the error correction rule should contain a more definitive statement regarding when the corrected rule will be submitted for publication in the **Federal Register**. In their view, DOE’s use of the phrase “absent extenuating circumstances” in this context creates an ambiguity with respect to when DOE will submit a corrected rule for publication. The Joint Advocates suggested that DOE either drop this phrase or specify exactly how much time the Secretary will take to submit a corrected rule for publication. See Joint Advocates Petition, No. 0006, at 2–3.

Lennox indicated in its comments that DOE cannot foresee every possible error and that the complexity of past DOE rulemaking analyses suggests that more than 30 days may sometimes be needed to resolve a given error correction request. In its view, devoting an additional amount of time in favor of ensuring that a standard is correct is preferable to the alternative of having a permanently flawed standard. Lennox, No. 0009, at 3.

DOE is declining to make any change in response to this part of the Joint Advocates’ petition. The language in 10 CFR 430.5(f)(3) was crafted to ensure that DOE could adjust to potential situations where additional time beyond the 30-day period for submitting a corrected rule to the **Federal Register** may be required. While DOE will make every effort to adhere to this 30-day timeline, it is not inconceivable that there may be occasions in which an unexpected delay may occur that would necessitate the need for additional time, such as where an error relates to particularly complex engineering analysis. Having this flexibility will help ensure that DOE has sufficient time to thoroughly review all timely error requests it receives and make any necessary corrections that may be

required to the final rule prior to its publication in the **Federal Register**.

D. Clarifying Certain Text

The error correction rule uses the term “posting” to refer to the Secretary’s action causing a rule under the Act to be posted on a publicly-accessible Web site. See 10 CFR 430.5(c)(1). Related provisions at 10 CFR 430.5(d)(3) and 10 CFR 430.5(f)(3) refer to the Secretary’s “issuance” of a rule. Under the former provision, the rule notes that the evidence to substantiate an error correction request or evidence of the error must be in the rulemaking record “at the time of the rule’s issuance”; under the latter, the rule indicates that upon receipt of a properly filed correction request “after issuance of a rule,” DOE will follow a prescribed timeline for submitting a corrected rule to the **Federal Register** for publication.

The Joint Advocates stated that, based on this definition, DOE should replace “issuance” with “posting” in these two instances in the error correction rule, namely, at 10 CFR 430.5(d)(3) (which describes the point by which evidence supporting an error correction request must be entered into the rulemaking record) and 10 CFR 430.5(f)(3) (which describes the point by which DOE must receive a properly filed error correction request). The Joint Advocates asserted that the term “issuance” means publication in the **Federal Register**, which was not what DOE intended at those instances, but rather “posting.” The Joint Advocates suggested that the language be corrected to avoid confusion. Joint Advocates Petition, No. 0006, at 3.

Zero Zone commented that it generally disagreed with the Joint Advocates’ Petition. Zero Zone, No. 0007, at 1. AHRI and AHAM commented that they agreed with the Joint Advocates that “issuance” of a final rule does not occur until publication in the **Federal Register**. AHRI-AHAM, No. 0012, at 5.

In response to the petition and comments, DOE is amending its error correction rule to clarify the point by which evidence supporting an error correction request must be in the rulemaking record (10 CFR 430.5(d)(3)) and the point after which a properly filed error correction request is submitted to DOE (10 CFR 430.5(f)(3)). DOE is clarifying that these points are denoted by the posting date of the final rule. Making this change will help ensure that there is no confusion as to when the supporting evidence must be in the rulemaking record and after which a properly filed request is submitted. DOE notes that it is also

clarifying 10 CFR 430.5(c)(3) to more clearly indicate that errors must be identified as provided in 10 CFR 430.5 and that DOE may make any necessary corrections in the regulatory text submitted to the Office of the **Federal Register**.

E. Evidence That May Be Relied Upon in Error Correction Requests and the Scope of the Administrative Record That Would Be Filed in Any Court Challenge to a Final Rule

The error correction rule states that to substantiate an error correction request, the evidence relied upon must be evidence that is “in the record of the rulemaking at the time of the rule’s issuance, which may include the preamble accompanying the rule. The Secretary will not consider new evidence submitted in connection with the request.” 10 CFR 430.5(d)(3). AHRI petitioned to broaden the scope of evidence that the Secretary could consider to include any new evidence. AHRI Petition, No. 0005, at 6. According to AHRI, there is no precedent for excluding “new evidence.” *Id.*

In addition, the preamble to the error correction rule stated that DOE “consider[ed] the record with respect to a rule subject to the error correction process [to be] closed upon the posting of the rule.” 81 FR at 26999. AHRI construed this sentence to mean that, in the event of a court challenge to a standards rule, no documents postdating the posting of a rule would be included in the administrative record filed in a court of appeals. AHRI Petition, No. 0005, at 9–10. AHRI argued that exclusion of such documents from an administrative record filed in court would be contrary to the Administrative Procedure Act. *Id.*

Industry commenters agreed with AHRI’s suggested approach. Zero Zone, No. 0007, at 1; AHAM, No. 0008, at 2; Lennox, No. 0009, at 1; AGA-APGA, No. 0010, at 1; Traulsen-Kairak, No. 0011, at 1. AHRI also commented that the Joint Advocates indirectly supported AHRI’s Petition. According to AHRI, when the Joint Advocates stated that a final rule is not “issued” until it is published in the **Federal Register**, their statement supported AHRI’s view that the rulemaking record is not yet closed when a rule is “posted.” AHRI-AHAM, No. 0012, at 5.

With respect to AHRI’s distinct concern about the scope of the administrative record that would be filed in a court of appeals in the event of a challenge to a final standards rule published in the **Federal Register**, DOE notes that it did not intend for the preamble to the error correction rule to

make any statements about the contents of such an administrative record. DOE clarifies that an administrative record filed in a court reviewing a final standards rule published in the **Federal Register** would include all documents that are required by law to be part of such a record, including (1) all properly filed error correction requests (including any supporting materials submitted to DOE); (2) DOE’s responses to such requests; and (3) the final rule published in the **Federal Register**. DOE believes that this clarification addresses the concerns articulated by AHRI and others that the administrative record not be closed upon the posting of a standards rule. DOE emphasizes, however, that inclusion in the administrative record of supporting materials attached to an error correction request does not mean that DOE must substantively consider such materials. To the contrary, DOE is only obligated to consider such materials if they satisfy all regulatory requirements, including the requirements of Section 430.5(d)(3) discussed in this preamble.

In DOE’s view, the posting of an energy conservation standards rule signals the end of DOE’s substantive analysis and decision-making regarding the applicable standards. The purpose of the error correction rule is to ensure that the legal requirements that regulated entities will need to meet—as detailed in the regulatory text of a given standards rule—accurately reflect that completed substantive analysis and decision-making. It is not possible for a regulation to be in error, as defined for purposes of the error correction rule, based on evidence first introduced after the substantive decision has been made. Accordingly, such a consideration would be beyond the scope of the error correction process that DOE has developed. It would, essentially, be akin to a request for reconsideration; the submitter would be arguing that, in light of additional evidence, DOE should alter its decision. For the reasons discussed elsewhere in this preamble, DOE declines to expand the scope of the error correction process to encompass requests for reconsideration of its standards rules on any ground.

F. DOE Responses to Error Correction Requests

The error correction rule describes three potential options that could occur after the period for submitting error correction requests expires. See 10 CFR 430.5(f). First, if one or more “properly filed requests” are submitted and the Secretary determines that no correction is necessary, the Secretary has discretion on whether to provide a

written response. The Secretary may, for example, submit the final rule for **Federal Register** publication as posted, thereby effectively denying any requests. See 10 CFR 430.5(f)(1). Second, if no properly filed requests are submitted and the Secretary does not identify any errors, the Secretary will submit the final rule for publication as it was posted. See 10 CFR 430.5(f)(2). Finally, if the Secretary receives a properly filed request and determines that a correction is necessary, the Secretary will submit the final rule for publication with the correction included. See 10 CFR 430.5(f)(3).

Several petitioners stated that DOE should provide a public response to requests for correction, regardless of whether the Secretary deems that any correction is merited. Hussmann Petition, No. 0003, at 1; Lennox Petition, No. 0004, at 4; AHRI Petition, No. 0005, at 10. Hussmann stated that DOE should do so, either before or at the time of publication of a final rule in the **Federal Register**. Hussmann Petition, No. 0003, at 1. Lennox and AHRI stated that providing a response will promote transparency and should not take much additional time for DOE to prepare, assuming that DOE already analyzed any requests. Lennox Petition, No. 0004, at 4; AHRI Petition, No. 0005, at 10. Lennox added that rejecting an error correction request through a non-response is not acceptable because petitioners incur real costs when submitting a request. Lennox Petition, No. 0004, at 4.

Related to the Secretary's options under 10 CFR 430.5(f), petitioners made reference to a statement in the preamble to the error correction rule under the "Publication in the **Federal Register**" section. In particular, DOE indicated that there may be instances where DOE "may choose not to correct the regulation because it concludes the regulatory text is nonetheless acceptable; for instance, because it considers the error insignificant." 81 FR at 27002. Both Lennox and AHRI stated that, especially when an error is considered "insignificant" by the Secretary, DOE should provide a public response not only to promote transparency but also to reduce subsequent litigation. AHRI argued that DOE should furnish a rationale or justification explaining why an error is deemed to be insignificant, while Lennox asserted that if DOE is mistaken about an error being insignificant and does not publish a response, the absence of a response could lead "to unintended actions by stakeholders, including the exploitation of perceived loopholes."

Lennox Petition, No. 0004, at 4; AHRI Petition, No. 0005, at 10.

Most commenters generally agreed with the petitioners who urged DOE to provide a public response to requests for error correction, including when DOE deems an error to be "insignificant." Zero Zone, No. 0007, at 1; AHAM, No. 0008, at 2; Lennox, No. 0009, at 1; AGA-APGA, No. 0010, at 2; Traulsen-Kairak, No. 0011, at 1.

After giving careful consideration to this issue, DOE has decided to make public brief written indications of its handling of all properly-filed error correction requests. DOE will ordinarily summarize these indications in a single document. In DOE's view, the vast majority of cases in which it grants an error correction request are likely to involve a request that DOE correct a typographical error that appears in a posted, pre-publication version of a rule. In such cases, DOE's written indication addressing the request may note only that DOE made the requested change because the reason for the change may be readily apparent to the public. When requesters have sought to identify a potential error in a posted standards rule and DOE has decided not to make the requested change, an explanation as to why that correction request has not been adopted will usually be helpful in assisting the public with understanding DOE's reasoning, and DOE will provide a brief explanation in those circumstances. Accordingly, DOE is modifying the regulatory text under 10 CFR 430.5(f) to include a provision indicating that DOE will make available a brief written statement indicating the agency's treatment of the error correction requests it received. DOE expects to make such a statement available at around the same time it publishes the rule.

G. Notice and Comment

In a separately filed comment, AHAM asked that the error correction final rule be treated as a proposed rule. It further asked that, upon granting the petition from AHRI, DOE seek stakeholder input in order to ensure that the next version of the error correction process does not suffer from the same deficiencies as the first version. AHAM Comments, No. 0008, at 2.

As an initial matter, DOE notes that the error correction rule was published as a final rule and has already taken effect. Moreover, DOE is not required to provide the public with an opportunity to comment on the error correction rule or any amendments to that rule because it is a rule of agency procedure and practice. See 5 U.S.C. 553(b)(A).

However, as indicated elsewhere in this document, DOE is amending the error correction rule in part to address some of the suggestions offered by both petitioners and commenters. Accordingly, interested members of the public have been afforded the opportunity to provide input into shaping the final version of the error correction rule being adopted in this document.

H. Response to Petitions Seeking Full Reconsideration Procedures

AHRI's principal request is for DOE to replace the error correction rule with a process that "provide[s] for the posting of a pre-publication version of final rules under 42 U.S.C. 6293 and 6295 (and the corresponding provisions applicable to commercial equipment, sections 6313 and 6314) for a period of 60 days and allow[s] petitions for reconsideration under the APA during that prepublication period." AHRI Petition, No. 0005, at 2–3. Embedded in this request, it appears, are the following five suggested changes to the current error correction rule, all of which AHRI also separately requests, in the alternative, in the event that DOE denies its principal request: (1) Broaden the types of arguments that may be asserted in error correction requests to encompass any grounds for changing a rule, not just arguments identifying an "error" as defined in the current rule, *id.* at 3–6; (2) allow the introduction of evidence that is not in the rulemaking record to support error correction requests, *id.* at 6; (3) expand the error correction process to include errors appearing in Technical Support Documents and perhaps other parts of the regulatory record, *id.* at 12–13; (4) expand the error correction process to include rules establishing test procedures, *id.* at 7–8; and (5) extend the 30-day period for submitting error correction requests (prior to publication in the **Federal Register**) to 60 days (also prior to publication in the **Federal Register**),⁴ *id.* at 8–9. Lennox supported AHRI's principal request, as did other industry commenters. See Lennox Petition, No. 0004, at 2 (supporting "a 60 day pre-publication period" for "Petitions for Reconsideration, as provided for under the [APA]"); AGA-APGA, No. 0010, at 1–2 (supporting pre-publication "petitions for

⁴ AHRI's request in the alternative pertaining to timing also argues that DOE could instead allow error correction requests to be submitted during the existing 30-day pre-publication period and continuing until the effective date of the rule, which follows publication in the **Federal Register**. AHRI Petition, No. 0005, at 8–9; see also AGA-APGA, No. 0010, at 2.

reconsideration, as provided for under the [APA]" and including "the full range of reconsideration petitions that the APA contemplates"); AHRI-AHAM, No. 0012, at 5 (reiterating AHRI's view that "many of the main purposes articulated in the Final Rule are best met by allowing for a 60-day pre-publication period in which Petitions for Reconsideration, as provided for under the [APA], will be considered").

DOE has explained above why it is rejecting (in part) AHRI's second through fifth requests embedded in its principal suggestion. For the reasons explained below, DOE also rejects AHRI's first request embedded in its principal suggestion (and offered as a standalone request)—that DOE expand the error correction process to encompass requests alleging any grounds for changing a rule.

DOE understands that the "full" reconsideration procedure that AHRI describes in its principal request, as well as in item 1 under its alternative request, would encompass the full range of issues germane to a given rulemaking. DOE has considered whether to adopt a reconsideration procedure along the lines suggested by AHRI. Given the practical implications of crafting an error correction process that would allow for full reconsideration of any factual or legal issue implicated by the rulemaking, as discussed in this preamble, DOE declines to broaden the error correction rule to permit petitions asserting any ground for changing a rule.

As AHRI acknowledges, energy conservation rulemakings are an "enormous undertaking . . . in terms of time, effort and cost, both on the part of stakeholders and DOE." AHRI Petition, No. 0005, at 2. In addition, these rulemakings tend to involve an extensive opportunity for comment, both through written submissions in response to notices of proposed rulemaking and notices releasing additional technical information, as well as through oral participation at public meetings held by DOE. Adding a full reconsideration process, in which the Department would specifically review a further round of comment on any matter, would substantially increase the cost of energy conservation rulemakings and the length of time they take. *See* Lennox Petition, No. 0004, at 5 (acknowledging that it is "important to bring finality to a given rulemaking"). Meanwhile, in DOE's view, given the opportunities for public input that the process already provides, a mandatory general reconsideration period covering all topics would, in many instances, not

significantly increase meaningful public participation in rulemakings.

By contrast, DOE developed the error correction rule to invite public input on a narrow but challenging category of problems, namely errors that may occur in formulating the text of regulations and that, if left uncorrected, could result in standards that would be binding on regulated parties but would not accurately reflect DOE's judgment about the appropriate standard level. Obtaining public input on "errors" as defined by the rule is particularly valuable because, by their nature, such errors are inadvertent, and thus DOE is unaware of them. In addition, the narrow error correction rule helps avoid the possibility that DOE might inadvertently adopt an energy conservation without having determined that it meets the statutory standards. That is so because many "errors" (as defined by the error correction rule) may, if uncorrected, result in the promulgation of standards that DOE did not intend to adopt. For example, if DOE's calculations in the preamble to a final rule suggested that the standard for a given product should be set at one level, but a more stringent standard was inadvertently presented in the regulatory text, that standard would not have been the one DOE intended to adopt as being technologically feasible and economically justified. By contrast, a request to change a rule on a ground other than the identification of an "error" (as defined by the error correction rule) does not raise the possibility that DOE adopted a standard in the regulatory text without determining that it was technologically feasible and economically justified. Moreover, reviewing and responding to requests to correct errors as defined in the error correction rule should not be too burdensome because DOE will need to review only a limited scope of materials for each submission. Thus, the error correction rule is specifically tailored to address what the agency views as a critical class of inadvertent errors warranting the creation of an additional limited administrative process apart from the procedures already afforded by EPCA and the APA.

In contrast, the full reconsideration process that AHRI suggests is not closely tailored to address this key problem and would represent a commitment by DOE to revisiting the entire rulemaking record in order to assess the particulars of any issue a person might raise in a reconsideration request. Because of the open-ended nature of such a process, DOE would need to provide interested persons with a period of time to submit

reconsideration petitions that is longer than the 45-day period established by the error correction rule (as amended in this document). In addition, it would take DOE significantly more time to consider such petitions and to determine whether to change the rule in response to the petitions. Furthermore, DOE's preparation and issuance of a written response to any such reconsideration requests, as suggested by industry petitioners, would extend the process further. *See* AHRI Petition, No. 0005, at 3.

DOE declines to extend its rulemaking procedures in that fashion. Many standards-setting rules are subject to a statutory deadline. *See, e.g.,* 42 U.S.C. 6295(m)(1) (DOE must determine whether to amend an energy conservation standard for consumer products not later than six years after issuance of a final rule establishing or amending a standard); 42 U.S.C. 6295(m)(3)(A) (under which DOE must issue a rule within two years of the notice of proposed rulemaking for an amended standard); *see also* 42 U.S.C. 6316 (applying section 6295(m), including its two-year window, to a variety of industrial equipment-related energy conservation standards, including (1) electric motors and pumps, (2) commercial refrigerators, freezers, and refrigerator-freezers, (3) automatic commercial ice makers, (4) walk-in coolers and walk-in freezers, and (5) commercial clothes washers). Given the complexity of these rulemakings, these statutory deadlines are difficult to meet in current circumstances, which include considerable periods of time that lie outside of DOE's control. Trying to fit a broad reconsideration process within these already limited time periods would be even more difficult. The broader the issues available for review through an administrative reconsideration process, the greater the strain on departmental resources and the agency's ability to complete its portfolio of rulemaking proceedings within statutory deadlines. *See* Joint Advocates Petition, No. 0006, at 1–2. In addition, DOE takes the timelines in EPCA as signals of congressional concern that standards rulemakings should not be unnecessarily delayed. As the preamble to the error correction rule observed, postponing the publication of a standards rule in the **Federal Register** means delaying the benefits to consumers and to the economy that the new standard will achieve; and it prolongs the uncertainty for manufacturers about what the standard will eventually be. Accordingly, in

DOE's view, the benefits AHRI attributes to a full reconsideration option are limited and outweighed by the delay and resource strain that would follow from the implementation of such a reconsideration process.

DOE also finds unpersuasive AHRI's argument that DOE must entertain pre-publication petitions for reconsideration alleging any grounds for changing a rule because "5 U.S.C. 553(e) does not limit the grounds on which reconsideration can be pursued." AHRI Petition, No. 0005, at 5. Reliance on section 553(e) is inapposite here because DOE is not establishing the error correction process under this section. Through the error correction rule, DOE established a new procedure in addition to and independent of any statutory rights to petition for rulemaking afforded to persons under the APA and EPCA. See 5 U.S.C. 553(e) ("Each agency shall give an interested person the right to petition for the issuance, amendment, or repeal of a rule."); 42 U.S.C. 6295(n) ("[A]ny person may petition the Secretary to conduct a rulemaking to determine for a covered product if the standards contained either in the last final rule required under subsections (b) through (i) of this section or in a final rule published under this section should be amended."). To the extent that those authorities permit the filing of petitions seeking to change a rule, that option remains available to the public and is not superseded or limited by the error correction rule in any way. Thus, contrary to AHRI's position, DOE is not required by any statutory, regulatory, or other requirement to broaden the error correction procedure to encompass any ground for changing a standards rule. It is in DOE's sole discretion to determine the scope of the error correction procedure, and, for the reasons described in this preamble, the Department has reasonably concluded that this process should be limited to "errors" as defined in the rule. See *Vermont Yankee Nuclear Power Corp. v. NRDC*, 435 U.S. 519, 543–44 (1978) ("Absent constitutional constraints or extremely compelling circumstances the 'administrative agencies "should be free to fashion their own rules of procedure and to pursue methods of inquiry capable of permitting them to discharge their multitudinous duties."') (internal citations omitted).

In its petition to amend the error correction rule, AHRI refers back to certain arguments raised in its brief to the Fifth Circuit in *Lennox Int'l, Inc. v. U.S. Dep't. of Energy*, No. 14–60535, concerning AHRI's underlying July 30, 2014 Petition for Reconsideration of DOE's Rule for Walk-In Coolers and

Freezers (WICFs), Docket No. EERE–2010–BT–STD–0003, and AHRI argues that DOE must respond to those legal arguments here in order to determine whether the pre-publication error correction process should be broadened to encompass requests to change a posted rule on any ground. See AHRI Petition, No. 0005, at 5 (contending that DOE wrongly "expressed the view in denying [reconsideration of] the walk in cooler/freezer rule that it lacked the power to grant reconsideration petitions"); see also *id.* (arguing that "DOE must . . . set[] out its current position as to what [*Natural Resources Defense Council v. Abraham*, 355 F.3d 179 (2d Cir. 2004),] says about DOE's EPCA reconsideration powers"). However, the relevant parts of DOE's denial of the petition for reconsideration of the Walk-In Coolers and Freezers Rule and AHRI's subsequent Fifth Circuit brief dealt solely with the issue of DOE's authority to grant petitions for reconsideration filed after publication of a rule in the **Federal Register** and before its effective date. The legal arguments raised in that context have no bearing on the validity of DOE's rule establishing a process for correcting errors before publication in the **Federal Register**. Moreover, even if AHRI is correct that DOE has the authority to consider reconsideration petitions submitted after a rule is published in the **Federal Register**, it does not follow that DOE should expand the pre-publication error correction process to encompass petitions alleging any ground as a basis for changing a posted rule, which is a distinct question. Accordingly, DOE declines in this rulemaking to definitively resolve the legal arguments AHRI advanced in its Fifth Circuit brief regarding DOE's authority to consider petitions for reconsideration submitted after a rule is published in the **Federal Register**.

AHRI argued in its Fifth Circuit brief in *Lennox* that 42 U.S.C. 6295(o)(1)—which provides that DOE may not prescribe any amended standard that "increases the maximum allowable energy use . . . or decreases the minimum required energy efficiency" of a product—does not prevent DOE from reconsidering EPCA standards to make them less stringent when reconsideration is sought after publication in the **Federal Register** but before the effective date of the relevant rule. See AHRI Brief in *Lennox*, at 28–38. But see *Natural Resources Defense Council v. Abraham*, 355 F.3d 179 (2d Cir. 2004) (interpreting section 6295(o)(1) as applying as of **Federal Register** publication of a standards

rule); Joint Advocates, No. 0013, at 1 (same). As the preamble to the error correction rule noted, section 6295(o)(1) does not unambiguously indicate the relevant reference point (e.g., a publication in the **Federal Register**) for determining the "maximum allowable energy use" and the "minimum required energy efficiency." 81 FR at 27002.

However, because DOE has established a pre-publication error correction procedure, DOE can leave for another day the questions AHRI has raised about DOE's authority to reconsider rules that have already been published in the **Federal Register**. That is so because, regardless of whether section 6295(o)(1) bars DOE from considering some or all reconsideration petitions submitted after **Federal Register** publication, section 6295(o)(1) does not bar DOE from correcting errors prior to publication in the **Federal Register**. See 81 FR 26998, 27002–27003 (May 5, 2016) (discussing § 430.5(g) of the error correction rule and why pre-publication error correction requests do not implicate EPCA's anti-backsliding provision).⁵ Indeed, neither AHRI nor any other petitioner or commenter has contended that the error correction rule is inconsistent with section 6295(o)(1).⁶

Similarly, AHRI's Fifth Circuit brief in *Lennox* argued that 42 U.S.C. 6295(n) does not bar DOE from making a standards rule less stringent in response to a petition for reconsideration filed after the rule was published in the **Federal Register** but before the effective date of the relevant rule. See AHRI Brief in *Lennox*, at 39–41. Section 6295(n), which addresses "[p]etition[s] for amended standards," applies to "petition[s] . . . to conduct a rulemaking to determine . . . if the standards contained either in the last final rule required under [42 U.S.C.

⁵ To the extent that the preamble to the error correction rule could be construed as having definitively taken a position on whether the anti-backsliding provision is triggered by publication of final rule in the **Federal Register**, see 81 FR at 27002, DOE now clarifies that it meant to express the more limited proposition that the anti-backsliding provision permits the pre-publication correction of errors in the manner that the error correction rule establishes.

⁶ AHRI "not[e]s" that "it would [be] just as consistent with DOE's construction of [section 6295(o)(1)] for DOE to allow for a process for full reconsideration (to any degree, of any aspect) of an energy conservation standard, as contrasted with the limited scope of the error correction rule"—i.e., to allow pre-publication petitions seeking to change a standards rule on any ground. AHRI Petition, No. 0005, at 6 (internal quotation marks omitted). Nonetheless, it is within DOE's discretion to determine the scope of the error correction procedure, and DOE has reasonably concluded that the procedure should be limited to "errors" as defined in the rule.

6295(b)–(i)] or in a final rule published under [section 6295] should be amended.” DOE need not, however, resolve the question raised in the *Lennox* briefs of whether section 6295(n) applies to post-publication reconsideration petitions because, regardless of whether section 6295(n) applies to such petitions, 42 U.S.C. 6295(n) is not implicated by the pre-publication error correction procedures established under the error correction rule.

That conclusion follows from the text of section 6295(n). DOE has, for the most part, already published the “last final rule[s] required” by subsections (b) through (i) of section 6295. Thus, for nearly all new standards rules for consumer products and for any standards applicable to commercial equipment, a petition under section 6295(n) would be submitted under the second clause of that subsection, applicable to “published” rules. Regardless which clause of 6295(n) may be the basis for a rule (*i.e.*, the “required” rules clause or the “published” rules clause), DOE interprets that provision to apply no earlier than the date a rule is published in the **Federal Register**. Because error correction requests submitted pursuant to the error correction rule seeking to change a standard in a rule posted on DOE’s Web site based on an “error” are filed before the rule is published in the **Federal Register**, such requests do not qualify as section 6295(n) petitions. Section 6295(n) thus is irrelevant to whether DOE may consider and grant any given error correction request, and no petitioner or commenter (including AHRI) has argued to the contrary.⁷

⁷ Accordingly, DOE rejects AHRI’s argument that it “must reject the 42 U.S.C. 6295(n) rationale it adopted” when it denied reconsideration of the WICF rule. AHRI Petition, No. 0005, at 6. As explained in this document, 42 U.S.C. 6295(n) plainly does not apply to pre-publication error correction requests, and there is no need to substantively resolve in this rulemaking whether it applies to post-publication reconsideration petitions like the petition filed with respect to the WICF rule.

For similar reasons, DOE rejects AHRI’s suggestion that it must substantively resolve the argument AHRI advanced in its *Lennox* brief that DOE “acted inconsistently with its own action on prior reconsideration petitions” when it denied reconsideration of the WICF rule on the ground that it lacked authority to consider that petition. AHRI Petition, No. 0005, at 5. The alleged inconsistency concerns DOE’s handling of reconsideration petitions submitted *after* rules are published in the **Federal Register**. See *id.* at 5 & n.3 (citing DOE’s actions on reconsideration petitions submitted after rules were published in the **Federal Register**). As explained above, there is no need to substantively resolve in this rulemaking how DOE responds to such post-publication reconsideration petitions. DOE’s response to the submission at issue in the *Lennox* case nowhere suggested that DOE would be

As explained in this preamble, DOE has fully considered but is declining to adopt the full reconsideration procedure that AHRI suggests—irrespective of what DOE’s legal authority to accept a post-publication petition would be. Because resolution of those legal arguments is not determinative of DOE’s basis for rejecting a full reconsideration procedure in the matter at hand, DOE declines to definitively resolve the questions AHRI raises about the Department’s authority to reconsider rules that have already been published in the **Federal Register** and is reserving judgment until a more appropriate time on whether and, if so, to what extent it possesses the legal authority to create a reconsideration procedure after a rule’s publication in the **Federal Register**. The Department notes, however, that, regardless of the exact point in time when the anti-backsliding provision in section 6295(o)(1) and the amendment provision in section 6295(n) are triggered so as to have an impact on reconsideration requests, as DOE reads the provisions, they do not restrict DOE’s correction of rules pursuant to the error correction process it has established. As such, DOE’s error correction rule is consistent with both EPCA and the rationale expressed by DOE in its order denying AHRI’s petition for reconsideration in the WICF rulemaking.

It is DOE’s position that a process to correct errors such as typographical mistakes or calculation errors can be resolved at the administrative level without causing an undue burden on agency resources or the agency’s ability to comply with statutory deadlines. The error correction rule, as amended, reflects DOE’s balancing between the resource-intensive rulemaking process and its ability to offer an additional administrative process to stakeholders that will reduce the need to pursue judicial review in instances where it is clear that the relevant standard in the posted rule is not the standard the agency had intended to select.

DOE has carefully considered petitioners’ request for a full reconsideration procedure but concludes that agency and stakeholder interests will be best served by a streamlined process for correcting the errors described in the amended error correction rule.⁸

unable to establish a mechanism like the error correction process, as an exercise of its authority to engage in administrative and procedural rulemaking regarding its implementation of EPCA.

⁸ AHRI asserts various arguments about how DOE must respond to its petition to amend the error correction rule under two settlement agreements in *Lennox Int’l, Inc. v. U.S. Dep’t of Energy*, No. 14–

III. Procedural Issues and Regulatory Review

A. Administrative Procedure Act

This rule of agency procedure and practice is not subject the requirement to provide prior notice and an opportunity for public comment pursuant to authority at 5 U.S.C. 553(b)(A). The Administrative Procedure Act’s exception to the notice-and-comment rulemaking requirement for rules of agency procedure and practice reflects Congress’s judgment that such rules typically do not significantly benefit from notice-and-comment procedures, and that judgment is particularly applicable here, where the agency perceives no specific need for notice and comment. In addition, DOE has concluded that seeking further input on this rule—beyond that which has already been provided through the submitted petitions to amend and comments responding to them—would inappropriately divert valuable agency resources from other rulemakings that Congress has directed DOE to complete according to certain statutory timelines.

This rule is also not a substantive rule subject to a 30-day delay in effective date pursuant to 5 U.S.C. 553(d).

B. Review Under Executive Orders 12866 and 13563

This regulatory action is not a “significant regulatory action” under section 3(f) of Executive Order 12866. Accordingly, this action was not subject to review under that Executive Order by the Office of Information and Regulatory Affairs (“OIRA”) of the Office of Management and Budget (“OMB”). DOE has also reviewed this regulation pursuant to Executive Order 13563, issued on January 18, 2011. 76 FR 3281 (January 21, 2011). EO 13563 is supplemental to and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866. As a result, EO 13563 also does not apply to this rule.

60535 (5th Cir.). See AHRI Petition, No. 0005, at 2–5. DOE has complied with both settlement agreements because, *inter alia*, this document responding to petitions to amend the error correction rule “address[es]” AHRI’s request that DOE “consider establishing a process for full reconsideration (to any degree, of any aspect) of an energy conservation standard.” Joint Motion Embodying Further Settlement Agreement of All Parties for Dismissal Without Prejudice, *Lennox Int’l Inc. v. U.S. Dep’t of Energy*, No. 14–60535 (5th Cir.) (filed April 28, 2016). Indeed, for the reasons identified in this document, DOE declines to adopt AHRI’s principal suggestion for expanding the error correction rule, and DOE also rejects AHRI’s related request that parties be permitted to assert any grounds for changing a rule in their error correction requests.

C. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601, *et seq.*) requires preparation of an initial regulatory flexibility analysis ("IRFA") for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. Because this rule is not subject to the requirement to provide prior notice and an opportunity for public comment, it is not subject to the analytical requirements of the Regulatory Flexibility Act.

D. Review Under the Paperwork Reduction Act

This rule does not contain a collection of information for purposes of the Paperwork Reduction Act.

E. Review Under the National Environmental Policy Act of 1969

DOE has determined that this rule falls into a class of actions that are categorically excluded from review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) and DOE's implementing regulations at 10 CFR part 1021. Specifically, this rule is strictly procedural and is covered by the Categorical Exclusion in 10 CFR part 1021, subpart D, paragraph A6. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

F. Review Under Executive Order 13132

Executive Order 13132, "Federalism," 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have Federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have Federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE examined this final rule and determined that it will not have a substantial direct effect on the States, on the relationship

between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes Federal preemption of State regulations as to energy conservation for the equipment that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297(d)) No further action is required by Executive Order 13132.

G. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, "Civil Justice Reform," imposes on Federal agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; and (3) provide a clear legal standard for affected conduct rather than a general standard and promote simplification and burden reduction. 61 FR 4729 (February 7, 1996). Section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this rule meets the relevant standards of Executive Order 12988.

H. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 ("UMRA") requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104-4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action resulting in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of

\$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a proposed "significant intergovernmental mandate," and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect small governments. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820; also available at <http://energy.gov/gc/office-general-counsel>. DOE examined this final rule according to UMRA and its statement of policy and determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure of \$100 million or more in any year, so these requirements do not apply.

I. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105-277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This rule will not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

J. Review Under Executive Order 12630

DOE has determined, under Executive Order 12630, "Governmental Actions and Interference with Constitutionally Protected Property Rights," 53 FR 8859 (March 18, 1988), that this regulation would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

K. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under guidelines established

by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (February 22, 2002), and DOE's guidelines were published at 67 FR 62446 (October 7, 2002). DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

L. Review Under Executive Order 13211

Executive Order 13211, "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use" 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OIRA at OMB, a Statement of Energy Effects for any significant energy action. A "significant energy action" is defined as any action by an agency that promulgated or is expected to lead to promulgation of a final rule, and that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (3) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use if the regulation is implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

This final rule is not a significant energy action because the ability to correct regulations will not, in itself, have a significant adverse effect on the supply, distribution, or use of energy. Moreover, it would not have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as a significant energy action by the Administrator of OIRA. Therefore, it is not a significant energy action, and, accordingly, DOE has not prepared a Statement of Energy Effects.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule before its effective date. The report will state that it has been determined that the rule is not a "major rule" as defined by 5 U.S.C. 804(2).

IV. Approval of the Office of the Secretary

List of Subjects

10 CFR Part 430

Administrative practice and procedure, Energy conservation test procedures, Household appliances.

10 CFR Part 431

Administrative practice and procedure, Energy conservation test procedures, Commercial and industrial equipment.

Issued in Washington, DC, on August 10, 2016.

Kathleen B. Hogan,

Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy.

For the reasons set forth in the preamble, DOE amends parts 430 and 431 of chapter II of title 10 of the Code of Federal Regulations as set forth below:

PART 430—ENERGY CONSERVATION STANDARDS FOR CONSUMER PRODUCTS

■ 1. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 2. Section 430.5 is revised to read as follows:

§ 430.5 Error correction procedures for energy conservation standards rules.

(a) *Scope and purpose.* The regulations in this section describe procedures through which the Department of Energy accepts and considers submissions regarding possible Errors in its rules under the Energy Policy and Conservation Act, as amended (42 U.S.C. 6291–6317). This section applies to rules establishing or amending energy conservation standards under the Act, except that this section does not apply to direct final rules issued pursuant to section 325(p)(4) of the Act (42 U.S.C. 6295(p)(4)).

(b) *Definitions.*

Act means the Energy Policy and Conservation Act of 1975, as amended (42 U.S.C. 6291–6317).

Error means an aspect of the regulatory text of a rule that is inconsistent with what the Secretary intended regarding the rule at the time of posting. Examples of possible mistakes that might give rise to Errors include:

(i) A typographical mistake that causes the regulatory text to differ from how the preamble to the rule describes the rule;

(ii) A calculation mistake that causes the numerical value of an energy conservation standard to differ from what technical support documents would justify; or

(iii) A numbering mistake that causes a cross-reference to lead to the wrong text.

Rule means a rule establishing or amending an energy conservation standard under the Act.

Secretary means the Secretary of Energy or an official with delegated authority to perform a function of the Secretary of Energy under this section.

(c) *Posting of rules.* (1) The Secretary will cause a rule under the Act to be posted on a publicly-accessible Web site.

(2) The Secretary will not submit a rule for publication in the **Federal Register** during 45 calendar days after posting the rule pursuant to paragraph (c)(1) of this section.

(3) Each rule posted pursuant to paragraph (c)(1) of this section shall bear the following disclaimer:

NOTICE: The text of this rule is subject to correction based on the identification of errors as defined in 10 CFR 430.5 before publication in the **Federal Register**. Readers are requested to notify the United States Department of Energy, by email at [EMAIL ADDRESS PROVIDED IN POSTED NOTICE], of any typographical or other errors, as described in such regulations, by no later than midnight on [DATE 45 CALENDAR DAYS AFTER DATE OF POSTING OF THE DOCUMENT ON THE DEPARTMENT'S WEBSITE], in order that DOE may make any necessary corrections in the regulatory text submitted to the Office of the Federal Register for publication.

(d) *Request for correction.* (1) A person identifying an Error in a rule subject to this section may request that the Secretary correct the Error. Such a request must be submitted within 45 calendar days of the posting of the rule pursuant to paragraph (c)(1) of this section.

(2)(i) A request under this section must identify an Error with particularity. The request must state what text is claimed to be erroneous. The request must also provide text that the requester argues would be a correct substitute. If a requester is unable to identify a correct substitute, the requester may submit a request that states that the requester is unable to determine what text would be correct and explains why the requester is unable to do so. The request must also substantiate the claimed Error by citing evidence from the existing record of the rulemaking that the text of the rule as issued is inconsistent with what the Secretary intended the text to be.

(ii) A person's disagreement with a policy choice that the Secretary has made will not, on its own, constitute a valid basis for a request under this section.

(3) The evidence to substantiate a request (or evidence of the Error itself) must be in the record of the rulemaking

at the time of the rule's posting, which may include the preamble accompanying the rule. The Secretary will not consider new evidence submitted in connection with a request.

(4) A request under this section must be filed in electronic format by email to the address that the rule designates for correction requests. Should filing by email not be feasible, the requester should contact the program point of contact designated in the rule regarding an appropriate alternative means of filing a request.

(5) A request that does not comply with the requirements of this section will not be considered.

(e) *Correction of rules.* The Secretary may respond to a request for correction under paragraph (d) of this section or address an Error discovered on the Secretary's own initiative by submitting to the Office of the Federal Register either a corrected rule or the rule as previously posted.

(f) *Publication in the **Federal Register**.* (1) If, after receiving one or more properly filed requests for correction, the Secretary decides not to undertake any corrections, the Secretary will submit the rule for publication to the Office of the Federal Register as it was posted pursuant to paragraph (c)(1) of this section.

(2) If the Secretary receives no properly filed requests after posting a rule and identifies no Errors on the Secretary's own initiative, the Secretary will in due course submit the rule, as it was posted pursuant to paragraph (c)(1) of this section, to the Office of the Federal Register for publication. This will occur after the period prescribed by paragraph (c)(2) of this section has elapsed.

(3) If the Secretary receives a properly filed request after posting a rule pursuant to (c)(1) and determines that a correction is necessary, the Secretary will, absent extenuating circumstances, submit a corrected rule for publication in the **Federal Register** within 30 days after the period prescribed by paragraph (c)(2) of this section has elapsed.

(4) Consistent with the Act, compliance with an energy conservation standard will be required upon the specified compliance date as published in the relevant rule in the **Federal Register**.

(5) Consistent with the Administrative Procedure Act, and other applicable law, the Secretary will ordinarily designate an effective date for a rule under this section that is no less than 30 days after the publication of the rule in the **Federal Register**.

(6) When the Secretary submits a rule for publication, the Secretary will make

publicly available a written statement indicating how any properly filed requests for correction were handled.

(g) *Alteration of standards.* Until an energy conservation standard has been published in the **Federal Register**, the Secretary may correct such standard, consistent with the Administrative Procedure Act.

(h) *Judicial review.* For determining the prematurity, timeliness, or lateness of a petition for judicial review pursuant to section 336(b) of the Act (42 U.S.C. 6306), a rule is considered "prescribed" on the date when the rule is published in the **Federal Register**.

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 3. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317.

■ 4. Section 431.3 is revised to read as follows:

§ 431.3 Error Correction procedure for energy conservation standards rules.

Requests for error corrections pertaining to an energy conservation standard rule for commercial or industrial equipment shall follow those procedures and provisions detailed in 10 CFR 430.5 of this chapter.

[FR Doc. 2016–19968 Filed 8–23–16; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA–2015–5391; Special Conditions No. 25–630–SC]

Special Conditions: The Boeing Company, Boeing Model 767–2C Airplane; Non-Rechargeable Lithium Battery Installations

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions.

SUMMARY: These special conditions are issued for the Boeing Model 767–2C airplane. This airplane will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for transport-category airplanes. This design feature is associated with non-rechargeable lithium battery installations. The applicable airworthiness regulations do not contain adequate or appropriate

safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: Effective April 22, 2017.

FOR FURTHER INFORMATION CONTACT:

Nazih Khaouly, Airplane and Flight Crew Interface Branch, ANM–111, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington 98057–3356; telephone 425–227–2432; facsimile 425–227–1149.

SUPPLEMENTARY INFORMATION:

Future Requests for Installation of Non-Rechargeable Lithium Batteries

The FAA anticipates that non-rechargeable lithium batteries will be installed in other makes and models of airplanes. We have determined to require special conditions for all applications requesting non-rechargeable lithium battery installations, except the installations excluded in the Applicability section, until the airworthiness requirements can be revised to address this issue. Applying special conditions to these installations across the range of all transport-airplane makes and models ensures regulatory consistency among applicants.

The FAA issued special conditions no. 25–612–SC to Gulfstream Aerospace Corporation for their GVI airplane. Those are the first special conditions the FAA issued for non-rechargeable lithium battery installations. We explained in that document our determination to make those special conditions effective one year after publication of those special conditions in the **Federal Register**, and our intention for other special conditions for other makes and models to be effective on this same date or 30 days after their publication, whichever is later.

Background

On January 18, 2010, The Boeing Company (Boeing) applied for an amendment to type certificate no. A1NM to include a new Model 767–2C airplane. The Model 767–2C airplane is a twin-engine, transport-category freighter derivative of the Model 767–200 airplane currently approved under type certificate no. A1NM. This freighter has a maximum takeoff weight of 415,000 pounds and can be configured to carry up to 11 supernumeraries.

The Model 767–2C airplane incorporates provisions to support subsequent supplemental type

certificate (STC) modifications, which are intended to provide additional mission capabilities, including provisions to support conversion into an aerial refueling platform (*i.e.*, tanker) configuration.

Type Certification Basis

Under the provisions of Title 14, Code of Federal Regulations, (14 CFR) 21.101, Boeing must show that the Model 767–2C airplane meets the applicable provisions of the regulations listed in type certificate no. A1NM or the applicable regulations in effect on the date of application for the change, except for earlier amendments as agreed upon by the FAA. The regulations listed in the type certificate are commonly referred to as the “original type certification basis.” The regulations listed in type certificate no. A1NM are 14 CFR part 25, effective February 1, 1965, including Amendments 25–1 through 25–37, with exceptions listed in the type certificate. In addition, the certification basis includes other regulations, special conditions, and exemptions that are not relevant to these special conditions. Type certificate no. A1NM will be updated to include a complete description of the certification basis for this airplane model.

If the Administrator finds that the applicable airworthiness regulations (*i.e.*, 14 CFR part 25) do not contain adequate or appropriate safety standards for the Model 767–2C airplane because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the airplane model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same novel or unusual design feature, or should any other model already included on the same type certificate be modified to incorporate the same novel or unusual design feature, these special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the Model 767–2C airplane must comply with the fuel-vent and exhaust-emission requirements of 14 CFR part 34, and the noise-certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type-certification basis under § 21.101.

Novel or Unusual Design Features

The Boeing Model 767–2C airplane will incorporate non-rechargeable lithium batteries.

A battery system consists of the battery and any protective, monitoring, and alerting circuitry or hardware inside or outside of the battery. It also includes vents (where necessary) and packaging. For the purpose of these special conditions, a “battery” and “battery system” are referred to as a battery.

Discussion

The FAA derived the current regulations governing installation of batteries in transport-category airplanes from Civil Air Regulations (CAR) 4b.625(d) as part of the re-codification of CAR 4b that established 14 CFR part 25 in February 1965. We basically reworded the battery requirements, which are currently in § 25.1353(b)(1) through (b)(4), from the CAR requirements. Non-rechargeable lithium batteries are novel and unusual with respect to the state of technology considered when these requirements were codified. These batteries introduce higher energy levels into airplane systems through new chemical compositions in various battery-cell sizes and construction. Interconnection of these cells in battery packs introduces failure modes that require unique design considerations, such as provisions for thermal management.

Recent events involving rechargeable and non-rechargeable lithium batteries prompted the FAA to initiate a broad evaluation of these energy-storage technologies. In January 2013, two independent events involving rechargeable lithium-ion batteries demonstrated unanticipated failure modes. A National Transportation Safety Board (NTSB) letter to the FAA, dated May 22, 2014, which is available at <http://www.nts.gov>, filename A–14–032–036.pdf, describes these events.

On July 12, 2013, an event involving a non-rechargeable lithium battery in an emergency-locator-transmitter installation demonstrated unanticipated failure modes. The United Kingdom’s Air Accidents Investigation Branch Bulletin S5/2013 describes this event.

Some known uses of rechargeable and non-rechargeable lithium batteries on airplanes include:

- Flight deck and avionics systems such as displays, global positioning systems, cockpit voice recorders, flight data recorders, underwater locator beacons, navigation computers, integrated avionics computers, satellite network and communication systems, communication-management units, and

remote-monitor electronic line-replaceable units;

- Cabin safety, entertainment, and communications equipment, including emergency-locator transmitters, life rafts, escape slides, seatbelt air bags, cabin management systems, Ethernet switches, routers and media servers, wireless systems, internet and in-flight entertainment systems, satellite televisions, remotes, and handsets;

- Systems in cargo areas including door controls, sensors, video surveillance equipment, and security systems.

Some known potential hazards and failure modes associated with non-rechargeable lithium batteries are:

- *Internal failures:* In general, these batteries are significantly more susceptible to internal failures that can result in self-sustaining increases in temperature and pressure (*i.e.*, thermal runaway) than their nickel-cadmium or lead-acid counterparts. The metallic lithium can ignite, resulting in a self-sustaining fire or explosion.

- *Fast or imbalanced discharging:* Fast discharging or an imbalanced discharge of one cell of a multi-cell battery may create an overheating condition that results in an uncontrollable venting condition, which in turn leads to a thermal event or an explosion.

- *Flammability:* Unlike nickel-cadmium and lead-acid batteries, lithium batteries use higher energy and current in an electrochemical system that can be configured to maximize energy storage of lithium. They also use liquid electrolytes that can be extremely flammable. The electrolyte, as well as the electrodes, can serve as a source of fuel for an external fire if the battery casing is breached.

Special condition no. 1 requires that each individual cell within a non-rechargeable lithium battery be designed to maintain safe temperatures and pressures. Special condition no. 2 addresses these same issues but for the entire battery. Special condition no. 2 requires that the battery be designed to prevent propagation of a thermal event, such as self-sustained, uncontrolled increases in temperature or pressure from one cell to adjacent cells.

Special condition nos. 1 and 2 are intended to ensure that the non-rechargeable lithium battery and its cells are designed to eliminate the potential for uncontrolled failures. However, a certain number of failures will occur due to various factors beyond the control of the designer. Therefore, other special conditions are intended to protect the airplane and its occupants if failure occurs.

Special condition nos. 3, 7, and 8 are self-explanatory, and the FAA does not provide further explanation for them at this time.

Special condition no. 4 makes it clear that the flammable-fluid fire-protection requirements of § 25.863 apply to non-rechargeable lithium battery installations. Section 25.863 is applicable to areas of the airplane that could be exposed to flammable fluid leakage from airplane systems. Non-rechargeable lithium batteries contain electrolyte that is a flammable fluid.

Special condition no. 5 requires each non-rechargeable lithium battery installation to not damage surrounding structure or adjacent systems, equipment, or electrical wiring from corrosive fluids or gases that may escape. Special condition no. 6 requires each non-rechargeable lithium battery installation to have provisions to prevent any hazardous effect on airplane structure or systems caused by the maximum amount of heat it can generate due to any failure of it or its individual cells. The means of meeting these special conditions may be the same, but they are independent requirements addressing different hazards. Special condition no. 5 addresses corrosive fluids and gases, whereas special condition no. 6 addresses heat.

These special conditions will apply to all non-rechargeable lithium battery installations in lieu of § 25.1353(b)(1) through (b)(4) at Amendment 25–123. Sections 25.1353(b)(1) through (b)(4) at Amendment 25–123 will remain in effect for other battery installations.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Discussion of Comments

Notice of proposed special conditions no. 25–16–01–SC, for the Boeing 767–2C airplane, was published in the **Federal Register** on January 27, 2016 [81 FR 4596]. We received four substantive comments.

The Aerospace Industries Association (AIA) provided several comments that were identical to their comments for special conditions no. 25–612–SC, which we issued to Gulfstream Aerospace Corporation for non-rechargeable lithium battery installations on Gulfstream GVI airplanes. The FAA responded to each of these comments in that final special conditions document. We incorporated the same revisions into these Boeing 767–2C special conditions that we

incorporated into the Gulfstream GVI special conditions as a result of AIA's comments.

Boeing commented that they fully support AIA's comments.

Boeing requested that the FAA provide adequate time before non-rechargeable lithium battery special conditions become effective to support validation activities by foreign civil airworthiness authorities (FCAA) and to not adversely impact future airplane deliveries by all applicants. The FAA considered this same comment from Boeing for special conditions no. 25–612–SC and provided a detailed response in that document. We determined the effective date for these Boeing 767–2C special conditions based on Boeing's comment and other factors stated in special conditions no. 25–612–SC.

Boeing commented that the FAA needs to clearly define the applicability of these special conditions. Boeing's comment is similar to their comment on special conditions no. 25–612–SC. We provided a detailed response in special conditions no. 25–612–SC and have clearly defined the applicability for these Boeing 767–2C special conditions. One aspect of Boeing's comment that we did not address in special conditions no. 25–612–SC is that some design changes may not change a lithium battery installation but affect it, which results in these special conditions being applicable. For example, adding a heat source next to a lithium battery can increase its possibility of entering into thermal runaway. Lithium battery installations affected by design changes must meet these special conditions. Some examples of changes that affect lithium battery installations are those that:

- Increase the temperatures or pressures in a battery,
- Increase the electrical load on a battery,
- Increase potential for imbalance between battery cells,
- Modify protective circuitry for a lithium battery,
- Increase the airplane level risk due to the location of an existing lithium battery. An example is installation of a new oxygen line next to an existing part that has a lithium battery. The airplane level risk may increase due to the potential hazard of a lithium battery fire in the proximity of oxygen.

Gulfstream Aerospace Corporation commented that they agree with Boeing's comments and requested that the FAA consider incorporating their proposed changes into this document.

AmSafe recommended that the FAA state in the preamble that design

mitigation or analysis at the airplane level may be applied to show that designs meet these special conditions. The FAA has determined that these special conditions are to require the battery to be designed to minimize the potential of uncontrollable failure, and to not only rely on mitigation of a battery failure at the airplane level. Therefore, we have not incorporated the proposed revision into the preamble of these special conditions.

AmSafe commented that they concur with proposed special condition no. 1 with an understanding that “foreseeable operating conditions” equates to the full normal operating envelope of the airplane. However, this is not a correct understanding of proposed special condition no. 1. The FAA intends for the term “foreseeable operating conditions,” in these special conditions, to apply at the cell level and not only at the airplane level. In addition, “foreseeable” includes anticipated abnormal operating conditions.

AmSafe recommended revising proposed special condition no. 2 to read, “Battery installation and/or equipment containing any non-rechargeable lithium battery must preclude the occurrence of, or mitigate the effect of self-sustaining, uncontrolled increases in temperature or pressure.” AmSafe's rationale was based on their recommendation that design mitigation or analysis at the airplane level be acceptable. As explained above, the FAA has determined that these special conditions are to require the battery to be designed to minimize the potential of uncontrollable failure, and to not only rely on mitigation of a battery failure at the airplane level. The FAA has not incorporated the proposed revision into special condition no. 2.

AmSafe recommended adding the phrase “. . . failure *which is not shown to be extremely remote . . .*” to proposed special condition no. 3. The FAA responds that service history shows that battery failure is not extremely remote. Therefore, to ensure that failures are properly anticipated and accounted for, we have not revised proposed special condition no. 3 to include these words.

AmSafe recommended deleting § 25.863(c)(d) from proposed special condition no. 4. The FAA does not concur. Section 25.863 already applies to non-rechargeable lithium batteries since they contain electrolyte that is a flammable fluid. Since § 25.863 has historically been applied to flammable fluids related to propulsion and hydraulic systems, the FAA is including special condition no. 4 to ensure that

there is no misunderstanding that § 25.863 also applies to these batteries.

AmSafe recommended revising proposed special condition no. 5 to prohibit damage to surrounding structure or adjacent systems, equipment, or electrical wiring from corrosive fluids or gases that may escape “in such a way as to cause a hazardous or catastrophic failure condition.” AIA also recommended this revision. The FAA intends for special condition no. 5 to be consistent with § 25.1309. So, we added the words “. . . in such a way as to cause a major or more-severe failure condition.” The revised special condition now reads, “. . . each non-rechargeable lithium battery installation must not damage surrounding structure or adjacent systems, equipment, or electrical wiring from corrosive fluids or gases that may escape in such a way as to cause a major or more-severe failure condition.” The FAA does not concur with excluding major failure conditions.

AmSafe concurred with proposed special condition no. 6.

AmSafe concurred with proposed special condition no. 7 and recommended revising proposed special condition no. 8. However, the FAA deleted these proposed special conditions as explained in our response to AIA’s comments in special conditions no. 25–612–SC.

AmSafe recommended revising “safe operation of the airplane” in proposed special condition nos. 9 and 10 to “continued safe operation of the airplane.” The phrase “continued safe operation of the airplane” is used to refer to safe operation of the airplane after a failure has occurred. The phrase “safe operation of the airplane” is more general and appropriate for these special conditions. We did not incorporate AmSafe’s proposed revision into these special conditions.

The FAA has determined that “uncontrolled” in special condition no. 2 should be “uncontrollable” to more accurately describe the concern. This revision does not change the intended meaning of this special condition.

Except as discussed above, the special conditions are adopted as proposed.

Applicability

As discussed above, these special conditions are applicable to the Model 767–2C airplane. Should the applicant apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design feature, or should any other model already included on the same type certificate be modified to incorporate the same novel or unusual

design feature, these special conditions would apply to that model as well.

These special conditions are only applicable to design changes applied for after their effective date. The existing airplane fleet and follow-on deliveries of airplanes with previously certified non-rechargeable lithium battery installations are not affected.

These special conditions are not applicable to previously certified non-rechargeable lithium battery installations where the only change is either cosmetic or relocating the installation to improve the safety of the airplane and occupants. The FAA determined that this exclusion is in the public interest because the need to meet all of the special conditions might otherwise deter such design changes that involve relocating batteries. A cosmetic change is a change in appearance only, and does not change any function or safety characteristic of the battery installation.

Conclusion

This action affects only certain novel or unusual design features on one model of airplane. It is not a rule of general applicability.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and record keeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, the following special conditions are part of the type certification basis for the Boeing Model 767–2C airplane.

Non-Rechargeable Lithium Battery Installations

In lieu of § 25.1353(b)(1) through (b)(4) at Amendment 25–123, each non-rechargeable lithium battery installation must:

1. Maintain safe cell temperatures and pressures under all foreseeable operating conditions to prevent fire and explosion.
2. Prevent the occurrence of self-sustaining, uncontrollable increases in temperature or pressure.
3. Not emit explosive or toxic gases, either in normal operation or as a result of its failure, that may accumulate in hazardous quantities within the airplane.
4. Meet the requirements of § 25.863.
5. Not damage surrounding structure or adjacent systems, equipment, or electrical wiring from corrosive fluids or gases that may escape in such a way as

to cause a major or more-severe failure condition.

6. Have provisions to prevent any hazardous effect on airplane structure or systems caused by the maximum amount of heat it can generate due to any failure of it or its individual cells.

7. Have a failure sensing and warning system to alert the flightcrew if its failure affects safe operation of the airplane.

8. Have a means for the flightcrew or maintenance personnel to determine the battery charge state if the battery’s function is required for safe operation of the airplane.

Note: A battery system consists of the battery and any protective, monitoring, and alerting circuitry or hardware inside or outside of the battery. It also includes vents (where necessary) and packaging. For the purpose of these special conditions, a “battery” and “battery system” are referred to as a battery.

Issued in Renton, Washington, on August 11, 2016.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 95

[Docket No. 31093; Amdt. No. 528]

IFR Altitudes; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule

SUMMARY: This amendment adopts miscellaneous amendments to the required IFR (instrument flight rules) altitudes and changeover points for certain Federal airways, jet routes, or direct routes for which a minimum or maximum en route authorized IFR altitude is prescribed. This regulatory action is needed because of changes occurring in the National Airspace System. These changes are designed to provide for the safe and efficient use of the navigable airspace under instrument conditions in the affected areas.

DATES: *Effective Date:* 0901 UTC, September 15, 2016.

FOR FURTHER INFORMATION CONTACT: Richard A. Dunham, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service,

Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954-4164.

SUPPLEMENTARY INFORMATION: This amendment to part 95 of the Federal Aviation Regulations (14 CFR part 95) amends, suspends, or revokes IFR altitudes governing the operation of all aircraft in flight over a specified route or any portion of that route, as well as the changeover points (COPs) for Federal airways, jet routes, or direct routes as prescribed in part 95.

The Rule

The specified IFR altitudes, when used in conjunction with the prescribed changeover points for those routes, ensure navigation aid coverage that is adequate for safe flight operations and free of frequency interference. The reasons and circumstances that create the need for this amendment involve matters of flight safety and operational efficiency in the National Airspace System, are related to published aeronautical charts that are essential to the user, and provide for the safe and

efficient use of the navigable airspace. In addition, those various reasons or circumstances require making this amendment effective before the next scheduled charting and publication date of the flight information to assure its timely availability to the user. The effective date of this amendment reflects those considerations. In view of the close and immediate relationship between these regulatory changes and safety in air commerce, I find that notice and public procedure before adopting this amendment are impracticable and contrary to the public interest and that good cause exists for making the amendment effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3)

does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 95

Airspace, Navigation (air).

Issued in Washington, DC on August 12, 2016.

John Duncan,

Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, part 95 of the Federal Aviation Regulations (14 CFR part 95) is amended as follows effective at 0901 UTC, July 21, 2016.

■ 1. The authority citation for part 95 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44719, 44721.

■ 2. Part 95 is amended to read as follows:

BILLING CODE 4910–13–P

DEPARTMENT OF LABOR**Employment and Training
Administration****20 CFR Part 615****RIN 1205–AB62****Federal-State Unemployment
Compensation Program; Implementing
the Total Unemployment Rate as an
Extended Benefits Indicator and
Amending for Technical Corrections;
Final Rule****AGENCY:** Employment and Training
Administration, Labor.**ACTION:** Final rule.

SUMMARY: The Employment and Training Administration (ETA) of the U.S. Department of Labor (Department) issues this final rule to implement statutory amendments to the Extended Benefits (EB) program, which pays extra weeks of unemployment compensation during periods of high unemployment in a State. Specifically, this final rule codifies a methodology for computing the Total Unemployment Rate (TUR)

indicator which is an optional indicator used to measure unemployment in a State. Also, the final rule makes technical corrections to the current regulations and corrects minor mistakes. **DATES:** This rule is effective October 24, 2016.

FOR FURTHER INFORMATION CONTACT: Gay Gilbert, Administrator, Office of Unemployment Insurance, Employment and Training Administration, (202) 693–3029 (this is not a toll-free number) or 1–877–889–5627 (TTY). Individuals with hearing or speech impairments may access the telephone number above via TTY by calling the toll-free Federal Information Relay Service at (800) 877–8339.

SUPPLEMENTARY INFORMATION:**Executive Summary****I. Purpose of the Regulatory Action**

a. ETA issues this final rule to implement statutory amendments to the EB program, which pays extra weeks of unemployment compensation during periods of high unemployment in a State. Specifically, this final rule codifies a methodology for computing the TUR indicator, which is an optional indicator used to measure unemployment in a State. Also, the final rule makes technical corrections to the

current regulations and corrects minor mistakes.

b. The Unemployment Compensation Amendments of 1992, Public Law 102–318, added Section 203(f), EUCA, to provide for an optional alternative indicator that States may use to trigger “on” EB based on the TUR. That indicator requires that, for the most recent 3 months for which data for all States is published, the average TUR in the State (seasonally adjusted) for the most recent 3-month period equals or exceeds 6.5 percent and the average TUR in the State (seasonally adjusted) equals or exceeds 110 percent of the average TUR for either or both of the corresponding 3-month periods in the 2 preceding calendar years (look-back). The 1992 amendments also provided for a calculation of a “high unemployment period” when the TUR in a State equals or exceeds 8 percent and meets the 110-percent look-back described above, permitting the payment of additional weeks of EB. Section 203(f)(3), EUCA, provides that “determinations of the rate of total unemployment in any State for any period . . . shall be made by the Secretary.” An EB period ends when the State no longer meets any of the “on” triggers provided for in State law.

II. Summary of the Major Provisions of the Regulatory Action in Question

To conform the regulations to current practice, the Department is issuing this final rule to describe how the TUR indicators are computed for purposes of determining whether a State meets the 110 percent look-back requirements. The final rule regulations at 20 CFR 615 implement the provisions of EUCA relating to the insured unemployment rate (IUR) indicators, including how they will be computed. The regulation, at 20 CFR 615.12, explains the IUR triggers and how the rates are computed. Until this final rule, the regulation did not address the TUR indicator although the Department issued UIPLs No. 45–92 and No. 16–11, respectively, addressing the TUR indicator and its computation.

Because of these differences in the calculation of the insured and total

unemployment rates, the appropriate methodology for computing the look-back percentage for the TUR indicator is to switch from truncation at the second decimal place, which is used for calculating the IUR indicator, to rounding to the second decimal place.

III. Costs and Benefits

This rule has not been designated an economically significant rule under section 3(f) of Executive Order 12866. However, the Department provides an analysis of the impact of the final rule, including a costs and benefits analysis under Executive Order 13563, in the Administrative Section of this final rule. This costs and benefits analysis was conducted for the proposed rule. Since the Department made no changes in the final rule, a new analysis was not conducted.

The Preamble to this final rule is organized as follows:

- I. Background—provides a brief description of the development of the final rule.
- II. Review of the Final Rule—analyzes comments and summarizes and discusses changes to the Federal-State Unemployment Compensation Program.
- III. Administrative Information—sets forth the applicable regulatory requirements.

I. Background

An understanding of the basic elements that comprise the mechanisms used to determine if EB is payable in a State is necessary to appreciate the dynamics of the EB program. EB programs can be triggered by two different measures for unemployment: The IUR and TUR. The table below compares the characteristics of each.

Characteristics	IUR	TUR
Type of Data	Administrative	Sample.
Definition	Continued Claims/Covered Employment	Unemployed/Employed+Unemployed.
Seasonally Adjusted	No	Yes.
Data Source	States	Bureau of Labor Statistics.
Collection Frequency	Weekly	Monthly.
Trigger Value Computation	13-Week Moving Average	3-Month Moving Average.

EB is payable in a State only during an EB period of unusually high unemployment in the State. Section 203 of the Federal-State Extended Unemployment Compensation Act of 1970 (EUCA), Public Law 91–373, provides methods for determining whether a State’s current unemployment situation qualifies as an EB period. EB periods are determined by “on” and “off” indicators (commonly referred to as triggers) in the State. Section 203(d), EUCA, provides for an “on” indicator based on the IUR. The IUR is computed weekly by the States using administrative data on State unemployment compensation claims filed and the total population of employed individuals covered by unemployment insurance. States trigger “on” EB if the IUR trigger value for the most recent 13-week period equals or exceeds 5 percent and equals or exceeds 120 percent of the average of such trigger values for the corresponding 13-week period ending in each of the preceding 2 calendar years. The calculation of the relationship between the current rate and prior 2 years’ rates is commonly referred to as the “look-back.”

The Unemployment Compensation Amendments of 1992, Public Law 102–318, added Section 203(f), EUCA, to provide for an optional alternative indicator that States may use to trigger

“on” EB based on the TUR. That indicator requires that, for the most recent 3 months for which data for all States is published, the average TUR in the State (seasonally adjusted) for the most recent 3-month period equals or exceeds 6.5 percent and the average TUR in the State (seasonally adjusted) equals or exceeds 110 percent of the average TUR for either or both of the corresponding 3-month periods in the 2 preceding calendar years (look-back). The 1992 amendments also provided for a calculation of a “high unemployment period” when the TUR in a State equals or exceeds 8 percent and meets the 110 percent look-back described above, permitting the payment of additional weeks of EB. Section 203(f)(3), EUCA, provides that “determinations of the rate of total unemployment in any State for any period . . . shall be made by the Secretary.” An EB period ends when the State no longer meets any of the “on” triggers provided for in State law.

Regulations at 20 CFR part 615 implement the provisions of EUCA relating to the IUR indicators, including how they will be computed. The regulation at 20 CFR 615.12 explains the IUR triggers and how the rates are computed. The regulation does not address the TUR indicator although the Department issued UIPLs No. 45–92 and No. 16–11, respectively, addressing the TUR indicator and its computation. To

conform the regulations to current practice, the Department is issuing this final rule to describe how the TUR indicators are computed for purposes of determining whether a State meets the 110 percent look-back requirements.

In the absence of explicit guidance and regulation, the Department previously adapted a portion of the existing guidance for the IUR look-back as a basis for calculating the TUR look-back. Specifically, in computing the look-back percentage for the TUR trigger the procedure for determining the number of significant digits from the resulting fraction followed 20 CFR 615.12(c)(3).

The TUR indicator uses total unemployment rates determined by the Bureau of Labor Statistics (BLS). These rates are measured using sampled data and therefore are imprecise due to sampling error. In order to ensure that the TUR indicator is measured with more consistency to similar measures, and to the extent possible, a more accurate measure, the Department has determined that an appropriate methodology for computing the look-back on the TUR indicator is to switch from truncation to rounding to the nearest hundredth, or second decimal place. Additionally, rounding, rather than truncating, is consistent with BLS practices in treating the TUR data. UIPL No. 16–11, dated May 20, 2011,

informed the State Workforce Agencies (SWAs) that the full effect of this new rounding procedure was implemented retroactive to April 16, 2011.

General

Section 3304(a)(11) of the Federal Unemployment Tax Act (26 U.S.C. 3301 *et seq.*) (FUTA) requires, as a condition of employers in States receiving credits against the Federal unemployment tax, that the States' unemployment compensation laws provide for the payment of extended unemployment compensation during periods of high unemployment to eligible individuals. EUCA established the EB Program by which, if certain conditions are met in a State under its law, extended unemployment compensation is provided to workers in the State who have exhausted their regular compensation during a period of high unemployment referred to as an EB period. EUCA provides methods for determining whether an EB period exists in the State. These methods are referred to as "on" or "off" indicators.

There were two "on" and "off" indicators in existence before the enactment of the UC Amendments. These indicators were based on the IUR. The IUR indicator's trigger value is, under section 203(e) of EUCA, the ratio of the average number of unemployment claims filed in a State during the most recent 13 weeks to the average monthly number of employed individuals covered by UC in that State during the first four of the last six completed calendar quarters. The first indicator has two conditions which must be met and is required to be in State law. Under section 203(d) of EUCA, the EB Program is activated if a State's IUR trigger value (first condition) is at least 5 percent (referred to as the regular IUR trigger threshold with "look-back"), and is at least 120 percent of the average of the trigger values in the prior 2 years for the corresponding 13-week calendar periods (second condition). The second condition—that the most recent 13-week period must be at least 120 percent of the average of the corresponding periods in the last 2 years—is commonly referred to as the "look-back" provision. (The Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010, Public Law 111–312, allowed States to temporarily modify provisions in their EB laws to use the prior 3 years in applying the look-back.) The look-back provision supports activation of a State's EB Program only when the current unemployment rate is both high and increasing, which indicates that the State's labor market is worsening and

additional compensation is warranted. Under the second indicator, which is an option for a State, section 203(d) of EUCA provides the EB Program may be triggered "on" with an IUR trigger value of at least 6 percent regardless of its relation to the IUR trigger values in the preceding 2 years. The 6 percent value is referred to as the regular IUR trigger threshold without look-back.

Alternative Indicator

Because the IUR indicator failed to trigger many States "on" to the EB Program during the recession of the early 1990s, the UC Amendments amended the EUCA to permit States to adopt an alternative, more labor market sensitive, indicator based on the TUR to trigger "on" and "off" the EB Program. Specifically, paragraph (f) of section 203 of EUCA provides for a TUR indicator comprised of a Trigger Value and look-back provision. The Trigger Value for this indicator is the 3-month average of seasonally adjusted TURs for the most recent 3 months for which data for all States is published. The regular TUR trigger threshold is 6.5 percent. The look-back provision requires that the Trigger Value equals or exceeds 110 percent of the TUR Trigger Values for either or both of the corresponding 3-month periods in the 2 preceding calendar years. The TUR Trigger Value is determined by the Department based on data from BLS.

As with the IUR indicator, the look-back provision ensures that the State's TUR Trigger Value is both high and increasing, indicating that the State's labor market is worsening and additional compensation is warranted. A State will trigger "off" its EB Program when either the TUR Trigger Value falls below 6.5 percent, or the requirements pertaining to the look-back provision are not satisfied.

Regardless of whether a State's EB Program is triggered "on" based on the IUR or TUR indicators, sections 203(d)(2) and 203(f)(1)(B) of EUCA provide that the EB period is triggered "off" when the conditions supporting the activation of the EB Program are no longer satisfied. Additionally, when the program triggers "on" or "off" EB payments, it must remain in the new status ("on" or "off" EB payments) for a minimum of 13 weeks regardless of changes in future trigger values.

The Department implemented EUCA's provisions on the IUR indicator at 20 CFR part 615, published in 53 FR 27928, Jul. 25, 1988. The Department implemented the alternative TUR indicator provided by the UC Amendments through guidance on August 31, 1993 (UIPL No. 45–92). The

Department now incorporates the TUR indicator into regulations.

Payments of Additional Weeks of Extended Benefits

The UC Amendments provided that States electing to use the new TUR indicator must also provide for the payment of additional weeks of EB during a "high unemployment period" that occurs during an EB period. These additional weeks of EB are available if State law provides for the use of the alternative TUR indicator.

Consistent with EUCA § 203(b)(1), no EB period or high unemployment period may begin in any State by reason of a State "on" indicator before the 13-week minimum status period expires after the ending of a prior EB period with respect to such State. Conversely, no EB period or high unemployment period may end in any State by reason of a State "off" indicator before the 13-week minimum status period expires after the beginning of an EB period with respect to such State.

EUCA originally provided for the establishment of an EB account, and the amount in the account is the least of one of three amounts which is payable for regular extended compensation. The UC amendments added a new paragraph to section 202(b) of EUCA that increases the amount in these accounts during a high unemployment period. The amount payable in a high unemployment period is equal to whichever of the following is the least and is referred to as "high unemployment extended compensation":

- 80 percent (as opposed to 50 percent in a "normal" EB period) of the total amount of regular UC (including dependent's allowances) payable to the individual during the benefit year;
- 20 (as opposed to 13) times the individual's weekly benefit amount; or
- 46 (as opposed to 39) times the individual's weekly benefit amount, reduced by the regular UC paid (or deemed paid) during the benefit year.

The term "high unemployment period" is defined in Section 202(b)(3)(B), EUCA, as any period during which an EB Program would be in effect if the TUR indicator equaled or exceeded 8 percent and the TUR indicator equals or exceeds 110 percent of the TUR indicators for either or both the corresponding 3-month periods in the 2 previous calendar years.

Whether a high unemployment period exists in a State for a particular week is determined in accordance with provisions of State law implementing sections 202(b)(3) and 203(f) of EUCA

and the seasonally adjusted TUR indicator determined by BLS. When this determination is made, the State follows the requirements of sections 203(a) and (b) of EUCA for determining the first and last week for which high unemployment EB is payable. Specifically, a high unemployment EB period begins on the first day of the third calendar week after the TUR indicator requirements are satisfied, and ends on the last day of the third week after the first week for which the TUR indicator requirements are not met. However, as stated above, no EB period or high unemployment period may begin in any State by reason of a State “on” indicator before the 13-week minimum status period expires after the ending of a prior EB period with respect to such State.

Alternative Indicator Rounding Methodology

Before April 16, 2011, in absence of explicit statutory guidance and regulation, the Department adapted a portion of the requirement (in 20 CFR 615.12) for calculating the look-back percentage for the IUR indicator as a basis for determining the significant number of digits from the look-back percentage for the TUR indicator. Specifically, the quotient is computed to two decimal places and multiplied by 100 with all numbers to the right of the decimal point being dropped (known as “truncation”). The result is expressed as a percentage.

The UC Amendments provide for a State to trigger “on” EB using the TURs determined by BLS. As discussed above, because the TUR indicator uses unemployment rates determined by BLS using sampled data, the rates are imprecise due to sampling error. In order to ensure that the TUR indicator is measured with more consistency to similar measures, and to the extent possible, a more accurate measure, the Department has determined that an appropriate methodology for computing the look-back on the TUR indicator is to switch from truncation to rounding to the nearest hundredth. In contrast, the IUR indicator values are computed from administrative data and thus represent the full universe. Because of these differences in the calculation of the insured and total unemployment rates, on May 20, 2011 the Department announced, in UIPL No. 16–11, that an appropriate methodology for computing the look-back percentage for the TUR indicator is to switch from truncation at the second decimal place to rounding to the second decimal place.

UIPL No. 16–11 informed States of the new rounding methodology the

Department now employs when computing the current trigger rate as a percent of the comparable trigger rates in prior years for the TUR indicator. Since TURs have been rounded, an expression of a ratio of two TURs must also be rounded.

On a monthly basis, the 3-month average of the seasonally adjusted TUR is divided by the same measure for the corresponding 3 months in each of the applicable 2 prior years. The resulting decimal fraction is then rounded to the hundredths place (the second digit to the right of the decimal place). The resulting number is multiplied by 100, reported as an integer, and compared to the statutory threshold to determine if the State triggers “on” EB. UIPL No. 16–11 informed the SWAs that the full effect of this new rounding procedure was implemented retroactive to April 16, 2011.

II. Review of the Final Rule

The Department published the Notice of Proposed Rulemaking (NPRM) on the subject of this final rule in the **Federal Register** on October 27, 2014 at 79 FR 63859. The NPRM had a 60-day public comment period and allowed for the submission of comments by hand delivery or U.S. Mail or by electronic submission at www.regulations.gov.

At the close of the 60-day public comment period at midnight on December 26, 2014, the Department had received one public comment. After a careful analysis of the comment, which was posted on www.regulations.gov, the Department determined that the comment did not raise any substantive issues that required a response in the final rule. In addition, the Department received no requests for extensions of the public comment period.

Therefore, because the Department did not receive any comments that required a response on the NPRM, this final rule adopts the regulation as proposed, with minor technical corrections explained below.

The final rule updates 20 CFR part 615 so that it includes the TUR indicator. In addition, the final rule updates Part 615 to incorporate the rounding method adopted for the look-back. Also, the final rule makes technical amendments to this part to update its provisions since the last regulatory revision and to correct minor errors in the text of the existing regulations.

However, since the NPRM publication, the Department discovered that minor technical corrections were needed. A non-substantive technical addition of a phrase was made in the definition of “Department” in § 615.2 to

acknowledge that a Secretary’s Order delegating authority to ETA can be superseded. A non-substantive technical addition was made in the definition of “Extended compensation” in § 615.2 to clarify that “extended benefits” can be used interchangeably with “extended compensation.” Non-substantive deletions were made, in the definition of “Extended unemployment compensation” in § 615.2, of paragraphs (3) and (4). Paragraph (3) of § 615.2 in the NPRM was deleted because it redundantly repeats the substance in paragraph (1) of that section. Paragraph (4) of § 615.2 was deleted because it was placed in this location of the NPRM erroneously, simply as a typographical error.

For ease of reading § 615.2, the definitions in this section have been printed in their entirety. The following definitions are unchanged with the exception of changing Act to EUCA where appropriate: Additional compensation; And; Applicable State; Applicable State law; Average weekly benefit amount; Base period; Benefit structure; Benefit year; Claim filed in any State under the interstate benefit payment plan; Compensation and unemployment compensation; Date; Employed; Gross average weekly remuneration; Hospitalized for treatment of an emergency or life-threatening condition; Individual’s capabilities; Jury duty; Reasonably short period; Regular compensation; Secretary; State; State agency; State law; systematic and sustained effort; Tangible evidence; and Week of unemployment. Also, an “s” was removed from the word “mean” in the definition of “Employed,” and since the paragraph designations were removed in order to reorder the definitions alphabetically, the phrase “(n)(2) of this section” was replaced with “(2) of this definition” in paragraph (1), and the phrase “(n)(1) of this section” was replaced with “(1) of this definition” in paragraph (2) in the definition of “Week of unemployment.”

Paragraph (a) of § 615.7 in the NPRM was revised in the final rule to delete the following language—

Removing the term “Extended Benefits” wherever it appears and replacing it with the term “Extended compensation” throughout.

This is no longer necessary since a technical correction was made in the definition of “Extended compensation” in § 615.2 to clarify that “extended benefits” can be used interchangeably with “extended compensation.”

Non-substantive deletions were made in paragraph (d) of § 615.11, which discusses the limitations in an extended

benefit period. The paragraph was revised to delete from the NPRM language which reads—

extended benefit period or high unemployment period may begin in any State by reason of a State “on” indicator before the 14th week after the ending of a prior extended benefit period or high unemployment period in such State. Conversely, no extended benefit period or high unemployment period may end in any State by reason of a State “off” indicator before the 14th week after the beginning of an extended benefit period or high unemployment period in such State. In addition, no . . .

since this criteria is covered in paragraph (c) of the same section.

Three technical corrections were made in § 615.12. First, “our concurrence” was replaced with “the concurrence of the Department” in paragraph (d)(1). Second, in paragraph (d)(2), “Bureau of Labor Statistics” was spelled out since it is the first use in the rule text, and the paragraph was slightly revised to clarify that unemployment data released by BLS for each month have an initial release and then regular revisions. Third, an identical sentence in paragraphs (e)(1)(ii) and (e)(2)(ii) referencing the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010, Public Law 111–312, was deleted from both paragraphs because it describes a temporary provision of law that no longer applies. Several non-substantive additions and deletions were made in § 615.13. The first was to clarify that paragraphs (a) and (b) were revised by adding paragraphs (a)(1), (a)(2), (b)(1), (b)(2), and (b)(3). Second, the phrase “the Department determines” was added after the word “which” in paragraph (a)(1). Third, the phrase “or high unemployment period” was added in paragraphs (a)(1) and (a)(2). Fourth, “a result of our determination” was replaced with “determined by the Department to be” in paragraph (a)(1).

Finally, typographical errors were corrected in §§ 615.2, 615.12, 615.13, 615.14, and 615.15. In § 615.2, a comma was added after the word “published” in the definition of “High unemployment period,” and “is” was replaced with “as” before the word “described” in the definition of “Trigger Value.” In § 615.12, an “s” was added to the word “State” in paragraph (e)(2)(i), and “However” was deleted and the “t” in the word “the” was capitalized to begin the sentence in paragraph (f). In paragraph (a)(1) of § 615.13, “the” was replaced with “a” before the word “notice”; “to us” located after the word “acceptable” was deleted; “we” was replaced with “the

Department”; “will” was added before the phrase “publish in the **Federal Register**”; and the word “publish” was revised to read “publishes” before the phrase “that information”. In paragraph (a)(2) of § 615.13, “our” was replaced with “of the Department’s” before the word “determination”. In § 615.14, the citation to paragraph (a) was corrected to paragraph (c), and the citation to paragraph (a)(4) was corrected to paragraph (c)(4). In § 615.15, “we” was replaced with “the Department,” and “require” was revised to read “requires”.

The final rule, as explained also in the discussion of Paperwork Reduction Act requirements below, retains proposed revisions in the NPRM to regulatory requirements at § 615.15, pertaining to records and reports State agencies must submit. Paragraphs (a) and (b) are revised for clarity by deleting unnecessary language regarding the Secretary’s authority to request Extended Benefit Program reports and to appoint audit officials for those reports. Furthermore, the final rule deletes paragraphs (c) and (d). In reference to reporting guidelines discussed in the Paperwork Reduction Act, the ET Handbook is a more effective way to communicate reporting requirements, because codifying the reporting requirements in paragraphs (c) and (d) of § 615.15 prevents the Department from adapting reporting instructions to changing conditions or needs. The ET Handbook requires the weekly submission of Forms ETA–538 and ETA–539. These forms have been computerized and contain information on initial Unemployment Insurance claims and continued weeks claimed. These figures are important economic indicators. Form ETA–538 provides information allowing release of advance unemployment claims information to the public five days after the close of the reference period. Form ETA–539 contains more detailed weekly claims information and the State’s 13-week IUR that is used to determine eligibility for the Extended Benefits program. The reporting requirements in paragraphs (c) and (d) of the old regulation are included in the ET Handbook, and elimination of the requirements in regulation allow for ease in making future modifications by simply updating the ET Handbook.

Furthermore, paragraph (d) existed during the implementation phase of the IUR indicator and required States to submit the method used to identify and select the weeks used for EB trigger purposes to ensure that States were consistent and comparable in their methods. With 30 years of experience,

as well as numerous data validation and data quality programs in effect, the Department has determined it is unnecessary to compel State administrators to provide this information. Current reporting guidelines contained in the ET Handbook are clear enough that States continue to have clear standards about which claims are used for constructing totals used to compute trigger values, thus permitting the deletion of this paragraph. The NPRM did not change the existing reporting requirements for Forms ETA–538 or ETA–539, and the Department received no substantive comments on the NPRM during the public comment period.

III. Administrative Information

Executive Orders 12866 and 13563

Executive Orders (E.O.) 13563 and 12866 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects; distributive impacts; and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Section 3(f) of E.O. 12866 defines a “significant regulatory action” as an action that is likely to result in a rule that: (1) Has an annual effect on the economy of \$100 million or more or adversely and materially affects a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or Tribal governments or communities (also referred to as “economically significant”); (2) creates serious inconsistency or otherwise interferes with an action taken or planned by another agency; (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raises novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in E.O. 12866. Regarding item (4), any novel legal or policy issues raised by this rule do not arise from legal mandates, Presidential priorities, or the principles set forth in E.O. 12866.

For a “significant regulatory action,” E.O. 12866 asks agencies to describe the need for the regulatory action and explain how the regulatory action will meet that need, as well as assess the

costs and benefits of the regulation.¹ In the Unemployment Compensation Amendments of 1992 (UC Amendments), Congress adopted an optional indicator for the existing EB Program that is based on both the level of the TUR Trigger Value and the percentage the Trigger Value is of Trigger Values in comparable periods in each of the prior years (referred to as the look-back).² Although the TUR indicator was implemented in the early 1990s, there was never any regulation put in place defining its computation and its application. The Department is establishing regulations for the TUR indicator which interpret the law related to the TUR indicator and clarify the computation of its look-back provision. As discussed in more detail in the Background section above, the Department uses rounding to calculate the TUR because it is consistent with the BLS's calculation of unemployment rates. Based on the economic impact analysis that follows, the Department believes this is not an economically significant regulatory action.

EUCA, as amended by the UC Amendments, requires two conditions be met for a TUR-based "on" indicator to occur in a State: (1) For the most recent 3 months for which data for all States is published, the 3-month average seasonally adjusted TUR in the State equals or exceeds 6.5 percent, and (2) that the Trigger Value equals or exceeds 110 percent of the Trigger Values for either or both of the corresponding 3-month periods in the 2 preceding calendar years (look-back). The UC

Amendments also provide for a "high unemployment period" when the TUR Trigger Value in a State equals or exceeds 8 percent and meets the 110 percent look-back described above, permitting the payment of additional weeks of compensation.³ States that want to use the optional TUR indicator must have authority under State law which may require States to enact legislation that implements the Federal requirements. An EB period ends when the State no longer meets any of the "on" requirements provided for in State law.

Under the original methodology by which the Department determined the look-back criterion for the optional TUR indicator, the indicator's Trigger Value was divided by the indicator's Trigger Value for the comparable period in the preceding year and 2nd preceding year. Digits beyond the hundredths place (the second digit to the right of the decimal place) in the resultant decimal fractions were truncated and the results multiplied by 100 to determine the percent the current indicator Trigger Value was of the indicator Trigger Value in the comparable periods in the prior years. If the result was greater than or equal to 110 for one of the fractions, the look-back criterion was met. This approach paralleled the method used for the IUR look-back computation established in regulations at 20 CFR 615.12(c)(3); however, neither the law nor regulations specify the method for computing the TUR indicator look-back.⁴

The Department is changing the method for computing the TUR look-back by rounding to the hundredths place, rather than truncating. The TUR indicator uses total unemployment rates determined by BLS. These rates are measured using sampled data and therefore are imprecise due to sampling error. In order to ensure that the TUR indicator is measured with more consistency to similar measures, and to the extent possible, a more accurate measure, the Department has determined that an appropriate methodology for computing the look-back on the TUR indicator is to switch from truncation to rounding to the nearest hundredth, or second decimal place. In contrast, IUR indicators are computed from administrative data and thus represent the full universe. Because of these differences in the computation of the insured and total unemployment rates, the Department has determined that an appropriate methodology for computing the look-back for the TUR indicator is to switch from truncation at the second decimal place, to rounding to the second decimal place. Rounding, rather than truncating, is consistent with BLS practices for TUR data. UIPL No. 16–11, dated May 20, 2011, informed the SWAs that the full effect of this new rounding procedure was implemented retroactive to April 16, 2011.

Rounding Change in the TUR Look-Back Computation

Original Method:

$$\frac{\text{Three Mo. SATUR}}{\text{Three Mo. SATUR (-1)}} = (\text{ratio truncated at second decimal place}) * 100$$

New Method:

$$\frac{\text{Three Mo. SATUR}}{\text{Three Mo. SATUR (-1)}} = (\text{ratio rounded at second decimal place}) * 100$$

¹ Executive Order No. 12866, § 6(a)(3)(B).

² Unemployment Compensation Amendments of 1992, Public Law 102–318 (1992). This law added Section 203(f) to EUCA to provide for an optional alternative indicator that States may use to trigger "on" or "off" EB based on the total unemployment rate. EUCA originally provided for an "on"

indicator based only on the IUR. EUCA, § 203(d)–(e).

³ EUCA, § 202(b)(3)(B). Meeting the 6.5 percent TUR indicator permits eligible claimants to receive up to an additional 50 percent of their regular entitlement during an EB period. Meeting the 8.0 percent indicator permits eligible claimant to

receive up to a total of 80 percent of their regular entitlement during a high EB period.

⁴ EUCA provides that "determinations of the rate of total unemployment in any State for any period . . . shall be made by the Secretary." EUCA, § 203(f)(3).

Where:
Three Mo. SATUR = 3-month average
seasonally adjusted total unemployment
rate.
Three Mo. SATUR (– 1) = 3-month average
seasonally adjusted total unemployment
rate for the corresponding period in the
prior year period.

Potential Impacts

Changing the look-back
computational method will have a
marginal economic impact because of
the new rounding method and no
increased operational burden because it
would result in no change in claimant
behavior or in procedure from the
existing process.⁵ The TUR indicator
and new rounding method are currently
implemented for the States to use;
however, because the Department is
implementing in regulations the TUR
indicator as well as the new rounding
method for the TUR look-back, the
Department offers estimates of both
impacts.

The UI program is a transfer payment
program. For the purposes of a cost-
benefit analysis under E.O.s 13563 and
12866, transfer payments are not
considered a cost. Therefore, the
analysis will be on the possible
redistribution of wealth that may take
place, as opposed to any impact on
aggregate social welfare.⁶ In this case,

the redistribution is primarily one that
takes place over time rather than
between groups. More specifically, the
UI program is structured to act as a
counter-cyclical program in terms of its
impact on the economy—during
recessions increased benefit payments
(much higher than taxes paid) provide
temporary income support and greater
economic stimulus which prevents
greater economic distress, while during
expansions the program acts through
higher taxes to lower overall
employment and demand levels.
Because a State whose Trigger Value
meets or exceeds the threshold and
whose look-back falls short of meeting
the requirement by 0.05 percentage
point or less would trigger “on” under
the rounding computation while under
the truncation method would keep the
State “off,” the change marginally
increases extended compensation as the
TUR Trigger Value increases in a
recession. A change to increase the
duration of benefits during recessions
will ultimately increase the counter-
cyclical nature of the program by
increasing stimulus during recessions
while slightly decreasing economic
activity during expansions. Following is
an impact analysis which estimates the
change in the level and timing of the UI
benefits paid and taxes collected as a

result of the change for the look-back
provision of the TUR indicator.

The actual future impacts of changing
the look-back calculation on the flow of
UI benefits and taxes are dependent
upon the unemployment rate in relation
to the TUR trigger threshold and the
number of States that have actually
implemented the optional TUR
indicator. Historically, the proportion of
months that the EB Program has been in
effect was extremely low, due primarily
to a relatively high threshold in relation
to the level of unemployment,
unwillingness by States to adopt the
optional indicators, and Federal
emergency benefit programs that at
times can and have supplanted the EB
Program. For example, on average for
the 1991 and 2001 high unemployment
periods, State indicators were “on” in
roughly 3 percent of the State trigger
months.⁷ In contrast, this past
recession’s high unemployment period
(2007–2011) has been quite unique: In
over 40 percent of the State trigger
months, the EB Program has been “on,”
due primarily to the large number of
States adopting the optional TUR
indicator once the Federal Government
began paying 100 percent of the costs
(see Table 1).

TABLE 1—HOW OFTEN THE EXTENDED BENEFIT PROGRAM IS “ON”

High unemployment periods	State trigger months	State trigger months EB was “on”	Percent of trigger months EB was “on”
1991–1994 ¹	2,226	111	5.0
2001–2004 ²	2,438	38	1.4
2007–2011 ³	2,392	1,055	44

¹ Period begins in July 1991 and goes to Dec. 1994 to include the post recessionary period of high unemployment.
² Period begins in Mar. 2001 and goes to Dec. 2004 to include the post recessionary period of high unemployment.
³ Period begins in Dec. 2007 and goes to Sept. 2011 to include the post recessionary period of high unemployment.

Only seven States adopted the
optional TUR indicator upon its
introduction in 1993. Then from 1994
through 2008, only four more States
added the TUR indicator to their State
law, bringing the number to 11 at the
start of 2009 (see Table 2). The number
of States implementing the optional
TUR indicator and how often the EB
Program is actually activated are critical

pieces of information for estimating the
impacts of the look-back rounding
methodology change. In 2009, as part of
the American Recovery and
Reinvestment Act (Recovery Act), the
Federal government began paying 100
percent of extended compensation and
high unemployment extended
compensation, so the number of States
that adopted the optional TUR indicator

went up to 38 in 2009, then 39 in 2011.⁸
All of the 28 States that adopted the
TUR indicator post-Recovery Act
instituted the TUR indicator on a
temporary basis—for as long as the
Federal government was paying 100
percent of the compensation for the EB
Program.

⁵ The process of look-back calculation is done in
the Division of Fiscal and Actuarial Services,
Employment and Training Administration of the
U.S. Department of Labor, using data from the
Bureau of Labor Statistics which calculates the
trigger values. The operational procedure will
remain exactly the same as done previously by State
and Federal staff.
⁶ See Office of Management and Budget, *Circular*
A–4: Regulatory Analysis, p. 46 (Sept. 17, 2003),
available at http://www.whitehouse.gov/omb/circulars_default.

⁷ State trigger months are the number of months
during high unemployment periods (see notes to
Table 1) multiplied by the number of States, *i.e.*, 53.
During non-recessionary the percentage would be
even less and close to zero. Extended Benefit
Program data is found in the DOL ETA–394 annual
report. <http://www.workforcesecurity.doleta.gov/unemploy/hb394.asp>.
⁸ An additional feature of the TUR trigger that
should be noted is that for claims beginning after
December, 2010, Congress added a 3rd year to the
look-back calculation, so that if for the most recent

three-month period the TUR equals or exceeds 6.5
percent (or 8.0 percent) and the average TUR in the
State equals or exceeds 110 percent of the average
TUR for any or all three of the corresponding three-
month periods in the 3 preceding calendar years,
then EB will trigger “on.” Tax Relief,
Unemployment Insurance Reauthorization, and Job
Creation Act of 2010, Pub. L. 111–312, § 502 (Dec.
17, 2010). This feature expired on January 1, 2012,
and was not included in the impact analysis.

TABLE 2—STATES THAT HAVE ADOPTED THE OPTIONAL EB TUR INDICATOR

Years	1993–1998	1999–2001	2002	2003–2004	2005–2008	2009–2010	2011
Total TUR indicator states	7	8	9	10	11	38	39
States	Alaska Connecticut Kansas Oregon Rhode Island ... Vermont Washington	New Hampshire	North Carolina	New Mexico	New Jersey Arizona. California. Colorado. Delaware. District of Columbia. Florida. Georgia. Idaho. Illinois. Indiana. Kentucky. Maine. Massachusetts. Michigan. Minnesota. Missouri. Nevada. New York. Ohio. Pennsylvania. South Carolina. Tennessee. Texas. Virginia. West Virginia. Wisconsin.	Alabama	Maryland.

Impact Assessment Methodology

ETA used two distinct methodologies, a time-series simulation and a Monte Carlo-type simulation analysis (each explained more fully below), to provide quantitative impact estimates for the change in the level and timing of the UI benefits paid and taxes collected as a result of the change in formulation of the TUR indicator. The specific goal of these two analyses is to provide a quantitative measure for: (1) The increased probability of a State turning “on” the EB Program under the new rounding rules, and (2) the likely change in the aggregate level of UI benefits and taxes with each instance of additional EB benefits paid. The results of these measures will allow a determination of the economic impact of that occurrence of additional EB benefits paid on the overall economy and on any subgroups.

The time-series simulation estimates are developed using a historical simulation methodology: By first applying the existing TUR indicator computation, and then applying the new rounding rules to data from a specified period of time and measuring the difference in outcomes. To examine the impact on outcomes, the data used is from the introduction of the optional TUR indicator in 1993 through September 2011 when this analysis was completed. This period encompasses

two recessions of varying severity, two complete economic cycles, and a large number of States turning “on” the EB Program. This period also includes the temporary period of 100 percent Federal reimbursement of EB benefit payments when a majority of States, 39, adopted the TUR indicator.⁹

The baseline case is considered to be the simulated outcomes under the current TUR look-back computation for the States that had adopted the optional TUR indicator. For each month during this historical period (January 1993 through September 2011), the actual seasonally adjusted 3-month average TUR¹⁰ was used as well as the actual look-back percentages for each State that had adopted the TUR indicator. The number of months in EB periods was

⁹ The analysis does not include the computation of the 3 year look-back or the periods under which any State may have triggered “on” the EB Program by using the 3 year look-back. State data on adoption of the TUR trigger can be found on the weekly trigger notice at http://www.workforcesecurity.doleta.gov/unemploy/claims_arch.asp.

¹⁰ The data for monthly seasonally adjusted State total unemployment rates is from Bureau of Labor Statistics LASST01000006 (<http://data.bls.gov/timeseries/LASST01000006>). The total amount of monthly EB benefits paid is from the Division of Fiscal and Actuarial Services in the Employment and Training Administration of the Department of Labor report 394 can be found here: <http://www.workforcesecurity.doleta.gov/unemploy/hb394.asp>.

then estimated for each state.¹¹ The TUR look-back percentage was then computed using the new rounding methodology and the analysis rerun. These computations enabled measurement of the differences between the two types of trigger formulations in the number months when the EB Program is triggered “on,” and then the amount of extended benefits paid.¹²

Probability of Turning “On” EB. Using just the States that had adopted the TUR indicator, there were 2,271 monthly observations in this simulation, of which there were 1,170 instances when a State triggered “on” the EB Program by using the TUR indicator under the current methodology. When the new rounding rules were applied there were 1,177 instances—only 7 additional instances when a State would have triggered “on” EB, an increase of 0.6 percent (see Table 3).

¹¹ The “on” period was computed for each state rather than using the actual historical outcome.

¹² Under the new rounding of the look-back formulation there will only be cases when the look back percentage in either of the 2 years, will be higher than the original so the EB Program will turn “on” while the original method will have the EB Program as “off.”

TABLE 3—EXTENDED BENEFIT PERIODS UNDER THE OLD AND NEW TUR INDICATOR ¹
[1993–2011]

	Estimated # of instances of EB “on”	# of instances of EB w/TUR indicator ≥ 6.0%	# of instances of EB w/TUR indicator ≥ 8.0%

New Method	1,177	365	812

Source: Periods of EB are estimated using federal law and data from the Bureau of Labor Statistics seasonally adjusted Total Unemployment Rate series by State LASST01000006.

¹ Data consists of measuring only the periods when the EB Program triggered “on” based on the TUR indicator and included only the States that had adopted the optional TUR indicator. The number of instances refers to the number of State months.

The seven instances included six different States. In four of the instances, the State was triggering “on” because of the 8.0 percent high unemployment period. In none of the instances were there two consecutive months in which a State had a different EB triggering

outcome under the new rounding methodology compared to the truncation method. Two of the instances when States triggered “on” EB due to the rounding calculation occurred following the 1991 recession, one occurred following the 2001 recession,

and four occurred following the 2007 recession when 39 States had adopted the optional TUR indicator (see Table 4). In six of the seven occurrences, the difference in the look-back calculation occurred in the 2nd prior year look-back calculation.

TABLE 4—PERIODS WHEN EB WAS TRIGGERED “ON” UNDER THE NEW ROUNDING FORMULATION

State	EB Trigger date	Rounded 3-month SATUR	First year look-back truncated	Second year look-back truncated	First year look-back rounded	Second year look-back rounded
Alaska	2/28/1993	8.0	86.02	109.58	86	110
Connecticut	5/31/1993	6.8	91.89	109.67	92	110
Oregon	11/30/2003	8.0	106.66	109.58	107	110
Alaska	1/31/2009	6.8	109.67	109.67	110	110
Alabama	3/31/2011	9.2	90.19	109.52	90	110
Kansas	3/31/2011	6.8	94.44	109.67	94	110
Georgia	4/30/2011	10.0	98.03	109.89	98	110

The 0.6 percent increase in the EB Program’s being “on” in this simulation represents the percentage likelihood change in the number of times that the EB Program would trigger “on” due solely to the change in formulation of the look-back mechanism for, on average, 13 States having the TUR indicator in place. Therefore, the likelihood of a State turning “on” the EB Program with the new rounding formulation may be represented by .05 percent (.6/13).

The time series estimates used the actual State unemployment rates as they occurred from 1993 through September 2011 and include only the States which had adopted the optional TUR indicator.

To provide further support for the estimate of the difference in the number of times the EB Program may trigger “on” due to rounding in the look-back calculation during a recession, an additional analysis was employed based on a Monte Carlo-type methodology. The Monte-Carlo methodology allows the simulation of thousands of possible State TUR values rather than just the historical values used in the time series analysis. Thirteen States—the seven original States that adopted the optional TUR indicator and six additional randomly selected States—were chosen,¹³ and then, using the mean and standard deviation of their total unemployment rates during the past

four recessions,¹⁴ one thousand TUR periods were created for each State using a random number generator with a normal distribution. The number of periods when the EB Program would trigger “on” by rounding as opposed to truncating was computed. Of the 13,000 total State observation periods (each representing recessionary periods), the EB Program would have triggered “on” in 4,822 periods using the original method of truncation for the look-back computation, while the EB Program would have triggered “on” in 4,903 periods using the method of rounding, an increase of 81 additional periods (see Table 5).

TABLE 5—DIFFERENCE BETWEEN EB TRIGGER FORMULATIONS UNDER SIMULATED RECESSIONARY TURs
[For 1,000 simulations for each State]

State ¹	Mean TUR in recession periods (%) ²	Standard deviation of recession period ²	Instances when EB “on” w/truncating	Instances when EB “on” w/rounding	Difference	% increase due to rounding
Alaska	8.14	1.21	448	459	11	2.40

¹³ Thirteen States were used as a number of States likely to maintain the TUR indicator in the future. The six States were randomly selected to insure a representative group from the remaining States. The

six States randomly chosen were: Colorado; Delaware; Illinois; Kentucky; Maine; and Maryland.

¹⁴ The mean and standard deviation were taken from actual monthly observations over the recession

and post-recession periods of: 1980–1983; 1991–1993; 2001–2003; and 2008–2011.

TABLE 5—DIFFERENCE BETWEEN EB TRIGGER FORMULATIONS UNDER SIMULATED RECESSIONARY TURs—Continued
[For 1,000 simulations for each State]

State ¹	Mean TUR in recession periods (%) ²	Standard deviation of recession period ²	Instances when EB “on” w/truncating	Instances when EB “on” w/rounding	Difference	% increase due to rounding
Colorado	6.35	1.48	226	229	3	1.31
Connecticut	6.31	1.59	363	375	12	3.20
Delaware	6.23	1.80	367	371	4	1.62
Illinois	8.22	1.98	499	507	8	1.58
Kansas	5.32	1.08	119	120	1	0.83
Kentucky	8.04	2.07	510	517	7	1.35
Maine	6.70	1.48	418	425	7	1.65
Maryland	5.24	1.30	183	185	2	1.08
Oregon	8.53	2.03	512	521	9	1.73
Rhode Island	8.01	2.08	497	506	9	1.78
Vermont	5.66	1.21	221	223	2	0.90
Washington	8.06	1.95	459	465	6	1.29

¹ Original seven States to adopt the optional TUR indicator are in bold.

² The mean and standard deviation were taken from actual monthly TUR observations over the recession and post-recession periods of: 1980–1983; 1991–1993; 2001–2003; 2008–2011.

Across the States this represents, on average, a 1.7 percent (81/4822) increase in the likelihood of turning “on” the EB Program under the new rounding rules (see Table 6). This also represents the

cumulative difference of the 13 States, meaning that each State in this simulation could be considered to have added a 0.13 percent increase of an added instance of turning “on” the EB

Program (1.7/13). This value will be used as the per-State increase in the likelihood of turning “on” the EB Program under the new rounding rules in this simulation.

TABLE 6—MONTE CARLO-TYPE ANALYSIS OF DIFFERENCE IN EB TRIGGER FORMULATION
[For 1,000 simulated monthly trigger values per State]

State	# Instances EB “on” w/truncating	# Instances EB “On” w/rounding	Difference	% Difference
13 States	4,822	4,903	81	1.7
Per State Average	371	377	6

Transfer to EB Recipients: Temporary Income Support (During Recession)

The revision to the TUR indicator computation methodology will result in increased benefits payments during a recession, which provide temporary income support and greater economic stimulus than would otherwise exist during that economic time period. This increased economic stimulus will prevent greater economic distress during a recession. This impact is not a true benefit of the rule because, as explained above, the TUR indicator formulation would redistribute existing transfer payments only over time. That is, a change to increase extended benefits during recessions will ultimately increase the counter-cyclical nature of the program by increasing stimulus during recessions while doing the opposite during expansions.

Increased Compensation. A value for the amount of additional extended compensation and number of people who would receive the extended compensation under the rounding rules

was estimated using a time-series methodology. The estimated total level of extended compensation that would have been paid under the look-back computation was estimated using a weekly survival rate method. In this methodology, for each week that the EB Program is “on,” the number of State EB claimants is multiplied by the State average weekly benefit amount to get the weekly total benefit amount. To arrive at the weekly number of EB claimants, a weekly survival rate is applied for each week of EB to a beginning number of regular UI program exhaustees.¹⁵ This was done for each week of the EB period (either 13 or 20 weeks) and aggregated to get total EB payments for the applicable period, *i.e.*, the period during which each State was

¹⁵ Survival rate is the probability that a claimant will collect Unemployment Compensation from one week to the next. An exhaustee is a person collecting Unemployment Compensation who would be in their last week of compensation but for the EB Program.

“on” EB. This computation is represented in the formula below.

Computation of Total Extended Compensation Paid

Total Wkly Extended Compensation EB Benefits = Σ (Reg. Program Wkly Exhaustions¹⁶ * Wkly Survival Rate¹⁷) * Avg. Wkly Benefit¹⁸ (Summed over each week of the EB period.)

Applying this computation to the seven State periods that turned “on” the EB Program under the rounding formulation in the time series simulation, it was estimated that in total

¹⁶ ETA–5159 report includes monthly regular program exhaustees which were divided by the number of weeks in a month to get weekly data.

¹⁷ The weekly survival rate is the proportion of individuals claiming unemployment compensation in week *n* that will also claim unemployment compensation in week *n*+1. A weekly survival rate of 0.97 was used as a constant for each week of extended benefits. This level is derived from the Division of Fiscal and Actuarial Services State Benefit Forecasting Model.

¹⁸ State average weekly benefit is derived from the ETA–5159 monthly claims report: <http://www.workforcesecurity.doleta.gov/unemploy/finance.asp>.

\$294 million¹⁹ more would have been paid out in extended compensation, and there would be an increase of 148,000²⁰ new first payments in the EB Program. This translates into an estimated 1.2 percent increase (\$294 million/\$24,897 million—total extended compensation in the simulation) in extended compensation and a 1.5 percent increase (\$148,000/\$9.6 million—total EB first pays in the simulation) of EB first payments under the rounding rules compared to the current methodology (*i.e.*, truncating the look-back computation after two decimal places).

Again, dividing these results into the per State added percentage point increase for each instance of triggering “on” the EB Program means there would be a 0.17 percent increase in extended compensation paid²¹ and a 0.22 percent increase²² in first payments.

In terms of how the increased extended compensation paid would be distributed among subgroups of EB recipients, attempting to disaggregate this level of benefits into numerically small select subgroups of claimants such as low-wage workers, or minority claimants, would mean working with monetary flows of very little statistical consequence. Therefore, the Department has determined that no distributional analysis is necessary.

Transfer From State Unemployment Insurance Accounts: Increased Employer Taxes (During Expansions)

The revision to the TUR indicator computation methodology will result in

¹⁹ This amount is, of course, dependent on the size of the States, but it does represent a reasonable estimate since these are the States most likely to have the TUR indicator in the future. Also, this amount is considered a high estimate, since 4 of the States triggered on to 20 weeks of benefits, and the average is a reasonable expected value for the level of per State extended benefits. For all of the periods except one (Alaska, 1/2009) during the State EB period triggered on by the rounding calculation, there was no “on” period for the truncation calculation. The Alaska data was adjusted for the truncation period.

²⁰ Estimated increase in the number of first payments in the seven state periods of triggering on EB found in the Time-series analysis.

²¹ Total additional extended compensation from rounding, \$294 million divided by the number of State periods, 7, and then divided by the total extended compensation for the entire period, \$24,897 million.

²² The increase in first pays due to rounding, 148,000, divided by the number of State periods, 7, and then dividing by the total number of EB first pays during the period of 9.6 million.

increased economic stimulus during recessions. However, a significant increase in extended compensation may result in a State UI tax increase on employers. An increased UI tax on employers might result in dampened overall economic activity as employers postpone equipment purchases or hiring. This impact does not represent a true cost of the changes made in this rule because it is associated with a corresponding transfer of payments to EB recipients during recessions. That is, the regulation would result in redistribution of wealth over time (based on the counter-cyclical nature of the EB Program), rather than have a net social welfare impact.

UI Taxes. Except for the temporary provisions that are no longer in effect, Federal statutes specify that 50 percent of extended compensation is paid from the Extended Unemployment Compensation Account (EUCA) in the Unemployment Trust Fund (UTF), which is funded through the Federal Unemployment Tax Act (FUTA), and 50 percent is paid by the liable State from its account in the UTF.

The Federal monies for extended compensation flow from EUCA, which is also used to fund additional Federal emergency benefit programs. Historically, the balance of this account has been sufficient to pay the level of extended compensation during a recession and would therefore be much greater than the estimated amounts that may result from the change in the look-back mechanism.²³ Nevertheless, even if EUCA, together with the other Federal accounts in the UTF is depleted, the account can obtain advances from the General Fund with no impact on the FUTA tax, which means there would be no expected increase in Federal taxes from the change in formulation of the TUR indicator.

On the State side, every State has a tax structure that responds with higher taxes when the amount of reserves in its UTF account declines.²⁴ Thus, a significant increase in paid extended compensation may result in a State UI tax increase on employers. However, the

tax response takes place only with relatively large changes in the State trust fund account balance, and differs by State depending on the size of the account balance; small changes in a State trust fund account balance may actually have no impact in a State’s UI taxes. To gauge the magnitude of the tax impact from an increase in extended compensation paid, a generalized rule of State UI tax collections can be applied: For any specified increase in unemployment compensation, 100 percent of the increase will be collected in UI taxes over a 10-year period.²⁵

Using the estimated increase of extended compensation paid (due to the TUR indicator rounding computation) from the time-series simulation, \$294 million, an estimate was derived for the amount of potential State tax increases by assuming the increase in extended compensation was divided among the average number of States that experienced an increase in extended EB compensation paid over a 10-year period. To arrive at an estimate for the expected increase in State unemployment compensation taxes due to a change in the rounding rule for the look-back feature of the TUR indicator, 50 percent of the total extended compensation, \$147 million, is assumed to be financed by seven States for an average of \$21 million per State. The amount is assumed to be financed by increased State taxes over a 10-year period for an average of \$2.1 million per year. This amount represents an estimated increase of 0.14 percent²⁶ in State unemployment compensation taxes for each State that turns “on” the EB Program under the new rounding rules.

²⁵ Recoupment rule of UI taxes in response to a compensation increase is from an Office of Unemployment Insurance, Division of Fiscal and Actuarial Services State Revenue model run over a range of scenarios, 12/2011.

²⁶ Derived by taking the average estimated yearly tax increase per State, \$2.1 million, divided by the estimated amount of contributions per State per year, \$1.4 billion. This is certainly a very rough estimate that depends on the size of the States having the optional TUR indicator in the simulation. However, because those States would be expected to continue having the indicator, it is considered a reasonable level.

²³ Historical balances of the EUCA fund can be found here: http://www.treasurydirect.gov/govt/reports/tfmp/tfmp_utf.htm.

²⁴ For applicable State triggering laws see Comparison of State UI Laws: <http://www.workforcesecurity.doleta.gov/unemploy/comparison2011.asp>.

TABLE 7—ESTIMATED INCREASE IN STATE TAXES COLLECTED UNDER NEW ROUNDING FORMULATION

[Based on the estimated extended compensation from the Time-Series data, 1993–2011]

Period	Est. amt. of added extended compensation to finance ¹ (mil.)	Amt. financed per state ² (mil.)	Avg. amt. financed per year (mil.)	% Increase in taxes per state ³
1993–2011 data period	\$147	\$21	\$2.1	0.14

¹ Fifty percent of total estimated amount of increased extended compensation paid due to rounding from the Time-Series Data.² Derived from 50 percent of the estimated increase in extended compensation payments under the Time Series data divided by the number of States that experienced an increase.³ Total extended compensation to be financed divided by the total unemployment compensation contributions over the period: <http://www.workforcesecurity.doleta.gov/unemploy/hb394.asp>.

In terms of specific distribution of these impacts, disaggregating the tax increases into subgroups of employers such as small businesses would mean working with monetary flows of very little consequence. Therefore, the Department has determined that no distributional analysis is necessary.

Non-Quantified Impacts

OMB Circular No. A–4 requires the identification of any non-quantifiable benefits and costs that cannot be reasonably measured.²⁷ One primary non-quantifiable benefit of implementing regulations for the TUR indicator and the associated rounding rule, and which is a driving factor for its adoption, is that by codifying the TUR indicator the Department will explicitly clarify a methodology for computing the TUR look-back that regulations previously left unspecified. This final rule will remove the potential for future misunderstanding in the computation of the optional TUR indicator, as compared to the current status quo where the TUR look-back computation method is not specified in Department regulations.

Regarding the secondary impacts from increased temporary income during recessions and increased employer taxes during expansions, the Department has determined that the estimates of extended compensation and UI tax increases are too small to meaningfully model their impact on the macro economy. With a likely impact of increasing the number of instances the EB Program triggers “on” by two during an average recession and nine instances during a severe recession (as computed in detail in the scenarios below), these impact numbers are too small to model any stimulus impact during a recession or a dampening effect of the tax increases during expansions. Not only are the impacts on extended

compensation and taxes small compared to the U.S. economy (e.g., far below the \$1 billion limit for use of an economic multiplier effect on the level of employment or economic activity²⁸), but even compared to aggregate unemployment compensation payments and taxes the numbers are rather insignificant.

Potential Future Stimulative and Distributional Impacts Scenarios

By increasing the overall level of benefits paid by States during recessionary periods, the change in TUR indicator computation methodology would aid in the counter-cyclical nature of the Unemployment Compensation program by increasing the economic stimulus during recessions and possibly dampening overall activity with possible higher taxes. The estimates for the increased probability of States triggering “on” the EB Program, increased benefits, higher first payments, and potential changes to UI taxes, can provide estimates for the change in flows of the Unemployment Compensation program that this proposal may cause under various future recessionary scenarios.

*Scenario 1 (11 States with the optional TUR indicator; typical severity 3-year recession and post-recession period).*²⁹ In a likely scenario, assuming a recession and post-recession high unemployment period lasting 3 years, with 11 States having the optional TUR indicator in place, it would mean 396 possible State months (11 States * 36 months) of high enough unemployment for the EB Program to trigger “on.” Using the results from the high unemployment periods in the Monte Carlo-type analysis, the Department could expect approximately 147 periods of the EB Program to be triggered “on” in States with the optional TUR

indicator (37 percent³⁰ * 396 State months) using the original truncation methodology. With 11 States having the optional TUR indicator, the likelihood of turning “on” the EB Program under the rounding methodology would be 1.4 percent (11 States * 0.13 percent per State likelihood), this would increase the number of EB Program periods by two instances (1.4 percent * 147 periods). Assuming a recession with \$2 billion in total extended compensation paid and 1.5 million first payments in the EB Program, then with two more instance of the EB Program triggering “on” the Department would expect an increase in extended compensation paid of \$7 million (0.34 percent * \$2 billion) and an increase of 7,000 in the number of first payments (1.5 million * 0.44 percent). The resulting tax increases spread over a 10-year period in one State would then be expected to be approximately \$350,000 per year ((\$7 million * 0.5 State cost)/10 years).

*Scenario 2 (20 States with optional TUR indicator; more severe 3-year recession and post-recession period).*³¹ In a less likely scenario, but one with possibly the highest expected impact, assuming a recession and post-recession period lasting 3 years, with 20 States having the optional TUR indicator in place—720 State months (20 States * 36 months). In a more severe recession the Department could expect 360 periods of the EB Program to be triggered “on” with the optional TUR indicator (720 * 50 percent³²). With 20 States having the optional TUR indicator the likelihood of triggering “on” the EB Program under the new rounding rules would be 2.6 percent (20 States * 0.13 percent³³) this would increase the number of periods

³⁰ A value similar to the percentage of State months that triggered on to EB in the 1991 and 2001 recessions.

³¹ Similar in severity to the 2007 recession.

³² Assumed likelihood of triggering on EB in a severe recession.

³³ Calculated likelihood of triggering on EB in the severe recession for States with optional TUR trigger under the new rounding rules.

²⁷ See Office of Management and Budget, *Circular A–4: Regulatory Analysis*, pp. 2–3, 10, 26–27 (Sept. 17, 2003), available at http://www.whitehouse.gov/omb/circulars_default.

²⁸ In OMB Circular A–4 in reference to the size of stimulative impacts: “. . . that rules with annual costs that are less than one billion dollars are likely to have a minimal effect on economic growth.”

²⁹ Similar in severity to the 1991 recession.

the EB Program would be triggered “on” by nine instances (2.6 percent * 360 periods). Assuming a recession with \$5 billion in total extended compensation paid and 3.0 million first payments for the program,³⁴ with nine more instances of the EB Program triggering “on,” the Department would expect an increase in extended compensation of \$77 million (0.17 percent³⁵ * 9 periods * \$5 billion) and an increase of 59,000 in the number of first payments for the program (3 million * 9 periods * 0.22 percent). The resulting tax increases spread over a 10-year period in one State would then be expected to be approximately \$190,000

per year (\$77 million * 0.5 State cost)/20 States)/10 years).

Impact of the TUR Option

The preceding impact analysis focused on changing the computational methodology of the TUR look-back provision. Since the Department is not considering the removal of the optional TUR indicator, the analysis does not measure the impact of the original adoption of the TUR indicator in 1992. However, it should be noted that a review of the most evident differences caused by the implementation of this option shows a rather small impact.

From 1993 to 2006, for the 11 States that adopted the TUR indicator by 2006 (Table 2), EB costs are totaled for each period when one of these States triggered on to the EB Program with the TUR option but would not have turned on extended compensation under the IUR option.³⁶ During this 14-year period, there were 28 instances when a State triggered on to the EB Program using the TUR option and would not have triggered on using the IUR trigger. The total extended compensation costs of these instances were approximately \$310 million and the number of First Payments was 330,000.

TABLE 8—STATES TRIGGERING ON TO THE EB PROGRAM USING THE TUR OPTION
[Without qualifying with the IUR Option]

1993	1994	1995	1996	1997	1998	1999
Alaska Oregon Rhode Is Washington.	Alaska Oregon Rhode Is,	Alaska Rhode Is.	Alaska	Alaska	Alaska	Alaska,
2000	2001	2002	2003	2004	2005	2006
Alaska	Alaska	Alaska	Alaska N. Carolina Oregon	Alaska Michigan N. Carolina Oregon Washington.	Alaska. Michigan. Oregon. Washington.	

This is a relatively small number of States and amount spent, on average approximately \$22 million per year, and in no year did the amount spent on extended compensation from States that triggered on using the TUR option ever exceed \$100 million. Indeed, measuring the change in cyclical financial flows of the UI program does not seem necessary under these aggregates.

Conclusion

Placing the optional TUR indicator in regulations does not impose any additional change in burden, since no change in the operational procedure will occur. In addition, it incorporates in regulations the computational methodology previously communicated in UIPL No. 16–11 for the TUR’s look-back.

Changing the look-back computation does have an impact, although it is estimated to be small. For each State that adopted the optional TUR indicator, it was found that the new rounding rule would likely add a 0.13 percentage point increase in the

likelihood of a single State triggering “on” the EB Program during a recession. For each State that triggered “on” the EB Program, it would likely add a 0.17 percent increase in the level of extended compensation paid, a 0.22 percent increase in people receiving extended compensation, and a per State increase in unemployment compensation taxes of 0.14 percent per year. These numbers indicate a negligible impact on the redistribution of the flows (unemployment compensation and taxes) in the Unemployment Compensation program. These impacts are so small that any stimulative or distributional effects would be considered of little consequence. Indeed, the probable economic impact encompasses the likely possibility (depending on the future level of the TUR) that there would be no measurable impact from a change in the derivation of the TUR indicator due to rounding the look-back proportion as opposed to truncating that value.

Paperwork Reduction Act

The purposes of the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.*, include minimizing the paperwork burden on affected entities. The PRA requires certain actions before an agency can adopt or revise a collection of information, including publishing a summary of the collection of information and a brief description of the need for and proposed use of the information.

A Federal agency may not conduct or sponsor a collection of information unless it is approved by OMB under the PRA, and displays a currently valid OMB control number, and the public is not required to respond to a collection of information unless it displays a currently valid OMB control number. Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512).

³⁴ Calculated from average costs and payments made during recessions 1980–2001.

³⁵ Assumed likelihood of triggering on EB in this type of recession.

³⁶ For a state to trigger on extended compensation using the IUR, its insured unemployment rate (IUR) for the previous 13 weeks is at least 5 percent and is 120 percent of the average of the rates for the

corresponding 13-week period in each of the 2 previous years.

The Department published an NPRM on October 27, 2014, in the **Federal Register** (79 FR 63859). The NPRM proposed to amend 20 CFR 615, Extended Benefits, by implementing the TUR indicator, an optional calculation methodology for triggering on Extended Benefits, in regulations. The NPRM also proposed to revise the regulatory requirements at § 615.15, pertaining to records and reports State agencies must submit. More specifically, paragraphs (a) and (b) were proposed to be revised for clarity by deleting unnecessary language regarding the Secretary's authority to request Extended Benefit Program reports and to appoint audit officials for those reports. Furthermore, for reasons discussed in the Review of the Final Rule, the Department proposed to delete paragraphs (c) and (d). The reporting instructions for the proper and timely submission of data are provided in ET Handbook No. 401, which governs Unemployment Compensation required reporting.

The preamble to the NPRM stated that the Department had determined the proposed rule did not contain new information collections. However, to ensure transparency and full opportunities for public participation under all appropriate authorities, the Department is submitting an Information Collection Request (ICR) to the Office of Management and Budget (OMB) to revise the PRA approval for the information collections to reflect this rulemaking. See 44 U.S.C. 3506(c)(2)(B); 5 CFR 1320.11. As part of that process, the Department sought public comments on the removal of specific information collection requirements in the NPRM and on the general Extended Benefit reporting requirements in Handbook 401 and Forms ETA 538 and 539 in light of specific areas of interest to minimize so-called "paperwork" burdens on the public. The Department published a notice in the **Federal Register** on July 7, 2015 (80 FR 38747) to provide the public a 60-day opportunity to comment on the information collections as described in the rule. No comments on the ICR were received during the public comment period.

Concurrent with the publication of this final rule, the Department is submitting an ICR to OMB for approval. The Department will publish a **Federal Register** notice upon receipt of OMB's notice of approval.

Overview of the Information Collection

Agency: DOL–ETA.

Action: ICR Revision.

Title of Collection: Weekly Claims and Extended Benefits Data and Weekly Initial and Continued Weeks Claimed.

OMB Control Number: 1205–0028.

Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Respondents: 53.

Total Estimated Number of Responses: 5,512.

Total Estimated Annual Time Burden: 3,675 hours.

Total Estimated Annual Other Costs Burden: \$0.

Executive Order 13132

Section 6 of Executive Order 13132 requires Federal agencies to consult with State entities when a regulation or policy may have a substantial direct effect on the States or the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of government, within the meaning of the Executive Order. Section 3(b) of the Executive Order further provides that Federal agencies must implement regulations that have a substantial direct effect only if statutory authority permits the regulation and it is of national significance.

This final rule does not have a substantial direct effect on the States or the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of Government, within the meaning of the Executive Order 13132. Any action taken by a State as a result of the final rule would be at its own discretion as the rule imposes no requirements.

Unfunded Mandates Reform Act of 1995

This regulatory action has been reviewed in accordance with the Unfunded Mandates Reform Act of 1995 (Reform Act). Under the Reform Act, a Federal agency must determine whether a regulation proposes a Federal mandate that would result in the increased expenditures by State, local, or tribal governments, in the aggregate, or by the private sector, of \$100 million or more in any single year. The Department has determined this final rule does not include any Federal mandate that may result in increased expenditure by State, local, and Tribal governments in the aggregate of more than \$100 million, or increased expenditures by the private sector of more than \$100 million.

Accordingly, it is unnecessary for the Department to prepare a budgetary impact statement. Further, as noted above in the conclusion of the economic

impact analysis, the impact is positive for State UTF accounts.

Effect on Family Life

The Department certifies that this final rule has been assessed according to section 654 of the Treasury and General Government Appropriations Act, enacted as part of the Omnibus Consolidated and Emergency Supplemental Appropriations Act of 1999 (Pub. L. 105–277, 112 Stat. 2681), for its effect on family well-being. It will not adversely affect the well-being of the nation's families. Therefore, the Department certifies that this final rule does not adversely impact family well-being.

Regulatory Flexibility Act/SBREFA

The Regulatory Flexibility Act (RFA) at 5 U.S.C. 603(a) requires agencies to prepare and make available for public comment an initial regulatory flexibility analysis which will describe the impact of the final rule on small entities. Section 605 of the RFA allows an agency to certify a rule, in lieu of preparing an analysis, if the final rulemaking is not expected to have a significant economic impact on a substantial number of small entities. Furthermore, under the Small Business Regulatory Enforcement Fairness Act of 1996, 5 U.S.C. 801 (SBREFA), an agency is required to produce compliance guidance for small entities if the rule has a significant economic impact on a substantial number of small entities.

The RFA defines small entities as small business concerns, small not-for-profit enterprises, or small governmental jurisdictions. The final rule does not regulate small entities. As a result, any indirect impact on small entities would be from a tax increase resulting from a State triggering "on" because of the new computation method for the look-back. Therefore, the Department certifies that the final rule will not have a significant economic impact on a substantial number of these small entities.

Plain Language

The Department drafted this final rule in plain language.

List of Subjects in 20 CFR Part 615

Grant programs-labor; Reporting and recordkeeping requirements; Unemployment compensation.

For the reasons discussed in the preamble, ETA amends 20 CFR part 615 as follows:

PART 615—EXTENDED BENEFITS IN THE FEDERAL-STATE UNEMPLOYMENT COMPENSATION PROGRAM

■ 1. The authority citation for part 615 is revised to read as follows:

Authority: 26 U.S.C. 7805; 26 U.S.C. 1102; Secretary's Order No. 6–10.

■ 2. Revise § 615.1 to read as follows:

§ 615.1 Purpose.

This part implements the “Federal-State Extended Unemployment Compensation Act of 1970” (EUCA). Under the Federal Unemployment Tax Act, 26 U.S.C. 3304(a)(11), an approved State law must provide for the payment of extended compensation to eligible individuals who have exhausted all rights to regular compensation during specified periods of unemployment, as prescribed in EUCA and this part.

§§ 615.3, 615.4, 615.7, 616.8, 615.9, 615.12, and 615.14 [Amended]

■ 3. In part 615 remove the words “the Act” and add in their place the acronym “EUCA” in the following places:

- a. Section 615.3 (four places);
 - b. Section 615.4(a) and (b) introductory text;
 - c. Section 615.8(a) introductory text;
 - d. Section 615.8(c) introductory text;
 - e. Section 615.8(c)(2);
 - f. Section 615.8(d) introductory text;
 - g. Section 615.8(d)(3) (two places);
 - h. Section 615.8(d)(4);
 - i. Section 615.8(e) introductory text;
 - j. Section 615.8(e)(8);
 - k. Section 615.8(f)(1) introductory text;
 - l. Section 615.8(f)(1)(ii);
 - m. Section 615.8(f)(4);
 - n. Section 615.8(g)(1) and (5);
 - o. Section 615.9(d);
 - p. Section 615.14(a)(1) through (4);
 - q. Section 615.14(b) introductory text;
 - r. Section 615.14(c)(1);
 - s. Section 615.14(c)(2) (two places);
 - t. Section 615.14(c)(3) introductory text;
 - u. Section 615.14(c)(5) and (6);
 - v. Section 615.14(c)(7)(i) through (iii);
 - w. Section 615.14(d)(1);
 - x. Section 615.14(d)(2) (two places);
 - y. Section 615.14(d)(3) (four places);
 - z. Section 615.14(d)(6); and
- 4. Revise § 615.2 to read as follows:

§ 615.2 Definitions.

For the purposes of the EUCA and this part—

Additional compensation means compensation totally financed by a State and payable under a State law by reason of conditions of high unemployment or by reason of other special factors and,

when so payable, includes compensation payable pursuant to 5 U.S.C. chapter 85.

And, as used in section 202(a)(3)(D)(ii), shall be interpreted to mean “or”.

Applicable benefit year means, with respect to an individual, the current benefit year if, at the time an initial claim for extended compensation is filed, the individual has an unexpired benefit year only in the State in which such claim is filed, or, in any other case, the individual's most recent benefit year. For this purpose, the most recent benefit year for an individual who has unexpired benefit years in more than one State when an initial claim for extended compensation is filed, is the benefit year with the latest ending date or, if such benefit years have the same ending date, the benefit year in which the latest continued claim for regular compensation was filed. The individual's most recent benefit year which expires in an extended benefit period, when either extended compensation or high unemployment extended compensation is payable, is the applicable benefit year if the individual cannot establish a second benefit year or is precluded from receiving regular compensation in a second benefit year solely by reason of a State law provision which meets the requirement of section 3304(a)(7) of the Internal Revenue Code of 1986 (26 U.S.C. 3304(a)(7)).

Applicable State means, with respect to an individual, the State with respect to which the individual is an “exhaustee” as defined in § 615.5, and in the case of a combined wage claim for regular compensation, the term means the “paying State” as defined in § 616.6(e) of this chapter.

Applicable State law means the law of the State which is the applicable State for an individual.

Average weekly benefit amount, for the purposes of section 202(a)(3)(D)(i), means the weekly benefit amount (including dependents' allowances payable for a week of total unemployment and before any reduction because of earnings, pensions or other requirements) applicable to the week in which the individual failed to take an action which results in a disqualification as required by section 202(a)(3)(B) of the EUCA.

Base period means, with respect to an individual, the base period as determined under the applicable State law for the individual's applicable benefit year.

Benefit structure as used in section 204(a)(2)(D), for the requirement to round down to the “nearest lower full

dollar amount” for Federal reimbursement of sharable regular and sharable extended compensation means all of the following:

- (1) Amounts of regular weekly benefit payments,
- (2) Amounts of additional and extended weekly benefit payments,
- (3) The State maximum or minimum weekly benefit,
- (4) Partial and part-total benefit payments,
- (5) Amounts payable after deduction for pensions, and
- (6) Amounts payable after any other deduction required by State law.

Benefit year means, with respect to an individual, the benefit year as defined in the applicable State law.

Claim filed in any State under the interstate benefit payment plan, as used in section 202(c), means:

- (1) Any interstate claim for a week of unemployment filed pursuant to the Interstate Benefit Payment Plan, but does not include—
 - (i) A claim filed in Canada,
 - (ii) A visiting claim filed by an individual who has received permission from his/her regular reporting office to report temporarily to a local office in another State and who has been furnished intrastate claim forms on which to file claims, or
 - (iii) A transient claim filed by an individual who is moving from place to place searching for work, or an intrastate claim for Extended Benefits filed by an individual who does not reside in a State that is in an Extended Benefit Period,
- (2) *The first 2 weeks*, as used in section 202(c), means the first 2 weeks for which the individual files compensable claims for Extended Benefits under the Interstate Benefit Payment Plan in an agent State in which an Extended Benefit Period is not in effect during such weeks.

Compensation and unemployment compensation means cash benefits (including dependents' allowances) payable to individuals with respect to their unemployment, and includes regular compensation, additional compensation and extended compensation as defined in this section.

Date of a disqualification, as used in section 202(a)(4), means the date the disqualification begins, as determined under the applicable State law.

Department means the United States Department of Labor, and shall include the Employment and Training Administration, the agency of the United States Department of Labor headed by the Assistant Secretary of Labor for Employment and Training to whom has been delegated the

Secretary's authority under the EUCA in Secretary's Order No. 6–2010 (75 FR 66268) or any subsequent order.

Eligibility period means, for an individual, the period consisting of—

(1) The weeks in the individual's applicable benefit year which begin in an extended benefit period or high unemployment period, or for a single benefit year, the weeks in the benefit year which begin in more than one extended benefit period or high unemployment period, and

(2) If the applicable benefit year ends within an extended benefit period or high unemployment period, any weeks thereafter which begin in such extended benefit period or high unemployment period,

(3) An individual may not have more than one eligibility period for any one exhaustion of regular benefits, or carry over from one eligibility period to another any entitlement to extended compensation.

Employed, for the purposes of section 202(a)(3)(B)(ii) of the EUCA, and *employment*, for the purposes of section 202(a)(4) of the EUCA, mean service performed in an employer-employee relationship as defined in the State law; and that law also shall govern whether that service must be covered by it, must consist of consecutive weeks, and must consist of more weeks of work than are required under section 202(a)(3)(B) of the EUCA.

EUCA means the Federal-State Extended Unemployment Compensation Act of 1970, title II of Public Law 91–373, 84 Stat. 695, 708 (codified in note to 26 U.S.C. 3304), as amended.

Extended benefit period means the weeks during which extended compensation is payable in a State in accordance with § 615.11.

Extended Benefits Program or *EB Program* means the entire program under which monetary payments are made to workers who have exhausted their regular compensation during periods of high unemployment.

Extended compensation or *extended benefits* means the funds payable to an individual for weeks of unemployment which begin in a regular EB period or high unemployment period (HUP), under those provisions of a State law which satisfy the requirements of EUCA and this part with respect to the payment of extended unemployment compensation, and, when so payable, includes compensation payable under 5 U.S.C. chapter 85, but does not include regular compensation or additional compensation.

Extended compensation account is the account established for each individual claimant for the payment of

regular extended compensation or high unemployment extended compensation.

Extended unemployment compensation means:

(1) Regular extended compensation paid to an eligible individual under those provisions of a State law which are consistent with EUCA and this part, and that does not exceed the smallest of the following:

(i) 50 percent of the total amount of regular compensation payable to the individual during the applicable benefit year; or

(ii) 13 times the individual's weekly amount of extended compensation payable for a week of total unemployment, as determined under § 615.6(a); or

(iii) 39 times the individual's weekly benefit amount, referred to in paragraph (1)(ii) of this definition, reduced by the regular compensation paid (or deemed paid) to the individual during the applicable benefit year; or

(2) High unemployment extended compensation paid to an eligible individual under an optional TUR indicator enacted under State law when the State is in a high unemployment period, in accordance with § 615.11(e) of this part, and that does not exceed the smallest of the following:

(i) 80 percent of the total amount of regular compensation payable to the individual during the applicable benefit year; or

(ii) 20 times the individual's weekly amount of extended compensation payable for a week of total unemployment, as determined under § 615.6(a); or

(iii) 46 times the individual's weekly benefit amount, referred to in paragraph (1)(ii) of this definition, reduced by the regular compensation paid (or deemed paid) to the individual during the applicable benefit year.

Gross average weekly remuneration, for the purposes of section 202(a)(3)(D)(i), means the remuneration offered for a week of work before any deductions for taxes or other purposes and, in case the offered pay may vary from week to week, it shall be determined on the basis of recent experience of workers performing work similar to the offered work for the employer who offered the work.

High unemployment extended compensation means the benefits payable to an individual for weeks of unemployment which begin in a high unemployment period, under those provisions of a State law which satisfy the requirements of EUCA and this part for the payment of high unemployment extended compensation. When so payable, high unemployment extended

compensation includes compensation payable under 5 U.S.C. chapter 85, but does not include regular compensation or additional compensation. Regular extended unemployment compensation, along with high unemployment extended compensation, are part of the program referred to in this part as Extended Benefits.

High unemployment period (or HUP) means a period where the Department determines that the Trigger Value in a State, which has enacted the alternative Total Unemployment Rate indicator in law, for the most recent 3 months for which data for all States is published, equals or exceeds 8 percent and such Trigger Value equals or exceeds 110 percent of such Trigger Value for either or both of the corresponding 3-month periods ending in the 2 preceding calendar years.

Hospitalized for treatment of an emergency or life-threatening condition, as used in section 202(a)(3)(A)(ii), has the following meaning: "Hospitalized for treatment" means an individual was admitted to a hospital as an inpatient for medical treatment. Treatment is for an "emergency or life threatening condition" if determined to be such by the hospital officials or attending physician that provide the treatment for a medical condition existing upon or arising after hospitalization. For purposes of this definition, the term "medical treatment" refers to the application of any remedies which have the objective of effecting a cure of the emergency or life-threatening condition. Once an "emergency condition" or a "life-threatening condition" has been determined to exist by the hospital officials or attending physician, the status of the individual as so determined shall remain unchanged until release from the hospital.

Individual's capabilities, for the purposes of section 202(a)(3)(C), means work which the individual has the physical and mental capacity to perform and which meets the minimum requirements of section 202(a)(3)(D).

Insured Unemployment Rate means the percentage derived by dividing the average weekly number of individuals filing claims for regular compensation in a State for weeks of unemployment in the most recent 13-consecutive-week period as determined by the State on the basis of State reports to the United States Secretary of Labor by the average monthly employment covered under State law for the first 4 of the most recent 6 completed calendar quarters before the end of such 13-week period.

Jury duty, for purposes of section 202(a)(3)(A)(ii), means the performance of service as a juror, during all periods

of time an individual is engaged in such service, in any court of a State or the United States pursuant to the law of the State or the United States and the rules of the court in which the individual is engaged in the performance of such service.

Provisions of the applicable State law, as used in section 202(a)(3)(D)(iii) of EUCA, means that State law provisions must not be inconsistent with sections 202(a)(3)(C) and 202(a)(3)(E). Therefore, decisions based on State law provisions must not require an individual to take a job which requires traveling an unreasonable distance to work, or which involves an unreasonable risk to the individual's health, safety or morals. Such State law provisions must also include labor standards and training provisions required under sections 3304(a)(5) and 3304(a)(8) of the Internal Revenue Code of 1986 and section 236(d) of the Trade Act of 1974.

Reasonably short period, for the purposes of section 202(a)(3)(C), means the number of weeks provided by the applicable State law.

Regular compensation means compensation payable to an individual under a State law, and, when so payable, includes compensation payable pursuant to 5 U.S.C. chapter 85, but does not include extended compensation or additional compensation.

Regular extended compensation means the benefits payable to an individual for weeks of unemployment which begin in an extended benefit period, under those provisions of a State law which satisfy the requirements of EUCA and this part for the payment of extended unemployment compensation, and, when so payable, includes compensation payable under 5 U.S.C. chapter 85, but does not include regular compensation or additional compensation. Regular extended compensation, along with high unemployment extended compensation, are part of the program referred to in this part as Extended Benefits.

Regular EB period means a period in which a state is "on" the EB Program because either the mandatory or optional IUR indicator satisfies the criteria to be "on" and the state is not in a 13-week mandatory "off" period; or the State is "on" the EB Program because the TUR indicator's Trigger Value is at least 6.5 percent and it is at least 110 percent of the Trigger Value for the comparable 3 months in either of the prior 2 years.

Secretary means the Secretary of Labor of the United States.

Sharable compensation means:

(1) Extended compensation paid to an eligible individual under those provisions of a State law which are consistent with EUCA and this part, and that does not exceed the smallest of the following:

(i) 50 percent of the total amount of regular compensation payable to the individual during the applicable benefit year; or

(ii) 13 times the individual's weekly amount of extended compensation payable for a week of total unemployment, as determined under § 615.6(a); or

(iii) 39 times the individual's weekly benefit amount, referred to in paragraph (1)(ii) of this definition, reduced by the regular compensation paid (or deemed paid) to the individual during the applicable benefit year.

(2) Extended compensation paid to an eligible individual under an optional TUR indicator enacted under State law when the State is in a high unemployment period, in accordance with § 615.12(f) of this part, and that does not exceed the smallest of the following:

(i) 80 percent of the total amount of regular compensation payable to the individual during the applicable benefit year; or

(ii) 20 times the individual's weekly amount of extended compensation payable for a week of total unemployment, as determined under § 615.6(a); or

(iii) 46 times the individual's weekly benefit amount, referred to in paragraph (1)(ii) of this definition, reduced by the regular compensation paid (or deemed paid) to the individual during the applicable benefit year.

(3) Regular compensation paid to an eligible individual for weeks of unemployment in the individual's eligibility period, but only to the extent that the sum of such compensation, plus the regular compensation paid (or deemed paid) to the individual for prior weeks of unemployment in the applicable benefit year, exceeds 26 times and does not exceed 39 times the average weekly benefit amount (including allowances for dependents) for weeks of total unemployment payable to the individual under the State law in such benefit year: Provided, that such regular compensation is paid under provisions of a State law which are consistent with EUCA and this part.

(4) Notwithstanding the preceding provisions of this paragraph, sharable compensation does not include any regular or extended compensation for which a State is not entitled to a payment under section 202(a)(6) or 204 of EUCA or § 615.14 of this part.

State means the States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and the U. S. Virgin Islands.

State agency means the State unemployment compensation agency of a State which administers the State law.

State law means the unemployment compensation law of a State, approved by the Secretary under section 3304(a) of the Internal Revenue Code of 1986 (26 U.S.C. 3304(a)).

A systematic and sustained effort, for the purposes of section 202(a)(3)(E), means—

(i) A high level of job search activity throughout the given week, compatible with the number of employers and employment opportunities in the labor market reasonably applicable to the individual,

(ii) A plan of search for work involving independent efforts on the part of each individual which results in contacts with persons who have the authority to hire or which follows whatever hiring procedure is required by a prospective employer in addition to any search offered by organized public and private agencies such as the State employment service or union or private placement offices or hiring halls,

(iii) Actions by the individual comparable to those actions by which jobs are being found by people in the community and labor market, but not restricted to a single manner of search for work such as registering with and reporting to the State employment service and union or private placement offices or hiring halls, in the same manner that such work is found by people in the community,

(iv) A search not limited to classes of work or rates of pay to which the individual is accustomed or which represent the individual's higher skills, and which includes all types of work within the individual's physical and mental capabilities, except that the individual, while classified by the State agency as provided in § 615.8(d) as having "good" job prospects, shall search for work that is suitable work under State law provisions which apply to claimants for regular compensation (which is not sharable),

(v) A search by every claimant, without exception for individuals or classes of individuals other than those in approved training, as required under section 3304(a)(8) of the Internal Revenue Code of 1986 or section 236(e) of the Trade Act of 1974,

(vi) A search suspended only when severe weather conditions or other calamity forces suspension of such activities by most members of the community, except that

(vii) The individual, while classified by the State agency as provided in § 615.8(d) as having “good” job prospects, if such individual normally obtains customary work through a hiring hall, shall search for work that is suitable work under State law provisions which apply to claimants for regular compensation (which is not sharable).

Tangible evidence of an active search for work, for the purposes of section 202(a)(3)(E), means a written record which can be verified, and which includes the actions taken, methods of applying for work, types of work sought, dates and places where work was sought, the name of the employer or person who was contacted and the outcome of the contact.

Total Unemployment Rate means the number of unemployed individuals in a State (seasonally adjusted) divided by the civilian labor force (seasonally adjusted) in the State for the same period.

Trigger Value or *average rate of total unemployment* means the ratio computed using 3 months of the level of seasonally adjusted unemployment in a State in the numerator and 3 months of the level of the seasonally adjusted civilian labor force in the State in the denominator. This rate is used for triggering States “on” and “off” the optional Total Unemployment Rate indicator as described in § 615.12(e).

Week means:

(1) For purposes of eligibility for and payment of extended compensation, a week as defined in the applicable State law.

(2) For purposes of computation of extended compensation “on” and “off” and “no change” indicators and insured unemployment rates and the beginning and ending of an EB Period or a HUP, a calendar week.

Week of unemployment means:

(1) A week of total, part-total, or partial unemployment as defined in the applicable State law, which shall be applied in the same manner and to the same extent to the Extended Benefit Program as if the individual filing a claim for Extended Benefits were filing a claim for regular compensation, except as provided in paragraph (2) of this definition.

(2) *Week of unemployment* in section 202(a)(3)(A) of the EUCA means a week of unemployment, as defined in paragraph (1) of this definition, for which the individual claims Extended Benefits or sharable regular benefits.

■ 5. Amend § 615.3 by revising the third sentence to read as follows:

§ 615.3 Effective period of the program.

* * * Conformity with EUCA and this part in the payment of regular compensation, regular extended compensation, and high unemployment extended compensation (if State law so provides) to any individual is a continuing requirement, applicable to every week as a condition of a State’s entitlement to payment for any compensation as provided in EUCA and this part.

■ 6. Amend § 615.7 by adding paragraph (b)(3) and revising paragraph (d) introductory text to read as follows:

§ 615.7 Extended Benefits; maximum amount.

* * * * *

(b) * * *

(3) If State law provides, in accordance with § 615.12(e), for a high unemployment period for weeks of unemployment beginning after March 6, 1993, the provisions of paragraph (b)(1) of this section are applied by substituting:

- (i) 80 percent for 50 percent in (b)(1)(i),
- (ii) 20 for 13 in (b)(1)(ii), and
- (iii) 46 for 39 in (b)(1)(iii).

Note to paragraph (b)(3). *Provided*, that if an individual’s extended compensation account is determined in accordance with the provisions of paragraphs (b)(3)(i) through (b)(3)(iii) (for a “high unemployment period” as defined in § 615.2) during the individual’s eligibility period, upon termination of the high unemployment period, such individual’s account must be reduced by the amount in the account that is more than the maximum amount of extended compensation or high extended compensation payable to the individual. *Provided further*, if the account balance is equal to or less than the maximum amount of extended compensation or high unemployment extended compensation payable, there will be no reduction in the account balance upon termination of a high unemployment period. In no case will the individual receive more regular extended compensation or high unemployment extended compensation than the amount determined in accordance with paragraphs (b)(1)(i) through (iii) of this section, nor more extended compensation or high unemployment extended compensation than as provided in paragraphs (b)(2)(i) through (iii) of this section.

* * * * *

(d) *Reduction because of trade readjustment allowances.* Section 233(c) of the Trade Act of 1974 (and section 204(a)(2)(C) of EUCA), requiring a reduction of extended compensation because of the receipt of trade readjustment allowances, must be applied as follows:

* * * * *

■ 7. Amend § 615.8 by revising paragraphs (e)(5)(iii), (f)(2)(i) and (iii), and (h)(3) and (4) to read as follows:

§ 615.8 Provisions of State law applicable to claims.

* * * * *

(e) * * *

(5) * * *

(iii) The work pays less than the higher of the minimum wage set in section 6(a)(1) of the Fair Labor Standards Act of 1938, or any applicable State or local minimum wage, without regard to any exemption elsewhere in those laws, or

* * * * *

(f) * * *

(2) * * *

(i) The gross average weekly remuneration for the work for any week does not exceed the sum of the individual’s weekly benefit amount plus any supplemental unemployment compensation benefits (as defined in section 501(c)(17)(D) of the Internal Revenue Code of 1986) payable to the individual,

* * * * *

(iii) The work pays less than the higher of the minimum wage set in section 6(a)(1) of the Fair Labor Standards Act of 1938, or any applicable State or local minimum wage, without regard to any exemption elsewhere in those laws, or

* * * * *

(h) * * *

(3) What kind of jobs he/she must be actively engaged in seeking each week depending on the classification of his/her job prospects, and what tangible evidence of such search must be furnished to the State agency with each claim for benefits. In addition, the State must inform the claimant that he/she is required to apply for and accept suitable work, and

(4) The resulting disqualification if he/she fails to apply for work to which referred, or fails to accept work offered, or fails to actively engage in seeking work or to furnish tangible evidence of such search for each week for which extended compensation or sharable regular benefits is claimed, beginning with the week following the week in which such information shall be furnished in writing to the individual.

■ 8. Revise § 615.11 to read as follows:

§ 615.11 Extended Benefit Periods.

(a) *Beginning date.* Except as provided in paragraph (d) of this section, an extended benefit period or high unemployment period begins in a State on the first day of the third calendar week after a week for which there is a

State “on” indicator in that State under either § 615.12(a) or (b).

(b) *Ending date.* Except as provided in paragraphs (c) and (e) of this section, an extended benefit period or high unemployment period in a State ends on the last day of the third week after the first week for which there is a State “off” indicator in that State, unless another indicator is in “on” status.

(c) *Duration.* When an extended benefit period and/or high unemployment period becomes effective in any State, or triggers “off,” the attained status must continue in effect for not less than 13 consecutive weeks.

(d) *Limitation.* No extended benefit period or high unemployment period may begin or end in any State before the most recent week for which data used to trigger the State “on” or “off” or “no change” indicator has been published.

(e) *Specific applications of the 13-week rule.* (1) If a State concludes a 13-week mandatory “on” period by virtue of the IUR indicator which, at the end of the 13-week period no longer satisfies the requirements for a State to be “on,” the extended benefit period continues if the TUR indicator is “on” during the 11th week of the 13-week mandatory “on” period.

(2) If a State concludes a 13-week mandatory “on” period by virtue of the TUR indicator which, at the end of the 13-week period no longer satisfies the requirements for a State to be “on,” the extended benefit period continues if the IUR indicator is “on” during the 11th week of the 13-week mandatory “on” period.

(f) *Determining if a State remains “off” as a result of a total unemployment rate indicator after the 13-week mandatory “off” period ends.*

(1) The State remains “off” if there is not an IUR “on” indicator the 11th week of the 13-week mandatory “off” period, and there is a TUR “off” indicator for the third week before the last week of the 13-week mandatory “off” period.

■ 9. Amend § 615.12 by:

- a. Revising paragraphs (d)(1) and (2);
- b. Adding paragraph (d)(3);
- c. Redesignating paragraph (e) as paragraph (f) and revising it; and
- d. Adding new paragraph (e).

The additions and revisions read as follows:

§ 615.12 Determination of “on” and “off” indicators.

* * * * *

(d) * * *

(1) Any determination by the head of a State agency of an “on” or “off” or “no change” IUR indicator may not be corrected more than three weeks after the close of the week to which it

applies. If any figure used in the computation of a rate of insured unemployment is later found to be wrong, the correct figure must be used to redetermine the rate of insured unemployment and the 120 percent factor for that week and all later weeks, but no determination of previous “on” or “off” or “no change” indicator shall be affected unless the redetermination is made within the time the indicator may be corrected under the first sentence of this paragraph (d)(1). Any change is subject to the concurrence of the Department as provided in paragraph (e) of this section.

(2) The initial release of the TUR by the Bureau of Labor Statistics (BLS) is subject to revision. However, once a State’s TUR indicator is determined using the initial release of the TUR data, it is not subject to revision even if the BLS TUR for that period of time is revised.

(3) The “on” period under a State’s optional IUR or TUR indicator may not begin before the later of the date of the State’s adoption of the optional insured unemployment rate or total unemployment rate indicator, or the effective date of that enactment. The “off” period under a State’s optional insured unemployment rate or total unemployment rate indicator may not occur until after the effective date of the repeal of the optional insured unemployment rate or total unemployment rate indicator from State law.

(e) *Other optional indicators.* (1) A State may, as an option, in addition to the State indicators in paragraphs (a) and (b) of this section, provide by its law that there is a State “on” or “off” indicator in the State for a week if we determine that—

(i) The Trigger Value in such State computed using the most recent 3 months for which data for all States are published before the close of such week equals or exceeds 6.5 percent; and

(ii) The Trigger Value computed using data from the 3-month period referred to in paragraph (e)(1)(i) of this section equals or exceeds 110 percent of the Trigger Value for either (or both) of the corresponding 3-month periods ending in the 2 preceding calendar years. This “look-back” is computed by dividing the Trigger Value by the same measure for the corresponding 3 months in each of the applicable prior years, and the resulting decimal fraction is rounded to the hundredths place, multiplied by 100 and reported as an integer and compared to the statutory threshold to help determine the State’s EB Program status; and

(iii) There is a State “off” indicator for a week if either the requirements of paragraph (e)(1)(i) or (ii) of this section are not satisfied.

(2) Where a State adopts the optional indicator under paragraph (e)(1) of this section, there is a State “on” indicator for a high unemployment period (as defined in § 615.2) under State law if—

(i) The Trigger Value in the State computed using the most recent 3 months for which data for all States are published before the close of such week equals or exceeds 8.0 percent, and

(ii) The Trigger Value in the State computed using data from the 3-month period referred to in paragraph (e)(2)(i) of this section equals or exceeds 110 percent of the Trigger Value for either (or both) of the corresponding 3-month periods ending in the 2 preceding calendar years. This “look-back” is computed by dividing the Trigger Value by the same measure for the corresponding 3 months in each of the applicable prior years, and the resulting decimal fraction is rounded to the hundredths place, multiplied by 100 and reported as an integer and compared to the statutory threshold to help determine the State’s EB Program status; and

(iii) There is a State “off” indicator for high unemployment period for a week if either the requirements of paragraph (e)(2)(i) or (ii) of this section are not satisfied.

(3) *Method of computing the average rate of total unemployment.* The average rate of total unemployment is computed by dividing the average of 3 months of the level of seasonally adjusted unemployment in the State by the average of 3 months of the level of seasonally adjusted unemployment and employment in the State. The resulting rate is multiplied by 100 to convert it to a percentage basis and then rounded to the tenths place (the first digit to the right of the decimal place).

(4) *Method of computing the State “look-back.”* The average rate of total unemployment, ending with a given month, is divided by the same measure for the corresponding 3 months in each of the applicable prior years. The resultant decimal fraction is then rounded to the hundredths place (the second digit to the right of the decimal place). The resulting number is then multiplied by 100 and reported as an integer (no decimal places) and compared to the statutory threshold to help determine the State’s EB Program status.

(f) *Notice to Secretary.* Within 10 calendar days after the end of any week for which the head of a State agency has determined that there is an “on,” or

“off,” or “no change” IUR indicator in the State, the head of the State agency must notify the Secretary of the determination. The notice must state clearly the State agency head’s determination of the specific week for which there is a State “on” or “off” or “no change” indicator. The notice must include also the State agency head’s findings supporting the determination, with a certification that the findings are made in accordance with the requirements of § 615.15. The Secretary may provide additional instructions for the contents of the notice to assure the correctness and verification of notices given under this paragraph. The Secretary will accept determinations and findings made in accordance with the provisions of this paragraph and of any instructions issued under this paragraph. A notice does not become final for purposes of EUCA and this part until the Secretary accepts the notice.

■ 10. Revise § 615.13 to read as follows:

§ 615.13 Announcement of the Beginning and Ending of Extended Benefit Periods or High Unemployment Periods.

(a) *State indicators*—(1) *Extended benefit period*. Upon receipt of a notice required by § 615.12(f) which the Department determines is acceptable, the Department will publish in the **Federal Register** a notice of the State agency head’s determination that there is an “on” or an “off” indicator in the State, as the case may be, the name of the State and the beginning or ending of the extended benefit period, or high unemployment period, whichever is appropriate. If an “on” or “off” EB period is determined by the Department to be based on a State’s TUR Trigger Value, the Department publishes that information in the **Federal Register** as well.

(2) *Notification*. The Department also notifies the heads of all other State agencies, and the Regional Administrators of the Employment and Training Administration of the State agency head’s determination of the State “on” or “off” indicator for an extended benefit period, or high unemployment period (based on the insured unemployment rate in the State), or of the Department’s determination of an “on” or “off” indicator (based on the total unemployment rate in a State) for an extended benefit period or high unemployment period and of the indicator’s effect.

(b) *Publicity by State*. (1) Whenever a State agency head determines that there is an “on” indicator in the State by reason of which an extended benefit period (based on the insured unemployment rate in the State) will

begin in the State, or an “off” indicator by reason of which an extended benefit period in the State (based on the insured unemployment rate) will end, the head of the State agency must promptly announce the determination through appropriate news media in the State after the Department accepts notice from the agency head in accordance the 615.12(f).

(2) Whenever the head of a State agency receives notification from the Department in accordance with § 615.12(f) that there is an “on” indicator by reason of which an extended benefit period or high unemployment period (based on the total unemployment rate in the State) will begin in the State, or an “off” indicator by reason of which a regular extended benefit period or high unemployment period (based on the total unemployment rate) will end, the head of the State agency must promptly announce the determination through the appropriate news media in the State.

(3) Announcements made in accordance with paragraphs (b)(1) or (b)(2) of this section must include the beginning or ending date of the extended benefit period or high unemployment period, whichever is appropriate. In the case of a regular EB period or high unemployment period that is about to begin, the announcement must describe clearly the unemployed individuals who may be eligible for extended compensation or high extended compensation during the period, and in the case of a regular EB period or high unemployment period that is about to end, the announcement must also describe clearly the individuals whose entitlement to extended compensation or high extended compensation will be terminated. If a high unemployment period is ending, but an extended benefit period will remain “on,” the announcement must clearly state that fact and the effect on entitlement to extended compensation.

(c) *Notice to individuals*. (1) Whenever there has been a determination that a regular extended benefit period or high unemployment period will begin in a State, the State agency must provide prompt written notice of potential entitlement to Extended Benefits to each individual who has established a benefit year in the State that will not end before the beginning of the regular extended benefit period or high unemployment period, and who exhausted all rights under the State law to regular compensation before the beginning of the regular extended benefit period or high unemployment period.

(2) The State agency must provide the notice promptly to each individual who begins to claim sharable regular benefits or who exhausts all rights under the State law to regular compensation during a regular extended benefit period or high unemployment period, including exhaustion by reason of the expiration of the individual’s benefit year.

(3) The notices required by paragraphs (c)(1) and (2) of this section must describe the actions required of claimants for sharable regular compensation and extended compensation and those disqualifications which apply to the benefits which are different from those applicable to other claimants for regular compensation which is not sharable.

(4) Whenever there is a determination that a regular extended benefit period or high unemployment period will end in a State, the State agency must provide prompt written notice to each individual who is currently filing claims for extended compensation of the forthcoming end of the regular extended benefit period or high unemployment period and its effect on the individual’s right to extended compensation.

■ 11. Amend § 615.14 by revising paragraph (c)(4) to read as follows:

§ 615.14 Payments to States.

* * * * *

(c) * * *

(4) As provided in section 204(a)(2)(C) of EUCA, for any week in which extended compensation is not payable because of the payment of trade readjustment allowances, as provided in section 233(c) of the Trade Act of 1974, and § 615.7(d).

* * * * *

■ 12. Revise § 615.15 to read as follows:

§ 615.15 Records and reports.

(a) *General*. State agencies must furnish to the Secretary such information and reports and make such studies as the Secretary decides are necessary or appropriate for carrying out the purposes of this part.

(b) *Recordkeeping*. Each State agency must make and maintain records pertaining to the administration of the Extended Benefit Program as the Department requires, and must make all such records available for inspection, examination and audit by such Federal officials or employees as the Department

may designate or as may be required by law.

Portia Wu

Assistant Secretary for Employment and Training.

The Food and Drug Administration Food Safety Modernization Act; Extension and Clarification of Compliance Dates for Certain Provisions of Four Implementing Rules

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule; extension and clarification of compliance dates for certain provisions.

SUMMARY: The Food and Drug Administration (FDA or we) is extending the dates for compliance with certain provisions in four final rules. We are extending the compliance dates to address concerns about the practicality of compliance with certain provisions, consider changes to the regulatory text, and better align compliance dates across the rules. In addition, we are clarifying certain compliance dates in the Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption rule.

DATES: This final rule is effective August 24, 2016. See sections III.C, IV.A.2, IV.B, and V through VIII for the extended compliance dates.

For questions relating to Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Human Food: Jenny Scott, Center for Food Safety and Applied Nutrition (HFS-300), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240-402-2166.

For questions relating to Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Food for Animals: Jeanette Murphy, Center for Veterinary Medicine

(HFV-200), Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855, 240-402-6246.

For questions relating to Foreign Supplier Verification Programs for Importers of Food for Humans and Animals: Rebecca Buckner, Office of Food and Veterinary Medicine, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993-0002, 301-796-4576.

For questions relating to Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption: Samir Assar, Center for Food Safety and Applied Nutrition (HFS-317), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240-402-1636.

SUPPLEMENTARY INFORMATION:

I. Background: The Four Related Rules Implementing the FDA Food Safety Modernization Act

This extension and clarification of compliance dates concerns four of the seven foundational rules that we have established in Title 21 of the Code of Federal Regulations (21 CFR) as part of our implementation of the FDA Food Safety Modernization Act (FSMA; Pub. L. 111-353). The four final rules are entitled “Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Human Food” (published in the **Federal Register** of September 17, 2015, 80 FR 55908) (<http://www.fda.gov/fsma>); “Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Food for Animals” (published in the **Federal Register** of September 17, 2015, 80 FR 51670) (<http://www.fda.gov/fsma>); “Foreign Supplier Verification Programs for Importers of Food for Humans and Animals” (published in the **Federal Register** of November 27, 2015, 80 FR 74226) (<http://www.fda.gov/fsma>); and “Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption” (published in the **Federal Register** of November 27, 2015, 80 FR 74354) (<http://www.fda.gov/fsma>).

In part 117 (21 CFR part 117), we have established our regulation entitled “Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Human Food” (80 FR 55908, September 17, 2015). Among other things, the rulemaking to establish part 117 amended our current good manufacturing practice (CGMP) regulation for manufacturing, packing, or holding human food to modernize it and establish it in new part 117, subparts A, B, and F. Part 117 also includes new requirements for domestic

and foreign facilities that are required to register under section 415 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 350d) in subparts A, C, D, E, F, and G to establish and implement hazard analysis and risk-based preventive controls for human food (the human food preventive controls requirements). In the preamble of the final rule establishing part 117, we stated that the rule is effective November 16, 2015, and provided for compliance dates of 1 to 3 years from the date of publication in most cases (see table 53 in the preamble of the final rule establishing part 117, 80 FR 55908 at 56128). In the rulemaking to establish part 117, we also amended the “farm” definition in our regulations implementing section 415 of the FD&C Act (the section 415 registration regulation; 21 CFR part 1, subpart H) to clarify the scope of the exemption from registration requirements provided for “farms” and, in so doing, to clarify which human food establishments are subject to the human food preventive controls requirements, and which human food establishments are exempt from those requirements because they are “farms.”

In part 507 (21 CFR part 507), we have established our regulation entitled “Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Food for Animals” (80 FR 56170, September 17, 2015). Among other things, the rulemaking to establish part 507 established new requirements for CGMPs in subparts A, B, and F (CGMP requirements) and also established requirements for hazard analysis and risk-based preventive controls for food for animals in subparts A, C, D, E, and F (the animal food preventive controls requirements). The part 507 requirements apply to domestic and foreign facilities that are required to register under the section 415 registration regulation and, thus, the “farm” definition that we amended as part of the rulemaking to establish part 117 also clarifies which animal food establishments are subject to the part 507 requirements, and which animal food establishments are exempt from those requirements because they are “farms.” In the preamble of the final rule establishing part 507, we stated that the rule is effective November 16, 2015 (80 FR 56170). We provided for compliance dates of 1 to 3 years from the date of publication in most cases for compliance with the CGMP requirements, with an additional year beyond that for compliance with the animal food preventive controls

requirements (see table 32 in the preamble of the final rule establishing part 507, 80 FR 56170 at 56329).

In part 1, subpart L (21 CFR part 1, subpart L), we have established our regulation entitled “Foreign Supplier Verification Programs for Importers of Food for Humans and Animals” (the FSVP regulation; 80 FR 74226, November 27, 2015). The FSVP regulation requires importers to establish foreign supplier verification programs to verify that their foreign suppliers are using processes and procedures that provide the same level of public health protection as those required under the provisions on hazard analysis and risk-based preventive controls and standards for produce safety in the FD&C Act, that the imported food is not adulterated, and that food is not misbranded with respect to food allergen labeling. In the preamble of the final rule establishing the FSVP regulation, we stated that the rule is effective January 26, 2016, and provided for varying compliance dates based in part on the size of the foreign supplier, the nature of the importer, and whether the foreign supplier is subject to certain other FSMA regulations (80 FR 74226 at 74332 to 74333, as corrected in a technical amendment (81 FR 25326, April 28, 2016)).

In part 112 (21 CFR part 112), we have established our regulation entitled “Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption” (the produce safety regulation; 80 FR 74354, November 27, 2015). Among other things, the rulemaking to establish the produce safety regulation set forth in a new part 112 procedures, processes, and practices that minimize the risk of serious adverse health consequences or death, including those reasonably necessary to prevent the introduction of known or reasonably foreseeable biological hazards into or onto produce and to provide reasonable assurances that the produce is not adulterated on account of such hazards. The produce safety regulation applies to certain produce farms, and does not apply to activities of facilities that are subject to part 117 (as established in part 117). In the preamble of the final rule establishing the produce safety regulation, we stated that the produce safety regulation is effective January 26, 2016, and provided for compliance dates of 1 to 6 years from the effective date depending on the commodity and the provision(s) (see table 30 in the preamble of the final rule establishing the produce safety regulation, 80 FR 74354 at 74527, as corrected in a technical amendment at 81 FR 26466,

May 3, 2016). (Some of the compliance dates identified in the technical amendment fall on weekends (*i.e.*, January 26, 2019, is a Saturday and January 26, 2020, is a Sunday) and should therefore be read as referring to the next business day (*i.e.*, January 28, 2019, and January 27, 2020, respectively). We use the latter dates throughout this document.)

II. Summary of Compliance Date Extensions in This Rule

We are extending the dates for compliance with certain provisions in four final rules to address concerns about the practicality of compliance with certain provisions, consider changes to the regulatory text, and better align compliance dates across the rules. First, we are extending the compliance dates for certain related provisions concerning customer assurances when controls are applied downstream in the distribution chain in all four rules. Second, we are extending the compliance dates for part 117 and part 507 for facilities solely engaged in packing and/or holding activities conducted on raw agricultural commodities (RACs) that are produce and/or nut hulls and shells and for certain facilities that would qualify as secondary activities farms except for the ownership of the facility. Third, we are extending the compliance dates for part 117 for certain facilities that color RACs. Fourth, we are extending the compliance dates for part 507 for facilities solely engaged in the ginning of cotton. Fifth, we are extending the compliance dates for the FSVP regulation for importation of food contact substances. Sixth, we are extending the date for certain facilities producing Grade “A” milk and milk products covered by the National Conference on Interstate Milk Shipments (NCIMS) under the Pasteurized Milk Ordinance (PMO) to comply with the CGMP requirements of part 117.

Finally, we are clarifying how we interpret the compliance dates for certain provisions related to agricultural water testing in the produce safety regulation.

III. Extension of Compliance Dates for “Customer Provisions” in Part 117 and Related Rules

A. Background

In a supplemental notice of proposed rulemaking for part 117 (79 FR 58524, September 29, 2014), we proposed several exceptions to the requirement for a manufacturer/processor to establish and implement a supply-chain

program. Under one proposed exception, a receiving facility would not have been required to have a supply-chain program if it relied on its customer to control the hazard and annually obtained from its customer written assurance that the customer had established and was following procedures (identified in the written assurance) that would significantly minimize or prevent the hazard (see the discussion in the preamble of the final rule at 80 FR 55908 at 56036; see the proposed regulatory text at 79 FR 58524 at 58565).

After considering comments, we replaced this proposed provision with several provisions (§§ 117.136(a)(2) through (4) and 117.137) (referred to collectively as “customer provisions”) that apply when a manufacturer/processor identifies a hazard requiring a preventive control (“identified hazard”), does not control the identified hazard, and relies on an entity in its distribution chain to address the hazard (80 FR 55908 at 56037 to 56039). (In these provisions, “customer” means a commercial customer, not a consumer.) A manufacturer/processor that complies with the customer provisions is not required to implement a preventive control for the identified hazard. The combination of three requirements in the customer provisions is intended to provide assurance that the food will be processed to control the identified hazard before it reaches consumers:

- Documentation provided by the manufacturer/processor to its direct customer that the food is “not processed to control [identified hazard]” (the disclosure statement provisions; § 117.136(a)(2)(i), (3)(i), and (4)(i));
- Written assurance provided by the customer to the manufacturer/processor that the customer is manufacturing, processing, or preparing the food in accordance with applicable food safety requirements (the written assurance provisions; § 117.136(a)(2)(ii), (3)(ii), and (4)(ii)); and
- Provisions relating to accountability for written assurances (the accountability provision; § 117.137).

We established similar requirements in three other FSMA rules (“related rules”): Part 507 (§§ 507.36 (a)(2) through (4) and 507.37); the FSVP regulation (§§ 1.507(a)(2) through (4), and 1.507(c)); and the produce safety regulation (§ 112.2(b)(2) through (4), and (6)).

B. Written Assurances From Customers

On March 23, 2016, FDA met with the Grocery Manufacturers Association (GMA) at their request to listen to concerns regarding the customer

provisions in the part 117 rule (Ref. 1). GMA provided examples of product distribution chains that would require vastly more written assurances and consequently resources to comply with the requirement than anticipated by FDA. For example, a manufacturing facility may sell such foods to a distributor, who may sell numerous items requiring assurances to multiple restaurants, cafeterias, delicatessens, and other distributors. GMA estimated that this could result in hundreds or even thousands of written assurances needed by a single distributor. A similar concern exists for the related rules.

After considering the information presented by GMA, FDA believes that the requirement for written assurance in the customer provisions of part 117 significantly exceeds the current practices of even the largest facilities; compliance by those facilities by September 19, 2016, may not be

feasible; and it is appropriate to extend the compliance dates for 2 years for the written assurance requirements for part 117 and the related rules while FDA considers the best approach to address feasibility concerns.

We believe it continues to be appropriate to provide for an entity earlier in the distribution chain to disclose that a hazard has not been controlled and rely on a subsequent entity to control a hazard in human or animal food. For example, it would not make sense to require a facility that chops nuts to have a preventive control for *Salmonella* if the nuts are going to be used by customers in baked goods in accordance with a process validated to adequately control the hazard. In addition, it would not make sense to require a facility that manufactures a rendered meat ingredient for pet food to have a preventive control for *Salmonella* when the final pet food will

go through an extrusion process at a customer's facility to control *Salmonella*. A manufacturer/processor under part 117 or part 507 that relies on a customer to control a hazard will continue to be required to comply with the disclosure statement provisions and disclose that the food has not been processed to control the hazard on the compliance date originally specified (we note that FDA will soon be making available for public comment draft guidance on the disclosure statement provisions). Subsequent entities in the distribution chain will continue to be subject to applicable requirements related to food adulteration in Federal and/or state and local laws and regulations, *e.g.*, part 117, part 507, and the Retail Food Code.

C. Extension of Compliance Dates

Table 1 provides a summary of the revised compliance dates.

TABLE 1—EXTENSION OF COMPLIANCE DATES FOR THE WRITTEN ASSURANCES IN THE CUSTOMER PROVISIONS IN PART 117 AND RELATED RULES

	Previously announced compliance date	Compliance date with extension
Human Food—§ 117.136(a)(2)(ii), (3)(ii), and (4)(ii)		
Small Business (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 18, 2017	September 18, 2019.
Business that is neither small or very small (a business (including any subsidiaries and affiliates) averaging less than \$1 million, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of human food plus the market value of human food manufactured, processed, packed or held without sale (<i>e.g.</i> held for a fee)).	September 19, 2016	September 19, 2018.
Animal Food—§ 507.36(a)(2)(ii), (3)(ii), and (4)(ii)		
Small Business (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 17, 2018	September 17, 2020.
Business that is neither small or very small ((a business (including any subsidiaries and affiliates) averaging less than \$2,500,000, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of animal food plus the market value of animal food manufactured, processed, packed or held without sale (<i>e.g.</i> , held for a fee or supplied to a farm without sale)).	September 18, 2017	September 18, 2019.
FSVP—§ 1.507(a)(2)(ii), (3)(ii), and (4)(ii)		
Latest date of: 18 months after the publication of the final rule	May 30, 2017	May 28, 2019.
Importers of food from foreign supplier subject to preventive controls regulation for human food, the preventive controls or CGMP requirements in part 507, or the produce safety regulation:	6 months after supplier is required to comply with the relevant regulations.	30 months after previously announced compliance date for the relevant regulations.
Produce Safety—§ 112.2(b)(3)		
Very small businesses relying on the exemption in § 112.2(b) for sprouts that would otherwise be subject to subpart M (those with more than \$25,000 but no more than \$250,000 in average annual produce sales during the previous three year period).	January 28, 2019	January 26, 2021.
Small businesses relying on the exemption in § 112.2(b) for sprouts that would otherwise be subject to subpart M (those with more than \$250,000 but no more than \$500,000 in average annual produce sales during the previous three year period).	January 26, 2018	January 27, 2020.
All other businesses relying on the exemption in § 112.2(b) for sprouts that would otherwise be subject to subpart M.	January 26, 2017	January 28, 2019.

TABLE 1—EXTENSION OF COMPLIANCE DATES FOR THE WRITTEN ASSURANCES IN THE CUSTOMER PROVISIONS IN PART 117 AND RELATED RULES—Continued

	Previously announced compliance date	Compliance date with extension
Very small businesses relying on the exemption in § 112.2(b) for all other produce that would otherwise be covered (those with more than \$25,000 but no more than \$250,000 in average annual produce sales during the previous three year period).	January 27, 2020	January 26, 2022.
Small businesses relying on the exemption in § 112.2(b) for all other produce that would otherwise be covered (those with more than \$250,000 but no more than \$500,000 in average annual produce sales during the previous three year period).	January 28, 2019	January 26, 2021.
All other businesses relying on the exemption in § 112.2(b) for all other produce that would otherwise be covered.	January 26, 2018	January 27, 2020.

We are extending the compliance date by 2 years for the written assurance requirement in the customer provisions in part 117. With the extension, facilities that are small businesses must comply with § 117.136(a)(2)(ii), (3)(ii), and (4)(ii) by September 18, 2019, and other facilities subject to the requirements must comply with those provisions by September 19, 2018. As a result of the extension, the compliance date for certain associated requirements that are contingent on the specified delayed provisions are also delayed (*i.e.*, the recordkeeping requirements in §§ 117.136(b)(2) through (4) and 117.335 and the requirements in § 117.137 for a facility that provides a written assurance under § 117.136(a)(2), (3), or (4)). We are not extending the compliance date for qualified facilities (including very small businesses) as defined in § 117.3 because they are not subject to the requirements in § 117.136(a)(2)(ii), (3)(ii), and (4)(ii).

We are also extending the compliance date by 2 years for the written assurance requirement in the customer provisions in part 507. With the extension, facilities that are small businesses must comply with § 507.36(a)(2)(ii), (3)(ii), and (4)(ii) by September 17, 2020, and other facilities subject to the requirements must comply with those provisions by September 18, 2019. As a result of the extension, the compliance dates for certain associated requirements that are contingent on the specified delayed provisions are also delayed (*i.e.*, the recordkeeping requirements in §§ 507.36(b)(2) through (4) and 507.215 and the requirements in § 507.37 for a facility that provides a written assurance under § 507.36(a)(2), (3), or (4)). We are not extending the compliance date for qualified facilities (including very small businesses) as defined in § 507.3 because they are not subject to the requirements in § 507.36(a)(2)(ii), (3)(ii), and (4)(ii).

In addition, we are extending the compliance date under the FSVP regulation for complying with the written assurance requirements in § 1.507(a)(2)(ii), (3)(ii), and (4)(ii) by 2 years beyond the dates established in the final rule (as corrected in the technical amendment). In the preamble of the final rule, as corrected by the technical amendment, we stated that importers would need to comply with the FSVP regulation by the latest of the following:

- 18 months after the publication of the final rule;
- For importers of food from a foreign supplier that is subject to part 117, the CGMP requirements or the preventive controls requirements for animal food in part 507, or the produce safety regulation, 6 months after the supplier was required to comply with the relevant regulations; or
- For an importer subject to the supply-chain program provisions of the human or animal food preventive controls regulations, the date the importer, as a receiving facility, was required to comply with the supply-chain program provisions of the relevant regulation.

As a result of this extension, the earliest that an importer would be required to comply with the written assurance requirements in the customer provisions in § 1.507 would be May 28, 2019. When an importer's compliance date is determined by when the foreign supplier must comply with the preventive controls regulation for human food, the preventive controls or CGMP requirements in part 507, or the produce safety regulation (*i.e.*, when the importer must comply with FSVP 6 months after the foreign supplier is required to come into compliance), the importer's compliance date for the written assurance requirements in § 1.507 will be 2 years and 6 months after the previously-announced compliance dates for the relevant

regulations. That is, the other changes we are making to compliance dates for the human and animal food preventive controls and produce safety regulations will not impact when an FSVP importer must comply with the written assurance requirements in the customer provisions in § 1.507. For example, although this rule extends the compliance dates for part 117 and part 507 for facilities solely engaged in packing and/or holding activities conducted on RACs that are produce that would qualify as secondary activities farms except for the ownership of the facility, an importer whose foreign supplier is such a facility will be required to comply with the assurance requirements in § 1.507 2 years and 6 months after the foreign supplier would have been required to comply with part 117 or part 507 under the final rules published on September 17, 2015 (80 FR 55908; 80 FR 56170). The importer's compliance date for the assurance requirements in § 1.507 is not 2 years and 6 months after the newly-established part 117 and part 507 compliance dates announced in this rule. As a result of the extension, the compliance dates for certain associated requirements that are contingent on the specified delayed provisions are also delayed (*i.e.*, the requirements in § 1.507(c) for a customer or subsequent entity that provides a written assurance under § 1.507(a)(2), (3), or (4)).

Finally, we are extending by 2 years the compliance dates for the written assurance requirements in the customer provisions of the produce safety regulation in § 112.2(b)(3). With the extension, sprout operations wishing to rely on the exemption in § 112.2(b) with respect to sprouts that would otherwise be subject to subpart M of part 112 must comply with the written assurances provisions in § 112.2(b)(3) by January 26, 2021 (very small businesses); January 27, 2020 (small businesses); and January 28, 2019 (all other businesses). With the extension, operations wishing

to rely on the exemption in § 112.2(b) with respect to other types of produce that would otherwise be covered must comply with the written assurances provisions in § 112.2(b)(3) by January 26, 2022 (very small businesses); January 26, 2021 (small businesses), and January 27, 2020 (all other businesses). As a result of the extension, the compliance dates for certain associated requirements that are contingent on the specified delayed provisions are also delayed (*i.e.*, § 112.2(b)(4) and (6)).

IV. Extension of Certain Compliance Dates for Both Part 117 and Part 507

A. Facilities Solely Engaged in Packing and/or Holding Activities Conducted on Produce RACs and/or Nut Hulls and Shells

Some facilities that are subject to part 117 are solely engaged in packing and/or holding RACs that are produce (“produce RACs”). These activities are similar to packing and holding activities commonly conducted on produce RACs by farms subject to the produce safety regulation. Examples of such facilities are produce packinghouses, warehouses that hold produce RACs, and facilities that hull, shell, pack and/or hold nuts (nuts are produce RACs and hulling and shelling may be considered “packing” when done for safe or effective packing). (We note that FDA will soon be making available for public comment a draft guidance on classification of activities as harvesting, packing, holding, or manufacturing/processing for farms and facilities). During the rulemaking to establish part 117, we received comments asking us to revise the regulatory text to ensure that similar activities would be treated similarly under either the produce safety regulation or part 117. (See Comment 25, 80 FR 55908 at 55927 to 55928.)

We received comments that expressed concern about how the requirements in part 117 for environmental monitoring and product testing would apply to off-farm facilities that pack or hold produce RACs. (See Comment 524, 80 FR 55908 at 56062.) In responding to those comments, we stated that we were considering developing a separate guidance on packing and holding operations for produce RACs in light of the questions we have received regarding similarities and differences for

off-farm packing and holding compared to on-farm packing and holding. In a letter to us dated April 19, 2016, the United Fresh Produce Association and 21 other organizations (UFPA et al.) noted that such guidance has not been issued, and the September 19, 2016, compliance date for part 117 is approaching (Ref. 2).

1. Similarities of Packing and Holding Activities Conducted on Produce RACs

In the preamble of the final rule establishing part 117, we described several changes to the regulatory text in response to comments asking us to consider revisions to ensure that similar activities would be treated the same way under either the produce safety regulation or part 117. (See Response 25, 80 FR 55908 at 55928 to 5929.) For example, we revised the “farm” definition to provide for two types of farms: (1) A primary production farm and (2) a secondary activities farm (see §§ 1.227 and 117.3). With the added definition of “secondary activities farm,” some packinghouses that are managed by a business entity (such as a cooperative) that is different from the business entity growing crops (such as individual farms) can be within the “farm” definition and, thus, not be subject to the human food preventive controls requirements. We also established a new provision to allow off-farm establishments that package, pack, and hold produce RACs to comply with the CGMPs in part 117 by complying with the relevant requirements for packing and holding in the final produce safety regulation (see § 117.8).

In responding to these comments, we noted that the revised “farm” definition did not, as requested, provide for all off-farm operations such as certain packinghouses and hulling/shelling operations to be subject to the produce safety regulation rather than part 117. We explained that the statutory framework does not provide for entities such as packinghouses and hulling/shelling operations that do not have a sufficient connection to a farm to be subject to the requirements of the produce safety regulation. However, we stated that we continued to believe that an off-farm packinghouse that is subject to the human food preventive controls requirements in part 117 will be able to draw from the provisions of the produce

safety regulation in developing its food safety plan and establishing preventive control management components that are appropriate in light of the nature of the preventive controls and their role in the facility’s food safety system. For example, we stated our expectation that the food safety plan for an off-farm packinghouse would focus on a few key preventive controls, including some that would have counterparts in the produce safety regulation, such as maintaining and monitoring the temperature of water used during packing (which would have counterparts under § 112.48(c) in the produce safety regulation). We also expected that an off-farm packinghouse would establish sanitation controls to address the cleanliness of food-contact surfaces (including food-contact surfaces of utensils and equipment) and the prevention of cross-contamination from insanitary objects and from personnel to food, food-packaging material, and other food-contact surfaces. On-farm packinghouses would be subject to similar, but not identical, requirements (see, *e.g.*, §§ 112.111(b) and 112.123(d)(1) for cleanliness of food-contact surfaces, and §§ 112.113 and 112.132 for protection against contamination).

We agree that certain activities conducted on produce RACs are similar regardless of where they happen. Therefore, facilities for which the packing and/or holding of produce RACs is subject to the human food preventive controls requirements may nonetheless still be able to draw from the provisions of the produce safety regulation in developing their food safety plans and establishing preventive control management components that are appropriate in light of the nature of the preventive controls and their role in the facility’s food safety system. We acknowledge that we have not yet issued guidance with specific recommendations for how packinghouses subject to the human food preventive controls requirements could comply with those requirements.

2. Extension of Compliance Dates for Facilities Solely Engaged in Packing and/or Holding Produce RACs and/or Nut Hulls and Shells

Table 2 provides a summary of the revised compliance dates.

TABLE 2—EXTENSION OF COMPLIANCE DATES FOR BOTH PART 117 AND PART 507 FOR FACILITIES SOLELY ENGAGED IN PACKING AND/OR HOLDING PRODUCE RACS AND/OR NUT HULLS AND SHELLS

	Previously announced compliance date	Compliance date with extension
Human Food—Facilities solely engaged in packing and/or holding activities on produce RACs (part 117)		
Very Small Businesses (a business (including any subsidiaries and affiliates) averaging less than \$1 million, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of human food plus the market value of human food manufactured, processed, packed or held without sale (e.g. held for a fee)).	September 17, 2018	January 27, 2020.
Small Businesses (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 18, 2017	January 28, 2019.
Other Businesses	September 19, 2016	January 26, 2018.
Animal Food—Facilities solely engaged in packing and/or holding activities on produce RACs and/or nut hulls and shells that are used as animal food (part 507)		
Very Small Businesses (a business (including any subsidiaries and affiliates) averaging less than \$2,500,000, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of animal food plus the market value of animal food manufactured, processed, packed or held without sale (e.g., held for a fee or supplied to a farm without sale)).	September 17, 2018 (CGMPs) September 17, 2019 (preventive controls).	January 27, 2020 (CGMPs) January 26, 2021 (preventive controls).
Small Businesses (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 18, 2017 (CGMPs) September 17, 2018 (preventive controls).	January 28, 2019 (CGMPs) January 27, 2020 (preventive controls).
Other Businesses	September 19, 2016 (CGMPs) September 18, 2017 (preventive controls).	January 26, 2018 (CGMPs). January 28, 2019 (preventive controls).

We published the final rule establishing part 117 more than 2 months before we published the final rule establishing the produce safety regulation and, thus, the compliance dates for the produce safety regulation had not yet been established. To provide facilities that are solely engaged in packing and/or holding activities on produce RACs the same time to understand the applicable provisions of the produce safety regulation as farms that conduct similar packing and holding activities, and to enable such facilities to develop a food safety plan that builds on the requirements of the produce safety regulation, where applicable, we are extending the date for facilities that are solely engaged in packing and/or holding activities on produce RACs to comply with part 117 by approximately 16 months to make the compliance dates the same as for businesses in the same size categories in the produce safety regulation. For example, the new compliance date for a facility that is a small business under part 117 is the compliance date for a small business under the produce safety regulation, regardless of whether the facility subject to part 117 would be considered a small business under the produce safety regulation. (Note that the produce safety regulation has different compliance dates associated with sprouts but for the purposes of this

extension we are not establishing different dates for sprouts.) This will match the other extended compliance dates that relate to the “farm” definition or the produce safety regulation in this document.

With the extension, eligible facilities that are very small businesses must comply with part 117 by January 27, 2020; eligible facilities that are small businesses must comply by January 28, 2019, and all other eligible facilities must comply by January 26, 2018. We are extending compliance dates for very small businesses because, although they are not required to comply with subparts C and G (e.g., they are not required to have food safety plans), one of their options for compliance includes identifying the potential hazards associated with the food being produced, implementing preventive controls to address the hazards, and monitoring the performance of the preventive controls to ensure that such controls are effective (21 CFR 117.201(a)(2)(i)).

To maintain the intended alignment between part 117 and part 507, we also are making a parallel extension to the dates for facilities that are solely engaged in packing and/or holding activities on produce RACs that are used as animal food to comply with part 507 requirements. While there may be limited facilities that pack and hold

produce RACs exclusively for animal food, the by-products, such as culls, from packing and holding of produce RACs for human food are often used as animal food. The rulemaking to establish part 507 included a provision for certain human food by-products used as animal food (§ 507.12). To qualify for § 507.12, the human food facility whose packing or holding of produce results in by-products for use as animal food must be in compliance with the part 117 CGMPs or in compliance with the applicable requirements for packing and holding in part 112. The extension of compliance dates allows for facilities that are providing by-products for use as animal food time to implement the applicable part 117 or part 112 requirements. The parallel 16 month compliance date extension for part 507 is staggered to allow time for such operations to first comply with the part 507 CGMP requirements, including the related requirement in § 507.12. With the extension, eligible facilities that are very small businesses must comply with the CGMP requirements of part 507 by January 27, 2020, and with the preventive controls requirements of part 507 by January 26, 2021; eligible facilities that are small businesses must comply with the CGMP requirements of part 507 by January 28, 2019, and with the preventive controls requirements of

part 507 by January 27, 2020, and all other eligible facilities must comply with the CGMP requirements of part 507 by January 26, 2018, and with the preventive controls requirements of part 507 by January 28, 2019.

In addition, nut hulls and shells are used for animal food and result from some activities performed by those facilities that are receiving an extension to comply with part 117. Therefore, we are extending the compliance dates for animal food preventive controls requirements for facilities solely engaged in packing and/or holding activities conducted on nut hulls and shells. Facilities that are solely engaged in hulling, shelling, drying, packing, and/or holding of nuts and hulls are exempt from the part 507 CGMP requirements (§ 507.5(h)(2)) and will

continue to remain exempt. With the extension, eligible facilities that are very small businesses must comply with animal food preventive controls requirements by January 26, 2021; eligible facilities that are small businesses must comply by January 27, 2020, and all other eligible facilities must comply by January 28, 2019.

The extended compliance dates do not apply to facilities that manufacture/process produce RACs or nut hulls and shells in addition to packing and/or holding produce RACs or nut hulls and shells, because such facilities must come into compliance with part 117 and part 507 with respect to their manufacturing/processing as well as their packing and holding. Examples of facilities to which the extended compliance dates apply are

packinghouses that solely pack and/or hold produce RACs; and facilities that solely hull, shell, pack, and/or hold nuts (nuts are produce RACs and hulling and shelling may be considered “packing” when done for safe or effective packing). Examples of manufacturing/processing facilities to which the extended compliance dates do not apply are a “fresh-cut” processing facility, such as a facility that produces bagged salad mixes or packages of sliced fruit, and a facility that grinds nut shells to make an animal food ingredient.

B. Certain Facilities That Would Qualify as Secondary Activities Farms Except for the Ownership of the Facility

Table 3 provides a summary of the revised compliance dates.

TABLE 3—EXTENSION OF COMPLIANCE DATES FOR CERTAIN FACILITIES THAT WOULD QUALIFY AS SECONDARY ACTIVITIES FARMS EXCEPT FOR OWNERSHIP OF THE FACILITY

	Previously announced compliance date	Compliance date with extension
Human Food—Facilities that would qualify as secondary activities farms except for ownership of the facility (part 117)		
Very Small Businesses (a business (including any subsidiaries and affiliates) averaging less than \$1 million, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of human food plus the market value of human food manufactured, processed, packed or held without sale (e.g., held for a fee)).	September 17, 2018	January 27, 2020.
Small Businesses (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 18, 2017	January 28, 2019.
Other Businesses	September 19, 2016	January 26, 2018.
Animal Food—Facilities that would qualify as secondary activities farms except for ownership of the facility (part 507)		
Very Small Businesses (a business (including any subsidiaries and affiliates) averaging less than \$2,500,000, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of animal food plus the market value of animal food manufactured, processed, packed or held without sale (e.g., held for a fee or supplied to a farm without sale)).	September 17, 2018 (CGMPs) September 17, 2019 (preventive controls).	January 27, 2020 (CGMPs). January 26, 2021 (preventive controls).
Small Businesses (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 18, 2017 (CGMPs) September 17, 2018 (preventive controls).	January 28, 2019 (CGMPs). January 27, 2020 (preventive controls).
Other Businesses	September 19, 2016 (CGMPs) September 18, 2017 (preventive controls).	January 26, 2018 (CGMPs). January 28, 2019 (preventive controls).

The rulemaking to establish part 117 created a “secondary activities farm” definition within the “farm” definition to cover certain operations that are not located on a primary production farm but are sufficiently related to a primary production farm so that it is appropriate to consider the operations to be farms (§ 1.227). A secondary activities farm is devoted to harvesting (such as hulling or shelling), packing, and/or holding of RACs (such as produce, grains, and eggs). Further, a majority interest in a secondary activities farm must be majority-owned (singly or jointly) by the

primary production farm(s) that grows, harvests, and/or raises the majority of the RACs harvested packed, and/or held by the secondary activities farm (§ 1.227).

We have received questions via our Technical Assistance Network regarding whether certain operations qualify as secondary activities farms under part 117 and part 507. These questions describe a variety of business structures that may satisfy our intention to require a close relationship regarding ownership of the primary and secondary activities farms but the business

structures do not meet the ownership requirement as codified in the “farm” definition. For example, some operations that might otherwise qualify as secondary activities farms own the primary production farm, rather than being owned by the primary production farm as currently required. Other operations that might otherwise qualify as a secondary activities farm are operations that are not owned by (and do not own) the primary production farm but are majority owned by the same entity as the primary production farm. For example, Farm A is a primary

production farm. Facility B is a produce packinghouse that packs only produce from Farm A. Farm A and Facility B are both part of Corporation C. Despite the close relationship, Facility B is not a secondary activities farm under the current definition because Farm A does not own a majority interest in Facility B.

We are extending the compliance dates for certain operations that would be secondary activities farms except that they do not meet the ownership criterion in the definition. The extension is applicable only to an operation satisfying all of the following requirements: (1) The operation is not located on a primary production farm; (2) the operation is devoted to harvesting, packing, and/or holding of RACs (including operations that hull, shell, and/or dry nuts without additional manufacturing); and (3) the operation is under common ownership with the primary production farm(s) that grows, harvests, and/or raises the majority of the RACs harvested, packed, and/or held by the operation. Examples of common ownership include an operation that is owned by (or that owns) one or more primary production farms (e.g., a packinghouse owned by a cooperative of individual farms) and an

operation under common ownership with a primary production farm, such as operations that are managed within the same business structure as the primary production farm (e.g., the farm and packinghouse are separate operations owned by parents and their children, respectively, and both operations are part of the same business jointly owned by the parents and children). Other limitations on secondary activities farms remain. For example, feed mills manufacturing animal food for contract farms would not qualify because, among other reasons, those feed mills are conducting manufacturing/processing outside the farm definition.

We are extending the compliance dates for part 117 for operations satisfying all of the requirements by approximately 16 months to match the compliance dates for businesses in the same size categories in the produce safety regulation (note that the produce safety regulation has different compliance dates associated with sprouts but for purposes of this extension we are not establishing different dates for sprouts). This will match the other extended compliance dates that relate to the “farm” definition or the produce safety regulation in this document. With the extension, eligible

facilities that are very small businesses must comply with part 117 by January 27, 2020; eligible facilities that are small businesses must comply by January 28, 2019, and all other eligible facilities must comply by January 26, 2018.

The parallel 16 month compliance date extension for part 507 is staggered to allow time for operations satisfying all of the requirements to first comply with the CGMP requirements. With the extension, eligible facilities that are very small businesses must comply with the CGMP requirements of part 507 by January 27, 2020, and with the preventive controls requirements of part 507 by January 26, 2021; eligible facilities that are small businesses must comply with the CGMP requirements of part 507 by January 28, 2019, and with the preventive controls requirements of part 507 by January 27, 2020, and all other eligible facilities must comply with the CGMP requirements of part 507 by January 26, 2018, and with the preventive controls requirements of part 507 by January 28, 2019.

V. Extension of Compliance Dates for Certain Facilities That Color RACs Under Part 117

Table 4 provides a summary of the revised compliance dates.

TABLE 4—EXTENSION OF COMPLIANCE DATES IN PART 117 FOR CERTAIN FACILITIES THAT COLOR RACs

	Previously announced compliance date	Compliance date with extension
Human Food—Facilities that color RACs under part 117		
Very Small Businesses (a business (including any subsidiaries and affiliates) averaging less than \$1 million, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of human food plus the market value of human food manufactured, processed, packed or held without sale (e.g., held for a fee)).	September 17, 2018	January 27, 2020.
Small Businesses (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 18, 2017	January 28, 2019.
Other Businesses	September 19, 2016	January 26, 2018.

The definition of RAC in section 201(r) of the FD&C Act includes “fruits that are . . . colored . . . in their unpeeled natural form prior to marketing.” (21 U.S.C. 321(r)). As we noted in the proposed rule to establish part 117 (78 FR 3646 at 3678 to 3679, January 16, 2013), FDA does not consider the activity of coloring a RAC to result in the transformation of the RAC into a processed food. However, this does not mean that coloring a RAC is not manufacturing/processing. The activity classification “manufacturing/processing” is broader than just activities that transform a RAC into a processed food. It includes most food-

handling activities because it is satisfied by any degree of “making food from one or more ingredients, or synthesizing, preparing, treating, modifying or manipulating food” (§ 1.227). In contrast, transforming a RAC into a processed food generally requires meeting a threshold of altering the general state of the commodity. In the proposed rule, coloring was provided as an example of an activity that is manufacturing/processing but does not transform a RAC into a processed food (78 FR 3646 at 3678 to 3679).

An establishment that conducts manufacturing/processing activities other than those specified as being

within the “farm” definition generally is a facility that is required to register and is subject to the human food preventive controls requirements in part 117. The “farm” definition provides for farms to do several manufacturing/processing activities, including treating RACs to manipulate ripening and packaging and labeling RACs. These are all manufacturing/processing activities that do not transform a RAC into a processed food. However, FDA did not include coloring, another manufacturing/processing activity that does not transform a RAC into a processed food, within the “farm” definition. Therefore, currently coloring triggers the

registration requirement and application of the human food preventive controls requirements in part 117 (except where other exemptions apply). We are considering whether future rulemaking to modify the “farm” definition is appropriate to address the issue.

Therefore, we are extending the compliance dates for facilities that would qualify as farms if they did not color RACs. We are extending the compliance dates for such operations by approximately 16 months to match the compliance dates for businesses in the same size categories in the produce

safety regulation. (Note that the produce safety regulation has different compliance dates associated with sprouts but for purposes of this extension, we are not establishing different dates for sprouts.) This will match the other extended compliance dates that relate to the “farm” definition or the produce safety regulation in this document. With the extension, eligible facilities that are very small businesses must comply with part 117 by January 27, 2020; eligible facilities that are small businesses must comply by January 28, 2019, and all other eligible facilities

must comply by January 26, 2018. We are not extending the compliance dates for facilities that engage in additional manufacturing/processing activities currently outside of the “farm” definition because we expect such facilities to come into compliance with part 117 as a result of those other activities.

VI. Extension of Compliances Dates for Facilities Solely Engaged in the Ginning of Cotton Under Part 507

Table 5—provides a summary of the revised compliance dates.

TABLE 5—EXTENSION OF COMPLIANCE DATES FOR FACILITIES SOLELY ENGAGED IN THE GINNING OF COTTON UNDER PART 507

	Previously announced compliance date for part 507	Compliance date for part 507 with extension
Animal Food—Facilities solely engaged in the ginning of cotton under part 507		
Very Small Businesses (a business (including any subsidiaries and affiliates) averaging less than \$2,500,000, adjusted for inflation, per year, during the 3-year period preceding the applicable calendar year in sales of animal food plus the market value of animal food manufactured, processed, packed or held without sale (e.g., held for a fee or supplied to a farm without sale)).	September 17, 2019	January 26, 2021.
Small Businesses (a business (including any subsidiaries and affiliates) employing fewer than 500 full-time equivalent employees).	September 17, 2018	January 27, 2020.
Other Businesses	September 18, 2017	January 28, 2019.

Cotton ginning is considered part of harvesting and thus within the “farm” definition when done on a farm (and when done for safe or effective packing, it may also be considered a packing activity on a farm). When done off-farm, cotton ginning is either a packing activity (if done for safe or effective packing), or a manufacturing/processing activity, depending on the circumstances. Ginning cotton does not transform a RAC into a processed food but results in component RACs, some of which (e.g., cotton seed, lint, gin trash) are used for animal food. Therefore, currently off-farm cotton ginning in the production of animal food generally triggers the food facility registration requirement and application of the animal food preventive controls requirements in part 507 (facilities solely engaged in the ginning of cotton remain exempt from the CGMP requirements in part 507). Since publication of the final rule establishing part 507, we have received communications from the cotton industry expressing concern that the part 507 rule does not apply to the vast

majority of cotton ginners that are part of a farm, while it does apply to the minority of cotton ginners that do not meet the “farm” definition, despite the fact that both types of operations perform the same activities (Ref. 3). We are considering whether and how FDA should address these concerns. Therefore, we are extending the compliance dates for animal food preventive controls requirements for facilities subject to part 507 that solely engage in the ginning of cotton. We are extending the compliance dates for such operations by approximately 16 months to match the other extension dates that relate to the “farm” definition. With the extension, eligible facilities that are very small businesses must comply with the animal food preventive controls requirements of part 507 by January 26, 2021; eligible facilities that are small businesses must comply with the animal food preventive controls requirements of part 507 by January 27, 2020, and all other eligible facilities must comply with the animal food preventive controls requirements of part 507 by January 28, 2019. We are not

extending the compliance dates for facilities that engage in additional animal food manufacturing/processing activities of cotton currently outside of the “farm” definition (e.g., crushing cotton seed to make cotton seed oil) because we expect such facilities to come into compliance with the animal food preventive controls requirements of part 507 as a result of those other activities.

In addition, some cotton ginners may be operations that would be secondary activities farms except that they do not meet the ownership criterion in the current “farm” definition. For further discussion of the compliance date extension for these types of operations see section IV.B. Certain Facilities That Would Qualify as Secondary Activities Farms Except for the Ownership of the Facility.

VII. Extension of Compliance Dates for Importation of Food Contact Substances Under the FSVP Regulation

Table 6 provides a summary of the revised compliance dates.

TABLE 6—EXTENSION OF COMPLIANCE DATES FOR IMPORTATION OF FOOD CONTACT SUBSTANCES UNDER THE FSVP REGULATION

	Previously announced earliest compliance date	Earliest compliance date with extension
Importation of Food Contact Substances under the FSVP Regulation ..	May 30, 2017	May 28, 2019.

In the preamble of the final rule establishing the FSVP regulation, we stated that the definition of “food” for purposes of FSVP (§ 1.500) includes food contact substances that are considered “food” in section 201(f) of the FD&C Act. A food contact substance is any substance that is intended for use as a component of materials used in manufacturing, packing, packaging, transporting, or holding food if such use of the substance is not intended to have any technical effect in such food (21 CFR 170.3(e)(3)). The term “food” is defined in section 201(f)(3) of the FD&C Act to include articles used as components of food. Therefore, we concluded that importers must have an FSVP for a food contact substance that they import that meets the definition of “food” in section 201(f) of the FD&C Act (80 FR 74226 at 74233).

Since we published the final rule establishing the FSVP regulation, our Technical Assistance Network has received inquiries regarding the applicability of the FSVP regulation to food contact substances. In addition, on June 16, 2016, FDA met with representatives of the food packaging manufacturing industry at their request to listen to concerns regarding the applicability of the FSVP regulation to the importation of food contact substances (Ref. 4). The industry representatives stated that the supply chain associated with imported substances used to manufacture food contact substances is highly complex and very different from other foods subject to the FSVP regulation. The industry representatives also asserted that the hazards associated with food contact substances are already adequately addressed through the food additive petition and food contact substance notification processes under section 409 of the FD&C Act (21 U.S.C. 348).

After considering the information presented by the industry representatives, FDA believes that compliance with the requirement to conduct verification activities under the FSVP regulation for food contact substances by May 30, 2017, might not be feasible. Accordingly, we are extending the compliance date for the importation of food contact substances by 2 years so that we can consider how

best to address the feasibility concerns. We note the relatively rare occurrence of significant safety concerns associated with the manufacture of food contact substances and FDA’s extensive premarket approval and review processes for these substances under section 409 of the FD&C Act provide some assurances regarding safety during this time. As a result of this extension, the earliest that an importer would be required to comply with FSVP for the importation of food contact substances would be May 28, 2019.

VIII. Extension of Compliance Date for the CGMP Requirements of Part 117 for Facilities Producing Grade “A” Milk and Milk Products Covered by NCIMS Under the PMO

In the preamble of the final rule establishing part 117, we established a compliance date of September 17, 2018, for “PMO facilities” (see Response 214, 80 FR 55908 at 55987 to 55988). As we discussed in Response 214, we agreed that we should make use of the existing system of State regulatory oversight for Grade “A” milk and milk products provided through the NCIMS and the food safety requirements of the PMO. We described our reasons for deciding to extend the compliance date for “PMO-regulated facilities” to comply with the human food preventive controls requirements to September 17, 2018. Those reasons related to the current provisions of the PMO, the work already begun by NCIMS to modify the PMO to include all of the human food preventive controls requirements established in part 117, and complex implementation issues concerning the interstate movement of milk and milk products and imported milk.

In the **Federal Register** of November 18, 2015 (80 FR 71934), we clarified that the extended compliance date of September 17, 2018, for “PMO facilities” applies only to Grade “A” milk and milk products covered by NCIMS under the PMO, and not to the manufacturing, processing, packing, or holding of other food produced in such facilities. In the November 18, 2015, clarification, we did not discuss the date for “PMO facilities” to be in compliance with the CGMP requirements of part 117. During our outreach activities for implementation of part 117 we have

received questions about when “PMO facilities” must comply with the modernized CGMP requirements of part 117 (primarily located in subpart B).

We have not established compliance dates for the modernized CGMPs that are different from the general compliance dates for the preventive controls requirements in part 117 with one exception related to “PMO facilities” (see table 53 in the preamble of the final rule establishing part 117, 80 FR 55908 at 56128). Specifically, we provided that the extension of the compliance date for “PMO facilities” until September 17, 2018, applied only to “subparts C and G” (the principal provisions of the human preventive controls requirements) (see Response 214, 80 FR 55908 at 55987 to 55988). In this document, we are extending the date for compliance with the modernized CGMPs by “PMO facilities” until September 17, 2018. We will continue to work with the NCIMS to modify the PMO to reflect the modernized CGMPs and the preventive control requirements. The extension will create a single compliance date for the Grade “A” milk and milk products covered by the PMO. Note that this extension applies only to Grade “A” milk and milk products covered by NCIMS under the PMO, and not to the manufacturing, processing, packing, or holding of other food produced in such facilities.

IX. Clarification of Compliance Dates for Certain Agricultural Water Testing Provisions in Produce Safety Regulation

In this final rule, we are also clarifying our intent regarding the meaning of the compliance dates with respect to certain testing requirements related to agricultural water in the produce safety regulation.

Specifically, in the preamble of the final rule establishing the produce safety regulation (at 80 FR 74354 at 74453 to 74454) we explained that we excluded § 112.46(b)(1), with respect to untreated surface water only, from the 2-year extended compliance period provided for the remainder of § 112.46 because, in order to comply with the microbial quality criteria in § 112.44(b), farms must have developed a microbial water quality profile (MWQP) based on

the initial survey conducted over a minimum of 2 years and not greater than 4 years. We stated that to develop the MWQP prior to the point at which they must comply with all of the requirements of subpart E, covered farms must begin water sampling and subsequent testing not later than 4 years after issuance of the rule for very small farms; not later than 3 years after issuance of the rule for small farms; and not later than 2 years after issuance of the rule for all other farms. As an example we stated that initiating water sampling upon publication of the rule would allow covered farms that are not small or very small to collect 5 samples per year over the next 4 years, sufficient to make up the minimum 20 samples necessary to develop the MWQP required under § 112.46(b) at the point at which they must comply with all of the requirements of subpart E. We also stated that if these covered farms initiated water sampling 2 years after issuance of the rule, the farms would need to collect 10 samples per year over the next 2 years to make up the minimum 20 samples necessary to develop the MWQP.

We want to clarify and correct these earlier statements. We note that § 112.46(b)(1)(i)(A) allows covered farms discretion as to both (1) the number of samples they include in their initial survey, provided that the total must be 20 or more samples; and (2) the time period over which such samples are taken, provided that the period must be at least 2 years and no more than 4 years. For each business size category, the compliance date for § 112.46(b)(1) with respect to untreated surface water testing is 2 years before the compliance date for the § 112.44(b) microbial quality criteria for such water. This does not mean that covered farms have only 2 years in which to conduct their initial surveys for untreated surface water under § 112.46(b)(1) if they begin testing on the compliance date for that provision. Covered farms have 2 to 4 years in which to fulfill that requirement, per § 112.46(b)(1)(i)(A). This means that, for example, a farm that is not small or very small must begin sampling and testing untreated surface water in accordance with § 112.46(b)(1)(i)(A), as applicable, no later than January 26, 2018. The relevant compliance date for the related microbial quality criteria is 2 years later, on January 27, 2020. However, the farm has discretion under § 112.46(b)(1)(i)(A) as to both (1) the number of samples they include in their initial survey, provided that the total must be 20 or more samples; and (2) the time period

over which such samples are taken, provided that the period must be at least 2 years and no more than 4 years. Therefore, to provide a few examples, all of the following possible approaches are acceptable for farms that are not small or very small:

- Beginning in 2018, conducting an initial survey consisting of taking 10 samples per year over 2 years (10 in 2018 and 10 in 2019) for a total of 20 samples; calculating the MWQP for the first time upon completing the 20-sample data set (e.g., at the end of 2019, early 2020); and applying any necessary corrective actions under § 112.45(b) as soon as practicable and no later than the following year (e.g., in 2020–2021).

- Beginning in 2018, conducting an initial survey consisting of taking 5 samples per year over 4 years (5 in 2018, 5 in 2019, 5 in 2020, and 5 in 2021) for a total of 20 samples; calculating the MWQP for the first time upon completing the 20-sample data set (e.g., at the end of 2021, early 2022); and applying any necessary corrective actions under § 112.45(b) as soon as practicable and no later than the following year (e.g., in 2022–2023).

- Beginning in 2018, conducting an initial survey consisting of taking 10 samples per year over 4 years (10 in 2018, 10 in 2019, 10 in 2020, and 10 in 2021) for a total of 40 samples; calculating the MWQP for the first time upon completing the 40-sample data set (e.g., at the end of 2021, early 2022); and applying any necessary corrective actions under § 112.45(b) as soon as practicable and no later than the following year (e.g., in 2022–2023).

For small and very small farms, the same approaches are acceptable, and the relevant dates are 1 and 2 years later, respectively.

X. Economic Analysis of Impacts

In the final regulatory impact analysis (FRIA) for part 117, we concluded that extension of the compliance dates would be unlikely to significantly affect the cost estimates made (Ref. 5). In the FRIA for the produce safety regulation, we noted that extended compliance dates would result in a decrease in costs as smaller operations would have additional time to fully and correctly implement the rule's requirements (Ref. 6). We did not quantify the potential impact of extended compliance periods on the costs of part 507 or the FSVP regulation but expect the impacts would be similar to those of part 117 or the produce safety regulation.

We are extending the compliance dates by 2 years for the written assurances in the customer provisions in part 117 and part 507, the produce

safety regulation, and the FSVP regulation. Although none of the FRIAs provided a separate cost analysis for the written assurance provisions, based on our general conclusions about the costs of extending compliance dates and because the affected businesses will not be incurring the costs associated with the written assurances during the compliance delay period, we believe that a 2-year delay in the compliance dates for the written assurances in the customer provisions for these rules is unlikely to significantly affect the costs of the rules.

We are extending the compliance dates in part 117 and part 507 for facilities that are solely engaged in packing and/or holding activities on produce RACs and/or nut hulls and shells. The new compliance dates for part 117 are the same as the compliance dates under the produce safety regulation for the same size categories: January 27, 2020 (very small businesses), January 28, 2019 (small businesses), and January 26, 2018 (other businesses). The new compliance dates for part 507 are staggered to allow for compliance with CGMP requirements first followed by the animal food preventive controls requirements 1 year later. The part 507 CGMP compliance dates for these facilities are the same as the compliance dates under the produce safety regulation for the same size categories: January 27, 2020 (very small businesses), January 28, 2019 (small businesses), and January 26, 2018 (other businesses). The part 507 animal food preventive controls requirements for the same size categories are: January 26, 2021 (very small businesses), January 27, 2020 (small businesses), and January 28, 2019 (other businesses). Although the FRIAs for part 117 and part 507 did not provide a separate compliance cost analysis for facilities solely engaged in packing and/or holding activities on produce RACs and/or nut hulls and shells, based on our general conclusions about the costs of extending compliance dates and because the affected businesses will not be incurring the costs associated with compliance during the delay period, we believe that the delay in the compliance dates for these facilities is unlikely to significantly affect the costs of the rules.

We are similarly extending the compliance dates in part 117 and part 507 for certain facilities that would qualify as secondary activities farms except for the ownership of the facility. Although the FRIAs for part 117 and part 507 did not provide a separate compliance cost analysis for these facilities, based on our general conclusions about the costs of extending

compliance dates and because the affected businesses will not be incurring the costs associated with compliance during the delay period, we believe that the delay in the compliance dates for these facilities is unlikely to significantly affect the costs of the rules.

We are similarly extending the compliance dates in part 117 for certain facilities that color RACs. Although the FRIA for part 117 did not provide a separate compliance cost analysis for these facilities, based on our general conclusions about the costs of extending compliance dates and because the affected businesses will not be incurring the costs associated with compliance during the delay period, we believe that the delay in the compliance dates for these facilities is unlikely to significantly affect the costs of the rule.

We are similarly extending the compliance dates in part 507 for facilities that are solely engaged in the ginning of cotton. Although the FRIA for part 507 did not provide a separate compliance cost analysis for these facilities, based on our general conclusions about the costs of extending compliance dates and because the affected businesses will not be incurring the costs associated with compliance during the delay period, we believe that the delay in the compliance dates for these facilities is unlikely to significantly affect the cost of the rule.

We are extending the compliance date for the importation of food contact substances by 2 years, such that the earliest that an importer would be required to comply with the FSVP regulation for the importation of food contact substances would be May 28, 2019. Although the FRIA for the FSVP regulation did not provide a separate compliance cost analysis for importers of food contact substances, based on our general conclusions about the costs of extending compliance dates and because the affected businesses will not be incurring the costs associated with compliance during the delay period, we believe that the delay in the compliance dates for these facilities is unlikely to significantly affect the cost of the rule.

We are extending the compliance date for the CGMP Requirements of part 117 for facilities producing Grade “A” milk and milk products covered by NCIMS under the PMO. Although the FRIA for part 117 did not provide a separate compliance cost analysis for these facilities to comply with subpart B of part 117, based on our general conclusions about the costs of extending compliance dates and because the affected businesses will not be incurring the costs associated with compliance during the delay period, we believe that

the delay in the compliance dates for these facilities is unlikely to significantly affect the costs of the rule.

We have examined the impacts of the final rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Executive Order 13563 states the importance of quantifying costs and benefits, reducing costs and burdens, and harmonizing rules. We believe this final rule will not increase compliance costs and will serve an important purpose of providing us an opportunity to consider how to reduce burdens on the public and maintain or improve coordination among the four rules affected. We believe that this final rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires us to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this final rule only extends various compliance dates for certain provisions and/or certain entities with respect to the four rules discussed here, we have determined that the final rule will not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$146 million, using the most current (2015) Implicit Price Deflator for the Gross Domestic Product. This final rule would not result in an expenditure in any year that meets or exceeds this amount.

XI. Analysis of Environmental Impact

We have determined under 21 CFR 25.30(j) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an

environmental impact statement is required.

XII. Paperwork Reduction Act of 1995

This final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

XIII. Federalism

We have analyzed this final rule in accordance with the principles set forth in Executive Order 13132. FDA has determined that the rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, we conclude that the rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

XIV. Executive Order 13175

We have analyzed this rule in accordance with the principles set forth in Executive Order 13175. We have determined that the rule does not contain policies that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Accordingly, we conclude that the rule does not contain policies that have tribal implications as defined in the Executive order and, consequently, a tribal summary impact statement is not required.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 558

[Docket No. FDA–2016–N–1896]

New Animal Drugs for Use in Animal Feed; Category Definitions

AGENCY: Food and Drug Administration, HHS.

ACTION: Direct final rule.

SUMMARY: The Food and Drug Administration (FDA, the Agency, we) is amending the animal drug regulations by revising the definitions of the two categories of new animal drugs used in medicated feeds to base category assignment only on approved uses in major animal species. This revision will preserve the availability of medicated feeds intended for therapeutic use in minor animal species and prevent a significant disincentive for future development of additional minor species therapies.

DATES: This rule is effective December 1, 2016. Submit either electronic or written comments by November 7, 2016. See Section IV for further discussion of the effective date.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA–2016–N–1896 for "Category Definitions For Minor Species." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states

"THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: David Edwards, Center for Veterinary Medicine (HFV–220), Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855, 240–402–6205, david.edwards@fda.hhs.gov.

I. Executive Summary

A. Purpose of the Direct Final Rule

FDA is issuing this direct final rule to revise the definitions of the two categories of new animal drugs used in

medicated feeds to base category assignment only on approved uses in major animal species. This action is being taken to address a potential consequence of animal drug sponsor cooperation in implementing a strategy initiated by the FDA Center for Veterinary Medicine (CVM) to address antimicrobial resistance by taking measures to ensure the judicious use of antimicrobial drugs in animal agriculture. Under this program, sponsors of antimicrobial new animal drugs that also have importance in human medicine were requested to voluntarily withdraw approval of production (e.g., growth production, feed efficiency) indications for their drug products that are intended for use in the feed or water of food-producing animals. Based on the existing drug category definitions, the voluntary withdrawal of production indications by these drug sponsors would, in some cases, result in a change to a medicated feed drug's category, potentially leading to additional consequences not foreseen at the time the program was initiated.

The category in which a new animal drug used in medicated feeds is placed is based on their likelihood of producing unsafe residues in the edible products of treated animals. Category I consists of those drugs that require no withdrawal period at the lowest use level in each species for which they are approved. Category II consists of those drugs that require a withdrawal period at the lowest use level for at least one species for which they are approved, or that are regulated on a "no-residue" basis or with a zero tolerance because of a carcinogenic concern, regardless of whether a withdrawal period is required.

New animal drugs approved for use in medicated feeds are approved as Type A medicated articles, the most concentrated form of the drug product for use by feed mills. Category I Type A medicated articles can be handled by both licensed and unlicensed feed mills, whereas Category II Type A medicated articles can be handled only by licensed feed mills.

Certain Category I Type A medicated articles would be recategorized to Category II when a production indication is voluntarily withdrawn by a sponsor as part of the judicious use initiative that is currently underway, based on the next lowest use level that remains once the production use is withdrawn having a withdrawal period such that the drug would then meet the definition for Category II. For Category I Type A medicated articles that include indications for minor species, FDA is concerned that if such a Type A

medicated article is recategorized to Category II based on a withdrawal period for an approved therapeutic use in a minor species, sponsors may opt to request withdrawal of approval of these minor species indications in order to ensure the Type A medicated article can remain in Category I. Sponsors may also decline to pursue development of additional therapies for minor species if these uses would require a withdrawal period that would trigger a recategorization to Category II.

This direct final rule revises the category definitions such that they will be based only on whether a withdrawal period is required for a major species.¹ Under this new definition, a Category I Type A medicated article will not be recategorized to Category II based on the existence of a withdrawal period for an approved indication in a minor species, even if that minor species indication is the next lowest approved use level that remains after the production indication has been withdrawn. However, if the next lowest use level (apart from the minor species indication) is an indication approved for use in a major species that has a withdrawal period, under the new definition the drug will move to Category II.

The purpose of this revision is to preserve the present availability of medicated feeds intended for therapeutic uses in minor species and to prevent a significant disincentive for future development of additional therapies for minor species. We believe this revision will not compromise public health due to the comparatively lower exposure by humans to potential drug residues in edible tissues of food-producing minor species inherent in their less frequent consumption.

B. Summary of the Major Provisions of the Direct Final Rule

FDA is amending 21 CFR 558.3 *Definitions and general considerations applicable to this part* (§ 558.3) to base the definition for each of the two categories (Category I and Category II) of new animal drugs used in medicated feeds only on approved uses in major species. Definitions for "major species"

¹ As a practical matter, categorization under the revised definitions in this direct final rule will be driven by approved indications for major food-producing species (cattle, poultry, swine, and turkeys). While the definition for major species includes horses, dogs, and cats, they are not regulated as food-producing major species and thus drugs approved for use in these species do not require an assessment of human food safety that may result in assignment of a withdrawal period. Minor species are defined as animals, other than humans, that are not major species. Minor species include animals such as sheep, goats, ducks, geese, and aquaculture species such as catfish, salmon, and trout.

and "minor species" are also being added to this section.

C. Legal Authority

FDA is issuing these regulations based on its authority under the new animal drug provisions in sections 512 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 360b) and under section 701(a) of the FD&C Act (21 U.S.C. 371(a)), which gives the Agency general rulemaking authority to issue regulations for the efficient enforcement of the FD&C Act.

D. Costs and Benefits

The revisions made by this direct final rule are intended to preserve the availability of medicated feeds intended for therapeutic use in minor animal species. In addition, these revisions will prevent a significant disincentive for future development of additional therapies for minor species. No additional costs or benefits will accrue from this rulemaking.

II. Background

FDA is issuing this direct final rule to revise the definitions of the two categories of new animal drugs used in medicated feeds to base category assignment only on approved uses in major animal species. To strengthen the Agency's medicated feed program, FDA issued a final rule in the **Federal Register** of March 3, 1986 (51 FR 7382), which, among other things, established two categories of new animal drugs used in medicated feeds. As discussed in the final rule, the Agency placed these drugs into categories based on their likelihood of producing unsafe residues in the edible products of treated animals (51 FR 7382). Category I consists of those drugs that require no withdrawal period at the lowest use level in each species for which they are approved. Category II consists of those drugs that require a withdrawal period at the lowest use level for at least one species for which they are approved, or that are regulated on a "no-residue" basis or with a zero tolerance because of a carcinogenic concern, regardless of whether a withdrawal period is required.

New animal drugs approved for use in medicated feeds are approved as Type A medicated articles, the most concentrated form of the drug product for use by feed mills. Category I Type A medicated articles can be handled by both licensed and unlicensed feed mills, whereas Category II Type A medicated articles can be handled only by licensed feed mills.

This action is being taken to address a potential consequence of animal drug

sponsor cooperation in implementing a strategy initiated by CVM to address antimicrobial resistance by taking measures to ensure the judicious use of antimicrobials of importance to human medicine (*i.e.*, medically important antimicrobials) in animal agriculture. Specifically, CVM's initiative to ensure the judicious use of medically important antimicrobial drugs in animal agriculture advocates two specific changes to the approved conditions of use of medically important antimicrobials that are administered through the medicated feed or water of food-producing animals.

These changes, which are described in Guidance for Industry (GFI) #213, "New Animal Drugs and New Animal Drug Combination Products Administered in or on Medicated Feed or Drinking Water of Food-Producing Animals: Recommendations for Drug Sponsors for Voluntarily Aligning Product Use Conditions with GFI #209," published December 2013 (<http://www.fda.gov/downloads/AnimalVeterinary/GuidanceComplianceEnforcement/GuidanceforIndustry/UCM299624.pdf>), are intended to reduce the development of antimicrobial resistance and thereby preserve the effectiveness of these important drugs for use in treating infections in humans. Following publication of GFI #213, all sponsors of these medically important antimicrobial new animal drug products approved for use in the feed or water of food-producing animals notified FDA in writing of their intent to voluntarily make changes to their affected products as outlined in the guidance.

Under GFI #213, sponsors of medically important antimicrobial new animal drugs approved for over-the-counter use in the feed or water of food-producing animals were asked to change the marketing status of their products to veterinary prescription (Rx) marketing status in the case of new animal drugs administered in water, or to veterinary feed directive (VFD) marketing status for drugs administered in or on animal feed. New animal drugs with Rx or VFD marketing status can legally only be used with a veterinarian's oversight. Prescription animal drugs require a veterinarian's prescription, while use of VFD drugs requires a VFD; both types of orders must be issued by a licensed veterinarian in the course of the veterinarian's professional practice.

In addition, under GFI #213 sponsors of medically important new animal drugs used in animal feed or water that have production indications were requested to voluntarily withdraw these indications; approved therapeutic

indications for use of these drugs would remain.

In some instances, once a sponsor withdraws the production indication from a drug approved for use in animal feed (which is generally the lowest use level of the drug), the remaining lowest therapeutic use level will require a withdrawal period. Based on the existing definitions of the feed drug categories, this results in a Category I new animal drug being recategorized as a Category II drug, the more restrictive of the two possible categories of drugs used in medicated feed. Category II drugs require that the manufacture of Type B and Type C medicated feeds from Type A medicated articles be done in facilities possessing a medicated feed mill license, which number roughly 900 in the United States. In contrast, there are tens of thousands of unlicensed feed mills in this country. Such a recategorization to Category II, thereby limiting the use of the Type A medicated article to a much smaller subset of feed mills, may disrupt the existing movement of these medicated feeds through distribution channels.

FDA believes that sponsors may request voluntary withdrawal of those specific therapeutic indications as a way to keep their products in the less restrictive Category I when the recategorization of a drug to Category II is triggered by a therapeutic indication for a minor species. For certain drug products, the only therapeutic indications requiring a withdrawal period that would remain following the voluntary withdrawal of approval of production uses are those for minor species. The loss of therapeutic indications for minor species would adversely affect the availability of therapeutic medicated feeds necessary for the health of minor species, which is a matter of significant concern for the Agency.

This foreseeable adverse effect on the health of minor species would directly undermine the intent of Congress in passing the Minor Use and Minor Species Animal Health Act of 2004 (Pub. L. 108–282) as well as to our intent in establishing the implementing regulations under that statute. The Category I drugs likely to be affected have been safely used in this category for decades, and we have no reason to believe they would not continue to be safely used in this category moving forward.

Under the current category definitions in § 558.3 for feed use drugs, a drug will be included in Category II if the lowest use level of the drug in any approved species requires a withdrawal period. This approach equates the existence of

a withdrawal period for a particular use with the potential risk that edible tissues from animals administered a medicated feed might contain a residue of concern.

However, the toxicological analysis of animal drugs used to calculate a withdrawal period is based on lifetime exposure by humans to potential drug residues. This assessment of lifetime exposure does not consider the lower risk to the public health from the use of these same new animal drugs in food-producing minor species attributable to the lower human consumption over time of edible tissues from food-producing minor species (Refs. 1 and 2). For this reason, FDA does not at this time believe this revision of the category definitions presents a risk to the public health.

In a manner similar to its effect on drug indications that are already approved, CVM believes the existing categorization scheme would pose a significant disincentive for future development of additional minor species therapies for existing Category I drugs if those new uses would require a withdrawal period and thus trigger a change to Category II for that drug.

Given the potential for implementation of GFI #213 to result in the foreseeable consequence of the withdrawal of approval of needed therapeutic indications for minor species, the definitions of the two categories of new animal drugs used in medicated feeds in § 558.3 are being revised to base category assignment only on uses in major species. This revision is expected to preserve the availability of drugs intended for therapeutic use in minor species and also prevent a significant disincentive for future development of additional therapies for minor species without compromising public health.

III. Provisions of the Regulation

We are amending paragraphs (b)(1)(i) and (ii) of this Agency's regulations at § 558.3 (*Definitions and general considerations applicable to this part.*) to base the definition for each of the two categories of new animal drugs (Category I and Category II) used in medicated feeds only on approved uses in major species. Section 558.3(b) is further amended to add definitions for "major species" and "minor species" that are identical to the definitions of those terms found in FDA's regulations for new animal drugs for minor use and minor species (21 CFR 516.3). We are revising the feed drug category definitions in § 558.3 to preserve the availability of medicated feeds intended for use in minor species and prevent a

likely disincentive for development of additional therapies for minor species.

IV. Direct Final Rulemaking

FDA has determined that the subject of this rulemaking is suitable for a direct final rule. FDA is amending § 558.3(b)(1) by revising the definitions of Category I and Category II new animal drugs administered in or on medicated feed. This rule is intended to make noncontroversial changes to existing regulations. The Agency does not anticipate receiving any significant adverse comments on this rule.

Consistent with FDA's procedures on direct final rulemaking, we are publishing elsewhere in this issue of the **Federal Register** a companion proposed rule. The companion proposed rule and this direct final rule are substantively identical. The companion proposed rule provides the procedural framework within which the rule may be finalized in the event the direct final rule is withdrawn because of any significant adverse comment. The comment period for this direct final rule runs concurrently with the comment period of the companion proposed rule. Any comments received in response to the companion proposed rule will also be considered as comments regarding this direct final rule.

FDA is providing a comment period for the direct final rule of 75 days after the date of publication in the **Federal Register**. If FDA receives a significant adverse comment, we intend to withdraw this direct final rule before its effective date by publication of a notice in the **Federal Register** within 30 days after the comment period ends. A significant adverse comment is one that explains why the rule would be inappropriate, including challenges to the rule's underlying premise or approach, or would be ineffective or unacceptable without a change. In determining whether an adverse comment is significant and warrants withdrawing a direct final rule, the Agency will consider whether the comment raises an issue serious enough to warrant a substantive response in a notice-and-comment process in accordance with section 553 of the Administrative Procedure Act (APA) (5 U.S.C. 553).

Comments that are frivolous, insubstantial, or outside the scope of this direct final rule will not be considered significant or adverse under this procedure. For example, a comment recommending a regulation change in addition to those in the rule would not be considered a significant adverse comment unless the comment states why the rule would be ineffective

without the additional change. In addition, if a significant adverse comment applies to an amendment, paragraph, or section of this rule and that provision can be severed from the remainder of the rule, FDA may adopt as final those provisions of the rule that are not the subject of a significant adverse comment.

If FDA withdraws the direct final rule, all comments received will be considered under the companion proposed rule in developing a final rule under the usual notice-and-comment procedures under the APA (5 U.S.C. 552 *et seq.*). If FDA does not receive a significant adverse comment in response to the direct final rule, the Agency will publish, within 30 days after the comment period ends, a document in the **Federal Register** confirming the effective date of the final rule. The Agency intends to make the direct final rule effective December 1, 2016.

A full description of FDA's policy on direct final rule procedures may be found in a guidance document announced in the **Federal Register** of November 21, 1997 (62 FR 62466). The guidance document may be accessed at: <http://www.fda.gov/RegulatoryInformation/Guidances/ucm125166.htm>.

V. Legal Authority

We are issuing these regulations under the legal authority provided by section 512 of the FD&C Act relating to new animal drugs and section 701(a) of the FD&C Act. Section 512 gives FDA the authority to approve new animal drug applications (NADAs). Such approval establishes conditions of use under which the drug can be used in a safe and effective manner. Categorization of new animal drugs used in medicated feeds is one such condition of use. In addition, section 701(a) of the FD&C Act gives FDA general rulemaking authority to issue regulations for the efficient enforcement of the FD&C Act.

VI. Economic Analysis of Impacts

We have examined the impacts of the direct final rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages;

distributive impacts; and equity). We believe that this direct final rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires Agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this direct final rule would not impose any compliance costs on the sponsors of animal drug products that are currently marketed or in development, we certify that this direct final rule will not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before issuing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$146 million, using the most current (2015) Implicit Price Deflator for the Gross Domestic Product. This direct final rule would not result in an expenditure in any year that meets or exceeds this amount.

This direct final rule allows certain new animal drugs approved for use in animal feed that would otherwise be recategorized as Category II drugs under the current definitions in § 558.3 following withdrawal of approval of production indications during GFI #213 implementation to remain in Category I if the change to Category II would have been triggered by a minor species indication.

Based on the revised definitions of the two feed drug categories, there is one drug, sulfamerazine for control of furunculosis in trout (21 CFR 558.582), that will be recategorized from Category II to Category I as a result of this direct final rule. No compliance costs will be incurred due to this recategorization because no changes to the approved application are required for continued marketing of the drug.

VII. Analysis of Environmental Impact

We have determined under 21 CFR 25.30(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VIII. Paperwork Reduction Act of 1995

This direct final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) is not required.

IX. Federalism

We have analyzed this direct final rule in accordance with the principles set forth in Executive Order 13132. We have determined that this direct final rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, we have concluded that this direct final rule does not contain policies that have federalism implications as defined in the Executive Order and, consequently, a federalism summary impact statement is not required.

X. References

List of Subjects in 21 CFR Part 558

Animal drugs, animal feeds.

Therefore, under the Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR part 558 is amended as follows:

PART 558—NEW ANIMAL DRUGS FOR USE IN ANIMAL FEEDS

■ 1. The authority citation for part 558 continues to read as follows:

Authority: 21 U.S.C. 354, 360b, 360ccc, 360ccc–1, 371.

■ 2. In § 558.3, revise paragraphs (b)(1)(i) and (ii); and add paragraphs (b)(13) and (14) to read as follows:

§ 558.3 Definitions and general considerations applicable to this part.

* * * * *

(b) * * *

(1) * * *

(i) Category I—These drugs require no withdrawal period at the lowest use level in each major species for which they are approved or are approved for use only in minor species.

(ii) Category II—These drugs require a withdrawal period at the lowest use level for at least one major species for which they are approved, or are regulated on a “no-residue” basis or with a zero tolerance because of carcinogenic concern regardless of whether a withdrawal period is required in any species.

* * * * *

(13) “Major species” means cattle, horses, swine, chickens, turkeys, dogs, and cats.

(14) “Minor species” means animals, other than humans, that are not major species.

Dated: August 18, 2016.

Jeremy Sharp,

Deputy Commissioner for Policy, Planning, Legislation, and Analysis.

[FR Doc. 2016–20148 Filed 8–23–16; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****33 CFR Part 117**

[Docket No. USCG–2016–0814]

Drawbridge Operation Regulation; Trent River, New Bern, NC

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the U.S. 70/Alfred A. Cunningham Bridge across the Trent River, mile 0.0, at New Bern, NC. The deviation is necessary to facilitate safe participation in the Multiple Sclerosis Society’s Historic New Bern Bike Ride. This deviation allows the bridge to remain in the closed-to-navigation position.

DATES: The deviation is effective from 8 a.m. on Saturday, September 10, 2016, to 9:30 a.m. Sunday, September 11, 2016.

ADDRESSES: The docket for this deviation, [USCG–2016–0814] is available at <http://www.regulations.gov>. Type the docket number in the “SEARCH” box and click “SEARCH”. Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Mr. Michael Thorogood, Bridge Administration Branch Fifth District, Coast Guard, telephone 757–398–6557, email Michael.R.Thorogood@uscg.mil.

SUPPLEMENTARY INFORMATION: The North Carolina Department of Transportation, who owns and operates the U.S. 70/Alfred A. Cunningham Bridge, has requested a temporary deviation from the current operating regulations set out in 33 CFR 117.843(a), to ensure the safety of the cyclists and spectators that are associated with the Multiple Sclerosis Society’s Historic New Bern Bike Ride.

Under this temporary deviation, the bridge will be maintained in the closed position from 8 a.m. to 9:30 a.m. on Saturday, September 10, 2016, and from 8 a.m. to 9:30 a.m. on Sunday, September 11, 2016. The bridge is a double bascule drawbridge and has a vertical clearance in the closed position of 14 feet above mean high water.

The Trent River is used by small commercial vessels and recreational vessels. The Coast Guard has carefully considered the nature and volume of vessel traffic in publishing this temporary deviation.

Vessels able to pass through the bridge in the closed position may do so at any time. The bridge will be able to open in case of emergencies, there is no immediate alternative route for vessels to pass. The Coast Guard will also inform the users of the waterway through our Local and Broadcast Notice to Mariners of the change in operating schedule for the bridge so that vessel operators can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: August 17, 2016.

Hal R. Pitts,

Bridge Program Manager, Fifth Coast Guard District.

[FR Doc. 2016–20232 Filed 8–23–16; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****33 CFR Part 117****[Docket Number USCG–2016–0707]****Drawbridge Operation Regulation; Upper Mississippi River, Rock Island, IL****AGENCY:** Coast Guard, DHS.**ACTION:** Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Rock Island Railroad and Highway Drawbridge across the Upper Mississippi River, mile 482.9, at Rock Island, Illinois. The deviation is necessary to facilitate a charity marathon race. This deviation allows the bridge to be maintained in the closed-to-navigation position for four and a half hours.

DATES: This deviation is effective from 7 a.m. to 11:30 a.m., September 25, 2016.

ADDRESSES: The docket for this deviation, (USCG–2016–0707) is available at <http://www.regulations.gov>. Type the docket number in the “SEARCH” box and click “SEARCH”. Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Eric A. Washburn, Bridge Administrator, Western Rivers, Coast Guard; telephone 314–269–2378, email Eric.Washburn@uscg.mil.

SUPPLEMENTARY INFORMATION: The U.S. Army Rock Island Arsenal requested a temporary deviation for the Rock Island Railroad and Highway Drawbridge, across the Upper Mississippi River, mile 482.9, at Rock Island, Illinois to remain in the closed-to-navigation position for four and a half hours from 7 a.m. to 11:30 a.m., September 25, 2016 to facilitate the Quad City Marathon.

The Rock Island Railroad and Highway Drawbridge currently operates in accordance with 33 CFR 117.5, which states the general requirement that the drawbridge shall open on signal. There are no alternate routes for vessels transiting this section of the Upper Mississippi River. The bridge cannot open in case of emergency.

The Rock Island Railroad and Highway Drawbridge provides a vertical clearance of 23.8 feet above normal pool in the closed-to-navigation position. Navigation on the waterway consists

primarily of commercial tows and recreational watercraft. This temporary deviation has been coordinated with waterway users. No objections were received. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessel operators can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: August 19, 2016.

Eric A. Washburn,

Bridge Administrator, Western Rivers.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****33 CFR Part 165****[Docket Number USCG–2016–0735]****RIN 1625–AA00****Safety Zone; Nahant Bay, Marblehead, MA****AGENCY:** Coast Guard, DHS.**ACTION:** Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on the navigable waters of the Captain of the Port (COTP) Boston Zone within a 2,500-yard radius around a position approximately 6nm Northeast of Nahant Bay, MA, for a Department of Defense (DOD) Training Exercise. The safety zone is needed to protect Navy personnel, support vessels, and the maritime public from the hazards associated with this training exercise. Entering into, transiting through, mooring, or anchoring within this safety zone during periods of enforcement is prohibited unless authorized by the Coast Guard Sector Boston COTP or the COTP’s designated representative.

DATES: This rule is effective on August 24, 2016 from 7:00 p.m. through 10:00 p.m.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type USCG–2016–0735 in the “SEARCH” box and click

“SEARCH.” Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email, Mark Cutter, Sector Boston Waterways Management Division, U.S. Coast Guard; telephone 617–223–4000, email Mark.E.Cutter@uscg.mil.

SUPPLEMENTARY INFORMATION:**I. Table of Abbreviations**

COTP Captain of the Port
CFR Code of Federal Regulations
DHS Department of Homeland Security
DOD Department of Defense
FR Federal Register
NPRM Notice of Proposed Rulemaking
NAD 83 North American Data of 1983
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a NPRM with respect to this rule because publishing a NPRM would be impracticable. DOD Training Exercise will take place on August 24, 2016. The DOD Exercise will consist of High-altitude military parachuting freefall insertion approximately 6nm Northeast of Nahant, MA, in position 42° 27.000’ N., 070° 50.000’ W. This exercise will present safety hazards and risks to Navy personnel, support vessels, and the maritime public during the exercise. It would be impracticable to delay promulgating this rule, as it would not be possible to conduct notice and comment rulemaking before the date of the exercise. For this reason, the Coast Guard finds it impracticable to delay this regulation.

We are issuing this rule, and under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making it effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable for the same reasons specified above.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. The

COTP has determined that the potential hazards associated with this DOD Training Exercise create a serious safety concern for anyone transiting within a 2,500-yard radius of position 42° 27.000' N., 070° 50.000' W. This rule is needed to protect Navy personnel, vessels, and the normal marine traffic in the navigable waters within the safety zone while this exercise is being conducted.

IV. Discussion of Rule

This rule establishes a safety zone from 7:00 p.m. until 10:00 p.m. on August 24, 2016. The safety zone will cover all navigable waters within a 2,500-yard radius of position 42° 27.000' N., 070° 50.000' W. The duration of the zone is intended to protect Navy personnel, vessels, and normal marine traffic in these navigable waters during the DOD training exercise. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has not been designated a "significant regulatory action," under Executive Order 12866. Accordingly, it has not been reviewed by the Office of Management and Budget.

This regulatory action determination is based on the size, location, and duration of the safety zone. The implementation of this temporary safety zone is necessary for the protection of all waterway users. The size of the zone is the minimum necessary to provide adequate protection for the waterway users, adjoining areas, and the public. Vessel traffic will be able to safely transit around this safety zone. Any hardships experienced by persons or vessels are considered minimal compared to the interest in protecting the public.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Public Law 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of

power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that will prohibit entry within 2,500 yards of position 42° 27.000' N., 070° 50.000' W. during the DOD training exercise. It is categorically excluded from further review under paragraph 34(g) of Figure 2–1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and a Categorical Exclusion Determination will be available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this rule.

G. Protest Activities

The Coast Guard respects the First Amendment Rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

- 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

- 2. Add § 165.T01–0735 to read as follows:

§ 165.T01–0735 Safety Zone; DOD Training Exercise, Nahant Bay, Marblehead, MA.

(a) *Location.* The following area is a safety zone: All navigable waters within 2,500-yards of 42° 27.000' N., 070° 50.000' W. while the DOD Training Exercise is underway.

(b) *Regulations.* While this security zone is being enforced, the following regulations, along with those contained in § 165.33, apply:

(1) Under the general safety zone regulations in subpart B of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or a COTP designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF–FM channel 16 or by phone at (617) 223–5757 (Sector Boston Command Center). Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or a COTP designated representative.

(c) *Enforcement period.* This section will be enforced from 7:00 p.m. until 10:00 p.m. on August 24, 2016.

(d) *Definitions.* As used in this section, *designated representative* means is any Coast Guard commissioned, warrant, or petty officer or any federal, state, or local law enforcement officer who has been designated by the COTP to act on the

COTP's behalf. The COTP's representative may be on a Coast vessel, a Coast Guard Auxiliary vessel, state or local law enforcement, or a location on shore.

(e) *Penalties.* Those who violate this section are subject to the penalties set forth in 33 U.S.C. 1232 and 50 U.S.C. 192.

Dated: August 19, 2016.

C. C. Gelzer,

Captain, U.S. Coast Guard, Captain of the Port Boston.

50 CFR Part 635

[Docket No. 160328287–6745–02]

RIN 0648–BF94

Atlantic Highly Migratory Species (HMS); Porbeagle Shark Management Measures

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This final rule implements the International Commission for the Conservation of Atlantic Tunas (ICCAT) Recommendation 15–06 regarding porbeagle sharks (*Lamna nasus*) caught in association with ICCAT fisheries. Recommendation 15–06 requires, among other things, fishing vessels to promptly release unharmed, to the extent practicable, porbeagle sharks caught in association with ICCAT fisheries when brought alive alongside for taking on board the vessel. This action affects fishermen fishing in the commercial highly migratory species (HMS) pelagic longline fishery and the HMS recreational fisheries for tunas, swordfish, and billfish in the Atlantic Ocean, including the Caribbean Sea and Gulf of Mexico. This action implements an ICCAT recommendation, consistent with the Atlantic Tunas Convention Act (ATCA), and will further domestic management objectives under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

DATES: Effective on September 23, 2016.

FOR FURTHER INFORMATION CONTACT: Larry Redd, Carrie Soltanoff, or Karyl Brewster-Geisz by phone at 301–427–8503.

SUPPLEMENTARY INFORMATION:

Background

Atlantic HMS are managed under the 2006 Consolidated HMS Fishery Management Plan (FMP). Implementing regulations at 50 CFR part 635 are issued under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), 16 U.S.C. 1801 *et seq.*, and Atlantic Tunas Convention Act (ATCA), 16 U.S.C. 927 *et seq.* ATCA requires the Secretary of Commerce (Secretary) to promulgate regulations as may be necessary and appropriate to implement ICCAT recommendations.

At its 24th Annual Meeting in 2015, ICCAT adopted Recommendation 15–06 on “Porbeagle [Sharks] Caught in Association with ICCAT Fisheries.” Recommendation 15–06 requires, among other things, fishing vessels “. . . to promptly release unharmed, to the extent practicable, porbeagle sharks caught in association with ICCAT fisheries when brought alive alongside for taking on board the vessel.” Recommendation 15–06 notes that, according to the ICCAT Standing Committee for Research and Statistics (SCRS), biomass of northwest Atlantic and northeast Atlantic porbeagle sharks is depleted to well below the biomass at maximum sustainable yield, but recent fishing mortality is below the fishing mortality at maximum sustainable yield (*i.e.*, the stocks are overfished but overfishing is not occurring). Recommendation 15–06 further notes that the 2008 and 2012 Ecological Risk Assessments concluded that the porbeagle shark was among the most vulnerable of shark species, which, even at low fishing mortality levels, makes it more susceptible to overfishing. Thus, Recommendation 15–06 was adopted by ICCAT to reduce fishing mortality of porbeagle sharks caught in association with ICCAT fisheries in order to reduce porbeagle shark fishing even further, and thus assist in rebuilding stocks which are currently overfished. On June 15, 2016 (81 FR 39017), NMFS published a proposed rule to consider changes to the regulations at 50 CFR part 635 consistent with Recommendation 15–06. The proposed rule contains details that are not repeated here. The comment period on the proposed rule ended on July 15, 2016.

Domestically, porbeagle sharks are managed pursuant to a rebuilding plan established in Amendment 2 to the 2006 Consolidated HMS FMP (73 FR 35788, June 24, 2008 as corrected at 73 FR 40658, July 15, 2008). Under current regulations, commercial and

recreational HMS fishermen that operate in ICCAT fisheries are authorized to retain any porbeagle shark, regardless of whether the shark is dead or alive at haulback. In this final rule, NMFS requires, to the extent practicable, all live porbeagle sharks to be released by commercial and recreational HMS fishermen operating in ICCAT fisheries, as determined by the permits they hold or, in the case of recreational fisheries, whether they have also retained tuna-like species on a given trip.

Response to Comments

During the proposed rule stage, NMFS received 28 written comments. The comments received on the proposed rule during the public comment period can be found at <http://www.regulations.gov/> by searching for NOAA-NMFS-2016-0066. A summary of the relevant comments on the proposed rule are shown below with NMFS' response.

Comment 1: NMFS received comments both in support of, and opposed to, implementing the ICCAT recommendation. Commenters who supported this action stated that the proposed rule was necessary to be consistent with the recommendation adopted by ICCAT. Commenters opposing the proposed rule stated that the porbeagle population in waters off the northeast United States was abundant.

Response: NMFS agrees that this action is consistent with the ICCAT recommendation. Regarding the status of porbeagle sharks, as described in the proposed rule, according to the most recent stock assessment in 2009, which was a joint stock assessment between ICCAT and the International Council for the Exploration of the Sea (ICES), the Northwest Atlantic porbeagle shark stock is depleted well below the biomass at maximum sustainable yield, and recent fishing mortality is below the fishing mortality at maximum sustainable yield. Based on these results, porbeagle sharks are considered to be overfished with no overfishing occurring both domestically and internationally. As cited in Recommendation 15-06, porbeagle sharks are among the most vulnerable shark species, which means that even at low fishing mortality levels, the species is more susceptible to overfishing than other less vulnerable shark species. ICCAT has provisionally scheduled the next porbeagle shark stock assessment for 2019. More information regarding the 2009 stock assessment can be found at <http://www.iccat.int/Documents/SCRS/DetRep/DET-POR.pdf>.

Comment 2: Some commenters noted the need for complete prohibition of porbeagle sharks caught in association with non-ICCAT fisheries given the overfished status of the stock.

Response: This comment is outside the scope of this rulemaking because the purpose of this rulemaking only pertains to implementing ICCAT Recommendation 15-06, consistent with ATCA. ICCAT Recommendation 15-06 pertains to the live release of porbeagle sharks caught in association with ICCAT fisheries and does not address possession of the species in non-ICCAT fisheries. Domestically, porbeagle sharks are managed pursuant to a rebuilding plan established in 2008 in Amendment 2 to the 2006 Consolidated HMS FMP, consistent with the requirements of the Magnuson-Stevens Act.

Comment 3: NMFS received comments stating that NMFS should issue its 12-month finding regarding listing porbeagle sharks under the Endangered Species Act (ESA).

Response: This comment is outside the scope of this rulemaking because the purpose of this rulemaking is to implement ICCAT Recommendation 15-06. The 12-month finding regarding listing porbeagle sharks under the ESA very recently published on August 1, 2016 (81 FR 50463). Any further information regarding the 12-month finding and any subsequent related agency action can be found at www.federalregister.gov/.

Comment 4: NMFS received a comment stating that current low interactions between recreational fishermen and porbeagle sharks, in combination with high release rates of the species, does not warrant additional regulations for the recreational fishery.

Response: Under the authority of ATCA and the Magnuson-Stevens Act, NMFS is obligated to promulgate such regulations as may be necessary and appropriate to carry out ICCAT recommendations. Additionally, as stated above, porbeagle sharks are overfished without overfishing occurring. ICCAT Recommendation 15-06 was designed in part to aid in rebuilding this vulnerable shark species. NMFS acknowledges that recreational fishermen interact with few porbeagle sharks and that most fishermen who catch porbeagle sharks release the majority of those sharks alive. Furthermore, the measures in this rulemaking only apply to recreational fishermen that catch porbeagle sharks while also retaining swordfish, billfish, or tuna. This rulemaking does not apply to recreational fishermen that catch porbeagle sharks and do not retain

swordfish, billfish, or tuna. As such, this regulation, which requires the live release of porbeagle sharks caught in association with ICCAT fisheries, should have few overall impacts on the recreational fishery.

Comment 5: NMFS received public comments regarding handling and release practices of porbeagle sharks. The commenters highlighted that the proposed changes could result in anglers switching to fishing practices that would ensure porbeagle sharks are dead at haulback in order to allow for retention of any porbeagle shark caught. Other commenters were concerned that the data indicating high release rates of porbeagle sharks in commercial and recreational fisheries were inaccurate because the data were self-reported and did not consider post-release mortality rates of porbeagle sharks.

Response: As described in the proposed rule, HMS logbook and pelagic observer program data indicate that approximately 97 percent of porbeagle sharks were released (alive and dead) from 2010-2015. Additionally, recreational data indicate approximately 90 percent of porbeagle sharks were released from 2010-2015. These data, which are a mix of self-reported and observer data are the best scientific data available and indicate that most porbeagle sharks have not been retained. While the data do not indicate how many sharks released alive would subsequently die as a result of being caught, the ICCAT Recommendation will increase the numbers of porbeagle sharks released alive and thereby likely increase the survival of those sharks and aid in rebuilding.

Regarding handling and release practices, U.S. fishermen who interact with porbeagle sharks have historically followed safe handling and release practices. This regulation requires U.S. fishermen to release live porbeagle sharks in a manner that is largely consistent with the safe handling and release practices that most fishermen employ. NMFS believes and expects that fishermen will continue to follow these safe handling and release practices after implementation of the ICCAT Recommendation 15-06. NMFS will continue to monitor potential violations of Atlantic HMS regulations to ensure that both commercial and recreational fishermen maintain proper catch and release practices.

Comment 6: Several commenters expressed concern that implementing ICCAT Recommendation 15-06 would result in a complete closure of the recreational porbeagle shark fishery.

Response: This final rule will not result in the closure of the recreational porbeagle shark fishery. As described in the proposed rule, implementation of ICCAT Recommendation 15–06 would impact HMS recreational fishermen who retain porbeagle sharks while also retaining swordfish, billfish, or tuna. Under these circumstances, recreational fishermen would have to either discard live porbeagle sharks or the swordfish, billfish, or tuna. If a porbeagle shark were caught that was dead at the time of haulback, a recreational HMS fisherman with swordfish, billfish, or tuna onboard could retain the porbeagle, consistent with all other regulations such as the retention and size limits. Similarly, if a recreational HMS fisherman did not have swordfish, billfish, or tuna onboard, and was not intending to retain any swordfish, billfish, or tunas, that fisherman could retain any porbeagle shark that met the retention and size limits, regardless of the disposition of the shark.

Changes From the Proposed Rule

NMFS made one change to the proposed regulations. At § 635.22 (a)(3), NMFS has added text specifying that the permit holders subject to the applicable requirements of this rulemaking include fishermen who hold a Swordfish General Commercial permit when they are participating in an HMS registered tournament. The proposed rule clearly stated that recreational fishing for porbeagle sharks would be affected when swordfish, tuna, or billfish are retained or possessed on board, or offloaded from, the vessel on a trip. We inadvertently did not list the Swordfish General Commercial permit, even though participation in an HMS registered recreational tournament with such a permit is clearly recreational fishing, and such permit holders had notice of the proposed rule's effect on recreational fishing both through the **Federal Register** Notice and through NMFS outreach, including NMFS' HMS-specific email listserv and NMFS' general email listserv.

It is generally understood that the Swordfish General Commercial permit is similar to the HMS General Category commercial permit in that the permit is considered recreational when the vessel owner or operator is using that vessel in an HMS registered tournament and landings of HMS are allowed, consistent with the regulations. While the regulatory language in the proposed rule did not specifically include this category of permit when listing the permit titles, the rule did repeatedly refer to recreational fisheries, and permit holders could reasonably have

anticipated that the prohibition would apply to them given the rule's overall context and content and thus had sufficient notice. The underlying NEPA analysis associated with this rulemaking is not affected by this correction. These fishermen are considered recreational when fishing during a registered HMS tournament, and all such fishing in tournaments was within the scope of what was analyzed; any harvest of porbeagle sharks by these fishermen was analyzed at the proposed rule stage as recreational data. The Regulatory Flexibility Act (RFA) certification is similarly unaffected by this correction. It was based on the recreational information about porbeagle sharks received through the Large Pelagics Survey, which does not distinguish among permit types. Therefore, any recreational harvest of porbeagle sharks by Swordfish General Category permit holders was considered at the proposed rule stage. Furthermore, recreationally-caught porbeagle sharks cannot be sold, limiting the effects analyzed under the RFA.

Classification

The NMFS Assistant Administrator has determined that the final rule is consistent with the 2006 Consolidated HMS FMP and its amendments, the Magnuson-Stevens Act, ATCA, and other applicable law.

This final action has been determined to be not significant for the purposes of Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. No comments were received regarding this certification. As a result, a regulatory flexibility analysis was not required and none was prepared.

On December 29, 2015, NMFS issued a final rule establishing a small business size standard of \$11 million in annual gross receipts for all businesses primarily engaged in the commercial fishing industry (NAICS 11411) for Regulatory Flexibility Act (RFA) compliance purposes only (80 FR 81194, December 29, 2015). The \$11 million standard became effective on July 1, 2016, and is to be used in place of the U.S. Small Business Administration's (SBA) current standards of \$20.5 million, \$5.5 million, and \$7.5 million for the finfish (NAICS 114111), shellfish (NAICS 114112), and

other marine fishing (NAICS 114119) sectors of the U.S. commercial fishing industry in all NMFS rules subject to the RFA after July 1, 2016. Id. at 81194.

Pursuant to the Regulatory Flexibility Act, and prior to July 1, 2016, a certification was developed for this regulatory action using SBA's former size standards. NMFS has reviewed the analyses prepared for this regulatory action in light of the new size standard. All of the entities directly regulated by this regulatory action are commercial finfish fishing businesses. The new standard could result in fewer commercial finfish businesses being considered small. However, NMFS has determined that the new size standard does not affect its decision to certify this regulatory action. NMFS considers all HMS longline permit holders to be small entities because these vessels have reported annual gross receipts of less than \$11 million for commercial fishing. The average annual gross revenue per active pelagic longline vessel was estimated to be \$187,000 based on the 170 active vessels between 2006 and 2012 that produced an estimated \$31.8 million in revenue annually. The maximum annual revenue for any pelagic longline vessel between 2006 and 2015 was \$1.9 million, well below the NMFS small business size threshold of \$11 million in gross receipts for commercial fishing. Therefore, NMFS considers all Atlantic Tunas Longline category permit holders to be small entities. Since the annual revenue for Atlantic Tunas Longline category permit holders is well below both the former and new SBA size standard, there continues to be no significant economic impact on a substantial number of small entities.

List of Subjects in 50 CFR Part 635

Fisheries, Fishing, Fishing vessels, Foreign relations, Imports, Penalties, Reporting and recordkeeping requirements, Treaties.

Dated: August 18, 2016.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 635 is amended as follows:

PART 635—ATLANTIC HIGHLY MIGRATORY SPECIES

■ 1. The authority citation for part 635 continues to read as follows:

Authority: 16 U.S.C. 971 *et seq.*; 16 U.S.C. 1801 *et seq.*

■ 2. In § 635.21, add paragraph (c)(1)(iii) to read as follows:

§ 635.21 Gear operation and deployment restrictions.

* * * * *

(c) * * *

(1) * * *

(iii) Has pelagic longline gear on board, persons aboard that vessel are required to release unharmed, to the extent practicable, porbeagle sharks that are alive at the time of haulback.

* * * * *

■ 3. In § 635.22, add paragraph (a)(3) to read as follows:

§ 635.22 Recreational retention limits.

(a) * * *

(3) Vessels issued an HMS General Category permit under § 635.4(d) that are participating in an HMS registered tournament, vessels issued a Swordfish General commercial permit under § 635.4(f) that are participating in an HMS registered tournament, vessels issued a HMS Angling category permit under § 635.4(c), or vessels issued a HMS Charter/Headboat permit under § 635.4(b) are required to release unharmed, to the extent practicable, porbeagle sharks that are alive at the time of haulback if swordfish, tuna, or billfish are retained or possessed on board, or offloaded from, the vessel during that trip.

* * * * *

■ 4. In § 635.24, add paragraph (a)(10) to read as follows:

§ 635.24 Commercial retention limits for sharks, swordfish, and BAYS tunas.

* * * * *

(a) * * *

(10) Notwithstanding other provisions in this paragraph (a), vessels issued a permit under this part that have pelagic longline gear on board or on vessels issued both an HMS Charter/Headboat permit and a commercial shark permit when tuna, swordfish, or billfish are on board the vessel, offloaded from the vessel, or being offloaded from the vessel, are required to release unharmed, to the extent practicable, porbeagle sharks that are alive at the time of haulback.

* * * * *

■ 5. In § 635.71, add paragraph (d)(20) to read as follows:

§ 635.71 Prohibitions.

* * * * *

(d) * * *

(20) Retain, possess, or land porbeagle sharks that were alive at the time of haulback as specified in

§§ 635.21(c)(1)(iii), 635.22(a)(3), and 635.24 (a)(10).

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 150916863–6211–02]

RIN 0648–XE833

Fisheries of the Exclusive Economic Zone Off Alaska; Atka Mackerel in the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for Atka mackerel in the Central Aleutian district (CAI) of the Bering Sea and Aleutian Islands management area (BSAI) by vessels participating in the BSAI trawl limited access fishery. This action is necessary to prevent exceeding the 2016 total allowable catch (TAC) of Atka mackerel in this area allocated to vessels participating in the BSAI trawl limited access fishery.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), August 19, 2016, through 2400 hrs, A.l.t., December 31, 2016.

FOR FURTHER INFORMATION CONTACT: Steve Whitney, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI exclusive economic zone according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2016 TAC of Atka mackerel, in the CAI, allocated to vessels participating in the BSAI trawl limited access fishery was established as a directed fishing allowance of 1,421 metric tons by the final 2016 and 2017 harvest specifications for groundfish in the BSAI (81 FR 14773, March 18, 2016).

In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that

this directed fishing allowance has been reached. Consequently, NMFS is prohibiting directed fishing for Atka mackerel in the CAI by vessels participating in the BSAI trawl limited access fishery.

After the effective dates of this closure, the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA, (AA) finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such a requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the closure of the Atka mackerel directed fishery in the CAI for vessels participating in the BSAI trawl limited access fishery. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 18, 2016. The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 19, 2016.

Alan D. Risenhoover,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2016–20317 Filed 8–19–16; 4:15 pm]

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for Pacific ocean perch in the Central Aleutian district (CAI) of the Bering Sea and Aleutian Islands management area (BSAI) by vessels participating in the BSAI trawl limited access fishery. This action is necessary to prevent exceeding the 2016 total allowable catch (TAC) of Pacific ocean perch in the CAI allocated to vessels participating in the BSAI trawl limited access fishery.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), August 19, 2016, through 2400 hrs, A.l.t., December 31, 2016.

FOR FURTHER INFORMATION CONTACT: Steve Whitney, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI exclusive economic zone according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2016 TAC of Pacific ocean perch, in the CAI, allocated to vessels participating in the BSAI trawl limited access fishery was established as a directed fishing allowance of 618 metric tons by the final 2016 and 2017 harvest specifications for groundfish in the BSAI (81 FR 14773, March 18, 2016).

In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance has been reached. Consequently, NMFS is prohibiting directed fishing for Pacific ocean perch in the CAI by vessels participating in the BSAI trawl limited access fishery.

After the effective dates of this closure, the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA, (AA) finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such a requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the closure of the Pacific ocean perch directed fishery in the CAI for vessels participating in the BSAI trawl limited access fishery. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 18, 2016. The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 19, 2016.

Alan D. Risenhoover,
Director, Office of Sustainable Fisheries,
National Marine Fisheries Service.

[FR Doc. 2016–20308 Filed 8–19–16; 4:15 pm]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 679****[Docket No. 150818742–6210–02]****RIN 0648–XE822****Fisheries of the Economic Exclusive Zone Off Alaska; Deep-Water Species Fishery by Vessels Using Trawl Gear in the Gulf of Alaska**

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for species that comprise the deep-water species fishery by vessels using trawl gear in the Gulf of Alaska (GOA). This action is necessary because the third seasonal apportionment of the Pacific halibut bycatch allowance specified for the trawl deep-water species fishery in the GOA has been reached.

DATES: Effective 1200 hours, Alaska local time (A.l.t.), August 20, 2016, through 1200 hours, A.l.t., September 1, 2016.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The third seasonal apportionment of the Pacific halibut bycatch allowance specified for the deep-water species in the GOA by vessels not participating in the cooperative fishery in the Rockfish Program of the Central GOA, is 159 metric tons (mt). This apportionment was established by the final 2016 and 2017 harvest specifications for groundfish of the GOA (81 FR 14740, March 18, 2016) and reapportionment (81 FR 45423, July 14, 2016), for the period 1200 hours, A.l.t., July 1, 2016, through 1200 hours, A.l.t., September 1, 2016.

In accordance with § 679.21(d)(6)(i), the Administrator, Alaska Region, NMFS, has determined that the third seasonal apportionment of Pacific halibut bycatch allowance specified for deep-water species by vessels using trawl gear in the GOA has been reached. Consequently, NMFS is prohibiting directed fishing for the deep-water species by vessels using trawl gear in the GOA. The species and species groups that comprise the deep-water species fishery include sablefish, rockfish, deep-water flatfish, rex sole, and arrowtooth flounder. This closure does not apply to fishing by vessels participating in the cooperative fishery in the Rockfish Program for the Central GOA.

After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public

interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the closure of the deep-water species fishery by vessels using trawl gear in the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 18, 2016.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon

the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.21 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 19, 2016.

Alan D. Risenhoover,

*Director, Office of Sustainable Fisheries,
National Marine Fisheries Service.*

BILLING CODE 3510-22-P

Proposed Rules

Federal Register

Vol. 81, No. 164

Wednesday, August 24, 2016

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 532

RIN 3206-AN40

Prevailing Rate Systems; Definition of Kent County, Michigan, and Cameron County, Texas, to Nonappropriated Fund Federal Wage System Wage Areas

AGENCY: U. S. Office of Personnel Management.

ACTION: Proposed rule with request for comments.

SUMMARY: The U.S. Office of Personnel Management (OPM) is issuing a proposed rule that would define Kent County, Michigan, as an area of application county to the Macomb, MI, nonappropriated fund (NAF) Federal Wage System (FWS) wage area and Cameron County, Texas, as an area of application county to the Nueces, TX, NAF FWS wage area. These changes are necessary because there are NAF FWS employees working in Kent and Cameron Counties, and the counties are not currently defined to NAF wage areas.

DATES: We must receive comments on or before September 23, 2016.

ADDRESSES: You may submit comments, identified by "RIN 3206-AN40," using any of the following methods:

Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Mail: Brenda L. Roberts, Deputy Associate Director for Pay and Leave, Employee Services, U.S. Office of Personnel Management, Room 7H31, 1900 E Street NW., Washington, DC 20415-8200.

Email: pay-leave-policy@opm.gov.

FOR FURTHER INFORMATION CONTACT: Madeline Gonzalez, by telephone at (202) 606-2838 or by email at pay-leave-policy@opm.gov.

SUPPLEMENTARY INFORMATION: OPM is issuing a proposed rule that would define Kent County, MI, as an area of

application county to the Macomb, MI, NAF FWS wage area and Cameron County, TX, as an area of application county to the Nueces, TX, NAF FWS wage area. The Veterans Canteen Service (VCS) now employs one NAF FWS employee at VCS #315 in the Wyoming Health Care Center in Kent County and two NAF FWS employees at VCS #740 in the Veterans Affairs Health Care Center at Harlingen in Cameron County.

Under § 532.219 of title 5, Code of Federal Regulations, each NAF wage area "shall consist of one or more survey areas, along with nonsurvey areas, if any, having nonappropriated fund employees." Kent and Cameron Counties do not meet the regulatory criteria under 5 CFR 532.219 to be established as separate NAF wage areas; however, nonsurvey counties may be combined with a survey area to form a wage area. Section 532.219 lists the regulatory criteria that OPM considers when defining FWS wage area boundaries.

OPM recently completed reviews of the definitions of Kent and Cameron Counties and is proposing the changes described below. The Federal Prevailing Rate Advisory Committee, the national labor-management committee responsible for advising OPM on matters concerning the pay of FWS employees, recommended these changes by consensus. These changes would apply on the first day of the first applicable pay period beginning on or after 30 days following publication of the final regulations.

Kent County, MI

Kent County would be defined as an area of application county to the Macomb, MI, NAF FWS wage area. The closest NAF wage area to Kent County is the Macomb wage area. There are no other NAF wage areas in the immediate vicinity of Kent County. VCS #315 is located approximately 175 miles from Selfridge Air National Guard Base, the Macomb wage area's host activity.

With the definition of Kent County to the Macomb NAF wage area, the Macomb wage area would consist of 1 survey county, Macomb County, MI, and 13 area of application counties: Alpena, Calhoun, Crawford, Grand Traverse, Huron, Iosco, Kent, Leelanau, Ottawa, Saginaw, Washtenaw, and Wayne Counties, MI; and Ottawa County, OH.

Cameron County, TX

Cameron County would be defined as an area of application county to the Nueces, TX, NAF FWS wage area. The closest NAF wage area to Cameron County is the Nueces wage area. There are no other NAF wage areas in the immediate vicinity of Cameron County. VCS #740 is located approximately 148 miles from Naval Air Station Corpus Christi, the Nueces wage area's host activity.

With the definition of Cameron County to the Nueces NAF wage area, the Nueces wage area would consist of one survey county, Nueces County, TX, and six area of application counties: Bee, Calhoun, Cameron, Kleberg, San Patricio, and Webb Counties, TX.

Regulatory Flexibility Act

I certify that these regulations would not have a significant economic impact on a substantial number of small entities because they would affect only Federal agencies and employees.

List of Subjects in 5 CFR Part 532

Administrative practice and procedure, Freedom of information, Government employees, Reporting and recordkeeping requirements, Wages.

U.S. Office of Personnel Management.

Beth F. Cobert,
Acting Director.

Accordingly, OPM is proposing to amend 5 CFR part 532 as follows:

PART 532—PREVAILING RATE SYSTEMS

■ 1. The authority citation for part 532 continues to read as follows:

Authority: 5 U.S.C. 5343, 5346; § 532.707 also issued under 5 U.S.C. 552.

■ 2. Appendix D to subpart B is amended by revising the wage area listing for the Macomb, MI, and Nueces, TX, wage areas to read as follows:

Appendix D to Subpart B of Part 532—Nonappropriated Fund Wage and Survey Areas

* * * * *

BILLING CODE 6325-39-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 23

[Docket No. FAA-2016-9001; Notice No. 23-16-02-SC]

Special Conditions: Pilatus Aircraft, Ltd., Model PC-12, PC-12/45, and PC-12/47 Airplanes, Lithium Batteries

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed special conditions.

SUMMARY: This action proposes special conditions for the Pilatus Aircraft, Ltd., Model PC-12, PC-12/45, and PC-12/47 airplanes. This airplane as modified by Finnoff Aviation will have a novel or unusual design feature associated with the installation of a rechargeable lithium battery. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These proposed special conditions contain the additional safety standards that the Administrator considers necessary to establish a level

of safety equivalent to that established by the existing airworthiness standards.

DATES: Send your comments on or before October 11, 2016.

ADDRESSES: Send comments identified by docket number FAA-2016-9001 using any of the following methods:

☐ *Federal eRegulations Portal:* Go to <http://www.regulations.gov> and follow the online instructions for sending your comments electronically.

☐ *Mail:* Send comments to Docket Operations, M-30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12-140, West Building Ground Floor, Washington, DC 20590-0001.

☐ *Hand Delivery of Courier:* Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

☐ *Fax:* Fax comments to Docket Operations at 202-493-2251.

Privacy: The FAA will post all comments it receives, without change, to <http://regulations.gov>, including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477-19478), as well as at <http://DocketsInfo.dot.gov>.

Docket: Background documents or comments received may be read at <http://www.regulations.gov> at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT:

Ruth Hirt, Federal Aviation Administration, Programs and Procedures, ACE-114, Small Airplane Directorate, Aircraft Certification Service, 901 Locust; Kansas City, Missouri 64106; telephone (816) 329-4108; facsimile (816) 329-4090.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special

conditions, explain the reason for any recommended change, and include supporting data. We ask that you send us two copies of written comments.

We will consider all comments we receive on or before the closing date for comments. We will consider comments filed late if it is possible to do so without incurring expense or delay. We may change these special conditions based on the comments we receive.

Background

On September 28, 2015, Finnoff Aviation applied for a supplemental type certificate for installation of a rechargeable lithium battery in the Model PC-12, PC-12/45, PC-12/47 airplanes. The Model PC-12, PC-12/45, PC-12/47 airplanes are single-engine turboprop-powered business aircraft that can accommodate up to nine passengers with a take-off weight up to 10,450 lbs.

The current regulatory requirements for part 23 airplanes do not contain adequate requirements for the application of rechargeable lithium batteries in airborne applications. This type of battery possesses certain failure and operational characteristics with maintenance requirements that differ significantly from that of the nickel-cadmium (Ni-Cd) and lead-acid rechargeable batteries currently approved in other normal, utility, acrobatic, and commuter category airplanes. Therefore, the FAA is proposing this special condition to address (1) all characteristics of the rechargeable lithium batteries and their installation that could affect safe operation of the modified Model PC-12, PC-12/45, and PC-12/47 airplanes, and (2) appropriate Instructions for Continued Airworthiness (ICAW) that include maintenance requirements to ensure the availability of electrical power from the batteries when needed.

Type Certification Basis

Under the provisions of § 21.101, Finnoff Aviation must show that the Model PC-12, PC-12/45, and PC-12/47, as changed, continue to meet the applicable provisions of the regulations incorporated by reference in Type Certificate No. A78EU¹ or the applicable regulations in effect on the date of application for the change.

If the Administrator finds that the applicable airworthiness regulations (*i.e.*, 14 CFR part 23) do not contain adequate or appropriate safety standards for the Model PC-12, PC-12/45, and

¹ http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgMakeModel.nsf/0/6BCB00B1F3CA4EF886257FED0069EF2D?OpenDocument.

PC-12/47 airplanes because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the applicant apply for a supplemental type certificate to modify any other model included on the same type certificate to incorporate the same or similar novel or unusual design feature, the special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the Model PC-12, PC-12/45, and PC-12/47 airplanes must comply with the fuel vent and exhaust emission requirements of 14 CFR part 34 and the noise certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type-certification basis under § 21.101.

Novel or Unusual Design Features

The Model PC-12, PC-12/45, and PC-12/47 airplanes will incorporate the following novel or unusual design feature: Installation of a rechargeable lithium battery as the main or engine start aircraft battery.

Discussion

Presently, there is limited experience with use of rechargeable lithium batteries and rechargeable lithium battery systems in applications involving commercial aviation. However, other users of this technology, ranging from personal computers, wireless telephone manufacturers to the electric vehicle industry, have noted safety problems with lithium batteries. These problems include overcharging, over-discharging, flammability of cell components, and cell internal defects described in the following paragraphs:

1. Overcharging: In general, lithium batteries are significantly more susceptible to internal failures that can result in self-sustaining increases in temperature and pressure (*i.e.*, thermal runaway) than the Ni-Cd or lead-acid counterparts. This is especially true for overcharging which causes heating and destabilization of the components of the cell, leading to the formation (by plating) of highly unstable metallic lithium. The metallic lithium may ignite, resulting in a fire or explosion. Finally, the severity of thermal runaway due to overcharging increases with increasing battery capacity and due to a higher amount of electrolyte in large batteries.

2. Over-discharging: Discharge of some types of lithium battery cells beyond a certain voltage (typically 2.4 volts) can cause corrosion of the electrodes of the cell, resulting in loss of battery capacity that cannot be reversed by recharging. This loss of capacity may not be detected by the simple voltage measurements commonly available to flight crews as a means of checking battery status, which is a problem shared with Ni-Cd batteries.

3. Flammability of Cell Components: Unlike Ni-Cd and lead-acid batteries, some types of lithium batteries use liquid electrolytes that are flammable. The electrolyte may serve as a source of fuel for an external fire, if there is a breach of the battery container.

4. Cell Internal Defects: The rechargeable lithium batteries and rechargeable battery systems have a history of undetected cell internal defects. These defects may or may not be detected during normal operational evaluation, test, and validation. This may lead to unsafe conditions when operating in service.

These problems experienced by users of lithium batteries raise concern about the use of these batteries in commercial aviation. The intent of the special condition is to establish appropriate airworthiness standards for lithium battery installations in the Model PC-12, PC-12/45, and PC-12/47 airplanes and to ensure, as required by §§ 23.1309 and 23.601, that these battery installations are neither hazardous nor unreliable.

In summary, the lithium battery installation will consider the following items:

(a) The flammable fluid fire protection requirement is § 23.863. In the past, this rule was not applied to batteries of normal, utility, acrobatic, and commuter category airplanes since the electrolytes utilized in Ni-Cd and lead-acid batteries are not flammable.

(b) New Instructions for Continuous Airworthiness that include maintenance requirements to ensure that batteries used as spares have been maintained in an appropriate state of charge and installed lithium batteries have been sufficiently charged at appropriate intervals. These instructions must also describe proper repairs, if allowed, and battery part number configuration control.

(c) The applicant must conduct a system safety assessment for the failure condition classification of a failure of the battery charging and monitoring functionality (per Advisory Circular AC

23.1309-1E²), and develop mitigation to preclude any adverse safety effects. Mitigation may include software, Airborne Electronic Hardware (AEH) or a combination of software and hardware, which should be developed to the appropriate Design Assurance Level(s) (DALs), respectively (per Advisory Circular AC 20-115C³ and Advisory Circular AC 20-152⁴).

(d) New requirements, in the proposed special conditions section, address the hazards of overcharging and over-discharging that are unique to lithium batteries, which should be applied to all rechargeable lithium battery and battery installations on the Model PC-12, PC-12/45, and PC-12/47 airplanes in lieu of the requirements of § 23.1353(a)(b)(c)(d)(e), amendment 23-49.

Note 1: These special conditions are not intended to replace § 23.1353(a)(b)(c)(d)(e) at amendment 23-49 in the certification basis of Model PC-12, PC-12/45, and PC-12/47 airplanes. These special conditions apply only to rechargeable lithium batteries and lithium battery systems and their installations. The requirements of § 25.1353 at amendment 23-49 remains in effect for batteries and battery installations on Model PC-12, PC-12/45, and PC-12/47 airplanes that do not use rechargeable lithium batteries.

Applicability

As discussed above, these special conditions are applicable to the Model PC-12, PC-12/45, and PC-12/47 airplanes. Should Finnoff Aviation apply at a later date for a supplemental type certificate to modify any other model included on Type Certificate No. A78EU⁵ to incorporate the same novel or unusual design feature, the special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on one model series of airplanes. It is not a rule of general applicability and it affects only the applicant who applied to the FAA for approval of these features on the airplane.

List of Subjects in 14 CFR Part 23

Aircraft, Aviation safety, Signs and symbols.

■ The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Proposed Special Conditions

■ Accordingly, the Federal Aviation Administration (FAA) proposes the following special conditions as part of the type certification basis for Pilatus Aircraft, Ltd., Model PC-12, PC-12/45, and PC-12/47 airplanes modified by Finnoff Aviation.

1. Installation of Lithium Batteries must show compliance to the following requirements:

- (1) Safe cell temperatures and pressures must be maintained during—
 - i. Normal operations;
 - ii. Any probable failure conditions of charging or discharging or battery monitoring system;
 - iii. Any failure of the charging or battery monitoring system not shown to be extremely remote.

(2) The rechargeable lithium battery installation must be designed to preclude explosion or fire in the event of (1)(ii) and (1)(iii) failures.

(3) Design of the rechargeable lithium batteries must preclude the occurrence of self-sustaining, uncontrolled increases in temperature or pressure.

(4) No explosive or toxic gasses emitted by any rechargeable lithium battery in normal operation or as the result of any failure of the battery charging system, monitoring system, or battery installation which is not shown to be extremely remote, may accumulate in hazardous quantities within the airplane.

(5) Installations of rechargeable lithium batteries must meet the requirements of § 23.863(a) through (d) at amendment 23-34.

(6) No corrosive fluids or gases that may escape from any rechargeable lithium battery may damage surrounding structure or any adjacent systems, equipment, electrical wiring, or the airplane in such a way as to cause a major or more severe failure condition, in accordance with § 23.1309(c) at amendment 23-62 and applicable regulatory guidance.

(7) Each rechargeable lithium battery installation must have provisions to prevent any hazardous effect on structure or essential systems that may be caused by the maximum amount of heat the battery can generate during a short circuit of the battery or of its individual cells.

(8) Rechargeable lithium battery installations must have—

i. A system to automatically control the charging rate of the battery to prevent battery overheating and overcharging, or;

ii. A battery temperature sensing and over-temperature warning system with a means for automatically disconnecting the battery from its charging source in the event of an over-temperature condition, or;

iii. A battery failure sensing and warning system with a means for automatically disconnecting the battery from its charging source in the event of battery failure.

(9) Any rechargeable lithium battery installation functionally required for safe operation of the airplane must incorporate a monitoring and warning feature that will provide an indication to the appropriate flight crewmembers whenever the State of Charge (SOC) of the batteries has fallen below levels considered acceptable for dispatch of the airplane.

(10) The Instructions for Continued Airworthiness required by § 23.1529 at amendment 23-26 must contain maintenance requirements to assure that the battery has been sufficiently charged at appropriate intervals specified by the battery manufacturer and the equipment manufacturer that contain the rechargeable lithium battery or rechargeable lithium battery system. This is required to ensure that lithium rechargeable batteries and lithium rechargeable battery systems will not degrade below specified ampere-hour levels sufficient to power the aircraft system. The Instructions for Continued Airworthiness must also contain procedures for the maintenance of replacement batteries in spares storage to prevent the installation of batteries that have degraded charge retention ability or other damage due to prolonged storage at a low state of charge. Replacement batteries must be of the same manufacturer and part number as approved by the FAA.

Note 2: The term “sufficiently charged” means that the battery will retain enough of a charge, expressed in ampere-hours, to ensure that the battery cells will not be damaged. A battery cell may be damaged by lowering the charge below a point where there is a reduction in the ability to charge and retain a full charge. This reduction would be greater than the reduction that may result from normal operational degradation.

(11) In showing compliance with the proposed special conditions herein, paragraphs (1) through (8), and the RTCA document, Minimum Operational Performance Standards for Rechargeable Lithium Battery Systems, DO-311, may be used. The list of planned DO-311 tests should be documented in the certification or compliance plan and agreed to by the Denver ACO. Alternate methods of compliance other than DO-

311 tests must be coordinated with the directorate and Denver ACO.

Issued in Kansas City, Missouri, on August 18, 2016.

Pat Mullen,

Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Food and Drug Administration****21 CFR Parts 16 and 511**

[Docket No. FDA-2011-N-0079]

Disqualification of a Clinical Investigator

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing to amend the regulations for new animal drugs for investigational use to expand the scope of clinical investigator disqualification to include ineligibility to conduct nonclinical laboratory studies. Currently, when the Commissioner of Food and Drugs (the Commissioner) determines that an investigator is ineligible to receive a new animal drug for investigational use, the investigator also is ineligible to conduct any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA. Under this proposal, when the Commissioner determines that an investigator is ineligible to receive a new animal drug for investigational use, the investigator also will be ineligible to conduct any nonclinical study intended to support an application for a research or marketing permit for a new animal drug. This proposal is intended to help ensure adequate protection of animal research subjects and the quality and integrity of data submitted to FDA.

DATES: Submit either electronic or written comments on the proposed rule by November 22, 2016. See section VII of this document for the proposed effective date of a final rule based on this document.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the

instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2011-N-0079 for "Disqualification of a Clinical Investigator." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the

claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of the guidance to the Policy and Regulations Staff (HFV-6), Center for Veterinary Medicine, Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Vernon Toelle, Center for Veterinary Medicine (HFV-230), 7519 Standish Pl., Rockville, MD 20855, 240-402-5637.

SUPPLEMENTARY INFORMATION:

I. Introduction

The current regulations in part 511 (21 CFR part 511) prohibit a disqualified clinical investigator from conducting any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA. We propose to expand the current clinical investigator disqualification regulations in part 511 by providing that a disqualified investigator also is ineligible to conduct any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug. In this document, consistent with our proposal in part 58 (21 CFR part 58) published elsewhere in

this issue of the **Federal Register**, the term "nonclinical laboratory study" means in vivo or in vitro experiments in which test articles are studied prospectively in test systems under laboratory conditions or in the applicable environment to determine their safety or toxicity or both. The term does not include studies involving human subjects, clinical studies, or clinical investigational use in animals. The term does not include basic exploratory studies carried out to determine whether a test article has any potential utility or basic exploratory studies to determine the physical or chemical characteristics of a test article.

Under current § 511.1(c) (21 CFR 511.1(c)), a clinical investigator disqualified by the Commissioner is ineligible to receive the test article regulated in part 511 (*i.e.*, a new animal drug for investigational use). Also, under the current regulations in § 511.1(c), a disqualified clinical investigator is ineligible to conduct any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA. However, under the current regulations, a disqualified clinical investigator continues to be eligible to conduct a nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug.

In order to conclude that a clinical investigator is no longer eligible to receive new animal drugs for investigational use, the Commissioner must find that the investigator repeatedly or deliberately failed to comply with the conditions of the exempting regulations or repeatedly or deliberately submitted to FDA or to the sponsor false information in any required report (§ 511.1(c)(2)). When a clinical investigator is disqualified under part 511, the basis for disqualification typically is the repeated or deliberate submission of false information to FDA or a sponsor in a required report. For new animal drugs, the same clinical investigator could conduct both nonclinical laboratory studies and clinical investigations.

In the new animal drug approval process, nonclinical laboratory studies such as those for target animal safety and human food safety may be essential in determining whether to approve an application for a research or marketing permit for a new animal drug. Therefore, this proposal to expand § 511.1(c) to include nonclinical laboratory studies is intended to help ensure adequate protection of animal research subjects and the quality and integrity of data submitted to FDA for the approval of a new animal drug.

Consistent with the proposed changes to the provisions in part 511, we propose amending the list of regulatory provisions under which a part 16 (21 CFR part 16) informal regulatory hearing is available. In part 16, we propose changing the scope of the relevant provision for part 511 to add “any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug.”

Concurrent with this proposal, FDA is publishing elsewhere in this issue of the **Federal Register** a related provision in part 58. We propose in § 58.206 (21 CFR 58.206) that a disqualified person under part 58, who is a clinical investigator, would be notified that they are ineligible to receive a test article under part 511. Thus, where this part 511 proposal would make a disqualified clinical investigator ineligible to conduct any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug, the proposal in § 58.206 would make a disqualified person under part 58, who is a clinical investigator, ineligible to receive a test article under part 511. An investigator ineligible to receive a test article under part 511 also would be ineligible to conduct any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug. We propose this action in § 58.206 to help protect the safety and welfare of animal research subjects involved in FDA-regulated nonclinical laboratory studies and clinical investigations, and to help ensure the reliability and integrity of the data submitted to FDA to support FDA decisions concerning new animal drugs.

II. Background

FDA may consider disqualification of a clinical investigator when FDA has information that an investigator has repeatedly or deliberately failed to comply with applicable requirements for the conduct of clinical investigations, or has repeatedly or deliberately submitted to FDA or to the sponsor false information in any required report. Disqualification of an investigator is initiated by the appropriate FDA Center depending upon the particular type of test article (e.g., new animal drug for investigational use) under study by the investigator in the clinical investigation. For example, the Center for Veterinary Medicine (CVM) may pursue disqualification of a clinical investigator who conducted a new animal drug clinical investigation and allegedly

submitted to FDA or the sponsor false information in a required report.

The regulations provide the investigator, who is subject to disqualification, an opportunity to be heard and explain the matter complained of, *i.e.*, explain the alleged violations. If the explanation offered is not accepted by the Center, the investigator will be given an opportunity for an informal regulatory hearing under part 16. After evaluating all available information, including any explanation presented by the investigator, the Commissioner issues a Commissioner's decision regarding the eligibility of the investigator to receive a particular type of test article (e.g., a new animal drug for investigational use). When disqualified by a Commissioner's decision, the investigator is no longer eligible to receive the particular type of test article under study when the violations occurred (e.g., new animal drugs). Also, under current regulations, an investigator disqualified by a Commissioner's decision is ineligible to conduct any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA.

Because CVM regulates drugs for animal use, the study subjects are animals in both nonclinical laboratory studies and clinical investigations intended to support the approval of a new animal drug. Nonclinical laboratory studies such as those for target animal safety and human food safety may be essential in determining whether to approve an application for a research or marketing permit for a new animal drug. For animal drug products regulated by CVM, the same investigator may conduct both nonclinical laboratory studies and clinical investigations. For example, CVM's two most recent clinical investigator disqualification matters involved investigators who were also study directors on nonclinical laboratory studies submitted to CVM in support of applications for a new animal drug. In addition, CVM is aware of multiple persons that conduct both clinical investigations and nonclinical laboratory studies intended to support an application for a research or marketing permit for a new animal drug. Therefore, it is critical for CVM to have the authority to disqualify an investigator from conducting nonclinical laboratory studies when that same investigator is disqualified from conducting clinical investigations, particularly when the basis for disqualification is the repeated or deliberate submission of false

information to FDA or the sponsor in a required report.

This proposal to amend part 511 to expand a disqualified investigator's ineligibility to conduct any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug would help to ensure adequate protection of animal research subjects and data integrity. This action also may lead to improved public confidence in the nonclinical and clinical data supporting FDA decisions for new animal drug approvals.

We therefore propose that when the Commissioner determines that a clinical investigator is ineligible to receive the test article under the disqualification regulations in part 511 and is therefore ineligible to conduct any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA, the investigator also would be ineligible to conduct any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug.

To effect this change, FDA proposes to amend the current regulations in § 511.1(c).

III. Description of the Proposed Rule

A. Disqualification Proceedings (§ 511.1(c)(1))

Proposed Revisions to § 511.1(c)(1): We propose to change the scope of the question addressed during a part 16 hearing, should the investigator request and be granted an informal hearing, also to include whether the investigator is eligible to conduct any nonclinical laboratory study that is intended to support an application for a research or marketing permit for a new animal drug.

B. Ineligibility To Receive Any Test Article (§ 511.1(c)(2))

Proposed Revisions to § 511.1(c)(2): We propose that an investigator disqualified by a Commissioner's decision also will be ineligible to conduct any nonclinical laboratory study that is intended to support an application for a research or marketing permit for a new animal drug.

Therefore, as proposed, an investigator determined to be ineligible to receive a test article under part 511 also would be ineligible to conduct any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug. This proposal expands the scope of the current regulations in § 511.1(c)(2) which states that a disqualified clinical investigator is ineligible to conduct any

clinical investigation that supports an application for a research or marketing permit for products regulated by FDA, including drugs, biologics, devices, new animal drugs, foods, including dietary supplements, that bear a nutrient content claim or a health claim, infant formulas, food and color additives, and tobacco products.

C. Reinstatement (§ 511.1(c)(6))

FDA proposes amending § 511.1(c)(6) for consistency with our proposal to add “any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug” to the part 511 investigator disqualification regulations. Therefore, for consistency with the proposed changes in § 511.1(c)(2), we propose adding in § 511.1(c)(6) that the investigator has presented adequate assurances that the investigator will conduct any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug solely in compliance with the applicable provisions of chapter I.

IV. Regulatory Hearing before the Food and Drug Administration

We propose to revise § 16.1(b)(2) to amend the entry for § 511.1(c)(1) to add “any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug” to be consistent with the other proposed amendments in this rulemaking.

V. Environmental Impact

We have determined under 21 CFR 25.30(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VI. Legal Authority

Under section 701(a) of the FD&C Act (21 U.S.C. 371(a)), FDA is authorized to issue regulations for the efficient enforcement of the FD&C Act. Section 512(j) of the FD&C Act (21 U.S.C. 355(j)) authorizes FDA to issue regulations for exempting from the operation of section 512 of the FD&C Act new animal drugs intended solely for investigational use by experts qualified by scientific training and experience to investigate the safety and effectiveness of animal drugs. An investigator who repeatedly or deliberately violates the regulations or who repeatedly or deliberately submits to FDA or the sponsor false information in a required report would

not be considered a qualified expert with the experience required to conduct nonclinical laboratory studies intended to support an application for a research or marketing permit for a new animal drug. This proposed rulemaking would disqualify a clinical investigator from conducting nonclinical laboratory studies intended to support an application for a research or marketing permit for a new animal drug when the Commissioner determines that a clinical investigator is ineligible to receive the test article under the disqualification regulations in part 511. FDA’s legal authority to promulgate this proposal regarding clinical investigators exists under sections 512(j) and 701(a) of the FD&C Act, as essential to protection of the public health and safety and to enforcement of the Agency’s responsibilities under sections 201, 501, 502, 503, 512, and 701 of the FD&C Act (21 U.S.C. 321, 351, 352, 353, 360b, and 371).

VII. Proposed Effective Date

FDA proposes that any final rule that may issue based on this proposal become effective 30 days after the date of publication of the final rule in the **Federal Register**.

VIII. Preliminary Economic Analysis

FDA has examined the impacts of the proposed rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct Agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The Agency believes that this proposed rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires Agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this proposed rule does not impose new requirements on any entity and therefore has no associated compliance costs, the Agency proposes to certify that the final rule will not have a significant economic impact on a substantial number of small entities.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that Agencies prepare a written statement, which includes an

assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$144 million, using the most current (2014) Implicit Price Deflator for the Gross Domestic Product. FDA does not expect this proposed rule to result in any 1-year expenditure that would meet or exceed this amount.

This proposed rule seeks to expand the scope in part 511 of disqualification of a clinical investigator to include ineligibility to conduct nonclinical laboratory studies. A final rule (77 FR 25353), published on April 30, 2012, prevents a disqualified investigator from conducting any clinical investigation, and therefore applies explicitly to clinical investigations. However, the rule is silent on nonclinical laboratory studies. Thus, under the current regulation in part 511, a disqualified investigator could conduct a nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug. Because the reason typically for disqualification in part 511 is the repeated or deliberate submission of false information to FDA or a sponsor in a required report, preventing a disqualified clinical investigator from performing both nonclinical laboratory studies and clinical investigations is essential to adequate protection of animal research subjects and data integrity.

The Agency would not incur additional costs by expanding the scope in part 511 for disqualification of a clinical investigator. Similarly, we do not expect that industry would incur additional costs because the proposed rule would not require sponsors to perform additional tasks. For instance, upon disqualification, the respective investigator’s name is posted on FDA’s Web page, and this helps mitigate the employment of the investigator for clinical investigations or nonclinical laboratory studies intended to support an application for a research or marketing permit for a new animal drug. Because the typical reason for disqualification in part 511 is the repeated or deliberate submission of false information to FDA or a sponsor in a required report, the benefit of preventing a disqualified clinical investigator from performing both nonclinical laboratory studies and clinical investigations is enhanced protection of animal research subjects and data integrity.

IX. Paperwork Reduction Act

FDA tentatively concludes that this proposed rule contains no collection of information. Therefore, clearance by OMB under the Paperwork Reduction Act of 1995 is not required.

X. Federalism

We have analyzed this proposed rule in accordance with the principles set forth in Executive Order 13132. We have determined that the proposed rule, if finalized, would not contain policies that would have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the Agency tentatively concludes that the proposed rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

List of Subjects

21 CFR Part 16

Administrative practice and procedure.

21 CFR Part 511

Animal drugs, Medical research, Reporting and recordkeeping requirements.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, it is proposed that parts 16 and 511 be amended as follows:

PART 16—REGULATORY HEARING BEFORE THE FOOD AND DRUG ADMINISTRATION

■ 1. The authority citation for part 16 continues to read as follows:

Authority: 15 U.S.C. 1451–1461; 21 U.S.C. 141–149, 321–394, 467f, 679, 821, 1034; 28 U.S.C. 2112; 42 U.S.C. 201–262, 263b, 364.

■ 2. In § 16.1, in paragraph (b)(2), revise the numerically sequenced entry for § 511.1(c)(1) to read as follows:

§ 16.1 Scope.

* * * * *

- (b) * * *
(2) * * *

§ 511.1(c)(1), relating to whether an investigator is eligible to receive test articles under part 511 and eligible to conduct:

(i) Any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA including drugs, biologics, devices, new animal drugs, foods,

including dietary supplements, that bear a nutrient content claim or a health claim, infant formulas, food and color additives, and tobacco products; and

(ii) Any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug.

* * * * *

PART 511—NEW ANIMAL DRUGS FOR INVESTIGATIONAL USE

■ 3. The authority citation for part 511 continues to read as follows:

Authority: 21 U.S.C. 321, 351, 352, 353, 360b, 371.

■ 4. In § 511.1, revise the section heading, the last sentences in paragraphs (c)(1) and (2), and revise paragraph (c)(6) to read as follows:

§ 511.1 New animal drugs for investigational use exempt from section 512(a) of the Federal Food, Drug, and Cosmetic Act.

* * * * *

(c) * * *

(1) * * * If an explanation is offered but not accepted by the Center for Veterinary Medicine, the investigator will be given an opportunity for a regulatory hearing under part 16 of this chapter on the question of whether the investigator is eligible to receive test articles under this part and eligible to conduct:

(i) Any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA; and

(ii) Any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug.

(2) * * * The notification also will explain that an investigator determined to be ineligible to receive a test article under this part will be ineligible to conduct

(i) Any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA, including drugs, biologics, devices, new animal drugs, foods, including dietary supplements, that bear a nutrient content claim or a health claim, infant formulas, food and color additives, and tobacco products, and

(ii) Any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug.

* * * * *

(6) An investigator who has been determined to be ineligible under paragraph (c)(2) of this section may be reinstated as eligible when the Commissioner determines that the

investigator has presented adequate assurances that the investigator will employ all test articles, and will conduct any clinical investigation that supports an application for a research or marketing permit for products regulated by FDA and any nonclinical laboratory study intended to support an application for a research or marketing permit for a new animal drug, solely in compliance with the applicable provisions of this chapter.

* * * * *

Dated: August 16, 2016.

Peter Lurie,

Associate Commissioner for Public Health Strategy and Analysis.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 117

[Docket No. FDA–2016–D–2343]

Hazard Analysis and Risk-Based Preventive Controls for Human Food; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notification of availability.

SUMMARY: The Food and Drug Administration (FDA, we, or Agency) is announcing the availability of a draft guidance for industry entitled “Hazard Analysis and Risk-Based Preventive Controls for Human Food: Guidance for Industry.” This draft guidance document includes several chapters of a multi-chapter guidance intended to explain our current thinking on how to comply with the requirements for hazard analysis and risk-based preventive controls under our rule entitled “Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Human Food.”

DATES: Although you can comment on any guidance at any time (see 21 CFR 10.115(g)(5)), to ensure that we consider your comment on this draft guidance before we issue the final version of the guidance, submit either electronic or written comments on the draft guidance by February 21, 2017.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2016-D-2343 for "Hazard Analysis and Risk-Based Preventive Controls for Human Food: Guidance for Industry." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions**—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the

information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of the draft guidance to Office of Food Safety, Center for Food Safety and Applied Nutrition, Food and Drug Administration (HFS-300), 5001 Campus Dr., College Park, MD 20740. Send two self-addressed adhesive labels to assist that office in processing your request. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance.

FOR FURTHER INFORMATION CONTACT:

Jenny Scott, Center for Food Safety and Applied Nutrition (HFS-300), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240-402-2166.

SUPPLEMENTARY INFORMATION:

I. Background

The FDA Food Safety Modernization Act (FSMA) (Pub. L. 111-353) enables FDA to better protect public health by helping to ensure the safety and security of the food supply. It enables FDA to focus more on preventing food safety problems rather than relying primarily on reacting to problems after they occur.

FSMA recognizes the important role industry plays in ensuring the safety of the food supply, including the adoption of modern systems of preventive controls in food production.

Section 103 of FSMA amended the Federal Food, Drug, and Cosmetic Act (the FD&C Act), in section 418 of the FD&C Act (21 U.S.C. 350g), by adding requirements for hazard analysis and risk-based preventive controls for establishments that are required to register as food facilities under our regulations, in 21 CFR part 1, subpart H, in accordance with section 415 of the FD&C Act (21 U.S.C. 350d). We have established regulations to implement these requirements within part 117 (21 CFR part 117).

We are announcing the availability of several chapters of a multi-chapter draft guidance for industry entitled "Hazard Analysis and Risk-Based Preventive Controls for Human Food." We are issuing the draft guidance consistent with our good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on this topic. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternate approach if it satisfies the requirements of the applicable statutes and regulations.

The multi-chapter draft guidance for industry is intended to explain our current thinking on how to comply with the requirements for hazard analysis and risk-based preventive controls under part 117, principally in subparts C and G. The chapters that we are announcing in this document are as follows:

- Introduction
- Chapter One—The Food Safety Plan
- Chapter Two—Conducting a Hazard Analysis
- Chapter Three—Potential Hazards Associated with the Manufacturing, Processing, Packing, and Holding of Human Food
- Chapter Four—Preventive Controls
- Chapter Five—Application of Preventive Controls and Preventive Control Management Components

We intend to announce the availability for public comment of additional chapters of the draft guidance as we complete them.

II. Paperwork Reduction Act of 1995

This draft guidance refers to previously approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under

the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in part 117 have been approved under OMB control number 0910–0751.

III. Electronic Access

Persons with access to the Internet may obtain the draft guidance at either <http://www.fda.gov/FoodGuidances> or <http://www.regulations.gov>. Use the FDA Web site listed in the previous sentence to find the most current version of the guidance.

Dated: August 18, 2016.

Jeremy Sharp,

Deputy Commissioner for Policy, Planning, Legislation, and Analysis.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 558

[Docket No. FDA–2016–N–1896]

New Animal Drugs for Use in Animal Feed; Category Definitions

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA, the Agency, we) proposes to amend the animal drug regulations by revising the definitions of the two categories of new animal drugs used in medicated feeds to base category assignment only on approved uses in major animal species. The proposed revision will preserve the availability of medicated feeds intended for therapeutic use in minor animal species and prevent a significant disincentive for future development of additional minor species therapies.

DATES: Submit either electronic or written comments by November 7, 2016.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your

comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2016–N–1896 for “Category Definitions for Minor Species.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be

made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

I. Executive Summary

A. Purpose of the Proposed Rule

FDA proposes to revise the definitions of the two categories of new animal drugs used in medicated feeds to base category assignment only on approved uses in major animal species. This revision is being proposed to address a potential consequence of animal drug sponsor cooperation in implementing a strategy initiated by the FDA Center for Veterinary Medicine (CVM) to address antimicrobial resistance by taking measures to ensure the judicious use of antimicrobial drugs in animal agriculture. Under this program, sponsors of antimicrobial new animal

drugs that also have importance in human medicine were requested to voluntarily withdraw approval of production (e.g., growth production, feed efficiency) indications for their drug products that are intended for use in the feed or water of food-producing animals. Based on the existing drug category definitions, the voluntary withdrawal of production indications by these drug sponsors would, in some cases, result in a change to a medicated feed drug's category, potentially leading to additional consequences not foreseen at the time the program was initiated.

The category in which a new animal drug used in medicated feeds is placed is based on their likelihood of producing unsafe residues in the edible products of treated animals. Category I consists of those drugs that require no withdrawal period at the lowest use level in each species for which they are approved. Category II consists of those drugs that require a withdrawal period at the lowest use level for at least one species for which they are approved, or that are regulated on a "no-residue" basis or with a zero tolerance because of a carcinogenic concern, regardless of whether a withdrawal period is required.

New animal drugs approved for use in medicated feeds are approved as Type A medicated articles, the most concentrated form of the drug product for use by feed mills. Category I Type A medicated articles can be handled by both licensed and unlicensed feed mills, whereas Category II Type A medicated articles can be handled only by licensed feed mills.

Certain Category I Type A medicated articles would be recategorized to Category II when a production indication is voluntarily withdrawn by a sponsor as part of the judicious use initiative that is currently underway, based on the next lowest use level that remains once the production use is withdrawn having a withdrawal period such that the drug would then meet the definition for Category II. For Category I Type A medicated articles that include indications for minor species, FDA is concerned that if such a Type A medicated article is recategorized to Category II based on a withdrawal period for an approved therapeutic use in a minor species, sponsors may opt to request withdrawal of approval of these minor species indications in order to ensure the Type A medicated article can remain in Category I. Sponsors may also decline to pursue development of additional therapies for minor species if these uses would require a withdrawal period that would trigger a recategorization to Category II.

The proposed revisions would revise the category definitions such that they would be based only on whether a withdrawal period is required for a major species.¹ Under the proposed definition, a Category I Type A medicated article would not be recategorized to Category II based on the existence of a withdrawal period for an approved indication in a minor species, even if that minor species indication is the next lowest approved use level that remains after the production indication has been withdrawn. However, if the next lowest use level (apart from the minor species indication) is an indication approved for use in a major species that has a withdrawal period, under the new definition the drug would move to Category II.

The purpose of the proposed revision is to preserve the present availability of medicated feeds intended for therapeutic use in minor species and to prevent a significant disincentive for future development of additional therapies for minor species. We believe the proposed revision will not compromise public health due to the comparatively lower exposure by humans to potential drug residues in edible tissues of food-producing minor species inherent in their less frequent consumption.

B. Summary of the Major Provisions of the Proposed Rule

FDA proposes to amend 21 CFR 558.3 *Definitions and general considerations applicable to this part* (§ 558.3) to base the definition for each of the two categories (Category I and Category II) of new animal drugs used in medicated feeds only on approved uses in major species. Definitions for "major species" and "minor species" are also being added to this section.

C. Legal Authority

We are proposing these regulations based on our authority under the new animal drug provisions in section 512 (21 U.S.C. 360b) and section 701 (21 U.S.C. 371) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) which gives the Agency general rulemaking

authority to issue regulations for the efficient enforcement of the FD&C Act.

D. Costs and Benefits

The revisions made by this proposed rule are intended to preserve the availability of medicated feeds intended for therapeutic use in minor animal species. In addition, these proposed revisions will prevent a significant disincentive for future development of additional therapies for minor species. No additional costs or benefits will accrue from this rulemaking.

II. Background

FDA is proposing to revise the definitions of the two categories of new animal drugs used in medicated feeds to base category assignment only on approved uses in major animal species. To strengthen the Agency's medicated feed program, FDA issued a final rule in the **Federal Register** of March 3, 1986 (51 FR 7382), which, among other things, established two categories of new animal drugs used in medicated feeds. As discussed in the final rule, the Agency placed these drugs into categories based on their likelihood of producing unsafe residues in the edible products of treated animals (51 FR 7382). Category I consists of those drugs that require no withdrawal period at the lowest use level in each species for which they are approved. Category II consists of those drugs that require a withdrawal period at the lowest use level for at least one species for which they are approved, or that are regulated on a "no-residue" basis or with a zero tolerance because of a carcinogenic concern, regardless of whether a withdrawal period is required.

New animal drugs approved for use in medicated feeds are approved as Type A medicated articles, the most concentrated form of the drug product for use by feed mills. Category I Type A medicated articles can be handled by both licensed and unlicensed feed mills, whereas Category II Type A medicated articles can be handled only by licensed feed mills.

This action is being taken to address a potential consequence of animal drug sponsor cooperation in implementing a strategy initiated by CVM to address antimicrobial resistance by taking measures to ensure the judicious use of antimicrobials of importance to human medicine (i.e., medically important antimicrobials) in animal agriculture. Specifically, CVM's initiative to ensure the judicious use of medically important antimicrobial drugs in animal agriculture advocates two specific changes to the approved conditions of use of medically important

¹ As a practical matter, categorization under the revised definitions in this direct final rule will be driven by approved indications for major food-producing species (cattle, poultry, swine, and turkeys). While the definition for major species includes horses, dogs, and cats, they are not regulated as food-producing major species and thus drugs approved for use in these species do not require an assessment of human food safety that may result in assignment of a withdrawal period. Minor species are defined as animals, other than humans, that are not major species. Minor species include animals such as sheep, goats, ducks, geese, and aquaculture species such as catfish, salmon, and trout.

antimicrobials that are administered through the medicated feed or water of food-producing animals.

These changes, which are described in Guidance for Industry (GFI) #213, "New Animal Drugs and New Animal Drug Combination Products Administered in or on Medicated Feed or Drinking Water of Food-Producing Animals: Recommendations for Drug Sponsors for Voluntarily Aligning Product Use Conditions with GFI #209," published December 2013 (<http://www.fda.gov/downloads/AnimalVeterinary/GuidanceComplianceEnforcement/GuidanceforIndustry/UCM299624.pdf>), are intended to reduce the development of antimicrobial resistance and thereby preserve the effectiveness of these important drugs for use in treating infections in humans. Following publication of GFI #213, all sponsors of these medically important antimicrobial new animal drug products approved for use in the feed or water of food-producing animals notified FDA in writing of their intent to voluntarily make changes to their affected products as outlined in the guidance.

Under GFI #213, sponsors of medically important antimicrobial new animal drugs approved for over-the-counter use in the feed or water of food-producing animals were asked to change the marketing status of their products to veterinary prescription (Rx) marketing status in the case of new animal drugs administered in water, or to veterinary feed directive (VFD) marketing status for drugs administered in or on animal feed. New animal drugs with Rx or VFD marketing status can legally only be used with a veterinarian's oversight. Prescription animal drugs require a veterinarian's prescription, while use of VFD drugs requires a VFD; both types of orders must be issued by a licensed veterinarian in the course of the veterinarian's professional practice.

In addition, under GFI #213 sponsors of medically important new animal drugs used in animal feed or water that have production indications were requested to voluntarily withdraw these indications; approved therapeutic indications for use of these drugs would remain.

In some instances, once a sponsor withdraws the production indication from a drug approved for use in animal feed (which is generally the lowest use level of the drug), the remaining lowest therapeutic use level will require a withdrawal period. Based on the existing definitions of the feed drug categories, this results in a Category I new animal drug being recategorized as a Category II drug, the more restrictive of the two possible categories of drugs

used in medicated feed. Category II drugs require that the manufacture of Type B and Type C medicated feeds from Type A medicated articles be done in facilities possessing a medicated feed mill license, which number roughly 900 in the United States. In contrast, there are tens of thousands of unlicensed feed mills in this country. Such a recategorization to Category II, thereby limiting the use of the Type A medicated article to a much smaller subset of feed mills, may disrupt the existing movement of these medicated feeds through distribution channels.

FDA believes that sponsors may request voluntary withdrawal of those specific therapeutic indications as a way to keep their products in the less restrictive Category I when the recategorization of a drug to Category II is triggered by a therapeutic indication for a minor species. For certain drug products, the only therapeutic indications requiring a withdrawal period that would remain following the voluntary withdrawal of approval of production uses are those for minor species. The loss of therapeutic indications for minor species would adversely affect the availability of therapeutic medicated feeds necessary for the health of minor species, which is a matter of significant concern for the Agency.

This foreseeable adverse effect on the health of minor species would directly undermine the intent of Congress in passing the Minor Use and Minor Species Animal Health Act of 2004 (Pub. L. 108–282) as well as to our intent in establishing the implementing regulations under that statute. The Category I drugs likely to be affected have been safely used in this category for decades, and we have no reason to believe they would not continue to be safely used in this category moving forward.

Under the current category definitions in § 558.3 for feed use drugs, a drug will be included in Category II if the lowest use level of the drug in any approved species requires a withdrawal period. This approach equates the existence of a withdrawal period for a particular use with the potential risk that edible tissues from animals administered a medicated feed might contain a residue of concern.

However, the toxicological analysis of animal drugs used to calculate a withdrawal period is based on lifetime exposure by humans to potential drug residues. This assessment of lifetime exposure does not consider the lower risk to the public health from the use of these same new animal drugs in food-producing minor species attributable to

the lower human consumption over time of edible tissues from food-producing minor species (Refs. 1 and 2). For this reason, FDA does not at this time believe this revision of the category definitions presents a risk to the public health.

In a manner similar to its effect on drug indications that are already approved, CVM believes the existing categorization scheme would pose a significant disincentive for future development of additional minor species therapies for existing Category I drugs if those new uses would require a withdrawal period and thus trigger a change to Category II for that drug.

Given the potential for implementation of GFI #213 to result in the foreseeable consequence of the withdrawal of approval of needed therapeutic indications for minor species, we propose to revise the definitions of the two categories of new animal drugs used in medicated feeds in § 558.3 to base category assignment only on uses in major species. This proposed revision is expected to preserve the availability of drugs intended for therapeutic use in minor species and also prevent a significant disincentive for future development of additional therapies for minor species without compromising public health.

III. Proposed Regulation

FDA proposes to amend paragraphs (b)(1)(i) and (ii) of this Agency's regulations at § 558.3 (*Definitions and general considerations applicable to this part*) to base the definition for each of the two categories (Category I and Category II) of new animal drugs used in medicated feeds only on approved uses in major species. We further propose to amend § 558.3(b) by adding definitions for "major species" and "minor species" that are identical to the definitions of those terms found in FDA's regulations for new animal drugs for minor use and minor species (21 CFR 516.3). We are proposing to revise the feed drug category definitions in § 558.3 to preserve the availability of medicated feeds intended for use in minor species and to prevent a likely disincentive for development of additional therapies for minor species.

IV. Companion Document to Direct Final Rulemaking

This proposed rule is a companion to the direct final rule published elsewhere in this issue of the **Federal Register**. FDA proposes to amend § 558.3(b)(1) to revise the definitions of Category I and Category II new animal drugs administered in medicated feed. This proposed rule is intended to make

noncontroversial changes to existing regulations. The Agency does not anticipate receiving any significant adverse comment on this rule.

Consistent with FDA's procedures on direct final rulemaking, we are publishing elsewhere in this issue of the **Federal Register** a companion direct final rule. The direct final rule and this companion proposed rule are substantively identical. This companion proposed rule provides the procedural framework within which the rule may be finalized in the event the direct final rule is withdrawn because of any significant adverse comment. The comment period for this proposed rule runs concurrently with the comment period of the companion direct final rule. Any comments received in response to the companion direct final rule will also be considered as comments regarding this proposed rule.

FDA is providing a comment period for the proposed rule of 75 days after the date of publication in the **Federal Register**. If FDA receives a significant adverse comment, we intend to withdraw the direct final rule before its effective date by publication of a notice in the **Federal Register** within 30 days after the comment period ends. A significant adverse comment is one that explains why the rule would be inappropriate, including challenges to the rule's underlying premise or approach, or would be ineffective or unacceptable without a change. In determining whether an adverse comment is significant and warrants withdrawing a direct final rule, the Agency will consider whether the comment raises an issue serious enough to warrant a substantive response in a notice-and-comment process in accordance with section 553 of the Administrative Procedure Act (5 U.S.C. 553).

Comments that are frivolous, insubstantial, or outside the scope of the proposed rule will not be considered significant or adverse under this procedure. For example, a comment recommending a regulation change in addition to those in the proposed rule would not be considered a significant adverse comment unless the comment states why the proposed rule would be ineffective without the additional change.

If FDA does not receive significant adverse comment in response to the companion direct final rule, the Agency will publish, within 30 days after the comment period ends, a document in the **Federal Register** confirming the effective date of the final rule. The Agency intends to make the direct final rule effective on December 1, 2016.

A full description of FDA's policy on direct final rule procedures may be found in a guidance document announced in the **Federal Register** of November 21, 1997 (62 FR 62466). The guidance document may be accessed at: <http://www.fda.gov/RegulatoryInformation/Guidances/ucm125166.htm>.

V. Legal Authority

We are proposing these regulations under the legal authority provided by section 512 of the FD&C Act relating to new animal drugs and section 701(a) of the FD&C Act. Section 512 gives FDA the authority to approve new animal drug applications (NADAs). Such approval establishes conditions of use under which the drug can be used in a safe and effective manner. Categorization of new animal drugs used in medicated feeds is one such condition of use. In addition, section 701(a) of the FD&C Act gives FDA general rulemaking authority to issue regulations for the efficient enforcement of the FD&C Act.

VI. Economic Analysis of Impacts

We have examined the impacts of the proposed rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). We believe that this proposed rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires us to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this proposed rule would not impose any compliance costs on the sponsors of animal drug products that are currently marketed or in development, we propose to certify that this proposed rule will not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the

private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$146 million, using the most current (2015) Implicit Price Deflator for the Gross Domestic Product. This proposed rule would not result in an expenditure in any year that meets or exceeds this amount.

This proposed rule allows certain new animal drugs approved for use in animal feed that would otherwise be recategorized as Category II drugs under the current definitions in § 558.3 following withdrawal of approval of production indications during GFI #213 implementation to remain in Category I if the change to Category II would have been triggered by a minor species indication.

Based on the revised definitions of the two feed drug categories, there is one drug, sulfamerazine for control of furunculosis in trout (21 CFR 558.582), that would be recategorized from Category II to Category I as a result of this proposed rule, if finalized. No compliance costs would be incurred due to this recategorization because no changes to the approved application are required for continued marketing of the drug.

VII. Analysis of Environmental Impact

We have determined under 21 CFR 25.30(h) that this action is of a type that will not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VIII. Paperwork Reduction Act of 1995

This proposed rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) is not required.

IX. Federalism

We have analyzed this proposed rule in accordance with the principles set forth in Executive Order 13132. We have determined that the proposed rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, we have concluded that the proposed rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

List of Subjects in 21 CFR Part 558

Animal drugs, animal feeds.

Therefore, under the Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, it is proposed that part 558 be amended as follows:

PART 558—NEW ANIMAL DRUGS FOR USE IN ANIMAL FEEDS

■ 1. The authority citation for part 558 continues to read as follows:

Authority: 21 U.S.C. 354, 360b, 360ccc, 360ccc-1, 371.

■ 2. In § 558.3, revise paragraphs (b)(1)(i) and (ii) and add paragraphs (b)(13) and (14) to read as follows:

§ 558.3 Definitions and general considerations applicable to this part.

* * * * *

(b) * * *

(1) * * *

(i) Category I—These drugs require no withdrawal period at the lowest use level in each major species for which they are approved or are approved for use only in minor species.

(ii) Category II—These drugs require a withdrawal period at the lowest use level for at least one major species for which they are approved, or are regulated on a "no-residue" basis or with a zero tolerance because of carcinogenic concern regardless of whether a withdrawal period is required in any species.

* * * * *

(13) "Major species" means cattle, horses, swine, chickens, turkeys, dogs, and cats.

(14) "Minor species" means animals, other than humans, that are not major species.

Dated: August 18, 2016.

Jeremy Sharp,

Deputy Commissioner for Policy, Planning, Legislation, and Analysis.

BILLING CODE 4164-01-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 70

[EPA-HQ-OAR-2016-0194; FRL-9951-09-OAR]

RIN 2060-AS61

Revisions to the Petition Provisions of the Title V Permitting Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) proposes to revise its regulations to streamline and clarify processes related to submission and review of title V petitions. This notice covers five key areas, each of which should increase stakeholder access to and understanding of the petition process and aid the EPA's review of petitions. First, the EPA is proposing regulatory provisions that provide direction as to how petitions should be submitted to the agency. Second, the EPA is proposing regulatory provisions that describe the expected format and minimum required content for title V petitions. Third, the proposal clarifies that permitting authorities are required to respond to significant comments received during the public comment period for draft title V permits, and to provide that response with the proposed title V permit to the EPA for the agency's 45-day review period. Fourth, guidance is provided in the form of "recommended practices" for various stakeholders to help ensure title V permits have complete administrative records and comport with the requirements of the Clean Air Act (CAA or Act). Fifth, to increase familiarity with the post-petition process, this notice presents information on the agency's interpretation of certain title V provisions of the CAA and its implementing regulations regarding the steps following an EPA objection in response to a title V petition, as previously discussed in specific title V orders.

DATES: *Comments:* Comments must be received on or before October 24, 2016.

Public Hearing: If anyone contacts EPA requesting a public hearing on or before September 6, 2016, we will hold a public hearing. Additional information about the hearing would be published in a subsequent **Federal Register** notice.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-HQ-OAR-2016-0194, to the *Federal eRulemaking Portal*: <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or withdrawn. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information the disclosure of which is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the Web, Cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Questions concerning these proposed rule revisions should be addressed to Ms. Carrie Wheeler, U.S. Environmental Protection Agency, Office of Air Quality Planning and Standards, Air Quality Planning Division, (C504-05), Research Triangle Park, NC 27711, telephone number (919) 541-9771, email at wheeler.carrie@epa.gov. To request a public hearing or information pertaining to a public hearing on the proposed regulatory revisions, contact Ms. Pamela Long, U.S. Environmental Protection Agency, Office of Air Quality Planning and Standards, Air Quality Policy Division, (C504-01), Research Triangle Park, NC 27711; telephone number (919) 541-0641; fax number (919) 541-5509; email address: long.pam@epa.gov (preferred method of contact).

I. General Information

A. Does this action apply to me?

Entities potentially affected directly by the proposed revisions to the EPA's regulations include anyone who intends to submit a title V petition on a proposed title V permit prepared by a state, local or tribal title V permitting authority pursuant to its EPA-approved title V permitting program. Entities also potentially affected by this rule include state, local and tribal permitting authorities responsible for implementing the title V permitting program. Entities not directly affected by this proposed rule include owners and operators of major stationary sources or other sources that are subject

to title V permit requirements, as well as the general public who would have an interest in knowing about title V permitting actions and associated public hearings but do not intend to submit a petition.

B. What should I consider as I prepare my comments for the EPA?

1. *Submitting CBI.* Do not submit this information to the EPA through <http://www.regulations.gov> or email. Clearly mark the specific information that you claim to be CBI. For CBI in a disk or CD-ROM that you mail to the EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket.

2. *Tips for preparing comments.* When preparing and submitting your comments, see the commenting tips at <http://www.epa.gov/dockets/comments.html>.

C. How can I find information about a possible public hearing?

To request a public hearing or information pertaining to a public hearing, contact Ms. Pamela Long, Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, by phone at (919) 541-0641 or by email at long.pam@epa.gov.

D. Where can I obtain a copy of this document and other related information?

In addition to being available in the docket, an electronic copy of this **Federal Register** document will be posted at the regulations section of our Title V Operating Permits Web site, under Regulatory Actions, at <http://www.epa.gov/title-v-operating-permits/current-regulations-and-regulatory-actions>. A "track changes" version of the full regulatory text that incorporates and shows the full context of the proposed changes to the existing regulations in this proposal is also available in the docket for this rulemaking.

II. Overview of Proposed Regulatory Revisions and Information in This Notice

Title V of the CAA establishes an operating permit program. Section 505

of the CAA requires permitting authorities to submit a proposed title V permit to the EPA Administrator for review for a 45-day review period before issuing the permit as final. The Administrator shall object to issuance of the permit within that 45-day review period if the Administrator determines that the permit contains provisions that are not in compliance with the applicable requirements under the CAA. If the Administrator does not object to the permit during the 45-day EPA review period, any person may petition the Administrator within 60 days after the expiration of the 45-day review period to take such action (hereinafter "title V petition" or "petition"). The title V petition provisions of the current implementing regulations found at 40 CFR part 70 largely mirror the CAA, and have not been revised since original promulgation in 1992. With 20 years of experience with title V petitions as well as feedback from various stakeholders, the agency is now proposing changes to 40 CFR part 70 intended to provide clarity and transparency to the petition process, and to improve the efficiency of that process.¹

The changes proposed and the information provided in the preamble to the proposal are intended to benefit permitting authorities, permitted sources, and potential petitioners, as well as the EPA. Permitting authorities and permitted sources are expected to benefit by early consultation with the appropriate EPA Regional Office when the permitting authority is preparing a permit to ensure it includes conditions that assure compliance with applicable requirements under the CAA and part 70). These early actions should minimize potential permit deficiencies and reduce the associated likelihood that a petition will be submitted on that title V permit.

Potential petitioners are expected to benefit by having better notification of permits and review deadlines (e.g., the EPA is proposing to post on EPA Regional Web sites when a proposed permit is received and the corresponding 60-day deadline for submitting a petition) and by better

¹ The revisions proposed in this rule only impact 40 CFR part 70, which applies to federally-approved state, local, and tribal operating permit programs; 40 CFR part 71, which covers the title V operating permit program for permits issued under the EPA's federal permitting authority, utilizes a different administrative review process, through the Environmental Appeals Board (EAB). The EAB has its own review process for title V permits issued under 40 CFR part 71 that is separate and distinct from the process of petitioning the Administrator for an objection to a 40 CFR part 70 permit; thus, these proposed changes are intended to streamline and clarify the EPA's title V petition review process under 40 CFR part 70 only.

access to permitting decision information (e.g., the permitting authority's written response to comments). These updates will clarify the expected minimum content of petitions and provide a standardized format, simplifying the process and enhancing the likelihood that petitions will be clear and complete. In addition, potential petitioners may also derive a benefit from more efficient responses to petitions and a better understanding of the process.

The EPA is expected to benefit by improving the agency's ability to meet its statutory obligations to review proposed permits, respond to title V petitions and provide more transparency in the title V petition process. These were concerns expressed by a Clean Air Act Advisory Committee task force in recommendations provided to the agency in 2006.² The EPA believes that the proposed regulatory revisions and shared information are responsive to these concerns and could, if finalized, improve the efficiency of the agency's response.

The proposed regulatory revisions described in Section IV of this notice would, among other things: (1) Provide direction as to how title V petitions should be submitted to the agency, including encouraging the use of an electronic submittal system as the preferred (but not exclusive) method to submit title V petitions; (2) describe mandatory content and format for title V petitions, which is intended to clarify the process for petitioners and improve the EPA's ability to review and act on petitions efficiently; and (3) require permitting authorities to respond in writing to significant comments received during the public comment period on a draft title V permit and to provide that written response to the EPA along with the proposed title V permit at the start of the EPA's 45-day review period. This proposal also requests comment on the proposed revisions to the regulations governing the CAA title V petition process, as well as comment on questions related to

potentially establishing page limits on title V petitions. The proposed revisions to the 40 CFR part 70 regulations are described more fully in Section IV of this notice.

Separate from the regulatory revisions proposed in Section IV, Section V.A of this notice provides guidance on "recommended practices" for permit development for various stakeholders that, when followed, helps to ensure permits have complete administrative records and comport with the requirements of the CAA. Lastly, to increase stakeholder familiarity with the post-petition process, Section V.B. provides information concerning the agency's interpretation of certain provisions of title V of the CAA and the implementing regulations at part 70 regarding the steps following an EPA objection in response to a title V petition, as previously discussed in specific title V orders. The following paragraphs briefly provide additional information on each area.

First, in order to reduce confusion with and add clarity to the process of submitting title V petitions, the EPA has developed a centralized point of entry for all title V petitions using an electronic submittal system. As described in Section IV.A of this notice, the EPA encourages petitioners to use this electronic system when submitting title V petitions, which will improve customer service by allowing for better access to and tracking of petitions. This is the preferred method identified in the proposed regulatory revisions that would be acceptable to use to submit a title V petition to the agency. Alternative methods for submittal are also identified in this notice.

Second, with regard to petition content, the EPA is proposing regulatory revisions that would specify requirements for mandatory petition content and standard formatting for all petitions. This is expected to benefit potential petitioners by ensuring completeness while promoting streamlining and improving the EPA's ability to review and act on petitions efficiently. In its orders responding to title V petitions, the EPA has already identified key elements that are critical for demonstrating that a title V permit does not assure compliance with applicable requirements under the CAA or under the part 70 regulations, and has explained their relevance to its determinations. In this proposal, the EPA is proposing new regulatory language to codify what has already been discussed in prior orders. If finalized, petitioners would be expected to follow these requirements and include this content following a

standard format. As described later in this notice and in the proposed regulatory text, this content includes identifying where the issue being raised in the title V petition was raised during the public comment period on the draft title V permit and addressing the permitting authority's response to the comment in the petition in order to demonstrate that an objection is warranted.

Along with the proposed changes and requests for comment regarding petition content and format in Section IV.B of this notice, the EPA proposes to add new regulatory language to 40 CFR 70.8 that would require a petitioner to send a copy of the petition to both the permitting authority and the permit applicant. The current title V regulations do not have provisions implementing this requirement of section 505(b)(2) of the Act. Therefore, this rule proposes to insert a requirement into the part 70 rules mirroring the Act's requirement in order to ensure consistency with this provision of the statute.

Third, Section IV.C of this notice contains requirements for certain procedures related to responding to significant public comments on the draft title V permit, as well as the administrative record for and submittal of proposed title V permits to the EPA by permitting authorities. The changes being proposed now would require that all permitting authorities respond to significant comments received on draft permits. The EPA is also proposing that the 45-day review period under section 505(b)(1) would not begin until the permitting authority forwards the proposed permit, the written response to comments (RTC) or statement that no public comments were received, and the statement of basis document, to the EPA for its review. These changes are expected to benefit permitting authorities and permitted sources by resulting in a more complete permit record and greater clarity for all stakeholders. If finalized, these changes may result in a need to revise at least some state, local and tribal part 70 programs.

In addition to these three areas, as part of the agency's effort to share information with stakeholders about the title V petition process, this notice includes guidance to help ensure permits have complete administrative records and comport with the requirements of the CAA. Presented in the form of "recommended practices" for stakeholders, this guidance is shared in the spirit of providing information and context to give a more comprehensive view of the title V

² In 2004, the Clean Air Act Advisory Committee (CAAC) established a Task Force to evaluate the title V program. The 18-member panel, comprised of industry, state, and environmental group representatives, identified what Committee members believed was and was not working well. After hosting public meetings and receiving written feedback, and compiling the information with the personal experience of panel members, the Title V Task Force issued a final report that highlighted concerns and recommendations for improvement. See, *Final Report to the Clean Air Act Advisory Committee on the Title V Implementation Experience: Title V Implementation Experience* (April 2006). The Title V Task Force Final Report is available at: <https://www.epa.gov/caaac/caaac-reports>.

petition process, including the time before a petition may be filed. Following the suggested recommended practices contained in Section V.A of this notice is expected to positively affect the permit issuance process resulting in better permits and may reduce the likelihood that a title V petition will be submitted on a title V permit.

All four of the previously mentioned areas should help to improve title V permits issued by permitting authorities, promote access to and provide better understanding of the title V petition process for potential petitioners, and reduce delays in decisions and support the agency's efforts to meet its obligations in responding to title V petitions. The proposed revisions to the part 70 regulations associated with the first three key areas are anticipated to increase transparency and add clarity to the title V petition submittal, review, and response processes. Codifying existing practices into title V regulations of the CAA is also expected to make the EPA petition review process more efficient. In addition, providing "recommended practices" for stakeholders, including some related to permit issuance, also increases transparency and clarity to further improve the stakeholder experience and understanding surrounding title V petitions.

Section V.B of this notice discusses steps following the EPA's issuance of an objection in response to a title V petition, particularly where the state, local, or tribal permitting authority subsequently amends the permit terms and conditions and/or the permit record in response to the EPA's objection. This process is often referred to as the post-petition process. The information provided in Section V.B reflects interpretations of certain statutory and regulatory provisions related to this aspect of the title V petition process that have previously been discussed by the EPA, including in title V petition orders. This information is repeated as a convenience to stakeholders and the general public: The agency is not proposing to alter its interpretation of that process in this notice and the regulatory revisions proposed in this notice do not relate to or modify this interpretation. The agency is not soliciting comment on this interpretation or otherwise reopening or revising the already-issued title V petition orders or other EPA documents in which it has previously been discussed. Rather, this discussion is included to provide additional transparency and clarity.

Finally, as a convenience to stakeholders and the general public, and to provide context and background that informs how the EPA determines whether to grant an objection and to promote awareness of the EPA's existing interpretation of key provisions of section 505(b)(2) of the Act, Section III.D of this notice includes a summary of some past orders responding to title V petitions and court decisions addressing the burden on a title V petitioner to demonstrate that an objection is warranted.

III. Background

A. The Title V Operating Permits Program

Congress amended the CAA in 1990 to add title V, now found at 42 U.S.C. 7661–7661f, to assist in compliance and enforcement of air pollution controls. CAA Amendments of 1990, Public Law 101–549, sections 501–507, 104 Stat. 2399, 2635–48 (1990). Before this, the CAA pollution control requirements that might apply to a particular source could be found in many different provisions of the Act and its numerous regulations. As one court opinion has described it: "Before 1990, regulators and industry were left to wander through this regulatory maze in search of the emission limits and monitoring requirements that might apply to a particular source. Congress addressed this confusion in the 1990 Amendments by adding title V of the Act, which created a national permit program that requires many stationary sources of air pollution to obtain permits that include relevant emission limits and monitoring requirements." *Sierra Club v. EPA*, 536 F.3d 673, 674 (D.C. Cir. 2008).

Accordingly, title V of the Act establishes an operating permits program for major sources of air pollutants, as well as certain other sources. CAA section 502(a). Under title V of the CAA, states were required to develop and submit to EPA for approval title V permitting programs consistent with program requirements promulgated by the EPA. Those requirements are now found in 40 CFR part 70. Most states, certain local agencies, and one tribe have approved part 70 programs.³ As part of an approved part 70 program, title V of the CAA requires every major source and certain other sources to apply for and operate pursuant to an operating permit. CAA sections 502(a) and 503; *see also* 40 CFR 70.5(a) and 70.1(b). It further requires that the permits contain conditions that assure

compliance with all of the sources' applicable requirements under the Act, including the requirements of the applicable implementation plan. CAA section 504(a); *see also* 40 CFR 70.1(b) and 70.6(a)(1).

Prior to the title V program, CAA requirements for major sources of air pollutants were implemented in multiple and various ways. As a lawmaker involved in the 1990 CAA Amendments explained:

Title V creates, for the first time, a unifying permit program for facilities subject to the [A]ct's various control requirements. In the past, some provisions of the Clean Air Act—for example, the nonattainment and PSD new source requirements—were, and will continue to be, implemented through preconstruction permits. Other control requirements were effected without Federal, or in some cases, State permits—for example, NESHAPS and NSPS—although States often incorporated these requirements into their own permit programs.⁴

More specifically, a title V permit must contain enforceable emission limits and standards, including operational requirements and limitations, and such other conditions as necessary to assure compliance with all applicable requirements that apply to the source at the time of permit issuance, as well as the monitoring, recordkeeping, and reporting requirements to assure compliance. In sum, the title V permit program is a vehicle for ensuring that air quality control requirements are appropriately applied to a source's emission units and for assuring compliance with such requirements.

For the most part, title V of the CAA does not impose new pollution control requirements on sources. The definition of "applicable requirements" in the part 70 regulations includes many standards and requirements that are established through other CAA programs, such as standards and requirements under sections 111 and 112 of the Act, and terms and conditions of preconstruction permits issued under the New Source Review programs. 40 CFR 70.2. Once those air quality control requirements are established in those other programs, they are incorporated into a source's title V permits as appropriate. Hence, a title V permit is a comprehensive document that identifies all the specific CAA requirements that must be met by a source in order to operate. Developing

³ The Southern Ute Indian Tribe has an EPA-approved operating permit program under 40 CFR part 70.

⁴ 136 Cong. Rec. E3663, E3673 (1990) (Speech of Rep. Michael Bilirakis), *reprinted in* Environment and Natural Resources Policy Division of the Congressional Research Service of the Library of Congress, 6 A Legislative History of the Clean Air Act Amendments of 1990, at 10768 (1993) [hereinafter CAAA Leg. Hist.].

such a comprehensive document can be a complex process that involves some harmonization of all the source's applicable requirements. As a lawmaker involved in the 1990 CAA Amendments explained:

The creation of the new permit program in title V provides an opportunity and an obligation for EPA to harmonize the substantive provisions of the other titles in this complex legislation. Many of the same sources and pollutants will be controlled under multiple titles—the same facilities and pollutants will often be controlled under the hazardous air pollutant, nonattainment, and acid rain programs. EPA must make every effort to harmonize and prevent unproductive duplication among those titles. The permit provisions of title V provide a focus for this harmonization, although title V does not change, and gives EPA no authority to modify, the substantive provisions of these other titles.⁵

As this language suggests, in providing an opportunity for harmonization through title V of the CAA, Congress did not replace or remove the procedures and requirements for establishing substantive requirements that exist in other provisions of the CAA. Nor did Congress alter or supplant the opportunities for public participation and administrative and judicial review that are found in other CAA programs, such as those for public participation and judicial review of certain final agency actions under section 307 of the Act. In addition, the Act requires that title V permitting programs provide opportunities for public participation in title V permitting processes and an opportunity for judicial review in state court. CAA section 502(b)(6); *see also* 40 CFR 70.4(b)(3)(x) (judicial review) and 70.7(h) (public participation). The petition process co-exists with those provisions, without superseding them.

Although title V of the CAA does not generally impose new pollution control requirements on sources, it does require that certain procedural measures be followed especially with respect to assuring compliance with underlying applicable requirements, and it also requires sources to pay certain fees. For example, title V of the CAA requires permits to contain adequate monitoring, recordkeeping, and reporting provisions to assure sources' compliance with permit terms and conditions. *See* CAA 504(c); *Sierra Club v. EPA*, 536 F.3d 673 (D.C. Cir. 2008). The part 70 regulations contain monitoring rules designed to satisfy this statutory requirement. Finally, as an additional measure to

ensure permits are in compliance with the CAA, the title V program provides for public participation at various steps in the permitting process, including the opportunity to submit a title V petition.

B. Statutory and Regulatory Basis for This Proposal

In general terms, as noted above, the title V permit program was a significant development that established new procedural requirements for permitting authorities and sources. In crafting the program, Congress balanced the benefit of a single document that contains all applicable requirements of the Act with the need to process these complex documents in an efficient manner. As part of the effort to promote efficient implementation of the operating permits program, the provisions relating to title V objections establish an orderly process with specific deadlines, which give the EPA an opportunity to raise objections to a title V permit before it is issued and which give any person the opportunity to timely raise specific issues to the EPA through a title V petition. In light of the complexities of implementing a program of title V's scope, a statement of one lawmaker in the legislative history indicates that the opportunity to “challenge EPA's failure to object” through the petition process was “designed to avoid delays” while preserving the discretion of both the EPA and the states.⁶

More specifically, under CAA section 505(a), and the current implementing regulations found at 40 CFR 70.8(a), permitting authorities are required to submit each proposed title V permit to the EPA for review.⁷ Upon receipt of a proposed permit and all necessary supporting information, the Administrator has 45 days in which to object to the final issuance of the permit if he/she determines that the proposed permit is not in compliance with applicable requirements of the Act, including the requirements of the applicable state implementation plan (SIP), or part 70 requirements. CAA section 505(b)(1) and 40 CFR 70.8(c)(1).

As the EPA explained when proposing the initial title V regulations in 1991, the Act limits the EPA's opportunity for its initial review and an objection based on that review to 45 days in order to minimize delays. 56 FR 21749 (May 10, 1991). If the Administrator objects under CAA

505(b)(1), he/she must provide a statement of the reasons for the objection, providing a copy of both the objection and the statement to the permit applicant. CAA 505(b)(1); *see also* 40 CFR 70.8(c)(1).

If the Administrator does not object during the 45-day review period, consistent with section 505(b)(2) of the CAA and 40 CFR 70.8(d), any person may petition the Administrator within 60 days after the expiration of the EPA's 45-day review period to object to the permit. The Administrator shall grant or deny such a petition within 60 days after it is filed. CAA section 505(b)(2) establishes several requirements related to such petitions. Among other things, it provides that such a petition shall be based only on objections to the permit that were raised with reasonable specificity during the public comment period, unless the petitioner demonstrates that it was impracticable to raise objections during that period or the grounds for objection arose after completion of the public comment period. It also provides that the Administrator shall issue an objection if the petitioner demonstrates that the permit is not in compliance with the requirements of the CAA, including the requirements of the applicable implementation plan.

The implementing regulations are found in 40 CFR 70.8(d) and largely mirror this provision. As the EPA explained in proposing the initial title V regulations, the title V petition opportunity serves an important purpose because title V permits are frequently complex documents, and given the brevity of the agency review period there may be occasions when the EPA does not recognize that certain permit provisions are not in compliance with applicable requirements of the Act. 56 FR 21751 (May 10, 1991). CAA section 505(b)(2) states that the Administrator “shall” object if the petitioner makes the required demonstration. If the Administrator denies a petition for an objection, CAA 505(b)(2) provides that denial is subject to judicial review under CAA section 307; however, under CAA section 505(c), no objection is subject to judicial review until the Administrator has taken final action to issue or deny the permit. Further, the requirements under CAA section 505(b)(2) may not be delegated by the Administrator.

In addition to the provisions of title V, the rulemaking of provisions under CAA section 307(d) are relevant to this notice. The Administrator is applying the rulemaking provisions of CAA section 307(d) to the rulemaking discussed in this notice, pursuant to

⁶ 136 Cong. Rec. E3663, E3675 (1990) (Speech of Rep. Michael Bilirakis), *reprinted in* 6 CAAA Leg. Hist. at 10774.

⁷ As the part 70 rules in 70.8(c) and (d) largely mirror the Act's provisions, the statutory and regulatory requirements are addressed together in this background discussion.

⁵ 136 Cong. Rec. E3663, E3673 (1990) (Speech of Rep. Michael Bilirakis), *reprinted in* 6 CAAA Leg. Hist., at 10768 (1993).

CAA section 307(d)(1)(V), which provides that the provisions of 307(d) apply to “such other actions as the Administrator may determine.”

C. Title V Petition Process and Content

After 20 years of experience in implementing the title V petition process, the EPA has identified some general trends in petition content and aspects of the petition review process that pose challenges for potential petitioners in preparing petitions and for the EPA in providing an efficient response to petitions. These are described in this section of the notice to provide additional context for this proposal. This proposed rulemaking is aimed in part at increasing stakeholder access to and understanding of the petition process and increasing the efficiency of the agency's response to petitions received and at mitigating some of the factors that contribute to poorly prepared or incomplete petitions, misunderstanding of applicable permit and CAA requirements, and longer response times. These factors include: (1) The lack of administrative requirements around petition submittals, which results in a variety of inconsistent methods used by petitioners; (2) the lack of specific rules regarding petition content, which results in considerable inconsistency in the format and content of petitions; and (3) the need to often deal with numerous and highly complex issues that arise in title V petitions given that title V permits must address many applicable requirements. These include issues relating to compliance with the requirements of the prevention of significant deterioration (PSD) permitting program, the hazardous air pollutant program (*i.e.*, requirements implementing the provisions of CAA 112), and other air quality issues. For example, petitioners often raise issues related to compliance with the requirements of the major and minor preconstruction permit programs, such as the PSD permitting requirements found in part C of Title I of the Act. This permitting program has a separate process under the CAA, its implementing regulations and SIPs, for evaluating applicability of the permitting requirements, determining the appropriate terms and conditions for permits, and for public participation and administrative and/or judicial review of those permits. At times, the PSD issues raised in the context of a title V petition relate to projects that occurred a considerable time in the past, and in some situations, the title V permit record may not contain all the relevant information for understanding

the determinations that were made. For these reasons, consideration of these issues in the title V petition context can be time-consuming to research and complex to resolve, even to come to the seemingly simple determination that the permit record is inadequate. Further, title V petitions frequently include lengthy arguments that primarily concern CAA programmatic or policy issues, rather than the terms of a particular permit.

Over time, petitions have raised increasingly more complex policy, legal, and technical matters. Through the review of such extensive and complicated petitions, the petition review process has evolved into a resource-intensive effort by the EPA. To increase stakeholder understanding of the title V petition process, help ensure consistent presentation of critical information in such petitions, and facilitate more efficient review of them, the EPA is proposing to revise its regulations to establish procedural parameters which, if finalized, would govern the title V petition process moving forward. As described in more detail in Section IV of this notice, this proposal includes proposed requirements for petition submittal, petition content and format, and certain administrative record requirements. As mentioned previously, one of the primary goals of the proposed changes is to improve stakeholder access to and understanding of the petition process and improve the agency's ability to meet its statutory obligations to review proposed permits and respond to title V petitions, in light of the overall structure of the CAA.

Yet another overarching factor that hampers the current petition review process is the confusion or lack of familiarity with the process itself. In the 2006 Title V Task Force Final Report noted earlier, for example, the CAAAC task force expressed a concern with the lack of transparency in the title V petition process. This concern has been echoed in the years since the 2006 report through feedback the agency has received from various stakeholders. In response, the EPA has tried to provide more explanation and insight into the title V petition process in the administrative orders it issues in responding to petitions. Some of these issues have also been discussed in the opinions courts have issued in reviewing such EPA orders. However, the EPA expects that not all stakeholders, including the public, may have read these response orders or related court decisions.

Therefore, the next section of this notice seeks to provide additional

transparency concerning the petition process by repeating some of the relevant interpretations of statutory and regulatory provisions that the EPA has previously explained in title V petition orders, as well as interpretations of certain provisions related to the title V petition process provided in judicial opinions. Reiterating these prior statements concerning the EPA's application and interpretation of the statute to reviewing title V petitions may also provide useful context for the proposed changes to 40 CFR part 70, which are discussed in Section IV of this notice.

D. Prior Interpretations and Applications of the Title V Provisions

This section includes a discussion of certain aspects of the statutory elements of CAA section 505(b)(2) as well as the implementing regulations that have previously been interpreted by the EPA and/or courts. The discussion that follows serves to inform the public, stakeholders, permitting authorities, and other interested parties of these interpretations. Although the matters discussed in this section are available to the public,⁸ and in some cases have been available for years and/or already subject to judicial review, in the interest of transparency and clarity, the agency is collecting these interpretations and judicial decisions in this notice. That information is repeated here merely as a convenience for the public. The agency is not in this notice proposing to change these previously-presented interpretations, soliciting comments on these interpretations, or reopening the already-issued title V orders or other EPA documents in which these interpretations were discussed. None of the regulatory revisions proposed in this notice would alter these interpretations or the prior title V orders or other EPA documents in which these interpretations were discussed.

1. “Threshold” Requirements

Certain of the requirements under CAA section 505(b)(2) related to petitions are sometimes referred to as “threshold” requirements, which provide some procedural requirements and some limitations on the scope of title V petitions. These include, for example, that the petition be filed within 60 days following the agency's 45-day review period. Another example is the requirement that the petition be based only on objections to the permit

⁸ The Title V Petitions Database contains petitions and EPA Orders responding to petitions and is available at: <https://www.epa.gov/title-v-operating-permits/title-v-petition-database>.

that were raised with reasonable specificity during the public comment period provided by the permitting agency. The agency has previously addressed these “threshold” issues in prior title V orders, and some of those statements are reiterated in this section.

a. Timeliness

Generally speaking, the first step in the petition response process is for the agency to ascertain if the petition was timely filed pursuant to CAA section 505(b)(2). The Act and implementing regulations at 40 CFR 70.8(d) provide for a 60-day window in which to file a title V petition, which runs from the expiration of the EPA’s 45-day review period. A petition received after the 60-day petition deadline is not timely. The agency is aware that because the petition period runs from the end of the EPA’s 45-day review period, and the date a proposed permit is received by the EPA is not always apparent, the petition deadline is not always readily apparent. The agency currently encourages permitting authorities to provide notifications to the public or interested stakeholders regarding the timing of proposal of permits to the EPA, for example making that information available either online, such as Region 4 has done on the EPA Web site, “Region 4 Proposed Title V Permits and State Contacts,”⁹ or in the publication in which public notice of the draft permit was given.

b. Reasonable Specificity

The second “threshold” requirement described in the statute regards the content of a petition. CAA section 505(b)(2) requires that, unless one of the enumerated exceptions applies, the petition must be based only on objections to the permit that were raised with reasonable specificity during the public comment period provided by the permitting agency. Subject to the exceptions contained in the provision, the EPA understands this statutory language to require that the issues presented in a petition be raised during the public comment process with reasonable specificity. Such issues could, however, be raised in comments filed by a commenter other than the petitioner.

The EPA continues to believe that, as stated in the preamble to the 1991 part 70 proposal, Congress did not intend for petitioners to create an entirely new

record before the EPA that the permitting authority had no opportunity to address. The requirement to raise issues “with reasonable specificity” places the burden on the petitioner. Unless there are unusual circumstances, the Petitioner needs to provide evidence that would support a finding of noncompliance with the Act to the permitting authority before it is raised in a petition. *See*, 56 FR 21712, 21750 (1991).

Where an issue is raised to the EPA in a title V petition without first raising it with reasonable specificity to the permitting authority to give it the opportunity to address the issue, the Administrator has generally denied such claims consistent with the statutory requirements. The EPA has specifically addressed the reasonable specificity threshold requirement in a number of title V petition orders. Some key highlights are summarized next.

In 2013 in the *Luminant Order*, the EPA responded to a petition that raised a number of issues, including several that were raised only in general terms or not raised at all during the public comment period by any commenter. *See*, *In the Matter of Luminant Generating Station, Petition*, Order on Petition No. VI–2011–05 (January 15, 2013). For example, the petitioners claimed that the permit in question failed to identify emission units that were associated with permit by rules to which the facility was subject. The EPA noted that no mention was made in the public comments concerning the lack of identification of emission units, and denied the claim. *Id.* at 12. The Administrator similarly denied other claims not raised with reasonable specificity during the public comment period: The comments did not present evidence or analysis to support these petition claims, and thus the state had no opportunity to consider and respond to those claims. *Id.* at 6, 11, 13, 15. The *Luminant Order* also included a discussion of the reasonable specificity standard, that absent unusual circumstances, the requirement to raise issues “with reasonable specificity” places the burden on the petitioner to bring forward evidence before the State that would support a finding of noncompliance with the CAA. *See id.* at 5.

As noted above, the Act contains two enumerated exceptions to the “reasonable specificity” requirement. Namely, issues that were not raised with reasonable specificity during the public comment period can be raised in a petition if the petitioner demonstrates that it was impracticable to raise such objections within such period or unless

the grounds for such objection arose after such period. CAA section 505(b)(2). For an issue to fit within one of these exceptions, the petitioner would have to demonstrate the impracticability, or show that the grounds arose after the comment period. The EPA has also addressed this issue in petition orders.

One example is in the 2012 *San Juan Generating Station Order*, where the EPA responded to a petition claim that the permit failed to assure compliance with PSD applicable requirements because it did not address significant increase of a specific pollutant after a change at the facility. *See In the Matter of Public Service Company Of New Mexico, San Juan Generating Station (SJGS)*, Order on Petition VI–2010 (February 15, 2012) at 10. According to the petitioners, these concerns were not raised during the comment period because the State did not make the information about the significant emission increase available until after the public comment period, when the permitting authority noted in its response to the EPA that the change triggered PSD and expressed its intent to add a title V compliance schedule to the permit. The Administrator found that in this case, the petitioners demonstrated that the grounds arose after the comment period and therefore, the EPA would consider their claim on this matter. *See id.* at 10.

c. Scope of Permit Action

Petitions may be submitted on several types of proposed title V permits, such as proposed initial permits, permit renewals, or permit revisions, which may include minor or significant modifications to the title V permit. Some stakeholders have indicated there may be confusion on the matter of petition opportunities, particularly for minor modification actions. In cases where the permitting authority has not provided for a prior public comment period on a minor permit modification, petitioners can still submit a petition to the Administrator. 57 FR 32283; *see also* 40 CFR 70.7(e)(2)(iv) (for a minor modification, the permitting authority may not issue a final permit until after EPA’s 45-day review period or until EPA has notified the permitting authority that it will not object, whichever is earlier) and 70.8(e) (a part 70 permit, including a modification, may not be issued until after EPA has had an opportunity to review the proposed permit as required under this section). As the EPA may receive a petition on different types of proposed title V permits, it is important for the agency to be able to identify the

⁹EPA Region 4’s Web site provides links with lists of permits that have been proposed and are still under the public petition deadline, organized by state: <https://www.epa.gov/caa-permitting/region-4-proposed-title-v-permits-and-state-contacts>.

particular action of concern to the petitioner.

Under CAA section 505(b)(2), a petition pertains to a particular permit. Thus, the EPA must be able to discern from the petition what permit action the petition is based on in order to review and respond to it. The EPA has interpreted the potential scope of the petition as related to the scope of the permit action that is the basis of the petition. In the 1992 preamble to the final part 70 rule, the EPA explained that public objections to an initial permit, permit revision, or permit renewal must be germane to the applicable requirements implicated by the permitting action in question. For example, objections raised on a portion of an existing permit that would not in any way be affected by a proposed permit revision would not be germane. 57 FR 32250, 32290/3 (July 21, 1992). Consistent with CAA section 505(b)(2), the EPA has considered the scope of the permit proceeding in reviewing petitions and denied petitions that concern issues that are outside the scope of the permit proceeding. *See, e.g., In the Matter of Wisconsin Public Service Corporation's JP Pulliam Power Plant* (Order in response to Petition Number V–2012–01) (January 7, 2013) at 8; *In the Matter of Consolidated Environmental Management, Inc.—Nucor Steel Louisiana*, Order on Petition Numbers VI–2010–05, VI–2011–06 and VI–2012–07 (January 30, 2014) (*Nucor III Order*) at 12.

One such denial can be found in the 2007 *Weston Order*, in which the EPA received a petition that claimed that the proposed modification permit was deficient because it did not incorporate limits from PSD and preconstruction permit applications for a particular unit at the Weston facility. *See, In the Matter of Wisconsin Public Service Corporation—Weston Generating Station* (Order in response to Petition) (December 19, 2007). The EPA denied the claim because the unit in question had not been affected by or related to the significant modification on which the title V permitting action was based. The Order stated:

EPA interprets its title V regulations at 40 CFR part 70 to require different opportunities for citizens to petition on initial permit issuance, permit modifications, and renewals. The regulations state that a permit, permit modification, or renewal may be issued if specified conditions are met, 40 CFR 70.7(a)(1), including a requirement that '[t]he permitting authority shall provide a statement that sets forth the legal and factual basis for the draft permit conditions.' 40 CFR 70(a)(1)(ii) and 70.7(a)(5) (emphasis added). Further, 40 CFR 70.7(h), in requiring the permitting authority to provide adequate

procedures for public notice and comment for permit proceedings that qualify as significant modifications, provides that the notice shall identify 'the activity or activities involved in the permit action; the emissions change involved in any permit modification; . . . and all other materials available to the permitting authority that are relevant to the permit decision . . . ' 40 CFR 70.7(h)(2) (emphasis added). We interpret these provisions to limit petitions on significant modifications to issues directly related to those modifications. *Id.* at 5.

The *Weston Order* further noted that this limitation on petitions for title V significant modifications did not affect the public's ability to participate in the permit issuance or enforcement processes. When a title V permit is renewed, all aspects of the title V permit are subject to public comment and petition as part of the process to issue a renewal permit. Generally speaking, members of the public can also bring an enforcement action in situations of alleged noncompliance with any permit terms. Furthermore, if the public is concerned that the permit fails to incorporate all applicable requirements, a petition may be submitted to the Administrator to reopen the permit for cause under CAA section 505(e). *Id.* at 7.

2. Demonstration Requirement

In addition to the threshold requirements, the statute identifies another general guideline for the EPA's consideration. Specifically, to compel an objection by the EPA, CAA section 505(b)(2) requires the petitioner to demonstrate that a permit is not in compliance with requirements of the Act, including the requirements of the applicable implementation plan. The EPA has interpreted the demonstration burden under CAA section 505(b)(2) in numerous title V petition orders and court opinions have also interpreted it. What follows is a brief restatement of interpretations previously articulated in some of those orders and opinions.

In the 2013 *Nucor II Order* the EPA stated:

The petitioner demonstration burden is a critical component of CAA section 505(b)(2). As courts have recognized, CAA section 505(b)(2) contains a "discretionary component" that requires the exercise of the EPA's judgment to determine whether a petition demonstrates noncompliance with the Act, as well as a nondiscretionary duty to object where such a demonstration is made. *Sierra Club v. Johnson*, 541 F.3d at 1265–66 ("it is undeniable [CAA section 505(b)(2)] also contains a discretionary component: it requires the Administrator to make a judgment of whether a petition demonstrates a permit does not comply with clean air requirements"); *NYPIRG*, 321 F.3d at 333. Courts have also made clear that the

Administrator is only obligated to grant a petition to object under CAA section 505(b)(2) if the Administrator determines that the petitioners have demonstrated that the permit is not in compliance with requirements of the Act. *See, e.g., Citizens Against Ruining the Environment*, 535 F.3d at 667 (section 505(b)(2) "clearly obligates the Administrator to (1) determine whether the petition demonstrates noncompliance and (2) object if such a demonstration is made") (emphasis added); *NYPIRG*, 321 F.3d at 334 ("Section 505(b)(2) of the CAA provides a step-by-step procedure by which objections to draft permits may be raised and directs the EPA to grant or deny them, depending on whether non-compliance has been demonstrated.") (emphasis added); *Sierra Club v. Johnson*, 541 F.3d at 1265 ("Congress's use of the word 'shall' . . . plainly mandates an objection whenever a petitioner demonstrates noncompliance") (emphasis added). Courts reviewing the EPA's interpretation of the ambiguous term "demonstrates" and its determination as to whether the demonstration has been made have applied a deferential standard of review. *See, e.g., Sierra Club v. Johnson*, 541 F.3d at 1265–66; *Citizens Against Ruining the Environment*, 535 F.3d at 678; *MacClarence [v. EPA]*, 596 F.3d [1123] at 1130–31 [9th Cir. 2010].

See, In the Matter of Consolidated Environmental Management, Inc.—Nucor Steel Louisiana, Order on Petition Numbers VI–2011–06 and VI–2012–07 (June 19, 2013) (*Nucor II Order*) at 4–5.

The EPA highlighted in the *Nucor II Order* several reasons why the petitioner's demonstration is important in the context of a title V petition, including first, the relatively short time frames title V of the CAA provides for the EPA to review title V permits and petitions. As previously explained, under CAA section 505(b)(1), the Administrator has only 45 days after receiving a copy of the proposed permit to review that permit and object if she determines that the permit is not in compliance with the CAA. If the Administrator does not object, then any petition for an objection must be filed within 60 days after the expiration of the 45-day review period, and the agency is required to grant or deny that petition within 60 days. *See* CAA section 505(b)(2). Given these short time frames, the *Nucor II Order* explained that EPA does not believe it is reasonable to conclude that Congress would have intended for the EPA to engage in extensive fact-finding or investigation to analyze contested petition claims, and in support of this interpretation it cited *Citizens Against Ruining the Environment*, 535 F.3d at 678, which noted that because the limited time frame Congress gave the EPA for permit review "may not allow

the EPA to fully investigate and analyze contested allegations, it is reasonable in this context for the EPA to refrain from extensive fact-finding.” *Nucor II Order* at 5. Therefore, it is imperative that the petitioner make the demonstration.

After discussing the relatively short time frames for the EPA to review as the first point, the *Nucor II Order* continued:

Second, the Act is structured so that the EPA’s evaluation of a petition under CAA section 505(b)(2) follows and is distinct from its review of a proposed permit under section 505(b)(1), which requires the Administrator to object on his own accord if he determines the permit is not in compliance with the Act. By contrast, under section 505(b)(2), the Administrator is compelled to object only if the necessary demonstration has been made.¹⁰

Third, the EPA is also sensitive to the fact that its response to title V petitions often comes late in the title V permitting process and often after the title V permit has been issued. See CAA section 505(b)(3) (acknowledging that the EPA’s response to a petition may occur after the permit has been issued). The EPA’s evaluation of the petitioners’ demonstration can have consequences, as a determination by the EPA that the petition demonstrates the permit is not in compliance with the Act requires the Administrator and the state permitting authority to take certain actions. *MacClarence*, 596 F.3d at 1131. The EPA also acknowledges Congress’ direction that permitting authorities must provide “streamlined” procedures for issuing title V permits, indicating that the title V permitting process should proceed efficiently and expeditiously. CAA section 502(b)(6); 40 CFR part 70.4(d)(3)(ix). These circumstances make it all the more important that the EPA carefully evaluate the petition’s demonstration and not issue an objection under section 505(b)(2) unless the petition demonstrates that one is required.

Fourth, and consistent with its importance in CAA section 505(b)(2), the petitioner demonstration requirement helps to ensure the equity, procedural certainty, efficiency, and viability of the title V petition process for petitioners, state and local permitting authorities, the EPA and source owner/operators. This petitioner demonstration requirement helps to ensure that each and every petitioner is treated equitably in the petition process because the same standard for demonstration applies to each petitioner. Where petitioners meet their burden, the EPA will grant the petition. Where they do not, the EPA will not grant the petition. In this way, the EPA gives equal consideration to the petitioner’s arguments, as appropriate.

In addition, the petitioner burden requirement also helps to ensure that the title

V petition process is consistent with the division of responsibilities and co-regulator relationship between the EPA and state or local permitting authorities established in the CAA. When carrying out our title V review responsibilities under the CAA, it is our practice, consistent with that relationship, to defer to permitting decisions of state and local agencies with approved title V programs where such decisions are not inconsistent with the requirements under the CAA. The EPA does not seek to substitute its judgment for the state or local agency. As we discuss above in this section, sections 505(b)(1) and (2) of the Act, require the EPA to object to the issuance of a title V permit if it determines that the title V permit contains provisions that are not in compliance with applicable requirements of the Act, including the requirements of the applicable SIP. State and local agencies must ensure that the title V permit includes all applicable requirements under the CAA for that source, and provide an adequate rationale for the permit requirements in the public record, including the response to comment. When the EPA grants a particular title V petition under CAA section 505(b)(2), the EPA directs the state or local agency regarding actions necessary to ensure that the title V permit meets the applicable requirements with regard to the particular issue(s) that was raised, including appropriate and necessary changes to the permit.

The petitioner burden requirement assures that petitioners have clearly and sufficiently articulated the basis for an objection before a title V petition is granted. Thus, state and local agencies have certainty regarding the standard against which petitions on their title V permits and permit records will be assessed. The petitioner burden requirement also helps to ensure that the EPA does not have to spend significant time and resources responding to ungrounded claims regarding the title V permit or permit record. For example, petitioners might include claims in petitions unrelated to applicable requirements for the title V permit at issue or that do not provide sufficient information for the EPA to analyze the claim. Without the petitioner demonstration burden, the EPA could be required to investigate and respond to claims that ultimately prove to be ungrounded or frivolous. This would increase the complexity and uncertainty of the title V permit process, and would be burdensome and unproductive for the EPA, as well as for state and local agencies. The petitioner burden standard also helps to ensure certainty of the permitting process for source owner/operators, because it provides a consistent standard against which petitions on their title V permits will be assessed.

Nucor II Order at 5–7.

In light of the EPA’s interpretation of the demonstration requirement and its importance to the implementation of the statutory structure that Congress created for addressing objections to title V permits, the EPA has discussed and applied its interpretation of the demonstration burden in numerous title V orders. Examples of the EPA’s

application of this standard can be found in: *In the Matter of Scherer Steam-Electric Generating Plant Juliette, Georgia, et al.*, Order on Petition Nos. IV–2012–1, IV–2012–2, IV–2012–3, IV–2012–4, and IV–2012–5 (Apr. 14, 2014) at 12–13; *In the Matter of Hu Honua Bioenergy Facility*, Order on Petition No. IX–2001–1 (July 2, 2014) (*Hu Honua Order*) at 25–27; *In the Matter of EME Homer City Generation LP, et al.*, Order on Petition No. III–2012–06, III–2012–07, and III–2013–02 (July 30, 2014) at 24–25; *In the Matter of Public Service of New Hampshire Schiller Station*, Order on Petition No. VI–2014–04 (July 28, 2015) at 11–12.

The interpretation quoted from the *Nucor II Order* is based on the discussion of the demonstration burden in opinions from federal courts of appeal. These courts have recognized that the term “demonstrates” in CAA section 505(b)(2) is ambiguous and have accordingly deferred to the EPA’s interpretation. See *Wildearth Guardians v. EPA*, 728 F.3d 1075, 1081–1082 (10th Cir. 2013); *MacClarence v. EPA*, 596 F.3d 1123, 1130–1131 (9th Cir. 2010); *Sierra Club v. Johnson*, 541 F.3d 1257, 1265–1267 (11th Cir. 2008); *Citizens Against Ruining the Env’t v. EPA*, 535 F.3d 670, 677–678 (7th Cir. 2008). In so deferring, these courts have discussed the seminal Supreme Court decision, *Chevron USA, Inc. v. Natural Res. Def. Council Inc.*, 467 U.S. 837, 842–843 (1984), which provides guiding principles for judicial review of agency interpretations and determinations under statutes that the agency administers.¹¹ *Chevron* establishes a well-known two-step test: First, if the Congress has “directly spoken to the precise question at issue” both the court and the agency must “give effect to the unambiguously expressed intent of Congress.” *Chevron*, 467 U.S. at 842–843. Second, if the statute is ambiguous, courts will generally defer to the agency’s interpretation and uphold it so long as it “is based on a permissible construction of the statute.” *Id.* at 843.

Several federal courts of appeal have agreed with the EPA’s position that the term “demonstrates” in CAA section 505(b)(2) is ambiguous. *MacClarence*, 596 F.3d at 1130 (collecting cases). As one opinion pointed out, “[n]either the Clean Air Act nor its regulations define the term ‘demonstrates’ or give context to how the Administrator should make this judgment.” *Sierra Club v. Johnson*, 541 F.3d at 1266; see also *Citizens Against Ruining the Env’t*, 535 F.3d at

¹⁰Footnote 3 of the *Nucor II Order* explained: “Further, CAA section 505(b)(2) provides that ‘the Administrator may not delegate the requirements of this paragraph.’ This reflects the significance Congress attached to the decision on whether or not to object in response to a petition, and means the process requires additional time.”

¹¹The principle of deference named after this decision—*Chevron* deference—is discussed in more detail in Section IV.A of this notice.

677–678. After considering the plain meaning of the term “demonstrates” as shown by various dictionary definitions, courts have agreed that the plain meaning “does not resolve important questions that are part and parcel of the Administrator’s duty to evaluate the sufficiency of a petition, for example, the type of evidence a petitioner may present and the burden of proof guiding the Administrator’s evaluation of when a sufficient demonstration has occurred.” *Sierra Club v. Johnson*, 541 F.3d at 1266; *MacClarence*, 596 F.3d at 1131 (same). Similarly, another court observed that the Act “does not set forth any factors the EPA must take into account in determining whether a petitioner has demonstrated noncompliance under [CAA 505(b)(2)].” *Wildearth Guardians*, 728 F.3d at 1082.

This recognition of the ambiguity in CAA section 505(b)(2) leads to the conclusion that “the statute’s silence on these important issues means Congress has delegated to the EPA some discretion in determining whether, in its expert opinion, a petitioner has presented sufficient evidence to prove a permit violates clean air requirements.” *Sierra Club v. Johnson*, 541 F.3d at 1266. Accordingly, as one opinion put it, “the EPA has discretion under the statute to determine what a petition must show in order to make an adequate ‘demonstration.’” *Citizens Against Ruining the Env’t*, 535 F.3d at 678. Similarly, another court explained, “because we conclude [section 505(b)(2)] is ambiguous when it comes to defining the type of demonstration required to trigger the Administrator’s duty to object, we are willing to defer to a reasonable interpretation by the agency as to when a petitioner has sufficiently demonstrated noncompliance with PSD requirements.” *Sierra Club v. Johnson*, 541 F.3d at 1267. In so deferring to the EPA’s interpretation of the demonstration standard under CAA section 505(b)(2) some courts have noted that they need not resolve the question of the exact degree of deference to be accorded to the EPA because its “interpretation is persuasive even under [the] less deferential standard of review” under *Skidmore v. Swift*, 323 U.S. 134 (1944) and “would thus prevail under either standard.” *Wildearth Guardians*, 728 F.3d at 1082; *MacClarence*, 596 F.3d at 1131 (same).

In the context of reviewing particular applications of the demonstration burden in title V petition orders, courts have also deferred to the agency’s interpretation as to whether or not a petition had adequately demonstrated that an objection was warranted. For

example, in *MacClarence*, the petition was denied in part because it “failed to provide adequate information to support [a claim]” and made “only generalized statements . . . and did not provide adequate references, legal analysis, or evidence in support of these general assertions.” 596 F.3d at 1131 (internal marks omitted). The court found the EPA’s construction of the burden under CAA section 505(b)(2) as encompassing an expectation that a petition provide “references, legal analysis, or evidence” a reasonable interpretation, which comported with both the plain meaning of the term “demonstrates” and with CAA section 505(b)(2). *Id.* In addition, in *MacClarence*, the petitioner argued that the EPA should not have denied his petition for failing to address the permitting authority’s reasoning in the final permitting decision and documents, which differed from the draft documents and explained why the changes had been made. The court upheld the EPA’s decision, determining that it was reasonable for the EPA to expect the petitioner to address the permitting authority’s final decision. *Id.* at 1132–33. As another example of the deference that courts have accorded the EPA’s application of the demonstration standard, in the *Wildearth Guardians* case cited above, the court found reasonable the EPA’s determination that the petitioner could not rely solely on the fact that a Notice of Violation (NOV) had been previously issued to demonstrate noncompliance. *Wildearth Guardians*, 728 F.3d at 1082. The court noted that the EPA had explained that an NOV may be a relevant factor in “‘determining whether the overall information presented by Petitioner—in light of all the factors that may be relevant—demonstrates the applicability of a requirement for the purposes of title V’” but explained that other factors may also be relevant. *Id.* The EPA further explained that if the petitioner had not addressed other relevant factors, it could find that petitioner “‘failed to present sufficient information to demonstrate that the requirement is applicable.’” *Id.* Finding this interpretation of the demonstration requirement persuasive, the court deferred to it. *Id.*

3. Raising PSD Issues in a Petition

As noted earlier, many petitions raise numerous and highly complex issues around PSD permitting, a separate permitting program under the CAA. Because of the frequency with which title V petitions raise PSD claims, statements in prior petition orders regarding such claims is worth a separate mention here. In the *Meraux*

Refinery Order, *In the Matter of Meraux Refinery*, Order on Petition Number VI–2012–04 (May 29, 2015), at 3–4, the EPA stated:

Where a petitioner’s request that the Administrator object to the issuance of a title V permit is based in whole, or in part, on a permitting authority’s alleged failure to comply with the requirements of its approved PSD program (as with other allegations of noncompliance with the Act), the burden is on the petitioner to demonstrate to the Administrator that the permitting decision was not in compliance with the requirements of the Act, including the requirements of the SIP. CAA section 505(b)(2). . . . Such requirements, as the EPA has explained in describing its authority to oversee the implementation of the PSD program in states with approved programs, include the permitting authority: (1) following the required procedures in the SIP; (2) making PSD determinations on reasonable grounds properly supported on the record; and (3) describing the determinations in enforceable terms. *See, e.g., In the Matter of Wisconsin Power and Light, Columbia Generating Station*, Order on Petition No. V–2008–01 (October 8, 2009) at 8. The permitting authority for a State’s SIP-approved PSD program has substantial discretion in issuing PSD permits. Given this discretion, in reviewing a PSD permitting decision, the EPA will not substitute its own judgment for that of the State. Rather, consistent with the decision in *Alaska Dep’t of Env’t’l Conservation v. EPA*, 540 U.S. 461 (2004), in reviewing a petition to object to a title V permit raising concerns regarding a state’s PSD permitting decision, the EPA generally will look to see whether the petitioner has shown that the state did not comply with its SIP-approved regulations governing PSD permitting or whether the state’s exercise of discretion under such regulations was unreasonable or arbitrary. *See, e.g., In re Louisville Gas and Electric Company*, Order on Petition No. IV–2008–3 (Aug. 12, 2009); *In re East Kentucky Power Cooperative, Inc. Hugh L. Spurlock Generating Station*, Order on Petition No. IV–2006–4 (Aug. 30, 2007); *In re Pacific Coast Building Products, Inc.* (Order on Petition) (Dec. 10, 1999); *In re Roosevelt Regional Landfill Regional Disposal Company* (Order on Petition) (May 4, 1999).

As is indicated by the internal citations to a number of other title V orders in the *Meraux Refinery Order*, the agency has made similar statements in several previous orders over the years.

4. Raising Emissions Monitoring Issues in a Petition

Many petitions also raise issues surrounding emissions monitoring, recordkeeping and reporting in title V permits. Title V of the CAA requires permits to contain adequate emissions monitoring, recordkeeping, and reporting to assure sources’ compliance with applicable requirements. 57 FR 32250, 32251 (July 1, 1992). Because of

the frequency with which monitoring claims are raised, statements in prior petition orders regarding such claims are also worth a separate mention here. As an example, *In the Matter of the Premcor Refining Group, Inc.*, Order on Petition Number VI-2007-02 (May 28, 2009), at 7, the EPA stated:

As a general matter, permitting authorities must take three steps to satisfy the monitoring requirements in the EPA's part 70 regulations. First, a permitting authority must ensure that monitoring requirements contained in applicable requirements are properly incorporated into the title V permit. 40 CFR 70.6(a)(3)(i)(A). Second, if the applicable requirements contain no periodic monitoring, permitting authorities must add monitoring "sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit." 40 CFR 70.6(a)(3)(i)(B). Third, if the applicable requirement has associated periodic monitoring but the monitoring is not sufficient to assure compliance with permit terms and conditions, a permitting authority must supplement monitoring to assure compliance. See 40 CFR 70.6(c)(1).

5. Addressing Permitting Authority's Rationale

The EPA has previously noted that as part of the CAA section 505(b)(2) demonstration requirement, the petitioner is expected to address the permitting authority's final decision, and the permitting authority's final reasoning (including the RTC), where these documents were available during the timeframe for filing the petition. Where a permitting authority has articulated its rationale for the permit terms and conditions concerning an applicable requirement in its record (RTC and statement of basis) and the petitioner did not adequately address that rationale in its petition, the EPA has often denied the petition, at least in part, on that basis. See e.g., *In the Matter of Noranda Alumina, LLC*, Order on Petition No. VI-2011-04 (December 14, 2012) at 20-21 (denying title V petition issue where petitioners did not respond to state's explanation in response to comments or explain why the state erred or the permit was deficient); *In the Matter of Kentucky Syngas, LLC*, Order on Petition No. IV-2010-9 (June 22, 2012) at 41 (denying title V petition issue where petitioners did not acknowledge or reply to state's response to comments or provide a particularized rationale for why the state erred or the permit was deficient). Caselaw supports this interpretation. See *MacClarence*, 596 F.3d at 1132-33 (the Administrator "reasonably expected" the petitioner to challenge the state permitting

authority's explanation and reasoning for final permit).

IV. Proposed Revisions to Title V Regulations

This notice proposes several changes to part 70. Many of the proposed revisions fall within three key areas. First, regulatory language is proposed that encourages the use of the agency's electronic submittal system for title V petitions. Alternative methods for submittal are also identified in this notice. Petitioners who experience technical difficulty when attempting to submit a petition through the electronic submittal system may send it to the designated email address, while those without access to the Internet or unable to access email for other reasons may send a paper copy to the specific physical address identified in this proposal.

Second, this rule proposes mandatory petition content requirements and standard formatting for title V petitions. The EPA has identified key pieces of information that are critical when assessing claims and potential flaws in a title V permit or permit process, and these pieces are now proposed as required content for petitions and would be a new provision, 40 CFR 70.12. Under the proposed revisions, in order to demonstrate a flaw in the permit, permit record, or permit process that warrants an objection under CAA section 505(b)(2), the petition would present the required content in the same manner and order as contained in the new section of the title V regulations, 40 CFR 70.12.

A related change is proposed that would add new regulatory language to 40 CFR 70.8, which would require a petitioner to send a copy of the petition to both the permitting authority and the permit applicant. The current title V regulations do not have provisions effectuating this requirement of section 505(b)(2) of the Act. Therefore, this proposal would insert a requirement into the regulation identical to the one in the Act in order to ensure consistency with this provision of the statute.

Third, the agency proposes to require that permitting authorities respond in writing to significant comments received during the public comment period on a draft title V permit. Further, the EPA proposes regulatory language stating that this response to significant comments, often referred to as the RTC, must be sent with the proposed permit and statement of basis for the 45-day EPA review period of the proposed

permit.¹² Under the proposed revisions, the EPA 45-day review period would not commence until the proposed permit and all necessary supporting information, including the written RTC, are received. Finally, the EPA proposes to require that within 30 days of sending the proposed permit to the EPA, that permitting authorities must provide notification that the proposed permit and the response to significant public comments are available to the public. Such notice must explain how these materials may be accessed.

These proposed revisions to part 70 provide increased transparency and clarity to the title V petition preparation, submittal, review, and response processes. Improved interactions with stakeholders that participate in the title V process and more accurate tracking of petitions may also result from the establishment of the preferred petition submittal method. If finalized, the proposed rule revisions would help facilitate a more effective process for the development of title V petitions and a more efficient process for the review and response to title V petitions. Overall, the EPA is intending that these rule revisions along with other shared information will help to improve title V permits issued by permitting authorities, promote access to and provide better understanding of the title V petition process for potential petitioners, and reduce delays in decisions and support the agency's efforts to meet its obligations in responding to title V petitions.

For each of the three key areas, the agency describes the proposed regulatory changes, rationale for proposing the changes, and request for comment in the sections that follow. Before discussing each of the three key areas of this proposal, however, this notice provides some additional legal background related to these proposals.

A. Additional Legal Background for the Proposed Revisions to the Part 70 Rules

To provide context for the statutory and regulatory interpretations discussed below, the EPA first discusses some additional legal background, including principles generally applied by courts in reviewing agency interpretations.

The Supreme Court decision, *Chevron USA, Inc. v. Natural Res. Def. Council*

¹² The statement of basis is a statement that "sets forth the legal and factual basis . . . (including references to the applicable statutory or regulatory provisions)" for terms and/or conditions in a permit. 40 CFR 70.7(a)(5). Often a separate document, the statement of basis is intended to provide information to facilitate the EPA's review of permit terms and conditions and also to provide information that supports public participation in the permitting process.

Inc., 467 U.S. 837, 842–843 (1984), establishes principles that guide judicial review of agency interpretations of statutes that the agency administers. Under *Chevron* courts apply a well-known two-step test: First, if the Congress has “directly spoken to the precise question at issue” both the court and the agency must “give effect to the unambiguously expressed intent of Congress.” *Chevron*, 467 U.S. at 842–843. Second, if the statute is ambiguous, courts will generally defer to the agency’s interpretation and uphold it so long as it “is based on a permissible construction of the statute.” *Id.* at 843. At the second step of this inquiry, also referred to as “*Chevron* Step 2,” courts such as the D.C. Circuit have frequently explained that “‘*Chevron* requires that we defer to the agency’s reasonable interpretation of the term.’” *Miss. Comm’n on Env’tl. Quality v. EPA*, 790 F.3d 138, 151 (D.C. Cir. 2015) (quoting *Pennsylvania Dept. of Env’tl. Protection v. EPA*, 429 F.3d 1125, 1130 (D.C. Cir. 2005)). In other words, under *Chevron* the agency’s interpretation “‘governs if it is a reasonable interpretation of the statute—not necessarily the only possible interpretation, nor even the interpretation deemed most reasonable by the courts.’” *Entergy Corp. v. Riverkeeper, Inc.*, 556 U.S. 208, 218 (2009) (quoted in *Airlines for Am. v. Transp. Sec. Admin.*, 780 F.3d 409, 413 (D.C. Cir. 2015)).

Similarly, courts accord deference to an administrative agency’s interpretations of its own regulations under principles enunciated in *Auer v. Robbins*, 519 U.S. 452, 462–63 (1997). This type of deference is frequently referred to as *Auer* deference. When an agency’s interpretation of a regulation receives *Auer* deference, the court accepts the agency’s interpretation “unless the interpretation is plainly erroneous or inconsistent with the regulations or there is any other reason to suspect that the interpretation does not reflect the agency’s fair and considered judgment on the matter in question.” *Rural Cellular Ass’n & Universal Serv. v. FCC*, 685 F.3d 1083, 1093–1094 (D.C. Cir. 2012) (internal marks and citations omitted).

Finally, the EPA notes that administrative agencies have broad discretion to adopt procedures to discharge their obligations under the statutes they implement. In the words of the U.S. Supreme Court: “[T]he formulation of procedures [is] basically to be left within the discretion of the agencies to which Congress [has] confided the responsibility for substantive judgments.” *Vermont Yankee Nuclear Power Corp. v. Natural*

Resources Defense Council, 435 U.S. 519, 524 (1978). Later in the same case, the Court observed that “[a]bsent constitutional constraints or extremely compelling circumstances the administrative agencies should be free to fashion their own rules of procedure to pursue methods of inquiry capable of permitting them to discharge their multitudinous duties.” *Id.* at 543–544. Relatedly, courts have emphasized the inherent authority that administrative agencies have “to control the disposition of their caseload” and manage their own dockets. *See, e.g., GTE Service Corp. v. FCC*, 782 F.2d 263, 273–274 (D.C. Cir. 1986).

B. Electronic Submittal System for Petitions

1. Proposed Revisions

a. Petition Submission to the EPA

In this notice, the EPA is proposing to revise part 70 to add a new provision that would require petitions to be submitted using one of three identified methods. Among those three methods, the agency encourages petitioners to submit title V petitions through the electronic submittal system, the agency’s preferred method. The EPA has developed a title V petitions submittal system through the Central Data Exchange (CDX) and information on how to access and use the system is available at the title V petitions Web site: <http://www.epa.gov/title-v-operating-permits/title-v-petitions>. While the current submittal system was designed using CDX, the EPA recognizes that adjustments to the system or a different submittal system entirely may be needed in the future. Therefore, the title V petitions Web site will provide access to the designated electronic submittal system in use at any given time, which will remain the primary and preferred method for receiving title V petitions. The electronic submittal system allows for a direct route to the appropriate agency staff. It also provides immediate confirmation that the EPA has received the petition and any attachments.

If a petitioner experiences technical difficulties when trying to submit a petition through the electronic submittal system identified on the title V petitions Web site, the petition may also be submitted to the agency through the following email address: titleVpetitions@epa.gov. This address is being established as an alternative method for use in instances when the electronic submittal system is not available. For petitioners without access to the Internet at the time of petition submittal, this notice also announces

the establishment of one specific physical address to which all paper copies of petitions should be sent. Paper copies of all petitions unable to be sent electronically may be sent by mail or by courier to the following address: U.S. EPA, Office of Air Quality Planning and Standards, Air Quality Policy Division, Operating Permits Group Leader, 109 T.W. Alexander Dr. (C504–05), Research Triangle Park, NC 27711. Additional information on these alternative methods for submittal will also be available at the title V petitions Web site.

Although regulatory changes are being proposed to integrate these methods of submission into the part 70 rules, all three of these methods are currently available for petition submission, and petitioners may elect to use any one of them now. Furthermore, although the proposed changes to the regulatory provisions identify three possible means to submit petitions, for any particular petition, once a petition and any attachments have been successfully submitted using one method, there is no need to submit a duplicate copy via another method. The EPA requests that petitioners only submit a petition using one method, which will expedite the administrative process and improve the EPA’s efficiency in reviewing petitions. Finally, if these regulatory revisions are finalized, the agency would not be obligated to consider petitions submitted through any means other than the three identified in the rule.

b. Required Copy of the Petition to the Permitting Authority and Applicant

Section 505(b)(2) of the Act requires that the petitioner provide copies of its petition to the permitting authority and the permit applicant. This requirement does not currently appear in the part 70 rules. The EPA is proposing to revise the part 70 regulations in order to fill this gap in the regulations. Specifically, in this notice, the EPA proposes to add language to 40 CFR 70.8(d) that is identical to the statutory language.

2. Why is the EPA proposing this change?

In general, feedback from stakeholders, as well as the EPA’s experience in receiving petitions, indicate there is confusion at present as to where a petition should be submitted. While section 505(b)(2) of the CAA and 40 CFR 70.8(d) provide that any person may petition the Administrator to object within 60 days after the expiration of the EPA’s 45-day review period for the proposed permit, both the statute and the regulations are currently silent as to how a petition should be submitted to

the EPA. Because the regulations do not dictate a specific address, title V petitions have been received in a number of different offices within the agency. Most of the recent petitions have been sent to the agency through email, in some cases with a duplicate paper copy sent to a physical address somewhere within the EPA. For example, the agency has received petitions that were sent directly to a staff person in a Regional office, as well as petitions sent directly to the Administrator, either by email or courier. One complication presented by this current practice is that by sending petitions via email, attachments supplied by petitioners as supporting materials may become separated from the petition or lost entirely. In addition, and potentially because of this fact, petition attachments are frequently submitted by mail or courier, while the petition itself is submitted by email. These various submission practices require additional administrative processing within the EPA and can delay the initiation of the substantive petition review process.

One goal of this proposal is to clarify where and how title V petitions should be submitted. Another goal of this proposal is to announce the establishment of an electronic submittal system and promote its use as the preferred method for the submittal of petitions to the EPA. These proposed changes are expected to allow for more accurate tracking of petitions and to increase the agency's efficiency and effectiveness in responding to petitions by ensuring the timely receipt of petitions and any attachments in a central location.

The EPA has identified several benefits of establishing the electronic submittal system as the preferred submittal method for receiving title V petitions. For petitioners, the electronic submittal system will provide immediate confirmation to the petitioner that the petition was received by the agency. In contrast to the size limitations that can be experienced when sending title V petitions through email, petitioners will be able to see that all intended supporting materials are attached to the petition and are submitted in one entry. Thus, submitting a petition and attachments via the electronic submittal system would avoid the need to send multiple emails to transmit the entire petition package. Sending petitions through the electronic submittal system also eliminates timeliness issues from potential mishandling due to courier issues.

For the agency, there is a time savings as petitions and any attachments submitted through the electronic submittal system will be immediately and directly available to the agency. This saves administrative time otherwise spent processing the incoming petition and any attachments, especially those submitted separately from the petition. Thus, the EPA anticipates that using this system will facilitate more efficient processing for incoming petitions. Further, the electronic submittal system in its current form identifies the number of attachments a petitioner intends to submit, which can alert the EPA to any missing attachments.

More information about the electronic submittal system, including information about security concerns regarding providing personal information, uploading and/or downloading files, personally identifiable information (PII), and CBI is available at the CDX Web site: <https://cdx.epa.gov/>. If this rule is finalized and there is interest from commenters, the EPA will consider developing training webinars on the use of the electronic submittal system.

These proposed rule revisions to identify specific methods for petition submittal fall within the EPA's inherent discretion to formulate procedures to meet its obligations under CAA section 505(b)(2), as discussed in Section IV.A of this notice. In addition, the Act is silent as to the methods that should be used for title V petition submittal but imposes a 60-day deadline for granting or denying such petitions. Accordingly, these proposed changes to improve the efficiency of the EPA's initial processing of petitions and to support the agency's efforts to satisfy that obligation are based on a reasonable interpretation of CAA section 505(b)(2), including the relatively short timeframe for the EPA to grant or deny a petition.

3. Request for Comment

Comments are requested on all aspects of these proposed revisions. The EPA is also specifically soliciting comment on our proposal to add language to part 70 that identifies the electronic submittal of petitions through the agency's identified electronic submittal system as the preferred primary method for submitting a title V petition, as well as identifying two alternative methods that could be used in case of technical difficulties or by a petitioner without Internet access. Commenters are encouraged to address in their comments whether additional specification or direction is needed to ensure all stakeholders are aware and have a better understanding of the

preferred electronic submittal process. The EPA is expressly requesting comment on whether the proposed regulatory revisions are necessary, or whether the same effect could be achieved through the direction provided in this preamble and through the title V petitions Web site. Further, the EPA is requesting comment on what, if any, outreach methods or training materials (e.g., written instructions) would assist users with submitting petitions through the CDX system.

C. Required Petition Content and Format

1. Proposed Revisions

The following proposed regulatory changes are designed to assist the public with preparing their petitions, as well as to assist the EPA in its review of petitions. In this notice, the agency proposes to establish in the part 70 regulations key mandatory content requirements for title V petitions. These proposed requirements are based on statutory requirements under CAA section 505(b)(2) and aspects of the demonstration standard interpreted by the EPA in numerous title V petition orders and restated in Section III.D of this notice. By proposing to codify what has already been discussed in prior orders, the EPA aims to help all stakeholders understand the criteria that the EPA applies in reviewing a title V petition. The EPA also proposes to establish requirements to encourage similar formats for all petitions to further assist the agency in its review process.

a. Required Petition Content

The EPA is proposing to revise part 70 to require standard content that must be included in a title V petition, laying out the agency's expectations with more specificity to assist petitioners in understanding how to make their petitions complete and to enhance the EPA's ability to review and respond to them promptly. Under this proposal, a new section of the title V regulations, 40 CFR 70.12, would add the following list of required elements:

- Identification of the proposed permit on which the petition is based. The proposed permit is the version of the permit the permitting authority forwards to the EPA for the agency's 45-day review under CAA section 505(b)(1).¹³ A petition would be required to provide the permit number, version number, and/or any other information by which the permit can be

¹³ A proposed permit may be any of the following permit actions: Initial permit, renewal permit, or permit modification/revision.

readily identified. In addition, the petition must specify whether the relevant permit action is an initial issuance, renewal, or modification/revision, including minor modifications/revisions.

- Sufficient information to show that the petition was timely filed. A petition must be filed within 60 days after the expiration of the Administrator's 45-day review period, as required by section 505(b)(2) of the Act. Timeliness may be demonstrated by the electronic receipt date generated upon submittal of the petition through the agency's electronic submittal system, the date and time the emailed petition was received, or the postmark date generated for a paper copy mailed to the agency's designated physical address. It is helpful if the petition provides key dates, such as the end of the public comment period provided under 40 CFR 70.7(h), (or parallel regulations in an EPA-approved state, local or tribal title V permitting program), or the conclusion of the EPA 45-day review period for the proposed permit.

- Identification of Petition Claims. Any issue raised in the petition as grounds for an objection must be based on a claim that the permit, permit record, or permit process is not in compliance with the applicable requirements under the Act or requirements under part 70. All pertinent information in support of each issue raised as a petition claim must be included within the body of the petition. In determining whether to object, the Administrator would not consider information incorporated into the petition by reference (for example, comments offered during the public comment period on the draft permit that are incorporated by reference into the petition on the proposed permit, or, as another example, claims raised in one title V petition that are incorporated by reference into a different title V petition). However, petitions may and should still provide citations to support each petition claim (e.g., citations to caselaw, statutory and regulatory provisions, or portions of the permit record). For each claim raised, the petition would need to identify the following:

- The specific grounds for an objection, citing to a specific permit term or condition where applicable.

- The applicable requirement under the CAA or requirement under part 70 that is not met. Note that the term "applicable requirement" refers to Clean Air Act requirements only, and does not include other requirements (e.g., Endangered Species Act, Clean Water Act) to which a source may be subject.

The term "applicable requirement" of the CAA for title V purposes is defined in 40 CFR 70.2.

- An explanation of how the term or condition in the proposed permit, or relevant portion of the permit record or permit process, is not adequate to comply with the corresponding applicable requirement under the CAA or requirement under part 70.

- If the petition claims that the permitting authority did not provide for the public participation procedures required under 40 CFR 70.7(h), the petition must identify specifically the required public participation procedure that was not provided.

- Identification of where the issue in the claim was raised with reasonable specificity during the public comment period provided for in 40 CFR 70.7(h), citing to any relevant page numbers in the public comment as submitted and attaching the submitted public comment to the petition. If the grounds for the objection were not raised during the public comment period, the petitioner must demonstrate that it was impracticable to raise such objections within the period or that they arose after such a period, as required by section 505(b)(2) of the Act and 40 CFR 70.8(d).

- Unless the exception under CAA section 505(b)(2) and 40 CFR 70.8(d) discussed in the immediately preceding bullet applies, the petition must identify where the permitting authority responded to the public comment, including the specific page number(s) in the document where the response appears, and explain how the permitting authority's response to the comment is inadequate to address the claimed deficiency. If the written RTC does not address the public comment at all or if there is no RTC, the petition should state that.

In addition to including all specified content, it is important that the information provided or any analysis completed by the petitioner must also be accurate. However, including this content would not necessarily result in the Administrator granting an objection on any particular claim raised in a petition. For example, a petitioner could include all this information but not demonstrate noncompliance, or the petition might point to a specific permit term as not being adequate to comply with an air emission limit, but may not have identified the appropriate applicable requirement.

One impediment to the EPA's review process is the use of incorporation by reference of other documents, in whole or in part, into petitions. As noted earlier in this section, under "identification of petition issues" in the

new proposed mandatory content requirements, the EPA would require all pertinent information in support of each issue raised as a petition claim to be included in the body of a petition. Incorporating information into a petition by reference is inconsistent with the demonstration obligations in the statute and would extend the petition review time as the agency spends time searching for and then attempting to decipher the petitioner's intended claim. In practice, the EPA often finds that where claims have been incorporated by reference it is not clear that the specific grounds for objection have been raised by the petitioner, which could lead to the EPA denying for failure to meet the demonstration burden. Relatedly, petitioners have sometimes used incorporation by reference to include comments from a comment letter, but a comment letter alone would typically not address a state's response to the comment. *See, e.g. Nucor III Order* at 16 (noting that the "mere incorporation by reference . . . without any attempt to explain how these comments relate to an argument in the petition and without confronting [the State's] reasoning supporting the final permit is not sufficient to satisfy the petitioner's demonstration burden"). In practice, the EPA has found that the incorporation of comments by reference into a petition can lead to confusion concerning the rationale for the petitioner's arguments, as it is frequently unclear which part of the comment is incorporated, how it relates to the particular argument in the petition, and the precise intent of the incorporation. In addition, the incorporation of comments by reference increases the agency's review time, as the EPA must review more than one document to try to determine the complete argument that a petitioner is making. Therefore, the EPA is proposing to revise the regulations to state that the Administrator will not consider information incorporated by reference into a petition. However, a petition should still provide citations as needed to support its legal and factual assertions.

For further transparency and clarity, the EPA in this notice gives examples of types of information that are not necessary to include when preparing an effective petition. In doing so, the EPA hopes to ease the effort associated with preparing a petition while promoting succinctness. For example, while a petitioner needs to cite to the legal authority supporting its specific claim, a petition does not need to include pages of background or history on

aspects of the CAA. If a petitioner wishes to include additional information for an alternate purpose unrelated to the EPA's review of the specific petition claim, the EPA recommends appending this information to the petition as a separate document and identifying the purpose for which it is provided.

b. Required Petition Format

Even with all necessary information provided, a petition may still require substantial time to review because of how it is organized. Therefore, the EPA is also proposing and taking comment on format requirements. If information is presented in the same format, including the same order, in all petitions, the EPA anticipates this standard organization could reduce review time as the general location of specific details would be the same in every petition received. These proposed format requirements could also help petitioners better understand what is, and what isn't, necessary in an effective title V petition. To that end, the EPA proposes the use of a standard format following the same order as previously identified in the list of required petition content. Regulatory language to this effect is included in the proposed new provision, 40 CFR 70.12. If finalized, templates and/or guidance are planned for development for inclusion on the title V petitions Web site.

Further, the EPA is requesting input from the public on several specific questions related to potentially establishing page limits for title V petitions, as explained further in Section IV.C.4 of this notice. While the EPA has received petitions ranging from approximately 3 to 82 pages (excluding attachments), the length for most petitions is in the range of 20 to 30. The amount of detail required to successfully raise a claim and meet the demonstration standard may depend on the complexity of the issue. However, we expect that most claims could be written effectively and succinctly, as demonstrated in the example claim that follows.

2. Example Claim

The following paragraphs contain an example of a concise and effective presentation of a hypothetical single claim that would be part of a larger petition—one that includes all pieces of required content for a claim proposed in this rule. Because this is only a sample claim, not a sample petition, it does not include some of the required content that relates to the petition as a whole (such as identifying information for the proposed permit). This example is

organized following the order presented in the proposed required content changes identified previously, which is also the proposed standard format. The bullets highlight each element of the proposed content requirements.

Although EPA is providing this sample claim to illustrate how the material that would be required under the proposed regulatory revisions could be presented succinctly and effectively, the information that is needed to satisfy the demonstration burden for any given petition claim will vary depending on the specifics of the claim, the applicable requirements, and the underlying permit terms and record. The following hypothetical claim is provided solely for purposes of illustration:

- Specific Grounds for Objection, Including Citation to Permit Term

Facility X's title V permit lacks monitoring sufficient to assure compliance with the 4.5 pound per hour (lb/hr) nitrogen dioxide (NO_x) emission limitation of the approved State Implementation Plan (SIP) at 30 State Administrative Code 66.54.2. Specifically, Permit Condition I.D.26 requires that NO_x emissions from Facility X's combustion units (Units 1–6 and 11–14) cannot exceed 4.5 pounds of NO_x per hour. Permit Condition II.D.105 requires once-per-year portable analyzer monitoring for Units 1–6 and 11–14. The permit contains no other testing, monitoring, recordkeeping, or reporting requirements on these units, and contains no other monitoring that could be used to determine compliance with the 4.5 lb/hr NO_x emission limit for the units.

- Applicable Requirement or Part 70 Requirement Not Met

CAA section 504(c), and the implementing regulations in 40 CFR 70.6(c)(1) and 70.6(a)(3)(i)(B), requires all title V permits to contain monitoring requirements to assure compliance with permit terms and conditions. *See also* 30 State Administrative Code 66.55.5(b) and (c) (same requirements in state's approved title V program). The permit does not meet this requirement as explained in the following analysis.

- Inadequacy of the Permit Term

The SIP-approved NO_x limitation does not include any periodic monitoring requirements, so 40 CFR 70.6(a)(3)(i)(B) requires state agency to add periodic monitoring sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit. The monitoring added by the state in Permit Condition II.D.105 fails

to satisfy that requirement under part 70 because monitoring only once annually for the engines units is inadequate to assure compliance with an hourly emission limit.

- Public Participation Procedure Not Provided

This petition does not claim that any public participation procedures were not provided.

- Issue Raised in Public Comments

Public Group Y (Petitioners) raised this issue on page 5 of the July 31, 2015 comment letter it submitted on Facility X's July 1, 2015 draft title V permit. (*See* Public Group Y Comments at 5; Petition Exhibit A at 5.)

- Analysis of State's Response

In responding to Petitioners' comment stating that the frequency of the permit's compliance monitoring for the compressor engines' 4.5 lb/hour NO_x limit was inadequate to assure compliance with the permit term, state agency asserted that "all that the title V provisions in 30 State Administrative Code 66.55.5(b) and the parallel requirements in 40 CFR 70.6(a)(3)(i)(B) require is periodic monitoring sufficient to yield reliable data that are representative of the source's compliance with the permit. Continuous monitoring is not required." [RTC] at 8; Petition Exhibit B at 8]. The RTC states that state agency's monitoring protocol for this unit type requires "quarterly portable analyzer testing on units with catalytic converters and annual testing on units without controls." *Id.* The RTC then concludes that "[b]ecause the portable analyzer test is a short term test, it demonstrates compliance with the emission limits for that time period. Due to the steady state operation of these units, state agency believes that the portable analyzer testing along with proper operation and maintenance of the units provides reasonable demonstration of compliance with hourly NO_x and CO emission limits." *Id.* Although state agency asserts that it included NO_x monitoring in accordance with its monitoring protocols for engines, state agency's RTC does not adequately explain how the monitoring in Facility X's permit is sufficient to assure compliance with the hourly NO_x limit in Permit Condition I.D.26.

As explained, state agency is relying on the portable analyzer test results as a snapshot sampling of emissions to confirm annually whether the units continue to meet their 4.5 lb/hour NO_x limits. Between annual portable analyzer tests, state agency relies on assumptions of steady state operation

and “proper operation and maintenance of the units” to provide a “reasonable” demonstration of compliance with hourly NO_x emission limits. The RTC, however, does not identify any permit terms or conditions that require proper operation and maintenance of the units; nor does it provide an explanation (or appropriate citation to the technical discussion) of why it believes its assumptions about steady-state operations are reasonable for this equipment, or explain how such assumptions, in conjunction with an annual emissions test, constitute monitoring that demonstrates compliance with a short term limit. Accordingly, the EPA must grant the petition on this claim.

3. Why is the EPA proposing this change?

The CAA and part 70 regulations currently provide little information on what a title V petition must or should contain. In fact, the primary requirement in CAA section 505(b)(2) is that a petition (with a few identified exceptions) must be based on objections that were raised with reasonable specificity during the public comment period for the permit, and that is the only specific requirement for petition content in the relevant regulation. See CAA section 505(b)(2) and 40 CFR 70.8(d). As a result, the content and format of petitions have varied widely. In the agency's experience, many petitions fail to include key pieces of information, making it more time-consuming and resource-intensive for the EPA to assess the claim. Many petitions are also convoluted, include extraneous or irrelevant information, or fail to present the key information in a logical progression, making it difficult for the agency to ascertain the specific issue being raised. Contributing to the confusion, petitions frequently include large sections of text that appear to have been developed for other reasons and are not relevant to raising or evaluating a claim about a specific flaw in the title V permit or permitting process.

One of the EPA's desired outcomes for this proposed rule is to provide direction to petitioners that will assist them with preparing petitions. The agency anticipates receiving petitions that are both more concise and clear and that contain all the key relevant material, so that the EPA does not have to search for fundamental information or attempt to decipher the petitioner's intent. These proposed revisions are intended to facilitate a more effective petition development process and a more efficient petition review and response process, which are critical in

this context because CAA section 505(b)(2) requires the agency to grant or deny a petition within 60 days. Similarly, this tight timeframe makes it imperative that a petitioner make a clear and concise demonstration that can be efficiently evaluated. By proposing to create obligations related to the content and structure of a petition, the EPA anticipates receiving petitions that more clearly articulate the petition claim and the basis for it, focusing on key information, including the alleged deficiency in the permit or permit process; the applicable requirements under the CAA or requirements under part 70 that are in question; and where the issue was raised during the public comment period (or a demonstration as to why it was impracticable to do so or that the grounds for the objection arose after the public comment period closed), how the state responded, and why that response did not adequately address the issue.

These proposed rules are consistent with statements and conclusions that the EPA has made in previous orders responding to title V petitions. The EPA has identified and emphasized the importance of such key pieces of information in assessing petitioners' claims that a title V permit or permit process does not assure compliance with applicable requirements under the CAA or under part 70. For context, examples of some of these orders were discussed in Section III.D of this notice. The EPA is proposing to add petition content requirements that would make certain information mandatory in petitions. These requirements would help clarify for petitioners specific information that is useful or necessary to evaluate a petition claim. The EPA anticipates that these mandatory petition content requirements and standard formatting would help petitioners to succinctly focus their claims and present them effectively. The EPA anticipates that these proposed changes could also decrease the instances in which the Administrator denies a petition because the petitioner did not provide an adequate demonstration. The agency believes these changes would help petitioners to hone their claims to include the appropriate information and to realize when a claim does not meet the mandatory requirements and should not be included in the petition (e.g., the state adequately addressed the issue in its RTC).

The EPA expects the proposed revisions to require mandatory content to improve the efficiency of the agency's review process for title V petitions, as the key information would be presented

in a clear and succinct fashion. Similarly, the agency expects that the proposed revisions to require similar organization for all petitions could reduce agency review time as a result of having the specific information in the same format in every petition received. Increasing the efficiency of the review process, and more specifically reducing the time it takes to review petitions, are consistent with Congress's intent that the petition process proceed in a timely and expeditious fashion, as indicated by the 60-day time frame for the Administrator to grant or deny petitions provided in CAA section 505(b)(2). See *Citizens Against Ruining the Environment*, 535 F.3d at 678 (noting that because the limited time frame Congress gave the EPA for permit review “may not allow the EPA to fully investigate and analyze contested allegations, it is reasonable in this context for the EPA to refrain from extensive fact-finding”).

Moreover, as discussed in more detail in Section III.D of this notice, the EPA has explained in previous title V orders the importance of the demonstration burden in determining whether or not to grant an objection in response to a petition. See, e.g., *Nucor II Order* at 4–7. The Act does not dictate all the information that must be included or the format in which that information should be presented; nor does it address what kind of showing must be made in order to demonstrate that an objection is warranted. Courts have determined that the term “demonstrates” in CAA section 505(b)(2) is ambiguous and have accordingly deferred to the EPA's reasonable interpretation of that term. See, e.g., *MacClarence*, 596 F.3d at 1131 (finding the EPA's expectation that a petition provide “references, legal analysis, or evidence” a reasonable interpretation of the term “demonstrates” under CAA section 505(b)(2)). The proposed changes are aimed in part at helping petitioners ensure that they are including information in their petitions that is necessary to satisfy the demonstration burden, under the EPA's interpretation.

Furthermore, these proposed revisions to the part 70 rules related to mandatory petition content and format fall within the EPA's inherent discretion to formulate procedures to discharge its obligations under CAA section 505(b)(2), as discussed in Section IV.A of this notice. Similar procedural requirements have been established for other EPA programs and processes, including the procedures for appeals filed with the Environmental Appeals Board (EAB). See 78 FR 5281 (2013) (adopting revisions to “codify current

procedural practices, clarify existing review procedures, and simplify the permit review process”).

4. Request for Comment

Comments are requested on all aspects of these proposed revisions. The EPA is proposing changes to part 70 to include mandatory petition content and format to facilitate the efficient review of issues raised in petitions. The EPA requests comment on all aspects of the required petition content in the proposed 40 CFR 70.12, including the requirement to provide all key information, arguments, or analysis in the petition, rather than incorporating it by reference. The agency also requests comments on the proposed requirement that the petition format follow the same order as the proposed list of required content, as well as the proposed revision to the regulatory language in 40 CFR 70.8(d) that requires that copies of the petition be provided to the permitting authority and the applicant.

The EPA is also requesting comment on whether or not page limits should be established for title V petitions, as a means of promoting concise petitions and to further facilitate efficient and expeditious review of petitions by the EPA. Procedural requirements specifying the maximum length of submissions have been instituted for processes such as the EAB appeal process, where petitions and response briefs may not exceed an identified word or page limit. See 40 CFR 12419(d)(3) (limiting petitions and response briefs to either 14,000 words or alternatively, a 30-page limit). Based on the EPA's assessment of petitions received to date, most claims could be written effectively and succinctly in one or two pages. However, we recognize that some claims are more complex and could benefit from more space for an effective demonstration. If page limits were established in the final rules, petitioners would need to include the mandatory required content (if finalized) while adhering to a specified page limit. We also request comments on the following questions: if a page limit is established, what would be an adequate number of pages, excluding attachments, for a complete but concise petition? Would a page limit in the range of 15–20 or 20–30 pages be reasonable excluding attachments? What would be an adequate number of pages for a complete but concise claim? When responding to these questions, the EPA requests that commenters provide a rationale or basis for their responses.

D. Proposed Administrative Record Requirements

1. Proposed Revisions

The EPA proposes to revise 40 CFR 70.7 to require a permitting authority to respond in writing to significant comments received during the public participation process for a draft permit. The agency is proposing a regulatory revision to 40 CFR 70.8 that would require a written response to all significant comments (RTC) and the statement of basis document to be included as part of the proposed permit record that is sent to the EPA for its review under CAA section 505(b)(1).¹⁴ Finally, the EPA proposes to revise 40 CFR 70.4(b), 70.7(h), and 70.8(a) to specifically identify the statement of basis document as a necessary part of the permit record throughout the permitting process. If no significant comments are received during the public comment period, the permitting authority should prepare and submit to EPA for its 45-day review a statement to that effect.

a. Response to Comments

Under the existing 40 CFR 70.7(h)(5), a permitting authority is required to keep a record of the commenters and also of the issues raised during the public participation process so that the Administrator may fulfill the obligation under CAA section 505(b)(2) of the Act to determine whether a title V petition may be granted. This provision also requires that such records shall be available to the public. The EPA is proposing regulatory language to revise 40 CFR 70.7 to add a new requirement that a permitting authority respond in writing to significant comments from the public participation process for a draft title V permit.¹⁵ Significant comments in this context include, but are not limited to, comments that concern whether the title V permit includes terms and conditions addressing federal applicable requirements, including monitoring and related recordkeeping and reporting requirements. If no significant

¹⁴ While most permitting authorities prepare a separate RTC document, the response to significant comments may also be included within a statement of basis. Likewise, the statement of basis may be part of the title V permit, rather than a separate document. As long as there is clear indication that the RTC and statement of basis are provided along with the proposed permit, and where they can be found in the submission, the EPA will commence its 45-day review period.

¹⁵ The EPA is aware that many permitting authorities elect to respond to all comments. While the EPA is proposing to require that permitting authorities must respond to all significant comments, the Agency's proposal is not intended to discourage permitting authorities from that practice.

comments are received during the public comment period the permitting authority should prepare a statement to that effect.

b. Statement of Basis

The statement of basis document, which provides the legal and factual basis for the permit terms or conditions, is a necessary component for an effective permit review. Under the current regulations, permitting authorities are required to send this “statement of basis” to the EPA and “to any other person who requests it.” 40 CFR 70.7(a)(5). The EPA recently compiled best practices for developing and preparing statement of basis documents in the April 2014 guidance document, *Implementation Guidance on Statement of Basis Requirements Under the Clean Air Act Title V Operating Permits Program*.¹⁶ In most situations, the permitting authority makes the statement of basis document available for the public comment period on the draft permit (at least 30 days long), for the EPA's 45-day review, and during the 60-day petition period.

To address any occasions where it may be absent during the permit issuance process, the EPA now proposes to add language to the part 70 regulations that would reaffirm its importance and require its inclusion at all points in the permit review process for every permit. To that end, we are proposing that 40 CFR 70.4(b), 70.7(h) and 70.8(a) would be revised to specifically identify the statement of basis document as a required document.

c. Incorrect Reference

The EPA proposes one additional change to 40 CFR 70.4(b) to amend an incorrect reference. Specifically, the language in 40 CFR 70.4(b)(3)(viii) currently reads: “[t]he contents of a part 70 permit shall not be entitled to protection under section 115(c) of the Act.” However, section 115(c) of the Act pertains to reciprocity related to statutory provisions addressing endangerment of public health or welfare in foreign countries from air pollution emitted in the United States.

Therefore, the EPA proposes to revise the citation in 40 CFR 70.4(b)(3)(viii) to section 114(c) of the Act, which pertains to the availability of records, reports, and information to the public. This change ensures the regulations comport with the parallel provision in the section 503(e) of the CAA, which states

¹⁶ Memorandum from Stephen D. Page, Director, Office of Air Quality Planning and Standards, U.S. EPA, to Regional Air Division Directors, April 30, 2014. Available at: <https://www.epa.gov/sites/production/files/2015-08/documents/20140430.pdf>.

that: “The contents of a permit shall not be entitled to protection under section 7414(c) of this title.”

d. Commencement of EPA 45-Day Review Period

The agency considers both the statement of basis and the written RTC to be integral components of the permit record. Having access to these documents during the agency’s 45-day review period could improve the efficiency of the review, and also ensures that the agency has these critical parts of the record before it in reviewing a proposed permit under CAA section 505(b)(1). Further, it ensures that these documents are completed and available during the petition period under CAA section 505(b)(2). The EPA is proposing revisions to part 70 to require that any proposed permit that is transmitted to the agency must include both the statement of basis and written RTC among the necessary information as described in 40 CFR 70.8. The agency is proposing that the 45-day review period would not begin until all the supporting information listed in the proposed revisions to 40 CFR 70.8(a)(1)(i) has been received by the EPA. This includes the proposed permit, statement of basis, and the written RTC (or when no significant comments are received during the public comment period a statement to that effect). Finally, the EPA proposes to revise 40 CFR 70.7(h)(7) to require that within 30 days of sending the proposed permit to the EPA, that permitting authorities must provide notification that the proposed permit and the response to significant public comments are available to the public. Such notice must explain how these materials may be accessed.

The EPA recognizes that some permitting authorities run the 30-day public comment period and 45-day EPA review period concurrently, as long as no significant comments are received. Under this proposal such a practice could continue, but if a significant public comment is received, the Administrator would no longer consider the submitted permit as a proposed permit. In such instances, the permitting authority must make any necessary revisions to the permit or permit record, and per the regulations proposed in this notice, resubmit the proposed permit to EPA with the RTC and statement of basis, and any other required supporting information, with any revisions that were made to address the public comments, to re-start the EPA’s 45-day review period. This reflects the EPA’s understanding of how such concurrent permitting programs currently operate.

e. Notification to the Public

Because the petition period runs from the end of the EPA’s 45-day review period, and the date a proposed permit is received by the EPA is not always apparent, the petition deadline is not always readily apparent. To date, the agency has encouraged permitting authorities to provide notifications to the public or interested stakeholders regarding the timing of proposal of permits to the EPA, for example by making that information available either online or in the publication in which public notice of the draft permit was given. At this time, the agency is considering and requests comment on the best method for the public to be made aware of the date that a proposed permit is received by the EPA, as well as the deadline to submit a petition on a particular proposed permit. The EPA proposes to post when a proposed permit is received and the corresponding 60-day deadline for submitting a petition on the EPA Regional Office Web sites.

2. Why is the EPA proposing this change?

Section 505(a)(1)(B) of the CAA requires in relevant part that permitting authorities transmit to the Administrator each proposed permit. The current regulations contain the same requirement in 40 CFR 70.8(a)(1). Failure to submit any information necessary for the adequate review of the proposed permit is grounds for an objection. *See* 40 CFR 70.8(c)(3)(ii). Part 70 also currently requires that the permitting authority provide a statement of basis that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory and regulatory provisions). *See* 40 CFR 70.7(a)(5).

As a general matter, initial and renewed title V permits are developed by a permitting authority and then go through a public notice and comment period. The draft permit may undergo some revisions based on the public comment period and this updated version of the permit, referred to as the proposed permit, is sent to the EPA for a 45-day review period per CAA section 505(b)(1). Many permitting authorities already send a written RTC and a statement of basis along with the proposed permit for the EPA 45-day review. However, there are other permitting authorities that do not; instead this information may be provided by these permitting authorities at some point later in the permitting process. When these documents, and the RTC document in particular, are

unavailable for the EPA review period, the EPA cannot provide a fully effective review. Moreover, when these documents are unavailable to the public following the EPA’s review, potential petitioners may be missing necessary information to determine whether to submit a petition or to provide a full argument in support of any issues they may raise in a petition.

Notably, the EPA’s 45-day review period under the current rules begins when the EPA has received the proposed permit and “all necessary information” from the permitting authority. 40 CFR 70.8(c). With regard to the availability of necessary information for the agency’s 45-day review of a proposed permit, the EPA stated in the proposal to the original title V regulations that the agency believes it can object to the issuance of permit where the materials submitted by the permitting authority do not provide enough information to allow a meaningful EPA review of whether the proposed permit is in compliance with requirements of the Act (including the SIP). If the agency was not able to object under these circumstances, the EPA’s oversight rule could be severely hampered. 56 FR 21750 (1991). The EPA continues to interpret the Act in this way and provides part of the rationale for these proposed revisions to the regulations.

In reviewing title V petitions, the EPA generally pays careful attention to the permitting authority’s RTC. The EPA also explained the benefits of making the written RTC available during its 45-day review period in 2014 in the *Hu Honua Order*:

[P]roviding the entire record for a Proposed Permit at the beginning of the EPA’s 45-day review period serves to enhance the EPA’s review of the Proposed Permit by providing a fuller understanding of the permitting history and the state’s rationale for its permitting decisions. Where the entire record is available at the beginning of the 45-day review period, the EPA has the benefit of understanding the permitting history and the state’s rationale for its permitting decisions. Likewise, where the entire record is available at the beginning of the public’s 60-day window to submit petitions to the Administrator, the public has the benefit of understanding the permitting history and the state’s rationale for its permitting decisions. Providing the entire record before the start of the public’s 60-day petition period would allow the public to better assess any issues with the permit that they may have identified.

See, In the Matter of Hu Honua Bioenergy Facility, Order on Petition No. IX–2001–1 (July 2, 2014) at 30.

As noted in Section III.D.5 of this notice under general principles of

administrative law, it is incumbent upon an administrative agency to respond to significant comments raised during the public comment period. *See, e.g., Home Box Office v. FCC*, 567 F.2d 9, 35 (D.C. Cir. 1977) (“the opportunity to comment is meaningless unless the agency responds to significant points raised by the public.”) It is to the benefit of the permitting authority to respond to significant comments, as it is an opportunity to further refine the permit record and/or articulate the authority’s rationale. As the issues raised in a title V petition must generally be raised with reasonable specificity during the comment period, responding to comments gives the permitting authority a chance to address any issues that may become the basis for a petition. Generally speaking, in order to make the demonstration required under CAA 505(b)(2), a petitioner is expected to address the permitting authority’s final decision and reasoning, including any response in the RTC. *See MacClarence*, 596 F.3d at 1132–33; *see also, e.g., In the Matter of Noranda Alumina, LLC*, Order on Petition No. VI–2011–04 (December 14, 2012) at 20–21 (denying title V petition issue where petitioners did not respond to state’s explanation in response to comments or explain why the state erred or the permit was deficient); *In the Matter of Kentucky Syngas, LLC*, Order on Petition No. IV–2010–9 (June 22, 2012) at 41 (denying title V petition issue where petitioners did not acknowledge or reply to state’s response to comments or provide a particularized rationale for why the state erred or the permit was deficient). However, if the state has not responded to the comment, there is nothing for the petitioner to address. If the written RTC is not available during the petition period, it may not be clear how the petitioner would be able to address the permitting authority’s response in its petition. Similarly, if a permitting authority has not adequately articulated its rationale for a particular permitting action that rationale may not be evident to the EPA from the permit record and a petitioner may be able to easily demonstrate that the articulated rationale is inadequate to support the action. For these reasons, without the availability of the written RTC during the petition period, there may be an increased likelihood of granting a particular claim on the basis that the state provided an inadequate rationale or permit record.

While many permitting authorities submit the RTC and statement of basis with a title V proposed permit, these proposed revisions, if finalized, would

promote national consistency and the availability of the RTC document during the EPA 45-day review and the 60-day window in which a petition may be submitted on the proposed permit. This proposed requirement would allow a petitioner to better determine whether flaws in the permit, permit record, or public participation procedures raised during the public comment period had been adequately addressed. In turn, this would enhance a petitioner’s confidence in its judgment whether a title V petition is warranted, because it would have the benefit of the permitting authority’s rationale for permit terms and permit actions. Thus, it could facilitate resolution of issues earlier in the permitting process and may reduce the number of petitions or petition claims filed. Further, when properly implemented by permitting authorities, the agency anticipates that this proposed requirement would likely reduce the number of EPA determinations to grant a petition because a permitting authority’s rationale is inadequate. The EPA is proposing this regulatory change to ensure that petitioners have the opportunity to address the permitting authority’s response to comment in order to meet their demonstration burden. As such, these proposed revisions are supported by and would help implement the EPA’s interpretation in this context of the ambiguous term “demonstrate” under CAA section 505(b)(2). *See MacClarence*, 596 F.3d at 1132–33 (finding the EPA’s expectation that a petitioner challenge a permitting authority’s final reasoning as reflected in the statement of basis of the permit a reasonable interpretation of the demonstration requirement).

These proposed changes are responsive to recommendations from the CAAAC Title V Task Force Final Report. The 2006 report included a number of recommendations for implementation improvements, including specific recommendations regarding public notification and public participation in the title V process. The majority of Task Force members agreed that if a permitting authority receives comments on a draft permit, it is essential that the permitting authority prepare a written response to comments. *See Title V Task Force Final Report Recommendation 1* at page 238. The majority of Task Force members also recommended that if a permitting authority received public comments (from anyone other than the permittee) during the public comment period, the RTC described in Recommendation 1 should be provided to the EPA for

consideration during its 45-day review period. *See Title V Task Force Final Report Recommendation 2* at 239.

While the Act does not expressly require the submission of the RTC and statement of basis together with the proposed permit, it also does not preclude such a requirement or prescribe the specific materials that are needed to review a proposed permit. In light of the focus of CAA section 505(b)(2) on issues raised with reasonable specificity during the comment period, it is reasonable to interpret the Act to include a requirement that would allow the EPA and the public access to materials such as the RTC and statement of basis that would allow them to evaluate the issues raised with reasonable specificity during the comment period and the permitting authority’s response.

The agency believes these proposed revisions to the part 70 rules are within the EPA’s inherent discretion to formulate procedures to discharge its obligations under CAA sections 505(b)(1) and 505(b)(2), as discussed in Section IV.A of this notice. If finalized, it would help the EPA more efficiently review both proposed permits and title V petitions.

3. Request for Comment

Comments are requested on all aspects of these proposed revisions. Comments are specifically requested on the proposed regulatory language requiring the preparation of a written RTC. Additionally, the EPA requests comment on all aspects of the proposal to require both the written RTC and statement of basis be included in the record that is sent with the proposed title V permit for the EPA’s 45-day review. The EPA is expressly taking comment on the best method(s) for proposed permits to be made available so that the public is aware when a proposed permit is received by the EPA for its 45-day review. States are also encouraged to provide information on whether any changes to state rules and programs would be necessary if this proposed revision to part 70 were finalized. The EPA is also expressly taking comment on the practices of permitting authorities that conduct concurrent review and is particularly interested in what processes or steps should be followed to allow for concurrent review, even if the permitting authority is not aware of whether or not it will receive comment on the title V permit when that permit is initially submitted to EPA. Finally, the EPA solicits comments on the proposed regulatory language in 40 CFR 70.4, 70.7, and 70.8 requiring the

statement of basis is necessary or appropriate to ensure the document is available at all stages of the permit issuance process, or whether including it in fewer provisions would be adequate (and if so, which ones).

V. Pre- and Post-Petition Process Information/Guidance

In this section of the notice, the EPA is providing information on certain steps in the title V petition process, namely the permit issuance process that occurs before a petition is submitted, and the post-petition process, which occurs after the EPA grants an objection on at least one issue in a petition. The EPA anticipates this information will help stakeholders gain a better understanding of the role a petition might play in the development of a permit that assures compliance with applicable requirements under the CAA and part 70. Most of what follows has been addressed publicly in various formats, but the EPA believes that repeating this information here for the public's convenience will provide stakeholders with a comprehensive look at the petition opportunity in CAA section 505(b)(2) and 40 CFR 70.

A. Recommended Practices for Complete Permit Records

1. Recommended Practices for Permitting Authorities

The proposed changes in Section IV.D of this notice are intended to increase the effectiveness of the EPA 45-day review as well as ensure that the full permit record is before petitioners during the 60-day petition period. Making these documents available also provides an opportunity for a permitting authority to ensure that they have fully responded to comments when preparing the proposed permit. Permitting authorities have at least three opportunities to provide the permit record and ensure that it comports with the CAA: the draft, proposed, and final permit.

While the EPA is not requiring the following actions, the agency is recommending practices for permitting authorities when preparing title V permits. In the agency's experience, these practices can minimize the likelihood that a petition will be submitted on a title V permit. Many involve taking action at an appropriate time to ensure that the permit includes the conditions to assure compliance with applicable requirements under the CAA and part 70. In addition, many focus on consulting with the appropriate EPA Regional Office early when preparing and issuing permits.

These "recommended practices" include:

- Consulting with the appropriate EPA Regional Office as needed on key aspects of the permit before the draft permit stage, especially if the permit is expected to be highly visible or contested.
- On a case-by-case basis, considering whether a particular draft permit warrants outreach to the community.
- On a case-by-case basis, considering whether it is appropriate to provide for a public participation opportunity on a revised draft permit.
- Fully addressing significant comments on draft permits and ensuring the permit or permit record includes adequate rationale for the decisions made. For example, permitting authorities should provide sufficient rationale for selected monitoring to assure compliance. The EPA's objections based on an inadequate record most often occur when the EPA finds that a permitting authority did not sufficiently explain why the monitoring was sufficient to assure compliance with a particular limit.
- Consulting with the appropriate EPA Regional Office as needed to resolve issues related to comments on draft permits and incorporating those resolutions into the proposed permits.
- Consulting with the appropriate EPA Regional Offices as needed to resolve issues related to the EPA objections or comments on proposed permits and incorporating those resolutions into the final permits.
- For petitions on which the EPA grants an objection on a claim because the record is inadequate, revising the record and permit as necessary and in a timely manner to resolve the objection.
- Reviewing permits that are the subject of a petition and revising or reopening for cause to address any issues raised by the petition that have not been resolved.
- Posting the proposed permit and RTC online where possible.

2. Recommended Practices for Permit Applicants

The EPA is providing the following recommended practices for a source to consider to help ensure that its permit includes the conditions to assure compliance with applicable requirements under the CAA and part 70. In some cases, this may minimize the likelihood that a petition will be submitted on its title V permit. These "recommended practices" include:

- Submitting permit applications that include all information required under the approved title V permit program.
- Consulting with the permitting authority when any discrepancy or inaccuracy is identified in the permit, at any stage of the permitting process.
- Promptly providing any updates to the permit application to the permitting authority.
- If public comments identify an issue in the draft permit, contacting the permitting authority to make revisions to address the concern before the permit is proposed to the EPA.
- Timely responding to inquiries from the permitting authority at each stage in the permitting process, including the draft, proposed, and final stages.

B. Post-Petition Process

The following discussion provides information about the activities that occur, or may occur, after the EPA responds to a title V petition. Various stakeholders have indicated there can be confusion around the appropriate steps following an EPA petition order, particularly when the Administrator granted the petition in whole or in part. The summary below describes EPA's interpretation of key provisions of the CAA and implementing regulations. This interpretation has already been shared publicly in title V orders responding to petitions. *See, e.g., In the Matter of Public Service of New Hampshire Schiller Station*, Order on Petition Number VI-2014-04 (July 28, 2015) at 4; *In the Matter of Meraux Refinery*, Order on Petition Number VI-2012-04 (May 29, 2015) at 7-10. In the interest of providing additional transparency and clarity for the title V petition process, and for the public's convenience, the EPA repeats that interpretation in the following paragraphs.

When the EPA objects to a proposed permit under CAA section 505(b), section 505(b)(3) instructs that a permitting authority "may not issue the permit unless it is revised and issued" in accordance with section 505(c) of the Act. If the permit has already been issued by the permitting authority before it receives the objection, then the EPA "shall modify, terminate, or revoke" the permit, and the permitting authority may then only issue a revised permit in accordance with section 505(c) of the Act.

Under CAA section 505(c), if the permitting authority fails to submit a permit revised to meet the Administrator's objection within 90 days after the objection, the Administrator must issue or deny the

permit in accordance with the requirements under title V. Section 505(c) further provides that no objection is subject to judicial review until the Administrator takes final action to issue or deny the permit.

Neither CAA section 505(b)(3) nor section 505(c) provide express direction as to the specific procedures and steps the EPA must use to “modify, terminate, or revoke” or “issue or deny” the permit, though section 505(c) points generally to the requirements under title V. Although the Act is ambiguous, the implementing regulations shed some light on the process. Those regulations provide a state with 90 days to resolve the EPA’s objection and terminate, modify, or revoke and reissue the permit, before the EPA would need to begin to act on the permit. 40 CFR 70.8(d), 70.7(g)(4)–(5); *see also* 40 CFR 71.4(e) (the EPA will take permitting action under part 71, when, among other things, a state fails to respond to the EPA’s objection). A permitting authority may address an EPA objection by, among other things, providing the EPA with a revised permit. *See, e.g.*, 40 CFR 70.7(g)(4). In some cases, the permitting authority’s response to an EPA objection may not involve a revision to the permit terms and conditions themselves, but may instead involve revisions to the permit record. As an example, a permitting authority might opt to include additional rationale and detail to support its decision in response to the EPA’s objection if such objection was based on the grounds that the permit record does not adequately support the permitting authority’s decision. Whether the permitting authority submits revised permit terms, a revised permit record, or other revisions to the permit, the permitting authority’s response is generally treated as a new proposed permit.¹⁷

¹⁷ When the permitting authority decides to modify a permit in order to resolve an EPA objection, it must go through the appropriate procedures for that modification. For example, when the permitting authority’s response to an objection is a change to the permit terms or conditions or a revision to the permit record, the permitting authority should determine whether its response is a minor modification or a significant modification to the title V permit, as described in 40 CFR 70.7(e)(2) and (4) or the corresponding regulations in the state’s EPA-approved title V program. If the permitting authority determines that the modification is a significant modification, then the permitting authority must provide for notice and opportunity for public comment for the significant modification consistent with 40 CFR 70.7(h). In other words, EPA’s view that the state’s response to an EPA objection is a generally treated as a new proposed permit does not alter the procedures for making the changes to the permit terms or condition or permit record that are intended to resolve EPA’s objection.

As described in previous title V orders, such as the 2013 *Nucor II Order*, the EPA has generally treated the permitting authority response as a new proposed permit which is subject to the agency’s opportunity to conduct a 45-day review per CAA 505(b)(1) and 40 CFR 70.8(c), and an opportunity for a petition if the EPA does not object. As stated in the *Nucor II Order*:

[T]he EPA viewed the revised permit as providing the EPA an opportunity to object to the permit under CAA section 505(b)(1) and 40 CFR 70.8(c), and, when the EPA did not object, an opportunity for a citizen to petition the EPA to object under CAA section 505(b)(2) and 40 CFR 70.8(d). The EPA has also treated state responses to EPA objections that revised the permit record to provide further support for its decision as constituting new proposed permits subject to review by the EPA under CAA section 505(b)(1) and 40 CFR 70.8(c), and, absent an EPA objection, citizen petition under CAA section 505(b)(2) and 40 CFR 70.8(d). *See, e.g., In the Matter of KerrMcGee/Anadarko Petroleum Corp., Frederick Compressor Station*, Order on Petition VIII–2008–02, at 2–3 (Oct. 8, 2009); *In the Matter of Anadarko Petroleum Corp., Frederick Compressor Station*, Order on Petition VIII–2010–4, at 4–5 (Feb. 2, 2011). A permitting authority’s rationale for its permit terms is a fundamental component of its permit decision. Accordingly, the EPA has viewed a state response to an EPA objection that buttresses its basis for its permit decision as a new proposed permit for purposes of CAA section 505(b) and 40 CFR 70.8(c) and (d).

Nucor II Order at 14.

The EPA’s interpretation that a state’s response to an EPA objection generally triggers a new EPA review and petition opportunity is consistent with, and a reasonable interpretation of, the statutory and regulatory process for addressing objections by the EPA, as explained previously. Accordingly, at the end of the 45-day review period, if the EPA does not object, there is a 60-day window in which there is an opportunity for a second petition. If a second petition is received, the EPA must respond to the petition within 60 days under CAA section 505(b)(2).

VI. Implementation

Costs associated with this proposed rule are expected to be minimal. Much of the focus in this proposal is to codify the established practice that has been publicly discussed and evolved over time. If finalized, the revisions should impose no costs on petitioners, and may reduce confusion over and the time necessary for preparing a title V petition. The agency anticipates that a small number of permitting authorities may need to amend their rules regarding permit issuance to require responses to significant comments and the submittal

of those responses with the proposed permit that is sent to the EPA for review.

The existing part 70 regulations provide for state program revisions if part 70 is revised and the EPA determines such conforming changes are necessary. 40 CFR 70.4(a) and 70.4(i). The EPA is soliciting comment as to whether revisions to any approved state programs would be necessary if the revisions to part 70 regulations proposed in this notice are finalized. States are expressly encouraged to provide information on any changes to state rules and programs that may be necessary if the proposed revisions to 40 CFR 70.7(h) and 70.8 are finalized to require permitting authorities to respond in writing to all significant comments raised during the public participation process and to provide that response to the EPA for the agency’s 45-day review period.

VII. Proposed Determination of Nationwide Scope and Effect

Section 307(b)(1) of the CAA indicates which Federal Courts of Appeal have venue for petitions of review of final agency actions by the EPA under the CAA. This section provides, in part, that petitions for review must be filed in the U.S. Court of Appeals for the District of Columbia Circuit (i) when the agency action consists of nationally applicable regulations promulgated, or final actions taken, by the Administrator; or (ii) when such action is locally or regionally applicable, if the action is determined to be of nationwide scope or effect and the Administrator publishes such a determination. The EPA proposes to find and publish that this rule is based on a determination of nationwide scope and effect. This proposed rule concerns revisions to the EPA’s regulations in part 70 for operating permit programs, and these regulations apply to permitting programs across the country. Accordingly, we propose to determine that this is a rulemaking of nationwide scope or effect such that any petitions for review must be filed in the U.S. Court of Appeals for the District of Columbia Circuit.

VIII. Environmental Justice Considerations

This action proposes certain revisions to part 70 regulations to improve the title V petition submittal, review and response processes. The proposed revisions and guidance provided in this rule should increase the transparency and clarity of the petition process for all stakeholders. First, the establishment of centralized petition submittal is expected to reduce or eliminate

confusion over where to submit a petition. When using the preferred method of an electronic petition submittal through the agency's electronic submittal system, a petitioner will also have immediate assurance that the petition and any attachments were received. However, alternative submittal methods are still available options for members of the public that experience technical difficulties when trying to submit a petition or for those that do not have access to electronic submittal mechanisms. Second, the proposed required content and format provides instruction and clarity on what must be included in a petition. This change is anticipated to assist petitioners in providing all the critical information in their petitions in an effective manner, which may increase the agency's efficiency in responding to petitions. Third, the proposed regulatory changes would require permitting authorities to respond to public comments in a written document that is provided to the EPA for the agency's 45-day review and is available during the 60-day opportunity to file a title V petition, which will provide increased availability of information regarding permits for the public in general and petitioners specifically. Further, this change may provide more timely notification of pertinent steps and documents in the permit issuance process. Fourth, the recommended practices for permitting authorities and sources, if followed, may improve the quality of public participation and the operating permits being issued. Finally, the description of the post-petition process is anticipated to reduce confusion regarding the appropriate steps when the EPA grants a petition for an objection on a particular issue. This proposed action does not compel any specific changes to the requirements to provide opportunities for public participation in permitting nor does it finalize any particular permit action that may affect the fair treatment and meaningful involvement of all people. Further, this proposed action is responsive to some of the feedback received during the Environmental Justice in Permitting workshops the agency provided in the North Birmingham area on September 15 and 16, 2014 and other such meetings held in EPA's Region 4.

In preparation for this proposal, the agency participated in community calls where the EPA presented a brief overview and announcement of the rulemaking effort. The EPA provided additional details about a planned webinar that will describe the title V

petition process, the content of this proposal, and when and how to submit comments.

IX. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant action and was, therefore, not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action would not impose any new information collection burden under the PRA. OMB has previously approved the information collection activities contained in the existing regulations and has assigned OMB control number 2060–0243 for the title V part 70 program. To the extent that a SIP revision or a title V program revision is necessary to effect the changes being proposed, we believe that the burden is already accounted for under the approved information collection requests noted earlier.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This proposed action would not impose any requirements directly on small entities. Entities potentially affected directly by this proposal include anyone that chooses to submit a title V petition on a proposed title V permit prepared by an EPA-approved state, local or tribal title V permitting authority. Other entities directly affected may include state, local, and tribal governments and none of these governments are small governments. Other types of small entities are not directly subject to the requirements of this action.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded federal mandate of \$100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and would not significantly or uniquely affect small governments. This proposed action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effect on the states, on the relationship between the national government and the states, or on the

distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has tribal implications. However, it will neither impose substantial direct compliance costs on federally recognized tribal governments, nor preempt tribal law. The Southern Ute Indian Tribe has an EPA-approved operating permit program under 40 CFR part 70 and could be impacted. The EPA conducted outreach to the tribes through a call with the National Tribal Air Association. Further, the agency plans to offer consultation to all tribal governments, and will specifically offer to consult with the Southern Ute Indian tribe. The EPA solicits comment from affected tribal governments on the implications of this proposed rulemaking.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

The EPA interprets Executive Order 13045 as applying to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This proposed action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes the human health and environmental risk addressed by this proposed action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. The results of this evaluation are contained in Section

VIII of this notice titled, “Environmental Justice Considerations.”

K. Determination Under Section 307(d)

Section 307(d)(1)(V) of the CAA provides that the provisions of CAA section 307(d) apply to “such other actions as the administrator may determine.” Pursuant to CAA section 307(d)(1)(V), the Administrator determines that this proposed action is subject to the provisions of CAA section 307(d).

VIII. Statutory Authority

The statutory authority for this proposed action is provided by 42 U.S.C. 7401 *et seq.*

List of Subjects in 40 CFR Part 70

Environmental protection, Administrative practice and procedure, Air pollution control, Intergovernmental relations, Reporting and recordkeeping requirements.

Dated: August 15, 2016.

Gina McCarthy,
Administrator.

For the reasons stated in the preamble, title 40, Chapter I of the Code of Federal Regulations is proposed to be amended as set forth below.

PART 70—STATE OPERATING PERMIT PROGRAMS

- 1. The authority citation for the part 70 continues to read as follows:

Authority: 42 U.S.C. 7401, *et seq.*

- 2. Section 70.4 is amended by revising paragraph (b)(3)(viii) to read as follows:

§ 70.4 State program submittals and transition.

* * * * *

- (b) * * *
- (3) * * *

(viii) Make available to the public any permit application, statement of basis, compliance plan, permit, and monitoring and compliance certification report pursuant to section 503(e) of the Act, except for information entitled to confidential treatment pursuant to section 114(c) of the Act. The contents of a part 70 permit itself shall not be entitled to protection under section 114(c) of the Act.

* * * * *

- 3. Section 70.7 is amended by:
 - a. Revising paragraphs (h)(2) and (5); and
 - b. Adding paragraphs (h)(6) and (7).

The revisions and additions read as follows:

§ 70.7 Permit issuance, renewal, reopenings, and revisions.

* * * * *

(h) * * *

(2) The notice shall identify the affected facility; the name and address of the permittee; the name and address of the permitting authority processing the permit; the activity or activities involved in the permit action; the emissions change involved in any permit modification; the name, address, and telephone number of a person from whom interested persons may obtain additional information, including copies of the draft permit, statement of basis for the draft permit, the application, all relevant supporting materials, including those set forth in § 70.4(b)(3)(viii), and all other materials available to the permitting authority that are relevant to the permit decision; a brief description of the comment procedures required by this part; and the time and place of any hearing that may be held, including a statement of procedures to request a hearing (unless a hearing has already been scheduled);

* * * * *

(5) The permitting authority shall keep a record of the commenters and of the issues raised during the public participation process, as well as records of the written comments submitted during that process, so that the Administrator may fulfill his obligation under section 505(b)(2) of the Act to determine whether a citizen petition may be granted, and such records shall be available to the public.

(6) The permitting authority shall respond in writing to all significant comments raised during the public participation process, including any such written comments submitted during the public comment period and any such comments raised during any public hearing on the permit. If no significant comments are raised during the public participation process, the permitting authority shall prepare a written statement to that effect.

(7) The permitting authority shall give notice within 30 days of transmitting the proposed permit to the Administrator, consistent with the procedures under paragraph (h)(1) of this section, that the proposed permit in accordance with § 70.8(a)(1) and responses to public comments in accordance with paragraph (h)(6) of this section have been transmitted to the EPA, the date of the transmission, and that these documents are available to the public. Such notice shall explain how the public may access the proposed permit and responses to comments. When possible, such notice shall include notification in the same manner used to announce the availability of the draft permit for public comment.

- 4. Section 70.8 is amended by revising paragraphs (a)(1), (c)(1) and (d) to read as follows:

§ 70.8 Permit review by EPA and affected States.

(a) *Transmission of information to the Administrator.* (1) (i) The permit program shall require that the permitting authority provide to the Administrator a copy of each permit application (including any application for significant or minor permit modification), the statement of basis for each proposed permit and for each final permit, each proposed permit, each final permit, the written response to comments (which shall include a written response to all significant comments raised during the public participation process on the draft permit and recorded under § 70.7(h)(5), or if no significant comments are received, a statement to that effect), and an explanation of how those public comments and the permitting authority's responses are available to the public. The applicant may be required by the permitting authority to provide a copy of the permit application (including the compliance plan) directly to the Administrator. Upon agreement with the Administrator, the permitting authority may submit to the Administrator a permit application summary form and any relevant portion of the permit application and compliance plan, in place of the complete permit application and compliance plan. To the extent practicable, the preceding information shall be provided in computer-readable format compatible with EPA's national database management system. The Administrator's 45-day review period for this proposed permit will not begin until the proposed permit and all necessary supporting material required under this paragraph have been received by the EPA.

(ii) In instances where the Administrator has received a proposed permit from a permitting authority before the public participation process on the draft permit has been completed, and the permitting authority receives a significant comment on the draft permit after the submission of the proposed permit to the Administrator, the Administrator will no longer consider the submitted proposed permit as a permit proposed to be issued under section 505 of the Act. In such instances, the permitting authority must make any revisions to the permit or permit record necessary to address the public comments, including preparation or revision of the response to comment document, and must re-submit the

proposed permit and all necessary supporting material required in paragraph (a)(1)(i) of this section to the Administrator after the public comment period has closed. The Administrator's 45-day review period for this proposed permit will not begin until the proposed permit and all necessary supporting material required under paragraph (a)(1)(i) of this section have been received by the EPA.

* * * * *

(c) * * *

(1) The Administrator will object to the issuance of any proposed permit determined by the Administrator not to be in compliance with applicable requirements or requirements under this part. No permit for which an application must be transmitted to the Administrator under paragraph (a) of this section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the proposed permit and all necessary supporting information required under paragraph (a)(1) of this section.

* * * * *

(d) *Public petitions to the Administrator.* The program shall provide that, if the Administrator does not object in writing under paragraph (c) of this section, any person may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. The petitioner shall provide a copy of such petition to the permitting authority and the applicant. Any such petition shall be based only on objections to the permit that were raised with reasonable specificity during the public comment period provided for in § 70.7(h), unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this paragraph, the permitting authority shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the permitting authority has issued a permit prior to receipt of an EPA objection under this paragraph, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in § 70.7(g) (4) or (5) (i) and (ii) except in unusual circumstances, and the permitting authority may thereafter issue only a revised permit that satisfies

EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

* * * * *

■ 5. Section 70.12 is added to read as follows:

§ 70.12 Public Petition Requirements.

Standard petition requirements. Each public petition sent to the Administrator under 70.8(d) of this part shall include the following elements in the following order:

(a) *Identification of the proposed permit on which the petition is based.* The petition shall provide the permit number, version number, or any other information by which the permit can be readily identified. The petition shall specify whether the permit action is an initial permit, a permit renewal, or a permit modification/revision, including minor modifications/revisions.

(b) Sufficient information to show that the petition was timely filed.

(c) *Identification of Petition Claims.* Any issue raised in the petition as grounds for an objection shall be based on a claim that the permit, permit record, or permit process is not in compliance with applicable requirements or requirements under this part. All pertinent information in support of each issue raised as a petition claim shall be contained within the body of the petition. In determining whether to object, the Administrator will not consider arguments, assertions, claims, or other information incorporated into the petition by reference. For each claim raised, the petition shall identify the following:

(1) The specific grounds for an objection, citing to a specific permit term or condition where applicable.

(2) The applicable requirement as defined in § 70.2, or requirement under part 70, that is not met.

(3) An explanation of how the term or condition in the permit, or relevant portion of the permit record or permit process, is not adequate to comply with the corresponding applicable requirement or requirement under part 70.

(4) If the petition claims that the permitting authority did not provide for a public participation procedure required under § 70.7(h), the petition must identify specifically the required public participation procedure that was not provided.

(5) Identification of where the issue was raised with reasonable specificity during the public comment period provided for in § 70.7(h), citing to any relevant page numbers in the public comment submitted to the permitting

authority and attaching this public comment to the petition. If the grounds for the objection were not raised with reasonable specificity during the public comment period, the petitioner must demonstrate that such grounds arose after that period, or that it was impracticable to raise such objections within that period, as required under § 70.8(d).

(6) Unless the grounds for the objection arose after the public comment period or it was impracticable to raise the objection within that period such that the exception under § 70.8(d) applies, the petition must identify where the permitting authority responded to the public comment, including page number(s) in the publicly available written response to comment, and explain how the permitting authority's response to the comment is inadequate to address the issue raised in the public comment. If the response to comment document does not address the public comment at all, the petition shall state that.

■ 6. Section 70.13 is added to read as follows:

§ 70.13 Documents that May be Considered in Reviewing Petitions.

The information that the Administrator considers in making a determination whether to grant or deny a petition submitted under § 70.8(d) on a proposed permit generally includes, but is not limited to, the Administrative Record for the proposed permit and the petition, including attachments to the Petition. For purposes of this paragraph, the Administrative Record for a particular proposed permit includes the draft and proposed permits; any permit applications that relate to the draft or proposed permits; the statement of bases for the draft and proposed permits; the permitting authority's written responses to comments, including responses to all significant comments raised during the public participation process on the draft permit; relevant supporting materials made available to the public according to § 70.7(h)(2); and all other materials available to the permitting authority that are relevant to the permitting decision and that the permitting authority made available to the public according to § 70.7(h)(2). If a final permit and a statement of basis for the final permit are available during the agency's review of a petition on a proposed permit, those documents may also be considered as part of making a determination whether to grant or deny the petition.

■ 7. Section 70.14 is added to read as follows:

§ 70.14 Submission of Petitions.

Any petition to the Administrator shall be submitted through the Operating Permits Group in the Air Quality Policy Division in the Office of Air Quality Planning and Standards, using one of the three following methods identified at the Title V Petitions Web site: An electronic submission through the EPA's designated submission system (the agency's preferred method); an electronic submission through the EPA's designated email address listed on that Web site; or a paper submission to the EPA's designated physical address listed on that Web site. Any necessary attachments shall be submitted together with the petition, using the same method as for the petition. Once a petition has been successfully submitted using one of these three methods, the petitioner should not submit additional copies of the petition using another method. The Administrator is not obligated to consider petitions submitted to the agency using any method other than the three identified in this paragraph.

[FR Doc. 2016-20029 Filed 8-23-16; 8:45 am]

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 721

[EPA-HQ-OPPT-2016-0491; FRL-9951-06]

RIN 2070-AB27

Significant New Use Rule on Certain Chemical Substances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing significant new use rules (SNURs) under the Toxic Substances Control Act (TSCA) for two chemical substances which were the subject of premanufacture notices (PMNs). This action would require persons who intend to manufacture (defined by statute to include import) or process any of the chemical substances for an activity that is designated as a significant new use by this proposed rule to notify EPA at least 90 days before commencing that activity. The required notification initiates EPA's evaluation of the intended use within the applicable review period. Manufacture and processing for the significant new use is unable to commence until EPA has conducted a review of the notice, made an appropriate determination on the notice, and taken such actions as are

required in association with that determination.

DATES: Comments must be received on or before September 23, 2016.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPPT-2016-0491, by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* Document Control Office (7407M), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

For technical information contact: Kenneth Moss, Chemical Control Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (202) 564-9232; email address: moss.kenneth@epa.gov.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you manufacture, process, or use the chemical substances contained in this proposed rule. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

Manufacturers (including importers) or processors of one or more subject chemical substances (NAICS codes 325 and 324110), e.g., chemical manufacturing and petroleum refineries.

This action may also affect certain entities through pre-existing import

certification and export notification rules under TSCA. Chemical importers are subject to the TSCA section 13 (15 U.S.C. 2612) import certification requirements promulgated at 19 CFR 12.118 through 12.127 and 19 CFR 127.28. Chemical importers must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA. Importers of chemicals subject to these SNURs must certify their compliance with the SNUR requirements. The EPA policy in support of import certification appears at 40 CFR part 707, subpart B. In addition, any persons who export or intend to export a chemical substance that is the subject of this proposed rule on or after September 23, 2016 are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)) (see § 721.20), and must comply with the export notification requirements in 40 CFR part 707, subpart D.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through [regulations.gov](http://www.regulations.gov) or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at <http://www.epa.gov/dockets/comments.html>.

II. Background

A. What action is the agency taking?

EPA is proposing these SNURs under TSCA section 5(a)(2) for two chemical substances which were the subject of PMNs P-14-321 and P-14-323. These SNURs would require persons who intend to manufacture or process any of these chemical substances for an activity that is designated as a significant new use to notify EPA at least 90 days before commencing that activity.

B. What is the agency's authority for taking this action?

Section 5(a)(2) of TSCA (15 U.S.C. 2604(a)(2)) authorizes EPA to determine that a use of a chemical substance is a "significant new use." EPA must make this determination by rule after considering all relevant factors, including the four bulleted TSCA section 5(a)(2) factors listed in Unit III. Once EPA determines that a use of a chemical substance is a significant new use, TSCA section 5(a)(1)(B) requires persons to submit a significant new use notice (SNUN) to EPA at least 90 days before they manufacture or process the chemical substance for that use (15 U.S.C. 2604(a)(1)(B)(i)). TSCA furthermore prohibits such manufacturing or processing from commencing until EPA has conducted a review of the notice, made an appropriate determination on the notice, and taken such actions as are required in association with that determination (15 U.S.C. 2604(a)(1)(B)(ii)). As described in Unit V., the general SNUR provisions are found at 40 CFR part 721, subpart A.

C. Applicability of General Provisions

General provisions for SNURs appear in 40 CFR part 721, subpart A. These provisions describe persons subject to the rule, recordkeeping requirements, exemptions to reporting requirements, and applicability of the rule to uses occurring before the effective date of the final rule. Provisions relating to user fees appear at 40 CFR part 700. According to § 721.1(c), persons subject to these SNURs must comply with the same SNUN requirements and EPA regulatory procedures as submitters of PMNs under TSCA section 5(a)(1)(A). In particular, these requirements include the information submission requirements of TSCA section 5(b) and 5(d)(1), the exemptions authorized by TSCA section 5(h)(1), (h)(2), (h)(3), and (h)(5), and the regulations at 40 CFR part 720. Once EPA receives a SNUN, EPA must either determine that the significant new use is not likely to present an unreasonable risk of injury or take such regulatory action as is associated with an alternative determination before the manufacture or processing for the significant new use can commence. If EPA determines that the significant new use is not likely to present an unreasonable risk, EPA is required under TSCA section 5(g) to make public, and submit for publication in the **Federal Register**, a statement of EPA's findings.

III. Significant New Use Determination

Section 5(a)(2) of TSCA states that EPA's determination that a use of a chemical substance is a significant new use must be made after consideration of all relevant factors, including:

- The projected volume of manufacturing and processing of a chemical substance.
- The extent to which a use changes the type or form of exposure of human beings or the environment to a chemical substance.
- The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance.
- The reasonably anticipated manner and methods of manufacturing, processing, distribution in commerce, and disposal of a chemical substance.

In addition to these factors enumerated in TSCA section 5(a)(2), the statute authorized EPA to consider any other relevant factors.

To determine what would constitute a significant new use for the chemical substances that are the subject of these SNURs, EPA considered relevant information about the toxicity of the chemical substances, likely human exposures and environmental releases associated with possible uses, and the four bulleted TSCA section 5(a)(2) factors listed in this unit.

IV. Substances Subject to This Proposed Rule

EPA is proposing significant new use and recordkeeping requirements for two chemical substances in 40 CFR part 721, subpart E. In this unit, EPA provides the following information for each chemical substance:

- PMN number.
- Chemical name (generic name, if the specific name is claimed as CBI).
- Chemical Abstracts Service (CAS) Registry number (assigned for non-confidential chemical identities).
- Tests recommended by EPA to provide sufficient information to evaluate the chemical substance (see Unit VII. for more information).
- CFR citation assigned in the regulatory text section of this proposed rule.

The regulatory text section of this proposed rule specifies the activities designated as significant new uses. Certain new uses, including production volume limits (*i.e.*, limits on manufacture volume) and other uses designated in this proposed rule, may be claimed as CBI.

PMN Number P-14-321 and P-14-323

Chemical name:

Hydrochlorofluoropropane and Hydrochlorofluoropropene (generic).

CAS number: Claimed confidential.

Effective date of TSCA section 5(e) consent order: August 12, 2016.

Basis for TSCA section 5(e) consent order: The PMN states that the generic (non-confidential) use of the substances will be as site-limited, isolated and recycled intermediates. Based on test data on the PMN substances, EPA identified concerns for acute toxicity including lethality to animals. The Order was issued under TSCA section 5(a)(3)(B)(ii)(I) based on a finding that the substance may present an unreasonable risk of injury to human health. To protect against these risks, the consent order requires:

1. Submission of certain toxicity testing on the PMN substances prior to exceeding the time trigger specified in the consent order of the PMN substances.
2. Use of impervious gloves and protective clothing where dermal exposure is reasonably likely for workers.
3. Use of respirators with an APF of 1000, in conjunction with a minimum set of engineering controls to prevent inhalation exposure for workers, or, as an alternative to using respirators, maintain workplace airborne concentrations of the PMN substances at or below a specified New Chemical Exposure Limit (NCEL) of 130 parts per million (ppm) for P-14-321 and 33 parts per billion (ppb) for P-14-323 as an 8-hour time-weighted average, where inhalation exposure is reasonably likely for workers.
4. Use of engineering controls to limit worker exposure and air release of the PMN substances to the environment.
5. Label containers of the PMN substances and provide Safety Data Sheets and worker training.
6. Manufacture, process and use the PMN substances only in an enclosed process.
7. Use of the PMN substances only as chemical intermediates.
8. No predictable or purposeful release of the PMN substances from manufacturing, processing or use into the waters of the United States that result in surface water concentrations exceeding 8 ppb.
9. Prohibition on the distribution of the PMN substances.

The SNUR designates as a "significant new use" the absence of these protective measures.

Recommended testing: EPA has determined that the results of a subacute

inhalation toxicity: 28-day study (OECD Test Guideline 412) in three species: Mouse, rat, and rabbit (6 studies total) and a combined repeated dose toxicity study with the reproduction/developmental toxicity screening test (OECD Test Guideline 422) would help characterize the human health effects of the PMN substances. The submitter has agreed to complete this testing by the production limits identified in the consent order.

V. Rationale and Objectives of the Proposed Rule

A. Rationale

During review of the PMNs submitted for the chemical substances that are subject to these SNURs, EPA concluded that regulation was warranted under TSCA section 5(e), pending the development of information sufficient to make reasoned evaluations of the health or environmental effects of the chemical substances. The basis for such findings is outlined in Unit IV. Based on these findings, TSCA section 5(e) consent orders requiring the use of appropriate exposure controls were negotiated with the PMN submitters. The SNUR provisions for these chemical substances are consistent with the provisions of the TSCA section 5(e) consent orders. These SNURs are promulgated pursuant to § 721.160 (see Unit VI.).

B. Objectives

EPA is proposing these SNURs for specific chemical substances which have undergone premanufacture review because the Agency wants to achieve the following objectives with regard to the significant new uses designated in this proposed rule:

- EPA would receive notice of any person's intent to manufacture or process a listed chemical substance for the described significant new use before that activity begins.
- EPA would have an opportunity to review and evaluate data submitted in a SNUN before the notice submitter begins manufacturing or processing a listed chemical substance for the described significant new use.
- EPA would be able to either determine that the prospective manufacture or processing is not likely to present an unreasonable risk, or to take necessary regulatory action associated with any other determination, before the described significant new use of the chemical substance occurs.

Issuance of a SNUR for a chemical substance does not signify that the chemical substance is listed on the

TSCA Chemical Substance Inventory (TSCA Inventory). Guidance on how to determine if a chemical substance is on the TSCA Inventory is available on the Internet at <https://www.epa.gov/tscainventory>.

VI. Applicability of the Proposed Rule to Uses Occurring Before the Effective Date of the Final Rule

To establish a significant new use, EPA must determine that the use is not ongoing. The chemical substances subject to this proposed rule have undergone premanufacture review. In cases where EPA has not received a notice of commencement (NOC) and the chemical substance has not been added to the TSCA Inventory, no person may commence such activities without first submitting a PMN. Therefore, for chemical substances for which an NOC has not been submitted EPA concludes that the designated significant new uses are not ongoing.

When chemical substances identified in this proposed rule are added to the TSCA Inventory, EPA recognizes that, before the rule is effective, other persons might engage in a use that has been identified as a significant new use. The identities of the two chemical substances subject to this proposed rule have been claimed as confidential and EPA has received no post-PMN *bona fide* submissions (per §§ 720.25 and 721.11). Based on this, the Agency believes that it is highly unlikely that any of the significant new uses described in the regulatory text of this proposed rule are ongoing.

Therefore, EPA designates August 15, 2016 (the date of public release/web posting of this proposal) as the cutoff date for determining whether the new use is ongoing. This designation varies slightly from EPA's past practice of designating the date of **Federal Register** publication as the date for making this determination. The objective of EPA's approach has been to ensure that a person could not defeat a SNUR by initiating a significant new use before the effective date of the final rule. In developing this proposal, EPA has recognized that, given EPA's practice of now posting proposed rules on its Web site a week or more in advance of **Federal Register** publication, this objective could be thwarted even before that publication. Thus, EPA has slightly modified its approach in this rulemaking and plans to follow this modified approach in future significant new use rulemakings.

Persons who begin commercial manufacture or processing of the chemical substances for a significant new use identified as of August 15, 2016

would have to cease any such activity upon the effective date of the final rule. To resume their activities, these persons would have to first comply with all applicable SNUR notification requirements and wait until all TSCA prerequisites for the commencement of manufacture or processing have been satisfied. If such a person met the conditions of advance compliance under § 721.45(h), the person would be considered exempt from the requirements of the SNUR. Consult the **Federal Register** document of April 24, 1990 (55 FR 17376) for a more detailed discussion of the cutoff date for ongoing uses.

VII. Test Data and Other Information

EPA recognizes that TSCA section 5 does not require developing new information (e.g., generating test data) before submission of a SNUN. There is an exception:

1. Development of test data is required where the chemical substance subject to the SNUR is also subject to a test rule, order, or consent agreement under TSCA section 4 (see TSCA section 5(b)(1)).

2. Development of test data may be necessary where the chemical substance has been listed under TSCA section 5(b)(4) (see TSCA section 5(b)(2)).

In the absence of a test rule, order, or consent agreement under TSCA section 4 covering the chemical substance, persons are required only to submit information in their possession or control and to describe any other information known to or reasonably ascertainable by them (see 40 CFR 720.50). However, upon review of PMNs and SNUNs, the Agency has the authority to require appropriate testing. Descriptions of tests are provided for informational purposes. EPA strongly encourages persons, before performing any testing, to consult with the Agency pertaining to protocol selection. To access the OCSPP test guidelines referenced in this document electronically, please go to <http://www.epa.gov/ocspp> and select "Test Guidelines for Pesticides and Toxic Substances."

The recommended tests specified in Unit IV. may not be the only means of addressing the potential risks of the chemical substance. However, submitting a SNUN that does not itself include information sufficient to permit a reasoned evaluation may increase the likelihood that EPA will either respond with a determination that the information available to the Agency is insufficient to permit a reasoned evaluation of the health and environmental effects of the significant

new use or, alternatively, that in the absence of sufficient information, the manufacture, processing, distribution in commerce, use, or disposal of the chemical substance may present an unreasonable risk of injury.

SNUN submitters should be aware that EPA will be better able to evaluate SNUNs and define the terms of any potentially necessary controls if the submitter provides detailed information on:

- Human exposure and environmental release that may result from the significant new use of the chemical substances.
- Potential benefits of the chemical substances.
- Information on risks posed by the chemical substances compared to risks posed by potential substitutes.

VIII. SNUN Submissions

EPA recommends that submitters consult with the Agency prior to submitting a SNUN to discuss what information may be useful in evaluating a significant new use. Discussions with the Agency prior to submission can afford ample time to conduct any tests that might be helpful in evaluating risks posed by the substance. According to § 721.1(c), persons submitting a SNUN must comply with the same notification requirements and EPA regulatory procedures as persons submitting a PMN, including submission of test data on health and environmental effects as described in 40 CFR 720.50. SNUNs must be submitted on EPA Form No. 7710–25, generated using e-PMN software, and submitted to the Agency in accordance with the procedures set forth in 40 CFR 720.40 and 721.25. E-PMN software is available electronically at <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca/how-submit-e-pmn>.

IX. Scientific Standards, Evidence, and Available Information

EPA has used scientific information, technical procedures, measures, methods, protocols, methodologies, and models consistent with the risk assessment documents included in the public docket.

The clarity and completeness of the data, assumptions, methods, quality assurance, and analyses employed in EPA's decision are documented, as applicable and to the extent necessary for purposes of this proposed significant new use rule, in Unit II and in the documents noted above. EPA recognizes, based on the available information, that there is variability and uncertainty in whether any particular significant new use would actually

present an unreasonable risk. For precisely this reason, it is appropriate to secure a future notice and review process for these uses, at such time as they are known more definitely. The extent to which the various information, procedures, measures, methods, protocols, methodologies or models used in EPA's decision have been subject to independent verification or peer review is adequate to justify their use, collectively, in the record for a significant new use rule.

X. Economic Analysis

EPA has evaluated the potential costs of establishing SNUN requirements for potential manufacturers and processors of the chemical substances subject to this proposed rule, during the development of the direct final rule. EPA's complete economic analysis is available in the docket under docket ID number EPA–HQ–OPPT–2016–0491.

XI. Statutory and Executive Order Reviews

A. Executive Order 12866

This proposed rule would establish SNURs for two chemical substances that were the subject of PMNs. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “*Regulatory Planning and Review*” (58 FR 51735, October 4, 1993).

B. Paperwork Reduction Act (PRA)

According to PRA (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related collection instrument or form, if applicable.

The information collection requirements related to this proposed rule have already been approved by OMB pursuant to PRA under OMB control number 2070–0012 (EPA ICR No. 574). This proposed rule would not impose any burden requiring additional OMB approval. If an entity were to submit a SNUN to the Agency, the annual burden is estimated to average between 30 and 170 hours per response. This burden estimate includes the time needed to review instructions, search existing data sources, gather and maintain the data needed, and

complete, review, and submit the required SNUN.

Send any comments about the accuracy of the burden estimate, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques, to the Director, Collection Strategies Division, Office of Environmental Information (2822T), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001. Please remember to include the OMB control number in any correspondence, but do not submit any completed forms to this address.

C. Regulatory Flexibility Act (RFA)

On February 18, 2012, EPA certified pursuant to RFA section 605(b) (5 U.S.C. 601 *et seq.*), that promulgation of a SNUR does not have a significant economic impact on a substantial number of small entities where the following are true:

1. A significant number of SNUNs would not be submitted by small entities in response to the SNUR.
2. The SNUR submitted by any small entity would not cost significantly more than \$8,300.

A copy of that certification is available in the docket for this proposed rule.

This proposed rule is within the scope of the February 18, 2012 certification. Based on the Economic Analysis discussed in Unit IX, and EPA's experience promulgating SNURs (discussed in the certification), EPA believes that the following are true:

- A significant number of SNUNs would not be submitted by small entities in response to the SNUR.
- Submission of the SNUN would not cost any small entity significantly more than \$8,300.

Therefore, the promulgation of the SNUR would not have a significant economic impact on a substantial number of small entities.

D. Unfunded Mandates Reform Act (UMRA)

Based on EPA's experience with proposing and finalizing SNURs, State, local, and Tribal governments have not been impacted by these rulemakings, and EPA does not have any reasons to believe that any State, local, or Tribal government would be impacted by this proposed rule. As such, EPA has determined that this proposed rule would not impose any enforceable duty, contain any unfunded mandate, or otherwise have any effect on small governments subject to the requirements of UMRA sections 202, 203, 204, or 205 (2 U.S.C. 1501 *et seq.*).

E. Executive Order 13132

This proposed rule would not have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132, entitled "Federalism" (64 FR 43255, August 10, 1999).

F. Executive Order 13175

This proposed rule would not have Tribal implications because it is not expected to have substantial direct effects on Indian Tribes. This proposed rule would not significantly nor uniquely affect the communities of Indian Tribal governments, nor would it involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of Executive Order 13175, entitled "Consultation and Coordination with Indian Tribal Governments" (65 FR 67249, November 9, 2000), do not apply to this proposed rule.

G. Executive Order 13045

This proposed rule is not subject to Executive Order 13045, entitled "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997), because this is not an economically significant regulatory action as defined by Executive Order 12866, and this proposed rule does not address environmental health or safety risks disproportionately affecting children.

H. Executive Order 13211

This proposed rule is not subject to Executive Order 13211, entitled "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use" (66 FR 28355, May 22, 2001), because this proposed rule is not expected to affect energy supply, distribution, or use and because this proposed rule is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

In addition, since this proposed rule would not involve any technical standards, NTTAA section 12(d) (15 U.S.C. 272 note), would not apply to this proposed rule.

J. Executive Order 12898

This proposed rule does not entail special considerations of environmental justice related issues as delineated by Executive Order 12898, entitled "Federal Actions to Address Environmental Justice in Minority

Populations and Low-Income Populations" (59 FR 7629, February 16, 1994).

List of Subjects in 40 CFR Part 721

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Dated: August 15, 2016.

Maria J. Doa,

Director, Chemical Control Division, Office of Pollution Prevention and Toxics.

Therefore, it is proposed that 40 CFR chapter I be amended as follows:

PART 721—SIGNIFICANT NEW USES OF CHEMICAL SUBSTANCES

■ 1. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

■ 2. Add § 721.10926 to subpart E to read as follows:

§ 721.10926 Hydrochlorofluoropropane and Hydrochlorofluoropropene (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substances identified generically as hydrochlorofluoropropane and hydrochlorofluoropropene (generic) (PMNs P-14-321 and P-14-323) are subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (a)(2)(i), (a)(3), (a)(4), (a)(6)(v), (a)(6)(vi), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. The following National Institute for Occupational Safety and Health (NIOSH)-certified respirators with an Assigned Protection Factor (APF) of at least 1000 meet the requirements of § 721.63(a)(4):

(A) Any NIOSH-certified powered air purifying full facepiece respirator equipped with appropriate gas/vapor (acid gas, organic vapor, or substance specific) cartridges.

(B) Any NIOSH-certified powered air-purifying respirator equipped with a hood or helmet and appropriate gas/vapor (acid gas, organic vapor, or substance specific) cartridges with evidence demonstrating protection level

of 1,000 or greater. (Note: OSHA has assigned APFs of 1000 for certain types of hoods and helmets with powered air purifying respirators (PAPRs) or supplied air respirators (SARs) where the manufacturer can demonstrate adequate air flows to maintain positive pressure inside the hood or helmet in normal working conditions. However, the employer must have evidence provided by the respirator manufacturer that the testing of these respirators demonstrates performance at a level of protection of 1,000 or greater to receive an APF of 1,000. This level of performance can best be demonstrated by performing a Workplace Protection Factor (WPF) or Simulated Workplace Protection Factor (SWPF) study or equivalent testing. Without testing data that demonstrates a level of protection of 1,000 or greater, all PAPRs and SARs with helmets/hoods are to be treated as loose-fitting facepiece respirators, and receive an APF of 25.)

(C) Any NIOSH-certified continuous flow supplied-air respirator equipped with a full facepiece.

(D) Any NIOSH-certified continuous flow supplied-air respirator equipped with a hood or helmet with evidence demonstrating protection level of 1,000 or greater. (See Note under (II), above)

(E) Any NIOSH-certified pressure-demand or other positive pressure mode supplied-air respirator equipped with a full facepiece.

(1) As an alternative to the respiratory requirements listed here, a manufacturer or processor may choose to follow the New Chemical Exposure Limit (NCEL) provisions listed in the TSCA section 5(e) consent order for this substance. The NCEL is 130 parts per million for P-14-321 and 33 parts per billion for P-14-323 as an 8-hour time weighted average (TWA) verified by actual monitoring data.

(ii) *Hazard communication program.* Requirements as specified in § 721.72(a), (b), (c), (d), (f), (g)(1)(i), (g)(1)(fatal if inhaled), (g)(2)(ii), (g)(2)(iv), (g)(2)(v), and (g)(2)(do not release to water).

(ii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(a) and (g). It is a significant new use to manufacture, process, or use the PMN substances without the engineering controls described in the consent order to prevent worker and environmental exposures. It is a significant new use to manufacture the PMN substances for more than one year.

(iii) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4) (N=8).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph.

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125 (a), (b), (c), (d), (e), (f), (g), (h), (i), and (k) are applicable to manufacturers and processors of this substance.

(2) *Limitations or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

[FR Doc. 2016-20310 Filed 8-23-16; 8:45 am]

BILLING CODE 6560-50-P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 64

[CG Docket Nos. 10-51 and 03-123; DA 16-893]

Structure and Practices of the Video Relay Service Program

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Consumer and Governmental Affairs Bureau (CGB or Bureau) of the Federal Communications Commission (FCC or Commission), pursuant to a delegation of authority, proposes to incorporate into the Commission's rules the Video Relay Service (VRS) interoperability and portability standards developed by the VRS Task Group of the Session Initiation Protocol (SIP) Forum and a successor group, the Relay User Equipment (RUE) Forum.

DATES: Comments are due on or before September 14, 2016.

ADDRESSES: You may submit comments, identified by CG Docket Nos. 10-51 and 03-123, by any of the following methods:

- *Electronic Filers:* Comments may be filed electronically using the Internet by accessing the Commission's Electronic Comment Filing System (ECFS): <http://apps.fcc.gov/ecfs/>. Filers should follow the instructions provided on the Commission's Web site for submitting comments. For ECFS filers, in completing the transmittal screens, filers should include their full name, U.S. Postal Service mailing address, and CG Docket Nos. 10-51 and 03-123.

- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for

each additional docket or rulemaking number. Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St. SW., Room TW-A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of before entering the building.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.

U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Eliot Greenwald, Consumer and Governmental Affairs Bureau, at phone: (202) 418-2235 or email:

Eliot.Greenwald@fcc.gov, or Robert Aldrich, Consumer and Governmental Affairs Bureau, at phone (202) 418-0996 or email: Robert.Aldrich@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Further Notice of Proposed Rulemaking (*Further Notice*), document DA 16-893, adopted on August 4, 2016, and released on August 4, 2016. The full text of this document is available for public inspection and copying via ECFS, and during regular business hours at the FCC Reference Information Center, Portals II, 445 12th Street SW., Room CY-A257, Washington, DC 20554. This document can also be downloaded in Word or Portable Document Format (PDF) at: <https://www.fcc.gov/general/disability-rights-office-headlines>. The proceeding initiated by the Further Notice shall be treated as a "permit-but-disclose" proceeding in accordance with the Commission's *ex parte* rules. 47 CFR 1.1200 *et seq.* Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons

attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with 47 CFR 1.1206(b). In proceedings governed by 47 CFR 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (e.g., .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to fcc504@fcc.gov or call the Consumer and Governmental Affairs Bureau at (202) 418-0530 (voice), (844) 432-2275 (videophone), or (202) 418-0432 (TTY).

Initial Paperwork Reduction Act of 1995 Analysis

The Further Notice does not contain proposed information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104-13. In addition, therefore, it does not contain any proposed information collection burden for small business concerns with fewer than 25 employees, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, *see* 44 U.S.C. 3506(c)(4).

Synopsis

1. In 2013, the Commission amended its rules to improve the effectiveness of its interoperability and portability rules for video relay service (VRS), in order to improve functional equivalence and VRS availability for consumers, ease of compliance by providers, and overall efficiency in the operation of the

telecommunications (TRS) program. The Commission directed Commission staff to support and participate in the ongoing Session Initiation Protocol (SIP) Forum's VRS Task Group process in order to ensure the timely development of such consensus standards. *Structure and Practices of the Video Relay Service Program; Telecommunications Relay Services and Speech-to-Speech Services for Individuals With Hearing and Speech Disabilities*, published at 78 FR 40582, July 5, 2013 (*VRS Reform Order*).

2. The Further Notice, issued by CGB pursuant to a delegation of authority in the *VRS Reform Order*, proposes to incorporate by reference into the Commission's VRS interoperability rule the interoperability and portability standards produced by the VRS Task Group of the SIP Forum and a successor group, the Relay User Equipment (RUE) Forum, along with a process that will readily enable revisions to this rule to reflect future amendments or changes in these standards. In addition, this document proposes guidance on implementation of the standards, including the need for a transition period for existing VRS access technologies to achieve interoperability and portability.

3. Since 2006, the Commission has required VRS providers to (i) allow VRS users to make and receive calls through any VRS provider, and to choose a different default provider, without changing the VRS access technology they use to place calls, and (ii) ensure that VRS users can make point-to-point calls to all other VRS users, irrespective of the default provider of the calling and called party. Providers also must ensure that videophone equipment that they distribute retains certain features when a user ports his or her ten-digit VRS number to a new default provider. 47 CFR 64.611(e); *VRS Reform Order*.

4. In order to improve the effectiveness of these interoperability and portability requirements, the Commission delegated "to the Chief of CGB, after consultation with the CTO [Chief Technology Officer] and the Chief of OET [Office of Engineering and Technology], the authority to conduct rulemaking proceedings to incorporate into the Commission's rules by reference any interoperability and portability standards developed under the auspices of the SIP Forum, now or in future, or such other voluntary, consensus standard organization as may be formed to address these issues." *VRS Reform Order*. The *VRS Reform Order* further provided: "Recognizing that the scope of the SIP Forum VRS Task Group charter extends beyond the Commission's current mandatory

minimum standards, the Commission also delegates to Chief of CGB, after consultation with the CTO and the Chief of OET, the authority to conduct rulemaking proceedings to incorporate into the Commission's rules by reference as new or updated mandatory minimum standards any standards or recommended standards developed by the SIP Forum (or such other voluntary, consensus standard organization as may be formed to address these issues) that the Chief of CGB finds will advance the statutory functional equivalency mandate or improve the availability of TRS, in the most efficient manner. In conducting such rulemakings, the Chief of CGB shall provide guidance on implementation, including the need for a transition period for existing VRS access technologies, complaint resolution, or other actions necessary to ensure full interoperability and portability."

5. In August 2015, the SIP Forum published the Video Relay Service (VRS) Provider Interoperability Profile (VRS Provider Interoperability Profile), a consensus document developed by the SIP Forum's VRS Task Group. The VRS Provider Interoperability Profile provides technical specifications for the interface between VRS providers and the interface between a VRS provider and the TRS Numbering Directory. In July 2016, the Relay User Equipment Forum (RUE Forum) published a second consensus document, the Interoperability Profile for Relay User Equipment (RUE Profile) on the Internet Engineering Task Force (IETF) Web site. The RUE Profile provides technical specifications that define a standard interface between a relay user's equipment and the services offered by relay service providers.

6. The Bureau tentatively concludes that the VRS Provider Interoperability Profile and the RUE Profile will effectively meet the Commission's goals of ensuring interoperability and portability, as required by the *VRS Reform Order*. Specifically, these standards will enable a VRS user to place and receive calls through any VRS provider and make point-to-point calls to all other VRS users, irrespective of the default provider of the parties to the call, and without the caller having to change the VRS access technology used to make such calls. Additionally, as required by the *VRS Reform Order*, these standards will support a standard data interchange format for exporting and importing private data contained in a user's personal contacts list (also referred to as an address book) and the user's speed dial list between the VRS user's access technology and the access

technology of other VRS providers. In these various ways, these standards will "advance the statutory functional equivalency mandate [and] improve the availability of TRS, in the most efficient manner," in accordance with the *VRS Reform Order*. The Bureau further notes that all current VRS providers participated in the process leading to adoption of the standards, and that all providers appear to have reached a consensus on these standards. For all of these reasons, the Bureau tentatively concludes that these standards meet the Commission's objective of facilitating interoperability and portability for VRS, and should be incorporated by reference into the Commission's rules. The Bureau seeks comment on this tentative conclusion and its rationale. The Bureau also seeks comment on whether any modified version of the standards that results from the continued work of the RUE Forum, which is published subsequent to the Commission's release of the Further Notice and during the pendency of this proceeding, should be adopted in lieu of the versions of the standards discussed above.

7. The Bureau also proposes to follow, in the future, a procedure that permits amendments or changes to the standards to be incorporated into the Commission's rules in a timely and efficient manner. The Bureau believes that a voluntary, consensus standards process that results in amendments or changes to the standards will, as is the case for the standards proposed for incorporation herein, allow for widespread participation by the affected parties, and in particular VRS providers. In the event of such amendments or changes, the Bureau will issue a public notice seeking comment on such modifications, followed by an order incorporating into the VRS rules amendments or changes by reference if justified based on the resulting record. When such revised standards are completed and accepted by the Bureau, a second public notice will be issued containing information on how to access the modified standards and establishing an implementation schedule. To facilitate ready access to such standards, the Bureau further proposes that the Commission make them available to the public online. The Bureau believes that this process will allow interested parties to have the opportunity to participate in the standards-setting process, comment on the inclusion of such standards in the Commission's rules, and receive notice about the implementation of any amendments or changes to the standards. The Bureau seeks comment

on this approach and on any alternatives.

8. As to the timing of the implementation of the recently developed standards, the Bureau believes that insofar as all current VRS providers participated in developing these standards and had an opportunity to debate the various technical issues over a period of several years, as a practical matter, all providers have become familiar with the content of the standards, have had ample opportunity to incorporate the standards into their software development processes, and have had sufficient opportunity to familiarize their suppliers with any necessary design changes. The Bureau therefore proposes that the rule amendment incorporating the standards into 47 CFR 64.621 shall become effective 60 days after publication in the **Federal Register** of the amended rule. The Bureau seeks comment on this proposed implementation schedule. To the extent that any commenter seeks a later effective date, the Bureau requests that such commenter describe the specific products or features and functions for which a later effective date is needed and the reasons why compliance is not achievable at an earlier date.

9. As the Commission contemplated in the *VRS Reform Order*, once incorporated into the Commission's rules, compliance with the standards "shall be a prerequisite for compensation from the Fund. No VRS provider shall be compensated for minutes of use generated by non-standards compliant VRS access technologies or otherwise generated in a manner inconsistent with the Commission's rules. If a provider cannot reliably separate minutes of use generated through standards compliant VRS access technologies from those generated through non-standards compliant VRS access technologies, the provider will not receive compensation for any of the minutes." *VRS Reform Order*.

10. The Office of Federal Register (OFR) recently revised its regulations to require that agencies must discuss in the preamble of a proposed rule ways that the materials the agency proposes to incorporate by reference are reasonably available to interested parties or how it worked to make those materials reasonably available to interested parties. In addition, the preamble of the proposed rule must summarize the material. 1 CFR 51.5(a). In accordance with OFR's requirements, the discussion in the following two paragraphs summarizes and indicates the availability of the VRS Provider

Interoperability Profile and the RUE Profile.

11. The U.S. Video Relay Service (VRS) Provider Interoperability Profile, Version 15, SIP Forum Document Number: VRS U.S. Providers Profile TWG-6-0.15 (Sept. 23, 2015) (VRS Provider Interoperability Profile), is available from SIP Forum LLC, 733 Turnpike Street, Suite 192, North Andover, MA 01845 USA, (203) 829-6307, at http://www.sipforum.org/component/option,com_docman/task,cat_view/gid,160/Itemid,75/. The Provider Interoperability Profile provides technical specifications for the interface between VRS providers and the interface between a VRS provider and the TRS Numbering Directory.

12. The Interoperability Profile for Relay User Equipment, draft-vrs-rue-dispatch-00 (July 20, 2016) (RUE Profile), is available from IETF Secretariat, 5177 Brandin Court, Fremont, CA 94538, 510-492-4080, at <https://www.ietf.org/id/draft-vrs-rue-dispatch-00.txt>. The RUE Profile provides technical specifications that define a standard interface between a relay user's equipment and the services offered by relay service providers.

Initial Regulatory Flexibility Analysis

13. As required by the Regulatory Flexibility Act (RFA), the Bureau has prepared this Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on small entities by the policies and rules proposed in the Further Notice. Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments specified in the Further Notice.

14. *Need For, and Objectives of, the Proposed Rules.* In the *VRS Reform Order*, the Commission strongly encouraged the continuation of efforts by the SIP Forum's VRS Task Group to develop voluntary, consensus standards to facilitate interoperability and portability of VRS and directed Commission staff to support and participate in the SIP Forum process. The SIP Forum and a successor group, the RUE Forum, have now produced interoperability and portability standards, making it possible to achieve the improvements sought in the *VRS Reform Order*. The Further Notice proposes to incorporate those interoperability and portability standards by reference into 47 CFR 64.621, the Commission's VRS interoperability rule, along with guidance on implementation, including the need for a transition period for existing VRS access technologies to

achieve interoperability and portability. In addition, the Further Notice proposes a process that will readily enable revisions to this rule to reflect future amendments or changes in these standards by issuing a public notice seeking comment on such modifications, followed by an order incorporating into the VRS rules amendments or changes by reference if justified based on the resulting record, after which a second public notice will be issued containing information on how to access the modified standards online and establishing an implementation schedule.

15. *Legal Basis.* The legal basis for any action that may be taken pursuant to the Further Notice is contained in 47 U.S.C. 151, 152, 154(i), 154(j), 225, 303(r).

16. *Types of Small Entities to Which the Proposed Rules May Apply.* All Other Telecommunications.

17. *Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements.* If the Commission were to incorporate the SIP Forum and RUE Forum standards by reference into the Commission's VRS interoperability rule and provide guidance on implementation, VRS providers, including small entities, would need to take steps to comply with such standards.

18. *Steps Taken to Minimize Significant Economic Impact on Small Entities and Significant Alternatives Considered.* In general, alternatives to proposed rules are discussed only when those rules pose a significant adverse economic impact on small entities. In this context, however, the proposed rules generally confer benefits. In particular, interoperability requirements benefit the smaller providers because consumers find the services of smaller providers to be more attractive when these services are interoperable than when they are not interoperable. These benefits outweigh any burdens associated with compliance. Moreover, because all of the VRS providers participated in the discussions associated with the development of the standards, the Commission believes that these standards are acceptable to all VRS providers, including small entities. Lastly, the Further Notice seeks comment on the proposed implementation schedule to ensure that such implementation schedule is achievable.

19. *Federal Rules that May Duplicate, Overlap, or Conflict with Proposed Rules.* None.

List of Subjects in 47 CFR Part 64

Telecommunications relay services, Individuals with disabilities.

Federal Communications Commission.

Karen Peltz Strauss,

Deputy Chief, Consumer and Governmental Affairs Bureau.

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 64 as follows:

PART 64—MISCELLANEOUS RULES RELATING TO COMMON CARRIERS

■ 1. The authority citation for part 64 continues to read as follows:

Authority: 47 U.S.C. 154, 254(k); 403(b)(2)(B), (c), Public Law 104–104, 110 Stat. 56. Interpret or apply 47 U.S.C. 201, 218, 222, 225, 226, 227, 228, 254(k), 616, and 620, and the Middle Class Tax Relief and Job Creation Act of 2012, Public Law 112–96, unless otherwise noted.

■ 2. Amend § 64.621 by revising paragraph (b) to read as follows:

§ 64.621 Interoperability and portability.

* * * * *

(b) *Technical Standard for Interoperability and Portability.*

(1) VRS providers shall ensure that their provision of VRS and video communications, including their access technology, meets the requirements of the U.S. Video Relay Service (VRS) Provider Interoperability Profile Version 15, SIP Forum Document Number: VRS U.S. Providers Profile TWG–6–0.15 (Sept. 23, 2015) (VRS Provider Interoperability Profile), http://www.sipforum.org/component/option,com_docman/task,cat_view/gid,160/Itemid,75/, and the Interoperability Profile for Relay User Equipment (RUE Profile), draft-vrs-rue-dispatch-00 (July 20, 2016), <https://www.ietf.org/id/draft-vrs-rue-dispatch-00.txt>.

(2) This incorporation by reference of the VRS Provider Interoperability Profile and the RUE Profile was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of the VRS Provider Interoperability Profile may be obtained from SIP Forum LLC, 733 Turnpike Street, Suite 192, North Andover, MA 01845 U.S.A., (203) 829–6307, at http://www.sipforum.org/component/option,com_docman/task,cat_view/gid,160/Itemid,75/. Copies of the RUE Profile may be obtained from IETF Secretariat, 5177 Brandin Court, Fremont, CA 94538, 510–492–4080, at <https://www.ietf.org/id/draft-vrs-rue-dispatch-00.txt>. Copies of these publications also may be inspected during normal business hours at the following locations: Consumer and Governmental Affairs Bureau,

Reference Information Center, Federal Communications Commission, 445 12th Street SW., Washington, DC 20554; and the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

50 CFR Part 216

[Docket No. 080302361–6677–01]

RIN 0648–AU02

Protective Regulations for Hawaiian Spinner Dolphins Under the Marine Mammal Protection Act

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: We, the National Marine Fisheries Service (NMFS), propose regulations under the Marine Mammal Protection Act (MMPA) to prohibit swimming with and approaching a Hawaiian spinner dolphin within 50 yards (45.7 m) (for persons, vessels, and objects), including approach by interception. These proposed regulatory measures are intended to prevent take of Hawaiian spinner dolphins from occurring in marine areas where viewing pressures are most prevalent; prohibitions would apply in waters within 2 nautical miles (nm; 3.7 km) of the Hawaiian Islands and in the waters between the islands of Lanai, Maui, and Kahoolawe. This proposed rule to establish 50-yard swim-with and approach regulations would help ensure public compliance by providing clear notice of prohibited conduct that results in take, including harassment and disturbance.

Although unauthorized take of marine mammals, including harassment of spinner dolphins, already is and continues to be prohibited under the MMPA throughout their range, the purpose of this regulation is to identify and prohibit specific human activities that result in take (including harassment) of spinner dolphins, and thus reduce disturbance and disruption

of important Hawaiian spinner dolphin behaviors in areas where human-dolphin interactions are most likely to occur. These proposed regulations would reduce take of Hawaiian spinner dolphins and the impact of human viewing and interaction on these animals in the Main Hawaiian Islands (MHI). We developed this proposed rule after considering comments submitted in response to an Advance Notice of Proposed Rulemaking (ANPR), as well as information received during the public scoping period for the Draft Environmental Impact Statement (DEIS), from community meetings, and from a dedicated scientific research project.

Although not currently part of this proposal, we are also considering whether additional management measures may be necessary and appropriate to protect Hawaiian spinner dolphins from take, especially in essential daytime habitats that are regularly targeted by humans for dolphin-directed activities. Accordingly, we are soliciting public comment on the proposed swim-with and approach regulations, as well as alternative management options discussed in this rule and in detail in the DEIS.

DATES: Comments must be received no later than 5 p.m. on October 23, 2016.

Public meetings will provide the public with an opportunity to provide comments on any portion of the proposed rule or DEIS. These meetings are scheduled for:

September 7, 2016, 5:30–9:30 p.m. at Konawaena High School Cafeteria, 81–1043 Konawaena School Rd., Kealahou, HI 96750;

September 8, 2016, 5:30–9:30 p.m. at Kealahou High School Cafeteria, 74–5000 Puohulihuli St., Kailua Kona, HI 96740;

September 21, 2016, 5:30–9:00 p.m. at Kauai High School Cafeteria, 3577 Lala Rd., Lihue, HI 96766;

September 22, 2016, 5:30–9:00 p.m. at the Hawaiian Islands Humpback Whale National Marine Sanctuary Visitor Center, 726 South Kihei Rd., Kihei, HI 96753;

September 27, 2016, 5:30–9:30 p.m. at Roosevelt High School Dining Hall, 1120 Nehoa Street, Honolulu, HI 96822; and

September 28, 2016, 5:30–9:30 p.m. at Waianae High School Cafeteria, 85–251 Farrington Hwy., Waianae, HI 96792.

ADDRESSES: You may submit comments, information, or data on this document, identified by NOAA–2005–0226, and on the DEIS by either of the following methods:

Electronic Submission: Submit all electronic comments via the Federal

eRulemaking Portal. Go to www.regulations.gov/ #!docketDetail;D=NOAA-2005-0226, click the "Comment Now!" icon, complete the required fields, and enter or attach your comments.

Mail: Submit written comments to Susan Pultz, Chief, Conservation Planning and Rulemaking Branch, Protected Resources Division, National Marine Fisheries Service, Pacific Islands Regional Office, 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818, Attn: Hawaiian Spinner Dolphin Proposed Rule.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. We will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous).

The Draft Environmental Impact Statement (DEIS) and references can be found online at http://www.fpir.noaa.gov/PRD/prd_spinner_EIS.html. Additionally, copies of the DEIS are available in print at the following libraries:

Hilo Library, 300 Waianuenue Ave., Hilo, HI 96720;
Kailua-Kona Library, 75–138 Hualalai Rd., Kailua Kona, HI 96740;
Kealahou Library, 81–6619 Mamalahoa Hwy., Kealahou, HI 96750;
Pahoa Library, 15–3070 Pahoa-Kalapana Rd., Pahoa, HI 96778;
Kihei Library, 35 Waimahaihai St., Kihei, HI 96753;
Lahaina Library, 680 Wharf St., Lahaina, HI 96761;

Waianae Library, 85–625 Farrington Hwy., Waianae, HI 96792; and
Lihue Library, 4344 Hardy St., Lihue, HI 96766; or upon request from the Conservation Planning and Rulemaking Branch Chief (see **ADDRESSES**).

FOR FURTHER INFORMATION CONTACT: Susan Pultz, NMFS, Pacific Islands Region, Chief, Conservation Planning and Rulemaking Branch, 808–725–5150;

or Trevor Spradlin, NMFS, Office of Protected Resources, Acting Chief, Marine Mammal and Sea Turtle Conservation Division, 301–427–8402.

SUPPLEMENTARY INFORMATION

Background

Viewing wild marine mammals in Hawaii has been a popular recreational activity for both tourists and residents over the past several decades. Historically, most marine mammal viewing focused on humpback whales (*Megaptera novaeangliae*) during the winter months when the whales migrate from their feeding grounds off the coast of Alaska to Hawaii's warm and protected waters to breed and calve. However, increased viewing has focused on small cetaceans, with a particular emphasis on Hawaiian spinner dolphins (*Stenella longirostris*), which can be predictably found close to shore in shallow waters throughout the MHI.

The number of commercial operators engaged in wild dolphin viewing has grown dramatically in Hawaii in recent years (O'Connor 2009), putting new pressures on easily accessible groups of resting Hawaiian spinner dolphins. In addition, a number of residents and visitors venture on their own, independent of commercial operators, to view and interact with spinner dolphins. The expectation for close interactions with wild dolphins has been encouraged by some operators and various media outlets, which routinely contradict established wildlife viewing guidelines by promoting close vessel or in-water encounters with the dolphins.

We have received many complaints that spinner dolphins are being routinely disturbed by people attempting to closely approach and interact with the dolphins by boat or other watercraft (e.g., kayaks), or in the water (e.g., snorkel or "swim-with-wild-dolphins" activities). In addition, concerns over human-dolphin interactions have been expressed by officials from the Hawaii Department of Land and Natural Resources (DLNR) and the U.S. Marine Mammal Commission (MMC), as well as various members of the public, including representatives of the Native Hawaiian community, scientific researchers, wildlife conservation organizations, public display organizations, and some commercial tour operators.

In 2010, we recognized five island-associated stocks and one pelagic stock of Hawaiian spinner dolphins in our annual Stock Assessment Report, identifying genetic distinctions and site fidelity differences as reasons to separately manage stocks found in waters surrounding the Hawaiian

Islands (Carretta *et al.* 2010). Three of the five island-associated stocks (the Kauai/Niihau stock, Oahu/4 Islands (i.e., Maui County) stock, and Hawaii Island stock) are found near the MHI and are considered resident stocks. These three stocks reside in waters surrounding their namesake islands out to approximately 10 nm (18.5 km) (Hill *et al.* 2010), and population estimates for each stock are relatively small. Recent research indicates that the Hawaii Island stock, which is thought to be the largest stock, has an estimated 631 individuals (Coefficient of Variation (CV) = 0.09) (Tyne *et al.* 2014, Carretta *et al.* 2016). Data for other stocks in the MHI is limited; however, using the best available information, the Kauai/Niihau and Oahu/4 Islands stocks are estimated to be around 601 (CV = 0.20) and 355 (CV = 0.09) individuals, respectively (Carretta *et al.* 2016).

Island-associated spinner dolphins, such as those found in the MHI, have complex social structures and behavioral patterns linked to specific habitats that support their high energetic demands. The rigid, cyclical, and patterned behavior of a Hawaiian spinner dolphin's day is well documented from decades of scientific research on spinner dolphins off the Kona coast on the island of Hawaii (Norris and Dohl 1980, Norris *et al.* 1994). The daily pattern of Hawaiian spinner dolphins has been characterized as "working the night shift," because the energetically demanding task of foraging is accomplished nightly when spinner dolphins move offshore in large groups to feed. Spinner dolphins feed on fish, shrimp, and squid found in the mesopelagic boundary community, part of the pelagic zone that extends from a depth of 200 to 1,000 m (~660 to 3,300 feet) below the ocean surface. Spinner dolphins maximize their foraging time by actively moving with, or tracking, the horizontal migration of the mesopelagic boundary community throughout the night, as it moves inshore until midnight and then offshore around sunrise (Benoit-Bird and Au 2003). Spinner dolphins are acoustically very active during foraging activities (Norris *et al.* 1994), working cooperatively in large groups using coordinated movements to maximize foraging potential (Benoit-Bird 2004).

During the day, spinner dolphins return in smaller groups to areas closer to shore to socialize, nurture their young, and rest in preparation for nightly foraging (Norris *et al.* 1994). These smaller groups visit specific habitats that are located along the coastlines of the MHI. These preferred daytime habitats of spinner dolphins are

areas that provide space with optimal environmental conditions for resting, socializing, and nurturing young, and are referred to hereafter as “essential daytime habitats.” Spinner dolphins’ essential daytime habitats are located close to offshore feeding areas, which minimizes the energetic cost of nightly travel to these areas (Norris *et al.* 1994, Thorne *et al.* 2012). Additionally, essential daytime habitats have large patches of sand bottom habitat, which increases the dolphins’ ability to visually (instead of acoustically) detect predators while resting, and thus minimizes the energetic costs of vigilance (Norris *et al.* 1994). Throughout the day, spinner dolphins take advantage of the physical characteristics of essential daytime habitats to engage in specific patterned resting behaviors to recuperate between foraging bouts. The physical characteristics of these essential daytime habitats, combined with specific patterned resting behaviors, play an important role in supporting the dolphins’ activity and energetic budgets.

Essential daytime habitats have been targeted by commercial operators and individuals interested in viewing or interacting with Hawaiian spinner dolphins because encounters with dolphins in these areas are virtually guaranteed. At some locations, up to 13 tour boats have been observed jockeying for position on a single dolphin group, with up to 60 snorkelers in the water (Heenehan *et al.* 2014). Apart from commercial tour operations, people also swim, kayak, or paddle into essential daytime habitats to seek interactions with the dolphins (Sepez 2006). In addition, organized retreats centered on dolphin encounters, dolphin-assisted therapy, and dolphin-associated spiritual practices have flourished in certain areas, further increasing the intensity of dolphin-directed activities in nearshore areas and especially within essential daytime habitats (Sepez 2006).

There is a growing body of scientific evidence documenting the effects of dolphin-directed activities on spinner dolphins, especially activities that involve close approaches by humans. Peer-reviewed scientific literature documents disturbance of individual spinner dolphins as well as changes to spinner dolphin group behavioral patterns. Individual dolphin responses to these activities vary, and in some cases may not be apparent to an observer (*e.g.*, elevated heart rates or increased watchfulness). However, discernable responses may include aerial displays when closely approached by vessels and swimmers (Forest 2001, Courbis and Timmel 2008); avoidance

behaviors, including moving around and away from swimmers and vessels, or leaving the area in response to human pursuit (Ostman-Lind *et al.* 2004, Courbis 2004, Courbis and Timmel 2008); and aggressive behaviors directed at people, including charging or threat displays (Norris *et al.* 1985, Norris *et al.* 1994).

Effects have been documented in the form of changes over time to spinner dolphins’ behavioral patterns in essential daytime habitats, where spinner dolphins’ behavioral patterns are easily observed. Courbis and Timmel (2008) reported differences in peak aerial activity throughout the day in comparison with earlier studies (Forrest 2001) and noted that dolphins may have reduced aerial behavior when entering and exiting bays to avoid human notice and approaches. Timmel *et al.* (2008) noted the dolphins’ direction of travel altered more frequently as the number of swimmers and/or vessels near to them increased. Symons (2013) found that spinner dolphins are less likely to rest when swimmers are present within 150 m. Numerous studies report changes in dolphin residence time within essential daytime habitats compared to earlier studies (Courbis 2004, Courbis and Timmel 2008, Ostman-Lind 2007, Forest 2001). In addition, human activities within essential daytime habitats may be affecting where spinner dolphins engage in their daytime behaviors within these areas. Courbis and Timmel (2008) reported changes in the location of resting spots within Kealakekua Bay from previous studies by Doty (1968) and Norris and Dohl (1980), and warned that changes in locations within the bay could be a precursor to abandonment of the bay with future increases in traffic.

Hawaiian spinner dolphin studies off the island of Oahu also demonstrate the effects of swimmers on dolphins’ daily resting behavioral patterns. As the number of swimmers increased in an essential daytime habitat off the west coast of Oahu, the dolphins departed the area at earlier times during the day, possibly indicating reduced rest periods in response to swimmer presence (Danil *et al.* 2005). Additionally, Danil *et al.* (2005) noted that on several occasions, smaller spinner dolphin groups (<25 animals) refrained from entering an essential daytime habitat when swimmer presence was high, suggesting that the observed spinner dolphin rest patterns were altered in order to accommodate and adapt to the swimmers’ occurrence. The authors predicted that swimmer presence keeps the dolphins in a constant state of alertness and vigilance, and that

delayed diving behavior (in the morning during swimmers’ presence) may indicate a diminished quality of rest (Danil *et al.* 2005).

When marine mammals respond to disturbance events, they incur a cost in the form of the energy expended to respond as well as the lost opportunity to engage in natural fitness-enhancing behavior. For example, spinner dolphins disturbed during rest may engage in avoidance or distress behaviors, which require energy, and disturbance detracts from the dolphins’ abilities to recuperate from energetically demanding behaviors such as foraging, transiting to and from offshore foraging grounds, and nurturing their young. In this example, the lack of consistent, undisturbed resting periods can reduce the amount of energy available to forage and care for young.

The predictable patterns of MHI resident spinner dolphins’ nearshore distribution and daytime behaviors result in concentrated daily viewing and interaction pressure on individual dolphins and groups over extended periods of time. In other small cetacean populations, chronic disturbance to natural behavioral patterns has been linked to biologically significant impacts such as habitat abandonment and reduced female reproductive success (Bejder 2005; Bejder *et al.* 2006a, 2006b; Lusseau and Bejder 2007). Similarly, over time, chronic disturbance to the MHI’s resident spinner dolphins could ultimately lead to habitat displacement and/or long term impacts to their individual fitness. These types of impacts may be amplified in resident, closed or isolated populations (local populations with barriers to gene flow) (Bejder 2005) because the impacts to multiple individuals’ health and fitness are quickly reflected in the overall fitness of the population. Accordingly, the small resident spinner dolphin populations of the MHI may be more vulnerable to negative impacts from human disturbance.

Disturbances to dolphins’ daily behavioral patterns may result in “take,” as defined and prohibited under the MMPA and its implementing regulations, and the chronic nature of these problems in Hawaii and observed changes to spinner dolphin behavioral patterns over time are a cause for concern.

Current MMPA Prohibitions and NMFS Guidelines and Regulations

Under section 102 of the MMPA, 16 U.S.C. 1361 *et seq.*, it is unlawful for any person, vessel, or other conveyance to “take” any marine mammal in waters

under the jurisdiction of the United States (16 U.S.C. 1372). The prohibition against take includes acts that “harass” marine mammals (16 U.S.C. 1362(13)). Harassment means any act of pursuit, torment, or annoyance which has the *potential to injure* a marine mammal in the wild (Level A Harassment), or has the *potential to disturb* a marine mammal in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B Harassment) (16 U.S.C. 1362(18); *see also* 50 CFR 216.3).

In addition, NMFS’ regulations implementing the MMPA further define the term “take” to include “the negligent or intentional operation of an aircraft or vessel, or the doing of any other negligent or intentional act which results in disturbing or molesting a marine mammal; and feeding or attempting to feed a marine mammal in the wild” (50 CFR 216.3).

Section 112 of the MMPA authorizes NOAA to implement regulations that are “necessary and appropriate to carry out the purpose” of the MMPA (16 U.S.C. 1382).

To date, NMFS has developed specific approach distance regulations for certain species of marine mammals listed under the Endangered Species Act (ESA) (16 U.S.C. 1531 *et seq.*). Each rule was based on the biology of the marine mammals and the best available scientific information on the nature of the threats. Examples of these types of regulations include a 100-yard (91.4 m) approach limit for humpback whales in Hawaii (60 FR 3775; January 19, 1995); a 100-yard approach limit for humpback whales in Alaska, which includes a speed restriction in the vicinity of the whale (66 FR 29502; May 31, 2001); a 500-yard (457.2 m) approach limit for North Atlantic right whales (62 FR 6729; February 13, 1997); size-specific vessel speed restrictions within specific areas in waters off the U.S. East Coast to protect North Atlantic right whales (73 FR 60173; October 10, 2008); and a 200-yard (182.9 m) approach limit for killer whales with prohibitions against vessels intercepting a killer whale or positioning the vessel in its path in the inland waters of Washington State (76 FR 20870; April 14, 2011).

In addition to the specific ESA regulations mentioned above, NMFS has developed guidelines for conducting responsible marine wildlife viewing to help the public avoid causing any take (harassment or disturbance) of protected wildlife species (http://www.nmfs.noaa.gov/pr/pdfs/education/viewing_wildlife.pdf); these guidelines have been available since 2004. On

human interactions with marine mammals in the wild, NMFS states the following: “The MMPA does not provide for a permit or other authorization to view or interact with wild marine mammals, except for specific listed purposes such as scientific research. Therefore, interacting with wild marine mammals should not be attempted and viewing marine mammals must be conducted in a manner that does not harass the animals. NMFS does not support, condone, approve, or authorize activities that involve closely approaching, interacting, or attempting to interact with whales, dolphins, porpoises, seals, or sea lions in the wild. This includes attempting to swim with, pet, touch, or elicit a reaction from the animals” (<http://www.nmfs.noaa.gov/pr/dontfeedorharass.htm>).

In addition to the national guidelines, each of the five NMFS Regions has developed recommended viewing guidelines relevant to protected species within their region to assist the general public with information on how to responsibly view and act around these animals in the wild. The guidelines are aimed at assisting the public in meeting their obligations under the MMPA and ESA. Although some guidelines address activities that are prohibited under law, others address activities that are not expressly prohibited.

The NMFS Pacific Islands Regional Office’s viewing guidelines for Hawaii recommend that people view wild dolphins from a safe distance of at least 50 yards (45.7 m) and advise against trying to chase, closely approach, surround, swim with, or touch the animals. To support the guidelines in Hawaii, NMFS has partnered with the State of Hawaii and the Hawaiian Islands Humpback Whale National Marine Sanctuary over the past several years to promote safe and responsible wildlife viewing practices through the development of outreach materials, training workshops, signage, and public service announcements. NMFS’ education and outreach efforts have also been supported by a partnership with the Watchable Wildlife program, a consortium of Federal and State wildlife agencies and wildlife interest groups that encourages passive viewing of wildlife from a distance for the safety and well-being of both animals and people (Duda 1995, Oberbillig 2000, Clark 2006). In addition to the guidance provided to the general public on protected wildlife viewing, several tour industry-specific programs have been initiated in various NMFS regions to further support protection of marine mammals targeted for wildlife viewing.

In Hawaii this includes administration of the voluntary Dolphin SMART program for commercial operators who pledge to comply with safe and responsible wildlife viewing practices.

Dolphin SMART is a model wildlife viewing stewardship program developed by NMFS and NOAA’s Office of National Marine Sanctuaries in partnership with Whale and Dolphin Conservation, the Dolphin Ecology Project, local businesses, and members of the public, who have teamed up to support responsible viewing of wild dolphins. The program was launched in 2007 in Key West, Florida, was subsequently expanded to the Central and Southwest Florida coast, and established in Hawaii in 2011.

The NMFS Pacific Islands Regional Office developed the Dolphin SMART program in Hawaii to aid education and outreach efforts for Hawaiian spinner dolphin conservation and management. Three businesses on Oahu, one on Kauai, and two on Maui are currently recognized as Dolphin SMART participants.

The Dolphin SMART program goals are to minimize the potential of wild dolphin harassment caused by commercial viewing activities, reduce expectations of close interaction with wild dolphins in a manner that may cause harassment, address advertising that creates expectations of engaging in activities that may cause harassment, and promote responsible stewardship of dolphins in local coastal waterways. The “SMART” acronym stands for:

S—Stay back 50 yards from dolphins
M—Move cautiously away if dolphins show signs of disturbance
A—Always put your engine in neutral when dolphins are near
R—Refrain from feeding, touching, or swimming with wild dolphins
T—Teach others to be Dolphin SMART

More information on the Dolphin SMART program can be found at the following Web sites: www.dolphinSMART.org and www.facebook.com/OfficialDolphinSmart.

Need for Additional Action

Despite the prohibitions, guidelines, outreach, and stewardship efforts currently in place, close interactions between humans and spinner dolphins continue to occur in Hawaii’s waters and are especially prevalent in essential daytime habitats (see Background). In April 2000, the MMC released a literature review of scientific publications that evaluated the impacts of swimming with wild dolphins worldwide (Samuels *et al.* 2000). The authors of this review noted the

prevalence of disturbances by tourist activities in areas critical to the animals' well-being, and recommended that precautions be taken to protect the dolphins (Samuels *et al.* 2000).

The concerns about disturbance to spinner dolphins by boaters and swimmers prompted NMFS to raise the topic of enhancing protections for these animals in an Advanced Notice of Proposed Rulemaking (ANPR) (70 FR 73426, December 12, 2005). Public comments received in 2005 reiterated and reinforced the concerns expressed by the MMC. In the years since the 2000 Samuels *et al.* review, additional scientific evidence has documented disturbances or disruptions to spinner dolphins by boaters or swimmers (Forest 2001; Courbis 2004, 2007; Danil *et al.* 2005; Timmel 2005; Courbis and Timmel 2009; Ostman-Lind 2009; Symons 2013; Heenehan *et al.* 2014; Tyne *et al.* 2015). This problem is pronounced in essential daytime habitats that are targeted for dolphin-directed activities, and animals that use these areas are exposed to intense activity on a daily basis. For example, a recent study found that human activities took place within 100 m of spinner dolphins 83 percent of the time the animals were using four essential daytime habitats on the island of Hawaii (Tyne 2015).

Based on extensive review and analysis through internal scoping, external scoping via the ANPR, public scoping for the DEIS, and the best available scientific information, we have determined that the existing prohibitions, regulations, and guidelines need to be strengthened to protect Hawaiian spinner dolphins from various forms of take from human activities that cause harassment or disturbance. Dolphins' response to disturbance varies among individuals, but in most cases it includes a departure from natural behavioral patterns that support the animal's health and fitness, and chronic disturbance may result in negative impacts to the fitness of individuals and/or populations. We therefore deem it necessary and appropriate to adopt additional regulations to clarify human activities that result in take of Hawaiian spinner dolphins, including harassment or other forms of disturbance as currently defined by statute and regulation.

Although unauthorized take of dolphins continues to be illegal wherever it occurs, we are focusing these regulations in nearshore areas, out 2 nm (3.7 km) from shore of the MHI and including designated waters between Lanai, Maui, and Kahoolawe (see Figures 1 and 2 in section 216.20(e)

and *Geographic Area* section below), where the threat from dolphin-directed activities is concentrated and where spinner dolphins engage in daytime behaviors, including resting, socializing, nurturing, and traveling. These additional measures are intended to prevent "take" during important resting periods and allow Hawaiian spinner dolphins to engage in normal fitness-enhancing behaviors, thereby preventing long-term negative impacts to individuals and to the population.

Development of Proposed Regulations

In 2005, NMFS convened a Spinner Dolphin Working Group with representatives from the MMC, State and Federal agencies, and scientific researchers who work on spinner dolphin conservation concerns. The group evaluated the best available information at the time to understand the scope of the tourist and recreational activities targeting spinner dolphins. As noted above (Need for Additional Action section), in December 2005, we published an ANPR in the **Federal Register** (70 FR 73426, December 12, 2005) to solicit input from the public on potential ways to better enhance protections for spinner dolphins and mitigate activities of concern (e.g., close approach and swim-with activities). This was followed by a Notice of Intent (NOI) to Prepare an Environmental Impact Statement (EIS) under the National Environmental Policy Act (NEPA) (71 FR 57923; October 2, 2006), in which we identified a preliminary list of potential regulations for future consideration and comment, which included partial time-area closures in certain spinner dolphin essential daytime habitats, a minimum distance limit for approaching dolphins in the wild, restrictions on certain human behaviors in NMFS-identified spinner dolphin resting areas, and complete closure of all known spinner dolphin resting areas in the MHI.

During the ANPR and the NOI comment periods, five public scoping meetings were held on the islands of Kauai, Oahu, Maui, and Hawaii, and oral statements were taken at each meeting. NMFS received a total of 4,641 public comments in response to the ANPR and the NOI (this includes all emails, letters, and public testimonies). Comments were submitted by concerned citizens, tour operators, scientific researchers, conservation and education groups, and Federal, State, and other government entities.

Comments received through both of the public comment periods varied widely and recommended numerous actions to consider, ranging from no

regulations to permanent closure of areas used by the dolphins for rest and shelter. Additionally, public comments raised concerns about various topics that should be addressed in the EIS or proposed action. These concerns are grouped into various topics in the final scoping report, and include the following topics: Hawaiian spinner dolphin biology and behavior; cultural issues; cumulative effects; data/data gaps; direct and indirect effects; education/outreach; enforcement; the ESA; guidelines/solutions for other species or from other countries; human-dolphin interaction, medical benefits from swimming with dolphins; MMPA; monitoring; the NEPA; public and stakeholder involvement; regulatory regime; social and economic issues; spiritual and religious issues; take and harassment, traditional Hawaiian knowledge; and welfare of the dolphins. Although comments varied greatly, a consistent theme that stood out under several topics was the need for effective and enforceable regulations.

As a result of stakeholder concerns expressed through these public comments, and for the preparation of this rule and associated DEIS, we made multiple site visits to areas where concerns have been raised regarding Hawaiian spinner dolphin disturbance in the MHI. During these visits, we met with concerned members of the public to gather information relevant to this analysis. Additionally, we coordinated with State and Federal agencies, and used the public comments generated from the ANPR and NOI to develop a range of actions and mitigation measures that are reflected in numerous alternatives under consideration for the proposed action.

Presentations made at the public scoping meetings, the April 2007 EIS public scoping summary report, a list of the attendees, the ANPR, public comments, and background materials are provided at http://www.fpir.noaa.gov/PRD/prd_spinner_EIS.html.

We relied on the public comments on the ANPR and the NOI, and on new scientific information to develop a range of regulatory and non-regulatory alternatives, including the alternative of not adopting regulations. We analyzed the environmental effects of these alternatives and considered options for mitigating effects. After a preliminary analysis of alternatives, we developed and analyzed the effects of the swim-with and 50-yard (45.7 m) approach regulations, which we chose as our preferred alternative, which includes no interception (i.e., "leapfrogging" or placing a person or vessel in the path of

dolphins for the purpose of interception). As more fully discussed below, we specifically seek public comment on whether these proposed measures alone will provide sufficient protection to spinner dolphins from human interactions.

Although not currently proposed, we are considering whether other management measures also may be necessary and appropriate to protect Hawaiian spinner dolphins from take, especially in essential daytime habitats targeted by humans for dolphin-directed activities. Accordingly, we have also analyzed the effects of the alternative management measures of promulgating swim-with and approach regulations, while additionally creating either mandatory (see DEIS Alternative 4) or voluntary (see DEIS Alternative 5) time-area closures in five essential daytime habitats. The results of our analyses are contained in a DEIS. The DEIS is available for review and comment in association with this rulemaking (see **ADDRESSES**). A description of these alternatives is also included in the *Additional Measures Under Consideration* section of this proposed rule.

SAPPHIRE Project

During the initial scoping period for the Spinner Dolphin Human Interaction EIS, we received comments that recommended gathering additional information on Hawaiian spinner dolphins, including monitoring local populations to determine impacts to numbers and overall health of the MHI resident spinner dolphins. In response to this recommendation and to inform this rulemaking effort, NMFS internal grant funding was awarded to the "Spinner Dolphin Acoustics, Population Parameters, and Human Impact Research" (SAPPHIRE) program, conducted jointly by Duke University and Murdoch University. The SAPPHIRE project's objective was to provide baseline data on the local abundance, distribution, and behavior of spinner dolphins in Kealahou Bay, Honaunau Bay, Kauhako Bay, and Makako Bay off of the island of Hawaii, as well as in nearshore, shallow-water environments near these resting bays. This intensive study integrated a suite of visual and acoustic sampling techniques, using boat-based and land-based surveys, as well as acoustic recording devices, to assess the following: Spinner dolphin daytime habitat use and resting behavior in study areas and surrounding waters; residency and fidelity patterns of spinner dolphins during the day in nearshore habitats in both the study

areas and surrounding waters; spinner dolphin exposure to human activities within the studied resting bays and surrounding waters; and spinner dolphin demographic response to human activities within resting bays and surrounding waters.

Research in the four bays and nearshore waters of the island of Hawaii began in August 2010 and was completed in May 2013. Results from this study provided robust population estimates for the Hawaii Island stock (see Background), as well as additional information about spinner dolphin habitat use and the pressure that this resident stock faces from dolphin-directed human activities. Many of these studies have been published in scientific literature and scientific reports and were used to inform this rulemaking process (Thorne *et al.* 2012, Johnson *et al.* 2013, Heenehan *et al.* 2014, Tyne *et al.* 2014, Tyne 2015, Tyne *et al.* 2015). Below we describe information gained from several of these studies.

Early researchers (Norris and Dohl 1980, Norris *et al.* 1994) hypothesized that essential daytime habitats have specific environmental characteristics making them more favorable to the dolphins in supporting resting behaviors, such as shallow, calm, flat, protected, sandy-bottomed bays that provide easy access to nearby deep-water foraging areas. Thorne *et al.* (2012) used dolphin surveys and predictive habitat modeling to test a suite of these environmental factors that may make spinner dolphins favor these areas. The study found that proximity to deep-water foraging areas, depth, the proportion of bays with shallow depths, and low rugosity (indicating low substrate roughness, *i.e.*, sand) were important predictors of spinner dolphin habitat. The strongest predictors of spinner dolphin resting habitat were distance to the 100-m depth contour (foraging habitat) and depth of the resting areas, with spinner dolphin resting habitat generally occurring in the shallow depths (<50 m) within a bay that was close to the 100-m depth contour and thus, their offshore foraging grounds (Thorne *et al.* 2012). In tests of these characteristics across the MHI, the bays that were predicted by the model to be optimal resting habitats were consistent with spinner dolphin resting habitats that are recognized as preferred from various observations and identified in the DEIS.

Tyne *et al.* (2015) further examined key ecological characteristics and spinner dolphin behavior to see which characteristics support resting behavior. The most important factor contributing

to the likelihood of rest was the dolphins' presence within a bay, meaning that they were most likely to rest when they were inside a bay (Tyne *et al.* 2015). Another important factor was the presence of sand substrate. In general, spinner dolphins spent disproportionately more time over sandy substrates in and out of bays; however, outside of bays, spinner dolphins were observed mostly travelling over sandy substrates. This supports the finding that the bays themselves are the most important factor for resting behaviors, because even sandy substrate outside of the bays did not significantly predict resting behavior. This work highlights the role that habitat areas play in supporting important fitness enhancing behaviors, specifically rest.

Johnson *et al.* (2013) assessed the influence of human activity on the energy budget of Hawaiian spinner dolphins using a theoretical model and comparing predictions from the model to empirical data collected in Kealahou Bay on spinner dolphin behavior. Under the model, individual dolphins needed to spend at least 60 percent of their time inshore in a resting state to be in a positive energetic balance. Given this assumption, direct observations of spinner dolphins suggest that these animals are currently spending adequate amounts of time engaged in resting behaviors to meet their energetic requirements; however, researchers cautioned that individuals with high energetic demands could be at a deficit. For example, nursing mothers and juveniles generally have a much higher energetic demand and these individuals could be at risk of an energetic deficit. This study also evaluated the likelihood of spinner dolphins resting, given various human activities occurring at different distances. Researchers found that the presence of swimmers within 150 m significantly decreased the likelihood of resting. Interestingly, the likelihood of dolphins resting was higher when vessels were present between 50 and 150 m, creating the appearance of a positive relationship between resting behavior and vessel presence at this distance. These results may demonstrate a difference in dolphins' perceived risk between swimmers and vessels, or a lack of perceived risk associated with vessels. However, this positive relationship between resting behavior and vessels may also be influenced by the high frequency of observations with vessels present between 50–300 m and few observations with no vessels present (Johnson *et al.* 2013).

Tyne (2015) similarly noted that spinner dolphins off the west coast of the island of Hawaii are exposed to a high rate of human activities and that this rate of exposure may obscure researchers' ability to distinguish disturbance effects associated with intense viewing pressures. In his evaluations, Tyne (2015) found that spinner dolphins were exposed to human activities within 100 m over 80 percent of the time that the dolphins were using essential daytime habitat. Evaluations between control conditions, *i.e.*, no vessels or people within 100 m of dolphins, and exposure conditions, *i.e.*, vessels or people within 100 m of dolphins, suggested that human activities did not have a significant effect on the probability of spinner dolphins engaging in resting, socializing, or traveling. However, control conditions did not occur often (less than 18 percent of the time) or for long periods of time (median duration of 10 minutes), preventing a robust comparison for the purposes of measuring effects. With so little control data and with short durations between exposures to human activity, Tyne (2015) questioned whether the observed data were representative of true or deep resting behavior, or whether observed resting behavior may only be "light" rest. In this case, observing behavior alone may not be a reliable indicator for measuring disturbance effects, because observed resting behavior may not represent behavior that provides restorative benefits for these animals. The rate of exposure to human activities off the west coast of the island of Hawaii is 25 percent higher than reported for other dolphins studied for behavioral response to human activities in other areas of the world (Tyne 2015). This rate of exposure may place resident stocks at risk and long-term disturbance could result in habitat displacement or reduced fitness as seen in other dolphin populations (Bejder *et al.* 2006a, 2006b; Lusseau and Bejder 2007).

Proposed Rulemaking

The swim-with and approach prohibitions described in this proposed rule are designed to protect spinner dolphins from take, including harassment and disturbance, caused by dolphin-directed activities that are concentrated in coastal waters (within 2 nm (3.7 km) of shore and in designated waters between Lanai, Maui, and Kahoolawe) and reduce the impact of increased viewing and interaction pressures. Although we stress that unauthorized take of spinner dolphins or any marine mammals already is and continues to be prohibited by the

MMPA in any location, we believe that specific regulations aimed at identified human activities that result in take of Hawaiian spinner dolphins is warranted because of the chronic disturbance that is currently taking place in nearshore waters. NMFS is proposing these regulations pursuant to its rulemaking authority under MMPA sections 112(a) (16 U.S.C. 1382(a)) and 102 (16 U.S.C. 1372).

Although not included in this proposed rule, we are also considering whether additional management measures may be necessary and appropriate to protect Hawaiian spinner dolphins from take, especially in essential daytime habitats targeted by humans for dolphin-directed activities. The *Additional Measures Under Consideration, Time-Area Closures* section below discusses both mandatory and voluntary time-area closures as two alternative management options that may enhance protections for Hawaiian spinner dolphins beyond the proposed swim-with and approach rule.

Scope and Applicability

Applications to All Hawaiian Spinner Dolphins

The proposed rule's swim-with and approach prohibitions would apply to all Hawaiian spinner dolphins found in the action area (see *Geographic Action Area* section below).

Geographic Action Area

The action area for this rule is limited to waters within 2 nm (3.7 km) of each of the MHI and in designated waters between the islands of Lanai, Maui, and Kahoolawe (see Figures 1 and 2 in section 216.20(e)). The latter designated waters include all water areas enclosed by three line segments that connect points at the 2-nm boundary between the islands as follows: The rhumb line between (A1) 20°32'51" N./156°43'50" W. and (A2) 20°42'4" N./156°55'34" W. between Kahoolawe and Lanai; the rhumb line between (B1) 20°51'1" N./156°54'0" W. and (B2) 20°59'48" N./156°42'28" W. between Lanai and Maui; and the rhumb line between (C1) 20°33'55" N./156°26'43" W. and (C2) 20°32'15" N./156°29'51" W. between Maui and Kahoolawe. Throughout this rule, all coordinates are referenced to the World Geodetic System of 1984 (WGS84).

This is inclusive of the majority of the nearshore habitats where MHI resident stocks of spinner dolphins engage in daytime behaviors and where dolphin-directed human activities that may result in take are known to occur (see *Rationale* section below).

Applications to All Forms of Swimming and Approach

The regulations apply to all forms of swim-with and approach activities in water and air. Forms of approaching spinner dolphins include, but are not limited to, operating a manned or unmanned motorized, non-motorized, self-propelled, human-powered, or submersible vessel; operating an unmanned aircraft system (UAS) or drone; and swimming at the water surface or underwater (*i.e.*, SCUBA or free diving).

Requirements of the Proposed Rule

Swim-With and Approach Regulations

The proposed rule would prohibit people from engaging in the following activities around Hawaiian spinner dolphins:

- (1) Approaching or remaining within 50 yards (45.7 m);
- (2) Swimming or attempting to swim within 50 yards;
- (3) Causing a vessel, person, or object to approach or remain within 50 yards; and
- (4) Intercepting, or placing a vessel, person, or other object on a path of a spinner dolphin so that the dolphin approaches within 50 yards of the vessel, person, or object.

Exceptions

NMFS considered specific categories that should be exempt from the regulations, which are proposed below:

- (1) Any person who inadvertently comes within 50 yards (45.7 m) of a Hawaiian spinner dolphin or is approached by a spinner dolphin, provided the person makes no effort to engage or pursue the animal and takes immediate steps to move away from the animal;
- (2) Any vessel that is underway and is approached by a spinner dolphin, provided the vessel continues normal navigation and makes no effort to engage or pursue the animal;
- (3) Any vessel transiting to or from a port, harbor, or in a restricted channel when a 50-yard distance will not allow the vessel to maintain safe navigation;
- (4) Vessel operations necessary to avoid an imminent and serious threat to a person or vessel;
- (5) Activities authorized through a permit or authorization issued by the NMFS to take spinner dolphins; and
- (6) Federal, State, or local government vessels, aircraft, personnel, and assets when necessary in the course of performing official duties.

The exception for vessels transiting to or from ports, harbors, or restricted channels is necessary to allow

continuation of safe navigation when approaching spinner dolphins closer than 50 yards is unavoidable. For these cases, the vessel should continue normal navigation to reduce the likelihood that close interactions result in disturbances for an appreciable period of time. The exception for vessel operations necessary to avoid an imminent and serious threat to a person or vessel is needed for the safety of human life and property, and to allow for compliance with applicable navigation rules. The exception for government vessels, aircraft, personnel, and assets operating in the course of official duties is intended to avoid disruption of essential government missions, including enforcement and national security activities. The exception for vessels or persons engaged in an activity authorized through a permit or other authorization issued by the NMFS to take spinner dolphins is necessary to ensure the continued availability of scientific research and biological data necessary to inform management and conservation decisions related to the dolphins. We anticipate that compliance with relevant permit terms and conditions will help minimize the potential impacts to dolphins.

Rationale

Proposed Action—Swim-With and Approach Regulations

Hawaiian spinner dolphins resident to the MHI are made up of small, genetically isolated stocks that exhibit a specialized behavioral ecology that makes them easy to access in coastal environments during their daytime resting hours. This leaves these resident stocks vulnerable to human-caused disturbance and its effects such as habitat abandonment or declines in reproductive success (Norris *et al.* 1994, Andrews *et al.* 2010, Tyne *et al.* 2014). In the MHI, dolphin-directed activities have increased in recent years and the public's expectation of close interactions has placed increased pressure on resident stocks of Hawaiian spinner dolphins and the habitats that support these stocks (see Background above). Despite outreach, guidelines, and current prohibitions, observations in the field indicate that MHI resident Hawaiian spinner dolphins' natural behaviors are disrupted by activities that include approach by both swimmers and vessels (Ostman-Lind *et al.* 2004, Danil *et al.* 2005, Courbis 2004, Courbis and Timmel 2008), and overarching spinner dolphin group behavioral patterns may be changing in essential daytime habitats as a result of

these pressures (Norris *et al.* 1994, Forest 2001, Courbis 2004, Courbis and Timmel 2008).

Observed individual dolphin responses to disturbance events when closely approached by people and vessels include charging or threat displays, aerial displays, and avoidance behaviors such as moving around and away from people and vessels, or leaving the bay in response to human pursuit (Norris *et al.* 1985, Norris *et al.* 1994, Forest 2001, Ostman-Lind *et al.* 2004, Courbis 2004, Courbis and Timmel 2008). Additionally, researchers have observed changes to behavioral patterns in essential daytime habitats, including differences in aerial activity (Courbis and Timmel 2008) and changes in dolphin residence time and distribution within essential daytime habitats, that may be linked to the intensity of human activity (Forest 2001; Danil *et al.* 2005; Courbis 2004, 2007; Courbis and Timmel 2008; Ostman-Lind 2007).

Chronic disturbance can disrupt natural behavioral patterns associated with feeding, resting, nurturing, and socializing, and diminish the animals' ability to utilize the benefits of important habitat, ultimately resulting in negative impacts to the fitness of individuals and resident populations. For example, disturbance while spinner dolphins are resting detracts from the dolphins' abilities to recuperate from energetically demanding behaviors such as foraging, transiting to and from offshore foraging grounds, and nurturing their young. If these disturbances happen chronically, the lack of consistent, undisturbed resting periods can reduce the amount of energy available to forage and care for young. In other small cetacean populations, chronic human disturbances have been linked to biologically significant impacts such as reduced female reproductive success (Bejder 2005, Lusseau and Bejder 2007).

In other locations globally, intense dolphin-directed human activities have resulted in changes to targeted dolphin populations' habitat use and even caused habitat abandonment (Bejder *et al.* 2006a, 2006b; Gannier and Petiau 2006; Nature Conservation Sector 2006; Lusseau and Bejder 2007; Notarbartolo-di-Sciara *et al.* 2009). For example, in a bay in Tahiti, spinner dolphin residence times were negatively influenced by boat presence. Spinner dolphins often left the bays earlier when there was an increase in boat presence, and this increased boat disturbance may have deterred dolphins from entering the bay the next day (Gannier and Petiau 2006). Additionally, in Samadai Reef, Egypt,

spinner dolphins were reported as noticeably distressed from excessive numbers of visitors and people attempting to interact with the dolphins (Notarbartolo-di-Sciara *et al.* 2009). The spinner dolphin group abandoned this preferred resting area, presumably to avoid the disturbance from vessels and visitors (Nature Conservation Sector 2006), and did not return to the site until after management measures were put in place. Management measures included prohibiting human entry into the core resting area, and restricting certain activities in areas surrounding the core resting area to prevent further disturbance (Nature Conservation Sector 2006, Notarbartolo-di-Sciara *et al.* 2009).

Chronic disturbance of spinner dolphins in the MHI could negatively affect the habitat use or health of resident populations. Additionally, disturbance effects may be amplified in the MHI's resident stocks, which exhibit high site fidelity and restricted gene flow, because the impacts to multiple individuals' health and fitness are quickly reflected in the overall fitness of these small populations (Bejder 2005).

The 50-yard (45.7 m) approach regulation, including prohibiting swimming with dolphins, is intended to reduce the degree of behavioral disruption from close approaches by vessels and swimmers, while allowing for meaningful dolphin watching opportunities. Research indicates that spinner dolphins exhibit changes and disruptions to natural behaviors from close approach by swimmers (Danil *et al.* 2005, Courbis and Timmel 2008) and that swimmer presence within 150 m reduces the likelihood of spinner dolphins being in a resting state (Symons 2013, Johnston *et al.* 2014). Approach by vessels and watercraft have also been shown to disrupt and alter spinner dolphin behavior (Ross 2001, Forest 2001, Timmel *et al.* 2008). In the MHI, several studies note that close approach by vessels disrupt dolphin behaviors at various distances ranging from 10 m to 300 m (Forest 2001, Timmel *et al.* 2008). At Midway Atoll in the Northwestern Hawaiian Islands, Ross (2001) found that spinner dolphins were affected by vessel presence at distances as great as 500 m and that the effects increased as the distance decreased. Although Johnson *et al.*'s (2013) work in the MHI found the likelihood that dolphins were resting was higher when vessels were present between 50 and 150 m, they noted that these results may be influenced by the fact that vessels were present in proximity to the dolphins most of the time.

We have considered multiple distances that may provide protections for spinner dolphins from human activities that result in take (such as swimming with and approaching dolphins), including 50 yards, 100 yards (91.4 m), or even greater distances. NMFS believes that 50 yards is the minimum distance that will prevent most forms of take, while also providing the public with sufficient opportunity to tailor their conduct to avoid disruptive encounters with spinner dolphins. We already recommend this distance (50 yards) in our wildlife viewing guidelines and request that people do not swim-with wild dolphins to reduce the risk of behavioral disruption from close encounters. These guidelines are recognized by tour operators and are used by some (e.g., Dolphin SMART operators) to help ensure that spinner dolphins are viewed responsibly.

A 100-yard approach restriction exists for humpback whales and this distance was also considered for reducing take of spinner dolphins. Spinner dolphins are fast-moving, small cetaceans and groups of dolphins may move through areas changing directions throughout the day. A distance restriction of 100 yards provides more space for these animals to move back and forth, and helps ensure that people and vessels have sufficient opportunity to maintain an appropriate distance to avoid take. A 100-yard approach restriction might also be easier for vessel operators to recognize and achieve, as this distance applies to humpback whales. However, approach regulations at a distance greater than 50 yards may be difficult for recreational swimmers to recognize and achieve in the water. Based on the best scientific information available, it is difficult to determine a precise distance beyond which human activity does not have the potential to cause disturbance by disrupting natural behaviors. However, we recognize that not all approaches within 100 yards result in take, and we are concerned that such a prohibition may unnecessarily burden the public, without necessarily achieving the purposes of this rulemaking. Further, this greater distance may diminish both the experience of dolphin watching and opportunities to participate in dolphin watching, because these animals are small and may be difficult to spot at a distance. NMFS recognizes that the dolphin watching industry is important to Hawaii's economy, and that these tours have the ability to inform the public about dolphins and to foster stewardship. To reduce the threat of take occurring (including harassment

and disturbance) when swimmers and vessels closely approach dolphins, to remain consistent with the current recommended approach guideline for the region, and to allow for continued dolphin watching opportunities at safe distances, NMFS is proposing a distance of 50 yards for swim-with and approach restrictions.

The proposed swim-with and approach regulations prevent a range of human activities that occur in close proximity to Hawaiian spinner dolphins. This includes swimming-with spinner dolphins, touching or attempting to touch spinner dolphins; corralling or herding spinner dolphins into small areas; and leap-frogging, all of which have the potential to disturb the dolphins and result in take.

Implementation of these prohibitions would include enforcement by NMFS and DLNR Division of Conservation and Resource Enforcement (DOCARE) personnel, and outreach by NMFS staff and volunteers who would assist with an informational campaign about the new regulation and the scientific information on which it is based. This proposed rule provides new tools for enforcement that are measurable, easy to understand, and based on the best available science regarding human impacts on spinner dolphins. To limit some potential impacts to the public from these regulations, we propose exceptions that are designed to allow for transit into and out of ports, harbors, and restricted channels; public safety measures; avoidance of penalties when the animal has closely approached a boat or person; and continuation of essential government and permitted activities (see *Exceptions* section above). The DEIS contains a full analysis of a No Action Alternative, other alternatives, and the Preferred Alternative.

The costs of implementing human and vessel regulations to protect the dolphins are expected to be low. Some will be borne by the commercial dolphin watch and dolphin swim industry, dolphin-associated spiritual retreats, and other generalized nature tours (see the DEIS and the *Regulatory Flexibility Act* section below for more information). While some dolphin watch companies and community members have suggested that restricting swimming with the dolphins or closely approaching them may affect revenue, surveys of tour participants indicate that close approach of the dolphins may not be the most important aspect for the dolphin watching participants, and that participants will support viewing these animals in a manner that reduces the potential for disruptive encounters with

dolphins (Wiener 2015). Other impacts to boaters, swimmers, kayakers, and others who are not engaged in dolphin-directed activities are expected to be minor and include slight changes to operations to comply with the proposed regulations.

The reduction in disturbance to Hawaiian spinner dolphins, as addressed through each element of the rule as described above, provides a benefit to the dolphins as well as to members of the public who value the dolphins. Reducing threats to the dolphins also supports the long-term sustainability of the responsible dolphin watching industry.

Geographic Scope (Distance From Shore)

The proposed regulations are designed to address dolphin-directed activities that are resulting in various forms of take of Hawaiian spinner dolphins. NMFS selected 2 nm (3.7 km) from shore around the MHI as well as designated waters between the islands of Lanai, Maui, and Kahoolawe as the boundary for the proposed prohibitions because this range encompasses the areas where current and best available information indicates that most dolphin-directed activities are likely to be concentrated. NMFS gathered information from scientific literature about Hawaiian spinner dolphin daytime habitat preferences and information from over 400 sightings of spinner dolphins collected around the MHI since 1992 from various members of the Pacific Islands Photo Identification Network (PIPIN) to determine where resident spinner dolphins are likely to occur during the day. Dolphin-directed activities in Hawaii are concentrated in the nearshore portion of the island-associated Hawaiian spinner dolphin stocks' ranges because these stocks are easily accessed in coastal waters during the day when most people seek out marine recreational activities.

Daytime habitat for Hawaiian spinner dolphins varies across the MHI, because the bathymetry, or depths and shapes of underwater terrain, is different for each island, and spinner dolphins seek out areas with physical and biological characteristics that support their ecological needs (see Background section). On Hawaii Island, Norris *et al.* (1994) indicate that spinner dolphins generally prefer areas with depths of less than 50 m for engaging in resting activities, and Thorne *et al.* (2013) note that resting habitats generally occur in close proximity to the 100-m contour (close to the inshore extent of prey species at night). Spinner dolphins are

also known to transit along Hawaii Island's coastline, moving between resting areas during the day. Lammers *et al.* (2004) indicate that Oahu's spinner dolphins show a strong affinity for the 10-fathom isobath (18.3 m), and note that approximately 93 percent of sightings off Waianae and 81 percent of sightings off the south shore of Oahu occurred at depths shallower than 17 fathoms (31.1 m). Lammers *et al.* (2004) also note that foraging activities begin by evening around the 100-fathom isobath (182.9 m) off Oahu. Information received from PIPIN indicates that approximately 89 percent of spinner sightings across the MHI were in waters within the 100-m depth contour and that 95 percent were in waters within the 200-m depth contour, although spinner dolphins have been observed in waters during the day where depths are as great as 3,000 m (NMFS 2016).

In reviewing this information, we determined that selecting a boundary based on depth in any particular area may be difficult for people to identify without having access to proper instrumentation (which would be especially difficult for kayakers, standup paddleboarders, and swimmers), and that the distance from shore may provide a more easily discerned boundary. In addition, although spinner dolphin daytime habitat may be located at different distances from the shoreline of different islands, establishing different prohibitions based on the location of these daytime habitats (*e.g.*, having restrictions out to 1 nm (1.9 km) or 2 nm depending on the island) could subject the public to inconsistent and confusing requirements, and complicate both enforcement of and compliance with these regulations. This could be particularly difficult in areas where multiple islands are visible and the restricted distances differ around different islands. Therefore, we evaluated consistent distances from shore across the MHI.

We reviewed the habitat preferences and sighting information as it relates to distance from shore to identify a boundary that would be easy for people to recognize and would incorporate the best available information about spinner dolphin habitat preferences and sighting information. Along the west coast of Hawaii Island, habitats that are 50 m or less in depth and where dolphin-directed activities are prevalent, are encompassed within 1–1.5 nm (1.9–2.8 km) from shore. Habitats within 100 m depth fall almost entirely within 2 nm of shore, and at 3 nm (5.6 km) these areas are entirely included. Off the west coast of Oahu, where most dolphin-

directed activities on this island occur, the 10-fathom (18.3 m) isobath is largely captured within 1 nm of shore, while 17 fathoms (31.1 m) is largely captured within 1.5 nm. Habitats of these depths extend out farther on the south shore where spinner dolphins are also known to rest; these habitats are largely captured within 1.5 and 2 nm from shore respectively. The 100-fathom (182.9 m) contour is largely captured within 1.5 nm on the west side of the island, but extends out past 3 nm on the south shore. Little information is available from the other MHIs regarding specific depth preferences, although there are areas where the 50- and 100-m depth contours extend past 4 nm (7.4 km). Off most of the MHI, a large majority of the PIPIN sighting information is captured within 2 nm from shore.

A key area for spinner dolphin sightings during the day, where the depth contour extends out past 4 nm, is between the islands of Lanai, Maui, and Kahoolawe. This area is traversed by many recreational and commercial tour vessels in search of marine mammal viewing opportunities throughout the day. Consequently, spinner dolphins also require protections in this area. To ensure that dolphins are protected throughout the day where they may transit between islands and encounter dolphin-directed activities, we delineated an area around all three islands that includes the 2-nm buffer around the outside of each island and the channels and waters between these islands. This delineated area includes 96 percent of all PIPIN sighting information across the MHI.

We are proposing this action to reduce the threat of take of Hawaiian spinner dolphins (including harassment and disturbance) caused by dolphin-directed activities that are concentrated in coastal waters of the MHI and to reduce the impact of increased viewing and interactions pressures on MHI resident stocks. We do not expect that these same pressures are prevalent in the outer portions of the MHI stocks' ranges, because these spinner dolphins are not easily accessed when they are offshore. Therefore, the proposed rule applies to an area within 2 nm of the MHI and in designated waters between the islands of Lanai, Maui, and Kahoolawe. This area encompasses the majority of the resident stocks' daytime habitat, thereby incorporating the area where spinner dolphins are easily accessed and where take of Hawaiian spinner dolphins is most likely to occur.

Additional Measures Under Consideration: Time-Area Closures

Although not currently proposed, we are also considering and seeking public comment on whether additional management measures (beyond swim-with and approach regulations) may be necessary and appropriate to protect Hawaiian spinner dolphins from take, especially in essential daytime habitats targeted by humans for dolphin-directed activities. At this time, we believe that the swim-with and approach regulations alone will provide sufficient protection to Hawaiian spinner dolphins, by reducing close encounters between spinner dolphins and humans that result in take. We also expect that the swim-with and approach regulations will reduce the intensity of activities within essential daytime habitats that are targeted by people for dolphin-directed activities to some degree. However, NMFS recognizes that the intensity of activity in some of these areas is high and that additional measures could be necessary.

Area closures have been shown to be an effective management tool for addressing the intensity of wildlife viewing and interaction in other areas globally (Notarbartolo-di-Sciara *et al.* 2009, Nature Conservation Sector 2006). Area closures provide members of the public with precise boundaries so that they may readily tailor their conduct accordingly. However, area closures can also carry undesired costs, such as by imposing a burden on the public when spinner dolphins are not present. We are mindful of this potential and believe a careful approach is warranted. By first implementing swim-with and approach regulations, we expect to reduce take of Hawaiian spinner dolphins resulting from interactions with swimmers and vessels. We also expect to gather additional information about the effectiveness of these measures. Should this action's swim-with and approach regulations provide insufficient protection for Hawaiian spinner dolphins using essential daytime habitats, we would consider additional conservation and management measures, including time-area closures, to reduce take in high intensity areas. Below we discuss two management options that are analyzed in the DEIS. We invite public comment about whether and at what point these management options or others may be necessary and appropriate to protect Hawaiian spinner dolphins from take.

Two possible management options evaluated in the DEIS would create either mandatory (see Alternative 4 in the DEIS) or voluntary (see Alternative

5 in the DEIS) time-area closures in five essential daytime habitats, in addition to the swim-with and approach regulations. We selected the five areas for potential time-area closures using a step-down process. In this approach, we identified important habitats that might benefit from additional protection, and then considered additional factors that may promote or obstruct the effectiveness of the closure. (See Appendix A of the DEIS for more detail.) The five sites are essential daytime habitats where human activities are largely Hawaiian spinner dolphin-directed, where closures are logistically feasible, and where regulatory measures can be balanced most effectively with human ocean use to protect these dolphins. Once the sites were selected for time-area closures, we delineated core areas within each of the five sites where spinner dolphins are most often engaged in resting activities. The core areas would be subject to closure, while leaving other areas of the bays open in order to minimize impacts on other human activities (e.g., snorkeling, surfing).

As noted in the SAPPHIRE Project section above, essential daytime habitats are particularly important to island-associated spinner dolphins because the habitats provide environmental characteristics that support the dolphins' ability to minimize travel to offshore food sources and to detect predators (Norris and Dohl 1980, Norris *et al.* 1994, Thorne *et al.* 2012). Tyne *et al.* (2014) reported that spinner dolphins off the island of Hawaii are most likely to rest while inside these habitats that support predator detection and noted that dolphins using these areas off the west coast of Hawaii are experiencing human activities within 100 m over 80 percent of the time. Chronic wildlife disturbance within important habitats may lead to habitat abandonment and/or negatively impact the health of individual dolphins, ultimately leading to population level impacts (Frid and Dill 2002, Bejder 2006). Additional management in these areas may be important to ensure that Hawaiian spinner dolphins are given sufficient space for groups to engage in deep resting behaviors that allow dolphins to recuperate from other energy demanding activities, such as foraging.

For time-area closures we are considering a closure time of 6 a.m. to 3 p.m. This time-period would allow spinner dolphins to enter essential daytime habitats without disturbance and remain in these areas undisturbed during peak resting hours, while allowing for human activities to occur

(at a distance greater than 50 yards (45.7 m) in accordance with the approach regulations) after 3 p.m. Historic spinner dolphin resting times (before human interactions were likely a major factor in the dolphins' resting patterns) were observed to occur between dawn and dusk (Norris and Dohl 1980), and research indicates that Hawaiian spinner dolphin resting behavior still occurs throughout daytime hours (generally 6 a.m. to 6 p.m.) with the highest resting activity occurring between 10 a.m. and 2 p.m. (Tyne *et al.* 2015). Nevertheless, some Hawaiian spinner dolphin groups have been deterred from entering their essential daytime habitat if human presence in the area was too high early in the day (Danil *et al.* 2005). Preventing disturbance in these habitats during early morning hours is important to support spinner dolphins' arrival to the essential daytime habitat and their descent into rest. The late afternoon hours are considered a time of transition and described as a time when the dolphins rally together and engage in zig zag movements as they are waking from their deep rest, prior to moving offshore to their foraging grounds (Norris *et al.* 1994). However, the afternoon hours are also a popular time for human recreational use. Because the swim-with and approach regulations would provide a measure of protection for spinner dolphins as they increase activity toward the end of their resting period, we would end the closure time at 3 p.m. Swim-with and approach regulations would continue to provide a buffer of protection to the dolphins at the end of their peak resting times, while also allowing some of these human activities to occur for a limited time period.

For either mandatory or voluntary closure options, the closure areas would be marked using buoys, sight-line markers, and landmarks from shore, and explanations of the closure's purpose and effective hours would be provided by signs on land and through other public outreach efforts. The intent of both mandatory and voluntary closures would be to prevent take by eliminating the intense human activity within essential daytime habitats during important resting times. These closures would allow for increased opportunities for spinner dolphins to engage in fitness-enhancing behaviors in the absence of vessels and people.

The bays identified for the mandatory and voluntary time-area closure options are (1) Makako Bay, (2) Kealakekua Bay, (3) Honaunau Bay, and (4) Kauhako Bay on the island of Hawaii, and (5) La Perouse Bay on the island of Maui.

Below we describe the areas delineated for the time-area closures; these areas are also depicted in Figures 1–5 of this preamble.

Makako Bay. The lines between points A, B, C, and D shown in Figure 1 illustrate the marine boundaries for the time-area closure for Makako Bay; the shoreline boundary is at the mean lower low water line (meaning activities could occur in the intertidal zone) between points A and D. The following geographic coordinates provide the approximate location for each point in Figure 1: A) 19°44'21.61" N., 156°3'16.37" W.; B) 19°44'25.18" N., 156°3'26.07" W.; C) 19°44'2.16" N., 156°3'35.51" W.; and D) 19°43'57.31" N., 156°3'23.04" W. Two buoy markers would be placed at points B and C aligned with site line markers on shore at points A and D to delineate the closure area (Figure 1). The closure encompasses approximately 0.14 mi² (0.36 km²) of essential daytime habitat used by Hawaiian spinner dolphins. These coordinates, and coordinates for the other time-area closures, are considered approximate because the exact locations would not be specified until the buoy anchoring system is identified and an underwater survey is completed.

No public access point from shore is identified by the County of Hawaii for Makako Bay. The closest access points are identified south at Wawaloli Beach, with another access point identified North at Keahole Point.

Kealakekua Bay. The lines between points A, B, C, and D shown in Figure 2 illustrate the time-area closure for Kealakekua Bay. The following geographic coordinates provide the approximate location for each point in Figure 2: A) 19°28'37.82" N., 155°55'15.03" W.; B) 19°28'54.23" N., 155°55'44.90" W.; C) 19°28'48.42" N., 155°55'49.04" W.; and D) 19°28'32.19" N., 155°55'19.20" W. The closure area would be delineated by means of six marker buoys—one located at each corner and one located at the middle of each of the lengthwise boundaries. Informational signs would be placed on shore to inform the public of the closure areas. The closure encompasses approximately 0.08 mi² (0.21 km²) of essential daytime habitat used by Hawaiian spinner dolphins.

The County of Hawaii identifies two public access points on Boulder Beach and Napoopoo Landing at Kealakekua Bay; both points would remain open for access. Additionally, the route used by kayakers to access the Captain Cook Monument at Kaawaloa from Napoopoo Pier is located outside of the closure

area. A line on the map going across the bay depicts this route.

Honaunau Bay. The lines between points A, B, and C shown in Figure 3 illustrate the marine boundaries for the time-area closure for Honaunau Bay; the shoreline boundary is at the mean lower low water line (meaning activities could occur in the intertidal zone) between points A and C. The following geographic coordinates provide the approximate location for each point in Figure 3: (A) 19°25'27.13" N., 155°54'41.65" W.; (B) 19°25'21.41" N., 155°54'58.17" W.; and (C) 19°25'31.99" N., 155°54'58.24" W. The closure site at Honaunau would be delineated by means of a single marker buoy at point B to accommodate local native Hawaiians' requests to honor the sacred nature of this cultural site, and would be aligned with site line markers on shore at points A and C (Figure 3). Informational signs would be placed on shore to inform the public of the closure areas. The closure encompasses approximately 0.04 mi² (0.10 km²) of essential daytime habitat used by Hawaiian spinner dolphins.

The County of Hawaii identifies Honaunau Bay boat ramp as a public access area for this bay. The boat ramp and the popular access point for swimming and snorkeling known as Two-Step are located outside of the closure area, and would remain open for everyday use.

Kauhako Bay. The lines between points A, B, and C shown in Figure 4

illustrate the marine boundaries for the time-area closure for Kauhako Bay; the shoreline boundary is at the mean lower low water line (meaning activities could occur in the intertidal zone) between points A and B. The following geographic coordinates provide the approximate location for each point in Figure 4: (A) 19°37'86.15" N., 155°89'68.10" W.; (B) 19°37'91.79" N., 155°89'95.98" W.; and (C) 19°37'04.02" N., 155°89'70.41" W. A single marker buoy would be placed approximately 35 m from shore to delineate the inner bay closure boundary. Sight line markers at each of the points A, B and C (Figure 4), and two buoys placed along the offshore boundary (line B–C) would delineate the closure area at this bay.

Informational signs would be placed on shore to inform the public of the closure areas. The closure encompasses approximately 0.087 mi² (0.18 km²) of essential daytime habitat used by Hawaiian spinner dolphins.

The County of Hawaii identifies Hookena Beach Park as a public access point for this area. The nearshore area located inshore of the line between points A and B would be open for everyday use, including swimming, snorkeling, and freediving.

La Perouse Bay. The lines between points A, B, C and D shown in Figure 5 illustrate the marine boundaries for the time-area closure for La Perouse Bay; the shoreline boundary is at the mean lower low water line (meaning activities could occur in the intertidal

zone) between points A and C, and between B and D. The following geographic coordinates provide the approximate location for each point in Figure 5: (A) 20°35'56.90" N., 156°25'17.04" W.; (B) 20°35'25.68" N., 156°24'44.72" W.; (C) 20°35'39.30" N., 156°25'33.85" W.; and (D) 20°35'10.98" N., 156°24'50.90" W. A single marker buoy would be placed approximately 100 m offshore of the most popular snorkeling entry point to delineate the nearshore boundary line, with three buoys placed along the offshore boundary line (line C–D) to delineate the outer closure boundary. Shore-based markers at points A, B, C, and D would provide a sightline. Informational signs would be placed on shore to inform the public of the closure areas. The closure encompasses approximately 0.32 mi² (0.83 km²) of resting habitat used by Hawaiian spinner dolphins.

Maui County identifies La Perouse as a public access point for this area (coordinates: 20°36'09.66" N., 156°25'22.48" W.). The area inshore of the line between A and B, which includes this access point, would remain open for everyday uses such as surfing, snorkeling, and freediving.

Activities occurring in the intertidal zone (the area that is above water at low tide and under water at high tide), such as shore-based fishing and subsistence gathering, would be able to continue during any time of day in either type of closure.

Figure 5. Time-Area Closure Depiction, La Perouse Bay

Mandatory Time-Area Closures and Swim-With and Approach Regulations

Although not currently proposed, if we were to implement mandatory time-area closures in addition to promulgating swim-with and approach regulations (described under Alternative 4 in the DEIS), we would create the time-area closures (depicted in Figures 1–5 above) and promulgate regulations that prohibit use of waters within the five delineated areas from 6 a.m. to 3 p.m.. All *Exceptions* (see section above) described for the proposed swim-with and approach regulations would apply to this alternative, and the following three additional exceptions would also apply to the mandatory time-area closures:

(1) Vessels that transit the time-area closure for the sole purpose of ingress and egress to privately-owned shoreline residential property located immediately adjacent to the time-area closure;

(2) Vessels participating in organized community-based outrigger canoe races that transit straight through a time-area closure; and

(3) Vessels that transit straight through the time-area closure for the purpose of traditional subsistence fishing where harvested resources are

intended for personal, family, or community consumption or traditional use and not for commercial market sale.

Entering mandatory time-area closures during closed periods would result in a violation unless an exception to the rule applies.

Mandatory time-area closures would prevent take within these important areas and ensure that spinner dolphins are provided space to achieve deep rest during the day. Additionally, regulations to impose these closures would provide a strong tool for enforcement that is measurable and easy to understand, promoting both enforcement and compliance. Under this management option, swim-with and approach regulations would reduce disturbance to Hawaiian spinner dolphins from close approach activities throughout nearshore areas, and mandatory time-area closures would provide additional protection by reducing the intensity of viewing pressure in five essential daytime habitats.

Voluntary Time-Area Closures and Swim-With and Approach Regulations

Although not currently proposed, if we were to implement voluntary time-area closures in addition to promulgating swim-with and approach

regulations (Alternative 5 in the DEIS), we would demarcate the same five areas for voluntary time-area closures as are described for the mandatory closures (see *Mandatory Time-Area Closures with Swim-with and Approach Regulation* above). Through outreach, we would ask the public to refrain from using waters within the five delineated areas from 6 a.m. to 3 p.m. Participation in the time-area closures would be voluntary, and no penalties would apply to people or vessels that enter the areas during designated spinner dolphin resting times. The voluntary time-area closures would not apply to any activity that falls within the *Exceptions* (see above) described for the swim-with and approach regulations, or the three additional exceptions described for the mandatory time-area closures option (see three exceptions in the *Mandatory Time-Area Closures and Swim-with and Approach Regulations* section above). Under this alternative, compliance with the time-area closure would be voluntary.

Success with voluntary measures requires strong community engagement and support. Ideally, conservation benefits for Hawaiian spinner dolphins would be the same for mandatory and voluntary closures because both management measures demarcate space

for Hawaiian spinner dolphins to engage in resting behaviors. However, we expect that compliance with voluntary measures would be generally lower than compliance with regulations that are enforced (May 2005), and within the five bays, resource users are diverse and have varying motivations and beliefs with regard to Hawaiian spinner dolphin conservation. The lack of a common understanding about the value of these conservation measures may make it difficult to achieve voluntary compliance for the closures. Further, inconsistent compliance with voluntary measures could lead to increased tension between resource user groups that have conflicting views about Hawaiian spinner dolphin conservation.

Additional Measures Eliminated From Consideration

NMFS did not propose some of the regulatory options suggested in the ANPR and in public comments for several reasons, including the measures' inability to meet the purpose and need for this rulemaking (see the DEIS for more detail), difficulties in enforcing them, changes to infrastructure needed to implement them, lack of effectiveness of the measures, lack of resources available to institute them, and the complexity associated with complying with the measures. For example, a permit certification program for all marine operators that engage in some form of dolphin viewing would be inappropriate for addressing chronic and concentrated viewing practices, would require a large processing infrastructure to implement throughout the Hawaiian Islands, and would not address disturbance caused by vessels that are not conducting dolphin tours (e.g., recreational vessels or kayaks). Another suggestion, implementing full closures of all identified resting habitats throughout the Hawaiian Islands, would create many restrictions on activities that are not dolphin-directed, obstruct some harbors, be costly, and require a larger infrastructure to institute and enforce. We discuss these and other regulatory options suggested in public comments in the DEIS for this action.

Public Comments

We are soliciting comments on any aspect of these proposed swim-with and 50-yard (45.7 m) approach regulations. As explained above, NMFS does not propose to implement mandatory or voluntary time-area closures as part of this rulemaking. At this time, NMFS believes that the proposed swim-with and approach regulations will provide adequate protection to spinner dolphins against take, including harassment and

disturbances. Should NMFS determine that swim-with and approach regulations provide insufficient protection for Hawaiian spinner dolphins using essential daytime habitats, we would consider additional conservation and management measures, including time-area closures to reduce take in high intensity areas, in a separate rulemaking.

We are particularly interested in comments concerning the following: (1) Effects of the increasing number of human interactions with Hawaiian spinner dolphins; (2) proposed prohibited and exempted activities; (3) whether 50 yards is the most appropriate distance for swim-with and approach restrictions to reduce take of spinner dolphins; (4) whether 100 yards (91.4 m) or another distance is the most appropriate distance for swim-with and approach restrictions to reduce take of spinner dolphins; (5) research recommendations and priorities for better understanding how human disturbance affects Hawaiian spinner dolphins; (6) information on responsible viewing of marine mammals; (7) additional information on spinner dolphin behaviors; (8) other human activities affected by the proposed rule that were not discussed; (9) the temporal and geographic scope (i.e., 2 nm from shore) of the approach regulation; (10) whether the area where the approach regulation is proposed in the Lanai- Maui-Kahoolawe triangle is adequate and appropriate; (11) whether time-area closures are necessary to address the intensity of Hawaiian spinner dolphin-directed activities in some areas; (12) the effectiveness of mandatory versus voluntary closures; (13) the bays and times of day identified for time-area closures; (14) information about other areas where Hawaiian spinner dolphins may face pressures from human viewing and interaction; and (5) suggestions on other areas that should be considered for time-area closures.

Please be aware that all comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.) submitted voluntarily by the sender will be publicly accessible. Do not submit confidential business information, or otherwise sensitive or protected information. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous).

References Cited

A complete list of all references cited in this proposed rule can be found on our Web site at: http://www.fpir.noaa.gov/PRD/prd_spinner_EIS.html, or at www.regulations.gov, and is available upon request from the NMFS office in Honolulu, Hawaii (see **ADDRESSES**).

Classification

National Environmental Policy Act (NEPA) and Regulatory Impact Review (RIR)

NMFS has prepared a DEIS and an RIR pursuant to NEPA (42 U.S.C. 4321 *et seq.*) and Executive Order (E.O.) 12866, to support this proposed rule. The DEIS/RIR contains a full analysis of a No Action Alternative, five action alternatives, and the Preferred Alternative that we are proposing. There are a number of elements that were common to all of the action alternatives analyzed, including the preferred alternative proposed in this notice, and a number of exceptions that would apply to these alternatives. The DEIS/RIR and supporting documents are available for review and comment and can be found on the NMFS Pacific Islands Region Web site at http://www.fpir.noaa.gov/PRD/prd_spinner_EIS.html.

Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, whenever an agency publishes a notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a Regulatory Flexibility Analysis describing the effects of the rule on small entities, i.e., small businesses, small organizations, and small government jurisdictions.

Pursuant to the RFA, NMFS prepared the following Initial Regulatory Flexibility Analysis (IRFA). A description of the action, why it is being considered, and the legal basis for this action are contained in the preamble to this proposed rule. This proposed rule does not duplicate, overlap, or conflict with other Federal rules. The analysis contains a description of and, where feasible, an estimate of the number of, small entities to which the proposed rule will apply. The Small Business Administration (SBA) establishes criteria for defining a "small entity" for purposes of the RFA. This IRFA analyzes the proposed alternatives and other alternatives described in the preamble to the rule, and does not

address alternatives previously considered and subsequently dismissed in the DEIS. There are no record-keeping or reporting requirements associated with this proposed rule.

Description and Estimate of the Number of Small Entities to Which the Proposed Rule Applies

There are several types of industries directly affected by this proposed rulemaking: Swim-with-wild-dolphins tour operators; dolphin watch tour operators; non-motorized vessel ocean wildlife viewing tour operators; and generalized commercial boat tour operators. This analysis uses size standards prescribed by the SBA. Specifically, for scenic and sightseeing water transportation operators (North American Industry Classification System Code 487210), the SBA size standard for a small business is average annual receipts of \$7.5 million or less. Much of the background information for potentially affected entities is based on a 2007 report that summarized surveys and other information collected in 2006 with regard to participants within these industries that potentially interact with Hawaiian spinner dolphins to varying degrees in the MHI (Impact Assessment 2007). The report provides information that suggests that all businesses operating in the swim-with-wild-dolphins tour and the kayak tour industries operating in 2006 could be considered small entities, and all but one of the generalized commercial boat tour operators were assumed to be small entities (Impact Assessment 2007). This is the most recent information available to NMFS regarding revenue information, but NMFS notes that the composition of these vessel-based tour industries, including the number which can be considered small entities and the total number, may have changed since the report was written.

Swim-with-wild-dolphins tour operators are those that bring clientele into close proximity with spinner dolphins. This includes health and/or spiritual retreat operations as well as dolphin-oriented swim tours. Health and spiritually-linked businesses provide opportunities for persons wishing to interact with spinner dolphins for perceived physical, mental, and/or spiritual well-being enhancement. Spiritually-linked tour operations may charter vessels through other established dolphin-swim companies to transport customers as part of an overall per-person package consisting of lodging, swimming with dolphins, and other activities. For spiritual retreats that offer dolphin swims, the number of businesses is

estimated to be as follows: Hawaii (22), Maui (7), Oahu (1), and Kauai (2+).

Dolphin-oriented swim tours operate by transporting passengers by boat or having them swim from shore to areas in which dolphins are known to be present during daytime hours. Customers may also be provided with facemasks, fins, floatation devices, and snorkels to enhance viewing. Recent information compiled by NMFS suggests that the number of swim-with-dolphins tour companies is as follows: Hawaii (22), Maui (2), Oahu (10), and Kauai (1). All are believed to be small entities.

Dolphin-watch tour operators involve taking clients out specifically to view wild dolphins. These companies tend to operate smaller boats than the more generalized commercial boat tours described below, and are more likely to view dolphins at a closer range. Revenue information for this specific business category is not available. NMFS estimates the number of dolphin watch tour businesses to be as follows: Hawaii (3), Maui (21), Oahu (3), and Kauai (11).

More generalized commercial boat tours offer a range of ocean activities, which may include sightseeing, snorkeling, diving, viewing various forms of sea life from a vantage point in and/or above the water, or just generally spending time on the ocean. The majority of the general tour boats derive revenue from whale watching and sightseeing operations, while a number of the dive/snorkel vessels offer snorkeling or diving trips. Based on recent information collected by NMFS, the estimated number of generalized commercial boat tour businesses reportedly involving indirect dolphin interaction is estimated as follows: Hawaii (10), Maui (19), Oahu (36), and Kauai (12). NMFS believes that most, but not all, would be considered small entities.

Non-motorized vessel ocean wildlife viewing tour operators, specifically kayak tour businesses around the MHI, provide a general wildlife viewing experience, with a very small number of operators advertising direct or intentional interactions with dolphins. The number of kayak tour operators who advertise the opportunity to directly interact with wild dolphins is not available. NMFS estimates the numbers of companies that either operate kayak tours or rent out kayaks to be as follows: Hawaii (6), Maui (9), Oahu (6), and Kauai (13).

The estimated numbers of small entities directly affected by the proposed rulemaking, by industry, on the MHI are as follows: 67 swim-with-

wild-dolphins tour operators (including health and/or spiritual retreats enabling opportunities to swim with wild dolphins), 77 generalized commercial boat tour operators (one or more of which are likely to be considered large entities), and 34 kayak tour and rental companies.

Economic Impacts to Small Entities Resulting From the Proposed Action (Swim-With and 50-Yard Approach Regulations)

The preferred alternative would restrict all activities associated with close approach to Hawaiian spinner dolphins, including swimming with dolphins and close approach by vessel. These prohibitions would be applicable within 2 nm (3.7 km) of each of the MHI and in designated waters between the islands of Lanai, Maui, and Kahoolawe.

The proposed action to ban swimming and approaching within 50 yards (45.7 m) of Hawaiian spinner dolphins, has the potential to eliminate all commercial activities that result in take of spinner dolphins (e.g., swim-with-wild-dolphins) at a close distance. Therefore, implementing this proposed action would require operators that currently offer the opportunity to swim with spinner dolphins to cease this specific activity, although they may choose to continue to provide other services among their menu of options. For example, a spiritual retreat that offers a menu of other activities along with swim-with-wild-dolphins activities may continue to offer the other activities. In addition, swim-with-wild-dolphins tour operators may choose to transition to operate as a dolphin-watching or generalized tour vessel operation. For these businesses, eliminating opportunities to swim with wild spinner dolphins within 50 yards is likely to result in a reduction in revenue in the short term and potentially in the long term. The decrease in revenue could come from the reduction in the number of customers, specifically those who seek the experience of swimming with spinner dolphins, and/or reduced trip or package prices with a reduced menu of options available for each trip. The loss in overall revenue to individual businesses and the industry as a whole that rely on close approach with spinner dolphins by any means for revenue is uncertain. The same is true with regard to the number of businesses that would be still be able to remain in operation if the proposed regulation is implemented.

Commercial wildlife boat tour operators, including generalized commercial boat tour operators, dolphin

watch tour operators, and non-motorized vessel tour operators, would no longer be able to take customers to view Hawaiian spinner dolphins from closer than 50 yards. Restricting operators from approaching within 50 yards of spinner dolphins may reduce demand for vessel-based tours among customers who specifically hope to view dolphins from a vessel at a closer range, although there will be no options other than not taking a tour at all, as no boats in Hawaii would be able to offer tours closer than 50 yards. Some tour operators may be able to offer alternative recreational opportunities or amenities as part of a tour to help offset any loss in demand for tours. For generalized tour boat operators with a clientele base that does not have a specific goal of viewing spinner dolphins, the direct economic impact of the proposed action is likely to be minimal.

NMFS concludes that there would be disproportionate impacts to the swim-with-wild-dolphin tour operators from implementation of this preferred alternative relative to all other general wildlife viewing tour operators. Similarly, because of the focus of activities, it is also likely that the dolphin watch tour industry will face greater impacts than the generalized wildlife tour companies. As a result, dolphin-watch tour entities may face disproportionate impacts relative to the generalized commercial boat tour companies, which are likely to incur few direct economic impacts from the proposed action. We note that dolphin watch tour entities are all believed to be small entities, and most of the generalized commercial boat tour companies are as well, although a few might be considered large entities with revenues exceeding \$7.5 million.

NMFS considered other alternatives in addition to the swim-with and 50-yard approach regulations in this proposed rule (*i.e.*, Alternative 3a). These include 1) no action; 2) swim-with regulations; 3b) swim-with and 100-yard (91.4 m) approach regulations; 4) mandatory time-area closures and swim-with and approach regulations; and 5) voluntary time-area closures and swim-with and approach regulations. As is the case for this proposed action, Alternatives 2, 3b, 4, and 5 would all be applicable within 2 nm of each MHI and in designated waters between the islands of Lanai, Maui, and Kahoolawe. Among the non-selected action alternatives, only Alternative 2 (no swimming with Hawaiian spinner dolphins) would result in a lower direct economic impact to small entities. While the restriction on swimming with

dolphins would address one threat to Hawaiian spinner dolphin population, this alternative would not address the remaining documented threats to dolphin populations caused by close approach by vessels and other craft. Section 4.2.2 of the DEIS provides more detail. The remaining non-selected action alternatives would most likely result in a higher economic impact to individual small entities and the dolphin-viewing industry as a whole, relative to the preferred alternative of this proposed action. NMFS has determined that the proposed action meets the goals and objective of reducing human-caused disturbances that Hawaiian spinner dolphins are facing in their natural habitat, and helps protect against declines in the fitness of the population over time.

No additional reporting, record keeping, and other compliance requirements are anticipated for small businesses. NMFS has identified no Federal rules that may duplicate, overlap, or conflict with the action alternatives.

Executive Order 12866

This proposed rule was determined to be not significant for purposes of E.O. 12866.

Paperwork Reduction Act

The purpose of the Paperwork Reduction Act is to minimize the paperwork burden for individuals, small businesses, educational and nonprofit institutions, and other persons resulting from the collection of information by or for the Federal government. The preferred alternative includes no new collection of information, so further analysis is not required.

National Historic Preservation Act (NHPA)

The goal of the National Historical Preservation Act (NHPA; 16 U.S.C. 470 *et seq.*) is to have Federal agencies act as responsible stewards of our nation's resources when their actions affect historic properties. Section 106 of the NHPA requires Federal agencies to take into account the effects of undertakings they carry out, assist, fund, or permit on historic properties. Federal agencies meet this requirement by completing the section 106 process set forth in the implementing regulations, "Protection of Historic Properties," 36 CFR part 800. The goal of the section 106 process is to identify and consider historic properties (or sites eligible for listing) that might be affected by an undertaking, and to attempt to resolve any adverse effects through consultation. The process provides for participation by State

Historic Preservation Officers, Tribal Historic Preservation Officers, tribal, state and local governments, Indian tribes and Native Hawaiian organizations, applicants for Federal assistance, permits, or licenses, representatives from interested organizations, private citizens, and other members of the public. Federal agencies and consulting parties strive to reach agreement on measures to avoid, minimize, and mitigate adverse effects on historic properties and to find a balance between project goals and preservation objectives.

Under the NHPA, an "effect" means an alteration to the characteristics of a historic property qualifying it for inclusion or eligibility for the National Register. The proposed swim-with and approach regulations for Hawaiian spinner dolphins, if finalized, would not have the potential to cause effects on or alterations to the characteristics of historic properties. Therefore, section 106 consultation is not required.

Coastal Zone Management Act

Section 307(c)(1) of the Federal Coastal Zone Management Act of 1972 requires that all Federal activities that affect any land or water use or natural resource of the coastal zone be consistent with approved state coastal zone management programs to the maximum extent practicable. We have determined that these proposed swim-with and approach regulations are consistent to the maximum extent practicable with the enforceable policies of the approved Coastal Zone Management Program of Hawaii. This determination, a copy of this document, and the DEIS will be submitted for review by the Hawaii Coastal Zone Management Program.

Executive Order 13132, Federalism

E.O. 13132 requires agencies to take into account any federalism impacts of regulations under development. It includes specific consultation directives for situations in which a regulation may preempt state law or impose substantial direct compliance costs on state and local governments (unless required by statute). NMFS has determined that the proposed swim-with and approach regulations do not have federalism implications.

Information Quality Act (IQAA)

Pursuant to Section 515 of Public Law 106-554 (the Information Quality Act), this information product has undergone a pre-dissemination review by NMFS. The signed Pre-dissemination Review and Documentation Form is on file with the NMFS Pacific Islands Regional

Office (see **FOR FURTHER INFORMATION CONTACT**).

List of Subjects in 50 CFR Part 216

Administrative practice and procedure, Marine mammals.

Dated: August 19, 2016.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 216 is proposed to be amended as follows:

PART 216—REGULATIONS GOVERNING THE TAKING AND IMPORTING OF MARINE MAMMALS

- 1. The authority citation for part 216 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*

- 2. Add § 216.20 to subpart B to read as follows:

§ 216.20 Special restrictions for Hawaiian spinner dolphins.

(a) *Applicability.* The following special restrictions designed to protect Hawaiian Spinner Dolphins apply:

- (1) In all waters within 2 nautical miles of the main Hawaiian Islands, and
- (2) In all waters located between the islands of Lanai, Maui, and Kahoolawe enclosed by three line segments that connect points on the 2-nautical mile boundary between the islands as follows: the straight line between

20°32'51" N./156°43'50" W. and 20°42'4" N./156°55'34" W. between Kahoolawe and Lanai, the straight line between 20°51'1" N./156°54'0" W. and 20°59'48" N./156°42'28" W. between Lanai and Maui, and the straight line between 20°33'55" N./156°26'43" W. and 20°32'15" N./156°29'51" W. between Maui and Kahoolawe (all coordinates referenced to The World Geodetic System of 1984 (WGS 84)).

(b) *Prohibitions.* Except as noted in paragraph (c) of this section, it is unlawful for any person subject to the jurisdiction of the United States to commit, to attempt to commit, to solicit another to commit, or to cause to be committed any of the following:

- (1) Approach or remain within 50 yards of a Hawaiian spinner dolphin by any means;
- (2) Swim within 50 yards of a Hawaiian spinner dolphin;
- (3) Cause a vessel, person, or other object to approach or remain within 50 yards of a Hawaiian spinner dolphin; or
- (4) Intercept or place a vessel, person, or other object on the path of a Hawaiian spinner dolphin so that the dolphin approaches within 50 yards of the vessel, person, or object.

(c) *Exceptions.* The prohibitions of paragraph (b) of this section do not apply to:

- (1) Any person who inadvertently comes within 50 yards of a Hawaiian spinner dolphin or is approached by a spinner dolphin, provided the person makes no effort to engage or pursue the

animal and takes immediate steps to move away from the animal;

(2) Any vessel that is underway and is approached by a Hawaiian spinner dolphin, provided the vessel continues normal navigation and makes no effort to engage or pursue the animal;

(3) Any vessel transiting to or from a port, harbor, or in a restricted channel when a 50-yard distance will not allow the vessel to maintain safe navigation;

(4) Vessel operations necessary to avoid an imminent and serious threat to a person or vessel;

(5) Activities authorized through a permit or authorization issued by the National Marine Fisheries Service to take Hawaiian spinner dolphins; and

(6) Federal, State, or local government vessels, aircraft, personnel, and assets when necessary in the course of performing official duties.

(d) *Affirmative defense.* In connection with any action alleging a violation of this section, any person claiming the benefit of any exemption, exception, or permit listed in paragraph (c) of this section has the burden of proving that the exemption or exception is applicable, or that the permit was granted and was valid and in force at the time of the alleged violation.

(e) *Maps of areas for Hawaiian spinner dolphin special restrictions.* The following are overview maps and a table with corresponding coordinate data for the areas for Hawaiian spinner dolphin special restrictions.

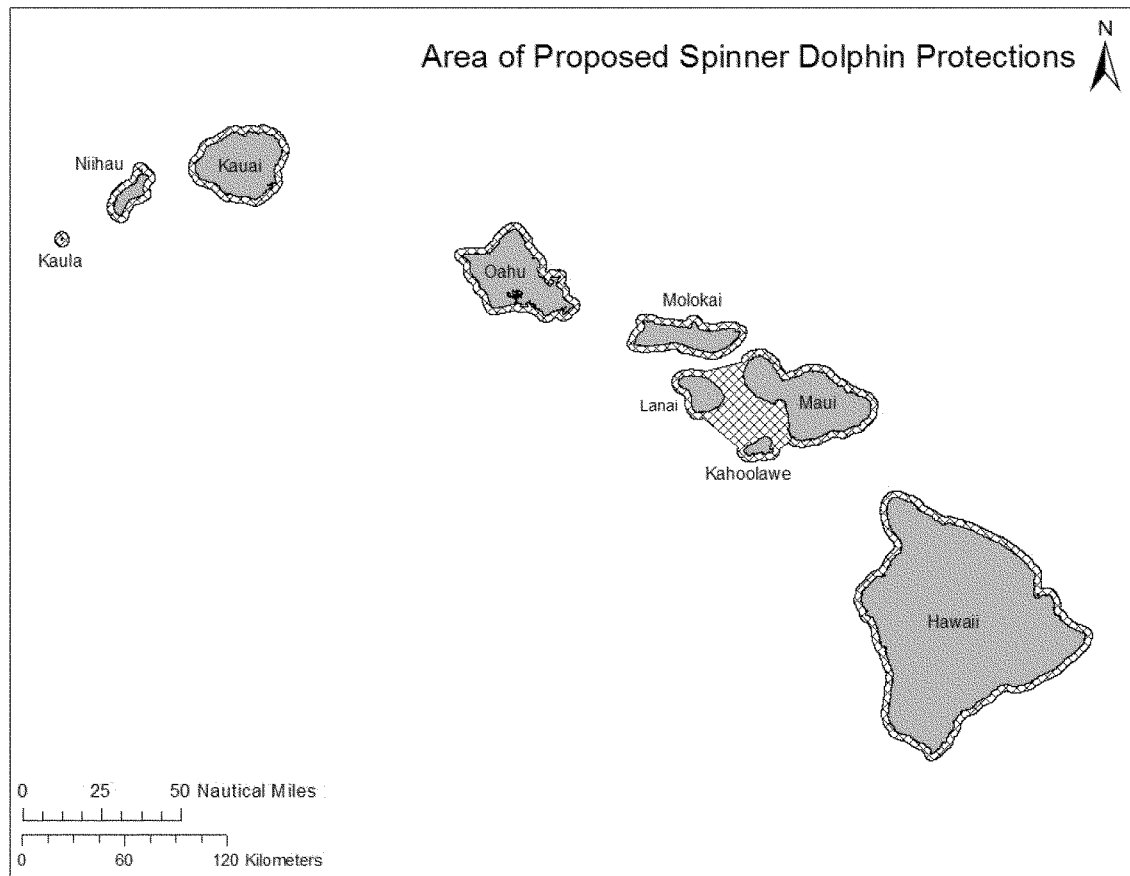

Figure 1. Overview of Area of Proposed Spinner Dolphin Protections

Figure 2. Overview of Designated Waters Between Lanai, Maui, and Kahoolawe for Proposed Spinner Dolphin Protections. See Table 1 for coordinates.

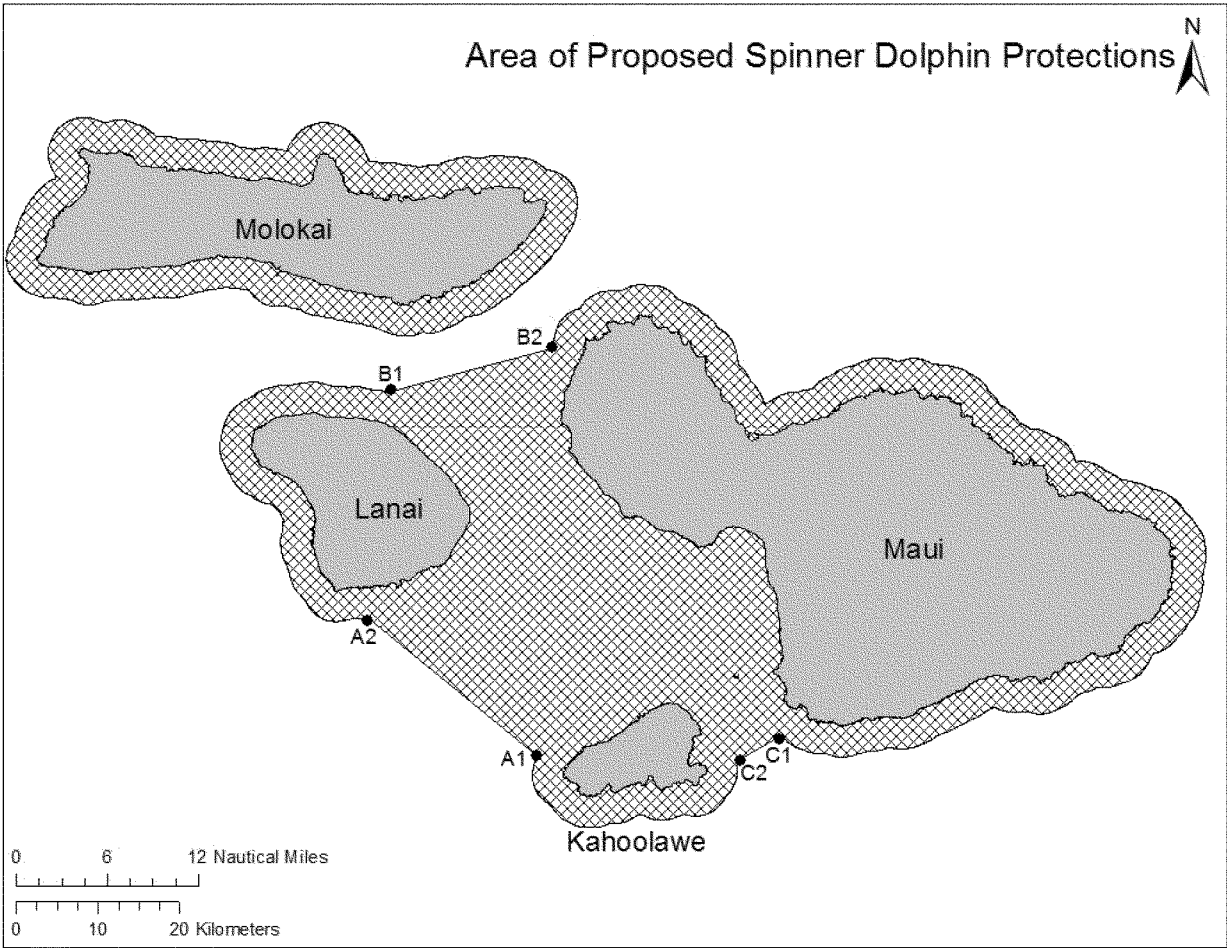

TABLE 1—COORDINATES FOR THE EXTENT OF THE DESIGNATED WATERS BETWEEN LANAI, MAUI, AND KAHOOLAWA (SEE FIGURE 2)
[All coordinates referenced to The World Geodetic System of 1984 (WGS 84)]

Line segment between islands	Figure 2 label	Latitude	Longitude
Kahoolawe and Lanai	A1	20°32'51" N.	156°43'50" W.
	A2	20°42'4" N.	156°55'34" W.
Lanai and Maui	B1	20°51'1" N.	156°54'0" W.
	B2	20°59'48" N.	156°42'28" W.
Maui and Kahoolawe	C1	20°33'55" N.	156°26'43" W.
	C2	20°32'15" N.	156°29'51" W.

Notices

Federal Register

Vol. 81, No. 164

Wednesday, August 24, 2016

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Docket No. AMS-LPS-16-0060]

United States Standards for Grades of Carcass Beef

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice, request for comments.

SUMMARY: The Agricultural Marketing Service (AMS) of the Department of Agriculture (USDA) is seeking public comments on a petition requesting revision to the United States Standards for Grades of Carcass Beef. Specifically, AMS is requesting comments concerning a petition that requests that the beef standards be amended to include dentition and documentation of actual age as an additional determination of maturity grouping for official quality grading. Currently, the standards only include skeletal and muscular evidence as a determination of maturity grouping for the purposes of official quality grading. Official quality grading is used as an indication of meat palatability and is a major determining factor in live cattle and beef value.

DATES: Submit comments on or before October 24, 2016.

ADDRESSES: Comments should be sent to Beef Carcass Revisions, Standardization Branch, Quality Assessment Division; Livestock Poultry and Seed Program, Agricultural Marketing Service, U.S. Department of Agriculture, 1400 Independence Ave. SW., Room 3932-S, STOP 0258, Washington, DC 20250-0258. Comments may also be sent by fax to (202) 690-2746 or by email to beefcarcassrevisions@ams.usda.gov.

FOR FURTHER INFORMATION CONTACT: For additional information, please contact Bucky Gwartney, International Marketing Specialist, Quality Assessment Division, at

bucky.gwartney@ams.usda.gov or (202) 720-1424.

SUPPLEMENTARY INFORMATION: Section 203(c) of the Agricultural Marketing Act of 1946, as amended, directs and authorizes the Secretary of Agriculture “to develop and improve standards of quality, condition, quantity, grade, and packaging and recommend and demonstrate such standards in order to encourage uniformity and consistency in commercial practices.” AMS is committed to carrying out this authority in a manner that facilitates the marketing of agricultural commodities and makes copies of official standards available upon request. The United States Standards for Grades of Carcass Beef do not appear in the Code of Federal Regulations but are maintained by USDA. These standards are located on USDA’s Web site at: <https://www.ams.usda.gov/sites/default/files/media/Carcass%20Beef%20Standard.pdf>. To change the United States Standards for Grades of Carcass Beef, AMS plans to utilize the procedures it published in the August 13, 1997, **Federal Register**, and that appear in part 36 of title 7 of the Code of Federal Regulations (7 CFR part 36).

Background

The Federal beef grade standards and associated voluntary, fee-for-service beef grading service program are authorized under the Agricultural Marketing Act of 1946, as amended (7 U.S.C. 1621 *et seq.*). The primary purpose of Federal grade standards, including the Federal beef grade standards, is to divide the population of a commodity into uniform groups (of similar quality, yield, value, etc.) to facilitate marketing. In concert, the Federal voluntary, fee-for-service grading program is designed to provide an independent, objective determination as to if a given product is in conformance with the applicable official Federal standard. In the case of beef, when it is voluntarily graded to the Federal beef grade standards under the beef grading service, the official grade consists of a quality grade and/or a yield grade.

The quality grades are intended to identify differences in the palatability or eating satisfaction of cooked beef principally through the characteristics of marbling and physiological maturity groupings. As noted in the standards referenced above, the principal official

USDA quality grades for young (maturity groups “A” and “B”) cattle and carcasses are Prime, Choice, and Select, in descending order in terms of historic market value. USDA recognizes that the beef standards must be relevant to be of greatest value to stakeholders and, therefore, recommendations for changes in the standards may be initiated by USDA or by interested parties at any time to achieve that goal.

For beef, USDA quality grades provide a simple, effective means of describing product that is easily understood by both buyers and sellers. By identifying separate and distinct segments of beef, grades enable buyers to obtain that particular kind of beef that meets their individual needs. For example, certain restaurants may choose to only sell officially graded USDA Prime beef so as to provide their customers with a product that meets a very consistent level of overall palatability. At the same time, grades are important in transmitting information to cattlemen to help ensure informed decisions are made. For example, the market preference and price paid for a particular grade of beef is communicated to cattle producers so they can adjust their production accordingly. In such a case, if the price premium being paid for a grade such as USDA Prime beef merits producers making the investments required in cattle genetics and feeding to produce more USDA Prime beef, such marketing decisions can be made with justification.

The current beef standards do not utilize dentition or age verification as methods to determine maturity groupings and instead rely solely on skeletal and lean (physiological) maturity. Although never intended to be a definitive method to determine the age of cattle at the time of slaughter and instead utilized to predict beef palatability, the maturity groupings have historically been roughly correlated to different age categories. Maturity grouping A was correlated with beef from cattle between 9 and 30 months of age at time of slaughter, maturity grouping B was correlated with beef from cattle between 30 and 42 months of age at time of slaughter, maturity grouping C was correlated with beef from cattle between 42 and 72 months of age at time of slaughter, maturity grouping D was correlated with

beef from cattle between 72 and 96 months of age at time of slaughter, and maturity grouping E was correlated with beef from cattle more than 96 months of age at time of slaughter. However, these are rough approximations that are influenced by other factors including diet, growth promotion administration, calving, breed, and a variety of environmental factors. Therefore, cattle that are younger than 30 months of age (MOA) may have a physiological maturity of B or greater beef quality grade maturity grouping due to other factors listed above.

The current use of dentition to determine animal age at time of slaughter is done on all slaughtered cattle in order to determine whether their age is less than or greater than 30 MOA due to food safety requirements. Cattle older than 30 MOA must have specific risk materials (e.g., vertebral column) removed from their carcasses before the sale of the resulting beef cuts. Age verification involves providing the paper paperwork or other proof of an animals' actual age (i.e., less than 30 MOA) and is also used for a variety of purposes including meeting foreign market requirements for U.S. beef from cattle under a certain age.

The official standards have had past revisions made to the maturity grouping requirements, and these revisions resulted in classifications that were designed to reduce the variability of eating quality within the grades. The most recent such change occurred in 1997 when certain carcasses from the B maturity grouping were no longer eligible for the USDA Choice or Select quality grades. However, the official standards have never relied upon any other indicator besides physiological maturity to determine maturity grouping or the resulting USDA quality grade. This was primarily because the use of physiological maturity wasn't intended to be used to predict the age of an animal at time of slaughter but, instead, the resulting palatability of the meat. Many years of research have demonstrated a strong correlation between physiological maturity and beef palatability.

However, current research has indicated that carcasses from grain-fed steers and heifers that are deemed less than 30 MOA, based on dentition, are similar in palatability to A maturity carcasses determined via physiological maturity and thus could be classified "A" maturity for grading purposes even though the physiological maturity characteristics of "B" or older maturity groupings may be present. Utilizing the recommendations of dentition and age verification would allow for an alternate

method of classifying beef carcasses into maturity groupings and thus allow additional carcasses to qualify for the higher USDA grades of Prime, Choice and Select without a significant reduction in the consistency of those grades in predicting palatability.

AMS was provided a large data set from a recent study of beef packing plant slaughter and has performed a statistical and economic analysis on this data in order to determine the possible impact should the proposed change to the Standards be adopted. That report can be found here: <https://www.ams.usda.gov/grades-standards/beef-request-for-comments>. The study period ranged from the beginning of May 2014 through the end of April 2015, and the results are summarized below.

Extrapolating the study data across the total population of cattle graded each year by AMS—approximately 21 million—results in the following:

- Seventy-two percent were slaughtered in facilities participating in the study,
- Ninety-seven percent were found to be less than 30 MOA using dentition,
- Less than 3 percent (2.8) were found to be equal to or greater than 30 MOA,
- Less than 2 percent (1.68) were deemed to be age-discounted when using skeletal ossification as the measure of maturity grouping, and
- Less than one-half of 1 percent of the total cattle graded were age-verified.

According to the study, had there been an allowance to use dentition as a means to override physiological characteristics of advanced maturity grouping, as is proposed, an additional 1.3 percent of those cattle would have been eligible for grading. Of these cattle, 4.5 percent would have been graded Prime, 63.6 percent Choice, and 31.9 percent Select. Within the Choice category, 24.4 percent of all newly graded carcasses, would have been placed in the top two-thirds Choice category (branded Choice programs), and 39.2 percent of all added carcasses would have been placed in the bottom of the Choice category. Currently, many private companies or organizations have established carcass schedules whereby AMS graders evaluate individual carcasses for conformance with those established requirements—things such as breed or breed influence, age, ribeye size, carcass weight. Most of those carcass programs (e.g., Certified Angus Beef™) currently have requirements for only allowing "A Maturity" carcasses.

The grade composition of the carcasses being added by using dentition as a measure of age was not much different than the grade

composition of carcasses graded using physiological maturity, and overall, these data show an increase of 1.05 percent for Prime beef, 0.91 percent for Choice¹ and 1.29 percent for Select. According to calculations made from wholesale beef elasticity, wholesale beef prices could decline between 1 to 1.5 percent for each of the grade categories as a result of the increased supply of graded beef.

According to projections provided by the National Cattlemen's Beef Association (NCBA), producers would yield approximately \$59 million in added revenue from removal of discounts for cattle identified as greater than A maturity grouping that dentition would allow to be classified as such. AMS found a net gain to producers of nearly \$55 million, primarily due to reduced hard bone discounts for quality grade maturity grouping done by the current physiological maturity approach alone.

A petition has been submitted by NCBA, the National Association State Departments of Agriculture, the U.S. Meat Export Federation, and the American Farm Bureau Federation and can be found here: <https://www.ams.usda.gov/grades-standards/beef-request-for-comments>.

The petitioners cite several research papers, as listed in the reference section at the above link, to support their request. Two of the summary papers that outline the relevant studies can be found here: <https://www.ams.usda.gov/grades-standards/beef-request-for-comments>. In summary, the studies showed that the use of dentition to determine maturity groupings did not have a significant negative affect on the ability of the official USDA quality grades to group beef into similar palatability categories while at the same time would allow for additional carcasses to qualify for the higher USDA quality grades of Prime, Choice and Select. This would allow for consumers to have access to additional USDA Prime, Choice and Select beef as well as for producers to be paid price premiums for cattle whose carcasses grade USDA Prime, Choice or Select.

In addition, a recent analysis located at: <https://www.ams.usda.gov/grades-standards/beef-request-for-comments>, which was done by the American Meat Science Association's Committee on Grading, found that while age at the time of slaughter does influence meat palatability, this becomes less

¹ While the volume of Choice carcasses added is large, the existing production of Choice beef is significantly large enough to result in a smaller proportion of Choice added than for Prime and Select.

influential within the young U.S. grain-fed cattle population, as the vast majority of cattle presented for grading in U.S. beef processing facilities are less than 30 MOA and USDA "A" or "B" maturity. It is important to note that the population of fed beef cattle in the U.S. has changed significantly over the last several decades. Today, there is greater consistency within the cattle herd, improved genetics, a relatively young slaughter population, more widespread use of growth promoting technologies that are known to effect bone ossification, and much higher carcass weights at slaughter which may also have skeletal implications. These market and production changes, along with recent research, could indicate that physiological maturity is less influential on palatability than in the past.

Request for Comments

AMS is soliciting comments from stakeholders about whether changes in the methodology for determining maturity grouping assessment for the purposes of official USDA quality grading should be made. This change would have no effect on the role that maturity groupings have upon USDA quality grade determination, simply how carcasses are placed into those maturity groupings. AMS also invites comments about how those changes would be implemented in the current beef grading system. If, after analyzing the comments, AMS determines that changes are warranted, a notice will be published in the **Federal Register** proposing specific changes to the United States Standards for Carcass Beef. Interested parties will have an opportunity to comment prior to a final decision adopting any changes.

Dated: August 19, 2016.

Elanor Starmey,

Administrator, Agricultural Marketing Service.

BILLING CODE 3410-02-P

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[Docket No. FSIS-2016-0027]

Statements That Bioengineered or Genetically Modified (GM) Ingredients or Animal Feed Were Not Used in the Production of Meat, Poultry, or Egg Products

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Notice of availability and opportunity for comment.

SUMMARY: The Food Safety and Inspection Service (FSIS) is announcing the availability of the Agency's compliance guidance on how companies can make label or labeling claims concerning the fact that bioengineered or genetically modified (GM) ingredients or animal feed were not used in the production of meat, poultry, or egg products. For purposes of this guidance document, these claims will be referred to as "negative claims."

DATES: Comments must be received by October 24, 2016.

ADDRESSES: A downloadable version of the compliance guidance is available to view and print at <http://www.fsis.usda.gov/wps/portal/fsis/topics/regulatory-compliance/labeling/claims-guidance/procedures-nongenetically-engineered-statement>. No hard copies of the compliance guidance have been published.

FSIS invites interested persons to submit comments on this notice. Comments may be submitted by one of the following methods:

Federal eRulemaking Portal: This Web site provides the ability to type short comments directly into the comment field on this Web page or attach a file for lengthier comments. Go to <http://www.regulations.gov/>. Follow the on-line instructions at that site for submitting comments.

Mail, including CD-ROMs: Send to Docket Clerk, U.S. Department of Agriculture, Food Safety and Inspection Service, Patriots Plaza 3, 1400 Independence Avenue SW., Mailstop 3782, Room 8-163B, Washington, DC 20250-3700.

Hand- or courier-delivered submittals: Deliver to Patriots Plaza 3, 355 E Street SW., Room 8-163A, Washington, DC 20250-3700.

Instructions: All items submitted by mail or electronic mail must include the Agency name, docket number FSIS-2016-0027, and the document title: Statements that Bioengineered or Genetically Modified (GM) Ingredients or Animal Feed Were not Used in the Production of Meat, Poultry, or Egg Products. Comments received in response to this docket will be made available for public inspection and posted without change, including any personal information, to <http://www.regulations.gov>.

For additional information about FSIS labeling policies and programs, including Generic Label Approval, please review the FSIS Web site at: <http://www.fsis.usda.gov/wps/portal/fsis/topics/regulatory-compliance/labeling/> or contact the Labeling and Program Delivery Staff at (301) 504-0878 or (301) 504-0879.

Docket: For access to background documents or to comments received, go to the FSIS Docket Room at Patriots Plaza 3, 355 E Street SW., Room 164-A, Washington, DC 20250-3700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Dr. Daniel L. Engeljohn, Assistant Administrator, Office of Policy and Program Development; Telephone: (202) 205-0495.

SUPPLEMENTARY INFORMATION:

Background

FSIS is the public health regulatory agency in the USDA that is responsible for ensuring that the nation's commercial supply of meat, poultry, and egg products is safe, wholesome, and accurately labeled and packaged. FSIS develops and implements regulations and policies to ensure that meat, poultry, and egg product labeling is not false or misleading. Under the Federal Meat Inspection Act (FMIA) (21 U.S.C. 601-695, at 607), the Poultry Products Inspection Act (PPIA) (21 U.S.C. 451-470, at 457), and the Egg Products Inspection Act (21 U.S.C. 1031-1056, at 1036) the labels of meat, poultry, and egg products must be approved by the Secretary of Agriculture, who has delegated this authority to FSIS, before these products can enter commerce.

Compliance Guide

FSIS is announcing that it has developed a compliance guide for companies that seek to make label or labeling claims concerning the fact that bioengineered or GM ingredients were not used in a meat, poultry or egg product. This guidance also provides information on how companies can make label or labeling claims that a product was produced from livestock or poultry that were not fed bioengineered or GM feed. For purposes of this guidance document, these claims will be referred to as "negative claims."

FSIS has approved negative claims through its prior label approval process. Because FSIS does not have the ability to independently verify negative claims for ingredients or feed, FSIS has required establishments that make these claims to comply with standards established by a third-party certifying organization. FSIS currently requires that the third-party certifying organization's standards be publicly available on a Web site and the label or labeling disclose the Web site address of the third-party certifying organization. FSIS currently requires that the establishment demonstrate that its

claims of third-party certification are truthful and not misleading.

As a policy matter, prior to issuing this guidance document, FSIS has not allowed the use of the terms “genetically modified organism” or “GMO” in negative claims. FSIS has allowed the use of the terms “genetically modified organism” or “GMO” on product labels or labeling only if the name of the third-party certifying organization contains these terms (e.g. “Non-GMO Project”). However, recent legislation was enacted (Pub L 114–216) requiring the Secretary of Agriculture to develop and implement a mandatory national bioengineered food disclosure standard within 2 years. This legislation also addresses negative claims, providing that “a food may not be considered to be ‘not bioengineered’ or ‘non-GMO’, or any other similar claim describing the absence of bioengineering in the food solely because the food is not required to bear a disclosure that the food is bioengineered under this subtitle.” (Pub. L. 114–216, section 294(c)). Therefore, FSIS has reconsidered its position and will allow the use of the terms “genetically modified organism” or “GMO” in negative claims provided that the label or labeling is otherwise truthful and not misleading.

Effective immediately, FSIS will begin approving negative claims for meat, poultry and egg products that do not contain bioengineered ingredients or that are derived from livestock that do not consume bioengineered feed and that contain the terms “genetically modified organism” or “GMO”. In evaluating such claims, FSIS will utilize the definition of “bioengineering” in Public Law 114–216. In that law, the term “bioengineering” refers to a food that contains genetic material that has been modified through in vitro recombinant deoxyribonucleic acid (DNA) techniques and for which the modification could not otherwise be obtained through conventional breeding or found in nature.

Consistent with past practice, FSIS will continue to allow the use of synonymous terms such as “genetically engineered.” If FSIS has approved an organic claim on the product label, establishments may add an applicable negative claim of the kind discussed in the guidance.

FSIS encourages companies to follow this guidance. This guidance represents FSIS’s current thinking, and FSIS welcomes comment on this compliance guidance and will update it as necessary to reflect comments received and any additional information that becomes available.

USDA Nondiscrimination Statement

No agency, officer, or employee of the USDA shall, on the grounds of race, color, national origin, religion, sex, gender identity, sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, or political beliefs, exclude from participation in, deny the benefits of, or subject to discrimination, any person in the United States under any program or activity conducted by the USDA.

To file a complaint of discrimination, complete the USDA Program Discrimination Complaint Form, which may be accessed online at: http://www.ocio.usda.gov/sites/default/files/docs/2012/Complain_combined_6_8_12.pdf, or write a letter signed by you or your authorized representative.

Send your completed complaint form or letter to USDA by mail, fax, or email:

Mail: U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue SW., Washington, DC 20250–9410.

Fax: (202) 690–7442.

Email: program.intake@usda.gov.

Persons with disabilities who require alternative means for communication (Braille, large print, audiotape, etc.) should contact USDA’s TARGET Center at (202) 720–2600 (voice and TDD).

Additional Public Notification

Public awareness of all segments of rulemaking and policy development is important. Consequently, in an effort to ensure that minorities, women, and persons with disabilities are aware of this notice, FSIS will announce it online through the FSIS Web page located at <http://www.fsis.usda.gov/wps/portal/fsis/topics/regulations/federal-register/federal-register-notices>. FSIS also will make copies of this **Federal Register** publication available through the FSIS Constituent Update, which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, recalls, and other types of information that could affect or would be of interest to constituents and stakeholders. The update is communicated via Listserv, a free electronic mail subscription service for industry, trade and farm groups, consumer interest groups, allied health professionals, and other individuals who have asked to be included. The update is available on the FSIS Web page. Through the Listserv and Web page, FSIS is able to provide information to a much broader and more diverse audience. In addition, FSIS offers an email subscription service

which provides automatic and customized access to selected food safety news and information. This service is available at <http://www.fsis.usda.gov/subscribe>. Options range from recalls to export information to regulations, directives and notices. Customers can add or delete subscriptions themselves and have the option to password protect their account.

Done at Washington, DC, on August 19, 2016.

Alfred V. Almanza,

Acting Administrator.

BILLING CODE 3410–DM–P

DEPARTMENT OF AGRICULTURE

Foreign Agricultural Service

Assessment of Fees for Dairy Import Licenses for the 2017 Tariff-Rate Import Quota Year

AGENCY: Foreign Agricultural Service, USDA.

ACTION: Notice.

SUMMARY: This notice announces a fee of \$250 to be charged for the 2017 tariff-rate quota (TRQ) year for each license issued to a person or firm by the Department of Agriculture authorizing the importation of certain dairy articles, which are subject to tariff-rate quotas set forth in the Harmonized Tariff Schedule (HTS) of the United States.

DATE: August 24, 2016.

FOR FURTHER INFORMATION CONTACT:

Abdelsalam El-Farra, Dairy Import Licensing Program, Import Policies and Export Reporting Division, STOP 1021, U.S. Department of Agriculture, 1400 Independence Avenue SW., Washington, DC 20250–1021 or telephone at (202) 720–9439 or email at abdelsalam.el-farra@fas.usda.gov.

SUPPLEMENTARY INFORMATION: The Dairy Tariff-Rate Import Quota Licensing Regulation promulgated by the Department of Agriculture and codified at 7 CFR 6.20–6.36 provides for the issuance of licenses to import certain dairy articles that are subject to TRQs set forth in the HTS. Those dairy articles may only be entered into the United States at the in-quota TRQ tariff-rates by or for the account of a person or firm to whom such licenses have been issued and only in accordance with the terms and conditions of the regulation.

Licenses are issued on a calendar year basis, and each license authorizes the license holder to import a specified quantity and type of dairy article from a specified country of origin. The use of

such licenses is monitored by the Dairy Import Licensing Program, Import Policies and Export Reporting Division, Foreign Agricultural Service, U.S. Department of Agriculture, and U.S. Customs and Border Protection, U.S. Department of Homeland Security.

The regulation at 7 CFR 6.33(a) provides that a fee will be charged for each license issued to a person or firm by the Licensing Authority in order to defray the Department of Agriculture's costs of administering the licensing system under this regulation.

The regulation at 7 CFR 6.33(a) also provides that the Licensing Authority will announce the annual fee for each license and that such fee will be set out in a notice to be published in the **Federal Register**. Accordingly, this notice sets out the fee for the licenses to be issued for the 2017 calendar year.

Notice: The total cost to the Department of Agriculture of administering the licensing system for 2017 has been estimated to be \$624,300.00 and the estimated number of licenses expected to be issued is 2,500. Of the total cost, \$479,200.00 represents staff and supervisory costs directly related to administering the licensing system, and \$145,100.00 represents other miscellaneous costs, including travel, postage, publications, forms, and ADP system support.

Accordingly, notice is hereby given that the fee for each license issued to a person or firm for the 2017 calendar year, in accordance with 7 CFR 6.33, will be \$250 per license.

Issued at Washington, DC, the 20th day of July, 2016.

Ronald Lord,
Licensing Authority.

BILLING CODE 3410-10-P

DEPARTMENT OF AGRICULTURE

Forest Service

Yavapai Resource Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Yavapai Resource Advisory Committee (RAC) will meet in Prescott, Arizona. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects

and funding consistent with Title II of the Act. RAC information can be found at the following Web site: <http://www.fs.usda.gov/main/prescott/working-together/advisorycommittees>.

DATES: The meeting will be held on September 27, 2016, at 11:00 a.m.

All RAC meetings are subject to cancellation. For status of meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

ADDRESSES: The meeting will be held at the Prescott Fire Center, 2400 Melville Drive, Prescott, Arizona.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at the Prescott National Forest Supervisor's Office, 2971 Willow Creek Road, Bldg 4, Prescott, Arizona. Please call ahead to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT: Debbie Maneely, RAC Coordinator, by phone at 928-443-8130 or via email at dmaneely@fs.fed.us.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to:

1. Update RAC on Outreach Efforts For Vacant Positions;
2. Review Round 6 Projects; and
3. Rank and Select Round 6 Projects.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by September 1, 2016, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time to make oral comments must be sent to Debbie Maneely, RAC Coordinator, 344 South Cortez, Prescott, Arizona 86301; or by email to dmaneely@fs.fed.us, or via facsimile to 928-443-8208.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for

access to the facility or proceedings by contacting the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case by case basis.

Dated: August 1, 2016.

Teresa A. Chase,
Forest Supervisor.

BILLING CODE 3411-15-P

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration

Opportunity for Designation in Louisiana Area; Request for Comments on the Official Agency Servicing This Area

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Notice.

SUMMARY: The designation of the official agency listed below will end on September 30, 2016. We are asking persons or governmental agencies interested in providing official services in the areas presently served by this

agency to submit an application for designation. In addition, we are asking for comments on the quality of services provided by the following designated agency: Louisiana Department of Agriculture and Forestry (Louisiana).

DATES: Applications and comments must be received by September 23, 2016.

ADDRESSES: Submit applications and comments concerning this Notice using any of the following methods:

- *Applying for Designation on the Internet:* Use FGISonline (https://fgis.gipsa.usda.gov/default_home_FGIS.aspx) and then click on the Delegations/Designations and Export Registrations (DDR) link. You will need to obtain an FGISonline customer number and USDA eAuthentication username and password prior to applying.

- *Submit Comments Using the Internet:* Go to [Regulations.gov](http://www.regulations.gov) (<http://www.regulations.gov>). Instructions for submitting and reading comments are detailed on the site.

- *Mail, Courier or Hand Delivery:* Jorge Vazquez, Compliance Officer, USDA, GIPSA, FGIS, QACD, 10383 North Ambassador Drive, Kansas City, MO 64153.

- *Fax:* Mark Wooden, 816-872-1257.
- *Email:* FGIS.QACD@usda.gov.

Read Applications and Comments: All applications and comments will be available for public inspection at the office above during regular business hours (7 CFR 1.27(c)).

FOR FURTHER INFORMATION CONTACT: Jorge Vazquez, 816-866-2224 or FGIS.QACD@usda.gov.

SUPPLEMENTARY INFORMATION: Section 79(f) of the United States Grain Standards Act (USGSA) authorizes the Secretary to designate a qualified applicant to provide official services in a specified area after determining that the applicant is better able than any other applicant to provide such official services (7 U.S.C. 79(f)). Under section 79(g) of the USGSA, designations of official agencies are effective for no longer than five years, unless terminated by the Secretary, and may be renewed according to the criteria and procedures prescribed in section 79(f) of the USGSA.

Areas Open for Designation

Louisiana

Pursuant to Section 79(f)(2) of the United States Grain Standards Act, the following geographic area in the State of Louisiana is assigned to this official agency.

In Louisiana

The entire State, except those export port locations within the State, which are serviced by GIPSA.

Opportunity for Designation

Interested persons or governmental agencies may apply for designation to provide official services in the geographic areas specified above under the provisions of section 79(f) of the USGSA and 7 CFR 800.196. Designation in the specified geographic areas in Louisiana is for the period beginning October 1, 2016, to September 30, 2021. To apply for designation or to request more information, contact Jorge Vazquez at the address listed above.

Request for Comments

We are publishing this Notice to provide interested persons the opportunity to comment on the quality of services provided by the Louisiana official agency. In the designation process, we are particularly interested in receiving comments citing reasons and pertinent data supporting or objecting to the designation of the applicant. Submit all comments to Jorge Vazquez at the above address or at <http://www.regulations.gov>.

We consider applications, comments, and other available information when determining which applicants will be designated.

Authority: 7 U.S.C. 71-87k.

Larry Mitchell,

Administrator, Grain Inspection, Packers and Stockyards Administration.

- *Applying for Designation on the Internet:* Use FGISonline (https://fgis.gipsa.usda.gov/default_home_FGIS.aspx) and then click on the Delegations/Designations and Export Registrations (DDR) link. You will need to obtain an FGISonline customer number and USDA eAuthentication username and password prior to applying.

- *Submit Comments Using the Internet:* Go to *Regulations.gov* (<http://www.regulations.gov>). Instructions for submitting and reading comments are detailed on the site.

- *Mail, Courier or Hand Delivery:* Sharon Lathrop, Compliance Officer, USDA, GIPSA, FGIS, QACD, 10383 North Ambassador Drive, Kansas City, MO 64153.

- *Fax:* Sharon Lathrop, 816-872-1257.

- *Email:* FGIS.QACD@usda.gov.

Read Applications and Comments: All applications and comments will be available for public inspection at the office above during regular business hours (7 CFR 1.27(c)).

FOR FURTHER INFORMATION CONTACT: Sharon Lathrop, 816-891-0415 or FGIS.QACD@usda.gov.

SUPPLEMENTARY INFORMATION: Section 79(f) of the United States Grain Standards Act (USGSA) authorizes the Secretary to designate a qualified applicant to provide official services in a specified area after determining that the applicant is better able than any other applicant to provide such official services (7 U.S.C. 79(f)). Under section 79(g) of the USGSA, designations of official agencies are effective for no longer than five years, unless terminated by the Secretary, and may be renewed according to the criteria and procedures prescribed in section 79(f) of the USGSA.

Areas Open for Designation

Amarillo

Pursuant to Section 79(f)(2) of the United States Grain Standards Act, the following geographic area, in the States of Texas and Oklahoma, is assigned to this official agency.

In Texas

Armstrong (north of Prairie Dog Town Fork of the Red River), Carson,

Childress, Collingsworth, Dallam, Deaf Smith (east of U.S. Route 385), Donley, Gray, Hansford, Hall (east of U.S. Route 287), Harley, Hemphill, Hutchinson, Lipscomb, Moore, Ochiltree, Oldham, Potter, Randall (north of Prairie Dog Town Fork of the Red River, State Route 217 and FM 1062), Roberts, Sherman, and Wheeler Counties.

In Oklahoma

Beaver, Cimarron, and Texas Counties.

Opportunity for Designation

Interested persons or governmental agencies may apply for designation to provide official services in the geographic areas specified above under the provisions of section 79(f) of the USGSA and 7 CFR 800.196. Designation in the specified geographic area, in the States of Texas and Oklahoma, is for the period beginning October 1, 2016, to September 30, 2021. To apply for designation or to request more information, contact Sharon Lathrop at the address listed above.

Request for Comments

We are publishing this Notice to provide interested persons the opportunity to comment on the quality of services provided by the Amarillo official agency. In the designation process, we are particularly interested in receiving comments citing reasons and pertinent data supporting or objecting to the designation of the applicant. Submit all comments to Sharon Lathrop at the above address or at <http://www.regulations.gov>.

We consider applications, comments, and other available information when determining which applicants will be designated.

Authority: 7 U.S.C. 71-87k.

Grain Inspection, Packers and Stockyards Administration

Designation for the Fargo, ND; Urbana, IL; Sandusky, MI; Davenport, IA; Enid, OK; Keokuk, IA; Marshall, MI; and Omaha, NE Areas

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Notice.

SUMMARY: GIPSA is announcing the designations of North Dakota Grain Inspection, Inc. (North Dakota); Champaign Danville Grain Inspection Departments, Inc. (Champaign); Detroit Grain Inspection Service, Inc. (Detroit); Eastern Iowa Grain Inspection and Weighing Service, Inc. (Eastern Iowa); Enid Grain Inspection Company, Inc. (Enid); Keokuk Grain Inspection Service (Keokuk); Michigan Grain Inspection Services, Inc. (Michigan); and Omaha Grain Inspection Service, Inc. (Omaha) to provide official services under the United States Grain Standards Act (USGSA), as amended.

DATES: *Effective Dates:* January 1, 2016 and April 1, 2016 (See table below).

ADDRESSES: Sharon Lathrop, Compliance Officer, USDA, GIPSA, FGIS, QACD, 10383 North Ambassador Drive, Kansas City, MO 64153.

FOR FURTHER INFORMATION CONTACT:

Sharon Lathrop, 816-891-0415, Sharon.L.Lathrop@usda.gov or FGIS.QACD@usda.gov.

READ APPLICATIONS: All applications and comments are available for public inspection at the office above during regular business hours (7 CFR 1.27(c)).

SUPPLEMENTARY INFORMATION: In the March 29, 2016, **Federal Register** (81 FR 17428), GIPSA requested applications for designation to provide official services in the geographic areas presently serviced by North Dakota, Champaign, Detroit, Eastern Iowa, Enid, Keokuk, Michigan, and Omaha. Applications were due by April 28, 2016.

The current official agencies: North Dakota, Champaign, Detroit, Eastern Iowa, Enid, Keokuk, Michigan, and Omaha were the only applicants for designation to provide official services in these areas. As a result, GIPSA did not ask for additional comments.

GIPSA evaluated the designation criteria in section 79(f) of the USGSA (7 U.S.C. 79(f)) and determined that North Dakota, Champaign, Detroit, Eastern Iowa, Enid, Keokuk, Michigan, and Omaha are qualified to provide official services in the geographic areas specified in the **Federal Register** on March 29, 2016. This designation to provide official services in the specified area of North Dakota is effective January 1, 2016, to December 31, 2020. This designation to provide services in the specified areas of Champaign, Detroit, Eastern Iowa, Enid, Keokuk, Michigan, and Omaha is effective April 1, 2016, to March 31, 2021.

Interested persons may obtain official services by contacting these agencies at the following telephone numbers:

Official agency	Headquarters location and telephone	Designation start	Designation end
North Dakota	Fargo, ND; 701-293-7420	1/1/2016	12/31/2020
Champaign	Urbana, IL; 217-344-9306	4/1/2016	3/31/2021
Detroit	Sandusky, MI; 810-404-3786	4/1/2016	3/31/2021
Eastern Iowa	Davenport, IA; 563-322-7149	4/1/2016	3/31/2021
Enid	Enid, OK; 580-233-1121	4/1/2016	3/31/2021
Keokuk	Keokuk, IA; 319-524-6482	4/1/2016	3/31/2021
Michigan	Marshall, MI; 269-781-2711	4/1/2016	3/31/2021
Omaha	Omaha, NE; 402-341-6739	4/1/2016	3/31/2021

Section 79(f) of the USGSA authorizes the Secretary to designate a qualified applicant to provide official services in a specified area after determining that the applicant is better able than any other applicant to provide such official services (7 U.S.C. 79(f)).

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration

Designation for the Cedar Rapids, IA; Fremont, NE; State of Maryland; and West Lafayette, IN Areas

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Notice.

SUMMARY: GIPSA is announcing the designations of Mid-Iowa Grain Inspection, Inc. (Mid-Iowa); Fremont Grain Inspection Department, Inc. (Fremont); Maryland Department of Agriculture (Maryland); and Titus Grain Inspection, Inc. (Titus) to provide official services under the United States Grain Standards Act (USGSA), as amended.

DATES: *Effective Date:* July 1, 2016.

ADDRESSES: Sharon Lathrop, Compliance Officer, USDA, GIPSA, FGIS, QACD, 10383 North Ambassador Drive, Kansas City, MO 64153.

FOR FURTHER INFORMATION CONTACT:

Sharon Lathrop, 816-891-0415, Sharon.L.Lathrop@usda.gov or FGIS.QACD@usda.gov.

Read Applications: All applications and comments are available for public inspection at the office above during regular business hours (7 CFR 1.27(c)).

SUPPLEMENTARY INFORMATION: In the March 29, 2016, **Federal Register** (81 FR 17431), GIPSA requested applications for designation to provide official

services in the geographic areas presently serviced by Mid-Iowa, Fremont, Maryland, and Titus. Applications were due by April 28, 2016.

The current official agencies: Mid-Iowa, Fremont, Maryland, and Titus were the only applicants for designation to provide official services in these areas. As a result, GIPSA did not ask for additional comments.

GIPSA evaluated the designation criteria in section 79(f) of the USGSA (7 U.S.C. 79(f)) and determined that Mid-Iowa, Fremont, Maryland, and Titus are qualified to provide official services in the geographic areas specified in the **Federal Register** on March 29, 2016. This designation to provide official services in the specified area of Mid-Iowa is effective July 1, 2016, to June 30, 2020. This designation to provide official services in the areas of Fremont, Maryland, and Titus is effective July 1, 2016, to June 30, 2021.

Interested persons may obtain official services by contacting these agencies at the following telephone numbers:

Official agency	Headquarters location and telephone	Designation start	Designation end
Mid-Iowa	Cedar Rapids, IA; 319-363-0239	7/1/2016	6/30/2020
Fremont	Fremont, NE; 402-721-1270	7/1/2016	6/30/2021
Maryland	Annapolis, MD; 410-841-5769	7/1/2016	6/30/2021
Titus	West Lafayette, IN; 765-497-2202	7/1/2016	6/30/2021

Section 79(f) of the USGSA authorizes the Secretary to designate a qualified applicant to provide official services in a specified area after determining that the applicant is better able than any other applicant to provide such official services (7 U.S.C. 79 (f)).

Areas Open for Designation

Cairo

Pursuant to Section 79(f)(2) of the United States Grain Standards Act, the following geographic areas, in the States of Illinois, Kentucky, and Tennessee, are assigned to this official agency.

In Illinois

Alexander, Jackson County (south of State Route 3, State Route 149, and State Route 13; west of U.S. Route 51), Johnson, Hardin, Massac, Pope, Pulaski, Randolph County (south of State Route 150 and south of State Route 3), and Union Counties.

In Kentucky

Ballard, Calloway, Carlisle, Fulton, Graves, Hickman, Livingston, Lyon, Marshall, McCracken, and Trigg Counties.

In Tennessee

Benton, Dickson, Henry, Houston, Humphreys, Lake, Montgomery, Obion, Stewart, and Weakley Counties.

The following grain elevator is not part of this geographic area assignment and is assigned to Midsouth Grain Inspection Service: Cargill, Inc., Tiptonville, Lake County, Tennessee.

Opportunity for Designation

Interested persons or governmental agencies may apply for designation to provide official services in the geographic areas specified above under the provisions of section 79(f) of the USGSA and 7 CFR 800.196. Designation in the specified geographic areas in the States of Illinois, Kentucky, and Tennessee is for the period beginning October 1, 2016, to September 30, 2021. To apply for designation or to request more information, contact Mark Wooden at the address listed above.

Request for Comments

We are publishing this Notice to provide interested persons the opportunity to comment on the quality of services provided by the Cairo official agency. In the designation process, we are particularly interested in receiving comments citing reasons and pertinent data supporting or objecting to the designation of the applicant. Submit all comments to Mark Wooden at the above address or at <http://www.regulations.gov>.

We consider applications, comments, and other available information when determining which applicants will be designated.

Authority: 7 U.S.C. 71–87k.

Larry Mitchell,

Administrator, Grain Inspection, Packers and Stockyards Administration.

BILLING CODE 3410–KD–P

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration

Opportunity for Designation in North Carolina Area; Request for Comments on the Official Agency Servicing This Area.

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Notice.

SUMMARY: The designation of the official agency listed below will end on September 30, 2016. We are asking persons or governmental agencies interested in providing official services in the areas presently served by this agency to submit an application for designation. In addition, we are asking for comments on the quality of services

provided by the following designated agency: North Carolina Department of Agriculture (North Carolina).

DATES: Applications and comments must be received by September 23, 2016.

ADDRESSES: Submit applications and comments concerning this Notice using any of the following methods:

- *Applying for Designation on the Internet:* Use FGISonline (https://fgis.gipsa.usda.gov/default_home_FGIS.aspx) and then click on the Delegations/Designations and Export Registrations (DDR) link. You will need to obtain an FGISonline customer number and USDA eAuthentication username and password prior to applying.

- *Submit Comments Using the Internet:* Go to *Regulations.gov* (<http://www.regulations.gov>). Instructions for submitting and reading comments are detailed on the site.

- *Mail, Courier or Hand Delivery:* Jacob Thein, Compliance Officer, USDA, GIPSA, FGIS, QACD, 10383 North Ambassador Drive, Kansas City, MO 64153.

- *Fax:* Jacob Thein, 816–872–1257.

- *Email:* FGIS.QACD@usda.gov.

Read Applications and Comments:

All applications and comments will be available for public inspection at the office above during regular business hours (7 CFR 1.27(c)).

FOR FURTHER INFORMATION CONTACT:

Jacob Thein, 816–866–2223 or FGIS.QACD@usda.gov.

SUPPLEMENTARY INFORMATION: Section 79(f) of the United States Grain Standards Act (USGSA) authorizes the Secretary to designate a qualified applicant to provide official services in a specified area after determining that the applicant is better able than any other applicant to provide such official services (7 U.S.C. 79(f)). Under section 79(g) of the USGSA, designations of official agencies are effective for no longer than five years, unless terminated by the Secretary, and may be renewed according to the criteria and procedures prescribed in section 79(f) of the USGSA.

Areas Open for Designation

North Carolina

Pursuant to Section 79(f)(2) of the United States Grain Standards Act, the following geographic area in the State of North Carolina is assigned to this official agency.

North Carolina

The entire State, except those export port locations within the State, which are serviced by GIPSA.

Opportunity for Designation

Interested persons or governmental agencies may apply for designation to provide official services in the geographic areas specified above under the provisions of section 79(f) of the USGSA and 7 CFR 800.196. Designation in the specified geographic areas in North Carolina is for the period beginning October 1, 2016, to September 30, 2021. To apply for designation or to request more information, contact Jacob Thein at the address listed above.

Request for Comments

We are publishing this Notice to provide interested persons the opportunity to comment on the quality of services provided by the North Carolina official agency. In the designation process, we are particularly interested in receiving comments citing reasons and pertinent data supporting or objecting to the designation of the applicant. Submit all comments to Jacob Thein at the above address or at <http://www.regulations.gov>.

We consider applications, comments, and other available information when determining which applicants will be designated.

Authority: 7 U.S.C. 71–87k.

Larry Mitchell,

Administrator, Grain Inspection, Packers and Stockyards Administration.

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration (GIPSA)

Notice of Intent To Certify Wisconsin Department of Agriculture, Trade and Consumer Protection (Wisconsin); Request for Comments

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Notice.

SUMMARY: We are asking for comments on the quality of services provided by this Delegated State: Wisconsin Department of Agriculture, Trade and Consumer Protection (Wisconsin).

DATES: Comments must be received by September 23, 2016.

ADDRESSES: Submit comments concerning this Notice using any of the following methods:

- *Submit Comments Using the Internet:* Go to [Regulations.gov](http://www.regulations.gov) (<http://www.regulations.gov>). Instructions for submitting and reading comments are detailed on the site.

- *Mail, Courier or Hand Delivery:* Jacob Thein, Compliance Officer, USDA, GIPSA, FGIS, QACD, 10383 North Ambassador Drive, Kansas City, MO 64153.

- *Fax:* Jacob Thein, 816–872–1257.

- *Email:* Jacob.D.Thein@usda.gov or FGIS.QACD@usda.gov.

Read Comments: All comments are available for public inspection at the office above during regular business hours (7 CFR 1.27(c)).

FOR FURTHER INFORMATION CONTACT:

Jacob Thein, 816–866–2223,

Jacob.D.Thein@usda.gov or

FGIS.QACD@usda.gov.

SUPPLEMENTARY INFORMATION: Section 79(e)(2)(A) of the United States Grain Standards Act (USGSA) designates that if the Secretary determines, pursuant to paragraph (3) of Section 79(e), that a State agency is qualified to perform official inspection, meets the criteria in subsection (f)(1)(A) of Section 79, and (i) was performing official inspection at an export port location under this chapter on July 1, 1976, or (ii)(I) performed official inspection at an export port location at any time prior to July 1, 1976, (II) was designated under subsection (f) of Section 79 on December 22, 1982, to perform official inspections at locations other than export port locations, and (III) operates in a State from which total annual exports do not exceed, as determined by the Secretary, five per centum of the total amount of grain exported from the United States annually, the Secretary may delegate authority to the State agency to perform all or specified functions involving official inspection (other than appeal inspection) at export port locations within the State, including export port locations which may in the future be established, subject to such rules, regulations, instructions, and oversight as the Secretary may prescribe, and any such official inspection shall continue to be the direct responsibility of the Secretary. Any such delegation may be revoked by the Secretary, at the discretion of the Secretary, at any time upon notice to the State agency without opportunity for a hearing. Under Section 79(e) of the USGSA, every five years, the Secretary shall certify that each State agency with a delegation of authority is meeting the criteria described in subsection (f)(1)(A). Delegations shall be renewed according to the criteria and procedures set forth in Section 79(e)(2)(B) of the USGSA.

Area of Delegation

Wisconsin

Pursuant to Section 79(e)(2) of the USGSA, the following export port

locations, in the State of Wisconsin is assigned to this State agency.

In Wisconsin

All export port locations in the State of Wisconsin, except those export port locations within the State, which are serviced by GIPSA (Milwaukee).

In Minnesota

The export port location of Duluth, Minnesota.

Request for Comments

We are publishing this Notice to provide interested persons the opportunity to comment on the quality of services provided by the State of Wisconsin. We are particularly interested in receiving comments citing reasons and pertinent data supporting or objecting to the delegation of the applicant. Submit all comments to Jacob Thein at the above address or at <http://www.regulations.gov>.

We consider comments and other available information when determining certification.

Authority: 7 U.S.C. 71–87k.

Larry Mitchell,

Administrator, Grain Inspection, Packers and Stockyards Administration.

BILLING CODE 3410-KD-P

DEPARTMENT OF COMMERCE

Advisory Committee on Supply Chain Competitiveness: Notice of Public Meeting

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of open meeting.

SUMMARY: This notice sets forth the schedule and proposed topics of discussion for a public meeting of the Advisory Committee on Supply Chain Competitiveness (Committee).

DATES: This conference call meeting will be held on Wednesday, September 7, 2016, from 4 p.m. to 5:30 p.m. Eastern Daylight Time. The deadline for members of the public to register to participate in or listen to the meeting is 5 p.m., Thursday, September 1, 2016.

ADDRESSES: The meeting will be held by conference call with webinar capabilities. The Web site, call-in number and passcode will be provided by email to registrants. Requests to register and any written comments should be submitted to: Richard Boll, Office of Supply Chain, Professional & Business Services, International Trade

Administration (Phone: (202) 482-1135 or Email: richard.boll@trade.gov). Members of the public are encouraged to submit registration requests and written comments via email to ensure timely receipt.

FOR FURTHER INFORMATION CONTACT: Richard Boll, Office of Supply Chain, Professional & Business Services, International Trade Administration. (Phone: (202) 482-1135 or Email: richard.boll@trade.gov)

SUPPLEMENTARY INFORMATION: The Committee was established under the discretionary authority of the Secretary of Commerce and in accordance with the Federal Advisory Committee Act (5 U.S.C. App. 2). It provides advice to the Secretary of Commerce on the necessary elements of a comprehensive policy approach to supply chain competitiveness designed to support U.S. export growth and national economic competitiveness, encourage innovation, facilitate the movement of goods, and improve the competitiveness of U.S. supply chains for goods and services in the domestic and global economy; and provides advice to the Secretary on regulatory policies and programs and investment priorities that affect the competitiveness of U.S. supply chains. For more information about the Committee visit: <http://trade.gov/td/services/oscpb/supplychain/acsccl/>.

Matters To Be Considered: Committee members are expected to deliberate and vote on the ACSCC Freight Policy and Movement Subcommittee's recommendations in response to the Secretary's request for information on the maritime container cargo data elements that U.S. shippers, supply chains, and other seaport users and stakeholders need to be able to have and to share in advance of vessel arrival in the United States in order to:

- Improve coordination, cooperation, and information-sharing among U.S. supply chains and port stakeholders;
- improve supply chain and cargo logistics, planning, and management;
- ensure the availability of sufficient container movement equipment and workforce; and
- improve the efficiency and flow of cargo and trade throughout U.S. supply chains.

The Committee will also discuss how these elements could be used in possible technology solutions that would facilitate element sharing among cargo owners, seaports, and supply chain stakeholders.

The Office of Supply Chain, Professional & Business Services will post the draft recommendations and the

final agenda on the Committee Web site at least one week prior to the meeting. Please provide any comments on the draft recommendations to Richard Boll, Office of Supply Chain, Professional & Business Services, International Trade Administration. (Phone: (202) 482-1135 or Email: richard.boll@trade.gov) at least six days prior to the conference call, in order to ensure adequate time to distribute the comments for Committee review. The conference call will be open to the public for comments on a first-come, first-served basis, with thirty minutes available for public comments. Access lines are limited. The minutes of the meetings will be posted on the Committee Web site within 60 days of the meeting.

Dated: August 17, 2016.

Maureen Smith,

Director, Office of Supply Chain, Professional and Business Services.

Transportation and Related Equipment Technical Advisory Committee; Notice of Partially Closed Meeting

The Transportation and Related Equipment Technical Advisory Committee will meet on September 7, 2016, 9:30 a.m., in the Herbert C. Hoover Building, Room 3884, 14th Street between Constitution & Pennsylvania Avenues NW., Washington, DC. The Committee advises the Office of the Assistant Secretary for Export Administration with respect to technical questions that affect the level of export controls applicable to transportation and related equipment or technology.

Agenda

Public Session

1. Welcome and Introductions.
2. Status reports by working group chairs.
3. Public comments and Proposals.

Closed Session

4. Discussion of matters determined to be exempt from the provisions relating to public meetings found in 5 U.S.C. app. 2 sections 10(a)(1) and 10(a)(3).

The open session will be accessible via teleconference to 20 participants on a first come, first serve basis. To join the conference, submit inquiries to Ms. Yvette Springer at Yvette.Springer@bis.doc.gov no later than August 31, 2016.

A limited number of seats will be available during the public session of the meeting. Reservations are not accepted. To the extent time permits, members of the public may present oral statements to the Committee. The public may submit written statements at any time before or after the meeting. However, to facilitate distribution of public presentation materials to Committee members, the Committee suggests that presenters forward the public presentation materials prior to the meeting to Ms. Springer via email.

The Assistant Secretary for Administration, with the concurrence of the delegate of the General Counsel, formally determined on November 5, 2015, pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. app. 2 section 10(d)), that the portion of the meeting dealing with pre-decisional changes to the Commerce Control List and U.S. export control policies shall be exempt from the provisions relating to public meetings found in 5 U.S.C. app. 2 sections 10(a)(1) and 10(a)(3). The remaining portions of the meeting will be open to the public.

For more information, call Yvette Springer at (202) 482-2813.

Dated: August 19, 2016.

Yvette Springer,

Committee Liaison Officer.

Hoover Building, 14th Street between Constitution and Pennsylvania Avenues NW., Washington, DC. The Committee advises the Office of the Assistant Secretary for Export Administration on implementation of the Export Administration Regulations (EAR) and provides for continuing review to update the EAR as needed.

Agenda

Public Session

1. Opening remarks by the Chairman.
2. Opening remarks by Bureau of Industry and Security.
3. Presentation of papers or comments by the Public.
4. Export Enforcement update.
5. Regulations update.

6. Working group reports.
7. Automated Export System (AES) update.

The open session will be accessible via teleconference to 20 participants on a first come, first serve basis. To join the conference, submit inquiries to Ms. Yvette Springer at Yvette.Springer@bis.doc.gov no later than September 6, 2016.

A limited number of seats will be available for the public session. Reservations are not accepted. To the extent that time permits, members of the public may present oral statements to the Committee. BILLING CODE 3510-JT-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE497

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to BlueCrest Alaska Operating LLC Drilling Activities at Cosmopolitan State Unit, Alaska, 2016

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; withdrawal of an Incidental Harassment Authorization (IHA) application.

SUMMARY: Notice is hereby given that BlueCrest Alaska Operating, LLC (BlueCrest) has withdrawn its application for an IHA to take marine mammals, by harassment, incidental to conducting an oil and gas production drilling program in lower Cook Inlet, AK, on State of Alaska Oil and Gas Lease 384403 under the program name of Cosmopolitan State during the 2016 open water season. Accordingly, NMFS has withdrawn its related proposed IHA.

ADDRESSES: An electronic copy of the application, proposed IHA **Federal Register** notice, NMFS' Draft Programmatic Environmental Assessment (EA) for activities in Cook Inlet, and a list of the references used in this document may be obtained online at: <http://www.nmfs.noaa.gov/pr/permits/incidental.htm>. In case of problems accessing these documents, please call the contact listed below. Documents cited in this notice may also be viewed, by appointment, during regular business hours, at the aforementioned address.

FOR FURTHER INFORMATION CONTACT: Dale Youngkin, Office of Protected Resources, NMFS, (301) 427-8401.

SUPPLEMENTARY INFORMATION: On September 28, 2015 NMFS received an IHA application from BlueCrest for the taking of marine mammals incidental to an oil and gas production drilling program in lower Cook Inlet, AK, during the 2016 open water season. NMFS determined that the application was adequate and complete on April 12, 2016. The requested IHA would authorize take, by Level B harassment only, of nine marine mammal species as a result from the specified activity. NMFS published a notice of the proposed IHA in the **Federal Register** (81 FR 35548) on June 2, 2016. On July 21, 2016, NMFS accepted notice from BlueCrest withdrawing their IHA application for the proposed action due to their decision to forego operations in Cook Inlet at this time due to economic reasons. Therefore, NMFS has withdrawn its proposed IHA for the action.

Dated: August 19, 2016.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****Proposed Information Collection; Comment Request; Green Sturgeon ESA 4(d) Rule Take Exceptions and Exemptions**

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before October 24, 2016.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Melissa Neuman, NMFS West Coast Region Protected Resources Division, 501 West Ocean Boulevard, Suite 4200, Long Beach, CA 90802, (562) 980-4115, or Melissa.Neuman@noaa.gov.

SUPPLEMENTARY INFORMATION:**I. Abstract**

This request is for an extension, without change, of a currently approved information collection.

The Southern Distinct Population Segment of North American green sturgeon (*Acipenser medirostris*; hereafter, “Southern DPS”) was listed as a threatened species in April 2006. Protective regulations under section 4(d) of the ESA were promulgated for the species on June 2, 2010 (75 FR 30714) (the final ESA 4(d) Rule). To comply with the ESA and the protective regulations, entities must obtain take authorization prior to engaging in activities involving take of Southern DPS fish unless the activity is covered by an exception or exemption. Certain activities described in the “exceptions” provision of 50 CFR 223.210(b) are not subject to the take prohibitions if they

adhere to specific criteria and reporting requirements. Under the “exemption” provision of 50 CFR 223.210(c), the take prohibitions do not apply to scientific research, scientific monitoring, and fisheries activities conducted under an approved 4(d) program or plan; similarly, take prohibitions do not apply to tribal resource management activities conducted under a Tribal Plan for which the requisite determinations described in 50 CFR 223.102(c)(3) have been made.

To ensure that activities qualify under exceptions to or exemptions from the take prohibitions, local, state, and federal agencies, non-governmental organizations, academic researchers, and private organizations are asked to voluntarily submit detailed information regarding their activity on a schedule to be determined by National Marine Fisheries Service (NMFS) staff. This information is used by NMFS to (1) track the number of Southern DPS fish taken as a result of each action; (2) understand and evaluate the cumulative effects of each action on the Southern DPS; and (3) determine whether additional protections are needed for the species, or whether additional exceptions may be warranted. NMFS designed the criteria to ensure that plans meeting the criteria would adequately limit impacts on threatened Southern DPS fish, such that additional protections in the form of a federal take prohibition would not be necessary and advisable.

II. Method of Collection

Respondents have a choice of either electronic or paper forms. Methods of submittal include email of electronic forms, and mail and facsimile transmission of paper forms.

III. Data

OMB Control Number: 0648–0613.

Form Number(s): None.

Type of Review: Regular submission (extension of a currently approved collection).

Affected Public: Not-for-profit institutions; State, Local, or Tribal government; business or other for-profit organizations.

Estimated Number of Respondents: 58.

Estimated Time per Response: Written notification describing research, monitoring or habitat restoration activities, 40 hours; development of fisheries management and evaluation plans or state 4(d) research programs, 40 hours; reports, 5 hours; development of a tribal fishery management plan, 20 hours.

Estimated Total Annual Burden Hours: 1,760.

Estimated Total Annual Cost to Public: \$200.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: August 19, 2016.

Sarah Brabson,

NOAA PRA Clearance Officer.

RIN 0660–XC027

State Alternative Plan Program (SAPP) and the First Responder Network Authority Nationwide Public Safety Broadband Network

AGENCY: National Telecommunications and Information Administration, U.S. Department of Commerce.

ACTION: Notice; reopening of comment period.

SUMMARY: On July 19, 2016, the National Telecommunications and Information Administration (NTIA) issued a notice and request for public comments on NTIA's preliminary guidance concerning how a qualified state may apply to NTIA for required authority to enter into a spectrum capacity lease with the First Responder Network Authority (FirstNet) and optional grant funds to assist in the construction of its radio access network (RAN) should it opt to do so as allowed under the Middle Class Tax Relief and Job

Creation Act of 2012 (Act). In response to requests for additional time in which to comment, NTIA through this notice reopens the comment period. Comments received between the August 18, 2016 due date for comments announced in the July 19, 2016 notice, and publication of this notice in the **Federal Register**, are deemed to be timely.

DATES: Comments are due no later than 5:00 p.m. Eastern Daylight Time on September 7, 2016.

ADDRESSES: The public may submit written comments on issues addressed in this Notice. Written comments may be submitted electronically via email to: sapp-comments@ntia.doc.gov or by mail to: Office of Public Safety Communications, National Telecommunications and Information Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Room 4078, Washington, DC 20230. Comments submitted by email should be machine-readable and should not be copy-protected. Commenters should include the name of the person or organization filing the comment, as well as a page number on each page of their submissions. Paper submissions should also include a CD or DVD with an electronic version of the document, which should be labeled with the name and organization of the filer. All comments received are a part of the public record and will generally be posted to the NTIA Web site (<http://www.ntia.doc.gov>) without change. All personal identifying information (e.g., name, address) voluntarily submitted by the commenter may be publicly accessible.

FOR FURTHER INFORMATION CONTACT: Carolyn Dunn, Office of Public Safety Communications, National Telecommunications and Information Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Room 4078, Washington, DC 20230; sapp-comments@ntia.doc.gov; (202) 482-4103. Please direct media inquiries to NTIA's Office of Public Affairs: (202) 482-7002; via email to: press@ntia.doc.gov.

SUPPLEMENTARY INFORMATION: The original notice provided NTIA's preliminary guidance concerning how a qualified state may apply to NTIA for authority to enter into a spectrum capacity lease with FirstNet and receive a grant to construct its RAN should it opt to do so as allowed under the Act. See Notice and request for comments, *State Alternative Plan Program (SAPP) and the First Responder Network Authority Nationwide Public Safety Broadband Network*, 81 FR 46907 (July 19, 2016), available at: <https://www.ntia.doc.gov/files/ntia/publications/fr-sapp-firstnet-rfc-07182016.pdf>.

www.ntia.doc.gov/files/ntia/publications/fr-sapp-firstnet-rfc-07182016.pdf. The original deadline for submission of comments was August 18, 2016. In response to requests for additional time in which to comment, NTIA reopens the comment period with this notice. Comments received between the August 18, 2016 due date for comments announced in the July 19, 2016 notice, and publication of this notice in the **Federal Register**, are deemed to be timely.

Dated: August 18, 2016.

BILLING CODE 3510-60-P

COMMODITY FUTURES TRADING COMMISSION

Agency Information Collection Activities Under OMB Review

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (PRA), this notice announces that the Information Collection Request (ICR) abstracted below has been forwarded to the Office of Management and Budget (OMB) for review and comment. The ICR describes the nature of the information collection and its expected costs and burden.

DATES: Comments must be submitted on or before September 23, 2016.

ADDRESSES: Comments regarding the burden estimated or any other aspect of the information collection, including suggestions for reducing the burden, may be submitted directly to the Office of Information and Regulatory Affairs (OIRA) in OMB, within 30 days of the notice's publication, by email at OIRASubmissions@omb.eop.gov. Please identify the comments by OMB Control No. 3038-0099. Please provide the Commodity Futures Trading Commission ("CFTC" or "Commission") with a copy of all submitted comments at the address listed below. Please refer to OMB Reference No. 3038-0099, found on <http://reginfo.gov>. Comments may also be mailed to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for the Commodity Futures Trading Commission, 725 17th Street NW., Washington, DC 20503, and to: Roger Smith, Special Counsel, Division

of Market Oversight, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW., Washington, DC 20581; or through the CFTC Web site at <http://comments.cftc.gov>. Follow the instructions for submitting comments through the Web site.

Comments may also be mailed to: Christopher J. Kirkpatrick, Secretary of the Commission, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW., Washington, DC 20581 or by Hand Deliver/Courier at the same address.

A copy of the supporting statements for the collection of information discussed above may be obtained by visiting RegInfo.gov. All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to www.cftc.gov.

FOR FURTHER INFORMATION CONTACT:

Roger Smith, Special Counsel, Division of Market Oversight, Commodity Futures Trading Commission, (202) 418-5344; email: rsmith@cftc.gov, and refer to OMB Control No. 3038-0099. A copy may also be obtained from this contact.

SUPPLEMENTARY INFORMATION:

Title: Process for a Swap Execution Facility or Designated Contract Market to Make a Swap Available to Trade (OMB Control No. 3038-0099). This is a request for extension of a currently approved information collection.

Abstract: The collection of information is needed to help determine which swaps should be subject to the trade execution requirement under Section 2(h)(8) of the Commodity Exchange Act pursuant to Section 723 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. A swap execution facility ("SEF") or designated contract market ("DCM") that submits a determination that a swap is available to trade must address at least one of several factors to demonstrate that the swap is suitable for trading pursuant to the trade execution requirement. The Commission uses the collection of information to facilitate the application of the trade execution requirement and the requirements associated with methods of execution under parts 37 and 38 of the Commission's regulations.

The Commission did not receive any relevant comments on the 60-day **Federal Register** notice, 81 FR 38689, dated June 14, 2016.

Burden Statement: The Commission estimates the burden of reviewing the prescribed factors and data to make a determination for this collection to be 16 hours per response. The total cost

burden per rule submission filing is estimated to be \$958.16. The Commission based its calculation on (1) an hourly wage rate of \$48.14 for a Compliance Specialist to perform the filing over 8 hours;¹ an hourly wage rate of \$71.63 for one economist to analyze trading data in the process over 8 hours.²

Respondents/Affected Entities: SEFs, DCMS.

Estimated Number of Respondents: 5.

Estimated Total Annual Burden on Respondents: 80 hours.

Frequency of Collection: Occasional.

Authority: 44 U.S.C. 3501 *et seq.*

Dated: August 19, 2016.

Christopher J. Kirkpatrick,
Secretary of the Commission.

[FR Doc. 2016-20288 Filed 8-23-16; 8:45 am]

BILLING CODE 6351-01-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Advisory Committee on Women in the Services; Notice of Federal Advisory Committee Meeting

AGENCY: Department of Defense.

ACTION: Federal Advisory Committee meeting notice.

SUMMARY: The Department of Defense is publishing this notice to announce that the following Federal Advisory Committee meeting of the Defense Advisory Committee on Women in the Services (DACOWITS) will take place. This meeting is open to the public.

DATES: Tuesday, September 13, 2016, from 8:30 a.m. to 2:15 p.m.; Wednesday, September 14, 2016, from 8:30 a.m. to 12 p.m.

ADDRESSES: Hilton Alexandria—Mark Center, 5000 Seminary Road, Alexandria, VA 22311.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Bowling or DACOWITS Staff at 4800 Mark Center Drive, Suite 04J25-01,

Alexandria, Virginia 22350-9000; robert.d.bowling1.civ@mail.mil, telephone (703) 697-2122, fax (703) 614-6233. Any updates to the agenda or any additional information can be found at <http://dacowits.defense.gov/>.

SUPPLEMENTARY INFORMATION: Pursuant to the Federal Advisory Committee Act of 1972 (5 U.S.C. Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b), and section 10(a), Public Law 92-463, as amended, notice is hereby given of a forthcoming meeting of the DACOWITS.

The purpose of the meeting is for the Committee to receive briefings and updates relating to their current work. The Committee will start the meeting with the Designated Federal Officer (DFO) giving a status update on the Committee's requests for information. There will then be a panel discussion with the U.S. Army and U.S. Marine Corps to discuss the Curriculum Standards for Infantry Officer School. This will be followed by a panel discussion with the Military Services on their Gender Neutral Occupational Standards. This will be followed with a public comment period. Day one will end with a panel discussion with the Military Services on their Maternity Uniforms. On the second day the Committee will receive a briefing from the Joint Advertising Market Research & Studies (JAMRS) Office on the Nation's Recruitable Population, which will then be followed by a panel discussion with the Military Services on the same topic. Lastly, the Committee will propose and vote on their 2016 Recommendations to the Secretary of Defense.

Pursuant to 41 CFR 102-3.140, and section 10(a)(3) of the Federal Advisory Committee Act of 1972, interested persons may submit a written statement for consideration by the DACOWITS. Individuals submitting a written statement must submit their statement to the point of contact listed at the address in **FOR FURTHER INFORMATION CONTACT** no later than 5 p.m., Tuesday, September 6, 2016. If a written statement is not received by Tuesday, September 6, 2016, prior to the meeting, which is the subject of this notice, then it may not be provided to or considered by the DACOWITS until its next open meeting. The DFO will review all timely submissions with the DACOWITS Chair and ensure they are provided to the members of the Committee. If members of the public are interested in making an oral statement, a written statement should be submitted. After reviewing the written comments, the Chair and the DFO will determine who of the requesting persons will be able to make

an oral presentation of their issue during an open portion of this meeting or at a future meeting. Pursuant to 41 CFR 102-3.140(d), determination of who will be making an oral presentation is at the sole discretion of the Committee Chair and the DFO, and will depend on time available and if the topics are relevant to the Committee's activities. Five minutes will be allotted to persons desiring to make an oral presentation. Oral presentations by members of the public will be permitted only on Tuesday, September 13, 2016 from 12 p.m. to 12:30 p.m. in front of the full Committee. The number of oral presentations to be made will depend on the number of requests received from members of the public.

Pursuant to 5 U.S.C. 552b and 41 CFR 102-3.140 through 102-3.165, this meeting is open to the public, subject to the availability of space.

Meeting Agenda

Tuesday, September 13, 2016, From 8:30 a.m. to 2:15 p.m.

- Welcome, Introductions, Announcements
- Request for Information Status Update
- Panel Discussion—Curriculum Standards for Infantry Officer School
- Panel Discussion—Gender Neutral Occupational Standards
- Public Comment Period
- Panel Discussion—Maternity Uniforms

Wednesday, September 14, 2016, From 8:30 a.m. to 12:00 p.m.

- Welcome and Announcements
- Briefing—The Nation's Recruitable Population
- Panel Discussion—The Nation's Recruitable Population
- Committee Proposes and Votes on 2016 Recommendations

Dated: August 19, 2016.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2016-20306 Filed 8-23-16; 8:45 am]

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Intent To Prepare a Supplemental Environmental Impact Statement (EIS) to the Land Acquisition and Airspace Establishment Final EIS at the Marine Corps Air Ground Combat Center, Twentynine Palms, California

AGENCY: Department of the Navy, DoD.

¹ See Report on Management & Professional Earnings in the Securities Industry 2013, Securities Industry and Financial Markets Association at 4 (Oct. 2013). The report lists the average total annual compensation for a compliance specialist (intermediate) as \$66,649. The Commission estimated the personnel's hourly cost by assuming an 1,800 hour work year and by multiplying by 1.3 to account for overhead and other benefits.

² See Bureau of Labor Statistics, U.S. Department of Labor, Occupational Outlook Handbook, Economists, <http://www.bls.gov/ooh/life-physical-and-social-science/economists.htm>. The report lists the median total annual compensation for an economist as \$99,180. The Commission estimated the economist personnel's hourly cost by assuming an 1,800 hour work year and by multiplying by 1.3 to account for overhead and other benefits.

ACTION: Notice.

SUMMARY: Pursuant to Section 102(2)(C) of the National Environmental Policy Act (NEPA) of 1969, as implemented by the Council on Environmental Quality Regulations (40 CFR parts 1500–1508), the Department of the Navy (DON) announces its intent to prepare a Supplemental Environmental Impact Statement (EIS) to evaluate the potential environmental impacts that may result from implementing alternative desert tortoise translocation plans at the Marine Corps Air Ground Combat Center, Twentynine Palms (hereinafter “the Combat Center”). The Supplemental EIS is a supplement to the Final EIS for “Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training” dated July 2012 (hereinafter “2012 Final EIS”) (77 FR 44234).

SUPPLEMENTARY INFORMATION: Pursuant to 40 CFR 1502.9(c), a Supplemental EIS is being prepared to evaluate new information relevant to environmental concerns associated with translocation of tortoises from specific training areas on newly acquired lands. Translocation was deemed necessary to mitigate the moderate to high levels of impact on the tortoise population from the Marine Expeditionary Brigade training activities assessed in the 2012 Final EIS. Since the 2012 Final EIS, the Marine Corps has conducted additional detailed studies and worked cooperatively with the United States Fish and Wildlife Service (USFWS), the California Department of Fish and Wildlife, and the Bureau of Land Management (BLM) on alternative translocation plans for the desert tortoise, as required in a 2012 Biological Opinion (BO) issued by the USFWS. In light of new information gained from these efforts, the DON has elected to prepare a Supplemental EIS focusing on the evaluation of potential impacts from alternative tortoise translocation plans.

The purpose of the proposed action evaluated in the Supplemental EIS is to study alternative translocation plans in support of the project that was described in the 2012 Final EIS, selected in the 2013 Record of Decision (ROD) (78 FR 11632), and authorized by the National Defense Authorization Act for Fiscal Year 2014.

The Marine Corps needs to implement the proposed action to satisfy requirements identified in the 2012 Final EIS and associated 2012 BO. The 2012 BO concluded that the implementation of the Preferred Alternative from the 2012 Final EIS would likely result in the “take” of desert tortoises associated with military

training, tortoise translocation efforts, and authorized and unauthorized Off-Highway Vehicle (OHV) use by recreationists displaced from former areas of the Johnson Valley OHV Area.

The 2013 ROD and associated BO committed the Marine Corps to undertake measures to minimize the “take” of desert tortoises including:

- Establishment of new Special Use Areas (tortoises habitat areas where military training and Off-Highway Vehicle use will be prohibited;
- Translocation Program;
- Desert Tortoise Headstarting and Population Augmentation; and
- Monitoring.

While the 2012 Final EIS and associated BO analyzed a particular translocation program, additional detailed studies and cooperative work on alternative translocation plans for the desert tortoise revealed other possible methods of meeting these requirements. In light of the purpose and need for the proposed action, the DON has identified two potential action alternatives and a No-Action Alternative for the translocation of desert tortoise from training impact areas.

Each alternative will identify recipient sites (to which tortoises would be translocated), and control sites (where the resident tortoise populations will be studied to provide comparative data on survival, threats to survival, habitat stability and changes, and health and disease relative to the translocated tortoise populations at the recipient sites). Each alternative will also include details of the proposed tortoise translocation, including specific handling procedures, fencing, clearance surveys, 30 years of post-translocation monitoring, and other research activities.

The Combat Center identified and applied screening criteria from the 2011 USFWS revised recovery plan for the Mojave population of the desert tortoise and the 2011 USFWS guidance for translocation of desert tortoises to evaluate and select the proposed recipient sites/areas under each alternative. These criteria relate to land use, habitat quality, population levels, disease prevalence, and distance from collection. The Combat Center also screened for research and monitoring feasibility.

Under the No-Action Alternative, the Marine Corps would conduct translocation of desert tortoises in accordance with the General Translocation Plan (GTP) described in the 2012 BO. Alternatives 1 and 2 primarily differ from the No Action Alternative in the selection of proposed recipient and control areas and in the

distribution of desert tortoises at each release site. Compared to the No Action Alternative, Alternatives 1 and 2 would also include additional research studies and reflect updated information obtained from the 3-year program of surveys conducted since the 2012 Final EIS. Alternative 2 differs from Alternative 1 in that: (1) One less recipient site would be used; (2) the pairing of control sites to recipient sites would be different; (3) the Bullion control site would be located on the Combat Center instead of within the Cleghorn Lakes Wilderness Area; and (4) translocation densities would be different.

The Supplemental EIS will analyze environmental effects associated primarily with biological resources, land use, air quality, and cultural resources. The Supplemental EIS analysis will evaluate direct, indirect, short-term and long-term impacts, as well as cumulative impacts from other relevant activities. Additionally, the DON will undertake any consultations required by all applicable laws or regulations.

BLM has been invited to be a Cooperating Agency on the preparation of the Supplemental EIS since many of the lands to which tortoises would be relocated are managed by BLM.

Pursuant to 40 CFR 1502.9(c)(4), the DON will prepare, circulate, and file the Supplemental EIS in the same fashion (exclusive of scoping) as it did the draft and 2012 Final EIS. This will include providing a Draft Supplemental EIS for a 45-day public review period in October 2016, during which three (3) public information meetings will be held in the communities of Joshua Tree, Palm Springs, and Barstow. A Notice of Availability of the Draft Supplemental EIS and Notice of Public Meetings will be published in the **Federal Register**, in area newspapers, and on the Supplemental EIS Web site at <http://LADTT.com> in advance of the release of the Draft Supplemental EIS and the public meetings. Those notices will identify further details about the public meetings and the specific opportunities and methods for the public to provide comments on the Draft Supplemental EIS.

The mailing list for the Supplemental EIS is based on the 2012 Final EIS. Those on this list will receive notices and documents related to Supplemental EIS preparation. This list includes local, state, and federal agencies with jurisdiction or other interests in the alternatives. In addition, the mailing list includes adjacent property owners, affected municipalities, and other interested parties such as conservation

and off-highway vehicle organizations. Anyone wishing to be added to the mailing list may request to be added by contacting the Supplemental EIS project manager at the address below.

No decision will be made to implement any alternative until the Supplemental EIS process is completed and a ROD is signed by the Assistant Secretary of the Navy (Energy, Installations and Environment) or designee.

FOR FURTHER INFORMATION CONTACT:

NEPA Program Manager (Attn: Mr. Scott Kerr), Bldg. 1418, MAGTF/TC/MCAGCC, Twentynine Palms, CA 92278-8104; phone: 760-830-8190; email: Scott.Kerr@usmc.mil.

Dated: August 18, 2016.

C. Pan,

Lieutenant, Judge Advocate General's Corps, U.S. Navy, Alternate Federal Register Liaison Officer.

BILLING CODE 3810-FF-P

DEPARTMENT OF EDUCATION

[Docket No.: ED-2016-ICCD-0093]

Agency Information Collection Activities; Comment Request; 2012/17 Beginning Postsecondary Students Longitudinal Study: (BPS:12/17)

AGENCY: National Center for Education Statistics (NCES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing a revision of an existing information collection.

DATES: Interested persons are invited to submit comments on or before October 24, 2016.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2016-ICCD-0093. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the

Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E-349, Washington, DC 20202-4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact NCES Information Collections at NCES.Information.Collections@ed.gov.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: 2012/17 Beginning Postsecondary Students Longitudinal Study: (BPS:12/17).

OMB Control Number: 1850-0631.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: Individuals.

Total Estimated Number of Annual Responses: 39,399.

Total Estimated Number of Annual Burden Hours: 55,002.

Abstract: The 2012/17 Beginning Postsecondary Students Longitudinal Study (BPS:12/17) is conducted by the National Center for Education Statistics (NCES), within the U.S. Department of Education (ED). BPS is designed to follow a cohort of students who enroll in postsecondary education for the first time during the same academic year, irrespective of the date of high school completion. The study collects data on

students' persistence in and completion of postsecondary education programs; their transition to employment; demographic characteristics; and changes over time in their goals, marital status, income, and debt, among other indicators. Data from BPS are used to help researchers and policymakers better understand how financial aid influences persistence and completion, what percentages of students complete various degree programs, what are the early employment and wage outcomes for certificate and degree attainees, and why students leave school. This request is to conduct the BPS:12/17 full-scale data collection, including a student interview, file matching to various administrative data sources, and collection of corresponding postsecondary education transcripts and student records.

Dated: August 19, 2016.

Tomakie Washington,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Reopening the Fiscal Year 2016 Competition for Certain Eligible Applicants; Investing in Innovation Fund—Development Grants Full Application

[Catalog of Federal Domestic Assistance (CFDA) Number: 84.411C]

AGENCY: Office of Innovation and Improvement, Department of Education.

ACTION: Notice.

SUMMARY: On April 25, 2016, we published in the **Federal Register** (81 FR 24070) a notice inviting applications for new awards for fiscal year (FY) 2016 for the Investing in Innovation (i3) Fund Development competition. The Department reopens the FY 2016 i3 Development Grants competition for, and will accept applications from, certain prospective eligible applicants affected by the severe storms and flooding beginning on August 11, 2016, and continuing, in Louisiana. We are reopening this competition in order to help affected eligible applicants compete fairly with other eligible applicants under this competition.

DATES:

Deadline for Transmittal of Applications for Eligible Applicants: August 30, 2016.

Deadline for Intergovernmental Review: October 24, 2016.

SUPPLEMENTARY INFORMATION: On April 25, 2016, we published in the **Federal Register** (81 FR 24070) a notice inviting applications for new awards for FY 2016 for the i3 Development competition. The deadline for transmittal of full applications was August 16, 2016. We are reopening this competition in order to allow certain eligible applicants affected by the severe storms and flooding in Louisiana (described in more detail below) more time to prepare and submit their applications.

Eligibility: Applicants are eligible to submit applications under this reopened competition if they are located in a Federally declared disaster area, as determined by the Federal Emergency Management Agency (FEMA) (see www.fema.gov/news/disasters.fema), and adversely affected by the severe storms and flooding beginning on August 11, 2016, and continuing, in Louisiana.

Under section 14007(a)(1) of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5), an eligible applicant for the Investing in Innovation Fund is (a) a local educational agency (LEA) or (b) a partnership between a nonprofit organization and (1) one or more LEAs or (2) a consortium of schools. An eligible applicant that is a partnership may apply under this reopened competition if any of the entities required to be part of the partnership (*i.e.*, a nonprofit organization, an LEA, or a consortium of schools) are located in a Federally declared disaster area, as determined by FEMA, and adversely affected by the severe storms and flooding in Louisiana.

An eligible applicant must provide a certification in its application that it meets the criteria for submitting an application as part of the reopened competition and be prepared to provide appropriate supporting documentation, if requested. If such an eligible applicant is submitting its application electronically, the submission of the application serves as the eligible applicant's attestation that it meets the criteria for submitting an application as part of this reopened competition.

We are not reopening the application period for any other applicants. Thus, applications from applicants not affected by the severe storms and flooding that were not timely submitted may not be submitted as part of this reopened competition.

Note: All information in the NIA for this competition remains the same, except for the deadline date for certain eligible applicants and the deadline for intergovernmental review.

Program Authority: ARRA, Division A, Section 14007, Pub. L. 111–5.

FOR FURTHER INFORMATION CONTACT: Kelly Terpak, U.S. Department of Education, 400 Maryland Avenue SW., Room 4W312, Washington, DC 20202. Telephone: (202) 245–7122. Email address: i3@ed.gov.

If you use a telecommunications device for the deaf or a text telephone, call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (*e.g.*, braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in this notice.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: August 19, 2016.

Nadya Chinoy Dabby,

Assistant Deputy Secretary for Innovation and Improvement.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2016–ICCD–0054]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Evaluation of the ESSA Title I, Part D, Neglected or Delinquent Programs

AGENCY: Department of Education (ED), Office of Planning, Evaluation and Policy Development (OPEPD).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44

U.S.C. chapter 3501 *et seq.*), ED is proposing a new information collection.

DATES: Interested persons are invited to submit comments on or before September 23, 2016.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED–2016–ICCD–0054. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E–347, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Michael Fong, 202–401–7462.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Evaluation of the ESSA Title I, Part D, Neglected or Delinquent Programs.

OMB Control Number: 1875–NEW.

Type of Review: A new information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 554.

Total Estimated Number of Annual Burden Hours: 529.

Abstract: The purpose of this study is to examine how state agencies, school districts, and juvenile justice and child welfare facilities implement education and transition programs for youth who are neglected or delinquent (N or D) under the Elementary and Secondary Education Act (ESEA), as amended by the Every Student Succeeds Act (ESSA), Title I, Part D. The information will be used by ED to produce and disseminate a report detailing how state agencies, school districts, and juvenile justice and child welfare facilities implement education and transition programs for youth who are neglected or delinquent (N or D).

Dated: August 18, 2016.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED–2016–ICCD–0092. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at [http://](http://www.regulations.gov)

www.regulations.gov by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E–349, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact NCES Information Collections at NCES.Information.Collections@ed.gov.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: EDFacts Data Collection School Years 2016–17, 2017–18, and 2018–19.

OMB Control Number: 1850–0925.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 61.

Total Estimated Number of Annual Burden Hours: 126,800.

Abstract: EDFacts is a U.S. Department of Education (ED) initiative

to collect, analyze, report on and promote the use of high-quality, pre-kindergarten through grade 12 (pre-K–12) performance data for use in education planning, policymaking, and management and budget decision making to improve outcomes for students. EDFacts enables the National Center for Education Statistics (NCES) to report on students, schools, staff, services, and education outcomes at the state, district, and school levels, by centralizing data provided by state education agencies, local education agencies, and schools. This centralized approach provides ED users with the ability to efficiently analyze and report on submitted data and has reduced the reporting burden for state and local data producers through the use of streamlined data collection, analysis, and reporting tools. EDFacts collects information on behalf of ED grant and program offices for approximately 180 data groups for all 50 states, Washington DC, Puerto Rico, and seven outlying areas and freely associated states (American Samoa, Federated States of Micronesia, Guam, Marshall Islands, Commonwealth of the Northern Mariana Islands, Republic of Palau, and the U.S. Virgin Islands), the Department of Defense Education Activity (DoDEA), and the Bureau of Indian Education (BIE). NCES seeks authorization from OMB to revise its EDFacts data collection and is requesting a new clearance for the 2016–17, 2017–18, and 2018–19 school years in order to support the Elementary and Secondary Act (ESEA), as amended by the Every Student Succeeds Act (ESSA) in December, 2015. This collection package will be available for public comment during two open periods, a 60 day and a 30 day, and revisions will be made accordingly. This submission includes a few proposed changes to the EDFacts data collection. In addition to reviewing the proposed changes (detailed in Attachment C and the B Attachments), ED requests that SEAs and other stakeholders respond to the directed questions found in Attachment D.

Dated: August 19, 2016.

Tomakie Washington,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission**

[Project No. 2785–092]

Boyce Hydro Power, LLC; Notice of Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Recreation Plan.
 b. *Project No:* 2785–092.
 c. *Date Filed:* August 16, 2016, as supplemented August 17, 2016.
 d. *Applicant:* Boyce Hydro Power, LLC.

e. *Name of Project:* Sandford Water Power Project.

f. *Location:* The project is located on the Tittabawssee River in Midland County, Michigan.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a–825r.

h. *Applicant Contact*: Frank Christie, General Manager, Boyce Hydro Power, LLC, 6000 S. M–30, P.O. Box 15, Edenville, MI 48620, (989) 689–3161.

i. *FERC Contact*: Mr. Mark Pawlowski, (202) 502–6052, mark.pawlowski@ferc.gov.

j. *Deadline for filing comments, motions to intervene, and protests*: September 2, 2016.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The first page of any filing should include docket number P–2785–092.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request*: The licensee filed a request for Commission approval of a temporary variance of the reservoir water surface elevation of the Sanford Water Power Project required by article 411 of the project's license. To facilitate repair of the Edenville dam spillway located upstream of Sandford dam, the licensee requests to draw down the Sandford reservoir 3 feet to its winter elevation of 622 feet National Geodetic Vertical Datum (NGVD) beginning September 15, 2016. Because the licensee does not anticipate completing the work by November 15, the licensee would not return to reservoir to its normal water surface elevation of 625 feet NGVD until just prior to the surface water temperature of the reservoir reaching 39 degrees Fahrenheit as required by article 411 of the license.

l. *Locations of the Application*: A copy of the application is available for inspection and reproduction at the

Commission's Public Reference Room, located at 888 First Street NE., Room 2A, Washington, DC 20426, or by calling (202) 502–8371. This filing may also be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email FERCOnlineSupport@ferc.gov, for TTY, call (202) 502–8659. A copy is also available for inspection and reproduction at the address in item (h) above. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions To Intervene*: Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, 385.211, and 385.214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents*: Any filing must (1) bear in all capital letters the title "COMMENTS", "PROTEST", or "MOTION TO INTERVENE" as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: August 18, 2016.

Kimberly D. Bose,
Secretary.

In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The first page of any filing should include docket number P-2232-633.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request*: Duke Energy Carolinas, LLC proposes to permit the expansion of Stutts Marina from the existing 30 boat slips to a total of 146 boat slips distributed across 4 docks. Additionally, Duke would permit 14 addition personal watercraft slips, the expansion of an existing gasoline dock (with 3 boat slips), the addition of a five-foot-wide (*i.e.*, 3,707 square feet) boardwalk along the shoreline, and dredging of 4.8 acres (*i.e.*, 34,600 cubic yards of material) of shallow-water area near the shoreline. Additional work associated with the marina would be constructed outside the project boundary.

l. *Locations of the Application*: A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street NE., Room 2A, Washington, DC 20426, or by calling (202) 502-8371. This filing may also be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1-866-208-3676 or email FERCOnlineSupport@ferc.gov, for TTY, call (202) 502-8659. A copy is also available for inspection and reproduction at the address in item (h) above. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene*: Anyone may submit

comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents*: Any filing must (1) bear in all capital letters the title "COMMENTS", "PROTEST", or "MOTION TO INTERVENE" as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: August 18, 2016.

Kimberly D. Bose,
Secretary.

[Docket No. ER16-1649-000]

California Independent System, Operator Corporation; Supplemental Notice of Agenda and Discussion Topics for Staff Technical Conference

This notice establishes the agenda and topics for discussion at the technical conference to be held on September 16, 2016 to discuss issues related to the measures implemented by the California Independent System Operator Corporation (CAISO) to address the limited availability of the Aliso Canyon natural gas storage facility.¹ The technical conference will be held from 10:00 a.m. to 4:00 p.m. (EDT) in the

¹ *Cal. Indep. Sys. Operator Corp.*, 155 FERC ¶ 61,224 (2016) (June 1 Order).

Commission Meeting Room at the Commission's headquarters, 888 First Street NE., Washington, DC. The technical conference will be led by Commission staff. All interested parties are invited to attend, and registration is not required.

The purpose of the technical conference is to provide Commission staff and interested parties an opportunity to discuss lessons learned regarding the efficacy of and the need for retention of any of the instant tariff revisions accepted by the Commission in the June 1 Order as well as potential longer-term solutions to address any ongoing limitations at the Aliso Canyon facility. The topics and related questions to be discussed during this conference are attached. No formal presentations will be made other than an opening presentation by CAISO and its Department of Market Monitoring; however, attendees will be encouraged to participate in the discussion along with Commission staff, time permitting. Attendees may also submit questions or potential discussion topics in the docket prior to the technical conference. Any such submissions should be made no later than one week prior to the conference and will be for discussion purposes only, time permitting.

This conference will be transcribed and webcast. Transcripts will be available immediately for a fee from Ace Reporting Company ((202) 347-3700). A link to the webcast of this event will be available in the Commission Calendar of Events at www.ferc.gov. The Capitol Connection provides technical support for the webcasts and offers the option of listening to the conferences via phone-bridge for a fee. For additional information, visit www.CapitolConnection.org or call (703) 993-3100. Parties attending the conference via webcast will have the opportunity to submit questions during the conference via email Virginia Castro at virginia.castro@ferc.gov.

FERC conferences are accessible under section 508 of the Rehabilitation Act of 1973. For accessibility accommodations please send an email to accessibility@ferc.gov or call toll free 1-866-208-3372 (voice) or 202-502-8659 (TTY), or send a fax to 202-208-2106 with the required accommodations.

For more information on this conference, please contact Virginia Castro at (202) 502-8491, virginia.castro@ferc.gov, or Sarah McKinley at (202) 502-8368, sarah.mckinley@ferc.gov.

Dated: August 17, 2016.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ID-4482-004; Docket No. ID-7981-000]

Huskilson, Christopher G.; Blunden, Gregory W.; Notice of Filing

Take notice that on August 18, 2016, Christopher G. Huskilson and Gregory W. Blunden submitted for filing, an application for authority to hold interlocking positions, pursuant to section 305(b) of the Federal Power Act, 16 U.S.C. 825d(b) and section 45.8 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR part 45.8.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov, or call

(866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Comment Date: 5:00 p.m. Eastern Time on September 8, 2016.

Dated: August 18, 2016.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP16-491-000]

National Fuel Gas Supply Corporation; Notice of Request Under Blanket Authorization

Take notice that on August 11, 2016, National Fuel Gas Supply Corporation (National Fuel), 6363 Main Street, Williamsville, New York 14221 filed in Docket No. CP16-491-000, filed a prior notice request pursuant to sections 157.205 and 157.216 of the Federal Energy Regulatory Commission's regulations under the Natural Gas Act (NGA) and National Fuel's blanket authorizations issued in Docket Nos. CP83-4-000. National Fuel seeks authorization to abandon on injection/withdraw storage well and abandon in place the associated well line, all as more fully set forth in the application which is on file with the Commission and open to public inspection. The filing may also be viewed on the web at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at FERCOnlineSupport@ferc.gov or call toll-free, (866) 208-3676 or TTY, (202) 502-8659.

National Fuel proposes to abandon facilities in its Henderson Storage Field, located in Mercer County, Pennsylvania. National Fuel proposes to plug and abandon one injection/withdrawal storage well, Well 622, and abandon in place the associated well line NW-622H. National Fuel states that based on the excessive cost to rehabilitate this well, it claims that the most prudent course of action is to plug and abandon it and that the proposed abandonment will not result in a material decrease in service to customers.

Any questions regarding this Application should be directed to Kenneth E. Webster, Attorney for National Fuel, 6363 Main Street, Williamsville, New York 14221, by phone (716) 857-7067, by fax (716) 857-

7206, or by email at websterk@natfuel.com.

Any person or the Commission's Staff may, within 60 days after the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and, pursuant to section 157.205 of the Commission's Regulations under the NGA (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the NGA.

Pursuant to Section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding, or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenters will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenters will not be required to serve copies of filed documents on all other parties. However, the non-party commenters will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right

to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests, and interventions via the internet in lieu of paper. See 18 CFR 385.2001(a) (1) (iii) and the instructions on the Commission's Web site (www.ferc.gov) under the "e-Filing" link. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

Dated: August 18, 2016.

Kimberly D. Bose,
Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 10821-004]

Pacific Gas & Electric Company; Notice of Intent To File License Application, Filing of Pre-Application Document, Approving Use of the Traditional Licensing Process

a. *Type of Filing:* Notice of Intent to a File License Application and Request to Use the Traditional Licensing Process.

b. *Project No.:* 10821-004.

c. *Date Filed:* June 30, 2016.

d. *Submitted By:* Pacific Gas & Electric Company (PG&E).

e. *Name of Project:* Camp Far West Transmission Line Project.

f. *Location:* The project is a transmission line-only project located in Placer and Yuba Counties, California. The project occupies 10.9 acres of federal land administered by Beale Air Force Base, Department of Defense.

g. *Filed Pursuant to:* 18 CFR 5.3 of the Commission's regulations.

h. *Potential Applicant Contact:* Mark Stewart, Electric FERC License Coordinator, 4636 Missouri Flat Road, Placerville, CA 95667; (530) 621-7243; email—m9s5@pge.com.

i. *FERC Contact:* Quinn Emmering at (202) 502-6382; or email at quinn.emmering@ferc.gov.

j. PG&E filed its request to use the Traditional Licensing Process on June 30, 2016. PG&E provided public notice of its request on June 9 and June 10, 2016. In a letter dated August 18, 2016, the Director of the Division of Hydropower Licensing approved PG&E's request to use the Traditional Licensing Process.

k. With this notice, we are initiating informal consultation with the U.S. Fish and Wildlife Service and NOAA Fisheries under section 7 of the

Endangered Species Act and the joint agency regulations thereunder at 50 CFR, Part 402; and NOAA Fisheries under section 305(b) of the Magnuson-Stevens Fishery Conservation and Management Act and implementing regulations at 50 CFR 600.920. We are also initiating consultation with the California State Historic Preservation Officer, as required by section 106, National Historic Preservation Act, and the implementing regulations of the Advisory Council on Historic Preservation at 36 CFR 800.2.

l. With this notice, we are designating PG&E as the Commission's non-federal representative for carrying out informal consultation pursuant to section 7 of the Endangered Species Act and section 305(b) of the Magnuson-Stevens Fishery Conservation and Management Act; and consultation pursuant to section 106 of the National Historic Preservation Act.

m. PG&E filed a Pre-Application Document (PAD; including a proposed process plan and schedule) with the Commission, pursuant to 18 CFR 5.6 of the Commission's regulations.

n. A copy of the PAD is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site (<http://www.ferc.gov>), using the "eLibrary" link. Enter the docket number, excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at FERCONlineSupport@ferc.gov, (866) 208-3676 (toll free), or (202) 502-8659 (TTY). A copy is also available for inspection and reproduction at the address in paragraph h.

o. The licensee states its unequivocal intent to submit an application for a new license for Project No. 10821-004. Pursuant to 18 CFR 16.8, 16.9, and 16.10 each application for a new license and any competing license applications must be filed with the Commission at least 24 months prior to the expiration of the existing license. All applications for licensing this project must be filed by June 30, 2019.

p. Register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filing and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Dated: August 18, 2016.

[Docket No. OR16-22-000]

EnLink Crude Pipeline, LLC; Notice of Petition for Declaratory Order

Take notice that on August 16, 2016, pursuant to Rule 207(a)(2) of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR 385.207(a)(2) (2015), EnLink Crude Pipeline, LLC ("EnLink"), filed a petition for a declaratory order approving the overall tariff and rate structure for EnLink's new pipeline system in the Midland Basin in Texas that will gather and transport crude oil from origin points located in Upton County, Texas and Midland County, Texas to the SunVit Midland Terminal and the Enterprise Midland Terminal, both in Midland County, Texas, all as more fully explained in the petition.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Petitioner.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2016-0427; FRL-9950-47]

Public Meeting; Data That Support the Registration of Plant-Incorporated Protectants (PIPs)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) will hold a one-day public symposium on the types of data that support the registration of plant-incorporated protectants (PIPs). The symposium is open to the public and can be attended in person and online.

DATES: The meeting will be held on September 29, 2016, from approximately 9:00 a.m. to 5:00 p.m. Sign-in begins at 8:30 a.m.

If you wish to participate in person, we encourage registration on or before September 26, 2016.

If you wish to attend in person and would like to request accommodation for a disability, please follow the registration link under III. How Can I Request to Participate in this Meeting? and follow the prompts for in-person attendance. In order to give EPA as much time as possible to process your request, we encourage participants to request accommodations at least 10 days prior to the meeting.

ADDRESSES: The meeting will be held at the Environmental Protection Agency, Conference Center Room S1204/06, Lobby Level, One Potomac Yard (South Bldg.), 2777 S. Crystal Dr., Arlington, VA 22202.

FOR FURTHER INFORMATION CONTACT: Wiebke Tapken, Biopesticides and Pollution Prevention Division (7511P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; main telephone number: (703) 305-7090; email address: BPPDFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. This action may, however, be of interest to persons who are or may be required to conduct testing of pesticidal

substances under the Federal Food, Drug, and Cosmetic Act (FFDCA) and/or the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action.

B. How can I get copies of this document and other related information?

The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2016-0427, is available at <http://www.regulations.gov> or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (703) 305-5805. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

II. Background

The purpose of the symposium is to provide a forum for biotechnology developers, the agricultural sector, researchers, and the public, to receive first-hand information on the scope of the scientific pesticide application review process that determines the safety of PIPs, including the type of data EPA typically needs to make a regulatory decision. We anticipate that this symposium and the information being presented will promote transparency, clarity, and consistency for EPA's regulation of PIPs. The symposium will provide opportunities for the audience to ask questions on each of the topics covered. EPA is not requesting public comment or advice on the materials being presented during the symposium. Following the meeting, the materials that will be presented will be made available in docket ID No. EPA-HQ-OPP-2016-0427.

III. How can I request to participate in this meeting?

No fees are associated with the attendance of the symposium. You may request to participate online and in-person by referring to this link and following the prompts: <https://www.epa.gov/regulation-biotechnology-under-tasca-and-fifra/plant-incorporated-protectants-data-requirements>.

Authority: 7 U.S.C. 136.

Dated: August 16, 2016.

Mark A. Hartman,

Acting Director, Biopesticides and Pollution Prevention Division, Office of Pesticide Programs.

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPPT-2016-0481; FRL-9950-88]

Certain New Chemicals; Receipt and Status Information for July 2016

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is required under the Toxic Substances Control Act (TSCA) to publish in the **Federal Register** a notice of receipt of a premanufacture notice (PMN); an application for a test marketing exemption (TME), both pending and/or expired; and a periodic status report on any new chemicals under EPA review and the receipt of notices of commencement (NOC) to manufacture those chemicals. This document covers the period from July 1, 2016 to July 29, 2016.

DATES: Comments identified by the specific case number provided in this document, must be received on or before September 23, 2016.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPPT-2016-2016-0481, and the specific PMN number or TME number for the chemical related to your comment, by one of the following methods:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

- **Mail:** Document Control Office (7407M), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001.

- **Hand Delivery:** To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: For technical information contact: Jim

Rahai, IMD, 7407M, Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (202) 564-8593; email address: rahai.jim@epa.gov.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave. Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. As such, the Agency has not attempted to describe the specific entities that this action may apply to. Although others may be affected, this action applies directly to the submitters of the actions addressed in this document.

B. What should I consider as I prepare my comments for EPA?

1. **Submitting CBI.** Do not submit this information to EPA through [regulations.gov](http://www.regulations.gov) or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. **Tips for preparing your comments.** When preparing and submitting your comments, see the commenting tips at <http://www.epa.gov/dockets/comments.html>.

II. What action is the agency taking?

This document provides receipt and status reports, which cover the period from July 1, 2016 to July 29, 2016, and consists of the PMNs and TMEs both pending and/or expired, and the NOCs to manufacture a new chemical that the Agency has received under TSCA section 5 during this time period.

III. What is the agency's authority for taking this action?

Under TSCA, 15 U.S.C. 2601 *et seq.*, EPA classifies a chemical substance as either an "existing" chemical or a

“new” chemical. Any chemical substance that is not on EPA’s TSCA Inventory is classified as a “new chemical,” while those that are on the TSCA Inventory are classified as an “existing chemical.” For more information about the TSCA Inventory, please go to: <http://www.epa.gov/opptintr/newchemicals/pubs/inventory.htm>.

Anyone who plans to manufacture or import a new chemical substance for a non-exempt commercial purpose is required by TSCA section 5 to provide EPA with a PMN, before initiating the activity. Section 5(h)(1) of TSCA authorizes EPA to allow persons, upon application, to manufacture (includes import) or process a new chemical substance, or a chemical substance

subject to a significant new use rule (SNUR) issued under TSCA section 5(a), for “test marketing” purposes, which is referred to as a test marketing exemption, or TME. For more information about the requirements applicable to a new chemical go to: <http://www.epa.gov/oppt/newchemicals>.

Under TSCA sections 5(d)(2) and 5(d)(3), EPA is required to publish in the **Federal Register** a notice of receipt of a PMN or an application for a TME and to publish in the **Federal Register** periodic reports on the status of new chemicals under review and the receipt of NOCs to manufacture those chemicals.

IV. Receipt and Status Reports

As used in each of the tables in this unit, (S) indicates that the information

in the table is the specific information provided by the submitter, and (G) indicates that the information in the table is generic information because the specific information provided by the submitter was claimed as CBI.

For the 58 PMNs received by EPA during this period, Table 1 provides the following information (to the extent that such information is not claimed as CBI): The EPA case number assigned to the PMN; the date the PMN was received by EPA; the projected end date for EPA’s review of the PMN; the submitting manufacturer/importer; the potential uses identified by the manufacturer/importer in the PMN; and the chemical identity.

TABLE 1—PMNS RECEIVED FROM JULY 1, 2016 TO JULY 29, 2016

Case No.	Date received	Projected end date for EPA review	Manufacturer/importer	Use(s)	Chemical identity
P-16-0165	7/26/2016	10/24/2016	Dura Chemicals, Inc.	(S) Iron, 2-ethylhexanoate propionate complexes is a component in a metal organic product that will be used in paint and ink driers, UPR promoters, lube/grease additives, fuel additives, polymerization catalysts, specialty petrochemical catalysts, etc., the amount of the iron, 2-ethylhexanoate propionate complexes will be well under 1% in any final product.	(S) Iron, 2- ethylhexanoate propionate complexes.
P-16-0186	7/12/2016	10/10/2016	CBI	(G) Surfactant	(G) Sodium branched chain alkyl hydroxyl and branched chain alkyl sulfonates.
P-16-0206	7/13/2016	10/11/2016	CBI	(G) Pigment wetting and dispersing additive.	(G) Formaldehyde ketone condensate polymer.
P-16-0313	7/5/2016	10/3/2016	Honeyol, Inc	(S) Use in production of resins raw material used in the production of resins.	(S) Tar acids (shale oil), c6-9 fraction, alkylphenols, low-boiling.
P-16-0358	7/20/2016	10/18/2016	CBI	(S) Intermediate for further polymer reaction.	(G) Alkyl phenol.
P-16-0414	7/1/2016	9/29/2016	CBI	(S) Polymerized pigment used in the manufacture of electronic inks.	(G) Dimethylsiloxane methyl methacrylate copolymer.
P-16-0427	7/8/2016	10/6/2016	CBI	(G) Adhesive	(G) Alkanedioic acid polymer with ethenylbenzene alky-2-alkenoate, alkanediol, .alpha. ??????????-hydro-.omega.-hydroxypoly[oxyalkyl-alkanediyl]], hydroxyalkyl-alkyl-alkenoate, and aromatic isocyanate.
P-16-0438	7/15/2016	10/13/2016	CBI	(S) Intermediate for pesticide inert ...	(S) 3-butenenitrile, 2-(acetyloxy).
P-16-0446	7/8/2016	10/6/2016	Allnex, USA, Inc ..	(S) Resin in architectural primer coatings.	(G) Fatty acids, reaction products with alkylamine, polymers with substituted carbomonocycle, substituted alkylamines, heteromonocycle and substituted alkanate, lactates (salts).
P-16-0450	7/21/2016	10/19/2016	CBI	(G) Plasticizer	(S) 1,2,4-benzenetricarboxylic acid, 1,2,4-trinonyl ester.
P-16-0451	7/8/2016	10/6/2016	Evonik Corporation.	(G) Binder in coatings	(G) Siloxane binder.
P-16-0455	7/13/2016	10/11/2016	CBI	(S) Component of Infrared absorption material.	(G) Mixed metal oxide.

TABLE 1—PMNS RECEIVED FROM JULY 1, 2016 TO JULY 29, 2016—Continued

Case No.	Date received	Projected end date for EPA review	Manufacturer/ importer	Use(s)	Chemical identity
P-16-0456	7/7/2016	10/5/2016	Kemira Chemicals	(S) Flocculant used to treat mining tailings.	(S) 2-propenoic acid, calcium salt (2:1), polymer with 2-propenamide.
P-16-0457	7/7/2016	10/5/2016	Kemira Chemicals	(S) Flocculant used to treat mining tailings.	(S) Ethanaminium, n,n,n-trimethyl-2-[(1-oxo-2-propen-1-yl)oxyl-, chloride (1:1), polymer with calcium 2-propenoate (1:2) and 2-propenamide.
P-16-0458	7/6/2016	10/4/2016	CBI	(G) Odor control agent	(G) Dialkyldimethyl ammonium salt.
P-16-0459	7/14/2016	10/12/2016	CBI	(G) Printing additive	(G) Carbomonocyclic dicarboxylic acid, polymer with alkanedioic acid, substituted heteropolycycle, substituted carbomonocycle, alkyl alkenoate, alkanedioic acid, alkoxyated substituted dicarbomonocycle, alkoxyated substituted dicarbomonocycle, alkenoic acid, oxo alkyl initiated.
P-16-0460	7/12/2016	10/10/2016	CBI	(G) Process aid	(G) Silane-treated aluminosilicate.
P-16-0461	7/12/2016	10/10/2016	CBI	(G) Process aid	(G) Silane-treated aluminosilicate.
P-16-0462	7/12/2016	10/10/2016	CBI	(G) Process aid	(G) Silane-treated aluminosilicate.
P-16-0463	7/12/2016	10/10/2016	CBI	(G) Process aid	(G) Silane-treated aluminosilicate.
P-16-0464	7/12/2016	10/10/2016	CBI	(G) Process aid	(G) Silane-treated aluminosilicate.
P-16-0465	7/11/2016	10/9/2016	CBI	(G) Surfactant	(G) Perfluoroalkyl ammonium chloride.
P-16-0466	7/11/2016	10/9/2016	CBI	(G) Additive open non-dispersive use.	(G) 2,5-furandione, telomer with ethenylbenzene and (alkylethyl)benzene, amides with polyethylene-polypropylene glycol aminoalkyl me ether, alkali salts.
P-16-0467	7/13/2016	10/11/2016	CBI	(S) Intermediate for a polyurethane catalyst.	(G) Propanenitrile, polyalkylpolyamine.
P-16-0468	7/14/2016	10/12/2016	Gelest	(S) Research	(S) Silsesquioxanes, 3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluorooctyl.
P-16-0468	7/14/2016	10/12/2016	Gelest	(S) The new substance will be used as a modifier for various polymeric coatings with applications in for example automotive fuel lines microelectronic housing coatings.	(S) Silsesquioxanes, 3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluorooctyl.
P-16-0468	7/14/2016	10/12/2016	Gelest	(S) The new material is to be used as a modifier for polymeric systems to make specialty coatings for applications in automotive fuel lines and other parts, as well as coatings for microelectronic housing industrial and oil and gas equipment. the amount of the new substance is estimate to be about 20mg per square meter of a coating.	(S) Silsesquioxanes, 3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluorooctyl.
P-16-0469	7/14/2016	10/12/2016	Gelest	(S) The new material is to be used as a modifier for polymeric systems to make specialty coatings for applications in automotive fuel lines and other parts, as well as coatings for microelectronic housing, industrial and oil and gas equipment. the amount of the new substance is estimate to be about 20mg per square meter of a coating.	(S) Silsesquioxanes, 3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluorooctyl.
P-16-0469	7/14/2016	10/12/2016	Gelest	(S) Research	(S) Silsesquioxanes, 3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluorooctyl.

TABLE 1—PMNS RECEIVED FROM JULY 1, 2016 TO JULY 29, 2016—Continued

Case No.	Date received	Projected end date for EPA review	Manufacturer/importer	Use(s)	Chemical identity

P-16-0482	7/15/2016	10/13/2016	CBI	(S) Additive for flotation products	(G) Fatty acid amidoamine.
P-16-0483	7/18/2016	10/16/2016	CBI	(G) Plastic additive	(G) Inorganic acids, metal salts, compds. with modified heteroaromatics.
P-16-0484	7/18/2016	10/16/2016	CBI	(G) Chemical intermediate	(G) Inorganic acid, metal salt, compd. with substituted aromatic heterocycle.
P-16-0485	7/18/2016	10/16/2016	CBI	(G) NCS is a colorant component used in coatings open non-dispersive use.	(G) Butanedioic diester.
P-16-0486	7/18/2016	10/16/2016	CBI	(G) Isolated intermediate in the production of a refrigerant precursor.	(G) Polychloropropane.
P-16-0488	7/20/2016	10/18/2016	CBI	(G) Binder for fibrous materials	(G) Alkenoic acid, polymer with hydrolyzed acid anhydride, compds. with alkanolamine.
P-16-0492	7/27/2016	10/25/2016	CBI	(G) Polymeric dye carrier	(G) Polyester-amide polymer of 'isophthalic acid' with diamino-alkane, cyclohexane-dialcohol, alkanetriol, di-isocyanate and acrylic acid-ethylene co-polymer.
P-16-0493	7/27/2016	10/25/2016	CBI	(G) Paint	(G) Polyurethane/acrylic grafted co-polymer, dimethylaminoethanol salt.
P-16-0494	7/25/2016	10/23/2016	CBI	(G) Adhesive for electrical industry use.	(G) Carboxylated styrene butadiene polymer.
P-16-0497	7/26/2016	10/24/2016	CBI	(G) Prepolymer	(G) Urethane prepolymer.
P-16-0498	7/27/2016	10/25/2016	CBI	(G) Open non-dispersive	(G) Hydroxy acrylic polymer, lactates.
P-16-0501	7/29/2016	10/27/2016	Reagens, USA, Inc.	(S) PVC stabilizer	(S) Di(m-2,2',2''-nitritoltris(ethanol)-diperchlorato)dinatrium.

For the 20 NOCs received by EPA during this period, Table 2 provides the following information (to the extent that such information is not claimed as CBI):

The EPA case number assigned to the NOC; the date the NOC was received by EPA; the projected date of commencement provided by the

submitter in the NOC; and the chemical identity.

TABLE 2—NOCs RECEIVED FROM JULY 1, 2016 TO JULY 29, 2016

Case No.	Date received	Projected date of commencement	Chemical identity
J-16-0003	7/25/2016	7/1/2016	(S) <i>Saccharomyces cerevisiae</i> , modified.
P-11-0243	7/13/2016	3/12/2016	(G) Alkanedioic acid polymer with alkanediol and diisocyanatohexane.
P-12-0149	7/18/2016	7/29/2013	(G) Distillation bottoms from manufacture or brominated cycloalkanes.
P-12-0273	7/25/2016	6/23/2016	(S) Coconut oil, polymer with di-me malonate, pentaerythritol, phthalic anhydride and trimethylolpropane.
P-13-0162	7/6/2016	3/7/2014	(G) Substituted cyclopentadienyl silico aluminosilicates.
P-13-0595	7/13/2016	7/28/2015	(G) Oxirane, alkyl -, polymer with oxirane, hydrogen sulfate, alkyl ethers, alkali metal salts.
P-13-0884	7/7/2016	6/20/2016	(S) 1,3'-bipyridinium, 1'-[3-(dimethylamino)propyl]-6'-hydroxy-4'-methyl-2'-oxo-, inner salt.
P-14-0834	7/11/2016	7/8/2016	(S) Cyclohexane, 1,1'-methylenebis[4-isocyanato-, homopolymer, 2-butoxyethanol- and polyethylene glycol mono-me ether-blocked.
P-15-0393	7/13/2016	9/21/2015	(G) Alkanedioic acid, polymer with alkanediol .alpha.-hydro.-omega.-hydroxypoly[oxy(alkyl)] and alkyl aromatic diisocyanate.
P-15-0535	7/13/2016	7/11/2016	(G) Propanoic acid, 3-hydroxy-2-(hydroxymethyl)-2-methyl-, compds. with hydroxyl-amine-blocked polymethylenepolyphenylene isocyanate-polymeric diol.
P-15-0634	7/13/2016	6/27/2016	(S) 2-butanone, 4-(dodecylthio)-4-[2,6,6-trimethyl-1(or 2)-cyclohexen-1-yl]-.
P-16-0042	7/6/2016	6/16/2016	(G) Polyammonium salt of a fatty acid.
P-16-0047	7/15/2016	6/15/2016	(G) Aromatic polyimide.
P-16-0047	7/15/2016	6/16/2016	(G) Aromatic polyimide.
P-16-0104	7/25/2016	7/18/2016	(S) 2-pyridinecarboxylic acid, 4,5-dichloro-6-(4-chloro-2-fluoro-3-methoxyphenyl).
P-16-0133	7/15/2016	6/19/2016	(S) 1,4-benzenedicarboxylic acid, polymer with 2-methyl-1,8-octanediamine and 1,9-nonanediamine, reaction products with benzoic acid.
P-16-0133	7/15/2016	6/20/2016	(S) 1,4-benzenedicarboxylic acid, polymer with 2-methyl-1,8-octanediamine and 1,9-nonanediamine, reaction products with benzoic acid.
P-16-0179	7/14/2016	7/1/2016	(G) Alkanoic acids, esters with alkanetriol.
P-16-0243	7/25/2016	7/19/2016	(S) Propanedioic acid, 1,3-diethyl ester polymer with 2,2-dimethyl-1,3-propanediol and hexahydro-1,3-isobenzofurandione.
P-16-0270	7/8/2016	7/5/2016	(G) Derivative of substituted acrylamides copolymer.

Authority: 15 U.S.C. 2601 *et seq.*

Dated: August 17, 2016.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[FRL-9951-39-Region 10]

Issuance of National Pollutant Discharge Elimination System (NPDES) General Permit (GP) for Idaho Drinking Water Treatment Facilities

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: The Director, Office of Water and Watersheds, Environmental Protection Agency (EPA) is publishing notice of availability of the final NPDES GP (IDG380000) to drinking water treatment facilities in Idaho. The GP authorizes discharges of treated wastewater from water treatment filtration processes and their delivery systems to waters of the United States within the State of Idaho. On April 25, 2016, EPA proposed the GP and there

was a 30 day comment period. During the comment period, EPA received comments on the draft permit but no changes to the permit were necessary based on the comments received.

DATES: The issuance date of the GP is the date of publication of this notice. The GP will be effective on November 1, 2016.

ADDRESSES: The GP, Fact Sheet and Response to Comments may be found on the Region 10 Web site at <https://yosemite.epa.gov/r10/water.nsf/NPDES+Permits/Current+ID1319>. Copies of the GP and Response to Comments are available upon request. Written requests for copies of the documents may be submitted to EPA, Region 10, 1200 Sixth Avenue, Suite 900, OWW-191, Seattle, WA 98101.

Electronic requests may be emailed to: washington.audrey@epa.gov or shum.kai@epa.gov.

FOR FURTHER INFORMATION CONTACT: Kai Shum at (206) 553-0060, shum.kai@epa.gov.

SUPPLEMENTARY INFORMATION: EPA requested final certification under the Clean Water Act § 401 from the State of Idaho and Tribal governments. EPA received certification from the Idaho Department of Environmental Quality in a letter dated July 28, 2016, that the subject discharges comply with the

applicable provisions of Sections 301, 302, 303, 306 and 307 of the Clean Water Act, the Idaho Water Quality Standards (WQS) (IDAPA 58.01.02), and other appropriate water quality requirements of state law.

Executive Order 12866: The Office of Management and Budget has exempted this action from the review requirements of Executive Order 12866 pursuant to Section 6 of that order.

Regulatory Flexibility Act: Under the Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.*, a Federal agency must prepare an initial regulatory flexibility analysis "for any proposed rule" for which the agency "is required by section 553 of the Administrative Procedure Act (APA), or any other law, to publish general notice of proposed rulemaking." The RFA exempts from this requirement any rule that the issuing agency certifies "will not, if promulgated, have a significant economic impact on a substantial number of small entities." EPA has concluded that NPDES general permits are permits, not rulemakings, under the APA and thus not subject to APA rulemaking requirements or the RFA. Notwithstanding that general permits are not subject to the RFA, EPA has determined that these general permits, as issued, will not have a significant

economic impact on a substantial number of small entities.

Dated: August 16, 2016.

Daniel D. Opalski,

*Director, Office of Water & Watersheds,
Region 10.*

BILLING CODE 6560-50-P

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Information Collection Activities: Information Collection Revision; Comment Request (3064-0200)

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice and request for comment.

SUMMARY: The FDIC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on the revision of an existing information collection, as required by the Paperwork Reduction Act of 1995. The FDIC is soliciting comment on the revision of the existing information collection entitled "Joint Standards for Assessing Diversity Policies and Practices" by adding a form to the information collection entitled "Diversity Self-Assessment Template for Entities Regulated by the FDIC."

DATES: Comments must be submitted on or before October 24, 2016.

ADDRESSES: Interested parties are invited to submit written comments to the FDIC by any of the following methods:

- *http://www.FDIC.gov/regulations/laws/federal/.*
- *Email: comments@fdic.gov* Include the name and number of the collection in the subject line of the message.
- *Mail:* Manny Cabeza (202.898.3767), Counsel MB-3105, Federal Deposit Insurance Corporation, 550 17th Street NW., Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 17th Street Building (located on F Street), on business days between 7:00 a.m. and 5:00 p.m.

All comments should refer to the relevant OMB control number. A copy of the comments may also be submitted to the OMB desk officer for the FDIC: Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Manny Cabeza, at the FDIC address above.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501-3520), certain Federal agencies must obtain approval from OMB for each collection of information that they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) (and 5 CFR 1320.3(c) of the PRA implementing regulations) to include agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. The PRA (44 U.S.C. 3506(c)(2)(A)) directs these Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information before submitting the collection to OMB for approval. To comply with this requirement, the FDIC is publishing this notice of a revision to the following currently-approved collection of information:

Title: Joint Standards for Assessing Diversity Policies and Practices.

OMB Number: 3064-0200.

Affected Public: Insured financial institutions supervised by the FDIC.

Annual Number of Respondents: 398.

Frequency of Response: Annual.

Average Response Time per

Respondent: 8 hours.

Estimated Total Annual Buren Hours: 3,184 hours.

General Description: This voluntary information collection applies to entities regulated by the FDIC for purposes of assessing their diversity policies and practices as described in the final Interagency Policy Statement Establishing Joint Standards for Assessing the Diversity Policies and Practices of Entities Regulated by the Agencies.¹ This revision to the previously approved collection adds a form entitled *Diversity Self-Assessment Template for Entities Regulated by the FDIC* intended to facilitate responders' self-assessment process. The FDIC estimates that the use of the template will result in a reduction in the average response time per respondent from 12 hours to 8 hours with a corresponding reduction in the estimated total annual burden hours for this collection of information from 4,778 hours to 3,184 hours. The *Diversity Self-Assessment Template for Entities Regulated by the FDIC* can be viewed at www.fdic.gov/about/diversity/dsa_template.docx. This revision to the previously approved collection of information: (1) Asks for general information about a respondent; (2) includes a checklist of the standards

set forth in the Policy Statement; (3) seeks additional diversity data; and (4) provides an opportunity for a respondent to give other information regarding or comment on the self-assessment of its diversity policies and practices.

The FDIC may use the information submitted by the entities it regulates to monitor progress and trends in the financial services industry with regard to diversity and inclusion in employment and contracting activities and to identify and highlight those policies and practices that have been successful. The FDIC will continue to reach out to the regulated entities and other interested parties to discuss diversity and inclusion in the financial services industry and share leading practices. The FDIC may also publish information disclosed by the entity, such as any identified leading practices, in any form that does not identify a particular institution or individual or disclose confidential business information.

Request for Comments: Comments are invited on: (a) Whether the collections of information are necessary for the proper performance of the FDIC's functions, including whether the information has practical utility; (b) the accuracy of the estimates of the burden of the collections of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collections of information on respondents, including through the use of automated collection techniques or other forms of information technology. All comments will become a matter of public record.

Dated at Washington, DC, this 19th day of August 2016.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

BILLING CODE 6714-01-P

FEDERAL MARITIME COMMISSION

[Petition No. P3-16]

Petition of APL Co. PTE Ltd; for An Exemption From Commission Regulations; Notice of Filing and Request for Comments

This is to provide notice of filing and to invite comments on or before September 1, 2016, regarding the Petition described below.

APL Co. Pte Ltd on behalf of itself and American President Lines, Ltd. (Petitioner), has petitioned the Commission pursuant to 46 CFR 502.76 of the Commission's Rules of Practice

¹ 80 FR 33016 (June 10, 2015).

and Procedure, for an exemption from the Commission's rules requiring individual service contract amendments, 46 CFR. 530.10, and the rule prohibiting duplicative tariffs, 46 CFR 520.7(a)(4). Specifically, Petitioner explains that "APL is currently majority owned by CMA CGM S.A. ("CMA CGM") a vessel operating common carrier headquartered in Marseille, France. On or about September 1, 2016, APL will become delisted from the Singaporean stock exchange and be 100% owned by CMA CGM. At that time, CMA CGM will begin to consolidate certain operations under its various brands worldwide." In particular, CMA CGM will transfer the slot allocations of its wholly owned subsidiary ANL Singapore Pte. Ltd. ("ANL") to APL effective October 1, 2016.

Petitioner requests that in lieu of publishing amendments to each of approximately 600 service contracts effected by the transfer of ANL's transpacific business, "the Commission permit APL to send a universal notice to the Commission and to each of the service contract parties." In addition, because existing ANL tariffs "will be taken over by APL and will be renumbered and republished under APL's organization number," Petitioners also seek a waiver to permit insertion of notices in existing ANL and new APL tariffs.

The Petition in its entirety is posted on the Commission's Web site at <http://www.fmc.gov/P3-16>. Comments filed in response to this Petition also will be posted on the Commission's Web site at this location.

In order for the Commission to make a thorough evaluation of the Petition, interested persons are requested to submit comments in reply to the Petition no later than September 1, 2016. Commenters must send an original and 5 copies to the Secretary, Federal Maritime Commission, 800 North Capitol Street NW., Washington, DC 20573-0001, and be served on Eric R. Swett, VP & General Counsel, Americas, APL Limited, 16220 N. Scottsdale Rd., Scottsdale, AZ 85254-1781. A text-searchable PDF copy of the comment must also be sent as an email attachment to Secretary@fmc.gov, and include in the subject line: "P3-16 (Commenter/Company Name)." Replies containing confidential information should not be submitted by email.

Rachel E. Dickon,
Assistant Secretary.

BILLING CODE 6731-AA-P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than September 6, 2016.

A. Federal Reserve Bank of San Francisco (Gerald C. Tsai, Director, Applications and Enforcement) 101 Market Street, San Francisco, California 94105-1579:

1. *First Financial Northwest Foundation and the First Financial Northwest ESOT, both of Renton, Washington*; to retain and acquire additional voting shares of First Financial Northwest, Inc., and thereby indirectly acquire shares of First Financial Northwest Bank, both of Renton, Washington.

2. *The Living Trust for the Benefit of Stephanie M. Smith, Helen Langer Smith, and Cynthia L. Smith; Kitsap, Washington*, as Trustees for the Living Trust for the Benefit of Stephanie M. Smith; and Michael K. Pigors, Memphis, Tennessee, to retain additional shares of Olympic Bancorp, Inc., and thereby indirectly retain voting shares of Kitsap Bank, both of Port Orchard, Washington.

B. Federal Reserve Bank of Chicago (Colette A. Fried, Assistant Vice President) 230 South LaSalle Street, Chicago, Illinois 60690-1414:

1. *Arthur C. Johnson as trustee of the Arthur C. Johnson Bank Stock Trust; Ada, Michigan; the Arthur C. Johnson Bank Stock Trust, Ada, Michigan; Lynnea K. Gery, LaGrange, Illinois*, as trustee and Arthur C. Johnson as special trustee of the Charles and Lois Welling Family Trust, Patricia A. Johnson as trustee of the Patricia A. Johnson Bank Stock Trust, the Patricia A. Johnson Bank Stock Trust, all of Ada, Michigan; Erik T. Johnson, Rockford, Michigan; Hilary L. Ciesielski, Canton, Michigan; Bonnie K. Miller, individually, and as trustee of the Bonnie K. Miller Bank

Stock Trust, the Bonnie K. Miller Bank Stock Trust, Legacy Trust as trustee of the Arthur C. Johnson Irrevocable Trust, the Arthur C. Johnson Irrevocable Trust, Legacy Trust as trustee of the Patricia A. Johnson Irrevocable Trust, and the Patricia A. Johnson Irrevocable Trust, all of Grand Rapids, Michigan; the Charles and Lois Welling Family Trust, Charles J. Welling and Lois M. Welling as trustees of the Charles and Lois Welling Bank Stock Trust, the Charles and Lois Welling Bank Stock Trust, all of Hutchinson Island, Florida; and Patlin Leasing Company, as a group acting in concert to retain voting shares of United Community Financial Corporation, and indirectly shares of United Bank of Michigan, both of Grand Rapids, Michigan.

Board of Governors of the Federal Reserve System, August 18, 2016.

Margaret M. Shanks,
Deputy Secretary of the Board.

BILLING CODE 6210-01-P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Savings and Loan Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*) (HOLA), Regulation LL (12 CFR part 238), and Regulation MM (12 CFR part 239), and all other applicable statutes and regulations to become a savings and loan holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a savings association and nonbanking companies owned by the savings and loan holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the HOLA (12 U.S.C. 1467a(e)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 10(c)(4)(B) of the HOLA (12 U.S.C. 1467a(c)(4)(B)). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 18, 2016.

A. Federal Reserve Bank of Atlanta (Chapelle Davis, Assistant Vice President) 1000 Peachtree Street NE., Atlanta, Georgia 30309. Comments can also be sent electronically to Applications.Comments@atl.frb.org:

1. *Sunshine Bancorp, Inc., Plant City, Florida* (“Sunshine”); to become a savings and loan holding company. Sunshine currently is a savings and loan holding company; Sunshine proposes to become a bank holding company for a moment in time by merging with FNB Bancorp Inc., Orlando, Florida and acquire its subsidiary bank, Florida Bank of Commerce, Orlando Florida, (“FB Bank”). Sunshine also has applied to retain its savings association, Sunshine Bank, Plant City, Florida. After the acquisition, Sunshine proposes to merge FB Bank with Sunshine Bank, with Sunshine Bank as the surviving entity, and become a savings and loan holding company.

Board of Governors of the Federal Reserve System, August 18, 2016.

Margaret M. Shanks,

Deputy Secretary of the Board.

BILLING CODE 6210–01–P

FEDERAL TRADE COMMISSION

Agency Information Collection Activities; Proposed Collection; Comment Request

AGENCY: Federal Trade Commission (FTC or Commission).

ACTION: Notice.

SUMMARY: The information collection requirements described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act (PRA). The FTC seeks public comments on its proposal to extend, for three years, the current PRA clearance for information collection requirements contained in its Consumer Product Warranty Rule. That clearance expires on December 31, 2016.

DATES: Comments must be received on or before October 24, 2016.

ADDRESSES: Interested parties may file a comment online or on paper by following the instructions in the Request for Comments part of the **SUPPLEMENTARY INFORMATION** section below. Write “Warranty Rules:

Paperwork Comment, FTC File No. P044403” on your comment, and file your comment online at <https://ftcpublish.commentworks.com/ftc/consumerwarrantypra> by following the instructions on the web-based form. If you prefer to file your comment on paper, mail or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW., Suite CC–5610 (Annex J), Washington, DC 20580, or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, Constitution Center, 400 7th Street SW., 5th Floor, Suite 5610 (Annex J), Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT:

Requests for copies of the collection of information and supporting documentation should be addressed to Gary Ivens, Attorney, Division of Marketing Practices, Bureau of Consumer Protection, Federal Trade Commission, 600 Pennsylvania Avenue NW., CC–8528, Washington, DC 20580, (202) 326–2330.

SUPPLEMENTARY INFORMATION:

Proposed Information Collection Activities

Under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501–3520, federal agencies must get OMB approval for each collection of information they conduct, sponsor, or require. “Collection of information” means agency requests or requirements to submit reports, keep records, or provide information to a third party. 44 U.S.C. 3502(3); 5 CFR 1320.3(c). As required by section 3506(c)(2)(A) of the PRA, the FTC is providing this opportunity for public comment before requesting that OMB extend the existing PRA clearance for the information collection requirements associated with the Commission’s Rule Concerning Disclosure of Written Consumer Product Warranty Terms and Conditions (the Consumer Product Warranty Rule or Warranty Rule), 16 CFR part 701 (OMB Control Number 3084–0111).

The FTC invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information

on those who are to respond. All comments must be received on or before October 24, 2016.

The Warranty Rule is one of three rules¹ that the FTC implemented pursuant to requirements of the Magnuson-Moss Warranty Act, 15 U.S.C. 2301 *et seq.* (Warranty Act or Act).² The Warranty Rule specifies the information that must appear in a written warranty on a consumer product³ costing more than \$15. The Rule tracks section 102(a) of the Warranty Act,⁴ specifying information that must appear in the written warranty and, for certain disclosures, mandates the exact language that must be used.⁵ Neither the Warranty Rule nor the Act requires that a manufacturer or retailer warrant a consumer product in writing, but if they choose to do so, the warranty must comply with the Rule.

Warranty Rule Burden Statement

Total annual hours burden: 140,280 hours.

In its 2013 submission to OMB, the FTC estimated that the information collection burden of including the disclosures required by the Warranty Rule was 116,128 hours per year. Although the Rule’s information collection requirements have not changed, this estimate slightly increases the number of manufacturers subject to the Rule based on recent Census data. Further, because most warrantors would continue to disclose this information even if there were no statute or rule requiring them to do so, staff’s estimates likely overstate the PRA-related burden attributable to the Rule. Moreover, the Warranty Rule has been in effect since 1976, and warrantors have long since modified their warranties to include the information the Rule requires.

Based on conversations with various warrantors’ representatives over the years, staff has concluded that eight hours per year is a reasonable estimate of warrantors’ PRA-related burden attributable to the Warranty Rule.⁶ This estimate takes into account ensuring that new warranties and changes to

¹ The other two rules relate to the pre-sale availability of warranty terms and minimum standards for informal dispute settlement mechanisms that are incorporated into a written warranty.

² 40 FR 60168 (Dec. 31, 1975).

³ The definition of *consumer product* excludes products purchased solely for commercial or industrial use. 16 CFR 701.1(b).

⁴ 15 U.S.C. 2302(a).

⁵ 40 FR 60168, 60169–60170.

⁶ FTC staff has previously contacted two manufacturing associations—the Association of Home Appliance Manufacturers and the National Association of Manufacturers—and we have not located additional data that further clarifies this figure.

existing warranties comply with the Rule. Based on recent Census data, staff now estimates that there are 17,535 manufacturers covered by the Rule.⁷ This results in an annual burden estimate of approximately 140,280 hours (17,535 manufacturers × 8 hours of burden per year).

Total annual labor costs: \$19,011,798.

Labor costs are derived by applying appropriate hourly cost figures to the burden hours described above. The work required to comply with the Warranty Rule—ensuring that new warranties and changes to existing warranties comply with the Rule—requires a mix of legal analysis (50%), legal support (paralegals) (25%) and clerical help (25%). Staff estimates that half of the total burden hours (70,140 hours) requires legal analysis at an average hourly wage of \$250 for legal professionals,⁸ resulting in a labor cost of \$17,535,000. Assuming that 25% of the total burden hours requires legal support at the average hourly wage of \$25.19, and that the remaining 25% requires clerical work at an average hourly wage of \$16.92; the resulting labor cost is approximately \$1,154,893 (\$883,413 + \$593,384). Thus, the total annual labor cost is approximately \$19,011,797 (\$17,535,000 for legal professionals + \$883,413 for legal support + \$593,384 for clerical workers). *Total annual capital or other non-labor costs:* \$0.

The Rule imposes no appreciable current capital or start-up costs. As stated above, warrantors have already modified their warranties to include the information the Rule requires. Rule compliance does not require the use of any capital goods, other than ordinary office equipment, which providers would already have available for general business use.

Request for Comments

You can file a comment online or on paper. Write “Warranty Rules: Paperwork Comment, FTC File No. P044403” on your comment. Your comment—including your name and your state—will be placed on the public record of this proceeding, including, to the extent practicable, on the public Commission Web site, at <http://www.ftc.gov/os/publiccomments.shtm>.

⁷ Because some manufacturers likely make products that are not priced above \$15 or not intended for household use—and thus would not be subject to the Rule—this figure is likely an overstatement.

⁸ Staff has derived an hourly wage rate for legal professionals based upon industry knowledge. The wage rates for legal support workers and for clerical support used in this Notice are based on recent data from the Bureau of Labor Statistics National Compensation Survey.

As a matter of discretion, the Commission tries to remove individuals’ home contact information from comments before placing them on the Commission Web site.

Because your comment will be made public, you are solely responsible for making sure that your comment does not include any sensitive personal information, like anyone’s Social Security number, date of birth, driver’s license number or other state identification number or foreign country equivalent, passport number, financial account number, or credit or debit card number. You are also solely responsible for making sure that your comment does not include any sensitive health information, like medical records or other individually identifiable health information. In addition, do not include any “[t]rade secret or any commercial or financial information which is . . . privileged or confidential,” as discussed in section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2). In particular, do not include competitively sensitive information such as costs, sales statistics, inventories, formulas, patterns, devices, manufacturing processes, or customer names.

If you want the Commission to give your comment confidential treatment, you must file it in paper form, with a request for confidential treatment, and you have to follow the procedure explained in FTC Rule 4.9(c), 16 CFR 4.9(c). Your comment will be kept confidential only if the FTC General Counsel, in his or her sole discretion, grants your request in accordance with the law and the public interest.

Postal mail addressed to the Commission is subject to delay due to heightened security screening. As a result, the Commission encourages you to submit your comments online. To make sure that the Commission considers your online comment, you must file it at <https://ftcpublish.commentworks.com/ftc/consumerwarrantypra>, by following the instructions on the web-based form. If this Notice appears at <http://www.regulations.gov>, you also may file a comment through that Web site.

If you file your comment on paper, write “Warranty Rules: Paperwork Comment, FTC File No. P044403” on your comment and on the envelope, and mail or deliver it to the following address: Federal Trade Commission, Office of the Secretary, Room H-113 (Annex J), 600 Pennsylvania Avenue NW., Washington, DC 20580. If possible, submit your paper comment to the Commission by courier or overnight service.

Visit the Commission Web site at <http://www.ftc.gov> to read this Notice. The FTC Act and other laws that the Commission administers permit the collection of public comments to consider and use in this proceeding as appropriate. The Commission will consider all timely and responsive public comments that it receives on or before October 24, 2016. You can find more information, including routine uses permitted by the Privacy Act, in the Commission’s privacy policy, at <http://www.ftc.gov/ftc/privacy.htm>.

David C. Shonka,

Principal Deputy General Counsel.

BILLING CODE 6750–01–P

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090–00XX; Docket No. 2016–0001; Sequence 11]

Information Collection; Alliant2 Greenhouse Gas Disclosure

AGENCY: Federal Acquisition Service (FAS), General Services Administration (GSA).

ACTION: Notice of request for comments regarding a new request for an OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division will be submitting to the Office of Management and Budget (OMB) a request to review and approve a new information collection requirement regarding OMB Control No. 3090–00XX; Alliant2 Greenhouse Gas Disclosure.

DATES: Submit comments on or before October 24, 2016.

ADDRESSES: Submit comments identified by Information Collection 3090–00xx; Alliant2 Greenhouse Gas Disclosure by any of the following methods:

- Regulations.gov: <http://www.regulations.gov>. Submit comments via the Federal eRulemaking portal by searching for “Information Collection 3090–00xx; Alliant2 Greenhouse Gas reporting”. Select the link “Submit a Comment” that corresponds with “Information Collection 3090–00xx; Alliant2 Greenhouse Gas Disclosure”. Follow the instructions provided at the “Submit a Comment” screen. Please include your name, company name (if any), and “Information Collection 3090–00xx; Alliant2 Greenhouse Gas Disclosure” on your attached document.

- Mail: General Services Administration, U.S. General Services

Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405. ATTN: Ms. Flowers/IC 3090–00XX, Alliant2 Greenhouse Gas Disclosure.

Instructions: Please submit comments only and cite Information Collection 3090–00XX; Alliant2 Greenhouse Gas Disclosure, in all correspondence related to this collection. Comments received generally will be posted without change to <http://www.regulations.gov>, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check www.regulations.gov, approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Dana Arnold, Director, Federal Acquisition Service Office of Acquisition Management, Special Programs Branch at telephone 703–605–0534 or via email to dana.arnold@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Purpose

President Obama has made Greenhouse Gas (GHG) emissions reduction nationwide and in the Federal community a priority. The President's Executive Order 13693, *Planning for Federal Sustainability in the Next Decade*, published in the **Federal Register** at 80 FR 15871, on March 25, 2015], requires the seven largest procuring agencies to implement procurements that take into consideration contractor GHG emissions and GHG management practices.

GSA has selected the Alliant2 Government-wide Acquisition Contract (GWAC) acquisition for inclusion of contractor GHG emissions disclosure requirements. Alliant, GSA's premier enterprise GWAC, provides flexible access to customized IT solutions from a large, diverse pool of industry partners. Alliant2 offers both large and small contractors. It is GSA's intent to require the large (unrestricted) Alliant2 contractors to inventory and publicly disclose their operational GHG emissions, set targets for reducing those emissions, and disclose progress toward meeting their targets. Of the current Alliant2 contractors, approximately 40 percent already publicly disclose their GHG emissions in response to requests from their non-government customers, investors, insurers, and corporate sustainability policies.

Public disclosure of GHG emissions and GHG reduction goals or targets has

become standard practice in many industries, and companies are increasingly asking their own suppliers about their GHG management practices. More than 4,000 companies provided public disclosure through third-party organization CDP (formerly the Carbon Disclosure Project) in 2015. Performing a GHG inventory provides insight into operations and opportunities for energy and operational savings that can result in both environmental and financial benefits.

The Alliant2 GHG disclosure requirement will require the unrestricted (large and medium-sized) Alliant2 contractors to inventory, and publicly disclose their operational GHG emissions, set targets for reducing those emissions, and report progress toward meeting their targets. This will be an annual requirement.

B. Annual Reporting Burden

Respondents: 60.

Responses per Respondent: 1.

Total Annual Responses: 60.

Hours per Response: 80.

Total Burden Hours: 4800.

C. Public Comments

Public comments are particularly invited on: Whether this collection of information is necessary, whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405, telephone 202–501–4755. Please cite OMB Control No. 3090–00XX, Alliant2 Greenhouse Gas Disclosure, in all correspondence.

Dated: August 18, 2016.

David A. Shive,

Chief Information Officer.

[FR Doc. 2016–20314 Filed 8–23–16; 8:45 am]

BILLING CODE 6820–34–P

GENERAL SERVICES ADMINISTRATION

[Notice-ISP–2016–02; Docket 2016–0002; Sequence 22]

Privacy Act of 1974; Notice of an Updated System of Records of Records

AGENCY: General Services Administration (GSA).

ACTION: Notice; New system.

SUMMARY: GSA proposes a new system of records subject to the Privacy Act of 1974, as amended, 5 U.S.C. 552a.

DATES: *Effective:* September 23, 2016.

ADDRESSES: GSA Privacy Act Officer (ISP), General Services Administration, 1800 F Street NW., Washington, DC 20405.

FOR FURTHER INFORMATION CONTACT: Call or email the GSA Privacy Act Officer: Telephone 571–388–6570; email gsa.privacyact@gsa.gov.

SUPPLEMENTARY INFORMATION: GSA proposes to establish a new system of records subject to the Privacy Act of 1974, 5 U.S.C. 552a. The system is a citizen-centric platform for delivering government services through a centralized single sign-on platform. The platform will leverage personal information to provide identity proofing to partner agencies, as well as data and resources associated with the user's account. Based on a successful user login and identity proofing, the partner agency will grant access to the user.

In order to facilitate access, information must be collected to authenticate an individual's identity at the requisite level of assurance for the purpose of obtaining a credential or electronically authorizing access to an agency application or service. Identity proofing is the process by which an identity service provider collects and verifies personally identifiable information (PII) about an individual for the purpose of issuing credentials to that individual.

Third-party identity service providers used by *Login.gov* use a variety of verification techniques. Users will be authenticated and proofed at the level required by the partner agency for accessing specific services and records. When a user attempts to access an agency service or record, the individual will be directed to *Login.gov*. The information requested by the system and asserted back to the agency will be only what is necessary to establish Level of Access (LOA)1 or LOA3 as appropriate. For access to services or records that require LOA1, the user will

be asked for email, password, and phone number.

For access to services or records that require LOA3, the user will be asked for PII that will be used for identity proofing, and then maintained in the system. Attributes requested for the proofing process are full name, date of birth, address, phone number, and social security number (SSN). The identity proofer will also ask the user credit and financial related questions. *Login.gov* does not have access to or retain the commercial identity verification information, questions asked of a user or the responses provided thereto.

Once proofed, the attribute bundle will be given a meaningless, but unique identifier number (MBUN) to identify the user in the system. The MBUN and attribute bundle will be asserted to the partner agency. The partner agency is granted access to user information only when the user logs in or specifically gives permission to transmit their information. The information in the system is contributed voluntarily by the user and cannot be accessed by the government without explicit consent of the user, except as provided in this notice.

Information is not shared between government agencies, except when the user gives explicit consent to share his or her information, except as provided in this notice.

Pranjali Desai,

*Director, Office of Information Management,
General Services Administration.*

GSA/GOVT-10

SYSTEM NAME:

Login.gov.

SYSTEM LOCATION:

The system is maintained for GSA under contract. Contact the System Manager for additional information.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Anyone is able to create an account.

CATEGORIES OF RECORDS IN THE SYSTEM:

Records may include, but are not limited to: Biographical data such as name, address, email, password, phone number, birth date, social security number. Use of the system, and contribution of personal information, is completely voluntary.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

E-Government Act of 2002 (P.L. 107-347, 44 U.S.C. 3501 note)

PURPOSES:

To enable users to control how government interacts with them and

their personal information, and to aid and assist users in interacting with the government. Users interacting with local, state, or federal agency developed applications may be asked to authorize the application to access system resources, such as their personal profile information. If a user authorizes use of his or her information, the agency application will be given programmatic access to the user's account resources. Profile, usage, and system information may be accessed by system managers, technical support and designated analysts in the course of their official duties.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Information from this system also may be disclosed as a routine use:

a. In any legal proceeding, where pertinent, to which GSA, a GSA employee, or the United States is a party before a court or administrative body.

b. To a Federal, State, local, or foreign agency responsible for investigating, prosecuting, enforcing, or carrying out a statute, rule, regulation, or order when GSA becomes aware of a violation or potential violation of civil or criminal law or regulation.

c. To a Member of Congress or his or her staff on behalf of and at the request of the individual who is the subject of the record.

d. To the Office of Personnel Management (OPM), the Office of Management and Budget (OMB), and the Government Accountability Office (GAO) in accordance their responsibilities for evaluating Federal programs.

e. To an expert, consultant, or contractor of GSA in the performance of a Federal duty to which the information is relevant.

f. To the National Archives and Records Administration (NARA) for records management purposes.

g. To a Federal agency in connection with the hiring or retention of an employee; the issuance of a security clearance; the reporting of an investigation; the letting of a contract; or the issuance of a grant, license, or other benefit to the extent that the information is relevant and necessary to a decision.

h. To appropriate agencies, entities, and persons when (1) the Agency suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (2) The Agency has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or

fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by GSA or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with GSA's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

i. To federal, state, or local government agencies or entities for purposes of complying with any legally authorized order or request of such an entity that is made in carrying out the entity's official responsibilities.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

All records are stored electronically in a database. Personally Identifiable Information (PII) is encrypted.

RETRIEVABILITY:

Records are retrieved using an authorization protocol. A user of the system grants explicit authorization to an application or government agency to access his or her profile.

SAFEGUARDS:

Access to the database is maintained behind a firewall certified in accordance with National Institute of Standards and Technology standards and information in the database is encrypted.

Records access is limited to authorized individuals and protected with two-factor authentication, and databases are behind a firewall. PII is encrypted at rest, and all transmissions of any information over external networks are encrypted. All passwords, encryption algorithms and firewalls are compliant with National Institute of Standards and Technology standards.

RETENTION AND DISPOSAL:

System records are retained and disposed of according to GSA records maintenance and disposition schedules and the requirements of the National Archives and Records Administration. The initial implementation of this has a limited scope of users. The option for users to delete their own information will be functional in a future version of the application. Physical records are disposed of by cross-cut shredding or burning as scheduled in the handbook, GSA Records Maintenance and Disposition System (CIO P. 1820.1).

SYSTEM MANAGER AND ADDRESS:

Director, *Login.gov*, General Services Administration, 1800 F Street NW.,

Washington, DC 20405; ATTN: <https://www.login.gov>.

NOTIFICATION PROCEDURE:

Individuals or users maintain their own information. Inquires can be made via the Web site at <https://login.gov/> or at the above address under 'System Manager and Address'.

RECORD ACCESS PROCEDURES:

Individuals or users wishing to access their own records may do so by password or by contacting the system administrator at the above address.

CONTESTING RECORD PROCEDURES:

Individuals or users of the system may amend their own records online.

RECORD SOURCE CATEGORIES:

The sources for information in the system are the individuals (or system users) for whom the records are maintained, and third-party applications which the user has authorized to contribute information to his or her account.

BILLING CODE 6820-34-P

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090-XXXX; Docket 2016-0001; Sequence 9]

Submission for OMB Review; Nondiscrimination in Federal Financial Assistance Programs, GSA Form 3702

AGENCY: Office of Civil Rights, General Services Administration (GSA).

ACTION: Notice of request for comments regarding a new request for an OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division will be submitting to the Office of Management and Budget (OMB) a request to review and approve a new information collection requirement regarding OMB Control No: 3090-XXXX; Nondiscrimination in Federal Financial Assistance Programs, GSA 3702. This information is needed to facilitate nondiscrimination in GSA's Federal Financial Assistance Programs, consistent with Federal civil rights laws and regulations that apply to recipients of Federal financial assistance. A notice was published in the **Federal Register** at 81 FR 36541 on June 7, 2016. No comments were received.

DATES: Submit comments on or before: September 23, 2016.

FOR FURTHER INFORMATION CONTACT: Evelyn Britton, Director, External

Programs Division, Office of Civil Rights, at telephone 202-603-1645 or via email to evelyn.britton@gsa.gov.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Office of Information and Regulatory Affairs of OMB, Attention: Desk Officer for GSA, Room 10236, NEOB, Washington, DC 20503. Additionally submit a copy to GSA by any of the following methods:

- *Regulations.gov:* <http://www.regulations.gov>. Submit comments via the Federal eRulemaking portal by searching the OMB control number. Select the link "Submit a Comment" that corresponds with "Information Collection 3090-XXXX, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702". Follow the instructions provided at the "Submit a Comment" screen. Please include your name, company name (if any), and "Information Collection 3090-XXXX, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702" on your attached document.

- *Mail:* General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405. ATTN: Ms. Flowers/IC 3090-0228, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702.

Instructions: Please submit comments only and cite Information Collection 3090-XXXX, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702, in all correspondence related to this collection. Comments received generally will be posted without change to <http://www.regulations.gov>, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check www.regulations.gov, approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

SUPPLEMENTARY INFORMATION:

A. Purpose

GSA has mission responsibilities related to monitoring and enforcing compliance with Federal civil rights laws and regulations that apply to Federal financial assistance programs administered by GSA. Specifically, those laws provide that no person on the ground of race, color, national origin, disability, sex or age shall be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program in connection with which

Federal financial assistance is extended under laws administered in whole, or in part, by GSA.

These mission responsibilities generate the requirement to request and obtain certain data from recipients of Federal surplus property for the purpose of determining compliance, such as the number of individuals, based on race and ethnic origin, of the recipient's eligible and actual serviced population; race and national origin of those denied participation in the recipient's program(s); non-English languages encountered by the recipient's program(s) and how the recipient is addressing meaningful access for individuals that are Limited English Proficient; whether there has been complaints or lawsuits filed against the recipient based on prohibited discrimination and whether there has been any findings; and whether the recipient's facilities are accessible to qualified individuals with disabilities.

B. Annual Reporting Burden

Respondents: 1,200.

Responses per Respondent: 1.

Total Responses: 1,200.

Hours per Response: 2.

Total Burden Hours: 2,400.

C. Public Comments

Public comments are particularly invited on: Whether this collection of information will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405, telephone 202-501-4755. Please cite OMB Control No. 3090-XXXX, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702, in all correspondence.

Dated: August 18, 2016.

David A. Shive,
Chief Information Officer.

BILLING CODE 6820-34-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Centers for Disease Control and Prevention****[30 Day-16-0255]****Agency Forms Undergoing Paperwork Reduction Act Review**

The Centers for Disease Control and Prevention (CDC) has submitted the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The notice for the proposed information collection is published to obtain comments from the public and affected agencies.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address any of the following: (a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) Enhance the quality, utility, and clarity of the information to be collected; (d) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses; and (e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570 or

send an email to omb@cdc.gov. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, Washington, DC 20503 or by fax to (202) 395-5806. Written comments should be received within 30 days of this notice.

Proposed Project

Resources and Services Database of the CDC National Prevention Information Network (NPIN)(OMB Control No. 0920-0255 exp. 12/31/2016)—Extension—National Center for HIV/AIDS, Viral Hepatitis, Sexually Transmitted Diseases, and Tuberculosis Prevention (NCHHSTP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

NCHHSTP has the primary responsibility within the CDC and the U.S. Public Health Service for the prevention and control of HIV infection, viral hepatitis, sexually transmitted diseases (STDs), and tuberculosis (TB), as well as for community-based HIV prevention activities, syphilis, and TB elimination programs. NPIN serves as the U.S. reference, referral, and distribution service for information on HIV/AIDS, viral hepatitis, STDs, and TB, supporting NCHHSTP's mission to link Americans to prevention, education, and care services. NPIN is a critical member of the network of government agencies, community organizations, businesses, health professionals, educators, and human services providers that educate the American public about the grave threat to public health posed by HIV/AIDS, viral hepatitis, STDs, and TB, and provides services for persons infected with human immunodeficiency virus (HIV). NPIN services are designed to facilitate program collaboration in sharing information, resources,

published materials, research, and trends among the four diseases.

The NPIN Resources and Services Database contains entries on approximately 9,000 organizations and is the most comprehensive listing of HIV/AIDS, viral hepatitis, STD, and TB resources and services available throughout the country. The American public can also access the NPIN Resources and Services database through the NPIN Web site. More than 1,000,000 unique visitors and more than 3,000,000 page views are recorded annually.

To accomplish CDC's goal of continuing efforts to maintain an up-to-date, comprehensive database, NPIN plans each year to add up to 400 newly identified organizations and to verify those organizations currently described in the NPIN Resources and Services Database each year. Organizations with access to the Internet will be given the option to complete and submit an electronic version of the questionnaire by visiting the NPIN Web site. Methods to be used to collect the information include online, telephone and email survey questionnaires to collect information from representatives of the organizations that provide covered services.

The respondent population includes Registered Nurses, Social and Community Service Managers, Health Educators, Social and Human Service Assistants working within NPIN member organizations that provide HIV/AIDS, viral hepatitis, STD, and TB prevention, education, testing, and healthcare services. This data collection uses no inferential statistical methods. The data collected is in textual or anecdotal format and will be used for information purposes.

There is a total of 1,717 burden hours involved in this collection. There are no costs to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Form	Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Initial Questionnaire Telephone Script.	Registered nurses, Social and community service managers, and Health educators.	400	1	15/60
Telephone Verification	Registered nurses, Social and community service managers, and Health educators Social and human service assistants.	6,100	1	10/60
Email Verification	Registered nurses, Health educators, and Social and human service assistants, social and community service managers.	3,000	1	12/60

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS-10455 and CMS-
R-290]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare &
Medicaid Services, HHS.

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by *September 23, 2016*.

ADDRESSES: When commenting on the proposed information collections, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be received by the OMB desk officer via one of the following transmissions:

OMB, Office of Information and
Regulatory Affairs.

Attention: CMS Desk Officer.
Fax Number: (202) 395-5806 *OR*
Email: OIRA_submission@omb.eop.gov.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Web site address at <http://www.cms.hhs.gov/PaperworkReductionActof1995>.

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to Paperwork@cms.hhs.gov.

3. Call the Reports Clearance Office at (410) 786-1326.

FOR FURTHER INFORMATION CONTACT:

Reports Clearance Office at (410) 786-1326.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501-3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term "collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Report of a Hospital Death Associated with Restraint or Seclusion; *Use:* Executive Order 13563, Improving Regulation and Regulatory Review, was signed on January 18, 2011. The order recognized the importance of a streamlined, effective, and efficient regulatory framework designed to promote economic growth, innovation, job creation, and competitiveness. Each agency was directed to establish an ongoing plan to reduce or eliminate burdensome, obsolete, or unnecessary regulations to create a more efficient and flexible structure.

The regulation that was published on May, 16, 2012 (77 FR 29034) included a reduction in the reporting requirement

related to hospital deaths associated with the use of restraint or seclusion, § 482.13(g). Hospitals are no longer required to report to CMS those deaths where there was no use of seclusion and the only restraint was 2-point soft wrist restraints. It is estimated that this will reduce the volume of reports that must be submitted by 90 percent for hospitals. In addition, the final rule replaced the previous requirement for reporting via telephone to CMS, which proved to be cumbersome for both CMS and hospitals, with a requirement that allows submission of reports via telephone, facsimile or electronically, as determined by CMS. Finally, the amount of information that CMS needs for each death report in order for CMS to determine whether further on-site investigation is needed has been reduced.

The Child Health Act (CHA) of 2000 established in Title V, Part H, Section 591 of the Public Health Service Act (PHSA) minimum requirements concerning the use of restraints and seclusion in facilities that receive support with funds appropriated to any Federal department or agency. In addition, the CHA enacted Section 592 of the PHSA, which establishes minimum mandatory reporting requirements for deaths in such facilities associated with use of restraint or seclusion. Provisions implementing this statutory reporting requirement for hospitals participating in Medicare are found at 42 CFR 482.13(g), as revised in the final rule that published on May 16, 2012 (77 FR 29034). *Form Number:* CMS-10455 (OMB control number: 0938-1210); *Frequency:* Occasionally; *Affected Public:* Private Sector; *Number of Respondents:* 6,225; *Number of Responses:* 6,225; *Total Annual Hours:* 2,054. (For policy questions regarding this collection contact Karina Meushaw at 410-786-1000.)

2. *Type of Information Collection Request:* Extension of a currently approved collection; *Title:* Medicare Program: Procedures for Making National Coverage Decisions; *Use:* We revised our April 27, 1999 (64 FR 22619) notice and published a new notice on September 26, 2003 (68 FR 55634) that described the process we use to make Medicare coverage decisions including decisions regarding whether new technology and services can be covered. We have made changes to our internal procedures in response to the comments we received following publication of the 1999 notice and experience under our new process. Over the past several years, we received numerous suggestions to further revise our process to continue to make it more

open, responsive, and understandable to the public. We share the goal of increasing public participation in the development of Medicare coverage issues. This will assist us in obtaining the information we require to make a national coverage determination in a timely manner and ensuring that the Medicare program continues to meet the needs of its beneficiaries. *Form Number:* CMS–R–290 (OMB control number: 0938–0776); *Frequency:* Annual; *Affected Public:* Private Sector: Business or other for-profits; *Number of Respondents:* 200; *Total Annual Responses:* 200; *Total Annual Hours:* 8,000. (For policy questions regarding this collection contact Katherine Tillman at 410–786–9252.)

Dated: August 18, 2016.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–7042–N]

Health Insurance MarketplaceSM; and the Medicare, Medicaid, and Children's Health Insurance Programs; Meeting of the Advisory Panel on Outreach and Education (APOE), September 21, 2016

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice of meeting.

SUMMARY: This notice announces the new meeting of the Advisory Panel on Outreach and Education (APOE) (the Panel) in accordance with the Federal Advisory Committee Act. The Panel advises and makes recommendations to the Secretary of the U.S. Department of Health and Human Services (HHS) and the Administrator of the Centers for Medicare & Medicaid Services (CMS) on opportunities to enhance the effectiveness of Health Insurance MarketplaceSM and the Medicare, Medicaid, and Children's Health Insurance Programs consumer education strategies. This meeting is open to the public.

DATES: *Meeting Date:* Wednesday, September 21, 2016, 8:30 a.m. to 4:00 p.m. eastern daylight time (e.d.t.).

Deadline for Meeting Registration, Presentations, Special Accommodations

and Comments: Wednesday, September 7, 2016, 5:00 p.m., e.d.t.

ADDRESSES: *Meeting Location:* U.S. Department of Health & Human Services, Hubert H. Humphrey Building, 200 Independence Avenue SW., Room 425A, Conference Room, Washington, DC 20201.

Presentations and Written Comments: Presentations and written comments should be submitted to: Abigail Huffman, Designated Federal Official (DFO), Division of Forum and Conference Development, Office of Communications, Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Mailstop S1–05–06, Baltimore, MD 21244–1850 or via email at Abigail.Huffman1@cms.hhs.gov.

Registration: The meeting is open to the public, but attendance is limited to the space available. Persons wishing to attend this meeting must register at the Web site <https://www.regonline.com/apoesept2016meeting> or by contacting the DFO as listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice, by the date listed in the **DATES** section of this notice. Individuals requiring sign language interpretation or other special accommodations should contact the DFO at the address listed in the **ADDRESSES** section of this notice by the date listed in the **DATES** section of this notice.

FOR FURTHER INFORMATION CONTACT: Abigail Huffman, Designated Federal Official, Office of Communications, CMS, 7500 Security Boulevard, Mail Stop S1–05–06, Baltimore, MD 21244, 410–786–0897, email Abigail.Huffman1@cms.hhs.gov. Additional information about the APOE is available on the Internet at: <http://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/APOE.html>. Press inquiries are handled through the CMS Press Office at (202) 690–6145.

SUPPLEMENTARY INFORMATION:

I. Background

The Advisory Panel for Outreach and Education (APOE) (the Panel) is governed by the provisions of Federal Advisory Committee Act (FACA) (Pub. L. 92–463), as amended (5 U.S.C. Appendix 2), which sets forth standards for the formation and use of federal advisory committees. The Panel is authorized by section 1114(f) of the Social Security Act (42 U.S.C. 1314(f)) and section 222 of the Public Health Service Act (42 U.S.C. 217a).

The Secretary of the U.S. Department of Health and Human Services (HHS) (the Secretary) signed the charter establishing the Citizen's Advisory

Panel on Medicare Education¹ (the predecessor to the APOE) on January 21, 1999 (64 FR 7899, February 17, 1999) to advise and make recommendations to the Secretary and the Administrator of the Centers for Medicare & Medicaid Services (CMS) on the effective implementation of national Medicare education programs, including with respect to the Medicare+Choice (M+C) program added by the Balanced Budget Act of 1997 (Pub. L. 105–33).

The Medicare Modernization Act of 2003 (MMA) (Pub. L. 108–173) expanded the existing health plan options and benefits available under the M+C program and renamed it the Medicare Advantage (MA) program. We have had substantial responsibilities to provide information to Medicare beneficiaries about the range of health plan options available and better tools to evaluate these options. The successful MA program implementation required CMS to consider the views and policy input from a variety of private sector constituents and to develop a broad range of public-private partnerships.

In addition, Title I of the MMA authorized the Secretary and the Administrator of CMS (by delegation) to establish the Medicare prescription drug benefit. The drug benefit allows beneficiaries to obtain qualified prescription drug coverage. In order to effectively administer the MA program and the Medicare prescription drug benefit, we have substantial responsibilities to provide information to Medicare beneficiaries about the range of health plan options and benefits available, and to develop better tools to evaluate these plans and benefits.

The Affordable Care Act (Patient Protection and Affordable Care Act, Public Law 111–148, and Health Care and Education Reconciliation Act of 2010, Public Law 111–152) expanded the availability of other options for health care coverage and enacted a number of changes to Medicare as well as to Medicaid and the Children's Health Insurance Program (CHIP). Qualified individuals and qualified employers are now able to purchase private health insurance coverage through competitive marketplaces, called Affordable Insurance Exchanges (we also call an Exchange a Health

¹ We note that the Citizen's Advisory Panel on Medicare Education is also referred to as the Advisory Panel on Medicare Education (65 FR 4617). The name was updated in the Second Amended Charter approved on July 24, 2000.

Insurance Marketplace^{SM 2} or MarketplaceSM). In order to effectively implement and administer these changes, we must provide information to consumers, providers, and other stakeholders through education and outreach programs regarding how existing programs will change and the expanded range of health coverage options available, including private health insurance coverage through a MarketplaceSM. The APOE (the Panel) allows us to consider a broad range of views and information from interested audiences in connection with this effort and to identify opportunities to enhance the effectiveness of education strategies concerning the Affordable Care Act.

The scope of this panel also includes advising on issues pertaining to the education of providers and stakeholders with respect to the Affordable Care Act and certain provisions of the Health Information Technology for Economic and Clinical Health (HITECH) Act enacted as part of the American Recovery and Reinvestment Act of 2009 (ARRA).

On January 21, 2011, the Panel's charter was renewed and the Panel was renamed the Advisory Panel for Outreach and Education. The Panel's charter was most recently renewed on January 21, 2015, and will terminate on January 21, 2017 unless renewed by appropriate action.

Under the current charter, the APOE will advise the Secretary and the Administrator on optimal strategies for the following:

- Developing and implementing education and outreach programs for individuals enrolled in, or eligible for, Medicare, Medicaid, and CHIP or coverage available through the Health Insurance MarketplaceSM.
- Enhancing the federal government's effectiveness in informing Health Insurance MarketplaceSM, Medicare, Medicaid, and CHIP consumers, issuers, providers, and stakeholders, through education and outreach programs, on issues regarding these programs, including the appropriate use of public-private partnerships to leverage the resources of the private sector in educating beneficiaries, providers, and stakeholders.
- Expanding outreach to vulnerable and underserved communities, including racial and ethnic minorities, in the context of Health Insurance MarketplaceSM, Medicare, Medicaid, and CHIP education programs.

- Assembling and sharing an information base of "best practices" for helping consumers evaluate health coverage options.

- Building and leveraging existing community infrastructures for information, counseling, and assistance.

- Drawing the program link between outreach and education, promoting consumer understanding of health care coverage choices, and facilitating consumer selection/enrollment, which in turn support the overarching goal of improved access to quality care, including prevention services, envisioned under the Affordable Care Act.

The current members of the Panel are: Kellan Baker, Associate Director, Center for American Progress; Robert Blancato, President, Matz, Blancato & Associates; Dale Blasier, Professor of Orthopaedic Surgery, Department of Orthopaedics, Arkansas Children's Hospital; Deborah Britt, Executive Director of Community & Public Relations, Piedmont Fayette Hospital; Deena Chisolm, Associate Professor of Pediatrics & Public Health, The Ohio State University, Nationwide Children's Hospital; Josephine DeLeon, Director, Anti-Poverty Initiatives, Catholic Charities of California; Robert Espinoza, Vice President of Policy, Paraprofessional Healthcare Institute; Jennifer Gross, Manager of Political Field Operations, Planned Parenthood of Montana; Louise Scherer Knight, Director, The Sidney Kimmel Comprehensive Cancer Center at Johns Hopkins; Roanne Osborne-Gaskin, M.D., Senior Medical Director, MDWise, Inc.; Cathy Phan, Outreach and Education Coordinator, Asian American Health Coalition DBA HOPE Clinic; Kamilah Pickett, Litigation Support, Independent Contractor; Brendan Riley, Outreach and Enrollment Coordinator, NC Community Health Center Association; Alvia Siddiqi, Medical Director, Advocate Physician Partners; Carla Smith, Executive Vice President, Healthcare Information and Management Systems Society (HIMSS); Tobin Van Ostern, Vice President and Co-Founder, Young Invincibles Advisors; and Paula Villescascz, Senior Consultant, Assembly Health Committee, California State Legislature.

II. Provisions of This Notice

In accordance with section 10(a) of the FACA, this notice announces a meeting of the APOE. The agenda for the September 21, 2016 meeting will include the following:

- Welcome and listening session with CMS leadership
- Recap of the previous (June 22, 2016) meeting

- Affordable Care Act initiatives
- An opportunity for public comment
- Meeting summary, review of recommendations, and next steps

Individuals or organizations that wish to make a 5-minute oral presentation on an agenda topic should submit a written copy of the oral presentation to the DFO at the address listed in the **ADDRESSES** section of this notice by the date listed in the **DATES** section of this notice. The number of oral presentations may be limited by the time available.

Individuals not wishing to make an oral presentation may submit written comments to the DFO at the address listed in the **ADDRESSES** section of this notice by the date listed in the **DATES** section of this notice.

III. Security, Building, and Parking Guidelines

This meeting will be held in a federal government building; therefore, federal security measures are applicable. The Real ID Act, enacted in 2005, establishes minimum standards for the issuance of state-issued driver's licenses and identification (ID) cards. It prohibits federal agencies from accepting an official driver's license or ID card from a state unless the Department of Homeland Security determines that the state meets these standards. Beginning October 2015, photo IDs (such as a valid driver's license) issued by a state or territory not in compliance with the Real ID Act will not be accepted as identification to enter federal buildings. Visitors from these states/territories will need to provide alternative proof of identification (such as a valid passport) to gain entrance into CMS buildings. The current list of states from which a federal agency may accept driver's licenses for an official purpose is found at <http://www.dhs.gov/real-id-enforcement-brief>. We recommend that confirmed registrants arrive reasonably early, but no earlier than 45 minutes prior to the start of the meeting, to allow additional time to clear security. Security measures include the following:

- Presentation of government issued photographic identification to the Federal Protective Service or Guard Service personnel.
- Inspection of vehicle's interior and exterior (this includes engine and trunk inspection) at the entrance to the grounds. Parking permits and instructions will be issued after the vehicle inspection.
- Inspection, via metal detector or other applicable means, of all persons entering the building. We note that all items brought into CMS, whether personal or for the purpose of

² Health Insurance MarketplaceSM and MarketplaceSM are service marks of the U.S. Department of Health & Human Services.

presentation or to support a presentation, are subject to inspection. We cannot assume responsibility for coordinating the receipt, transfer, transport, storage, set up, safety, or timely arrival of any personal belongings or items used for presentation or to support a presentation.

Note: Individuals who are not registered in advance will not be permitted to enter the building and will be unable to attend the meeting. The public may not enter the building earlier than 45 minutes prior to the convening of the meeting.

All visitors must be escorted in areas other than the lower and first floor levels in the Central Building.

Authority: Sec. 222 of the Public Health Service Act (42 U.S.C. 217a) and sec. 10(a) of Pub. L. 92-463 (5 U.S.C. App. 2, sec. 10(a) and 41 CFR 102-3).

Dated: August 16, 2016.

Andrew M. Slavitt,

Acting Administrator, Centers for Medicare & Medicaid Services.

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2015-D-1580]

Patient Preference Information—Voluntary Submission, Review in Premarket Approval Applications, Humanitarian Device Exemption Applications, and De Novo Requests, and Inclusion in Decision Summaries and Device Labeling; Guidance for Industry, Food and Drug Administration Staff and Other Stakeholders; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of the guidance entitled “Patient Preference Information—Voluntary Submission, Review in PMAs, HDE Applications, and De Novo Requests, and Inclusion in Decision Summaries and Device Labeling.” This document explains the principal concepts that sponsors and other stakeholders should consider when choosing to collect patient preference information (PPI), which may inform FDA’s benefit-risk determinations in the premarket review of premarket approval applications (PMAs), humanitarian device exemption

(HDE) applications, and *de novo* classification requests. This guidance also discusses FDA’s inclusion of PPI in its decision summaries and provides recommendations for the inclusion of such information in device labeling for certain devices. FDA is also issuing a Level 2 updated version of the guidance document entitled “Factors To Consider When Making Benefit-Risk Determinations in Medical Device Premarket Approval and De Novo Classifications,” originally issued on March 28, 2012, that has been edited to be consistent with this guidance document.

DATES: Submit either electronic or written comments on this guidance at any time. General comments on Agency guidance documents are welcome at any time.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments,

except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2015-D-1580 for “Patient Preference Information—Voluntary Submission, Review in PMAs, HDE Applications, and De Novo Requests, and Inclusion in Decision Summaries and Device Labeling.” If you are making submissions that also address the edits to the Level 2 guidance, the submissions received must include the Docket No. FDA-2011-D-0577 for “Factors To Consider When Making Benefit-Risk Determinations in Medical Device Premarket Approval and De Novo Classifications.” Received comments will be placed in the docket(s) noted and, except for those submitted as “Confidential Submissions,” publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the

docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

An electronic copy of the guidance document is available for download from the Internet. See the

SUPPLEMENTARY INFORMATION section for information on electronic access to the guidance. Submit written requests for a single hard copy of the guidance document entitled "Patient Preference Information—Voluntary Submission, Review in PMAs, HDE Applications, and *De Novo* Requests, and Inclusion in Decision Summaries and Device Labeling" to the Office of the Center Director, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002; or the Office of Communication, Outreach, and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Anindita Saha, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5414, Silver Spring, MD 20993–0002, 301–796–2537, Anindita.Saha@fda.hhs.gov; or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance entitled "Patient Preference Information—Voluntary Submission, Review in PMAs, HDE Applications, and *De Novo* Requests, and Inclusion in Decision Summaries and Device Labeling." FDA believes that patients can and should bring their own experiences to bear in helping the Agency to evaluate the benefit-risk profiles of certain devices. This kind of input can be important to consider during FDA's decisionmaking for these devices.

This document explains the principal concepts that sponsors and other stakeholders should consider when choosing to collect PPI, which may inform FDA's benefit-risk

determinations in the premarket review of PMAs, HDE applications, and *de novo* requests. This guidance also discusses FDA's inclusion of PPI in its decision summaries and provides recommendations for the inclusion of such information in device labeling for certain devices.

The objectives of this guidance are: (1) To encourage submission of PPI, if available, by sponsors or other stakeholders to FDA and to aid in FDA decisionmaking; (2) to outline recommended qualities of patient preference studies, which may result in valid scientific evidence; (3) to provide recommendations for collecting and submitting PPI to FDA; and (4) to discuss FDA's inclusion of PPI in its decision summaries and provide recommendations for the inclusion of such information in device labeling, where appropriate. The guidance also includes hypothetical examples that illustrate how PPI may inform FDA's decisionmaking. The guidance applies to both diagnostic and therapeutic devices that are subject to these review processes. Additionally, this guidance may be information to other stakeholders such as patient groups and academia who may wish to conduct patient preference studies.

In the **Federal Register** of May 18, 2015 (80 FR 28277), FDA announced the availability of the draft of this guidance and interested persons were invited to comment by August 17, 2015. FDA has considered all of the public comments received in finalizing this guidance.

FDA is also issuing a Level 2 update to the guidance document entitled "Factors To Consider When Making Benefit-Risk Determinations in Medical Device Premarket Approval and *De Novo* Classifications," which was originally issued on March 28, 2012, to ensure consistency with the terminology and concepts presented in this guidance.

II. Significance of Guidance

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on "Patient Preference Information—Voluntary Submission, Review in PMAs, HDE Applications, and *De Novo* Requests, and Inclusion in Decision Summaries and Device Labeling." It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

III. Electronic Access

Persons interested in obtaining a copy of the guidance may do so by downloading an electronic copy from the Internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at <http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm>. Guidance documents are also available at <http://www.fda.gov/BiologicsBloodVaccines/GuidanceComplianceRegulatoryinformation/Guidances/default.htm> or <http://www.regulations.gov>. Persons unable to download an electronic copy of "Patient Preference Information—Voluntary Submission, Review in PMAs, HDE Applications, and *De Novo* Requests, and Inclusion in Decision Summaries and Device Labeling" or "Factors To Consider When Making Benefit-Risk Determinations in Medical Device Premarket Approval and *De Novo* Classifications" may send an email request to CDRH-Guidance@fda.hhs.gov to receive an electronic copy of the document. Please use the document number 1500006 or 1772 respectively to identify the guidance you are requesting.

IV. Paperwork Reduction Act of 1995

This guidance refers to currently approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR 812.25(c) have been approved under OMB control number 0910–0078; the collections of information in 21 CFR part 807, subpart E have been approved under OMB control number 0910–0120; the collections of information in 21 CFR part 814, subparts B and E have been approved under OMB control number 0910–0231; the collections of information in 21 CFR part 814, subpart H have been approved under OMB control number 0910–0332; the collections of information in 21 CFR part 822 have been approved under OMB control number 0910–0449; the collections of information in 21 CFR part 801 have been approved under OMB control number 0910–0485; and the collections of information in the guidance document "Requests for Feedback on Medical Device Submissions: The Pre-Submission Program and Meetings with Food and Drug Administration Staff" have been approved under OMB control number 0910–0756.

Dated: August 2, 2016.

Leslie Kux,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2007–D–0369]

Bioequivalence Recommendations for Fidaxomicin; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a draft guidance for industry on generic fidaxomicin tablets entitled “Draft Guidance on Fidaxomicin.” The recommendations provide specific guidance on the design of bioequivalence (BE) studies to support abbreviated new drug applications (ANDAs) for fidaxomicin tablets.

DATES: Although you can comment on any guidance at any time (see 21 CFR 10.115(g)(5)), to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance, submit either electronic or written comments on the draft guidance by October 24, 2016.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2007–D–0369 for “Draft Guidance on Fidaxomicin.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” will be publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access

the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT:

Xiaoqiu Tang, Center for Drug Evaluation and Research (HFD–600), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 4730, Silver Spring, MD 20993–0002, 301–796–5850.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of June 11, 2010 (75 FR 33311), FDA announced the availability of a guidance for industry entitled “Bioequivalence Recommendations for Specific Products,” which explained the process that would be used to make product-specific BE recommendations available to the public on FDA’s Web site at <http://www.fda.gov/Drugs/Guidance/ComplianceRegulatoryInformation/Guidances/default.htm>.

As described in that guidance, FDA adopted this process to develop and disseminate product-specific BE recommendations and to provide a meaningful opportunity for the public to consider and comment on those recommendations. This notice announces the availability of draft BE recommendations for generic fidaxomicin tablets.

FDA initially approved new drug application (NDA) 201699 for DIFICID (fidaxomicin) in May 2011. Currently, there are no approved ANDAs for this product. We are now issuing a draft guidance for industry on BE recommendations for generic fidaxomicin tablets (“Draft Guidance on Fidaxomicin”).

On May 6, 2015, Cubist Pharmaceuticals, Inc. submitted a

citizen petition requesting that “FDA impose scientifically-appropriate standards for demonstrating BE for ANDAs and 505(b)(2) new drug applications” citing to DIFICID as the reference listed drug. FDA has reviewed the issues raised in the citizen petition and is responding to the citizen petition (Docket No. FDA-2015-P-1595, available at <http://www.regulations.gov>).

This draft guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on the design of BE studies to support ANDAs for fidaxomicin tablets. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Electronic Access

Persons with access to the Internet may obtain the draft guidance at either <http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm> or <http://www.regulations.gov>.

Dated: August 18, 2016.

Jeremy Sharp,

Deputy Commissioner for Policy, Planning, Legislation, and Analysis.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Advisory Council on Blood Stem Cell Transplantation; Notice of Meeting

SUMMARY: In accordance with section 10(a)(2) of the Federal Advisory Committee Act, notice is hereby given of the following meeting of the Advisory Council on Blood Stem Cell Transplantation (ACBSCT).

DATES:

September 13, 2016, from 8:00 a.m. to 4:00 p.m. Eastern Time.

September 14, 2016, from 8:00 a.m. to 12:30 p.m. Eastern Time.

ADDRESSES: Crystal Gateway Marriott, 1700 Jefferson Davis Highway, Arlington, VA 22202.

FOR FURTHER INFORMATION CONTACT:

Robert Walsh, Executive Secretary, Division of Transplantation, Healthcare Systems Bureau, Health Resources and Services Administration, 5600 Fishers Lane, Room 8W60, Rockville, MD 20857; telephone (301) 443-6839.

SUPPLEMENTARY INFORMATION:

Status: The meeting will be open to the public.

Purpose: Pursuant to Public Law 109-129, 42 U.S.C. 274k (session 379 of the Public Health Service Act, as amended), the ACBSCT advises the Secretary of the Department of Health and Human Services and Administrator, Health Resources and Services Administration (HRSA), on matters related to the activities of the C.W. Bill Young Cell Transplantation Program (Program) and the National Cord Blood Inventory Program.

Agenda: The Council will discuss trends in the usage of various sources of blood stem cells used in unrelated blood stem cell transplants, utilization of cord blood, blood stem cell transplantation for treatment of sickle cell disease, and late effects in blood and marrow transplantation, among other topics. The Council will also receive a program update from the HRSA Division of Transplantation (DoT). Agenda items are subject to change as priorities indicate.

After Council discussions, members of the public will have an opportunity to provide comment. Because of the Council’s full agenda and timeframe in which to cover the agenda topics, public comment will be limited. All public comments will be included in the record of the ACBSCT meeting.

The draft meeting agenda will be posted on www.ACBSCTmeeting.org. Those participating at this meeting should pre-register by visiting www.ACBSCTmeeting.org. The deadline to pre-register for this meeting is Friday, September 9, 2016. Registration will be confirmed on site. For all logistical questions and concerns, please contact Susie Gingrich, Leonard Resource Group, at (202) 289-8322 or send an email to sgringrich@lrginc.com.

Participants can also join this meeting via teleconference by:

1. (Audio Portion) Calling the Conference Phone Number (1-800-832-0736) and providing the Participant Passcode (1337210); and

2. (Visual Portion) Connecting to the ACBSCT Adobe Connect Pro Meeting using the following URL <https://lrg.adobeconnect.com/acbsct/> and entering as GUEST: (Copy and paste the link into your browser if it does not work directly, and enter as a guest). Participants should plan to call and connect 15 minutes prior to the meeting for logistics to be set up. If you have never attended an Adobe Connect meeting, please test your connection using the following URL: http://www.adobe.com/go/meeting_test. In order to obtain a quick overview, go to the following URL: http://www.adobe.com/go/connectpro_overview. Call (202) 289-8322 or email Susie Gingrich at sgringrich@lrginc.com if you are having trouble connecting to the meeting site.

Public Comment: It is preferred that persons interested in providing an oral presentation email a written request, along with a copy of your presentation, to Robert Walsh, Executive Secretary, at RWalsh@hrsa.gov. Requests should contain the name, address, telephone number, email address, and any business or professional affiliation of the person desiring to make an oral presentation. Groups having similar interests are encouraged to combine their comments and present them through a single representative.

The allocation of time may be adjusted to accommodate the level of expressed interest. Persons who do not file an advance request for a presentation, but desire to make an oral statement, may request it during the public comment period. Public participation and ability to comment will be limited as time permits.

Jason E. Bennett

Director, Division of the Executive Secretariat.

BILLING CODE 4165-15-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

[Document Identifier: OMB # 0990-0424-30D]

Agency Information Collection Activities; Proposed Collection; Public Comment Request

AGENCY: Office of the Assistant Secretary for Health, Office of Adolescent Health, HHS.

ACTION: Notice.

SUMMARY: In compliance with section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, announces plans to submit a Information Collection Request (ICR), described below, to the Office of Management and Budget (OMB). Prior to submitting that ICR to OMB, OS seeks comments from the public regarding the burden estimate, below, or any other aspect of the ICR.

DATES: Comments on the ICR must be received on or before September 23, 2016.

ADDRESSES: Submit your comments to Information.CollectionClearance@hhs.gov or by calling (202) 690-6162.

FOR FURTHER INFORMATION CONTACT: Information Collection Clearance staff, Information.CollectionClearance@hhs.gov or (202) 690-6162.

SUPPLEMENTARY INFORMATION: When submitting comments or requesting information, please include the document identifier OMB # 0990–0424–30D for reference.

Information Collection Request Title: Positive Adolescent Futures (PAF) Study

Abstract: The Office of Adolescent Health (OAH), U.S. Department of Health and Human Services (HHS) is requesting approval by OMB on a revised data collection. The Positive Adolescent Futures (PAF) Study will provide information about program design, implementation, and impacts through a rigorous assessment of program impacts and implementation of two programs designed to support expectant and parenting teens. These programs are located in Houston, Texas and throughout the state of California. This revised information collection request includes the 24-month follow-up survey instrument related to the impact study. The data collected from this instrument in the two study sites

will provide a detailed understanding of program impacts about two years after youth are enrolled in the study and first have access to the programming offered by each site.

Need and Proposed Use of the Information: The data will be used to determine program effectiveness by comparing outcomes on repeat pregnancies, sexual risk behaviors, health and well-being, and parenting behaviors between treatment (program) and control youth. The data will also be used to understand whether the programs are more effective for some youth than others. The findings will be of interest to the general public, to policymakers, and to organizations interested in supporting expectant and parenting teens.

Likely Respondents: The 24-month follow-up survey data will be collected through a web-based survey or through telephone interviews with study participants. The mode of survey administration will primarily be based on the preference of the study

participants. The survey will be completed by 1,515 respondents across the two study sites. Clearance is requested for three years.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose or provide the information requested. This includes the time needed to review instructions, to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information, to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information, and to transmit or otherwise disclose the information.

The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS

Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden hours
24-month follow-up survey of impact study participants	505	1	30/60	252.5
Total	252.5

OS specifically requests comments on (1) the necessity and utility of the proposed information collection for the proper performance of the agency's functions, (2) the accuracy of the estimated burden, (3) ways to enhance the quality, utility, and clarity of the information to be collected, and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Terry S. Clark,

Asst Information Collection Clearance Officer.

ACTION: Notice.

SUMMARY: In compliance with section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, announces plans to submit an Information Collection Request (ICR), described below, to the Office of Management and Budget (OMB). The ICR is for extension of the approved information collection assigned OMB control number OS–0990–0323, which expires on January 31, 2017. Prior to submitting the ICR to OMB, OS seeks comments from the

public regarding the burden estimate, below, or any other aspect of the ICR.

DATES: Comments on the ICR must be received on or before October 24, 2016.

ADDRESSES: Submit your comments to Information.CollectionClearance@hhs.gov or by calling (202) 690–6162.

FOR FURTHER INFORMATION CONTACT: Information Collection Clearance staff, Information.CollectionClearance@hhs.gov or (202) 690–6162.

SUPPLEMENTARY INFORMATION: When submitting comments or requesting information, please include the document identifier HHS–OS–0990–0323–60D for reference.

Information Collection Request Title: *Medical Countermeasures.gov.*

Abstract: In order to route product developers to the most appropriate personnel within the Department of Health and Human Services (HHS), HHS collects some basic information about the company's product through Medical Countermeasures.gov. Using this information and a routing system that has been developed with input from participating agencies within HHS, including the Office of the Assistant Secretary for Preparedness and Response (ASPR), the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA), and the National Institutes of Health (NIH), Medical

Countermeasures.gov routes the meeting request to the appropriate person within HHS. ASPR is requesting an extension by OMB for a three-year clearance.

Need and Proposed Use of the Information: Meeting Request Routing System for Medical Countermeasures.gov—OMB No. 0990–0323—Extension—Office of the Assistant Secretary for Preparedness and Response (ASPR), Office of the Biomedical Advanced Research and Development Authority (BARDA).

Likely Respondents: Medical Countermeasure Developers.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose or provide the information requested. This includes the time needed to review instructions, to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information, to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information, and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS

Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden hours
Meeting Request	225	1	8/60	30
Total	225	1	8/60	30

OS specifically requests comments on (1) the necessity and utility of the proposed information collection for the proper performance of the agency's functions, (2) the accuracy of the estimated burden, (3) ways to enhance the quality, utility, and clarity of the information to be collected, and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Terry S. Clark,

Asst Information Collection Clearance Officer.

[FR Doc. 2016-20158 Filed 8-23-16; 8:45 am]

BILLING CODE 4150-37-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Eunice Kennedy Shriver National Institute of Child Health & Human Development; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Child Health and Human Development Special Emphasis Panel, Developmental Mechanisms of Human Structural Birth Defects.

Date: September 20, 2016.

Time: 2:00 p.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Rockledge 6710B, 6710B Rockledge Drive, Bethesda, MD 20817, (Telephone Conference Call).

Contact Person: Sherry L Dupere, Ph.D., Chief, Scientific Review Branch, Scientific Review Branch, Eunice Kennedy Shriver National Institute of Child Health and Human Development, NIH, 6710 B Rockledge Drive, Room 2115, Bethesda, MD 20892-7510, 301-451-3415, duperes@mail.nih.gov. BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The invention listed below is owned by an agency of the U.S. Government and is available for licensing and/or co-development in the U.S. in accordance with 35 U.S.C. 209 and 37 CFR part 404 to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing and/or co-development.

ADDRESSES: Invention Development and Marketing Unit, Technology Transfer Center, National Cancer Institute, 9609 Medical Center Drive, Mail Stop 9702, Rockville, MD 20850-9702.

FOR FURTHER INFORMATION CONTACT: Information on licensing and co-development research collaborations, and copies of the U.S. patent applications listed below may be obtained by contacting: Attn. Invention Development and Marketing Unit, Technology Transfer Center, National Cancer Institute, 9609 Medical Center Drive, Mail Stop 9702, Rockville, MD 20850-9702, Tel. 240-276-5515 or email ncitechtransfer@mail.nih.gov. A signed Confidential Disclosure Agreement may be required to receive copies of the patent applications.

SUPPLEMENTARY INFORMATION: Technology description follows.

Title of invention: Processes for Producing and Purifying Nucleic Acid-Containing Compositions.

Description of Technology: This technology consists of improved processes for producing and purifying nucleic acid-containing compositions, such as non-naturally occurring viruses, for example, recombinant polioviruses that can be used as oncolytic agents. Some of the improved processes relate

to producing viral DNA templates and for chromatographic purification of nucleic acid-containing compositions, in which the nucleic acid is quantified in chromatography fractions with the rapid detection of one or more nucleic acid sequences (e.g., using real time RT-qPCR detection). In addition, the invention includes improved processes for production and purification of oncolytic poliovirus, such as PVSRIPO. Compositions generated using these methods are also described.

Potential Commercial Applications:

- Large-scale manufacturing for producing highly purified, live virus.
- Improved viral purification process that:

- Increases the yield and/or purity of the resulting product, while decreasing the purification time;

- is generally applicable to purification of any nucleic acid molecule-containing composition, such as virus-based composition, and can be used for the purification of live native or recombinant viruses necessary for clinical applications.

- Improved process for generating viral template plasmid (such as one that includes a DNA template for an RNA virus), which addresses the problem of genetic instability of the plasmids containing the viral genome (e.g., of a recombinant polio virus) in host (e.g., bacterial) cells, in which the plasmids are typically propagated.

Value Proposition:

- Cost- and time-effective means of producing highly purified virus-based GMP products, such as oncolytic viruses, for regulatory approval.

Development Stage: Clinical Phase I.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Interagency Coordinating Committee on the Validation of Alternative Methods Biennial Progress Report: 2014-2015; Availability of Report

SUMMARY: The National Toxicology Program (NTP) Interagency Center for the Evaluation of Alternative Toxicological Methods (NICEATM) announces availability of the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM) Biennial Progress Report: 2014-2015. This report, prepared in accordance with requirements of the ICCVAM Authorization Act of 2000 (42 U.S.C. 285l-3), describes activities and accomplishments from January 2014 through December 2015.

ADDRESSES: The report is available at <http://ntp.niehs.nih.gov/iccvamreport/2015/index.html>.

FOR FURTHER INFORMATION CONTACT: Dr. Warren Casey, Director, NICEATM; email: warren.casey@nih.gov; telephone: (919) 316-4729.

SUPPLEMENTARY INFORMATION:

Background: The ICCVAM Authorization Act of 2000 established ICCVAM as a permanent interagency committee of the National Institute of Environmental Health Sciences (NIEHS) under NICEATM. ICCVAM's mission is to facilitate development, validation, and regulatory acceptance of new and revised regulatory test methods that reduce, refine, or replace the use of animals in testing while maintaining and promoting scientific quality and the protection of human health, animal health, and the environment.

A provision of the ICCVAM Authorization Act states that ICCVAM shall prepare "reports to be made available to the public on its progress under this Act." The eighth ICCVAM progress report is now available, which describes ICCVAM activities and accomplishments from January 2014 through December 2015.

Summary of Report Contents: Key ICCVAM, ICCVAM agency, and NICEATM accomplishments summarized in the report include:

- A computational approach that integrates several types of data to predict human skin sensitization hazard without using animals (ICCVAM)
- A plan to adopt high throughput assays and computational models for detecting and measuring estrogen receptor bioactivity as an alternative for three Tier 1 tests currently used in the Endocrine Disruptor Screening Program to assess estrogen receptor activity (U.S. Environmental Protection Agency [EPA])
- Establishment of a Communities of Practice webinar seminar series discussing relevant topics (ICCVAM)
- Evaluation of acute oral and dermal toxicity data to determine if oral toxicity tests are sufficient to assign U.S. EPA dermal hazard classifications, eliminating the need for separate acute dermal toxicity tests (NICEATM)
- A series of workshops that drafted recommendations on use of an *in vitro* test with potential to replace animal use for pertussis vaccine testing (NICEATM, U.S. Food and Drug Administration, other ICCVAM agencies).

Availability of Report: The report is available at <http://ntp.niehs.nih.gov/iccvamreport/2015/index.html>. Links to this report and all past ICCVAM annual and biennial reports are available at <http://ntp.niehs.nih.gov/go/iccvam-bien>.

Background Information on ICCVAM and NICEATM: ICCVAM is an interagency committee composed of representatives from 15 federal regulatory and research agencies that require, use, generate, or disseminate toxicological and safety testing information. ICCVAM conducts technical evaluations of new, revised, and alternative safety testing methods and integrated testing strategies with regulatory applicability and promotes the scientific validation and regulatory acceptance of testing methods that more accurately assess the safety and hazards of chemicals and products and replace, reduce, or refine (enhance animal well-being and lessen or avoid pain and distress) animal use.

The ICCVAM Authorization Act of 2000 (42 U.S.C. 285l-3) establishes ICCVAM as a permanent interagency committee of NIEHS and provides the authority for ICCVAM involvement in activities relevant to the development of alternative test methods. ICCVAM acts to ensure that new and revised test methods are validated to meet the needs of federal agencies, increase the efficiency and effectiveness and federal agency test method review, and optimize utilization of scientific

expertise outside the federal government. Additional information about ICCVAM can be found at <http://ntp.niehs.nih.gov/go/iccvam>.

NICEATM administers ICCVAM, provides scientific and operational support for ICCVAM-related activities, and conducts and publishes analyses and evaluations of data from new, revised, and alternative testing approaches. NICEATM and ICCVAM work collaboratively to evaluate new and improved testing approaches applicable to the needs of U.S. federal agencies. NICEATM and ICCVAM welcome the public nomination of new, revised, and alternative testing approaches for validation studies and technical evaluations. Additional information about NICEATM can be found at <http://ntp.niehs.nih.gov/go/niceatm>.

Dated: August 16, 2016.

John R. Bucher,

Associate Director, National Toxicology Program.

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The invention listed below is owned by an agency of the U.S. Government and is available for licensing and/or co-development in the U.S. in accordance with 35 U.S.C. 209 and 37 CFR part 404 to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing and/or co-development.

ADDRESSES: Invention Development and Marketing Unit, Technology Transfer Center, National Cancer Institute, 9609 Medical Center Drive, Mail Stop 9702, Rockville, MD 20850-9702.

FOR FURTHER INFORMATION CONTACT: Information on licensing and co-development research collaborations, and copies of the U.S. patent applications listed below may be obtained by contacting: Attn. Invention Development and Marketing Unit, Technology Transfer Center, National Cancer Institute, 9609 Medical Center

Drive, Mail Stop 9702, Rockville, MD 20850-9702, Tel. 240-276-5515 or email ncitechtransfer@mail.nih.gov. A signed Confidential Disclosure Agreement may be required to receive copies of the patent applications.

SUPPLEMENTARY INFORMATION:

Technology description follows.

Title of invention: Methods of Analyzing Virus-Derived Therapeutics.

Description of Technology: Researchers at the National Cancer Institute's Biopharmaceutical Development Program recently developed massively parallel sequencing methods for virus-derived therapeutics such as viral vaccines and oncolytic immunotherapies. The methods allow for the determination of micro-heterogeneity and quantitation of low frequency sequence variants, which have the possibility of supplanting monkey neurovirulence safety testing (MNVT), mutant analysis by PCR, and restriction enzyme cleavage (MAPREC) methods that are currently used to screen RNA virus-derived therapeutics.

Potential Commercial Applications:

- Improved methods for detecting mutations in GMP-manufactured virus-derived therapeutics, including viruses, viral template plasmids, or vaccines;
- The method allows for at least two different virus-derived therapeutics to be assayed simultaneously.

Value Proposition:

- Provides a cost- and time-effective means of assaying a virus-derived therapeutic, such as oncolytic viruses, for viral sequence variants, for regulatory approval;
- RNA virus preparation steps increase the amount of viral RNA obtained;
- Demonstrated superiority of massively parallel sequencing ("MPS") over mutant analysis by PCR and restriction enzyme cleavage ("MAPREC") analysis.

Development Stage: Clinical Phase I.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer on (240) 276-1243.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Voluntary Customer Satisfaction Surveys To Implement Executive Order 12862 in the Substance Abuse and Mental Health Services Administration (SAMHSA)—(OMB No. 0930-0197)—Extension

Executive Order 12862 directs agencies that “provide significant services directly to the public” to “survey customers to determine the kind and quality of services they want and their level of satisfaction with existing services.” SAMHSA provides significant services directly to the public, including treatment providers

and State substance abuse and mental health agencies, through a range of mechanisms, including publications, training, meetings, technical assistance and Web sites. Many of these services are focused on information dissemination activities. The purpose of this submission is to extend the existing generic approval for such surveys.

The primary use for information gathered is to identify strengths and weaknesses in current service provisions by SAMHSA and to make improvements that are practical and feasible. Several of the customer

satisfaction surveys expected to be implemented under this approval will provide data for measurement of program effectiveness under the Government Performance and Results Act (GPRA). Information from these customer surveys will be used to plan and redirect resources and efforts to improve or maintain a high quality of service to health care providers and members of the public. Focus groups may be used to develop the survey questionnaire in some instances.

The estimated annual hour burden is as follows:

Type of data collection	Number of respondents	Responses/ respondent	Hours/ response	Total hours
Focus groups	250	1	2.50	625
Self-administered, mail, telephone and e-mail surveys	89,750	1	.250	22,438
Total	90,000	23,063

Send comments to Summer King, SAMHSA Reports Clearance Officer, 5600 Fishers Lane, Room 15E57-B, Rockville, Maryland 20857, *OR* email a copy to summer.king@samhsa.hhs.gov. Written comments should be received by October 24, 2016.

Summer King,
Statistician.

BILLING CODE 4162-20-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[1651-0105]

Agency Information Collection Activities: Application To Use the Automated Commercial Environment (ACE)

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: 30-Day notice and request for comments; Extension and revision of an existing collection of information.

SUMMARY: U.S. Customs and Border Protection (CBP) of the Department of Homeland Security will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act: Application to Use the Automated Commercial Environment (ACE). CBP is proposing that this information collection be extended with a change to the burden hours resulting

from the addition of a new application for brokers, importers, sureties, attorneys and other parties to establish an ACE Portal account to file protests. There are no proposed changes to the existing ACE Portal application for imported merchandise. This document is published to obtain comments from the public and affected agencies.

DATES: Written comments should be received on or before September 23, 2016 to be assured of consideration.

ADDRESSES: Interested persons are invited to submit written comments on this proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to the OMB Desk Officer for Customs and Border Protection, Department of Homeland Security, and sent via electronic mail to oira_submission@omb.eop.gov or faxed to (202) 395-5806.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Paperwork Reduction Act Officer, U.S. Customs and Border Protection, Regulations and Rulings, Office of Trade, 90 K Street NE., 10th Floor, Washington, DC 20229-1177, or via email (CBP_PRA@cbp.dhs.gov). Please note contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs please contact the CBP National Customer Service Center at 877-227-5511, (TTY) 1-800-877-8339, or CBP Web site at <https://www.cbp.gov/>. For additional help: <https://help.cbp.gov/app/home/search/1>.

SUPPLEMENTARY INFORMATION: This proposed information collection was previously published in the **Federal Register** (81 FR 38727) on June 14, 2016, allowing for a 60-day comment period. This notice allows for an additional 30 days for public comments. This process is conducted in accordance with 5 CFR 1320.10. CBP invites the general public and other Federal agencies to comment on proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (Public Law 104-13; 44 U.S.C. 3507). The comments should address: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimates of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden, including the use of automated collection techniques or the use of other forms of information technology; and (e) the annual costs to respondents or record keepers from the collection of information (total capital/startup costs and operations and maintenance costs). The comments that are submitted will be summarized and included in the CBP request for OMB approval. All comments will become a matter of public record. In this document, CBP is soliciting comments concerning the following information collection:

Title: Application to Use the Automated Commercial Environment (ACE).

OMB Number: 1651-0105.

Abstract: As of July 23, 2016, the Automated Commercial Environment (ACE) is the sole CBP-authorized electronic data interchange (EDI) system for processing electronic entry and entry summary filings of certain entry types. Pursuant to Executive Order 13659, a deadline of December 31, 2016, was established for participating Federal agencies to have capabilities, agreements, and other requirements in place to utilize the International Trade Data System (ITDS) and supporting systems, such as ACE, as the primary means of receiving from users the standard set of data and other relevant documentation (exclusive of applications for permits, licenses, or certifications) required for the release of imported cargo and clearance of cargo for export. See 79 FR 10655 (February 25, 2014). ACE supports government agencies and the trade community with border-related missions with respect to moving goods across the border efficiently and securely. Once ACE is fully implemented, all related CBP trade functions and the trade community will be supported from a single common user interface.

In order to establish an ACE Portal account, participants submit information such as their name, their employer identification number (EIN) or social security number, and if applicable, a statement certifying their capability to connect to the Internet. This information is submitted through the ACE Secure Data Portal which is accessible at: <http://www.cbp.gov/trade/automated>.

CBP is proposing to add the capability of electronically filing protests to ACE. A protest is a procedure whereby a private party may administratively challenge a CBP decision regarding imported merchandise and certain other CBP decisions. Trade members wishing to establish a protest filer account will need to submit the following data elements:

1. Organization Information
 - a. Protest Filer Number (EIN, SSN, or CBP Assigned Number)
 - b. Organization Name
 - c. Organization Type
 - d. End of Fiscal Year (month and day)
 - e. Mailing Address
2. ACE Account Owner Information
 - a. Name
 - b. Date of Birth
 - c. Email Address
 - d. Telephone Number
 - e. Fax Number (optional)
 - f. Account Owner address if different from Company Address
3. Filing Notification Point of Contact
 - a. Name
 - b. Email address

Current Actions: CBP is proposing that this information collection be extended with a change to the burden hours resulting from the addition of a new application for protest filers to establish an ACE Portal account. There are no proposed changes to the existing ACE Portal application, or changes to the burden hours, for other ACE accounts.

Type of Review: Extension (with change).

Affected Public: Businesses.

Application to ACE (Import)

Estimated Number of Respondents: 21,100.

Estimated Number of Total Annual Responses: 21,100.

Estimated Time per Response: .33 hours.

Estimated Total Annual Burden Hours: 6,963.

Application to ACE (Export)

Estimated Number of Respondents: 9,000.

Estimated Number of Total Annual Responses: 9,000.

Estimated Time per Response: .066 hours.

Estimated Total Annual Burden Hours: 594.

Application to ACE (Protest)

Estimated Number of Respondents: 3,750.

Estimated Number of Total Annual Responses: 3,750.

Estimated Time per Response: .066 hours.

Estimated Total Annual Burden Hours: 248.

Dated: August 18, 2016.

Seth Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

BILLING CODE 9111-14-P

DEPARTMENT OF THE INTERIOR

Geological Survey

[GX16RB00FXBRD00]

Agency Information Collection Activities: Request for Comments on the Assessing Public Views of Waterfowl-Related Topics To Inform the North American Waterfowl Management Plan

AGENCY: U.S. Geological Survey (USGS), Interior.

ACTION: Notice of a new information collection, Assessing Public Views of Waterfowl-Related Topics to Inform the

North American Waterfowl Management Plan.

SUMMARY: We (the U.S. Geological Survey) are notifying the public that we have submitted to the Office of Management and Budget (OMB) the information collection request (ICR) described below. To comply with the Paperwork Reduction Act of 1995 (PRA) and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this ICR.

DATES: To ensure that your comments on this ICR are considered, OMB must receive them on or before September 23, 2016.

ADDRESSES: Please submit written comments on this information collection directly to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs, Attention: Desk Officer for the Department of the Interior, via email: (OIRA_SUBMISSION@omb.eop.gov); or by fax (202) 395-5806; and identify your submission with 'OMB Control Number 1028-NEW Assessing Public Views of Waterfowl-Related Topics to Inform the North American Waterfowl Management Plan'. Please also forward a copy of your comments and suggestions on this information collection to the Information Collection Clearance Officer, U.S. Geological Survey, 12201 Sunrise Valley Drive MS 807, Reston, VA 20192 (mail); (703) 648-7195 (fax); or gs-info_collections@usgs.gov (email). Please reference 'OMB Information Collection 1028-NEW: Assessing Public Views of Waterfowl-Related Topics to Inform the North American Waterfowl Management Plan' in all correspondence.

FOR FURTHER INFORMATION CONTACT:

Holly Miller, Fort Collins Science Center, U.S. Geological Survey, 2150 Centre Ave., Bldg. C, Fort Collins, CO 80526 (mail); 970-226-9133 (phone); or millerh@usgs.gov (email). You may also find information about this ICR at www.reginfo.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

The North American Waterfowl Management Plan (NAWMP) is an international agreement signed by the United States Secretary of the Interior, the Canadian Minister of the Environment, and the Mexican Secretary of the Environment and Natural Resources. NAWMP lays out a strategy to restore waterfowl populations in North America through habitat protection, restoration, and enhancement. The 2012 revised goals of

NAWMP focused for the first time on people as well as waterfowl and their habitats. Specifically, the plan states that “The needs and desires of people [as they relate to waterfowl] must be clearly understood and explicitly addressed” and calls for more human dimensions research with waterfowl hunters, viewers, and the general public. The plan recognizes the interconnectedness of waterfowl, their habitat, and stakeholders. Without human dimensions information, NAWMP objectives may not reflect stakeholder and societal values, and management and policy decisions may lead to actions that could be either irrelevant or counter to stakeholder and societal expectations.

To meet the goals set forth in the 2012 NAWMP revision, the NAWMP Human Dimensions Working Group has asked the USGS to conduct a mail survey to assess the general public’s awareness and perceptions of waterfowl and wetlands, as well as measure participation in recreational activities, conservation behaviors, how people obtain information on nature-related issues, and demographics. Demographics voluntarily collected on the survey will include gender, education, income, and race/ethnicity. Additionally, a representative sample of names and mailing addresses from the general public will be purchased from a survey sampling company which uses publicly available information to construct sample lists. To protect the confidentiality and privacy of survey respondents, the demographic information from the survey will not be associated with any respondent’s name or mailing address at any time and will only be analyzed and reported in aggregate.

Demographic information collected on the survey will be used to understand if any segments of the American public hold differing views on waterfowl and waterfowl-related topics. For example, there may be differences in awareness and perceptions of waterfowl and wetlands or in participation in recreational activities between men and women. This will enable waterfowl managers and policymakers to better understand and be more responsive to the varied stakeholders they are serving. The data from the survey will be aggregated and statistically analyzed and the results will be published in publically available USGS reports.

The USGS Ecosystems Mission Area is conducting this effort as it aligns with their mission to “work with others to provide the scientific understanding and technologies needed to support the

sound management and conservation of our Nation’s biological resources.” Specifically, the Ecosystems Mission Area “enters into partnerships with scientific collaborators to produce high-quality scientific information and partnerships with the users of scientific information to ensure this information’s relevance and application to real problems.”

II. Data

OMB Control Number: 1028–NEW.

Title: Assessing Public Views of Waterfowl-Related Topics to Inform the North American Waterfowl Management Plan.

Type of Request: Approval of new information collection.

Respondent Obligation: Voluntary.

Frequency of Collection: One time only.

Description of Respondents: General public.

Estimated Total Number of Annual Responses: 1,400.

Estimated Time per Response: We estimate that it will take 20 minutes per person to complete the full survey and 5 minutes per person to complete the non-response survey.

Estimated Annual Burden Hours: 366.

Estimated Reporting and

Recordkeeping “Non-Hour Cost”

Burden: There are no “non-hour cost” burdens associated with this collection of information.

Public Disclosure Statement: The PRA (44 U.S.C. 3501, *et seq.*) provides that an agency may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number. Until the OMB approves a collection of information, you are not obliged to respond.

Comments: On June 30, 2015, we published a **Federal Register** notice (80 FR 37292) announcing that we would submit this ICR to OMB for approval and soliciting comments. The comment period closed on August 31, 2015. We received no comments.

III. Request for Comments

We again invite comments concerning this ICR as to: (a) Whether the proposed collection of information is necessary for the agency to perform its duties, including whether the information is useful; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) how to enhance the quality, usefulness, and clarity of the information to be collected; and (d) how to minimize the burden on the respondents, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this notice are a matter of public record. Before including your personal mailing address, phone number, email address, or other personally identifiable information in your comment, you should be aware that your entire comment, including your personally identifiable information, may be made publicly available at any time. While you can ask the OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: August 16, 2016.

Rudy Schuster,

Fort Collins Science Center Director (Acting).

BILLING CODE P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLID100000.L10200000.PH0000
LXSS024D0000 241A 4500088890]

Notice of Public Meeting, Idaho Falls District Resource Advisory Council Meeting

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meetings.

SUMMARY: In accordance with the Federal Land Policy and Management Act (FLPMA) and the Federal Advisory Committee Act of 1972 (FACA), the U.S. Department of the Interior, Bureau of Land Management (BLM) Idaho Falls District Resource Advisory Council (RAC), will meet as indicated below.

DATES: The Idaho Falls District RAC will meet in Salmon, Idaho, September 20–21, 2016 for a two-day meeting. The first day will begin at 10:30 a.m. at the Public Lands Center, 1206 South Challis, Salmon, Idaho 83401. The second day will begin at same location starting at 8:00 a.m. adjourning at 1:30 p.m. Members of the public are invited to attend. All meetings are open to the public.

SUPPLEMENTARY INFORMATION: The first day will be held at the office beginning at 10:30 a.m. The agenda includes the following topics: a resource management plan (RMP) update and discussion on public collaboration in that process; discussion on the Western States Wolverine Conservation Project; the Salmon/Challis Vegetation Environmental Assessment Process; Sage-grouse Updates; Wilderness Planning Updates and; Pocatello Field Office’s request for assistance as they

work on the Blackfoot River Special Recreation Management Area.

On Wednesday, the group will depart the office at 8:00 a.m. to view Land and Water Conservation Fund (LWCF) parcels. Following that stop the group will head to Lemhi Pass/Agency Creek area where they will look at the site location for a possible new cabin along the Continental Divide Trail. While on the Pass, local archaeologist will provide background on the Lemhi Pass National Historic Landmark. The group will have lunch in the field before departing for home around 1:30 p.m.

The 15-member Council advises the Secretary of the Interior, through the Bureau of Land Management, on a variety of planning and management issues associated with public land management in the BLM Idaho Falls District (IFD), which covers eastern Idaho.

All meetings are open to the public. The public may present written comments to the Council. Each formal Council meeting will also have time allocated for hearing public comments. Depending on the number of persons wishing to comment and time available, the time for individual oral comments may be limited. The IFD RAC will hear public comment from 10:30–11:00 a.m. on September 20. Individuals who plan to attend and need special assistance, such as sign language interpretation, tour transportation or other reasonable accommodations, should contact the BLM as provided below.

FOR FURTHER INFORMATION CONTACT: Sarah Wheeler, RAC Coordinator, Idaho Falls District, 1405 Hollipark Dr., Idaho Falls, ID 83401. Telephone: (208) 524–7550. Email: sawheeler@blm.gov.

Dated: August 15, 2016.

Sarah Wheeler,

*Resource Advisory Council Coordinator,
Idaho Falls District.*

BILLING CODE 4310–GG–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–991]

Certain Nanopores and Products Containing Same Commission Determination Not To Review an Initial Determination Terminating the Investigation Based Upon Consent Order Stipulation and Proposed Consent Order; Issuance of Consent Order; Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination (“ID”) (Order No. 13) granting a joint motion to terminate the investigation based upon a consent order stipulation and proposed consent order. The Commission has issued the consent order. The investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Lucy Grace D. Noyola, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone 202–205–3438. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone 202–205–2000. General information concerning the Commission may also be obtained by accessing its Internet server (<https://www.usitc.gov>). The public record for this investigation may be viewed on the Commission’s electronic docket (EDIS) at <https://edis.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission’s TDD terminal on 202–205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on March 31, 2016, based on a complaint filed by Illumina, Inc. of San Diego, California; University of Washington of Seattle, Washington; and UAB Research Foundation of Birmingham, Alabama (collectively, “Complainants”). 81 FR 18648 (Mar. 31, 2016). The complaint, as supplemented, alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain nanopores and products containing same by reason of infringement of certain claims of U.S. Patent Nos. 8,673,550 and 9,170,230. *Id.* The notice of investigation names as a respondents Oxford Nanopore Technologies Ltd. of Oxford, United Kingdom and Oxford Nanopore Technologies, Inc. of Cambridge, Massachusetts (collectively, “Respondents”). *Id.* The Office of Unfair Import Investigations (“OUII”) also was named as a party to the investigation. *Id.*

On July 5, 2016, Complainants and Respondents filed a joint motion to terminate the investigation based upon a consent order stipulation and

proposed consent order. On July 12, 2016, OUII filed a response, supporting the motion.

On July 26, 2016, the presiding administrative law judge (“ALJ”) issued an ID (Order No. 13) granting the motion. The ALJ found that the consent order stipulation and proposed consent order contain the statements required by 19 CFR 210.21(c). The ALJ also found that termination of the investigation was in the public interest. No petitions for review of the ID were filed.

The Commission has determined not to review the subject ID and has issued the consent order. The investigation is terminated.

The authority for the Commission’s determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission’s Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: August 18, 2016.

Lisa R. Barton,

Secretary to the Commission.

[FR Doc. 2016–20199 Filed 8–23–16; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1009]

Certain Inflatable Products With Tensioning Structures and Processes for Making the Same; Commission Determination Not To Review an Initial Determination Terminating the Investigation Based on a Consent Order Stipulation and Proposed Consent Order; Issuance of Consent Order; Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination (“ID”) (Order No. 6) of the presiding administrative law judge (“ALJ”) terminating the above-captioned investigation based upon a consent order stipulation and proposed consent order. The Commission has also determined to issue a consent order.

FOR FURTHER INFORMATION CONTACT: Robert Needham, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 708–5468. Copies of non-confidential documents filed in connection with this

investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at <https://www.usitc.gov>. The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on June 24, 2016, based on a complaint filed by Intex Recreation Corp. of Long Beach, California; and Intex Marketing Ltd. of Tortola, British Virgin Islands (together, "Intex"). 81 *FR* 41346–47. The complaint alleges that respondents Bestway (USA), Inc., of Phoenix, Arizona; Bestway Global Holdings, Inc. of Shanghai, China; Bestway (Hong Kong) International Ltd. of Hong Kong; Bestway Inflatables & Materials Corporation of Shanghai, China; and Bestway (Nantong) Recreation Corp. of Nantong, China (together, "Bestway"), are in violation of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, by reason of infringement of certain claims of U.S. Patent Nos. 8,562,773 and 9,156,203. *Id.* The Office of Unfair Import Investigations ("OUII") is a party to the investigation. *Id.* at 41347.

On July 14, 2016, Bestway filed a motion to terminate the investigation based upon a consent order stipulation and proposed consent order. That same day, OUII filed a response arguing that the motion should be granted because it complies with the Commission Rules for consent orders and termination serves the public interest. Intex did not respond to the motion.

On July 25, 2016, the ALJ granted the motion in the subject ID. She found that the motion for termination by consent order stipulation complies with the requirements of Commission Rule 210.21(c) and is in the public interest. No petitions for review of the ID were received.

The Commission has determined not to review the subject ID and to issue a consent order. The investigation is terminated in its entirety.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in Part

210 of the Commission's Rules of Practice and Procedure, 19 CFR part 210.

By order of the Commission.
Issued: August 18, 2016.

Lisa R. Barton,

Secretary to the Commission.

[FR Doc. 2016–20200 Filed 8–23–16; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–392]

Bulk Manufacturer of Controlled Substances Application: Chattem Chemicals

ACTION: Notice of application.

DATES: Registered bulk manufacturers of the affected basic classes, and applicants therefore, may file written comments on or objections to the issuance of the proposed registration in accordance with 21 CFR 1301.33(a) on or before October 24, 2016.

ADDRESSES: Written comments should be sent to: Drug Enforcement Administration, Attention: DEA Federal Register Representative/ODW, 8701 Morrisette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION:

The Attorney General has delegated her authority under the Controlled Substances Act to the Administrator of the Drug Enforcement Administration (DEA), 28 CFR 0.100(b). Authority to exercise all necessary functions with respect to the promulgation and implementation of 21 CFR part 1301, incident to the registration of manufacturers, distributors, dispensers, importers, and exporters of controlled substances (other than final orders in connection with suspension, denial, or revocation of registration) has been redelegated to the Deputy Assistant Administrator of the DEA Office of Diversion Control ("Deputy Assistant Administrator") pursuant to section 7 of 28 CFR part 0, appendix to subpart R.

In accordance with 21 CFR 1301.33(a), this is notice that on July 27, 2016, Chattem Chemicals, 3801 St. Elmo Avenue, Chattanooga, Tennessee 37409 applied to be registered as a bulk manufacturer of the following basic classes of controlled substances:

Controlled substance	Schedule
Gamma Hydroxybutyric Acid (2010).	I
4-Methoxyamphetamine (7411) ...	I

Controlled substance	Schedule
Dihydromorphine (9145)	I
Amphetamine (1100)	II
Methamphetamine (1105)	II
Lisdexamfetamine (1205)	II
Methylphenidate (1724)	II
Pentobarbital (2270)	II
Codeine (9050)	II
Dihydrocodeine (9120)	II
Oxycodone (9143)	II
Hydromorphone (9150)	II
Hydrocodone (9193)	II
Meperidine (9230)	II
Meperidine intermediate–A (9232)	II
Meperidine intermediate–B (9233)	II
Meperidine intermediate–C (9234)	II
Methadone (9250)	II
Methadone intermediate (9254) ...	II
Morphine (9300)	II
Oripavine (9330)	II
Thebaine (9333)	II
Opium tincture (9630)	II
Opium, powdered (9639)	II
Opium, granulated (9640)	II
Oxymorphone (9652)	II
Noroxymorphone (9668)	II
Alfentanil (9737)	II
Remifentanil (9739)	II
Sufentanil (9740)	II
Tapentadol (9780)	II
Fentanyl (9801)	II

The company plans to manufacture the listed controlled substances in bulk for distribution and sale to its customers.

Louis J. Milione,

Deputy Assistant Administrator.

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–392]

Importer of Controlled Substances Application: Noramco, Inc.

ACTION: Notice of application.

DATES: Registered bulk manufacturers of the affected basic classes, and applicants therefore, may file written comments on or objections to the issuance of the proposed registration in accordance with 21 CFR 1301.34(a) on or before September 23, 2016. Such persons may also file a written request for a hearing on the application pursuant to 21 CFR 1301.43 on or before September 23, 2016.

ADDRESSES: Written comments should be sent to: Drug Enforcement Administration, Attention: DEA Federal Register Representative/ODW, 8701 Morrisette Drive, Springfield, Virginia 22152. All requests for hearing must be sent to: Drug Enforcement

Administration, Attn: Administrator, 8701 Morrisette Drive, Springfield, Virginia 22152. All requests for hearing should also be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/LJ, 8701 Morrisette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/ODW, 8701 Morrisette Drive, Springfield, Virginia 22152. Comments and request for hearings on applications to import narcotic raw material are not appropriate. 72 FR 3417 (January 25, 2007).

SUPPLEMENTARY INFORMATION: The Attorney General has delegated her authority under the Controlled Substances Act to the Administrator of the Drug Enforcement Administration (DEA), 28 CFR 0.100(b). Authority to exercise all necessary functions with respect to the promulgation and implementation of 21 CFR part 1301, incident to the registration of manufacturers, distributors, dispensers, importers, and exporters of controlled substances (other than final orders in connection with suspension, denial, or revocation of registration) has been redelegated to the Deputy Assistant Administrator of the DEA Office of Diversion Control (“Deputy Assistant Administrator”) pursuant to section 7 of 28 CFR part 0, appendix to subpart R.

In accordance with 21 CFR 1301.34(a), this is notice that on July 12, 2016, Noramco, Inc., 500 Swedes Landing Road, Wilmington, Delaware 19801–4417 applied to be registered as an importer of the following basic classes of controlled substances:

Controlled substance	Schedule
Phenylacetone (8501)	II
Opium, raw (9600)	II

Controlled substance	Schedule
Poppy Straw Concentrate (9670)	II
Tapentadol (9780)	II

The company plans to import phenylacetone (8501), opium, raw (9600), and poppy straw concentrate (9670) to bulk manufacture other controlled substances for distribution to its customers. The company plans to import an intermediate form of tapentadol (9780) to bulk manufacture tapentadol (9780) for distribution to its customers

The company plans to import small quantities of the listed controlled substances for the manufacture of analytical reference standards and distribution to their research and forensic customers. Placement of these drug codes onto the company's registration does not translate into automatic approval of subsequent permit applications to import controlled substances.

In reference to drug code 7360 (Marihuana) the company plans to import a synthetic cannabidiol. No other

activity for this drug code is authorized for this registration.

Louis J. Milione,

Deputy Assistant Administrator.

BILLING CODE 4410-09-P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA-392]

**Importer of Controlled Substances
Application: Akorn, Inc.**

ACTION: Notice of application.

DATES: Registered bulk manufacturers of the affected basic class, and applicants therefore, may file written comments on or objections to the issuance of the proposed registration in accordance

with 21 CFR 1301.34(a) on or before September 23, 2016. Such persons may also file a written request for a hearing on the application pursuant to 21 CFR 1301.43 on or before September 23, 2016.

ADDRESSES: Written comments should be sent to: Drug Enforcement Administration, Attention: DEA **Federal Register** Representative/ODW, 8701 Morrisette Drive, Springfield, Virginia 22152. All requests for hearing must be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrisette Drive, Springfield, Virginia 22152. All requests for hearing should also be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/LJ, 8701 Morrisette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA **Federal Register** Representative/ODW, 8701 Morrisette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION:

The Attorney General has delegated her authority under the Controlled Substances Act to the Administrator of the Drug Enforcement Administration (DEA), 28 CFR 0.100(b). Authority to exercise all necessary functions with respect to the promulgation and implementation of 21 CFR part 1301, incident to the registration of manufacturers, distributors, dispensers, importers, and exporters of controlled substances (other than final orders in connection with suspension, denial, or revocation of registration) has been redelegated to the Deputy Assistant Administrator of the DEA Office of Diversion Control ("Deputy Assistant Administrator") pursuant to section 7 of 28 CFR part 0, appendix to subpart R.

In accordance with 21 CFR 1301.34(a), this is notice that on June 3, 2016, Akorn, Inc., 1222 W. Grand Avenue, Decatur, Illinois 62522 applied to be registered as an importer of remifentanyl (9739), a basic class of controlled substances listed in schedule II.

The company plans to import remifentanyl in dosage form for distribution.

Louis J. Milione,

Deputy Assistant Administrator.

BILLING CODE 4410-09-P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA-392]

Bulk Manufacturer of Controlled Substances Application: Noramco, Inc.

ACTION: Notice of application.

DATES: Registered bulk manufacturers of the affected basic classes, and applicants therefore, may file written comments on or objections to the issuance of the proposed registration in accordance with 21 CFR 1301.33(a) on or before October 24, 2016.

ADDRESSES: Written comments should be sent to: Drug Enforcement Administration, Attention: DEA Federal Register Representative/ODW, 8701 Morrisette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: The Attorney General has delegated her authority under the Controlled Substances Act to the Administrator of the Drug Enforcement Administration (DEA), 28 CFR 0.100(b). Authority to exercise all necessary functions with respect to the promulgation and implementation of 21 CFR part 1301, incident to the registration of manufacturers, distributors, dispensers, importers, and exporters of controlled substances (other than final orders in connection with suspension, denial, or revocation of registration) has been redelegated to the Deputy Assistant Administrator of the DEA Office of Diversion Control ("Deputy Assistant Administrator") pursuant to section 7 of 28 CFR part 0, appendix to subpart R.

In accordance with 21 CFR 1301.33(a), this is notice that on July 20, 2016, Noramco, Inc., 1440 Olympic Drive, Athens, Georgia 30601 applied to be registered as a bulk manufacturer the following basic classes of controlled substances:

Controlled substance	Schedule
Marihuana (7360)	I
Tetrahydrocannabinols (7370)	I
Hydromorphenol (9301)	I
Nabilone (7379)	II

The company plans to manufacture bulk active pharmaceutical ingredients (APIs) and reference standards for distribution to their customers.

In reference to drug codes 7360 (marihuana) and 7370 (tetrahydrocannabinols), the company plans to bulk manufacturer these drugs as synthetic. No other activities for these

drug codes are authorized for this registration.

Louis J. Milione,

Deputy Assistant Administrator.

BILLING CODE 4410-09-P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Clean Air Act

On August 18, 2016, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the District of Columbia in the lawsuit entitled *United States v. Harley-Davidson, Inc., et al.*, Civil Action No. 1:16-cv-01687.

The United States' Complaint alleges that Harley-Davidson, Inc. (and three related companies) manufactured and sold over 339,392 after-market devices (known as "Super Tuners" and used with Harley-Davidson motorcycles) in violation of the Clean Air Act prohibition on the manufacture or sale of devices that defeat the functioning of the motorcycle's certified emissions control system. The Complaint also alleges, relatedly, that Defendants violated the provision of the Act that prohibits any person from removing or rendering inoperative a motor vehicle's certified emissions control system and from causing such "tampering." Finally, the Complaint alleges that Defendants manufactured and sold more than 12,000 motorcycles from model years 2006, 2007 and 2008 that were not certified by EPA as required by the Clean Air Act.

The Consent Decree requires Defendants to stop selling the illegal tuners in the United States by August 23, 2016. Defendants will also offer to buy back all such tuners in stock at Harley-Davidson dealerships across the country and destroy them. The Decree requires Defendants to obtain an Executive order from the California Air Resources Board (CARB) for any tuners it sells in the United States in the future. These Executive orders (E.O.s) will demonstrate that the CARB-certified tuners do not cause Defendants' motorcycles to exceed the EPA-certified emissions limits. Defendants must also conduct tests on motorcycles that have been tuned with the E.O.-certified tuners and provide the results to EPA to ensure that their motorcycles remain in compliance with EPA emissions requirements. In addition, for any uncertified Super Tuners that Defendants sell outside the United

States in the future, they must label them as not for use in the United States.

Under the Consent Decree, Defendants must also ensure that all of their future motorcycle models intended for sale in the United States are certified by EPA.

Finally, Defendants will pay a civil penalty of \$12 million and spend \$3 million implementing a project to mitigate excess hydrocarbon emissions by replacing conventional woodstoves with cleaner-burning stoves.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States v. Harley-Davidson, Inc., et al.*, D.J. Ref. No. 90-5-2-1-11333. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

<i>To submit comments:</i>	<i>Send them to:</i>
By email	<i>pubcomment-ees.enrd@usdoj.gov.</i>
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

During the public comment period, the Consent Decree may be examined and downloaded at this Justice Department Web site: <https://www.justice.gov/enrd/consent-decrees>. We will provide a paper copy of the Decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Please enclose a check or money order for \$9.50 (25 cents per page reproduction cost) payable to the United States Treasury.

Karen Dworkin,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410-15-P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OJP (OJJDP) Docket No. 1724]

Meeting of the Federal Advisory Committee on Juvenile Justice

AGENCY: Office of Juvenile Justice and Delinquency Prevention, Justice.

ACTION: Notice of annual in-person meeting.

SUMMARY: The Office of Juvenile Justice and Delinquency Prevention (OJJDP) has scheduled an Annual Meeting of the Federal Advisory Committee on Juvenile Justice (FACJJ).

DATES: The Annual Meeting will take place on Thursday, September 29, 2016, at 8:30 a.m.–5 p.m. ET and Friday, September 30, 2016, at 8:30 a.m.–12:30 p.m. ET.

ADDRESSES: The meeting will take place in the third floor main conference room at the U.S. Department of Justice, Office of Justice Programs, 810 7th St. NW., Washington, DC 20531.

FOR FURTHER INFORMATION CONTACT: Visit the Web site www.facjj.org or contact Jeff Slowikowski, Designated Federal Official, OJJDP, Jeff.Slowikowski@usdoj.gov or (202) 616-3646. [This is not a toll-free number.]

SUPPLEMENTARY INFORMATION: FACJJ, established pursuant to Section 3(2)(A) of the Federal Advisory Committee Act (5 U.S.C. App.2), will meet to carry out its advisory functions under Section 223(f)(2)(C–E) of the Juvenile Justice and Delinquency Prevention Act of 2002. The FACJJ is composed of representatives from the states and territories. FACJJ member duties include: Reviewing Federal policies regarding juvenile justice and delinquency prevention; advising the OJJDP Administrator with respect to particular functions and aspects of OJJDP; and advising the President and Congress with regard to State perspectives on the operation of OJJDP and Federal legislation pertaining to juvenile justice and delinquency prevention. More information on the FACJJ may be found at www.facjj.org.

Meeting Agenda: The proposed agenda includes: (a) Opening Introductions, and Meeting Logistics; (b) Remarks of Robert L. Listenbee, Administrator, OJJDP; (c) FACJJ Subcommittee Reports (Legislation; Expungement/Sealing of Juvenile Court Records; Research/Publications; LGBT); (d) FACJJ Administrative Business; (e) New Member Orientation; (f) Ethics Training (g) Discussion of By-Laws; and

(h) Summary, Next Steps, and Meeting Adjournment.

Registration: For security purposes, members of the public who wish to attend the meeting in-person must pre-register online at www.facjj.org no later than Friday, September 23, 2016. Should problems arise with web registration, contact Melissa Kanaya, Senior Program Manager/Federal Contractor, at 202-532-0121, or send a request to register to Ms. Kanaya at Melissa.Kanaya@usdoj.gov. Please include name, title, organization or other affiliation, full address and phone, fax, and email information and send to her attention. Note that these are not toll-free telephone numbers. Additional identification documents may be required. Meeting space is limited. Note: Photo identification will be required for admission to the meeting.

To view the webcast meeting, the public must pre-register online at www.facjj.org, no later than Friday, September 23, 2016. Upon registration, information will be sent to you at the email address you provide to enable you to connect to the webcast.

Written Comments: Interested parties may submit written comments by email message in advance to Jeff Slowikowski, Designated Federal Official, at Jeff.Slowikowski@usdoj.gov, no later than Friday September 23, 2016. In the alternative, interested parties may fax comments to 202-307-2819 and contact Melissa Kanaya at 202-532-0121 to ensure that they are received. [These are not toll-free numbers.]

Robert L. Listenbee,

Administrator, Office of Juvenile Justice and Delinquency Prevention.

[FR Doc. 2016-20255 Filed 8-23-16; 8:45 am]

BILLING CODE 4410-18-P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Claim for Compensation by a Dependent Information Reports

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Office of Workers' Compensation Programs (OWCP) sponsored information collection request (ICR) revision titled, "Claim for Compensation by a Dependent Information Reports," to the Office of Management and Budget (OMB) for review and approval for use in accordance with the Paperwork

Reduction Act (PRA) of 1995 (44 U.S.C. 3501 *et seq.*). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before September 23, 2016.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201602-1240-003 (this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or sending an email to DOL_PRA_PUBLIC@dol.gov.

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-OWCP, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202-395-5806 (this is not a toll-free number); or by email: OIRA_submission@omb.eop.gov. Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor—OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: DOL_PRA_PUBLIC@dol.gov.

FOR FURTHER INFORMATION CONTACT: Contact Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or sending an email to DOL_PRA_PUBLIC@dol.gov.

Authority: 44 U.S.C. 3507(a)(1)(D).

SUPPLEMENTARY INFORMATION: This ICR seeks approval under the PRA for revisions to the Claim for Compensation by a Dependent Information Reports information collection. This ICR covers forms a dependent of a deceased Federal employee, whose death is work-related, uses to prove continued eligibility for benefits, to show entitlement to remaining compensation payments of the deceased employee, and to show dependency. Specifically, this ICR covers Forms CA-5 (Claim for Compensation by Widow, Widower, and/or Children), CA-5b (Claim for Compensation by Parents, Brothers, Sisters, Grandparents, or Grandchildren), CA-1031 (Claimant Support of Dependent), and CA-1074

(Request for Clarification of CA-5b), as well as related form letters used to obtain follow-up information commonly needed to clarify an initial benefit claim. This information collection is considered a revision, because several clarifying changes were made to the forms and letters; however, the changes do not affect the estimated burden. Federal Employee Compensation Act as amended sections 28 and 32 authorize this information collection. See 5 U.S.C. 8145 and 8149.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1240-0013. The current approval is scheduled to expire on August 31, 2016; however, the DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. New requirements would only take effect upon OMB approval. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on March 8, 2016 (81 FR 12129).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1240-0013. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and

- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL-OWCP.

Title of Collection: Claim for Compensation by a Dependent Information Reports.

OMB Control Number: 1240-0013.

Affected Public: Individuals or Households.

Total Estimated Number of Respondents: 1,675.

Total Estimated Number of Responses: 1,675.

Total Estimated Annual Time Burden: 964 hours.

Total Estimated Annual Other Costs Burden: \$871.

Dated: August 18, 2016.

Michel Smyth,

Departmental Clearance Officer.

[FR Doc. 2016-20262 Filed 8-23-16; 8:45 am]

BILLING CODE 4510-CH-P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Weekly Claims and Extended Benefits Data and Weekly Initial and Continued Weeks Claimed

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Employment and Training Administration (ETA) sponsored information collection request (ICR) revision titled, "Weekly Claims and Extended Benefits Data and Weekly Initial and Continued Weeks Claimed," to the Office of Management and Budget (OMB) for review and approval for use in accordance with the Paperwork Reduction Act (PRA) of 1995. Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before September 23, 2016.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201602-1205-001

(this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or sending an email to DOL_PRA_PUBLIC@dol.gov.

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-ETA, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202-395-5806 (this is not a toll-free number); or by email:

OIRA_submission@omb.eop.gov.

Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor-OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: DOL_PRA_PUBLIC@dol.gov.

FOR FURTHER INFORMATION CONTACT:

Contact Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or sending an email to DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: This ICR seeks approval under the PRA for revisions to the Weekly Claims and Extended Benefits Data and Weekly Initial and Continued Weeks Claimed information collection requirements. This data collection is necessary for the determination of the beginning, continuance, or termination of an Extended Benefit (EB) period in any State that determines the EB trigger rate. In addition, data on initial and continued claims are used to help determine economic indicators. The revisions are related to the Final Rule titled, "Federal-State Unemployment Compensation Program; Implementing the Total Unemployment Rate as an Extended Benefits Indicator and Amending for Technical Corrections," that appears elsewhere today in the **Federal Register**. The Final Rule deletes regulations 20 CFR 615.15 paragraphs (c) and (d) that pertain to records and reports a State agency must submit. The reporting instructions for the proper and timely submission of data are provided in *ET Handbook No. 401* that governs Unemployment Compensation required reporting. Social Security Act section 303(a)(6) and Federal-State Extended Unemployment Compensation Act of 1970 section 203, as amended authorize this information collection. See 42

U.S.C. 303(a)(6) and Public Law 91-373, section 203.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1205-0028. The current approval is scheduled to expire on October 31, 2018; however, the DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. New requirements would only take effect upon OMB approval. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 7, 2015 (80 FR 38747) and the Final Rule published today under RIN 1205-AB62.

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. The DOL notes that the request for public comments is limited to the information collection requirements; the ETA provided an opportunity for public comment on the underlying regulatory provisions when it published a Proposed Rule in the **Federal Register** on October 24, 2014 (79 FR 63589). In order to help ensure appropriate consideration, comments on the ICR should mention OMB Control Number 1205-0028. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who

are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL-ETA.

Title of Collection: Weekly Claims and Extended Benefits Data and Weekly Initial and Continued Weeks Claimed.

OMB Control Number: 1205-0028.

Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Respondents: 53.

Total Estimated Number of Responses: 5,512.

Total Estimated Annual Time Burden: 3,675 hours.

Total Estimated Annual Other Costs Burden: \$0.

Authority: 44 U.S.C. 3507(a)(1)(D).

Dated: July 27, 2016.

Michel Smyth,

Departmental Clearance Officer.

BILLING CODE 4510-FW-P

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice (16-058)]

Notice of Intent To Grant an Exclusive License

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of intent to grant exclusive license.

SUMMARY: This notice is issued in accordance with 35 U.S.C. 209(e) and 37 CFR 404.7(a)(1)(i). The National Aeronautics and Space Administration (NASA) hereby gives notice of its intent to grant an exclusive license in the United States to practice the inventions described and claimed in U.S. Patent Number 8,401,217, titled "Extreme Low Frequency Acoustic Measurement System," NASA Case Number LAR-17317-1, and U.S. Patent Application Serial Number 13/771,735, titled "Extreme Low Frequency Acoustic Measurement System," NASA Case Number LAR-17317-2, to Infrasonix Inc., having its principal place of business in Lawrenceville, GA. The fields of use may be limited to, but not necessarily limited to, human and/or animal healthcare. Certain patent rights in these inventions have been assigned to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration. The prospective

exclusive license will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7.

DATES: The prospective exclusive license may be granted unless, within fifteen (15) days from the date of this published notice, NASA receives written objections including evidence and argument that establish that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR. 404.7. Competing applications completed and received by NASA within fifteen (15) days of the date of this published notice will also be treated as objections to the grant of the contemplated partially exclusive license.

Objections submitted in response to this notice will not be made available to the public for inspection and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

ADDRESSES: Objections relating to the prospective license may be submitted to Patent Counsel, Office of Chief Counsel, NASA Langley Research Center, MS 30, Hampton, VA 23681; (757) 864-3221 (phone), (757) 864-9190 (fax).

FOR FURTHER INFORMATION CONTACT: Andrea Z. Warmbier, Patent Attorney, Office of Chief Counsel, NASA Langley Research Center, MS 30, Hampton, VA 23681; (757) 864-7686; Fax: (757) 864-9190. Information about other NASA inventions available for licensing can be found online at <http://technology.nasa.gov>.

Mark P. Dvorscak,

Agency Counsel for Intellectual Property.

BILLING CODE 7510-13-P

NATIONAL SCIENCE FOUNDATION

Notice of Intent to Prepare a Comprehensive Environmental Evaluation Under the Antarctic Conservation Act of 1978, as amended

AGENCY: National Science Foundation

ACTION: Notice of Intent to Prepare a Comprehensive Environmental Evaluation (hereinafter CEE) for Continuation of United States Antarctic Program (USAP) Activities

SUMMARY: The National Science Foundation (NSF) announces its intent to prepare a CEE pursuant to the Antarctic Conservation Act, 16 U.S.C. 2401, *et seq.*, as amended, (ACA) and its implementing regulations, and in accordance with the procedures of the Protocol on Environmental Protection to the Antarctic Treaty. The purpose of the

CEE is to evaluate the potential environmental effects of continued USAP activities in Antarctica and maintaining or enhancing capabilities that support the USAP. In addition, this CEE will update baseline descriptions of the USAP presented in the 1991 Final Supplemental Environmental Impact Statement for the United States Antarctic Program. (Supplement). NSF originally published a Programmatic Environmental Impact Statement (PEIS) in 1980 and reprinted and redistributed the PEIS in 1984. As noted, a Supplement was prepared in 1991 and project-specific impact analyses have been consistently conducted starting in 1991 and continuing through 2016. By this notice, NSF is announcing the beginning of the scoping process to solicit public comments and identify issues to be analyzed in the CEE.

DATES: This notice initiates the public scoping process for the CEE. Scoping comments on issues may be submitted in writing until October 15, 2016. To be eligible for inclusion in the Draft CEE, all comments must be received prior to the close of the scoping period. NSF will provide additional opportunities for public participation upon publication of the Draft CEE.

ADDRESSES: Written comments should be addressed to Dr. Polly A. Penhale, Environmental Officer, Room 755, Division of Polar Programs, National Science Foundation, 4201 Wilson Boulevard, Arlington, Virginia 22230 or by email at CEE.comments@nsf.gov.

FOR FURTHER INFORMATION CONTACT: For further information regarding the CEE process, please contact: Dr. Polly A. Penhale, Environmental Officer, at CEE.comments@nsf.gov.

SUPPLEMENTARY INFORMATION:

History of the United States Involvement in Antarctica

The United States has been active in Antarctica since its discovery and exploration in the 1800's and has played a crucial role in building the international cooperation necessary for establishing a peaceful human presence on the Earth's last undeveloped continent. Through the Antarctic Treaty, which went into effect with 12 original member nations in 1961, the United States and 52 other nations have agreed to avoid militarization or conflict over territorial claims in the Antarctic Treaty Area, the area of the earth from the South Pole to 60 degrees south latitude. Treaty nations are dedicated to international cooperation, scientific study, and the protection of Antarctica's distinctive environment.

The United States Antarctic Program (USAP)

Since 1956 and without interruption, Americans have been conducting science and education programs in Antarctica. The 2,500 or so American scientists, administrators, and supporting personnel involved in these activities make up USAP. Three year-round research stations are maintained by the USAP: McMurdo, Amundsen-Scott South Pole, and Palmer. From October through February, field research camps are established for research. McMurdo Station, the largest station in Antarctica is USAP's logistics hub and a center for scientific studies. The Amundsen-Scott South Pole Station supports astronomy, upper atmosphere science, meteorology, glaciology, and earth sciences studies. Palmer Station, on Anvers Island just west of the Antarctic Peninsula, is primarily a marine biology center and also supports upper atmospheric sciences and other studies.

USAP transportation infrastructure includes vessels, aircraft, and tractor-based traverse capabilities. USAP operates two research vessels (the Laurence M. Gould and the Nathaniel B. Palmer) and deploys a fuel tanker, resupply vessel, and a United States Coast Guard ice breaker once annually. The United States Air National Guard and Air Force operate LC-130 and C-17 aircraft supporting intracontinental and intercontinental transport of equipment, material, and people. In addition, DeHavilland Twin Otter and Basler BT-67 aircraft, plus helicopters transport research teams to remote research locations. Traverses are a critical method to transport fuel and material to South Pole Station, Black Island, and Marble Point from McMurdo Station. Similarly, traverse capabilities are in used to support major deep field science projects.

The NSF has overall management responsibility for USAP and U.S. activities in Antarctica. However, several federal agencies have important roles in the U.S. presence in Antarctica. The Department of Defense assists in planning and provides logistical support to USAP. The Department of Homeland Security's United States Coast Guard provides icebreaker services and other assistance, as required. Further, the United States has strong diplomatic interests in Antarctica and the Department of State coordinates U.S. policy on Antarctica.

USAP Activities in Antarctica

USAP activities have increased in complexity and locations over the years.

Over 124 science projects were supported by USAP during the 2015–2016 austral summer season. Examples of recent complex USAP projects include ecosystem-scale, multi-disciplinary projects; study of deep subglacial lakes; installation and operation of Project IceCube (a neutrino detector at South Pole Station); upgrades to the South Pole Telescope, and extensive marine and terrestrial seismic projects. The demand for science and education programs in Antarctica is expected to continue increasing over the next decade.

In addition to supporting increasingly complex science and education programs in Antarctica, a safety, environment, and health program has enabled USAP to reduce the health and safety risks to participants and improve environmental protection. USAP has made significant progress in the remediation of old waste disposal sites and in the removal of wastes from Antarctica.

Because the science and education programs supported by USAP are increasing in size and complexity, improved equipment, more specialized facilities, additional electrical power, and improved logistical support are required. USAP has met many of these emerging needs, including construction and operation of the Crary Science and Engineering Center and the Science Support Center at McMurdo Station.

However, approximately 60 years after USAP began much of the infrastructure at each of the three year-round USAP Stations has exceeded its intended life expectancy. USAP stations were originally built to serve the newly developing Antarctic science and education programs of the 1950s and 1960s. With few people or facilities in Antarctica, there was an expeditionary approach to infrastructure development. Energy efficiency and environmental protection were not high priorities. Today, much of the USAP infrastructure cannot meet modern practices without replacement, significant repair, or substantial restrictions in use. Reconstruction of the Amundsen-Scott South Pole Station was completed in 2010; however, the Station and outlying facilities require repairs and ongoing maintenance in order to support current and future science and education programs.

Issues and Possible Alternatives for USAP Activities

In 2011, a Blue Ribbon Panel was established by the Directors of the Office of Science and Technology Policy and of the NSF to assess the current USAP operations, logistics and management

and make recommendations on a long-term strategy to deliver an efficient and effective national research program. The 2012 report “More and Better Science in Antarctica through Increased Logistical Effectiveness” provided a basis for discussions among USAP participants, managers, scientists, educators, and NSF leadership. From these discussions and others, the following USAP needs have been identified:

- Capacity and flexibility to adapt to the changing needs of USAP science and education in Antarctica over a 35–50 year planning horizon
- Increased energy conservation (reduced energy consumption)
- Increased operational efficiency (e.g., reduced costs and personnel requirements)
- A continued safe and healthy working environment for USAP personnel and visitors
- A continued high standard of environmental stewardship in Antarctica
- Reflecting the “active and influential presence” in Antarctica in a manner consistent with U.S. stature in the international research community
- Reflecting the professional nature of NSF and its scientific activities

These needs are important considerations in meeting USAP’s long-term goals and may generate conflicts in the use of available resources. To more fully respond to these needs, NSF has been preparing Master Plans for McMurdo and Palmer stations. In addition, NSF has been expanding planning efforts to address the needs of other USAP components including South Pole Station, field camps, vessels, and traverse capabilities. To address the issues and fulfill the purpose and need of the proposed action, two alternatives have been identified for evaluation in the CEE:

Alternative A—Implement the McMurdo Station Master Plan, Palmer Station Master Plan, South Pole Station renovation and maintenance plan; and maintain and improve traverse, field camp, and marine capabilities (Proposed Action). This alternative would include the modernization of McMurdo Station and Palmer Station through reconstruction, consolidation, and renovation of facilities. Critical maintenance as well as facility and infrastructure improvements would be made at the Amundsen-Scott South Pole Station. Traverse, field camp, and marine operations and capabilities would be maintained and enhanced to meet evolving science requirements, improve efficiencies, and continue to protect health, safety, and the environment.

Alternative B—Maintain facilities and capabilities at the current level of performance. This alternative maintains the “status quo” of USAP facilities and capabilities across the program, including at all three stations, camps, traverse, and vessels. This alternative represents the ‘No action’ alternative. The improvement or replacement of facilities to prevent major structural failures, and mitigate risks to health and safety, would be conducted on a modest, long-term implementation schedule.

The purpose of the public scoping process is to determine relevant issues that will influence the scope of the environmental analysis, including identification of viable alternatives, and guide the process for developing the CEE. At present, NSF has identified the following preliminary resource areas for analysis of potential impacts: Air quality, climate, marine and terrestrial biological resources, geological resources, glacial resources, water quality, groundwater resources, aesthetics, wilderness values, solid waste generation, and health and safety. Federal, state, and local agencies, along with other stakeholders that may be interested or affected by NSF’s decision on this proposal are invited to participate in the scoping process.

Dated: August 19, 2016.

Nadene G. Kennedy,

Polar Coordination Specialist, Division of Polar Programs.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on Reliability and PRA; Notice of Meeting

The ACRS Subcommittee on Reliability and PRA will hold a meeting on September 7, 2016, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Wednesday, September 7, 2016—1 p.m. Until 5 p.m.

The Subcommittee will be briefed on the activities of Risk-Informed Steering Committee from both the staff and the industry. The Subcommittee will hear presentations by and hold discussions with the NRC staff, the industry, and

interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), John Lai (Telephone 301-415-5197 or Email: John.Lai@nrc.gov) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Detailed procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on October 21, 2015 (80 FR 63846).

Detailed meeting agendas and meeting transcripts are available on the NRC Web site at <http://www.nrc.gov/reading-rm/doc-collections/acrs>. Information regarding topics to be discussed, changes to the agenda, whether the meeting has been canceled or rescheduled, and the time allotted to present oral statements can be obtained from the Web site cited above or by contacting the identified DFO. Moreover, in view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with these references if such rescheduling would result in a major inconvenience.

If attending this meeting, please enter through the One White Flint North Building, 11555 Rockville Pike, Rockville, Maryland. After registering with security, please contact Mr. Theron Brown (Telephone 240-888-9835) to be escorted to the meeting room.

Dated: August 17, 2016.

Mark L. Banks,

Chief, Technical Support Branch, Advisory Committee on Reactor Safeguards.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on T-H Phenomena; Notice of Meeting

The ACRS Subcommittees on T-H Phenomenon and Metallurgy & Reactor Fuels will hold a meeting on September 19, 2016, Room T-2B1, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance with the exception of portions that may be closed to protect information that is proprietary pursuant to 5 U.S.C. 552b(c)(4). The agenda for the subject meeting shall be as follows:

Monday, September 19, 2016—8:30 a.m. Until 5 p.m.

The Subcommittee will review the fidelity of methods and codes for operation at AREVA's Extended Flow Window (plant-specific Monticello). The Subcommittee will hear presentations by and hold discussions with the NRC staff regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Zena Abdullahi (Telephone 301-415-8716 or Email: Zena.Abdullahi@nrc.gov) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Detailed procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on October 21, 2015, (80 FR 63846).

Detailed meeting agendas and meeting transcripts are available on the NRC Web site at <http://www.nrc.gov/reading-rm/doc-collections/acrs>. Information regarding topics to be discussed, changes to the agenda, whether the meeting has been canceled or rescheduled, and the time allotted to

present oral statements can be obtained from the Web site cited above or by contacting the identified DFO.

Moreover, in view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with these references if such rescheduling would result in a major inconvenience.

If attending this meeting, please enter through the One White Flint North building, 11555 Rockville Pike, Rockville, MD. After registering with security, please contact Mr. Theron Brown (Telephone 240-888-9835) to be escorted to the meeting room.

Dated: August 16, 2016.

Mark L. Banks,

Chief, Technical Support Branch, Advisory Committee on Reactor Safeguards.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-275 and 50-323; NRC-2009-0552]

Pacific Gas and Electric Company; Diablo Canyon Power Plant, Units 1 and 2; Annual Updates to License Renewal Application

AGENCY: Nuclear Regulatory Commission.

ACTION: Exemption; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing an exemption in response to an August 1, 2016, request from Pacific Gas and Electric Company (PG&E), which requested an exemption from the requirement to submit annual updates to its license renewal application (LRA) for Diablo Canyon Power Plant (DCPP), Units 1 and 2. The NRC staff reviewed this request and determined that it is appropriate to grant the exemption while the review of the LRA remains suspended.

DATE: The exemption is effective on August 24, 2016.

ADDRESSES: Please refer to Docket ID NRC-2009-0552 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- Federal Rulemaking Web site: Go to <http://www.regulations.gov> and search for Docket ID NRC-2009-0552. Address questions about NRC dockets to Carol Gallagher; telephone: 301-415-3463;

email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- NRC's Agencywide Documents Access and Management System (ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that a document is referenced.

- NRC's PDR: You may examine and purchase copies of public documents at the NRC's PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT:

Michael J. Wentzel, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington DC 20555-0001; telephone: 301-415-6459; email: Michael.Wentzel@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Background

By letter dated November 23, 2009 (ADAMS Package No. ML093340125), PG&E submitted an application pursuant to part 54 of title 10 of the *Code of Federal Regulations* (10 CFR) for the renewal of Facility Operating Licenses DPR-80 and DPR-82 for DCP. A notice of acceptance for docketing of the application and opportunity for hearing regarding renewal of the facility operating licenses was published in the **Federal Register** on January 21, 2010 (75 FR 3493). On June 21, 2016, PG&E notified the NRC that it had reached an agreement in principle with various stakeholders to not proceed with the DCP license renewal and requested that the NRC suspend activity on the LRA, pending approval of the agreement by the California Public Utilities Commission (ADAMS Accession No. ML16173A454). On July 28, 2016, the NRC staff notified PG&E that it had suspended its review of the DCP LRA (ADAMS Accession No. ML16193A599). Although the NRC staff has suspended its review of the DCP LRA, the NRC's regulations at 10 CFR 54.21(b) would still require PG&E to provide an annual update to its LRA identifying changes made to the current licensing basis

(CLB) for DCP that materially affect the LRA, absent this exemption request.

II. Request/Action

Pursuant to 10 CFR 54.15, "Specific exemptions," which references 10 CFR 50.12, PG&E's letter dated August 1, 2016 (ADAMS Accession No. ML16214A369), requested an exemption from the requirements of 10 CFR 54.21, "Contents of application—technical information," paragraph (b), related to the schedule for submitting periodic updates to the DCP LRA, while the NRC staff's review of the DCP LRA is suspended. Given PG&E's request for approval from the California Public Utilities Commission to not proceed with license renewal for DCP, PG&E is requesting exemption from the requirements in 10 CFR 54.21(b). Should the California Public Utilities Commission deny PG&E's request and direct PG&E to pursue license renewal, PG&E would provide an amendment to the DCP LRA that identifies changes to the CLB of the facility that materially affect the contents of the LRA by a date agreed upon between PG&E and the NRC.

III. Discussion

Pursuant to 10 CFR 54.15, the Commission may, upon application by any interested person or upon its own initiative, grant exemptions from the requirements of the regulations of 10 CFR part 54, in accordance with 10 CFR 50.12, when (1) the exemptions are authorized by law, will not present an undue risk to the public health and safety, and are consistent with the common defense and security; and (2) special circumstances are present. As applicable to the requested exemption, special circumstances exist when application of the regulation in the particular circumstances would not serve the underlying purpose of the rule or is not necessary to achieve the underlying purpose of the rule (10 CFR 50.12(a)(2)(ii)).

The purpose of 10 CFR 54.21(b) is to ensure that the effect of changes to a renewal applicant's existing licensing basis is evaluated during the review of a renewal application (56 FR 64954). As referenced above, the NRC staff has suspended its review of the DCP LRA in response to PG&E's June 21, 2016, request. As such, the NRC staff would not review an update to the DCP LRA, should it be provided; therefore, updating the LRA while the review is suspended is unnecessary to achieve the underlying purpose of the rule. Should PG&E resume the license renewal process for DCP, the NRC will require it to provide an amendment to the DCP

LRA that identifies applicable changes to the CLB of the facility since the period of time covered in PG&E's December 21, 2015, update (ADAMS Accession No. ML16004A149) by a date agreed upon between PG&E and the NRC.

Authorized by Law

Pursuant to 10 CFR 54.15, and in accordance with 10 CFR 50.12, the NRC may grant an exemption from the requirements of 10 CFR part 54, if the exemption is authorized by law. The exemption is authorized by law in that no other prohibition of law exists to preclude the activities which would be authorized by the exemption. Granting this exemption will provide PG&E with relief from the requirements of 10 CFR 54.21(b) while review of the DCP LRA is suspended and will not result in a violation of the Atomic Energy Act of 1954, as amended, or the NRC's regulations. Therefore, this exemption request is authorized by law.

No Undue Risk to Public Health and Safety

The underlying purpose of 10 CFR 54.21(b) is to ensure that changes made to the CLB of a facility that materially affect an LRA are reflected in a timely manner over the course of the NRC staff's review. The requested exemption is administrative in nature, in that it pertains to the schedule for submitting periodic updates of an application for renewal under 10 CFR part 54. Based on the nature of the requested exemption as described above, no new accident precursors are created by the exemption. As a result, neither the probability, nor the consequences, of postulated accidents are increased. Therefore, the requested exemption does not result in any undue risk to public health and safety.

Consistent With Common Defense and Security

The requested exemption would exempt PG&E from providing updates to the DCP LRA while review of the LRA is suspended. This proposed change has no relation to security issues. Therefore, the common defense and security is not impacted by the exemption.

Special Circumstances

Special circumstances, in accordance with 10 CFR 50.12(a)(2), are present whenever application of the regulation in the particular circumstances would not serve the underlying purpose of the rule or is not necessary to achieve the underlying purpose of the rule (10 CFR 50.12(a)(2)(ii)).

As discussed above, the requested exemption will exempt PG&E from submitting LRA updates while the NRC's review of the application is suspended. Because the NRC staff would not review an update to the DCPD LRA, should it be provided, application of 10 CFR 54.21(b) is not necessary to achieve the underlying purpose of the rule. Therefore, special circumstances exist under 10 CFR 50.12(a)(2)(ii).

Eligibility for Categorical Exclusion From Environmental Review

With respect to the exemption's impact on the quality of the human environment, the NRC has determined that this specific exemption request is eligible for categorical exclusion as identified in 10 CFR 51.22(c)(25). Under 10 CFR 51.22(c)(25), granting of an exemption from the requirements of any regulation of 10 CFR chapter 1 (which includes 10 CFR 54.21(b)) is an action that is a categorical exclusion, provided that it meets the requirements of 10 CFR 51.22(c)(25)(i) through (vi). The NRC staff's determination that each of the applicable criteria for this categorical exclusion is met as follows:

I. 10 CFR 51.22(c)(25)(i): There is no significant hazards consideration.

Staff Analysis: The criteria for determining if an exemption involves a significant hazards consideration are found in 10 CFR 50.92. The action involves only changes regarding the submission of updates to an application for which the licensing review is currently suspended. Therefore, there are no significant hazard considerations because granting the exemption would not:

- (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or
- (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or
- (3) Involve a significant reduction in a margin of safety.

II. 10 CFR 51.22(c)(25)(ii): There is no significant change in the types or significant increase in the amounts of any effluents that may be released offsite.

Staff Analysis: The proposed action involves only a change regarding the submission of updates, which is administrative in nature, and does not involve any changes in the types or significant increase in the amounts of effluents that may be released offsite.

III. 10 CFR 51.22(c)(25)(iii): There is no significant increase in individual or cumulative public or occupational radiation exposure.

Staff Analysis: Since the proposed action involves only a change regarding the submission of updates, which is administrative in nature, it does not contribute to any significant increase in occupational or public radiation exposure.

IV. 10 CFR 51.22(c)(25)(iv): There is no significant construction impact.

Staff Analysis: Since the proposed action involves only a change regarding the submission of updates, which is administrative in nature; it does not involve any construction impact.

V. 10 CFR 51.22(c)(25)(v): There is no significant increase in the potential for or consequences from radiological accidents.

Staff Analysis: The proposed action involves only a change regarding the submission of updates, which is administrative in nature and does not impact the probability or consequences of accidents.

VI. 10 CFR 51.22(c)(25)(vi): The requirements from which this exemption is sought involve 10 CFR 51.22(c)(25)(vi)(B) (reporting requirements) and 10 CFR 51.22(c)(25)(vi)(G) (scheduling requirements).

Staff Analysis: The exemption request involves requirements in both of these categories because it involves suspending the requirement contained in 10 CFR 54.21(b) to provide an update to the DCPD LRA each year following submittal of the LRA.

IV. Conclusions

The NRC has determined that, pursuant to 10 CFR 54.15, and in accordance with 10 CFR 50.12, the exemption is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security. Also, special circumstances exist under 10 CFR 50.12(a)(2)(ii). Therefore, the NRC hereby grants PG&E this exemption from the requirements of 10 CFR 54.21(b) to allow PG&E to dispense with the submission of updates to the DCPD LRA while the NRC's review of the LRA is suspended. Should PG&E resume the license renewal process for DCPD, the NRC will require it to provide an amendment to the DCPD LRA that identifies applicable changes to the CLB of the facility since the period of time covered in PG&E's December 21, 2015, update by a date agreed upon between PG&E and the NRC.

Additionally, pursuant to 10 CFR 51.22, the Commission has determined that the exemption request meets the applicable categorical exclusion criteria set forth in 10 CFR 51.22(c)(25), and the granting of this exemption will not have

a significant effect on the quality of the human environment.

Dated at Rockville, Maryland, this 17th Day of August 2016.

For the Nuclear Regulatory Commission.

Jane E. Marshall,

Acting Director, Division of License Renewal, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on Digital I&C Systems; Notice of Meeting

The ACRS Subcommittee on Digital I&C Systems will hold a meeting on September 7, 2016, Room T-2B1, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Wednesday, September 7, 2016—8:30 a.m. Until 12 p.m.

The Subcommittee will review the Methods for Assuring Safety and Dependability when Applying Digital Instrumentation and Control Systems. The Subcommittee will hear presentations by and hold discussions with the NRC staff, representatives from EPRI, and other interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Christina Antonescu (Telephone 301-415-6792 or Email: Christina.Antonescu@nrc.gov) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Detailed procedures for the conduct of

and participation in ACRS meetings were published in the **Federal Register** on October 21, 2015, (80 FR 63846).

Detailed meeting agendas and meeting transcripts are available on the NRC Web site at <http://www.nrc.gov/reading-rm/doc-collections/acrs>. Information regarding topics to be discussed, changes to the agenda, whether the meeting has been canceled or rescheduled, and the time allotted to present oral statements can be obtained from the Web site cited above or by contacting the identified DFO.

Moreover, in view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with these references if such rescheduling would result in a major inconvenience.

If attending this meeting, please enter through the One White Flint North Building, 11555 Rockville Pike, Rockville, MD. After registering with security, please contact Mr. Theron Brown (Telephone 240-888-9835) to be escorted to the meeting room.

Dated: August 17, 2016.

Mark L. Banks,

Chief, Technical Support Branch, Advisory Committee on Reactor Safeguards.

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS); Meeting of the ACRS Subcommittee on Metallurgy & Reactor Fuels; Notice of Meeting

The ACRS Subcommittee on Metallurgy & Reactor Fuels will hold a meeting on September 20, 2016, Room T-2B1, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Tuesday, September 20, 2016—8:30 a.m. until 12:00 p.m.

The Subcommittee will discuss the draft Managing Aging Processes in Storage (MAPS) Report. The Subcommittee will hear presentations by and hold discussions with the NRC staff and other interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Christopher Brown (Telephone 301-415-7111 or Email: Christopher.Brown@nrc.gov) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS); Meeting of the ACRS Subcommittee on Planning and Procedures; Notice of Meeting

The ACRS Subcommittee on Planning and Procedures will hold a meeting on September 8, 2016, Room T-2B3, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance with the exception of a portion that may be closed pursuant to 5 U.S.C. 552b(c)(2) and (6) to discuss organizational and personnel matters that relate solely to the internal personnel rules and practices of the ACRS, and information the release of which would constitute a clearly unwarranted invasion of personal privacy.

The agenda for the subject meeting shall be as follows:

Thursday, September 8, 2016—12 p.m. Until 1 p.m.

The Subcommittee will discuss proposed ACRS activities and related matters. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Quynh Nguyen (Telephone 301-415-5844 or Email: Quynh.Nguyen@nrc.gov) five days prior to the meeting, if possible, so that arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. BILLING CODE 7590-01-P

OFFICE OF PERSONNEL MANAGEMENT

[OMB Control No. 3206-0131]

Revision of Information Collection: Combined Federal Campaign Applications

AGENCY: U.S. Office of Personnel Management.

ACTION: 30-Day notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104-13, May 22, 1995), this notice announces that the Office of Personnel Management intends to submit to the Office of Management and Budget (OMB) a request for clearance to revise an information collection. Combined Federal Campaign Applications, OMB Control No. 3206-0131, which include OPM Forms 1647-A, -B, and -E, are used to review the eligibility of national, international, and local charitable organizations and Department of Defense morale, welfare, and recreation (MWR)/Family Support and Youth Activities/Programs (FSYA/FSYP) organizations that wish to participate in the Combined Federal Campaign. The proposed revisions reflect changes in eligibility guidance from the Office of Personnel Management. On March 10, 2016, we published a 60-day notice and request for comments. We received two comments recommending the addition of a “thank you statement” field that would facilitate immediate acknowledgement of electronic pledges. This recommended revision is included below.

We estimate 20,500 responses to this information collection annually. Each form takes approximately three hours to complete. The annual estimated burden is 40,500 hours.

DATES: Comments are encouraged and will be accepted until September 23, 2016. This process is conducted in accordance with 5 CFR 1320.1.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management Budget, 725 17th Street NW., Washington, DC 20503, Attention: Desk Officer for the Office of Personnel Management or sent via electronic mail to oira_submission@omb.eop.gov or faxed to (202) 395-6974.

FOR FURTHER INFORMATION CONTACT: A copy of this ICR, with applicable supporting documentation, may be obtained by contacting the Office of Information and Regulatory Affairs, Office of Management Budget, 725 17th Street NW., Washington, DC 20503, Attention: Desk Officer for the Office of Personnel Management or sent via electronic mail to oira_submission@omb.eop.gov or faxed to (202) 395-6974. **SUPPLEMENTARY INFORMATION:** The Office of Management and Budget is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected; and
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

The Combined Federal Campaign (CFC) is the world's largest and most successful annual workplace philanthropic giving campaign, with 127 CFC campaigns throughout the country and overseas raising millions of dollars each year. The mission of the CFC is to promote and support philanthropy through a program that is employee focused, cost-efficient, and effective in providing all federal employees the opportunity to improve the quality of life for all.

The CFC charity applications collect information from about 20,500 national, international, and local charities for

inclusion on the CFC charity list. This ICR is being revised to accommodate presentation in an online CFC charity application format. Revisions include:

1. The addition of name and email fields for CFC application system account creation;
2. the inclusion of electronic fund transfer (EFT) information (for national and international charities);
3. the addition of a “thank you statement” field to facilitate immediate acknowledgement of electronic pledges;
4. the addition of three questions surrounding volunteers opportunities and solicitation of federal employees for these opportunities;
5. design of the schedule of services to align with an online form; and
6. revision of certification statements to make them parallel with eligibility requirements at 5 CFR 950 as revised April 16, 2014, effective January 1, 2017.

U.S. Office of Personnel Management.

Beth F. Cobert,
Acting Director.

BILLING CODE 6325-46-P

SECURITIES AND EXCHANGE COMMISSION

Submission for OMB Review; Comment Request

Upon Written Request, Copies Available
From: Securities and Exchange
Commission, Office of FOIA Services,
100 F Street NE., Washington, DC
20549-2736.

Extension:

Rule 19b-4 and Form 19b-4 Filings with Respect to Proposed Rule Changes, Securities-Based Swap Submissions, and Advance Notices by Self-Regulatory Organizations and the Security-Based Swap Stay of Clearing Requirement; SEC File No. 270-38, OMB Control No. 3235-0045.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (“PRA”) (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (“Commission”) has submitted to the Office of Management and Budget (“OMB”) a request for approval of extension of the of the previously approved collection of information provided for in Rule 19b-4 (17 CFR 240.19b-4), under the Securities Exchange Act of 1934 (“Act”) (15 U.S.C. 78a *et seq.*).

Section 19(b) of the Act (15 U.S.C. 78s(b)) requires each self-regulatory organization (“SRO”) to file with the Commission copies of any proposed

rule, or any proposed change in, addition to, or deletion from the rules of such SRO. Rule 19b-4 implements the requirements of Section 19(b) by requiring the SROs to file their proposed rule changes on Form 19b-4 and by clarifying which actions taken by SROs are subject to the filing requirement set forth in Section 19(b). Rule 19b-4(n) requires a designated clearing agency to provide the Commission advance notice ("Advance Notice") of any proposed change to its rules, procedures, or operations that could materially affect the nature or level of risks presented by such clearing agency. Rule 19b-4(o) requires a registered clearing agency to submit for a Commission determination any security-based swap, or any group, category, type, or class of security-based swaps it plans to accept for clearing ("Security-Based Swap Submission"), and provide notice to its members of such submissions.

The collection of information is designed to provide the Commission with the information necessary to determine, as required by the Act, whether the proposed rule change is consistent with the Act and the rules thereunder. The information is used to determine if the proposed rule change should be approved, disapproved, suspended, or if proceedings should be instituted to determine whether to approve or disapprove the proposed rule change.

The respondents to the collection of information are SROs (as defined by Section 3(a)(26) of the Act),¹ including national securities exchanges, national securities associations, registered clearing agencies, notice registered securities future product exchanges, and the Municipal Securities Rulemaking Board.

In calendar year 2015, each respondent filed an average of approximately 57 proposed rule changes. Each filing takes approximately 39 hours to complete on average. Thus, the total annual reporting burden for filing proposed rule changes with the Commission is 86,697 hours (57 proposals per year \times 39 SROs \times 39 hours per filing) for the estimated future number of 39 SROs.² In addition to filing their proposed rule changes with the Commission, the respondents also

are required to post each of their proposals on their respective Web sites, a process that takes approximately four hours to complete per proposal. Thus, for 1,935 proposals, the total annual reporting burden on respondents to post the proposals on their Web sites is 7,740 hours (1,935 proposals per year \times 4 hours per filing) or 8,892 hours (57 proposals per year \times 39 SROs \times 4 hours per filing) for the estimated future number of 39 SROs. Further, the respondents are required to update their rulebooks, which they maintain on their Web sites, to reflect the changes that they make in each proposal they file. Thus, for all filings that were not withdrawn by a respondent (240 withdrawn filings in calendar year 2015) or disapproved by the Commission (6 disapproved filings in calendar year 2015), the respondents were required to update their online rulebooks to reflect the effectiveness of 1,689 proposals, each of which takes approximately four hours to complete per proposal. Thus, the total annual reporting burden for updating online rulebooks is 7,764 hours ((2,223 filings per year – 275 withdrawn filings³ – 7 disapproved filings⁴) \times 4 hours). Finally, a respondent is required to notify the Commission if it does not post a proposed rule change on its Web site on the same day that it filed the proposal with the Commission. The Commission estimates that SROs will fail to post proposed rule changes on their Web sites on the same day as the filing 22 times a year (across all SROs), and that each SRO will spend approximately one hour preparing and submitting such notice to the Commission, resulting in a total annual burden of 22 hours (22 notices \times 1 hour per notice).

Designated clearing agencies have additional information collection burdens. As noted above, pursuant to Rule 19b-4(n), a designated clearing agency must file with the Commission an Advance Notice of any proposed change to its rules, procedures, or operations that could materially affect the nature or level of risks presented by such designated clearing agency. The Commission estimates that four designated clearing agencies will each submit five Advance Notices per year, with each submission taking 90 hours to complete. The total annual reporting burden for filing Advance Notices is

therefore 1,800 hours (4 designated clearing agencies \times 5 Advance Notices per year \times 90 hours per response).

Designated clearing agencies are required to post all Advance Notices to their Web sites, each of which takes approximately four hours to complete. For five Advance Notices, the total annual reporting burden for posting them to respondents' Web sites is 80 hours (4 designated clearing agencies \times 5 Advance Notices per year \times 4 hours per Web site posting). Respondents are required to update the postings of those Advance Notices that become effective, each of which takes approximately four hours to complete. The total annual reporting burden for updating Advance Notices on the respondents' Web sites is 80 hours (4 designated clearing agencies \times 5 Advance Notices per year \times 4 hours per Web site posting).

Pursuant to Rule 19b-4(n)(5), the respondents are also required to provide copies of all materials submitted to the Commission relating to an Advance Notice to the Board of Governors of the Federal Reserve System ("Board") contemporaneously with such submission to the Commission, which is estimated to take two hours. The total annual reporting burden for designated clearing agencies to meet this requirement is 40 hours (4 designated clearing agencies \times 5 Advance Notices per year \times 2 hours per response).

The Commission estimates that three security-based swap clearing agencies will each submit 20 Security-Based Swap Submissions per year, with each submission taking 140 hours to complete resulting in a total annual reporting burden of 8,400 hours (3 respondent clearing agencies \times 20 Security-Based Swap Submissions per year \times 140 hours per response). Respondent clearing agencies are required to post all Security-Based Swap Submissions to their Web sites, each of which takes approximately four hours to complete. For 20 Security-Based Swap Submissions, the total annual reporting burden for posting them to the three respondents' Web sites is 240 hours (3 respondent clearing agencies \times 20 Security-Based Swap Submissions per year \times 4 hours per Web site posting). In addition, three clearing agencies that have not previously posted Security-Based Swap Submissions, Advance Notices, and proposed rule changes on their Web sites may need to update their existing Web sites to post such filings online. The Commission estimates that each of these three clearing agencies would spend approximately 15 hours updating its existing Web site, resulting in a total one-time burden of 45 hours (3

¹ 15 U.S.C. 78c(a)(26).

² For most of 2015, 34 SROs were registered. One registered SRO withdrew in December 2015 and one SRO newly registered with the Commission in January 2016. The Commission expects five additional respondents to register during the three-year period for which this PRA Extension is applicable (three as registered clearing agencies and two as national securities exchanges), bringing the total number of respondents to 39.

³ For 34 SROs, 240 withdrawn filings equal approximately 7.06 filings per SRO. For 39 SROs, the figure would increase to 275 withdrawn filings.

⁴ For 34 SROs, six disapproved filings equal approximately 0.18 filings per SRO. For 39 SROs, the figure would increase to seven disapproved filings.

respondent clearing agencies × 15 hours per Web site update) or 15 hours annualized over three years.

Respondent clearing agencies will also have to provide training to staff members using the Electronic Form 19b-4 Filing System ("EFFS") to submit Security-Based Swap Submissions, Advance Notices, and/or proposed rule changes electronically. The Commission estimates that one anticipated security-based swap clearing agency will spend approximately 20 hours training all staff members who will use EFFS to submit Security-Based Swap Submissions, Advance Notices, and/or proposed rule changes electronically, or 6.7 hours annualized over three years. The Commission also estimates that one anticipated clearing agency will have a one-time burden of 130 hours to draft and implement internal policies and procedures for using EFFS to make these submissions, or 43.3 hours annualized over three years. The Commission estimates that each of the 39 respondents will spend 10 hours each year training new compliance staff members and updating the training of existing compliance staff members to use EFFS, for a total annual burden of 390 hours (39 respondent SROs × 10 hours).

In connection with Security-Based Swap Submissions, counterparties may apply for a stay from a mandatory clearing requirement under Rule 3Ca-1. The Commission estimates that each clearing agency will submit five applications for stays from a clearing requirement per year and it will take approximately 18 hours to retrieve, review, and submit each application. Thus, the total annual reporting burden for the Rule 3Ca-1 stay of clearing requirement would be 270 hours (3 respondent clearing agencies × 5 stay of clearing applications per year × 18 hours to retrieve, review, and submit the stay of clearing information).

Based on the above, the total estimated annual response burden pursuant to Rule 19b-4 and Form 19b-4 is the sum of the total annual reporting burdens for filing proposed rule changes, Advance Notices, and Security-Based Swap Submissions; training staff to file such proposals; drafting, modifying, and implementing internal policies and procedures for filing such proposals; posting each proposal on the respondents' Web sites; updating Web sites to enable posting of proposals; updating the respondents' online rulebooks to reflect the proposals that became effective; submitting copies of Advance Notices to the Board; and applying for stays from clearing requirements, which is 114,740 hours.

Compliance with Rule 19b-4 is mandatory. Information received in response to Rule 19b-4 shall not be kept confidential; the information collected is public information.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

The public may view background documentation for this information collection at the following Web site, www.reginfo.gov. Comments should be directed to: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, New Executive Office Building, Washington, DC 20503, or by sending an email to: Shagufta_Ahmed@omb.eop.gov; and (ii) Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or by sending an email to: PRA_Mailbox@sec.gov. Comments must be submitted to OMB within 30 days of this notice.

Dated: August 19, 2016.

Brent J. Fields,

Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78617; File No. SR-FINRA-2015-054]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Order Approving Rule Change as Modified by Amendment Nos. 1 and 2 To Adopt FINRA Capital Acquisition Broker Rules

August 18, 2016.

I. Introduction

On December 4, 2015, the Financial Industry Regulatory Authority, Inc. ("FINRA") filed with the Securities and Exchange Commission (the "Commission" or "SEC"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Exchange Act")¹ and Rule 19b-4 thereunder,² proposed rule change SR-FINRA-2015-054, pursuant to which FINRA proposed to adopt a rule set that would apply exclusively to firms that meet the definition of "capital acquisition broker" ("CAB") and that elect to be

governed under this rule set (collectively, the "CAB rules").

The Commission published the proposed rule change for public comment in the **Federal Register** on December 23, 2015.³ On January 28, 2016, FINRA extended the time period in which the Commission must approve the proposed rule change, disapprove the proposed rule change or institute proceedings to determine whether to approve or disapprove the proposed rule change to March 22, 2016. On March 17, 2016, the Commission instituted proceedings pursuant to Section 19(b)(2)(B) of the Exchange Act⁴ to determine whether to approve or disapprove the proposed rule change.⁵ The Commission received 18 comment letters on the proposal.⁶

In response to comments, on March 29, 2016 FINRA filed a partial amendment ("Amendment No. 1") to its proposed rule change to amend CAB Rule 016(c)(2) to clarify that the definition of "capital acquisition broker" does not include any broker or

dealer that effects securities transactions that would require the broker or dealer to report the transaction under the FINRA Rules 6300 Series, 6400 Series, 6500 Series, 6600 Series, 6700 Series, 7300 Series or 7400 Series. The Commission published Amendment No. 1 for public comment in the **Federal Register** on April 15, 2016.⁷ The Commission received one additional comment.⁸

FINRA filed a second amendment on June 28, 2016 ("Amendment No. 2") to amend proposed CAB Rule 016(c)(1)(F) regarding a CAB's authority to engage in qualifying, identifying, soliciting, or acting as a placement agent or finder in connection with unregistered securities transactions. The Commission published Amendment No. 2 for public comment in the **Federal Register** on July 7, 2016.⁹ The Commission received one comment letter on Amendment No. 2.¹⁰ FINRA responded to all of the comment letters on August 16, 2016.¹¹

This order grants approval of the proposed rule change, as modified by Amendment Nos. 1 and 2.

II. Description of the Rule Change¹²

FINRA states that there are firms that are solely corporate financing firms that advise companies on mergers and acquisitions, advise issuers on raising debt and equity capital in private placements with institutional investors, or provide advisory services on a consulting basis to companies that need assistance analyzing their strategic and financial alternatives. FINRA explains that these firms often are registered as broker-dealers because of their activities and because they may receive transaction-based compensation as part of their services. Nevertheless, FINRA believes that these firms do not engage in many of the types of activities typically associated with traditional broker-dealers. For example, these firms typically do not carry or act as an

introducing broker with respect to customer accounts, handle customer funds or securities, accept orders to purchase or sell securities either as principal or agent for the customer, exercise investment discretion on behalf of any customer, or engage in proprietary trading of securities or market-making activities. Therefore, FINRA proposed to create a separate rule set to apply to firms that meet the definition of CAB and elect to be governed under this rule set.

The proposed rules subject CABs to the FINRA By-Laws, as well as core FINRA rules that FINRA believes should apply to all of its members. The rule set applicable to CABs also includes other FINRA rules that are tailored to address CABs' business activities. A brief description of the rule set for CABs is included below.

A. General Standards

CAB Rule 014 provides that all persons that have been approved for membership in FINRA as a CAB and persons associated with CABs shall be subject to the CAB rules and the FINRA By-Laws (including the schedules thereto), unless the context requires otherwise. CAB Rule 015 provides that FINRA Rule 0150(b) shall apply to CABs. FINRA Rule 0150(b) provides that the FINRA rules do not apply to transactions in, and business activities relating to, municipal securities as that term is defined in the Exchange Act.

CAB Rule 016 sets forth basic definitions that apply to CABs. The proposed definitions of "capital acquisition broker" and "institutional investor" are particularly important to the application of the rule set. The term "capital acquisition broker" means any broker that solely engages in one or more of the following activities:

- Advising an issuer, including a private fund, concerning its securities offerings or other capital raising activities;
- advising a company regarding its purchase or sale of a business or assets or regarding its corporate restructuring, including a going-private transaction, divestiture or merger;
- advising a company regarding its selection of an investment banker;
- assisting in the preparation of offering materials on behalf of an issuer;
- providing fairness opinions, valuation services, expert testimony, litigation support, and negotiation and structuring services;
- qualifying, identifying, soliciting, or acting as a placement agent or finder (i) on behalf of an issuer in connection with a sale of newly-issued, unregistered securities to institutional

investors or (ii) on behalf of an issuer or control person in connection with a change of control of a privately-held company. For purposes of this part, a "control person" is a person who has the power to direct the management or policies of a company through ownership of securities, by contract, or otherwise. Control will be presumed to exist if, before the transaction, the person has the right to vote or the power to sell or direct the sale of 25% or more of a class of voting securities or in the case of a partnership or limited liability company has the right to receive upon dissolution or has contributed 25% or more of the capital. Also, for purposes of this part, a "privately-held company" is a company that does not have any class of securities registered, or required to be registered, with the SEC under Section 12 of the Exchange Act or with respect to which the company files, or is required to file, periodic information, documents, or reports under Section 15(d) of the Exchange Act;¹³ and

- effecting securities transactions solely in connection with the transfer of ownership and control of a privately-held company through the purchase, sale, exchange, issuance, repurchase, or redemption of, or a business combination involving, securities or assets of the company, to a buyer that will actively operate the company or the business conducted with the assets of the company, in accordance with the terms and conditions of an SEC rule, release, interpretation or "no-action" letter that permits a person to engage in such activities without having to register as a broker or dealer pursuant to Section 15(b) of the Exchange Act.¹⁴

A firm will be permitted to register as, or change its status to, a CAB *only* if the firm solely engages in one or more of these activities.

The term "capital acquisition broker" does not include any broker or dealer that:

- Carries or acts as an introducing broker with respect to customer accounts;
- holds or handles customers' funds or securities;
- accepts orders from customers to purchase or sell securities either as principal or as agent for the customer (except as permitted by paragraphs (c)(1)(F) and (G) of CAB Rule 016);

¹³ See Notice of Amendment No.2, *supra* note 9, 81 FR at 44373 (amending this prong of the proposed definition of CAB). Originally, this prong of the definition of CAB included a broker "qualifying, identifying, soliciting, or acting as a placement agent or finder with respect to institutional investors in connection with purchases or sales of unregistered securities." Notice of Filing, *supra* note 3, 80 FR at 79970.

¹⁴ See CAB Rule 016(c)(1).

⁷ Exchange Act Release No. 77581 (April 11, 2016), 81 FR 22333 (April 15, 2016) (Notice of Filing of Partial Amendment No. 1 to Proposed Rule Change to Adopt FINRA Capital Acquisition Broker Rules) ("Notice of Amendment No.1").

⁸ See letter from Anonymous dated May 3, 2016 (stating "Good").

⁹ Exchange Act Release No. 78220 (July 1, 2016), 81 FR 44372 (July 7, 2016) (Notice of Filing of Partial Amendment No. 2 to Proposed Rule Change to Adopt FINRA Capital Acquisition Broker Rules) ("Notice of Amendment No.2").

¹⁰ See letter from Kent J. Lund, SDR Capital Markets, Inc., dated July 15, 2016 ("SDR Letter").

¹¹ See letter from Joseph Savage, FINRA, dated August 16, 2016 ("FINRA Response").

¹² For a more detailed description of the proposed rule change, see the Notice of Filing, *supra* note 3, Notice of Amendment No.1, *supra* note 7, and Notice of Amendment No.2, *supra* note 9, which were substantially prepared by FINRA.

- has investment discretion on behalf of any customer;
- engages in proprietary trading of securities or market-making activities;
- participates in or maintains an online platform in connection with offerings of unregistered securities pursuant to Regulation Crowdfunding or Regulation A under the Securities Act of 1933; or
- effects securities transactions that will require the broker or dealer to report the transaction under the FINRA Rules 6300 Series, 6400 Series, 6500 Series, 6600 Series, 6700 Series, 7300 Series or 7400 Series.¹⁵

The term “institutional investor” has substantially the same meaning as that term has under FINRA Rule 2210 (Communications with the Public). The term includes any:

- Bank, savings and loan association, insurance company or registered investment company;
- governmental entity or subdivision thereof;
- employee benefit plan, or multiple employee benefit plans offered to employees of the same employer, that meet the requirements of Section 403(b) or Section 457 of the Internal Revenue Code and in the aggregate have at least 100 participants, but does not include any participant of such plans;
- qualified plan, as defined in Section 3(a)(12)(C) of the Exchange Act, or multiple qualified plans offered to employees of the same employer, that in the aggregate have at least 100 participants, but does not include any participant of such plans;
- other person (whether a natural person, corporation, partnership, trust, family office or otherwise) with total assets of at least \$50 million;
- person meeting the definition of “qualified purchaser” as that term is defined in Section 2(a)(51) of the Investment Company Act of 1940 (“1940 Act”); and
- person acting solely on behalf of any such institutional investor.

B. FINRA Membership

The CAB Rule 100 Series sets forth the requirements for a firm that wishes to register as a CAB. The CAB Rule 100 Series generally incorporates by reference FINRA Rules 1010 (Electronic Filing Requirements for Uniform Forms), and 1122 (Filing of Misleading

Information as to Membership or Registration), and NASD Rules 1011 (Definitions), 1012 (General Provisions), 1013 (New Member Application and Interview), 1014 (Department Decision), 1015 (Review by National Adjudicatory Council), 1016 (Discretionary Review by FINRA Board), 1017 (Application for Approval of Change in Ownership, Control, or Business Operations), 1019 (Application to Commission for Review), 1090 (Foreign Members), 1100 (Foreign Associates) and IM-1011-1 (Safe Harbor for Business Expansions). Accordingly, a CAB applicant will follow the same procedures for membership as any other FINRA applicant, with four modifications.

- First, an applicant for membership that seeks to qualify as a CAB will have to state in its application that it intends to operate solely as such.
- Second, in reviewing an application for membership as a CAB, the FINRA Member Regulation Department will consider, in addition to the standards for admission set forth in NASD Rule 1014, whether the applicant’s proposed activities are consistent with the limitations imposed on CABs under CAB Rule 016(c).
- Third, CAB Rule 116(b) sets forth the procedures for an existing FINRA firm to change its status to a CAB. If an existing firm is already approved to engage in the activities of a CAB, and the firm does not intend to change its existing ownership, control or business operations, it will not be required to file either a New Member Application (“NMA”) or a Change in Membership Application (“CMA”). Instead, the firm will be required to file a request to amend its membership agreement or obtain a membership agreement (if none exists currently) to provide that: (i) The firm’s activities will be limited to those permitted for CABs under CAB Rule 016(c), and (ii) the firm agrees to comply with the CAB rules.¹⁶
- Fourth, CAB Rules 116(c) and (d) set forth the procedures for an existing CAB to terminate its status as such and continue as a FINRA firm. Under Rule 116(c), such a firm will be required to file a CMA with the FINRA Member Regulation Department, and to amend its membership agreement to provide that the firm agrees to comply with all FINRA rules.¹⁷

Under CAB Rule 116(d), however, if during the first year following an existing FINRA member firm’s

amendment to its membership agreement to convert a full-service broker-dealer to a CAB pursuant to Rule 116(b) a CAB seeks to terminate its status as such and continue as a FINRA member firm, the CAB may notify the FINRA Membership Application Program group of this change without having to file an application for approval of a material change in business operations pursuant to NASD Rule 1017. The CAB will instead file a request to amend its membership agreement to provide that the member firm agrees to comply with all FINRA rules, and execute an amended membership agreement that imposes the same limitations on the member firm’s activities that existed prior to the member firm’s change of status to a CAB.¹⁸

The CAB Rule 100 Series also governs the registration and qualification examinations of principals and representatives that are associated with CABs. These rules incorporate by reference NASD Rules 1021 (Registration Requirements—Principals), 1022 (Categories of Principal Registration), 1031 (Registration Requirements—Representatives), 1032 (Categories of Representative Registration), 1060 (Persons Exempt from Registration), 1070 (Qualification Examinations and Waiver of Requirements), 1080 (Confidentiality of Examinations), IM-1000-2 (Status of Persons Serving in the Armed Forces of the United States), IM-1000-3 (Failure to Register Personnel) and FINRA Rule 1250 (Continuing Education Requirements). Accordingly, CAB firm principals and representatives are subject to the same registration, qualification examination, and continuing education requirements as principals and representatives of other FINRA firms. CABs are also subject to FINRA Rule 1230(b)(6) regarding Operations Professional registration.

C. Conduct Rules (CAB Rule 200 Series)

The CAB Rule 200 Series establishes a streamlined set of conduct rules. CABs are subject to FINRA Rules 2010 (Standards of Commercial Honor and Principles of Trade), 2020 (Use of Manipulative, Deceptive or Other Fraudulent Devices), 2040 (Payments to Unregistered Persons), 2070 (Transactions Involving FINRA Employees), 2080 (Obtaining an Order of Expungement of Customer Dispute Information from the CRD System), 2081

¹⁵ See CAB Rule 016(c)(2). The original rule in the Notice of Filing was amended by Amendment No. 1, which clarified that CABs may engage in secondary transactions only if they are not subject to FINRA Rules 6300 Series, 6400 Series, 6500 Series, 6600 Series, 6700 Series, 7300 Series or 7400 Series. See Notice of Amendment No.1, *supra* note 7, 81 FR at 22333.

¹⁶ There will not be an application fee associated with this request.

¹⁷ Absent a waiver, such a firm will have to pay an application fee associated with the CMA. See FINRA By-Laws, Schedule A, Section 4(i).

¹⁸ To the extent that the rules applicable to the member firm had been amended since it had changed its status to a CAB, FINRA will have the discretion to modify any limitations to reflect any new rule requirements.

(Prohibited Conditions Relating to Expungement of Customer Dispute Information), 2263 (Arbitration Disclosure to Associated Persons Signing or Acknowledging Form U4), and 2268 (Requirements When Using Predispute Arbitration Agreements for Customer Accounts).

CAB Rules 209 and 211 impose know-your-customer and suitability obligations similar to those imposed under FINRA Rules 2090 and 2111. CAB Rule 211(b) includes an exception to the customer-specific suitability obligations for institutional investors similar to the exception found in FINRA Rule 2111(b). CAB Rule 221 is an abbreviated version of FINRA Rule 2210 (Communications with the Public), essentially prohibiting false and misleading statements.

Under CAB Rule 240, if a CAB or associated person of a CAB has engaged in activities that require the CAB to register as a broker or dealer under the Exchange Act, and that are inconsistent with the limitations imposed on CABs under CAB Rule 016(c), FINRA could examine for and enforce all FINRA rules against such a broker-dealer or associated person, including any rule that applies to a FINRA member that is not a CAB or to an associated person who is not a person associated with a CAB.¹⁹

FINRA is not subjecting CABs to FINRA Rules 2121 (Fair Prices and Commissions), 2122 (Charges for Services Performed), and 2124 (Net Transactions with Customers). FINRA Rule 2121 provides that, for both listed and unlisted securities, a member that buys for its own account from its customer, or sells for its own account to its customer, shall buy or sell at a price that is fair, taking into consideration all relevant circumstances, including market conditions with respect to the security at the time of the transaction, the expense involved, and the fact that the member is entitled to a profit. Further, if the member acts as agent for its customer in any such transaction, the member shall not charge its customer more than a fair commission or service charge, taking into consideration all relevant circumstances, including market conditions with respect to the security at the time of the transaction, the expense of executing the order and the value of any service the member

may have rendered by reason of its experience in and knowledge of such security and the market therefor.

A CAB is not permitted to act as principal in a securities transaction. Accordingly, the provisions of FINRA Rule 2121 that govern principal transactions do not apply to a CAB's permitted activities. However, CABs are permitted to qualify, identify, solicit or act as placement agent or finder in a securities transaction, although only in very narrow circumstances on behalf of an issuer in connection with a sale of newly-issued, unregistered securities to institutional investors or on behalf of an issuer or control person in connection with a change of control of a privately-held company. CABs also are permitted to effect securities transactions solely in connection with the transfer of ownership and control of a privately-held company to a buyer that will actively operate the company or the business conducted with the assets of the company in accordance with the terms and conditions of an SEC rule, release, interpretation or "no-action" letter. FINRA believes that these narrow circumstances either involve institutional parties that are generally capable of negotiating fair prices, or involve the sale of a business as a going concern, which differ in nature from the types of transactions that typically raise issues under FINRA Rule 2121.²⁰

FINRA Rule 2122 provides that charges, if any, for services performed, including, but not limited to, miscellaneous services such as collections due for principal, dividends, or interest; exchange or transfer of securities; appraisals, safekeeping or custody of securities, and other services shall be reasonable and not unfairly discriminatory among customers. FINRA believes that CABs typically provide services to institutional customers that are capable of negotiating reasonable service charges.²¹ Moreover, CABs are not permitted to provide many of the services listed in Rule 2122, such as collecting principal, dividends or interest, or providing safekeeping or custody services.

FINRA Rule 2124 sets forth specific requirements for executing transactions with customers on a "net" basis. "Net" transactions are defined as a type of principal transaction, and CABs may not trade securities on a principal basis. Thus, FINRA does not believe it is necessary to include FINRA Rule 2124 as part of the CAB rule set.

Notwithstanding the foregoing, CAB Rule 201 will subject CABs to FINRA

Rule 2010 (Standards of Commercial Honor and Principles of Trade), which requires a member, in the conduct of its business, to observe high standards of commercial honor and just and equitable principles of trade. FINRA notes that, depending on the facts, CAB Rule 201 may apply in situations in which a CAB charged a commission or fee that clearly is unreasonable under the circumstances.

D. Supervision and Responsibilities Related to Associated Persons (CAB Rule 300 Series)

The CAB Rule 300 Series establishes a limited set of supervisory rules for CABs. CABs are subject to FINRA Rules 3220 (Influencing or Rewarding Employees of Others), 3240 (Borrowing from or Lending to Customers), and 3270 (Outside Business Activities of Registered Persons).

CAB Rule 311 subjects CABs to some, but not all, of the requirements of FINRA Rule 3110 (Supervision) and, consistent with Rule 3110, is designed to provide CABs with the flexibility to tailor their supervisory systems to their business models. CABs are subject to the provisions of Rule 3110 concerning the supervision of offices, personnel, customer complaints, correspondence and internal communications. However, CABs are not subject to the provisions of Rule 3110 that require annual compliance meetings (paragraph (a)(7)), review and investigation of transactions (paragraphs (b)(2) and (d)), specific documentation and supervisory procedures for supervisory personnel (paragraph (b)(6)), and internal inspections (paragraph (c)).

FINRA does not believe that the annual compliance meeting requirement in FINRA Rule 3110(a)(7) should apply to CABs given the nature of their business model and structure. FINRA has observed that most current FINRA member firms that would qualify as CABs tend to be small and often operate out of a single office. In addition, the range of rules that CABs are subject to is narrower than the rules that apply to other broker-dealers. Moreover, as noted above, CABs are subject to both the Regulatory and Firm Element continuing education requirements. Accordingly, FINRA does not believe that CABs need to conduct an annual compliance meeting as required under FINRA Rule 3110(a)(7). The fact that the annual compliance meeting requirement does not apply to CABs or their associated persons is in no way intended to reduce their responsibility to have knowledge of and comply with applicable securities laws and regulations and the CAB rule set.

¹⁹ FINRA states that the purpose of this rule is to clarify that the full FINRA Rulebook would apply if a CAB engages in broker-dealer activities that are inconsistent with the limitations imposed on CABs. FINRA believes that, without CAB Rule 240, it might be unclear which rules would apply to a firm that elected CAB status and yet engaged in brokerage activities that are impermissible for a CAB. See FINRA Response, *supra* note 11, at 18.

²⁰ See FINRA Response, *supra* note 11, at 16.

²¹ *Id.*

FINRA also does not believe that FINRA Rule 3110(b)(2), which requires members to adopt and implement procedures for the review by a registered principal of all transactions relating to the member's investment banking or securities business, or FINRA Rule 3110(d), which imposes requirements related to the investigation of securities transactions and heightened reporting requirements for members engaged in investment banking services, should apply to CABs. CABs are not permitted to carry or act as an introducing broker with respect to customer accounts, hold or handle customers' funds or securities, accept orders from customers to purchase or sell securities (except as permitted by CAB Rule 016(c)(1)(F) and (G)), have investment discretion on behalf of any customer, engage in proprietary trading or market-making activities, or participate in Crowdfunding or Regulation A securities offerings. Accordingly, due to these restrictions, FINRA does not believe a CAB's business model necessitates the application of these provisions, which primarily address trading and investment banking functions that are beyond the permissible scope of a CAB's activities.

FINRA also does not believe that the requirements of FINRA Rule 3110(b)(6) should apply to CABs. Paragraph (b)(6) generally requires a member to have procedures to prohibit its supervisory personnel from: (1) Supervising their own activities; and (2) reporting to, or having their compensation or continued employment determined by, a person the supervisor is supervising.²² In addition, FINRA does not believe that FINRA Rule 3110(c), which requires members to conduct internal inspections of their businesses, should apply to CABs.

FINRA believes that it is providing CABs with flexibility to tailor their supervisory structures to their business model, which is geared toward acting as a consultant in capital acquisition

transactions, qualifying, identifying, soliciting or acting as placement agent or finder in a securities transaction solely on behalf of an issuer in connection with a sale of newly-issued, unregistered securities to institutional investors or on behalf of an issuer or a control person in connection with a change of control of a privately-held company, or with the transfer of ownership and control of a privately-held company. As discussed above, many CABs operate out of a single office with a small staff, which reduces the need for internal inspections of numerous or remote offices. In addition, part of the purpose of creating a separate CAB rule set is to streamline and reduce existing FINRA rule requirements where doing so does not hinder investor protection. FINRA believes that the remaining provisions of FINRA Rule 3110, coupled with the CAB Rule 200 Series addressing duties and conflicts will sufficiently protect CABs' customers from potential harm due to insufficient supervision.

CAB Rule 313 requires CABs to designate and identify one or more principals to serve as a firm's chief compliance officer ("CCO"), similar to the requirements of FINRA Rule 3130(a). FINRA Rule 3130 requires a CAB to have its chief executive officer ("CEO") certify that the member has in place processes to establish, maintain, review, test and modify written compliance policies and written supervisory procedures reasonably designed to achieve compliance with applicable federal securities laws and regulations, and FINRA and MSRB rules, which are required under FINRA Rules 3130(b) and (c). FINRA does not believe the CEO certification is necessary given a CAB's narrow business model and smaller rule set.

CAB Rule 328 prohibits any person associated with a CAB from participating in any manner in a private securities transaction as defined in FINRA Rule 3280(e).²³ FINRA does not believe that an associated person of a CAB should be engaged in selling securities away from the CAB, nor should a CAB have to oversee and review such transactions, given its

limited business model. This restriction does not prohibit associated persons from investing in securities on their own behalf, or engaging in securities transactions with immediate family members, provided that the associated person does not receive selling compensation.

CAB Rule 331 requires each CAB to implement a written anti-money laundering ("AML") program. FINRA believes that this is consistent with the SEC's requirements and Chapter X of Title 31 of the Code of Federal Regulations. Accordingly, CAB Rule 331 is similar to FINRA Rule 3310 (Anti-Money Laundering Compliance Program); however, the CAB rule contemplates that all CABs will be eligible to conduct the required independent testing for compliance every two years (rather than annually as FINRA Rule 3310 requires of non-CAB members).

E. Financial and Operational Rules (CAB Rule 400 Series)

The CAB Rule 400 Series establishes a streamlined set of rules concerning firms' financial and operational obligations. CABs are subject to FINRA Rules 4140 (Audit), 4150 (Guarantees by, or Flow through Benefits for, Members), 4160 (Verification of Assets), 4511 (Books and Records—General Requirements), 4513 (Records of Written Customer Complaints), 4517 (Member Filing and Contact Information Requirements), 4524 (Supplemental FOCUS Information), 4530 (Reporting Requirements), and 4570 (Custodian of Books and Records). Under CAB Rule 411, which is modeled after FINRA Rule 4110, CABs are required to suspend business operations during any period a firm is not in compliance with the applicable net capital requirements set forth in Exchange Act Rule 15c3-1, and CAB Rule 411 also authorizes FINRA to direct a CAB to suspend its operation under those circumstances.²⁴ The CAB rules also set forth requirements concerning withdrawal of capital, subordinated loans, notes collateralized by securities, and capital borrowings.

Because CABs may not carry or act as an introducing broker with respect to customer accounts, they will have more limited customer information requirements than those imposed under FINRA Rule 4512.²⁵ Pursuant to CAB Rule 451, CABs will have to maintain each customer's name and residence, whether the customer is of legal age (if applicable), and the names of any persons authorized to transact business

²² FINRA Rule 3110(b)(6)(C)(i) and (ii). FINRA Rule 3110(b)(6) also requires that a member's supervisory procedures include the titles, registration status and locations of the required supervisory personnel and the responsibilities of each supervisory person as these relate to the types of business engaged in, applicable securities laws and regulations, and FINRA rules, as well as a record of the names of its designated supervisory personnel and the dates for which such designation is or was effective. FINRA Rule 3110(b)(6)(A) and (B). In addition, paragraph (b)(6) requires a member to have procedures reasonably designed to prevent the standards of supervision required pursuant to FINRA Rule 3110(a) from being compromised due to the conflicts of interest that may be present with respect to an associated person being supervised. FINRA Rule 3110(b)(6)(D).

²³ FINRA Rule 3280(e) defines "private securities transaction" as "any securities transaction outside the regular course or scope of an associated person's employment with a member, including, though not limited to, new offerings of securities which are not registered with the Commission, provided however that transactions subject to the notification requirements of NASD Rule 3050, transactions among immediate family members (as defined in FINRA Rule 5130), for which no associated person receives any selling compensation, and personal transactions in investment company and variable annuity securities, shall be excluded."

²⁴ See CAB Rule 411.

²⁵ See CAB Rule 451(b).

on behalf of the customer. CABs will still have to make and preserve all books and records required under Exchange Act Rules 17a-3 and 17a-4.²⁶ CABs are subject to a limited set of requirements for the supervision and review of a firm's general ledger accounts.²⁷

CABs are not subject to FINRA Rules 4370 (Business Continuity Plans and Emergency Contact Information) or 4380 (Mandatory Participation in FINRA BC/DR Testing under Regulation SCI). FINRA does not believe it is necessary to have a rule requiring a CAB to maintain a business continuity plan ("BCP"), given a CAB's limited activities, particularly since a CAB will not engage in retail customer transactions or clearance, settlement, trading, underwriting or similar investment banking activities. FINRA Rule 4380 relates to Rule SCI under the Exchange Act, which is not applicable to a member that limits its activities to those permitted under the CAB rule set.

F. Securities Offerings (CAB Rule 500 Series)

The CAB Rule 500 Series subjects CABs to FINRA Rules 5122 (Private Placements of Securities Issued by Members) and 5150 (Fairness Opinions).

G. Investigations and Sanctions, Code of Procedure, and Arbitration and Mediation (CAB Rules 800, 900 and 1000)

CAB Rule 800 provides that CABs are subject to the FINRA Rule 8000 Series governing investigations and sanctions of firms, other than FINRA Rules 8110 (Availability of Manual to Customers), 8211 (Automated Submission of Trading Data Requested by FINRA), and 8213 (Automated Submission of Trading Data for Non-Exchange-Listed Securities Requested by FINRA).

CABs are not subject to FINRA Rule 8110 (Availability of Manual to Customers), which requires members to make available a current copy of the FINRA manual for examination by customers upon request. FINRA represents that it will make the CAB rule set available through the FINRA Web site. Accordingly, FINRA does not believe this rule is necessary for CABs.

CABs also are not subject to FINRA Rules 8211 (Automated Submission of Trading Data Requested by FINRA) or 8213 (Automated Submission of Trading Data for Non-Exchange-Listed Securities Requested by FINRA). Given that these rules are intended to assist FINRA in requesting trade data from firms engaged in securities trading, and that

CABs will not engage in securities trading, FINRA does not believe that these rules should apply to CABs.

CAB Rule 900 provides that CABs are subject to the FINRA Rule 9000 Series governing disciplinary and other proceedings involving firms, other than the FINRA Rule 9700 Series (Procedures on Grievances Concerning the Automated Systems). CAB Rule 900(c) provides that any CAB may be subject to a fine under FINRA Rule 9216(b) with respect to an enumerated list of FINRA By-Laws, CAB rules and SEC rules under the Exchange Act. CAB Rule 900(d) authorizes FINRA staff to require a CAB to file communications with the FINRA Advertising Regulation Department at least ten days prior to use if the staff determined that the CAB had departed from CAB Rule 221's standards.²⁸

CAB Rule 1000 provides that CABs are subject to the FINRA Rule 12000 Series (Code of Arbitration Procedure for Customer Disputes), 13000 Series (Code of Arbitration Procedure for Industry Disputes) and 14000 Series (Code of Mediation Procedure).

FINRA states that if the Commission approves the rule change it will announce the implementation date of the rule change in a *Regulatory Notice* to be published no later than 60 days following Commission approval, and that such date will be no later than 180 days following publication of the *Regulatory Notice*.

III. Discussion of Comment Letters, FINRA's Response and Commission Findings

After careful review of the proposed rule change, the comment letters, and FINRA's response to the comments, the Commission finds that the rule change, as modified by Amendment Nos. 1 and 2, is consistent with the requirements of the Exchange Act and the rules and regulations thereunder that are applicable to a national securities

association.²⁹ Specifically, the Commission finds that the rule change is consistent with Section 15A(b)(6) of the Exchange Act,³⁰ which requires, among other things, that FINRA rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest.

The Commission received a total of twenty comment letters and FINRA's response to those comment letters. Commenters were generally supportive of the proposal but had suggestions regarding areas where certain aspects of the proposal could be expanded or further explained.³¹ The Commission has considered the commenters' suggestions and FINRA's response and believes, as discussed below, that the CAB rules as amended are reasonably designed to provide flexibility for CABs, while providing for protection of investors and the public interest consistent with Section 15A(b)(6) of the Exchange Act.³²

²⁹ In approving this rule change, the Commission has considered the rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

³⁰ 15 U.S.C. 78o-3(b)(6).

³¹ Several commenters request certain changes to SEC rules and other requirements that apply to CABs, including, for example, eliminating financial responsibility rules, net capital requirements, Securities Investor Protection Corporation requirements and financial audits for CABs. See generally Achates Letter, *supra* note 6; Q Advisors Letter, *supra* note 6; 3PM Letter, *supra* note 6; and IMS Letter 1, *supra* note 6. FINRA responds that such changes are outside its authority. Further, the Commission believes that such changes are also outside the scope of the proposed rule change, and thus, we are not proposing to amend these requirements at this time.

³² One commenter suggests that the Commission, FINRA, and NASAA should cooperate to more fully analyze the interaction between the CAB proposal and state registration requirements to better harmonize the application of these provisions. See NASAA Letter. This commenter suggests that the most relevant provisions of the CAB rule set is CAB Rule 016(c)(1)(C) (*i.e.*, mergers and acquisition brokers). The commenter indicates that it will welcome the opportunity to work with FINRA and the Commission on the issues presented by the proposal (including related to mergers and acquisitions brokers), and encourages the Commission to delay approval of the proposed rule change until there has been an opportunity to more fully explore these issues.

In response, FINRA states that it disagrees that the SEC should delay acting on the CAB proposal. FINRA notes that the definition of CAB will permit CABs to engage, among other activities, in mergers and acquisition transactions. While FINRA acknowledges that NASAA has adopted a model rule for mergers and acquisition brokers, it does not believe that any differences between the NASAA model rule and the CAB rules should preclude the SEC from approving its proposal. See FINRA Response, *supra* note 11, at 27.

The Commission notes that approval of FINRA's proposed rule change will not preclude further coordination and discussion with FINRA and NASAA.

²⁶ See CAB Rule 900(c).

²⁷ See CAB Rule 452(a).

²⁸ CAB Rule 221 states that: (a) No communication with the public by a capital acquisition broker may: (1) Include any false, exaggerated, unwarranted, promissory or misleading statement or claim; (2) omit any material fact or qualification if the omission, in light of the context of the material presented, would cause the communication to be misleading; (3) state or imply that FINRA, or any other corporate name or facility owned by FINRA, or any other regulatory organization endorses, indemnifies, or guarantees the capital acquisition broker-dealer's business practices; or (4) imply that past performance will recur or make any exaggerated or unwarranted claim, opinion or forecast. Further, the rule requires that all communications by a capital acquisition broker must be based on principles of fair dealing and good faith, must be fair and balanced, and must provide a sound basis for evaluating the facts in regard to any particular security or type of security, industry, or service.

A. General Standards and FINRA Membership

1. By-laws

CAB Rule 014 requires that all persons that have been approved for membership in FINRA as a CAB and their associated persons shall be subject to the CAB rules and FINRA By-Laws (including the schedules thereto) “unless the context requires otherwise.” CAB Rule 014 also states that the terms used in the CAB rules, if defined in the FINRA By-Laws, shall have the same meaning as defined in the FINRA By-Laws, unless a term is defined differently in a CAB rule, “or unless the context of a term within a Capital Acquisition Broker Rule requires a different meaning.”³³

One commenter expresses concern that there is no guidance as to what “context” may “require otherwise” and when and under what circumstances. This commenter suggests that this language sets up an interpretive issue and will make it impossible to advise a client as to what the actual definition is and, more significantly, whether it applies in a particular context.³⁴ In response, FINRA states that, as a general matter, the FINRA By-Laws’ provisions would apply as written, without the need to interpret them differently as applied to CABs. FINRA states that there may be on occasion situations in which reading a By-Law provision literally would lead to a clearly incorrect result, due to the differences between the CAB Rules and other FINRA Rules governing non-CAB firms. FINRA does not believe that this qualification for context creates an interpretive issue, nor would it be impossible to advise clients on how to comply with the FINRA By-Laws. FINRA also explains that the Commission approved similar qualifying language regarding application of the FINRA By-Laws in the recently adopted Funding Portal Rules.³⁵

2. Review of Membership Application

CAB Rules 101 through 115 generally apply the same standards for new member applications by CAB applicants as those that apply to non-CAB FINRA member firm applicants. CAB Rule 116 generally applies the same standards regarding changes in ownership, control or business operations to CABs as those that apply to non-CAB firms.³⁶ One

commenter suggests that FINRA should approve the membership applications of new CABs within 60 days of the filing of the application (instead of 180 days as provided for in CAB Rule 113), provided that certain conditions are met, including: A completed application; the required supervisory principals, who have each taken and passed the applicable examinations; and no significant disciplinary history or other red flag indications of potential compliance problems.³⁷

In response, FINRA states that it does not agree that it should revise its proposed rules to require it to act on a CAB’s NMA within 60 days of filing an application that meets certain conditions.³⁸ FINRA believes that its Membership Application Program staff often will need more than 60 days to conduct a proper investigation of an applicant and complete other tasks associated with broker-dealer applications, such as a membership interview.³⁹

3. Grace Period

CAB Rule 116 provides that if during the first year following an existing FINRA member’s amendment electing to become a CAB the firm seeks to terminate its status as such and continue as a full FINRA member, the CAB may notify FINRA of this change without having to file an application for approval of a material change in business operations. One commenter states its view that this one-year grace period is not a sufficient amount of time for a firm to determine if CAB status is appropriate for its business model.⁴⁰ The commenter believes its view that a converted firm may not have sufficient data within the first year to evaluate its decision fully, and recommends that this grace period be extended to at least 24 months or that there be no grace time restrictions at all.⁴¹ This commenter also suggests that FINRA allow interim continued operations as a CAB (provided the firm is in regulatory compliance) while an active CMA is being reviewed by FINRA, with the firm remaining subject to all the CAB rules pending a final decision by FINRA on the CMA.⁴² Another commenter recommends that FINRA consider a grace period for firms that unintentionally conduct activities

beyond the scope of a CAB’s permissible activities.⁴³

In response, FINRA states that it does not believe that the grace period during which a CAB may revert back to its prior non-CAB status should be lengthened.⁴⁴ FINRA believes that 12 months will give CABs sufficient time to make the determination of whether this status works for a firm’s business model. FINRA states that a CAB may still change its status to a full FINRA member firm after 12 months by filing a CMA. However, FINRA agrees that a CAB that determines to terminate its status as such and revert back to a non-CAB firm should be permitted to continue to operate as a CAB while its CMA or application to amend its membership agreement is pending, barring unusual circumstances.⁴⁵ With respect to a grace period for impermissible activities, FINRA states that it does not believe it is necessary.⁴⁶ FINRA believes that unintentional violations of the CAB rules are best handled through the examination and enforcement process on a case-by-case basis. FINRA believes it may be useful to provide additional guidance to CABs concerning the scope of permissible activities, and may do so through FAQs or other means.⁴⁷

After reviewing the CAB rules relating to the application of the FINRA By-laws and membership application process, the Commission believes that these rules are consistent with Section 15A(b)(6), in particular the requirements that FINRA’s rules be reasonably designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest. In particular, given the limited activity of CABs, the Commission believes that it is reasonable for FINRA to provide a certain amount of flexibility through the use of the concept “unless the context otherwise requires” in the application of the By-laws and the definitions within the By-laws to CABs and the CAB Rules, so as to provide for a certain amount of flexibility if needed. The Commission notes that FINRA has committed to work with its members if interpretive issues arise. The Commission also believes it is reasonable for FINRA to provide for the same amount of time for approval of new CAB member applications as for non-CAB applications, to help ensure that FINRA

⁴⁴ See FINRA Response, *supra* note 11, at 14.

⁴⁵ *Id.*

⁴⁶ *Id.*

⁴⁷ *Id.* at 19.

has sufficient time to engage in its new member application process. In addition, the Commission believes FINRA's determination that a one year grace period for a firm to revert back to full member status is reasonably designed to provide a sufficient amount of time for a firm to determine whether CAB status makes sense for the firm, while not providing too long of a period without requiring the protections of going through the full membership process.⁴⁸ With respect to a grace period for impermissible activities, the Commission believes that it is appropriate for FINRA to address unintentional violations of the CAB rules through its examination and enforcement process on a case-by-case basis, and notes that FINRA states that it may provide additional guidance to CABs concerning the scope of permissible activities.

B. Registration and Licensing

The CAB Rule 100 Series incorporates various NASD rules relating to the registration and qualification examinations of principals and representatives associated with CABS. Thus CAB firm principals and representatives are subject to the same registration, qualification examinations, and continued requirements as that of non-CAB FINRA member firms. One commenter suggests that FINRA should establish new examinations specifically for the registered representatives and supervisory principals of CABs that would test only that subject matter relevant to the business of CABs.⁴⁹ In response, FINRA states that it believes it is premature to establish new examinations at this point and may monitor the need in the future.⁵⁰

Two commenters request that FINRA clarify whether CABs may hold all registration and licenses previously attained by their associated persons, including Series 53, 4 and other licenses.⁵¹ One of these commenters also suggests that CABs should not be subject to FINRA Rule 1230(b)(6)⁵²

regarding Operations Professional registration because of the scope and nature of the examination.⁵³ In addition, the other commenter suggests that FINRA should exempt a CAB CCO from FINRA's proposed requirement⁵⁴ to obtain and maintain the Series 14 CCO license because of the broad and comprehensive scope of the proposed license.⁵⁵

In response, FINRA states that associated persons of CABs will only be permitted to retain registrations and licenses that are appropriate to their functions.⁵⁶ FINRA notes that this standard applies to non-CAB member firms as well as to CABs. Further, FINRA does not agree that CABs should be exempt from FINRA Rule 1230(b)(6).⁵⁷ FINRA believes that many of the functions for which an Operations Professional is responsible apply to all types of broker-dealers, including CABs. For example, FINRA states that firm account management and reconciliation, maintaining a general ledger and treasury, and preparing and filing regulatory reports apply to CABs as well as other broker-dealers. Accordingly, FINRA declines to eliminate this requirement for CABs. FINRA also states that given that its contemplated proposal to put in place an examination for CCOs is still under review at FINRA, and subject to filing with the SEC, it is premature to exempt CABs from this proposal.⁵⁸

The Commission believes that it is reasonable for FINRA to first assess the potential need for new examinations specific to CAB activities before determining whether such action is necessary or appropriate, particularly given that associated persons of CABs will be subject to existing FINRA examination requirements that apply to all members, including CABs, to the extent they apply to their CAB activities

a supervisor, manager or other person responsible for approving or authorizing work, including work of other persons, in direct furtherance of each of the covered functions in the Rule, as applicable, provided that there is sufficient designation of such persons by senior management to address each of the applicable covered functions; and (iii) Persons with the authority or discretion materially to commit a member's capital in direct furtherance of the covered functions in the Rule or to commit a member to any material contract or agreement (written or oral) in direct furtherance of the covered functions in the Rule.

⁵³ See 3PM Letter, *supra* note 6, at 2.

⁵⁴ FINRA is separately considering a proposal to establish a new stand-alone registration category for compliance officers. Before it would implement such a proposal, FINRA would need to file a notice with the Commission, which would be subject to review and comment.

⁵⁵ See Roth Letter, *supra* note 6, at 1.

⁵⁶ See FINRA Response, *supra* note 11, at 15.

⁵⁷ *Id.*

⁵⁸ *Id.*

and functions. In this regard, the Commission agrees that it is reasonable to subject CABs to the FINRA operations professional registration rules, given that many of the functions for which an operations professional is responsible would apply to all types of FINRA member firms, including CABs. Likewise, the Commission believes that it is reasonable for FINRA to apply the same standard regarding the retention of licenses by associated persons to CAB member firms and non-CAB member firms. Thus, the Commission believes that the CAB registration and licensing rules are consistent with requirements in Section 15A(b)(6) of the Exchange Act that an association's rules be reasonably designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest.

C. Scope of CAB Permitted Activities

1. Secondary Market Transactions

As initially filed with the Commission, FINRA's definition of a CAB in Rule 016(c) would have included, among the permissible activities of a CAB, "qualifying, identifying, soliciting, or acting as a placement agent or finder with respect to institutional investors in connection with purchases or sales of unregistered securities." One commenter interpreted that description as including both primary issuances and secondary transactions in unregistered securities and requested that FINRA confirm the intent to include secondary transactions among the permitted activities of a CAB.⁵⁹ Another commenter noted that the definition appears to permit CABs to act as agent in the purchase or sale of debt, equity and equity-linked instruments, and not solely one category of securities.⁶⁰ One commenter supported the definition in its original form.⁶¹

Due to concerns that permitting CABs to act as agent in a wide array of secondary market transactions would be inconsistent with the purpose of its proposed rule set, FINRA subsequently amended proposed CAB Rule 016(c)(1)(F) to narrow the range of permitted secondary market activities.⁶²

⁵⁹ See New York State Bar Association Letter, *supra* note 6, at 2.

⁶⁰ See Q Advisors Letter, *supra* note 6, at 1.

⁶¹ See 3PM Letter, *supra* note 6, at 1–2.

⁶² See Notice of Amendment No. 2, *supra* note 9, 81 FR at 44372–44373. Prior to Amendment No. 2, FINRA also amended the scope in Amendment No. 1 to clarify that the definition of "capital acquisition broker" does not include any broker or dealer that effects securities transactions that would

⁴⁸ In response to another comment, the Commission notes that FINRA agrees that a CAB that determines to terminate its status as such and revert back to a non-CAB firm should be permitted to continue to operate as a CAB while its CMA or application to amend its membership agreement is pending, barring unusual circumstances.

⁴⁹ See New York State Bar Association Letter, *supra* note 6, at 2.

⁵⁰ See FINRA Response, *supra* note 11, at 27.

⁵¹ See 3PM, *supra* note 6, at 2 and Roth Letter, *supra* note 6, at 1.

⁵² FINRA Rule 1230 requires that each of the following persons be registered with FINRA as an Operations Professional: (i) Senior management with direct responsibility over the covered functions under the Rule; (ii) Any person designated by senior management under the Rule as

As amended, a CAB will be permitted to engage in qualifying, identifying, soliciting, or acting as a placement agent or finder (i) on behalf of an issuer in connection with a sale of newly-issued, unregistered securities to institutional investors or (ii) on behalf of an issuer or a control person in connection with a change of control of a privately-held company.

In response to Amendment No. 2, one commenter states its view that CAB Rule 016(c)(1)(F) should expressly permit CABs to engage in secondary market transactions.⁶³ The commenter suggests that CABs should be permitted to sell subsequent to a private placement any securities that the CAB receives as compensation for acting as a placement agent in a private placement securities transaction. The commenter also recommends that CABs be permitted to act as agent to assist the owner of securities purchased in a private placement to sell them subsequent to such private placement. The commenter suggests that it is common for placement agents to receive compensation in the form of restricted stock, options or warrants, and for the owner of securities purchased in a private placement to desire sometime later to sell those securities in a private secondary market transaction. The commenter argues that, without its recommended changes, it is likely many firms will decline to elect CAB status due to fears of engaging in impermissible activities.

In response, FINRA states that it does not believe that proposed CAB Rule 016(c)(1)(F) should be amended. FINRA states that other provisions of the proposal that preceded the filing of Amendment No. 2 would prohibit some of the activities that the commenter recommends. FINRA further explains that allowing a CAB to dispose of securities that it receives as compensation for placement agent services would likely be inconsistent with the prohibition on a CAB engaging in proprietary trading, and could be interpreted as allowing trading activities that do not fall within a CAB's business model. FINRA states that the definition of a CAB also prohibits a CAB from holding or handling customer funds or securities. To the extent that a CAB handles a customer's stock certificate as part of its services, a CAB could not act as agent on behalf of an owner who is disposing of privately placed securities.

require the broker or dealer to report the transaction under the FINRA Rules 6300 Series, 6400 Series, 6500 Series, 6600 Series, 6700 Series, 7300 Series or 7400 Series. See Notice of Amendment No. 1, *supra* note 7, 80 FR at 22333.

⁶³ See SDR Letter, *supra* note 10, at 1.

FINRA states that amending these various provisions to accommodate these activities at this time would not be prudent, particularly given the risk that these amendments would inadvertently allow some firms that do not fall within the intended business model to elect CAB status. FINRA states that it will consider proposed changes to the CAB rules after FINRA and the industry have gained experience with their application to CABs.

2. Prohibition on Private Securities Transactions

One commenter objects to CAB Rule 328 (Prohibition on Private Securities Transactions)⁶⁴ on the grounds that a CAB should be permitted to set its own policies to supervise private securities transactions.⁶⁵ Another commenter suggests that FINRA revise CAB Rule 328 to allow: (1) The investment advisory activities of associated persons of CABs who are also employees or supervised persons of an investment adviser registered with the SEC or a state ("RIA"); and (2) associated persons of CABs to be employees of a bank or trust company engaged in securities or advisory activities that a bank may engage in pursuant to the exceptions from the definition of broker or dealer in Exchange Act Sections 3(a)(4) or (5) or Regulation R.⁶⁶

In response, FINRA states that it does not agree that CAB Rule 328 should be revised to allow activities to be engaged in by associated persons in their capacities as RIA or bank employees, nor does it believe CABs should be allowed to supervise private securities transactions as a business decision.⁶⁷ FINRA notes that CABs will engage only in a limited range of institutional securities activities, generally involving either advice to companies and issuers regarding private equity or merger and acquisition transactions, or acting as agent on behalf of an issuer in connection with a sale of newly-issued, unregistered securities to institutional investors or on behalf of an issuer or a control person in connection with a change of control of a privately-held company.⁶⁸ Given the limited nature of CABs' permissible business activities, FINRA believes that CABs generally will not be well positioned to supervise and keep records of private securities

⁶⁴ CAB Rule 328 prohibits persons associated with a CAB from participating in any manner in a private securities transaction as defined in FINRA Rule 3280(e).

⁶⁵ See IMS Letter 1, *supra* note 6.

⁶⁶ See New York State Bar Association Letter, *supra* note 6, at 3–4.

⁶⁷ See FINRA Response, *supra* note 11, at 23.

⁶⁸ *Id.*

transactions, particularly if a CAB employee conducted business with retail investors through an RIA or bank. Accordingly, FINRA believes that the prohibitions in Rule 328 should remain as proposed.

3. Prohibition on CABs Chaperoning Foreign Broker-Dealers

One commenter suggests that FINRA should allow CABs to chaperone foreign associated persons under Exchange Act Rule 15a–6, since other broker-dealers that are subject to a \$5,000 net capital requirement are permitted to engage in this activity.⁶⁹ In response, FINRA states that it does not agree that CABs should be permitted to engage in chaperoning activities under Exchange Act Rule 15a–6.⁷⁰ FINRA notes that the CAB rule set did not contemplate that CABs will engage in these activities, and FINRA does not believe that most firms that would consider registering as a CAB currently engage in them. As such, FINRA declines to make this change.

4. Permitted Activities With Institutional Investors

One commenter suggests that the definition of a CAB is problematic because it allows CABs to provide services only to institutional investors as defined by the proposal, which it believes is too restrictive.⁷¹ Two commenters also object to the definition of institutional investor because it does not include accredited investors as defined under Securities Act Regulation D.⁷² Noting that FINRA had stated it purposefully did not propose to define "institutional investor" to include accredited investors due to serious concerns with the manner in which firms market and sell private placements to accredited investors, one of these commenters recommends that FINRA should address any potential sales practice problems by incorporating any other rules needed for this purpose, rather than prohibiting the solicitation of accredited investors.⁷³ Another commenter suggests that FINRA consider lowering the threshold for institutional investors preferably to \$5 million or less.⁷⁴ This commenter also suggests that many issuers may have less than \$50 million in assets but are otherwise sophisticated, knowledgeable and advised by competent attorneys.⁷⁵

⁶⁹ See IMS Letter 1, *supra* note 6, at 3–4.

⁷⁰ See FINRA Response, *supra* note 11, at 6.

⁷¹ See IMS Letter 1, *supra* note 6, at 7–8.

⁷² See *id.* See also Achates Letter, *supra* note 6 at 1.

⁷³ See Achates Letter, *supra* note 6, at 1.

⁷⁴ See Intellivest Letter, *supra* note 6, at 1.

⁷⁵ *Id.*

In addition to institutional investors, one commenter suggests that FINRA permit CAB transactions with certain other categories of persons, specifically: (1) A “knowledgeable employee” as defined in Investment Company Act Rule 3c–5, except that for purposes of the institutional investor definition, “covered company” would mean either the CAB or the issuer of the securities sold in the transaction; and (2) a person designated by the issuer of the securities sold in the transaction, provided that the CAB did not solicit the person or make a recommendation to the person with respect to purchase of the securities.⁷⁶ Another commenter also requests a de minimis and/or knowledgeable employee exemption to allow for one-off capital-raises (under various scenarios where accredited individuals working at alternative investment firms and the funds they manage or other closely affiliated individuals desire to invest) without violating the CAB rules.⁷⁷ This commenter also states that there may be circumstances where the issuer wishes to sell securities to persons who would not otherwise qualify as institutional investors, but wants the transaction to be effected by the CAB.⁷⁸ In addition, the commenter suggests that CAB rules should not prohibit sales to those categories of persons, since the usual concerns about suitability determinations and content of communications by member firms to retail investors will not apply.⁷⁹

In response, FINRA states that the term “institutional investor” is relevant only with respect to CAB Rule 016(c)(1)(F), which permits CABs to qualify, identify, solicit or act as placement agent or finder on behalf of an issuer in connection with a sale of newly-issued, unregistered securities to institutional investors or on behalf of an issuer or control person in connection with a change of control of a privately-held company.⁸⁰ FINRA notes that CABs may provide a wide array of negotiation, consulting and advisory services to issuers, companies and their owners without regard to whether these parties fall within the definition of institutional investor pursuant to CAB Rule 016(c)(1)(A) through (E).⁸¹ In addition, CABs are permitted to effect securities transactions on behalf of accredited investors that do not meet

the definition of institutional investor in transactions involving the transfer of control of a business or company, as permitted by an SEC rule, release or no-action letter, pursuant to CAB Rule 016(c)(1)(G).⁸²

By adding qualified purchasers to the definition of “institutional investor,” FINRA states that its proposal permits CABs to solicit investors that have at least \$5 million in investments pursuant to CAB Rule 016(c)(1)(F).⁸³ However, FINRA states that it does not believe it is either necessary or appropriate to extend the definition to include accredited investors who have less than \$5 million in investments, since those investors may not have the requisite investment acumen or financial means to understand or assume the risks associated with investments sold by CABs.⁸⁴ FINRA believes that the CAB rule set is not an appropriate model for the broader, more retail, private placement marketplace, given that investors in the private placement market have been harmed by widespread fraud and abuse in recent years.⁸⁵ In addition, FINRA notes that the SEC is also looking at whether the definition of accredited investor should be revised.⁸⁶ Moreover, FINRA states that expanding the definition of “institutional investor” to include accredited investors would be substantially inconsistent with similar definitions of “institutional investor” or

“institutional account” in other FINRA Rules.⁸⁷

For these reasons, FINRA also does not believe it is appropriate at this time to revise the definition of institutional investor to include knowledgeable employees as that term is defined in Investment Company Act Rule 3c–5, as suggested by one commenter.⁸⁸ FINRA states that it may consider revising this definition at a later date, depending on the need to expand it, as well as CABs’ investment activities.

FINRA believes that any firm that wishes to engage in private placement activities beyond that contemplated for CABs should be registered as a non-CAB broker-dealer and be subject to all FINRA rules, not just the more limited rule set applicable to CABs.⁸⁹ For example, FINRA believes that non-CAB rules that are more oriented to business conducted with retail investors, such as FINRA Rule 2210 (Communications with the Public) should apply to these types of private placement firms, rather than the CAB rules.

The Commission believes that it is reasonable and consistent with the protection of investors and the public interest for FINRA to limit the permitted activities of CABs in the manner discussed above, given the stated purpose of its proposal and the limited rule set that is applicable to CABs. Specifically, FINRA states in the Notice of Filing that it is proposing a separate rule set that would apply to firms that it describes as those that are “solely corporate financing firms that advise companies on mergers and acquisitions, advise issuers on raising debt and equity capital in private placements with institutional investors, or provide advisory services on a consulting basis to companies that need assistance analyzing their strategic and financial alternatives.”⁹⁰ In this context, FINRA’s CAB rules, which are more streamlined than the full FINRA rule set, are designed to provide appropriate flexibility and investor protection in the context of a CAB’s limited permissible activities.

D. Conduct Rules

As detailed above in Section II.C., the CAB rule set imposes a streamlined set of conduct rules on CABs. One such rule, CAB Rule 209, states in part that a CAB must use reasonable diligence to know and retain the essential facts concerning a customer.⁹¹ The facts

⁷⁶ See New York State Bar Association Letter, *supra* note 6, at 3–4.

⁸⁴ See FINRA Response, *supra* note 11, at 10–11.

⁸⁵ FINRA states that it has many formal investigations involving broker-dealer conduct in private placements. In 2015, FINRA conducted over 650 reviews involving private placements from sources including customer complaints, tips, referrals, and firm filings. FINRA states that approximately 100 of these matters are currently open and under review, and that it has recently settled many cases regarding private placements. FINRA states that it has brought multiple cases against firms that participated in these offerings and their relevant employees. Further, FINRA also states that state securities regulators also are bringing many enforcement cases involving private placements. FINRA notes that NASAA reported that in 2014, Regulation D offerings were the second most frequently investigated matters as reported by states. In addition, FINRA states that the SEC has settled cases involving fraud or abuse in the private placement market. FINRA states, for example, that in July 2009, the SEC brought actions involving two high-profile private placements, Medical Capital Holdings Inc. and Provident Royalties LLC. *SEC v. Provident Royalties, LLC*, SEC Litigation Release No. 21118, 2009 SEC LEXIS 2241 (July 7, 2009); *SEC v. Medical Capital Holdings, Inc.*, SEC Litigation Release No. 21141, 2009 SEC LEXIS 2390 (July 20, 2009). See FINRA Response, *supra* note 11, at 11–12.

⁹¹ See FINRA Response, *supra* note 11, at 16–17.

essential to knowing the customer include those required to effectively service the customer's account and understand the authority of each person acting on behalf of the customer. With respect to this CAB rule, one commenter requests clarification of FINRA's statement that "[i]t also recognizes that a CAB or its associated person may look to an institutional investor's agent if the investor is represented by an agent."⁹² Specifically, this commenter requests clarification as to what "look to" requires and whether this can be interpreted to mean that a CAB's responsibility under CAB Rule 209 is limited to learning the essential facts of the agent.⁹³ Another commenter also seeks clarification as to whether a CAB's responsibility under CAB Rule 209 is limited to learning the essential facts of the agent.⁹⁴

In response, FINRA states that it recognizes that firms that elect CAB status often will be dealing with customers that are represented by agents, and that CAB Rule 209 contemplates situations in which a customer is represented by an agent.⁹⁵ For example, CAB Rule 209 states in part that the facts essential to knowing the customer are those required to effectively service the customer's account and understand the authority of each person acting on behalf of a customer.⁹⁶ FINRA also states that the type of information necessary to satisfy the requirements of CAB Rule 209 will depend on the facts and circumstances. FINRA explains that the FINRA Rule 2090 "know your customer" obligation is flexible and that the extent of the obligation generally should depend on a particular firm's business model, its customers, and applicable regulations,⁹⁷ and that this same flexibility applies to CAB Rule 209, which is modeled on FINRA Rule 2090. Furthermore, FINRA notes that although a CAB must understand, *inter alia*, the essential facts about a customer that are necessary to effectively service the customer's account and the authority of each person acting on behalf of the customer, the rule does not prescribe the exact information that should be assessed or the process by which it should be obtained. Depending on the facts and circumstances, FINRA states that a CAB could comply with CAB Rule 209 by reasonably relying on the assistance of

a customer's agent in obtaining the essential facts about the customer.⁹⁸

CAB Rule 211 states that a CAB or an associated person of a CAB must have a reasonable basis to believe that a recommended transaction or investment strategy (as defined in FINRA Rule 2111) involving a security or securities is suitable for the customer, based on the information obtained through the reasonable diligence of the broker or associated person to ascertain the customer's investment profile. CAB Rule 211 specifies that a CAB or associated person fulfills this customer-specific suitability obligation for an institutional investor, if: (1) The broker or associated person has a reasonable basis to believe that the institutional investor is capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies involving a security or securities; and (2) the institutional investor affirmatively indicates that it is exercising independent judgment in evaluating the broker's or associated person's recommendations. CAB Rule 211 also states in part that, where an institutional investor has delegated decision-making authority to an agent, such as an investment adviser or a bank trust department, the factors in determining whether a CAB has a reasonable basis to believe that the institutional investor is capable of evaluating investment risks independently and indicates that it is exercising independent judgment apply to the agent rather than to the investor.

One commenter generally agrees with CAB Rule 211, but believes that the rule fails by requiring the suitability analyses to be performed before any recommendation is made.⁹⁹ The commenter believes that the rule does not recognize that the process of diligence is ongoing, in many cases can take several months to several years before an investment decision is made, and often does not, and should not conclude until the deal is closed. The commenter believes that Rule 211 should emphasize this point and encourage registered representatives to periodically review their suitability analysis throughout the offering process, but no less frequently than once before the subscription agreement or relevant contract is signed and due diligence is as complete as it can be at that particular time.¹⁰⁰ In response, FINRA states that FINRA Rule 2111 applies the suitability rule on a recommendation-

by-recommendation basis. FINRA explains that it is important to emphasize that the rule's focus is on whether the recommendation was suitable when it was made.¹⁰¹ A recommendation to hold securities, maintain an investment strategy involving securities or use another investment strategy involving securities—as with a recommendation to purchase, sell or exchange securities—normally would not create an ongoing duty to monitor and make subsequent recommendations. Likewise, CAB Rule 211 would not create an ongoing duty to monitor and make subsequent recommendations.¹⁰²

Two commenters request that FINRA clarify what it meant when it said that a CAB may look to an institutional investor's agent for suitability.¹⁰³ One of those commenters suggests that FINRA should recognize that a CAB may not have access to some information about an investor, particularly where the investor is represented by an agent. As an example, the commenter posits that a CAB may have little information about an investor's overall investment portfolio. The commenter requests that FINRA clarify how CAB Rule 211 would apply in these circumstances. In particular, the commenter recommends that the proposed rules address some type of minimum compliance standards that would be appropriate to these situations, and that a demonstrable best efforts basis may be a satisfactory alternative in such instances.¹⁰⁴

As noted, FINRA recognizes that CABs often will be dealing with customers represented by agents, and CAB Rule 211 contemplates such situations. FINRA emphasizes that CAB Rule 211 states in part that, where an institutional investor has delegated decision-making authority to an agent, such as an investment adviser or a bank trust department, the factors in determining whether a CAB has a reasonable basis to believe that the institutional investor is capable of evaluating investment risks independently and indicates that it is exercising independent judgment apply to the agent rather than to the investor.¹⁰⁵ Thus, FINRA does not believe it would be appropriate to suggest minimum compliance standards in situations in which a CAB may have limited information about a

¹⁰⁵ See FINRA Response, *supra* note 11, at 18.

customer.¹⁰⁶ FINRA states that determining the “essential facts” needed to effectively service a customer’s account and the information necessary to form a reasonable basis to believe that a recommendation is suitable for a non-institutional customer or that an institutional customer (or its agent) is capable of evaluating investment risks independently will always vary depending on the facts and circumstances.

FINRA’s CAB rules do not apply FINRA Rules 2121 (Fair Prices and Commissions), 2122 (Charges for Services Performed), and 2124 (Net Transactions with Customers) to CABs. FINRA does state, however, that depending on the facts, CAB Rule 201 (Standards of Commercial Honor and Principles of Trade) may apply in situations in which a CAB charged a commission or fee that clearly is unreasonable under the circumstances. One commenter states its view that applying CAB Rule 201, which is modeled on FINRA Rule 2010, may lead to interpretive issues when a CAB charges a commission or fee that clearly is unreasonable under the circumstances.¹⁰⁷ In response, FINRA states that it does not agree that the CAB rule set will create an interpretive issue in situations where a CAB charges unreasonable commissions.¹⁰⁸ Specifically, FINRA explains that it will apply the principles of CAB Rule 201 in the same manner as it currently interprets FINRA Rule 2010. Should interpretive issues arise with regard to the application of CAB Rule 201 to CAB commissions or fees, FINRA is open to further discussion of any specific interpretive issues should the context arise, and would consider whether any further rulemaking in this area is necessary.¹⁰⁹

The Commission believes that the CAB conduct rules are consistent with Section 15A(b)(6) of the Exchange Act in that they are reasonably designed to take into account the limited permissible activities of CABs, while still addressing the protection of investors and the public interest. The Commission also believes that FINRA has appropriately responded to comments regarding the proposed CAB conduct rules to clarify their scope and purpose. In this regard, we note that FINRA indicates that, depending on the facts, CAB Rule 201 (Standards of Commercial Honor and Principles of

Trade) may apply in situations in which a CAB charges a commission or fee that clearly is unreasonable under the circumstances. We also note that FINRA clarifies that a CAB could comply with CAB Rule 209 (Know Your Customer) by reasonably relying on the assistance of a customer’s agent in obtaining the essential facts about the customer, and that CAB Rule 211 (Suitability) contemplates situations where a CAB will be dealing with customers represented by agents for which such suitability determinations will vary depending on the facts and circumstances.

E. Supervisory Procedures and Cybersecurity

As detailed above in Section II.D., the CAB Rule 300 Series establishes a limited set of supervisory rules for CABs. FINRA states that the CAB supervisory rules are designed to streamline the requirements applicable to CABs where doing so does not hinder investor protection, and that doing so will provide flexibility to CABs to tailor their supervisory structure to their business model, which is limited in scope of permissible activities.¹¹⁰

One commenter states its view that requirements related to supervisory procedures for supervisors should not be required for CABs.¹¹¹ This commenter also recommends that FINRA clarify its expectations with respect to email review.¹¹² Specifically, the commenter suggests that the rules should note that expectations for email review should be tailored according to the CAB’s business and that such expectations will not be as stringent as those for broker-dealers engaged in non-CAB activities.¹¹³ In response, FINRA states that CAB Rule 311 incorporates by reference FINRA Rule 3110(b)(4), which requires members to adopt procedures for the review of incoming and outgoing written (including electronic) correspondence and internal communications relating to a member’s investment banking business.¹¹⁴ FINRA states that the supervisory procedures must be appropriate for the member’s business, size, structure and customers.¹¹⁵ FINRA believes that these standards offer the flexibility that the commenter seeks, since they recognize that the procedures may be tailored

based on a firm’s business, size, structure and customers.¹¹⁶

Also as discussed above in Section II.E, FINRA has not applied FINRA Rule 4370, which requires FINRA members to maintain a business continuity plan, to CABs. One commenter recommends that FINRA clarify the expectations of CABs with respect to cybersecurity.¹¹⁷ Specifically, while the proposal suggests that a CAB would not be required to have a business continuity plan, the commenter suggests that the final rules include a requirement to have appropriate cybersecurity/information security programs in place, tailored to the CAB’s business.¹¹⁸ In response, FINRA states that it is not applying the business continuity plan requirements of FINRA Rule 4370, given that, among other things, a CAB may not hold, manage, possess, or otherwise handle customer funds or securities. FINRA, however, recognizes that CABs are broker-dealers, and FINRA states that it will monitor, as part of FINRA’s examination and surveillance process, the development and operation of CABs’ business to identify emergency or business disruptions at CABs that affect the ability of the members to meet their existing obligations to investors and issuers. FINRA will use these efforts to assist in assessing whether additional rulemaking in this area is required.¹¹⁹ Likewise, FINRA will examine a CAB’s operations to determine compliance with all applicable SEC rules.¹²⁰

The Commission believes that CAB rules are reasonably designed to provide flexibility to CABs to structure their business, including their supervisory and cybersecurity policies and procedures, while providing for

¹¹⁶ One commenter requests that the SEC work with the appropriate authorities to revisit the anti-money laundering responsibilities of CABs and consider requiring other U.S. registered entities (such as registered investment advisers) to share certain data with FINRA member firms so that all registered participants may satisfy their respective compliance obligations in the most complete and accurate manner possible. In addition, this commenter seeks clarification as to whether CABs, as registered broker-dealers, may rely on previous SEC staff anti-money laundering guidance. See 3PM Letter, *supra* note 6.

In response, FINRA states that because the Bank Secrecy Act imposes AML obligations on all broker-dealers, FINRA does not believe it has the authority to exempt CABs from the requirements to adopt and implement an AML program. To the extent commenters are making suggestions directly to the SEC staff, FINRA states that it is willing to work with the Commission staff if asked. The Commission also notes that CABs, as registered broker-dealers, may rely on previous SEC staff guidance, if applicable to their anti-money laundering requirements and activities.

protection of investors and the public interest, in the context of the limited permitted activities of CABs. Although FINRA is providing flexibility to CABs, we note that FINRA states that a CAB's supervisory procedures must be appropriate for the member's business, size, structure and customers, and that FINRA will monitor, as part of its examination and surveillance process, the development and operation of CABs' business to identify emergency or business disruptions at CABs that affect the ability of the members to meet their existing obligations to investors and issuers. Accordingly, the Commission believes that the proposed rule change is reasonably designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest consistent with Section 15A(b)(6) of the Exchange Act.

IV. Conclusion

For the reasons discussed above, the Commission finds that the rule change, as modified by Amendment Nos. 1 and 2, is consistent with the Exchange Act and the rules and regulations thereunder, in particular with Section 15A(b)(6) of the Exchange Act, which requires in part that FINRA's rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest.¹²¹

It Is Therefore Ordered, pursuant to Section 19(b)(2) of the Act,¹²² that the rule change, SR-FINRA-2015-054, as modified by Amendment Nos. 1 and 2, be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹²³

Robert Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78610; File No. SR-NYSEArca-2016-82]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change To List and Trade Shares of the JPMorgan Diversified Event Driven ETF Under NYSE Arca Equities Rule 8.600

August 18, 2016.

On June 20, 2016, NYSE Arca, Inc. filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to list and trade shares of the JPMorgan Diversified Event Driven ETF under NYSE Arca Equities Rule 8.600. The proposed rule change was published for comment in the **Federal Register** on July 7, 2016.³ The Commission received no comment letters on the proposed rule change.

Section 19(b)(2) of the Act⁴ provides that, within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is August 21, 2016. The Commission is extending this 45-day time period.

The Commission finds that it is appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,⁵ designates October 5, 2016, as the date by which the Commission should either approve or disapprove or institute proceedings to determine whether to disapprove the proposed rule change (File Number SR-NYSEArca-2016-82).

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78611; File No. SR-MSRB-2016-07]

Self-Regulatory Organizations; Municipal Securities Rulemaking Board; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, Consisting of Proposed Amendments to Rule G-12, on Uniform Practice, Regarding Close-Out Procedures for Municipal Securities

August 18, 2016.

I. Introduction

On May 11, 2016, the Municipal Securities Rulemaking Board (the "MSRB" or "Board") filed with the Securities and Exchange Commission (the "SEC" or "Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change consisting of proposed amendments to Rule G-12, on uniform practice, regarding close-out procedures for municipal securities. The proposed rule change was published for comment in the **Federal Register** on June 1, 2016.³

The Commission received three comment letters on the proposal.⁴ On July 25, 2016, the MSRB responded to the comments⁵ and filed Amendment No. 1 to the proposed rule change.⁶ The

¹²³ 17 CFR 200.30-3(a)(12).

Commission is publishing this notice to solicit comments on Amendment No. 1 to the proposed rule change from interested persons and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis.

II. Description of the Proposed Rule Change

In the Proposing Release, the MSRB stated that a more timely resolution of inter-dealer fails would ultimately benefit customers by providing greater certainty that their fully paid for securities are in fact owned in their account, not allocated to a firm short, and would benefit dealers by reducing the risk and costs associated with inter-dealer fails.

As further described in the Proposing Release and the MSRB Response and Amendment Letter, the MSRB states that the purpose of the proposed rule change is to significantly compress the timing to initiate and complete a close-out by allowing a close-out notice to be issued the day after the purchaser's original settlement date, with the last day by which the purchasing dealer must complete a close-out on an open transaction being reduced to 10 calendar days, with an option for the buyer to grant the seller a one-time 10 calendar day extension.⁷

With the vast majority of municipal securities in book entry form and the Depository Trust & Clearing Corporation's ("DTCC") continued efforts to promote dematerialization, the MSRB proposed that firms should no longer have to provide a 10-day delivery window before implementing an execution period. The MSRB believes a three-day delivery window would be sufficient as the majority of inter-dealer fails are resolved within days of the original settlement and/or a fail situation is known prior to the original settlement date.

Additionally, the current rule requires that the earliest day that can be specified as the execution date is 11 days after telephonic notice. The proposed amendments would amend the current allowable execution time frame from 11 days to four days after electronic notification. Accelerating the execution date could improve a firm's likelihood of finding a security for a

buy-in, lower overall counter-party risk and may further reduce accrual, capital and other expenses.

Under the proposed rule change, a purchasing dealer notifying the selling dealer of an intent to close out an inter-dealer fail would continue to prompt DTCC to "exit" the position from DTCC's continuous net settlement ("CNS") and the two parties are responsible for effecting the close-out. Because a municipal security may not be available for purchase, incorporating the buy-in procedures of a registered clearing agency will often not solve the inter-dealer fail. The MSRB expects firms to not solely rely upon the CNS system or the services of a registered clearing agency to resolve inter-dealer fails and take prompt action to close out inter-dealer fails in a timely manner. Under the proposed rule change, regardless of the date the positions are exited from CNS, the inter-dealer fail must be resolved within 20 calendar days of the purchasing dealer's original settlement date. The MSRB is also proposing to retire the Manual on Close-Out Procedures.⁸

Proposed Amendments to MSRB Rule G-12(h)

Rule G-12, on uniform practice, establishes uniform industry practices for processing, clearance and settlement of transactions in municipal securities between a broker, dealer or municipal securities dealer and any other broker, dealer or municipal securities dealer. The proposed amendments would amend Rule G-12(h) by requiring close-outs to be settled no later than 20 calendar days after the settlement date. The proposed amendments to G-12(h)(i)(B) would allow for the close-out process to continue to provide three options to the purchasing dealer. The three options include: (1) Purchase ("buy-in") at the current market all or any part of the securities necessary to complete the transaction for the account and liability of the seller; (2) accept from the seller in satisfaction of the seller's obligation under the original contract (which shall be concurrently cancelled) the delivery of municipal securities that are comparable to those originally bought in quantity, quality, yield or price, and maturity, with any additional expenses or any additional cost of acquiring such substituted securities being borne by the seller; or (3) require the seller to repurchase the

securities on terms which provide that the seller pay an amount which includes accrued interest and bear the burden of any change in market price or yield.

Firms must coordinate internally to determine which of the three close-out options are appropriate for any given fail-to-deliver situation. While a buy-in may be the most preferred method, Rule G-12(h) provides two other options to a purchaser in the event a buy-in is not feasible. Firms are reminded that, regardless of the option agreed upon by the counterparties, including a cancellation of the original transaction, the close-out transaction is reportable to the Real-time Transaction Reporting System ("RTRS") as currently required pursuant to Rule G-14.

Additionally, the proposed amendments to Rule G-12(h)(i)(A) would allow a purchaser to notify the seller of the purchaser's intent to close-out the transaction the first business day following the purchaser's original transaction settlement date, instead of waiting five business days as currently required in Rule G-12(h)(i)(A).

Currently Rule G-12(h) references use of the telephone and mail as part of the notification process. The proposed amendments would update Rule G-12(h) throughout, to reflect modern communication methods and widely-used industry practices that would facilitate more timely and efficient close-outs. For example, DTCC's SMART/Track is available for use by any existing NSCC clearing firm or DTCC settling member, allowing users to create, retransmit, respond, update, cancel and view a notice.

The proposed amendments to Rule G-12(h)(i)(D) would require sellers to use their best efforts to locate the securities that are subject to a close-out notice from a purchaser. The proposed amendments to Rule G-12(h)(i)(E)(1) would also require the seller to bear any burden in the market price, with any benefit from any change in the market price remaining with the purchaser.

The proposed amendments would also require a purchasing dealer that has multiple counterparties, to utilize the FIFO (first-in-first-out) method for determining the contract date for the failing quantity. Amendments to Rule G-12(h)(iv) would require dealers to maintain all records regarding the close-out transaction as part of the firm's books and records.

III. Summary of Comments Received and the MSRB's Response

As noted previously, the Commission received three comment letters on the proposed rule change and a response

change to shorten the period in which firms are required to resolve an inter-dealer fail from 20 calendar days to 10 calendar days, and to permit the buyer to grant the seller a one-time 10 calendar day extension.

⁷ See *supra* notes 3 and 5. The rule as initially proposed in the Proposing Release provided for a period of 20 days in which a close-out must be completed.

⁸ See Manual on Close-Out Procedures. The Manual on Close-Out Procedures will be retired because such procedures would be outdated and, given the proposed rule change's overall simplicity, developing an updated version of the manual is not warranted.

letter from the MSRB.⁹ The commenters generally support the proposed rule change.¹⁰ However, some commenters asked for further clarification and provided suggested amendments to the proposed rule change.¹¹ The MSRB has responded to the commenters, as discussed below.¹²

1. Shorter Close-Out Deadline

As noted above, the original proposed rule change provided for a close-out deadline of 20 calendar days. Both BDA and SIFMA commented that they would support an even shorter close-out period, with both suggesting a period of 10 calendar days, with an option for the buyer to consent to a 10-day extension, for a maximum aggregate total of 20 days.¹³

In response to comments, the MSRB proposed, in Amendment No. 1, to amend the original proposed rule change to require firms to resolve an inter-dealer fail from 20 calendar days to 10 calendar days and permit the buyer to grant the seller a one-time 10 calendar day extension, which would allow the buyer flexibility, while still ensuring that inter-dealer fails would be closed-out in a maximum of 20 calendar days. The MSRB stated in the Proposing Release that “a more timely resolution of inter-dealer fails would ultimately benefit customers by providing greater certainty that their fully paid for securities are in fact owned in their account and not allocated to a firm short, and would also benefit dealers by reducing the risk and costs associated with inter-dealer fails.”¹⁴ The MSRB states in the MSRB Response and Amendment Letter that shortening the close-out period from 20 calendar days, as stated in the original proposed rule change, to 10 calendar days will further reduce the risk and cost associated with inter-dealer fails.

2. Requests for Clarification and Guidance

BDA commented that its member firms still have outstanding questions about how the proposed rule change would impact close-out processes related to accounts transferred to a broker-dealer via the Automated Customer Account Transfer Service (“ACATS”), and requested additional guidance from the MSRB regarding close-outs through ACATS.¹⁵ SIFMA requested further guidance from the

MSRB regarding close-outs with respect to self-directed customer accounts, in which broker-dealers are not allowed to use discretion.¹⁶

The MSRB responded that both of these requests for guidance are beyond the scope of the proposed rule change, both as originally proposed and as amended by Amendment No. 1.¹⁷

IV. Discussion and Commission Findings

The Commission has carefully considered the proposed rule change, as modified by Amendment No. 1, as well as the three comment letters received and the MSRB’s response. The Commission finds that the proposed rule change, as amended by Amendment No. 1, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to the MSRB.

In particular, the proposed rule change is consistent with Section 15B(b)(2)(C) of the Act. Section 15B(b)(2)(C) of the Act requires that the MSRB’s rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in municipal securities and municipal financial products, to remove impediments to and perfect the mechanism of a free and open market in municipal securities and municipal financial products, in general, to protect investors, municipal entities, obligated persons, and the public interest.¹⁸

The MSRB states that the proposed rule change would benefit investors, dealers and issuers. Specifically, the MSRB states that dealers may benefit from clarifications and revisions that more closely reflect actual market practices. In addition, dealers may be able to more quickly and efficiently resolve inter-dealer fails, which may reduce dealer risk, reduce the likelihood and duration that dealers are required to pay “substitute interest” to customers and reduce systemic risk. The MSRB further states that the proposed rule change may also reduce the likelihood and duration of firm short positions that allocate to customer long positions, reduce investor tax exposure and increase investor confidence in the market. According to the MSRB, issuers and the market as a whole may benefit from increased investor confidence.

In approving the proposed rule change, the Commission has considered the proposed rule’s impact on efficiency, competition, and capital formation.¹⁹ The Commission believes the proposed rule change will improve efficiency in the municipal securities market. The Commission notes that all of the commenters stated that the proposed rule change would have positive effects on municipal market efficiency.²⁰ The Commission does not believe that the proposed rule change would impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

As noted above, the Commission received three comment letters on the filing. The Commission believes that the MSRB, through its responses and through proposed changes in Amendment No. 1, has addressed commenters’ concerns.

For the reasons noted above, including those discussed in the MSRB Response and Amendment Letter, the Commission believes that the proposed rule change, as amended by Amendment No. 1, is consistent with the Act.

V. Solicitation of Comments on Amendment No. 1

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 to the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-MSRB-2016-07 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549.

All submissions should refer to File Number SR-MSRB-2016-07. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the

²⁰ See *supra* note 4.

submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the MSRB. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-MSRB-2016-07 and should be submitted on or before September 14, 2016.

VI. Accelerated Approval of Proposed Rule Change as Modified by Amendment No. 1

The Commission finds good cause for approving the proposed rule change, as amended by Amendment No. 1, prior to the 30th day after the date of publication of notice in the **Federal Register**. As discussed above, Amendment No. 1 amends the proposed rule change by shortening the required time frame for firms to resolve an inter-dealer fail from 20 calendar days to 10 calendar days, and permitting the buyer to grant the seller a one-time 10 calendar day extension.

The MSRB has proposed the revisions included in Amendment No. 1 to further reduce the risk and cost associated with inter-dealer fails. As noted by the MSRB, the only substantive change to the proposed amendment, the shortening of the close-out period, was made to address concerns raised during the comment period. The MSRB has further noted that, in light of the stated goal of the original proposal to compress the timing for initiating and completing a close-out, the revisions are consistent with the original proposal and are unlikely to be controversial.

For the foregoing reasons, the Commission finds good cause for approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis, pursuant to Section 19(b)(2) of the Act.

VII. Conclusion

It Is Therefore Ordered, pursuant to Section 19(b)(2) of the Act,²¹ that the proposed rule change (SR-MSRB-2016-07), as modified by Amendment No. 1, be, and hereby is, approved on an accelerated basis.

For the Commission, pursuant to delegated authority.²²

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Rule 17a-3, SEC File No. 270-026, OMB Control No. 3235-0033.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*) the Securities and Exchange Commission ("Commission") is soliciting comments on the existing collection of information provided for in Rule 17a-3 (17 CFR 240.17a-3), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget ("OMB") for extension and approval.

Rule 17a-3 under the Securities Exchange Act of 1934 establishes minimum standards with respect to business records that broker-dealers registered with the Commission must make and keep current. These records are maintained by the broker-dealer (in accordance with a separate rule), so they can be used by the broker-dealer and reviewed by Commission examiners, as well as other regulatory authority examiners, during inspections of the broker-dealer.

The collections of information included in Rule 17a-3 are necessary to provide Commission, self-regulatory organization ("SRO") and state examiners to conduct effective and efficient examinations to determine whether broker-dealers are complying with relevant laws, rules, and regulations. If broker-dealers were not required to create these baseline,

standardized records, Commission, SRO and state examiners could be unable to determine whether broker-dealers are in compliance with the Commission's antifraud and anti-manipulation rules, financial responsibility program, and other Commission, SRO, and State laws, rules, and regulations.

As of April 1, 2016 there were 4,104 broker-dealers registered with the Commission. The Commission estimates that these broker-dealer respondents incur a total burden of 2,763,566 hours per year to comply with Rule 17a-3.

In addition, Rule 17a-3 contains ongoing operation and maintenance costs for broker-dealers, including the cost of postage to provide customers with account information, and costs for equipment and systems development. The Commission estimates that under Rule 17a-3(a)(17), approximately 41,143,233 customers will need to be provided with information regarding their account on a yearly basis. The Commission estimates that the postage costs associated with providing those customers with copies of their account record information would be approximately \$13,577,267 per year (41,143,233 × \$0.33).¹ The staff estimates that broker-dealers establishing liquidity, credit, and market risk management controls pursuant to Rule 17a-3(a)(23) incur one-time startup costs of \$924,000, or \$308,000 amortized over a three-year approval period, to hire outside counsel to review the controls. The staff further estimates that the ongoing equipment and systems development costs relating to Rule 17a-3 for the industry would be about \$30,677,094 per year.

Consequently, the total cost burden associated with Rule 17a-3 would be approximately \$44,562,361 per year.

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in

¹ Estimates of postage costs are derived from past conversations with industry representatives and have been adjusted to account for inflation and increases in postage costs.

²¹ 15 U.S.C. 78s(b)(2).

²² 17 CFR 200.30-3(a)(12).

writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or send an email to: PRA_Mailbox@sec.gov.

Dated: August 19, 2016.

Brent J. Fields,
Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78609; File No. SR-FINRA-2016-031]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Relating to Use of the Alternative Display Facility for Trade Reporting Purpose Only

August 18, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) ¹ and Rule 19b-4 thereunder, ² notice is hereby given that on August 11, 2016, Financial Industry Regulatory Authority, Inc. (“FINRA”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as constituting a “non-controversial” rule change under paragraph (f)(6) of Rule 19b-4 under the Act, ³ which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

FINRA is proposing a proposed rule change relating to use of the Alternative Display Facility (“ADF”) by FINRA members for trade reporting purposes only.

The text of the proposed rule change is available on FINRA’s Web site at <http://www.finra.org>, at the principal office of FINRA and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose Background

On January 20, 2016, FINRA published a *Trade Reporting Notice* with guidance on firms’ over-the-counter (“OTC”) equity trade reporting obligations in the event of a systems issue during the trading day that prevents them from reporting OTC trades in NMS stocks in accordance with FINRA rules. ⁴ As set forth in the *Notice*, a firm that routinely reports its OTC trades in NMS stocks to only one FINRA trade reporting facility (a firm’s “primary facility”) must establish and maintain connectivity and report to a second FINRA trade reporting facility (a firm’s “secondary facility”), if the firm intends to continue to support OTC trading as an executing broker while its primary facility is experiencing a widespread systems issue. ⁵ FINRA currently has three facilities that support member reporting of OTC trades in NMS stocks, as defined in SEC Rule 600(b) of Regulation NMS: the ADF and two Trade Reporting Facilities (“TRFs”). The TRFs are facilities that are operated by both FINRA and its exchange partners (NASDAQ and NYSE).

⁴ See *Trade Reporting Notice*, January 20, 2016 (OTC Equity Trading and Reporting in the Event of Systems Issues).

⁵ As discussed in the *Notice*, if a firm chooses not to have connectivity to a secondary facility, it should cease executing OTC trades altogether when its primary trade reporting facility is experiencing a widespread systems issue. In that instance, the firm could route orders for execution to an exchange or another FINRA member (*i.e.*, a member with connectivity and the ability to report to a FINRA trade reporting facility that is operational).

Since publication of the *Trade Reporting Notice*, a number of firms have inquired about using the ADF as their secondary facility for trade reporting, and at least one has inquired about using the ADF as its primary facility. While the ADF historically has not been used by members for trade reporting without quoting activity, there is nothing in the ADF rules ⁶ to prohibit it. Thus, to better accommodate firms in their efforts to comply with the guidance in the *Trade Reporting Notice*, and to provide an alternative to connecting to both TRFs, FINRA will make the ADF available to members for trade reporting purposes only. ⁷ FINRA currently is making systems updates to the ADF and anticipates that the ADF will be available to members before the end of this year. ⁸ Members that use the ADF for trade reporting purposes only would not be able to quote on the ADF without registering under one of the two categories of “ADF Market Participant” under current ADF rules (*i.e.*, Registered Reporting ADF ECN and Registered Reporting ADF Market Maker) and satisfying all applicable requirements for quoting. ⁹

Because the substantive trade reporting and trade reporting participation requirements under current ADF rules are consistent with the trade reporting and participation requirements applicable to the TRFs, ¹⁰ significant rulemaking is not needed to enable firms to use the ADF for trade reporting purposes only. However, FINRA is proposing the following additional requirements that would apply specifically to members that use the ADF for trade reporting purposes only.

⁶ See Rule 6200 and 7100 Series.

⁷ While members will have the option of using the ADF as their primary facility for trade reporting, FINRA anticipates that members would be more likely to use the ADF as their secondary facility. FINRA has historically operated the ADF as a utility and has not attempted to actively attract participants in the OTC trade reporting space. For example, FINRA does not offer a market data revenue share program for the ADF comparable to the TRFs. See Rules 7610A and 7610B.

⁸ FINRA notes that in addition to the systems updates that will be completed this year, the ADF may need additional infrastructure enhancements to support significant trade reporting volume. However, the necessary enhancements, and the time it may take to make those enhancements, will not be known until FINRA has a more concrete understanding of the level of firms’ interest in using the ADF for trade reporting purposes only and their potential volume.

⁹ For example, in addition to registration, FINRA rules include certification and deposit requirements for ADF quoting participants, as well as capacity fees and penalties. See, *e.g.*, Rules 6271 and 7580.

¹⁰ See, *e.g.*, Rules 6282 and 7120; 6380A and 7220A; and 6380B and 7220B.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 17 CFR 240.19b-4(f)(6).

Proposed Testing Requirements

FINRA is proposing to adopt new paragraph (b)(2)(E) of Rule 7120 (Trade Reporting Participation Requirements) to require members that intend to use the ADF for trade reporting purposes only and connect to the ADF via a Financial Information eXchange (“FIX”) line to participate in annual connectivity and capacity/stress testing. Members that use only the web browser for trade reporting to the ADF and do not have any FIX connections would not be required to participate in connectivity and capacity/stress testing.¹¹

FINRA is proposing to waive the testing requirements under Rule 7120(b)(2)(E) for members that meet certain thresholds. Specifically, members that report at least 100 trades per month to the ADF would not be required to participate in annual connectivity testing. Thus, a member that elects to use the ADF as its primary trade reporting facility likely would be excluded from this requirement. In addition, FINRA is proposing that members would not be required to participate in annual capacity/stress testing unless their actual ADF activity levels or their capacity projections based on their TRF usage¹² increase by more than 20% from one year to the next. FINRA notes that the proposed waivers would apply independently. For example, a member may be subject to annual connectivity testing (because it reports fewer than 100 trades per month to the ADF), while being excused from the capacity/stress testing requirement (because its capacity projection based on its TRF usage has not increased by more than 20% from the prior year).

Pursuant to proposed Rule 7120(b)(2)(E), members that are required to participate in annual connectivity and capacity/stress testing will not be

charged fees under current Rule 7530(c) for the annual testing. However, members that request additional testing beyond the required annual connectivity and capacity/stress testing would be required to pay fees for testing services under Rule 7530(c).¹³

FINRA believes that the proposed testing requirements will help ensure that the ADF has sufficient capability and capacity to support trade reporting, particularly in the event that members relying on the ADF as their secondary facility for trade reporting must report to the ADF in response to a widespread systems issue in their primary facility.

Proposed FIX Connectivity Fee

FINRA is proposing to charge members that use the ADF for trade reporting purposes only and connect to the ADF via a FIX line a monthly fee of \$500. The proposed fee would apply to all members that use the ADF for trade reporting purposes only (as either their primary or secondary facility for trade reporting).¹⁴

The proposed fee would replace the fees for ADF terminal software and servers under current Rule 7520 (Equipment Related Charges).¹⁵ These fees are obsolete, as members no longer use workstations to connect to the ADF, but instead, connect via FIX or web browser. Members that elect to trade report to the ADF via web browser would pay the monthly fee of \$20 per user ID under current Rule 7510(c), rather than the proposed monthly fee for FIX connectivity.¹⁶

The proposed FIX connectivity fee would help cover the costs associated with maintaining the ADF platform and ensuring that there is sufficient capacity on the platform and at the securities information processors to accommodate trade reporting, particularly in the event that firms relying on the ADF as their secondary facility for trade reporting must report to the ADF in response to a widespread systems issue in their primary facility.

Technical Conforming Changes

FINRA is proposing the following technical conforming changes to the ADF rules.

First, FINRA is proposing to amend and rename Rule 6170 (Primary and Additional MPIDs for Alternative Display Facility Participants). With the exception of paragraphs (d) and (e), Rule 6170 relating to the use of multiple market participant identifiers (“MPIDs”) currently is limited to ADF quoting participants. FINRA is proposing to amend the Rule, as applicable, to also apply to members that use the ADF for trade reporting purposes only. In addition, FINRA is proposing to streamline and conform the Rule to Rule 6160 (Multiple MPIDs for Trade Reporting Facility Participants). The standards and processes applicable to the assignment and use of multiple MPIDs are the same for ADF and TRF participants, and as such, FINRA believes that the rules should be identical, to the extent possible.

As amended, paragraph (b) of Rule 6170 would provide that any ADF participant (which would include a member that uses the ADF for trade reporting only) that is required to obtain, or otherwise wishes to use, more than one MPID for purposes of displaying quotes/orders or reporting trades to the ADF must submit a written request, in the form required by FINRA, to, and obtain approval from, FINRA Market Operations for such additional MPID(s). As amended, this paragraph would conform to the language of current Rule 6160(a). Paragraph (c) of Rule 6170, which currently applies only to Registered Reporting ADF ECNs, would be amended to apply to “ADF Market Participants” (which term encompasses both categories of ADF quoting participant, *i.e.*, Registered Reporting ADF ECNs as well as Registered Reporting ADF Market Makers) and to conform to the language of Rule 6160(b).

FINRA also is proposing to amend and reorganize the Supplementary Material under Rule 6170 to conform to Rule 6160 and to delete unnecessary, and in places repetitive, language regarding the specifics of assigning “Primary” and “Additional” MPIDs. As amended, Rule 6170.01 would apply to any ADF participant (which would include a member that uses the ADF for trade reporting purposes only) and provide that an ADF participant must identify the purpose(s) and system(s) for which the multiple MPIDs will be used. If FINRA determines that the use of multiple MPIDs is detrimental to the marketplace, or that an ADF participant

¹¹ FINRA notes that members using a web browser for trade reporting generally have relatively low volume, since it would be difficult for a member with significant volume to meet its 10-second trade reporting obligation under FINRA rules. Thus, FINRA expects that members using the web browser for trade reporting to the ADF will not put the same demands on the ADF system as firms reporting more significant volume using a FIX connection. As such, FINRA does not believe that it is necessary to require web browser users to participate in annual testing.

¹² FINRA will develop capacity projections for members that will use the ADF for trade reporting purposes only based on their current usage of a TRF, and members may be asked to review and confirm these projections from time to time. If a member's volume on a TRF increases by more than 20% from one year to the next, the member would be required to participate in capacity/stress testing to retain connectivity to the ADF for use as a secondary facility for trade reporting.

¹³ Pursuant to Rule 7530(c)(1), members are charged \$333 per hour for testing with the ADF, subject to the exceptions identified in paragraph (c)(2) of the Rule.

¹⁴ FINRA notes that the proposed fee would be in addition to any charges firms must pay NASDAQ, as FINRA's technology provider for the ADF, under NASDAQ rules. For example, firms that report to the ADF via FIX—either directly or indirectly through third party intermediaries (*e.g.*, service bureaus)—would pay NASDAQ charges associated with FIX ports to connect to the ADF data center. *See, e.g.*, NASDAQ Rule 7015.

¹⁵ Pursuant to this rule, the charge for ADF terminal software is \$275 a month per terminal and \$550 a month for each server.

¹⁶ Members that submit trades to the ADF, via FIX or web browser, also would be subject to the trade reporting fees under current Rule 7510(a), which fees are assessed on a per reported transaction basis.

is using one or more additional MPIDs improperly or for other than the purpose(s) identified by the member, FINRA staff retains full discretion to limit or withdraw its grant of the additional MPID(s) to such ADF participant for purposes of displaying quotes/orders or reporting trades through the ADF. This language incorporates language in current Rule 6170.01 and .05 and conforms to the language of Rule 6160.01.

Amended Rule 6170.02 would continue to provide that each MPID belonging to a Registered Reporting ADF ECN is subject to the requirements of Rule 6279 (Alternative Trading Systems). Rule 6170.03 would be amended to apply to “ADF Market Participants,” which would encompass both categories of ADF quoting participant, and provide that if an ADF Market Participant no longer fulfills the conditions appurtenant to one of its MPIDs (e.g., by being placed into an unexcused withdrawal), it may not use another MPID for any purpose in that security. Rules 6170.04 and .05 would be deleted in their entirety.¹⁷

Second, FINRA is proposing to amend paragraph (c)(1) of Rule 7510 (System Related Fees) to clarify that the web browser fee of \$20 per month per user ID will apply to all ADF participants, including members that use the ADF for trade reporting purposes only. The provision currently applies only to “ADF Market Participants,” which term is defined as a Registered Reporting ADF Market Maker or a Registered Reporting ADF ECN.

Finally, FINRA is proposing to delete paragraph (a)(9) of Rule 6220. The term “Non-Registered Reporting Member” is not used in the ADF rule set and as such should no longer be included in the definitions under Rule 6220.

FINRA has filed the proposed rule change for immediate effectiveness and the operative date will be 30 days from the date of filing.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(6) of the Act,¹⁸ which

requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest. FINRA believes that the proposed rule change is consistent with the Act because it provides members with an alternative for meeting their trade reporting obligations under FINRA rules and will allow members that wish to connect to a secondary facility for trade reporting in accordance with the *Trade Reporting Notice* to continue executing OTC trades in NMS stocks in the event their primary facility is experiencing a widespread systems issue.

In addition, FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(5) of the Act,¹⁹ which requires, among other things, that FINRA rules provide for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility or system that FINRA operates or controls. FINRA believes that the proposed rule change to apply the web browser fee under Rule 7510(c)(1) and the proposed FIX connectivity fee under Rule 7520 for members that use the ADF for trade reporting purposes only are reasonable in light of FINRA’s regulatory and operational costs, including personnel, infrastructure and technology costs. FINRA further believes that the proposed fees are equitably allocated and not unfairly discriminatory because they will apply uniformly to all similarly situated members (i.e., the web browser fee will apply uniformly to all members that elect to use the web browser and the FIX connectivity fee will apply uniformly to all members that elect to connect to the ADF via FIX for trade reporting purposes only).

B. Self-Regulatory Organization’s Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Economic Impact Analysis

As an initial matter, the *Trade Reporting Notice* applies only to members that have the trade reporting obligation under FINRA rules.²⁰ Today,

on average, several hundred firms execute and report OTC trades in NMS stocks to the TRFs on a regular basis. Many firms, including smaller firms, route their order flow to another firm, e.g., their clearing firm, for execution, and as the routing firm, they do not have the trade reporting obligation. Thus, the proposed rule change will have no impact on many members.

Moreover, members are not required to use the ADF for purposes of meeting their trade reporting obligations under FINRA rules. As noted above, the ADF would simply be another option available to members for trade reporting, particularly those members that elect to connect to a secondary facility in accordance with the *Trade Reporting Notice*. Members that determine that the ADF is not a cost-effective option for them (as either a primary or secondary facility for trade reporting) can elect to use one (or both) of the TRFs.

FINRA further notes that the proposed rule change does not create any new trade reporting obligations to members; rather it is designed to provide an alternative for members to meet their existing equity trade reporting obligations. Members that choose to rely upon the ADF as their primary or secondary facility for trade reporting will incur some costs. Members connecting to the ADF will incur a cost of \$500 per month per FIX connection or \$20 per month per user for web browser access. FINRA believes that members that report via FIX will also likely maintain at least one web user ID. Members reporting via FIX will also incur a NASDAQ charge of \$575 per port per month. Members that report trades through the ADF will be assessed charges based upon the existing fee schedule, as detailed in Rule 7510(a).

In addition, members maintaining FIX connectivity to the ADF for trade reporting purposes only will be required to conduct annual testing. The connectivity testing requirement will be waived for members reporting at least 100 trades per month through the ADF and the capacity/stress testing requirement will be waived for members with reported trading activity that does not increase by more than 20% from the previous year.

By providing an alternative for trade reporting, FINRA is increasing the choices available to members. FINRA anticipates that few members will use the ADF for trade reporting purposes,

member must report the trade. “Executing party” is defined under FINRA rules as the member that receives an order for handling or execution or is presented an order against its quote, does not subsequently re-route the order, and executes the transaction. See, e.g., Rule 6282(b).

¹⁷ FINRA notes that as amended, Rule 6170.02 and .03 apply to quoting activity, and specifically to Registered Reporting ADF ECNs and ADF Market Participants, respectively, and thus do not correspond to any provisions of Rule 6160. FINRA further notes that Rule 6160.02 applies exclusively to the TRFs and thus there is no corresponding provision in Rule 6170. Otherwise, Rule 6160 and 6170 are substantively identical, differing only with respect to the defined terms used or to reflect the fact that the TRFs are used for trade reporting only and the ADF could be used for both quoting and trade reporting.

¹⁸ 15 U.S.C. 78o-3(b)(6).

¹⁹ 15 U.S.C. 78o-3(b)(5).

²⁰ FINRA rules for reporting OTC transactions in equity securities require that for transactions between members, the “executing party” report the trade to a FINRA facility. For transactions between a member and a non-member or customer, the

but this may change as the relative costs for trade reporting services shift. If a member chooses to use the ADF as a primary or secondary trade reporting venue, it will be because it is determined to be advantageous to that member.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act²¹ and Rule 19b-4(f)(6) thereunder.²² FINRA believes that the filing is appropriately designated as "non-controversial" because the proposed rule change does not create any new trade reporting obligations to members, but rather provides another alternative for members to meet their existing equity trade reporting obligations. Members that do not wish to be subject to the proposed testing requirements and fees or otherwise determine that the ADF is not a cost-effective option for them—as either a primary or secondary facility for trade reporting—can elect to use one (or both) of the TRFs to fulfill their trade reporting obligations under FINRA rules.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-FINRA-2016-031 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-FINRA-2016-031. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-FINRA-2016-031 and should be submitted on or before September 14, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²³

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78613; File No. SR-BatsBZX-2016-35]

Self-Regulatory Organizations; Bats BZX Exchange, Inc.; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change To List and Trade Shares of the JPMorgan Global Bond Opportunities ETF

August 18, 2016.

On July 1, 2016, Bats BZX Exchange, Inc. (the "Exchange" or "BZX") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to list and trade shares of the JPMorgan Global Bond Opportunities ETF of the J.P. Morgan Exchange-Traded Fund Trust under BZX Rule 14.11(i). The proposed rule change was published for comment in the **Federal Register** on July 14, 2016.³ The Commission received no comments on the proposed rule change.

Section 19(b)(2) of the Act⁴ provides that, within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The Commission is extending this 45-day time period.

The Commission finds it appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,⁵ designates October 12, 2016 as the date by which the Commission should either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change (File No. SR-BatsBZX-2016-35).

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–78616; File No. SR–NASDAQ–2016–104]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing of Proposed Rule Change To Amend Nasdaq Rule 5735 To Adopt Generic Listing Standards for Managed Fund Shares

August 18, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that on August 16, 2016, The Nasdaq Stock Market LLC (“Nasdaq” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Nasdaq Rule 5735 to adopt generic listing standards for Managed Fund Shares.

The text of the proposed rule change is available on the Exchange’s Web site at <http://nasdaq.cchwallstreet.com>, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of

the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Nasdaq Rule 5735 to adopt generic listing standards for Managed Fund Shares, as well as to make additional changes as described below. Under the Exchange’s current rules, a proposed rule change must be filed with the Commission for the listing and trading of each new series of Managed Fund Shares. The Exchange believes that it is appropriate to codify certain rules within Rule 5735 that would generally eliminate the need for such proposed rule changes, which would create greater efficiency and promote uniform standards in the listing process.³

Background

Rule 5735 sets forth certain rules related to the listing and trading of Managed Fund Shares.⁴ Under Rule 5735(c)(1), the term “Managed Fund Share” means a security that:

(a) Represents an interest in a registered investment company (“Investment Company”) organized as an open-end management investment company or similar entity, that invests in a portfolio of securities selected by the Investment Company’s investment adviser (hereafter “Adviser”) consistent

with the Investment Company’s investment objectives and policies;

(b) is issued in a specified aggregate minimum number in return for a deposit of a specified portfolio of securities and/or a cash amount with a value equal to the next determined net asset value; and

(c) when aggregated in the same specified minimum number, may be redeemed at a holder’s request, which holder will be paid a specified portfolio of securities and/or cash with a value equal to the next determined net asset value.

Effectively, Managed Fund Shares are securities issued by an actively-managed open-end Investment Company (*i.e.*, an actively-managed exchange-traded fund (“ETF”)). Because Managed Fund Shares are actively-managed, they do not seek to replicate the performance of a specified passive index of securities. Instead, they generally use an active investment strategy to seek to meet their investment objectives. In contrast, an open-end Investment Company that issues Index Fund Shares, listed and traded on the Exchange pursuant to Nasdaq Rule 5705(b), seeks to provide investment results that generally correspond to the price and yield performance of a specific foreign or domestic stock index, fixed income securities index, or combination thereof.

All Managed Fund Shares listed and/or traded pursuant to Rule 5735 (including pursuant to unlisted trading privileges) are subject to the full panoply of Exchange rules and procedures that currently govern the trading of equity securities on the Exchange.⁵

In addition, Rule 5735(d) currently provides for the criteria that Managed Fund Shares must satisfy for initial and continued listing on the Exchange, including, for example, that a minimum number of Managed Fund Shares are required to be outstanding at the time of commencement of trading on the Exchange. However, the current process for listing and trading new series of Managed Fund Shares on the Exchange requires that the Exchange submit a proposed rule change with the Commission. In this regard, Rule 5735(b)(1) specifies that the Exchange will file separate proposals under Section 19(b) of the Act (hereafter, a “proposed rule change”) before listing and trading shares of an issue of Managed Fund Shares.

³ Except as noted below, this proposed rule change is substantively identical to changes approved by the Commission to NYSE Arca Equities Rule 8.600. See Securities Exchange Act Release No. 78397 (July 22, 2016) (SR–NYSEArca–2015–110) (order approving generic listing standards for Managed Fund Shares listed per NYSE Arca Equities Rule 8.600). The definition of “Exchange Traded Derivative Securities” provided in proposed Rule 5735(c)(6) is similar to, but more narrow than, the definition of “Derivative Securities Product” used in NYSE Arca Rule 8.600 because the proposed definition of Exchange Traded Derivative Securities does not include an Exchange rule comparable to NYSE Arca Equities Rule 8.400 (Paired Trust Shares). In addition, non-substantive changes are made in order to conform the proposal to the structure of the Exchange’s current rules. See also Securities Exchange Act Release No. 78396 (July 22, 2016) (SR–BATS–2015–100) (order approving generic BATS listing standards for Managed Fund Shares).

⁴ See Securities Exchange Act Release No. 57962 (June 13, 2008), 73 FR 35175 (June 20, 2008) (SR–NASDAQ–2008–039) (order approving Nasdaq Rule 4420(o) and listing and trading of shares of certain issues of Managed Fund Shares) (the “Approval Order”). The Approval Order approved, among other things, the rules permitting the listing and trading of Managed Fund Shares. Rule 4420(o) was subsequently relocated to Rule 5735. See Securities Exchange Act Release No. 59663 (March 31, 2009), 74 FR 15552 (April 6, 2009) (SR–NASDAQ–2009–018).

⁵ See Approval Order, note 4 above, at 35177.

⁶ 17 CFR 200.30–3(a)(31).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b–4.

Proposed Changes to Rule 5735

The Exchange proposes to amend Rule 5735(b)(1) to specify that the Exchange may approve Managed Fund Shares for listing and/or trading (including pursuant to unlisted trading privileges) pursuant to SEC Rule 19b-4(e) under the Act, which pertains to derivative securities products (“SEC Rule 19b-4(e)”).⁶ SEC Rule 19b-4(e)(1) provides that the listing and trading of a new derivative securities product by a self-regulatory organization (“SRO”) is not deemed a proposed rule change, pursuant to paragraph (c)(1) of Rule 19b-4,⁷ if the Commission has approved, pursuant to section 19(b) of the Act, the SRO’s trading rules, procedures, and listing standards for the product class that would include the new derivative securities product and the SRO has a surveillance program for the product class. This is the current method pursuant to which “passive” ETFs are listed under Nasdaq Rule 5705.

The Exchange would also specify within Rule 5735(b)(1) that components of Managed Fund Shares listed pursuant to SEC Rule 19b-4(e) must satisfy, upon initial listing and on a continual basis, certain specific criteria, which the Exchange would include within Rule 5735(b)(1), as described in greater detail below. As proposed, the Exchange would continue to file separate proposed rule changes before the listing and trading of Managed Fund Shares with components that do not satisfy the additional criteria described below or components other than those specified below. For example, if the components of a Managed Fund Share exceeded one of the applicable thresholds, the Exchange would file a separate proposed rule change before listing and trading such Managed Fund Share. Similarly, if the components of a Managed Fund Share included a security or asset that is not specified below, the Exchange would file a separate proposed rule change.

The Exchange would also add to Rule 5735(c) to provide that the Web site for each series of Managed Fund Shares shall disclose certain information regarding the Disclosed Portfolio, to the extent applicable. The required

information includes the following, to the extent applicable: Ticker symbol, CUSIP or other identifier, a description of the holding, identity of the asset upon which the derivative is based, the strike price for any options, the quantity of each security or other asset held as measured by select metrics, maturity date, coupon rate, effective date, market value, and percentage weight of the holding in the portfolio.⁸

In addition, the Exchange would amend Rule 5735(d) to specify that all Managed Fund Shares must have a stated investment objective, which must be adhered to under normal market conditions.⁹

Finally, the Exchange would also amend the continued listing requirement in Rule 5735(d)(2)(A) by changing the requirement that an Intraday Indicative Value for Managed Fund Shares be widely disseminated by one or more major market data vendors at least every 15 seconds during the time when the Managed Fund Shares trade on the Exchange to a requirement that an Intraday Indicative Value be widely disseminated by one or more major market data vendors at least every 15 seconds during the Regular Market Session (as defined in Nasdaq Rule 4120(b)).

Proposed Managed Fund Share Portfolio Standards

The Exchange is proposing standards that would pertain to Managed Fund Shares to qualify for listing and trading pursuant to SEC Rule 19b-4(e). These standards would be grouped according to security or asset type. The Exchange notes that the standards proposed for a Managed Fund Share portfolio that holds U.S. Component Stocks, Non-U.S. Component Stocks, Exchange Traded Derivative Securities, and Linked Securities are based in large part on the

existing equity security standards applicable to Index Fund Shares in Rule 5705(b)(3).

The standards proposed for a Managed Fund Share portfolio that holds fixed income securities are based in large part on the existing fixed income security standards applicable to Index Fund Shares in Rule 5705(b)(4). Many of the standards proposed for other types of holdings in a Managed Fund Share portfolio are based on previous proposed rule changes for specific series of Managed Fund Shares.¹⁰

Proposed Rule 5735(b)(1)(A) would describe the standards for a Managed Fund Share portfolio that holds equity securities, which are defined to be U.S. Component Stocks,¹¹ Non-U.S. Component Stocks,¹² Exchange Traded

¹⁰ See, e.g., Securities Exchange Act Release No. 77688 (April 22, 2016), 81 FR 25467 (April 28, 2016) (SR-NASDAQ-2016-030) (order approving listing and trading of Elkhorn Dorsey Wright Commodity Rotation Portfolio of Elkhorn ETF Trust). See also Securities Exchange Act Release Nos. 72728 (July 31, 2014) 79 FR 45852 (August 6, 2014) (SR-NASDAQ-2014-059) (order approving listing and trading of Global X Commodities Strategy ETF); 72506 (July 1, 2014), 79 FR 38631 (July 8, 2014) (SR-NASDAQ-2014-050) (order approving listing and trading of First Trust Strategic Income ETF); 69464 (April 26, 2013), 78 FR 25774 (May 2, 2013) (SR-NASDAQ-2013-036) (order approving listing and trading of First Trust Senior Loan Fund); and 66489 (February 29, 2012), 77 FR 13379 (March 6, 2012) (SR-NASDAQ-2012-004) (order approving listing and trading of WisdomTree Emerging Markets Corporate Bond Fund). See also Securities Exchange Act Release Nos. 66321 (February 3, 2012), 77 FR 6850 (February 9, 2012) (SR-NYSEArca-2011-95) (the “PIMCO Total Return Approval”); 69244 (March 27, 2013), 78 FR 19766 (April 2, 2013) (SR-NYSEArca-2013-08) (the “SPDR Blackstone/GSO Senior Loan Approval”); 68870 (February 8, 2013), 78 FR 11245 (February 15, 2013) (SR-NYSEArca-2012-139) (the “First Trust Preferred Securities and Income Approval”); 69591 (May 16, 2013), 78 FR 30372 (May 22, 2013) (SR-NYSEArca-2013-33) (the “International Bear Approval”); 61697 (March 12, 2010), 75 FR 13616 (March 22, 2010) (SR-NYSEArca-2010-04) (the “WisdomTree Real Return Approval”); and 67054 (May 24, 2012), 77 FR 32161 (May 31, 2012) (SR-NYSEArca-2012-25) (the “WisdomTree Brazil Bond Approval”). Certain standards proposed herein for Managed Fund Shares are also based on previous proposed rule changes for specific series of Index Fund Shares for which Commission approval for listing was required due to the Index Fund Shares not satisfying certain standards of Rule 5705(b)(3) and 5705(b)(4). On NYSE Arca, similar products under NYSE Commentary .01 and .02 to NYSE Arca Equities Rule 5.2(j)(3) are called Investment Company Units. See, e.g., Securities Exchange Act Release No. 69373 (April 15, 2013), 78 FR 23601 (April 19, 2013) (SR-NYSEArca-2012-108) (the “NYSE Arca U.S. Equity Synthetic Reverse Convertible Index Fund Approval”).

¹¹ For the purposes of Rule 5735(b)(1) and this proposal, the term “U.S. Component Stocks” would have the same meaning as defined in Rule 5705(b)(1)(D).

¹² For the purposes of Rule 5735(b)(1) and this proposal, the term “Non-U.S. Component Stocks” would have the same meaning as defined in Rule 5705(b)(1)(E).

⁶ 17 CFR 240.19b-4(e). As provided under SEC Rule 19b-4(e), the term “new derivative securities product” means any type of option, warrant, hybrid securities product, or any other security, other than a single equity option or a security futures product, whose value is based, in whole or in part, upon the performance of, or interest in, an underlying instrument.

⁷ 17 CFR 240.19b-4(c)(1). As provided under SEC Rule 19b-4(c)(1), a stated policy, practice, or interpretation of the SRO shall be deemed to be a proposed rule change unless it is reasonably and fairly implied by an existing rule of the SRO.

⁸ Proposed rule changes for previously-listed series of Managed Fund Shares have similarly included disclosure requirements with respect to each portfolio holding, as applicable to the type of holding. See, e.g., Securities Exchange Act Release No. 77688 (April 22, 2016), 81 FR 25467 (April 28, 2016) (SR-NASDAQ-2016-030) (the “Elkhorn Dorsey Wright Commodity Rotation Portfolio of Elkhorn ETF Trust Approval”), generally and at 14147. See also Securities Exchange Act Release No. 72666 (July 3, 2014), 79 FR 44224 (July 30, 2014) (SR-NYSEArca-2013-122) (the “PIMCO Total Return Use of Derivatives Approval”), generally and at 44227.

⁹ The Exchange would also add a new defined term under Rule 5735(c)(5) to specify that the term “normal market conditions” includes, but is not limited to, the absence of trading halts in the applicable financial markets generally; operational issues (e.g., systems failure) causing dissemination of inaccurate market information; or force majeure type events such as a natural or man-made disaster, act of God, armed conflict, act of terrorism, riot or labor disruption or any similar intervening circumstance.

Derivative Securities,¹³ and Linked Securities¹⁴ listed on a national securities exchange. For Exchange Traded Derivative Securities and Linked Securities, no more than 25% of the equity weight of the portfolio could include leveraged and/or inverse leveraged Exchange Traded Derivative Securities or Linked Securities. In addition, proposed rule 5735(b)(1)(A) would provide that, to the extent that a portfolio includes convertible securities, the equity security into which such security is converted would be required to meet the criteria of 5735(b)(1)(A) after converting.

As proposed in Rule 5735(b)(1)(A)(i), the component stocks of the equity portion of a portfolio that are U.S. Component Stocks shall meet the following criteria initially and on a continuing basis:

(1) Component stocks (excluding Exchange Traded Derivative Securities and Linked Securities) that in the aggregate account for at least 90% of the equity weight of the portfolio (excluding such Exchange Traded Derivative Securities and Linked Securities) each must have a minimum market value of at least \$75 million;¹⁵

(2) Component stocks (excluding Exchange Traded Derivative Securities and Linked Securities) that in the aggregate account for at least 70% of the equity weight of the portfolio (excluding such Exchange Traded Derivative Securities and Linked Securities) each must have a minimum monthly trading

volume of 250,000 shares or minimum notional volume traded per month of \$25,000,000, averaged, over the last six months;¹⁶

(3) The most heavily weighted component stock (excluding Exchange Traded Derivative Securities and Linked Securities) must not exceed 30% of the equity weight of the portfolio, and, to the extent applicable, the five most heavily weighted component stocks (excluding Exchange Traded Derivative Securities and Linked Securities) must not exceed 65% of the equity weight of the portfolio;¹⁷

(4) Where the equity portion of the portfolio does not include Non-U.S. Component Stocks, the equity portion of the portfolio shall include a minimum of 13 component stocks; provided, however, that there shall be no minimum number of component stocks if (a) one or more series of Exchange Traded Derivative Securities or Linked Securities constitute, at least in part, components underlying a series of Managed Fund Shares, or (b) one or more series of Exchange Traded Derivative Securities or Linked Securities account for 100% of the equity weight of the portfolio of a series of Managed Fund Shares;¹⁸

(5) Except as provided in proposed Rule 5735(b)(1)(A), equity securities in the portfolio must be U.S. Component Stocks listed on a national securities exchange and must be NMS Stocks as defined in Rule 600 of Regulation NMS;¹⁹ and

(6) American Depositary Receipts (“ADRs”) may be exchange-traded or

non-exchange-traded. However no more than 10% of the equity weight of the portfolio shall consist of non-exchange-traded ADRs.²⁰

As proposed in Rule 5735(b)(1)(A)(ii), the component stocks of the equity portion of a portfolio that are Non-U.S. Component Stocks shall meet the following criteria initially and on a continuing basis:

(1) Non-U.S. Component Stocks each shall have a minimum market value of at least \$100 million;²¹

(2) Non-U.S. Component Stocks each shall have a minimum global monthly trading volume of 250,000 shares, or minimum global notional volume traded per month of \$25,000,000, averaged over the last six months;²²

(3) The most heavily weighted Non-U.S. Component Stock shall not exceed 25% of the equity weight of the portfolio, and, to the extent applicable, the five most heavily weighted Non-U.S. Component Stocks shall not exceed 60% of the equity weight of the portfolio;²³

(4) Where the equity portion of the portfolio includes Non-U.S. Component Stocks, the equity portion of the portfolio shall include a minimum of 20 component stocks; provided, however, that there shall be no minimum number of component stocks if (i) one or more series of Exchange Traded Derivative

²⁰ Proposed rule changes for previously-listed series of Managed Fund Shares have similarly included the ability for such Managed Fund Shareholdings to include not more than 10% of net assets in unsponsored ADRs (which are not exchange-listed). See, e.g., Securities Exchange Act Release No. 73480 (October 31, 2014), 79 FR 66022 (November 6, 2014) (SR-NASDAQ-2014-090) (order approving the Listing and Trading of Shares of the Validea Market Legends ETFs). See also Securities Exchange Act Release No. 71067 (December 12, 2013), 78 FR 76669 (December 18, 2013) (order approving listing and trading of shares of the SPDR MFS Systematic Core Equity ETF, SPDR MFS Systematic Growth Equity ETF, and SPDR MFS Systematic Value Equity ETF under NYSE Arca Equities Rule 8.600).

²¹ The proposed text is identical to the corresponding representations from the First Trust Approval Order and the SSgA Global Managed Volatility Release, as noted in footnote 28, below. The proposed text is also substantively identical to the corresponding text of Rule 5705(b)(3)(A)(ii)a., except for the omission of the reference to “index,” which is not applicable, and that each Non-U.S. Component Stock must have a minimum market value of at least \$100 million instead of the 90% required under Rule 5705(b)(3)(A)(ii)a.

²² The proposed text is identical to the corresponding representations from the First Trust Approval Order and the SSgA Global Managed Volatility Release, as noted in footnote 28, below. This proposed text also is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(ii)b., except for the omission of the reference to “index,” which is not applicable.

²³ This proposed text is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(ii)c., except for the omission of the reference to “index,” which is not applicable.

¹³ For the purposes of Rule 5735(b)(1)(A) and this proposal, proposed Rule 5735(c)(6) would define the term “Exchange Traded Derivative Securities” to mean the securities described in Nasdaq Rules 5705(a) (Portfolio Depository Receipts); 5705(b) (Index Fund Shares); 5720 (Trust Issued Receipts); 5711(d) (Commodity-Based Trust Shares); 5711(e) (Currency Trust Shares); 5711(f), (Commodity Index Trust Shares); 5711(g) (Commodity Futures Trust Shares); 5711(h) (Partnership Units); 5711(i) (Trust Units); 5735 (Managed Fund Shares); and 5711(j) (Managed Trust Securities). This proposed definition is more narrow than the term “Derivative Securities Product,” as defined in Nasdaq Rule 4120(b)(4)(A) and used in Rule 5705(b), because it excludes certain securities including NextShares. It is also more narrow than the term “Derivative Securities Product” as defined in commentary .01(a) to NYSE Arca Rule 8.600 because it excludes Paired Trust Shares.

¹⁴ Linked Securities are securities that qualify for Exchange listing and trading under Rule 5710. The securities described in Rules 5705, 5710, and 5735(c)(6), as referenced above, would include securities listed on another national securities exchange pursuant to substantially equivalent listing rules.

¹⁵ This proposed text is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(i)a., except for the omission of the reference to “index,” which is not applicable, the substitution of a more narrow exclusion for “Exchange Traded Derivative Securities” instead of for “Derivative Securities Products,” and the addition of the reference to Linked Securities.

¹⁶ This proposed text is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(i)b., except for the omission of the reference to “index,” which is not applicable, the substitution of a more narrow exclusion for “Exchange Traded Derivative Securities” instead of for “Derivative Securities Products,” and the addition of the reference to Linked Securities.

¹⁷ This proposed text is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(i)c., except for the omission of the reference to “index,” which is not applicable, the substitution of a more narrow exclusion for “Exchange Traded Derivative Securities” instead of for “Derivative Securities Products,” and the addition of the reference to Linked Securities.

¹⁸ This proposed text is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(i)d., except for the omission of the reference to “index,” which is not applicable, the addition of the reference to Linked Securities, the substitution of a more narrow exclusion for “Exchange Traded Derivative Securities” instead of for “Derivative Securities Products,” and the reference to the 100% limit applying to the “equity portion” of the portfolio.

¹⁹ 17 CFR 240.600. This proposed text is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(i)e., except for the addition of “equity” to make clear that the standard applies to “equity securities,” the exclusion of unsponsored ADRs, and the omission of the reference to “index,” which is not applicable.

Securities or Linked Securities constitute, at least in part, components underlying a series of Managed Fund Shares, or (ii) one or more series of Exchange Traded Derivative Securities or Linked Securities account for 100% of the equity weight of the portfolio of a series of Managed Fund Shares²⁴; and

(5) Each Non-U.S. Component Stock shall be listed and traded on an exchange that has last-sale reporting.²⁵

The Exchange notes that it is not proposing to require that any of the equity portion of the equity portfolio composed of Non-U.S. Component Stocks be listed on markets that are either a member of the Intermarket Surveillance Group ("ISG") or a market with which the Exchange has a comprehensive surveillance sharing agreement ("CSSA").²⁶ However, as further detailed below, the regulatory staff of the Exchange, or the Financial Industry Regulatory Authority, Inc. ("FINRA"), on behalf of the Exchange, will communicate as needed regarding trading in Managed Fund Shares with other markets that are members of the ISG, including U.S. securities exchanges on which the components are traded.

The Exchange notes that the generic listing standards for Index Fund Shares based on foreign indexes in Rule 5705 do not include specific ISG or CSSA requirements.²⁷ In addition, the Commission has approved listing and trading on the Exchange of shares of an issue of Managed Fund Shares under Rule 5735 where non-U.S. equity securities in such issue's portfolio meet specified criteria and where there is no requirement that such non-U.S. equity securities are traded in markets that are

members of ISG or with which the Exchange has in place a CSSA.²⁸

Proposed Rule 5735(b)(1)(B) would describe the standards for a Managed Fund Share portfolio that holds fixed income securities, which are debt securities²⁹ that are notes, bonds, debentures, or evidence of indebtedness that include, but are not limited to, U.S. Department of Treasury securities ("Treasury Securities"), government-sponsored entity securities ("GSE Securities"), municipal securities, trust preferred securities, supranational debt and debt of a foreign country or a subdivision thereof, investment grade and high yield corporate debt, bank loans, mortgage and asset backed securities, and commercial paper.

In addition, to the extent that a portfolio includes convertible securities, the fixed income security into which such security is converted would be required to meet the criteria of Rule 5735(b)(1)(B) after converting.

The components of the fixed income portion of the portfolio must meet the following criteria initially and on a continuing basis:

(1) Components that in the aggregate account for at least 75% of the fixed income weight of the portfolio each shall have a minimum original principal amount outstanding of \$100 million or more;³⁰

(2) No component fixed-income security (excluding Treasury Securities and GSE Securities) could represent more than 30% of the fixed income weight of the portfolio, and the five most heavily weighted component fixed income securities in the portfolio (excluding Treasury Securities and GSE Securities) must not in the aggregate

account for more than 65% of the fixed income weight of the portfolio;³¹

(3) An underlying portfolio (excluding exempted securities) that includes fixed income securities must include a minimum of 13 non-affiliated issuers; provided, however, that there shall be no minimum number of non-affiliated issuers required for fixed income securities if at least 70% of the weight of the portfolio consists of equity securities as described in proposed Rule 5735(b)(1)(A).³²

(4) Component securities that in aggregate account for at least 90% of the fixed income weight of the portfolio must be either (a) from issuers that are required to file reports pursuant to Sections 13 and 15(d) of the Act; (b) from issuers that have a worldwide market value of its outstanding common equity held by non-affiliates of \$700 million or more; (c) from issuers that have outstanding securities that are notes, bonds debentures, or evidence of indebtedness having a total remaining principal amount of at least \$1 billion³³; (d) exempted securities as defined in Section 3(a)(12) of the Act; or (e) from issuers that are a government of a foreign country or a political subdivision of a foreign country; and

(5) Non-agency, non-GSE, and privately-issued mortgage-related and other asset-backed securities components of a portfolio shall not account, in the aggregate, for more than 20% of the weight of the fixed income portion of the portfolio.³⁴

³¹ This proposed text is substantively identical to the corresponding text of 5705(b)(4)(A)(iv), except for the omission of the reference to "index," which is not applicable.

³² This proposed text is substantively identical to the corresponding text of Rule 5705(b)(4)(A)(v), except for the omission of the reference to "index," which is not applicable, the exclusion of the text "consisting entirely of exempted securities" and the provision that there shall be no minimum number of non-affiliated issuers required for fixed income securities if at least 70% of the weight of the portfolio consists of equity securities as described in proposed Rule 5735(b)(1)(A).

³³ With respect to subparagraphs (b) and (c) above, the special purpose vehicle ("SPV") that issues the fixed income security (e.g., an asset-backed or mortgage-backed security) would itself be required to satisfy the \$700 million and \$1 billion criteria, respectively, and not the entity that controls, owns or is affiliated with the SPV.

³⁴ Proposed rule changes for previously-listed series of Managed Fund Shares have similarly included the ability for such Managed Fund Share holdings to include up to 20% of net assets in non-agency, non-GSE and privately-issued mortgage-related and other asset-backed securities. See, e.g., Securities Exchange Act Release No. 74742 (April 16, 2015) 80 FR 22584 (April 22, 2015) (SR-NASDAQ-2015-011) (order approving the listing and trading of shares of the First Trust Strategic Floating Rate ETF of First Trust Exchange-Traded Fund IV. See also, Securities Exchange Act Release No. 75566 (July 30, 2015), 80 FR 46612 (August 5,

²⁴ This proposed text is substantively identical to the corresponding text of Rule 5705(b)(3)(A)(ii)d., except for the omission of the reference to "index," which is not applicable, the substitution of a more narrow exclusion for "Exchange Traded Derivative Securities" instead of for "Derivative Securities Products," the addition of the reference to Linked Securities, the reference to the equity portion of the portfolio including Non-U.S. Component Stocks, and the reference to the 100% limitation applying to the "equity weight" of the portfolio, which is included because the proposed standards in Rule 5735(b) permit the inclusion of non-equity securities, whereas Rule 5705 applies only to equity securities.

²⁵ This proposed text is substantively identical to Rule 5705(b)(3)(A)(ii)e. as it relates to Non-U.S. Component Stocks.

²⁶ ISG is comprised of an international group of exchanges, market centers, and market regulators that perform front-line market surveillance in their respective jurisdictions. See www.isgportal.org. A list of ISG members is available at www.isgportal.org.

²⁷ Under Rule 5705(b)(3), Index Fund Shares with components that include Non-U.S. Component Stocks can hold a portfolio that is entirely composed of Non-U.S. Component Stocks that are listed on markets that are neither members of ISG, nor with which the Exchange has in place a CSSA.

²⁸ See, e.g., Securities Exchange Act Release No. 77548 (April 6, 2016), 81 FR 21626 (April 12, 2016) (SR-NASDAQ-2015-161) (order approving listing and trading of the Shares of the First Trust RiverFront Dynamic Europe ETF, First Trust RiverFront Dynamic Asia Pacific ETF, First Trust RiverFront Dynamic Emerging Markets ETF, and First Trust RiverFront Dynamic Developed International ETF of First Trust Exchange-Traded Fund III) (the "First Trust Approval Order"). See also Securities Exchange Act Release No. 75023 (May 21, 2015), 80 FR 30519 (May 28, 2015) (SR-NYSEArca-2014-100) (order approving listing and trading on the Exchange of shares of the SPDR SSGA Global Managed Volatility ETF under NYSE Arca Equities Rule 8.600) ("SSGA Global Managed Volatility Release").

²⁹ Debt securities include a variety of fixed income obligations, including, but not limited to, corporate debt securities, government securities, municipal securities, convertible securities, and mortgage-backed securities. Debt securities include investment-grade securities, non-investment-grade securities, and unrated securities. Debt securities also include variable and floating rate securities.

³⁰ This text of proposed Rule 5735(b)(1)(B)(i) is based on the corresponding text of Rule 5705(b)(4)(A)(ii).

Proposed Rule 5735(b)(1)(C) would describe the standards for a Managed Fund Share portfolio that holds cash and cash equivalents.³⁵ Specifically, the portfolio may hold short-term instruments with maturities of less than 3 months. There would be no limitation to the percentage of the portfolio invested in such holdings. Short-term instruments would include the following:³⁶

- (1) U.S. Government securities, including bills, notes, and bonds differing as to maturity and rates of interest, which are either issued or guaranteed by the U.S. Treasury or by U.S. Government agencies or instrumentalities;
- (2) certificates of deposit issued against funds deposited in a bank or savings and loan association;
- (3) bankers' acceptances, which are short-term credit instruments used to finance commercial transactions;
- (4) repurchase agreements and reverse repurchase agreements;
- (5) bank time deposits, which are monies kept on deposit with banks or savings and loan associations for a stated period of time at a fixed rate of interest;
- (6) commercial paper, which are short-term unsecured promissory notes; and
- (7) money market funds.

Proposed Rule 5735(b)(1)(D) would describe the standards for a Managed Fund Share portfolio that holds listed derivatives, including futures, options, and swaps on commodities, currencies, and financial instruments (*e.g.*, stocks, fixed income, interest rates, and volatility) or a basket or index of any of the foregoing.³⁷ There would be no limitation to the percentage of the

portfolio invested in such holdings, subject to the following requirements:

- (1) In the aggregate, at least 90% of the weight of such holdings invested in futures, exchange-traded options, and listed swaps shall, on both an initial and continuing basis, consist of futures, options, and swaps for which the Exchange may obtain information via the ISG from other members or affiliates of the ISG or for which the principal market is a market with which the Exchange has a comprehensive surveillance sharing agreement (For purposes of calculating this limitation, a portfolio's investment in listed derivatives will be calculated as the aggregate gross notional value of the listed derivatives.); and
- (2) the aggregate gross notional value of listed derivatives based on any five or fewer underlying reference assets shall not exceed 65% of the weight of the portfolio (including gross notional exposures), and the aggregate gross notional value of listed derivatives based on any single underlying reference asset shall not exceed 30% of the weight of the portfolio (including gross notional exposures).

Proposed Rule 5735(b)(1)(E) would describe the standards for a Managed Fund Share portfolio that holds over the counter ("OTC") derivatives, including forwards, options and swaps on commodities, currencies and financial instruments (*e.g.*, stocks, fixed income, interest rates, and volatility) or a basket or index of any of the foregoing.³⁸ Proposed Rule 5735(b)(1)(E) would provide that, on both an initial and continuing basis, no more than 20% of the assets in the portfolio may be invested in OTC derivatives. For purposes of calculating this limitation, a portfolio's investment in OTC derivatives will be calculated as the aggregate gross notional value of the OTC derivatives.

Proposed Rule 5735(b)(1)(F) would provide that, to the extent that listed or OTC derivatives are used to gain exposure to individual equities and/or fixed income securities, or to indexes of equities and/or fixed income securities, the aggregate gross notional value of such exposure shall meet the criteria set forth in Rules 5735(b)(1)(A) and (B)

(including gross notional exposures), respectively.

The following examples illustrate how certain of the proposed generic criteria of Rule 5735 would be applied:

1. An actively managed ETF holds non-agency MBS that represent 15% of the weight of the fixed income portion of the portfolio. The fixed income portion of the portfolio meets all the requirements of Rule 5735(b)(1)(B). The ETF also holds an OTC swap on a non-agency MBS Index that represents 10% of the fixed income weight of the portfolio calculated on a notional value basis. Separately, the OTC swap and fixed income portion of the portfolio would meet the requirements of Rule 5735(b)(1). However, when the 15% weight in non-agency MBS and the 10% weight in the non-agency MBS Index OTC swap are combined, as required by proposed 5735(b)(1)(F), the 25% total weight would exceed the 20% limit for non-agency GSE and privately-issued mortgage-related securities in 5735(b)(1)(B)(v). The portfolio, therefore, would not meet the proposed generic criteria of Rule 5735.

2. An actively managed ETF holds a portfolio of non-U.S. equity securities, S&P 500 Index and gold futures. S&P 500 Index futures and the gold futures held by the fund are listed on an ISG member exchange. The equity portion of the portfolio consists of developed and emerging markets equity securities with a current aggregate market value of \$15 million and all components meet the requirements under Rule 5735(b)(1)(A)(ii). The gold futures contract trading unit size is 100 troy ounces and an ounce of gold is currently worth \$1200. The fund holds 500 gold futures contracts with a notional value of \$60 million (500*100*\$1200). One S&P 500 contract represents 250 units of the S&P 500 Index and the S&P 500 Index is trading at \$2,000. The portfolio holds 50 contracts, so the notional value of the S&P 500 Index futures position is \$25 million (50*250*\$2000). The S&P 500 Index futures meet the requirement under Rule 5735(b)(1)(F), that is, the S&P 500 Index meets the criteria in Rule 5735(b)(1)(A). The weights of the components are as follows; equity securities represent 15% of the portfolio, gold futures represent 60% of the portfolio and S&P 500 Index futures represent 25% of the portfolio. The gold futures represent 60% of the portfolio and exceeds the 30% concentration limitation on any single underlying reference asset as outlined in proposed Rule 5735(b)(1)(D)(ii). The portfolio, therefore, would not meet the proposed generic criteria of Rule 5735.

2015) (SR-NYSEArca-2015-42) (order approving listing and trading of shares of Newfleet Multi-Sector Unconstrained Bond ETF under Rule 8.600).

³⁵ Proposed rule changes for previously-listed series of Managed Fund Shares have similarly included the ability for such Managed Fund Share holdings to include cash and cash equivalents. *See, e.g.*, note 10 above regarding approval of NYSE Arca's SPDR Blackstone/GSO Senior Loan, at 19768-69; and First Trust Preferred Securities and Income Approval, at 76150.

³⁶ Proposed rule changes for previously-listed series of Managed Fund Shares have similarly specified short-term instruments with respect to their inclusion in Managed Fund Share holdings. *See, e.g.*, note 10 above, regarding NYSE Arca's First Trust Preferred Securities and Income Approval, at 76150-51.

³⁷ Proposed rule changes for previously-listed series of Managed Fund Shares have similarly included the ability for such Managed Fund Share holdings to include listed derivatives. *See, e.g.*, note 10 above, regarding NYSE Arca's WisdomTree Real Return Approval, at 13617; and WisdomTree Brazil Bond Approval, at 32163.

³⁸ A proposed rule change for series of Index Fund Shares previously listed and traded on the Exchange pursuant to Rule 5705 similarly included the ability for such Index Fund Shares' holdings to include OTC derivatives, specifically OTC down-and-in put options, which are not NMS Stocks as defined in Rule 600 of Regulation NMS and therefore do not satisfy the requirements of Rule 5705. *See, e.g.*, note 10 above, regarding NYSE Arca U.S. Equity Synthetic Reverse Convertible Index Fund Approval, at 23602.

3. An actively managed ETF holds a portfolio of equity securities and call option contracts on company XYZ. The equity portion of the portfolio meets the requirements under Rule 5735(b)(1)(A). Company XYZ represents 20% of the weight of the equity portion of the portfolio. The equity portion of the fund has a market value of \$100 million and the market value of the fund's holdings in company XYZ has a market value of \$20 million. The fund also holds 10,000 call option contracts on company XYZ which has a current market price of \$50 a share and, therefore, a notional value of \$50 million ($50 \times 100 \times 10,000$) (that is, the \$50 market price per share times the multiplier of 100 times 10,000 contracts). The option contracts are traded on an ISG member exchange. The total exposure to company XYZ is therefore \$70 million and represents 46.7% ($\$70 \text{ million} / \$150 \text{ million} = 46.7\%$) of the portfolio. This fund would not meet the requirements of Rule 5735 because the exposure to XYZ at 46.7% exceeds the 30% concentration limitation of proposed Rule 5735(b)(1)(D)(ii).

The Exchange believes that the proposed standards would continue to ensure transparency surrounding the listing process for Managed Fund Shares. Additionally, the Exchange believes that the proposed portfolio standards for listing and trading Managed Fund Shares, many of which track existing Exchange rules relating to Index Fund Shares, are reasonably designed to promote a fair and orderly market for such Managed Fund Shares.³⁹ These proposed standards would also work in conjunction with the existing initial and continued listing criteria related to surveillance procedures and trading guidelines.

In support of this proposal, the Exchange represents that:⁴⁰

(1) The Managed Fund Shares will continue to conform to the initial and continued listing criteria under Rule 5735;

(2) the Exchange's surveillance procedures are adequate to continue to properly monitor the trading of the Managed Fund Shares in all trading sessions and to deter and detect violations of Exchange rules. Specifically, the Exchange intends to utilize its existing surveillance procedures applicable to derivative products, which will include Managed Fund Shares, to monitor trading in the Managed Fund Shares;

(3) prior to the commencement of trading of a particular series of Managed Fund Shares, the Exchange will inform its members in an information circular ("Circular") of the special characteristics and risks associated with trading the Managed Fund Shares, including procedures for purchases and redemptions of Managed Fund Shares, suitability requirements under Rules 2090A and 2111A, the risks involved in trading the Managed Fund Shares during the Pre-Market and Post-Market Sessions when an updated Portfolio Indicative Value will not be calculated or publicly disseminated, information regarding the Portfolio Indicative Value and the Disclosed Portfolio, prospectus delivery requirements, and other trading information. In addition, the Circular will disclose that the Managed Fund Shares are subject to various fees and expenses, as described in the applicable registration statement, and will discuss any exemptive, no-action, and interpretive relief granted by the Commission from any rules under the Act. Finally, the Circular will disclose that the net asset value for the Managed Fund Shares will be calculated after 4 p.m., ET, each trading day; and

(4) the issuer of a series of Managed Fund Shares will be required to comply with Rule 10A-3 under the Act for the initial and continued listing of Managed Fund Shares, as provided under the Nasdaq Rule 5600 Series.

The Exchange, on a periodic basis and no less than annually, will review issues of Managed Fund Shares generically listed pursuant to Rule 5735, and will provide a report to the Regulatory Oversight Committee of the Exchange's Board of Directors regarding the Exchange's findings. In addition, the Exchange will provide the Commission staff with a report each calendar quarter that includes the following information for issues of Managed Fund Shares listed during such calendar quarter under Rule 5735(b)(1): (1) Trading symbol and date of listing on the Exchange; (2) the number of active authorized participants and a description of any failure of an issue of Managed Fund Shares or of an authorized participant to deliver shares, cash, or cash and financial instruments in connection with creation or redemption orders; and (3) a description of any failure of an issue of Managed Fund Shares to comply with Nasdaq Rule 5735.

Prior to listing pursuant to proposed amended Rule 5735(b)(1), an issuer would be required to represent to the Exchange that it will advise the Exchange of any failure by a series of Managed Fund Shares to comply with

the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under the Nasdaq Rule 5800 Series.

The Exchange notes that the proposed change is not otherwise intended to address any other issues and that the Exchange is not aware of any problems that members or issuers would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁴¹ in general, and furthers the objectives of Section 6(b)(5) of the Act,⁴² in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest because it would facilitate the listing and trading of additional Managed Fund Shares, which would enhance competition among market participants, to the benefit of investors and the marketplace.

Specifically, after more than six years under the current process, whereby the Exchange is required to file a proposed rule change with the Commission for the listing and trading of each new series of Managed Fund Shares, the Exchange believes that it is appropriate to codify certain rules within Rule 5735 that would generally eliminate the need for separate proposed rule changes.

The Exchange believes that this would facilitate the listing and trading of additional types of Managed Fund Shares that have investment portfolios that are similar to investment portfolios for Index Fund Shares, which have been approved for listing and trading, thereby creating greater efficiencies in the listing process for the Exchange and the Commission.

In this regard, the Exchange notes that the standards proposed for Managed Fund Share portfolios that include U.S. Component Stocks, Non-U.S. Component Stocks, Exchange Traded

³⁹ See note 4 above, Approval Order, at 35177.

⁴⁰ The Exchange made similar representations in the Approval Order. See *id.* at 35177—35178.

⁴¹ 15 U.S.C. 78f(b).

⁴² 15 U.S.C. 78f(b)(5).

Derivative Securities, and Linked Securities are based in large part on the existing equity security standards applicable to Index Fund Shares in Rule 5705(b)(3) and that the standards proposed for Managed Fund Share portfolios that include fixed income securities are based in large part on the existing fixed income standards applicable to Index Fund Shares in Rule 5705(b)(4). Additionally, many of the standards proposed for other types of holdings of series of Managed Fund Shares are based on previous proposed rule changes for specific series of Managed Fund Shares.⁴³

With respect to the proposed addition to the criteria of Rule 5735(c) to provide that the Web site for each series of Managed Fund Shares shall disclose certain information regarding the Disclosed Portfolio, to the extent applicable, the Exchange notes that proposed rule changes approved by the Commission for previously-listed series of Managed Fund Shares have similarly included disclosure requirements with respect to each portfolio holding, as applicable to the type of holding.⁴⁴

With respect to the proposed definition of the term “normal market conditions” in proposed Rule 5735(c)(5), such definition is similar to the definition of normal market conditions approved by the Commission for other issues of Managed Fund Shares.⁴⁵ In addition, proposed Rule 5735(d)(1)(C), would specify that a series of Managed Fund Shares would be required to adhere to its stated investment objective during normal market conditions.

With respect to the proposed amendment to the continued listing requirement in Rule 5735(d)(2)(A) to require dissemination of a Portfolio Indicative Value at least every 15 seconds during the Regular Market Session (as defined in Rule 4120(b)), such requirement conforms to the requirement applicable to the dissemination of the Intraday Indicative Value for Index Fund Shares in Rule 5705(b)(3)(C). In addition, such dissemination is consistent with representations made in proposed rule

changes for issues of Managed Fund Shares previously approved by the Commission.⁴⁶

With respect to the proposed requirement in Rule 5735(b)(1)(A) that no more than 25% of the equity weight of the portfolio shall consist of leveraged and/or inverse leveraged Exchange Traded Derivative Securities or Linked Securities, such requirement would assure that only a relatively small proportion of a fund’s investments could consist of such leveraged and/or inverse securities. In addition, such limitation would apply to both U.S. Component Stocks and Non-U.S. Component Stocks comprising the equity portion of a portfolio.

With respect to the proposed provision in Rule 5735(b)(1)(A) that, to the extent a portfolio includes a convertible security, the equity security into which such security is converted must meet the criteria in Rule 5735(b)(1)(A) after converting, such requirement would assure that the equity securities into which a convertible security could be converted meet the liquidity and other criteria in Rule 5735(b)(1)(A) applicable to such equity securities.

With respect to the proposed exclusion of Exchange Traded Derivatives Securities and Linked Securities from the requirements of proposed Rule 5735(b)(1)(A), the Exchange believes it is appropriate to exclude Linked Securities as well as Exchange Traded Derivative Securities from certain component stock eligibility criteria for Managed Fund Shares in so far as Exchange Traded Derivative Securities and Linked Securities are themselves subject to specific quantitative listing and continued listing requirements of a national securities exchange on which such securities are listed. Exchange Traded Derivative Securities and Linked Securities that are components of a fund’s portfolio would have been listed and traded on a national securities exchange pursuant to a proposed rule change approved by the Commission pursuant to Section 19(b)(2) of the Act⁴⁷ or submitted by a national securities exchange pursuant to Section 19(b)(3)(A) of the Act⁴⁸ or would have been listed by a national securities exchange pursuant to the requirements of Rule 19b–4(e) under the Act.⁴⁹

The Exchange also notes that Exchange Traded Derivative Securities

and Linked Securities are derivatively priced, and, therefore, the Exchange believes that it would not be necessary to apply the proposed generic quantitative criteria (e.g., market capitalization, trading volume, or portfolio component weighting) applicable to equity securities other than Exchange Traded Derivative Securities or Linked Securities (e.g., common stocks) to such products.⁵⁰

With respect to the proposed criteria applicable to U.S. Component Stocks, the Exchange notes that such criteria are similar to those in Rule 5705(b)(3) relating to criteria applicable to an index or portfolio of U.S. Component Stocks. In addition, Non-U.S. Component Stocks also will be required to meet criteria similar to certain generic listing standards in Rule 5705(b)(3) relating to criteria applicable to an index or portfolio of U.S. Component Stocks and Non-U.S. Component Stocks underlying a series of Index Fund Shares to be listed and traded on the Exchange pursuant to Rule 19b–4(e) under the Act.

With respect to the proposed requirement in Rule 5735(b)(1)(A)(i)f. that no more than 10% of the equity weight of the portfolio shall consist of non-exchange-traded ADRs, the Exchange notes that such requirement will ensure that non-exchange-traded ADRs, which are traded OTC and which generally have less market transparency than exchange-traded ADRs, could account for only a small percentage of the equity weight of a portfolio. Further, the requirement is consistent with representations made in proposed rule changes for issues of Managed Fund Shares previously approved by the Commission.⁵¹

With respect to the proposed provision in Rule 5735(b)(1)(B) that, to the extent a portfolio includes convertible securities, the fixed income security into which such security is converted must meet the criteria in paragraph (B) of Rule 5735(b)(1) after converting, such requirement would assure that the fixed income securities into which a convertible security could be converted meet the liquidity and other criteria in Rule 5735(b)(1)(B) applicable to fixed income securities.

⁴⁸ 15 U.S.C. 78s(b)(3)(A).

⁴⁹ 17 CFR 240.19b–4(e).

⁵⁰ See, e.g., Securities Exchange Act Release Nos. 57561 (March 26, 2008), 73 FR 17390 (April 1, 2008) (SR–NYSEArca–2008–29) (notice of filing of proposed rule change to amend eligibility criteria for components of an index underlying Investment Company Units); 57751 (May 1, 2008), 73 FR 25818 (May 7, 2008) (SR–NYSEArca–2008–29) (order approving proposed rule change to amend eligibility criteria for components of an index underlying Investment Company Units).

⁵¹ See note 20 above.

As proposed, pursuant to Rule 5735(b)(1)(B)(iii), an underlying portfolio (excluding exempted securities) that includes fixed income securities must include a minimum of 13 non-affiliated issuers, but there would be no minimum number of non-affiliated issuers required for fixed income securities if at least 70% of the weight of the portfolio consists of equity securities, as described in Rule 5735(b)(1)(A). The Exchange notes that, when evaluated in conjunction with proposed Rule 5735(b)(1)(B)(ii), the proposed rule is consistent with Rules 5705(b)(4)(A)(iv) and 5705(b)(4)(A)(v) in that it provides for a maximum weighting of a fixed income security in the fixed income portion of the portfolio of a fund that is comparable to the existing rules applicable to Index Fund Shares based on fixed income indexes.

With respect to the proposed requirement in Rule 5735(b)(1)(B)(v) that non-agency, non-GSE and privately-issued mortgage-related and other asset-backed securities components of a portfolio shall not account, in the aggregate, for more than 20% of the weight of the fixed income portion of the portfolio, the Exchange notes that such requirement is consistent with representations made in proposed rule changes for issues of Managed Fund Shares previously approved by the Commission.⁵²

With respect to the proposed amendment to Rule 5735(b)(1)(C) relating to cash and cash equivalents, while there is no limitation on the amount of cash and cash equivalents that can make up the portfolio, such instruments are short-term, highly liquid, and of high credit quality, making them less susceptible than other asset classes both to price manipulation and volatility. Further, the requirement is consistent with representations made in proposed rule changes for issues of Managed Fund Shares previously approved by the Commission.⁵³

With respect to proposed Rule 5735(b)(1)(D)(i) relating to listed derivatives, the Exchange believes that it is appropriate that there be no limit to the percentage of a portfolio invested in such holdings, provided that, in the aggregate, at least 90% of the weight of such holdings invested in futures, exchange-traded options, and listed swaps would consist of futures, options, and swaps for which the Exchange may obtain information via ISG from other members or affiliates or for which the principal market is a market with which the Exchange has a CSSA. Such a

requirement would facilitate information sharing among market participants trading shares of a series of Managed Fund Shares as well as futures and options that such series may hold. In addition, listed swaps would be centrally cleared, reducing counterparty risk and thereby furthering investor protection.⁵⁴

With respect to proposed Rule 5735(b)(1)(D)(ii), requiring percentage caps on the aggregate gross notional value of listed derivatives based on any five or fewer underlying reference assets or based on any single underlying reference asset, the Exchange believes such requirements will help ensure that listed derivatives utilized by a fund are adequately diversified and not unduly concentrated.

With respect to proposed Rule 5735(b)(1)(E) relating to OTC derivatives, the Exchange believes that the limitation to 20% of a fund's assets would assure that the preponderance of fund investments would not be in derivatives that are not listed and centrally cleared. The Exchange believes that such a limitation is sufficient to mitigate the risks associated with price manipulation because a 20% cap on OTC derivatives will ensure that any series of Managed Fund Shares will be sufficiently broad-based in scope to minimize potential manipulation associated with OTC derivatives and because the remaining 80% of the portfolio will consist of instruments subject to numerous restrictions designed to prevent manipulation, including equity securities (which, as proposed, would be subject to market cap, trading volume, and diversity requirements, among others), fixed income securities (which, as proposed, would be subject to principal amount outstanding, diversity, and issuer requirements, among others), cash and cash equivalents (which, as proposed, would be limited to short-term, highly liquid, and high credit quality instruments), and/or listed derivatives (which would be subject to the limitations in proposed Rule 5735(b)(1)(D)).

The Exchange notes that a fund's investments in derivative instruments would be subject to limits on leverage imposed by the 1940 Act. Section 18(f) of the 1940 Act and related Commission

guidance limit the amount of leverage an investment company can obtain. A fund's investments would be consistent with its investment objective and would not be used to enhance leverage. To limit the potential risk associated with a fund's use of derivatives, a fund will segregate or " earmark " assets determined to be liquid by a fund in accordance with the 1940 Act (or, as permitted by applicable regulation, enter into certain offsetting positions) to cover its obligations under derivative instruments.

With respect to proposed Rule 5735(b)(1)(F) relating to a fund's use of listed or OTC derivatives to gain exposure to individual equities and/or fixed income securities, or to indexes of equities and/or indexes of fixed income securities, the Exchange notes that the aggregate gross notional value of such exposure would be required to meet the numerical and other criteria set forth in proposed Rules 5735(b)(1)(A) and 5735(b)(1)(B) (including gross notional exposures), respectively.

Quotation and other market information relating to listed futures and options is available from the exchanges listing such instruments as well as from market data vendors. With respect to centrally-cleared swaps⁵⁵ and non-centrally-cleared swaps regulated by the CFTC,⁵⁶ the Dodd-Frank Act mandates that swap information be reported to swap data repositories ("SDRs").⁵⁷ SDRs provide a central facility for swap data reporting and recordkeeping and are required to comply with data standards set by the CFTC, including real-time public reporting of swap transaction data to a derivatives clearing organization or SEF.⁵⁸ SDRs require real-time reporting of all OTC and centrally cleared derivatives, including public reporting of the swap price and size. The parties responsible for reporting swaps information are CFTC-registered swap dealers ("RSDs"), major swap participants, and swap execution facilities ("SEFs"). If swap counterparties do not fall into the above

⁵⁵ There are currently five categories of swaps eligible for central clearing: Interest rate swaps; credit default swaps; foreign exchange swaps; equity swaps; and commodity swaps. The following entities provide central clearing for OTC derivatives: ICE Clear Credit (US); ICE Clear (EU); CME Group; LCH.Clearnet; and Eurex.

⁵⁶ Pursuant to the Dodd-Frank Act, OTC and centrally-cleared swaps are regulated by the CFTC with the exception of security-based swaps, which are regulated by the Commission.

⁵⁷ The following entities are provisionally registered with the CFTC as SDRs: BSDR LLC., Chicago Mercantile Exchange, Inc., DTCC Data Repository, and ICE Trade Vault.

⁵⁸ Approximately eighteen entities are currently registered with the CFTC as SEFs.

⁵² See note 34 above.

⁵³ See note 35 above.

⁵⁴ The Commission has noted that "[c]entral clearing mitigates counterparty risk among dealers and other institutions by shifting that risk from individual counterparties to [central counterparties ("CCPs")], thereby protecting CCPs from each other's potential failures." See Securities Exchange Act Release No. 67286 (June 28, 2012) (File No. S7-44-10) (Process for Submissions for Review of Security-Based Swaps for Mandatory Clearing and Notice Filing Requirements for Clearing Agencies).

categories, then one of the parties to the swap must report the trade to the SDR. Cleared swaps regulated by the CFTC must be executed on a Designated Contract Market (“DCM”) or SEF. Such cleared swaps have the same reporting requirements as futures, including end-of-day price, volume, and open interest. CFTC swaps reporting requirements require public dissemination of, among other items, product ID (if available); asset class; underlying reference asset, reference issuer, or reference index; termination date; date and time of execution; price, including currency; notional amounts, including currency; whether direct or indirect counterparties include an RSD; whether cleared or uncleared; and platform ID of where the contract was executed (if applicable).

With respect to security-based swaps regulated by the Commission, the Commission has adopted Regulation SBSR under the Act implementing requirements for regulatory reporting and public dissemination of security-based swap transactions set forth in Title VII of the Dodd-Frank Act. Regulation SBSR provides for the reporting of security-based swap information to registered security-based swap data repositories (“Registered SDRs”) or the Commission, and the public dissemination of security-based swap transaction, volume, and pricing information by Registered SDRs.⁵⁹

Price information relating to forwards and OTC options will be available from major market data vendors.

A fund’s investments will not be used to seek performance that is the multiple or inverse multiple (*i.e.*, 2Xs and 3Xs) of a fund’s broad-based securities market index (as defined in Form N-1A).⁶⁰ In addition, the Exchange notes that, under proposed Rule 5735(b)(1)(A), for Exchange Traded Derivative Securities and Linked Securities, no more than 25% of the equity weight of a fund’s portfolio could include leveraged and/or inverse leveraged Exchange Traded Derivative Securities or Linked Securities.

The proposed rule change is also designed to protect investors and the public interest because Managed Fund Shares listed and traded pursuant to Rule 5735, including pursuant to the proposed new portfolio standards,

would continue to be subject to the full panoply of Exchange rules and procedures that currently govern the trading of equity securities on the Exchange.⁶¹

The proposed rule change is also designed to protect investors and the public interest as well as to promote just and equitable principles of trade in that any Non-U.S. Component Stocks will each meet the following criteria initially and on a continuing basis: (1) Have a minimum market value of at least \$100 million; (2) have a minimum global monthly trading volume of 250,000 shares, or minimum global notional volume traded per month of \$25,000,000, averaged over the last six months; (3) most heavily weighted Non-U.S. Component Stock shall not exceed 25% of the equity weight of the portfolio, and, to the extent applicable, the five most heavily weighted Non-U.S. Component Stocks shall not exceed 60% of the equity weight of the portfolio; and (4) each Non-U.S. Component Stock shall be listed and traded on an exchange that has last-sale reporting.

The Exchange believes that such quantitative criteria are sufficient to mitigate any concerns that may arise on the basis of a series of Managed Fund Shares potentially holding 100% of its assets in Non-U.S. Component Stocks that are neither listed on members of ISG nor exchanges with which the Exchange has in place a CSSA because, as stated above, such criteria are either the same or more stringent than the portfolio requirements for Index Fund Shares that hold Non-U.S. Component Stocks and there are no such requirements related to such securities being listed on an exchange that is a member of ISG or with which the Exchange has in place a CSSA.

Further, the Exchange has not encountered and is not aware of any instances of manipulation or other negative impact in any series of Index Fund Shares that has occurred by virtue of the Index Fund Shares holding such Non-U.S. Component Stocks. Therefore, the Exchange believes that there should be no difference in the portfolio requirements for Managed Fund Shares and Index Fund Shares as it relates to holding Non-U.S. Component Stocks that are not listed on an exchange that is a member of ISG or with which the Exchange has in place a CSSA.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices because the Managed Fund Shares will be listed and traded

on the Exchange pursuant to the initial and continued listing criteria in Rule 5735. The Exchange has in place surveillance procedures that are adequate to properly monitor trading in the Managed Fund Shares in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws. FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, will communicate as needed regarding trading in Managed Fund Shares with other markets that are members of the ISG, including all U.S. securities exchanges and futures exchanges on which the components are traded.

In addition, the Exchange may obtain information regarding trading in Managed Fund Shares from other markets that are members of the ISG, including all U.S. securities exchanges and futures exchanges on which the components are traded, or with which the Exchange has in place a CSSA.

The Exchange also believes that the proposed rule change would fulfill the intended objective of Rule 19b-4(e) under the Act by allowing Managed Fund Shares that satisfy the proposed listing standards to be listed and traded without separate Commission approval. However, as proposed, the Exchange would continue to file separate proposed rule changes before the listing and trading of Managed Fund Shares that do not satisfy the additional criteria described above.

The Exchange, on a periodic basis and no less than annually, will review issues of Managed Fund Shares listed pursuant to Rule 5735(b)(1), and will provide a report to the Regulatory Oversight Committee of the Exchange’s Board of Directors regarding the Exchange’s findings. In addition, the Exchange will provide the Commission staff with a report each calendar quarter that includes the following information for issues of Managed Fund Shares listed during such calendar quarter under Rule 5735(b)(1): (1) Trading symbol and date of listing on the Exchange; (2) the number of active authorized participants and a description of any failure of an issue of Managed Fund Shares listed pursuant to Rule 5735(b)(1) or of an authorized participant to deliver shares, cash, or cash and financial instruments in connection with creation or redemption orders; and (3) a description of any failure of an issue of Managed Fund Shares to comply with Rule 5735.

Prior to listing pursuant to proposed amended Rule 5735(b)(1), an issuer would be required to represent to the Exchange that it will advise the Exchange of any failure by a series of

⁵⁹ See Securities Exchange Act Release No. 74244 (February 11, 2015), 80 FR 14564 (March 19, 2015) (Regulation SBSR—Reporting and Dissemination of Security-Based Swap Information).

⁶⁰ See, *e.g.*, Securities Exchange Act Release No. 74842 (April 29, 2015), 86 FR 25723 (May 5, 2015) (SR-NYSEArca-2014-89) (order approving listing and trading of shares of eight PIMCO exchange-traded funds).

⁶¹ See note 4 above, Approval Order, at 35177.

Managed Fund Shares to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under the Nasdaq Rule 5800 Series.

For these reasons, the Exchange believes that the proposal is consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,⁶² the Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, the Exchange believes that the proposed rule change would facilitate the listing and trading of additional types of Managed Fund Shares and result in a significantly more efficient process surrounding the listing and trading of Managed Fund Shares, which will enhance competition among market participants, to the benefit of investors and the marketplace. The Exchange believes that this would reduce the time frame for bringing Managed Fund Shares to market, thereby reducing the burdens on issuers and other market participants and promoting competition. In turn, the Exchange believes that the proposed change would make the process for listing Managed Fund Shares more competitive by applying uniform listing standards with respect to Managed Fund Shares.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) by order approve or disapprove such proposed rule change, or (b) institute proceedings to determine

whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NASDAQ-2016-104 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NASDAQ-2016-104. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NASDAQ-2016-104 and should be submitted on or before September 14, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁶³

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78618; File No. SR-BOX-2016-41]

Self-Regulatory Organizations; BOX Options Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule on the BOX Market LLC ("BOX") Options Facility

August 18, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 15, 2016, BOX Options Exchange LLC (the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange filed the proposed rule change pursuant to Section 19(b)(3)(A)(ii) of the Act,³ and Rule 19b-4(f)(2) thereunder,⁴ which renders the proposal effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange is filing with the Securities and Exchange Commission ("Commission") a proposed rule change to amend the Fee Schedule to make a number of changes to the fees and credits for PIP and COPIP Transactions on the BOX Market LLC ("BOX") options facility. The text of the proposed rule change is available from the principal office of the Exchange, at the Commission's Public Reference Room and also on the Exchange's Internet Web site at <http://boxexchange.com>.

⁶³ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A)(ii).

⁴ 17 CFR 240.19b-4(f)(2).

⁶² 15 U.S.C. 78f(b)(8).

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule for trading on BOX to make a number of changes to the fees and credits for PIP and COPIP Transactions.⁵ Overall, the Exchange proposes to amend the Fee Schedule to differentiate between those PIP and COPIP transactions where the PIP or COPIP Order is from the account of a Public Customer; and those PIP and COPIP transactions where a PIP or COPIP Order is from the account of a Professional Customer, Broker Dealer or Market Maker ("Non-Public Customer"). While most PIP and COPIP Orders are from the account of a Public Customer, any type of BOX Participant may submit a PIP or COPIP Order with a matching contra order equal to the full size of the PIP or COPIP Order to the PIP and COPIP auction mechanisms. Therefore, the Exchange believes this distinction is appropriate, as the current fees, rebates, and credits for PIP and COPIP transactions within the BOX Fee Schedule are meant to incentivize Public Customer order flow to the PIP

and COPIP auctions. The Exchange believes that similar incentives are not necessary for Non-Public Customer PIP and COPIP order flow and the proposed fees and credits below are meant to establish separate fees and credits for Non-Public Customer PIP and COPIP Order flow which, taken as a whole, do not offer the same level of inducement. Further, the Exchange notes that the distinction between auction transactions from a Public Customer versus a Non-Public Customer is already in place on another options exchange.⁶

Exchange Fees

PIP and COPIP Orders

The Exchange proposes to adjust certain fees for PIP and COPIP Transactions. Currently, Professional Customers, Broker Dealers and Market Makers are assessed a fee of \$0.15 for PIP and COPIP Orders⁷ and Public Customers are assessed no fee. The Exchange proposes to reduce the fees assessed to Professional Customers, Broker Dealers and Market Makers for PIP and COPIP Orders in Penny and Non-Penny Pilot Classes to \$0.05.

Primary Improvement Order

Under the Primary Improvement Order⁸ tiered fee structure, the Exchange assesses a per contract execution fee to all Primary Improvement Order executions initiated by the particular Initiating Participant. Percentage thresholds are calculated on a monthly basis by totaling the Initiating Participant's Primary Improvement Order volume submitted to BOX, relative to the total national Customer volume in multiply-listed options classes.

The Exchange proposes to first add language that will specify that the tiered fee schedule for initiating participants will only apply to Primary Improvement Order executions where the corresponding PIP or COPIP Order is

from the account of a Public Customer. The Exchange then proposes to introduce a flat per contract fee of \$0.05 for all Primary Improvement Orders where the corresponding PIP or COPIP Order is from the account of a Non-Public Customer.

BOX Volume Rebate ("BVR")

The Exchange then proposes to amend Section I.B.2 of the Fee Schedule (BVR). Under the current BVR, the Exchange offers a tiered per contract rebate for all PIP Orders and COPIP orders of 100 contracts and under. Percentage thresholds are calculated on a monthly basis by totaling the Participant's PIP and COPIP volume submitted to BOX, relative to the total national Customer volume in multiply-listed options classes. The Exchange proposes to add language that will specify that only Public Customer PIP and COPIP Orders are eligible for the BVR.

Liquidity Fees and Credits

The Exchange then proposes to amend Section II.A. of the BOX Fee Schedule, Liquidity Fees and Credits for PIP and COPIP transactions. Specifically, the Exchange proposes to amend Section II.A. to differentiate between PIP and COPIP transactions where the PIP and COPIP Orders are from the accounts of Public Customers and PIP and COPIP transactions where the PIP and COPIP Orders are from the accounts of Non-Public Customers.

First, the Exchange proposes to specify that the current liquidity fees and credits will only apply to PIP and COPIP transactions where the PIP and COPIP Order is from the account of a Public Customer. The liquidity fees and credits for these PIP and COPIP Orders, the Primary Improvement Order and any corresponding Improvement Orders remain unchanged and will be as follows:

	Fee for adding liquidity	Credit for removing liquidity
Non-Penny Pilot Classes	\$0.77	(\$0.77)
Penny Pilot Classes	\$0.38	(\$0.38)

The Exchange then proposes to establish a new section for the Liquidity Fees and Credits of PIP and COPIP transactions where the PIP and COPIP

Order is from the account of a Non-Public Customer. First, the Exchange proposes to specify that PIP or COPIP Orders from the account of a Non-Public

Customer are assessed the "removal" credit only if the PIP or COPIP Order does not trade with its contra order (the Primary Improvement Order). The

⁵ Transactions executed through Price Improvement Period ("PIP") and the Complex Order Price Improvement Period ("COPIP") auction mechanisms. All COPIP transactions will be charged per contract per leg.

⁶ See Miami International Securities Exchange LLC ("MIAX") Fee Schedule Section I(A)(v) available at <https://www.miaxoptions.com/content/fees>.

⁷ A PIP Order or COPIP Order is a Customer Order (an agency order for the account of either a

customer or a broker-dealer) designated for the PIP or COPIP, respectively.

⁸ A Primary Improvement Order is the matching contra order submitted to the PIP or COPIP on the opposite side of the PIP or COPIP order.

Exchange also proposes to specify that only responses to PIP and COPIP Orders from the account of a Non-Public Customer that are executed in these mechanisms, also known as

Improvement Orders, shall continue to be charged the “add” fee. Specifically, a PIP or COPIP Order from the account of a Non-Public Customer that does not trade with its Primary Improvement

Order, and the corresponding Improvement Orders will subject to the fees and credits in the following table:

	Fee for adding liquidity	Credit for removing liquidity
Non-Penny Pilot Classes	\$0.77	(\$0.77)
Penny Pilot Classes	\$0.38	(\$0.38)

For example, if a Broker Dealer submits a PIP Order for the account of a Non-Public Customer to buy 100 contracts in the PIP and there are no responders, the PIP Order would execute against the matching Primary Improvement Order to sell 100 contracts and neither Order would be assessed a liquidity fee or credit. If, instead, the same PIP Order receives an Improvement Order response to sell 75 contracts, at the end of the auction the PIP Order would now execute against the Improvement Order for 75 contracts and the Primary Improvement Order for 25 contracts, and liquidity fees and credits would only be assessed on the 75 contracts which executed against the Improvement Order. Specifically, the 75 contracts from the PIP Order will receive the removal credit and the 75 contracts from the Improvement Order will be charged the add fee.

Lastly, the Exchange also proposes to update the footnote numbering and make other non-substantive technical changes within the BOX Fee Schedule.

2. Statutory Basis

The Exchange believes that the proposal is consistent with the requirements of Section 6(b) of the Act, in general, and Section 6(b)(4) and 6(b)(5) of the Act,⁹ in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among BOX Participants and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

Exchange Fees

PIP and COPIP Transactions

The Exchange believes that reducing the fees assessed to Professional Customers, Broker Dealers and Market Makers for PIP and COPIP Orders in Penny and Non-Penny Pilot Classes is reasonable, equitable, and not unfairly discriminatory. In particular, the Exchange believes that reducing these fees will encourage auction order flow to the Exchange, which will benefit all market participants on the Exchange.

BOX believes that the proposed fee reductions from \$0.15 to \$0.05 are reasonable and in line with similar fees on other exchanges.¹⁰ Further, the Exchange believes the \$0.05 fee is equitable and not unfairly discriminatory, as it applies equally to all Market Maker, Professional Customers and Broker Dealers submitting PIP and COPIP Orders to the PIP and COPIP auction mechanisms. The Exchange believes it is equitable and not unfairly discriminatory to charge these Non-Public Customers more for their PIP and COPIP Orders in Penny and Non-Penny Pilot Classes than Public Customers. The practice of incentivizing increased Public Customer order flow is common in the options markets.

Primary Improvement Order

The Exchange believes that adding language to specify that the tiered fee schedule for initiating participants will only apply to Primary Improvement Order executions where the corresponding PIP or COPIP Order is from the account of a Public Customer, as well as introducing a flat per contract fee of \$0.05 for all Primary Improvement Orders where the corresponding PIP or COPIP Order is from the account of a Non-Public Customer is reasonable, equitable and not unfairly discriminatory. The Exchange also believes the proposed \$0.05 fee for Primary Improvement Order executions where the corresponding PIP or COPIP Order is from the account of a Non-Public Customer is reasonable, as it is within the range of fees currently assessed on all Primary Improvement Orders on BOX.¹¹ The Exchange believes that this distinction is reasonable and competitive, as it is made on another options exchange.¹²

¹⁰ See MIAX Fee Schedule Section I(A)(v); Phlx Pricing Schedule Section IV and ISE Fee Schedule Section I. Comparable fees at these exchanges range from \$0.05 to \$0.30.

¹¹ For Primary Improvement Order executions, contract fees range from \$0.25 to \$0.02.

¹² PHLX also distinguishes between a PIXL Order from the account of a Non-Customer as compared to a PIXL Order from the account of a Customer. See NASDAQ PHLX LLC (“Phlx”) Fee Schedule

Finally, the Exchange believes that differentiating between Public Customer and Non-Public Customer PIP and COPIP Orders, and their corresponding Primary Improvement Orders is equitable and not unfairly discriminatory. As stated above, the current fees, credit and rebates for PIP and COPIP transactions are meant to encourage Public Customer order flow to the PIP and COPIP auction mechanisms. Specifically, the tiered fee schedule for initiating participants encourages Order Flow Providers to submit Public Customer orders to the PIP or COPIP to gain the benefit of a lower fee. The Exchange believes that this incentive is not necessary for Non-Public Customer PIP and COPIP order flow and that the proposed flat \$0.05 fee is appropriate. Specifically, when taken as a whole, the proposed Non-Public Customer PIP and COPIP transactions fees will result in the PIP or COPIP Order always being assessed a \$0.05 fee with no rebate potential,¹³ and the corresponding Primary Improvement Order being assessed a flat \$0.05 fee. In comparison, the Initiating Participant’s Primary Improvement Order for a Public Customer PIP or COPIP Order could potentially be assessed a fee as low as \$0.02,¹⁴ while the corresponding PIP or COPIP Order would be assessed no fee and could obtain a rebate of up \$0.12 (PIP Orders) or \$0.06 (COPIP Orders) depending on the Participant’s volume.

BOX Volume Rebate

The Exchange believes the proposed changes to the BVR are reasonable, equitable and not unfairly discriminatory. The BVR was adopted to attract Public Customer order flow to the Exchange by offering these

Section V. When a PIXL Order is contra to a PIXL Auction Responder, a Customer PIXL Order will be assessed \$0.00 per contract where a Non-Customer PIXL Order will be assessed \$0.30 per contract in Penny Pilot Options or \$0.38 in Non-Penny Pilot Options.

¹³ These transactions will be exempt from the BVR.

¹⁴ The Exchange notes that a majority of Primary Improvement Order executions are assessed Tier 4 and 5 fees within the tiered fee schedule for Initiating Participants.

⁹ 15 U.S.C. 78f(b)(4) and (5).

Participants incentives to submit their PIP and COPIP Orders to the Exchange.¹⁵ As such, the Exchange believes it is reasonable and appropriate to exempt Non-Public Customer PIP and COPIP Orders from the BVR. Further, the Exchange believes this exemption is equitable and not unfairly discriminatory as it will apply to all Non-Public Customers uniformly. As stated above, providing specific incentives for Public Customer volume is common both within the options industry and elsewhere in the BOX Fee Schedule.

Liquidity Fees and Credits

The Exchange believes amending the Liquidity Fees and Credits for PIP and COPIP transactions to differentiate between PIP and COPIP transactions where the PIP or COPIP Order is from the account of a Public Customer, and the PIP or COPIP Order is from the account of a Non-Public Customer is reasonable, equitable and not unfairly discriminatory. As stated above, the current liquidity fees and credits for PIP and COPIP transactions are focused on incentivizing Public Customer order flow to the PIP and COPIP auctions. Therefore, the Exchange believes it is equitable and not unfairly discriminatory to establish different fees and credits for Non-Public Customer order flow to these auction mechanisms. The Exchange notes that the liquidity fees and credits for PIP and COPIP transactions where the PIP and COPIP Order is from the account of a Public Customer remain unchanged.

Accordingly, the Exchange believes the proposed liquidity fees and credits for PIP and COPIP transactions where the PIP or COPIP Order are from the account of a Non-Public Customer are reasonable, equitable and not unfairly discriminatory as they are identical to the current liquidity fees and credits assessed for PIP and COPIP transactions where the PIP or COPIP Order is from the account of a Public Customer.

The Exchange also believes it is reasonable, equitable and not unfairly discriminatory to only apply the liquidity fees and credits to the portion of the PIP or COPIP Order from the account of a Non-Public Customer that does not trade with its contra order, and the Improvement Order responses. Liquidity fees and credits on BOX do not directly result in revenue to BOX, but are meant to incentivize Participants to attract order flow. Because of the value of Public Customer order flow, the

Exchange believes these incentives are appropriate even if the Public Customer PIP or COPIP Order is fully internalized and trades only against its matching Primary Improvement Order. However, as stated above, the Exchange believes that the same level of incentives is not necessary for Non-Public Customer PIP or COPIP order flow. Therefore, the Exchange believes it reasonable to only provide these incentives to the portion of the Non-Public Customer PIP or COPIP Orders where liquidity is being added in the form of Improvement Order responses. Further, the Exchanges notes that the liquidity fees and credits for transactions within the Facilitation and Solicitation auction mechanism (Section II.B. of the BOX Fee Schedule) are assessed in a similar manner, and that the distinction is also made within the price improvement mechanism fees and rebates on another exchange in the options industry.¹⁶

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange believes that the proposed adjustments to the Non-Public Customer PIP and COPIP Transactions fees will not impose a burden on competition among various Exchange Participants. Rather, BOX believes that the changes will result in the Participants being charged appropriately for their Non-Public Customer PIP and COPIP Transactions and is designed to enhance competition in Auction transactions on BOX. Submitting an order is entirely voluntary and Participants can determine which type of order they wish to submit, if any, to the Exchange.

The Exchange also believes that amending the proposed liquidity fees and credits for Non-Public Customer PIP and COPIP Transactions will not impose a burden on competition among various Exchange Participants. The Exchange believes that the proposed changes will result these Participants being charged or credited appropriately for these transactions.

Finally, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing exchanges. In such an environment, the Exchange

must continually review, and consider adjusting, its fees and credits to remain competitive with other exchanges. For the reasons described above, the Exchange believes that the proposed rule change reflects this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Exchange Act¹⁷ and Rule 19b-4(f)(2) thereunder,¹⁸ because it establishes or changes a due, or fee.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend the rule change if it appears to the Commission that the action is necessary or appropriate in the public interest, for the protection of investors, or would otherwise further the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BOX-2016-41 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BOX-2016-41. This file number should be included on the subject line if email is used. To help the Commission process and review your

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78614; File No. SR-NYSEArca-2016-64]

Self-Regulatory Organizations; NYSE Arca, Inc.; Order Instituting Proceedings To Determine Whether To Approve or Disapprove Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, To List and Trade Shares of the AdvisorShares KIM Korea Equity ETF

August 18, 2016.

On May 2, 2016, NYSE Arca, Inc. ("Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to

list and trade shares ("Shares") of the AdvisorShares KIM Korea Equity ETF ("Fund") under NYSE Arca Equities Rule 8.600. On May 13, 2016, the Exchange submitted Amendment No. 1 to the proposed rule change.³ The Commission published notice of the proposed rule change, as modified by Amendment No. 1, in the **Federal Register** on May 23, 2016.⁴ On May 23, 2016, the Exchange submitted Amendment No. 2 to the proposed rule change.⁵ On July 7, 2016, pursuant to Section 19(b)(2) of the Act,⁶ the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.⁷ The Commission received no comments on the proposed rule change. This order institutes proceedings under Section 19(b)(2)(B) of the Act⁸ to determine whether to approve or disapprove the proposed rule change, as modified by Amendment Nos. 1 and 2.

I. The Exchange's Description of the Proposal⁹

The Exchange proposes to list and trade the Shares under NYSE Arca Equities Rule 8.600, which governs the listing and trading of Managed Fund Shares on the Exchange. The Shares will be offered by AdvisorShares Trust ("Trust"), an open-end management

investment company.¹⁰ The investment adviser to the Fund will be AdvisorShares Investments LLC ("Adviser") and Korea Investment Management Co., Ltd. will be the Fund's sub-adviser ("Sub-Adviser"). Foreside Fund Services, LLC will be the principal underwriter and distributor of the Fund's Shares, and the Bank of New York Mellon will serve as the administrator, custodian, and transfer agent for the Fund.

The Fund's Principal Investments

The Exchange states that the investment objective of the Fund will be to seek to provide long-term capital appreciation above the capital appreciation of its primary benchmark, the MSCI Korea Index, and other Korea-focused indexes. The Fund will seek to achieve its investment objective by investing primarily in growth-oriented stocks of any capitalization range listed on the Korea Exchange. Under normal circumstances,¹¹ the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in equity securities listed on the Korea Exchange.¹²

The Exchange states that the Sub-Adviser will manage the Fund's portfolio by buying and holding stocks of companies at attractive valuation that it believes have growth potential. The Sub-Adviser will focus on corporate fundamental research in its stock selection, often called "bottom up" analysis. The Sub-Adviser will invest the Fund's assets with a mid- to long-term view, typically seeking to avoid short-term trading. In selecting investments for the Fund's portfolio, the Sub-Adviser will place emphasis on fundamentals rather than on short-term momentum and continuously monitor market risks. In deciding whether to sell

³ Amendment No. 1 replaced and superseded the original filing in its entirety. Amendment No. 1 is available at <https://www.sec.gov/comments/sr-nysearca-2016-64/nysearca201664-1.pdf>.

⁴ See Securities Exchange Act Release No. 34-77847 (May 17, 2016), 81 FR 32364 (NYSEArca-2016-64) ("Notice").

⁵ In Amendment No. 2, which replaced and superseded the original filing in its entirety, the Exchange clarified certain statements relating to the Fund's investments in Depositary Receipts and certain representations by the Exchange relating to surveillance. Amendment No. 2 is available at <https://www.sec.gov/comments/sr-nysearca-2016-64/nysearca201664-2.pdf>. Because Amendment No. 2 does not materially alter the substance of the proposed rule change or raise unique or novel regulatory issues, Amendment No. 2 is not subject to notice and comment.

⁶ 15 U.S.C. 78s(b)(2).

⁷ See Securities Exchange Act Release No. 78240, 81 FR 45332 (July 13, 2016). The Commission designated August 21, 2016, as the date by which the Commission would either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change.

⁸ 15 U.S.C. 78s(b)(2)(B).

⁹ Additional information regarding the Fund, the Shares, and the Trust (as defined herein), including investment strategies, risks, creation and redemption procedures, fees, portfolio holdings, disclosure policies, calculation of net asset value, distributions, and taxes, among other things, can be found in the Notice and the Registration Statement, as applicable. See Notice, *supra* note 4, and Registration Statement, *infra* note 10.

¹⁰ The Exchange states that the Trust is registered under the Investment Company Act of 1940 ("1940 Act") and that on March 25, 2016, the Trust filed with the Commission amendments to its registration statement on Form N-1A under the Securities Act of 1933 ("Securities Act") and under the 1940 Act relating to the Fund (File Nos. 333-157876 and 811-22110) ("Registration Statement"). In addition, the Exchange states that the Commission has issued an order granting certain exemptive relief to the Trust under the 1940 Act. See Investment Company Act Release No. 29291 (May 28, 2010) (File No. 812-13677).

¹¹ The Exchange states that the term "under normal circumstances" means, without limitation, the absence of extreme volatility or trading halts in the equity markets or the financial markets generally; operational issues causing dissemination of inaccurate market information; or force majeure type events such as systems failure, natural or man-made disaster, act of God, armed conflict, act of terrorism, riot or labor disruption or any similar intervening circumstance.

¹² The Korea Exchange is a member of the Intermarket Surveillance Group ("ISG").

¹⁹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

investments in the Fund's portfolio, the Sub-Adviser will consider the following factors: A company's stock price reaches its target price; a company in the portfolio experiences negative fundamental changes; errors are found in the previous assumptions or forecasts of a company; and more profitable alternatives are found.

In addition to individual stock selection, the Exchange states that the Sub-Adviser will engage in sector allocation based on analysis of the macro economy and its effect on corporate competitiveness and industry cycles. This is often called "top down" analysis. The Sub-Adviser will strive to invest with large economic cycles as compared to short-term market trends and short-term supply and demand.

The Fund's Non-Principal Investments

The Exchange represents that while the Fund, under normal circumstances, will invest at least 80% of its assets in the securities described above in the "Principal Investments of the Fund," the Fund may invest its remaining assets in the securities and financial instruments as described below.

The Fund may invest in the following equity securities traded on a U.S. or foreign exchange or over-the-counter, including equity securities of foreign issuers in emerging countries: Common stocks, preferred stocks, warrants, rights, securities convertible into common stock, and investments in master limited partnerships.

The Fund may invest in issuers located outside the United States directly and may invest in exchange-traded funds ("ETFs"),¹³ exchange-traded notes ("ETNs"),¹⁴ and exchange-traded products ("ETPs")¹⁵ that are

indirectly linked to the performance of foreign issuers. The Fund may invest in "Depository Receipts," consisting of American Depository Receipts ("ADRs"), Global Depository Receipts, European Depository Receipts, International Depository Receipts, "ordinary shares," and "New York shares" issued and traded in the U.S.¹⁶

The Fund may invest in non-exchange-traded investment company securities to the extent that such investments would be consistent with the requirements of Section 12(d)(1) of the 1940 Act or any rule, regulation, or order of the Commission or interpretation thereof. Consistent with the restrictions discussed above, the Fund may invest in U.S. and non-U.S. exchange-listed closed-end funds and business development companies. Except with respect to inverse ETFs as described above,¹⁷ the Fund will not invest in inverse, leveraged, or inverse leveraged investment company securities.

The Fund may invest in U.S. government securities and may invest in certain U.S. government securities that are issued or guaranteed by agencies or instrumentalities of the U.S. government.¹⁸ The Fund also may invest in non-exchange-traded convertible securities that are bonds, debentures, notes, or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio. Finally, the Fund may invest in shares of U.S. or non-U.S. exchange-traded real estate investment trusts and repurchase agreements and reverse repurchase agreements.¹⁹

Shares (as described in NYSE Arca Equities Rule 8.202). While the Fund may invest in inverse ETPs, the Fund will not invest in leveraged or inverse leveraged ETPs (e.g., 2X or 3X).

¹⁶ The Exchange represents that not more than 10% of the Fund's assets will be invested in non-exchange-traded ADRs. In addition, the Exchange represents that other Depository Receipts in which the Fund invests will be exchange-traded.

¹⁷ See note 13, *supra*.

¹⁸ According to the Exchange, securities issued or guaranteed by the U.S. government or its agencies or instrumentalities include the following: U.S. Treasury securities, which are backed by the full faith and credit of the U.S. Treasury and which differ only in their interest rates, maturities, and times of issuance; U.S. Treasury bills, which have initial maturities of one year or less; U.S. Treasury notes, which have initial maturities of one to ten years; U.S. Treasury bonds, which generally have initial maturities of greater than ten years; and U.S. Treasury zero-coupon bonds.

¹⁹ The Fund may purchase securities on a when-issued, delayed-delivery or forward commitment basis (i.e., delivery and payment can take place between a month and 120 days after the date of the transaction).

The Fund's Investment Restrictions

The Exchange represents that the Fund may hold up to an aggregate amount of 15% of its net assets in assets deemed illiquid by the Adviser.²⁰ The Fund will monitor its portfolio liquidity on an ongoing basis to determine whether, in light of current circumstances, an adequate level of liquidity is being maintained, and will consider taking appropriate steps in order to maintain adequate liquidity if, through a change in values, net assets, or other circumstances, more than 15% of the Fund's net assets are held in illiquid assets.²¹

The Exchange also represents that the Fund will not invest in options, futures, swaps, or forward contracts. Further, the Fund's investments will be consistent with its investment objective and will not be used to provide multiple returns of a benchmark or to produce leveraged returns. Finally, the Exchange represents that not more than 10% of the net assets of the Fund in the aggregate invested in equity securities (other than non-exchange-traded investment company securities) shall consist of equity securities whose principal market is not a member of the ISG or is a market with which the Exchange does not have a comprehensive surveillance sharing agreement.

II. Proceedings To Determine Whether To Approve or Disapprove SR-NYSEArca-2016-64 and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act²² to determine whether the proposed rule change, as modified by Amendment Nos. 1 and 2, should be approved or disapproved. Institution of such proceedings is appropriate at this time in view of the

²⁰ The Exchange states that, under the supervision of the Fund's Board of Trustees, the Adviser determines the liquidity of the Fund's investments. In determining the liquidity of the Fund's investments, the Adviser may consider various factors, including (1) the frequency and volume of trades and quotations; (2) the number of dealers and prospective purchasers in the marketplace; (3) dealer undertakings to make a market; and (4) the nature of the security and the market in which it trades (including any demand, put or tender features, the mechanics and other requirements for transfer, any letters of credit or other credit enhancement features, any ratings, the number of holders, the method of soliciting offers, the time required to dispose of the security, and the ability to assign or offset the rights and obligations of the security).

²¹ Illiquid assets include securities subject to contractual or other restrictions on resale and other instruments that lack readily available markets as determined in accordance with Commission staff guidance.

²² 15 U.S.C. 78s(b)(2)(B).

¹³ For purposes of the proposed rule change, ETFs are Investment Company Units (as described in NYSE Arca Equities Rule 5.2(j)(3)); Portfolio Depository Receipts (as described in NYSE Arca Equities Rule 8.100); and Managed Fund Shares (as described in NYSE Arca Equities Rule 8.600). The ETFs that the Fund invests in all will be listed and traded in the U.S. on registered exchanges. The Fund will invest in the securities of ETFs registered under the 1940 Act consistent with the requirements of Section 12(d)(1) of the 1940 Act, or any rule, regulation or order of the Commission or interpretation thereof. The Fund will only make ETF investments in conformity with the requirements of Regulation M of the Internal Revenue Code of 1986, as amended. While the Fund may invest in inverse ETFs, the Fund will not invest in leveraged or inverse leveraged ETFs (e.g., 2X or 3X).

¹⁴ For purposes of the proposed rule change, ETNs include Index-Linked Securities (as described in NYSE Arca Equities Rule 5.2(j)(6)). While the Fund may invest in inverse ETNs, the Fund will not invest in leveraged or inverse leveraged ETNs (e.g., 2X or 3X).

¹⁵ For purposes of the proposed rule change, ETPs include Trust Issued Receipts (as described in NYSE Arca Equities Rule 8.200) and Currency Trust

legal and policy issues raised by the proposed rule change, as modified by Amendment Nos. 1 and 2. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide comments on the proposed rule change, as modified by Amendment Nos. 1 and 2.

Pursuant to Section 19(b)(2)(B) of the Act,²³ the Commission is providing notice of the grounds for disapproval under consideration. The Commission is instituting proceedings to allow for the submission of additional analysis regarding the proposed rule change's consistency with Section 6(b)(5) of the Act, which requires, among other things, that the rules of a national securities exchange be "designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade," and "to protect investors and the public interest."²⁴

The Exchange provides that the Fund will invest at least 80% of its net assets in equity securities listed on the Korea Exchange. The Exchange, however, proposes no other quantitative standards with respect to the types of equity securities listed on the Korea Exchange in which the Fund, at the Sub-Adviser's discretion, may invest. The Commission has recently noted that appropriate quantitative standards, such as minimum market value and trading volume requirements, "should reduce the extent to which Managed Fund Shares holding Non-U.S. Component Stocks may be susceptible to manipulation."²⁵ Accordingly, the Commission seeks comment on whether the Exchange's representations relating to the Korean equity securities held by the Fund are sufficient to prevent the susceptibility of the Fund's portfolio to manipulation and are thereby consistent with the requirements of Section 6(b)(5) of the Act, which, among other things, requires that the rules of an exchange be designed to prevent fraudulent and

manipulative acts and practices and to protect investors and the public interest.

III. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their views, data, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposal. In particular, the Commission invites the written views of interested persons concerning whether the proposal is consistent with Section 6(b)(5) or any other provision of the Act, or the rules and regulations thereunder. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b-4, any request for an opportunity to make an oral presentation.²⁶

Interested persons are invited to submit written data, views, and arguments regarding whether the proposal should be approved or disapproved by September 14, 2016. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by September 28, 2016. The Commission asks that commenters address the sufficiency of the Exchange's statements in support of the proposal, which are set forth in the Notice²⁷ and in Amendment No. 2 to the proposed rule change,²⁸ in addition to any other comments they may wish to submit about the proposed rule change, as modified by Amendment Nos. 1 and 2.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEArca-2016-64 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange

Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Numbers SR-NYSEArca-2016-64. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of these filings also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2016-64 and should be submitted on or before September 14, 2016. Rebuttal comments should be submitted by September 28, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁹

Robert W. Errett,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78612; File No. SR-MIAX-2016-29]

Self-Regulatory Organizations; Miami International Securities Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rules 803 and 1308

August 18, 2016.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”)¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 12, 2016, Miami International Securities Exchange LLC (“MIAX” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend Exchange Rule 803, Audits; and Exchange Rule 1308, Supervision of Accounts, to adopt new Interpretations and Policies .01 to each existing rule regarding the submission of annual reports.

The text of the proposed rule change is available on the Exchange’s Web site at http://www.miaxoptions.com/filter/wotitle/rule_filing, at MIAX’s principal office, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Exchange Rule 803, Audits, to adopt new Interpretations and Policies .01 to state that Members must now file annual reports electronically with the Exchange by utilizing the system or software prescribed by the Exchange which will be announced via Regulatory Circular. Additionally, the Exchange proposes to amend Exchange Rule 1308, Supervision of Accounts, to adopt new Interpretations and Policies .01 to state that Members required to file an annual report under paragraph (g) of Rule 1308 must now file such report electronically with the Exchange by utilizing the system or software prescribed by the Exchange which will be announced via Regulatory Circular.

The Exchange has a Regulatory Services Agreement (“RSA”) with the Financial Industry Regulatory Authority, Inc. (“FINRA”). FINRA provides its members, and the members of exchanges for which it provides regulatory services, access to its Firm Gateway system, which is a portal that provides consolidated access to various FINRA regulatory systems. As part of the RSA, FINRA will collect reports on behalf of the Exchange and provide a report to the Exchange indicating which Firms have submitted an annual audit report. Additionally, FINRA has a process in place to provide specific annual audit reports to the Exchange upon request.

The FINRA Firm Gateway is available to Members³ of the Exchange for the submission of various regulatory filings, including certain filings such as the Annual Supervision Report and the Annual Audit Report. The Exchange intends to require Members that are required to submit these reports to the Exchange to submit them to FINRA through the Firm Gateway system and announce this to Members via Regulatory Circular as stated in the proposed amended rules.

Therefore the Exchange proposes to adopt Interpretations and Policies .01 to Rule 803 to state that reports must be filed electronically with the Exchange utilizing the system or software prescribed by the Exchange. Additionally, the Exchange proposes to adopt Interpretations and Policies .01 to

Rule 1308 to state that if a Member is required to file a report, that such report must be filed electronically with the Exchange utilizing the system or software prescribed by the Exchange.

The Exchange believes that requiring Members to submit annual reports directly into the system of the Exchange’s regulatory services provider will provide for a more efficient and effective process for the collection, tracking, consolidation, and review of Members’ annual reports.

2. Statutory Basis

MIAX believes that its proposed rule change is consistent with Section 6(b) of the Act⁴ in general, and furthers the objectives of Section 6(b)(5) of the Act⁵ in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)⁶ requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Exchange believes that the proposed rule change will create a more efficient and effective process for the Exchange’s Members to submit annual reports to the Exchange, which fosters cooperation and coordination with FINRA in its performance of regulatory services with respect to the Exchange and Exchange Members. By enhancing the process through which the Exchange (through its regulatory services provider) receives annual reports, the Exchange believes the proposed rule changes will promote just and equitable principles of trade and ultimately protect investors. Additionally, upon implementation, all Members that are required to submit annual reports will be required to submit them in the same (and thus nondiscriminatory) electronic manner.

Regulation of Members continues to be performed by electronic processes, and thus the Exchange believes it is appropriate to require electronic submission of these reports so that they may be incorporated into these processes. By maintaining the flexibility

³ The term “Member” means an individual organization approved to exercise trading rights associated with a Trading Permit. Members are deemed “members” under the Exchange Act. See Exchange Rule 100.

⁴ 15 U.S.C. 78f(b).

⁵ 15 U.S.C. 78f(b)(5).

⁶ *Id.*

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

within the rules for the Exchange to prescribe by Regulatory Circular which system or software will be used for the submission of annual reports, the Exchange believes it will be able to adjust, as necessary, the required manner of reporting by Members, particularly to the extent that new or enhanced software or systems are developed for this purpose.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change requires all Members that are required to submit annual reports to submit those reports electronically in the same manner.

The Exchange believes the proposed rule change will not impose any burden on intra-market competition because it applies equally to all Exchange Members with reporting obligations.

The Exchange does not believe that the proposed rule changes will impose any burden on intermarket competition as the proposed rule change is for regulatory purposes to enhance the process for Member's submission and the Exchange's collection, tracking, consolidation, and review of annual reports.

The Exchange believes that the proposed change is not controversial and does not impose any significant burden on the Exchange's Members. All Exchange Members have access to the FINRA Firm Gateway system and there is no additional financial cost to file the required reports electronically through this system. Additionally, the majority of Members of the Exchange are also Members of FINRA and use the FINRA Firm Gateway system on a regular basis. Therefore, the Exchange believes that any burden that the proposed rule change may impose on Members will be minimal. The Exchange believes any burden is outweighed by the benefits of electronic filing, which include a more efficient and effective process for the Exchange (through its regulatory services provider) to collect, track, and consolidate annual reports. The Exchange believes that an electronic filing process is in its, and its Members', best interest.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act⁷ and Rule 19b-4(f)(6)⁸ thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-MIAX-2016-29 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-MIAX-2016-29. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the

⁷ 15 U.S.C. 78s(b)(3)(A).

⁸ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-MIAX-2016-29, and should be submitted on or before September 14, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁹

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Rule 17a-4, SEC File No. 270-198, OMB Control No. 3235-0279.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the collection of information provided for in Rule 17a-4 (17 CFR 240.17a-4), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget ("OMB") for extension and approval.

Rule 17a-4 requires exchange members, brokers and dealers ("broker-

⁹ 17 CFR 200.30-3(a)(12).

dealers'') to preserve for prescribed periods of time certain records required to be made by Rule 17a-3. In addition, Rule 17a-4 requires the preservation of records required to be made by other Commission rules and other kinds of records which firms make or receive in the ordinary course of business. These include, but are not limited to, bank statements, cancelled checks, bills receivable and payable, originals of communications, and descriptions of various transactions. Rule 17a-4 also permits broker-dealers to employ, under certain conditions, electronic storage media to maintain records required to be maintained under Rules 17a-3 and 17a-4.

There are approximately 4,104 active, registered broker-dealers. The staff estimates that the average amount of time necessary to preserve the books and records as required by Rule 17a-4 is 254 hours per broker-dealer per year. In addition, the Commission is moving into this information collection the annual burden hours for paragraph (b)(11) of Rule 17a-4, which requires any broker-dealer that sponsors an internal broker-dealer system to maintain certain records relating to such system for at least three years. The Commission estimates that paragraph (b)(11) of Rule 17a-4 imposes an annual burden of 3 hours per year to maintain the requisite records. The Commission estimates that there are approximately 150 internal broker-dealer systems, resulting in an annual recordkeeping burden of 450 hours. Therefore, the Commission estimates that compliance with Rule 17a-4 requires 1,042,866 hours each year ((4,104 broker-dealers × 254 hours) + (150 broker-dealers × 3 hours)). These burdens are recordkeeping burdens.

The staff believes that compliance personnel would be charged with ensuring compliance with Commission regulation, including Rule 17a-4. The staff estimates that the hourly salary of a Compliance Clerk is \$65 per hour.¹ Based upon these numbers, the total internal cost of compliance for 4,104 respondents is the dollar cost of approximately \$67.8 million (1,042,416 yearly hours × \$65). The total burden hour decrease of 242,062 is due to a decrease in the number of respondents from 5,057 to 4,104.

Based on conversations with members of the securities industry and the Commission's experience in the area,

the staff estimates that the average broker-dealer spends approximately \$5,000 each year to store documents required to be retained under Rule 17a-4. Costs include the cost of physical space, computer hardware and software, etc., which vary widely depending on the size of the broker-dealer and the type of storage media employed. The Commission estimates that the annual reporting and recordkeeping cost burden is \$20,520,000. This cost is calculated by the number of active, registered broker-dealers multiplied by the reporting and recordkeeping cost for each respondent (4,104 active, registered broker-dealers × \$5,000).

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or send an email to: PRA_Mailbox@sec.gov.

Dated: August 19, 2016.

Brent J. Fields,
Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-78615; File No. SR-NYSEArca-2016-117]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend NYSE Arca Equities Rules 7.35P, 7.34P, 7.18P and 7.31P Regarding Order Processing Following an Auction or When Transitioning From One Trading Session to Another

August 18, 2016.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act"),² and Rule 19b-4 thereunder,³ notice is hereby given that on August 15, 2016, NYSE Arca, Inc. (the "Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend NYSE Arca Equities Rule 7.35P (Auctions), Rule 7.34P (Trading Sessions), Rule 7.18P (Halts), and 7.31P (Orders and Modifiers) regarding order processing following an auction or when transitioning from one trading sessions to another. The proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

¹ This figure is based on SIFMA's *Office Salaries in the Securities Industry 2016*, modified by Commission staff to account for an 1,800-hour work-year multiplied by 2.93 to account for bonuses, firm size, employee benefits, and overhead.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend NYSE Arca Equities Rule 7.35P (Auctions) ("Rule 7.35P"), Rule 7.34P (Trading Sessions) ("Rule 7.34P"), Rule 7.18P (Halts) ("Rule 7.18P"), and 7.31P (Orders and Modifiers) ("Rule 7.31P") regarding order processing following an auction or when transitioning from one trading session to another. These proposed changes would revise how the Exchange processes orders on the Pillar trading platform only.

Overview

Currently, under Rule 7.35P(g), during the Auction Processing Period,⁴ new orders, requests to cancel, and requests to cancel and replace an order that are received during the Auction Processing Period will be accepted but will not be processed until after the applicable auction concludes. In addition, a request to cancel and replace an order that was entered during the Auction Processing Period for an order that was also entered during the Auction Processing Period will be rejected.

When the Exchange transitions to continuous trading, either after auction processing concludes or when transitioning from one trading session to another, the Exchange transitions to continuous trading pursuant to the steps specified in Rule 7.35P(h). Specifically, the Exchange will first expire orders that are no longer eligible to trade. Next, orders that are designated for a trading session and that were received during a prior trading session or during the Auction Processing Period, and that did not participate in the auction, will become eligible to trade. Then, before continuous trading will begin, the Exchange will process any order instructions received either during the Auction Imbalance Freeze or Auction Processing Period, which includes new orders and requests to cancel, will next adjust the display price and working price of orders based on the PBBO or NBBO, and if orders are marketable, will trade and/or route such orders based on price-time priority. After marketable orders have routed or traded, the Exchange will publish a quote for the next trading session.

With respect to order entry for the Core Trading Session, Rule 7.34P(c)(1)(C) currently provides that

Limit Orders designated IOC and Cross Orders entered before or during the Early Trading Session and designated for the Core Trading Session will be rejected if entered before the Core Open Auction concludes. As such, a Limit Order designated IOC that is entered after 9:30:00, but before the Core Open Auction concludes, would be rejected.

Finally, Rule 7.18P(c)(2) provides that during a halt or pause in an Exchange-listed security, the Exchange retains resting orders in the NYSE Arca Book and assigns Limit Orders a working price and display price that is equal to the limit price of the order. The Exchange proposes to amend order and order instruction processing following an auction or when transitioning from one trading session to another to:

- Evaluate the status of orders that were live before the auction or in the earlier trading session and are eligible to trade after the auction/next trading session to assess whether to publish a new quote;
- After the Auction Processing Period ends, process orders that become eligible to trade in time sequence with specified cancel request; and
- Distinguish when requests to cancel, cancel and replace, and modify an order would be processed on arrival based on whether the impacted order was previously eligible to trade.

The Exchange believes that these proposed changes would simplify the transition to continuous trading following an auction or the transition from one trading session to another. Specifically, rather than waiting for all marketable orders to be traded or routed in price/time priority before publishing a quote, the Exchange would be evaluating orders at an earlier stage to determine whether to publish a quote. After publishing a quote, orders that become eligible to trade and related order instructions would be traded, routed, or quoted in time sequence. These proposed order processing changes would facilitate the Exchange in applying Price Bands, as defined in the Regulation NMS Plan to Address Extraordinary Market Volatility ("LULD Plan"),⁵ immediately following an auction in Exchange-listed securities, rather than waiting for the securities information processor ("SIP") to publish such Price Bands based on the reference price provided by the Exchange for such securities.

To effect the rule change, the Exchange proposes to amend Rules

7.35P(g) and (h) to specify order and order instruction processing both during the Auction Processing Period and when transitioning to continuous trading. The Exchange also proposes to amend Rules 7.31P and 7.34P to specify that Limit Orders designated IOC and Cross Orders would be accepted during the Auction Processing Period. Finally, the Exchange proposes to amend Rule 7.18P to specify that orders that were on the NYSE Arca Book before a halt or pause would retain their last working and display price.

Proposed Rule Change

To effect the changes to how order instructions would be processed during the Auction Processing Period, the Exchange proposes to amend Rule 7.35P(g). As proposed, Rule 7.35P(g) would provide that new orders received during the Auction Processing Period would be accepted but would not be processed until after the Auction Processing Period. This proposed rule text is based on current Rule 7.35P(g), with a non-substantive change to specify that the processing would be "after the Auction Processing Period" rather than "until after the applicable auction concludes." The proposed change is designed to use consistent terminology throughout proposed Rule 7.35P(g) and (h) without any change to its meaning.

Proposed Rule 7.35P(g) would further provide that for purposes of paragraphs (g) and (h) of that rule, an "order instruction" refers to a request to cancel, cancel and replace, or modify an order. The current rule text does not currently specify how the Exchange would process requests to modify an order during the Auction Processing Period. However, because requests to modify an order would be handled in the same manner as requests to cancel or requests to cancel and replace and [sic] order, the Exchange proposes to include modifying an order in the definition of "order instruction." As further proposed, during the Auction Processing Period, order instructions would be processed as described in proposed Rules 7.35P(g)(1)–(2), which would replace the remainder of the current text of Rule 7.35P(g).

- Proposed Rule 7.35P(g)(1) would provide that an order instruction received during the Auction Processing Period would not be processed until after the Auction Processing Period if it relates to an order that was received before the Auction Processing Period. This proposed text is based on current Rule 7.35P(g) with no substantive changes, but with revised text to use consistent terminology. The proposed

⁴ The "Auction Processing Period" means the period during which the applicable auction is being processed. See Rule 7.35P(a)(2).

⁵ See Securities Exchange Act Release No. 77679 (April 21, 2016), 81 FR 24908 (April 27, 2016) (File No. 4-631) (Order approving 10th Amendment to the LULD Plan) and Rule 7.11P.

rule would further provide that any subsequent order instructions relating to such order would be rejected. This would be new functionality. The Exchange proposes to reject such subsequent order instructions because they may conflict with the previously-entered order instruction.⁶ To avoid such a scenario, the Exchange proposes that any subsequent order instructions would be rejected.

- Proposed Rule 7.35P(g)(2) would provide that an order instruction received during the Auction Processing Period would be processed on arrival if it relates to an order that was received during the Auction Processing Period. This proposed rule text represents a substantive change from current Rule 7.35P(g), which provides that the Exchange rejects a request to cancel and replace an order that was entered during the Auction Processing Period. The Exchange believes that if the Exchange receives an order during the Auction Processing Period, because such order would not be eligible to participate in an auction and because such order is not yet eligible to trade following the auction or in the next trading session, there should be no restrictions on cancelling, replacing, or modifying such non-live order.

The Exchange also proposes to amend which orders may be entered during the Auction Processing Period. Currently, Rule 7.34P(c)(1)(C) provides that Limit Orders designated IOC and Cross Orders entered before or during the Early Trading Session and designated for the Core Trading Session will be rejected if entered before the Core Open Auction concludes. Because of the changes to order processing following the Auction Processing Period to process orders that are received during the Auction Processing Period in time sequence (as described in greater detail below), the Exchange proposes to accept Limit Orders designated IOC and Cross Orders during the Auction Processing Period. Because the Auction Processing Period occurs after 9:30 a.m. Eastern Time, an ETP Holder may be timing to send Limit Orders designated IOC as soon after 9:30 a.m. Eastern Time as feasible and would not know the precise time when the Exchange has transitioned to continuous trading. To avoid rejecting orders designated for the Core Trading Session

that were entered during Core Trading Hours,⁷ the Exchange proposes to amend Rule 7.34P(c)(1)(C) to provide that Limit Orders designated IOC and Cross Orders entered before or during the Early Trading Session and designated for the Core Trading Session would be rejected if entered before the Auction Processing Period for the Core Open Auction. The Exchange similarly proposes to amend Rules 7.31P(b)(2) and (g), which currently provide that a Limit Order with an IOC Modifier or a Limit IOC Cross Order will be cancelled if it arrives during auction processing, to delete the phrase “and it if arrives during auction processing, it will be cancelled.”

The Exchange further proposes to amend Rule 7.34P(c)(2) to add new subparagraph (C) that would provide that Limit Orders designated IOC and Cross Orders entered before and during the Core Trading Session and designated for the Late Trading Session would be rejected if entered before the Auction Processing Period for the Closing Auction. Currently, the rule is silent on the treatment of Limit Orders designated IOC and Cross Orders that are designated for the Late Trading Session only and entered during the Core Trading Session or earlier, but the treatment is the same as provided for in current Rule 7.34P(c)(1)(C). The Exchange proposes to codify the treatment of such orders entered during the Core Trading Session, and in so doing, make the same substantive change as proposed for Rule 7.34P(c)(1)(C).

To effect the changes to how the Exchange would transition to continuous trading, the Exchange proposes to amend Rule 7.35P(h). The Exchange proposes a non-substantive clarifying change to the text of Rule 7.35P(h) to replace the phrase “the Exchange will transition to continuous trading session” with the phrase “the Exchange will transition to continuous trading following an auction or when transitioning from one trading session to another” to specify that Rule 7.35P(h) governs both trading session transition (which may involve an auction) and transition to continuous trading following a Trading Halt Auction. Rule 7.35P(h)(1), which is not changing, and proposed Rules 7.35P(h)(2)–(3), which will be new rule text, would specify how orders and order instructions would be processed as the Exchange

transitions to continuous trading. The Exchange proposes to delete current Rule 7.35P(h)(2), (h)(3), and (h)(3)(A)–(D) (with the exception of the second sentence of current Rule 7.35P(h)(3)(B), which, as described below, will be included in proposed Rule 7.35P(h)(3)(C)).

Proposed Rule 7.35P(h)(2) would specify how the Exchange would process order instructions during the transition to continuous trading:

- Proposed Rule 7.35P(h)(2)(A) would provide that an order instruction received during the Auction Imbalance Freeze,⁸ the transition to continuous trading, or the Auction Processing Period under paragraph (g)(1) of this Rule would be processed in time sequence with the processing of orders as specified in proposed Rule 7.35P(h)(3)(A) or (B) if it relates to an order that was received before the Auction Processing Period. As proposed, these order instructions would be processed in time sequence with the processing of orders as they become eligible to trade, as described below. Similar to proposed Rule 7.35P(g)(1), any subsequent order instructions relating to such order would be rejected. This proposed rule is based in part on current Rule 7.35P(h)(2)(A) [sic], which provides that any order instructions received during either the Auction Imbalance Freeze or Auction Processing Period that were not processed will be processed. The proposed changes are designed to provide more specificity that the specified order instructions would be processed in time sequence with all other order processing.

- Proposed Rule 7.35P(h)(2)(B) would provide that an order instruction received during the transition to continuous trading would be processed on arrival if it relates to an order that was entered during the Auction Processing Period or the transition to continuous trading. This proposed processing would therefore apply to orders that were not previously live and were entered after the Auction Processing Period began. Similar to proposed Rule 7.35P(g)(2), because these orders have not yet been processed, the Exchange believes it is appropriate to apply order instructions against such orders immediately.

Proposed Rule 7.35P(h)(3) would specify how orders would be processed when transitioning to continuous

⁶ For example, assume that during the Auction Processing Period, an ETP Holder sends a request to cancel and replace an order. While still in the Auction Processing Period, the ETP Holder then sends a request to cancel the original order. When those order instructions are processed in time sequence, the first instruction would result in a cancellation of the original order and a new order. The second instruction would be a cancellation of a non-existing order.

⁷ “Core Trading Hours” means the hours of 9:30 a.m. Eastern Time through 4:00 p.m. Eastern Time or such other hours as may be determined by the Corporation from time to time. See Rule 1.1(j).

⁸ The “Auction Imbalance Freeze” means the period that begins before the scheduled time for the Early Open Auction, Core Open Auction, or Closing Auction, as specified in Rules 7.35P(b), (c), and (d), and that ends once the Auction Processing Period begins. See Rule 7.35P(a)(3).

trading, as provided for in proposed Rules 7.35P(h)(3)(A)–(C):

- Proposed Rule 7.35P(h)(3)(A) would provide that a quote would be published based on unexecuted orders that were eligible to trade in the trading sessions both before and after the transition or auction, *i.e.*, previously-live orders. This represents a substantive change from current Rule 7.35P(h)(3)(D), which provides that the Exchange will publish a quote only after all marketable orders have routed or traded. As proposed, the Exchange would publish a quote before evaluating the orders that were not previously eligible to trade. Proposed Rules 7.35P(h)(3)(A)(i) and (ii) would provide specificity regarding how such quote would be determined.

Proposed Rule 7.35P(h)(3)(A)(i) would provide that before publishing a quote when transitioning from a prior trading session or following the Early Open Auction, Core Open Auction, or Closing Auction: (1) Previously-live orders that are marketable would be traded, routed, or cancelled in time sequence; (2) a new quote would be published only if different from the last-published quote;⁹ and (3) if the new published quote would be worse than the previously-published quote and would lock or cross the PBBO, the display price of Limit Orders would be adjusted consistent with Rule 7.31P(a)(2)(C).

Because the Exchange does not currently update its quote solely because it transitions from one trading session to another, the Exchange would not be changing that behavior when evaluating whether to publish a quote. When assessing whether previously-live orders are marketable, the Exchange would re-price them first, as provided for in proposed Rule 7.35P(h)(3)(C). If such orders would become marketable against each other or a protected quote, they would be traded or routed, as applicable. In addition, because such orders would be subject to LULD Plan Price Bands, such orders may be cancelled if priced through a Price Band.¹⁰

With respect to proposed cross reference to Rule 7.31P(a)(2)(C), that rule describes how the Exchange would not publish a new BBO that would lock

or cross a PBBO that initially had locked or crossed our previously-displayed quote. Because of updates to the PBBO during the Auction Processing Period, a similar set of facts and circumstances could arise, and rather than publishing a new quote that would lock or cross the PBBO, the Exchange would adjust the display price of Limit Orders as provided for in Rule 7.31P(a)(2)(C) until such time that the limit price of such orders no longer locks or crosses the PBBO.¹¹

Proposed Rule 7.35P(h)(3)(A)(ii) would provide that before publishing a quote following a Trading Halt Auction: (1) Previously-live Limit Orders that are designated with a Proactive if Locked/ Crossed Modifier or that would be the result of reserve interest replenishing the fully-executed display quantity of a routable Reserve Order would route, if marketable against protected quotations on Away Markets; (2) previously-live orders marketable against other orders in the NYSE Arca Book that would not trade-through a protected quotation would trade; and (3) the display price of all other orders that are marketable against a protected quotation on an Away Market would be adjusted consistent with Rule 7.31P(a)(2)(C). The Exchange proposes this difference in processing following a Trading Halt Auction to avoid locking or crossing a protected quotation, the Exchange proposes to re-price the display price of such orders as provided for in Rule 7.31P(a)(2)(C). In addition, unlike a trading session transition change, because the Exchange would not have a published quote during a halt or pause, if there is sufficient interest, the Exchange would publish a quote at this stage following a Trading Halt Auction.

- Proposed Rule 7.35P(h)(3)(B) would provide that next, unexecuted orders that were not eligible to trade in the prior trading session (or were received during a halt or pause) or that were received during the Auction Processing Period, would be assigned a new working time at the end of the Auction Processing Period in time sequence relative to one another based on original entry time. This would be new processing of such orders. Currently, as

provided for in Rule 7.36P(f)(1), an order is assigned a working time based on its original order entry time. That would remain true for such orders for purposes of participation in the applicable auction.¹² However, as proposed, after the Auction Processing Period, the Exchange would assign a new working time to such orders, *i.e.*, orders that were not previously live. This proposed change is similar to how Bats BZX Exchange, Inc. (“Bats”) and the Nasdaq Stock Market LLC (“Nasdaq”) process orders following an auction that were not previously live.¹³ By assigning a new working time, in continuous trading, such orders would no longer have time priority over orders that were entered later, but were eligible to trade in the prior trading session.¹⁴

- Proposed Rule 7.35P(h)(3)(C) would provide that when processing orders, the display price and working price of an order would be adjusted based on the PBBO or NBBO, as provided for in Rule 7.31P. This rule text is based on the first sentence of current Rule 7.31P(h)(3)(B). The second sentence of proposed Rule 7.35P(h)(3)(C) would retain the second sentence of current Rule 7.35P(h)(3)(B), which states that “when transitioning to continuous trading, the display price and working price of Day ISOs will be adjusted in the same manner as Arca Only Orders until the Day ISO is either traded in full or displayed at its limit price.”

The Exchange also proposes to amend Rule 7.18P regarding order handling during a halt or pause. During a UTP Regulatory Halt, the Exchange cancels any unexecuted portions of Market Orders. The Exchange proposes to add that the Exchange would also cancel

¹² See Rule 7.35P(a)(6) (describing Auction Ranking, which is based on the price-time priority of such orders as specified in Rules 7.36P(c)–(g)).

¹³ See Bats Rules 11.23(b)(3)(A) and (B) and (c)(3)(A) (previously-live orders, *i.e.*, “Limit order shares on the Continuous Book that are not executed in” an auction, will remain on the Bats’ book and thus will be represented in the quote and orders that were not previously live, *i.e.*, “RHO Orders” will be added to the Bats’ book at the conclusion of the Opening Auction); Nasdaq Rules 4752(c) and 4753(c)(1) (If no opening or trading halt cross, orders are added to the book, *i.e.*, the previously published quote, in time priority).

¹⁴ For example, assume a Limit Order to buy for 10.00 designated for the Core Trading Session only (Order A) is entered at 8:00 a.m. Eastern Time. Assume next that a Limit Order to buy for 10.00 designated for both the Early and Core Trading Sessions (Order B) is entered at 9:00 a.m. Eastern Time, and is eligible to trade on arrival. Assume that Order B is not executed in the Early Trading Session. In the Core Trading Auction, Order A will have time priority over Order B. However, after the Auction Processing Period for the Core Open Auction ends, Order A will be assigned a new working time. In continuous trading Order B, which was eligible to trade earlier than Order A, would have time priority over Order A.

⁹ For example, assume that at 9:29 a.m. Eastern Time, NYSE Arca publishes a quote in XYZ of 100 shares 10.04 x 10.05 100 shares. Assume that after the Auction Processing Period, based on the orders that were previously eligible to trade, the quote would be 100 shares 10.04 x 10.05 100 shares. Because the quote has not changed, the Exchange would not republish that quote. By contrast, if the new quote is 100 shares 10.03 x 10.05 100 shares, the Exchange would publish a new quote.

¹⁰ See Rule 7.11P(a)(5) (specifying when the Exchange would cancel buy (sell) orders priced above (below) the Upper (Lower) Price Band).

¹¹ For example, assume that before the Core Open Auction, the Exchange publishes a quote of 10.04 x 10.05, which is the NBBO. During the Auction Processing Period, an Away Market publishes a new protected offer of 10.02, which crosses the Exchange’s best bid. That bid can stand its ground. However, if after the Auction Processing Period, the new Exchange best bid would be 10.03, because this is worse than the Exchange’s last published best bid and would cross the new PBO of 10.02, the Exchange would adjust the display price of the Limit Order representing the best bid to 10.01 and the working price would be priced at 10.02.

orders not eligible to trade in the current trading session on the NYSE Arca Book. For example, assume there is a UTP Regulatory Halt at 8:00 a.m. Eastern Time. If the Exchange receives notice of such halt, it would cancel any orders in the impacted security resting on the NYSE Arca Book that are designated for the Core Trading Session only or designated for the Core and Late Trading Sessions, *i.e.*, are not eligible to trade in the Early Trading Session, which is for purposes of this example, the current trading session. Because the Exchange does not conduct a Trading Halt Auction for UTP Securities, the Exchange proposes to cancel such non-live orders in order to reduce the potential for such orders to lock or cross a protected quotation if trading resumes in that security in the next trading session.

The Exchange also proposes to amend how orders are maintained on the NYSE Arca Book during a halt or pause. As proposed, rather than assign Limit Orders a working price and display price that is equal to the limit price of the Order, the Exchange proposes to amend Rule 7.18P(c)(2) to provide that during a halt or pause in Exchange-listed securities, it would maintain resting orders on the NYSE Arca Book at their last working price and display price. This proposed change would not alter how such orders would participate in a Trading Halt Auction, which would continue to be based on their limit price, and not their last working price.¹⁵ Nor would it alter how they would be priced when transitioning to continuous trading, because as proposed in Rule 7.35P(h)(3)(C), the working price and display price of such orders would be adjusted based on any changes to the PBBO or NBBO, as provided for in Rule 7.31P. This proposed rule change would therefore not alter any priority for such orders, but would streamline order processing for the Exchange by eliminating an extra processing step. For consistency, the Exchange proposes to add the same clause to Rule 7.18P(b)(2).¹⁶ Finally, the Exchange proposes to amend Rule 7.18P(c)(5) to provide more specificity of when the rules governing order acceptance during a halt or pause ends. Currently, the rule provides that the Exchange accepts all other incoming order instructions until the security has reopened. Because

acceptance of orders and order instructions during the Auction Processing Period is governed by Rule 7.35P(g), the Exchange proposes to revise Rule 7.18P(c)(5) to provide that the Exchange would accept all other incoming order instructions until the Auction Processing Period for the Trading Halt Auction, at which point, Rule 7.35P(g) would govern the entry of incoming orders and order instructions.

* * * * *

Because of the technology changes associated with this proposed rule change, the Exchange will announce by Trader Update the implementation date.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934 (the “Act”),¹⁷ in general, and furthers the objectives of Section 6(b)(5),¹⁸ in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes the proposed changes would remove impediments to and perfect the mechanism of a free and open market and a national market system, and in general, to protect investors and the public interest, because they are designed to simplify order and order instruction processing both during the Auction Processing Period and when transitioning to continuous trading. Specifically, the Exchange believes that publishing a quote based on orders that were previously live before the new trading session or auction would result in the Exchange publishing an updated quote sooner than under current rules. In addition, the proposed change to process orders that become live after an auction or in a new trading session in time sequence rather than in price/time priority would similarly simplify order processing by processing such orders in the order they were received. The Exchange also believes that assigning a new working time to orders that were not live prior to the transition to continuous trading would preserve the time priority of those orders that were eligible to trade in an earlier trading session or before the auction. This

proposed rule change is also based on how Bats and Nasdaq assign time priority to orders that were not live prior to an auction and that are added to the book after an auction.¹⁹

The Exchange also believes that the proposed changes to when the Exchange would process order instructions, both during the Auction Processing Period and when transitioning to continuous trading, are designed to provide consistent treatment of when order instructions would be processed, which would be based on when an order was entered. The Exchange believes that waiting to process order instructions that relate to an order that was entered before the Auction Processing Period (including order instructions entered during the Auction Imbalance Freeze that were not yet processed) would remove impediments to and perfect a free and open market and a national market system because it would ensure that a customer’s order instructions would be processed in time sequence with the underlying order. Likewise, the Exchange believes that the proposed change to reject subsequent order instructions when order instructions are not processed on arrival, as provided for in proposed Rules 7.35P(g)(1) and 7.35P(2)(A) [sic], would remove impediments to and perfect the mechanism of a free and open market and a national market system because it would reduce the potential for conflicting order instructions being entered for the same order. By contrast, the Exchange believes that if a new order is entered during a transition phase, such as the Auction Processing Period or the transition to continuous trading, ETP Holders do not have an expectation that such orders would be processed yet, and therefore processing order instructions relating to such new orders on arrival would remove impediments to and perfect the mechanism of a free and open market and a national market system by ensuring that the most recent instruction for such not-yet-live order is available when the order will be processed in time sequence with other orders.

The Exchange also believes that the proposed change to accept Limit Orders designated IOC and Cross Orders during the Auction Processing Period would remove impediments to and perfect the mechanism of a free and open market and a national market system. Specifically, the Exchange believes that ETP Holders that enter such orders after 9:30 a.m. Eastern Time or after 4:00 p.m. Eastern Time have an expectation that

¹⁵ See Rule 7.35P(a)(6)(A) (Limit Orders, LOO Orders, and LOC orders will be ranked based on their limit price and not the price at which they would participate in the auction).

¹⁶ The Exchange also proposes a non-substantive, technical amendment to fix a typographical error in Rule 7.18P(c) to use the term “Marketplace” instead of “Markeplace.”

¹⁷ 15 U.S.C. 78f(b).

¹⁸ 15 U.S.C. 78f(b)(5).

¹⁹ See *supra* note 13.

such orders would be eligible to trade consistent with the IOC instruction. Because an ETP Holder would not be able to pinpoint the precise timing of the Auction Processing Period for a security and because the Exchange would be processing orders in time sequence following the Auction Processing Period, the Exchange believes that the applicable IOC instruction would in essence be processed on arrival.

The Exchange believes that the proposed changes to Rule 7.18P would remove impediments to and perfect the mechanism of a free and open market and a national market system because they are designed to streamline order processing during a halt or pause. The Exchange further believes that the proposed change during a UTP Regulatory Halt to cancel orders that are not eligible to trade in the current trading session would remove impediments and perfect the mechanism of a free and open market and a national market system because the changes are designed to reduce the potential for such orders to lock or cross a protected quotation if trading resumes in that security in the next trading session.

The Exchange further believes that the proposed changes would remove impediments to and perfect the mechanism of a free and open market and in general, to protect investors and the public interest because the proposed changes would facilitate the Exchange in applying Price Bands under the LULD Plan to Exchange-listed securities immediately following the transition to the Core Trading Session or following a Trading Halt Auction during Core Trading Hours without waiting for such Price Bands to be published by the SIP based on the reference price provided by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rule change is not designed to address any competitive issues, but rather, to streamline and simplify order and order instruction processing both during and immediately after the Auction Processing Period.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act²⁰ and Rule 19b-4(f)(6) thereunder.²¹

A proposed rule change filed pursuant to Rule 19b-4(f)(6) under the Act²² normally does not become operative for 30 days after the date of its filing. However, Rule 19b-4(f)(6)(iii)²³ permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. According to the Exchange, the proposed rule change would help the Exchange in providing more information about orders on the Arca Book at an earlier stage, would simplify certain order processing, and would facilitate the Exchange in applying LULD Price Bands immediately following an auction in Exchange-listed securities, rather than waiting for the SIP to publish such Price Bands based on a reference price provided by the Exchange. The Exchange further stated that it expects to be able to implement the technology changes supporting this proposed rule change in less than 30 days from filing. The Commission believes the waiver of the operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission hereby waives the operative delay and

designates the proposal operative upon filing.²⁴

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEArca-2016-117 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEArca-2016-117. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE.,

²⁰ 15 U.S.C. 78s(b)(3)(A).

²¹ 17 CFR 240.19b-4(f)(6). As required under Rule 19b-4(f)(6)(iii), the Exchange provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission.

²² 17 CFR 240.19b-4(f)(6).

²³ 17 CFR 240.19b-4(f)(6)(iii).

²⁴ For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2016–117, and should be submitted on or before September 14, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁵

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011–01–P

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #14811 and #14812]

LOUISIANA Disaster #LA–00065

AGENCY: U.S. Small Business Administration.

ACTION: Notice.

SUMMARY: This is a Notice of the Presidential declaration of a major disaster for the State of Louisiana (FEMA–4277–DR), dated 08/14/2016.

Incident: Severe Storms and Flooding.
Incident Period: 08/11/2016 and continuing.

Effective Date: 08/14/2016.

Physical Loan Application Deadline Date: 10/13/2016.

Economic Injury (EIDL) Loan Application Deadline Date: 05/15/2017.

ADDRESSES: Submit completed loan applications to: U.S. Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

FOR FURTHER INFORMATION CONTACT: A. Escobar, Office of Disaster Assistance, U.S. Small Business Administration, 409 3rd Street SW., Suite 6050, Washington, DC 20416.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the President's major disaster declaration on 08/14/2016, applications for disaster loans may be filed at the address listed above or other locally announced locations.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties (Physical Damage and Economic Injury Loans): East Baton Rouge, Livingston, Saint Helena, Tangipahoa.

Contiguous Counties (Economic Injury Loans Only):

Louisiana: Ascension, East Feliciana, Iberville, Jefferson, Saint Charles, Saint Tammany, St John the Baptist, Washington, West Baton Rouge.

Mississippi: Amite, Pike.

The Interest Rates are:

	Percent
<i>For Physical Damage:</i>	
Homeowners With Credit Available Elsewhere	3.125
Homeowners Without Credit Available Elsewhere	1.563
Businesses With Credit Available Elsewhere	6.250
Businesses Without Credit Available Elsewhere	4.000
Non-Profit Organizations With Credit Available Elsewhere ...	2.625
Non-Profit Organizations Without Credit Available Elsewhere	2.625
<i>For Economic Injury:</i>	
Businesses & Small Agricultural Cooperatives Without Credit Available Elsewhere	4.000
Non-Profit Organizations Without Credit Available Elsewhere	2.625

The number assigned to this disaster for physical damage is 14811B and for economic injury is 148120.

[Public Notice: 9683]

Culturally Significant Objects Imported for Exhibition Determinations: “Fragonard: Drawing Triumphant—Works from New York Collections” Exhibition

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.*; 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000 (and, as appropriate, Delegation of Authority No. 257 of April 15, 2003), I hereby determine that the objects to be included in the exhibition “Fragonard: Drawing Triumphant—Works from New York Collections,” imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owner or custodian. I also determine that the exhibition or display of the exhibit objects at the Metropolitan Museum of Art, New York, New York, from on or about October 6, 2016, until on or about January 8, 2017, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the imported objects, contact the Office of Public Diplomacy and Public Affairs in the Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: section2459@state.gov). The mailing address is U.S. Department of State, L/PD, SA–5, Suite 5H03, Washington, DC 20522–0505.

Dated: August 17, 2016.

BILLING CODE P

SURFACE TRANSPORTATION BOARD**[Docket No. AB 6 (Sub-No. 467X)]****BNSF Railway Company—
Discontinuance of Trackage Rights
Exemption—in Big Stone, Swift,
Chippewa, Yellow Medicine, and
Renville Counties, Minn.**

On August 4, 2016, BNSF Railway Company (BNSF) filed with the Surface Transportation Board (Board) a petition under 49 U.S.C. 10502 for exemption from the provisions of 49 U.S.C. 10903 to discontinue trackage rights over a 106.7-mile line of railroad (the Line) owned by Twin Cities & Western Railroad Company (TC&W), between milepost 600.7 at Ortonville and milepost 494.0 at Buffalo Lake in Big Stone, Swift, Chippewa, Yellow Medicine, and Renville Counties, Minn.¹ The Line traverses U.S. Postal Service Zip Codes 57216, 56276, 56278, 56208, 56227, 56262, 56265, 56260, 56241, 56285, 56284, 56230, 56277, 56295, 55310, 55342, and 55314.

To BNSF's knowledge, the Line does not contain any federally granted rights-of-way. Any documentation in BNSF's possession will be made available promptly to those requesting it.

The interest of railroad employees will be protected by the conditions set forth in *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho*, 360 I.C.C. 91 (1979).

By issuance of this notice, the Board is instituting an exemption proceeding pursuant to 49 U.S.C. 10502(b). A final decision will be issued by November 22, 2016.

Because this is a discontinuance proceeding and not an abandonment, trail use/rail banking and public use conditions are not appropriate. This action is categorically excluded from environmental review under 49 CFR 1105.6(c).

Any offer of financial assistance (OFA) under 49 CFR 1152.27(b)(2) to subsidize continued rail service will be due no later than 10 days after service of a decision granting the petition for exemption. Each OFA must be accompanied by the filing fee, which is currently set at \$1,600. See 49 CFR 1002.2(f)(25).

¹ BNSF's predecessor was granted authority to acquire the trackage rights as part of the transaction in *Burlington Northern Railroad—Trackage Rights Exemption—between Ortonville & Buffalo Lake, Minn.*, FD 30191 (ICC served June 23, 1983). According to BNSF, its trackage rights agreement expired in 2008 and it has not performed any trackage rights operations over the Line since that time. BNSF also states that TC&W has continued to provide rail service over the Line since 2008.

All filings in response to this notice must refer to Docket No. AB 6 (Sub-No. 467X) and must be sent to: (1) Surface Transportation Board, 395 E Street SW., Washington, DC 20423-0001; and (2) Karl Morell, 655 Fifteenth Street NW., Suite 225, Washington, DC 20005. Replies to the petition are due on or before September 13, 2016.

Persons seeking further information concerning discontinuance procedures may contact the Board's Office of Public Assistance, Governmental Affairs, and Compliance at (202) 245-0238 or refer to the full abandonment and discontinuance regulations at 49 CFR pt. 1152. Questions concerning environmental issues may be directed to the Board's Office of Environmental Analysis at (202) 245-0305. [Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at 1-800-877-8339.]

Board decisions and notices are available on our Web site at WWW.STB.DOT.GOV.

Decided: August 18, 2016.

By the Board, Rachel D. Campbell,
Director, Office of Proceedings.

Kenyatta Clay,
Clearance Clerk.

[FR Doc. 2016-20271 Filed 8-23-16; 8:45 am]

BILLING CODE 4915-01-P

SURFACE TRANSPORTATION BOARD**[Docket No. FD 36055]****Southeastern Land, LLC—Acquisition
and Operation Exemption—Vaughan
Railroad Company**

Southeastern Land, LLC (Southeastern), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to acquire from Vaughan Railroad Company (Vaughan), and to operate, approximately 14 miles of rail line between milepost 7.5 near Belva and milepost 22.0 on Twentymile Creek, northeast of Vaughan, in Nicholas and Fayette Counties, W. Va. (the Line).

In the verified notice, Southeastern states that Southeastern, Vaughan, and Vaughan's affiliates have entered into a Purchase and Sale Agreement (Agreement) under which Southeastern will purchase the 14-mile rail line in addition to certain other assets. The Line is currently not in use and has no active customers. After consummation of the transaction, Southeastern intends to provide service to future customers on the Line or contract with a third party to provide the service. According to Southeastern, the Line is subject to a trackage rights agreement with CSX

Transportation, Inc.,¹ and a separate trackage rights agreement with Norfolk Southern Railway Co.²

According to Southeastern, the Agreement between Southeastern and Vaughan does not contain any provision that prohibits Southeastern from interchanging traffic or limits Southeastern's ability to interchange traffic with a third party.

Southeastern certifies that its projected revenues upon consummation of the proposed transaction will not result in Southeastern's becoming a Class I or Class II rail carrier and states that its projected annual revenues will not exceed \$5 million.

This transaction may be consummated on or after September 7, 2016, the effective date of the exemption (30 days after the verified notice was filed).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be filed no later than August 31, 2016 (at least seven days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36055 must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423-0001. In addition, a copy of each pleading must be served on Rebecca S. Gohmann, General Counsel of Southeastern Land, LLC, 2408 Sir Barton Way, Suite 325, Lexington, KY 40509.

According to Southeastern, this action is categorically excluded from environmental review under 49 CFR 1105.6(c).

Board decisions and notices are available on our Web site at WWW.STB.DOT.GOV.

Decided: August 18, 2016.

By the Board, Rachel D. Campbell,
Director, Office of Proceedings.

Kenyatta Clay,
Clearance Clerk.

DEPARTMENT OF TRANSPORTATION**Federal Highway Administration****Buy America Waiver Notification**

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice.

SUMMARY: This notice provides information regarding FHWA's finding that a Buy America waiver is appropriate for the use of non-domestic iron and steel components of casings, housings, electrical, and mechanical equipment needed for rehabilitation of Isthmus Bridge in the State of Oregon.

DATES: The effective date of the waiver is August 25, 2016.

FOR FURTHER INFORMATION CONTACT: For questions about this notice, please contact Mr. Gerald Yakowenko, FHWA Office of Program Administration, (202) 366-1562, or via email at gerald.yakowenko@dot.gov. For legal questions, please contact Mr. William Winne, FHWA Office of the Chief Counsel, 202-366-1397, or via email at William.Winne@dot.gov. Office hours for the FHWA are from 8:00 a.m. to 4:30 p.m., E.T., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:**Electronic Access**

An electronic copy of this document may be downloaded from the

Federal Register's home page at: <http://www.archives.gov> and the Government Printing Office's database at: <http://www.access.gpo.gov/nara>.

Background

The FHWA's Buy America policy in 23 CFR 635.410 requires a domestic manufacturing process for any steel or iron products (including protective coatings) that are permanently incorporated in a Federal-aid construction project. The regulation also provides for a waiver of the Buy America requirements when the application would be inconsistent with the public interest or when satisfactory quality domestic steel and iron products are not sufficiently available. This notice provides information regarding FHWA's finding that a Buy America waiver is appropriate for use of non-domestic iron and steel components of casings, housings, electrical, and mechanical equipment for rehabilitation of Isthmus Bridge in the State of Oregon.

In accordance with Division K, section 122 of the "Consolidated and Further Continuing Appropriations Act, 2015" (Pub. L. 113-235), FHWA published a notice of intent to issue a

waiver on its Web site; <http://www.fhwa.dot.gov/construction/contracts/waivers.cfm?id=127> on June 9th. The FHWA received no comments in response to the publication. Based on all the information available to the agency, FHWA concludes that there are no domestic manufacturers of casings, housings, electrical and mechanical equipment for in-kind replacement and rehabilitation of Isthmus Bridge in Oregon.

In accordance with the provisions of section 117 of the SAFETEA-LU Technical Corrections Act of 2008 (Pub. L. 110-244, 122 Stat. 1572), FHWA is providing this notice as its finding that a waiver of Buy America requirements is appropriate. The FHWA invites public comment on this finding for an additional 15 days following the effective date of the finding. Comments may be submitted to FHWA's Web site via the link provided to the waiver page noted above.

Authority: 23 U.S.C. 313; Pub. L. 110-161, 23 CFR 635.410)

Issued on: August 15, 2016.

Gregory G. Nadeau,
Administrator, Federal Highway Administration.

BILLING CODE 4910-22-P

DEPARTMENT OF TRANSPORTATION**Federal Highway Administration**

[Docket No. FHWA-2016-0015]

Emergency Route Working Group (ERWG)—Federal Advisory Committee

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Establishment of the Emergency Route Working Group; Request for Nominations.

SUMMARY: FHWA announces the establishment of the Emergency Route Working Group (ERWG) for a 2-year period. The ERWG will provide the U.S. Secretary of Transportation, through the Administrator of the FHWA, with advice and recommendations for the implementation of best practices for expeditious State approval of special permits for vehicles involved in emergency response and recovery. The ERWG will provide the U.S. Secretary of Transportation a written report by December 4, 2016, on its findings and recommendation for the implementation of best practices for expeditious State approval of special permits for vehicles involved in emergency response and recovery. The ERWG's advice and

recommendations will work within existing legal authorities and not require changes in State or Federal law for DOT to implement.

DATES: The deadline for nominations for ERWG members must be received on or before September 23, 2016.

ADDRESSES: All nomination materials should be emailed to erwg@dot.gov or faxed to the attention of Crystal Jones at (202) 366-3225, or mailed to Crystal Jones, Federal Highway Administration, Office of Freight Management and Operations, Room E84-314, 1200 New Jersey Avenue SE., Washington, DC 20590. Any person needing accessibility accommodations should contact Crystal Jones at (202) 366-2976.

FOR FURTHER INFORMATION CONTACT: Crystal Jones, U.S. Department of Transportation, Federal Highway Administration, Room E84-314, 1200 New Jersey Avenue SE., Washington, DC 20590. Any person needing accessibility accommodations should contact Crystal Jones at (202) 366-2976; email: erwgt@dot.gov.

SUPPLEMENTARY INFORMATION: Section 5502 of the Fixing America's Surface Transportation (FAST) Act (P.L. 114-94, 129 Stat. 1312) requires the Secretary of Transportation to establish a working group to determine best practices for expeditious State approval of special permits for vehicles involved in emergency response and recovery. Pursuant to Section 9(a)(2) of the Federal Advisory Committee Act (FACA), and in accordance with 41 CFR 102-3.65, and following consultation with the Committee Management Secretariat, General Services Administration, notice is hereby given that the ERWG will be established for up to a 2-year period. The ERWG will provide the U.S. Secretary of Transportation, through the Administrator of the FHWA, with advice and recommendations for the implementation of best practices for expeditious State approval of special permits for vehicles involved in emergency response and recovery. The ERWG will provide the U.S. Secretary of Transportation a written report by December 4, 2016, on its findings and recommendations. The ERWG's advice and recommendations will work within existing legal authorities and not require changes in State or Federal law for DOT to implement.

The Department of Transportation is hereby soliciting nominations for members of the ERWG. The Federal Highway Administrator, on behalf of the Secretary of Transportation, will appoint up to 25 ERWG members. The

ERWG members selected will provide views and perspective on whether:

a. impediments currently exist that prevent expeditious State approval of special permits for vehicles involved in emergency response and recovery;

b. it is possible to pre-identify and establish emergency routes between States through which infrastructure repair materials could be delivered following a natural disaster or emergency;

c. a State could pre-designate an emergency route identified under paragraph (b) as a certified emergency route if a motor vehicle that exceeds the otherwise applicable Federal and State truck length or width limits may safely operate along such route during periods of declared emergency and recovery from such periods; and

d. an online map could be created to identify each pre-designated emergency route under paragraph (c), including information on specific limitations, obligations, and notification requirements along that route.

The ERWG membership will seek to balance the following interests to the extent practicable; but as required by law the membership shall include representatives from State highway transportation departments or agencies; relevant modal agencies within the DOT; emergency response or recovery experts; relevant safety groups; and entities affected by special permit restrictions during emergency response and recovery efforts. The ERWG members serve at the pleasure of the Secretary, but may serve for a term of 2 years or less. The Chair and Vice Chair of the ERWG will be appointed by the FHWA Administrator from among the selected members, and the ERWG is expected to meet 12 times before the termination, which is defined in law as 1 year after the group delivers the report to the Secretary of Transportation required under Section 5502(c) of the FAST Act. Subcommittees may be formed to address specific emergency route issues. Some ERWG members may be appointed as special Government employees and will be subject to certain ethical restrictions, and such members will be required to submit certain information in connection with the appointment process. With the exception of travel and per diem for official travel, members will serve without compensation.

Process and Deadline for Submitting Nominations: Qualified individuals can self-nominate or be nominated by any individual or organization. To be considered for the ERWG, nominators should submit the following information:

(1) Name, title, and relevant contact information (including phone, fax, and email address) of the individual requesting consideration;

(2) A letter of support from a company, union, trade association, or non-profit organization on letterhead containing a brief description why the nominee should be considered for membership;

(3) Short biography of nominee including professional and academic credentials;

(4) An affirmative statement that the nominee is not a federally registered lobbyist, and that the nominee understands that if appointed, the nominee will not be allowed to continue to serve as a ERWG member if the nominee becomes a federally registered lobbyist;

(5) An affirmative statement that the nominee meets all ERWG eligibility requirements.

Please do not send company, trade association, or organization brochures or any other information. Materials submitted should total two pages or less. Should more information be needed, DOT staff will contact the nominee, obtain information from the nominee's past affiliations, or obtain information from publicly available sources, such as the Internet.

Nominations may be emailed to erwg@dot.gov or faxed to the attention of Crystal Jones at (202) 366-2976, or mailed to Crystal Jones, Federal Highway Administration, Office of Freight Management and Operations, Room E84-314, 1200 New Jersey Avenue SE., Washington, DC 20590. Nominations must be received before September 23, 2016. Nominees selected for appointment to the ERWG will be notified by return email and by a letter of appointment.

A selection team comprising representatives from several DOT offices will review the nomination packages. The selection team will make recommendations regarding membership to the Secretary of Transportation through the Federal Highway Administrator based on criteria including (1) professional or academic expertise, experience, and knowledge; (2) stakeholder representation; (3) availability and willingness to serve; and (4) skills working in committees and advisory panels. The Federal Highway Administrator will submit a list of recommended candidates to the Secretary of Transportation for review and selection of ERWG members.

Nominations are open to all individuals without regard to race, color, religion, sex, national origin, age,

mental or physical handicap, marital status, or sexual orientation. To ensure that recommendations to the Secretary take into account the needs of the diverse groups served by DOT, membership shall include, to the extent practicable, individuals with demonstrated ability to represent minorities, women, and persons with disabilities.

Issued in Washington, DC, on August 15, 2016.

Gregory G. Nadeau,
Administrator, Federal Highway
Administration.

BILLING CODE 4910-22-P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. MARAD-2016-0086]

Requested Administrative Waiver of the Coastwise Trade Laws: Vessel NISSI; Invitation for Public Comments

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Notice.

SUMMARY: As authorized by 46 U.S.C. 12121, the Secretary of Transportation, as represented by the Maritime Administration (MARAD), is authorized to grant waivers of the U.S.-build requirement of the coastwise laws under certain circumstances. A request for such a waiver has been received by MARAD. The vessel, and a brief description of the proposed service, is listed below.

DATES: Submit comments on or before September 23, 2016.

ADDRESSES: Comments should refer to docket number MARAD-2016-0086. Written comments may be submitted by hand or by mail to the Docket Clerk, U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590. You may also send comments electronically via the Internet at <http://www.regulations.gov>. All comments will become part of this docket and will be available for inspection and copying at the above address between 10 a.m. and 5 p.m., E.T., Monday through Friday, except federal holidays. An electronic version of this document and all documents entered into this docket is available on the World Wide Web at <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Bianca Carr, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue SE., Room W23-453, Washington, DC 20590. Telephone 202-366-9309, Email Bianca.carr@dot.gov.

SUPPLEMENTARY INFORMATION: As described by the applicant the intended service of the vessel NISSI is:

Intended Commercial Use of Vessel: "The intended commercial use of this vessel is for day charters and multiple day charters; its commercial use will be sporadic in nature and for the sole purpose of offsetting maintenance costs. The vessel and its intended use comply with all basic eligibility requirements."

Geographic Region: "Florida"
The complete application is given in DOT docket MARAD-2016-0086 at <http://www.regulations.gov>. Interested parties may comment on the effect this action may have on U.S. vessel builders or businesses in the U.S. that use U.S.-flag vessels. If MARAD determines, in accordance with 46 U.S.C. 12121 and MARAD's regulations at 46 CFR part 388, that the issuance of the waiver will have an unduly adverse effect on a U.S.-vessel builder or a business that uses U.S.-flag vessels in that business, a waiver will not be granted. Comments should refer to the docket number of

this notice and the vessel name in order for MARAD to properly consider the comments. Comments should also state the commenter's interest in the waiver application, and address the waiver criteria given in § 388.4 of MARAD's regulations at 46 CFR part 388.

Privacy Act

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477-78).

By Order of the Maritime Administrator.

Dated: August 18, 2016.

Written comments may be submitted by hand or by mail to the Docket Clerk, U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590. You may also send comments electronically via the Internet at <http://www.regulations.gov>. All comments will become part of this docket and will be available for inspection and copying at the above address between 10 a.m. and 5 p.m., E.T., Monday through Friday, except federal holidays. An electronic version of this document and all documents entered into this docket is available on the World Wide Web at <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT:

Bianca Carr, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue SE., Room W23-453, Washington, DC 20590. Telephone 202-366-9309, Email Bianca.carr@dot.gov.

SUPPLEMENTARY INFORMATION:

As described by the applicant the intended service of the vessel KIA ORA is:

Intended Commercial Use of Vessel: Bareboat and Captained pleasure charters.

Geographic Region: "Florida."

The complete application is given in DOT docket MARAD-2016-0085 at <http://www.regulations.gov>. Interested parties may comment on the effect this action may have on U.S. vessel builders or businesses in the U.S. that use U.S.-

flag vessels. If MARAD determines, in accordance with 46 U.S.C. 12121 and MARAD's regulations at 46 CFR part 388, that the issuance of the waiver will have an unduly adverse effect on a U.S.-vessel builder or a business that uses U.S.-flag vessels in that business, a waiver will not be granted. Comments should refer to the docket number of this notice and the vessel name in order for MARAD to properly consider the comments. Comments should also state the commenter's interest in the waiver application, and address the waiver criteria given in § 388.4 of MARAD's regulations at 46 CFR part 388.

Privacy Act

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477-78).

By Order of the Maritime Administrator
Dated: August 16, 2016.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

BILLING CODE 4910-81-P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. MARAD-2016 0082]

Requested Administrative Waiver of the Coastwise Trade Laws: Vessel ANGARI; Invitation for Public Comments

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Notice.

SUMMARY: As authorized by 46 U.S.C. 12121, the Secretary of Transportation, as represented by the Maritime Administration (MARAD), is authorized to grant waivers of the U.S.-build requirement of the coastwise laws under certain circumstances. A request for such a waiver has been received by MARAD. The vessel, and a brief description of the proposed service, is listed below.

DATES: Submit comments on or before September 23, 2016.

ADDRESSES: Comments should refer to docket number MARAD-2016-0082. Written comments may be submitted by hand or by mail to the Docket Clerk,

U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590. You may also send comments electronically via the Internet at <http://www.regulations.gov>. All comments will become part of this docket and will be available for inspection and copying at the above address between 10 a.m. and 5 p.m., E.T., Monday through Friday, except federal holidays. An electronic version of this document and all documents entered into this docket is available on the World Wide Web at <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Bianca Carr, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue SE., Room W23-453, Washington, DC 20590. Telephone 202-366-9309, Email Bianca.carr@dot.gov.

SUPPLEMENTARY INFORMATION: As described by the applicant the intended service of the vessel ANGARI is:

Intended Commercial Use of Vessel: "The vessel is owned and operated by a non-profit foundation in order to fulfill its mission. The Foundation is dedicated to creating a global community that is interested, knowledgeable and invested in marine and environmental sciences by directly supporting research initiatives that foster a greater trust and dialogue between scientists and the public. The Foundation also uses innovative technology, film and other media to raise awareness and strengthen science education. The vessel offers dedicated indoor and outdoor research and work space as well as living areas. Vessel charter will mainly consist of research and educational trips with scientists, teachers and film crews onboard. The vessel will be uninspected and operate along the U.S. East Coast and Gulf of Mexico, including the Florida Keys and Dry Tortugas."

Geographic Region: Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Washington DC, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas.

The complete application is given in DOT docket MARAD-2016-0082 at <http://www.regulations.gov>. Interested parties may comment on the effect this action may have on U.S. vessel builders or businesses in the U.S. that use U.S.-flag vessels. If MARAD determines, in accordance with 46 U.S.C. 12121 and MARAD's regulations at 46 CFR part

388, that the issuance of the waiver will have an unduly adverse effect on a U.S.-vessel builder or a business that uses U.S.-flag vessels in that business, a waiver will not be granted. Comments should refer to the docket number of this notice and the vessel name in order for MARAD to properly consider the comments. Comments should also state the commenter's interest in the waiver application, and address the waiver criteria given in § 388.4 of MARAD's regulations at 46 CFR part 388.

BILLING CODE 4910–81–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2015–0031; Notice 2]

BMW of North America, LLC, Denial of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT)

ACTION: Denial of petition.

SUMMARY: BMW of North America, LLC (BMW), a subsidiary of BMW AG in Munich, Germany, has determined that certain model year (MY) 2014–2015 BMW R nineT motorcycles do not fully comply with paragraph S6.4.3(a) (Table V–b) of Federal Motor Vehicle Safety Standard (FMVSS) No. 108, *Lamps, Reflective Devices and Associated Equipment*. BMW has filed an appropriate report dated February 20, 2015, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. BMW then petitioned NHTSA under 49 CFR part 556 requesting a decision that the subject noncompliance is inconsequential to motor vehicle safety.

ADDRESSES: For further information on this decision contact Mike Cole, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), telephone (202) 366–5319, facsimile (202) 366–5930.

SUPPLEMENTARY INFORMATION:

I. BMW's Petition: Pursuant to 49 U.S.C. 30118(d) and 30120(h) (see implementing rule at 49 CFR part 556), BMW submitted a petition for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

Notice of receipt of BMW's petition was published, with a 30-day public comment period, on June 4, 2015 in the *Federal Register* (80 FR 31966). No comments were received. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number “NHTSA–2015–0031.”

II. Motorcycles Involved: Affected are approximately 1,792 MY 2014–2015 BMW R nineT motorcycles manufactured between November 27, 2013 and January 26, 2015.

III. Noncompliance: BMW explains that, due to an obstruction caused by the tail lamp assembly, the noncompliance is that the rear turn signal lamps were manufactured with a corner point of 5°IB. The turn signal lamps should have had a corner point of 20°IB as required by paragraph S6.4.3(a) (Table V–b) of FMVSS No. 108.

BMW has since revised its petition to indicate that the obstructed lens area was 666 sq-mm and that the photometric test point (20°IB/5° down) was also obstructed and measured only 1.1 cd (FMVSS No. 108, S6.1.3.1 and S7.1.2.13.2).

IV. Rule Text: FMVSS No 108 requires in pertinent part:

Paragraph S6.1.3.1: Each lamp, reflective device, and item of associated equipment must be securely mounted on a rigid part of the vehicle, other than glazing, that is not designed to be removed except for repair, within the mounting location and height limits as specified in Table I, and in a location where it complies with all applicable photometric requirements, effective projected luminous lens area requirements, and visibility requirements with all obstructions considered;

Paragraph S6.4.3(a): When a vehicle is equipped with any lamp listed in Table V–b each such lamp must provide not less than 1250 sq mm of unobstructed effective projected luminous lens area in any direction throughout the pattern defined by the corner points specified in Table V–b for each such lamp;

Paragraph S7.1.2.13.2: As an alternative to S7.1.2.13.1, a rear turn signal lamp installed on a motorcycle may be designed to conform to the photometry requirements of Table XIII–a.

V. Summary of BMW's Analyses: BMW stated its belief that the subject noncompliance is inconsequential to motor vehicle safety for the following reasons:

(A) BMW states that when the subject motorcycles are upright on a level surface and equipped with standard tires at their recommended cold tire inflation pressure; the lower edge of the rear turn signal lenses are approximately 747 mm above ground, the lower edge of the tail lamp lens is approximately 710 mm above ground and the tail lamp lens extend upward. BMW believes that due to these geometric conditions there is some overlap in the vertical direction between the rear turn signal lenses and the tail lamp lens however, they are not aligned along the same longitudinal centerline [of the turn signals]. Specifically, the

tail lamp is on the motorcycle's longitudinal centerline while the rear turn signals are on stalks offset from the centerline. As a result, BMW believes that this has a very minor affect upon the effective projected luminous lens area.

(B) BMW stated its belief that the obstruction from the tail lamp only occurs if another road user in a following vehicle has an eye-point of approximately 747 mm above ground (extremely low for an average vehicle) and is a worst-case-scenario. For other road users with a higher eye-point, there is no apparent obstruction and the turn signal would appear to meet the requirements of FMVSS No. 108.

(C) BMW also stated its belief that the effect of the noncompliance, *i.e.*, the overlap or interference of the turn signal lamp by the tail lamp does not occur during critical traffic conditions. A road user, who is following an affected motorcycle, and in the same lane as an affected motorcycle, will be able to fully view an affected motorcycle's rear turn signal at a distance of approximately 1,935 mm (approximately 6 ft). BMW believes that in most traffic conditions, a road user would not want to be closer to a motorcycle than 6 ft. Thus, this “non-visible” rear turn signal condition is not likely to occur during the vast majority of traffic conditions. BMW provided detailed analysis of specific travel conditions including following directly behind an affected motorcycle and overtaking/passing an affected motorcycle that it believes supports its conclusion that the condition caused by the subject noncompliance will not interfere with the safety of the motorcycle rider or another road user.

(D) BMW Customer Relations has not received any contacts from motorcycle riders, or other road users regarding this issue. Also, BMW is not aware of any accidents or injuries that have occurred as a result of this issue.

BMW has additionally informed NHTSA that it has corrected the noncompliance so that all future production of the subject vehicles will fully comply with FMVSS No. 108.

In summation, BMW believes that the described noncompliance of the subject motorcycles is inconsequential to motor vehicle safety, and that its petition, to exempt BMW from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the noncompliance as required by 49 U.S.C. 30120 should be granted.

NHTSA'S Decision

NHTSA's Analysis of BMW's Arguments: BMW stated that a number

of traffic conditions were analyzed to determine whether the noncompliance is perceptible to other road users and, if so, its affect upon safety.

The first condition BMW reviewed was the rear turn signal mounting height. BMW indicates that for another road user with a higher eye-point, there is no apparent obstruction¹ and the turn signal would appear to meet the requirements of FMVSS No. 108. While many road users will have higher eye-points on a flat road than the mounting height of these lamps, the downward requirements applicable to lamps are generally necessary for instances when other road users are below the preceding vehicles, such as vehicles cresting a hill. NHTSA has previously relaxed the provisions of downward photometric test angles for low mounted turn signal lamps,² however, this provision would not apply to BMW's turn signal lamps due to their moderately higher mounting height. Regardless, even for lower mounted lamps, the photometric test angles were relaxed at test points that were 15° down and 10° down only. Essentially, any photometric requirements for a low mounted turn signal lamp at the 15° down and 10° down locations are allowed to be met at 5° down. In the instant case, BMW's turn signal lamps (as installed) at the 20°/B/5° down test point are 75% below the required minimum photometric requirements. As such, we are not compelled by BMW's argument on this point.

The second condition that BMW reviewed was a traffic condition of "*Following Directly Behind an Affected Motorcycle*." BMW's analysis in this case assumes that the motorcycle and following vehicle are in the same lane, and the motorcycle is on the left side of the lane directly in front (and inline) with the driver of the following vehicle. BMW argues that the following driver would have to be closer than 6 feet from the motorcycle for the lamp to become obstructed and that would be unlikely unless they were in bumper to bumper traffic. However, BMW did not analyze the case where the motorcycle and the following vehicle were in the same lane, but the motorcycle was oriented on the right hand side of the lane. In this instance, the motorcycle could be offset by 7.5 feet or more to the opposite side of the following driver, and the distance from the motorcycle where the right turn signal lamp would begin to become obstructed would be over 65 feet. This

situation could occur when the motorcyclist is preparing for a right hand turn and the following driver may not receive the signal that the motorcycle is about to slow down for the turn. As such, we are not compelled by BMW's argument on this point.

The third condition that BMW reviewed was a traffic condition of "*Overtaking/Passing an Affected Motorcycle*." BMW's analysis in this case assumes that the following vehicle is not in the same lane as the motorcycle and that if the motorcyclist used its turn signal to indicate a turn into the same lane as the following vehicle, the turn signal lamp would not be obstructed. In this case, where a motorcyclist indicates a turn into the same lane as a following vehicle, NHTSA agrees that the turn signal lamp on that side would not be obstructed.

NHTSA's Decision: In consideration of the foregoing, NHTSA finds that BMW has not met its burden of persuasion that the subject FMVSS No. 108 noncompliance described is inconsequential to motor vehicle safety. Accordingly, BMW's petition is hereby denied and BMW is obligated to provide notification of, and a free remedy for, that noncompliance under 49 U.S.C. 30118 and 30120.

Authority: 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

Gregory K. Rea,

Associate Administrator for Enforcement.

BILLING CODE 4910-59-P

DEPARTMENT OF THE TREASURY

Financial Crimes Enforcement Network

Proposed Renewal Without Change; Comment Request; Imposition of Special Measure Against Commercial Bank of Syria, Including Its Subsidiary Syrian Lebanese Commercial Bank, as a Financial Institution of Primary Money Laundering Concern

AGENCY: Financial Crimes Enforcement Network, Department of the Treasury.

ACTION: Notice and request for comments.

SUMMARY: As part of our continuing effort to reduce paperwork and respondent burden, FinCEN invites comment on a renewal, without change, to information collection requirements finalized on March 15, 2006 (71 FR 13260, RIN 1506-AA64), imposing a special measure against the Commercial Bank of Syria, including its subsidiary

Syrian Lebanese Commercial Bank, as a financial institution of primary money laundering concern. This request for comments is being made pursuant to the Paperwork Reduction Act of 1995 ("PRA"), Public Law 104-13, 44 U.S.C. 3506(c)(2)(A).

DATES: Written comments are welcome and must be received on or before October 24, 2016.

ADDRESSES: You may submit comments identified by OMB Control Number 1506-0036, by any of the following methods:

- **Federal E-Rulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments.
 - **Mail:** Written comments should be submitted to: Financial Crimes Enforcement Network, P.O. Box 39, Vienna, VA 22183, Attention: Comment Request; Imposition of Special Measure against Commercial Bank of Syria.
 - Please submit by one method only.
 - All comments submitted by either method in response to this notice will become a matter of public record.
- Therefore, you should submit only information that you wish to make publicly available.

Inspection of comments: Comments, when received, are viewable on the *Regulations.gov* public Web site. Persons wishing to review the comments submitted may access the posted comments by going to <https://www.regulations.gov> and search on OMB Control Number 1506-0036.

FOR FURTHER INFORMATION CONTACT: The FinCEN Resource Center at 1-800-767-2825 or 1-703-905-3591 (not a toll free number) and select option 3 for regulatory questions. Email inquiries can be sent to FRC@fincen.gov.

SUPPLEMENTARY INFORMATION:

Abstract: The Director of the Financial Crimes Enforcement Network ("FinCEN") is the delegated administrator of the Bank Secrecy Act ("BSA"). The Act authorizes the Director to issue regulations to require all financial institutions defined as such pursuant to the Act to maintain or file certain reports or records that have been determined to have a high degree of usefulness in criminal, tax, or regulatory investigations or proceedings, or in the conduct of intelligence or counter-intelligence activities, including analysis, to protect against international terrorism.¹ Regulations implementing

¹ BMW later indicated that the obstruction of the turn signal that created the noncompliance was due to a redesigned stop lamp.

² See Final Rule at 69 FR 48805, August 11, 2004

¹ Public Law 91-508, as amended and codified at 12 U.S.C. 1829b, 12 U.S.C. 1951-1959 and 31 U.S.C. 5311-5332. Language expanding the scope of the BSA to intelligence or counter-intelligence activities to protect against international terrorism was added by section 358 of the Uniting and Strengthening America by Providing Appropriate

section 5318A of title 31, United States Code can be found in part at 31 CFR 1010.653. In general, the regulations require financial institutions, as defined at 31 U.S.C. 5312(a)(2) and 31 CFR 1010.100 to establish, document, and maintain programs as an aid in protecting and securing the U.S. financial system.

Title: Imposition of Special Measure against Commercial Bank of Syria, Including its Subsidiary Syrian Lebanese Commercial Bank, as a Financial Institution of Primary Money Laundering Concern.

Office of Management and Budget Control Number: 1506–0036.

Abstract: FinCEN is issuing this notice to renew the imposition of a special measure against the Commercial Bank of Syria, including its subsidiary Syrian Lebanese Commercial Bank, as a financial institution of primary money laundering concern, pursuant to the authority contained in 31 U.S.C. 5318A.

Current Action: Renewal without change to existing regulations.

Type of Review: Extension of a currently approved information collection.

Affected Public: Businesses and other for-profit institutions.

Burden: Estimated Number of Respondents: 5,000.

Estimated Number of Responses: 5,000.

Estimated Number of Hours: 5,000. (Estimated at one hour per respondent).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget (“OMB”). Records required to be retained under the BSA must be retained for five years. Generally, information collected pursuant to the BSA is confidential but may be shared as provided by law with regulatory and law enforcement authorities.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the collection of information; (c) ways to enhance the

quality, utility, and clarity of the information to be collected; (d) Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance and purchase of services to provide information.

Dated: August 19, 2016.

Jamal El-Hindi,

Acting Director, Financial Crimes Enforcement Network.

[FR Doc. 2016–20240 Filed 8–23–16; 8:45 am]

BILLING CODE 4810–02–P

DEPARTMENT OF THE TREASURY

Bureau of the Fiscal Service

Proposed Collection Of Information: CMIA Annual Report and Direct Cost Claims

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently the Bureau of the Fiscal Service within the Department of the Treasury is soliciting comments concerning the CMIA Annual Report and Direct Cost Claims.

DATES: Written comments should be received on or before October 24, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments and requests for additional information to Bureau of the Fiscal Service, Bruce A. Sharp, 200 Third Street A4–A, Parkersburg, WV 26106–1328, or bruce.sharp@fiscal.treasury.gov.

SUPPLEMENTARY INFORMATION:

Title: CMIA Annual Report and Direct Cost Claims.

OMB Number: 1530–0066.

Transfer of OMB Control Number: The Financial Management Service (FMS) and the Bureau of the Public Debt (BPD) have consolidated to become the Bureau of the Fiscal Service (Fiscal Service). Information collection requests previously held separately by BPD and FMS will now be identified by a 1530 prefix, designating Fiscal Service.

Form Number: None.

Abstract: States and Territories must report interest owed to and from the

Federal government for major Federal assistance programs on an annual basis. The data is used by Treasury and other Federal agencies to verify State and Federal interest claims, to assess State and Federal cash management practices and to exchange amounts of interest owed.

Current Actions: Extension of a currently approved collection.

Type of Review: Regular.

Affected Public: Federal Government, State, Local or Tribal Government.

Estimated Number of Respondents: 56.

Estimated Time per Respondent: Average 393.5 hours per state.

Estimated Total Annual Burden Hours: 22,036.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: August 18, 2016.

Bruce A. Sharp,

Bureau Clearance Officer.

[FR Doc. 2016–20147 Filed 8–23–16; 8:45 am]

BILLING CODE 4810–AS–P

UNITED STATES SENTENCING COMMISSION

Request for Applications; Tribal Issues Advisory Group

AGENCY: United States Sentencing Commission.

ACTION: Notice.

SUMMARY: The Commission has decided to establish a Tribal Issues Advisory Group as a standing advisory group pursuant to 28 U.S.C. 995 and Rule 5.4 of the Commission’s Rules of Practice and Procedure. Having adopted a formal charter for the Tribal Issues Advisory Group, the Commission is constituting

the initial membership of the advisory group under that charter. Under the charter, the advisory group will consist of no more than 9 members. Of those 9 members, not more than 1 shall be a Federal judge; 2 shall be from the Executive Branch (one from the United States Department of Justice and one from the United States Department of the Interior); 1 shall be from a federal public defender organization or community defender organization; 1 shall be a tribal court judge; and not more than 4 shall be at-large members. To be eligible to serve as a member, an individual must have expertise, knowledge, and/or experience in the issues considered by the Tribal Issues Advisory Group. The Commission hereby invites any individual who is eligible to be appointed to the Federal judge membership, the tribal court judge membership, or the at-large membership of the Tribal Issues Advisory Group to apply. Application materials should be received by the Commission not later than October 24, 2016. An applicant for membership in the Tribal Issues Advisory Group should apply by sending a letter of interest and resume to the Commission as indicated in the **ADDRESSES** section below.

DATES: Application materials for the Federal judge, tribal court judge, and at-large memberships of the Tribal Issues Advisory Group should be received not later than October 24, 2016.

ADDRESSES: An applicant for the memberships of the Tribal Issues Advisory Group covered by this notice should apply by sending a letter of interest and resume to the Commission by electronic mail or regular mail. The email address is pubaffairs@ussc.gov. The regular mail address is United States Sentencing Commission, One Columbus Circle NE., Suite 2-500, South Lobby, Washington, DC 20002-8002, Attention: Public Affairs.

FOR FURTHER INFORMATION CONTACT: Christine Leonard, Director, Office of Legislative and Public Affairs, (202) 502-4500, pubaffairs@ussc.gov. More information about the Tribal Issues Advisory Group (including the advisory group charter) is available on the Commission's Web site at <http://www.ussc.gov/about/who-we-are/advisory-groups>.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent agency in the judicial branch of the United States Government. The Commission promulgates sentencing guidelines and policy statements for federal sentencing courts pursuant to 28 U.S.C. 994(a). The Commission also periodically reviews

and revises previously promulgated guidelines pursuant to 28 U.S.C. 994(o) and submits guideline amendments to the Congress not later than the first day of May each year pursuant to 28 U.S.C. 994(p). Under 28 U.S.C. 995 and Rule 5.4 of the Commission's Rules of Practice and Procedure, the Commission may create standing or ad hoc advisory groups to facilitate formal and informal input to the Commission. Upon creating an advisory group, the Commission may prescribe the policies regarding the purpose, membership, and operation of the group as the Commission deems necessary or appropriate.

The Commission recently adopted a formal charter for the Tribal Issues Advisory Group. Under the charter, the purpose of the advisory group is:

(1) To assist the Commission in carrying out its statutory responsibilities under 28 U.S.C. 994(o);

(2) to provide to the Commission its views on federal sentencing issues relating to American Indian and Alaska Native defendants and victims, and to offenses committed in Indian country;

(3) to engage in meaningful consultation and outreach with tribes, tribal governments, and tribal organizations regarding federal sentencing issues that have tribal implications;

(4) to disseminate information regarding federal sentencing issues to tribes, tribal governments, and tribal organizations; and

(5) to perform any other related functions as the Commission requests.

The Tribal Issues Advisory Group shall consist of no more than 9 members. Of those 9 members, not more than 1 shall be a Federal judge; 2 shall be from the Executive Branch (one from the United States Department of Justice and one from the United States Department of the Interior); 1 shall be from a federal public defender organization or community defender organization; 1 shall be a tribal court judge; and not more than 4 shall be at-large members. All members are appointed by the Commission and shall have expertise, knowledge, and/or experience in the issues considered by the Tribal Issues Advisory Group. The Commission intends that the at-large membership shall include individuals with membership in or experience with tribes, tribal governments, and tribal organizations, appointed in a manner that ensures representation among tribal communities diverse in size, geographic location, and other unique characteristics.

All members of the Tribal Issues Advisory Group shall serve not more than two consecutive three-year terms.

However, the terms of the initial membership shall be staggered so that 3 members serve a term of three years, 3 members serve a term of two years, and 3 members serve a term of one year.

The Commission invites any individual who is eligible to be appointed to the Federal judge membership, the tribal court judge membership, or the at-large membership of the Tribal Issues Advisory Group to apply by sending a letter of interest and a resume to the Commission as indicated in the **ADDRESSES** section above.

Authority: 28 U.S.C. 994(a), (o), (p), § 995; USSC Rules of Practice and Procedure 5.2, 5.4.

Patti B. Saris,
Chair.

BILLING CODE 2210-40-P

UNITED STATES SENTENCING COMMISSION

Final Priorities for Amendment Cycle

AGENCY: United States Sentencing Commission.

ACTION: Notice of final priorities.

SUMMARY: In June 2016, the Commission published a notice of possible policy priorities for the amendment cycle ending May 1, 2017. *See* 81 FR 37241 (June 9, 2016). After reviewing public comment received pursuant to the notice of proposed priorities, the Commission has identified its policy priorities for the upcoming amendment cycle and hereby gives notice of these policy priorities.

FOR FURTHER INFORMATION CONTACT: Christine Leonard, Director, Office of Legislative and Public Affairs, (202) 502-4500, pubaffairs@ussc.gov.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent agency in the judicial branch of the United States Government. The Commission promulgates sentencing guidelines and policy statements for federal sentencing courts pursuant to 28 U.S.C. 994(a). The Commission also periodically reviews and revises previously promulgated guidelines pursuant to 28 U.S.C. 994(o) and submits guideline amendments to the Congress not later than the first day of May each year pursuant to 28 U.S.C. 994(p).

Pursuant to 28 U.S.C. 994(g), the Commission intends to consider the issue of reducing costs of incarceration and overcapacity of prisons, to the

extent it is relevant to any identified priority.

As part of its statutory authority and responsibility to analyze sentencing issues, including operation of the federal sentencing guidelines, the Commission has identified its policy priorities for the amendment cycle ending May 1, 2017. The Commission recognizes, however, that other factors, such as the enactment of any legislation requiring Commission action, may affect the Commission's ability to complete work on any or all of its identified priorities by the statutory deadline of May 1, 2017. Accordingly, it may be necessary to continue work on any or all of these issues beyond the amendment cycle ending on May 1, 2017.

As so prefaced, the Commission has identified the following priorities:

(1) Continuation of its work with Congress and other interested parties on statutory mandatory minimum penalties to implement the recommendations set forth in the Commission's 2011 report to Congress, titled Mandatory Minimum Penalties in the Federal Criminal Justice System, including its recommendations regarding the severity and scope of mandatory minimum penalties, consideration of expanding the "safety valve" at 18 U.S.C. 3553(f), and elimination of the mandatory "stacking" of penalties under 18 U.S.C. 924(c), and to develop appropriate guideline amendments in response to any related legislation.

(2) Continuation of its multi-year examination of the overall structure of the guidelines post-Booker, possibly including recommendations to Congress on any statutory changes and development of any guideline amendments that may be appropriate. As part of this examination, the Commission intends to study possible approaches to (A) simplify the operation of the guidelines, promote proportionality, and reduce sentencing disparities; and (B) appropriately account for the defendant's role, culpability, and relevant conduct.

(3) Continuation of its study of approaches to encourage the use of alternatives to incarceration.

(4) Continuation of its multi-year study of statutory and guideline definitions relating to the nature of a defendant's prior conviction (e.g., "crime of violence," "aggravated felony," "violent felony," "drug trafficking offense," and "felony drug offense") and the impact of such definitions on the relevant statutory and guideline provisions (e.g., career offender, illegal reentry, and armed career criminal), possibly including recommendations to Congress on any

statutory changes that may be appropriate and development of guideline amendments that may be appropriate.

(5) Continuation of its comprehensive, multi-year study of recidivism, including (A) examination of circumstances that correlate with increased or reduced recidivism; (B) possible development of recommendations for using information obtained from such study to reduce costs of incarceration and overcapacity of prisons, and promote effectiveness of reentry programs; and (C) consideration of any amendments to the *Guidelines Manual* that may be appropriate in light of the information obtained from such study.

(6) Study of the findings and recommendations contained in the May 2016 Report issued by the Commission's Tribal Issues Advisory Group, and consideration of any amendments to the *Guidelines Manual* that may be appropriate in light of the information obtained from such study.

(7) Study of the treatment of youthful offenders under the *Guidelines Manual*.

(8) Examination of Chapter Four, Part A (Criminal History) to (A) study the treatment of revocation sentences under § 4A1.2(k), and (B) consider a possible amendment of § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to account for instances in which the time actually served was substantially less than the length of the sentence imposed for a conviction counted under the *Guidelines Manual*.

(9) Study of offenses involving MDMA/Ecstasy, synthetic cannabinoids (such as JWH-018 and AM-2201), and synthetic cathinones (such as Methylenedioxymethamphetamine, MDPV, and Mephedrone), and consideration of any amendments to the *Guidelines Manual* that may be appropriate in light of the information obtained from such study.

(10) Possible consideration of whether the weapon enhancement in § 2D1.1(b)(1) should be amended to conform to the "safety valve" provision at 18 U.S.C. 3553(f) and § 5C1.2 (Limitation on Applicability of Statutory Minimum Sentences in Certain Cases).

(11) Study of environmental offenses involving knowing endangerment resulting from mishandling hazardous or toxic substances, pesticides, or other pollutants, and consideration of any amendments to the *Guidelines Manual* that may be appropriate in light of the information obtained from such study.

(12) Implementation of the Bipartisan Budget Act of 2015, Public Law 114-74, and any other crime legislation enacted

during the 114th or 115th Congress warranting a Commission response.

(13) Resolution of circuit conflicts, pursuant to the Commission's continuing authority and responsibility, under 28 U.S.C. 991(b)(1)(B) and *Braxton v. United States*, 500 U.S. 344 (1991), to resolve conflicting interpretations of the guidelines by the federal courts.

(14) Consideration of any miscellaneous guideline application issues coming to the Commission's attention from case law and other sources, including possible consideration of whether a defendant's denial of relevant conduct should be considered in determining whether a defendant has accepted responsibility for purposes of § 3E1.1.

Authority: 28 U.S.C. 994(a), (o); USSC Rules of Practice and Procedure 5.2.

Patti B. Saris,
Chair.

BILLING CODE 2210-40-P

DEPARTMENT OF VETERANS AFFAIRS

Privacy Act of 1974; System of Records

AGENCY: Department of Veterans Affairs (VA).

ACTION: Notice of amendment to system of records.

SUMMARY: As required by the Privacy Act of 1974, 5 U.S.C. 552a(e), notice is hereby given that the Department of Veterans Affairs (VA) is amending the system of records currently entitled "My HealtheVet Administrative Records-VA" (130VA19) as set forth in the **Federal Register** 75 FR 70365. VA is amending the system by revising the System Number, System Location, Categories of Individuals Covered by the System, Categories of Records in the System, Records Source Categories, Routine Uses of Records Maintained in the System, Retention and Disposal, System Manager, Record Access Procedure, and Notification Procedure. VA is republishing the system notice in its entirety.

DATES: Comments on the amendment of this system of records must be received no later than September 23, 2016. If no public comment is received, the amended system will become effective September 23, 2016.

ADDRESSES: Written comments concerning the amended system of records may be submitted through www.regulations.gov; by mail or hand-

delivery to Director, Regulations Management (02REG), Department of Veterans Affairs, 810 Vermont Avenue NW., Room 1068, Washington, DC 20420; or by fax to (202) 273-9026. All comments received will be available for public inspection in the Office of Regulation Policy and Management, Room 1063B, between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday (except holidays). Please call (202) 461-4902 (this is not a toll-free number) for an appointment. In addition, during the comment period, comments may be viewed online through the Federal Docket Management System at www.regulations.gov.

FOR FURTHER INFORMATION CONTACT: Veterans Health Administration (VHA) Privacy Officer, Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC 20420; telephone (704) 245-2492.

SUPPLEMENTARY INFORMATION: The System Number is changed from 130VA19 to 130VA10P2 to reflect the current organizational alignment.

The System Location in this system of records is being amended to include contracted data storage location.

The Categories of Individuals Covered by the System is being amended to remove “grantee, family members and friends” and add “power of attorney and legal guardian” to section (2). Section (4) is being amended to replace “VHA Information Technology (IT)” with “VA Office of Information and Technology (OI&T)”. The Categories of Records in the System is being amended to delete “grantee”. The Record Source Categories is being amended to add “power of attorney” to section (2). Routine Uses of Records Maintained in the System is being deleted:

“8. Disclosure of information may be made to VA approved researchers to enhance, advance and promote both the function and the content of the My HealtheVet application.”

This section is also being amended to add:

8. VA may disclose health information for research purposes determined to be necessary and proper to epidemiological and other research entities approved by the Under Secretary for Health or designee, such as the Medical Center Director of the facility where the information is maintained.

9. VA may disclose health information, including the name(s) and address(es) of present or former personnel of the Armed Services and/or their dependents, (a) to a Federal department or agency or (b) directly to a contractor of a Federal department or agency, at the written request of the head of the agency or the designee of the head of that agency, to conduct Federal research necessary to accomplish a statutory purpose of an agency. When this information is to be

disclosed directly to the contractor, VA may impose applicable conditions on the department, agency, and/or contractor to ensure the appropriateness of the disclosure to the contractor.

The Retention and Disposal section is being amended to remove General Records Schedules (GRS) 20, item 1c and GRS 24, item 6a. This section will now include research and GRS 3.2 Item 031.

The System Manager(s) and Address, Notification Procedure, and Record Access Procedure sections are being amended to remove the Chief, Technical Infrastructure Division (31), Austin Automation Center, 1615 Woodward Street, Austin, Texas 78772. These sections will now include My HealtheVet Chief Information Officer, 55 Foothill Drive, Suite 400, Salt Lake City, Utah 84113.

The Report of Intent to Amend a System of Records Notice and an advance copy of the system notice have been sent to the appropriate Congressional committees and to the Director of the Office of Management and Budget (OMB) as required by 5 U.S.C. 552a(r) (Privacy Act) and guidelines issued by OMB (65 FR 77677), December 12, 2000.

Signing Authority

The Secretary of Veterans Affairs, or designee, approved this document and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs. Gina S. Farrisee, Deputy Chief of Staff, approved this document on August 2, 2016, for publication.

Dated: August 8, 2016.

Kathleen M. Manwell,

VA Privacy Service, Office of Privacy and Records Management, Department of Veterans Affairs.

130VA10P2

SYSTEM NAME:

My HealtheVet Administrative Records-VA.

SYSTEM LOCATION:

Records are maintained at Veterans Health Administration (VHA) facilities, VA National Data Centers, VA Health Data Repository (HDR), and at the contracted data storage system located in Culpepper, Virginia. Address locations for VHA facilities are listed in VA Appendix 1 of the biennial publications of the VA systems of records.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Title 38, United States Code, section 501.

PURPOSE(S):

The information in the My HealtheVet Administrative Records is needed to operate the My HealtheVet program including, but not limited to, registration and verification of the Veteran's identity or to register and authenticate those who have legal authority to participate in lieu of the Veteran, to assign and verify administrators of the My HealtheVet portal, to retrieve the Veteran's information to perform specific functions, and to allow access to specific information and provide other associated My HealtheVet electronic services in current and future applications of the My HealtheVet program. The administrative information may also be used to create administrative business reports for system owners and VA managers who are responsible for ensuring that the My HealtheVet system is meeting performance expectations and is in compliance with applicable Federal laws and regulations. Administrative information may also be used for evaluation to support program improvement, including VA approved research studies.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals covered by this system encompass: (1) All individuals who successfully register for a My HealtheVet account and whose identity has been verified; (2) Representatives of the above individuals who have been provided Delegate access to My HealtheVet including, but not limited to, Power of Attorney (POA), legal guardian, or VA and non-VA health care providers; (3) VA health care providers and certain administrative staff; (4) VA Office of Information and Technology (OI&T) staff and/or their approved contractors who may need to enter identifying, administrative information into the system to initiate, support, and maintain electronic services for My HealtheVet participants; and (5) VA researchers fulfilling VA required authorization procedures.

CATEGORIES OF RECORDS IN THE SYSTEM:

The records include personally identifiable information, such as an individual's full name; My HealtheVet User Identifier (ID); date of birth; Social Security number; email address; telephone number; mother's maiden name; ZIP code; place and date of registration for My HealtheVet; Delegate

user IDs associated with My HealtheVet accounts; level of access to My HealtheVet electronic services; date and type of transaction; web analytics for the purpose of monitoring site usage; patient internal control number (ICN); and other administrative data needed for My HealtheVet roles and services.

RECORD SOURCE CATEGORIES:

The sources of information for this system of records include the individuals covered by this notice and an additional contributor, as listed below:

- (1) All individuals who successfully register for a My HealtheVet account;
- (2) Representatives of the above individuals who have been provided access to the private health space by the Veteran user, including but not limited to, POA, or VA and non-VA health care providers;
- (3) VA health care providers;
- (4) VA OI&T staff and/or their contractors and subcontractors who may need to enter information into the system to initiate, support and maintain My HealtheVet electronic services for My HealtheVet users;
- (5) VistA and other VA IT systems;
- (6) VA researchers fulfilling VA required authorization procedures (see VHA Handbook 1200.01 http://www1.va.gov/vhapublications/ViewPublication.asp?pub_ID=2038).

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

To the extent that records contained in the system include information protected by 45 CFR. Parts 160 and 164 (*i.e.*, individually identifiable health information), and 38 U.S.C. 7332 (*i.e.*, medical treatment information related to drug abuse, alcoholism or alcohol abuse, sickle cell anemia or infection with the human immunodeficiency virus), that information cannot be disclosed under a routine use unless there is also specific statutory authority in 38 U.S.C. 7332 and regulatory authority in 45 CFR parts 160 and 164 permitting disclosure.

1. Disclosure of information in this system of records may be made to private or public sector organizations, individuals, agencies, etc., with whom VA has a contract or agreement, including subcontractors, in order to administer the My HealtheVet program, or perform other such services as VA deems appropriate and practical for the purposes of administering VA laws.

2. On its own initiative, VA may disclose information, except for the names of My HealtheVet users and system administrators, to State, local, tribal or foreign agency charged with the

responsibility of investigating or prosecuting civil, criminal or regulatory violations of law, or charged with enforcing or implementing the statute, regulation, rule or order issued pursuant thereto. On its own initiative, VA may disclose information including names of My HealtheVet users and system administrators to a Federal agency charged with the responsibility of investigating or prosecuting civil, criminal or regulatory violations of law, or charged with enforcing or implementing the statute, regulation, rule or order issued pursuant thereto.

3. VA may disclose information from this system to the National Archives and Records Administration (NARA) and General Services Administration in records management inspections conducted under title 44, United States Code (U.S.C.).

4. VA may disclose information from this system of records to the Department of Justice (DoJ), either on VA's initiative or in response to DoJ's request for the information, after either VA or DoJ determines that such information is relevant to DoJ's representation of the United States or any of its components in legal proceedings before a court or adjudicative body, provided that, in each case, the agency also determines prior to disclosure that release of the records to the DoJ is a use of the information contained in the records that is compatible with the purpose for which VA collected the records. VA, on its own initiative, may disclose records in this system of records in legal proceedings before a court or administrative body after determining that the disclosure of the records to the court or administrative body is a use of the information contained in the records that is compatible with the purpose for which VA collected the records.

5. Disclosure may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

6. Disclosure to other Federal agencies may be made to assist such agencies in preventing and detecting possible fraud or abuse by individuals in their operations and programs.

7. Disclosure of information may be made when (1) VA suspects or has confirmed that the integrity or confidentiality of information in the system of records has been compromised; (2) the Department has determined that as a result of the suspected or confirmed compromise, there is a risk of embarrassment or harm to the reputations of the record subjects, harm to economic or property interests, identity theft or fraud, or harm to the

security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (3) the disclosure is to agencies, entities, and persons whom VA determines are reasonably necessary to assist or carry out the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm. This routine use permits disclosure by the Department to respond to a suspected or confirmed data breach, including the conduct of any risk analysis or provision of credit protection services as provided in 38 U.S.C. 5724.

8. VA may disclose health information for research purposes determined to be necessary and proper to epidemiological and other research entities approved by the Under Secretary for Health or designee, such as the Medical Center Director of the facility where the information is maintained.

9. VA may disclose health information, including the name(s) and address(es) of present or former personnel of the Armed Services and/or their dependents, (a) to a Federal department or agency or (b) directly to a contractor of a Federal department or agency, at the written request of the head of the agency or the designee of the head of that agency, to conduct Federal research necessary to accomplish a statutory purpose of an agency. When this information is to be disclosed directly to the contractor, VA may impose applicable conditions on the department, agency, and/or contractor to ensure the appropriateness of the disclosure to the contractor.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

My HealtheVet Administrative Records are maintained on paper and electronic media, including hard drive disks, which are backed up to tape at regular intervals.

POLICIES AND PRACTICES FOR RETRIEVABILITY OF RECORDS:

Records may be retrieved by an individual's name, user ID, date of registration for My HealtheVet electronic services, ZIP code, the VA assigned ICN, date of birth and/or Social Security number, if provided.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records are maintained and disposed of in accordance with the records disposition authority approved by the Archivist of the United States. Records from this system that are needed for

audit purposes will be retained for at least six (6) years after a user's account becomes inactive. Routine records will be disposed of when the agency determines they are no longer needed for administrative, legal, audit, research, or other operational purposes, but no less than six (6) years from date of last account activity. These retention and disposal statements are pursuant to the currently applicable NARA General Records Schedule GRS 3.2 Item 031.

PHYSICAL, PROCEDURAL, AND ADMINISTRATIVE SAFEGUARDS:

1. Access to and use of the My HealtheVet Administrative Records are limited to those persons whose official duties require such access. VA has established security controls and procedures to ensure that access is appropriately limited. Information Security Officers and system data stewards review and authorize data access requests. VA regulates data access with security software that authenticates My HealtheVet administrative users and requires individually unique codes and passwords. VA provides Information Security training to all staff and instructs staff on the responsibility each person has for safeguarding data confidentiality. VA regularly updates security standards and procedures that are applied to systems and individuals supporting this program.

2. Physical access to computer rooms housing the My HealtheVet

Administrative Records is restricted to authorized staff and protected by a variety of security devices. The Federal Protective Service or other security personnel provide physical security for the buildings housing computer systems and data centers.

3. Data transmissions between operational systems and My HealtheVet Administrative Records maintained by this system of records are protected by telecommunications security software and hardware as prescribed by Federal security and privacy laws as well as VA standards and practices. This includes firewalls, encryption, and other security measures necessary to safeguard data as it travels across the VA Wide Area Network.

4. Copies of back-up computer files are maintained at secure off-site locations.

SYSTEM MANAGER(S):

Official responsible for policies and procedures: Director of Veterans and Consumers Health Informatics Office, 8455 Colesville Road, Suite 1200, Silver Spring, Maryland 20910. Officials maintaining this system of record: VHA facilities (address locations for VHA facilities are listed in VA Appendix 1 of the biennial publications of the VA systems of records) and the My HealtheVet Chief Information Officer, 55 Foothill Drive, Suite 400, Salt Lake City, Utah 84113.

RECORD ACCESS PROCEDURE:

Individuals seeking information regarding access to and/or contesting of records in this system may write or call their local VHA facility and/or the My HealtheVet Chief Information Officer, 55 Foothill Drive, Suite 400, Salt Lake City, Utah 84113.

CONTESTING RECORD PROCEDURES:

(See Record Access Procedures above.)

NOTIFICATION PROCEDURE:

Individuals who wish to determine whether a record is being maintained under their name in this system or wish to determine the contents of such records have two options:

1. Submit a written request or apply in person to the VHA facility where the records are located. VHA facility location information can be found in the Facilities Locator section of VA's Web site at <http://www.va.gov>; or

2. Submit a written request or apply in person to the My HealtheVet Chief Information Officer, 55 Foothill Drive, Suite 400, Salt Lake City, Utah 84113.

Inquiries should include the person's full name, user ID, date of birth, and return address.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

No. 164

August 24, 2016

Part II

Environmental Protection Agency

40 CFR Parts 50, 51, and 93

Fine Particulate Matter National Ambient Air Quality Standards: State Implementation Plan Requirements; Final Rule

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Parts 50, 51, and 93**

[EPA-HQ-OAR-2013-0691; FRL-9946-36-OAR]

RIN 2060-AQ48

Fine Particulate Matter National Ambient Air Quality Standards: State Implementation Plan Requirements**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing requirements that state, local and tribal air agencies would have to meet as they implement the current and future national ambient air quality standards (NAAQS) for fine particulate matter (PM_{2.5}). Specifically, this document provides details on meeting the statutory state implementation plan (SIP) requirements that apply to areas designated nonattainment for any PM_{2.5} NAAQS, such as: General requirements for attainment plan due dates and attainment dates; emissions inventories; attainment demonstrations; provisions for demonstrating reasonable further progress; quantitative milestones; contingency measures; and nonattainment New Source Review (NNSR) permitting programs, among other things. This rule clarifies the specific attainment planning requirements that apply to PM_{2.5} NAAQS nonattainment areas based on their classification (either Moderate or Serious), and the process for reclassifying Moderate areas to Serious. Additionally, in this document the EPA is revoking the 1997 primary annual standard for areas designated as attainment for that standard because the EPA revised the primary annual standard in 2012. The EPA first established the PM_{2.5} NAAQS in 1997, completed a review and revision of those standards in 2006, and most recently completed a review and revision of the PM_{2.5} NAAQS on December 14, 2012.

DATES: This final rule is effective on October 24, 2016.

ADDRESSES: The EPA has established a docket for this action, identified by Docket ID No. EPA-HQ-OAR-2013-0691. All documents in the docket are listed in the <http://www.regulations.gov> Web site. Although listed in the index, some information is not publicly available, e.g., Confidential Business Information or other information whose disclosure is restricted by statute.

Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy. Publicly available docket materials are available either electronically in <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: For general information on this rule, contact Mr. Rich Damberg, Office of Air Quality Planning and Standards, U.S. EPA, by phone at (919) 541-5592 or by email at damberg.rich@epa.gov; or Mr. Patrick Lessard, Office of Air Quality Planning and Standards, U.S. EPA, by phone at (919) 541-5383 or by email at lessard.patrick@epa.gov. For information on the Information Collection Request (ICR), contact Mr. Butch Stackhouse, Office of Air Quality Planning and Standards, U.S. EPA, by phone at (919) 541-5208 or by email at stackhouse.butch@epa.gov.

B. Entities Affected by This Rule

Entities potentially affected directly by this final rule include state, local and tribal governments and air pollution control agencies responsible for attainment and maintenance of the NAAQS. Entities potentially affected indirectly by this final rule as regulated sources include owners and operators of sources that emit PM_{2.5}, sulfur dioxide (SO₂), oxides of nitrogen (NO_x), volatile organic compounds (VOC) and/or ammonia (NH₃). Parties affected by the conformity-related elements include state and local transportation and air quality agencies, metropolitan planning organizations (MPOs), and all federal agencies including the U.S. Department of Transportation, the U.S. Department of Defense, the U.S. Department of Interior and the U.S. Department of Agriculture. Others potentially affected indirectly by this final rule include members of the general public who live, work, or recreate in areas affected by elevated ambient PM_{2.5} levels in areas designated nonattainment for a PM_{2.5} NAAQS.

II. Background

A. Introduction

Ambient, or outdoor, air can contain a variety of pollutants, including particulate matter (PM). Airborne PM can be comprised of either solid or liquid particles, and can be a complex

mixture of particles in both solid and liquid form. The most common constituents of airborne PM include the following: Sulfate (SO₄); nitrate (NO₃); ammonium (NH₄); elemental carbon (EC); organic mass (OM); and inorganic material, generally referred to as “crustal” material, which can include metals, dust, sea salt and other trace elements. Airborne PM can be of different sizes, commonly referred to as “coarse” and “fine” particles. Fine particles, in general terms, are PM with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers (µm). For this reason, particles of this size are referred to as PM_{2.5}. PM_{2.5} particles commonly include “primary” particles and “secondary” particles. Primary particles, or direct PM_{2.5}, are emitted by sources directly into the air as solid or liquid particles (e.g., elemental carbon from diesel engines or wildfires, or condensable organic particles from gasoline engines). Secondary particles are formed in the atmosphere as a result of chemical reactions between specific pollutants known as PM_{2.5} precursors (e.g., reactions between NO_x and SO₂ emissions from mobile and stationary sources combined with ammonia to form ammonium nitrate and ammonium sulfate).

The human health effects associated with long or short-term exposure to PM_{2.5} are significant and include premature mortality, aggravation of respiratory and cardiovascular disease (as indicated by increased hospital admissions and emergency room visits) and development of chronic respiratory disease. In addition, welfare effects associated with elevated PM_{2.5} levels include visibility impairment as well as effects on sensitive ecosystems, materials damage and soiling and climatic and radiative processes.¹

On December 14, 2012, the EPA made revisions to the suite of the NAAQS for PM to provide requisite protection of public health and welfare with an adequate margin of safety. The EPA also made corresponding revisions to the data handling conventions for PM and the ambient air monitoring, reporting and network design requirements for PM. Specifically, the agency revised the primary annual PM_{2.5} standard by lowering the level from 15.0 to 12.0 µg/

¹ For a complete discussion of the human health and welfare effects associated with exposure to elevated concentrations of particulate matter, see generally “Integrated Science Assessment for Particulate Matter.” U.S. Environmental Protection Agency, Office of Research and Development, National Center for Environmental Assessment—RTP Division, February 10, 2010. EPA/600/R-08/139F. Available at: http://www3.epa.gov/ttn/naaqs/standards/pm/s_pm_2007_isa.html. See Chapter 2.

m³ to provide increased protection against health effects associated with long- and short-term PM_{2.5} exposures. The EPA did not revise the secondary annual PM_{2.5} standard, which remains at 15.0 µg/m³.² The EPA eliminated spatial averaging as part of the form of the PM_{2.5} annual standards to avoid potential disproportionate impacts on at-risk populations. In addition, the EPA retained the level and form of the primary and secondary 24-hour PM_{2.5} standards to continue to provide supplemental protection against health effects associated with short-term PM_{2.5} exposures. Although not directly relevant to this rulemaking with respect to implementation of the PM_{2.5} NAAQS, it should be noted that in December 2012, the EPA also did not revise the level or form of the primary and secondary 24-hour PM₁₀ NAAQS, which remain at 150 µg/m³.³

Estimates show that attainment of the primary PM_{2.5} standards will result in hundreds fewer premature deaths each year, prevent tens of thousands of hospital admissions each year and prevent hundreds of thousands of doctor visits, absences from work and school and respiratory illnesses in children annually.⁴ Attainment of the primary PM_{2.5} standards will have welfare co-benefits in addition to direct human health benefits. The term “welfare co-benefits” covers both environmental and societal benefits of reducing pollution, such as reductions in visibility impairment, materials damage and ecosystem damage.⁵

B. Overview of PM_{2.5} NAAQS and Implementation

1. General Background

Sections 108 and 109 of the Clean Air Act (CAA or Act) govern the establishment, review and revision, as

appropriate, of the NAAQS for widespread pollutants emitted from numerous and diverse sources considered harmful to public health and the environment. The CAA requires two types of NAAQS: (i) *Primary* standards, which set limits to protect public health, including the health of at-risk populations; and (ii) *secondary* standards, which set limits to protect public welfare, including protection against visibility impairment, damage to animals, crops, vegetation and buildings.

The CAA also establishes important roles both for state and tribal governments and for the EPA in implementing the NAAQS. In accordance with the principle of cooperative federalism, both state and tribal governments and the EPA have respective authorities and responsibilities under the CAA. At the outset, the EPA has the authority and responsibility to promulgate the NAAQS. In turn, state, local and tribal air pollution control agencies (“air agencies”) have the authority and primary responsibility for developing and implementing attainment plans that contain emission control measures needed to achieve the air quality standards in a timely manner in each nonattainment area, consistent with the requirements of the CAA. The EPA often assists states by promulgating regulations or providing guidance for meeting implementation requirements and by providing technical tools, including information on control measures.^{6,7}

The EPA also promulgates nationally applicable control requirements and emission limits for many sources such as new motor vehicles, certain categories of new and modified major stationary sources and existing stationary sources of toxic air pollutants. These federal actions assist states by achieving emissions reductions

from certain categories of sources nationwide, which can help with local attainment needs in a given nonattainment area. The EPA also has authority to provide funding, technical assistance, and guidance to states to support implementation of the NAAQS. In addition, the EPA has authority to address interstate transport of pollutants, in the event that states fail to do so. Through this authority, the EPA has addressed regional transport of pollutants from upwind states to downwind states, and has previously done so for purposes of the PM_{2.5} NAAQS.⁸ In addition, the EPA has the authority and responsibility to review and take action to approve or disapprove attainment plans submitted by states based upon whether they meet applicable statutory and regulatory requirements and to initiate the process for imposition of sanctions and/or issue federal implementation plans (FIPs) when states fail to fulfill their CAA obligations.

2. History of PM_{2.5} NAAQS Implementation

The EPA first promulgated annual and 24-hour NAAQS for PM_{2.5} in July 1997.⁹ Prior to that time, the EPA had addressed ambient PM through other means, first by regulating “total suspended particles” (TSP) and then later by regulating PM₁₀. After protracted litigation, the 1997 NAAQS for PM_{2.5} were upheld by the U.S. Court of Appeals for the District of Columbia Circuit in March 2002.¹⁰ The EPA subsequently promulgated designations for the 1997 PM_{2.5} NAAQS nationwide, designating a number of areas as nonattainment for the 1997 PM_{2.5} NAAQS, effective April 2005.¹¹ In April 2007, the EPA issued a detailed implementation rule to assist states with the development of SIP submissions to meet attainment plan requirements for the 1997 NAAQS (the “2007 PM_{2.5} Implementation Rule”).¹² In May 2008, the EPA issued another rule to assist states with SIP submissions to meet the specific requirements for permitting programs for NNSR purposes in designated nonattainment areas (the “2008 PM_{2.5} NSR Rule”).¹³ The EPA premised both the 2007 PM_{2.5} Implementation Rule and the 2008 PM_{2.5} NSR Rule on the EPA’s interpretation of the statute that

² 78 FR 3086 (January 15, 2013).

³ This final rulemaking applies to implementation of the PM_{2.5} NAAQS. For the PM₁₀ NAAQS, states and the EPA will continue to implement those NAAQS in accordance with the applicable statutory requirements of the CAA and the EPA’s existing guidance in the “The General Preamble for Implementation of Title I of the Clean Air Act (CAA) Amendments,” 57 FR 13498 (April 16, 1992); and “State Implementation Plans for Serious PM–10 Nonattainment Areas: Addendum to the General Preamble for the Implementation of Title I of the Clean Air Act (CAA) Amendments,” 59 FR 41998 (August 16, 1994). Throughout this preamble, these documents will be referred to as the “General Preamble” and the “Addendum,” respectively.

⁴ “Regulatory Impact Analysis for the Final Revisions to the National Ambient Air Quality Standards for Particulate Matter.” U.S. Environmental Protection Agency, Office of Air Quality and Planning Standards, Health and Environmental Impacts Division, February 28, 2013. EPA–452/R–12–005. See http://www3.epa.gov/ttn/naaqs/standards/pm/s_pm_2007_ria.html.

⁵ *Ibid.*

⁶ It is important to note that the EPA does not have a mandatory duty to promulgate an implementation rule for the PM_{2.5} NAAQS, and the obligations of state and tribal air agencies to develop and submit an attainment plan are independent obligations and not conditioned upon the EPA promulgating an implementation rule for the PM_{2.5} NAAQS.

⁷ When the term “state” is used hereafter, it will refer generically to states, local air agencies, and tribal governments electing to be treated as states for the purposes of implementing the CAA. Of additional note is that the 1998 Tribal Authority Rule (TAR), which is found in 40 CFR part 49, which implements section 301(d) of the CAA, provides that tribes be treated in the same manner as a state when implementing certain sections of the CAA. It gives tribes the option of developing tribal implementation plans (TIPs), but unlike states, tribes are not required to develop implementation plans. Section IX.I of this preamble provides further discussion of tribal issues.

¹³ 73 FR 28231 (May 16, 2008).

nonattainment areas for the PM_{2.5} NAAQS were subject solely to the general attainment plan requirements of subpart 1, part D of title I of the CAA (“subpart 1”).

Section 109(d)(1) of the CAA requires the EPA periodically to review the science upon which the standards are based and the standards themselves, and to revise the standards as may be appropriate. In October 2006, the EPA promulgated revisions to the suite of the NAAQS for PM, and in particular the EPA revised the 24-hour PM_{2.5} standards.¹⁴ In accordance with section 107(d), the EPA subsequently designated a number of areas as nonattainment for the revised 2006 24-hour PM_{2.5} standards, effective December 2009.¹⁵ In March 2012, the EPA issued a guidance document specifically to aid states in preparing their SIP submissions to meet attainment plan requirements for the 2006 24-hour PM_{2.5} NAAQS in designated nonattainment areas.¹⁶ The EPA’s guidance for the 2006 PM_{2.5} NAAQS was based, in large part, on the requirements finalized in the 2007 PM_{2.5} Implementation Rule, which the EPA based solely upon the statutory requirements of subpart 1.

The EPA initiated a review of the PM_{2.5} NAAQS in June 2007, proposing revisions to the primary and secondary PM_{2.5} NAAQS on June 29, 2012.¹⁷ The EPA issued its final rule on December 14, 2012, in which it lowered the primary annual PM_{2.5} standard from 15.0 µg/m³ to 12.0 µg/m³ to provide increased protection against health effects associated with long- and short-term fine particle exposures.¹⁸ The EPA also eliminated spatial averaging as part of the form of the annual standard to avoid potential disproportionate impacts on at-risk populations.¹⁹ The EPA retained the level (35 µg/m³) and form (98th percentile, averaged over 3 years) of the primary 24-hour PM_{2.5} standard, as revised in 2006, to provide

supplemental protection against health effects associated with short-term PM_{2.5} exposures, especially in areas with high peak PM_{2.5} concentrations.²⁰ This suite of primary PM_{2.5} standards provides increased public health protection, including the health of at-risk populations which include children, older adults, persons with pre-existing health and lung disease and persons of lower socioeconomic status, against a broad range of PM_{2.5}-related effects that include premature mortality, increased hospital admissions and emergency department visits and development of chronic respiratory disease.²¹ With regard to the secondary (welfare-based) standards, the EPA retained the existing annual PM_{2.5} standard of 15.0 µg/m³ and the existing 24-hour PM_{2.5} standard of 35 µg/m³ to protect against PM-related non-visibility welfare effects including ecological effects, effects on materials and climate impacts. In addition, the secondary 24-hour PM_{2.5} standard provides protection for PM-related visibility impairment.

On January 4, 2013, shortly after the EPA promulgated the 2012 revisions to the suite of PM NAAQS, the D.C. Circuit issued its decision in a challenge to the 2007 PM_{2.5} Implementation Rule and the 2008 PM_{2.5} NSR Rule. In *NRDC v. EPA*, the court held that the EPA erred in implementing the 1997 PM_{2.5} NAAQS pursuant only to the general implementation requirements of subpart 1, rather than also to the implementation requirements specific to particulate matter (PM₁₀) in subpart 4, part D of title I of the CAA (“subpart 4”).²² The court reasoned that the plain meaning of the CAA requires implementation of the 1997 PM_{2.5} NAAQS under subpart 4 because PM_{2.5} particles fall within the statutory definition of PM₁₀ and thus implementation of the PM_{2.5} NAAQS is subject to the same statutory requirements as the PM₁₀ NAAQS. In addition, although the court stated that its decision that the EPA must implement the PM_{2.5} NAAQS pursuant to subpart 4 requirements meant that it did not have to reach decisions on other issues concerning the regulation of precursors to PM_{2.5}, the court nonetheless noted that subpart 4 has specific requirements with respect to

regulation of such precursors. As a result, the court remanded to the EPA both the 2007 PM_{2.5} Implementation Rule and the 2008 PM_{2.5} NSR Rule, both of which were premised on the EPA’s interpretation of the statute that subpart 1 was the only applicable subpart for the implementation of the 1997 PM_{2.5} NAAQS in nonattainment areas. The court instructed the EPA “to repromulgate these rules pursuant to subpart 4 consistent with this opinion.” Given the D.C. Circuit’s opinion in *NRDC v. EPA*, the EPA withdrew its 2012 guidance document for the 2006 24-hour PM_{2.5} NAAQS in June 2013. Because the court had concluded that the EPA and states must implement the PM_{2.5} NAAQS consistent with the statutory requirements of subpart 4, the EPA’s 2012 guidance for attainment plans for the 2006 PM_{2.5} NAAQS premised solely upon subpart 1 requirements was no longer appropriate.

The EPA issued a notice of proposed rulemaking (NPRM) on March 23, 2015 (80 FR 15340) titled, “Fine Particulate Matter National Ambient Air Quality Standards: State Implementation Plan Requirements” (PM_{2.5} SIP Requirements Rule) to meet a number of objectives. This final rule accomplishes those objectives. It clarifies how states should meet the statutory SIP requirements that apply to areas designated nonattainment for any PM_{2.5} NAAQS under subparts 1 and 4. It does so by establishing regulatory requirements and providing guidance that will be applicable to attainment plans for the 2012 PM_{2.5} NAAQS and any future revisions of the PM_{2.5} NAAQS, subject to revisions that may be necessary for implementation purposes in the future. In addition, this action responds to the D.C. Circuit’s remand of the 2007 PM_{2.5} Implementation Rule and the 2008 PM_{2.5} NSR Rule. As a result, the requirements of the rule will also govern future actions associated with states’ ongoing implementation efforts for the 1997 and 2006 PM_{2.5} NAAQS.

The public comment period for the proposed PM_{2.5} SIP Requirements Rule closed on May 29, 2015, and the EPA received 56 comments during that period. The preamble to this final rule includes discussion of the most significant comments received on the proposal and how the EPA considered them in developing the agency’s final action concerning the specific nonattainment planning requirements. The Response to Comments document that accompanies this final rule provides more detailed responses to the significant comments received. C. Atmospheric Chemistry of PM_{2.5} and Its Precursors

1. Overview

In order to determine how to regulate sources of direct PM_{2.5} and PM_{2.5} precursors to attain the PM_{2.5} NAAQS in a given nonattainment area, it is necessary to understand the basic chemical processes that cause or contribute to the formation of ambient PM_{2.5}. Accordingly, an understanding of these processes is necessary to design

appropriate regulations for implementation of the PM_{2.5} NAAQS.

As noted earlier, the term PM_{2.5} refers to particles of solid and liquid material less than 2.5 microns in aerodynamic diameter.²³ “Primary” PM_{2.5} is emitted directly from emissions sources or activities, such as from diesel fuel combustion, wood burning, construction activities, and unpaved roads, and it includes both filterable and condensable particles.²⁴ “Secondary” PM_{2.5} is formed as a result of emissions of certain precursor gases that undergo chemical reactions in the atmosphere. The principal precursor gases that contribute to secondary PM_{2.5} formation

are SO₂, from the combustion of coal or other high sulfur fuels; NO_x, from many types of fossil fuel combustion; VOC, from certain fuels, solvents and industrial processes; and ammonia, from sources such as animal feeding operations, wastewater treatment and fertilizer. To illustrate the types of sources that emit relevant pollutants, Table 1 provides National Emissions Inventory (NEI) data for 2011 that represent nonattainment area anthropogenic and wildfire emissions estimates for direct PM_{2.5} and the four main PM_{2.5} precursor gases from major source sectors.

TABLE 1—TOTAL EMISSIONS OF PM_{2.5} AND PRECURSORS FOR MAJOR SECTORS IN PM_{2.5} NONATTAINMENT AREAS ^a
[In tons/year]

Miscellaneous (includes emissions from fire, ^c dust and some agricultural operations)	158,565	7,368	13,734	248,835	236,577
Total	284,401	410,540	1,037,764	1,042,144	292,800

^a There were 33 areas designated as nonattainment for the 1997, 2006, or 2012 PM_{2.5} NAAQS as of June 6, 2016. These areas were comprised of 67 whole or partial counties. The emissions data in this table represents whole county emissions for the 67 counties because such data is readily available in EPA databases. Actual emissions totals for the 33 nonattainment areas in aggregate would be somewhat lower because some nonattainment areas include partial counties.

^b For more details on the definitions of the emission categories listed in Table 1, see Sector/Tier crosswalk table for the 2011 NEI, available at: ftp://ftp.epa.gov/EmissionInventory/2011/doc/scc_eis_crosswalk_2011nei1.xlsx.

^c Emissions from fire include wildfire, prescribed fire, and agricultural burning.

2. Composition and Sources of PM_{2.5} Constituents

PM_{2.5} is a complex and highly variable mixture of particles, but the majority of PM_{2.5} by mass is often comprised of five constituents: (i) OM; (ii) EC; (iii) crustal material; (iv) ammonium sulfate ((NH₄)₂SO₄); and (v) ammonium nitrate (NH₄NO₃).²⁵ The discussion that follows provides an overview of each of the five major components of PM_{2.5}, all of which are

known to contribute to ambient PM_{2.5} levels in areas throughout the U.S.²⁶ Section II.C.3.d of this preamble provides more details on the atmospheric chemistry involved in the formation of sulfate, nitrate and OM, to illustrate the importance of controlling emissions of PM_{2.5} precursors as part of any comprehensive strategy to reduce ambient PM_{2.5} levels in excess of the NAAQS. Section II.C.4 of this preamble

presents a brief overview of PM_{2.5} composition by region of the U.S.

OM is the fraction of ambient PM_{2.5} with the most diverse chemical composition, containing potentially thousands of different organic compounds (*i.e.*, those compounds containing carbon) composed primarily of carbon, hydrogen, oxygen and nitrogen. Both primary particles and secondary particles contribute to ambient OM concentrations, with

²³ The regulatory definition of PM_{2.5} includes particles with an upper 50 percent cut-point of 2.5µm aerodynamic diameter (the 50 percent cut-point diameter is the diameter at which the sample collects 50 percent of the particles and rejects 50 percent of the particles). PM_{2.5} particles have a penetration curve as measured by a reference method based on Appendix L of 40 CFR part 50 and designated in accordance with 40 CFR part 53, by an equivalent method designed in accordance with 40 CFR part 53, or by an approved regional method

designated in accordance with Appendix C of 40 CFR part 58.

²⁴ Certain commercial or industrial activities involving high temperature processes (*e.g.*, fuel combustion, metal processing, cooking operations) emit gaseous pollutants into the ambient air that rapidly condense into particle form. These “condensable” PM emissions exist almost entirely in the 2.5 or less micron range and can consist of organic material, sulfuric acid and metals.

²⁶ U.S. Environmental Protection Agency, 2004. “The Particle Pollution Report: Current Understanding of Air Quality and Emissions through 2003.” Office of Air Quality Planning and Standards, Emissions, Monitoring, and Analysis Division, December 2004. Available at: <http://www.epa.gov/airtrends/reports.html>.

combustion sources being the dominant type of emissions sources. Another portion of primary OM particles results from direct emissions of organic compounds from sources of incomplete combustion, such as gas and diesel engines. Secondary OM particle formation involves oxidation of both anthropogenic and biogenic (plant-derived) VOC, and can involve other, more complex chemical reactions. Further details of the chemistry behind the formation of secondary OM, known more commonly as secondary organic aerosols (SOA), are described in Section II.C of this preamble.

EC refers to particulate carbon that has a graphitic molecular structure, and is sometimes referred to as “black carbon” (BC). It is emitted directly from emission sources and does not undergo any significant reactions with other gases in the atmosphere. EC particles result from primary emissions involving combustion, especially from diesel-fueled vehicles, but also from other processes involving the burning of fossil fuels. The latter include anthropogenic sources such as boilers and waste disposal. In addition, some EC particles originate from biomass combustion such as from prescribed fires, wildfires and residential wood combustion.

Crustal PM is comprised of particles of soil and oxides of metals from some industrial processes. Compounds comprised of elements such as silicon, aluminum, iron, calcium, titanium, magnesium and potassium, as well as oxygen, are major components.²⁷ Sources of crustal PM_{2.5} include windblown dust, dust from mechanical resuspension (e.g. dust from construction activities or vehicles driving on unpaved roads) and some forms of combustion, especially of coal. Crustal PM_{2.5} comprised of elements, like iron (Fe), and their oxides can also be emitted from industrial sources.

The remaining portion of ambient PM_{2.5} is mostly composed of SO₄, NO₃ and NH₄, which react in the ambient air to form ammonium sulfate ((NH₄)₂SO₄) and ammonium nitrate (NH₄NO₃). Another common PM_{2.5} particle is ammonium bi-sulfate (NH₄HSO₄). In some areas, less common ions such as chloride are also found in PM_{2.5} samples

in the form of particles that include sodium chloride and ammonium chloride. Particle-bound water is often also associated with this fraction of PM_{2.5}. Sulfate, nitrate and ammonium particles originate through both primary and secondary mechanisms, although the vast majority of these PM_{2.5} particles are formed through secondary formation, as described in the following section.

3. Secondary Formation of PM_{2.5} From Gaseous Precursors

a. Overview. The composition of PM_{2.5} is complex and highly variable due in part to the large contribution of secondary PM_{2.5} to total fine particle mass in most locations, and to the complexity of secondary particle formation processes. A large number of possible chemical reactions, often non-linear in nature, can convert the gases SO₂, NO_x, VOC and ammonia to PM_{2.5}. Thus, these gases are precursors to PM_{2.5}. A brief discussion of SO₄, NO₃ and SOA formation, as well as the role of ammonia in their formation, follows.

b. SO₄ Formation. SO₂ is emitted mostly from the combustion of fossil fuels in boilers operated by electric utilities and other industries, with less than 10 percent of SO₂ emissions nationwide currently coming from other industrial sources, such as oil refining and pulp and paper production.²⁸ When SO₂ oxidizes it forms sulfuric acid, a highly corrosive compound toxic to humans and to ecosystems that contributes to acid deposition (acid rain). In the presence of ammonia, however, sulfuric acid will react to form (NH₄)₂SO₄, a less acidic compound and one of the five major components of PM_{2.5}. If there is not enough ammonia present to fully neutralize the sulfuric acid, part of it may convert to NH₄HSO₄, which is more acidic than (NH₄)₂SO₄, but less so than sulfuric acid. There is a large amount of emerging scientific evidence that SO₂ may also contribute to the formation of SOA from biogenic VOC emissions (see section later on SOA). Sulfate levels in the ambient air peak in summer months due to increased SO₂ emissions, generally from electric generating units (EGUs), and from meteorological conditions that are conducive to sulfate formation.

c. NO₃ Formation. The main sources of NO_x emissions are combustion of fossil fuel in boilers and mobile sources,

accounting for more than 80 percent of national anthropogenic NO_x emissions (based on the 2011 NEI), with boilers and EGUs contributing about 27 percent and mobile sources contributing 56 percent. Oxides of nitrogen react in the atmosphere to form nitric acid, another prime contributor to acid deposition in the environment. Nitric acid converts to ammonium nitrate, one of the five main components of PM_{2.5}, in the presence of ammonia. Low temperatures and high relative humidity create ideal conditions for the formation of ammonium nitrate, typically leading to higher atmospheric levels in winter months and lower levels in summer months.²⁹

d. SOA Formation. As discussed earlier, the OM component of ambient PM_{2.5} is a complex mixture of hundreds or even thousands of anthropogenic and biogenic organic compounds. These compounds are either emitted directly from sources (i.e., as “primary” PM_{2.5}) or formed by reactions in the ambient air to make SOA (i.e., as “secondary” PM_{2.5}).

VOC (both anthropogenic and biogenic) are key precursors to the SOA component of PM_{2.5}. The relative importance of these compounds in the formation of organic particles varies between geographic areas, depending upon local emission sources, atmospheric chemistry and season of the year. It should be further noted that not all inventoried VOC may be contributing to the formation of organic particles. For example, chemical reactions involving VOC are generally accelerated in warmer temperatures, and for this reason studies show that SOA typically comprises a higher percentage of PM_{2.5} in the summer than in the winter.³⁰

Anthropogenic sources of VOC include mobile sources, petrochemical manufacturing, oil and gas emissions, fire emissions, and solvents.³¹ In addition, some biogenic VOC, emitted by vegetation such as trees, can also contribute significantly to SOA formation, especially in heavily forested areas, such as the southeastern U.S. It should be noted, however, that

anthropogenic contributions to SOA are likely highest in the wintertime when biogenic SOA levels are lower; conversely, in the summertime, biogenic contributions to SOA are likely higher. Despite significant progress that has been made in understanding the origins and properties of SOA, it remains the least understood component of PM_{2.5} and continues to be a significant topic of research and investigation.

e. Role of Ammonia in Sulfate, Nitrate and SOA Formation. Ammonia is a gaseous pollutant emitted by natural and anthropogenic sources. The EPA's 2011 NEI shows that the two main sources of ammonia emissions are fertilizer application (27 percent) and livestock raising (54 percent). It should be noted that the 2011 NEI indicates that mobile sources in the aggregate contribute about 3 percent of nationwide ammonia emissions. Catalytic converters installed on light-duty gasoline vehicles are designed to convert NO_x to nitrogen (N₂); however, some ammonia is formed as a secondary product and emitted during this process.

As indicated earlier, ammonia plays an important role in neutralizing acids, such as sulfuric acid and nitric acid, in

clouds, precipitation and particles. On the other hand, deposited ammonia can contribute to problems of eutrophication in water bodies due to its nutritive properties.³² Ammonia would not exist in particles if not for the presence of acidic species with which it can combine to form a particle. In the eastern U.S., sulfate, nitrate and the ammonium associated with them can together account for between roughly 30 percent and 75 percent of the total PM_{2.5} mass in a given area. The ammonium portion by itself roughly accounts for between 5 percent and 20 percent of the total PM_{2.5} mass in the East.³³

f. Role of NO_x in Nitrate and SOA Formation. In addition to the contribution of NO_x emissions to secondary particulate nitrate formation, NO_x also reacts with anthropogenic and biogenic VOC to enhance the secondary formation of organic compounds that make up SOA. NO_x is thus involved in all secondary PM chemistry, not just in particulate nitrate formation.³⁴

4. Fine Particulate Composition by Location.

Table 2 shows regional 3-year mean concentrations (2009–2011) of PM_{2.5} and its main components at sites in the Chemical Speciation Network (CSN).³⁵

In addition to the mean values for all sites in each region, the table includes the minimum and maximum observed PM_{2.5} and species concentrations for sites within each region. These data illustrate broad observed spatial patterns across the U.S. in PM_{2.5} concentrations and its composition. For example, PM_{2.5} concentrations are highest on average in the Central and West regions. Sulfate mass comprises a larger fraction of PM_{2.5} than nitrate mass in the northeastern U.S., whereas nitrate has a greater contribution than sulfate in the West. OM is the dominant component in all regions, with the highest concentrations of OM on average found in the West, Northwest and Southeast. On a percentage basis, the concentrations of EC and crustal material are relatively low throughout all regions of the U.S. compared to the other major PM_{2.5} components.

The composition of PM_{2.5} also varies between urban and rural areas. This is reflective of the distribution of urban and regional emission sources, atmospheric reactions and transport of fine particles. More details about the spatial distribution and origins of PM_{2.5} components can be found in the docket for this action.³⁶

III. Requirements With Respect to the Treatment of PM_{2.5} Precursors in Attainment Plans and the NNSR Program

A. Background

The EPA recognizes that the treatment of PM_{2.5} precursors is an important issue in developing a PM_{2.5} attainment plan³⁷ or implementing the NNSR program in a nonattainment area. The EPA has long recognized the scientific basis for concluding that there are multiple scientific precursors to PM₁₀³⁸ and PM_{2.5}.³⁹ Appropriate control of precursors is especially important for attaining the PM_{2.5} NAAQS because secondarily formed particles (such as ammonium nitrate, ammonium sulfate, and some portion of organic carbon) comprise a large fraction of ambient PM_{2.5} concentrations in many nonattainment areas. However, in some PM_{2.5} nonattainment areas, a particular precursor or precursors may not contribute significantly to PM_{2.5} levels that exceed the relevant NAAQS. This section of the preamble describes optional precursor demonstrations that a state may choose to submit to the EPA in order to establish that sources of particular precursors need not be regulated for purposes of attainment planning or in the NNSR permitting program for a specific nonattainment area.

Section III.A of this preamble provides background on the January 2013 *NRDC v. EPA* court decision, in which the court found that subpart 4 of part D of the CAA presumptively requires regulation of all PM_{2.5} precursors, except under certain circumstances. Section III.A of this preamble also provides information on the requirements of the subpart 4 provisions applicable to attainment plans for PM NAAQS. Section III.B of this preamble provides a summary of the precursor demonstration options in the proposed rule and comments received. Section III.C of this preamble provides a discussion of the optional precursor demonstrations provided in the final rule.

The final rule describes how in some cases a state may demonstrate that the adoption of additional emission reduction measures for a particular precursor is not needed for purposes of achieving expeditious attainment nor for advancing the attainment date by at least a year in a nonattainment area. (This is referred in the preamble as an “expeditious attainment demonstration.”) The rule also describes three optional approaches for demonstrating that a particular precursor is not a significant contributor to ambient PM_{2.5} levels that exceed the standard in a particular nonattainment area. These three precursor demonstrations are: (a) Comprehensive precursor demonstration; (b) major stationary source precursor demonstration; and (c) NNSR precursor demonstration. If a state chooses to submit a precursor demonstration, it must do so in accordance with provisions in the final rule. A state may use this type of demonstration to justify that sources of the given precursor may

be excluded from certain PM_{2.5} attainment plan requirements and/or NNSR requirements, although the particular sources and requirements eligible for exclusion will depend on the type of demonstration submitted.

Section III.C of this preamble also outlines certain technical issues, such as the appropriate geographic scope of a precursor demonstration, recommended significance thresholds, and recommended analytical approaches for evaluating precursor contributions to ambient PM_{2.5} levels and the sensitivity of PM_{2.5} levels in an area to decreases or increases of emissions.

January 2013 court decision in NRDC v. EPA. As explained in the proposed rule, the EPA’s approach to the evaluation and regulation of PM_{2.5} precursors pursuant to subpart 1 in both the 2007 PM_{2.5} Implementation Rule and the 2008 PM_{2.5} NSR Rule was invalidated in the court’s 2013 decision in *NRDC v. EPA*. As an example of the distinction between the divergent substantive requirements of subpart 1 and subpart 4 of part D of the CAA, the court noted that subpart 4 has specific provisions related to regulation of precursors not present in subpart 1. Although the court stated that it was not reaching a decision on the issue of regulation of precursors, the court’s opinion specifically discussed the approach to precursors in both the 2007 PM_{2.5} Implementation Rule and the 2008 PM_{2.5} NSR Rule and compared that approach to section 189(e) of the CAA, which contains the sole explicit reference to the regulation of precursors in subpart 4. The court decision included the following statements with regard to precursors:

Ammonia is a precursor to fine particulate matter, making it a precursor to both PM_{2.5}

³⁷ Note that in this document the term “attainment plan” refers to a state’s required SIP submittal elements other than those elements related to the NNSR program.

³⁸ See the General Preamble, 57 FR 13498, (April 16, 1992).

³⁹ See 2007 PM_{2.5} Implementation Rule, 72 FR 20586 (April 25, 2007). The rule discussed the fact that emissions of SO₂, NO_x, VOC and ammonia are factual and scientific precursors to PM_{2.5}.

and PM₁₀. For a PM₁₀ nonattainment area governed by subpart 4, a precursor is presumptively regulated. *See* 42 U.S.C. 7513a(e) [CAA section 189(e)]. Under the PM rules challenged here, the EPA established a rebuttable presumption against regulating ammonia unless a state or the EPA “provides an appropriate technical demonstration” that shows emissions from ammonia “significantly contribute to PM concentration in the nonattainment area.” 40 CFR 51.1002(c)(4)(i). When Congress enacted subpart 4, it sought to end this administrative gamesmanship.⁴⁰

The court continued to hold that “[i]n light of our disposition, we need not address the petitioners’ challenge to the presumptions in 40 CFR 51.1002(c)(3)–(4) that volatile organic compounds and ammonia are not PM_{2.5} precursors, as subpart 4 expressly governs precursor presumptions.”⁴¹

Section 189(e) of the CAA establishes requirements for precursors to PM₁₀ (which the court concluded expressly includes PM_{2.5}) and provides that: “The control requirements applicable under plans in effect under this part for major stationary sources of PM₁₀ shall also apply to major stationary sources of PM₁₀ precursors, except where the Administrator determines that such sources do not contribute significantly to PM₁₀ levels which exceed the standard in the area.” The court reasoned that the EPA’s approach to precursors in the 2007 PM_{2.5} Implementation Rule and 2008 PM_{2.5} NSR Rule had the effect of reversing the presumption embodied within subpart 4 that a state should address all PM₁₀ precursors unless the state has made a specific showing why regulation of a particular precursor is not necessary.

Subpart 4 of part D of the CAA. The provisions of subpart 4 (CAA sections 188–190) do not define the term “precursor” for purposes of PM₁₀, nor do they explicitly require the control of any specifically identified PM precursor. However, the statutory definition of “air pollutant” provides that the term “includes any precursors to the formation of any air pollutant, to the extent the Administrator has identified such precursor or precursors for the particular purpose for which the term ‘air pollutant’ is used.” *See* CAA section 302(g). The EPA has determined that SO₂, NO_x, VOC and ammonia are factual and scientific precursors to PM and, thus, the attainment plan requirements of subpart 4 apply equally to emissions of direct PM_{2.5} and these precursors in PM_{2.5} nonattainment

areas, except as otherwise provided in the statute. Section 189(e) of the CAA explicitly requires the control of precursors from all major stationary sources in PM_{2.5} nonattainment areas unless there is a demonstration to the satisfaction of the Administrator that such major stationary sources do not contribute significantly to PM levels that exceed the standards in the nonattainment area.⁴² Section 189(e) of the CAA contains the only express exception to control requirements for PM precursors under subpart 4.

When Congress adopted the 1990 CAA Amendments, the NAAQS for PM₁₀ was in effect, but no standard for PM_{2.5} had yet been established. At that time, it was understood that the interaction of PM₁₀ precursors in the atmosphere led to the formation of PM₁₀ in many areas. However, in some of the PM₁₀ nonattainment areas, air quality problems were caused primarily by area sources emitting direct PM emissions (e.g., a nonattainment area with numerous wood burning devices, or with substantial sources of windblown coarse particles from construction sites), and precursor emissions from major stationary sources were not considered to make a significant contribution to the local nonattainment problem. For cases such as these, CAA section 189(e) provided a possible exception to the requirement to control all PM₁₀ precursors from major sources in a particular nonattainment area.

Consistent with past practice for implementation of the PM₁₀ NAAQS, the EPA proposed to interpret the control requirements addressed by CAA section 189(e) to include RACM/RACT (and additional reasonable measures) for Moderate nonattainment areas, BACM/BACT (and additional feasible measures) for Serious nonattainment areas, most stringent measures (MSM) (for Serious areas as applicable) and NNSR on all major sources of precursors in the nonattainment areas. The General Preamble indicates that consideration of precursors is necessary for attainment plans, and it recognizes the specific applicability of CAA section 189(e) to both existing and new major stationary sources, including new and modified sources subject to NNSR permitting requirements. Even though CAA section 189(e) only explicitly contemplates exceptions to control requirements for PM_{2.5} precursors from major stationary sources in nonattainment areas, the EPA

believes that by analogy it has authority to promulgate regulations that allow states to determine that it is not necessary to regulate PM_{2.5} precursors from other sources in nonattainment areas as well, under appropriate circumstances.

While CAA section 189(e) expressly requires control of precursors from major stationary sources, it is clear that subpart 4 and other CAA provisions collectively require the control of direct PM_{2.5} and all PM_{2.5} precursors from all types of sources (*i.e.*, stationary sources, area sources, and mobile sources) as may be needed for the purposes of demonstrating attainment as expeditiously as practicable in a given nonattainment area.⁴³ Longstanding EPA guidance for RACM has indicated that the state should inventory all emissions of the relevant pollutants and precursors in the nonattainment area, evaluate the available control measures for the relevant pollutant and precursors to determine if such controls are economically and technologically feasible, and then adopt those measures that are deemed reasonably available and necessary in order to attain the NAAQS as expeditiously as practicable.⁴⁴ The EPA guidance has also long indicated that the state must ensure that there is no other collection of available control measures that if adopted would advance the attainment date by at least 1 year.⁴⁵ Section IV.D of this preamble provides additional discussion on the development of emissions inventories and the identification, adoption and implementation of reasonably available control measures for PM_{2.5} nonattainment areas, including a discussion particular to wildfire and wildland prescribed fire found in Section IV.D.3.b.⁴⁶

⁴³ *See* CAA requirements for states to demonstrate attainment “as expeditiously as practicable” (CAA section 188(c)(1); CAA section 172(a)(2)).

⁴⁴ 57 FR 13498 (April 16, 1992).

⁴⁵ In the context of the PM₁₀ NAAQS, the EPA has concluded that “advancement of the attainment date” should mean an advancement of at least 1 calendar year. *See* State Implementation Plans; General Preamble for the Implementation of Title I of the CAA Amendments of 1990, 57 FR 13498 (April 16, 1992). *See also* *Sierra Club v. EPA*, 294 F.3d 155 (D.C. Cir. 2002).

⁴⁶ *See* Section IV of this preamble for a thorough discussion of past policy and guidance on reasonably available control measures (RACM) and reasonably available control technology (RACT). Section IV of this preamble discusses the EPA’s final policy that under subpart 4, for Moderate areas that demonstrate that attainment by the statutory attainment date is impracticable, RACM and RACT would constitute all those technologically and economically feasible measures available for sources in the area that can be implemented within 4 years of designation, but they would not constitute the complete set of measures required to

⁴⁰ *NRDC v. EPA*, 706 F.3d 428, 437, n.7 (D.C. Cir. 2013).

⁴¹ *NRDC v. EPA*, 706 F.3d 428, 437, n.10 (D.C. Cir. 2013).

⁴² The EPA notes that it previously had addressed the requirements of subpart 4 for precursors, specifically within the context of the requirements of CAA section 189(e), in the General Preamble. *See* the **Federal Register** published on April 16, 1992 (57 FR 13498, 13539, 13541 and 13542).

In light of the court's decision in *NRDC v. EPA*, the EPA considers it necessary to describe how states must address regulation of PM_{2.5} precursors in attainment plans and NNSR programs for the PM_{2.5} NAAQS. The court's decision made clear that appropriate regulation of all precursors in designated nonattainment areas is presumptively required under the CAA, and the regulation of precursors in general is a critical issue for attainment of the PM_{2.5} NAAQS because secondarily formed particles are a substantial component of PM_{2.5} concentrations in most nonattainment areas of the United States.

For the purposes of this rule, the EPA considers that for all PM_{2.5} nonattainment areas, the PM_{2.5} precursors for regulatory purposes are the four scientific precursors that the EPA has previously identified: SO₂, NO_x, VOC and ammonia. This rule does not include any national presumption that would allow a state to exclude, without a demonstration, sources of emissions of a particular precursor from further analysis for attainment plan or NNSR control requirements in a PM_{2.5} nonattainment area. However, the EPA's interpretation of subpart 4 requirements with respect to precursors in attainment plans for PM₁₀, as set out in the General Preamble, contemplates that the state may develop an attainment plan that regulates only those precursors that are necessary to control for purposes of timely attainment in the nonattainment area, *i.e.*, states may determine that only certain precursors need to be regulated in a particular PM_{2.5} nonattainment area for attainment purposes.⁴⁷ Courts have upheld this approach to the requirements of subpart 4 for PM₁₀.⁴⁸ The EPA believes that application of a similar approach to PM_{2.5} precursors under subpart 4 is appropriate and reasonable.

The EPA interprets the CAA to require states to inventory emissions and adopt control measures as appropriate for direct PM_{2.5} and all PM_{2.5} precursors. This interpretation is based on CAA section 302(g), which defines an air pollutant as including precursors contributing to the formation of that pollutant; the EPA's identification of the four main scientific PM_{2.5} precursors; and the CAA provisions requiring adoption of all control measures (*i.e.*, RACM and RACT) needed in order to attain the

standard as expeditiously as practicable. CAA section 189(e) explicitly requires that the control requirements applicable for major stationary sources of direct PM_{2.5} emissions must also apply to major stationary sources of PM_{2.5} precursors, unless the state provides a showing that emissions of a particular precursor from major stationary sources do not contribute significantly to levels that exceed the standard in the nonattainment area of concern. Thus, the statute generally requires control of all PM_{2.5} precursors in a nonattainment area, but it provides an express exception applicable to major stationary sources in such areas if an appropriate demonstration is made.

The EPA also notes that CAA section 189(e) contains certain ambiguities that require interpretation. For example, CAA section 189(e) does not specify the precise method by which a state or the EPA should determine whether precursor emissions from major stationary sources do not "contribute significantly" to levels which exceed the standard in a given nonattainment area. Subpart 4 also does not explicitly address whether it would be appropriate to include a potential exemption from precursor controls for all source categories under certain circumstances, because a specific exemption from precursor controls is expressly made available in the statute only for major stationary sources. These issues are addressed in this final rule.

B. Summary of Proposal

In the proposal, the EPA sought comment on how states could focus regulatory efforts on the appropriate PM_{2.5} precursors in each area. Rather than simply requiring each state to regulate direct PM_{2.5} and all PM_{2.5} precursors without regard to whether that would be appropriate and necessary for expeditious attainment of the NAAQS, EPA took comment on different approaches for states to focus regulatory efforts on the appropriate pollutants. Thus, in the proposal, the EPA sought comment on three options by which a state could demonstrate that emission control requirements for a particular PM_{2.5} precursor or precursors would not be required for sources in a particular nonattainment area.⁴⁹ The

proposed "precursor demonstration" options outlined procedures and technical analyses a state could elect to perform to demonstrate that control requirements for sources of a particular precursor are not needed for expeditious attainment, or that a particular PM_{2.5} precursor does not significantly contribute to PM_{2.5} concentrations in the area. The proposal indicated that if the EPA were to approve such a precursor demonstration, then it would not be necessary for the state to adopt control requirements for sources of the precursor or precursors in the PM_{2.5} attainment planning process generally and/or in the NNSR permitting process for that particular area. The EPA requested comment on whether the final rule should include one or more precursor demonstration approaches, and whether it would be appropriate to combine specific elements from different options.

The EPA also described three technical issues associated with any such precursor demonstration and sought comment on the following: (1) The appropriate geographic scope of the analysis; (2) whether specific types of technical analyses (such as evaluating the contribution of the precursor to total PM_{2.5} concentrations, or evaluating the sensitivity of the area to decreases or increases of the precursor) should be required for a precursor demonstration; and (3) whether the EPA should establish a bright-line ambient air quality threshold (*e.g.*, 3 percent of the level of the relevant NAAQS in the area) to define an air quality change below which a precursor contribution should not be considered to be significant, thereby establishing that control of sources of the precursor is unnecessary in the area.

Lastly, the EPA indicated in the proposal that if a state had an approved precursor demonstration for a particular precursor in a Moderate area and the EPA later reclassifies the area to Serious, then the state would be required to develop an updated precursor demonstration if the state were again interested in having the precursor treated as insignificant for purposes of the Serious area plan. An updated precursor demonstration is necessary because many factors (*e.g.*, emissions, air quality and fine particle concentrations) could have changed substantially since the original

significantly to levels that exceed the PM_{2.5} standard, and (3) Option 3—a single analysis (for purposes of attainment planning and NNSR) showing that control measures for all sources for a particular precursor are not needed for expeditious attainment.

demonstrate attainment as expeditiously as practicable.

⁴⁷ See the **Federal Register** published on April 16, 1992 (57 FR 13498, 13540 and 13541).

⁴⁸ See, *e.g.*, *Assoc. of Irrigated Residents v. EPA, et al.*, 423 F.3d 989 (9th Cir. 2005).

⁴⁹ The three proposed options were: (1) Option 1—two independent analyses consisting of an attainment planning analysis showing that control measures for a particular precursor are not needed for expeditious attainment and an optional NNSR analysis showing that major stationary sources of a particular precursor do not contribute significantly to levels that exceed the PM_{2.5} standard, (2) Option 2—a single analysis (for purposes of attainment planning and NNSR) showing that all emissions of a particular precursor do not contribute

demonstration for the Moderate area attainment plan.⁵⁰

C. Final Rule

The EPA received many comments on the three proposed precursor demonstration approaches. Most commenters supported the inclusion of some kind of optional precursor demonstration in the final rule. Some commenters suggested that states should have the flexibility to develop any of the types of demonstrations that the EPA described in the three proposed options. One group of commenters opposed any option that would exempt a particular precursor from control measures even if the state could demonstrate it could expeditiously attain the standard by the attainment date without controls on sources of the precursor. Another group of commenters suggested that if only one option is finalized, it should allow a state to rely on a sensitivity analysis to show that changes in emissions of a particular precursor would not have a substantial contribution to PM_{2.5} concentrations in the area.

The EPA agrees with commenters who suggested that states should have the flexibility to conduct different types of precursor demonstrations appropriate to the area in question. Regardless of the type of precursor demonstration, the state will still need to provide adequate technical support and that demonstration will be subject to EPA approval. Thus, the EPA concludes that the specific form of the demonstration is not as crucial as its content and adequacy, in light of the facts and circumstances in the area. The EPA disagrees with commenters who argued that a state should not be able to determine insignificance for a precursor based on an attainment planning analysis showing expeditious attainment in the area without adopting new emissions reduction measures for the precursor in question. This approach has been upheld under subpart 4 with respect to implementation of the PM₁₀ NAAQS, and the EPA finds that it is reasonable to allow for a similar policy when implementing the PM_{2.5} NAAQS.⁵¹

After consideration of the numerous comments received on this issue, the EPA has decided to adopt a final approach that allows exclusion of certain precursor sources from certain SIP requirements, provided that states make the appropriate demonstrations. However, the EPA has revised the

details of the specific types of demonstrations based on further evaluation of the comments received. Section III.C.1 of this preamble describes the expeditious attainment demonstration, in which a state shows that control requirements for a particular precursor are not needed for expeditious attainment by the Moderate area attainment date. Section III.C.2 of this preamble describes the three types of optional precursor demonstrations a state may submit to the EPA to establish that emissions of a precursor do not contribute significantly to PM_{2.5} levels in a particular nonattainment area: (a) Comprehensive precursor demonstration; (b) major stationary source precursor demonstration; and (c) NNSR precursor demonstration. Each option is described in detail in the following subsections.

Section III.C.3 of this preamble highlights various technical issues associated with precursor demonstrations, including the appropriate geographic scope of the analyses, thresholds for characterizing an insignificant air quality change, and different analytical methods for assessing precursor contributions. Section III.C.4 of this preamble discusses certain procedural issues associated with precursor demonstrations. Section III.C.5 of this preamble addresses other relevant comments and responses.

1. Expeditious Attainment Demonstration

As noted earlier, the EPA's interpretation of subpart 1 and 4 requirements with respect to precursors in attainment plans for PM₁₀ has been that a state may develop an attainment plan that regulates only those precursors that are necessary to control for purposes of timely attainment in the area. The EPA believes that a similar policy approach for PM_{2.5} precursors is also appropriate.

Under the expeditious attainment demonstration, a state may be able to determine through its identification of RACM/RACT for existing sources in an area whether expeditious attainment could be achieved without new control measures for a particular PM_{2.5} precursor. It is important to note that this approach is available to a state only if the demonstration for the area (1) ensures attainment by the Moderate area attainment date (*i.e.*, the end of the sixth calendar year after designation), and (2) ensures that the area could not advance the attainment date by at least 1 year if it were to adopt reasonable control measures for the precursor in question. If the state determines that the area

cannot practicably attain by the relevant Moderate area attainment date, then the state still would have the option of developing one of the precursor demonstrations described in Sections III.C.2.a–c of this preamble for showing that the precursor contribution is not significant. The expeditious attainment option is not available for Serious nonattainment areas because BACM/BACT measures for Serious areas are not solely limited to those measures needed for expeditious attainment under this final rule. (See further discussion of this issue in Section VI.D of this preamble, Serious Area Attainment Plan Control Strategies.)

For the expeditious attainment demonstration, the required analysis is what is already needed for a Moderate area attainment demonstration: The identification of reasonably available control measures that provide for expeditious attainment by the attainment date, and a determination that attainment cannot be advanced through the imposition of other reasonable measures (*i.e.* RACM/RACT and other reasonable measures that are identified for the area but not necessary for the area to attain within 6 years). See 40 CFR 51.1006(a). After a comprehensive emissions inventory has been developed, the state should then identify potential control measures and assess factors related to technological feasibility, economic feasibility, and time needed for implementation for all types of sources in the area (*i.e.*, stationary, area, mobile) and all precursors emitted by such sources as included in the emissions inventory.

After identifying the set of control measures that are economically and technologically feasible for all precursors, the state may be able to show (using best available information on emissions, control options, technologies, and costs, along with appropriate air quality modeling) that those measures that could be identified as RACM/RACT and additional reasonable measures would not need to include new control measures for sources of a given precursor.⁵² The state could show this by demonstrating that one set of control measures to be adopted into the plan would provide for attainment by the statutory attainment date; and that an additional set of potential control measures (including measures for the precursor in question, and remaining measures for all other contributing pollutants) *collectively*

⁵⁰ For more information on the proposed precursor demonstration options, see 80 FR 15340, at 15350–15362.

⁵¹ See, e.g., *Assoc. of Irrigated Residents v. EPA*, et al., 423 F.3d 989 (9th Cir. 2005).

⁵² See Section IV.D.1 of this preamble, Background for Attainment Plan Control Strategy, for further discussion of “additional reasonable measures.”

would not advance the attainment date by at least 1 year (*i.e.*, enable the area to attain 1 year earlier). Under these circumstances, the state would not need to adopt the second set of measures (including measures for the particular precursor) because they would not expedite attainment of the NAAQS in the area.

If the attainment planning demonstration shows that the area can attain the NAAQS expeditiously without new emission reduction measures for a particular precursor, the state would be required to adopt control measures for only a subset of the four PM_{2.5} precursors as part of the attainment plan for the area, and existing sources in the nonattainment area would not be required to adopt new control measures for the particular precursor. Accordingly, the state would not need to address the precursor in the reasonable further progress plan, in quantitative milestones and associated reports, or be required to adopt contingency measures to reduce the precursor. *See* 40 CFR 51.1009(a)(4)(i). (Note that for purposes of meeting the contingency measure requirement, however, the state would still have the discretion to adopt control measures as contingency measures for a precursor that would otherwise not be subject to RACM/RACT requirements.)

It also should be noted that development of an approvable attainment plan that does not include new control measures for a particular precursor would not exempt the state from the requirements to address the same precursor with respect to the NNSR program, nor would it excuse the state from reconsidering the significance of the precursor to the PM nonattainment problem in any subsequent Serious area SIPs that could be required for the nonattainment area.

2. Optional Precursor Demonstrations

a. *Comprehensive Precursor Demonstration.* In line with the EPA's proposal for precursor insignificance demonstrations, the EPA is finalizing an option whereby a state may submit a comprehensive precursor demonstration as part of any Moderate or Serious area attainment plan. The use of the term "comprehensive" here refers to the fact that the demonstration covers all existing stationary, area, and mobile sources, rather than major sources alone. Note, however, that the comprehensive precursor demonstration does not affect precursor requirements for future new sources. Under this comprehensive precursor demonstration, the state would need to show that emissions of a particular

precursor from all existing stationary, area, and mobile sources located in the nonattainment area do not contribute significantly to PM_{2.5} levels that exceed the standard in the area. The state would first need to evaluate the contribution of all existing source emissions of the particular precursor to PM_{2.5} concentrations that exceed the PM_{2.5} standard (described in Section III.C.2 of this preamble). If the state cannot demonstrate via the concentration-based precursor demonstration that sources of a particular precursor have an insignificant contribution to PM_{2.5} levels in an area, then the state could still demonstrate that the precursor's contribution is insignificant by conducting a sensitivity analysis to evaluate the sensitivity of ambient PM_{2.5} concentrations in the nonattainment area to decreases in the precursor emissions in the area (*e.g.*, whether a given decrease is insignificant) as discussed further in Section III.C.2.c of this preamble.

If a comprehensive precursor demonstration for a precursor is approved, the state would not establish a motor vehicle emissions budget for the relevant precursor, and regional emissions analyses for the precursor would not be required to be included in transportation conformity determinations. This is consistent with the transportation conformity rule's provisions concerning PM_{2.5} precursors. (*See* 40 CFR 93.102(b)(2)(iv) and (v)). Separately, states may continue to determine that on-road emissions of PM_{2.5} precursors are insignificant even if emissions of a given precursor from other sources are significant. (*See* 40 CFR 93.102(b)(2)(iv) and (v) and 93.109(f)). With regard to general conformity, if a state precursor demonstration is approved for one or more precursors, federal agencies would not be required to address the affected precursor(s) in general conformity determinations.

If a comprehensive precursor demonstration is approved by the EPA, then in developing the attainment plan for the area, the state would not be required to adopt control measures (*e.g.*, RACM/RACT) for the precursor for any existing stationary, area, or mobile sources in the nonattainment area. The attainment plan also would not be required to address the relevant precursor in meeting the RFP or quantitative milestone requirements, or in adopting contingency measures because these requirements commonly apply to pollutants that are the subject of emission reduction measures in the attainment plan. (Note that for purposes

of meeting the contingency measure requirement, however, the state would still have the discretion to adopt emission reduction requirements on the precursor in question, in conjunction with emission reduction requirements on other pollutants.) The state would still need to include the precursor in all nonattainment area emission inventory submissions.

It also should be noted that development of an approvable attainment plan that does not include new control measures for a particular precursor would not exempt the state from the requirements to address that precursor with respect to the NNSR program, nor would it excuse the state from reevaluating the significance of the precursor to the PM nonattainment problem in any subsequent Serious area SIPs that could be required for the nonattainment area.

b. *Major Stationary Source Precursor Demonstration.* The state has the option of submitting a major stationary source precursor demonstration as part of any Moderate or Serious area plan, consistent with CAA section 189(e). This demonstration differs from the comprehensive demonstration in that it only evaluates existing major sources, and therefore may only be used to justify the exclusion of existing major sources from the control requirements for the applicable precursor. Although the EPA expects that most states making precursor demonstrations will opt for comprehensive demonstrations, this option is provided to offer additional flexibility. The requirements for a stationary source precursor demonstration are nearly identical to those of the comprehensive precursor demonstration, except the state would only need to show that a particular precursor from all existing *major stationary sources* located in the nonattainment area do not contribute significantly to PM_{2.5} levels that exceed the standard in the area. Similar to the comprehensive demonstration, the state must first evaluate the contribution of major stationary source emissions of the particular precursor to PM_{2.5} levels that exceed the PM_{2.5} standard (pursuant to section III.C.3.c of this preamble). If the state cannot demonstrate via the concentration-based precursor demonstration that sources of a particular precursor have an insignificant contribution to PM_{2.5} levels in an area, then the state could still try to demonstrate that the precursor is insignificant by conducting a sensitivity analysis to evaluate the sensitivity of PM_{2.5} levels in the nonattainment area to a reduction in major stationary source

emissions in the area (pursuant to Section III.C.3.d of this preamble).

If such a demonstration is approved by the EPA, then in developing the attainment plan for the area, the state would not be required to adopt control measures for the precursor for existing major stationary sources in the nonattainment area. The attainment plan also would not be required to address the emissions of the relevant precursor from major stationary sources in meeting the RFP or quantitative milestone requirements, or in adopting contingency measures. (Note that for purposes of meeting the contingency measure requirement, however, the state would still have the discretion to adopt emission reduction requirements on the precursor in question, in conjunction with emission reduction requirements on other pollutants.) The state would still need to include stationary source emissions of the precursor in all nonattainment area emission inventory submissions.

Note that a state might consider developing a major stationary source demonstration to avoid the requirement to adopt nonattainment planning control measures for a particular precursor emitted from existing major stationary sources in the area if the state does not believe that it could comprehensively demonstrate that the precursor does not have a significant contribution, and if major stationary source emissions of the precursor do not make up a very large percentage of the emissions inventory in the area. For example, it might be possible that in a particular area the overwhelming amount of emissions of a certain precursor could originate from mobile or area sources, or both, but not from existing major stationary sources. If the EPA approves a major stationary source precursor demonstration, the attainment plan would still need to evaluate and potentially impose control requirements for the relevant precursor for existing non-major stationary sources, area sources and mobile sources in order to demonstrate expeditious attainment.

It also should be noted that development of an approvable attainment plan that does not include new control measures for a particular precursor would not exempt the state from the requirements to address that precursor with respect to the NNSR program, nor would it excuse the state from the requirement to evaluate and adopt control measures for the precursor in any subsequent Serious area SIPs that could be required for the nonattainment area.

c. NNSR Precursor Demonstration. The state also has the option of

submitting a NNSR precursor demonstration as part of any Moderate or Serious area plan. This specific type of precursor demonstration is the only one of the three demonstrations described in this section that if approved would exempt new and modified major stationary sources of a precursor from regulation under the NNSR permitting program.

Under the NNSR precursor demonstration, the state would need to conduct an analysis to evaluate the sensitivity of $PM_{2.5}$ levels in the nonattainment area to an increase in emissions of a particular precursor in the area, simulating the response of the atmosphere (and associated $PM_{2.5}$ concentrations) to the addition of one or more new or modified stationary sources in the nonattainment area (see Section III.C.3.d of this preamble). Section III.C.3 of this preamble addresses additional issues related to technical analyses for precursor demonstrations.

The EPA believes that this approach to interpreting CAA section 189(e) of the statute as it applies to control requirements for the NNSR program is appropriate because (1) an analysis that evaluates the sensitivity of the atmosphere in an area to increases in emissions would most closely replicate the scenario of concern, where precursor emissions from new major stationary sources or major modifications are *added* to the existing inventory for the area; and (2) this approach would take into consideration the specific atmospheric chemistry and emissions profile that varies from area to area. For example, one nonattainment area may have low emissions of a particular precursor from all existing sources (and corresponding low current ambient contributions from the precursor), but the introduction of a new major stationary source of emissions of that particular precursor could in some cases significantly contribute to the ambient $PM_{2.5}$ levels in the area because other pollutants with which the precursor reacts in the atmosphere could be relatively abundant.

For purposes of the NNSR precursor demonstration, the state is not required to first evaluate the contribution of existing major sources to $PM_{2.5}$ levels that exceed the standard in the area, as would be required by the comprehensive and major stationary source demonstrations. Since NNSR permitting requirements do not apply to existing sources (unless such sources engage in a major modification), the EPA does not believe it is necessary or reasonable to require evaluation of

current emissions from existing major stationary sources as it would not inform the question of whether increases in emissions would significantly contribute to $PM_{2.5}$ levels in the area. Note, however, that the NNSR precursor demonstration is used only to justify an exclusion of sources of the precursor from the NNSR control requirements in the area. A state would need to pair the NNSR precursor demonstration with another type of precursor demonstration to address control requirements beyond NNSR, as described previously for each type of demonstration.

3. Technical Issues Associated With Precursor Demonstrations

a. Geographic Area. The proposal indicated that the emissions inventory to be used as the starting point for the comprehensive, major stationary source, and NNSR precursor demonstrations should represent emissions from sources located in the nonattainment area, and the final rule remains unchanged. The EPA believes that limiting the emissions inventory for these analyses to sources in the nonattainment area is appropriate based on the statutory construction of CAA section 189(e), in which the relevant test is whether “such sources contribute significantly to [$PM_{2.5}$] levels which exceed the standard in the area.” The EPA believes that a reasonable interpretation is that this provision applies to sources in the nonattainment area.

b. Significance Threshold. The proposal described the concept of including a bright-line threshold of 3 percent of the relevant NAAQS in the rule for precursor demonstrations other than the expeditious attainment approach, such that if an air quality contribution was found not to exceed the threshold amount, then it would not be considered significant. The proposal also included an option for no bright-line threshold in the final rule, based on the recognition that all nonattainment area situations are different.

Some commenters supported the bright-line threshold concept, but they suggested thresholds across a broad range, from less than 1 percent of the relevant NAAQS, to up to 5 percent. Some commenters stated that inclusion of a bright-line threshold of 3 percent of the relevant NAAQS was preferred because without such a threshold, states would be unsure about whether their proposed precursor assessment would be acceptable. Other commenters supported having no bright line threshold because the circumstances of each area are unique, and for that reason

each area should be considered on a case-by-case basis.

The EPA found merit in comments supporting both proposed options. The EPA agrees that an insignificance threshold can help avoid situations where lack of clarity may lead to delays in the EPA assessment of precursor demonstrations. At the same time, the EPA understands that PM_{2.5} nonattainment problems are complex and vary greatly based on the facts and circumstances of each area.

After considering the range of comments on this issue and the complexity of the types of analyses that may be conducted for precursor demonstrations, the EPA has decided that the best approach is for the final rule to codify the availability and basic requirements for precursor demonstrations, but to provide technical details (such as a recommended approach for assessing whether a particular air quality concentration threshold can be considered to be insignificant in a given area) in guidance supporting this final rule.

c. Concentration-based Contribution Analysis. The first type of analysis required for the comprehensive precursor demonstration (or, less commonly, the major stationary source precursor demonstration) is an existing source contribution analysis that would demonstrate whether emissions of a particular precursor from all existing sources (or, for a major source precursor demonstration, emissions from existing major sources) in the nonattainment area do not significantly contribute to PM_{2.5} concentrations that exceed the standard in the area. The state should use technically credible approaches for estimating the ambient contribution of emissions of a particular precursor to total PM_{2.5} concentration in the nonattainment area. The EPA anticipates that the forthcoming technical guidance will discuss the possible use of advanced air quality modeling tools to estimate precursor contributions to total PM_{2.5} concentrations in an area. For example, several photochemical air quality models (e.g., Community Multi-Scale Air Quality Model (CMAQ) and the Comprehensive Air Quality Model with Extensions (CAMx)) can be used to quantify the contributions of precursor emissions to PM_{2.5} concentrations in the area.⁵³

Other techniques such as the analysis of chemical speciation data and

emissions inventories also may be appropriate for determining the contribution of a particular precursor to PM_{2.5} concentrations. For example, SO₂ emissions and measured sulfate concentrations (in the form of ammonium sulfate or other forms) may be small in a particular nonattainment area. A simple analysis of measured species concentrations (attributable to a particular precursor) combined with nonattainment area emissions and other relevant data analyses may be sufficient to show that a precursor does not contribute significantly to PM_{2.5} concentrations in the area.

d. Sensitivity-based Contribution Analysis. A second type of analysis may also be used in developing comprehensive precursor demonstrations (or, less commonly, major source precursor demonstrations). This type of analysis is a sensitivity-based contribution analysis that would demonstrate the degree to which concentrations in the nonattainment area are sensitive to decreases of a precursor. Changes in PM_{2.5} concentrations at a particular location often will not be linear with respect to changes in PM_{2.5} precursor emissions; therefore, sensitivity analyses are useful for better understanding the complexity and variability of the atmospheric chemistry affecting PM_{2.5} concentrations in different areas across the country. A sensitivity-based contribution analysis evaluating the effect of precursor emissions reductions could be used in the event the state cannot demonstrate via the concentration-based analysis that sources of a particular precursor have an insignificant contribution to PM_{2.5} levels in an area.

The EPA also requires a sensitivity-based analysis as the means for conducting the NNSR precursor demonstration. In this case, in contrast to the assessment of decreases described for the comprehensive (or major source) precursor demonstration for existing sources, the appropriate sensitivity analysis is one that evaluates the impact of precursor emissions *increases*—without the need for a separate evaluation of existing source contribution to PM_{2.5} concentrations. This analysis is clearly most appropriate for NNSR, which is a program that governs emissions increases. Thus, the final rule requires that such an analysis must be used if a state chooses to submit a NNSR precursor demonstration.

The EPA states in the final rule that a sensitivity-based analysis is an appropriate approach for understanding whether emissions of a precursor make an insignificant contribution to PM_{2.5} levels in an area. Several main

components of PM_{2.5} are secondarily formed in the atmosphere and are the result of chemical reactions between various PM_{2.5} precursors. In some areas, one precursor may be abundant while a second precursor, with which it primarily reacts, may be less abundant. In such cases, a sensitivity analysis may find that reducing emissions of the second, less abundant precursor (the “limiting” precursor) may be generally more effective for reducing PM_{2.5} concentrations. It may also find that increasing emissions of the less abundant precursor may be more effective at increasing PM_{2.5} concentrations than a comparable tonnage increase of a more abundant precursor.

In another type of area, the PM_{2.5} concentrations that exceed the standard may be commonly dominated by primary PM_{2.5} emissions rather than by secondarily formed PM_{2.5}. In such an area, a sensitivity analysis may be able to demonstrate that sources of a particular precursor in the nonattainment area do not contribute significantly to PM_{2.5} levels that exceed the standard, and that the potential air quality improvement from reducing emissions of the precursor in the area may be limited.

Thus, the most effective precursor strategies for reducing PM_{2.5} concentrations as part of attainment planning will vary from area to area, depending upon which specific precursors play a role in forming or limiting PM_{2.5} formation in the particular area. The EPA therefore believes that it is a reasonable interpretation of the statute to allow a precursor to be excluded from control requirements if the PM_{2.5} concentration in the area is insensitive to decreases of that precursor.

For states that choose to develop an optional precursor demonstration, the final rule provides that in addition to the basic requirement to do a concentration-based contribution analysis, the state may choose to develop a sensitivity-based contribution analysis evaluating potential emissions reductions for either a comprehensive precursor demonstration or a major stationary source demonstration intended to show that emissions reductions of the particular precursor are not effective in reducing PM_{2.5} levels that exceed the standard in the area. As noted previously, the EPA expects to recommend approaches for assessing whether a particular air quality concentration threshold can be considered to be insignificant in a given area. If a concentration-based contribution analysis conducted for

⁵³ For more information on CMAQ, see <http://www.epa.gov/air-research/community-multi-scale-air-quality-cmaq-modeling-system-air-quality-management>. For more information on CAMx, see <http://www.camx.com/>.

either a comprehensive precursor demonstration or a major stationary source precursor demonstration shows that the contribution from a precursor is less than a particular threshold which may be considered insignificant at each PM_{2.5} monitor in the area, then the EPA could approve the concentration-based contribution analysis. However, if a concentration-based contribution analysis cannot be approved (*e.g.*, shows that the contribution of a precursor to PM_{2.5} levels in the area is not less than such a threshold at one or more monitors), then the overall precursor demonstration still could be approved, but only if the state also provides an appropriate sensitivity-based contribution analysis. If the sensitivity-based contribution analysis shows that the reduction in PM_{2.5} concentration at each PM_{2.5} monitor resulting from an emission reduction level that would not exceed such a threshold, then the EPA could approve the overall precursor demonstration, and the state would not be required to adopt control requirements for the precursor or address the precursor for attainment planning purposes.

In evaluating whether it would be appropriate to exclude sources of any precursors from NNSR regulation in a nonattainment area, it is important to understand the sensitivity of the atmosphere to potential increases in precursor emissions that could result from major source growth (from both new sources and major modifications at existing major sources) in the nonattainment area. For example, in some circumstances, adding a few hundred tons of a “less abundant” precursor to an area could result in a significant increase in PM_{2.5} concentrations even if there are currently very few existing major sources of the precursor in the area. In contrast to the emissions reduction analyses described for attainment planning purposes, sensitivity analyses that consider the effect of potential emissions increases of a particular precursor in the nonattainment area will help the state and the EPA to understand the potential response of PM_{2.5} concentrations to increased emissions in the area in order to assess whether the contribution from such increases is not significant under CAA section 189(e). In assessing whether a state precursor demonstration (*i.e.*, for attainment planning or for NNSR) can be approved, the EPA will consider the air quality changes estimated in the state’s technical sensitivity analyses, their relationship to thresholds developed under any EPA-

recommended approaches (including any thresholds that EPA may recommend), and any other information presented by the state.

4. Procedural Considerations

a. Consultation and Public Review. The EPA anticipates that a state’s development of an approvable PM_{2.5} precursor demonstration will require a substantial level of effort and consultation with the EPA. Such a demonstration by the state would likely involve technically rigorous and complex analyses, such as air quality modeling and ambient data analyses. Accordingly, the EPA strongly recommends that any state that is considering limiting the applicability and associated control strategy decisions only to specific precursors, either for the attainment plan, for the NNSR permitting program, or for both, should develop a precursor demonstration early in the attainment plan development process. The EPA is committed to consulting with states on designing technically appropriate precursor demonstrations consistent with EPA technical guidance. If a state chooses to develop a precursor demonstration, it must be submitted to the appropriate EPA regional office no later than the date of submission of the relevant attainment plan or NNSR program revision; an earlier submission is preferable. For example, if a state submits the Moderate area plan elements no later than 18 months from the date of designation (as discussed in Section IV.A of the preamble), it should submit any precursor demonstration no later than this same date. In its review of any precursor demonstration provided by a state, the EPA will consider all relevant information.

The critical first step in any precursor analysis is the development of a comprehensive inventory of all precursor emissions in the nonattainment area. A state will not be able to reasonably determine whether reductions of a given PM_{2.5} precursor are needed for expeditious attainment, or whether sources of such precursor are insignificant contributors to PM_{2.5} levels above the standard in an area, unless the state has adequately accounted for all nonattainment area emissions in its emissions inventory. (*See* section IV.B of this preamble for more details on emission inventory requirements.)

In the preamble to proposed rule, we indicated that if a state developed a precursor demonstration as part of its draft attainment plan or NNSR program submission, then in accordance with the state rulemaking process, the demonstration would be subject to

public review at the state level. We also stated that, as required under any rulemaking process, the state had to consider and provide a response in the rulemaking record to any information or evidence brought forward by commenters during the state’s SIP planning, development and review process. By ensuring that this important issue was explicitly addressed and supported in any attainment plan or NNSR program revision submitted to the EPA, the EPA could better evaluate the precursor demonstration in accordance with its obligations under the CAA. The EPA believes these are sound procedural steps for a state rulemaking process, and the final rule includes similar language requiring public review of any proposed precursor demonstration.

If a state chooses to develop a comprehensive precursor demonstration or major stationary source precursor demonstration for a nonattainment area, it must submit a concentration-based contribution analysis and, if applicable, a sensitivity-based contribution analysis conducted for the area. In cases where a sensitivity-based analysis was developed the concentration-based analysis must also still be submitted. Although the rule clearly provides that the precursor demonstration requirement may still be satisfied in such cases, the information in the concentration-based analysis will help inform review of the overall demonstration by the EPA. Similarly, the data from the concentration-based analysis should be available in the public record because it will help inform the review of the overall precursor demonstration by the public. *See* 40 CFR 51.1006(b).

b. Precursor Demonstration to be Reevaluated for Each New State Implementation Plan. There may be situations where the EPA approved a Moderate area plan that excluded a precursor from regulation from one or more requirements based on an approvable precursor demonstration, and then the area is reclassified as a Serious area, triggering an additional plan submission requirement. (Section V of this preamble provides additional detail on reclassification of areas from Moderate to Serious under subpart 4.) In addition, an area that had been reclassified as Serious later may be required to submit one or more additional SIPs if it obtains an extension of the Serious area attainment date, or if it fails to attain the standard by the end of the tenth year after designation. For a state seeking to continue a precursor exclusion in a subsequent attainment plan or NNSR program

submission, the final rule requires the state to assess the appropriateness of continuing the exclusion by providing a new precursor demonstration updated to reflect the type of plan and the conditions in effect when the new plan is submitted.

When an area is reclassified to Serious, existing sources of all PM_{2.5} precursors in the area are again presumptively subject to evaluation for BACM/BACT control measures and potential future control requirements, unless a new precursor demonstration is developed and approved as part of the Serious area plan. As noted in the discussion of the provisions for excluding sources of precursors from certain Moderate area requirements based on an expeditious attainment demonstration, this option is not available for Serious areas. Accordingly, if the state seeks to submit an updated precursor demonstration for a Serious area, at this stage it must submit a comprehensive, major stationary source, or NNSR precursor demonstration. Regardless of the type of demonstration(s) provided in the Moderate area plan, the final rule requires that the state must submit a reevaluated and updated precursor demonstration for the Serious area plan. The reason for this is that the Serious area plan would be due several years after the submission of a state's original precursor demonstration, and over that period, substantial emissions changes could have occurred that might call into question the basis of the previous precursor demonstration. In addition, because the area failed to attain by the Moderate area attainment date, it is reasonable and appropriate to require the state to reconsider and update its prior precursor demonstration. The final rule also requires similar updates for each successive plan beyond the initial Serious area plan (such as a revised Serious area plan for an area that fails to attain by the end of the tenth calendar year after designation). The EPA recommends that in developing a revised precursor demonstration, the state should consider changes in a number of factors, including: Changes in emissions inventory levels due to implementation of control programs, growth in emissions, and changes in emission estimation methodologies; recent ambient air quality concentrations; fine particle composition and the sensitivity of the atmosphere to increases and decreases of different precursors; advances in technical tools and modeling techniques to assess the effectiveness of precursor reductions; and advances in control

technologies and emission reduction programs.

5. Comments and Responses.

Comment: With regard to whether the existing source contribution analysis or the sensitivity-based contribution analyses should be required if a state opts to submit a precursor demonstration, a number of commenters supported only the sensitivity analysis because they believed the analysis would help identify the control measures that are most effective at reducing PM_{2.5} concentrations. Some commenters noted that conducting a "zero-out" analysis (*i.e.*, simulating the change in atmospheric chemistry and PM_{2.5} concentrations due to a hypothetical removal of 100 percent of the emissions of a precursor from the inventory) is not appropriate for a sensitivity analysis because the response of the photochemical grid model is highly non-linear under such circumstances.

Another group of commenters supported requiring only the concentration-based existing source contribution analysis because only that analysis would address the question alluded to in the statute, which is whether sources of the precursor contribute significantly to levels which exceed the standard in the area. These commenters stated that sensitivity-based analyses reflect localized conditions and do not represent a consistent effect across an air basin. The commenters suggested that sensitivity analyses might be considered to inform what pollutants are most cost-effective to control, but believed that this is dubious because the fact that certain pollutants are very abundant is likely the result of a history of under-regulation. They suggested that it actually may be cheaper to control the more abundant pollutant than the less abundant pollutant in order to achieve an equal amount of air quality improvement.

Response: The EPA agrees with commenters who suggested that the rule should closely align with the statutory language in CAA section 189(e) of subpart 4 and include provisions for evaluating the contribution of existing sources to PM_{2.5} levels which exceed the standard in the area. For this reason, the final rule states that the existing source contribution analysis should be required for any comprehensive precursor demonstration or major stationary source precursor demonstration seeking to exempt a precursor from attainment planning requirements.

The EPA also believes that a sensitivity-based contribution analysis is consistent with the language and

intent of CAA section 189(e). As applied to attainment plans, CAA section 189(e) allows states to evaluate whether PM_{2.5} precursors significantly contribute to levels which exceed the standard in the area. The intent of CAA section 189(e) in applying control requirements to PM_{2.5} precursors is to ensure expeditious attainment of the standard. However, if conditions in a particular area are such that control of sources of one or more precursors does not reduce PM_{2.5} concentrations in the area, then those controls will not help the area attain (expeditiously or otherwise). Therefore, the EPA disagrees with commenters who argue that sensitivity-based contribution analyses are not appropriate for determining if precursors do not significantly contribute to PM_{2.5} levels in the area. The EPA believes that sensitivity-based contribution analyses can be useful for determining whether adoption of control requirements for sources of a particular precursor would be effective in reducing PM_{2.5} concentrations, and can be useful for determining whether potential emissions increases under the NNSR program would lead to insignificant air quality changes. For this reason, the final rule allows states to conduct sensitivity-based contribution analyses for the comprehensive, major stationary source, and NNSR precursor demonstrations.

Comment: Some commenters expressed support for the precursor option from the proposal (*i.e.*, Option 3) that would have allowed for an expeditious attainment precursor demonstration to be deemed to demonstrate under CAA section 189(e) that emissions of the precursor do not need to be addressed for all major stationary source requirements, such as the NNSR program.

Response: Upon further consideration of this potential approach, the EPA decided that it would not be appropriate to include such an approach in the final rule. The reason for this is that an expeditious attainment planning analysis on its own would determine that the area could attain the standard by the Moderate area attainment date without new control requirements for sources of a particular precursor, but it would not address the potential impact of increased emissions of the precursor in the area due to new or modified sources, as is reasonably needed under the NNSR precursor demonstration. The evaluation of controls required for expeditious attainment does not consider what happens if new sources move into an area. Thus, while a state might be able to show that controlling existing sources of a precursor does not

advance attainment, the analysis would not determine whether a new major source of that precursor might have a significant contribution to air quality. The EPA believes it is important for purposes of CAA section 189(e) and our overall environmental goal under the NNSR program to evaluate emissions increases. Consequently, the EPA has revised the details of the specific types of demonstrations to include a specific stand-alone demonstration for purposes of exempting new major stationary sources and major modifications of a precursor from regulation under the NNSR permitting program.

IV. Requirements for PM_{2.5} Moderate Nonattainment Area Plans

Sections 189(a), (c), and (e) of the CAA require that Moderate area attainment plans contain the following: (i) An approved permit program for construction of new and modified major stationary sources (CAA section 189(a)(1)(A)); (ii) a demonstration that the plan provides for attainment by no later than the applicable Moderate area attainment date or a demonstration that attainment by that date is impracticable CAA (section 189(a)(1)(B)); (iii) provisions for the implementation of RACM and RACT no later than 4 years after designation (CAA section 189(a)(1)(C)); (iv) quantitative milestones that will be used to evaluate compliance with the requirement to demonstrate reasonable further progress (RFP) (CAA section 189(c)); and, (v) evaluation and regulation of PM_{2.5} precursors (in general to meet RACM and RACT and other attainment planning requirements, and as specifically provided for major stationary sources under CAA section 189(e)). In addition, subpart 1 requirements for attainment plans continue to apply to PM_{2.5} nonattainment areas unless they are superseded by subpart 4 provisions and include the following: (i) A description of the expected annual incremental reductions in emissions that will demonstrate RFP (CAA section 172(c)(2)); (ii) emissions inventories, as necessary (CAA section 172(c)(3)); (iii) other control measures (besides RACM and RACT) needed for attainment (CAA section 172(c)(6)); and, (iv) contingency measures (CAA section 172(c)(9)). The EPA notes that its longstanding guidance on interpreting these statutory requirements is embodied in the General Preamble and the Addendum.⁵⁴

⁵⁴ See 57 FR 13498, 13536, 13537, 13538, 13539, 13540, 13541, 13542, 13543, 13544 and 13545 (April 16, 1992); and 59 FR 41988 (August 16, 1994).

The preamble for the proposed rule presented several interpretations of these provisions, and further explained where its proposal varies from past EPA guidance and the reasons for the variance. The following sections of this preamble explain the EPA's final approach and, where different from the proposal, also explain EPA's reasons for finalizing an amended approach. This final rule reflects our careful consideration of the numerous thoughtful comments we received from air agencies, who are responsible under the CAA for these implementation activities, and a variety of other stakeholders.

A. Plan Due Dates

1. Summary of Proposal

The EPA proposed to require that all Moderate area plan elements for a nonattainment area be submitted by the state no later than 18 months from the effective date of designation. The attainment plan submission would thus include all necessary plan elements required under CAA subparts 1 and 4.

2. Final Rule

The final regulations at 51.1003(a) require all Moderate nonattainment area elements to be submitted by no later than 18 months from the date of designation, as proposed. Section 189 of the CAA specifies the schedule by which states must submit attainment plans for the PM_{2.5} NAAQS. Specifically, CAA section 189(a)(2)(B) requires states to submit an attainment plan that meets Moderate area attainment plan requirements no later than 18 months from the date of nonattainment designation.⁵⁵ While subpart 1 of the CAA could potentially be interpreted to authorize the EPA to provide up to 3 years after designation for states to submit certain attainment plan elements, the EPA believes that such an interpretation would be inconsistent with the specific deadlines

⁵⁵ The EPA notes that Congress provided different statutory deadlines for submission of attainment plans under subpart 1 and subpart 4. Under section 172(b) of the CAA, the EPA is directed to establish the date for the attainment plan submission, but it can extend no later than 3 years from the date of a nonattainment designation. By contrast, under CAA section 189(a)(2)(B), the statute provides that states must make the attainment plan submissions within 18 months after designation. Due to the December 2013 court decision in *NRDC v. EPA*, however, the EPA promulgated an alternative submission date of December 31, 2014, for attainment plans for the 1997 PM_{2.5} and 2006 PM_{2.5} NAAQS in order to provide a reasonable, prospective due date for attainment plans that must comply with subpart 4 requirements and to clarify the requirements that a state must meet prior to redesignation of a PM_{2.5} nonattainment area. See 79 FR 31566 (June 2, 2014).

that Congress imposed in subpart 4. The EPA concludes that all subpart 1 and subpart 4 nonattainment area requirements should be considered together in order to facilitate state development, and EPA review, of a comprehensive plan to attain the PM_{2.5} NAAQS in a given nonattainment area. In fact, the EPA finds that meeting key subpart 1 requirements within the 18-month timeframe of subpart 4 is fundamentally necessary for the state to develop an approvable plan. For example, the state must develop an emissions inventory (or inventories) either before or at the same time as the other attainment plan elements due under subpart 4 because the information contained in the emissions inventory is critical for development of other elements of the Moderate area attainment plan, such as its precursor analysis, analysis of RACM and RACT and additional reasonable measures, and attainment demonstration modeling. The EPA's ability to evaluate the submitted attainment plan therefore will be impaired if the state does not submit all the required plan elements at the same time.

3. Comments and Responses

Comment: Commenters suggested that the EPA should interpret the statute to allow more time for states to develop and submit contingency measures.

Response: As discussed earlier in this section, the EPA believes that it would be inconsistent with the specific deadlines that Congress imposed in subpart 4 to allow contingency measures to be submitted later than the other elements of the attainment plan. Contingency measures need to be adopted and ready for rapid and timely implementation in the event a nonattainment area fails to meet RFP requirements or fails to attain the PM_{2.5} NAAQS by the applicable attainment date. The state's evaluation of what emissions controls are appropriate to meet the contingency measure requirement is closely related to other aspects of the attainment plan, such as the pollutants and sources to be addressed in meeting the RACM/RACT requirements, and the amount of emissions reductions that the contingency measures should achieve, based upon the facts and circumstances of the attainment plan for the area. The same types of facts and analyses that are necessary for the other elements of an attainment plan are directly relevant to the development of contingency measures.

Although nothing in the CAA prohibits states from making separate attainment plan submissions to meet the

individual required elements for attainment plans in advance of the required date, the EPA presumes that development and submission of all of the attainment plan elements simultaneously will be most efficient, both for the state and for the EPA in reviewing the state's submission. A Moderate area implementation plan with a single SIP submission due date will be less administratively burdensome than a program with two SIP submission due dates. Under an approach with two submissions, the state would likely need to issue two sets of proposed regulations, hold two sets of public hearings, and respond to two sets of public comments, rather than dealing with all of these requirements in one comprehensive action. Likewise, the EPA would have two separate submissions to review and two sets of proposed and final actions to publish in the **Federal Register** for every Moderate nonattainment area. Thus, for the reasons outlined earlier, the final rule includes a single Moderate area attainment plan submission deadline of 18 months after designation. Accordingly, the areas designated as nonattainment for the 2012 PM_{2.5} NAAQS (with an effective date of April 15, 2015) are required to submit Moderate area attainment plans to the EPA no later than October 15, 2016. *See* 40 CFR 51.1003(a).

B. Emissions Inventory Requirements

1. Summary of Proposal

In the proposal, the EPA proposed for both Moderate and Serious areas to require both a "base year inventory for the nonattainment area" and an "attainment projected inventory for the nonattainment area." The proposal spelled out a list of requirements for each of these inventories. The proposal also specified, based on the timing requirements of CAA section 172(b), that the emissions inventories required for a Moderate area must be submitted within 18 months after the effective date of the designation of the nonattainment area.

The EPA proposed that the base year inventory for the nonattainment area: (a) Be required to represent one of the 3 years used for designations or another technically appropriate year; (b) include actual emissions of all sources within the nonattainment area; (c) be annual total or average-season-day emissions in accordance with the NAAQS violation(s) (annual and/or 24-hour); (d) include direct PM_{2.5} (filterable and condensable) as well as all scientific PM_{2.5} precursors; (e) follow the Air Emissions Reporting Requirements

(AERR), 40 CFR part 51, subpart A for the emissions thresholds for point sources; (f) use the level of detail as prescribed by the AERR; and (g) still meet the public review requirements even if submitted as a separate plan.

The EPA further proposed that the attainment projected inventory for the nonattainment area (a) be required to represent projected emissions in the first year for which attainment is demonstrated by the modeled attainment demonstration; (b) include projected emissions of the same sources included in the base year inventory for the nonattainment area; (c) use the same temporal period as the base year inventory (annual or average-season-day); (d) include the same pollutants as the base year inventory; (e) report as point sources the same sources treated as point sources in the base year inventory; (f) be consistent in inventory detail with the base year inventory; and (g) still meet the public review requirements even if submitted as a separate plan.

2. Final Rule

The final regulations at 51.1008 provide the inventory requirements for Moderate areas. The EPA received a number of comments on the emissions inventory requirements for Moderate areas. Commenters both supported the provisions of the proposed rule and objected to some aspects of the inventory requirements. The EPA is finalizing all of the proposed Moderate area requirements with some modifications based on comments. Specifically, the definition of what can constitute a seasonal inventory has been made more flexible to accommodate certain cases, as explained in Section IV.B.2.c of this preamble.

Pursuant to its authority under section 110 of title I of the CAA, the EPA has long required states to submit inventories of the emissions of criteria pollutants and their precursors. The EPA codified these requirements in 40 CFR part 51, subpart Q in 1979 and amended them in 1987. Additionally, the 1990 CAA Amendments revised many of the provisions of the CAA related to attainment of the NAAQS and the protection of visibility in mandatory Class I federal areas (certain national parks and wilderness areas). These revisions established new emissions inventory requirements applicable to areas that were designated nonattainment for certain pollutants. In the case of PM, Congress did not create a specific emissions inventory requirement in subpart 4 that would supersede the emissions inventory requirement under subpart 1. Thus, the

CAA section 172 (c)(3) emissions inventory requirements continue to apply, and that provision explicitly requires "a comprehensive, accurate, and current inventory of actual emissions of the relevant pollutants" in the nonattainment area. In addition, the specific attainment plan requirements for the PM_{2.5} NAAQS set forth in CAA section 189(a) and associated modeling requirements make an accurate and up-to-date emissions inventory a critical element of any viable attainment plan. Because of the nature of PM_{2.5}, the EPA concludes that the statutory requirements for emissions inventories need further elaboration through additional regulatory requirements as described later.

Emissions inventory data serve as the foundation for various types of analyses performed by states and by the EPA. For example, these data enable states to evaluate the degree to which different emissions sources contribute to the nonattainment problem in a given nonattainment area and enable states to estimate the air quality improvement that can be achieved through different control measures. States should use the best available, current emissions inventory information for attainment plan development, because high quality emissions inventory data are essential for the development of an effective control strategy. To assist states in preparing complete, high quality inventories, the EPA provides guidance for developing emissions inventories called "Emissions Inventory Guidance for Implementation of Ozone and Particulate Matter National Ambient Air Quality Standards (NAAQS) and Regional Haze," which is available from <https://www.epa.gov/air-emissions-inventories/emissions-inventory-guidance-documents>. This guidance is commonly called the "SIP Emissions Inventory Guidance." The EPA recommends that states consult this guidance while developing the emissions inventories to meet statutory and regulatory requirements.

a. Inventory Requirements. As explained in the proposed rule, CAA section 172(c)(3) requires states to submit an emissions inventory and periodic revisions thereof with an attainment plan. 80 FR at 15363. In addition, pursuant to CAA section 301, the EPA has authority to promulgate regulations as necessary for the implementation of the PM_{2.5} NAAQS, including requirements pertaining to emissions inventories. In this final action, the EPA is establishing several different inventory requirements that the agency has determined are necessary

for the proper implementation of the PM_{2.5} NAAQS in attainment plans.

There are three key facets of the emissions inventory requirements, as described later: (i) The type of inventories required; (ii) the timing of submission of these inventories; and (iii) the content of these inventories. These content requirements are described in this section; however, the EPA's rationale for these content requirements is in some cases further described in subsequent sections of this document.

First, states must submit at least two separate and distinct nonattainment area emissions inventories as elements of an attainment plan. The first emissions inventory is relevant for assessing the current or base year emissions from sources located in the nonattainment area; the second emissions inventory is a projected inventory relevant for assessing emissions in the target attainment year in the nonattainment area. The first type of inventory is called the "base year inventory for the nonattainment area," and the second type of inventory is called the "attainment projected inventory for the nonattainment area." See 40 CFR 51.1000. The base year inventory for the nonattainment area is necessary for development and evaluation of various elements of the attainment plan, such as the determination of appropriate pollutants, sources, and emission controls addressed in other elements of the attainment plan for the nonattainment area. The attainment projected inventory is necessary to implement the attainment demonstration requirement of CAA section 189(a)(1)(B), and it also may be used as part of meeting the RFP requirement (see Section IV.F of this preamble). The need for the attainment projected inventory also stems from the need for both the EPA and the public to be able to compare, during their reviews of the attainment plan, the base year inventory against the attainment projected inventory for the nonattainment area. For these reasons, this rule establishes a regulatory requirement at 51.1008 that Moderate area attainment plans must include a base year inventory for the nonattainment area and an attainment projected inventory for the nonattainment area.

Second, as noted in Section IV.A of this preamble, to meet the statutory requirements for submission of certain attainment plan elements required under subpart 4, the EPA believes that states must meet the same submission schedule for emissions inventories as for the other elements of an attainment

plan, *i.e.*, within 18 months after the effective date of the designation of the nonattainment area. This schedule must apply to both of these emissions inventories because they are necessary for effective evaluation of the attainment plan as a whole. Consequently, under the authority of CAA section 172(b), this rule establishes a regulatory requirement for Moderate areas that states must submit the required base and projected emissions inventories by 18 months after designation.

Third, the EPA is establishing specific requirements for both the base year inventory for the nonattainment area and for the attainment projected inventory for the nonattainment area in order to implement the PM_{2.5} NAAQS most effectively. Accordingly, this final rule requires that the base year inventory for Moderate nonattainment areas must meet the following minimum criteria 1 through 7:

(1) The inventory year must be one of the 3 years used for designations for the relevant PM_{2.5} NAAQS or another technically appropriate inventory year. Another inventory year may be chosen under specific circumstances (*e.g.*, to account for a change in sources in the nonattainment area, changes in nonattainment area boundaries, to allow the base year to be consistent with the base year needed for the conformity rule, or significant time lag between designations and preparation of the inventory) with consultation from the appropriate EPA Regional Office. This requirement is intended to ensure that the inventory will adequately represent the emissions sources that contributed to the nonattainment designation for the area. See 40 CFR 51.1008(a)(1)(i).

(2) The inventory must include actual emissions of all sources within the nonattainment area. This requirement stems directly from the language in CAA section 172(c)(3). Sources outside of the nonattainment area are explicitly not included in the section 172(c)(3) requirement with the words "in such area." Furthermore, the EPA interprets the Act requirement for "actual emissions from all sources" in CAA section 172(c)(3) as intending to include all emissions that may contribute to the formation of PM_{2.5} within the nonattainment area. This means that the inventory must include point sources, stationary nonpoint sources,⁵⁶ mobile

⁵⁶ Point sources are the same as major stationary sources, and the term indicates sources that must be reported at an individual facility with process-level details. Nonpoint sources are all other stationary sources, and the term indicates sources that are reported as a county total. The definitions for this rule (see 51.1000) refer to the definitions in the AERR (40 CFR part 51, subpart A). Nonpoint

sources, prescribed fires and wildfires. The EPA encourages states and tribes to work together to ensure that the information used in developing the base year inventory for the nonattainment area is inclusive of all emissions from the designated nonattainment area, including emissions from sources in tribal areas located therein. See 40 CFR 51.1008(a)(1)(ii).

(3) The emissions must be reported as annual total emissions, average-season-day emissions, or both, as appropriate for the relevant PM_{2.5} NAAQS. The rationale for the type(s) of emissions provided must be included as part of the attainment plan. When seasonal emissions are included, the rationale for the seasonal period must also be included as part of the attainment plan. A discussion of the EPA's rationale for including the option of seasonal or annual inventories is provided in Section IV.B.2.c of this preamble. See 40 CFR 51.1008(a)(1)(iii).

(4) As discussed earlier and consistent with past implementation rule requirements, the inventory must include emissions of direct PM_{2.5} (both filterable PM_{2.5} and condensable PM_{2.5}, provided as separate components), as well as all scientific PM_{2.5} precursors (SO₂, NO_x, VOC and ammonia). A discussion of the EPA's rationale for including this requirement is provided in Section IV.B.2.d of this preamble. See 40 CFR 51.1008(a)(1)(iv).

(5) States must follow the Air Emissions Reporting Requirements (AERR), 40 CFR part 51, subpart A criteria for emissions thresholds for states to use to determine which emissions sources must be reported as point sources. This requirement is consistent with past implementation rules and is needed to specify whether emissions must be submitted as specific major source stationary facilities with detailed emissions processes or whether emissions can be provided as county totals (*i.e.*, area sources, also called nonpoint sources). A discussion of the use of 40 CFR part 51, subpart A for the emissions thresholds is provided in Section IV.B.2.e of this preamble. See 40 CFR 51.1008(a)(1)(v).

(6) The level of detail of the emissions included in the inventory must be consistent with the detail required by 40 CFR part 51, subpart A. For example, all emissions must be subdivided to individual emissions processes within a facility or county. While these details should underlie the emissions

sources include minor sources, synthetic minor sources, and area sources such as residential heating and other sources where it is not realistic to estimate emissions from each emissions point.

inventory, this information can be summarized for other elements of the attainment plan. This requirement is consistent with the remanded 2007 PM_{2.5} Implementation Rule and is needed to define the data reporting elements (*i.e.*, how they are reported) as opposed to the emissions values (*i.e.*, how much emissions derive from each source or source category) of the emissions inventories submitted to the EPA. *See* 40 CFR 51.1008(a)(1)(vi).

(7) If the base year inventory for the nonattainment area is submitted to the EPA as a separate plan submission (*i.e.*, severed from the overall attainment plan and provided separately), the inventory must still meet the notice and public hearing requirements of CAA sections 110(a)(1) and 110(a)(2).

For the attainment projected inventory for Moderate nonattainment areas, this final rule also establishes specific requirements necessary to implement the PM_{2.5} NAAQS effectively. Accordingly, the attainment projected inventory must meet the following minimum criteria 1 through 7:

(1) The year of the projected inventory must be the most expeditious year for which projected emissions show modeled PM_{2.5} concentrations below the level of the NAAQS, consistent with the requirement for expeditious attainment by no later than the applicable deadlines provided in the statute. *See* 40 CFR 51.1008(a)(2)(i).

(2) The emissions must be projected emissions from the same sources included in the base year inventory for the nonattainment area and any new sources projected to locate within the boundaries of the nonattainment area. The projected emissions should be the best available representation of expected emissions, and thus should take into account emissions growth and contraction, facility closures, new facilities, new controls and other changes in emissions forecast to occur between the base year and the attainment year. In deciding what factors are relevant, states should consider factors affecting projected emissions that could significantly alter the conclusions of the modeled attainment demonstration. *See* 40 CFR 51.1008(a)(2)(ii). For prescribed and wildfire emissions, Section IV.D.3.b of this preamble describes in more detail the appropriate way to handle these sources in the attainment projected inventory.

(3) The temporal period of emissions must be the same temporal period (annual, average-season-day, or both) as the base year inventory for the nonattainment area. *See* 40 CFR 51.1008(a)(2)(iii).

(4) Consistent with the base year inventory for the nonattainment area, the inventory must include all emissions of direct PM_{2.5} (both filterable and condensable PM_{2.5} provided as separate components), as well as all emissions of the scientific precursors (SO₂, NO_x, VOC and ammonia). *See* 40 CFR 51.1008(a)(2)(iv).

(5) The same sources reported as point sources in the base year inventory for the nonattainment area must also be provided as point sources in the attainment projected inventory for the nonattainment area. Likewise, nonpoint and mobile source projected emissions must also be provided using the same delineations as the base year inventory. *See* 40 CFR 51.1008(a)(2)(v).

(6) The detail of the emissions included must be consistent with the level of detail in the base year inventory (*i.e.*, as required by 40 CFR part 41, subpart A). *See* 40 CFR 51.1008(a)(2)(vi).

(7) If the attainment projected inventory for the nonattainment area is submitted to the EPA as a separate plan submission (*e.g.*, severed from the overall attainment plan and provided separately), then the inventory must still meet all the notice and public hearing requirements of CAA sections 110(a)(1) and 110(a)(2).

b. *Comparison to Inventory Requirements from Earlier PM_{2.5} Implementation Rules.* The 2007 PM_{2.5} Implementation Rule required states to submit specific emissions inventories in connection with the RFP requirements of CAA section 172(c)(2) under subpart 1. In this rule, no specific RFP related inventory is required, but the attainment projected inventory for the nonattainment area also may serve a purpose for evaluation of RFP. Past EPA guidance with respect to RFP requirements under subpart 4 has not explicitly required a separate emissions inventory for this purpose for PM₁₀ NAAQS. Through evaluation of the RFP requirement in connection with this rulemaking, however, EPA has determined that there may be circumstances in which such an approach may be appropriate. For this reason, the EPA describes this issue more fully in Section IV.F of this preamble.

The 2007 PM_{2.5} Implementation Rule also required states to submit a statewide base year emissions inventory as part of the attainment plan. The EPA included the statewide emissions inventory requirement because it was relevant to evaluation of emissions reductions from sources outside of the designated nonattainment area for purposes of RFP. The EPA no longer

interprets the CAA to allow such reductions for purposes of RFP, so this particular form of emissions inventory is not needed for attainment plan for the PM_{2.5} NAAQS. Furthermore, statewide inventories are already required as part of the AERR (40 CFR part 51, subpart A) on a triennial basis. While these inventories do not receive the same level of scrutiny as inventories associated with attainment plans, the EPA believes that this existing statewide inventory requirement is sufficient for understanding the PM_{2.5} nonattainment contributions from areas outside of the nonattainment area, which is a necessary component of modeled attainment demonstrations described in Section IV.E of this preamble.

c. *Seasonal Inventories.* The statute does not explicitly address whether the emissions inventory required under CAA section 172(c)(3) should include emissions throughout an entire calendar year or emissions during some shorter portion of the year that may be appropriate for implementation of a particular NAAQS. In the case of the PM_{2.5} NAAQS, the standards currently include both annual NAAQS and 24-hour NAAQS. With respect to the annual NAAQS, the form of the NAAQS includes monitored ambient PM_{2.5} values at all times throughout the course of the year, and thus an annual emissions inventory is necessarily required for development of an appropriate attainment plan for a given area. In the case of the 24-hour NAAQS, however, the form of the NAAQS is based upon monitored values on particular days with high levels of ambient PM_{2.5}, and in some nonattainment areas those days may occur only during a distinct and definable season of the year. The EPA considers it appropriate to interpret the emissions inventory requirements of the CAA in light of the specific inventory needs that are relevant for the NAAQS in question. For the PM_{2.5} NAAQS, states can meet the inventory requirement with different combinations of temporal resolutions for the emissions. For the annual standard, annual emissions must be submitted. For the 24-hour standard, states must submit either an annual or an average-season-day inventory and optionally may submit both. For a nonattainment area for both the annual and 24-hour standard, states can meet the inventory requirement with only an annual inventory or with both an annual and average-season-day inventory.

In contrast with the annual PM_{2.5} NAAQS, the 24-hour PM_{2.5} NAAQS are designed to protect against peak exposures. Thus, for the 24-hour PM_{2.5}

NAAQS, there are circumstances in which the EPA believes that only seasonal emissions inventories may be useful for attainment planning purposes. This rule at 40 CFR 51.1008(a)(1)(iii) allows states to use seasonal inventories for attainment plan development for attaining the 24-hour PM_{2.5} standard in areas that are designated nonattainment for only the 24-hour standard. Use of a seasonal emissions inventory will also be appropriate only if the monitored violations of the 24-hour PM_{2.5} NAAQS in the area occur during an identifiable season. In the event that it is appropriate to rely on a seasonal emissions inventory, the state should confer with the EPA concerning the exact length of the season and the start and stop dates of the season. The duration and start and stop dates of the season will be an important component of the attainment plan and must be approved by the EPA along with other elements of the attainment plan for a given nonattainment area. Further, this rule requires that seasonal inventories must use average-season-day emissions values for this purpose, defined by 40 CFR 51.1000. The nature of some seasonal PM_{2.5} emissions sources (e.g., residential wood combustion) does not allow for only weekday emissions to be included in the inventory, therefore all days must be included. The state would need to explain the rationale for the duration of the season used for the inventory as part of the attainment plan submission. To justify the use of a seasonal emissions inventory, the state must demonstrate why a seasonal emissions inventory is appropriate for the particular PM_{2.5} nonattainment area in question.

Commenters recommended that the EPA should allow episode-specific inventories, in lieu of seasonal inventories. As a result, the EPA acknowledges in this final rule that, for some source categories, it may be advisable to limit the “season” considered in calculating emissions to an episodic period to reflect periods of higher emissions during periods of high ambient PM_{2.5}. Such an approach could help to ensure the nonattainment area inventory reflects the emissions conditions that led to an initial nonattainment area designation. For example, if nonattainment conditions are associated only with periods of peak emissions from residential wood combustion, then an episodic average for residential wood combustion may be more appropriate than a seasonal average. The resulting seasonal emissions inventory would then have a

mix of the seasonal averages as defined by 40 CFR 51.1000 for most categories, but using a shorter period for the emissions categories that can be justified and an improvement. In such cases, in addition to the requirement to justify the seasonal period, the state must additionally justify the factual basis for the period used to calculate emissions from such categories, and this would be subject to EPA approval. While the EPA encourages using the same averaging period for all sectors for purposes of simplicity, an episodic averaging period may only be needed for a select group of sources or even for a single category of sources. Those special cases must be explained in the emissions inventory part of the state implementation plan [see 40 CFR 51.1008(a)(1)(iii)]. For the purposes of the definitions included in this final rule, all non-annual emissions (whether seasonal or episodic) will be referred to as “seasonal” in this rule.

d. *Pollutant Requirements.* This rule requires that states must submit emissions inventories that include all emissions of direct PM_{2.5} and all emissions of scientific PM_{2.5} precursors: SO₂, NO_x, VOC and ammonia. Furthermore, the inventories must differentiate between the condensable and filterable portions of direct PM_{2.5} emissions, and states must provide this information in the emissions inventories as separate components. As described in Section IV.B.3 of this preamble, commenters disagreed with the EPA’s proposal to require inclusion of ammonia emissions and to require separate reporting of condensable and filterable emissions. The approach being finalized in this rule does not differ from the EPA’s proposal despite these adverse comments.

Section II.B of this preamble describes the background needed to understand the importance of including these precursors in emissions inventories for attainment plan purposes for the PM_{2.5} NAAQS. Emissions information about PM_{2.5} and its precursors is a necessary precondition to meeting other core attainment plan requirements, such as effective evaluation of control measures and adequate demonstration of projected future attainment of the NAAQS through modeling. The EPA notes that, with respect to requiring states to include emissions of direct PM_{2.5} and PM_{2.5} precursors in emissions inventories, the agency is following the requirements it established for the 2007 PM_{2.5} NAAQS Implementation Rule in the past.⁵⁷ Section 172(c)(3) of the CAA explicitly requires states to submit a

“comprehensive, accurate, current inventory of actual emissions of the relevant pollutants” and the EPA continues to believe that to meet these basic statutory requirements for the PM_{2.5} NAAQS, states must address PM_{2.5} and all PM_{2.5} precursors in their emissions inventories.

The EPA requires states to use the best available methodologies for estimating emissions of PM_{2.5} and its precursors.

e. *The AERR Defines the Thresholds, Data Elements and Data Methods.*

Because the provisions of the CAA do not specify the form of the emissions information to be reported to the EPA for meeting the attainment plan inventory requirement under CAA section 172(c)(3), it is necessary for the EPA to prescribe specifically the data elements of that emissions inventory and the attainment projected inventory. The EPA uses the AERR to define basic requirements/parameters of reporting emissions for all pollutants. This approach creates consistency and eases the burden for the states, because states have one basic set of rules that apply to all emissions they have to report to the EPA.

Distinct from the emissions *values* (i.e., how much emissions derive from each source or source category), the emissions *elements* (i.e., how they are reported) refer to the reporting definitions, data codes and required data fields. Under this final rule, states must use the emissions elements from 40 CFR part 51, subpart A in preparing their inventories to be submitted to the EPA for implementing the PM_{2.5} NAAQS. It also requires that states use point source thresholds from Appendix A of the same subpart. This is consistent with past requirements for the form of emissions inventories.

In addition to defining the point source thresholds and data elements, 40 CFR part 51, subpart A also requires states to submit emissions information to the EPA. The EPA is not referring to those emissions submission requirements here, but rather to the emissions elements—the definitions, data codes and required data fields. Later, the EPA addresses the issue of whether the emissions values submitted through the AERR are relevant to the inventory requirements of this final rule (see Section IV.B.2.g of this preamble).

As noted earlier, the EPA recommends that states consult the SIP Emissions Inventory Guidance in preparing the inventories required by this rule. In addition to the AERR, this guidance includes definitions for data fields that are not required by the AERR, such as seasonal emissions values and

⁵⁷ 72 FR 20647 (April 25, 2007).

other fields that are optional in the AERR data collection system. The EPA is updating the SIP Emissions Inventory Guidance in coordination with this final rule. It provides specific guidance to states on how to develop base year inventories for the nonattainment area and attainment projected inventories for 8-hour ozone, PM_{2.5}, and regional haze SIPs. While the AERR sets forth requirements for data elements and definitions, the guidance complements these requirements, defines all data elements (even those that are voluntary AERR elements), and indicates how states should prepare and document the data for attainment plan submissions.

In the case of prescribed fires and wildfires, the AERR no longer requires those categories to be submitted, but rather the emissions data can be optionally provided as an "Event" source, which is a day-specific source at a point location. For this rule as described earlier, states are required to include prescribed fires and wildfires for the base year inventory for the nonattainment area and the attainment projected inventory for the nonattainment area. For this rule, states are not expected to use the "Event" detail to meet their inventory reporting requirements. Instead, states can report these fire emissions by county as nonpoint sources are reported.

f. *Emissions Inventories for Support of Modeled Attainment Demonstrations.* This section clarifies the difference between the inventories required to be a part of a state's Moderate area attainment plan submission (as described earlier) and other modeling inventories that are also relevant for attainment planning. While the EPA is not establishing additional modeling inventory requirements in this rule (*i.e.*, for which a state must submit an emissions inventory to the EPA), to meet the attainment demonstration requirements of CAA sections 189(a)(1) and 189(b)(1), states are required to submit either an attainment demonstration (which includes air quality modeling) to show how the area will attain the NAAQS by the applicable attainment date or a demonstration that the area cannot attain by the attainment date. The modeled attainment demonstration requirements for Moderate areas are described fully in Section IV.E of this preamble.

As part of the modeled attainment demonstration, the EPA presumes that states will need to prepare attainment demonstration modeling inventories for both a modeled base year and projected attainment year. Respectively, these are called the "base year (baseline) inventory for modeling" and the

"attainment projected inventory for modeling." These inventories contain emissions for all regions (*i.e.*, not just from sources in the nonattainment area) within the modeling domain being used for the attainment plan modeling demonstration, which typically includes counties and even states outside of the nonattainment area. They include detailed spatial and temporal elements needed to support air quality modeling. States should follow the requirements laid out in Section IV.E of this preamble and the procedures described in the SIP Emissions Inventory Guidance and the Air Quality Modeling Guidance to meet the minimum requirements for documentation and emissions summaries supporting modeling demonstrations.

The base year inventory and projected attainment year inventory include emissions from only within the nonattainment area. The EPA expects that modeling inventories will be consistent with those nonattainment area inventories; however, some exceptions may exist. Where possible, the nonattainment area base year and projected attainment year inventories can be a sum (for annual data) or average (for PM_{2.5} season-day data) of day-specific or hour-specific data used for modeling. In some cases, however, annual or season-day data may not be sufficient for modeling purposes. For example, greater spatial detail (gridded rather than county total) and temporal detail (hourly rather than annual) are needed for on-road mobile modeling inventories as compared to the base year inventory for the nonattainment area. Rather, for the nonattainment area base year inventory, one goal is to allow for the repeatability of the approach in order to create average-season-day or annual inventories to help meet other attainment plan requirements, such as RFP or motor vehicle emissions budgets established for transportation conformity purposes. That goal is not necessarily compatible with the modeling need for greater spatial and temporal detail, which requires much greater effort and expense than is practical for RFP or establishing motor vehicle emissions budgets. In cases where some differences are unavoidable, states should attempt to promote consistency where feasible.

g. *Using AERR (40 CFR part 51, subpart A) Inventory Submission to Meet the Requirement for the Base Year Inventory for the Nonattainment Area.* The AERR includes both triennial and annual statewide reporting requirements, with more extensive reporting requirements for triennial inventory years. All AERR submissions

are required to be made electronically. For the interim annual inventories, reporting is limited to emissions data from only the larger point sources (Type "A" sources), as defined by Appendix A of 40 CFR part 51, subpart A. For the triennial inventories, lower point source thresholds are given in Appendix A, consistent with the definition of major sources in 40 CFR part 70, and data from all other sources of emissions must be reported as from either nonpoint or mobile sources on a county basis.

In the past, some states have incorrectly asserted that their AERR submission meets the requirements for base year inventories required by other implementation rules. To avoid confusion, the EPA explains here the limited circumstances under which the AERR emissions inventories will be considered to meet the base year inventory requirement for Moderate nonattainment areas. The following conditions must be met to use AERR inventories for attainment planning:

(1) The AERR emissions inventory must have gone through the notice and public hearing requirements of CAA sections 110(a)(1) and 110(a)(2).

(2) The AERR emissions inventory includes all sources of emissions and all pollutants required for the base year inventory for the nonattainment area. This is only possible if the year for the base year inventory for the nonattainment area aligns with a triennial AERR year, because the data system implementing the AERR only accepts emissions from point sources and not other source categories in non-triennial years.

(3) The EPA's inventory data system must be accepting data for the inventory year being submitted. Inventories are allowed to be submitted to the AERR for a given year for only a limited time during the development cycle of the National Emissions Inventory.

(4) The AERR submission must include emissions from all sources required for the base year inventory for the nonattainment area consistent with 40 CFR 51.1008(a)(1), and must include mobile source emissions in nonattainment areas (instead of simply providing inputs or other data that is allowed under the AERR). In some cases, the AERR requirement can be met without actually "submitting" emissions; for example, states may elect to accept the EPA estimates for some nonpoint emissions sectors. Accepting EPA emissions does not meet the requirements of CAA section 172(c)(3) or this rule. In addition, the AERR revision finalized in February 2015 (80 FR 8787) replaces the prior requirement of reporting onroad mobile and nonroad

mobile source emissions with a requirement for reporting the input parameters that can be used to run the EPA models to generate the emissions. If choosing to use an AERR submission to meet the base year inventory for the nonattainment area requirement, the state should submit the nonattainment area emissions, irrespective of the options provided to meet the AERR requirements. Because the “statewide” emissions are actually provided for individual point sources and counties, the EPA believes that the AERR submission can be sufficient for most PM_{2.5} nonattainment areas.

h. Mobile Source Emissions Models. A key part of emissions inventory development includes estimating mobile source emissions. For all of the mobile source inventories used for PM_{2.5} NAAQS implementation, states should use the latest emissions models available at the time that the attainment plan inventory is developed.⁵⁸ In general, for states other than California that choose to fulfill various modeling requirements by using the latest EPA emissions model, the latest approved version of the MOVES model should be used to estimate emissions from onroad transportation sources. States should use the latest available planning emission inputs including, but not limited to, vehicle miles traveled (VMT), speeds, fleet mix, SIP control measures and fuels. The current version of MOVES is available at <http://www.epa.gov/otaq/models/moves/index.htm>. The appropriate EPA-approved model(s) should similarly be used for California onroad source emissions.⁵⁹

When using MOVES, states should follow the most current version of the MOVES Technical Guidance, available at <http://www.epa.gov/otaq/models/moves/index.htm>. MOVES includes multiple options for estimating and processing emissions that could result in different emissions inventories. The EPA recommends that states use the same approach in any analysis that compares two or more emissions cases (e.g., different control scenarios, different years). If different approaches are taken for inventories that serve different purposes (for example, between inventories developed for air quality modeling, which may require greater temporal and spatial detail, and inventories used as the motor vehicle

emissions budget), states should seek to understand and minimize any differences in results. For example, an approach may be used for the modeled attainment demonstration that uses gridded temperatures and other meteorological data, but this approach could be too burdensome for use in the base year inventory for the nonattainment area. If a state chooses to use MOVES to create emissions inventories for purposes of RFP and establishing motor vehicle emissions budgets for transportation conformity purposes, it must use the same MOVES approach in the base year inventory for the nonattainment area, and using a straightforward MOVES approach without gridded meteorology is more reasonable for that purpose.

Likewise, if states choose to fulfill various inventory requirements by using the latest EPA emissions model, the most current version of the NONROAD model or its successor must be used for estimates of nonroad mobile source emissions, preferably with state-supplied model input data. States can alternatively develop technologically equivalent or superior state-specific nonroad emissions estimates, but should explain why their approach gives a better estimate than the EPA model. For nonroad sources not estimated by the NONROAD model, the best available methods should be used, and the EPA recommends that states refer to the SIP Emissions Inventory Guidance for more information on emissions from these sources. Links to **Federal Register** documents and policy guidance memos on the latest approved versions of MOVES and NONROAD can be found at <http://www3.epa.gov/otaq/models.htm>.

3. Comments and Responses

Comment: Several commenters pointed out the uncertainties associated with ammonia emissions and organic matter emissions from livestock and fertilizer application sources, including in data developed by the EPA such as the National Emissions Inventory. Commenters pointed to the data available through the National Air Emissions Monitoring Study (NAEMS) for use in developing improved ammonia estimation approaches from livestock activities, and asserted that the EPA cannot move forward with SIP implementation requirements that implicate livestock and poultry farmers without using the NAEMS data. The commenters stated that not only is this technically unsound, but that the idea of moving forward on regulating livestock operations without the most critical tool for establishing requirements is a

violation of the spirit of the consent agreements⁶⁰ and the NAEMS.

Response: The EPA acknowledges that there is some uncertainty in quantifying ammonia emissions and other PM_{2.5} precursors from source categories such as livestock and fertilizer application. This uncertainty extends to the emissions and chemical composition of VOC and PM_{2.5}, which also have an impact on ambient PM_{2.5}. These uncertainties have an impact on attainment demonstrations because they cause uncertainty in the modeling done to demonstrate future attainment of the PM_{2.5} standard. However, the EPA disagrees with the assertion that these uncertainties should eliminate certain pollutants from consideration for control measures or should slow progress on attainment planning.

Emissions uncertainty is a fact of air quality planning and cannot be avoided. Despite uncertainties in inventories of all kinds throughout the NAAQS program, great progress in improving air quality has been made through the attainment planning process and the implementation of control measures selected in part based on modeled attainment demonstrations. While emissions uncertainties remain, enough information is available for PM_{2.5} implementation planning purposes. The requirements contained in this final rule may drive further improvements in our understanding of emissions, and while the EPA strives to provide approaches for estimating emissions from a variety of source categories, the CAA places the burden for developing accurate emissions inventories on the states. The CAA does not allow for implementation of the NAAQS to be put on hold until all emissions uncertainties are eliminated. In fact, in spite of numerous uncertainties, states have developed emissions inventories for PM_{2.5} and PM_{2.5} precursors and performed modeling for PM_{2.5} attainment demonstrations for the previous 1997 and 2006 NAAQS over the last 10 or more years.

Updated emissions estimating methodologies for animal feeding operations are under development using data collected during the period 2007–2009 from representative operations pursuant to the National Air Emissions

⁵⁸ Section 172(c)(3) of the CAA requires that emission inventories be based on the most comprehensive, accurate and current information available. To do so, air agencies should use the most up to date method for estimating emissions.

⁵⁹ At this time, the California onroad mobile model is called EMFAC2014.

⁶⁰ In 2005, the EPA offered animal feeding operations (AFOs) an opportunity to participate in a voluntary consent agreement referred to as the Air Compliance Agreement. Under the Agreement, participating AFOs provided the funding for the National Air Emissions Monitoring Study (NAEMS)—a 2 year, nationwide emissions monitoring study of the animal confinement structures and manure storage and treatment units in the broiler, egg-layer, swine, and dairy industries (see 70 FR 4958).

Monitoring Study.⁶¹ For the 2008 and 2011 national emission inventories, the EPA compiled state and county-level ammonia emissions estimates using information from state and local governments, the USDA Census of Agriculture and National Agriculture Statistical Service, and from existing ammonia emissions models. A new approach in development for use in the 2014 NEI uses the NAEMS data to improve the EPA's approach for estimating county-total emissions. The EPA expects that this update and other uses of the NAEMS data will help to reduce uncertainties in current ammonia inventories and will improve the quality of future emissions inventories needed for implementing the PM_{2.5} NAAQS. The EPA disagrees that implementation planning should wait until NAEMS results are fully available. The EPA continues to make progress in using these data; however, the full use and implementation of new methods based on these data is not a prerequisite for progress on considering ammonia as a PM_{2.5} precursor for the NAAQS implementation purposes. Moreover, in order for a state to demonstrate a precursor's insignificance (as necessary under this rule before excluding it from certain control or planning requirements), in some cases it may need to move forward without waiting until the NAEMS results are fully available. The EPA and USDA are continuing to work collaboratively to better understand agricultural ammonia related emissions in order to more accurately represent the emissions and impacts of ammonia in relation to PM_{2.5}.

Comment: Commenters supported the EPA's proposed approach to require distinct emissions for filterable and condensable PM_{2.5}. Commenters asserted that this proposed requirement created an additional inventory requirement beyond what is already required in the AERR. Commenters also asserted that this requirement places an unnecessary burden on states and industry.

Response: The EPA disagrees with the assertion that an additional inventory requirement has been imposed by this rule. Within the AERR, 40 CFR 51.15(a)(1)(vi) states (with regard to what must be reported): "*Primary PM_{2.5}. As applicable, also report filterable and condensable components.*" The term "also" implies "in addition to total primary PM_{2.5}," and the phrase "as applicable" is intended to mean when such emissions are emitted from the source. This requirement has been in

place since 2008, providing ample time for states to ensure compliance with this reporting requirement in advance of this final rule. Furthermore, the EPA points out that it would be much more difficult for the EPA to assess (as part of evaluating an attainment plan) whether states have met the requirement to include condensable emissions, and thus a complete PM_{2.5} inventory, without the states providing condensable emissions as something separate and distinct from filterable and total PM_{2.5}. In addition, having a complete emission inventory of filterable and condensable PM_{2.5} emissions will enable a state to better identify contributing sources and develop a more effective plan.

The EPA also notes that new electric generating units that are subject to (40 CFR part 60, subpart Da) without PM continuous emissions monitors (CEMs) have to conduct annual testing for condensable PM using Method 202 of appendix M of part 51.

Comment: Some commenters supported the EPA's proposed approach to require an attainment projected inventory for the nonattainment area. Other commenters asserted that such an inventory should not be required because it has not been required before and because the attainment demonstration is sufficient.

Response: The EPA disagrees with the latter commenters, noting that the rationale that such inventories have not been required before is not in and of itself a reasonable basis on which to exclude such a requirement now. The purpose of these inventories is well justified by the need for both the EPA and the public to be able to compare, during their reviews of the attainment plan, the base year inventory to the attainment projected inventory. Without such information, it is extremely difficult for the EPA to assess the projected emissions changes in the nonattainment area that the state asserts contribute to attainment. The attainment projected inventory may also play a role in meeting the RFP requirements of this rule. Furthermore, while the EPA has not explicitly required submittal of an attainment projected inventory in regulation, many states have developed such future year inventories as part of attainment demonstrations and have submitted them as part of PM_{2.5} attainment plans in the past, thus demonstrating their viability and utility.

Comment: Commenters supported the EPA's proposed approach to allow seasonal inventories. Some commenters requested the use of clear language stating an allowance for episode-specific

inventories in lieu of seasonal inventories.

Response: The EPA agrees with the commenters that for some source categories, seasonally averaged winter conditions would not be sufficient to represent the conditions leading to violations of the 24-hour PM_{2.5} standard. As described in Section IV.B.2.c of this preamble, some modifications have been made to the explanation of seasonal inventories to clarify that it would be reasonable to use an episodic average from the modeled attainment demonstration in some cases.

C. Pollutants To Be Addressed in the Plan

Under subpart 4 of the CAA, states are presumptively required to analyze and evaluate emissions reduction measures for all sources of direct PM_{2.5} and PM_{2.5} precursors (*i.e.*, SO₂, NO_x, VOC and ammonia) in developing PM_{2.5} attainment plans. Direct PM_{2.5} emissions include both filterable and condensable PM_{2.5} emissions. See further discussion of filterable and condensable PM_{2.5} emissions in the background section (Section II of this preamble) and in the emissions inventory requirements for Moderate area attainment plans (Section IV.B of this preamble). Thus, a state must evaluate control measures for sources of filterable and condensable PM_{2.5} emissions as part of an approvable control strategy for a Moderate PM_{2.5} nonattainment area.

With regard to PM_{2.5} precursors, Section III of the preamble describes that the rule provides for the possibility that the state may demonstrate that nonattainment area emissions of a particular precursor may not make a significant contribution to PM_{2.5} levels that exceed the standard in the area, or that emissions reductions of the precursor may not be needed for expeditious attainment. Thus, the rule presumptively requires the state to evaluate potential control measures for all four precursors, but the state may not need to address one or more requirements for a particular precursor with an approvable precursor demonstration.

D. Attainment Plan Control Strategy

1. Background on Attainment Planning and the Evaluation of Control Measures

a. Summary of Proposal. The proposal included an overview of the statutory requirements and general guidance associated with attainment planning and evaluation of control measures.

b. Final Rule. The following overview of statutory requirements and general

⁶¹ For more information on the NAEMS study, see: <http://www3.epa.gov/airquality/agmonitoring/>.

guidance remains unchanged except as discussed in this final rule.

The attainment planning requirements of subparts 1 and 4 were established to ensure that two important CAA goals are met: (i) That states implement measures that provide for attainment of the PM_{2.5} NAAQS as expeditiously as practicable, but not later than the statutory attainment date; and (ii) that states adopt effective emissions reduction strategies in nonattainment areas. The Moderate nonattainment area attainment date is as expeditiously as practicable, but not later than the end of the sixth calendar year after designation.

CAA section 172(c) of subpart 1 of the CAA describes the general attainment plan requirement for RACM and RACT, requiring that attainment plan submissions “provide for the implementation of all reasonably available control measures as expeditiously as practicable (including such reductions in emissions from existing sources in the area as may be obtained through the adoption, at a minimum, of reasonably available control technology) and shall provide for attainment” of the NAAQS.⁶² The attainment planning requirements in subpart 4 that are specific to PM₁₀ (including PM_{2.5}) likewise impose upon states an obligation to develop attainment plans that require RACM and RACT for sources of direct PM_{2.5} and PM_{2.5} precursors within a Moderate nonattainment area. CAA section 189(a)(1)(C) requires that states with areas classified as Moderate have attainment plan provisions to assure that RACM/RACT are implemented by no later than 4 years after designation of the area.⁶³ The EPA reads CAA sections 172(c)(1) and 189(a)(1)(C) together to require that attainment plans for Moderate nonattainment areas must provide for the implementation of RACM and RACT for existing sources of PM_{2.5} and PM_{2.5} precursors in the nonattainment area as expeditiously as practicable but no later than 4 years after designation.⁶⁴ The terms RACM and RACT are not defined within subpart 4, nor do the provisions of

subpart 4 specify how states are to meet the RACM and RACT requirements. However, the EPA’s longstanding guidance in the 1992 General Preamble helps inform our interpretation of RACM and RACT for the purpose of implementing the PM_{2.5} NAAQS.

The EPA’s guidance on RACM for sources of PM₁₀ and PM₁₀ precursors under subpart 4 in the General Preamble and Serious area Addendum includes the following: (i) A recommended list of potential measures to reduce PM₁₀ for states to consider;⁶⁵ (ii) an emphasis on state evaluation of the technological and economic feasibility of potential control measures to determine whether such measures are reasonably available for implementation; (iii) an expectation that the state will provide a reasoned explanation for a decision not to adopt a particular control measure, including those measures recommended to the state in public comments or at a public hearing; and (iv) a discussion that in some cases partial implementation of an emissions reduction program may be considered RACM when full implementation would be infeasible within the given Moderate area timeframe.⁶⁶ Thus, the RACM requirement under subpart 4 applies to all types of sources and is not focused only on forms of control that are technology-based.

With respect to RACT requirements, the EPA’s guidance in the General Preamble includes the following: (i) RACT has historically been defined as “the lowest emission limit that a source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility”; (ii) RACT generally applies to stationary sources, both stack and fugitive emissions; (iii) major stationary sources (*i.e.*, sources with potential to emit 100 tons per year or more of direct PM_{2.5} or any PM_{2.5} precursor) should be the minimum starting point for a state’s RACT analysis, but states are recommended to evaluate RACT for smaller stationary sources as needed for attainment and considering the feasibility of controls;⁶⁷ and (iv) it is possible that a State could demonstrate that an existing source in an area should not be subject to a control technology especially where such technology is unreasonable in light of the area’s attainment needs, or such

technology is infeasible. In such a case, it could be concluded that no control technology is “reasonably available,” and RACT for the source could be considered to be no additional control.⁶⁸ Thus, the RACT requirement under subpart 4 is primarily focused on stationary sources and forms of emissions control that are technology-based.

The appendices to the General Preamble noted that reducing air emissions may not justify adversely affecting other resources, for example, by increasing pollution in bodies of water, creating additional solid waste disposal problems or creating excessive energy demands. An otherwise available control technology may not be reasonable if these other environmental impacts are sufficiently adverse and cannot reasonably be mitigated. A state may consider a control measure for direct PM_{2.5} or a PM_{2.5} precursor not reasonable if, considering the availability of mitigating adverse impacts of that control on pollution of other media, the control would not, in the state’s reasoned judgment, provide a net benefit to public health and the environment. It should be noted that, in many past situations, states and owners of existing sources have adopted control technologies for direct PM_{2.5} and/or PM_{2.5} precursors with known energy penalties and some adverse effects on other media, based on the reasoned judgment that installation of such technology would result in a net benefit to public health and the environment. States should consider this before determining that a control technology is not reasonable because it may have other, negative environmental impacts that are on balance marginal.

This final rule specifies the basic requirements that states must meet in identifying and selecting the complete suite of measures needed for an attainment plan submission for a Moderate PM_{2.5} nonattainment area. This preamble, together with the General Preamble, provides further description of the recommended process for states to follow in meeting these requirements. Under this process, the specific determination of RACM and RACT is to be made within the broader context of assessing control measures for all stationary, area and mobile sources of direct PM_{2.5} and PM_{2.5} precursors that would collectively contribute to meeting the Moderate area attainment date as expeditiously as practicable.⁶⁹

⁶⁸ *Ibid.*

⁶⁹ In *Sierra Club v. EPA*, 294 F.3d 155 (D.C. Cir. 2002), the court stated, in upholding the EPA’s

⁶² Because in CAA section 172(c) the term “reasonably available control measures,” or RACM, also includes “reasonably available control technology,” or RACT, this document uses the abbreviation “RACM/RACT” to represent these requirements collectively, where appropriate.

⁶³ States with areas later reclassified as “Serious” nonattainment areas under subpart 4 must also develop and submit later plans to meet additional requirements for Serious areas. See 40 CFR 51.1003(b).

⁶⁴ This interpretation is consistent with guidance described in the General Preamble. See 57 FR 13498 (April 16, 1992), at page 13540.

⁶⁵ The appendices to the General Preamble, 57 FR 18070 (April 28, 1992), included sections on available fugitive dust control measures, available residential wood combustion measures, and available prescribed burning control measures.

⁶⁶ See 57 FR 13498 (April 16, 1992), at pages 13540–41. See also the Addendum.

⁶⁷ *Ibid.*

The final rule requires that all moderate area plans contain RACM, which is defined as any technologically and economically feasible measure that can be implemented in whole or in part within 4 years after the effective date of designation of a PM_{2.5} nonattainment area and that achieves permanent and enforceable reductions in direct PM_{2.5} emissions and/or PM_{2.5} precursor emissions from sources in the area. RACM includes reasonably available control technology (RACT). The EPA recommends that to meet this definition, the state should follow a process by which it first identifies all sources of emissions of direct PM_{2.5} (including filterable and condensable PM_{2.5}) and all PM_{2.5} precursors in the nonattainment area, and all potential control measures to reduce emissions from those source categories.⁷⁰ The state next determines if any of the identified potential control measures are not technologically feasible and whether any of the identified technologically feasible control measures are not economically feasible. Measures that are not necessary for attainment need not be considered as RACM/RACT.⁷¹

Measures that can only be implemented after the 4-year deadline for RACM and RACT, but before the end

statutory interpretation of RACM, that the CAA does not compel a state to consider a measure without regard to whether it would expedite attainment.

⁷⁰ The proposal described situations where some control measures could be exempted from consideration at the beginning of the analytical process. For example, control measures for a particular precursor would not need to be evaluated if the air agency submits an acceptable precursor demonstration as described in Section III of the preamble.

⁷¹ This has been the EPA's longstanding interpretation of RACM/RACT in CAA sections 172(c)(1) and 189(a)(1)(C), which were enacted as part of the amendments to the Act in 1990. Even prior to the 1990 amendments, the EPA interpreted the statutory term RACM to encompass only those measures "necessary to assure reasonable further progress and attainment by the required date." 44 FR 20375 (Apr. 4, 1979); see 40 CFR 51.1(o) (1972) (defining RACT in similar terms); 42 U.S.C. 7502(b)(2) (1988) (requiring RACM in the precursor to current CAA section 172(c)(1)). In the 1990 amendments to the Act, Congress enacted a "[g]eneral savings clause" stating that "[e]ach regulation, standard, rule, notice, order and guidance promulgated or issued by [EPA] under this chapter, as in effect [before the 1990 Amendments], shall remain in effect according to its terms." 42 U.S.C. 7415. Since the passage of the 1990 amendments, the EPA's interpretation of RACM and RACT as encompassing only those measures necessary to advance attainment has been upheld in multiple U.S. Circuit Courts of Appeals. See *NRDC v. EPA*, 571 F.3d 1245, 1251–1253 (D.C. Cir. 2009); *Sierra Club v. EPA*, 314 F.3d 735, 743–744 (5th Cir. 2002); *Sierra Club v. EPA*, 294 F.3d 155, 162 (D.C. Cir. 2002). But cf. *Sierra Club v. EPA*, 793 F.3d 656 (6th Cir. 2015) (holding that an area must have subpart 1 RACM/RACT approved into its SIP prior to redesignation, regardless of whether the area is attaining the NAAQS).

of the sixth calendar year following designation, are defined in the final rule as "additional reasonable measures." ⁷² The EPA has created this new definition based on the recognition that in some areas there could be emission reduction strategies that still could be implemented beginning 4 years after designation through the attainment date that could help to improve air quality and attain the standard expeditiously in the area. Note also that the state has discretion to require reductions from any source inside or outside of a PM_{2.5} nonattainment area (but within the state's boundaries) in order to fulfill its obligation to demonstrate attainment in a PM_{2.5} nonattainment area as expeditiously as practicable, and it may need to require emissions reductions on sources located outside of a PM_{2.5} nonattainment area if such reductions are needed in order to provide for expeditious attainment of the PM_{2.5} NAAQS.

Lastly, the final rule requires the state to perform an analysis (typically an air quality modeling analysis) to determine the earliest practicable attainment date for the area. This analysis should take into account projected emissions reductions associated with existing federal and state regulations, plus any additional reductions that would be achieved due to new control measures that would be needed for expeditious attainment.

In the case of a Moderate area that can demonstrate it can attain by the statutory attainment date without implementing all reasonably available control measures (*i.e.* RACM/RACT and additional reasonable measures), the state would not be required to adopt certain otherwise reasonable measures if the state demonstrates that collectively such measures would not enable the area to attain the standard at least 1 year earlier (*i.e.*, "advance the attainment

date" by 1 year). The EPA has long applied this particular test to satisfy the statutory provision related to an area demonstrating attainment "as expeditiously as practicable." ⁷³ The EPA continues to believe that this approach provides an appropriate degree of flexibility to a state to tailor its attainment plan control strategy to the actual attainment needs of a particular PM_{2.5} nonattainment area. In the case of a Moderate area that cannot demonstrate that it will practicably attain by the statutory attainment date, the state would be required to evaluate potential control measures for sources in the nonattainment area and adopt all reasonable measures (*i.e.*, RACM and RACT, and any "additional reasonable measures").

The following sections of the preamble describe the steps of the control measure evaluation process in more detail, and include discussion of the consideration of public comments as appropriate.

2. Step 1: Identify Sources of Emissions

a. Summary of Proposal

The proposal stated that the identification of all sources of emissions of direct PM_{2.5} (including filterable and condensable PM_{2.5}) and all four PM_{2.5} precursors in the nonattainment area is the starting point for the state's analysis of potential control measures. It was noted that an exception to this comprehensive review requirement might be possible if the final rule includes a policy that would allow a state to demonstrate that one or more precursors in a nonattainment area do not significantly contribute to PM_{2.5} levels that exceed the standard. If such a demonstration were approved by EPA, then the state would not be required to adopt control measures for the precursor.

The proposal also included discussion of a possible *de minimis* source category exemption concept for Moderate areas. Under the approach, the analysis and identification of "*de minimis* source categories" for Moderate areas would occur early in the planning process, before potential control measures are identified or attainment modeling is conducted. The proposal recognized the challenges associated with defining "source categories." The proposal also included potential options on how source categories could be defined, and requested comment on using the North American Industry

⁷² In addition to the statutory requirements under CAA sections 172(c)(1) and 189(a)(1)(C) for RACM and RACT, CAA section 172(c)(6) requires that a state's attainment plan for a nonattainment area "include enforceable emission limitations, and such other control measures, means or techniques (including economic incentives such as fees, marketable permits, and auctions of emission rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to provide for attainment of such standard in such area by the applicable attainment date specified in this part." The EPA interprets this statutory provision to require a state to identify, select and implement additional measures to those identified as RACM and RACT for the area if needed to provide for timely attainment of the area. In the EPA's proposed approach, the EPA describes criteria for identifying and selecting "additional reasonable measures" for sources of direct PM_{2.5} and PM_{2.5} precursors in a Moderate nonattainment area which may be necessary in order to bring the area into expeditious attainment.

⁷³ The term "expeditious attainment" is used throughout this proposal to describe the ability of a nonattainment area to attain "as expeditiously as practicable" based on the test described here.

Classification System (NAICS) (which provides a detailed hierarchy of numeric codes for different industries and process types) at the two, four, or six digit levels.

The proposal also presented the concept of a possible bright line ambient impact threshold for determining whether a source category should be considered *de minimis* (in the event a *de minimis* concept is adopted). Comments were requested on two options: (1) No bright line threshold; and (2) a threshold in the range of 1–3 percent of the relevant PM_{2.5} NAAQS. This range was selected because it was similar to the *de minimis* source category threshold range (2.0–3.3 percent of the PM₁₀ NAAQS) included in the 1994 Serious Area Addendum.

b. Final Rule

Section 172(c)(3) of the CAA requires that attainment plans for PM_{2.5} nonattainment areas include a “comprehensive, accurate, current inventory of actual emissions from all sources of the relevant pollutant or pollutants.” Consistent with the proposal, the final rule maintains the policy that the state must begin the control consideration process by identifying potential control measures for all the sources included in the most recently available emissions inventory for the nonattainment area. The inventory must include emissions information for all existing major stationary sources as point sources, nonpoint sources (as defined by 40 CFR 51.50) including non-major point sources, and mobile sources of direct PM_{2.5} (including filterable and condensable PM_{2.5}) and PM_{2.5} precursors in the nonattainment area. Section IV.B of this preamble provides a detailed discussion of emission inventory requirements.

The rule requires that a state must identify all of the sources reflected in the nonattainment area’s base year inventory as the initial step in developing reasonable control measures for the area, as each of these sources may play a role in the area’s PM_{2.5} problem. A state would need to consider all inventoried sources of direct PM_{2.5} emissions (including filterable and condensable PM_{2.5}) and sources of all four scientific PM_{2.5} precursors as it conducts its determination of reasonable control measures for an area.

Some commenters suggested that subpart 4 only provides authority to regulate precursors from major stationary sources and not from other types of sources, such as area or mobile sources. However, EPA disagrees with these commenters, given that the CAA

provides an overarching requirement to attain the standard as expeditiously as practicable, PM_{2.5} precursor emissions play a very significant role in fine particle concentrations nationally, non-major sources are important sources of precursor emissions, and nothing in the statutory requirements for RACM and BACM limits these requirements only to major stationary sources.

As discussed in the previous section, the final rule provides that states may develop a precursor demonstration showing that a particular PM_{2.5} precursor does not contribute significantly to PM_{2.5} levels that exceed the standard. If such a demonstration is approved by the EPA, then the state would not be required to adopt control measures for the precursor. Note that the state would still be obligated to evaluate and adopt control measures from a source if the source has emissions of direct PM_{2.5} and/or the remaining PM_{2.5} precursors that must be controlled in the plan.

The EPA received a diverse set of comments on whether to include a *de minimis* source category exemption policy. Some commenters questioned why an up-front (*i.e.*, before analysis of potential control measures) source category by source category exemption should be included in the final rule in the first place, when the traditional RACT/RACM policy approach for the NAAQS implementation has enabled states not to adopt otherwise reasonable control measures if after analyzing potential control measures it is determined that such measures are not needed for expeditious attainment. These commenters also suggested that a *de minimis* source category approach would undermine any RACT/RACM analysis to evaluate whether a collection of measures could advance the attainment date by a year, because a *de minimis* exemption policy would potentially allow for an area to exempt many categories which together could have a substantial ambient impact. Other commenters noted that providing a source category exemption in one nonattainment area would give those companies a competitive advantage over the same types of sources in other areas.

A number of commenters supported the *de minimis* source category concept because they believed it could result in a reduced burden in the control measure evaluation stage and help avoid regulating sources with limited impact on PM_{2.5} levels. However, a number of commenters also expressed concern about the analytical resources that might be needed to conduct air quality modeling for a *de minimis* source category analysis. To address this

analytical concern, some commenters suggested that the EPA include an emissions-based threshold (*e.g.*, tons per day) rather than an air quality based threshold, and allow for its use only if controls on the source are not needed for expeditious attainment. However, the commenters did not address the fact that the air quality impact of a specific tons per day rate could vary widely from one pollutant to another within a particular nonattainment area. Other commenters noted that the NAICS system does not provide categories for nonpoint sources, and that this issue would need to be addressed if the NAICS approach were to be included in the final rule. Other commenters suggested that the rule not have a *de minimis* threshold at all but include the ability for the state to propose *de minimis* source categories to the EPA on a case-by-case basis.

After taking the range of comments on the *de minimis* source category concept into consideration, the EPA has decided to not finalize a *de minimis* source category approach for Moderate areas. The EPA is persuaded by commenters who argued it is not necessary, and believes that without this concept, the final rule will nevertheless provide sufficient flexibility in the Moderate area control measure analysis and attainment demonstration process due to the availability of precursor demonstrations, considerations of case-specific factors in determining technical and economic feasibility, and the longstanding ability for the state not to adopt certain otherwise reasonable measures if they are not needed for expeditious attainment. The EPA also finds that from a technical perspective, it would be very challenging to implement a *de minimis* source category process in a consistent manner nationally without clear guidelines describing how narrowly or how broadly a *de minimis* exemption could apply, or how the technical analysis would need to be performed. The EPA agrees with commenters that NAICS codes do not provide an appropriately comprehensive approach for defining source categories for this purpose. We note that a *de minimis* source category exemption process has been available in PM₁₀ NAAQS implementation guidance (the Addendum) since 1994, and remains available. In many PM₁₀ areas, it is relatively straightforward to identify the predominant source categories contributing to the NAAQS violations (such as direct PM emissions from dust or wood smoke), and therefore to be able to identify what categories might be considered *de*

minimis. However, implementation of the PM_{2.5} NAAQS presents more complex challenges. Precursors and their contribution to secondarily formed PM play a much greater role in PM_{2.5} nonattainment areas than in PM₁₀ nonattainment areas. In addition, the relative impact of each precursor to local PM_{2.5} concentrations varies from area to area. For these reasons, a *de minimis* source category concept for PM_{2.5} is not included in this final rule.

c. Comments and Responses

Any additional comments received on this section are addressed in the Response to Comments document found in the docket for this action.

3. Step 2: Identify Existing and Potential Control Measures

a. General Guidance

i. Summary of Proposal

The proposal preamble described general guidance for identifying existing and potential control measures.

ii. Final Rule

The guidance remains largely unchanged from the proposal. The state's compilation of existing and potential control measures⁷⁴ should be sufficiently broad to provide a basis for identifying all technologically and economically feasible controls that may be RACM or RACT for sources of direct PM_{2.5} (including filterable and condensable PM_{2.5}) and PM_{2.5} precursor emissions in the nonattainment area at issue. Because RACM applies to area and mobile sources as well as stationary sources, states should identify and consider control measures for all types of sources.⁷⁵

It is important to note that the emission inventory provisions of this rule require states with sources of direct PM_{2.5} to include emissions data for both filterable PM_{2.5} and condensable PM_{2.5} in the base year inventory for the nonattainment area. For some types of sources, condensable emissions can be much larger than filterable emissions, in some cases by ten times or more. Because the availability of condensable PM_{2.5} emissions data has been limited to date but more data will become

available through nonattainment planning efforts, the EPA recommends that states pay particular attention to identifying potential control measures for source categories with substantial condensable emissions. If measures are found to be technically and economically feasible for reducing condensable PM_{2.5} emissions as well as filterable PM_{2.5} emissions from a source, the state will need to adopt a new emissions limit for the source that accounts for both the filterable and condensable portions, and includes requirements for ensuring compliance using source test methods updated in 2011.⁷⁶

The control measure evaluation process described in this section generally allows states to apply reasoned judgment as they identify potential control measures for sources of direct PM_{2.5} and PM_{2.5} precursors in their respective nonattainment areas. In section 51.1009(a)(3)(iii) of the final rule, the state is required to include a complete and reasoned explanation to support its selection and rejection of control measures as part of the attainment plan submission for any Moderate nonattainment area.

Existing control measures. As a starting point when identifying candidate control measures, a state should include an initial list of control measures that are being implemented or will be implemented due to promulgated and/or adopted (*i.e.*, "on the books") regulations for sources of direct PM_{2.5} and PM_{2.5} precursors in its Moderate PM_{2.5} nonattainment area. The EPA expects that the state will incorporate anticipated emissions reductions from these "existing" control measures (such as expected SO₂ reductions from the MATS; reductions of NO_x and direct PM_{2.5} from engine and fuel standards to reduce emissions from on-road and nonroad mobile sources) into its attainment demonstration modeling for the nonattainment area, and therefore the EPA believes it is appropriate for the state to clearly indicate the existence of such measures in the attainment plan for the area.

The EPA recognizes that for some sources located in a Moderate PM_{2.5} nonattainment area, a state may have previously conducted control technology analyses to address emissions for previous RACM/RACT analyses or for other statutory purposes. Some of these determinations may have

been done relatively recently, while other determinations may be several years old. A state may not simply rely on a previous RACM or RACT determination or other control technology analysis for a particular source or source category, regardless of how recently it was performed, when developing the attainment plan for a PM_{2.5} NAAQS. Past experience has shown that due to ongoing innovation, cost-effective control technologies and process alternatives for many sectors continue to be developed, and new reasonable opportunities to reduce emissions in the future are expected to be available for existing sources, particularly those with technology determinations made several years ago. For this reason, the state must determine whether the existing controls or emissions reduction approach at the source can be updated or improved with reasonably available controls or strategies to achieve increased levels of emission reduction. In cases where a stationary source has installed new state-of-the-art emissions controls fairly recently (*e.g.*, within the last 3 years), the state technically would still need to provide a RACT analysis for the source, but in such cases it may be appropriate to find that existing controls satisfy the RACT requirement. Based on this policy, the state's updated RACM and RACT analyses will represent the most thorough, up-to-date review of control measures for its PM_{2.5} nonattainment area. The collection of existing control measures, any updated RACT/RACM determinations, and potential new control measures can then be considered together by the state as part of a comprehensive analysis to ensure the area will attain expeditiously. The EPA notes, however, that the more recently this analysis has been done, the less effort is expected to be needed to verify that it is up to date.

Potential control measures. In addition to identifying and reviewing existing control measures for sources in a Moderate PM_{2.5} nonattainment area, a state must develop a comprehensive list of potential new control measures. This process should involve close coordination between the state, source owners, municipalities, and other interested stakeholders. The potential measures should also have a strong technical basis. Analysis of emission inventory data summaries, fine particle speciation monitoring data and source apportionment air quality modeling data can help identify key sectors contributing to the PM_{2.5} problem in an area. Other analyses to characterize the seasonal variation of PM_{2.5}

⁷⁴ Note that the term "control measures" as used in this preamble broadly represents a range of enforceable approaches for reducing emissions. These enforceable approaches include, but are not limited to, installation of control technology, process changes, a change in fuel use, limitations on use or operation of a particular pollutant-emitting device, equipment replacement, dust minimization practices, and road paving.

⁷⁵ Additional guidance on evaluating potential control measures is provided in the previous Section III.D.1 of this preamble, Background.

⁷⁶ See 75 FR 80118 (December 21, 2010), revisions to test methods for measuring condensable PM emissions from stationary sources (Method 202).

concentrations and associated meteorology may help inform the state in identifying contributing sources and potential control measures.

Information about potential control measures and control technologies is available from a number of sources. One important source of information is the combined regulatory experience of other states. A compilation of existing control regulations that are on the books in other states can be a useful starting point for identifying potential control measures. Another source of information is the EPA's Office of Air Quality Planning and Standards (OAQPS) "Menu of Control Measures" document, available online at <http://www3.epa.gov/ttn/naaqs/pdfs/MenuOfControlMeasures.pdf>. This document was developed to provide information useful in the development of local emissions reduction and the NAAQS SIP scenarios, and identifying and evaluating potential control measures. It provides a broad, though not comprehensive, listing of potential emissions reduction measures for direct PM_{2.5} and precursors of ozone and PM_{2.5} from stationary, area and mobile sources. More complete information on mobile source control measures can be found on the EPA's Office of Transportation and Air Quality Web site at <http://www.epa.gov/otaq>.

The RACT/BACT/LAER Clearinghouse (RBLC) provides a central database of air pollution technology information (including past RACT, BACT and LAER decisions contained in NSR permits) to promote the sharing of information among permitting agencies and to aid in future case-by-case control measure determinations. The RBLC permit database contains over 5,000 determinations that can help a state identify appropriate technologies to mitigate most air pollutant emission streams. The RBLC includes data submitted by several U.S. territories and all 50 states on over 200 different air pollutants and 1,000 industrial processes, and can be searched for control approaches that address specific pollutants. The RBLC can be found at: <http://cfpub.epa.gov/rbhc>.

Additionally, the EPA maintains a Web site with links to other online sources of information on control measures for states to consider.⁷⁷ Again, the EPA recognizes that control technology guidance for certain source categories has not been updated for many years, and, for this reason, the

agency expects states to identify and consider new and updated information in their RACM and RACT determinations as it becomes available.

iii. Comments and Responses

Any additional comments received on this section are addressed in the Response to Comments document found in the docket for this action.

b. Managing Emissions From Wildfire and Wildland Prescribed Fire.

i. Proposed Rule

The EPA proposed to recommend as guidance but not as a requirement of the final rule that, if wildfire impacts are significant, contributing to exceedances of the standard, then states should consider RACM for wildfires (which RACM could include a required program of prescribed fires). The EPA also proposed to recommend that states should consider RACM for managing emissions from prescribed fires (including those prescribed fires conducted to reduce future wildfire emissions). The proposal noted that information is available from the DOI and the USDA Forest Service on smoke management programs and basic smoke management practices (BSMP). The EPA requested comment on the concept of, and practical considerations associated with RACM for wildfire and RACM for prescribed fire, including such issues as how such measures can be characterized in the emissions inventory and attainment demonstration and made federally enforceable for adoption in a SIP.

ii. Final Rule

Wildfire can make a large contribution to air pollution (including PM_{2.5}), and wildfire events can threaten public safety. These effects can be mitigated through management of wildland vegetation, including through prescribed fire. Such mitigation can help manage the contribution of fires to PM_{2.5} levels in nonattainment areas. Prescribed fire (and some wildfires) can mimic the natural processes necessary to maintain fire dependent ecosystems, minimizing catastrophic wildfires and the risks they pose to safety, property and air quality.

Upon consideration of public comments and further consultation with other federal agencies, the EPA recommends, as guidance for states as they implement the final rule, that states follow a different approach to addressing RACM for wildland fire than the approach that the EPA proposed to recommend. Before explaining this recommendation further, the EPA wishes to clarify that the

recommendation is focused on wildland fire management. There are other uses of prescribed fire and other types of burning that occur in nonattainment areas, or that affect downwind nonattainment areas, such as burning of land clearing debris, agricultural burning, and burning of logging slash on land where the primary purpose of the logging is for commercial timber sale.⁷⁸ The challenges with applying the traditional nonattainment planning framework that are raised in this discussion are particular to wildland fire, and the EPA believes that addressing these other uses of prescribed fire does not present nearly the same level of challenge, and thereby can still be accommodated within the nonattainment planning framework. For example, where these other types of burning currently contribute to PM_{2.5} levels in a nonattainment area, states may, with an adequate technical demonstration, be able to take credit for reductions resulting from improvement in smoke management techniques for these types of prescribed fire where the improvement results in a demonstrated reduction in impacts in the nonattainment area. The remainder of this discussion is not meant to address these categories, and is instead focused on prescribed fire on wildlands.

The EPA also wants to clarify that it is not the intention to in any way discourage federal, state, local or tribal agencies or private land owners from taking situation-appropriate steps to minimize impacts from prescribed fire emissions on wildland. The EPA encourages all land owners and managers to apply appropriate basic smoke management practices to reduce emissions from prescribed fires, especially where a state has determined that prescribed fires are a significant source affecting air quality. The EPA understands that the federal land managers (FLMs) apply these measures routinely and will be available to consult with other agencies and private parties interested in doing the same.

However, for several reasons, the EPA does not believe it would be effective policy or technically appropriate to recommend that control measures for wildland fire be adopted into the SIP as enforceable measures and credited for emissions reductions (of PM_{2.5} and precursors) that would help the area

⁷⁷ Links are provided to a number of national, state and local air quality agency sites from the EPA's PM_{2.5} Web site: <http://www3.epa.gov/pm/measures.html>.

⁷⁸ The EPA notes that some wildland logging operations are conducted for the same purposes as prescribed fire (e.g., reducing fuel load, ecosystem benefits, etc.). The fact that some of the removed trees may be sold as timber does not make commercial timber sale the primary purpose of such operations.

attain the standard.⁷⁹ Instead, EPA recommends that PM_{2.5} nonattainment plans (and in particular the attainment demonstrations) not expressly account for expected air quality changes over the planning period resulting from changes in the use of wildland prescribed fire to reduce future wildfires, or air quality changes over the planning period resulting from changes in wildland fire emissions due to a program of prescribed fire or due to any other cause including climate change. In most cases, state attainment demonstration modeling should assume that wildland prescribed fire and wildfire emissions in the attainment year will be equal to, and have the same temporal and geographic pattern as, those assumed in the baseline inventory year.

The EPA acknowledges that some temporal and spatial patterns of fire emissions must still be assumed in the attainment demonstration in order to ensure that the required air quality modeling results in a realistic physical and chemical environment and a correspondingly realistic model response against which to analyze the changes from categories where express accounting of changes is still being done. This rule is not intended to constrain the options for states regarding the appropriate assumptions to make for fire emissions. Rather, it simply recommends that once this base level is established, PM_{2.5} plans should not attempt to expressly project changes over the planning period in emissions from wildfires or prescribed fires on wildland within the nonattainment area, or in upwind areas included in the modeling domain, that are due to variability in wildfire occurrence or changes in the use of prescribed fire or other wildland fire management practices. Moreover, the EPA anticipates that changes in spatial and temporal patterns of wildfire will likewise be too uncertain for them to be allowed to have the effect of reducing or increasing the control requirement on conventional anthropogenic sources. The EPA therefore recommends that baseline wildland fire emissions should generally be held constant over the

planning period, regardless of whether wildland fire management practices by land managers are expected, and possibly encouraged, to change.

States still have flexibility in determining how best to represent baseline wildland fire emissions. As noted earlier, base year emission inventories for the nonattainment areas should represent the conditions leading to nonattainment and be consistent with inventories used for modeling. For fires, the EPA additionally encourages states to use a representative mix of prescribed fire and wildfire in their inventories. In the past, some plans under previous PM_{2.5} NAAQS have estimated the actual fire emissions and temporal and spatial patterns from a given year and used this estimate as the assumed future baseline for planning, while others have used average emissions over multiple years. Other approaches may be appropriate as well. Moreover, regardless of the approach used, the EPA still encourages states to submit actual wildfire and prescribed fire activity data that are critical to developing emissions estimates to the NEI as suggested in the AERR.

A consequence of the recommendation of not expressly accounting for changes in wildland fires in attainment demonstrations is that measures to reduce emissions from wildland fires, such as prescribed fire for wildland wildfire prevention and mitigation purposes or smoke management programs and BSMP for prescribed fires in wildland, need not be included as RACM for the respective fire types. This is because the changes in emissions due to such measures would not be accounted for in determining what is necessary for attainment and/or what would advance the attainment date, which is how the EPA is recommending that RACM be determined. So, for example, in an area that can attain in 6 years with measures that do not address wildland fire, the EPA does not recommend that states attempt to quantify whether increased prescribed fire could advance the attainment date by 1 year, due to aforementioned difficulties associated with such quantification.

To be clear, nothing about this policy regarding RACM is intended to suggest that fires should be ignited in wildland (or elsewhere) without regard to the air quality or public health consequences. As noted earlier, the EPA believes these consequences are important to address, and intends to engage in dialogue with the FLMs, air agencies, tribes, state and private land owners and other stakeholders at appropriate times, such as during the process for the

development of land management plans, about how land managers determine when and where prescribed fire is appropriate for particular wildlands and how to identify and implement appropriate mitigation measures. The policy simply makes clear the EPA's view regarding its recommendation for RACM for wildland fires.

The EPA notes that this recommendation regarding RACM differs somewhat from the recommendation that was offered in the preamble as guidance to states as they implement the EPA's recent SIP Requirements Rule for the 1997 and 2008 ozone NAAQS. The reasons for the strategy outlined earlier apply equally well to attainment demonstrations for the ozone NAAQS, and so EPA hereby makes the same recommendation for implementation of these ozone NAAQS as well. This recommendation, offered here in the same manner as the prior recommendation, supersedes the prior recommendation on RACM for wildfire in the preamble to the final SIP Requirements Rule for the 1997 and 2008 ozone NAAQS. The EPA will convey this revised recommendation to the air agencies that are working to prepare these ozone SIPs. The EPA also anticipates making this recommendation as part of our planned rulemaking on implementation of the 2015 ozone NAAQS. Note that this discussion pertains only to the RACM policy, and that other aspects of the fire discussions in the ozone SIP Requirements Rule remain applicable.

Finally, the EPA notes that, because a significant element of the rationale for this policy is the uncertainty in the timing of wildfires, we may reconsider this recommendation in the future, if adequate tools emerge that allow for predicting fire emissions with sufficient specificity. However, even if such tools emerge, due to inherent uncertainties it may be impossible to satisfactorily incorporate the use of such information into an attainment demonstration framework.

iii. Comments and Responses

The EPA received many comments expressing agreement with EPA's recognition of the importance of wildland prescribed fire, and welcoming continued dialogue among states, the EPA, and other federal agencies on how best to ensure that land managers have adequate management tools available, including prescribed fire and some wildfire, but also to ensure that use of these tools does not result in unhealthy air. The EPA intends to engage in such dialogue.

⁷⁹ These reasons include concerns raised by commenters about the difficulties associated with requiring or even encouraging states to incorporate wildland fire emissions into existing nonattainment planning procedures and practices under the CAA; high year-to-year variability and unpredictability with emissions from wildland fires; uncertainty in the amount of credit to give for reduced wildfire within the planning period and in the amount of benefit that exists after accounting for increases in prescribed fires within the planning period; and finally, the fact that air quality data actually influenced by fire events may ultimately be excluded under the provisions of the Exceptional Events Rule.

Some commenters also took positions on how specifically to define RACM for wildfires, ranging from required smoke management plans to simply stating that fires themselves are RACM with no further measures required. In light of the fact that EPA did not propose specific guidance on defining RACM for wildfires and typically does not define RACM for specific categories, and the fact that EPA is not recommending that states include RACM as proposed, we are not providing further guidance in response to those comments. Similarly, regarding baseline fire emissions, some commenters provided detailed suggestions regarding approaches to calculating baselines based not on actual fires (which may include periods when fires were suppressed) but on science-based fire regimes, fire return intervals and ecosystem types, including characteristics of wildland vegetation. The EPA notes that this guidance is not establishing or recommending any particular approach to calculating baseline fire emissions.

c. RACT for EGUs

i. Summary of Proposal

Through guidance in the preamble to the 2007 PM_{2.5} Implementation Rule, the EPA established a rebuttable presumption that compliance with the CAIR would satisfy RACM and RACT requirements for SO₂ and NO_x emissions from EGUs in states participating in the CAIR cap-and-trade program for such emissions.⁸⁰ The EPA indicated that states could presume that EGUs located within a given nonattainment area were meeting the RACM and RACT requirements, based solely upon a regional program that imposed controls for SO₂ and NO_x emissions from sources both within and outside designated nonattainment areas.

In June 2007, the EPA received a petition for reconsideration questioning the legality of this presumption, which the D.C. Circuit later found to be unlawful in the context of a similar presumption in the Phase 2 Ozone (NAAQS) Implementation Rule.⁸¹ The

agency granted the petition for reconsideration in 2011 and proposed to withdraw from the 2007 PM_{2.5} Implementation Rule any presumption that compliance with the CAIR automatically satisfies RACM and RACT requirements for SO₂ and NO_x emissions from EGUs located in nonattainment areas for the 1997 PM_{2.5} NAAQS.^{82 83} In that proposal, the EPA explained that given the explicit wording of CAA section 172(c)(1) that sources “in the area” (*i.e.*, in the nonattainment area) must at a minimum adopt RACT controls for that area, the agency believes that it is no longer appropriate to presume that this requirement is satisfied merely based upon the participation of a source in a regional cap-and-trade program. Indeed, implicit in a regional cap-and-trade program is that some sources, including those located within nonattainment areas, may elect to buy allowances in lieu of controlling emissions in order to meet the regional emissions reductions requirements.

Accordingly, in the proposal the EPA stated that it did not intend to include any rebuttable presumption that the CAIR or any other regional control strategy constitutes RACM or RACT for EGUs or any other source category. Instead, the EPA stated that it is clarifying that in order to meet the RACM and RACT requirements for the PM_{2.5} NAAQS, states should evaluate EGU sources for RACM and RACT level controls just like any other source category, and not merely presume for EGUs located in a nonattainment area that compliance with a cap-and-trade program, including the CAIR or any other program, would satisfy their obligation to implement RACM and RACT. As required by the CAA, states are required to analyze what constitutes RACM and RACT for EGUs in each nonattainment area.

ii. Final Rule

The final rule maintains the proposed policy approach as described earlier. As required by the CAA, states are required to analyze what constitutes RACM and RACT for EGUs in each nonattainment

program that meets the requirements of the NO_x SIP Call are inconsistent with the statutory requirements of CAA section 172(c)(1). The Court concluded that the phrase “in the area” means that reductions must occur from sources within the area and “reductions from outside the nonattainment area do not satisfy the requirement.” *See NRDC v. EPA*, 571 F.3d 1245 (D.C. Cir. 2009).

area, just as they are required to do for all other types of sources.

iii. Comments and Responses

Any additional comments received on this section are addressed in the Response to Comments document found in the docket for this action.

4. Step 3: Determine Whether an Available Control Measure or Technology Is Technologically Feasible

a. Summary of Proposal

The proposal cited longstanding guidance from the General Preamble regarding factors to consider when determining the technological feasibility of a potential control measure or control technology, and it requested comment on the factors. These factors included a source’s processes and operating procedures, raw materials, physical plant layout, and potential environmental impacts such as increased water pollution, waste disposal, and energy requirements. One sentence in the proposal stated: “With respect to determining whether a given control measure might not be technologically feasible for an area or mobile source, the EPA also proposes to retain its longstanding practice that a state may consider relevant factors in conducting its analysis, such as the social acceptability of the measure”⁸⁴

b. Final Rule

Several comments addressed the EPA’s inclusion of the social acceptability factor in the proposal. In reviewing this issue, the EPA determined that this factor actually has not been identified as a factor in the EPA’s longstanding guidance, and thus was mischaracterized in the proposal. Nevertheless, some commenters supported inclusion of the factor because no other factor is presented to help limit or eliminate a potential measure with strong public opposition. Other commenters that opposed use of such a factor suggested that including it in the final rule could allow a state to reject almost any control measures that is otherwise found to be technically and economically feasible.
