Additionally, we received a number of comments on the proposed 60-day filing period. Some commenters supported this proposed filing period.[779] Several other commenters, however, requested that the filing period be extended to at least a 75-day period, arguing, among other things, that a longer time period would help stagger the filing deadline from other end-of-month filing requirements and allow sufficient time to address accounting-related questions.[780]

[760] General Instruction A of Form N–CEN. Unlike Form N–PORT where separate reports will be filed for each series, registrants will file one report on Form N–CEN covering all series (as is currently done with reports on Form N–SAR). We are adopting this framework for Form N–CEN to help minimize reporting burdens, as much of the information that will be required by Form N–CEN (for example, the information reported pursuant to Part A and Part B) will be the same across a fund's various series. We note that Form N–SAR's approach to series information is slightly different than that of Form N–CEN, in that Form N–SAR allows registrants to indicate instances where the information is the same across all series, rather than requiring repetitive information. *See* General Instruction D(8) of Form N–SAR. Unlike Form N–SAR, however, to limit the reporting of repetitive information, Form N–CEN is organized such that information that is generally the same for all series is reported in Parts A and B of the form, with Part C, the part of the form that requires each series to respond separately, requesting information that is more likely to differ between series.

[761] *See* State Street Comment Letter.

[762] *See* General Instruction A of Form N–CEN. As reflected in General Instruction A, registrants will be required to respond to each item in each required Part. To the extent an item in a required Part is inapplicable to a registrant, the registrant should respond ''N/A'' to that item. Registrants will not, however, have to provide responses to items in Parts they are not required to respond to.

[763] *See id.* Certain investment products known as ''exchange-traded managed funds'' will also be required to complete Part E of Form N–CEN.

[764] *See id.* Management companies that are registered on Form N–3 are also required to complete certain items in Part F as directed by Item B.6.c.i of Form N–CEN. *See* General Instruction A of Form N–CEN.

[765] *See* current rule 30b1–1.

[766] *See* current rule 30a–1.

[767] *See* Proposing Release, *supra* footnote 7, at 33634.

[768] *See* Morningstar Comment Letter (suggesting semi-annual reporting as of the fund's fiscal year end should the Commission decide to include Items 34–44, Items 47–52, Item 54, Item 72, and Item 75 of Form N–SAR, as suggested). *See infra* section II.D.5 concerning these current Form N–SAR Items.

[769] *See, e.g.,* Carol Singer Comment Letter; State Street Comment Letter; Wells Fargo Comment Letter.

[770] As discussed above, certain items that are currently reported on Form N–SAR that would be helpful to have updated on a more frequent basis are included on Form N–PORT. For example, Item 28 of Form N–SAR requires the fund to provide its monthly sales and repurchases of the Registrant's/Series' shares. In order to increase the timeliness of the information reported to the staff for funds flows, certain information relating to monthly flows will be reported on Item B.6 of Form N–PORT.

[771] Because Form N–CEN is to be filed annually by all registered investment companies, we are rescinding 17 CFR 270.30b1–1 and revising 17 CFR 270.30a–1 to require all registered investment companies to file reports on Form N–CEN, as proposed. *See infra* section II.G (concerning technical and conforming amendments related to current rule 30b1–1 and current rule 30a–1). *See* rule 30a–1.

[772] *See* Proposing Release, *supra* footnote 7, at 33634.

[773] *See* current rule 30b1–1.

[774] *See* current rule 30a–1.

[775] In particular, we note that the items relating to UITs in Part F require reporting of aggregate information across all series of the UIT (as distinct from Part C, which requires series-specific information in the case of management companies offering multiple series). As proposed, UITs with multiple series with different fiscal year end dates would have been required to file more than once per year, at least once for each unique date. Considering that the reported information itself relates to the entire UIT and not each individual series, we have determined, after further consideration, that it would be less costly for UITs to report once per year, even if their series have different fiscal years. Moreover, we believe that the resulting data will be more useful to the Commission and other data users because the reported information will be as of a consistent date across UITs, and therefore more readily compared and contrasted. Accordingly, we are requiring UITs to file Form N–CEN reports on a calendar year basis even where the UIT offers multiple series with different fiscal years.

[776] *See* Morningstar Comment Letter.

[777] *See* rule 30a–1.

[778] *See* General Instruction C.1 of Form N–CEN.

[779] *See* Carol Singer Comment Letter; State Street Comment Letter.

[780] *See, e.g.,* Comment Letter of The Committee of Annuity Insurers (Aug. 11, 2015) (''CAI Comment Letter'') (75 days after fiscal year end); ICI Comment Letter (at least 75 days); Invesco Comment Letter (75 days after fiscal year end); MFS Comment Letter (75 days after fiscal year end, at least for initial filing for all funds in the fund complex); T. Rowe Price Comment Letter (75 days after fiscal year end).

We have been persuaded by these comments and are adopting a filing period of 75 days after the fiscal year-end (for management companies) and calendar year-end (for UITs). We believe that a 75-day filing period appropriately balances the staff's need for timely information against the time necessary for a fund to collect, verify, and report the required information to the Commission. Furthermore, the census-type information reported on Form N–CEN, in our experience, does not change frequently, thereby reducing the risk that a longer filing period would cause the information provided to become stale.

Current rule 30b1–3 under the Investment Company Act requires a fund to file a transition report on Form N–SAR when a fund's fiscal year changes.[781] Because reports on Form N–CEN are required to be filed annually rather semi-annually, we believe that a rule outlining the requirements for a transition report will no longer be necessary as transition report filing requirements for fiscal year changes involve less complexity in the case of reports required to be filed once a year rather than twice a year. Consequently, we are rescinding rule 30b1–3 as proposed. We received no comments on this aspect of the proposal. To ensure, however, that reports are filed at least annually, we are requiring that reports on Form N–CEN not cover a period of more than 12 months as proposed.[782] Thus, if a fund changes its fiscal year, a report filed on Form N–CEN may cover a period shorter than 12 months, but may not cover a period longer than 12 months or a period that overlaps with a period covered by a previously filed report.[783] We received no comments on this aspect of the proposal.

As proposed, a fund would be able to file an amendment to a previously filed report on Form N–CEN at any time, including an amendment to correct a mistake or error in a previously filed report.[784] A fund that files an amendment to a previously filed report on the form should provide information in response to all items of Form N–CEN, regardless of why the amendment is filed.[785] Commenters did not object to these proposed requirements although one commenter suggested that an amendment should not be required for any subsequent changes to previously reported information and that, except for any material errors, any subsequent changes should be reported in the next filing period.[786] We are adopting these requirements as proposed.[787] Although funds generally should correct a material mistake in a Form N–CEN report by filing an amendment to that report, Form N–CEN does not generally require registrants to file amendments in order to update information throughout the year. Rather, changes in information during the course of the year would be reflected in the fund's next report on the form.

Similar to Form N–PORT,[788] Form N–CEN also includes general filing instructions,[789] as well as definitions of specific terms referenced in the form.[790] As discussed in connection with Form N–PORT above, we have eliminated proposed instructions regarding the signature and filing of reports,[791] because we believe that the general rules and regulations applicable under the Act provide sufficient guidance regarding those issues.[792] As discussed further below, we have also revised, consistent with the changes to Form N–PORT discussed above, the definitions of ''Exchange-Traded Fund'' and ''Exchange-Traded Managed Funds'' to clarify that the terms would apply to a series or class of a UIT organized as an ETF or ETMF.[793] We have also revised, as we did in Form N–PORT, the definition of ''LEI'' to reflect new terminology regarding LEIs.[794]

4. Information Required on Form N–CEN

a. Part A—General Information

We are adopting, as proposed, Part A of Form N–CEN. We did not receive comments on Part A. Part A, which will be completed by all funds, will collect information about the reporting period covered by the report. It requires funds to report the fiscal-year end date and indicate if the report covers a period of less than 12 months.[795]

b. Part B—Information About the Registrant

We proposed a number of reporting items under Part B of Form N–CEN to provide information about the registrant. Although commenters did not raise broad objections to the reporting requirements under Part B, many commenters raised concerns with and/or requested clarification on specific reporting items. We are adopting Part B substantially as proposed with some modifications in response to comments on specific reporting items. Where we have received comments on specific reporting requirements, we discuss them in more detail below.

As proposed, Part B of Form N–CEN would have been required to have been completed by all funds and would have required certain background and other identifying information about the funds. Part B of Form N–CEN, as proposed, would have included an instruction that required funds offering multiple series to provide a response for each series when the response to an item in Part B of the form differed between series, and to label the response with the name and series identification number of the series to which a response relates.[796] In order to provide more clarity to filers as to when series information is required in Part B of the form, we have removed the proposed instruction to Part B and have instead added sub-items requesting series information, when applicable, for certain items in Part B of the form. We have added these sub-items to the items in Part B where we believe identification of the particular series would be most helpful to our monitoring efforts and general review and analysis of the information reported on the form.[797]

As proposed, Part B of the form requires certain background and other identifying information about the fund. This background information will allow the staff to categorize filers by fund type and will assist with our oversight of

787 *See* General Instruction C.2 of Form N–CEN.

788 *See supra* section II.A.3 regarding Form N–PORT.

789 *See* General Instruction C of Form N–CEN.

790 *See* General Instruction E of Form N–CEN.

791 General Instruction E of proposed Form N–CEN.

792 *See* General Instruction B to Form N–CEN (''The General Rules and Regulations under the Act contain certain general requirements that are applicable to reporting on any form under the Act. These general requirements should be carefully read and observed in the preparation and filing of reports on this Form, except that any provision in the Form or in these instructions shall be controlling.'').

793 General Instruction E of Form N–CEN. *See supra* footnotes 93–94 and accompanying text; *infra* footnote 896 and accompanying text.

794 *See supra* footnote 95 and accompanying text. Form N–CEN's revised definition of ''LEI'' refers to the legal entity identifier ''endorsed'' by LEI ROC or ''accredited'' by GLEIF, as opposed to ''assigned or recognized'' by those two entities. General Instruction E to Form N–CEN.

795 *See* Item A.1 of Form N–CEN.

796 *See* Instruction to Part B of proposed Form N–CEN.

797 *See* Item B.10, Item B.11, Item B.14, Item B.19, Item B.20, Item B.22, and Item B.23 of Form N–CEN. We note that, with respect to those items in Part B that do not include sub-items for series information, a registrant may still provide more than one response to the item (where applicable), but the response will not be required to indicate the relevant series to which it relates.

funds. Included in this background information is the fund's name,[798] Investment Company Act filing number,[799] and other identifying information, such as its CIK [800] and LEI,[801] each of which we are adopting as proposed. In addition, we are adopting as proposed the requirement that the report include the fund's address, telephone number, and public Web site (if any),[802] and the location of the fund's books and records.[803] While the fund's name, address, telephone number, and filing number are currently required by Form N–SAR,[804] some of the additional information, such as the fund's CIK, LEI, public Web site and location of books and records are new. As discussed in the proposal and the Form N–PORT section above, information such as the CIK and LEI will assist the Commission and other data users with organizing the data and allow the data reported on Form N–CEN to be cross-referenced with data received from other sources.[805] For tracking purposes, Form N–CEN also requires information relating to whether the filing is the initial or final filing.[806]

We are adopting, as proposed, the requirement that funds include the location of their books and records in reports on Form N–CEN. We note that books and records information is currently required by fund registration forms; [807] however, this information is not filed with the Commission in a structured format. We believe that having books and records information in a structured format will increase our efficiency in preparing for exams and, thus, we have determined to include this information in Form N–CEN.[808] In addition, so as not to create unnecessary burdens, we are adopting proposed amendments to Forms N–1A, N–2, N–3, N–4, and N–6 to exempt funds from those forms' respective books and records disclosure requirements if the information is provided in a fund's most recent report on Form N–CEN.[809]

Similar to Form N–SAR,[810] Form N–CEN requires information regarding whether the fund is part of a ''family of investment companies.'' [811] The form, which includes a substantially similar definition as Form N–SAR,[812] defines a ''family of investment companies'' to mean, except with respect to insurance company separate accounts, any two or more registered investment companies that (i) share the same investment adviser or principal underwriter; and (ii) hold themselves out to investors as related companies for purposes of investment and investor services.[813] This item will assist Commission staff with analyzing multiple funds across the same family of investment companies. One commenter suggested that a broader term such as ''fund complex'' would be a beneficial alternative to the proposed term ''family of investment companies.'' [814] We believe, however, that ''fund complex,'' as such term is defined for purposes of Form N–1A, for example, could be overly broad (*e.g.,* could unintentionally incorporate unaffiliated sub-advisers), and thus, we have determined to adopt the item as proposed.[815]

We are adopting, as proposed, a requirement in Form N–CEN that the fund provide its classification (*e.g.,* open-end fund, closed-end fund), similar to Form N–SAR.[816] Unlike the requirements of Form N–SAR, however, we are also adopting, as proposed, a requirement in Form N–CEN that specifically asks whether the fund issues a class of securities registered under the Securities Act.[817] These questions are intended to elicit background information on the fund, which will assist us in our monitoring and oversight functions (for example, identifying those funds that have not issued securities registered under the Securities Act).

We are also adopting, as proposed, the requirement in Form N–CEN that a management company report information about its directors, including each director's name, whether they are an ''interested person'' (as defined by section 2(a)(19) of the Investment Company Act), and the Investment Company Act file number of any other registered investment company for which they serve as a director.[818] Some commenters supported inclusion of such information [819] and one commenter suggested that the Commission request additional information concerning individual directors (and chief compliance officers (''CCOs'')), such as length of service, roles certain directors have on the board, and prior experience as fund directors.[820] Another commenter opposed the inclusion of additional disclosure requirements concerning the board or individual directors beyond those in the proposed

[798] Item B.1.a of Form N–CEN.

[799] Item B.1.b of Form N–CEN.

[800] Item B.1.c of Form N–CEN. Because UITs that register on Form N–8B–2 obtain CIKs for the UIT itself as well as for series offered by the UIT, we have made a clarifying modification to Form N–CEN by including a requirement in Part F of the form that such UITs also report the CIKs for each of their existing series. *See* Item F.6.b of Form N–CEN.

[801] Item B.1.d of Form N–CEN.

[802] Item B.2 of Form N–CEN.

[803] Item B.3 of Form N–CEN; *see also infra* footnotes 807–809 and accompanying text.

[804] Item 1 and Item 2 of Form N–SAR.

[805] *See supra* section II.A.2.a (discussing additional information such as CIK and LEI and comment letters received regarding the use of identifiers).

[806] Item B.4 of Form N–CEN. As proposed, the instruction to Item B.4—then numbered as ''Item 5''—stated that a fund should indicate that a filing is its final filing on Form N–CEN only if the fund has filed an application to deregister on Form N–8F ''or otherwise.'' We believe it would be useful to filers for the instruction to provide more context as to what should be considered ''or otherwise.'' Therefore, the final Form clarifies that a fund should indicate that a filing on Form N–CEN is its final filing ''only if the Registrant has filed an application to deregister or will file an application to deregister before its next required filing on this form.'' We note that even if a fund indicates a filing is its final filing on Form N–CEN, a fund is required to file reports on Form N–CEN until it is deregistered.

[807] *See* Item 33 of Form N–1A; Item 32 of Form N–2; Item 36 of Form N–3; Item 30 of Form N–4; and Item 31 of Form N–6.

[808] Additionally, by including books and records information in Form N–CEN, we may receive more frequently updated books and records information from closed-end funds. Closed-end funds do not update their registration statements as regularly as open-end funds and, thus, the information regarding their books and records may not always be current.

[809] Funds that have not yet filed a report on Form N–CEN will have to continue to include this information in their registration statement filings.

[810] Item 19, Item 94, and Item 116 of Form N–SAR; s*ee also* General Instruction H to Form N–SAR (defining ''family of investment companies'').

[811] Item B.5 of Form N–CEN.

[812] *See id.; see also* Instruction 1 to Item 17 of Form N–1A.

[813] Instruction to Item B.5 of Form N–CEN. The instruction, like the definition of ''family of investment companies'' in Form N–SAR, also clarifies that insurance company separate accounts that may not hold themselves out to investors as related companies (products) for purposes of investment and investor services should consider themselves part of the same family if the operational or accounting or control systems under which these entities function are substantially similar. *See* General Instruction H to Form N–SAR.

[814] *See* Morningstar Comment Letter.

[815] *See* Instruction 1(b) to Item 17 of Form N–1A (defining ''fund complex'' to mean two or more registered investment companies that: (1) Hold themselves out to investors as related companies for purposes of investment and investor services; *or* (2) have a common investment adviser or have an investment adviser that is an affiliated person of the investment adviser of any of the other registered investment companies).

[816] Item B.6 of Form N–CEN; *see also* Item 5, Item 6, Item 27, Item 58, Item 59 and Item 117 of Form N–SAR. If the registrant is an open-end fund, Form N–CEN also requires information on the total number of series of the registrant and, if a series of the registrant with a fiscal year end covered by the report was terminated during the reporting period, information regarding that series. *See* Item B.6.a.i–Item B.6.a.ii of Form N–CEN. In addition, registrants that indicate they are management companies registered on Form N–3 are directed by Item B.6 to respond to certain additional items in Part F of the form that relate to insurance company separate accounts. *See* Item B.6.c.i of Form N–CEN.

[817] Item B.7 of Form N–CEN.

[818] Item B.8 of Form N–CEN.

[819] *See* Franco Comment Letter; Morningstar Comment Letter.

[820] Morningstar Comment Letter.

form without a prior statement of regulatory purpose and opportunity for public comment.[821] We have determined to adopt these requirements as proposed because we believe it appropriately balances the need for director information in a structured format with efforts to minimize the partially duplicative reporting requirements.[822]

However, in a modification from the proposal, we have determined to add one additional reporting requirement concerning directors. In the Proposing Release, we solicited comment regarding whether Form N–CEN should require any additional information concerning directors. In response, a commenter stated that, as discussed below, the proposed form would require funds to report CRD numbers for CCOs, as applicable, and suggested that data users could more readily analyze particular directors across funds and over time if a unique identifier were reported for each director.[823] We acknowledge that not all fund directors have associated CRD numbers, but we are persuaded by the commenter that, for those that do, reporting of the CRD number would improve data comparability and help us in our risk assessment and examination functions by making it easier for Commission staff to identify persons and collect information across funds.[824]

In addition, as proposed, a fund will be required to provide the CCO's name, CRD number (if any), address, and phone number,[825] as well as indicate if the CCO has changed since the last filing.[826] If the fund's CCO is compensated or employed by any person other than the fund, or an affiliated person of the fund, for providing CCO services, the fund will also be required to report the name and IRS Employer Identification Number of the person providing such compensation.[827] One commenter objected to this reporting requirement stating that the information is already provided in other Commission filings.[828] As we stated in the Proposing Release, we recognize that some funds provide this information in their registration statements. However, as we also noted, not all funds do [829] and we believe that this requirement will provide staff with information on all fund CCOs and will allow the staff to contact a fund's CCO directly.

One commenter suggested that the Commission require additional information concerning CCOs, such as ''length of service and prior experience in order to aid in assessing the caliber of a fund or a fund company's regulatory practices.'' [830] We believe, however, that the reporting requirement as proposed and adopted is sufficient for our regulatory oversight purposes and appropriately balances the benefits of additional information for Form N–CEN data users against the burdens imposed upon filers. Specifically, because Commission data users could link Form N–CEN information about CCOs across filings, over time, using the required CRD number, the reporting requirements that we are adopting today will still allow users to inform themselves about a CCO's length of service without adding another reporting requirement.[831] Another commenter expressed support for the CCO reporting requirement but suggested that the item should also require the fund to report the name of the investment adviser's CCO as well.[832] We are not adopting this suggestion because Form N–CEN is designed to collect census-type information, including certain corporate governance information, about funds—not similar information about investment advisers. Investment advisers are currently required to report the name and contact information of the adviser's CCO on Form ADV, which facilitates the ability of the Commission to link fund and investment adviser CCO data without imposing an additional reporting burden on funds.[833] Accordingly, we believe that the item requirement as proposed is appropriate and are adopting it without any changes.

We are also adopting, substantially as proposed, the requirement in Part B that funds report matters that have been submitted to a vote of security holders during the relevant period.[834] Information regarding submissions of matters to a vote of securities holders is currently reported in Form N–SAR by management companies in the form of an attachment with multiple reporting requirements.[835] In order to alleviate the burden on filers, we are reducing the information to be reported regarding votes of security holders to a yes/no question that is primarily meant to allow staff to quickly identify funds with such votes, so that they can follow up as appropriate, such as by reviewing more detailed information required by other filings.[836]

[821] *See* IDC Comment Letter. It was unclear whether the commenter intended also to express concerns about the proposed requirements concerning directors, in addition to the concerns it expressed about other potential requirements concerning directors. *Id.* (''First, the Release asks about the information regarding fund directors that is proposed to be included in Form N–CEN, which includes each director's name, whether they are an ''interested person'' and the Investment Company Act file number of any other fund for which they serve as a director. Specifically, the Release asks whether funds should be required to include on Form N–CEN any additional information concerning the board or individual directors, such as information about the length of service of directors. The Release does not discuss why the Commission might be interested in this or other possible director-related information or how it would be used. Absent a clear statement of how information about directors would assist the Commission in carrying out its regulatory functions, and the opportunity to comment on any such information, we do not support adding it to Form N–CEN.'') To the extent that the commenter was commenting on the proposed requirements, we note, as we did in the Proposing Release, that although the information is reported in a management company's Statement of Additional Information and provided in annual reports to shareholders, providing this information to the Commission in a structured format will allow the Commission and other potential data users to sort and analyze the data more efficiently. *See* Proposing Release, *supra* footnote 7, at 33636.

[822] This information (along with additional director information) is also disclosed in a management company's Statement of Additional Information and its annual report to shareholders, albeit in an HTML or ASCII, rather than structured, format. *See, e.g.,* Item 17 and Item 27(b)(5) of Form N–1A (requiring, for example, disclosures regarding length of service, position(s) held with the fund, and other directorships held by the director).

[823] *See* Morningstar Comment Letter; *infra* notes 825–833 and accompanying text.

[824] Item B.8.b of Form N–CEN.

[825] Item B.9 of Form N–CEN. Because we expect that funds will provide the CCO's direct phone number in response to this information request, the CCO's phone number will not be made publicly available in Form N–CEN filings on EDGAR. *See* General Instruction D to Form N–CEN.

[826] Item B.9.i of Form N–CEN.

[827] Item B.9.j of Form N–CEN. We proposed to require funds provide the name and ''Employee Identification Number'' of the person providing compensation for CCO services (Proposing Release, *supra* footnote 7, at n. 409 and accompanying text). We are adopting a reference to ''IRS Employer Identification Number'' to conform with Form ADV (*see, e.g.,* Item 7 of Schedule A of Form ADV).

[828] *See* Schnase Comment Letter.

[829] *See, e.g.,* Item 17 of Form N–1A (requesting information regarding fund officers). For example, Form N–1A defines the term ''officer'' to mean ''the president, vice-president, secretary, treasurer, controller, or any other officer who performs policy-making functions.'' It is our understanding that in some fund complexes, the CCO does not fit within the category of officers covered by this definition (*i.e.,* the CCO does not perform a policy-making function), and therefore, information as to their CCO is not provided pursuant to the item.

[830] Morningstar Comment Letter.

[831] The same commenter stated that the required CRD numbers should be sufficiently specific to analyze the information over time. *See id.*

[832] *See* Franco Comment Letter.

[833] *See, e.g.,* Item 1.J of Part 1A of Form ADV.

[834] *See* Item B.10 of Form N–CEN. We have added an instruction to the item to clarify that registrants registered on Forms N–3, N–4 or N–6, should respond ''yes'' to the item only if security holder votes were solicited on contract-level matters.

[835] *See* Item 77.C of Form N–SAR; *see also* Instruction to Specific Items for Item 77C of N–SAR.

[836] *See, e.g.,* rule 30e–1(b) under the Investment Company Act (requiring management companies to include in shareholder reports certain information relating to matters submitted to a vote of shareholders through the solicitation of proxies or

Continued

Form N–CEN, like Form N–SAR, will also include an item relating to material legal proceedings during the reporting period.[837] One commenter suggested that the Commission define legal proceedings for purposes of Form N–CEN.[838] The relevant item includes an instruction highlighting certain proceedings that should be described in response to the item[839] and the item itself only requests information on ''material legal proceedings, other than routine litigation incidental to the business.'' We believe the instruction and language of the item appropriately describes the legal proceedings funds should include when responding to this item. Another commenter suggested that the Commission state that derivative suits reported in response to this item are deemed to satisfy the requirements under section 33 of the Investment Company Act for filing pleadings and other documents in connection with that type of lawsuit.[840] Section 33 requires every fund which is a party and every affiliated person of such fund who is a party defendant to any action or claim by a fund or a security holder thereof in a derivative capacity or representative capacity against certain persons to file certain documents related to the action or claim with the Commission.[841] We do not believe that reporting pursuant to this requirement, taken alone, would be an appropriate alternative for a fund to use to satisfy the legal proceeding filing requirements under section 33, as Form N–CEN requires only a brief description of the proceeding (as well as the case or docket number (if any) and names of the principal parties to the proceeding) and does not itself require the filing of all materials plainly required by section 33.[842] Moreover, for data users interested in the materials required to be filed under section 33, the reporting required by Form N–CEN would not be the same as, nor in many cases a suitable substitute for, the materials themselves. Accordingly, we are adopting the reporting item as proposed.

Form N–SAR currently requires management companies to report a number of data points relating to fidelity bond and errors and omissions insurance policy coverage.[843] As proposed, we are limiting this request to two separate items in Form N–CEN in order to limit the number of items to those most useful to the Commission staff and reduce burdens on filers.

One item requires funds to report if any claims were filed under the management company's fidelity bond and the aggregate dollar amount of any such claims.[844] One commenter requested that we eliminate the item requesting fidelity bond information, stating that the information is already provided elsewhere by funds.[845] The other item requires registrants to report if the management company's officers or directors are covered under any directors and officers/errors and omissions insurance policy and, if so, whether any claims were filed under the policy during the reporting period with respect to the registrant.[846] The staff appreciates that some of this information may be disclosed in other filings with the Commission, although it is not reported in a structured data format.[847] We continue to believe that having responses to these questions in a structured data format will help alert Commission staff to insurance claims made by the fund or its officers and directors as a result of legal issues related to the fund. Accordingly, we are adopting these reporting requirements as proposed.

In order to better understand instances when funds receive financial support from an affiliated entity, we are adopting, substantially as proposed but with a modification that is designed to address a commenter's suggestion, a new requirement for information regarding the provision of such financial support.[848] We adopted disclosure requirements relating to fund sponsors' support of money market funds as part of our money market reform amendments in 2014, including a new requirement that money market funds file reports on Form N–CR, reporting, among other things, the receipt of financial support.[849] As with money market funds, we believe that it is important that the Commission understand the nature and extent to which a fund's sponsor provides financial support to a fund. Therefore, we are extending this requirement to all funds that will file reports on Form N–CEN. As we stated in the Proposing Release, although we believe it is an infrequent practice, based on staff experience, non-money market funds have received sponsor support in the past and we believe this item will allow Commission staff to readily identify any funds that have received such support for further analysis and review, as appropriate.

One commenter suggested that, for purposes of Form N–CEN, the instruction concerning the definition of ''financial support'' provide additional guidance concerning exclusions from the definition. The proposed instruction regarding the definition of ''financial support'' provided for certain of the exclusions suggested by the commenter, such as for routine waiver of fees or reimbursement of fund expenses and routine inter-fund lending.[850] We continue to think that the proposed exclusions are appropriate, and we are adopting those exclusions today.[851] However, the commenter also suggested specifying that the purchase of a defaulted or devalued security would constitute ''financial support'' only when it is intended to increase or stabilize the value or liquidity of the fund's portfolio.[852] We agree with the commenter that purchases of a defaulted

otherwise) [17 CFR 270.30e–1(b)]. The information request in Form N–CEN applies to UITs as well as management companies. The Form N–SAR requirement applies only to management companies (*see* Item 77.C of Form N–SAR; *see also* Instruction to Specific Items for Item 77C of Form N–SAR). We believe it is important for the Commission to have information for all registered investment companies on matters submitted for security holder vote in order to assist us in our oversight and examination functions.

[837] Item B.11 of Form N–CEN. As in Item 77.E of Form N–SAR, if there were any material legal proceedings, or if a proceeding previously reported had been terminated, the registrant will file an attachment as required by Part G of Form N–CEN. *See* Item G.1.a.i of Form N–CEN. We note that Form N–CEN, unlike Form N–SAR, will require UITs to respond to the information request related to material legal proceedings. For the same reasons discussed above with respect to matters submitted for security holder vote, we believe it is important to have information on material legal proceedings of all registered investment companies. *See supra* footnotes 834–836 and accompanying text.

[838] *See* State Street Comment Letter.

[839] *See* Instruction to Item B.11 of Form N–CEN, which states, ''[f]or purposes of this Item, the following proceedings should be described: (1) Any bankruptcy, receivership or similar proceeding with respect to the Registrant or any of its significant subsidiaries; (2) any proceeding to which any director, officer or other affiliated person of the Registrant is a party adverse to the Registrant or any of its subsidiaries; and (3) any proceeding involving the revocation or suspension of the right of the Registrant to sell securities.''

[840] *See* Schnase Comment Letter.

[841] Section 33 of the Investment Company Act.

[842] We note that the commenter did not explain how reporting pursuant to this requirement, taken alone, would be consistent with the requirements of section 33.

[843] Items 80–85 and Items 105–110 of Form N–SAR.

[844] Item B.12 of Form N–CEN; *cf.* Item 83 of Form N–SAR.

[845] *See* Schnase Comment Letter (referring to fidelity bond disclosures submitted on Edgar Form 40–17G and Form 40–17G/A (for amendments)).

[846] Item B.13 of Form N–CEN; *cf.* Item 85 of Form N–SAR.

[847] For example, a fund is required to provide and maintain a fidelity bond against larceny and embezzlement, which in general covers each officer and employee of the fund who has access to securities or funds. *See* rule 17g–1(a) under the Investment Company Act [17 CFR 270.17g–1(a)].

[848] Item B.14 of Form N–CEN.

[849] *See* Money Market Fund Reform 2014 Release, *supra* footnote 33.

[850] *See* Dechert Comment Letter; Instruction to Item 15 of proposed Form N–CEN.

[851] *See* Instruction to Item B.14 of Form N–CEN.

[852] *See* Dechert Comment Letter.

or devalued security at fair value need only be characterized as ''financial support'' for purposes of Form N–CEN if they are intended to increase or stabilize the value or liquidity of the fund's portfolio, and, accordingly, have modified the instruction in this manner.[853] In addition, and as proposed, if a fund other than a money market fund received financial support, it will also be required to provide more detailed information in the form of an attachment as required by Part G of Form N–CEN.[854]

We are also adopting, as proposed, an item in Form N–CEN requiring reporting as to whether the fund relied on orders from the Commission granting the fund an exemption from one or more provisions of the Investment Company Act, Securities Act or Securities Exchange Act during the reporting period.[855] Funds are required to identify any such order by release number.[856] Collecting this information in a structured format will assist us with our oversight functions and improve our ability to monitor fund reliance on exemptive orders.

One commenter expressed support for this new reporting requirement, including the reporting of release numbers applicable to such exemptive orders.[857] The commenter suggested, however, that in addition to release numbers, the form include the classification or category of the exemptive order in relation to the Commission's Investment Company Act Notices and Orders Category Listing Web page [858] and similar reporting requirements for a fund's reliance on staff no-action letters.[859] We have determined to adopt the reporting item as proposed. We believe that reporting requirements regarding reliance on no-action letters may impose additional administrative costs on filers. Therefore, we believe that the requested information as proposed balances the Commission's need for information to monitor a fund's regulatory compliance with the costs imposed on registrants reporting this information.

As proposed, Form N–CEN, similar to Form N–SAR,[860] will require identifying information for the fund's principal underwriters [861] and independent public accountants,[862] including, as applicable, name, SEC file number, CRD number, PCAOB number, LEI (if any), state or foreign country, and whether a principal underwriter was hired or terminated or if the independent public accountant changed since the last filing.[863] We are adopting these requirements as proposed.

If the independent public accountant changed since the last filing, under the proposal, the fund would also have been required to provide a detailed narrative attachment to Form N–CEN similar to the exhibit in Form N–SAR reporting a change in independent registered public accountants, along with the predecessor accountant's letter reporting the change in independent registered public accountants also required to be reported on Form N–SAR.[864]

Some commenters expressed concern that because Form N–CEN would be an annual reporting form, rather than a semi-annual reporting form like Form N–SAR, the exhibit may be filed a significant amount of time after an accountant had changed.[865] Commenters instead suggested that the proposed attachment be filed by funds with their semi-annual Form N–CSR filings.[866] We are persuaded by these concerns, and are modifying the requirement by moving the change in independent public accountant attachment from Form N–CEN to Form N–CSR as a new attachment to reports on that form.[867] We share commenters' concerns that, as proposed, a significant amount of time may lapse before shareholders would be provided the letter reporting a change in independent registered public accountants. We also believe that moving the attachment from Form N–CEN to Form N–CSR will help ensure concurrent review and written agreement by the predecessor accountant of the required management statement in both annual and semi-annual reports, as reports on Form N–CSR are required to be filed no later than 10 days after reports to shareholders are transmitted. Thus, Form N–CEN provides a means to track funds that change accountants in a structured data format on an annual basis, while the accountant's letter regarding the change will become available to the public semi-annually as an exhibit on Form N–CSR.

We also proposed to include for all funds several other accounting and valuation related items that are currently required for management companies by Form N–SAR, and that provide important information to the Commission regarding possible accounting and valuation issues related to a fund. Commenters generally did not object to these proposed reporting requirements,[868] and we are adopting them largely as proposed, with some revisions in response to specific commenter suggestions. These items include a question relating to material changes in the method of valuation of the fund's assets.[869] If there have been material changes in the method of valuation of assets during the reporting period, Item B.20 requires that the fund report the types of investments involved.

One commenter expressed support for this reporting requirement, noting that the information would be sufficient to conduct due diligence on pricing and valuation issues.[870] This commenter

[853] *See* Instruction to Item B.14 of Form N–CEN.

[854] Item G.1.a.ii of Form N–CEN. Money market funds currently provide this information through reports on Form N–CR. However, all funds, including money market funds, will be required to respond ''yes'' or ''no'' to Item B.14 of Form N–CEN.

[855] Item B.15 of Form N–CEN. If any actions were taken during the reporting period, which were required to be reported on Form N–1Q pursuant to an exemptive order, Form N–SAR requires that information be reported in response to Sub-Item 77P of Form N–SAR. *See* Instructions to Sub-Items 77P and 102O of Form N–SAR. Form N–CEN requires the fund to file as an attachment any information required to be filed pursuant to exemptive orders issued by the Commission and relied on by the fund. Instruction 5 to Item G.1 of Form N–CEN.

[856] *See* Item B.15.a.i of Form N–CEN.

[857] *See* Morningstar Comment Letter.

[858] Investment Company Act Notices and Orders Category Listing Web page is available at: *https://www.sec.gov/rules/icreleases.shtml*.

[859] *See* Morningstar Comment Letter.

[860] Item 11, Item 13, Item 77.K, Item 91, Item 102.J, Item 114, and Item 115 of Form N–SAR.

[861] Item 17 of proposed Form N–CEN.

[862] Item 18 of proposed Form N–CEN.

[863] Item 17.b and Item 18.f of proposed Form N–CEN, respectively.

[864] Item 79.a.iii of proposed Form N–CEN.

[865] *See* AICPA Comment Letter; and PwC Comment Letter (noting that Item 27(c)(4) of Form N–1A and Item 24, Instruction 5, of Form N–2 both require that the management statement required under Item 4.01 of Form 8–K be presented in both semi-annual and annual shareholder reports. Thus, for any change in accountants occurring in the first six months of a registrant's fiscal year, management's statement regarding a change in accountants would be required to be issued and filed publicly in the fund's semi-annual shareholder report while the predecessor accountant's letter reported semi-annually on former Form N–SAR would, under the proposal, have been filed in Form N–CEN six months later).

[866] *See* AICPA Comment Letter; and PwC Comment Letter.

[867] *See* Item 12(a)(4) of Form N–CSR.

[868] *See, e.g.*, Morningstar Comment Letter.

[869] Item B.20 of Form N–CEN. As discussed in the Proposing Release, valuation methodologies are approved by fund directors for use by funds to determine, in good faith, the fair value of portfolio securities (and other assets) for which market quotations are not readily available. For example, valuation methodology changes may include, but are not limited to, changing from use of bid price to mid-price for fixed income securities or changes in the trigger threshold for use of fair value factors on international equity securities. Unlike Form N–SAR, this requirement will apply to UITs as well as management investment companies. As we noted in the Proposing Release, we believe it is important for the Commission to have information on accounting and valuation for all registered investment companies in order to assist us in our oversight and examination functions.

[870] Morningstar Comment Letter.

also suggested aligning the type of investments involved with the list of asset types identified in Form N–PORT.[871] After considering the commenter's request, we have added an additional sub-item and clarifying instructions to Item B.20 to require the applicable ''asset type'' category specified in Item C of Form N–PORT.[872] We believe that requiring responses based on the categories used in Form N–PORT will provide some measure of standardization that will generally assist the staff in its monitoring of changes in valuation methodologies by asset class, and will provide regulatory consistency that will assist Commission staff in its review of information reported pursuant to both forms.

In addition, and as proposed, funds will also be required to provide a brief description of the types of investments involved.[873] However, we have modified the instruction to this sub-Item from the proposal to provide that if the change in methodology relates to a sub-asset type included in the response to Item B.20.c, then funds should report the sub-asset class in responding to Item B.20.d.[874] This modification is intended to avoid duplicative responses to Item B.20.c and Item B.20.d by eliciting more specific information as to any sub-asset classes contained in the broader Form N–PORT asset categories that are impacted by the change of valuation methodologies. Unlike reports on Form N–SAR, Form N–CEN does not require a separate attachment detailing the circumstances surrounding a change in valuation methods.[875] Instead, to facilitate review of this information in a structured format, Form N–CEN includes specific items in the form itself, including the date of change, explanation of change, type of investment, statutory or regulatory basis for the change, and the fund(s) involved.[876] Also as proposed, Form N–CEN carries forward the requirement from Form N–SAR[877] that the fund identify whether there have been any changes in accounting principles or practices, and, if any, to provide more detailed information in a narrative attachment to the form.[878]

We are also adopting, largely as proposed, a requirement in Form N–CEN that management companies other than SBICs, file a copy of their independent public accountant's report on internal control as an attachment to their reports on the form.[879] To flag instances where a report noted any material weaknesses, Form N–CEN also includes, as proposed, a question that asks whether the report on internal control noted any material weaknesses.[880] In addition, as was proposed, Form N–CEN contains a new requirement that the fund report if the certifying accountant issued an opinion other than an unqualified opinion with respect to its audit of the fund's financial statements.[881] These questions will elicit information on potential accounting issues identified by a fund's accountant.

We are also adopting, largely as proposed, a requirement in Form N–CEN, not contained in Form N–SAR, to indicate whether, during the reporting period, an open-end fund made any payments to shareholders or reprocessed shareholder accounts as a result of an NAV error.[882] One commenter expressed support for additional information related to NAV errors.[883] Another commenter recommended that this item be omitted from Form N–CEN, arguing that the item is not an appropriate reporting item for a census form, would likely engender inquiries and claims from potential litigants, and could be obtained through the Commission's examination program.[884] We continue to believe, however, that the item will assist the staff's monitoring efforts and the yes/no reporting structure of the item will be a useful means to flag the occurrence of NAV corrections whereby Commission staff can request further information in connection with staff examinations and other inquiries.[885]

In addition, one commenter requested that we revise the item to ensure that any errors that ''exceeded the registrant's threshold for reprocessing'' were captured, even if the reprocessing was paid for by a service provider.[886] After consideration of the comment, we agree that this question should capture all incidents of reprocessed shareholder accounts regardless of the source of payment and have revised the item to clarify that a registrant should respond affirmatively if any payments were made to shareholders (*i.e.,* regardless of the source of the payment) or if any shareholder accounts were reprocessed as a result of an error in calculating the registrant's NAV.[887]

As proposed, Form N–CEN also requires information from management companies regarding payments of dividends or distributions that required a written statement pursuant to section 19(a) of the Investment Company Act and rule 19a–1 thereunder.[888] These questions will assist the staff in monitoring valuation of fund assets and the calculation of the fund's NAV, as well as compliance with distribution

[871] *See id.*

[872] *See* Item B.20.c of Form N–CEN and related instruction (requiring responses to provide the applicable ''asset type'' category specified in Item C.4.a of Form N–PORT).

[873] Item B.20.d of Form N–CEN.

[874] *See* Instruction to Item B.20 of Form N–CEN. Thus, if a fund changed its valuation methodologies with respect to municipal securities, the fund would report ''debt' in response to Item B.20.c and ''municipal securities'' in response to Item B.20.d.

[875] *See* Item 77.J and Item 102.I of Form N–SAR.

[876] *Compare* Item 77.J of Form N–SAR *with* Item B.20 of Form N–CEN. An instruction to Item B.20 of Form N–CEN clarifies that we do not expect responses to this item to include changes to valuation techniques used for individual securities (*e.g.,* changing from market approach to income approach for a private equity security). Form N–SAR does not contain a similar instruction, but we are including it in Form N–CEN to provide clarity for filers and because we believe that responding to Item B.20 of Form N–CEN for individual securities may be overly burdensome.

[877] *See* Item 77.L and Item 102.K of Form N–SAR.

[878] Item B.21 and Item G.1.a.iv of Form N–CEN. Like the information requested regarding changes in valuation methods, Form N–SAR only requests information from management companies regarding changes in accounting principles and practices. Unlike Form N–SAR, Form N–CEN requires this information from UITs as well, for the same reasons as discussed above with respect to changes in valuation methods. *See supra* footnote 869.

[879] Item G.1.a.iii of Form N–CEN. Management companies other than SBICs are currently required to file a copy of the independent public accountant's report on internal control with their reports on Form N–SAR. *See* Item 77.B of Form N–SAR. We continue to believe that a copy of the management company's report on internal control should be filed with the Commission and thus are carrying over the filing requirement to Form N–CEN.

[880] Item B.18 of Form N–CEN. One commenter suggested that the word ''find'' in the text of proposed Item 19 be changed to ''note,'' stating that the term ''find'' could be misinterpreted, creating an ''expectation gap'' over the nature of the consideration of internal control in an audit of financial statements, particularly for investment companies, which (except for BDCs) are not subject to the integrated audit requirements of the Sarbanes-Oxley Act. *See* PwC Comment Letter. We are persuaded by the commenter's concern and have revised the language of the item from ''find'' to ''note'' as recommended.

[881] Item B.19 of Form N–CEN.

[882] Item B.22 of Form N–CEN.

[883] Morningstar Comment Letter.

[884] *See* SIFMA Comment Letter I.

[885] Regarding the commenter's concerns regarding potential increased litigation risk or inquiries based on public disclosure, based on our experience, we understand that these types of payments and reprocessing transactions are typically already disclosed to investors through account statements.

[886] *See* BlackRock Comment Letter.

[887] Item B.22.a of Form N–CEN.

[888] Item B.23 of Form N–CEN. Section 19(a) of the Investment Company Act generally prohibits a fund from making a distribution from any source other than the fund's net income, unless that payment is accompanied by a written statement that adequately discloses the source or sources of the payment. *See* 15 U.S.C. 80a–19(a). Rule 19a-1 under the Investment Company Act specifies the information required to be disclosed in the written statement. [17 CFR 270.19a–1]; *see also* Shareholder Notices of the Sources of Fund Distributions—Electronic Delivery, IM Guidance Update No. 2013–11 (Nov. 2013), *available at http://www.sec.gov/divisions/investment/guidance/im-guidance-2013-11.pdf.*

requirements under section 19(a) and rule 19a–1. One commenter stated that there is not currently a consistent method used across funds to determine whether a rule 19a–1 notice is required, and that this inconsistency could limit comparability of the reported data.[889] The commenter suggested that the Commission could increase comparability of the reported data by clarifying the method that should be used to determine whether a 19a–1 notice is required.[890] Although we recognize, as the commenter suggests, that different substantive practices relating to 19a–1 notices could affect the comparability of the reported data, revising the substantive provisions of rule 19a–1 is beyond the intended scope of the requirements of Form N–CEN.

c. Part C—Items Relating to Management Investment Companies

i. Background and Classification of Funds

We proposed a number of reporting items under Part C of Form N–CEN to provide the Commission and its staff with background information on the fund industry and to assist us in meeting our legal and regulatory requirements, such as requirements under the Paperwork Reduction Act. Additionally, certain demographic information in Part C will allow the Commission to better identify particular types of management companies for monitoring and analysis if, for example, an issue arose with respect to a particular fund type. We are adopting those reporting items substantially as proposed with some modifications in response to comments. Where we have received comments on specific reporting requirements, we discuss them in more detail below.

Part C will be completed by management investment companies other than SBICs. As in the proposal, for management companies offering multiple series, the required information will be reported separately as to each series.[891]

Similar to Form N–SAR and as proposed, Form N–CEN includes general identifying information on management companies and any series thereof, including the full name of the fund, the fund's series identification number and LEI, and whether it is the fund's first time filing the form.[892]

Unlike Form N–SAR, specific information on the classes of open-end management companies, including information relating to the number of classes authorized, added, and terminated during the relevant period are required under Form N–CEN.[893] In addition, Form N–CEN includes a requirement (unlike Form N–SAR) to specifically provide identifying information for each share class outstanding, including the name of the class, the class identification number, and ticker symbol.[894]

Form N–CEN also requires—substantially as proposed with some modifications in response to public comment—management companies to identify if they are any of the following types of funds: [895] ETF or exchange-traded managed fund (''ETMF''); [896] index fund; [897] fund seeking to achieve performance results that are a multiple of an index or other benchmark, the inverse of an index or other benchmark, or a multiple of the inverse of an index or other benchmark; [898] interval fund; [899] fund of funds; [900] master-feeder fund; [901] money market fund; [902] target date fund; [903] and underlying fund to a variable annuity or variable life insurance contract.

For purposes of reporting on Form N–CEN, as proposed, ''index fund'' is defined as an investment company, including an ETF, which seeks to track the performance of a specified index.[904] The definition is largely similar to the definition of ''index fund'' in rule 2a19–3 under the Investment Company Act, but will capture both broad-based and affiliated indexes.[905] Additionally, we note that the definition is substantially similar to the definition of ''index fund'' in Form N–SAR, but also takes into account the emergence of ETFs.[906] One commenter expressed support for the proposed definition of index fund, but

[889] *See* State Street Comment Letter.

[890] *Id.*

[891] General Instruction A to Form N–CEN.

[892] Item C.1 of Form N–CEN; *see also supra* section II.A.2.a (discussing the use of LEIs for purposes of Form N–PORT and related comments received regarding the use of LEIs). The requirements relating to the name of the fund and if this is the first filing with respect to the fund are currently required by Form N–SAR. *See* Item 3 and Item 7.C of Form N–SAR.

[893] Item C.2.a–Item C.2.c of Form N–CEN.

[894] Item C.2.d of Form N–CEN.

[895] Item C.3 of Form N–CEN. As discussed herein, many of the types of funds listed in Item C.3 are defined in Form N–CEN. With the exception of ''index fund'' and ''money market fund,'' these terms are not currently defined in Form N–SAR. *See* General Instruction H and Item 69 of Form N–SAR.

[896] Item C.3.a of Form N–CEN. As discussed above, we have revised, consistent with the changes to Form N–PORT discussed above, the definitions of ''Exchange-Traded Fund'' and ''Exchange-Traded Managed Funds'' to clarify that the definitions would apply to a class or series of a UIT organized as an ETF or ETMF. *See supra* footnote 793 and accompanying text. Consequently, for purposes of reporting on Form N–CEN, ''exchange-traded fund'' is defined as an open-end management investment company (or series or class thereof) or UIT (or series thereof), the shares of which are listed and traded on a national securities exchange at market prices, and that has formed and operates under an exemptive order under the Investment Company Act granted by the Commission or in reliance on an exemptive rule under the Act adopted by the Commission. Similarly, ''exchange-traded managed fund'' is defined as an open-end management investment company (or series or class thereof) or UIT (or series thereof), the shares of which are listed and traded on a national securities exchange at NAV-based prices, and that has formed and operates under an exemptive order under the Investment Company Act granted by the Commission or in reliance on an exemptive rule under the Act adopted by the Commission. *See* General Instruction E of Form N–CEN. These definitions are substantially identical to the definitions we proposed, however, we have added a parenthetical to each definition to clarify that an ETF or exchange-traded managed fund would include a series of a UIT that meets the rest of the applicable definition. We believe that these are appropriate definitions as they are similar to the one used for determining the applicability of ETF registration statement disclosure requirements for open-end funds. *See* General Instruction A of Form N–1A. Currently, all ETFs and exchange-traded managed funds rely on relief from certain provisions of the Investment Company Act that is granted by Commission order. *See* ETF Proposing Release, *supra* footnote 5; Eaton Vance Management, *et al.,* Investment Company Act Release No. 31333 (Nov. 6, 2014) [79 FR 67471 (Nov. 13, 2014)] (Notice); Eaton Vance Management, *et al.,* Investment Company Act Release No. 31361 (Dec. 2, 2014) (Order). The Commission, however, proposed in 2008 to codify the exemptive relief previously granted to ETFs by order. *See* ETF Proposing Release, *supra* footnote 5 (proposing rule 6c-11).

[897] Item C.3.b of Form N–CEN.

[898] Item C.3.c of Form N–CEN. This item is being modified from the proposed requirement, which would have required a fund to indicate if it seeks to achieve performance results that are a multiple of a benchmark, the inverse of a benchmark, or a multiple of the inverse of a benchmark. The modifications clarify that the benchmark may be an index.

[899] Item C.3.d of Form N–CEN.

[900] Item C.3.e of Form N–CEN.

[901] Item C.3.f of Form N–CEN.

[902] Item C.3.g of Form N–CEN.

[903] Item C.3.h of Form N–CEN. As in the proposal, for purposes of reporting on Form N–CEN, ''target date fund'' is defined as an investment company that has an investment objective or strategy of providing varying degrees of long-term appreciation and capital preservation through a mix of equity and fixed income exposures that changes over time based on an investor's age, target retirement date, or life expectancy. *See* Instruction 5 to Item C.3.b of Form N–CEN. This is the same definition as was proposed by the Commission in our 2010 proposing release relating to target date funds. *See* Investment Company Advertising Release, *supra* footnote 6. We note that one commenter suggested that target-date funds should also self-identify whether their glide path is ''to'' or ''through'' retirement. *See* Morningstar Comment Letter. We have not made any changes in response to this comment because we believe that the identifying information requested by the form with respect to target-date funds is sufficient for the Commission's purposes.

[904] *See* Instruction 2 to Item C.3 of Form N–CEN.

[905] *See* rule 2a19–3 under the Investment Company Act [17 CFR 270.2a19–3] (referring to an index fund for purposes of the rule as a fund that has ''an investment objective to replicate the performance of one or more broad-based securities indices . . .'').

[906] *See* Instruction to Item 69 of Form N–SAR.

strongly encouraged that funds using indexes constructed by affiliated service providers be disclosed clearly and that funds disclose whether the index tracked by the fund is exclusively constructed for the fund.[907] We agree with the commenter and are requiring index funds to indicate whether the index whose performance the fund tracks is constructed by an affiliated person of the fund and whether the index is exclusively constructed for the fund.[908] We believe this information will further assist Commission staff in monitoring trends in funds that track these indexes, which often use more complex methodologies that choose constituents by weighing factors other than market capitalization. It also will assist staff in monitoring conflicts of interest that could exist when an index is constructed by an affiliated person of the fund or is exclusively constructed for the fund.

As proposed, ''interval fund'' is defined as a closed-end management company that makes periodic repurchases of its shares pursuant to rule 23c–3 under the Investment Company Act.[909] One commenter suggested that the definition of interval fund should not be limited to closed-end funds, but rather, expanded to other investment companies.[910] We believe, however, that the definition is appropriate as proposed because the term ''interval fund'' is commonly used to refer to funds that rely on rule 23c–3.[911]

For purposes of reporting on Form N–CEN, we also proposed to define ''fund of funds'' as a fund that acquires securities issued by another investment company in excess of the amounts permitted under section 12(d)(1)(A) of the Investment Company Act.[912] Some commenters suggested that we revise the definition to exclude funds that invest in money market funds for cash management purposes in excess of the amount permitted under section 12(d)(1)(A) in reliance on rule 12d1–1 of the Investment Company Act.[913] After consideration of these comments, we acknowledge that the definition as proposed would have included a larger universe of funds than we intended for our regulatory purposes. The proposed definition would have yielded data that would have impeded identification of those funds that acquire securities issued by another investment company in excess of the amounts permitted under section 12(d)(1)(A) other than those that do so only for short-term cash management purposes. Therefore, we have revised the instructions to Item C.3 to note that for purposes of the item, the term ''fund of funds'' does not include a fund that acquires securities issued by another investment company solely in reliance on rule 12d1–1.[914] We received no other comments on the other definitions for fund types.

As proposed, ''master-feeder fund'' was defined as a two-tiered arrangement in which one or more funds holds shares of a single fund in accordance with section 12(d)(1)(E) of the Investment Company Act.[915] We understand that certain interpretations of this definition could exclude some funds that operate in a master-feeder structure and hold themselves out as master-feeder funds, but for technical reasons must obtain exemptive relief from the Commission rather than rely on section 12(d)(1)(E) to operate in this manner. Accordingly, we have revised the definition of ''master-feeder fund'' to more clearly include two-tiered arrangements in which one or more funds holds shares of a single fund pursuant to exemptive relief granted by the Commission.[916]

ETFs and ETMFs, index funds, and master-feeder funds are also required to provide additional information under Part C.[917] First, as in the proposal, Form N–CEN requires a management company to further indicate if it is an ETF or an ETMF.[918] Second, as in the proposal, index funds will be required to report certain standard industry calculations of relative performance. In particular, index funds will be required to report a measure of the difference between the index fund's total return during the reporting period[919] and the index's return both before and after fees and expenses—commonly called the ''tracking difference''[920]—and also a measure of the volatility of the day-to-day tracking difference over the course of the reporting period—commonly called the fund's ''tracking error.''[921] One commenter suggested that tracking difference and tracking error should be reported monthly on Form N–PORT rather than annually on Form N–CEN, because monthly reporting would allow the Commission to receive observations for all index funds for the same time period, and the commenter opined that the additional information would help the Commission be more responsive, particularly in times of market stress.[922] Although we recognize that there may be additional potential benefits of monthly reporting, as the commenter suggests, we continue to believe that annual reporting more appropriately balances the usefulness of the reported information to the Commission and other data users with the additional administrative costs that would be associated with a requirement for monthly reporting and the associated recordkeeping necessary to support it.

---

[907] Morningstar Comment Letter.

[908] Item C.3.b.i of Form N–CEN.

[909] *See* Instruction 3 to Item C.3 of Form N–CEN.

[910] Morningstar Comment Letter (noting that there is one investment company registered on Form N–1A whose redemption parameters are largely similar to an interval fund pursuant to exemptive relief and suggesting that the definition of interval fund be expanded to other investment companies in light of the existence of this fund).

[911] *See* rule 23c–3 under the Investment Company Act [17 CFR 270.23c–3]. We believe that it is more appropriate to maintain the definition of interval fund as a closed-end fund that makes periodic purchases of its shares pursuant to rule 23c–3 as proposed, rather than expand the definition to capture funds that share some similar characteristics with interval funds but operate outside the context of rule 23c–3. For example, we believe that reports on Form N–CEN will appropriately capture an open-end fund that operates with redemption procedures similar to an interval fund pursuant to exemptive relief in response to Item B.15 of Form N–CEN.

[912] *See* 15 U.S.C. 80a–12(d)(1)(A); Instruction 1 to Item 27 of proposed Form N–CEN.

[913] Schwab Comment Letter; ICI Comment Letter; MFS Comment Letter.

[914] *See* Instruction 1 to Item C.3 of Form N–CEN.

[915] *See* Instruction 4 to Item 27 of proposed Form N–CEN.

[916] *See* Instruction 4 to Item C.3. of Form N–CEN which defines the term ''master-feeder fund'' to mean ''a two-tiered arrangement in which one or more funds (each a feeder fund) holds shares of a single Fund (the master fund) in accordance with section 12(d)(1)(E) of the Act (15 U.S.C. 80a–12(d)(1)(E)) *or pursuant to exemptive relief granted by the Commission*'' (emphasis added).

[917] *See* Item C.3.a, Item C.3.b, and Item C.3.f of Form N–CEN.

[918] *See* Item C.3.a.i and Item C.3.a.ii of Form N–CEN.

[919] With respect to index funds that are ETFs, we expect a fund to use its NAV-based total return, rather than market-based total return, in responding to Item C.3.a.i and Item C.3.a.ii of Form N–CEN.

[920] Item C.3.b.i of Form N–CEN. The tracking difference is the return difference between the fund and the index it is following, annualized. Morningstar ETF Research, Ben Johnson, *et al., On the Right Track: Measuring Tracking Efficiency in ETFs* (Feb. 2013) (''Morningstar Paper'') at 29, *available at http://media.morningstar.com/uk/MEDIA/Research_Paper/Morningstar_Report_Measuring_Tracking_Efficiency_in_ETFs_February_2013.pdf.* Thus, tracking difference = $(1 + R_{NAV} - R_{INDEX})^{1/N} - 1$, where R_{NAV} is the total return for the fund over the reporting period, R_{INDEX} is the total return for the index for the reporting period, and N is the length of the reporting period in years. N will equal to 1 if the reporting period is the fiscal year. *Id.*

[921] *See* Item C.3.b.ii of Form N–CEN. Tracking error is commonly understood as the standard deviation of the daily difference in return between the fund and the index it is following, annualized. Morningstar Paper, *supra* footnote 920, at 29. Thus, tracking error = $\text{std}(R_{NAV} - R_{INDEX}) \times \sqrt{n}$, where R_{NAV} is the daily return for the fund, R_{INDEX} is the daily return for the index, std(·) represents the standard deviation function, and n is the number of trading days in the fiscal year. *Id.*

[922] *See* Morningstar Comment Letter (recommending that tracking difference and tracking error be reported on N–PORT with trailing one-year data rather than annually on Form N–CEN).

Moreover, we believe that the frequency and timeliness of reports on Form N–CEN are, both generally and specifically with respect to these reporting requirements, sufficient for collecting census-type information, but that reporting of these particular annualized figures on Form N–PORT would not be so timely or so frequent as to advance the purposes the commenter suggested (*viz.,* to respond in periods of market stress), particularly in light of the Form N–PORT 60-day reporting delay.

While supporting the inclusion of tracking difference and tracking error reporting items, a couple of commenters suggested alternatives to the calculation methods underlying the reporting requirements, including, for example, measuring tracking error on a weekly or monthly basis rather than a daily basis as proposed.[923] With respect to tracking error, we believe that it is important to calculate tracking error using the same observation frequency across funds and that, based on staff experience, a daily frequency for tracking data is likely more commonly calculated and therefore more readily available to funds than the alternatives proposed. We also believe that daily calculations better reflect the nature of the daily redeemability of an open-end fund, including capturing the daily trading activities on the secondary market for ETFs. One commenter argued that daily tracking error calculations may contain temporary anomalies outside portfolio management control, such as differences in holidays or pricing sources used by the fund and/or index providers or temporary market aberrations which may cause a higher daily tracking error.[924] We do not believe such differences would be uninformative. Rather, we believe receiving information on these potential anomalies will better inform investors and Commission staff about the behaviors of index funds and the indexes they track and assist the Commission in our oversight responsibilities. Overall, we do not perceive significant additional benefits in the alternative calculation methods recommended by commenters and continue to believe that the calculation methodologies for tracking difference and tracking error, as proposed, are appropriate.

Specifically, tracking difference will be calculated as the annualized difference between the index fund's total return during the reporting period and the index's return during the reporting period, and tracking error will be calculated as the annualized standard deviation of the daily difference between the index fund's total return and the index's return during the reporting period.[925] Reporting of these measures will help data users, including the Commission, investors, and other potential users, evaluate the degree to which particular index funds replicate the performance of the target index.[926] In addition, tracking difference and tracking error before fees and expenses[927] will allow data users to better understand the effect of factors other than fees and expenses on the degree to which the index fund replicates the performance of the target index.[928]

Finally, as proposed, master funds will be required to provide identifying information with respect to each feeder fund, including information on unregistered feeder funds (*i.e.,* feeder funds not registered as investment companies with the Commission), such as offshore feeder funds.[929] Similarly, a feeder fund will be required to provide identifying information of its master fund.[930]

We are also adopting, as proposed, the requirement in Form N–CEN that a management company report if it seeks to operate as a non-diversified company, as defined in section 5(b)(2) of the Investment Company Act.[931] Form N–SAR, in contrast, asks if the management company was a diversified investment company at any time during the period or at the end of the reporting period.[932] The item in Form N–CEN is forward looking rather than backward looking as in Form N–SAR and is intended to include as part of the universe of non-diversified funds those funds that seek to operate as non-diversified companies even if they should happen to meet the definition of a ''diversified company'' as of the end of a particular reporting period.[933] We believe this item will allow our staff to more accurately ascertain the universe of non-diversified funds and, thus, better assist us in our analysis and inspection functions. One commenter suggested that this reporting requirement also consider the identification of funds that intended to operate as non-diversified at some point during the reporting period but have since changed to diversified status.[934] We believe that the reporting requirement as proposed is appropriate for our purpose of being able to efficiently identify non-diversified companies.

ii. Investments in Certain Foreign Corporations

Form N–CEN requires, as proposed, that a management company identify if it invests in a CFC for the purpose of investing in certain types of instruments, such as commodities.[935] If it does, it must include the name and LEI of such corporation, if any.[936] As discussed above in section II.A.2.b, some funds use CFCs for making certain investments, particularly in commodities and commodity-linked derivatives, often for tax purposes. Information regarding assets invested in a CFC for the purpose of investing in certain types of instruments will provide investors greater insight into CFCs that may have certain legal, tax, and country-specific risks associated with them. Combined with the information that we are collecting in Form N–PORT, Commission staff will use this information to better understand the use of CFCs, which could allow for more efficient collaboration with foreign financial regulatory authorities to the extent the Commission may need books and records or other information for specific funds or general inquiries related to CFCs.

iii. Securities Lending

As discussed above, we are adopting requirements that funds provide certain

[923] *See* Invesco Comment Letter (recommending that tracking error be based on a monthly basis rather than a daily basis and that tracking difference be calculated pursuant to an excess return calculation); Confluence Comment Letter (recommending that tracking error be based on a weekly basis rather than a daily basis, arguing that daily periodicity will show excess volatility, providing the Commission and investors with a skewed picture of tracking error).

[924] *See* Invesco Comment Letter.

[925] *See* Proposing Release, *supra* footnote 7, at 33639–40. *See also* Morningstar Paper, *supra* footnote 920, at 29.

[926] *See* Morningstar Paper, *supra* footnote 920, at 5. We believe that this information will help data users understand which funds are best tracking their target indexes and could highlight outlier funds.

[927] *See* Item C.3.b.ii.1 and Item C.3.b.iii.1 of Form N–CEN.

[928] *See* Morningstar Paper, *supra* footnote 920, at 9.

[929] Item C.3.f.ii of Form N–CEN.

[930] Item C.3.f.i of Form N–CEN.

[931] Item C.4 of Form N–CEN.

[932] *See* Item 60 of Form N–SAR.

[933] For example, if a fund generally operates as a non-diversified fund, but as a result of market conditions or other reasons, happens to meet the definition of ''diversified fund'' as of the end of the reporting period, it will still be required to indicate that it was a non-diversified fund for purposes of this item.

[934] *See* Schnase Comment Letter.

[935] Item C.5.a of Form N–CEN. As in the proposal, an instruction to the item defines ''controlled foreign corporation'' as having the meaning provided in section 957 of the Internal Revenue Code.

[936] *Id.*

securities lending information in reports on Form N–PORT to help inform the Commission, investors and other market participants about the scale of securities lending activity by funds and their related cash collateral reinvestments.[937] Additionally, we are adopting requirements that funds include in their statements of additional information[938] certain information concerning their income and expenses associated with securities lending activities in order to increase the transparency of this information to investors and other potential users.[939]

We proposed, and continue to believe it is appropriate, that some important information concerning securities lending activity by funds should be reported in a structured format, but on a less frequent basis than reports on Form N–PORT. In this regard, we believe that the proposed annual reporting requirement on Form N–CEN yields sufficiently timely data and more appropriately balances the requirements' benefits with their associated costs than would additional monthly reporting requirements on Form N–PORT. Some commenters expressed general support for reporting securities lending information on Form N–CEN.[940] One commenter suggested that the Commission require even more detailed reporting requirements concerning services provided by securities lending agents, including, for example, information about how securities are selected for loan, contending that the public availability of the information may assist a fund board in understanding fees and services and drawing conclusions concerning their comparability.[941]

We acknowledge that the commenter's recommended additions could yield information that may be useful to the Commission as well as to some data users, and recognize that a fund board's consideration of securities lending services may rightfully include consideration of how securities are selected for loan and the other matters raised by the commenter. However, the information required by Form N–CEN is intended primarily for Commission regulatory purposes, and—balancing those purposes against the reporting costs associated with additional requirements—we have determined that the requirements we are adopting today are appropriate. The adopted requirements are meant to yield census-type information that is, to the extent practicable, comparable across reporting funds and that permits the Commission and other potential users to follow up, as appropriate, on patterns and idiosyncrasies in the reported data. We believe, therefore, that the nuanced information the commenter suggests requiring is better provided in a fund's registration statement than in reports on Form N–CEN, to the extent required.

We are therefore adopting, as proposed, a requirement that each management company report annually on new Form N–CEN whether it is authorized to engage in securities lending transactions and whether it loaned securities during the reporting period.[942] In addition, we are adopting, as proposed, reporting requirements regarding information about the fees associated with securities lending activity and information about the management company's relationship with certain securities-lending-related service providers.

As in the proposal, management companies that loaned any securities during the reporting period will be required to report certain information, with some modifications in response to comments. Specifically, those management companies will be required to report annually whether any borrower of securities failed to return the loaned securities by the contractual deadline with the result that the fund (or its securities lending agent) liquidated collateral pledged to secure the loaned securities or that the fund was otherwise adversely impacted during the reporting period.[943]

However, this reporting requirement has been modified from the proposal, which would have required funds to report whether a borrower defaulted on its obligations to return loaned securities or return them on time in connection with a security on loan during that period. Some commenters requested that the Commission narrow the definition of borrower default to exclude "technical" defaults, citing concerns that the item, as proposed, could be read to require that funds report any default, including defaults that are not likely to result in potential harm to the fund and would not appropriately represent counterparty risk.[944] These types of defaults may occur when loaned securities are returned to a fund after the contractual deadline due to operational issues related to processing or communication, which, according to commenters, is not uncommon.[945] Commenters recommended various alternatives to defining borrower default, including, for example, as any default that causes a fund to liquidate securities lending collateral pledged in connection with the securities lending arrangement[946] or any default that results in losses to the fund.[947] Others noted that a fund can be further protected from borrower default if it is indemnified by the securities lending agent against loss resulting from a shortfall in pledged collateral when a borrower has defaulted.[948]

We are persuaded by commenters and have modified the reporting requirement regarding borrower default to focus on failures to return loaned

[937] *See supra* sections II.A.2.d and II.A.2.g.v.

[938] "Statement of additional information" means the statement of additional information required by Part B of the registration form applicable to the fund.

[939] *See* discussion *infra* section II.F regarding securities lending disclosures in the Statement of Additional Information and Form N–CSR; *see also supra* footnote 192.

[940] *See, e.g.,* BlackRock Comment Letter; Blackrock Directors Comment Letter; CFA Comment Letter; EY Comment Letter (suggesting, however, that securities lending disclosures proposed in Regulation S–X would be more appropriate in Form N–CEN than on Form N–PORT); Fidelity Comment Letter (recommending, however, that information concerning third-party lending agent arrangements should be non-public); Morningstar Comment Letter; RMA Comment Letter; SIFMA Comment Letter I; State Street Comment Letter.

[941] *See* Blackrock Directors Comment Letter (recommending that the Commission specifically require disclosures on whether qualified dividend income management is provided by lending agents, the client fund, or other third parties; whether securities for loan are selected by the lending agent, the client fund, or other third parties; and whether the lender's securities lending program includes "specials" only (and, if so, how "specials" are defined) or general collateral as well).

[942] Item C.6.a–Item C.6.b of Form N–CEN.

[943] Item C.6.b.i of Form N–CEN.

[944] *See, e.g.,* Fidelity Comment Letter; SIFMA Comment Letter I; Vanguard Comment Letter.

[945] *See* ICI Comment Letter; SIFMA Comment Letter I; Vanguard Comment Letter (recommending that the definition of borrower default be limited to any default that causes a fund to liquidate securities lending collateral pledged in connection with the securities lending arrangement); RMA Comment Letter and State Street Comment Letter (recommending that borrower default be limited to any default due to events of insolvency or upon an agent lender otherwise formally declaring a default by the borrower pursuant to the relevant borrower agreement); Fidelity Comment Letter (recommending that borrower default be limited to any default that results in losses to the fund, which could arise when the value of collateral for loaned securities and any reimbursement payments due to the fund are insufficient to eliminate losses associated with the default).

[946] *See* ICI Comment Letter; Vanguard Comment Letter; SIFMA Comment Letter I.

[947] *See* Fidelity Comment Letter. *See also* RMA Comment Letter and State Street Comment Letter (generally recommending borrower default being defined as any default due to events of insolvency or upon an agent lender otherwise formally declaring a default by the borrower pursuant to the relevant borrower agreement). We believe these recommended definitions of default are too narrow because a fund could be harmed by a borrower's failure to return loaned securities whether or not the borrower is insolvent or the lending agent declares an event of default.

[948] *See, e.g.,* RMA Comment Letter; State Street Comment Letter.

securities that result in the fund (or its securities lending agent) having to liquidate collateral pledged to secure the loaned securities or the fund otherwise being adversely impacted.[949] We have also added an instruction to clarify that, for purposes of this reporting requirement, other adverse impacts to the fund would include, for example, (1) a loss to the fund if collateral and indemnification were not sufficient to replace the loaned securities or their value, (2) the fund's ineligibility to vote shares in a proxy,[950] or (3) the fund's ineligibility to receive a direct distribution from the issuer.[951] We believe that with these modifications to the proposal, the Commission may better monitor the risks associated with borrower defaults that have the potential to expose the fund and its shareholders to harm without having funds account for technical defaults that do not pose the same risks.

We are also adopting, as proposed, a requirement that management companies report whether a securities lending agent or any other entity indemnifies the fund against borrower default on loans administered by the agent and certain identifying information about the entity providing indemnification if not the securities lending agent.[952] In addition, in a modification from the proposal, we are now including a requirement that management companies report whether the fund exercised its indemnification rights during the reporting period.[953] A commenter recommended that the Commission require funds to report whether they exercised their indemnification rights to, in part, provide information about defaults and the extent to which counterparty risks are covered by third parties that provide indemnification.[954] We agree with the commenter that this additional requirement would illuminate the frequency of defaults and indemnifications thereby providing the Commission with information about such counterparty defaults and the extent to which those risks are covered by third parties that provide indemnification. We believe that this additional requirement, together with the other default and indemnification requirements, will yield data that will allow the Commission, investors, and other potential users to more effectively assess the counterparty risks associated with borrower default in the securities lending market and the extent to which those risks are mitigated by—or concentrated in—third parties that provide indemnification against default.[955]

One commenter recommended that details concerning indemnification protection should be made nonpublic.[956] We continue to believe, however, that public reporting is a necessary part of improving transparency regarding a fund's securities lending activities. Specifically, we believe that the information regarding indemnification provisions is relevant to investors evaluating the risks associated with securities lending and comparing those risks across funds, particularly for funds that regularly engage in securities lending activities.

Because management companies often engage external service providers as securities lending agents or cash collateral managers, we believe that some of the risks associated with securities lending activities by management companies could be impacted by these service providers and the nature of their relationships with the management companies and the interconnectedness these service providers may have one with another. Accordingly, we are adopting, as proposed, a requirement that management companies report some basic identifying information about each securities lending agent and cash collateral manager.[957] One commenter suggested that the Commission define the terms ''securities lending agent'' and ''cash collateral manager'' for purposes of Form N–CEN.[958] While we continue to believe that these terms are generally understood within the fund industry, we have clarified in the Form that the term ''cash collateral manager'' refers to an entity that manages a pooled investment vehicle in which a fund's cash collateral is invested.[959] In addition, we are requiring that funds report whether each of these service providers is a first- or second-tier affiliated person of the management company.[960] One commenter specifically expressed support for this reporting requirement.[961] This data will highlight those funds that might be expected to rely on Commission exemptive relief in order to engage in securities lending activities with affiliates.[962] Additionally, the disclosure of whether the cash collateral manager is a first- or second-tier affiliate of the securities lending agent[963] could alert the Commission, investors, and other market participants to potential conflicts of interest when an entity managing a cash collateral reinvestment portfolio is affiliated with a securities lending agent that is compensated with

[954] *See* ICI Comment Letter.

[955] As discussed above, commenters to the FSOC Notice suggested that enhanced securities lending disclosures could be beneficial to investors and counterparties. *See supra* footnote 190.

[956] *See* Fidelity Comment Letter (noting that public disclosure may negatively impact a fund's ability to negotiate for lending services).

[957] Item C.6.c.i–Item C.6.c.ii and Item C.6.d.i–Item C.6.d.ii of Form N–CEN.

[958] *See* RMA Comment Letter (noting that the terms are generally well-understood within the fund industry, but suggesting that, for purposes of Form N–CEN, the Commission could define the term ''securities lending agent'' to mean a party employed by a lender to administer the lender's securities lending program according to the prescribed terms of a legal agreement and the term ''cash collateral manager'' to mean a party employed by the lender to manage cash collateral on behalf of securities loans).

[959] *See* Item C.6.d of Form N–CEN.

[960] *See* Item C.6.c.iii and Item C.6.d.iv of Form N–CEN (requiring a Fund to report if the named securities lending agent or cash collateral manager is an ''affiliated person'' (*i.e.* first-tier affiliate) or ''an affiliated person of an affiliated person'' (*i.e.* second-tier affiliate) of the Fund). *See also* section 2(a)(3) of the Investment Company Act for a definition of the term ''affiliated person.'' 15 U.S.C. 80a–2(a)(3).

[961] *See* RMA Comment Letter.

[962] Section 17(d) of the Investment Company Act makes it unlawful for a first- or second-tier affiliate, among others, acting as principal, to effect any transaction in which the fund, or a company it controls, is a joint or a joint and several participant in contravention of Commission rules. 15 U.S.C. 80a–17(d). Rule 17d–1(a) prohibits a first- or second-tier affiliate of a registered fund, among others, acting as principal from participating in or effecting any transaction in connection with any joint enterprise or other joint arrangement or profit-sharing plan in which the fund (or any company it controls) is a participant unless an application or arrangement or plan has been filed with the Commission and has been granted. 17 CFR 270.17d–1. These provisions would prohibit a fund from lending to a borrower that is a first- or second-tier affiliate or compensating a securities lending agent that is a first- or second-tier affiliate with a share of revenue generated by the lending program unless the fund (and/or its affiliate) has obtained an exemptive order from the Commission. These provisions also generally prohibit a fund from investing cash collateral in a first- or second-tier affiliated liquidity pool unless the fund satisfies the conditions in rule 12d1–1 under the Investment Company Act, which provides exemptive relief, subject to certain conditions, for fund investments in an affiliated registered money market fund and a pooled investment vehicle that would be an investment company but for sections 3(c)(1) and 3(c)(7) of the Investment Company Act and that the fund reasonably believes operates in compliance with money market fund regulations. *See* Fund of Funds Investments, Investment Company Act Release No. 27399 (June 20, 2006) [71 FR 36640 (June 27, 2006)] at n. 27 and accompanying text.

[963] Item C.6.d.iii of Form N–CEN.

a share of revenue generated by the cash collateral reinvestment pool.

As proposed, Form N–CEN also requires each management company to report whether it has made any of several specific types of payments, including a revenue sharing split, non-revenue sharing split (other than an administrative fee), administrative fee, cash collateral reinvestment fee, and indemnification fee, to one or more securities lending agents or cash collateral managers during the reporting period.[964] In the Proposing Release, we sought comment on whether, in addition to requiring management companies to report whether they made each of the proposed types of payments associated with securities lending, we should also require disclosure of specific rates or amounts paid for each of the enumerated types of compensation.[965] Two commenters expressed general support for disclosure of securities lending income and compensation of securities lending agents and cash collateral managers but recommended that, if compensation figures were required, that they be calculated on the basis of income and fees paid during the reporting period.[966]

We believe that the information we proposed about the types of payments relating to securities lending activities will allow the Commission, investors and other management company boards of directors to understand better the nature of fees a management company pays in connection with securities lending activities and whether, for example, the revenue sharing split that the company pays to a securities lending agent includes compensation for other services such as administration or cash collateral management.[967] We recognize the potential benefits for some data users of access to information about amounts paid for each of the types of compensation in a structured format. However, in light of the fact that Form N–CEN reporting requirements are intended primarily for the Commission's regulatory purposes and that there would be additional reporting costs related to such a change, and further recognizing that additional securities lending information will now be available to investors pursuant to new Statement of Additional Information (or, for closed-end funds, Form N–CSR) requirements discussed below,[968] we have determined not to require reporting of specific compensation amounts or fee rates in reports on Form N–CEN. In addition, we have included in Form N–CEN, a requirement that management companies report the monthly average of the value of portfolio securities on loan during the reporting period.[969] This requirement was originally proposed to be included in Regulation S–X along with other securities lending disclosure requirements.[970] We have determined to move this information to Form N–CEN as we believe having this information in a structured format will assist our staff in its analyses of the information. As previously noted, we have also determined to move the other proposed securities lending disclosures from Regulation S–X to the Statement of Additional Information (or, for closed-end funds, Form N–CSR), as we believe the Statement of Additional Information (or, for closed-end funds, Form N–CSR) is a more appropriate location for these disclosures.[971] One commenter recommended that funds be required to report average monthly aggregate dollar amounts on loan for each counterparty to the securities loan.[972] We continue to believe, however, that information on the overall monthly average of the value of portfolio securities on loan provides a better understanding of a fund's securities lending program without burdening registrants with additional counterparty reporting requirements.

Finally, we are also adopting a requirement that funds report the net income from securities lending activities in Form N–CEN.[973] We proposed to require disclosure of this information in fund financial statements pursuant to proposed amendments to Regulation S–X, and we sought comment on whether the information should be required in reports on Form N–CEN.[974] One commenter suggested that the proposed securities lending financial statement disclosure requirements be instead included in Form N–CEN, as presentation there would be less likely to detract from other material information in the financial statements.[975] Another commenter suggested that requiring additional information on Form N–CEN, including income from securities lending activities, would make the other required information more complete and useful.[976] We agree with commenters that reporting of net income from securities lending activities would yield useful information for the Commission and other data users and have determined to add this requirement. In particular, information about net income from securities lending activity in a structured format provides useful context for the other securities lending reporting requirements, such as those concerning fees.

Together, the data that these requirements will yield will allow the Commission to better understand the interaction of these service providers with management companies. We also believe that the reporting of this data will increase the transparency of information available to the public on the lending and borrowing of securities by funds, a subset of the market participants engaged in securities lending activities.[977] In addition to informing the Commission's risk analysis, we believe that this information will also help inform other data users about the use of, and possible risks associated with, the lending of

[964] *See* Item C.6.e of Form N–CEN; *see also* Proposing Release, *supra* footnote 7, at section II.E.4.c.iii. Management companies that report that ''other'' payments were made to one or more securities lending agents or cash collateral managers during the reporting period will also be required to describe the type or types of other payments. *See* Item C.6.e.vi of Form N–CEN. In addition, management companies will be required to disclose the total amount of each payment for the reporting period and describe the services provided for the payment. *See infra* section II.F.2 regarding amendments to the Statement of Additional Information and Form N–CSR.

portfolio securities by management companies.

iv. Reliance on Certain Rules

We are adopting, as proposed, a requirement in Form N–CEN that management companies report whether they relied on certain rules under the Investment Company Act during the reporting period.[978] A similar reporting item is contained in Form N–SAR.[979] However, Form N–CEN requires information with respect to additional rules not currently covered by Form N–SAR.[980] We are collecting information on these additional rules to better monitor reliance on exemptive rules and to assist us with our accounting, auditing and oversight functions, including, for some rules, compliance with the Paperwork Reduction Act. For example, reporting of reliance on rules 15a–4 and 17a–8 under the Investment Company Act will allow the staff to monitor significant events relating to interim investment advisory agreements and affiliated mergers, respectively.

One commenter suggested that the Commission specify the name of each rule next to the rule number.[981] We believe, however, that the rule number descriptions as proposed in Item C.7 are consistent with other reporting forms and provide sufficient information for registrants, and thus, are adopting the item as proposed.

In addition, we are adopting, as proposed, amendments to rule 10f–3 to eliminate the requirement that funds provide the Commission with reports on Form N–SAR regarding any transactions effected pursuant to the rule.[982] Rule 10f–3 currently requires funds to maintain and preserve certain information—the same information also required to be filed pursuant to Form N–SAR—in its records regarding rule 10f–3 transactions.[983] Our amendments to rule 10f–3 will eliminate the requirement to periodically report this information,[984] but will not alter the requirement to maintain and preserve it. The Commission believes it is unnecessary for funds to continue to file this information because Commission staff can request the information in connection with staff inspections, examinations and other inquiries.[985] We did not receive comment on this aspect of the proposal.

v. Expense Limitations

As in Form N–SAR,[986] Form N–CEN requires information regarding expense limitations.[987] The requirements in Form N–CEN are, as proposed, modified from Form N–SAR and require information on whether the management company had an expense limitation arrangement in place, whether any expenses of the fund were waived or reduced pursuant to the arrangement, whether the waived fees are subject to recoupment, and whether any expenses previously waived were recouped during the period.[988] We believe that more specific questions relating to management company expense limitation arrangements will limit uncertainty for management companies when responding to these items and will be a useful means to flag the occurrence of expense limitations whereby Commission staff can request further information in connection with staff examinations and other inquiries. One commenter expressed support for the expense limitation reporting requirement but suggested that the item include reporting of the actual dollar values of the expense information.[989] We continue to believe, however, that the reporting item, as proposed, appropriately balances the burden on funds of providing this information and information necessary for our regulatory purposes. The adopted requirements are meant to yield census-type information that is, to the extent practicable, comparable across reporting funds and that permits the Commission and other potential users to follow up, as appropriate, on patterns and idiosyncrasies in the reported data. We believe therefore that the detailed and nuanced information the commenter suggests requiring is better provided in a fund's registration statement than in reports on Form N–CEN, to the extent required or otherwise appropriate.

vi. Service Providers

Form N–CEN (similar to Form N–SAR)[990] will, as proposed, collect identifying information on the management company's service providers, including its advisers and sub-advisers,[991] transfer agents,[992] pricing services agents,[993] custodians (including custodians that provide services as sub-custodians),[994] shareholder servicing agents,[995] administrators,[996] and affiliated broker-dealers.[997] Together, these items will assist the Commission in analyzing the use of third-party service providers by management companies, as well as identify service providers that service large portions of the fund industry.

Unlike Form N–SAR, Form N–CEN will, as proposed, also require the

[978] Item C.7 of Form N–CEN.

[979] *Compare id.* (requiring management companies to identify if they relied upon any of the following rules: Rule 10f–3 (exemption for the acquisition of securities during the existence of an underwriting or selling syndicate) [17 CFR 270.10f–3], rule 12d1–1 [17 CFR 270.12d1–1] (exemptions for investments in money market funds), rule 15a–4 [17 CFR 270.15a–4] (temporary exemption for certain investment advisers), rule 17a–6 [17 CFR 270.17a–6] (exemption for transactions with portfolio affiliates), rule 17a–7 [17 CFR 270.17a–7] (exemption of certain purchase or sale transactions between an investment company and certain affiliated persons thereof), rule 17a–8 [17 CFR 270.17a–8] (mergers of affiliated companies), rule 17e–1 [17 CFR 270.17e–1] (brokerage transactions on a securities exchange), rule 22d–1 [17 CFR 270.22d–1] (exemption from section 22(d) to permit sales of redeemable securities at prices which reflect sales loads set pursuant to a schedule), rule 23c–1 [17 CFR 270.23c–1] (repurchase of securities by closed-end companies), rule 32a–4 [17 CFR 270.32a–4] (independent audit committees)) *with* Item 40, Item 77.N, Item 77.O, Item 102.M, and Item 102.N of Form N–SAR (requiring information regarding rule 2a–7 [17 CFR 270.2a–7] (money market funds), rule 10f–3 (see above for description), and rule 12b–1 [17 CFR 270.12b–1] (distribution of shares by registered open-end management investment company)).

[997] Item C.15 of Form N–CEN.

management company to provide information on whether the service provider was hired or terminated during the reporting period and whether it is affiliated with the fund or its adviser(s).[998] In addition, like Form N–SAR, and as proposed, Form N–CEN requests custodians to indicate the type of custody, but will expand upon the types of custody listed.[999]

One commenter recommended that the text of Item C.10 separate the term ''transfer agent'' from ''sub-transfer agents'' by including disclosures about the nature of the services rendered by sub-transfer agents to help assess shareholder costs paid.[1000] The commenter did not, however, suggest a particular list of specific services. We note that the proposed form requested information with respect to ''each'' service provider, which we believe would include service providers providing services to the fund in a sub-service provider capacity.[1001] However, in response to this comment, we have clarified for each relevant service provider, including transfers agents, that the fund must report sub-service providers in response to the service provider items.[1002] Thus, with respect to the item, we have added a sub-item requiring that funds indicate if the transfer agent is a sub-transfer agent.[1003] We have determined not to require a description of the services provided by each transfer agent (or of other service providers) in Form N–CEN as we believe the information as proposed is sufficient for our regulatory purposes and because it is unclear whether, absent a specific set of listed services in Form N–CEN, which the commenter did not provide, this information on services would yield comparable census-type data across funds.

With respect to custodian information, one commenter suggested that the form should require identification of the primary custodian only, citing that the primary custodian is the primary service provider of the fund, whereas any sub-custodians, depositories, or clearing organizations that provide custodial services will be a function of the specific instruments that the fund invests in during the reporting period.[1004] We note that identifying sub-custodians on Form N–CEN is consistent with reporting requirements on Form N–SAR.[1005] Because sub-custodians and other sub-service providers may provide important services to funds, we continue to believe that requesting information about sub-custodians and other sub-service providers in addition to the primary service providers is appropriate and useful for purposes of our oversight responsibilities. For example, should an adverse market event affect a particular sub-custodian, Commission data analysts could use the required information about sub-custodians to identify potentially affected funds. Information about the primary custodian alone would not permit such identification.

As proposed, the form would have included two new requirements regarding pricing services. Management companies would have to provide identifying information on persons that provided pricing services during the reporting period,[1006] as well as persons that formerly provided pricing services to the management company during the current and immediately prior reporting period that no longer provide services to that company.[1007] Based on staff experience, management companies and their boards often rely on pricing agents to help price securities held by the fund.

One commenter expressed support for the new reporting requirements, noting that the information would be sufficient to conduct due diligence on pricing and valuation issues.[1008] One commenter expressed concern that reporting pricing services no longer retained could improperly imply that valuation services provided by the former service provider were incorrect and/or unreliable.[1009] In response to that comment, we have determined to remove from the form the item requiring funds to provide information on pricing services no longer retained. We have instead revised Item C.11 of the form, which requires information on persons who provided pricing services to the fund during the reporting period, to ask whether a pricing agent was hired or terminated during the report period.[1010] Unlike the proposed requirement and in response to the commenter's concern, Item C.11 as modified does not identify specifically the pricing service that was terminated. A similar question is also included in the form for other fund service providers and, as with the information provided for other service providers, will still provide Commission staff with a method for identifying whether a fund has initiated or terminated a service provider relationship during the reporting period.[1011]

As in the proposal, Part C will also require identifying information on the ten entities that, during the reporting period, received the largest dollar amount of brokerage commissions from the management company[1012] and with which the management company did the largest dollar amount of principal transactions.[1013] Form N–SAR also requests identifying information on these entities,[1014] which is not available elsewhere in a structured format. We continue to believe that brokerage commission and principal transaction information provides valuable information to Commission staff about management company brokerage practices, and will assist the staff in identifying the broker-dealers who service management company clients, monitoring for changes in business practices, and assessing the types of trading activities in which funds are engaged. Additionally, similar to Form N–SAR, Form N–CEN requires information concerning whether the management company paid commissions to broker-dealers for ''brokerage and research services'' within the meaning of section 28(e) of

---

998 *See, e.g.,* Item C.9.a.vii, Item C.9.c.vii, Item C.9.c.viii, Item C.10.a.vi, Item C.10.b, Item C.11.a.v, Item C.11.b, Item C.12.a.v, Item C.12.b, Item C.13.a.v, Item C.13.b, Item C.14.a.v and Item C.14.b of Form N–CEN.

999 *Compare* Item 15.E and Item 18 of Form N–SAR *with* Item C.12.a.vii.1–Item C.12.a.vii.9 of Form N–CEN.

1000 Morningstar Comment Letter.

1001 We understand that a sub-service provider generally contracts with a primary service provider of the fund, rather than the fund itself, to provide a certain subset of the services that the primary service provider has otherwise agreed to provide the fund.

1002 *See* Item C.10.a.vii, Item C.12.a.vi, Item C.13.a.vi, and Item C.14.a.vi of Form N–CEN. We note that a similar requirement was proposed with respect to custodians. *See* Item 37.a.vi of proposed Form N–CEN.

1003 *See* Item C.10.a.vii of Form N–CEN.

1004 State Street Comment Letter.

1005 *See, e.g.,* Instructions to Item 15 of Form N–SAR; *see also* Item 15 and Item 92 of Form N–SAR, including Item 15.E and Item 92.D of Form N–SAR, which require reporting of rule 17f–5 [17 CFR 270.17f–5] foreign custodians.

1006 *See* Item 35 of proposed Form N–CEN.

1007 *See* Item 36 of proposed Form N–CEN.

1008 Morningstar Comment Letter.

1009 *See* Fidelity Comment Letter.

1010 As proposed, Item 35(f) would have asked ''Was the pricing service first retained by the Fund to provide pricing services during the current reporting period?'' As adopted, Item C.11.b asks ''Was a pricing service hired or terminated during the reporting period?''.

1011 *See, e.g.,* Item C.10–Item C.14 of Form N–CEN (requesting information regarding transfer agents, custodians, shareholder servicing agents, and third-party administrators).

1012 Item C.16 of Form N–CEN.

1013 Item C.17 of Form N–CEN.

1014 Items 20–23 of Form N–SAR. Form N–SAR includes an instruction designed to help filers distinguish between agency and principal transactions for purposes of reporting information regarding brokerage commissions and principal transactions. *See* Instruction to Items 20–23 of Form N–SAR. A substantially similar instruction will be included in Form N–CEN. *See* Instructions to Item C.16 and Item C.17 of Form N–CEN.

the Exchange Act.[1015] We did not receive comment on these aspects of the proposal.

In a modification from the proposal, we are now including a requirement that (1) funds other than money market funds report their monthly average net assets during the reporting period,[1016] and (2) money market funds report the daily average net assets during the reporting period.[1017] Funds currently report this information on Form N–SAR reports.[1018]

One commenter suggested that such net asset information (*e.g.,* Item 75) as well as fee and expense information (*e.g.,* Items 34–44, 47–52, 54, and 72), currently available semi-annually on Form N–SAR should carry over into Form N–CEN, arguing that the removal of these reporting items will make the fee and expense information more difficult to acquire and analyze.[1019] The commenter argued, in part, that while this information could be calculated based on information available through other sources, the manual aggregation of this information would put comprehensive analysis out of reach for investors and fund boards unless they were using services from third-party market data providers that may have the means to conduct such data aggregation. We continue to believe that fee and expense information reported on Form N–SAR need not be reported on Form N–CEN because fee and expense information is largely already disclosed in fund registration statements and, with respect to some information, in a structured format.[1020] However, we find the commenter's suggestion regarding reporting of average net assets persuasive and have added the reporting items of Item 75 of Form N–SAR into Form N–CEN.[1021] We believe that this information will assist data users in their analysis of various reporting items, including other information reported on Form N–CEN (for example, the monthly average of the value of portfolio securities on loan that will be reported pursuant to Item C.6.f).

d. Part D—Closed-End Management Companies and Small Business Investment Companies

The Commission recognizes that closed-end funds and SBICs have particular characteristics that warrant questions targeted specifically to them.[1022] Like Form N–SAR and as proposed, Form N–CEN requires additional information to be reported by closed-end funds in Part D of the form and also treats SBICs differently than other management investment companies, requiring them to complete Part D of the form in lieu of Part C.[1023] The information required in Part D will provide us with information that is particular to closed-end funds and SBICs and, thus, will assist us in monitoring the activities of these funds and our examiners in their preparation for exams of these funds. Where we have received comments on specific reporting requirements of Part D, we discuss them in more detail below.

Similar to Form N–SAR, we are adopting, as proposed, a reporting requirement in Part D of Form N–CEN for information on the securities that have been issued by the closed-end fund or SBIC, including the type of security issued (common stock, preferred stock, warrants, convertible securities, bonds, or any security considered ''other''), title of each class, exchange where listed, and ticker symbol.[1024] As in the proposal, we are requiring new information relating to rights offerings[1025] and secondary offerings by the closed-end fund or SBIC,[1026] including whether there was such an offering during the reporting period and if so, the type of security involved.[1027] Together, this information will allow the staff to quickly identify and track the securities and offerings of closed-end funds and SBICs when monitoring and examining these funds.

Like Form N–SAR,[1028] we are also adopting, as proposed, a requirement that each closed-end fund or SBIC report information on repurchases of its securities during the reporting period.[1029] However, unlike Form N–SAR, which requires information on the number of shares or principal amount of debt and net consideration received or paid for sales and repurchases for common stock, preferred stock, and debt securities, we are adopting, as proposed, the requirement in Form N–CEN that a closed-end fund or SBIC only needs to indicate if it repurchased any outstanding securities issued by the closed-end fund or SBIC during the reporting period and indicate which type of security.[1030]

As proposed, we are also carrying over Form N–SAR's requirements[1031] relating to default on long-term debt[1032] and dividends in arrears.[1033] However, unlike Form N–SAR, which requires an attachment providing detailed information on defaults and arrears on senior securities,[1034] Form N–CEN only will require a yes/no question and text-based responses.[1035] Also as proposed,

[1015] Item C.18 of Form N–CEN; *see also* Item 26.B of Form N–SAR (requiring disclosure if the fund's receipt of investment research and statistical information from a broker or dealer was a consideration which affected the participation of brokers or dealers or other entities in commissions or other compensation paid on portfolio transactions of Registrant). Section 28(e) of the Exchange Act establishes a safe harbor that allows money managers to use client funds to purchase ''brokerage and research services'' for their managed accounts under certain circumstances without breaching their fiduciary duties to clients. *See* 15 U.S.C. 78bb(e); *see also* Commission Guidance Regarding Client Commission Practices Under Section 28(e) of the Securities Exchange Act of 1934, Securities Exchange Act Release No. 34–54165 (July 18, 2006) [71 FR 41978 (July 24, 2006)]. We continue to believe that an item indicating whether a fund uses soft dollars will assist our staff in their examinations and provide census data as to the number and type of funds that rely on the safe harbor provided by section 28(e).

[1016] Item C.19.a of Form N–CEN.

[1017] Item C.19.b of Form N–CEN.

[1018] *See* Item 75 of Form N–SAR.

[1019] *See* Morningstar Comment Letter.

[1020] *See infra* footnote 1169 and accompanying text. We note that certain fee and expense information for closed-end funds, which is not disclosed in a structured format in closed-end fund registration statements, is included in Part D of Form N–CEN. *See* Item D.8 and Item D.9 of Form N–CEN. These items will provide Commission staff with the fee and expense information for closed-end funds that the staff finds most useful to have in a structured data format.

[1021] *See* Item C.19 of Form N–CEN.

[1022] *See* Items 86–88 of Form N–SAR (relating specifically to closed-end funds) and Items 89–104 of Form N–SAR (relating specifically to SBICs).

[1023] As discussed above, SBICs are unique investment companies that operate differently than other management investment companies. *See supra* footnote 49.

[1024] Item D.1 of Form N–CEN; *cf.* Items 87–88 and Item 96 of Form N–SAR (requesting information on the title and ticker of each class of securities issued on an exchange and information regarding certain specific types of securities). An instruction to Item D.1 of Form N–CEN indicates that the fund should provide the ticker symbol for any security not listed on an exchange, but has a ticker symbol.

[1025] Item D.2 of Form N–CEN.

[1026] Item D.3 of Form N–CEN.

[1027] *See* Item D.3.a and Item D.3.b of Form N–CEN. Item D.2.c of Form N–CEN also requires the percentage of participation in a primary rights offering and an accompanying instruction to this item addresses the method of calculating such percentage.

[1028] *See* Item 86 and Item 95 of Form N–SAR.

[1029] Item D.4 of Form N–CEN.

[1030] We note that, with respect to closed-end funds, financial information relating to monthly sales and repurchases of shares will be reported monthly on Form N–PORT. *See* Item B.6 of Form N–PORT (requiring the aggregate dollar amounts for sales and redemptions/repurchases of fund shares during each of the last three months).

[1031] *See* Item 77.G and Item 102.F of Form N–SAR.

[1032] Item D.5 of Form N–CEN.

[1033] Item D.6 of Form N–CEN.

[1034] Item 77.G and Item 102.F of Form N–SAR.

[1035] Item D.5 of Form N–CEN requires, with respect to any default on long-term debt, the nature of the default, the date of the default, the amount of the default per $1000 face amount, and the total amount of default. An instruction to this item defines ''long-term debt'' to mean a debt with a period of time from date of initial issuance to maturity of one year or greater. Item D.6 of Form N–CEN requires, with respect to any dividends in arrears, the title of the issue and the amount per

Continued

we are similarly carrying over the Form N–SAR requirement[1036] regarding modifications to the constituent's instruments defining the rights of holders.[1037] Similar to Form N–SAR, if a closed-end fund or SBIC made modifications to such an instrument, it also will be required to file an attachment in Part G of Form N–CEN with a more detailed description of the modification.[1038] This item provides the Commission with information on and copies of documents reflecting changes to shareholders' rights.

We are also adopting, as proposed, requirements in Part G of Form N–CEN that closed-end funds or SBICs file attachments regarding material amendments to organizational documents,[1039] new or amended investment advisory contracts,[1040] information called for by Item 405 of Regulation S–K,[1041] and, for SBICs only, senior officer codes of ethics.[1042] Where possible, we sought to eliminate the need to file attachments with the report in order to simplify the filing process and maximize the amount of information we receive in a data tagged format. However, the attachments required by Form N–CEN will provide us with information that is not otherwise updated or filed with the Commission and, thus, we believe they should continue to be filed in attachment form. All of the attachments in Form N–CEN that are specific to closed-end funds and SBICs are also currently required by Form N–SAR.[1043]

Similar to Form N–SAR, we are adopting, as proposed, a requirement for other census-type information relating to management fees and net operating expenses. Closed-end funds will be required to report the fund's advisory fee as of the end of the reporting period as a percentage of net assets.[1044] Some commenters expressed support for this specific item requirement.[1045] One of the commenters also suggested that funds report the actual management fee paid as a percentage of the average NAV of the fund during the reporting period so that the fee reported reflects the fee charged during the reporting period.[1046] We are adopting the requirement as proposed because it meets our regulatory purposes and is consistent with the fee disclosure requirements for closed-end funds in their registration statements.[1047] We believe that reporting in this manner will yield information that is more readily comparable across types of funds, as open-end funds must currently disclose tagged fee information as a percentage of net assets in XBRL in the fund's risk/return summary.[1048]

Additionally, as proposed, closed-end funds and SBICs will both be required to report the fund's net annual operating expenses as of the end of the reporting period (net of any waivers or reimbursements) as a percentage of net assets.[1049] Unlike open-end funds, which provide management fee and net expense information to the Commission in a structured format,[1050] such information is not reported to or updated with the Commission in a structured format by closed-end funds or SBICs. This information will allow the Commission to track industry trends relating to fees. As proposed, Form N–CEN carries forward the Form N–SAR requirement that market price per share[1051] and NAV per share[1052] of the fund's common stock be reported for the end of the reporting period.

Finally, as proposed, Form N–CEN (like Form N–SAR) will require information regarding an SBIC's investment advisers,[1053] transfer agents,[1054] and custodians (including custodians that provide services as sub-custodians).[1055] This information is the same as what will be reported by open-end and closed-end funds in Part C of Form N–CEN, but SBICs will not be required to fill out Part C of the form. The majority of questions in Part C of Form N–CEN are inapplicable to SBICs or otherwise request information that will not be helpful to us in carrying out our regulatory functions with respect to SBICs. Accordingly, we are excepting SBICs from filling out Part C of the form and instead including for SBICs certain service provider questions from Part C in Part D of the form.

e. Part E—Exchange-Traded Funds and Exchange-Traded Managed Funds

As we proposed, we are adopting a section in Form N–CEN related specifically to ETFs—Part E—which ETFs will complete in addition to Parts A, B, and G, and either Part C (for open-end funds) or Part F (for UITs). For purposes of Form N–CEN, an ETF is a special type of investment company that is registered under the Investment Company Act as either an open-end fund or a UIT. Unlike other open-end funds and UITs, an ETF generally does not sell or redeem its shares except in large blocks (or ''creation units'') and with broker-dealers that have contractual arrangements with the ETF (called ''authorized participants'').[1056]

share in arrears. This item defines ''dividends in arrears'' to mean dividends that have not been declared by the board of directors or other governing body of the fund at the end of each relevant dividend period set forth in the constituent instruments establishing the rights of the stockholders.

1036 Item 77.I and Item 102.H of Form N–SAR.

1037 Item D.7 of Form N–CEN.

1038 Item G.1.b.ii of Form N–CEN.

1039 Item G.1.b.i of Form N–CEN.

1040 Item G.1.b.iii of Form N–CEN.

1041 Item G.1.b.iv of Form N–CEN.

1042 Item G.1.b.v of Form N–CEN. This item applies only to SBICs because other management investment companies, including closed-end funds, provide this information in filings on Form N–CSR. *See* Item 2 and Item 3 of Form N–CSR; *see also* rule 30d–1 under the Investment Company Act [17 CFR 270.30d–1].

1043 *Compare* Item G.1.b of Form N–CEN *with* Item 77.Q.1, Item 77.Q.2, Item 102.P.1, Item 102.P.2, and Item 102.P.3 of Form N–SAR; *see also* Instructions to Specific Item 77Q1(a), Item 77Q1(e), Item 77Q2, Item 102P1(a), Item 102P1(e), Item 102P2, and Item 102P3 of Form N–SAR.

1044 Item D.8 of Form N–CEN; *cf.* Items 47–52 and Item 72.F of Form N–SAR (requesting advisory fee information for management companies, including closed-end funds). Whereas Form N–SAR requests information regarding the advisory fee rate and the dollar amount of gross advisory fees, an instruction to Item D.8 of Form N–CEN explains that the management fee reported should be based on the percentage of amounts incurred during the reporting period.

1045 *See* ICI Comment Letter (agreeing that management fee information should be backward looking); State Street Comment Letter (also agreeing that the advisory fee should be backward looking, noting that backward looking disclosures are consistent with the annual financial statements of regulated investment companies).

1046 *See* ICI Comment Letter.

1047 *See* Item 3 of Form N–2 (requesting management fee information as a percentage of net assets attributable to common shares).

1048 *See* General Instruction C.3.G to Form N–1A.

1049 Item D.9 of Form N–CEN; *cf.* Item 72.X and Item 97.X of Form N–SAR (requesting total expenses in dollars for closed-end funds and SBICs).

1050 Management fee information for open-end funds is currently tagged in XBRL format in the fund's risk return summary and is therefore not required by Form N–CEN. *See* General Instruction C.3.G to Form N–1A.

1051 Item D.10 of Form N–CEN; *see* Item 76 and Item 101 of Form N–SAR

1052 Item D.11 of Form N–CEN; *see* Item 74.V.1 and Item 99.V of Form N–SAR.

1053 Item D.12 of Form N–CEN.

1054 Item D.13; *see supra* footnotes 990–997 and accompanying text; *see also supra* footnotes 1000–1002, and accompanying text (discussing the addition of a sub-item related to sub-transfer agents).

1055 Item D.14 of Form N–CEN.

1056 For purposes of Form N–CEN, ''creation unit'' is defined as ''a specified number of Exchange-Traded Fund or Exchange-Traded Managed Fund shares that the fund will issue to (or redeem from) an authorized participant in exchange for the deposit (or delivery) of specified securities, positions, cash, and other assets.'' Instruction to Item E.3 of Form N–CEN. We have made a modification from the proposed definition of ''creation unit'' to clarify, consistent with current Commission exemptive relief, that a ''creation unit'' could also include ''positions'' that may not be ''assets.'' For purposes of Form N–CEN, ''authorized participant'' is defined as ''a broker-dealer that is also a member of a clearing agency registered with the Commission or a DTC Participant, and which has a written agreement with the Exchange-Traded Fund or Exchange-Traded Managed Fund or one of

However, national securities exchanges list ETF shares for trading, which allows investors to purchase and sell individual shares throughout the day in the secondary market. Thus, ETFs possess characteristics of traditional open-end funds and UITs, which issue redeemable shares, and of closed-end funds, which generally issue shares that trade at negotiated prices on national securities exchanges and that are not redeemable.[1057]

ETFs currently are subject to the same information reporting requirements on Form N–SAR as are other open-end funds or UITs, and they are not required to report additional, more specialized information because Form N–SAR predates the introduction of ETFs to the market and has not been amended to address ETFs' distinct characteristics. In 2009, the Commission amended its registration statement disclosure requirements for ETFs [1058] that are open-end funds to better meet the needs of investors who purchase those ETF shares in secondary market transactions.[1059] We believe that it is appropriate to similarly tailor some of the comprehensive information reporting requirements in Form N–CEN to the special characteristics of ETFs. As we proposed, funds and UITs meeting the definition of ''exchange-traded fund'' in Form N–CEN will be required to report information pursuant to the items in Part E of the form, as will certain similar investment products known as ''exchange-traded managed funds.'' [1060] Taken together, we believe that, in addition to informing the Commission's risk analysis and, potentially, future policymaking concerning ETFs, the information these requirements will yield could also help inform the interested public about the operation of, and possible risks associated with, these funds.

Some commenters supported having a distinct section for ETFs.[1061] However, as discussed in detail below, some commenters expressed certain concerns about specific reporting items, and, in particular, the public disclosure of certain reporting items.[1062] We are adopting proposed Part E, with some modifications in response to specific commenter concerns, which are addressed in more detail below. In particular, several of the modifications we are making today are intended to address concerns raised by commenters that certain of the proposed Part E reporting requirements may yield data that is not representative of the ETF's activity over the course of the reporting period and may not be appropriately reflective of the range of activity in the ETF primary market today or in the future.[1063]

Some of the new reporting requirements for ETFs that we are adopting today as part of Form N–CEN relate to an ETF's (or its service provider's) interaction with authorized participants. These entities have an important role to play in the orderly distribution and trading of ETF shares and are significant to the ETF marketplace.[1064] Because of their importance, we proposed new reporting requirements concerning these entities,[1065] and we have determined to adopt these new reporting requirements as proposed.

Currently, the information we have regarding reliance by ETFs on particular authorized participants is limited, and we believe that collecting information concerning these entities on an annual basis will allow us to understand and better assess the size, capacity, and concentration of the authorized participant framework and also inform the public about certain characteristics of the ETF primary markets. Accordingly, we are adopting, as proposed, a new requirement for each ETF to report identifying information about its authorized participants.[1066] More specifically, Form N–CEN will require an ETF to report the name of each of its authorized participants (even if the authorized participant did not purchase or redeem any ETF shares during the reporting period) [1067] and certain other identifying information,[1068] including the authorized participant's SEC file number.[1069] One commenter expressly supported reporting of this information, but suggested that authorized participants, rather than funds, should be required to provide this identifying information to the Commission, reasoning that authorized participants would have more ready access to the required information than funds.[1070] Although we acknowledge that authorized participants would be expected to have access to the required information, we believe that, because authorized participants are counterparties to ETFs in primary market transactions, the required information should also be available to ETFs with which the authorized participants contract and transact. Because the requirements are intended in part to yield information about reliance by ETFs on particular authorized participants, and the Commission as well as other data users seeking census-type information about ETFs will likely be able to find and analyze it most efficiently using reports on Form N–CEN, we believe that ETFs themselves are the most appropriate source for the required information.

In addition, we are adopting a requirement for each ETF to report the dollar value of the ETF shares that each authorized participant purchased and redeemed from the ETF during the reporting period.[1071] Some commenters objected to the inclusion of this requirement in Form N–CEN, expressing concerns that reporting authorized participant activities on Form N–CEN could discourage authorized participants from participating in the ETF market, leading to further concentration in the authorized participant community or authorized participants' moving their ETF-related trading activities to banks or ''clearing''

its designated service providers that allows the authorized participant to place orders to purchase or redeem creation units of the Exchange-Traded Fund or Exchange-Traded Managed Fund.'' Instruction to Item E.1.b of Form N–CEN. We have made a modification from the proposed definition of ''authorized participant'' to clarify, consistent with current Commission exemptive relief, that the definition of ''authorized participant'' includes broker-dealers that are DTC participants and otherwise fall within the definition's scope.

[1071] Item E.2.e–Item E.2.f of Form N–CEN.

authorized participants.[1072] We continue to believe, however, that collection of this additional information may allow the Commission staff to monitor how ETF purchase and redemption activity is distributed across authorized participants and, for example, the extent to which a particular ETF—or ETFs as a group—may be reliant on one or more particular authorized participants. We believe that adopting the new reporting requirements is appropriate in light of these benefits notwithstanding the possibility that public availability of the information might affect the ETF primary markets in the manner those commenters suggest.

We also proposed, in the Liquidity Proposing Release, to require an ETF to report whether it required that an authorized participant post collateral to the ETF or any of its designated service providers in connection with the purchase or redemption of ETF shares during the reporting period.[1073] We understand that some ETFs (or their custodians), particularly ETFs that invest in non-U.S. securities, require authorized participants transacting primarily on an in-kind basis to post collateral when purchasing or redeeming shares, most often for the duration of the settlement process. This can protect the ETF in the event, for example, that the authorized participant fails to deliver the basket securities.[1074] The requirement to post collateral for creating or redeeming ETF shares impacts the authorized participant's operating capital, which could, in turn, affect the ability and willingness of authorized participants to transact with such ETFs or transact with other market makers on an agency basis. Accordingly, we continue to believe that information about required posting of collateral by authorized participants when purchasing or redeeming shares—alongside the other information that will be required in Form N–CEN—will be helpful in understanding whether, and to what extent, there may be concentration in the authorized participant framework for such ETFs. Therefore, we are adopting this requirement as proposed.[1075]

Other new reporting requirements relate to certain characteristics of ETF creation units—the large blocks of shares that authorized participants may purchase from or redeem with the ETF. In the primary market, ETF shares, bundled in creation units, are sold or redeemed for consideration composed of some combination of the ETF's constituent portfolio securities (*i.e.,* an ''in-kind'' basis) and cash (*i.e.,* on a cash basis). Whether transacting in kind or in cash, there may be costs that result from the process of carrying out the transaction. In addition, when an authorized participant purchases (or redeems) ETF shares all or partly in cash, absent a countervailing effect, the ETF would experience additional costs (*e.g.,* brokerage, taxes) involved with buying the securities with cash or selling portfolio securities to satisfy a cash redemption. In the course of such primary market transaction, the particular authorized participant wishing to purchase (or redeem) shares typically bears the costs associated with transacting in the creation unit or units in the form of one or more transaction fees. The costs, therefore, are not directly borne by non-transacting shareholders. In the Proposing Release, we characterized these transaction fees as taking two specific forms (*viz.,* ''fixed fees'' and ''variable fees'') with corresponding purposes, and that characterization reflects our understanding of the typical transaction costs in the ETF primary markets today.[1076] As discussed below, a commenter raised concerns that transaction fees may not uniformly fit within the two types of fees discussed in the Proposing Release, and we are persuaded that it is appropriate to modify the proposed form's characterization of these transaction fees in Form N–CEN as we are adopting it today.[1077]

In order to better understand the capital markets implications of different creation unit requirements, primary market transaction methods, and transaction fees, we proposed requirements that ETFs annually report summary information about these characteristics of creation units and primary market transactions. ETFs are not currently required to report the information discussed below in a structured format, and public availability of many of the new data items is limited and indeterminable. To better understand how common different transaction methods are and the degree to which they vary across ETFs and over time, we proposed to require that ETFs report the total value (i) of creation units that were purchased by authorized participants ''primarily'' in exchange for portfolio securities on an in-kind basis; (ii) of those that were redeemed ''primarily'' on an in-kind basis; (iii) of those that were purchased by authorized participants ''primarily'' in exchange for cash; and (iv) of those that were redeemed ''primarily'' on a cash basis.[1078] For purposes of these reporting requirements concerning transaction methods and transaction fees, we proposed to define ''primarily'' to mean greater than 50% of the value of the creation unit.[1079] One commenter expressed general support for this information, opining that it would be helpful for investors.[1080] Another commenter, however, expressed concerns with the proposed distinction between transactions conducted ''primarily'' on an in-kind basis and those conducted ''primarily'' in exchange for cash, arguing that treating a creation unit that is almost entirely in-kind with a small cash balancing amount as equivalent to one that is effected with nearly half the value of the creation unit in the form of cash would yield data that would not serve the requirement's purpose.[1081]

We found this comment persuasive, and we agree with the commenter that it would better achieve the proposed requirement's purpose of better understanding different creation unit requirements, primary market transaction methods, and transaction fees to collect such information in a manner that obviates the need for the ''primarily'' distinction about which the commenter expressed concern. Therefore, in a modification from the proposal, we have eliminated the proposed distinction between ''primarily'' in-kind and ''primarily'' cash transactions. Instead, as adopted, Form N–CEN will require ETFs to report, based on the dollar value paid for each creation unit purchased by authorized participants during the

[1080] *See* BlackRock Comment Letter.

[1081] Invesco Comment Letter.

reporting period, (i) the average percentage of that value composed of cash; [1082] (ii) the standard deviation of the percentage of that value composed of cash; [1083] (iii) the average percentage of that value composed of non-cash assets and other positions exchanged on an in-kind basis: [1084] And (iv) the standard deviation of the percentage of that value composed of non-cash assets and other positions exchanged on an in-kind basis.[1085] The ETF will also be required to report, based on the total dollar value of creation units redeemed by authorized participants during the reporting period, (i) the average percentage of that value composed of cash; [1086] (ii) the standard deviation of the percentage of that value composed of cash; [1087] (iii) the average percentage of that value composed of non-cash assets and other positions exchanged on an in-kind basis; [1088] and (iv) the standard deviation of the percentage of that value composed of non-cash assets and other positions exchanged on an in-kind basis.[1089] We believe that this modified requirement will better achieve the purposes of the proposed requirement and address the commenter's concerns about the proposed distinction between ''primarily'' in-kind and ''primarily'' cash transactions.

To better understand the effects of primary market transaction fees on ETF pricing and trading and to better inform the public about such fees, we also proposed a requirement that ETFs report applicable transaction fees—including each of ''fixed'' and ''variable'' fees—applicable to the last creation unit purchased and the last creation unit redeemed during the reporting period of which some or all of the creation unit was transacted on a cash basis, as well as the same figures for the last creation unit purchased and the last creation unit redeemed during the reporting period of which some or all of the creation unit was transacted on an in-kind basis.[1090]

As discussed above, one commenter expressed concerns about a potential lack of uniformity in how ETFs name and calculate transactional fees and suggested that the Commission provide definitional guidance about the types of fees to be reported in order to receive accurate and standardized information.[1091] Another commenter expressed concerns that the information the proposed requirement would have yielded—which would have pertained specifically to the last creation units purchased or redeemed in the reporting period—may not be representative of the transactions occurring during the period and suggested that an alternative formulation would be more meaningful and helpful for investors.[1092]

We find both of these comments persuasive, and consistent with our overarching objectives of the proposed requirement to collect information that helps data users better understand the effects of primary market transaction fees on ETF pricing and trading and to better inform the public about such fees in a manner that is more representative of the ETF's activity over the course of the reporting period, while being flexible enough to embrace the range of activity in the ETF market today and, to the extent practicable, in the future. Therefore, in a modification from the proposal that we believe will better help us meet these objectives while also responding to commenters' concerns, we are requiring reporting of average fees based on the terms by which they are applied rather than how they are characterized or what purpose they serve. Thus we have modified the proposed requirement in two respects: First, the terms ''fixed fee'' and ''variable fee'' have been eliminated, and the fees required to be reported have been specified in a manner that would allow ETFs that today or in the future employ an alternative transaction fee schedule to report those fees consistent with their actual practice. Second, the requirement to report as to the last creation unit purchased or redeemed has been replaced with a requirement to report as to the average creation unit purchased or redeemed during the reporting period, so that the information reported will better reflect the ETF's fees over the course of the reporting period rather than at a specific moment in time. Accordingly, we are adopting a requirement that, as to creation units purchased by authorized participants during the reporting period, ETFs report the average transaction fee (i) charged in dollars per creation unit; [1093] (ii) charged for one or more creation units on the same business day; [1094] and (iii) charged as a percentage of the value of the creation unit.[1095] ETFs will also be required to report, as to only those creation units purchased by authorized participants that were fully or partially composed of cash, the average transaction fee (i) charged in dollars per creation unit; [1096] (ii) charged for one or more creation units on the same business day; [1097] and (iii) charged as a percentage of the value of the cash in the creation unit.[1098] Finally, as in the proposed requirements, ETFs will be required to report the parallel information for the redemption of creation units by authorized participants.[1099] We believe that this modified requirement will better achieve the purposes of the proposed requirement and address the commenters' concerns about the lack of uniformity in the naming and calculating of ETF primary market transaction fees as well as the representativeness of the fees on the last business day of the reporting period.

We also are adopting, as proposed, a requirement for ETFs to report the number of ETF shares required to form a creation unit as of the last business day of the reporting period,[1100] which we believe will also allow the Commission and other data users to better analyze any effects that ETFs' creation unit size requirements may have on ETF pricing and trading. One commenter expressed support for this information, opining that it would be helpful for investors.[1101] In addition to information about authorized participants and creation units, we are requiring, as proposed, that ETFs, like closed-end funds, report the exchange on which the ETF is listed so that Commission staff may be better able to quickly gather information as to which ETFs may be affected should an idiosyncratic risk or market event arise in connection with a particular exchange.[1102] In a modification from the proposal, we are also adopting a requirement that ETFs provide their ticker symbol. As discussed above, management investment companies with one or more classes of shares outstanding will be required to provide a ticker symbol, if any, relating to that class,[1103] and as we observed

throughout the Proposing Release, identifiers will assist the Commission with organizing the data received and allow the staff to cross-reference the data reported on Form N–CEN with data received from other sources.[1104] We have determined that it is appropriate for ETFs to provide a ticker symbol also, as not all ETFs would be subject to the ticker symbol requirement for management investment companies.

Finally, with respect to ETFs that are UITs, we are requiring information regarding whether the index whose performance the fund tracks is constructed by an affiliated person of the fund and/or exclusively constructed for the fund, as requested by a commenter,[1105] and, as proposed, information regarding tracking difference and tracking error.[1106] One commenter expressed support for the reporting of tracking difference and tracking error, stating that it would be helpful for investors.[1107] Another commenter suggested that tracking error should be reported on a monthly basis, rather than on a daily basis, as proposed.[1108] The index fund information is also required of open-end index funds and, for the same reasons discussed above in connection with those requirements, the form will require this same information of ETFs that are UITs.[1109] As discussed above, commenters made similar suggestions about the methodology for calculating tracking error in the open-end fund index context, and we have determined to adopt the proposed methodology for the same reasons discussed in connection with the open-end index fund requirements.[1110]

f. Part F—Unit Investment Trusts

As proposed, Part F of Form N–CEN requires information specific to UITs. Like Form N–SAR, Form N–CEN recognizes that UITs have particular characteristics that warrant questions targeted specifically to them.[1111] The information requested in Part F will inform us further about the scope and composition of the UIT industry and, thus, will assist us in monitoring the activities of UITs and our examiners in their preparation for exams of UITs. We did not receive specific comments on Part F of the form and are adopting it as proposed.

Form N–CEN (similar to Form N–SAR[1112]) also requires certain identifying information relating to a UIT's service providers and entities involved in the formation and governance of UITs, including its depositor,[1113] sponsor,[1114] trustee,[1115] and administrator.[1116] We are also adopting, as proposed, an item in Form N–CEN that asks whether a UIT is a separate account of an insurance company,[1117] and, depending on a UIT's response to this item, it will then proceed to answer certain additional questions in Part F.[1118] While Form N–SAR generally does not differentiate between UITs that are and are not separate accounts of insurance companies, Form N–CEN makes this distinction. We believe that by distinguishing between these different types of UITs, the form will allow us to better target the information requests in the form appropriate to the type of UIT. We also believe this new approach will allow filers to better understand the information being requested of them because it will be more reflective of their operations and should thus improve the consistency of the information reported.

As in the proposal and similar to Form N–SAR,[1119] a UIT that is not a separate account of an insurance company will provide the number of series existing at the end of the reporting period that had securities registered under the Securities Act[1120] and, for new series, the number of series for which registration statements under the Securities Act became effective during the reporting period[1121] and the total value of the portfolio securities on the date of deposit.[1122] As proposed, Form N–CEN also carries over from Form N–SAR[1123] requirements relating to the number of series with a current prospectus,[1124] the number of existing series (and total value) for which additional units were registered under the Securities Act,[1125] and the value of units placed in portfolios of subsequent series.[1126] We are also adopting, as proposed, a requirement in Form N–CEN that a UIT that is not a separate account of an insurance company provide the total assets of all series combined as of the reporting period,[1127] which is also currently required by Form N–SAR.[1128]

We are also adopting, as proposed, new requirements in Form N–CEN for separate accounts offering variable annuity and variable life insurance contracts. Specifically, if the UIT is a separate account of an insurance company, Form N–CEN requires reporting of its series identification number[1129] and, for each security that has a contract identification number assigned pursuant to rule 313 of Regulation S–T, the number of individual contracts that are in force at the end of the reporting period.[1130]

With respect to insurance company separate accounts, we are also adopting, as proposed, new requirements in Form N–CEN to identify and provide census information for each security issued through the separate account. These requirements will include the name of the security,[1131] contract identification number,[1132] total assets attributable to the security,[1133] number of contracts sold,[1134] gross premiums received,[1135] and amount of contract value

[1104] *See, e.g.,* Proposing Release, *supra* note 7, at 33635.

[1105] *See supra* footnote 907 and accompanying text.

[1106] Item E.4 of Form N–CEN.

[1107] *See* BlackRock Comment Letter.

[1108] *See* Invesco Comment Letter. *See supra* footnotes 920–928 and accompanying text.

[1109] *See* Item C.3.b of Form N–CEN; *supra* section II.D.4.c.i.

[1110] *See supra* footnotes 923–928 and accompanying text.

[1111] *See* Items 111–133 of Form N–SAR (relating specifically to UITs).

[1112] *See* Item 111 (depositor information), Item 112 (sponsor information), Item 113 (trustee information), and Item 114 (principal underwriter information) of Form N–SAR.

[1113] Item F.1 of Form N–CEN.

[1114] Item F.4 of Form N–CEN (only applies to UITs that are not insurance company separate accounts).

[1115] Item F.5 of Form N–CEN (only applies to UITs that are not insurance company separate accounts).

[1116] Item F.2 of Form N–CEN; *see also supra* footnotes 1001–1002 (discussing the addition of a sub-administrator sub-item). Form N–SAR does not request information about a UIT's administrator.

[1117] Item F.3 of Form N–CEN; *see* Item 117.A of Form N–SAR.

[1118] If a UIT responds ''yes'' to this item, it will proceed to respond to Item F.12–Item F.17 of the form. However, if a UIT responds ''no'' to this item, it will proceed to Item F.4–Item F.11, and Item F.17. *See* Instruction to Item F.3 of Form N–CEN.

[1119] *See* Items 118–120 of Form N–SAR (all UITs are required to complete these items).

[1120] Item F.6.a of Form N–CEN. As noted earlier, because UITs that register on Form N–8B–2 obtain CIKs for the UIT itself as well as for series offered by the UIT, we have made a clarifying modification to Form N–CEN by including a requirement that such UITs report the CIKs for each of their existing series in response to Item F.6.b of Part F of the form in addition to reporting the CIK for the UIT itself in response to Item B.1.c. *See supra* footnote 800.

[1121] Item F.7.a of Form N–CEN.

[1122] Item F.7.b of Form N–CEN.

[1123] *See* Items 121–124 of Form N–SAR (all UITs are required to complete these items).

[1124] Item F.8 of Form N–CEN.

[1125] Item F.9 of Form N–CEN.

[1126] Item F.10 of Form N–CEN.

[1127] Item F.11 of Form N–CEN.

[1128] *See* Item 127.L of Form N–SAR (all UITs are required to complete this item). Form N–CEN does not require UITs to report certain assets held by a UIT as required by Item 127 of Form N–SAR. *See* Items 127.A–K of Form N–SAR.

[1129] Item F.12 of Form N–CEN.

[1130] Item F.13 of Form N–CEN.

[1131] Item F.14.a of Form N–CEN.

[1134] Item F.14.d of Form N–CEN.

[1135] Item F.14.e of Form N–CEN.

redeemed.[1136] This item also requires additional information relating to section 1035 exchanges, including gross premiums received pursuant to section 1035 exchanges,[1137] number of contracts affected in connection with such premiums,[1138] amount of contract value redeemed pursuant to section 1035 redemptions [1139] and the number of contracts affected by such redemptions.[1140] In addition, as proposed, insurance company separate accounts will be required to provide information on whether they relied on rules 6c–7 [1141] and 11a–2 [1142] under the Investment Company Act. This information, which is specific to UITs that are separate accounts of insurance companies and is either not otherwise filed with the Commission or is not filed in a structured format, will further assist the Commission in its oversight of UITs, including monitoring trends in the variable annuity and variable life insurance markets.

Finally, as proposed, Form N–CEN carries over the Form N–SAR [1143] requirement that a UIT provide certain information relating to divestments under section 13(c) of the Investment Company Act.[1144] Thus, if a UIT intends to avail itself of the safe harbor provided by section 13(c) with respect to its divestment of certain securities, it will continue to make the following disclosures on Form N–CEN: Identifying information for the issuer, total number of shares or principal amount divested, date that the securities were divested, and the name of the statute that added the provisions of section 13(c) in accordance with which the securities were divested.[1145] If the UIT holds any securities of the issuer on the date of the filing, it will also provide the ticker symbol, CUSIP number, and total number of shares or, for debt securities, the principal amount held on the date of the filing.[1146]

g. Part G—Attachments

Like Form N–SAR,[1147] Form N–CEN requires, substantially as proposed, certain attachments to reports filed on the form in order to provide the staff with more granular information regarding certain key issues.[1148] Due to the narrative format of the information required, these attachments will not be required to be reported in a structured data format. Where possible, we eliminated the need to file attachments with the census reporting form in order to simplify the filing process and maximize the amount of information we receive in a structured format.[1149] Accordingly, we believe we have limited the number of attachments to the form to those that are most useful to the staff, either because of investor protection issues or because the information is not available elsewhere. Moreover, all except one of the attachments to Form N–CEN are current requirements in Form N–SAR.[1150]

Thus, as proposed, all funds are required, where applicable, to file attachments regarding legal proceedings,[1151] provision of financial support,[1152] independent public accountant's report on internal control,[1153] and changes in accounting principles and practices, where applicable.[1154] Unlike the proposal, however, the registrant will not be required under the form to file an attachment related to changes in the fund's independent public accountant (*i.e.,* information called for by Item 4 of Form 8–K under the Exchange Act). As previously discussed in section II.D.4.b above, this change was made in response to comments.[1155]

In addition, as in the proposal, all funds will be required, where applicable, to provide attachments relating to information required to be filed pursuant to exemptive orders issued by the Commission and relied on by the registrant,[1156] and other information required to be included as an attachment pursuant to Commission rules and regulations.[1157] Moreover, we are adopting, as proposed, requirements for closed-end funds and SBICs to provide attachments, where applicable, relating to material amendments to organizational documents,[1158] instruments defining the rights of the holders of any new or amended class of securities,[1159] new or amended investment advisory contracts,[1160] information called for by Item 405 of Regulation S–K,[1161] and, for SBICs only, senior officer codes of ethics.[1162] As proposed, each attachment required by Form N–CEN includes instructions describing the information that should be provided in the attachment.[1163]

[1136] Item F.14.h of Form N–CEN.

[1137] Item F.14.f of Form N–CEN.

[1138] Item F.14.g of Form N–CEN.

[1139] Item F.14.i of Form N–CEN.

[1140] Item F.14.j of Form N–CEN.

[1141] Item F.15 of Form N–CEN. Rule 6c–7 under the Investment Company Act provides exemptions from certain provisions of sections 22(e) and 27 of the Investment Company Act for registered separate accounts offering variable annuity contracts to participants in the Texas Optional Retirement Program. *See* 17 CFR 270.6c–7.

[1142] Item F.16 of Form N–CEN. Rule 11a–2 under the Investment Company Act relates to offers of exchange by certain registered separate accounts or others, the terms of which do not require prior Commission approval. *See* 17 CFR 270.11a–2.

[1143] Item 133 of Form N–SAR. Section 13(c) of the Investment Company Act provides a safe harbor for a registered investment company and its employees, officers, directors and investment advisers, based solely upon the investment company divesting from, or avoiding investing in, securities issued by persons that the investment company determines, using credible information that is available to the public, engage in certain investment activities in Iran or Sudan. The safe harbor, however, provides that this limitation on actions does not apply unless the investment company makes disclosures about the divestments in accordance with regulations prescribed by the Commission. *See* 15 U.S.C. 80a–13(c)(2)(B). Management investment companies are required to provide the disclosure on Form N–CSR, pursuant to Item 6(b) of the form, and UITs are required to provide the disclosure on Form N–SAR, pursuant to Item 133 of the form. *See* Technical Amendments to Forms N–CSR and N–SAR in Connection With the Comprehensive Iran Sanctions, Accountability, and Divestment Act of 2010, Securities Exchange Act Release No. 34–63087 (Oct. 13, 2010) [75 FR 64120 (Oct. 19, 2010)].

[1144] Item F.17 of Form N–CEN.

[1145] Item F.17.a of Form N–CEN.

[1146] Item F.17.b of Form N–CEN. An instruction to Item F.17 addresses when the UIT should report divestments pursuant to this item.

[1147] *See* Item 77.E, Item 77.I, Item 77.K, Item 77.L, Item 77.N, Item 77.P, Item 77.Q.1, Item 77.Q.2, Item 102.D, Item 102.H, Item 102.J, Item 102.K, Item 102.M, Item 102.O, Item 102.P.1, Item 102.P.2, and Item 102.P.3 of Form N–SAR.

[1148] Form N–SAR requires only management companies to file attachments to reports on the form, whereas Form N–CEN requires certain attachments for all Registrants.

[1149] With respect to certain attachments currently in Form N–SAR, we are integrating the data requirements into the form itself, rather than keep the attachment requirements. *See, e.g.,* Item 77.G and Item 102.F of Form N–SAR; Item D.5 (default on long-term debt) and Item D.6 (dividends in arrears) of Form N–CEN. However, not all of the attachments currently required by Form N–SAR lend themselves to integration into the form, either because of the amount of information reported in the attachment or because the attachment is a standalone document (*e.g.,* the accountant's report on internal control).

[1150] *But see supra* footnote 1148.

[1151] Item G.1.a.i of Form N–CEN.

[1152] Item G.1.a.ii of Form N–CEN.

[1153] Item G.1.a.iii of Form N–CEN. As noted in Item G.1.a.iii, this item will only apply to management companies other than SBICs.

[1154] Item G.1.a.iv of Form N–CEN.

[1155] *See supra* footnotes 860–867 and accompanying text.

[1156] Item G.1.a.v of Form N–CEN.

[1157] Item G.1.a.vi of Form N–CEN.

[1158] Item G.1.b.i of Form N–CEN. Unlike open-end funds, closed-end funds and SBICs do not otherwise update or file the information requested by this item with the Commission and, thus, we believe the information should continue to be filed as an attachment to the census reporting form.

[1159] Item G.1.b.ii of Form N–CEN.

[1160] Item G.1.b.iii of Form N–CEN. Unlike open-end funds, closed-end funds and SBICs do not otherwise update or file the information requested by this item with the Commission and, thus, we believe the information should continue to be filed as an attachment to the census reporting form.

[1161] Item G.1.b.iv of Form N–CEN.

[1162] Item G.1.b.v of Form N–CEN.

[1163] For example, the instructions to Item G.1.b.v require SBICs to attach detailed information regarding the senior officer code of ethics and certain information regarding the audit committee. The instructions also require SBICs to meet certain

Continued

As noted earlier, all of the attachments required by Form N–CEN, except one, are currently required by Form N–SAR.[1164] The new attachment relates to the provision of financial support and will be filed by a fund (other than a money market fund) if an affiliate, promoter or principal underwriter of the fund, or affiliate of such person, provided financial support to the fund during the reporting period.[1165] As discussed in section II.D.4.b, we are adopting this requirement, as proposed, and including it in Form N–CEN because we believe that it is important that the Commission understand the nature and extent to which a fund's sponsor provides financial support to a fund.

5. Items Required by Form N–SAR That Will Be Eliminated by Form N–CEN

As we discussed above and in the Proposing Release, with Form N–CEN, we seek to modernize and improve the information that we collect in order to reflect changes in the fund industry since Form N–SAR's adoption in 1985. Accordingly, and substantially as proposed, we are not carrying forward certain items in Form N–SAR to Form N–CEN that we believe are no longer needed by Commission staff or are outdated in their current form. For example, in Form N–CEN, we are not including Form N–SAR's requirement relating to considerations which affected the participation of brokers or dealers or other entities in commissions or other compensation paid on portfolio transactions.[1166] Many commenters agreed that Form N–SAR is outdated and commended the Commission's efforts to improve the relevance of information reported to the Commission.[1167] Where we have received comments on specific reporting requirements, we discuss them in more detail below.

As proposed, Form N–CEN eliminates a number of Form N–SAR items where the information is (or will be) reported elsewhere—for example, items relating to fees and expenses, including front-end and deferred/contingent sales loads, redemption and account maintenance fees, rule 12b–1 fees, and advisory fees.[1168] Many of the fee and expense items required by Form N–SAR are already reported, in a structured format, in the risk-return summary required by Form N–1A for open-end funds, as well as in an unstructured format in other places in fund registration statements.[1169] For other fee and expense items, the information is either not frequently used by Commission staff or we believe that the benefit of having such information is minimal while the burden to funds of reporting such information is costly.[1170] For similar reasons as above, we are also not requiring other information in Form N–CEN, including information relating to adjustments to shares outstanding by stock split or stock dividend, minimum initial investments, investment practices, portfolio turnover, number of shares outstanding, number of shareholder accounts, and certain other condensed balance sheet data items.[1171]

One commenter requested that the Commission include certain information required on Form N–SAR that was proposed to be eliminated in Form N–CEN.[1172] That commenter, for example, suggested that certain fee and expense information currently available semi-annually on Form N–SAR (*e.g.,* Items 34–44, 47–52, 54, 72, and 75) should carry over into Form N–CEN. As discussed above, we find the commenter's concerns persuasive with respect to Item 75 of Form N–SAR and have added a reporting requirement in Form N–CEN that (1) funds other than money market funds provide the fund's monthly average net assets during the reporting period, and (2) money market funds provide the fund's daily average net assets during the reporting period.[1173] Otherwise, we continue to believe that Form N–CEN strikes an appropriate balance between the current information needs of Commission staff as well as the developments in the fund industry and the reduction of reporting burdens for registrants where information may be similarly disclosed or reported elsewhere.

We are also eliminating, as proposed, certain information requirements specifically relating to SBICs and UITs that we no longer believe are necessary to collect on a census form because, much like the items discussed above, the benefit of having such information is minimal to the Commission's oversight and examination functions while the burdens to these funds of reporting such information is costly.[1174] Additionally, with respect to the Form N–SAR item relating to closed-end fund monthly sales and repurchases of shares,[1175] this information will be reported on Form N–PORT,[1176] rather than Form N–CEN.

The full list of items from Form N–SAR that will be included in Form N–CEN or eliminated is included in Figure 2 below.

BILLING CODE 8011–01–P

requirements regarding the availability of their senior office code of ethics.

[1164] *See supra* footnote 1150 and accompanying text.

[1165] Item G.1.a.ii of Form N–CEN.

[1166] Item 26 of Form N–SAR. Form N–CEN does, however, contain information relating to funds that paid commissions to brokers and dealers for research services. *See* Item C.18 of Form N–CEN.

[1167] *See, e.g.,* ICI Comment Letter; SIFMA Comment Letter I; Invesco Comment Letter; BlackRock Comment Letter.

[1168] *See generally* Items 29–44 and Items 47–52 of Form N–SAR. Form N–CEN does, however, contain an item relating to expense limitations, reductions, and waivers. *See* Item C.8 of Form N–CEN. As discussed above, Form N–CEN also requires information on management fees and net operating expenses for closed-end funds, as that information is not available elsewhere in a structured format. *See* Item D.8 and Item D.9 of Form N–CEN; *see also supra* section II.D.4.d.

[1169] *See* General Instruction C.3.G to Form N–1A; *see generally* Form N–1A, Form N–2, Form N–4, Form N–5, and Form N–6.

[1170] We acknowledge that some of the information reported in reports on Form N–SAR related to loads paid to captive or unaffiliated broker-dealers has been used by interested third-parties, including researchers. *See, e.g.,* Susan E.K. Christoffersen, Richard Evans, & David K. Musto, *What do Consumers' Fund Flows Maximize? Evidence from Their Brokers' Incentives,* J. of Fin., Vol. 68(1), 201–235 (2013) (''Christoffersen Journal Article''). While this is evidence of a discrete instance where such information has been useful to a third party, based on staff experience with this information and Form N–SAR information generally, we believe that no longer requiring funds to gather and report this information appropriately balances the burden on funds of providing this information and the overall utility of the information to the Commission, investors and third parties.

[1171] *See generally* Item 57, Item 61, and Items 70–74 of Form N–SAR.

[1172] *See* Morningstar Comment Letter.

[1173] *See* discussion at *supra* footnotes 1016–1021 and accompanying text (discussing Item C.19 of Form N–CEN.

[1174] *See* Item 86, Item 93, Item 95, Items 97–100, Items 103–104, Item 109, and Items 125–132 of Form N–SAR.

[1175] *See* Item 86 (closed-end funds) of Form N–SAR; *see also* Item 28 (management investment companies generally) of Form N–SAR.

[1176] *See* Item B.6 of Form N–PORT.

Figure 2

BILLING CODE 8011–01–P

E. Option for Web Site Transmission of Shareholder Reports

The Commission proposed new rule 30e–3 under the Investment Company Act, which would have permitted a fund to satisfy requirements under the Act and rules thereunder to transmit reports to shareholders if the fund made the reports and certain other materials accessible on a Web site. Reliance on the rule would have been subject to certain conditions, including conditions relating to (1) the availability of the shareholder report and other required information; (2) implied shareholder consent; (3) notice to shareholders of the availability of shareholder reports; and (4) shareholder ability to request paper copies of the shareholder report or other required information. The proposed option was intended to modernize the manner in which periodic information is transmitted to shareholders. When we proposed the rule, we stated that we believed it would improve the information's overall accessibility while reducing burdens such as printing and mailing costs that are borne by funds and, ultimately, by fund shareholders.[1177]

Proposed rule 30e–3 generated substantial public comment, with over 900 commenters expressing views on the rule. Comments received on the proposal were mixed. Many commenters expressed support for the proposed rule, citing, for example, positive internet access and use trends, consistency with the preferences of many investors, intra- and inter-agency regulatory consistency benefits, and anticipated reduction in printing and mailing expenses for funds and their shareholders.[1178] However, many other commenters expressed concerns with the proposed rule, arguing, for example, that the proposed rule would have potential adverse effects on investor readership of shareholder reports generally and on certain demographic groups in particular.[1179] Commenters also disagreed about the size and distribution of printing and mailing expense savings that would result from the rule as proposed, particularly in the context of investors who purchase shares through intermediaries.[1180]

While the Commission plans to continue to consider how to promote electronic transmission to those who might prefer it, the comments discussed above raised issues with respect to this proposal that merit further consideration. We have, therefore, determined not to adopt proposed rule 30e-3 at this time.

F. Amendments to Forms Regarding Securities Lending Activities

We are also adopting form amendments that require a management investment company to disclose in its registration statement (or, in the case of a closed-end fund, its reports on Form N–CSR) certain disclosures regarding securities lending activities.[1181] We proposed similar requirements as part of the proposed amendments to Regulation S–X, including disclosure in the fund's financial statements of (1) the gross income from securities lending, including income from cash collateral reinvestment; (2) the dollar amount of all fees and/or compensation paid by the fund for securities lending activities and related services, including borrower rebates and cash collateral management services; (3) the net income from securities lending activities; (4) the terms governing the compensation of the securities lending agent, including any revenue sharing split, with the related percentage split between the fund and the securities lending agent, and/or any fee-for-service, and a description of services included; (5) the details of any other fees paid directly or indirectly, including any fees paid directly by the fund for cash collateral management and any management fee deducted from a pooled investment vehicle in which cash collateral is invested; and (6) the monthly average of the value of portfolio securities on loan.[1182] We proposed these disclosures in order to allow investors to better understand the income generated from, as well as the expenses associated with, a fund's securities lending activities.[1183]

We received a number of comments addressing our proposed securities lending disclosures. Comments on the proposed disclosure requirements were mixed. Most of the commenters who addressed the issue expressed support for requiring disclosure of securities lending income and fees, although some specifically opposed or expressed concerns about the proposed requirement to disclose the terms governing the compensation of the securities lending agent.[1184] Some commenters expressed opposition generally to the public nature of the proposed new disclosure requirements concerning fund securities lending activities.[1185] Some commenters also

[1185] *See* Invesco Comment Letter (opposing required public disclosure of fund's securities lending activities); MFS Comment Letter (opposing

Continued

expressed particular concerns relating to the location of the required disclosure in the fund's financial statements.[1186]

We continue to believe that because net earnings from securities lending can contribute to the investment performance of a fund, investors and others would benefit from the additional transparency into the impact of securities lending fees on the income from these activities and further believe that the benefits of this additional transparency justify the potential unintended consequences, highlighted by commenters and discussed below, of public disclosure of certain information. We have, however, made certain modifications to the proposed requirements in an effort to mitigate some of these potential consequences.[1187] As discussed in greater detail below, these modifications include, for example, replacing the proposed requirement that funds disclose the terms governing the compensation of the securities lending agent—including any revenue split—with a requirement to report actual fees paid during the fund's prior fiscal year, because commenters persuaded us that backward-looking dollar-based requirements would yield clearer disclosure than would the proposed requirements and may also enhance disclosure comparability across funds for investors and reduce preparation complexity for funds.

1. Determination To Adopt Requirements as Amendments to Registration Statement and Annual Report Forms

As proposed, certain disclosures relating to securities lending activities, including income and expenses, would have been required to be included in a fund's financial statements.[1188] However, we sought public comment on whether the proposed or similar disclosures should instead be provided as part of other disclosure documents such as the Statement of Additional Information.[1189] In response, some commenters raised concerns about including this information in the fund's financial statements, including concerns about cost and that lengthy disclosure concerning securities lending activity in a fund's financial statements could detract from other financial statement disclosures.[1190] After consideration of these issues raised by commenters, we have determined that it is appropriate to require funds to include these disclosures in their Statements of Additional Information (or, for closed-end funds, in their reports on Form N–CSR), rather than to require their inclusion in fund financial statements. Therefore, we are adopting these disclosure requirements as amendments to the fund registration forms (*viz.,* Forms N–1A and N–3) and reports on Form N–CSR (for closed-end funds only), rather than as amendments to Regulation S–X.[1191]

2. Requirement To Disclose Securities Lending Income, Expenses, and Services

As discussed in detail below, the final rules will require funds to disclose gross and net income from securities lending activities, fees and compensation in total and broken out by enumerated types, and a description of the services provided to the fund by the securities lending agent. We proposed to require disclosure of gross income from securities lending, including income from cash collateral reinvestment;[1192] the dollar amount of fees and compensation paid by the fund for securities lending activities and related services, including borrower rebates and payments for cash collateral management services;[1193] the net income from securities lending activities;[1194] the details of any other fees paid directly or indirectly, including any fees paid directly by the fund for cash collateral management and any management fee deducted from a pooled investment vehicle in which cash collateral is invested;[1195] and the terms governing the compensation of the securities lending agent, including any revenue sharing split, with the related percentage split between the fund and the securities lending agent, and/or any fee for service and a description of services included.[1196] After consideration of issues raised by commenters, we are generally adopting the substance of the proposed fee disclosure requirements but are requiring funds to make these disclosures in their Statements of Additional Information (or, in the case of a closed-end fund, Form N–CSR) rather than as part of their financial statements (as proposed). We are amending the Statement of Additional Information requirements in Forms N–1A and N–3, and Form N–CSR (for closed-end funds) to require funds to disclose dollar amounts of income and fees and compensation paid to service providers related to their securities lending activities during their most recent fiscal year, as illustrated in Table 1 below.[1197]

required public disclosure of securities lending fees); SIFMA Comment Letter I (opposing public disclosure requirements concerning financial arrangements of fund securities lending activities); Wells Fargo Comment Letter (opposing required public disclosure of securities lending income and expenses); *cf.* IDC Comment Letter (opposing required public disclosure of compensation and other fee and expense information relating to securities lending arrangements).

SECURITIES LENDING ACTIVITIES

Gross income from securities lending activities	$ ____________
Fees and/or compensation for securities lending activities and related services	
Fees paid to securities lending agent from a revenue split	$ ____________
Fees paid for any cash collateral management service (including fees deducted from a pooled cash collateral reinvestment vehicle) that are not included in the revenue split	$ ____________
Administrative fees not included in revenue split	$ ____________
Indemnification fee not included in revenue split	$ ____________
Rebate (paid to borrower)	$ ____________
Other fees not included in revenue split (specify)	$ ____________
Aggregate fees/compensation for securities lending activities	$ ____________
Net income from securities lending activities	$ ____________

Table 1

The modifications from the proposed requirements are designed to, among other things, enhance comparability of the disclosed information and potentially ameliorate some concerns commenters expressed about the proposed required public disclosure of the terms governing compensation of the securities lending agent. Several commenters expressed concern that the proposed disclosure requirements could yield information that would suggest, inaptly, that fees and expenses related to securities lending activities among funds are readily compared and contrasted.[1198] Specifically, one commenter highlighted that information provided under the proposed requirements might not be comparable due to the subjectivity of related inputs and assumptions.[1199] Another commenter, however, suggested that we could facilitate comparability by specifying the fees for particular services that must be disclosed.[1200] We have considered these commenters' views and suggestions and have been persuaded to specify in the final rules which specific fees should be disclosed and what those fees should include rather than requiring, as proposed, disclosure of all fees and/or compensation paid for securities lending and related services *without* specifying which fees should be disclosed.[1201] We believe that these modifications will enhance comparability of the disclosed fees and compensation. The list of specific fees we are enumerating has been adapted from the list of securities lending payments about which reporting will be required by Form N–CEN, which, as discussed above, we are adopting as proposed.[1202] We have determined that, in specifying the specific categories of fees that are required to be disclosed, it is appropriate to adapt the list of fees from proposed Form N–CEN because consistency between the two lists will allow for better comparability of information from reports on Form N–CEN and disclosures in funds' Statements of Additional Information and, with respect to closed-end funds, reports on Form N–CSR.

The comparability of the disclosed fee and expense information may also depend on the nature of the services provided to a particular fund in connection with its securities lending activities. To that end, we proposed a disclosure requirement for a description of services included in the fund's arrangement with its securities lending agent.[1203] One commenter suggested robust disclosure of the services provided by the securities lending agent and provided several examples of the types of services that should be disclosed to improve comparability.[1204] The commenter stated that it had observed a lack of uniformity in the package of services performed by securities lending agents, which can hinder understanding of securities lending fees.[1205] We agree with the commenter that enhanced and more comparable disclosure of services provided can help users of the information to better understand the particular services provided by

[1205] *Id.*

securities lending agents for the aggregate fees they were paid over the reporting period. Accordingly, to further enhance the comparability of the disclosed information and allow users to better assess fee and expense information, we have determined to specify that this information should be provided on the basis of the services actually provided to the fund in its most recent fiscal year. Some examples of the types of services that could be enumerated include, as applicable, locating borrowers, monitoring daily the value of the loaned securities and collateral, requiring additional collateral as necessary, cash collateral management, qualified dividend management, negotiation of loan terms, selection of securities to be loaned, recordkeeping and account servicing, monitoring dividend activity and material proxy votes relating to loaned securities, and arranging for return of loaned securities to the fund at loan termination.[1206]

Another commenter expressed concerns that the proposed fee and expense information could be used to evaluate the terms of a fund's lending arrangements and could, without access to additional information, result in potentially inappropriate conclusions that a fund negotiated its arrangements poorly or was otherwise disadvantaged in its negotiations.[1207] That commenter noted that the revenue split can depend on numerous factors, including the range, amount, and attractiveness of the securities a fund complex as a whole may make available for loan.[1208] Two commenters suggested eliminating the proposed requirement for disclosure of borrower rebates, reasoning that they are primarily a function of prevailing short-term interest rates.[1209] However, we continue to believe that it is appropriate to require disclosure of borrower rebates, because, irrespective of how they may be determined in particular cases, they are nonetheless an expense of securities lending. One commenter argued that a fund board wishing to evaluate the fund's securities lending program would have access to more detailed analyses than could be practically included in the fund's financial statements.[1210] Conversely, another commenter stated that uniform and clear information requirements would have the benefit of empowering more effective evaluation and comparison of securities lending services.[1211] While, as commenters suggested, a thorough evaluation of a fund's securities lending activities, such as an evaluation by that fund's board, may appropriately include information beyond the scope of the disclosure requirements we are adopting today, we believe that these new requirements will nonetheless enhance comparability and allow investors to better understand the expenses associated with securities lending activities. We also note that today's amendments are not meant to circumscribe the factors to be rightfully considered in such an evaluation.

Commenters also expressed concerns with the proposed requirements based on the currently nonpublic character of some of the information that would be required to be disclosed publicly, particularly the proposed requirement to disclose the terms governing compensation of the securities lending agent.[1212] Commenters argued that some funds currently enjoy privately negotiated competitive advantages with securities lending services or counterparties that could be jeopardized should their arrangements with their securities lending agents be made public.[1213] We continue to believe, however, that the required fee information will allow investors to better understand the expenses associated with securities lending activities and have therefore determined to adopt these modified disclosure requirements with modifications to address commenters' concerns. We believe that the modifications to the proposed requirements that we are making today eliminate the disclosures from the proposed requirements that some commenters indicated could be the most sensitive—specifically, the terms of the revenue split and the terms governing the compensation of the securities lending agent more generally—while retaining the required information that we think will be most useful to investors in understanding the expenses associated with fund securities lending activities.

In particular, some commenters suggested that, rather than requiring disclosure of the terms governing the compensation of the securities lending agent, as we proposed,[1214] we consider instead requiring disclosure of backward-looking actual compensation levels.[1215] One of these commenters argued that, because there are a variety of fee arrangements in the marketplace, such an alternative disclosure requirement may provide a clearer, more concise view of each party's compensation.[1216] We have been persuaded by these commenters' suggestions that backward-looking dollar-based requirements would yield clearer disclosure than would the proposed requirements and may also enhance disclosure comparability across funds for investors and reduce preparation complexity for funds and thus have modified the requirements accordingly.[1217] This dollar-based requirement would also eliminate the requirement that potentially sensitive negotiated contractual terms be disclosed, while nonetheless allowing investors to better understand the expenses associated with securities lending activities. A commenter also counseled against placing undue emphasis on the securities lending agent's revenue split at the expense of other securities lending fees and expenses,[1218] and we believe that the schedule of fees and expenses we are requiring to be disclosed places an appropriate level of emphasis on that figure situated among the other required fee and expense disclosures.[1219]

We also proposed to require disclosure of gross income from securities lending, including income from cash collateral reinvestment,[1220] as well as net income.[1221] We did not receive comments specific to these proposed requirements. We are adopting the proposed requirement to disclose gross income from securities lending activities. Moreover, as further clarification about the types of income that could be included in this total, we

[1221] Proposed rule 6–03(m)(3) of Regulation S–X.

note that—in addition to income from cash collateral reinvestment—disclosed gross income may also include negative rebates (*i.e.,* those paid by the borrower to the lender), loan fees paid by borrowers when collateral is noncash, management fees from a pooled cash collateral reinvestment vehicle that are deducted from the vehicle's assets before income is distributed, and any other income.[1222] We are adopting the proposed requirement to disclose net income and clarifying that the reported figure should be equal to the difference between gross income and aggregate fees/compensation.[1223]

3. Required Disclosures of Monthly Average Value on Loan

We also proposed to require disclosure of the monthly average of the value of portfolio securities on loan.[1224] As discussed above, we have determined to adopt a similar requirement in Form N–CEN where it will be available in a structured data format and are not including it in the amendments to Forms N–1A, N–3, and N–CSR.[1225]

G. Technical and Conforming Amendments

As proposed, we are also adopting technical and conforming amendments to various rules and forms. As discussed above, we are rescinding Form N–Q and adopting new Form N–PORT. In order to implement this change, we are revising Forms N–1A, N–2, and N–3 to refer to the availability of portfolio holdings schedules attached to reports on Form N–PORT and posted on fund Web sites rather than on reports on Form N–Q.[1226] In addition, we are rescinding 17 CFR 249.332 and revising the following rules to remove references to Form N–Q: 17 CFR 232.401, 17 CFR 270.8b–33, 17 CFR 270.30a–2, 17 CFR 270.30a–3, and 17 CFR 270.30d–1.

We are also rescinding Form N–SAR and replacing it with new Form N–CEN. In order to implement this change, we are revising the following rules and sections to remove references to Form N–SAR and replacing them with references to Form N–CEN: 17 CFR 232.301, 17 CFR 240.10A–1, 17 CFR 240.12b–25, 17 CFR 249.322, 17 CFR 249.330, 17 CFR 270.8b–16, 270.30d–1, 17 CFR 274.101, and Form N–8F.[1227]

Currently, reports on Form N–SAR are filed semi-annually by management investment companies as required by 17 CFR 270.30b1–1, and annually by UITs as required by 17 CFR 270.30a–1. Because we are requiring reports on Form N–CEN to be filed annually by all registered investment companies, we are rescinding 17 CFR 270.30b1–1 and revising 17 CFR 270.30a–1 to require all registered investment companies to file reports on Form N–CEN. We are also revising the following rules to remove references to 17 CFR 270.30b1–1 and add references to revised rule 17 CFR 270.30a–1: 17 CFR 240.13a–10, 17 CFR 240.13a–11, 17 CFR 240.13a–13, 17 CFR 240.13a–16, 17 CFR 240.15d–10, 17 CFR 240.15d–11, 17 CFR 240.15d–13, and 17 CFR 240.15d–16.

In addition, as a result of the proposed new annual reporting requirement that would apply to all registered investment companies, we are rescinding 17 CFR 270.30b1–2—which currently permits wholly-owned management investment company subsidiaries of management investment companies to not file Form N–SAR under certain circumstances—and adopting new rule 17 CFR 270.30a–4—which will permit wholly-owned management investment company subsidiaries of management investment companies to not file Form N–CEN under those same circumstances. We are also amending 17 CFR 200.800 to display control numbers assigned to information collection requirements for Forms N–PORT and N–CEN by the Office of Management and Budget pursuant to the Paperwork Reduction Act. As discussed further below, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.[1228]

Our amendments to Regulation S–X will, among other things, require management investment companies to report new schedules for certain derivatives holdings.[1229] To implement these changes, we are renumbering the sections for schedules required to be reported by management investment companies and renumbering the list of schedules provided in 17 CFR 210.6–10, which outlines the schedules to be reported by investment companies.[1230] We are also adopting conforming changes to references to Regulation S–X in the following forms: Form N–1A, Form N–2, Form N–3, and Form N–14.[1231]

We are also amending Form N–CSR to revise instructions addressing how disclosures and certifications as to the effectiveness and changes in the registrant's internal control over financial reporting should be handled during the transition period when certifications for funds' portfolio holdings for their first and third fiscal quarters will no longer be provided on Form N–Q but instead will provided on Form N–CSR.[1232] In the Proposing Release we proposed deleting these instructions, but we are revising the instructions to clarify how these disclosures and certifications shall be handled with regards to smaller entities

[1222] Item 19(i)(1)(i) of Form N–1A; Item 21(j)(i)(A) of Form N–3 (same); Item 12(a)(1) of Form N–CSR. Gross income for purposes of this disclosure generally should include indirect fees paid for cash collateral management services—*i.e.,* management services provided to a pooled investment vehicle in which cash collateral is invested. Those fees are indirect because they are taken from the pooled assets before any income is distributed to the lending fund. In order for the net income disclosure from securities lending to sum to the net income for securities lending reported at period end, we believe that indirect fees for cash collateral management generally should be added to the gross income from securities lending in the Statement of Additional Information or, with respect to closed-end funds, in reports on Form N–CSR.

[1223] Item 19(i)(1)(iv) of Form N–1A; Item 21(j)(i)(D) of Form N–3; Item 12(a)(4) of Form N–CSR.

[1224] *See* proposed rule 6–03(m)(6) of Regulation S–X.

[1225] *See supra* footnotes 969–972 and accompanying text.

[1226] *See* Instruction 3(b) to Item 16(f) of Form N–1A; Instruction 4 to Item 27(d)(1) of Form N–1A; Instruction 6.b to Item 24 of Form N–2; Instruction 6(ii) to Item 28(a) of Form N–3; Instruction 3(b) to Item 19(e)(ii) of Form N–3.

[1227] Although we are deleting references to Form N–SAR in 17 CFR 232.301, we are not replacing them with references to Form N–CEN because the references in that section relate to specific portions of the EDGAR Filer Manual that would not be relevant to Form N–CEN.

[1228] *See infra* section IV.

[1229] Our amendments require new schedules to be filed to report open futures contracts, open forward foreign currency contracts, and open swap contracts. *See* new rules 12–13A–C of Regulation S–X.

[1230] Among other things, our amendments will renumber the CFR sections for open option contracts and the summary schedule of investments in unaffiliated issuers from 17 CFR 210.12–12B and 17 CFR 210.12–12C to 17 CFR 210.12–13 and 17 CFR 210.12–B, respectively. These amendments group the schedule for open option contracts written together with the new schedules for open futures contracts, open forward foreign currency contracts, and open swap contracts, and list the summary schedule sequentially after the investments in securities of unaffiliated issuers. We are also amending 17 CFR 210.6–10 to, among other things, add new schedules V, VI, and VII for open futures contracts, open forward foreign currency contracts, and open swap contracts, respectively, and renumber schedule II for investments other than securities and schedule VI for summary of investments in securities of unaffiliated issuers as schedules VIII and IX, respectively. *See* amended rule 6–10 of Regulation S–X (listing the schedules required to be filed by management investment companies, UITs, and face-amount certificate companies).

[1231] *See* Item 27(b)(1) of Form N–1A (reference to schedule VI changed to schedule IX and reference to schedule I are corrected to cite to the appropriate CFR section); Instruction 7 to Item 24 of Form N–2 (we are updating references to schedule VI); Instruction 7(i) and (ii) to Item 28(a) of Form N–3 (we are updating references to schedule VI).

[1232] Item 11 and Item 12 of Form N–CSR.

as opposed to larger entities during the transition period.

We are also removing and reserving paragraph (a) of 17 CFR 232.105, which currently requires electronic filers to submit Forms N–SAR and 13F in ASCII. We are rescinding Form N–SAR, and Form 13F has been submitted by electronic filers in XML, rather than ASCII, since 2013.[1233] Although we also proposed to revise the section heading of 17 CFR 232.105 and redesignate paragraphs (b) and (c) as (a) and (b), respectively, upon further consideration we believe those changes are unnecessary at this time.

We received no comments on these technical and conforming amendments, and are adopting them substantially as proposed, as discussed herein.

H. Compliance Dates

We are adopting the following compliance dates for our amendments, as set forth below.

1. Form N–PORT, Rescission of Form N–Q, and Amendments to the Certification Requirements of Form N–CSR

As proposed, given the nature and frequency of filings on Form N–PORT, the Commission is providing a tiered set of compliance dates based on asset size. Specifically, for larger entities—namely, funds that together with other investment companies in the same ''group of related investment companies'' [1234] have net assets of $1 billion or more as of the end of the most recent fiscal year of the fund—we are adopting a compliance date of June 1, 2018. This will result in larger funds filing their first reports on Form N–PORT, reflecting data as of June 30, no later than July 30, and will provide those funds with a compliance period of at least 18 months, consistent with our proposal. For these entities, we expect that this period of time will provide an adequate period of time for funds, intermediaries, and other service providers to conduct the requisite operational changes to their systems and to establish internal processes to prepare, validate, and file reports on new Form N–PORT with the Commission.[1235]

For smaller entities (*i.e.,* funds that together with other investment companies in the same ''group of related investment companies'' have net assets of less than $1 billion as of the end of the most recent fiscal year of the fund),[1236] the compliance date will be June 1, 2019. This will provide smaller entities an extra 12 months, as proposed, to comply with the new reporting requirements. We believe that smaller groups will benefit from this extra time to comply with the filing requirements for Form N–PORT and will potentially benefit from the lessons learned by larger investment companies and groups of investment companies during the adoption period for Form N–PORT.

In the Proposing Release, we stated that we intended to rescind Form N–Q and require implementation of the amendments to the certification requirements of Form N–CSR within a timing that would be consistent with this adoption. We received no comments on this aspect of the proposal. Therefore, consistent with the timing for the implementation of reporting requirements for Form N–PORT, we are also rescinding Form N–Q (referenced in 17 CFR 274.130) and implementing the amendments to the certification requirements of Form N–CSR (referenced in 17 CFR 274.128) with approximately the same time frame. However, we are delaying the rescission of Form N–Q by two additional months to allow funds sufficient time to satisfy Form N–Q's 60-day filing requirements with regard to their final filing on Form N–Q for the reporting period preceding their first filing on Form N–PORT. Thus, the compliance dates for the amendments to the certification requirements of Form N–CSR will be June 1, 2018 for larger entities, and June 1, 2019 (12 months later) for smaller entities. Form N–Q and related rules referencing Form N–Q will be rescinded two months later, on August 1, 2019. In addition, as discussed below, the compliance date for reporting a change in independent public accountant on Form N–CSR will be consistent with the compliance date for other information reported on Form N–CEN.[1237]

We understand that certain changes to issuers' and market participants' systems may not be able to occur until the final technical requirements are published in the EDGAR Filer Manual and EDGAR Technical Specifications documents. In order to provide issuers and other filers time to make adjustments to their systems, we anticipate making a draft of the EDGAR Technical Specifications documents available in advance. We believe that test submissions may assist both the Commission and issuers with addressing unknown and unforeseeable issues that may arise with the reporting of information on Form N–PORT. We will permit funds to file test submissions during a trial period.

Additionally, we have determined to maintain as nonpublic all reports filed on Form N–PORT for the first six months following June 1, 2018. We believe that, separate from the voluntary trial, having a time period where all funds are required to file reports on Form N–PORT with the Commission but not have those reports disclosed publicly will allow funds and the Commission to make adjustments to fine-tune the technical specifications and data validation processes. We believe that this process can ultimately improve the data that is reported to the Commission and, as required disclosed to the public. Accordingly, we find that it is neither necessary nor appropriate in the public interest or for the protection of investors to make reports filed on Form N–PORT during the first six months following the compliance date publicly available.[1238] However, portfolio information attached as

[1233] *See* SEC, Announcement: Notice to EDGAR Form 13F Filers (Mar. 29, 2013), *available at http://www.sec.gov/divisions/investment/imannouncements/notice-form-13f-im.htm* (requiring funds to file Form 13F according to EDGAR XML Technical Specifications beginning on April 29, 2013).

[1234] For these purposes, the threshold is based on the definition of ''group of related investment companies,'' as such term is defined in rule 0–10 under the Investment Company Act [17 CFR 270.0–10]. Rule 0–10 defines the term as ''two or more management companies (including series thereof) that: (i) Hold themselves out to investors as related companies for purposes of investment and investor services; and (ii) Either: (A) Have a common investment adviser or have investment advisers that are affiliated persons of each other; or (B) Have a common administrator; and [. . .] In the case of a unit investment trust, the term group of related investment companies shall mean two or more unit investment trusts (including series thereof) that have a common sponsor.'' We believe that this broad definition will encompass most types of fund complexes and therefore is an appropriate definition for compliance date purposes.

[1235] We believe that this compliance period for larger groups of investment companies is an adequate amount of time for funds to implement new Form N–PORT and make the necessary system and operational changes. We adopted a nine month compliance period when we first required money market funds to report their portfolio holdings to the Commission on a monthly basis on Form N–MFP. Based upon our Form N–MFP compliance experience, and the larger number of non-money market fund filers, we believe that doubling the Form N–MFP compliance period to eighteen months for filing reports on Forms N–PORT is appropriate. *See* Money Market Fund Reform 2010 Release, *supra* footnote 447, at 10087.

[1236] Based on staff analysis of data obtained from Morningstar Direct, as of June 30, 2016, we estimate that a $1 billion assets threshold would provide an extended compliance period to more than 67% of fund groups, but only 0.6% of all fund assets. We therefore believe that the $1 billion threshold will appropriately balance the need to provide smaller groups of investment companies with more time to prepare for the initial filing of reports on Form N–PORT, while still including the vast majority of fund assets in the initial compliance period.

[1237] *See infra* section II.H.2.

[1238] *See* section 45(a) of the Investment Company Act.

exhibits to Form N–PORT for the first and third quarters of a fund's fiscal year will still be made public during this period, to ensure that information about funds' portfolio holdings continues to be publicly available to investors and other users during the six month period when reports on Form N–PORT will not be made publicly available.[1239]

One commenter did not explicitly address compliance dates for Form N–PORT, but suggested that the compliance period for Regulation S–X be changed to 18 months so that Form N–PORT and the amendments to Regulation S–X would have the same compliance date.[1240] Other commenters suggested extending the compliance period for Form N–PORT for all funds, including specific recommendations for 24 months, 30 months, or 36 months after the later of the effective date for this rulemaking or the adoption of amendments requiring funds to report liquidity information on Form N–PORT.[1241]

We are adopting an initial compliance date for Form N–PORT of June 1, 2018, which is consistent with the 18-month compliance period we proposed. As discussed above, we anticipate that the information that will be reported on Form N–PORT will enable us to further our mission to protect investors by assisting us in carrying out our regulatory responsibilities related to the asset management industry. We believe that it is important for the Commission to obtain and benefit from such information as soon as it is reasonably possible for this information to be reported. Although several commenters recommended extending the compliance period in order to update reporting systems,[1242] based in part upon our experience with Form N–MFP reporting implementation, we continue to believe that 18 months for larger entities and 30 months for smaller entities will provide sufficient time for funds and their service providers to prepare to file reports on Form N–PORT.

Separately, as discussed above, our adoption includes numerous modifications from or clarifications to the proposal that address concerns raised by commenters and that are intended, in part, to decrease reporting and implementation burdens relative to the proposal. For example, we have added an instruction to Form N–PORT specifying that funds must report portfolio information on the same basis used in computing NAV, which is generally a T + 1 basis, rather than on a T + 0 basis, which is currently used for financial statement reporting. Several commenters asked for this clarification, as filing on a T + 0 basis would have required time-intensive conversion of portfolio transactions normally recorded on a T+1 basis.[1243] We are also permitting funds to attach Regulation S–X compliant portfolio holdings schedules to Form N–PORT within 60 days after the end of the first and third fiscal quarters as opposed to our proposed 30 days, thus allowing funds to focus on preparing their Form N–PORT filings as opposed to also preparing their Regulation S–X compliant portfolio holdings schedules simultaneously.[1244] More generally, we are permitting a fund to generally use its own methodology or the methodology of its service provider, so long as the methodology is consistently applied and is consistent with the way the fund reports internally and to current and prospective investors, which should help circumvent operational challenges that would have arisen if firms had attempted to standardize reporting of certain non-standardized information such as country of risk for each portfolio holding.[1245]

Several commenters suggested that the Commission should provide for a phase-in period based on a fund's fiscal year-end, such that the Commission would require each fund to first begin filing its Form N–PORT as of its next fiscal year following the compliance date.[1246] We decline to adopt this suggestion. A rolling compliance period based on fiscal year would mean that some funds would be filing reports on Form N–PORT while other funds would be filing reports on Form N–Q for the same reporting period, which would delay the Commission and other users from obtaining complete information about the industry on Form N–PORT for up to a year. Commission staff believes that this would diminish the value of the information reported on Form N–PORT in terms of assessing industry trends, identifying outliers, and monitoring industry developments, because only a portion of the industry would be filing reports on Form N–PORT each month in a structured data format. This would also create complexities for investors who might not understand why some of their funds would be reporting on one form while other funds would be reporting on a different form, and would diminish the ability of investors to compare the information reported by one fund with information reported by another fund if each fund reported information on a different form. While our staggered compliance approach will also result in some funds reporting on Form N–PORT while others are still reporting on Form N–Q, the difference will be less significant than with a rolling compliance date because under our approach only smaller funds representing a relatively small proportion of assets will continue to use Form N–Q after the initial compliance date.

One commenter suggested that the Commission should consider limiting liability for Form N–PORT filings for a transition period, similar to what was done with earlier structured data reporting rules.[1247] We decline to adopt this suggestion. In the prior structured data reporting rules, filers were required to report the same information in both structured and non-structured formats, with limited liability for the information reported in a structured format and full liability for that same information when reported in a non-structured format. In this case, the information will be reported on Form N–PORT in only a structured data format.

One commenter suggested raising the asset threshold for determining the larger entities that would be required to comply with Form N–PORT filing

[1239] *See supra* section II.A.2.j (discussing exhibits to Form N–PORT).

[1240] *See* State Street Comment Letter (stating that ''[m]any of the changes to disclosures for derivatives are aligned with the information required within Form N–PORT and will require significant enhancements to systems'').

[1241] *See, e.g.,* Dreyfus Comment Letter (compliance date of 24 months after the effective date); SIFMA Comment Letter I (later of 24 months following adoption or six months following publication of the final XML data structure for Form N–PORT); Fidelity Comment Letter (30 months after the effective date); ICI Comment Letter (30 months after the effective date of Form N–PORT or the requirement to report liquidity information on Form N–PORT); Oppenheimer Comment Letter (30 months after the effective date); Pioneer Comment Letter (36 months after the effective date).

[1242] *See, e.g.,* Fidelity Comment Letter; Vanguard Comment Letter; Pioneer Comment Letter; and Invesco Comment Letter.

[1243] *See supra* footnotes 74–76 and accompanying text.

[1244] *See supra* footnote 438 and accompanying and following text.

[1245] *See supra* footnote 79 and accompanying and following text.

[1246] *See* ICI Comment Letter (recommending a rolling compliance period, with each fund not required to file Form N–PORT until the beginning of its next fiscal year following 30 months after the effective date); Invesco Comment Letter (same, except each fund not required to file Form N–PORT until the beginning of its next fiscal year following 36 months after the effective date).

[1247] *See* Simpson Thacher Comment Letter (for a two-year transition period, structured data filings remained subject to standard antifraud provisions under federal securities laws, but were not subject to section 34(b) of the Investment Company Act of 1940 or section 18 of the Securities Exchange Act of 1934). *See also* Interactive Data to Improve Financial Reporting, Investment Company Act Release No. 28609 (Jan. 30, 2009) [74 FR 6776 (Feb. 10, 2009)].

requirements following an 18 month compliance period, as opposed to 30 months for smaller entities that fell below the asset threshold.[1248] As discussed above, we estimate that our proposed $1 billion assets threshold will provide an extended compliance period to more than 67% of the fund groups, but only 0.6% of all fund assets, and therefore believe that the $1 billion threshold will appropriately balance the need to provide smaller groups of investment companies with more time to prepare for the initial filing of reports on Form N–PORT, while still including the vast majority of fund assets in the initial compliance period.[1249]

2. Form N–CEN, Rescission of Form N–SAR, and Amendments to the Exhibit Requirements of Form N–CSR

We are adopting a compliance date of June 1, 2018 to comply with the new Form N–CEN reporting requirements. We expect that this compliance period, consistent with the 18 month compliance period that we proposed, will provide an adequate period of time for funds, intermediaries, and other service providers to conduct the requisite operational changes to their systems and to establish internal processes to prepare, validate, and file reports on Form N–CEN with the Commission. We are adopting the same compliance date for the related amendments to other rules and forms we are adopting today, including the rescission of Form N–SAR and related rules referencing Form N–SAR.[1250]

We also are adopting a compliance date of June 1, 2018 to comply with the modified reporting requirement for a registrant to file as an exhibit to Form N–CSR the letter reporting a change in independent registered public accountants. This exhibit was already required to be reported semi-annually on Form N–SAR, and as such, we do not expect that registrants will require significant amounts of time to modify systems or establish internal processes to prepare exhibit filings on Form N–CSR in accordance with our amendments.

Unlike Form N–PORT, we are not providing a tiered compliance date based on asset size. We believe that it is less likely that smaller fund complexes will need additional time to comply with the requirements to file Form N–CEN because the requirements are similar to the current requirements to file Form N–SAR, and we expect that filers will prefer the updated, more efficient filing format of Form N–CEN. We are therefore requiring all funds, regardless of size, to file reports on Form N–CEN with the same compliance period.

Furthermore, unlike Form N–PORT, we are not keeping reports filed during a phase in period after the compliance date nonpublic. Much of the information that will be filed on Form N–CEN is currently already reported by funds on Form N–SAR, and thus funds should already have processes and procedures in place to reduce the risk of inadvertent errors. In addition, filings on Form N–CEN are not expected to be as technically complex nor present comparable challenges in terms of reporting and data validation as filings on Form N–PORT. However, as with Form N–PORT, we anticipate allowing funds to file test submissions on Form N–CEN on a voluntary basis for a period of time before the compliance date.

Some commenters suggested that the compliance period be extended to the later of 30 months after the adoption of Form N–CEN, or 18 months after the effective date of amendments requiring funds to report liquidity information on Form N–CEN.[1251] We decline to adopt these suggestions. As discussed above, much of the information that will be reported on Form N–CEN is currently already reported by funds on Form N–SAR, and was reported by funds pursuant to a six-month compliance period upon our adoption of Form N–SAR.[1252] One commenter also estimated in the Form N–PORT context that implementing processes to report structured information in an XML format would take six months following publication of the final XML data structure.[1253] We therefore continue to believe, based in part upon this comment and also our prior experience with implementation of reporting requirements for Form N–SAR, that 18 months is an appropriate compliance period for Form N–CEN.

3. Regulation S–X, Statement of Additional Information, and Related Amendments

As discussed above, our amendments to Regulation S–X are largely consistent with existing fund disclosure practices. As such, we do not expect that funds, intermediaries, or service providers will require significant amounts of time to modify systems or establish internal processes to prepare financial statements in accordance with our proposed amendments to Regulation S–X. Accordingly, we are adopting a compliance date for our amendments to Regulation S–X of August 1, 2017. This is consistent with our proposed compliance period of eight months. The same compliance date will apply to conforming amendments related to our amendments to Regulation S–X, including the related amendments to the Statement of Additional Information (and Form N–CSR for closed-end funds) we are adopting today.

One commenter supported the proposed compliance date for the amendments to Regulation to S–X, although the commenter suggested that implementation be required for each fund with its next fiscal year end following the proposed compliance date.[1254] However, the commenter's rationale for a rolling compliance date was not that funds needed more time to comply, but rather that enhanced disclosure pursuant to the amendments to Regulation S–X should be initially provided over an entire fiscal year, as opposed to just a portion of the first fiscal year during which the amendments become effective.

Many other commenters requested that the compliance date be extended, with four commenters suggesting a compliance period of 18 months after the effective date of the amendments, one commenter recommending 24 months, and another commenter recommending 36 months.[1255] Commenters supported their requests

[1248] *See* Simpson Thacher Comment Letter.

[1249] *See supra* footnote 1236.

[1250] We similarly are rescinding Form N–SAR (referenced in 17 CFR 274.101) with a timing that is consistent with this adoption.

[1251] *See, e.g.,* Fidelity Comment Letter (suggesting a compliance date of 30 months after the adoption of Form N–CEN); MFS Comment Letter (same); CAI Comment Letter (same); IDC Comment Letter (same); Comment Letter of David W. Blass, General Counsel, Investment Company Institute (Jan. 13, 2016) (suggesting the later of 30 months after the adoption of Form N–CEN or 18 months after the adoption of amendments requiring funds to report liquidity information on Form N–CEN).

[1252] *See* Form N–SAR; Temporary Suspension of Quarterly Reporting Obligations of Certain Registered Investment Companies Pending Receipt of Comments on Proposed Final Action, Investment Company Act Release No. 14299 (Jan. 4, 1985) [50 FR 1442 (Jan. 11, 1985)].

[1253] *See* SIFMA Comment Letter I (estimating how long it would take to implement processes to report structured information in an XML format for Form N–PORT).

[1254] *See* Wells Fargo Comment Letter.

[1255] *See* Fidelity Comment Letter (recommending a compliance date of 18 months after the effective date); Oppenheimer Comment Letter (same); State Street Comment Letter (same); MFS Comment Letter (same, although with implementation on a rolling basis based on the fund's fiscal year end); SIFMA Comment Letter I (recommending the compliance date for the amendments to Regulation S–X be the same as SIFMA's recommended compliance date for Form N–PORT, namely 24 months after the effective date or six months after publication of the final XML data structure for Form N–PORT); Invesco Comment Letter (recommending 36 months, after the effective date with implementation on a rolling basis based on the fund's fiscal year end).

for a longer compliance date by asserting that the information that will be reported pursuant to the amendments to Regulation S–X overlaps with the information that will be reported on Form N–PORT, and thus the compliance date for Regulation S–X should be identical to the compliance date for Form N–PORT.[1256]

We decline to adopt these suggestions. Although some of the information that will be reported pursuant to the amendments to Regulation S–X overlaps with the information that will be reported on Form N–PORT, many of the amendments to Regulation S–X are unrelated to what will be reported in Form N–PORT. More significantly, as discussed above, our amendments to Regulation S–X are generally consistent with existing disclosure practices of many funds. As such, we do not expect that funds, intermediaries, or service providers will require significant amounts of time to modify systems or establish internal processes to prepare financial statements in accordance with our final amendments to Regulation S–X.

Additionally, some of the amendments we are adopting to Form N–CEN and the Statement of Additional Information (and Form N–CSR for closed-end funds) were originally proposed as part of our amendments to Regulation S–X, and we received no objections to our proposed timeframe for compliance for those portions of the amendments to Regulation S–X. Furthermore, the amendments to the Statement of Additional Information and Form N–CSR, like the amendments to Regulation S–X, do not entail the complications of having to develop and test an XML schema or EDGAR validation behaviors, as is the case for our reporting requirements regarding information that will be reported on Form N–PORT and Form N–CEN.

III. Economic Analysis

A. Introduction

The Commission is sensitive to the economic effects, including the benefits and costs and the effects on efficiency, competition, and capital formation that will result from the adopted changes to the current reporting regime. Changes to the current reporting regime include new Form N–PORT, the rescission of Form N–Q, amendments to the certification and exhibit filing requirements for Form N–CSR, amendments to Regulation S–X, new Form N–CEN, and the rescission of Form N–SAR. The economic effects of the adopted changes are discussed below.

The Commission is modernizing the content and format requirements of reports and disclosures by funds, and the manner in which information is filed with the Commission and disclosed to the public. The amendments are designed to enhance the Commission's ability to effectively oversee and monitor the activities of investment companies in order to better carry out its regulatory functions and to aid investors and other market participants to better assess the benefits, costs, and risks of investing in different fund products. In summary, and as discussed in greater detail in section II above, the Commission is adopting the following changes to its rules and forms:

- We are requiring registered management investment companies and ETFs organized as UITs, other than money market funds and SBICs, to report monthly portfolio information in a structured data format on a new form, Form N–PORT.
- We are rescinding Form N–Q. We are also lengthening the look-back for Sarbanes-Oxley certifications on Form N–CSR to six months to cover the gap in certification coverage that would otherwise occur once Form N–Q is rescinded.
- We are revising Regulation S–X to require new, standardized enhanced disclosures regarding fund holdings in derivatives instruments; update the disclosures for other investments; and amend the rules regarding the general form and content of fund financial statements.
- We are rescinding Form N–SAR and replacing it with new Form N–CEN, which will require the annual reporting of similar and additional census information in an updated, structured data format.
- We are adopting amendments to Forms N–1A, N–3, and N–CSR (for closed-end funds) to require certain disclosures in fund Statements of Additional Information regarding securities lending activities.

The current disclosure of information by funds serves as the baseline against which the costs and benefits as well as the impact on efficiency, competition, and capital formation are discussed. The baseline includes the current set of requirements for funds to file reports on Forms N–CSR, N–Q, and N–SAR with the Commission and the content of such reports, including Regulation S–X, and in particular, its schedule of investments. The baseline also includes guidance from Commission staff and other industry groups that have established industry practices for the disclosure of a fund's schedule of investments and financial statements. Lastly, the baseline includes the current practice of some funds to voluntarily disclose additional information, and the requirement that actively managed ETFs, and many index ETFs, disclose their portfolios on a daily basis. For example, some funds disclose monthly or quarterly portfolio investment information on their Web sites or to third-party information providers, and disclose additional information (*e.g.,* particular information on derivative positions) in fund financial statements that is not currently required under Regulation S–X. The parties that will be affected by the new rules, forms, and amendments are funds that have registered or will register with the Commission; the Commission; and other current and future users of fund information including investors, third-party information providers, and other potential users; and other market participants that could be affected by the change in fund disclosures.

We discuss separately below the economic effects of each of the following new rules, forms, and amendments: The introduction of Form N–PORT, the rescission of Form N–Q, the amendments to Form N–CSR, the amendments to Regulation S–X, the introduction of Form N–CEN, the rescission of Form N–SAR, and the amendments to multiple registration statement forms. We identify for each of the new rules, forms, and amendments the baseline from which the economic effects will be discussed and the parties most likely to be affected.

As noted above, the assets of registered investment companies exceeded $18 trillion at year-end 2015, having grown from about $5.8 trillion at the end of 1998.[1257] In addition, approximately 93 million individuals own shares of registered investment companies, representing 55 million or 44% of U.S. households.[1258] Among investment companies, we estimate that, as of December 2015, there were 3,113 active investment companies registered with the Commission, of which 1,642 were open-end funds, 750 were closed-end funds (including 1 SBIC), and 721 were UITs (including 5 exchange-traded funds).[1259] We further estimate that those registered investment companies included 17,052 funds or series thereof, of which 1,594 were exchange-traded funds (including eight organized as

[1256] *See* SIFMA Comment Letter I; State Street Comment Letter.

[1257] *See supra* footnote 4.

[1258] *See id.*

[1259] Based on data obtained from registrants' filings with the Commission on Form N–SAR.

UITs), 5,188 were UITs, 750 were closed-end funds, 481 were money market funds, and 9,039 were other mutual funds. The following table summarizes the entities likely to be affected by the new forms, rescissions, and amendments.

Figure 3

The Commission relies on information included in reports filed by funds to monitor trends, identify risks, inform policy and rulemaking, and assist Commission staff in examination and enforcement efforts of the asset management industry. An essential factor to the Commission's ability to carry out its regulatory functions is regular, timely information about portfolio holdings and general, census information about funds. In general, the new rules, forms, and amendments will modernize the fund reporting regime and, among other effects, will result in an increased transparency of fund portfolios and investment practices. The increased transparency will improve the ability of the Commission to fulfill its regulatory functions. These functions include the development of policy and guidance, the staff's review of fund registration statements and disclosures, and the Commission's examination and enforcement programs. We believe that the increase in transparency will also improve the ability of investors to select funds for investment, and therefore improve their ability to allocate capital across funds and other investments to more closely reflect their investment risk preferences. We also believe that the increase in transparency will enhance competition among funds to attract investors.

At the outset, the Commission notes that, where possible, it has sought to quantify the costs, benefits, and effects on efficiency, competition, and capital formation expected to result from each of the new rules, forms, and amendments and its reasonable alternatives. As discussed in further detail below, in many cases the Commission is unable to quantify the economic effects because it lacks the information necessary to provide a reasonable estimate.

The economic effects depend upon a number of factors that we cannot estimate or quantify. Factors include the extent to which investor protection would increase along with the ability of the Commission to oversee the fund industry; the amount of new information that would become available as a result of requiring such information in regulatory filings (as opposed to information that is provided voluntarily); the change in the availability of fund information to all investors, institutional and individual; and the extent to which investors are able to use the information to make more informed investment decisions either through direct use or through third-party service providers. Therefore, much of the discussion below is qualitative in nature although we describe where possible the direction of these effects.

In the Proposing Release, we requested general comment on the feasible alternatives to the information we proposed to require funds to report that would minimize the reporting burdens on funds while maintaining the anticipated benefits of the reporting and disclosure, as well as the utility of the information proposed to be included in reports to the Commission, investors, and the public in relation to the costs to funds of providing the reports.[1260] In adopting today's rules, forms, and amendments, we considered, among other things, such alternatives, utility, and costs.

B. Form N–PORT, Rescission of Form N–Q, and Amendments to Form N–CSR

1. Introduction and Economic Baseline

Form N–PORT will require registered management investment companies and ETFs organized as UITs, other than money market funds and SBICs, to report portfolio investment information to the Commission on a monthly basis. As discussed, only information reported for the last month of each fiscal quarter will be made available to the public in order to minimize potential costs associated with making the information public, including front-running or reverse engineering of a fund's investment strategies. Reports will be filed in a structured data format using XML to allow for easier aggregation and manipulation of the data. As discussed above, we are also rescinding Form N–Q but requiring that funds attach their complete portfolio holdings to Form N–PORT for the first and third fiscal quarters in accordance with Regulation S–X. We are also amending the form of certification in Form N–CSR to require each certifying officer to state that he or she has disclosed in the report any change in the registrant's internal control over financial reporting that occurred during the most recent fiscal half-year to fill the gap in certification coverage that would otherwise occur once Form N–Q is rescinded.[1261] As discussed above, we also are moving the management's statement regarding a change in accountant, which originally was an exhibit filed on Form N–SAR and was proposed as an attachment to Form N–CEN, to an exhibit to Form N–CSR.[1262] In addition, as discussed above, we are adopting amendments to require closed-end funds to report on Form N–CSR certain disclosures regarding securities lending activities.[1263]

The current set of requirements under which registered management investment companies (other than money market funds and SBICs) and ETFs organized as UITs publicly report their complete portfolio investments to the Commission on a quarterly basis and certain other information on a semi-annual basis,[1264] as well as the current practice of some investment companies to voluntarily disclose portfolio investment information either on their Web sites or to third-party information providers on a more frequent basis, is the baseline from which we will discuss the economic effects of new Form N–PORT.[1265] The parties that could be affected by the introduction of Form N–PORT are registered management investment companies (other than money market funds and SBICs) and ETFs organized as UITs, that have registered or will register with the Commission; the Commission; and other current and future users of investment company portfolio investment information including investors, third-party information providers, and other interested potential users; and other market participants that could be affected by the change in fund disclosure of portfolio investment information.

Currently, the Commission requires registered management investment companies (other than money market funds and SBICs) to report their complete portfolio investments to the Commission on a quarterly basis.[1266] These funds are required to provide this information in reports on Form N–Q as of the end of the first and third fiscal quarters of each year[1267] and in reports on Form N–CSR as of the end of the second and fourth fiscal quarters of each year.[1268] Both forms require that the reported schedule of portfolio investments conform to the requirements of Regulation S–X, and the schedule for the close of the fiscal year must be audited (but those schedules for the other three fiscal quarters need not be).[1269] These reports are generally required to be filed on the EDGAR system and are made publicly available upon receipt.[1270] Reports on Form N–CSR may be filed up to 70 days after the end of the reporting period,[1271] and reports on Form N–Q may be filed up to 60 days after the end of the reporting period.

Forms N–CSR and N–Q are required to be filed in HTML or ASCII/SGML format.[1272] In order to prepare reports in HTML and ASCII/SGML, reporting persons generally need to reformat information from the way the information is stored for normal business use.[1273] The resulting format, when rendered in an end user's Web browser, is comprehensible to a human reader, but it is not suitable for automated processing. These formats do not allow the Commission or other interested data users to combine information from more than one report in an automated way to, for example, construct a database of fund portfolio positions without additional formatting.

We received no comments that specifically addressed the baseline described in the Proposing Release. We believe that the economic effects from the introduction of new Form N–PORT will largely result from the disclosure of portfolio investment information in a structured data format, as well as the additional information that investment companies will report relative to current reporting practices. We also believe that the economic effects will depend on the extent to which the portfolios and investment activities of investment

[1260] *See* Proposing Release, *supra* footnote 7, at nn. 160–161.

[1261] Amended Item 11(b) of Form N–CSR; amended paragraph 4(d) of certification exhibit of Item 11(a)(2) of Form N–CSR.

[1262] Item 12(a)(4) of Form N–CSR; *see also supra* section II.D.4.b.

[1263] *See* Item 12 of Form N–CSR; *see also supra* footnote 1181 and accompanying text and section II.F.

[1264] Form N–PORT will also require information that is currently being reported on Form N–SAR such as information on fund flows, assets, and liabilities. The current requirement to report this information as part of Form N–SAR is also part of this baseline.

The baseline also includes the current obligation of Form N–Q filers to make certifications regarding (1) the accuracy of the portfolio holdings information reported on that form, and (2) the fund's disclosure controls and procedures and internal control over financial reporting.

[1265] Additionally, many funds currently provide information concerning derivatives investments, similar to the requirements we are adopting in our amendments to Regulation S–X. *See* discussion *supra* section II.C.2.

[1266] *See* General Instruction A to Form N–CSR; Item 6 of Form N–CSR; General Instruction A to Form N–Q; Quarterly Portfolio Holdings Adopting Release, *supra* footnote 421.

[1267] Item 1 of Form N–Q.

[1268] Item 6 of Form N–CSR.

[1269] Instruction to Item 6(a) of Form N–CSR; Item 1 of Form N–Q.

[1270] *See* rule 101(a)(i) of Regulation S–T [17 CFR 232.101(a)(i)].

[1271] Form N–CSR must be filed within 10 days after the shareholder report is sent to shareholders, and the shareholder report must be sent within 60 days after the end of the reporting period. Rule 30b2–1(a); rule 30e–1(c).

[1272] *See* rule 301 of Regulation S–T; EDGAR Filer Manual (Volume II) version 27 (June 2014), at 5–1.

[1273] In so doing, reporting persons typically strip out incompatible metadata (*i.e.,* syntax that is not part of the HTML or ASCII/SGML specification) that their business systems use to ascribe meaning to the stored data items and to represent the relationships among different data items.

companies become more transparent as a result of the increase in the amount and availability of portfolio investment information, and the ability of Commission staff, investors, and others to utilize the information. The current reporting requirements for investment companies, however, limit the ability of Commission staff to evaluate the potential economic effects. For example, the non-structured data format of reported portfolio investment information and the lack of standardized reporting requirements for certain types of portfolio investments all reduce the ability of Commission staff to aggregate information across the fund industry and to evaluate the economic effects of the regulatory changes.

The new rules, forms, and amendments will increase the amount of portfolio investment information available for some investment companies more so than others. For example, investment companies that utilize derivatives as part of their investment strategy, or that otherwise engage in alternative strategies, will provide more information about their businesses than other investment companies. Information from Form N–SAR provides some indication as to the current use of derivatives by investment companies. Form N–SAR requires investment companies to identify permitted investment policies, and if permitted, investment policies engaged in during the reporting period. As of the second half of 2015, on average 76.5% of investment companies reported as permitted investment policies involving the writing or investing in options or futures, and on average 5.3% of investment companies reported engaging in each one of these policies during the report period.[1274] In addition, the total net assets of alternative funds from which more information would become available were as of year-end 2015 approximately $219 billion or 1.3% of the total net assets of the mutual fund market.[1275] Although the percentage of net assets of alternative funds relative to the mutual fund market is currently small, the percentage of flows to alternative funds was 11.9% in 2013, 4.0% in 2014, and 6.1% in 2015.[1276]

Information from a White Paper prepared by staff in the Division of Economic and Risk Analysis also describes current fund use of derivatives.[1277] For example, based on data from Morningstar, the number of funds that can be categorized as engaging in alternative investment strategies increased from 2010 to 2014 at an annual rate of 17%, whereas the total number of all funds increased at an average annual rate of 8%.[1278] In addition, based on a random sample of funds drawn from Form N–CSR filings, 32% of funds held one or more derivatives, and the average aggregate exposure from derivatives, financial commitment transactions and other senior securities was 23% of net asset value. Evidence from the random sample also indicates that funds engaging in alternative investment strategies tended to use derivatives more often than other fund types, which the White Paper described collectively as ''Traditional'' mutual funds.

2. Benefits

As discussed, Form N–PORT will improve the information that registered management investment companies and ETFs organized as UITs (other than money market funds and SBICs) disclose to the Commission. The increase in the reporting frequency, the update to the structure of the information that reporting funds will disclose, and the additional information that reporting funds do not currently disclose, discussed in further detail below, will improve the ability of the Commission to understand, analyze, and monitor the fund industry. We believe that the information we receive on these reports will facilitate the oversight of reporting funds and will assist the Commission, as the primary regulator of such funds, to better effectuate its mission to protect investors, maintain fair, orderly and efficient markets, and facilitate capital formation, through better informed policy decisions, more specific guidance and comments in the disclosure review process, and more targeted examination and enforcement efforts.

To the extent that monthly portfolio investment information is not currently available, the requirement that funds make available monthly portfolio investment information to the Commission on Form N–PORT will improve the ability of the Commission to oversee reporting funds by increasing the timeliness of the information available, and by providing a larger number of data points. The expanded reporting also will increase the ability of Commission staff to identify trends in investment strategies and fund products as well as industry outliers.[1279] As discussed above, the quarterly portfolio reports that the Commission currently receives on Forms N–Q and N–CSR can become stale due to changes in the holdings of portfolio securities or fluctuations in the values of the portfolio's investments. Requiring monthly filings on Form N–PORT will increase the timeliness of the information the Commission receives from funds. More timely portfolio investment information will improve the ability of Commission staff to oversee the fund industry by monitoring industry trends, informing policy and rulemaking, identifying risks, and assisting Commission staff in examination and enforcement efforts.

The ability of Commission staff to effectively use the information reported

[1274] *See* Item 70 of Form N–SAR for a list of permitted investment policies, and if permitted, the investment policies engaged in during the reporting period. The percentages are calculated from the percentage of funds that report affirmatively to either of the two parts for Items 70.B though 70.I. There is little difference in the proportion of investment companies that reported as permitted the investment practices relating to Items 70.B through 70.I. The greatest proportion of funds reported engaging in writing or investing in stock index futures (14.0%) and engaging in writing or investing in interest rate futures (12.5%), and the smallest proportion of funds reported engaging in writing or investing in other commodity futures (1.6%) and engaging in writing or investing in options on stock index futures (0.7%). Aggregate condensed balance sheet information reported on Form N–SAR indicates that funds held $3.4 billion in options on equities and options on all futures (Item 74.G and Item 74.H) or 0.018% of net assets from the second half of 2015. Aggregate condensed balance sheet information reported on Form N–SAR from the second half of 2015 also indicates that funds had $54.1 billion in short sales (Item 74.R.(2)) and $3.8 billion in written options (Item 74.R.(3)), or 0.291% and 0.020% of net assets, respectively. The estimates are approximate.

[1275] *See supra* footnote 39. These statistics were obtained from staff analysis of Morningstar Direct data, and are based on fund categories as defined by Morningstar.

[1276] *See id.*

[1277] *See* White Paper entitled ''Use of Derivatives by Investment Companies,'' which was prepared by staff in the Division of Economic and Risk Analysis and was placed in the comment file for the Use of Derivatives by Registered Investment Companies and Business Development Companies, Investment Company Release No. 31933 (Dec. 11, 2015) [80 FR 80883 (Dec. 28, 2015)]. Daniel Deli, *et al., Use of Derivatives by Registered Investment Companies,* Division of Economic and Risk Analysis (2015) (''DERA White Paper''), *available at http://www.sec.gov/dera/staff-papers/white-papers/derivatives12-2015.pdf.*

[1278] In 2010, 591 of the 8,577 sample funds were defined as engaging in alternative investment strategies, and in 2014 1,125 of the 11,573 sample funds were defined as engaging in alternative investment strategies.

[1279] *See, e.g., supra* section II. Although likely not a significant effect, the increase in the frequency of portfolio investment disclosure to the Commission could also reduce the ability of investment companies to alter or ''window-dress'' portfolio investments in an attempt to disguise investment strategies and risk profiles. To the extent that managers may window-dress to affect public perception, managerial incentives for doing so would not change because the frequency of public disclosure of portfolio investment information would remain the same. *See, e.g.,* Vikas Agarwal, Gerald D. Gay, and Leng Ling, *Window Dressing in Mutual Funds,* Rev. of Fin. Stud., Vol. 27(11), 3133–3170 (2014).

in Form N–PORT depends on the ability of staff to compile and aggregate information into a single database that can then be used to conduct industry-wide analyses. Otherwise, the information would only improve the ability of staff to analyze a single or a small number of funds at any one time. Several commenters agreed that the structuring of the information will improve the ability of the Commission to compile and aggregate information across all reporting funds, and to analyze individual funds or a group of funds, and will increase the overall efficiency of staff to analyze the information.[1280] For example, the ability to compare portfolio investment information across reporting funds or for a single fund across report dates will improve the ability of the Commission to identify funds for examination and to identify trends in the fund industry. The Commission is requiring that filers disclose information using the Commission's XML schema. Based on the comments received and the Commission's experience, the Commission believes that requiring the information to be disclosed in an XML format will facilitate enhanced search capabilities, and statistical and comparative analyses across filings. With the data structured in XML, the Commission and the public can immediately download the information directly into databases and analyze it using various software packages. This enhances both the Commission's and the public's abilities to conduct large-scale analysis and immediate comparison across funds and date ranges.

The usefulness of structured data depends on the care with which filers report the data. If filers were to report data that did not conform to the Commission's XML schema, data quality would be diminished and would impair the Commission's and the public's ability to aggregate, compare, and analyze the data. As a result, the Commission's XML schema also incorporates certain validations to help ensure consistent formatting among all filings, in other words, to help ensure data quality. Validations are restrictions placed on the formatting for each data element so that comparable data is presented comparably. However, these formatting validations are not designed to ensure the underlying accuracy of the data; they can only help ensure data quality. These validations cannot exist in the current reporting formats for Form N–CSR and Form N–Q.

XML is an open standard [1281] that is maintained by an organization other than the Commission and undergoes constant review. As updates to XML or industry practice develop, the Commission's XML schema will also be updated to reflect those developments, with the outdated version of the schema replaced in order to maintain data quality and consistency.

As we discussed above in section II.A.3, we considered, as several commenters suggested, alternative formats to XML, such as XBRL.[1282] While the XBRL format allows funds to capture the rich complexity of financial information presented in accordance with GAAP, we believe that XML is more appropriate for the reporting requirements that we are adopting. Form N–PORT, as well as Form N–CEN, as adopted, will contain a set of relatively simple characteristics of the fund's portfolio- and position-level data, such as fund and class identifying information that is more suited for XML. While XBRL has more enhanced validation features, the simpler reporting elements on Form N–PORT and Form N–CEN do not require those enhanced features to ensure similar levels of formatting consistency.

In light of the benefits of structured data, we acknowledge that Form N–PORT duplicates some information filed in other forms, while also requiring funds to report information that is not currently required to be reported to the Commission, including portfolio- and position-level risk metrics and additional information describing debt securities and derivatives, securities lending activities, repurchase and reverse repurchase agreements, the pricing of securities, and fund flows and returns. Requesting data in a structured format may promote additional efficiency among investment companies to the extent that the new, standardized reporting requirements facilitate more automated report assembly, validation, and review processes for the disclosure and transmission of filings. Furthermore, filing this information in an XML format will allow the Commission staff to more efficiently review and analyze data for industry trends, and to better understand the risks of a particular fund (in the context of the fund's investment strategy), a group of funds, and the fund industry by being able to conduct large-scale analysis more easily, which will help in identifying outliers or trends that could warrant further investigation in a more immediate fashion.[1283]

The requirement to report portfolio- and position-level risk metrics will provide Commission staff with a set of quantitative measurements that provide information about the risk exposures of a fund. The risk metrics will improve the ability of Commission staff to efficiently analyze information for all reporting funds based on exposure to certain risks, and to determine whether additional guidance or policy measures are appropriate to improve disclosures. We are requiring funds to report risk measures, rather than the raw inputs used to calculate risk measures, because the calculation of position-level measures of risk for some derivatives, including derivatives with unique or complicated payoff structures, sometimes requires time-intensive computational methods or additional information that Form N–PORT will not require.[1284] While the Commission would retain greater flexibility if funds were required to report substantially more detailed information regarding raw inputs on Form N–PORT,[1285] it could be difficult for the Commission to efficiently calculate these same measures and funds would incur an

[1280] *See, e.g.,* ICI Comment Letter (''Receiving this information in XML format will facilitate the Commission's ability to efficiently analyze fund portfolio information on a regular basis.''); Morningstar Comment Letter; *but see* Federated Comment Letter.

[1281] The term ''open standard'' is generally applied to technological specifications that are widely available to the public, royalty-free, at no cost.

[1282] *See, e.g.,* XBRL US Comment Letter; Deloitte Comment Letter; *but see* Morningstar Comment Letter (''Extensible Business Reporting Language has had very limited success, and certain aspects of the standard are too lenient for regular data validation.'').

[1283] *See supra* section II.A.2.c. *See also, e.g.,* BlackRock Comment Letter (''Importantly, the greater depth and frequency of information requested by the Commission will help the Commission better identify and monitor emerging risks associated with specific RICs or categories of RICs as well as asset management activities.''); Wells Fargo Comment Letter (''we believe that the enhanced disclosure requirements of the Proposals represent appropriate valuable information for the Commission to have in order to assess trends in risks, for example, across the mutual fund industry.''); CFA Comment Letter (supporting transparency of derivatives holdings); Morningstar Comment Letter. *See also* ICI Comment Letter (''Much of the additional information the SEC proposes to collect can enhance its ability to monitor and oversee the fund industry.''). *But see* Federated Comment Letter (''A majority of the Commission's proposed amendments to Form N–1A, N–PORT, and N–CEN would require a large effort from funds while offering data that is, at best, of little utility, and, at worst, misleading. Many of these deficiencies relate to flaws inherent in a security-level disclosure scheme.'').

[1284] One commenter stated that the Commission should not require that funds report risk sensitivity measures, and instead calculate the risk sensitivity measures using raw inputs (Vanguard Comment Letter). The commenter noted that the Commission would therefore be able to calculate the measures consistently and in doing so draw ''apples-to-apples'' comparisons.

[1285] *See id.*

increase in reporting costs. We recognize that requiring funds to report these risk measures increases reporting burdens, but as discussed above, based on staff experience and outreach, we understand that most funds currently calculate risk measures for such securities and hence do not believe that the burden is significant.

The requirement for investment companies to provide risk metrics at the position-level and at the portfolio-level will improve the ability of staff to efficiently identify the risk exposures of funds regardless of the types of investments held or that could be introduced to the marketplace. The portfolio-level measures of risk will also improve the ability of staff to efficiently identify interest rate and credit spread exposures at the fund level and conduct analyses without first aggregating position-level measures. Also, staff could use the risk measures in combination to conduct additional analyses. For example, Commission staff can use the two measures of interest rate duration (*i.e.,* DV01 and DV100) to generate a proxy for interest rate convexity.

We have, however, made certain modifications to the proposed reporting requirements regarding the reporting of risk metrics in response to comments received. For example, as discussed in detail above, we are requiring the reporting of fewer key rates to reduce the reporting burden for funds, adopting a 1% *de minimis* threshold for reporting risk metrics for each currency to which the fund is exposed, and raising the threshold for fixed income allocation for risk reporting from 20% to 25% to align the reporting requirement with current disclosures required in the prospectus. To the extent that adopting a *de minimis* amount for reporting risk metrics for each currency will prevent the Commission, investors, and other users from seeing an exhaustive view of fund's currency risk exposures, there could be a reduction in the informational benefit to the Commission, investors, and other users relative to the proposal. However, relative to the baseline, we believe the economic effects of the disclosure of currency risk metrics are substantially similar with or without the adoption of a *de minimis.* Similarly, there could be a reduction in the informational benefit to the Commission, investors, and other users relative to the proposal to the extent that certain funds that would have had to report risk metrics under the 20% threshold do not have to report them under the 25% threshold, although we again believe that such a change will not significantly impact the benefits of this disclosure relative to the baseline because it is unlikely that funds that make investments in debt instruments as a significant part of their investment strategy have less than 25% of their NAV invested in such instruments. We believe, however, that such modifications are appropriate in light of the lower reporting burden for funds. Conversely, the Commission is adding a requirement to report DV100 in addition to DV01 to provide information about larger changes in interest rates, as well as information about nonparallel shifts in the yield curve. While funds will have an increased reporting cost to report DV100 in addition to DV01 relative to the proposal, as DV100 is a standard measure of interest rate sensitivity and a common measure of duration we do not believe the cost to funds relative to the baseline will change. Furthermore, we believe that this modification will provide the Commission with the ability to analyze data about larger shifts in the yield curve, as well as changes in the shape of the yield curve. Similarly, while funds will have a decreased reporting cost in light of our modification to require the reporting of fewer key rates, we do not believe that the decrease in information collected by the Commission will substantially affect our ability to analyze how debt portfolios will react to different interest rate changes and credit spreads along the Treasury curve, given that the rates at which funds will report these metrics are, in general, largely representative of bond funds' overall exposures.

Form N–PORT will require reporting funds to provide the contractual terms for debt securities and many of the more common derivatives including options, futures, forwards, and swaps; the reference instrument for convertible debt securities and derivatives; and information describing the size of the position. This information will provide Commission staff the ability to identify funds with interest rate risk exposure or exposure to other risks such as those pertaining to a company, industry, or region.

As discussed, for securities lending activities and reverse repurchase agreements, Form N–PORT will require counterparty identification information, contractual terms, and information describing the collateral and reinvestment of the collateral. The additional information could improve the ability of Commission staff to assess fund compliance with the conditions that they must meet to engage in securities lending, as well as better analyze the extent to which funds are exposed to the creditworthiness of counterparties, the loss of principal of the reinvested collateral, and leverage creation through the reinvestment of collateral.

Form N–PORT will also require additional identification information regarding the reporting fund, the issuers of the fund's portfolio investments, and the investments themselves, including the reference instruments for convertible debt securities and derivatives investments. The adopting release differs from the proposal with respect to the treatment of reference assets that are custom baskets or nonpublic indexes of securities in that for those that represent more than 1%, but less than 5%, of the fund's NAV, funds will be required to disclose the top 50 components of the basket and, in addition, those components that exceed 1% of the notional value of the index. For nonpublic indexes or custom baskets that represent greater than 5% of the fund's NAV, all components will be required to be disclosed. For nonpublic custom baskets or indexes that represent less than 1% of the fund's NAV, no disclosure is required. Although this modification will provide the Commission, investors, and other users with less than complete transparency into any such derivative investment that represents between 1% and 5% of a fund's NAV, given that this modification will still allow the Commission to collect information on a large portion of the significant reference assets for these investments, we do not believe this change will significantly impact the benefits derived relative to those discussed in the proposal. The additional identification information will benefit the Commission by improving the ability of staff to link the information from Form N–PORT to information from other sources that identify market participants and investments using these same identifiers, such as Form N–CEN. The additional identification information will improve upon the current requirement for funds to provide just the issuer name, and as such will aid the Commission in identifying both the issuers of fund portfolio investments and the investments themselves. As a result, Commission staff will be better able to identify and compare funds that have exposures to particular investments or issuers regardless of the whether the exposure is direct or indirect such as through a derivative security.

Investors, third-party information providers, and other potential users will also experience benefits from the introduction of Form N–PORT.[1286] While the frequency of the public disclosure of portfolio information will not change, we believe that the structured data format of this information will allow investors and other potential users to more efficiently analyze portfolio investment information. Investors and other potential users will also have disclosure of additional information that is currently not included in the schedule of investments reported on Form N–Q and Form N–CSR. The structure of the information, as well as the additional information, will increase the transparency of a fund's investment strategies and improve the ability of investors and other potential users to more efficiently identify its risk exposures.

Form N–PORT will benefit investors, to the extent that they use the information, to better differentiate investment companies based on their investment strategies and other activities. For example, investors will be able to more efficiently identify funds that use derivatives and the extent to which they use derivatives as part of their investment strategies.[1287] In general, we expect that institutional investors and other market participants will directly use the information from Form N–PORT more so than individual investors. For individual investors who choose not to access the data in an XML format, those investors can access similar information through the additional disclosure requirements in an unstructured format for investment companies, including the requirement for investment companies to attach to Form N–PORT complete portfolio holdings in accordance with Regulation S–X for the first and third fiscal quarters.[1288] Investors, and in particular individual investors, could also indirectly benefit from the information in Form N–PORT to the extent that third-party information providers and other interested parties obtain, aggregate, provide, and report on the information. Investors could also indirectly benefit from the information in Form N–PORT to the extent that other entities, including investment advisers and broker-dealers, utilize the information to help investors make more informed investment decisions.

We received a number of comments supporting quarterly public disclosure of Form N–PORT, but requesting that certain information items be kept nonpublic.[1289] In response to these comments, and in contrast to the proposing release, three items reported on Form N–PORT will be kept nonpublic: Delta, country of risk, and the explanatory notes related to delta and country of risk. Given that the Commission will still collect this information, we do not believe there will be a significant economic impact relative to the Proposing Release due to keeping these data items nonpublic, as the Commission is the primary user of these data elements. A discussion of the issue of public versus nonpublic data can be found in section II.A.4.

One clarifying change that has been made from the proposing release in response to commenters is the addition of an instruction that funds may use their own methodologies in General Instruction G. General Instruction G now provides that funds may respond to Form N–PORT using their own internal methodologies and the conventions of their service providers, provided the information is consistent with information that they report internally and to current and prospective investors, and the Fund's methodologies and conventions are consistently applied and the Fund's responses are consistent with any instructions or other guidance relating to the Form. To the extent this instruction decreases the comparability of the data collected, there could be some reduction in benefit relative to the proposal, although funds will likely benefit from the decreased reporting burden associated with explicitly allowing them to rely on their existing practices.

The portfolio investment information that investment companies report to the Commission is informative in describing the investment strategy funds implement,[1290] and investors could use the information to select funds based on security selection, industry focus, level of diversification, and the use of leverage and derivatives.[1291] We believe that an increase in the ability of investors to differentiate investment companies could allow investors to allocate capital across reporting funds more in line with their risk preferences and increase the competition among funds for investor capital. In addition, by improving the ability of investors to understand the risks of investments and hence their ability to allocate capital across funds and other investments more efficiently, we believe that the introduction of Form N–PORT could also promote capital formation.

Rescission of Form N–Q, along with its certifications of the accuracy of the portfolio schedules reported for each fund's first and third fiscal quarters, may result in some cost savings by funds in terms of administrative or filing costs. However, we expect any such savings, if any, to be minimal, because each fund will still be required to file portfolio schedules prepared in accordance with §§ 210.12–12 to 12–14 of Regulation S–X for the fund's first and third fiscal quarters, by attaching those schedules as attachments to its reports on Form N–PORT for those reporting periods.

3. Costs

Form N–PORT will require registered management investment companies and ETFs organized as UITs, other than money market funds and SBICs, to incur one-time and ongoing costs to comply with the new filing requirements. Funds will incur additional ongoing costs to report portfolio investment information on a monthly basis on Form N–PORT instead of a quarterly basis as currently reported on Forms N–Q and N–CSR. Funds that voluntarily provide information to third-party information providers and on fund Web sites, including monthly portfolio investments, and additional information in fund financial statements, including additional information regarding derivatives similar to the requirements that we are adopting today, will bear

[1286] *See also* Morningstar Comment Letter (stating that modern electronic reporting should apply to all registered investment companies, as investors use open-end funds, ETFs, closed-end funds, and UITs as ''tools to build portfolios.'').

[1287] Form N–PORT will also eliminate the reporting gap between money market funds, which report portfolio investment information in an XML format on Form N–MFP, and funds engaging in similar investment strategies such as ultra-short bond funds, which will be required to file reports on Form N–PORT.

[1288] *See* discussion *supra* section II.A.2.j.

[1289] *See, e.g.,* ICI Comment Letter (portfolio risk metrics, delta, liquidity determinations, country of risk and derivatives financing rates should be kept non-public); BlackRock Comment Letter (risk metrics); Invesco Comment Letter (portfolio level risk metrics, derivatives information, illiquidity determinations, and securities lending information should remain non-public); Oppenheimer Comment Letter (risk metrics, illiquidity determinations, country of risk determinations, derivatives payment terms (including financing rates), and securities lending fees and revenue sharing splits should be kept non-public).

[1290] Academic research indicates that the portfolio investment information funds provide to the Commission, such as on Form N–CSR and Form N–Q, has value even though the information is publicly available only after a time-lag. *See infra* footnotes 1307–1314. Just as investors can use the information to front-run, predatory trade, or copycat/reverse engineer of the trading strategy of a reporting fund, investors of funds can also use the information to identify funds for investment.

[1291] Empirical research shows that fund flows are sensitive to many factors including past fund performance and investor search costs. *See, e.g.,* Erik R. Sirri & Peter Tufano, *Costly Search and Mutual Fund Flows,* 53 J. of Fin., 1589 (1998); Zoran Ivković & Scott Weisbenner, *Individual Investor Mutual Fund Flows,* 92 J. of Fin. Econ., 223 (2009); George D. Cashman, *Convenience in the Mutual Fund Industry,* 18 J. of Corp. Fin., 1326 (2012).

fewer costs than those funds that do not.[1292] The Commission is aware that even funds that do so report will nonetheless likely incur additional costs on reports on Form N–PORT than on voluntary submissions, such as validation and signoff processes, given that reports on Form N–PORT will be a required regulatory filing and will require different data than the funds are currently providing to third-party information providers. However, over time, the filings could become highly automated and could involve fewer costs.[1293]

Funds will incur costs to file reports on Form N–PORT in a structured data format. Based on staff experience with other XML filings, however, these costs are expected to be minimal given the technology that will be used to structure the data.[1294] XML is a widely used data format, and based on the Commission's understanding of current practices, most reporting persons and third party service providers have systems already in place to report schedules of investments and other information. Systems should be able to accommodate XML data without significant costs, and large-scale changes will likely not be necessary to output structured data files. In an effort to reduce some of the potential burdens on smaller entities, we are extending the compliance period to begin filing reports on Form N–PORT to thirty months after the effective date for groups of funds with assets under $1 billion.[1295] The additional time could increase the ability of these investment companies to comply with the filing requirements by providing more time for system and operation changes and from observing larger fund groups.

Form N–PORT will also require the disclosure of certain information that is not currently required by the Commission. To the extent that the new form will require information to be reported that is not currently contained in fund accounting or financial reporting systems, funds will bear one-time costs to update systems to adhere to the new filing requirements. The one-time costs will depend on the extent to which investment companies currently report the information required to be disclosed. The one-time costs will also depend on whether and to what extent an investment company would need to implement new systems and to integrate information maintained in separate internal systems or by third parties to comply with the new requirements. For example, based on staff outreach to funds, we believe that funds will incur systems or licensing costs to obtain a software solution or to retain a service provider in order to report data on risk metrics, as risk metrics are not currently required to be reported on the fund financial statements. Our experience with and outreach to funds indicates that the types of systems funds use for warehousing and aggregating data, including data on risk metrics, varies widely.

In some instances, such as in the case of increased disclosures regarding derivatives investments and information concerning the pricing of investments, the Commission is requiring parallel disclosures in the fund's schedule of investments prepared pursuant to Regulation S–X; accordingly, we expect funds will generally incur one set of costs to adhere to the reporting of new information on Form N–PORT and in its schedule of investments. For other information, such as the reporting of particular asset classifications, identification of investments and reference instruments, and risk measures, the information will be disclosed on Form N–PORT only.

The Commission is sensitive to the costs that funds will incur to prepare, review, and file reports on Form N–PORT. Relative to the proposal, the Commission is making modifications to these final rules that should reduce the burden on investment companies to file reports on Form N–PORT. In particular, and in response to commenters,[1296] we have raised the threshold for requiring reporting of portfolio level risk metrics and are providing a *de minimis* for requiring reporting of risk metrics for currency exposures. We are also modifying the requirements with respect to reference assets that are custom baskets or nonpublic indexes of securities so that for such investments that constitute more than 1%, but less than 5% of the fund's NAV, funds will be required to report only the top 50 components of the basket and, in addition, those components that represent more than 1% of the notional value of the index. We believe this will result in a decreased burden for filers relative to the proposal. In addition, and as requested by commenters, funds will report portfolio information on Form N–PORT on the same basis they use in NAV calculations under rule 2a–4 (generally a T+1 basis), which will alleviate the need of the majority of funds to alter reporting systems to report on a T+0 basis.[1297] Although we did not specify the appropriate basis for reporting in the proposing release, commenters suggested that reporting on the same basis used in NAV calculations (generally a T+1 basis) was preferable to T+0, and we are sensitive to their concerns. Finally, we are adopting a new General Instruction G that clarifies that in reporting information on Form N–PORT, the fund may respond using its own internal methodologies and the conventions of its service providers, provided the information is consistent with information that they report internally and to current and prospective investors, and the fund's methodologies and conventions are consistent with any instructions or other guidance relating to the Form. We believe that this alteration eases the reporting burden on funds by allowing them to rely on their existing practices and could result in a cost savings for filers relative to the proposal as it makes clear that they do not have to alter systems or methodology for reporting information items on Form N–PORT.

To the extent possible, we have attempted to quantify these costs. Based on updated industry statistics, we estimate that 11,382 funds will file Form N–PORT.[1298] As discussed below, we estimate that these funds will incur certain costs associated with preparing, reviewing, and filing reports on Form N–PORT.[1299] Assuming that 35% of

[1292] Monthly portfolio investment information is available for approximately 42% of funds covered by The CRSP Survivor-Bias-Free US Mutual Fund Database as of the fourth quarter of 2015. The database covers more than 10,000 open-ended mutual funds during this time period. This estimate suggests that a large proportion of funds already report monthly portfolio investment information, although it is unclear whether monthly information is reported following each month or if information relating to several months is periodically reported at a later date. Calculated based on data from The CRSP Survivor-Bias-Free US Mutual Fund Database © 2015 Center for Research in Security Prices (CRSP®), The University of Chicago Booth School of Business. One commenter also cited the proportion of funds that are currently reporting monthly portfolio investment information, 6,500 of 12,000 portfolios, as well as the proportion of funds that report portfolio investment monthly information within 45 days, 6,200 of 6,500. Morningstar Comment Letter.

[1293] Costs related to such processes are included in the estimate below of the paperwork costs related to Form N–PORT, discussed below.

[1294] *See, e.g.,* Form PF Adopting Release, *supra* footnote 80, at text following n. 357 (discussing the costs to advisers to private funds of filing Form PF in XML format); Money Market Fund Reform 2010 Release, *supra* footnote 447, at nn. 341–344 and accompanying text (discussing the costs to money market funds of filing reports on Form N–MFP in XML format).

[1295] *See supra* section II.H.1.

[1296] *See, e.g.,* Oppenheimer Comment Letter; MFS Comment Letter; Wells Fargo Comment Letter.

[1297] Fidelity Comment Letter (requesting that funds be permitted to report on a T+1 basis); MFS Comment Letter (same); Pioneer Comment (same); Invesco Comment Letter (same).

[1298] *See infra* footnote 1495 (explaining calculation of 11,382 funds).

[1299] *See infra* section V.A.1. Commenters questioned the estimates in the proposal relating to the paperwork costs associated with preparing, funds (3,984 funds) will choose to license a software solution to file reports on Form N–PORT, we estimate costs to funds choosing this option of $56,682 per fund for the first year[1300] with annual ongoing costs of $47,465 per fund.[1301] We further assume that 65% of funds (7,398 funds) will choose to retain a third-party service provider to provide data aggregation and validation services as part of the preparation and filing of reports on Form N–PORT, and we estimate costs to funds choosing this option of $55,492 per fund for the first year[1302] with annual ongoing costs of $39,214 per fund.[1303] In total, we estimate that funds will incur initial costs of $636,350,904 and ongoing annual costs of $479,205,732.[1304]

Although there will be no change to the frequency or time-lag for which investment company security position information is publicly disclosed, the increase in the amount of publicly available information and the greater ability to analyze the information as a result of its structure may facilitate activities such as ''front-running,'' ''predatory trading,'' and ''copycatting/reverse engineering of trading strategies'' by other investors.[1305] Investors that trade ahead of funds could reduce the profitability of funds by increasing the prices at which funds purchase securities and by decreasing the prices at which funds sell securities. These activities can reduce the returns to shareholders who invest in actively managed funds, making actively managed funds less attractive investment options.[1306] Portfolio investment information, along with flow information, can also create opportunities for other market participants to front-run the sales of funds that experience large outflows and the purchases of funds that experience large inflows,[1307] or create opportunities for other market participants to engage in predatory trading that could further hinder fund ability to unwind positions.[1308] For example, Form N–PORT will result in the disclosure of additional information, such as pertaining to derivatives and securities lending activities, which could more clearly reveal the investment strategy of reporting funds and their risk exposures.[1309] We note, however, that much, though not all, of the information that Form N–PORT requires is already reported by funds on Form N–CSR and Form N–Q.[1310] The structured data format of portfolio investments disclosure could improve the ability of other investors to obtain and aggregate the data, and identify specific funds to front-run or trade in a predatory manner. These activities could reduce the profitability from developing new investment strategies, and therefore could reduce innovation and adversely impact competition in the fund industry.

A trading strategy that follows the publicly reported holdings of actively managed funds can also earn similar if not higher after expense returns.[1311] An implication of this observation is that the public disclosure of portfolio investment information could induce free-riding by investors that use the information and reduce the potential benefit from developing new investment strategies and engaging in proprietary market research. The effect of free-riding would reduce the ability of investment companies with longer investment horizons to benefit from researching investment opportunities and developing new strategies more so than investment companies with shorter investment horizons because of the increased likelihood that the disclosed portfolio investment information would reveal their long-term investment strategies.[1312]

A comparison can be made between the economic effects from the introduction of Form N–PORT and the economic effects from the introduction of Form N–Q in May 2004 which increased the reporting frequency of portfolio investment information to the Commission from semiannual to quarterly. The introduction of Form N–Q resulted in an increase in the amount

---

reviewing, and filing reports on Form N–PORT. *See* Invesco Comment Letter; Simpson Thacher Comment Letter. These comments are discussed *infra* section IV.A.1.

1300 *See infra* footnotes 1473–1476, 1486, 1494 and accompanying text. This estimate is based upon the following calculations: $56,682 = $4,805 in external costs + $51,876.50 in internal costs ($51,876.50 = (15 hours × $308/hour for a senior programmer) + (38.5 hours × $317/hour for a senior database administrator) + (30 hours × $271/hour for a financial reporting manager) + (30 hours × $201/hour for a senior accountant) + (30 hours × $160/hour for an intermediate accountant) + (30 hours × $306/hour for a senior portfolio manager) + (24 hours × $288/hour for a compliance manager)). The hourly wage figures in this and subsequent footnotes are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead.

1301 *See infra* footnotes 1477, 1486 and accompanying text. This estimate is based upon the following calculations: $47,465 = $4,805 in external costs + $42,660 in internal costs ($42,660 = (30 hours × $271/hour for a financial reporting manager) + (30 hours × $201/hour for a senior accountant) + (30 hours × $160/hour for an intermediate accountant) + (30 hours × $306/hour for a senior portfolio manager) + (24 hours × $288/hour for a compliance manager) + (24 hours × $317/hour for a senior database administrator)).

1302 *See infra* footnotes 1480–1482, 1487, 1494 and accompanying text. This estimate is based upon the following calculations: $55,492 = $11,440 in external costs + $44,051.50 in internal costs ($44,051.50 = (30 hours × $308/hour for a senior programmer) + (46 hours × $317/hour for a senior database administrator) + (16.5 hours × $271/hour for a financial reporting manager) + (16.5 hours × $201/hour for a senior accountant) + (16.5 hours × $160/hour for an intermediate accountant) + (16.5 hours × $306/hour for a senior portfolio manager) + (16.5 hours × $288/hour for a compliance manager)).

1303 *See infra* footnotes 1483, 1487 and accompanying text. This estimate is based upon the following calculations: $39,214 = $11,440 in external costs + $27,774 in internal costs ($27,774 = (18 hours × $271/hour for a financial reporting manager) + (18 hours × $201/hour for a senior accountant) + (18 hours × $160/hour for an intermediate accountant) + (18 hours × $306/hour for a senior portfolio manager) + (18 hours × $288/hour for a compliance manager) + (18 hours × $317/hour for a senior database administrator)).

1304 These estimates are based upon the following calculations: $636,350,904 = (3,984 funds × $56,682 per fund) + (7,398 funds × $55,492 per fund). $479,205,732 = (3,984 funds × $47,465 per fund) + (7,398 funds × $39,214 per fund).

1305 One commenter questioned the potential impact of monthly public disclosure of Form N–PORT on the ability of other investors to engage in predatory trading or copycatting activities citing to the large proportion of funds that currently report monthly portfolio investment information (Morningstar Comment Letter). Although a large percentage of funds report monthly portfolio investment information, a large percentage of funds currently do not. *See supra* footnote 1292. The incentives of funds to report portfolio investment information on a more frequent basis is dependent on many factors including their perception of the impact of more frequent public disclosure on future returns. Other commenters expressed concern that the increase in the amount of publicly available information and the greater ability to analyze the information as a result of its structure would increase front-running, predatory trading, and copycatting/reverse engineering of trading strategies by other investors and suggested that reports filed on Form N–PORT be made non-public (Schwab Comment Letter; T. Rowe Price Comment Letter). Another commenter recommended the quarterly reporting of monthly information to reduce these concerns (Dodge & Cox Comment Letter).

1312 *See, e.g.,* Vikas Agarwal, *et al., Mandatory Portfolio Disclosure, Stock Liquidity, and Mutual Fund Performance,* 70 J. of Fin. Econ. 2733 (Dec. 2015) (''Agarwal *et al.*''), *available at http://onlinelibrary.wiley.com/doi/10.1111/jofi.12245/pdf*; Marno Verbeek & Yu Wang, *Better than the Original? The Relative Success of Copycat Funds,* 37 J. of Bank. & Fin., 3454 (2013) (''Verbeek & Wang'').

of information that could have been acted upon by other investors. For example, studies suggest that the ability of copycat funds to outperform actively managed funds increased after the introduction of Form N–Q,[1313] and additional studies suggest that the performance of those funds with better previous performance or that invest in low-information stocks decreased following the introduction of Form N–Q.[1314] The increase in the frequency of portfolio investment information as a result of Form N–Q resulted in an increase in the amount of portfolio investment information available. Although Form N–PORT will not increase the frequency of public disclosure, Form N–PORT will increase the amount of portfolio investment information available. In addition, Form N–PORT, unlike Form N–Q, will also increase the accessibility of the information as a result of its structured data format. By maintaining the status quo with respect to the frequency and timing of the disclosure of publicly available portfolio information, we aim to mitigate added costs while allowing the Commission, the fund industry, and the marketplace to assess the impact of the structured, more detailed data reported on Form N–PORT, and the extent to which these changes might affect the likelihood of predatory trading. The additional information and the structure of the information that is required under Form N–PORT, however, could improve the ability of investors to obtain, aggregate, and analyze all fund investments. Thus, Form N–PORT could negatively affect actively managed funds by increasing the ability of other investors to front-run, predatory trade, and copycat/reverse engineer trading strategies, and in particular those funds that would have more additional information disclosed, such as funds that use derivatives as part of their investment strategies.[1315] We believe, however, that even though the reported information will be more easily and efficiently accessed and aggregated given the nature of structured data, the contribution of structured data to front-running, predatory trading, and reverse-engineering will be minimal compared to the baseline given that funds currently have a quarterly public reporting frequency with a 60-day reporting delay. The Commission has considered the needs of the Commission, investors, and other users of portfolio investment information and the potential that other investors may use the information to the detriment of the reporting funds.

Form N–PORT will require the disclosure of information that is currently nonpublic and could result in additional or other costs to funds and to market participants. For example, we proposed that Form N–PORT would require a fund to report the identities and weights of all of the individual components in custom baskets or indexes comprising the reference instruments underlying the fund's derivative investments, as well as each component that represents more than one percent of the reference asset based on the notional value of the derivatives, unless the reference instrument is an index or custom basket whose components are publicly available on a Web site and are updated on that Web site no less frequently than quarterly, or the notional amount of the derivative represents 1% or less of the net asset value of the fund.[1316] Commenters informed us that index providers assert intellectual property rights to many indexes or custom baskets used as reference instruments in derivative investments to index providers, and are subject to licensing agreements between the index provider and the fund.[1317] As further noted by commenters, we acknowledge that disclosing the components of a nonpublic index or custom basket could result in costs to both the index provider, whose indexing strategy could be imitated, and the fund, whose investments could be front-run.[1318] Moreover, as stated by commenters, disclosing the underlying components of such an index or custom basket could subject the fund to one-time costs associated with renegotiating licensing agreements and the ongoing payment of fees in order to obtain the rights to disclose the components of the index or custom basket.[1319] Additionally, the increased transparency in nonpublic indexes and custom baskets could ultimately decrease the incentives of index providers to license the use of such indexes or custom baskets to funds as well as fund demand for securities products that incorporate these indexes. We are unable to quantify the extent to which these reporting requirements could affect the costs associated with licensing agreements, fees, and incentives.

Although our determination to keep certain items nonpublic was based on factors other than competitive concerns,[1320] by keeping delta and country of risk nonpublic relative to the proposal, as recommended by commenters, potential costs of disclosing previously nonpublic information may have been mitigated as well. We recognize that Form N–PORT, as well as the amendments to regulation S–X, will require funds to report certain information regarding fees and financing terms for certain derivatives contracts, particularly OTC swaps, which are not currently required to be publicly disclosed.[1321] As asserted by commenters, the increased transparency could increase the competition among swap and security-based swap dealers to offer favorable fees and financing terms, as the fees and financing terms offered to one fund would be known to other funds negotiating the terms of such contracts.[1322] There is a possibility, however, that counterparties may choose not to transact with funds as a consequence of this disclosure, in which funds would have fewer potential counterparties to work with and the fees paid by funds would likely rise.

Form N–PORT also requires funds to disclose the variable financing rates for swaps that pay or receive financing payments.[1323] Some commenters noted that variable financing rates for swap contracts are commercial terms of a deal that are negotiated between the fund and the counterparty to the swap.[1324] Disclosure of favorable variable

[1313] *See* Verbeek & Wang, *supra* footnote 1312.

[1314] *See* Agarwal *et al., supra* footnote 1312. Low information stocks include stocks with smaller market capitalization, less liquidity, and less analyst coverage. The authors also observed that the liquidity of stocks with higher fund ownership increased following the introduction of Form N–Q. Although the increase in liquidity will benefit investors by reducing trading costs, this benefit stems as a result of the costly disclosure of potential investment opportunities.

[1315] *See supra* footnote 1314 and accompanying text.

[1316] *See supra* footnote 355 and accompanying text.

[1317] *See* MSCI Comment Letter; SIFMA Comment Letter I; ICI Comment Letter.

[1318] *See, e.g.,* SIFMA Comment Letter I; *see also* Antti Petajisto, *The Index Premium and its Hidden Cost for Index Funds,* 18 J. of Empirical Fin. 271 (2011). Petajisto analysis suggests that mechanically induced demand changes to demand, such as index fund rebalancing, can result in price effects. If predictable, then other investors could take advantage of the changes to the proprietary indexes by front-running future trades.

[1319] *See* ICI Comment Letter. The Commission does not have information available to provide a reliable estimate of the increased costs of such licensing agreements because funds are currently not required to disclose the agreements or the components of the index or custom basket.

[1320] *See generally supra* section II.A.

[1321] *See, e.g.,* MFS Comment Letter; Invesco Comment Letter; ICI Comment Letter.

[1322] *See, e.g.,* MFS Comment Letter; Invesco Comment Letter.

[1323] *See* Item C.11.f.i. of Form N–PORT.

[1324] *See, e.g.,* MFS Comment Letter; Invesco Comment Letter; and ICI Comment Letter (public benefit of disclosure does not outweigh potential competitive harm).

financing rates could result in costs to the fund in the form of less favorable variable financing rates for future transactions, but may also improve the ability of other funds to negotiate more favorable terms. However, the increased transparency could increase the competition among swap and security-based swap dealers to offer favorable fees and financing terms thereby decreasing the fees paid by funds. Counterparties could also choose not to transact with funds as a consequence of this disclosure, in which case competition for counterparties would increase and the fees paid by funds would rise.

Finally, some commenters noted that reporting of distressed debt issued by private companies could affect the private company's relationship with the fund. For example, one commenter argued that the public disclosure of default, arrears, or deferred coupon payments raises competitive concerns when a debt security is issued by a borrower that is a private company, as private borrowers may avoid registered funds in order to limit public disclosure if the company becomes distressed.[1325] The commenter noted that public disclosure that a borrower is or may be financially distressed could increase prepayment risk and be disruptive to the fund's or adviser's relationship with the borrower.[1326] Moreover, this disclosure could also harm private issuers by disclosing their financial distress to vendors and key employees and customers.[1327] While we recognize that the disclosure of a private issuer in distress could result in costs for the issuer in the forms discussed above (*e.g.* a potentially negative impact on existing outside relationships or a decrease in prospective future borrowers), we believe that it is important that Commission staff have access to information relating to fund investments that are in default or arrears in order to monitor individual fund and industry risk. Moreover, funds investors will benefit from the transparency into the financial health of the fund's investments which will allow them to make more fully informed decisions regarding their investment. Moreover, default or arrears relating to a fund's investments in private issuer debt are already publicly available on a fund's quarterly financial statements, further mitigating any potential new costs to the fund or its private counterparties.[1328]

As discussed, we expect that institutional investors and other market participants will directly use the information from Form N–PORT more so than individual investors as a result of the format and associated readability.[1329] To the extent that third-party information providers obtain and present the information in a format that individual investors could understand, then individual investors will also benefit from the information that funds report on Form N–PORT. We recognize that some commenters were concerned that individual investors may misinterpret the portfolio investment information that funds report on Form N–PORT, possibly including portfolio and position level risk metrics, country of risk and portfolio return information. As discussed above, we have determined to keep position-level reporting of delta and of country of risk nonpublic.[1330] Regarding the other information, however, while there is some possibility of misinterpretation, we believe investors could benefit from the information and, accordingly determined that the disclosure of such information is appropriate and in the public's interest.

For funds that invest in debt instruments or derivatives we are modifying our requirements from the proposing release in several ways that may affect the costs borne by affected filers. For example, as discussed in detail above, we are requiring the reporting of fewer key rates in order to reduce the reporting burden for funds, adding *de minimis* for reporting such metrics for certain currencies, and raising the threshold for fixed income allocation for risk reporting from 20% to 25% to align the reporting requirement with current disclosures required in the prospectus, which could reduce the number of funds that must report such metrics. We are also requiring filers to report DV100 in addition to DV01, which will result in an additional reporting cost relative to the proposal; however, we believe that the extent of such reporting costs will be mitigated because DV100 is among the most common measures of interest rate sensitivity and that it will not be costly to report. Similarly, we are adding the requirement to report net realized gain (or losses) and net change in unrealized appreciation (or depreciation) attributable to derivatives by derivative instrument, in addition to by asset category as proposed, which will add an incremental cost relative to the proposal; however, as discussed above, we understand from commenters that funds already keep this information by derivative instrument type, which should mitigate the incremental increase in cost relative to the proposal.[1331]

As discussed above, although Form N–Q would be rescinded, it would also require funds to file portfolio schedules prepared in accordance with §§ 210.12–12 to 12–14 of Regulation S–X for the fund's first and third fiscal quarters, by attaching those schedules to its reports on Form N–PORT for those reporting periods. The schedules attached to Form N–PORT would be largely identical to the information currently reported on Form N–Q to ensure that such information continues to be presented using the form and content which investors are accustomed to viewing in reports on Form N–Q, and we have modified this requirement from the Proposing Release to allow funds 60 days from the end of the reporting period to file this attachment, as opposed to 30 days as proposed. This should lower the burden of preparing such attachments relative to the proposal, without any change in benefit, as the attachment is intended for investors and quarter-end Form N–PORT filings are made public 60 days after the end of the reporting period.

Rescission of Form N–Q would eliminate certifications of the accuracy of the portfolio schedules reported for the first and third fiscal quarters. Rescission would also result in funds certifying their disclosure controls and procedures and internal control over financial reporting semi-annually (at the end of the second and fourth quarters) rather than quarterly. To the extent that such certifications improve the accuracy of the data reported, removing such certifications could have negative effects on the quality of the data reported. Likewise, if the reduced frequency of the certifications affects the process by which controls and procedures are assessed, requiring such certifications semi-annually rather than quarterly could reduce the effectiveness of the fund's disclosure controls and

[1328] *See* rule 12–12, n. 5 of Regulation S–X.

[1329] As discussed in section I.B.1., while we do not anticipate that many individual investors will analyze data using Form N–PORT, we believe that individual investors will benefit indirectly from the information collected on reports on Form N PORT, through enhanced Commission monitoring and oversight of the fund industry and through analyses prepared by third-party service providers and other parties, such as industry observers and academics.

[1330] *See, e.g.,* IDC Comment Letter (warning of possible investor confusion from public disclosure of risk metrics); SIFMA Comment Letter I (same); Invesco Comment Letter (same); Schwab Comment Letter (same); ICI Comment Letter (same); CRMC Comment Letter (warning of possible investor confusion from public disclosure of portfolio return information); SIFMA Comment Letter I (same).

[1331] *See supra* section II.A.2.e.

procedures and internal control over financial reporting. However, we expect such effects, if any, to be minimal because certifying officers would continue to certify portfolio holdings for the fund's second and fourth fiscal quarters and would further provide semi-annual certifications concerning disclosure controls and procedures and internal control over financial reporting that would cover the entire year.

Lastly, registrants also will be required to file the management's statement regarding a change in independent public accountant as an exhibit to reports on Form N–CSR. This exhibit filing requirement originated in Form N–SAR. Commission staff believes that moving this reporting requirement from Form N–SAR to Form N–CSR does not have new economic implications from the proposal. We have, however, attributed an annual burden of an additional one-tenth of an hour per registrant [1332] and approximately an additional $32.40 per registrant [1333] in reporting paperwork costs to Form N–CSR as a result of the modification.

4. Alternatives

The Commission has explored other ways to modernize and improve the utility and the quality of the portfolio investment information that funds provide to the Commission and to investors.[1334] Commission staff examined how portfolio investment information reported to the Commission could be improved to assist the Commission in its rulemaking, inspection, examination, policymaking, and risk-monitoring functions, and how technology could be used to facilitate those ends. Commission staff also examined enhancements that would benefit investors and other potential users of this information, including updating the reporting obligations of funds to keep pace with the changes in the fund industry. We have considered many alternatives to the individual elements contained in this release, and those alternatives are discussed above in the sections pertinent to the major components of this rulemaking.[1335] Alternatives to the filing of Form N–PORT and the disclosure of portfolio investment information relate to the timing and frequency of the reports, the public disclosure of the information, and the information that Form N–PORT would request.

Funds will file reports on Form N–PORT no later than 30 days after the close of each month. The monthly reporting and the 30-day reporting lag will increase the timeliness of the information and improve the ability of the Commission to oversee investment companies. Alternatives include extending the filing period from thirty days, as recommended by many commenters, or shortening the filing period, which no commenters specifically recommended,[1336] and to require the filing of monthly portfolio investment information at a quarterly frequency, as recommended by another commenter.[1337] While a shorter filing period would provide more timely information to the Commission, it would also increase the burden on funds that need time to collect, verify, and report the required information to the Commission. Conversely, a longer filing period or a decrease in the frequency in which funds provide monthly information would give funds more time to report the information and may decrease the potential costs from front-running, predatory trading, and copycatting/reverse engineering of trading strategies by other investors,[1338] but may also decrease the ability of the Commission to oversee investment companies and to identify risks a fund is facing, particularly during times of market stress, as the information is more likely to be stale or outdated. As discussed above in section II.A.3, we believe that the monthly reporting of Form N–PORT with a 30-day filing period appropriately balances the staff's need for timely information against the appropriate amount of time for funds to collect, verify, and report information to the Commission.

As discussed above in section II.A.2.a and in response to comments received, the final amendments now include an instruction that funds report portfolio information on Form N–PORT on the same basis used in calculating NAV under rule 2a–4 (generally a T+1 basis). Alternatives include requiring all funds to file reports on Form N–PORT on a T+0 basis or, providing the reporting fund the explicit option to file reports on Form N–PORT on either a T+0 basis or a T+1 basis, as recommended by a commenter.[1339] Although requiring funds to file reports on Form N–PORT on a T+0 basis would be consistent with the current filing requirements for Form N–CSR and Form N–Q and thus would result in information that is reported on a more consistent basis across reports, the shorter time to file Form N–PORT relative to Form N–CSR and Form N–Q could require funds to alter reporting systems and result in additional filing costs, as pointed out by several commenters.[1340] In addition, although providing funds the option to report on either a T+0 or a T+1 basis would eliminate the potential costs for all funds to alter systems to report on either a T+0 or a T+1 basis, providing funds the option to report on either a T+0 or a T+1 basis would result in information that is less comparable between funds.

Funds will have 18 to 30 months after the effective date to comply with the new reporting requirements for Form N–PORT. The compliance period varies with fund size, with smaller fund entities having an additional 12 months to comply with the new reporting requirements. An alternative would be to not allow for tiered compliance and require all investment companies to begin filing reports on Form N–PORT within 18 months. Other alternatives would be to extend the compliance period for all investment companies, as recommended by many commenters.[1341] As discussed above, we believe it is appropriate to tier the compliance period to provide the smaller fund complexes more time to make the system and internal process changes necessary to prepare reports on Form N–PORT. We also continue to believe that 18 months would provide an adequate period of time for larger fund entities,

[1332] *See infra* footnote1612 and accompanying text.

[1333] *See infra* footnote 1609 and accompanying text.

[1334] We discuss other alternatives to the adopted changes to the current regulatory regime in section III.F, below. Other alternatives include the information that funds will report on Form N–PORT relative to the information that funds will report on Form N–CEN, and alternative formats for structuring the data.

[1335] *See generally supra* section II.

[1336] *See, e.g.,* State Street Comment Letter (supporting a 30-day reporting lag, but requesting an additional 15 days for the first year of reporting); Morningstar Comment Letter (supporting a 30- or 45-day reporting lag); Vanguard Comment Letter (supporting a 45-day reporting lag); CRMC Comment Letter (supporting a 60-day reporting lag); Dechert Comment Letter (generally supporting a longer reporting period, or alternatively a longer compliance period to enable the systems necessary to produce accurate information to be developed and implemented).

[1337] *See, e,g.,* Dodge & Cox Comment Letter (supporting quarterly filings of monthly data).

[1338] *See, e.g.,* Dodge & Cox Comment Letter (advocating for quarterly filings of monthly data due, in part, to concerns regarding potential data breaches regarding monthly portfolio data); Morningstar Comment Letter (supporting public disclosure of portfolio investment information at the monthly frequency, citing to the large number of funds already reporting monthly portfolio investment information without significant delay as evidence of a lack of industry concern relating to front-running or copycatting).

[1339] SIFMA Comment Letter II.

[1340] *See, e.g.,* Fidelity Comment Letter; Pioneer Comment Letter; and Invesco Comment Letter.

[1341] *See, e.g.,* IDC Comment Letter; Dreyfus Comment Letter; Fidelity Comment Letter; Oppenheimer Comment Letter; Vanguard Comment Letter; MFS Comment Letter; Mutual Fund Directors Forum Comment Letter; ICI Comment Letter; and SIFMA Comment Letter I.

intermediaries, and other service providers to update systems to conduct the requisite operational changes to their systems and to establish internal processes to prepare, validate, and file reports on Form N–PORT with the Commission. Nonetheless, as discussed above, we intend to keep the first six months of filings reported on Form N–PORT after the compliance date nonpublic, to allow funds and the Commission to refine the technical specifications and data validation processes.[1342]

Another alternative for tiered compliance would be to set the threshold at a level different than $1 billion. A higher threshold, such as $20 billion, as recommended by one commenter,[1343] would increase the number of entities that could benefit from the additional time to update systems to adhere to the additional filing requirements, but would also decrease the amount of portfolio investment information that would be available to the Commission, investors, and other interested parties in a structured data format. A lower threshold, on the other hand, would have the opposite effects. As discussed above, the Commission believes that a $1 billion threshold for tiered compliance will address the need for structured portfolio investment information while providing smaller entities in most need of additional time a better opportunity to update systems.

The information that funds report on Form N–PORT for the last month of each fiscal quarter will be made publicly available (with the exception of delta, country of risk, and associated explanatory notes) 60 days after month-end (thirty days after the filing deadline). Additional alternatives include making more of the portfolio and other information reported on the form either nonpublic or public, including making all or none of the information reported on Form N–PORT each month publicly available, as discussed above in section II.A.3.[1344]

In response to comments received we have removed delta, country of risk, and the associated explanatory notes from the public reporting requirements, but we believe that making more of the portfolio and other information reported on Form N–PORT nonpublic would reduce the amount of information investors have access to when making investment decisions. However, as discussed above, making more of the portfolio and other information reported on the form public, including making all of the information reported on Form N–PORT each month publicly available, could increase the risk of front-running, predatory trading, and copycatting/reverse engineering of trading strategies by other investors, as well as the public disclosure of proprietary or sensitive information.[1345] We believe that making the vast majority of items reported on Form N–PORT public, as well as keeping eight of the twelve months of data collected by the Commission on Form N–PORT nonpublic, balances the public's need for and the usefulness of the information without unnecessarily subjecting funds to potentially harmful trading strategies by other market participants.

Form N–PORT will require funds to report additional portfolio investment information relative to what is currently reported in Form N–CSR and Form N–Q. Alternatives include not requiring some of this additional information, or requiring information in addition to what will be required to be reported as currently adopted. Other alternatives would be to request information that is more granular, information that is more aggregate, and information that is more consistent with other current regulatory forms or that substitutes compliance with other current regulatory regimes.[1346] Although we recognize that there are various alternative reporting requirements imposed in other contexts and by other regulators, the reporting requirements imposed by Form N–PORT have been designed specifically to meet the Commission's regulatory needs with regards to monitoring and oversight of registered funds. As discussed above, the information reported on Form N–PORT will increase the ability of Commission staff to better understand the risks of a particular fund, a group of funds, and the fund industry. Investors, third-party information providers, and other potential users will also experience benefits from the introduction of Form N–PORT. For example, to the extent that investors use the information, Form N–PORT will improve the ability of investors to differentiate funds based on their investment strategies and other activities. Although the new information that will be reported on Form N–PORT could increase the initial and ongoing reporting costs for investment companies, and could increase the likelihood of front-running, predatory trading, and copycatting/reverse-engineering by other investors, the Commission continues to believe that the information is important to fully describe a fund's investments. The Commission also believes that the reporting requirements of Form N–PORT are appropriate given each filer's status as a registered investment company with the Commission and not as a private fund.[1347]

As discussed above, the Commission is requiring funds to report risk metrics at the portfolio and position level on Form N–PORT. In response to commenters' suggestions, we are now requiring the disclosure of measures of duration for a smaller number of key interest rates than we had originally proposed. However, an alternative would be to request those key rates detailed in the proposing release, or even additional measures. As discussed above, we believe that the number of key rates that we are adopting today will provide us with sufficient information and flexibility while also reducing the reporting burden. Other alternatives that would increase the reporting of risk-sensitivity measures include requiring funds to report additional portfolio level measures that describe the sensitivity of a reporting fund at additional basis point changes in interest rates and credit spreads, and a measure (or measures) of convexity, and include requiring funds to report additional position level measures such as vega, as requested by one commenter.[1348] Investment companies could also report fewer portfolio or position level risk-sensitivity measures, such as a single or total portfolio level measure of interest rate and credit spread duration, as recommended by some commenters,[1349] or instead report the underlying data to calculate the measures, as recommended by another commenter.[1350]

As discussed above and in response to commenters' suggestions, we have made

[1342] *See supra* section II.H.1.

[1343] Simpson Thacher Comment Letter.

[1344] Commenters had mixed views on the public disclosure of N–PORT information; those comments are discussed *supra* section II.A.3.

[1345] *See infra* section III.C.3.

[1346] One commenter suggested that the Commission should use the same interest rate and credit spread risk metrics as is required in Form PF (BlackRock Comment Letter). Another commenter suggested that the Commission and the CFTC should agree on and implement a substituted compliance regime (SIFMA Comment Letter I).

[1347] *See supra* footnote 485 and accompanying text.

[1348] *See* State Street Comment Letter (requesting that funds also be required to report credit spread, delta, duration, yield to maturity, option adjusted spread, exposure, delta-adjusted exposure, duration equivalents, foreign exchange sensitivity/risk, and vega).

[1349] *See* Simpson Thacher Comment Letter; Fidelity Comment Letter; Dreyfus Comment Letter; ICI Comment Letter; and Wells Fargo Comment Letter.

[1350] *See* Vanguard Comment Letter (suggesting that the Commission calculate risk metrics from information that funds report on Form N–PORT).

a modification from the proposed requirement to report only DV01 to now require filers to report both DV01 and DV100 on Form N–PORT. The Commission believes that DV100 is among the most common measures of interest rate sensitivity and that it will, in conjunction with DV01, provide more useful information about non-parallel shifts in the yield curve than smaller measures, such as DV25 and DV5, while not requiring filers that do not calculate convexity internally to begin doing so. However, while potentially useful, requiring all funds to report further additional portfolio- or position-level risk-sensitivity measures would increase the burden on all funds and not significantly improve the ability of Commission staff to monitor the funds in most market environments, and in particular for funds which do not extensively use derivatives as part of their investment strategy (while we are requiring funds to report DV100, we believe the marginal cost of reporting it is minimal because we understand that many funds likely already calculate it). Although the burden to investment companies to report risk metrics would decrease if fewer or no risk-sensitivity measures were required by the Commission, the staff believes that the benefits from requiring the measures that we are including in Form N–PORT today, including the ability of Commission staff to efficiently identify and size specific investment risks, justify the costs to investment companies to provide the information. Lastly, we believe that requiring funds to provide the risk measures would improve the ability of the Commission, investors, or other potential users to efficiently analyze the information rather than requiring funds to provide the inputs that might be necessary for interested parties to calculate these measures themselves,[1351] and would enhance the ability of Commission staff to efficiently identify risk exposures, especially during times of market stress.

Other alternatives to the reporting of portfolio level risk-sensitivity measures relate to the allocation thresholds for funds to report portfolio interest rate risk exposures and currency risk exposures. Given commenters' recommendations, we are raising the threshold for fixed income allocation for risk reporting from 20% to 25%, and providing a *de minimis* threshold for reporting currency risk of 1%. We could, however, require lower/higher thresholds that would result in more/fewer funds reporting interest rate or currency risk exposures, respectively. As discussed above, the Commission believes that the reporting thresholds for Form N–PORT provide Commission staff the ability to analyze interest rate and currency exposures while reducing reporting burdens and the potential that funds inadvertently trigger the reporting requirement when the exposures are not part of its principal investment strategy.

Form N–PORT will also require funds to report terms and conditions of each derivative investment that are important to understanding the payoff profile of the derivative, including the reference instrument.[1352] As discussed above, for reference instruments that are indexes or custom baskets of securities that are not publicly available, Form N–PORT will require funds to report all the components of the index or custom basket if the investment constitutes more than 5% of the fund's NAV, and the top 50 components of the index or custom basket and any components that represent more than 1% of the notional value of the index or custom basket if the investment represents more than1% but less than 5% of the fund's NAV. Alternatives would be for funds to report fewer or additional components of the underlying indexes or custom baskets.

Lastly, funds will no longer be required to file reports on Form N–Q. An alternative is for funds to continue reporting Form N–Q along with Form N–PORT at the end of first and third fiscal quarters. Commission staff believes, however, that the new reporting requirements for portfolio investment information, including the amendments to the certification requirements of Form N–CSR, would cause Form N–Q to become redundant if not outdated, and therefore impose costs on funds to file reports that would result in little benefit. Although requiring that certifying officers state that they have disclosed in the report any change in the registrant's internal control over financial reporting that occurred during the most recent fiscal half-year will increase the burden of filing Form N–CSR, these certifications will fill the gap in certification coverage regarding the registrant's internal control over financial reporting that would otherwise exist once Form N–Q is rescinded.

C. Amendments to Regulation S–X

1. Introduction and Economic Baseline

Regulation S–X prescribes the form and content required in financial statements. The amendments to Regulation S–X will require new disclosures regarding fund holdings in open futures contracts, open forward foreign currency contracts, and open swap contracts, and additional disclosures regarding fund holdings of written and purchased option contracts; update the disclosures for other investments with conforming amendments, as well as reorganize the order in which some investments are presented; and amend the rules regarding the general form and content of fund financial statements, including requiring prominent placement of investments in derivative investments in a fund's financial statements, rather than allowing such schedules to be placed in the notes to the financial statements.[1353]

The current set of requirements under Regulation S–X, as well as the current practice of many funds[1354] to voluntarily disclose additional portfolio investment information in fund financial statements and to follow industry guidance and other industry practices, is the baseline from which we discuss the economic effects of amendments to Regulation S–X.[1355] The parties that could be affected by the amendments to Regulation S–X include funds that file or will file reports with the Commission and update or will update registration statements on file with the Commission, the Commission, current and future investors of investment companies, and other market participants that could be affected by the increase in the disclosure of portfolio investment information. We did not receive any specific comments on the proposed

[1351] *See supra* section II.A.2.g.iv.

[1352] We are requiring similar information on a fund's schedule of investments. *See supra* section II.A.2.g.iv.

[1353] *See supra* section II.C. As discussed above, rule 12–13 of Regulation S–X requires limited generic information on the fund's investments other than securities. To address issues of inconsistent disclosures and lack of transparency, the amendments will have a consistent presentation of a fund's disclosures of open futures contacts, foreign currency forward contracts, and swaps. In addition, while many of the amendments to Regulation S–X are similar to the proposed disclosures in Form N–PORT (*e.g.,* enhanced derivatives disclosures), the amendments to Regulation S–X will be in an unstructured but consistently presented format (as opposed to Form N–PORT's structured data).

[1354] As we discussed *supra* footnote 524, while "funds" are defined in the preamble as registered investment companies other than face-amount certificate companies and any separate series thereof—*i.e.,* management companies and UITs, we note that our amendments to Regulation S–X apply to both registered investment companies and BDCs. *See supra* footnotes 699 and 700. Therefore, when discussing fund reporting requirements in the context of our amendments to Regulation S–X, we are also including changes to the reporting requirements for BDCs.

[1355] *See* discussion *supra* section II.C.1.

economic baseline for the amendments to Regulation S–X.

Previously, Regulation S–X did not prescribe specific information to be disclosed for many investments in derivatives, which could result in inconsistent reporting between funds and reduced transparency of the information reported, and in some cases could result in insufficient information concerning the terms and underlying reference assets of derivatives to allow investors to understand the investment.

We expect that many of the economic effects from the amendments to Regulation S–X will largely result from an increase in investor ability to make investment decisions dependent on the more transparent disclosure in financial statements, as noted by commenters.[1356] As discussed above, the total economic effects will depend on the extent to which the portfolios and investment practices of all investment companies become more transparent, and the ability of investors, and in particular individual investors, to utilize financial statements to compare funds and to make investment decisions. The economic effects will also depend on the extent to which investment companies already voluntarily provide disclosures that will be required by the amendments, and the extent to which the amendments to Regulation S–X standardize financial statements across funds. As a result of these factors, some of which are difficult to quantify or unquantifiable, the discussion below is largely qualitative although certain one-time and ongoing costs associated with the amendments are quantified below.

2. Benefits

The amendments to Regulation S–X will benefit investors by updating the information funds disclose in the financial statements of registration statements and shareholder reports. Several commenters noted that the amendments will benefit investors through increased transparency and comparability of fund financial statements, particularly for individual investors that we would not expect to use the information in Form N–PORT because of its structured data format.[1357] In particular, the additional information that Regulation S–X will require for open option contracts both written and purchased, open futures contracts, open forward foreign currency contracts, open swap contracts, and other investments will increase the transparency of the fund's portfolio investments and risk exposures.[1358]

Other amendments will also improve the transparency into the fund's investments. For example, we are requiring funds to identify each investment whose value was determined using significant unobservable inputs.[1359] Likewise, we are requiring that funds separately identify restricted investments.[1360] In addition, in a modification from the proposal, we are now including a requirement that should benefit investors and other users of the information by providing more transparency to a fund's investments in debt securities, and in particular variable rate securities. As discussed more fully below and in section II.C.3, in light of comments we received and in order to give investors both the ability to understand the investment's current return (through end-period rate) and to better understand how interest rate changes could affect the investment's future returns, we are adopting an instruction that would require a fund, for its investments in variable rate securities, to both describe the referenced rate and spread and provide the end of period interest rate for each investment, or include disclosure of each referenced rate at the end of the period.[1361]

In a change from the proposal and Form N–PORT, we are requiring funds to separately list the top 50 components and the components that represent more than 1% of the notional value of the referenced assets underlying swap and option contracts, rather than separately listing every component. We believe that this alteration benefits investors by making it easy for them to understand and evaluate the specific risk exposures of a fund from certain swap and option contracts, while simultaneously reducing the reporting burden for funds.

We believe that the changes to the form and content of financial statements in Article 6 of Regulation S–X will similarly benefit investors, particularly individual investors who in general may not have the tools and resources possessed by institutional investors, through greater transparency in a fund's financial statements. For example, we are requiring funds to disclose their investments in derivatives in the financial statements, as opposed to in the notes to the financial statements.[1362] To the extent funds do not do this already, we believe, and commenters agreed, that more prominent placement of investments in derivatives in the financial statements (immediately following the schedules for investments in securities of unaffiliated investors and securities sold short), will benefit investors through increased visibility of fund investments in derivatives and comparability between funds.[1363] Likewise, we are eliminating the financial statement disclosure of ''Total investments'' on the balance sheet under ''Assets''.[1364] As we discuss in more detail in section II.C.6, recognizing that funds could present investments in derivatives under both assets and liabilities on the balance sheet, eliminating this disclosure will benefit investors by providing a more complete representation of the effect of these investments on a balance sheet.[1365] Other parties that will be affected by the amendments to Regulation S–X include the Commission and other market participants that would use shareholder reports and registration statements to obtain fund information. Although the amendments to Regulation S–X will primarily benefit investors and particularly individual investors, the Commission and other market participants could use the information reported in a fund's financial statements, and would benefit from an increase in transparency into a fund's financial statements. For example, Commission staff could utilize the information in a fund's financial statements during examinations.

Commission staff believes that a large number of funds currently adhere to industry practices from which the amendments to Regulation S–X are derived. The amendments to Regulation S–X, therefore, will effectively standardize the information that all funds disclose on financial statements, and make the schedule of investments and financial statement disclosures consistent and thus more comparable

[1356] *See, e.g.,* PwC Comment Letter (''We believe that the Proposed Rule will generally provide investors with greater access to information relating to their investments and investment advisors.''); Deloitte Comment Letter.

[1357] *See* PwC Comment Letter; EY Comment Letter.

[1358] *See, e.g.,* EY Comment Letter and Morningstar Comment Letter for statements in support of these ideas, and MFS Comment Letter and ICI Comment Letter for statements against, as well as the discussion in Section II.C.2.

[1359] *See, e.g.,* rule 12–13, n. 7 of Regulation S–X; *see also* rules 12–13A, n. 5; 12–13B, n. 3; 12–13C, n. 6; and 12–13D, n. 7 of Regulation S–X.

[1360] *See* rule 12–13, n. 6 of Regulation S–X; *see also* rules 12–13A, n. 4; 12–13B, n. 2; 12–13C, n. 5; and 12–13D, n. 6 of Regulation S–X.

[1361] *See* rules 12–12, n. 4 and 12–12B, n. 3 of Regulation S–X.

[1362] *See* rule 6–10(a) of Regulation S–X; *see also* discussion *supra* section II.C.6; *see also* ICI Comment Letter (supporting the requirement to present derivatives schedules in the fund's financial statements).

[1365] *See id.*

across funds, as noted by commenters.[1366] Similar to new Form N–PORT, the amendments to Regulation S–X, to the extent that they increase the transparency and consistency of shareholder reports across funds, could improve the ability of investors, particularly individual investors, to differentiate investment companies and make investment decisions either by themselves or by way of third-party information providers. An increase in the ability of investors to differentiate investment companies and allocate capital across reporting funds closer to their risk preferences will increase the competition among funds for investor capital. In addition, by improving the ability of investors to understand investment risks and hence their ability to allocate capital across funds and other investments more efficiently, we also believe that the introduction of Form N–PORT could also promote capital formation.

3. Costs

We believe that registrants on average will likely incur minimal costs from our amendments to Regulation S–X because, as discussed above, based upon staff experience, we believe that a majority of funds are already providing the information that will be required by the amendments to Regulation S–X in their financial statements.[1367] The costs to a fund of complying with the new rules will depend upon the extent to which funds are already making such disclosures currently.[1368] As discussed above, the Commission will require parallel disclosures in Form N–PORT, and funds will incur one set of costs, both one-time and ongoing, to obtain the information that will be disclosed in Form N–PORT and in financial statements. In addition, other costs that relate to the disclosure of portfolio investment information, including the ability of other investors to front-run, trade predatorily, and copycat/reverse engineer trading strategies of funds, will primarily relate to Form N–PORT because of the additional ability of other interested third-parties and market participants to efficiently obtain, aggregate, and analyze the information as a result of its structured data format as compared to the non-structured data format of portfolio investment information reported in financial statements.

For example, as discussed above in section II.C.2.a, in response to commenters' concerns relating to the burdens associated with our proposed requirement that funds list all components underlying a nonpublic index or custom basket,[1369] we are instead requiring funds to separately list the top 50 components and the components that represent more than 1% of the notional value of the referenced assets underlying swap [1370] and option contracts.[1371] Commenters noted, and we agree, that the potential volume of all of the components underlying nonpublic indexes and custom baskets were disclosed would make the fund's financial statements difficult to understand.[1372] Thus requiring funds to report only the most significant components could benefit investors by making it easier for them to understand and evaluate the specific risk exposures of a fund from certain swap and option contracts.[1373] Moreover, limiting the reporting of nonpublic indexes and custom baskets will reduce fund auditing costs by eliminating the burdens of requiring an auditor to verify every component of a nonpublic index, which could potentially include thousands of investments.

We further believe this change provides the necessary benefit without being unduly burdensome. We understand that index providers might assert intellectual property rights to certain indexes, and these may be subject to licensing agreements between the index provider and the fund.[1374] Disclosing the underlying components of an index could subject the fund to costs associated with negotiating or renegotiating licensing agreements in order to publicly disclose the components of the index.[1375] The Commission does not have information available to provide a reliable estimate of the increased costs of licensing agreements because funds currently are not required to disclose the agreements or the components of the index. In addition, disclosing the components of a nonpublic index may include costs to both the index provider, whose indexing strategy could be reverse-engineered, and the fund, whose rebalancing trades could be front-run.[1376] Finally, the possibility exists that index providers will refuse to permit disclosure and the funds might not be able to use such indexes any longer. This could potentially drive up competition for index providers, in turn raising costs for funds. Requiring the disclosure of only those proprietary components that meet a materiality threshold could help alleviate some of these costs and concerns. However, the underlying components would be more accessible in Form N–PORT as a result of its structured data format as compared to the non-structured data format of the information in financial statements, so we believe that the costs of disclosing the information will therefore primarily relate to Form N–PORT, and reporting of components will be more comprehensive in Form N–PORT, as discussed in greater detail above.

As another example, the amendments include an instruction to disclose the variable financing rates for swaps that pay or receive financing payments.[1377] It is our understanding that variable financing rates for swap contracts are often commercial terms of a deal that are negotiated between the fund and the counterparty to the swap.[1378] Disclosure of favorable variable financing rates could result in costs to the fund in the form of less favorable variable financing rates for future transactions, but may also improve the ability of other funds to negotiate more favorable terms. Similar to the introduction of Form N–PORT, the increased transparency could increase the competition among swap and security-based swap dealers to offer favorable fees and financing terms thereby decreasing the fees paid by funds. Counterparties could also, however, choose not to transact with funds as a consequence of this disclosure, in which case competition for counterparties would increase and the fees paid by funds would rise. As with the disclosure of the components of an index, we believe that the majority of the costs associated with disclosures of variable financing rates, including the increase in competition for favorable fees and terms, will instead derive from

[1366] *See, e.g.,* EY Comment Letter.

[1367] In order to reduce burdens on funds, we also endeavored, where appropriate, to require consistent derivatives holdings disclosures between Form N–PORT and Regulation S–X.

[1368] Moreover, as we discussed above in section III.C.1, we expect minimal audit costs as a result of our amendments to Regulation S–X because many funds are already voluntarily providing this information in their audited financial statements.

the similar requirements in Form N–PORT.[1379]

In response to commenters concerns, we also made changes from the proposal to eliminate several disclosures. For example, we are amending our proposed instruction which would require funds to categorize the schedule by type of investment, the related industry, *and* the related country or geographic region.[1380] We agreed with commenters that requiring categorization of both the industry *and* geographic region (as opposed to categorizing one) would add considerable length to the schedule of investments, which could ultimately undermine the schedule's usefulness to investors.[1381] In the interest of reducing burdens for investors and making financial statements easier to review, we are not adopting this proposed requirement.

We similarly determined to eliminate an instruction in Regulation S–X requiring funds to include tax basis disclosures. As discussed above in section II.C.4, this instruction is contained in current rules 12–12, 12–12C, and 12–13 and we proposed to extend the instruction to proposed rules 12–12A, 12–13A, 12–13B, 12–13C, and 12–13D. We were, however, persuaded by commenters that this disclosure of tax basis by investment type would not provide meaningful disclosure to investors, while increasing the volume and complexity of financial statements.[1382] In the interest of reducing burdens to both investors and funds, while making financial statements easier for investors to understand, we are eliminating the tax basis instruction from the current rules and not adopting it for the other rules.

We also proposed to require funds to identify illiquid investments.[1383] We received several comments noting that, among other things, this disclosure would be difficult and costly to audit, as auditors would be required to determine the validity of the fund's liquidity determinations for each investment.[1384] We were persuaded by comments relating to the costs of auditing liquidity disclosures and, as discussed further in the Liquidity Adopting Release we are adopting concurrently, also believe that such position-level information regarding liquidity is better suited for nonpublic reporting to the Commission in Form N–PORT.

Finally, in order to provide more transparency to a fund's investments in debt securities, we had proposed an instruction requiring a fund to disclose, for its investment in variable rate securities, the referenced rate and spread.[1385] We received several comments supporting our proposal to provide the reference rate and spread for variable rate securities, reasoning that the disclosure of the components of the variable rate would be easier for investors and other interested parties to determine the investment's current rate at any given time (as opposed to the rate at the end of the reporting period).[1386] However, another commenter suggested that the end-period interest rate is the most appropriate variable rate security disclosure for shareholders.[1387] As discussed more fully in section II.C.3, in order to give investors both the ability to understand the investment's current return (through end-period rate) and to better understand how interest rate changes could affect the investment's future returns, we have made a change to the proposed instruction so that it now requires a fund to both describe the reference rate and spread and provide the end of period interest rate for each investment, or include disclosure of each reference rate at the end of the period.[1388] Requiring a fund to disclose both the period-end rate and reference rate and spread will necessarily add costs relating to a fund's financial statement and auditing costs, albeit, we expect that cost to be minimal because these pieces of information are generally not difficult to obtain and verify as, based on staff experience, we believe that this information is currently collected by funds and commonly available in a fund's accounting system.

Funds will incur one-time and ongoing costs to comply with the amendments to Regulation S–X in addition to the costs attributable to new Form N–PORT. For the amendments to Regulation S–X, funds will incur one-time and ongoing costs to obtain the additional information that will be disclosed on shareholder reports and registration statements, and that will also not be disclosed on Form N–PORT; and funds will also incur one-time costs to format for presentation all additional information that will be reported in financial statements. In addition, we will require funds, to the extent they do not already do so, to present the schedules associated with rules 12–13 through 12–13D and 12–14 in the financial statements, as opposed to in the notes to the financial statements.[1389] Funds that do not currently present their schedule of investments in this manner will incur a one-time cost of modifying the presentation of their financial statements to conform to the amendments.

Additionally, we proposed to add a new disclosure requirement that was designed to increase transparency into a fund's securities lending and cash collateral management activities.[1390] Some commenters expressed concerns relating to the location of the required disclosure in the fund's financial statements in particular.[1391] One commenter in particular noted that additional costs of auditing the disclosure of these fees ''would most likely outweigh any benefits of reporting this information.'' [1392] While we continue to believe that investors and other interested parties will benefit from disclosures relating to a fund's securities lending and cash collateral management activities, after consideration of the issues raised by commenters, including the added auditing costs that funds would incur, we determined that it is more appropriate to require these disclosures be made in a fund's Statement of Additional Information (or, with respect to closed-end funds, a fund's reports on Form N–CSR) rather than to require their inclusion in its financial statements.[1393]

To the extent possible, we have attempted to quantify these costs. As discussed below in section IV.C, we estimate that management investment companies will incur certain one-time additional paperwork and other costs

associated with preparing, reviewing, and filing semi-annual reports in accordance with the amendments to Regulation S–X in the amount of approximately $1,911 per fund [1394] and $22,662,549 in the aggregate.[1395] We similarly estimate that management investment companies will incur certain ongoing paperwork and other costs associated with preparing, reviewing, and filing semi-annual reports in accordance with our amendments to Regulation S–X in the amount of approximately $683 per fund [1396] and $8,099,697 in the aggregate.[1397] Likewise, we estimate that UITs will incur certain one-time additional paperwork and other costs associated with preparing, reviewing, and filing semi-annual reports in accordance with the amendments to Regulation S–X in the amount of approximately $1,911 per fund [1398] and $1,377,831 in the aggregate.[1399] We similarly estimate that UITs will incur certain ongoing paperwork and other costs associated with preparing, reviewing, and filing semi-annual reports in accordance with the amendments to Regulation S–X in the amount of approximately $683 per UIT [1400] and $492,443 in the aggregate.[1401]

4. Alternatives

The Commission has also explored other ways to modernize and improve the utility, quality, and consistency of the information that funds report to the Commission and to investors in the financial statements required in shareholder reports and other registration statements. Commission staff examined how the information funds provide to the Commission and to investors could be made more informative and more consistent across funds. Alternatives to the amendments to Regulation S–X relate to the compliance period to adhere to the new amendments and to the information that funds report in the financial statements.

Funds will have 8 months after the effective date to comply with the amendments to Regulation S–X. An alternative would be to extend the compliance period, as suggested by several commenters.[1402] We believe, however, that most entities would not need additional time to modify systems to adhere to the amendments to Regulation S–X because, with the exception of the disclosure of index components, the proposed amendments are largely consistent with current fund disclosure practices. As such, we do not expect that funds, intermediaries, or service providers will require significant amounts of time to modify systems or establish internal processes to prepare financial statements in accordance with our final amendments to Regulation S–X. Another alternative would be to provide a tiered compliance period to provide smaller fund complexes more time, as we do for Form N–PORT. However, we do not believe that smaller entities would relatively benefit from additional time, since while fixed costs in general are proportionately higher for smaller entities, the amendments to Regulation S–X do not add additional fixed costs, but rather the amendments are largely consistent with current disclosure practices. Extending the compliance period for all entities or for smaller entities, however, would delay the benefits to investors (and to the Commission and to other market participants) from the increased transparency and standardization of shareholder reports and other financial statements.

The amendments to Regulation S–X will update the information funds disclose in financial statements. Alternatives to the amendments to Regulation S–X include the disclosures of different information. For example, the amendments to Regulation S–X will require funds to report information describing derivative contracts including, in some instances, the components of reference indexes that surpass certain materiality thresholds. As alternatives, we could require funds to only disclose a brief description of the index, require a different threshold for identifying the components of the swap or options contract, or require the reporting of all components. Although the alternatives that would increase the reporting of the components of reference indexes would increase the transparency for investors into the assets underlying a swap or options contract including the underlying risks of the fund, these alternatives would increase the costs of funds to report the information. However, although the alternatives that would decrease the reporting of the components of reference indexes would decrease the costs to funds to report the information, these alternatives would decrease the ability of investors to understand fund portfolio investments. We believe that the amendments to Regulation S–X adopted today provide investors with sufficient information to broadly understand funds' investments without unduly burdening funds.

Amendments to Regulation S–X will also not require funds to report information describing their securities lending activities in the financial statements, as proposed, but will instead require funds to report the information in the Statement of Additional Information (or, for closed-end funds, their reports on Form N–CSR). An alternative, similar to proposed rule 6.03(m), would be for funds to report information describing their securities lending activities as part of the financial statements. However, the requirement that securities lending information would be disclosed as part of financial statements would increase the costs to audit and report the information.[1403] Another alternative

[1394] *See infra* footnote 1562 and accompanying text. The estimate is based upon the following calculations: ($1,911 = ($560 = 3.5 hours × $160/hour for an Intermediate Accountant) + ($1,351 = 3.5 hours × $386/hour for an Attorney)). The hourly wage figures in this and subsequent footnotes are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead.

[1403] Deloitte Comment Letter.

would be for funds to not provide the information altogether. However, we believe that the information is important to investors, the Commission, and other interested parties to understand the economic implications of a fund's securities lending activities. To the extent that investors utilize this information or that it benefits the Commission, we believe that the Statement of Additional Information (or, for closed-end funds, reports on Form N–CSR) is an appropriate place to disclose this information.

Similarly, amendments to Regulation S–X will also not require funds in their financial statements to identify illiquid securities, as was initially proposed. An alternative is to adopt the proposed approach and require funds in their financial statements to identify illiquid securities. The disclosure of the liquidity of securities on financial statements, however, could increase the costs to audit financial statements.[1404] In addition, some commenters asserted the disclosure of security liquidity could cause investors, and in particular individual investors, to misinterpret the information as objective.[1405] As discussed in the Liquidity Adopting Release, we are adopting portfolio-level liquidity reporting on Form N–PORT which we believe mitigates many of the commenters' concerns and is a more appropriate method of public reporting.[1406] Accordingly, we are not adopting the proposed instructions in Regulation S–X relating to the liquidity of investments.

Lastly, amendments to Regulation S–X will include instructions to funds to make a separate disclosure for income from non-cash dividends and payment-in-kind interest on the statement of operations. Funds will report income from payment-in-kind interest or non-cash dividends only if the income exceeds 5 percent of the fund's investment income, as suggested by commenters who requested a materiality threshold, which is consistent with the other income disclosures under rule 6–07.1.[1407] An alternative, similar to the proposal, would be for funds to make a separate disclosure for all income from payment-in-kind interest or non-cash dividends regardless of the amount.

D. Form N–CEN and Rescission of Form N–SAR

1. Introduction and Economic Baseline

Form N–CEN requires funds to report census information to the Commission on an annual basis. Although Form N–CEN includes many of the same data elements as the current census-type reporting form, Form N–SAR, it replaces items that are outdated or no longer informative with items of greater importance for the oversight and examination of investment companies, and eliminates certain items that are also reported to the Commission in other forms. Investment companies will file reports on Form N–CEN in a structured, XML format to allow for easier aggregation and manipulation of the data. Form N–SAR will be rescinded.

The current set of requirements for funds to file reports on Form N–SAR is the baseline from which we discuss the economic effects of Form N–CEN.[1408] The parties that could be affected by the introduction of Form N–CEN and the rescission of Form N–SAR include funds that currently file reports on Form N–SAR and funds that will file reports on Form N–CEN; the Commission; and, other current and future users of fund census information including investors, third-party information providers, and other interested potential users.

At the time it was adopted, Form N–SAR was intended to reduce reporting burdens and better align the information reported with the characteristics of the fund industry. As the fund industry has developed, including the development of new products, so has the need to update the information the Commission requires in order to improve its ability to monitor the compliance and risks of reporting funds. The format in which information is reported in Form N–SAR is also outdated, which reduces the ability of Commission staff to obtain and aggregate the information. Likewise, the technology in which Form N–SAR is filed does not allow for certain validation checks, reducing the data quality of the information (*e.g.,* the Form N–SAR application is unable to check related fields for arithmetic consistency) and therefore the ability of Commission staff to compare the information across funds is constrained.

The economic effects from the introduction of new Form N–CEN and the rescission of Form N–SAR will largely result from an update to the format of the information reported, as well as the update to the census information that investment companies will report. The economic effects will therefore depend on the extent to which investment companies become more transparent, and the ability of Commission staff and investors to utilize the updated disclosures. Form N–CEN requires census information about the fund industry reported in a structured data format. However, while Form N–SAR information is also reported in a structured data format, Form N–CEN information will be reported in XML format, a much more modern and useful data format, and one that allows for more efficient data collection than does the baseline format, aggregation, manipulation, and rendering. Therefore, although the introduction of Form N–CEN will increase the transparency of the fund industry by making the information reported therein more readily available, more easily shared or retrieved, and more relevant, we cannot quantify the significance of its economic implications.

2. Benefits

The Commission is rescinding Form N–SAR and replacing it with new Form N–CEN to improve the quality and the utility of the information investment companies report to the Commission. The improvement in the quality and utility of the information will allow Commission staff to better understand industry trends, inform policy, and assist with the Commission's examination program.

Similar to Form N–PORT, the ability of the Commission to most effectively use the information is dependent on the ability of staff to compile and aggregate the information into a single database. The structuring of the information in an XML format will improve the ability and efficiency of Commission staff to obtain and analyze the information. An improved structured data format could also promote additional efficiency to the extent that the new standardized reporting requirements encourage more automated report assembly, validation, and review processes for the disclosure and transmission of information.[1409] In

[1406] *See* discussion in section II.C.4.

[1407] Several commenters suggested the materiality threshold including MFS Comment Letter; PwC Comment Letter; State Street Comment Letter; ICI Comment Letter; and AICPA Comment Letter; *see also* section II.C.6.

[1408] Management companies must file reports on Form N–SAR semi-annually, and UITs must file reports on Form N–SAR annually. *See* current rule 30b1–1 for management companies, and *see* current rule 30a–1 for UITs.

[1409] *See, e.g.,* CFA Comment Letter (noting that requiring information to be reported through a structured data format will allow better collection and analysis of information); *see also* XBRL US Comment Letter (expressing the belief that a structured data format will make data computer-

Continued

ways similar to those discussed above in relation to Form N–PORT, an XML format also improves the quality of census information obtained by the Commission by providing constraints as to how information can be provided and by allowing for built-in validation.[1410]

Form N–CEN also modernizes the census information that funds provide and increases its utility to Commission staff, investors, and other interested parties by reflecting the changes to the fund industry in a structured data format. The Commission will use the information in Form N–CEN to improve its understanding of fund industry trends and practices, and assist with the Commission's examination program. Commission staff has identified specific information that could improve its ability to effectively oversee funds.

Along with the other information, Form N–CEN adds new requirements for information specifically relating to the ETF primary markets, including more detailed information on authorized participants and creation unit requirements.[1411] We believe that the additional information on ETFs will allow the Commission to better understand and assess the ETF market and also inform the public about certain characteristics of the ETF primary markets.[1412] Additionally, Form N–CEN, like Form N–SAR, has particular sections for closed-end funds, SBICs, and UITs in order to obtain information about the particular characteristics of these entities to assist our staff in monitoring the activities of these funds and preparing for examinations.

Form N–CEN also adds new requirements for information relating to a management company's securities lending activities, including information concerning the management company's securities lending agents and cash collateral managers.[1413] We are also requiring the monthly average value of securities on loan, the net income from securities lending, and the monthly average net assets in the fund.[1414] Together with the requirements on securities lending activities in Form N–PORT and in fund Statements of Additional Information,[1415] this information will benefit the Commission's oversight abilities and, potentially, future policymaking concerning securities lending. Moreover, we believe that this information could inform investors and other interested parties about the use of and potential risks associated with a management company's securities lending activities.[1416]

We expect funds will also benefit from replacing Form N–SAR with Form N–CEN through reduced expenses. First, we estimate that Form N–CEN has a lower cost per filing than Form N–SAR, as a result of filing in an XML format, as opposed to the outdated format of Form N–SAR, and the elimination of certain items on Form N–SAR that funds will not report on Form N–CEN. Second, funds that are management companies will experience a decrease in paperwork-related expenses from the decrease in the reporting frequency of census information from semi-annual to annual.[1417] As discussed in detail below, we estimate that paperwork expenses associated with reporting on Form N–CEN will be, in the aggregate, about $14.6 million each year.[1418] By contrast, we estimate that paperwork expenses associated with reporting on Form N–SAR are about $25.5 million each year.[1419] Accordingly, we estimate, on net, annual paperwork expense savings to funds associated with the adoption of Form N–CEN and rescission of Form N–SAR will be about $10.9 million.[1420] We recognize that these ongoing annual expense savings will be partially offset by one-time expenses in the first year to file reports on Form N–CEN. We estimate that these expenses would be, in the aggregate, about $20.2

readable, consistent and comparable across different reporting entities).

1410 *See, e.g.,* Morningstar Comment Letter (noting that the XML format will reduce the amount of defective reporting currently possible in Form N–SAR); *see also* XBRL US Comment Letter (while specifically recommending an XBRL structured format, noting that checking the validity of data may still be required but, with structured data, the process can be automated, thereby reducing costs and at the same time increasing the consistency of the data produced).

1411 *See* discussion *supra* section II.D.4.e.

1412 Some commenters supported the inclusion of ETF-specific information in Form N–CEN. *See supra* footnote 1061 and accompanying text; *but see infra* footnote 1429 and accompanying text.

1413 *See* Item C.6 of Form N–CEN.; *see also* discussion *supra* section II.D.4.c.iii.

1414 The monthly average value of securities on loan and the net income from securities lending are being moved from Form S–X to Form N–CEN, while the monthly average net assets is a newly reported value, and while not specifically related to securities lending activity, it will facilitate the use of the monthly average value of securities on loan.

1415 *See supra* section II.A.2.d; section II.A.2.g.v; and section II.F.

1416 Some commenters expressed general support for reporting securities lending information on Form N–CEN; some commenters expressed certain concerns about particular proposed requirements and we have modified the securities lending requirements in certain respects after consideration of commenters' views. *See supra* section II.D.4.c.iii.

1417 See *supra* notes 768–769 and accompanying text for a discussion of commenters' views on the filing frequency. *See also* ICI Comment Letter (stating that reporting this data on an annual, rather than a semi-annual basis, would significantly lessen reporting burdens for funds).

1418 Below, we estimate that 3,113 funds will file reports on Form N–CEN each year. *See infra* footnote 1532. Below, we estimate that funds will, on average, incur 12.37 burden hours per fund per year to comply with the reporting requirements of Form N–CEN. *See infra* footnote 1532 and accompanying text. Therefore, in the aggregate, we estimate that such funds would incur about 38,508 burden hours to comply with these requirements. This estimate is based on the following calculation: 3,113 funds × 12.37 hours per fund per year = 38,508 hours per year. The Commission estimates the wage rate associated with these burden hours based on salary information for the securities industry compiled by the Securities Industry and Financial Markets Association. The estimated wage figure is based on published rates for senior programmers and compliance attorneys, modified to account for an 1,800-hour work year; multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead; and adjusted to account for the effects of inflation, yielding effective hourly rates of $308 and $340, respectively. *See* Securities Industry and Financial Markets Association, Report on Management & Professional Earnings in the Securities Industry 2013. We estimate that senior programmers and compliance attorneys would divide their time equally, yielding an estimated hourly wage of $324. ($308 per hour for senior programmers + $340 per hour for compliance attorneys) ÷ 2 = $324 per hour. Based on the Commission's estimate of 38,508 burden hours per year and the estimated wage rate of $324 per hour, the total annual paperwork expenses for funds associated with the internal hour burden imposed by the reporting requirements of Form N–CEN are about $12,476,592. This estimate is based upon the following calculation: 38,508 hours per year × $324 per hour = $12,476,592. Below, we also estimate that funds will incur aggregate annual external costs of $2,088,176 to comply with the requirements of Form N–CEN. *See infra* footnote 1538 and accompanying text. Thus the total estimated annual paperwork expenses associated with the reporting requirements of Form N–CEN are $14,564,768. This estimate is based upon the following calculation: $12,476,592 associated with internal burden + $2,088,176 external cost burden = $14,564,768.

1419 Below, we estimate that, in the aggregate, funds currently incur about 78,561 burden hours to comply with the requirements of Form N–SAR. *See infra* footnote 1541 and accompanying text. The Commission estimates the wage rate associated with these burden hours based on salary information for the securities industry compiled by the Securities Industry and Financial Markets Association. The estimated wage figure is based on published rates for senior programmers and compliance attorneys, modified to account for an 1,800-hour work year; multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead; and adjusted to account for the effects of inflation, yielding effective hourly rates of $308 and $340, respectively. *See* Securities Industry and Financial Markets Association, Report on Management & Professional Earnings in the Securities Industry 2013. We estimate that senior programmers and compliance attorneys would divide their time equally, yielding an estimated hourly wage of $324. ($308 per hour for senior programmers + $340 per hour for compliance attorneys) ÷ 2 = $324 per hour. Based on the Commission's estimate of 78,561 burden hours and the estimated wage rate of $324 per hour, the total annual paperwork expenses for funds associated with the internal hour burden imposed by the reporting requirements of Form N–SAR are about $25,453,764. This estimate is based upon the following calculation: 78,561 hours per year × $324 per hour = $25,453,764.

1420 This estimate is based upon the following calculation: $25,453,764 in annual paperwork expenses associated with Form N–SAR − $14,564,768 in annual paperwork expenses associated with Form N–CEN = $10,888,996 in annual paperwork expenses.

million.[1421] As indicated by commenters, the 75-day period to file Form N–CEN will also benefit funds by staggering the reports that funds file with the Commission at the end of each fiscal year.[1422]

The rescission of Form N–SAR and the introduction of Form N–CEN, to the extent relevant, could provide benefits to investors, to third-party information providers, and to other potential users from an update to the census information that investment companies report and from an update to its structured data format. Similar to Form N–PORT, we expect that institutional investors and other market participants could use the information from Form N–CEN more so than individual investors. However, individual investors may indirectly benefit from the increase in information to the extent that it becomes available through third-party information providers, as these information providers will likely have the capabilities to efficiently collect the data from Form N–CEN and present it for investors in user-friendly format. For certain investors and other potential users that would obtain and use the information that funds report in Form N–CEN directly, the update to the structure of the information should improve their ability to efficiently aggregate the information across all investment companies given the difficulty associated with extracting information from reports on Form N–SAR, due to its idiosyncratic reporting format.[1423]

The changes to the reporting of census information, including the reporting of the information in a modern structured data format, could improve the ability of investors to differentiate investment companies and could therefore lead to an increase in competition among funds for investor capital. In addition, these changes could enhance the ability of investors to understand the investment risks and practices (for example, securities lending activities) of investment companies, and therefore could improve the ability of investors to efficiently allocate capital. Consequently, the reporting changes could promote capital formation.

3. Costs

As discussed above, we expect the new Form N–CEN will be less costly to file than Form N–SAR has been, because Form N–CEN will be filed annually while Form N–SAR is filed semi-annually.[1424] ETFs and closed-end funds, however, may have higher expenses in filing reports on Form N–CEN relative to other investment companies, as they will generally be required to provide more information than previously reported.[1425] There could also be costs as a result of the change in the frequency of disclosure of census information. For example, the Commission will receive census information on an annual instead of semi-annual basis, and therefore to the extent that the information changes intra-annually the information will be more dated than if the information was reported to the Commission on a semi-annual basis.[1426] As discussed above, we believe that the costs related to reducing the frequency of the information received on Form N–SAR are not significant as this information is unlikely to change frequently. Also, funds' reporting costs may be reduced by the elimination, in Form N–CEN, of certain items from Form N–SAR that are no longer needed by Commission staff or are outdated in their current form.[1427] In addition, as discussed above, we are moving the change in independent public accountant attachment proposed on Form N–CEN to Form N–CSR so that an accountant's letter regarding a change in accountant will become available to the public semi-annually rather than annually,[1428] which we expect will affect reporting and other costs only minimally. Additionally, we recognize that we are adding some additional information items from the proposal, such as average net assets and CRD numbers for directors, which will result in minor increases in reporting costs relative to the proposal.

As discussed above, some commenters objected to the inclusion of the requirement for each ETF to report the dollar value of the ETF shares that each authorized participant purchased and redeemed from the ETF during the reporting period, expressing concerns that reporting authorized participant activities on Form N–CEN could discourage authorized participants from participating in the ETF market, leading to further concentration in the authorized participant community or authorized participants moving their ETF-related trading activities to banks or ''clearing'' authorized participants.[1429] We expect that any effects of these reporting requirements on authorized participant participation in the ETF primary market will be minimal. We continue to believe, moreover, that collection of this additional information may allow the Commission staff to monitor how ETF purchase and redemption activity is distributed across authorized participants and, for example, the extent to which a particular ETF—or ETFs as a group—may be reliant on one or more particular authorized participants, and we believe that adopting the new reporting requirements is appropriate in light of these benefits notwithstanding the possibility that public availability of the information might affect the ETF primary markets in the manner those commenters suggest.

Form N–CEN could impose costs on investors and other potential users of the information to obtain the information from a new or additional source, including the information that

[1421] Below, we estimate that 3,113 funds will file reports on Form N–CEN each year. *See infra* footnote 1532. Below, we estimate that funds will, on average, incur 20 additional one-time burden hours per fund in the first year to comply with the reporting requirements of Form N–CEN. *See infra* footnote 1528 and accompanying text. Therefore, in the aggregate, we estimate that such funds would incur about 62,160 one-time burden hours to comply with these requirements. This estimate is based on the following calculation: 3,113 funds × 20 one-time burden hours per fund = 62,260 one-time hours. The Commission estimates the wage rate associated with these burden hours based on salary information for the securities industry compiled by the Securities Industry and Financial Markets Association. The estimated wage figure is based on published rates for senior programmers and compliance attorneys, modified to account for an 1,800-hour work year; multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead; and adjusted to account for the effects of inflation, yielding effective hourly rates of $308 and $340, respectively. *See* Securities Industry and Financial Markets Association, Report on Management & Professional Earnings in the Securities Industry 2013. We estimate that senior programmers and compliance attorneys would divide their time equally, yielding an estimated hourly wage of $324. ($308 per hour for senior programmers + $340 per hour for compliance attorneys) ÷ 2 = $324 per hour. Based on the Commission's estimate of 62,260 one-time burden hours and the estimated wage rate of $324 per hour, the total one-time paperwork expenses for funds associated with the internal hour burden imposed by the reporting requirements of Form N–CEN are about $20,172,240. This estimate is based on the following calculation: 60,260 one-time hours × $324 per hour = $20,172,240 one-time expenses.

[1422] CAI Comment Letter; T. Rowe Price Comment Letter; Invesco Comment Letter; and ICI Comment Letter.

[1423] *See, e.g.,* Morningstar Comment Letter (noting that the XML format will provide more accessible data to the public).

[1424] *See, e.g.,* Dreyfus Comment Letter (noting that the rescission of Form N–SAR and Form N–Q and replacement with Form N–CEN would result in a net reduction of 504 filings annually for the company).

[1425] See *supra* section II.D.4.e for a discussion of the ETF requirements.

[1426] However, as discussed *supra* footnote 770, this cost is mitigated, in part, by the fact that certain items from Form N–SAR that the Commission staff has deemed necessary on a more frequent basis are included instead in reports on Form N–PORT.

[1427] *See* discussion *supra* section II.D.5. One commenter did, however, suggest we reconsider the exclusion of several of these items. Comment Letter of Morningstar, Inc. (July 20, 2015).

[1428] *See supra* section II.D.4.b.

[1429] *See supra* footnote 1072 and accompanying text.

will not be included on Form N–CEN but would be available through other filings. The information that will not be included on Form N–CEN and that will not be available elsewhere will impose costs on investors and other potential users from a loss of information to the extent that the information is found to be useful.[1430] One commenter expressed concern that obtaining this information from various sources would reduce its availability to investors and other interested parties, but could be available through third-party information providers.[1431] We have attempted to mitigate the potential cost relating to the loss of information by eliminating only those items which are either available elsewhere, not frequently used by Commission staff, or provide minimal benefit relative to the burdens of reporting such information.

4. Alternatives

Similar to Form N–PORT, the Commission has explored other ways to modernize and improve the utility and the quality of the census information that funds provide to the Commission and to investors. Commission staff examined how census information reported to the Commission could be improved to assist the Commission in its oversight activities, as well as how the information could benefit investors and other potential users of the information. Alternatives to the filing of Form N–CEN and the reporting of census information relate to the timing and frequency of the reports, the public disclosure of the information, the information that Form N–PORT would request, and the rescission of Form N–SAR.

Unlike Form N–SAR, on which management companies file reports on a semi-annual basis, management companies will report information on Form N–CEN on an annual basis. An alternative to the annual reporting of census information in Form N–CEN is a semi-annual reporting of the information similar to Form N–SAR. However, as we discussed above, the census-type nature of the information that we will collect from funds in Form N–CEN should not change as frequently as, for example, portfolio holdings information.[1432] Requiring management companies to report census information semi-annually would therefore place a burden on funds without a commensurate increase in the value of the information received by the Commission.

We also considered alternatives to extend or shorten the filing period of Form N–CEN from 75 days. While a shorter filing period, such as 60 days (similar to the proposal) would provide more timely information to the Commission,[1433] it would also place a burden on funds that need time to collect, verify, and report the required information to the Commission. Several commenters supported extending the filing period to at least a 75-day period, arguing, among other things, that a longer time period would help stagger the filing deadline from other end-of-month filing requirements, ensure that all accounting-related questions could be addressed more completely, and allow the appropriate time needed to update systems to report information in an XML format.[1434] As discussed above, we have been persuaded by commenters to adopt a filing period of 75 days after the fiscal year-end (for management companies) and calendar year-end (for UITs). We believe that the 75-day filing period for Form N–CEN would appropriately balance the staff's need for timely information against the appropriate amount of time for funds to collect, verify, and report information to the Commission.

Funds will have 18 months after the effective date to comply with the new reporting requirements for Form N–CEN. An alternative would be to tier the compliance period, similar to the compliance period for Form N–PORT, dependent on entity size. However, as discussed above, we believe that it is less likely that smaller entities would need additional time to file Form N–CEN because the requirement to file Form N–CEN is similar to the current requirement to file Form N–SAR, and we expect that filers will prefer the updated, more efficient filing format of Form N–CEN.[1435] An additional alternative would be to extend the compliance period. Some commenters suggested that the compliance period be extended to the later of 30 months after adoption of Form N–CEN, or 18 months after the effective date of amendments requiring funds to report liquidity information on Form N–CEN.[1436] Given that much of the information that will be reported on Form N–CEN is currently already reported by funds on Form N–SAR, funds should already have processes and procedures in place to reduce the risk of inadvertent errors. In addition, filings on Form N–CEN are not expected to be as technically complex nor present comparable challenges in terms of reporting and data validation as filings on Form N–PORT. As such, we expect that eighteen months will provide an adequate period of time for funds, intermediaries, and other service providers to conduct the requisite operational changes to their systems and to establish internal processes to prepare, validate, and file reports on Form N–CEN with the Commission.

Funds will be required to report to the Commission information in Form N–CEN that will provide staff an ability to identify investment risks and engage in further outreach as necessary. Not requiring the information would substantially reduce the ability of the Commission to oversee the fund industry. In addition, the information reported on Form N–CEN could be important to investors to differentiate investment companies. An alternative to adopting Form N–CEN would be to revise Form N–SAR. The Commission believes, however, that the outdated technology associated with Form N–SAR requires the introduction of a new form in order to increase the benefits from the changes made to the reporting of census information. In addition, there were no commenters who explicitly stated that Form N–SAR should not be replaced by Form N–CEN.

The information that funds report on Form N–CEN will be made publicly available. Additional alternatives include making some or all of the

[1430] Some of the information that funds will no longer report on a census-form, such as loads paid to captive or unaffiliated brokers, has been found by interested third-parties, including researchers, to be important in their analysis of the fund industry. *See, e.g.,* Susan E. K. Christoffersen, Richard Evans & David K. Musto, *What do Consumers' Fund Flows Maximize? Evidence from Their Brokers' Incentives,* 68 J. of Fin. 201 (2013). *See* discussion *supra* section II.D.5.

[1431] *See, e.g.,* Morningstar Comment Letter.

[1432] Unlike Form N–SAR, Form N–CEN will not require funds report information relating to fee and expense information. Morningstar Comment Letter suggested semi-annual reporting of Form N–CEN should fee and expense information be required on Form N–CEN.

[1433] Several commenters supported the 60-day filing period (Carol Singer Comment Letter and State Street), other commenters supported a longer filing period (MFS Comment Letter; CAI Comment Letter; T. Rowe Price Comment Letter; Invesco Comment Letter; and ICI Comment Letter). One justification for a longer filing period provided by commenters is the time needed to update systems to report information in an XML format (MFS Comment Letter; Invesco Comment Letter; and ICI Comment Letter).

[1434] MFS Comment Letter; CAI Comment Letter; T. Rowe Price Comment Letter; Invesco Comment Letter; and ICI Comment Letter.

[1435] No commenters expressed an opinion specifically related to the filing format of N–CEN versus N–SAR.

[1436] *See, e.g.,* Fidelity Comment Letter (suggesting a compliance date of 30 months after the adoption of Form N–CEN); MFS Comment Letter (same); CAI Comment Letter (same); IDC Comment Letter (same); ICI Comment Letter (suggesting the later of 30 months after the adoption of Form N–CEN or 18 months after the adoption of amendments requiring funds to report liquidity information on Form N–CEN).

census information reported on the form nonpublic. Specific information that could be made nonpublic includes securities lending information,[1437] service provider information,[1438] and ETF authorized participant information.[1439] Making more information reported on Form N–CEN nonpublic would reduce the amount of information available to investors and therefore reduce the ability of investors to differentiate investment companies. For example, one commenter recommended that details concerning indemnification protection should be made nonpublic.[1440] Nonetheless, we continue to believe that public reporting is a necessary part of improving transparency regarding a fund's securities lending activities. Specifically, we believe that the information regarding indemnification provisions is relevant to investors evaluating the risks associated with securities lending and comparing those risks across funds.

One set of alternatives is to require funds to report additional information on Form N–CEN, including additional new information that is not currently reported on Form N–SAR.[1441] Another set of alternatives is to require funds to report less information on Form N–CEN. For example, commenters expressed concern about providing new information related to securities lending, service providers, and ETF authorized participants, and one alternative is to not require this information to be provided.[1442] One commenter, however, expressed concern about the exclusion from Form N–CEN of particular items on Form N–SAR.[1443] As discussed above, the adoption of Form N–CEN and the rescission of Form N–SAR will improve the quality and utility of the information investment companies report to the Commission. Although additional information could further increase the benefits of Form N–CEN to Commission staff, investors, and other interested parties, the benefits may not justify the initial and ongoing costs for investment companies to report the information because the Commission believes that the information we are requesting strikes an appropriate balance between the current information needs of Commission staff as well as the developments in the fund industry and the reduction of reporting burdens for registrants, particularly where information may be similarly disclosed or reported elsewhere.[1444]

E. Amendments to Forms Regarding Securities Lending Activities

1. Introduction and Economic Baseline

We are also adopting amendments to Forms N–1A and N–3 to require certain disclosures in fund Statements of Additional Information regarding securities lending activities, as well as amendments to Form N–CSR to require the same information from closed-end funds.[1445] We proposed that similar requirements be included in fund financial statements as part of the proposed amendments to Regulation S–X in order to allow investors to better understand the income generated from, as well as the expenses associated with, a fund's securities lending activities.[1446] Some commenters stated that some of the proposed requirements would yield estimates that may be costly to audit, and that lengthy disclosure concerning securities lending activity in a fund's financial statements could detract from other financial statement disclosures.[1447] After consideration of these issues raised by commenters, we are adopting these disclosure requirements as amendments to the fund registration forms (*viz.,* Forms N–1A and N–3) or, in the case of closed-end funds, as amendments to Form N–CSR, rather than as amendments to Regulation S–X.[1448]

The final rules will require funds to disclose gross and net income from securities lending activities, fees and compensation in total and broken out by enumerated types, and a description of the services provided to the fund by the securities lending agent. The quantitative disclosure requirements are discussed above in section II.F and also illustrated in Table 2 below.

[1437] Some commenters suggested that certain securities lending information be kept non-public, including information describing third-party lending arrangements (Fidelity Comment Letter).

[1438] Some commenters suggested that certain service provider information be kept non-public, including the identities of the pricing services used (Interactive Data Comment Letter) and the compensation and other fee and expense arrangements (IDC Comment Letter).

[1439] Some commenters suggested that disclosure of information on authorized participants could discourage APs from participating in the ETF market (Invesco Comment Letter and BlackRock Comment Letter), while others suggested that disclosure of the creation and redemption activity of each AP is not helpful and is confusing to investors (BlackRock Comment Letter). *See supra* footnote 1429 and accompanying text.

[1440] *See* Fidelity Comment Letter.

[1441] Morningstar Comment Letter expressed concern that some of the information that would have been eliminated under the proposal would decrease the availability of the information for investors and other interested parties.

[1442] *See, e.g.,* Fidelity Comment Letter; Interactive Data Comment Letter; and BlackRock Comment Letter; *supra* footnote 1429 and accompanying text.

[1443] Morningstar Comment Letter expressed concern that the exclusion of several Form N–SAR items would then require a manual aggregation of information that would put comprehensive analysis of the information out of reach for investors and fund boards unless they were using services from third-party providers that could aggregate such data.

[1444] *See, e.g., supra* footnotes 941, 968, 989, 1000–1003 and accompanying text.

[1445] *See* Item 19(i) of Form N–1A; Item 21(j) of Form N–3; Item 12 of Form N–CSR; *see also supra* section II.F.

[1446] The proposed requirements would have included disclosure in the fund's financial statements of (1) the gross income from securities lending, including income from cash collateral reinvestment; (2) the dollar amount of all fees and/or compensation paid by the fund for securities lending activities and related services, including borrower rebates and cash collateral management services; (3) the net income from securities lending activities; (4) the terms governing the compensation of the securities lending agent, including any revenue sharing split, with the related percentage split between the fund and the securities lending agent, and/or any fee-for-service, and a description of services included; (5) the details of any other fees paid directly or indirectly, including any fees paid directly by the fund for cash collateral management and any management fee deducted from a pooled investment vehicle in which cash collateral is invested; and (6) the monthly average of the value of portfolio securities on loan. *See* proposed rule 6–03(m) of Regulation S–X; Proposing Release, *supra* footnote 7, at 33624.

[1447] *See* Deloitte Comment Letter; EY Comment Letter.

[1448] *See* Item 19(i) of Form N–1A; Item 21(j) of Form N–3; Item 12 of Form N–CSR.

SECURITIES LENDING ACTIVITIES

Gross income from securities lending activities	$ ____________
Fees and/or compensation for securities lending activities and related services	
Fees paid to securities lending agent from a revenue split	$ ____________
Fees paid for any cash collateral management service (including fees deducted from a pooled cash collateral reinvestment vehicle)	$ ____________
Administrative fees not included in revenue split	$ ____________
Indemnification fee not included in revenue split	$ ____________
Rebate (paid to borrower)	$ ____________
Other fees not included in revenue split (specify)	$ ____________
Aggregate fees/compensation for securities lending activities	$ ____________
Net income from securities lending activities	$ ____________

Table 2

Modifications from the proposed rule include, for example, replacing the proposed requirement that funds disclose the terms governing the compensation of the securities lending agent—including any revenue split—with a requirement to report actual fees paid during the fund's prior fiscal year,[1449] because commenters persuaded us that backward-looking dollar-based requirements would yield clearer disclosure than would the proposed requirements and may also enhance disclosure comparability across funds for investors and reduce preparation complexity for funds. Additionally, as discussed above, while the proposed requirements would have included disclosure of all fees and/or compensation paid for securities lending and related services, we have determined that it is appropriate to clarify in the final rules the specific categories of fees and/or compensation that are required to be disclosed.[1450]

The current set of fund registration statement and reporting requirements under Forms N–1A, N–3, and N–CSR (for closed-end funds) is the baseline from which we discuss the economic effects of today's amendments. The parties that could be affected by these amendments include funds that file or will file or update registration statements with the Commission (and closed-end funds that file or will file reports on Form N–CSR), the Commission itself, current and future investors of investment companies, and other market participants that could be affected by the increase in the disclosure of fund securities lending activity information.

We expect that many of the economic effects from the amendments to Forms N–1A, N–3, and N–CSR will largely result from an increase in investor ability to make investment decisions dependent on the more transparent disclosure in fund Statements of Additional Information (or in Form N–CSR for closed-end funds), and the extent to which this transparency enhances the ability of the Commission to utilize the updated disclosures. As discussed above, the economic effects will depend on the extent to which the securities lending practices of all investment companies become more transparent, and the ability of investors—and, in particular, individual investors—to utilize Statements of Additional Information (and reports on Form N–CSR for closed-end funds) to compare funds and to make investment decisions. As a result of these factors, some of which are unquantifiable, the discussion below is largely qualitative.

2. Benefits

The amendments to Forms N–1A, and N–3, and N–CSR will benefit investors by enhancing the information funds disclose in the Statements of Additional Information (and reports on Form N–CSR for closed-end funds). We continue to believe that because net earnings from securities lending can contribute to the investment performance of a fund, the Commission, investors and others would benefit from the additional transparency of securities lending fees on the income from these activities. We further believe that the benefits of this additional transparency justify the potential unintended consequences, highlighted by commenters and discussed above, of public disclosure of certain information.[1451]

We have made modifications from the proposed requirements designed to, among other things, enhance comparability of the disclosed information and potentially ameliorate some concerns commenters expressed about the proposed required public disclosure of the terms governing compensation of the securities lending agent. A commenter suggested that we could facilitate comparability by specifying the fees for particular services that must be disclosed,[1452] and we agree. We believe that these clarifications will enhance comparability of the disclosed fees and compensation across funds, and indirectly benefit investors to the extent that other entities, including investment advisers and broker-dealers, utilize the

[1449] *Compare* proposed rule 6–03(m)(4) of Regulation S–X *with* Item 19(i)(1)(ii) of Form N–1A; Item 21(j)(i)(B) of Form N–3 (same); Item 12(a)(1) of Form N–CSR.

[1450] *Compare* proposed rule 6–03(m)(2) *with* Item 19(i)(1)(ii) of Form N–1A; Item 21(j)(i)(B) of Form N–3; and Item 12(a)(1) of Form N–CSR.

[1451] *See supra* footnotes 1212–1219 and accompanying text.

[1452] *See* Fidelity Comment Letter.

information to help investors make more informed investment decisions.

The comparability of the disclosed fee and expense information may also depend on the nature of the services provided to a particular fund in connection with its securities lending activities. Accordingly, to further enhance the comparability of the disclosed information and allow users to better assess fee and expense information, we have determined to specify that this information should be provided on the basis of the services actually provided to the fund in its most recent fiscal year and the discussion above provides some examples of the types of services that could be enumerated to illustrate such services.[1453]

As mentioned above, we are persuaded that backward-looking dollar-based requirements would yield clearer disclosure than would the proposed requirements and may also enhance disclosure comparability across funds for investors and reduce preparation complexity for funds. This change from the proposal allows investors and others to derive the informational benefit from the disclosure without any potentially sensitive negotiated contractual terms being made public.

3. Costs

We believe that registrants on average will likely incur minimal costs from our amendments to Forms N–1A and N–3, including certain paperwork and other expenses discussed below.[1454]

Several commenters expressed concern that the proposed disclosure requirements could yield information that would suggest, inaptly, that fees and expenses related to securities lending activities among funds are readily compared and contrasted.[1455] While there is the potential for investor confusion with any disclosure, we believe we have mitigated these concerns through changes that we are making from the proposal, such as switching from terms of compensation to backward-looking dollar based requirements and providing clarification in the final rules as to the types of fees and/or compensation that must be enumerated.

Another commenter expressed concerns that the proposed fee and expense information could be used to evaluate the terms of a fund's lending arrangements and could, without access to additional information, result in potentially inappropriate conclusions that a fund negotiated its arrangements poorly or was otherwise disadvantaged in its negotiations.[1456] That commenter noted that the revenue split can depend on numerous factors, including the range, amount, and attractiveness of the securities a fund complex as a whole may make available for loan.[1457] We believe that the modifications we have made from the proposal, discussed above in Section II.F.2, help ameliorate these concerns.

Commenters also expressed concerns with the proposed requirements based on the currently nonpublic character of some of the information that would be required to be disclosed publicly, particularly the proposed requirement to disclose the terms governing compensation of the securities lending agent.[1458] Commenters argued that some funds currently enjoy privately negotiated competitive advantages with securities lending services or counterparties that could be jeopardized should their arrangements with their securities lending agents be made public.[1459] First, we note that, as discussed herein, we have modified the rule from the proposal and are no longer requiring certain pieces of information be disclosed—specifically, the terms of the revenue split and the terms governing the compensation of the securities lending agent more generally. We acknowledge, as these commenters have asserted, that enhanced transparency into securities lending arrangements could put funds at a competitive disadvantage by affecting the relative negotiating posture of funds that procure securities lending services, or dissuade counterparties from engaging in securities lending altogether, which could drive up the costs of lending services for funds. We believe, however, that the modifications to the proposed requirements that we are making today eliminate the disclosures from the proposed requirements that some commenters indicated could be the most sensitive while retaining the required information that we think will be most useful to investors in understanding the expenses associated with fund securities lending activities. This dollar-based requirement would also eliminate the requirement that potentially sensitive negotiated contractual terms be disclosed.

As mentioned above, we are persuaded that backward-looking dollar-based requirements would yield clearer disclosure than would the proposed requirements, thus mitigating potential costs related to misinterpretation or a false sense of precision by investors. In addition, this switch from terms of compensation to backward-looking dollar-based requirements could yield a cost savings for filers by possibly reducing preparation complexity relative to the proposal.

We expect that funds would incur certain paperwork and other expenses in connection with the new requirements. For funds that file registration statements on Forms N–1A and N–3, as discussed in detail below, we estimate that these paperwork expenses would be, in the aggregate, about \$1.3 million each year.[1460] Funds

[1453] Item 19(i)(2) of Form N–1A (requiring disclosure of the services provided to the fund by the securities lending agent (for example and as applicable, locating borrowers, monitoring daily the value of the loaned securities and collateral, requiring additional collateral as necessary, cash collateral management, qualified dividend management, negotiation of loan terms, selection of securities to be loaned, recordkeeping and account servicing, monitoring dividend activity and material proxy votes relating to loaned securities, and arranging for return of loaned securities to the fund at loan termination)); Item 21(j)(ii) of Form N–3 (same); Item 12(b) of Form N–CSR (same).

[1454] *See infra* footnotes 1460–1461 and accompanying text. *See also supra* section III.B.3 for related cost analysis associated with amendments to Form N–CSR.

[1458] *See* AICPA Comment Letter (particularly with respect to the terms governing the compensation of the securities lending agent); Fidelity Comment Letter (particularly with respect to the revenue split); ICI Comment Letter; Invesco Comment Letter; MFS Comment Letter; SIFMA Comment Letter I; Simpson Thacher Comment Letter (particularly with respect to the revenue split); Wells Fargo Comment Letter.

[1459] *See* AICPA Comment Letter; Fidelity Comment Letter; ICI Comment Letter; Invesco Comment Letter; MFS Comment Letter; SIFMA Comment Letter I; Simpson Thacher Comment Letter; Wells Fargo Comment Letter.

[1460] Below, we estimate that 9,502 and 16 funds per year could file registration statements on Forms N–1A and N–3, respectively. *See infra* text following footnote 1591. Below, we estimate that funds will, on average, incur 0.5 burden hours per fund per year to comply with the new registration statement requirements. *See id.* Therefore, in the aggregate, we estimate that such funds would incur about 5,038 burden hours to comply with these requirements. (9,502 funds + 16 funds) × 0.5 burden hours per fund per year = 4,759 burden hours per year. The Commission estimates the wage rate associated with these burden hours based on salary information for the securities industry compiled by the Securities Industry and Financial Markets Association. The estimated wage figure is based on published rates for intermediate accountants and attorneys, modified to account for an 1,800-hour work year; multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead; and adjusted to account for the effects of inflation, yielding effective hourly rates of \$160 and \$386, respectively. *See* Securities Industry and Financial Markets Association, Report on Management & Professional Earnings in the Securities Industry 2013. We estimate that intermediate accountants and attorneys would divide their time equally, yielding an estimated

Continued

would also incur initial one-time costs associated with establishing systems and procedures for compliance. We estimate that these expenses would be, in the aggregate, about $3.9 million.[1461] For closed-end funds that file annual reports on Form N–CSR, we estimate that the new requirements will increase the hour burden associated with the paperwork costs of Form N–CSR for closed-end funds by an additional 2 burden hours with an additional internal cost burden of $648 per fund in the first year,[1462] and an additional 0.5 hours with an additional internal cost burden of $162 per fund for filings in subsequent years.[1463]

4. Alternatives

The Commission has also explored other ways to modernize and improve the utility, quality, and consistency of the information that funds report to the Commission and to investors in the financial statements required in shareholder reports and other registration statements. Commission staff examined how the information funds provide to the Commission and to investors could be made more informative and more consistent across funds. Alternatives to the amendments to Forms N–1A, N–3, and N–CSR to require certain disclosures relate to information that funds report and the location in which the information is reported.

One alternative would be simply to not adopt any new securities lending disclosure amendments. We believe, however, that information regarding securities lending activities can provide investors with insights into fund activities, foster comparability across funds, and contribute to investors making informed investment decisions.

We are adopting amendments to Forms N–1A, N–3, and Form N–CSR to require certain disclosures regarding securities lending activities. Alternatively, we could require these disclosures to be made in the financial statements, in Form N–PORT, or in Form N–CEN. Given that our objective was to make this information available to investors and other users of the data, after consideration of comments we have decided that the Statement of Additional Information (and, with respect to closed-end funds, reports on Form N–CSR) is an appropriate place for funds to be required to disclose this information.

Finally, we could adopt different reporting requirements. For example, we could, as proposed, have required funds to disclose the terms of compensation in securities lending agreements rather than the backward-looking, dollar-based values. However, as discussed previously, commenters suggested, that doing so could result in the loss of privately negotiated competitive advantages or a decrease in the number of counterparties willing to participate in the securities lending market, and we believe that the requirements, as adopted eliminate the disclosures from the proposed requirements that commenters indicated could be the most sensitive while retaining the required information that we think will be most useful to investors in understanding the expenses associated with fund securities lending activities. Hence, we have decided against such an alternative.

F. Other Alternatives to the Reporting Requirements

The Commission has explored additional ways to modernize and improve the utility and the quality of the information that funds provide to the Commission and to investors. The Commission has considered many alternatives to the individual elements contained in new Form N–PORT, amendments to Regulation S–X, and new Form N–CEN; alternatives specific to each of the new reporting requirements are discussed above. The following discussion addresses other significant alternatives which involve aspects of fund reporting that pertain to more than one of the new reporting requirements.

The Commission considered the information that will be required on Form N–PORT as compared to the information on Form N–CEN. Commission staff considered the benefits to having the information more frequently updated as well as the cost to funds to report the information. Although the reporting of information on a more frequent basis imposes additional costs on funds, Commission staff believes the information that will be reported more frequently on Form N–PORT, relative to the annual reporting on Form N–CEN, is necessary for the Commission's oversight activities and could be important to other interested third-parties. Commission staff also considered the benefits of identification information to link information between forms and with other sources of information, with the costs to funds to obtain and report the identification information on the new forms.

The Commission is requiring that investment companies file Form N–PORT and Form N–CEN in an XML structured data format. One alternative is to not structure the information. As discussed, the ability of Commission staff, investors, third-party information providers, and other potential users to utilize the information is dependent on the efficiency with which the information investment companies provide can be compiled and aggregated. Commission staff believes that the affected parties would experience substantially less benefit from the reporting of investment company information if the information is not structured because of the time it would take to parse the information and the potential for errors in data due to the fact that unstructured data cannot be validated during the filing process. In addition, based on the Commission's understanding of current practices, it is likely that many investment companies and third party service providers have systems in place to accommodate the use of XML. Furthermore, based on our experiences with Forms N–MFP and PF, both of which require filers to report information in an XML format, we continue to believe that requiring funds to report information on Forms N–PORT and N–CEN in an XML format will provide the information that we seek in a timely and cost-effective manner. Therefore, requiring information in a format such as XML should impose minimal costs. The Commission will require funds to file certain attachments to their reports on Form N–PORT and Form N–CEN, and these attachments would not be required in a structured data format. The Commission believes that only marginal benefits would result from requiring funds to file these attachments in a structured, XML format due to the narrative format of the information provided.

hourly wage of $273 per hour. ($160 per hour for intermediate accountants + $386 per hour for attorneys) ÷ 2 = $273 per hour. Based on the Commission's estimate of 4,759 burden hours per year and the estimated wage rate of $273 per hour, the total annual paperwork expenses for funds associated with the new registration statement requirements are approximately $1,299,207. 4,759 hours per year × $273 per hour = $1,299,207 per year.

[1461] Below, we estimate that funds will, on average, incur 1.5 one-time burden hours in the first year to comply with the new registration statement requirements. *See infra* text following footnote 1591. Therefore, in the aggregate, we estimate that such funds will incur about 15,114 one-time burden hours to comply with these requirements. (9,502 funds + 16 funds) × 1.5 one-time burden hours = 14,277 one-time burden hours. Based on the Commission's estimate of 14,277 one-time burden hours and the estimated wage rate of $273 per hour, the total one-time paperwork expenses for funds associated with the new registration statement requirements are approximately $3,897,621. 14,277 one-time burden hours × $273 per hour = $3,897,621.

[1462] *See infra* footnote 1610 and accompanying text; *see also infra* section IV.D.7.

[1463] *See infra* footnote 1611 and accompanying text; *see also infra* section IV.D.7.

The technology used to structure the data could affect the benefits and costs associated with the adopted rules, and we have therefore considered alternative formats for structuring the data.[1464] Some commenters suggested XBRL, a tagged system that is based on XML and was created specifically for the purpose of reporting financial and business information,[1465] so as to leverage existing data definitions and reduce implementation costs.[1466] However, as noted earlier we believe that requiring funds to report information on Form N–PORT in XML will be both efficient and cost-effective for funds. Sending a data file from a sender to a recipient requires many conditions to be satisfied, and among those of crucial importance to regulatory data collection are compact transmission and efficient validation. XML Schema provides a widely used validation framework for XML, and is supported in all modern programming languages. The nature of the information we are collecting also lends itself to XML schema for almost all validation,[1467] and the arithmetic validations not supported natively in XML Schema are straightforwardly expressible in any number of languages. For this data set, the additional flexibility offered by a broader XML based framework such as XBRL incurs data volume and processing overhead with little incremental benefit; for example, the information funds will report will be as of a single reporting date, the units of measurement are predetermined or are constrained by the data type, and there is little value in customizing the content or presentation.

Finally, one commenter stated that we should not require funds to directly report information on their own behalf, but instead require other entities such as transfer agents and custodians to report information on behalf of funds.[1468] Given our expertise and experience in regulating, examining, and overseeing funds, including fund reporting, recordkeeping, and compliance, we continue to believe that obtaining such information directly from funds is appropriate.

IV. Paperwork Reduction Act

New forms Form N–CEN and Form N–PORT contain ''collections of information'' within the meaning of the Paperwork Reduction Act of 1995 (''PRA'').[1469] In addition, the amendments to Articles 6 and 12 of Regulation S–X will impact the collections of information under rules 30e–1 and 30e–2 of the Investment Company Act,[1470] and the amendments to Forms N–1A, N–2, N–3, N–4, N–6, and N–CSR under the Investment Company Act and Securities Act will impact the collections of information under those forms. Furthermore, implementation of new Forms N–PORT and N–CEN will coincide with rescission of Forms N–Q and N–SAR, thus eliminating the collections of information associated with those forms and impacting the collections of information under Form N–CSR.

The titles for the existing collections of information are: ''Form N–Q—Quarterly Schedule of Portfolio Holdings of Registered Management Investment Company'' (OMB Control No. 3235–0578);[1471] ''Form N–SAR under the Investment Company Act of 1940, Semi-Annual Report for Registered Investment Companies'' (OMB Control No. 3235–0330); Rule 30e–1 under the Investment Company Act of 1940, Reports to Stockholders of Management Companies'' (OMB Control No. 3235–0025); ''Rule 30e–2 pursuant to Section 30(e) of the Investment Company Act of 1940. Reports to Shareholders of Unit Investment Trusts'' (OMB Control No. 3235–0494); ''Form N–CSR under the Securities Exchange Act of 1934 and under the Investment Company Act of 1940, Certified Shareholder Report of Registered Management Investment Companies'' (OMB Control No. 3235–0570); ''Form N–1A under the Securities Act of 1933 and under the Investment Company Act of 1940, Registration Statement of Open-End Management Investment Companies'' (OMB Control No. 3235–0307); ''Form N–2 under the Investment Company Act of 1940 and Securities Act of 1933, Registration Statement of Closed-End Management Investment Companies'' (OMB Control No. 3235–0026); ''Form N–3 Under the Securities Act of 1933 and Under the Investment Company Act of 1940, Registration Statement of Separate Accounts Organized as Management Investment Companies'' (OMB Control No. 3235–0316); ''Form N–4 (17 CFR 239.17b) Under the Securities Act of 1933 and (17 CFR 274.11c) Under the Investment Company Act of 1940, Registration Statement of Separate Accounts Organized as Unit Investment Trusts'' (OMB Control No. 3235–0318); ''Form N–6 (17 CFR 239.17c) Under the Securities Act of 1933 and (17 CFR 274.11d) Under the Investment Company Act of 1940, Registration Statement of Separate Accounts Organized as Unit Investment Trusts that Offer Variable Life Insurance Policies'' (OMB Control No. 3235–0503). The titles for the new collections of information are: ''Form N–CEN Under the Investment Company Act, Annual Report for Registered Investment Companies'' (OMB Control No. 3235–0729 for N–CEN) and ''Form N–PORT Under the Investment Company Act, Monthly Portfolio Investments Report'' (OMB Control No. 3235–0730).

We published notice soliciting comments on the collection of information requirements in the Proposing Release and submitted the proposed collections of information to the Office of Management and Budget (''OMB'') for review in accordance with 44 U.S.C. 3507(d) and 5 CFR 1320.11. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number.

The Commission is adopting new forms Form N–CEN and Form N–PORT and amendments to Regulation S–X and the relevant registration forms, as well as the rescission of Forms N–Q and Form N–SAR, as part of a set of reporting and disclosure reforms. These

[1464] One commenter suggested a pre-formatted web portal or web form as well as the further development of inline structured data to ease reporting burdens (Schnase Comment Letter). We believe, however, that the volume of data for a fund to report on Form N–PORT would not lend itself to a manual entry approach, although we are considering the possibility of providing an online form for filers to use at their option for filing Form N–CEN, as we have with some other Commission Forms, such as Form 13F.

[1465] *See, e.g.,* XBRL US Comment Letter; Deloitte Comment Letter; *but see* Morningstar Comment Letter (''Extensible Business Reporting Language has had very limited success, and certain aspects of the standard are too lenient for regular data validation.'').

[1466] For example, public companies currently use XBRL taxonomies to file reports with the SEC, including investment companies that voluntarily file structured data on Form N–CSR.

[1467] Some commenters discussed the additional benefits from the types of validation that can be conducted with XBRL (XBRL US Comment Letter and AICPA Comment Letter).

[1468] *See* Federated Comment Letter (''It would also reduce the reporting burden on funds for the Commission to acquire information directly from custodians and transfer agents, which are proficient in maintaining and reporting portfolio holdings and other information.'').

[1469] 44 U.S.C. 3501 through 3521.

[1470] The paperwork burden from Regulation S–X is imposed by the rules and forms that relate to Regulation S–X and, thus, is reflected in the analysis of those rules and forms. To avoid a PRA inventory reflecting duplicative burdens and for administrative convenience, we have previously assigned a one-hour burden to Regulation S–X.

[1471] Currently, there is a collection of information associated with rule 30b1–5 under the Investment Company Act. *See* rule 30b1–5, 'Quarterly Report' Originally submitted and approved as Proposed Rule 30b1–4 under the Investment Company Act of 1940, 'Quarterly Report' '' (OMB Control No. 3235–0577). Rule 30b1–5 is the rule that requires certain funds to file Form N–Q. Among other things, we are rescinding Form N–Q and requiring certain funds to file Form N–PORT pursuant to new rule 30b1–9. With this in mind, we are discontinuing the information collection for rule 30b1–5.

reforms are designed to harness the benefits of advanced technology and to modernize the fund reporting regime in order to help investors and other market participants better assess different fund products and to assist the Commission in carrying out our regulatory functions. We discuss below the collection of information burdens associated with these reforms.

A. Portfolio Reporting

1. Form N–PORT

Certain funds will be required to file an electronic monthly report on Form N–PORT within thirty days after the end of each month. Form N–PORT is intended to improve transparency of information about funds' portfolio holdings and facilitate oversight of funds. The information required by Form N–PORT will be data-tagged in XML format. The respondents to Form N–PORT will be management investment companies (other than money market funds and small business investment companies) and UITs that operate as ETFs. Compliance with Form N–PORT will be mandatory for all such funds. Responses to the reporting requirements will be kept confidential for reports filed with respect to the first two months of each quarter; the third month of the quarter will not be kept confidential, but made public sixty days after the quarter end.

In the Proposing Release, we estimated that 10,710 funds [1472] would be required to file, on a monthly basis, a complete report on proposed Form N–PORT reporting certain information regarding the fund and its portfolio holdings. Based on our experience with other structured data filings, we estimated that funds would prepare and file their reports on proposed Form N–PORT by either (1) licensing a software solution and preparing and filing the reports in house, or (2) retaining a service provider to provide data aggregation, validation and/or filing services as part of the preparation and filing of reports on proposed Form N–PORT on behalf of the fund. We estimated that 35% of funds (3,749 funds) would license a software solution and file reports on proposed Form N–PORT in house.[1473] We further estimated that each fund that files reports on proposed Form N–PORT in house would require an average of approximately 44 burden hours to compile (including review of the information), tag, and electronically file a report on proposed Form N–PORT for the first time [1474] and an average of approximately 14 burden hours for subsequent filings.[1475] Therefore, we estimated the per fund average annual hour burden associated with proposed Form N–PORT for 3,749 fund filers would be 198 hours for the first year[1476] and 168 hours for each subsequent year.[1477] Amortized over three years, the average aggregate annual hour burden would be 178 hours per fund.[1478]

In the Proposing Release, we further estimated that 65% of funds (6,962 funds) would retain the services of a third party to provide data aggregation, validation and/or filing services as part of the preparation and filing of reports on proposed Form N–PORT on the fund's behalf.[1479] Because reports on Form N–PORT would be filed in a structured format and more frequently than current portfolio holdings reports (*i.e.,* Form N–CSR and Form N–Q), we anticipated that funds and their third-party service providers would move to automate the aggregation and validation process to the extent they do not already use an automated process for portfolio holdings reports. For these funds, we estimated that each fund would require an average of approximately 60 burden hours to compile and review the information with the service provider prior to electronically filing the report for the first time [1480] and an average of approximately 9 burden hours for subsequent filings.[1481] Therefore, we

[1472] This estimate includes 8,731 mutual funds (excluding money market funds), 1,411 ETFs and 568 closed-end funds and is based on ICI statistics as of December 31, 2014, *available at http://www.ici.org/research/stats.*

[1473] *See* Money Market Fund Reform 2014 Release, *supra* footnote 33, at 47945 (adopting amendments to Form N–MFP and noting that approximately 35% of money market funds that report information on Form N–MFP license a software solution from a third party that is used to assist the funds to prepare and file the required information).

[1474] We anticipated that these funds would use the same software that was used to generate reports on Form N–Q and that the software vendor offering the Form N–Q software would likely offer an update to that software to handle reports on Form N–PORT. Accordingly, we estimated the burden associated with information that is currently filed on Form N–Q and that would also be filed on Form N–PORT to generally be the same—10.5 hours per filing. With respect to new data that would be required by Form N–PORT that was not required by Form N–Q, we generally estimated that it would initially take up to 10 hours to connect the software to the new data points. However, because we understand risk metrics data may be located on a different system than portfolio holdings data and because current reporting requirements do not require funds to have a process in place for these two systems to work together, with respect to the new risk metrics data that would be required by Form N–PORT, we estimated that it would initially take up to 15 hours to connect the risk metrics data to the software and that, once connected, it would take 5 hours to program the risk metrics software to output the required data to the Form N–PORT software. Additionally, we added another 3.5 hours to our estimated initial burden to account for the increased amount of information that would be required to be reported on Form N–PORT, but that is not currently required by Form N–Q. *See infra* footnote 1475 (discussing the additional 30% burden added to the current Form N–Q estimate). We also noted that funds that are part of a larger fund complex may realize certain economies of scale when preparing and filing reports on proposed Form N–PORT. For purposes of our analysis, however, we took a conservative approach and did not account for such potential economies of scale.

[1475] We anticipated that most of the burden associated with licensing a software solution, as discussed above, would be a one-time burden. Accordingly, we estimated approximately 14 hours per fund for subsequent filings. This estimate is based on the 10.5 hours currently estimated for filings on Form N–Q, plus 30% to account for the amount of additional information that would be required to be filed on Form N–PORT. Additionally, because we believe that the required information is generally maintained by funds pursuant to other regulatory requirements or in the ordinary course of business, for the purposes of our analysis, we did not ascribe any time to collecting the required information. *See also supra* footnote 1474 (noting that our estimates do not account for economies of scale).

[1476] The estimate is based on the following calculation: (1 filing × 44 hours) + (11 filings × 14 hours) = 198 burden hours in the first year.

[1477] This estimate is based on the following calculation: 12 filings × 14 hours = 168 burden hours in each subsequent year.

[1478] The estimate is based on the following calculation: (198 + (168 × 2))/3 = 178.

[1479] *See* Money Market Fund Reform 2014 Release, *supra* footnote 33, at 47945 (adopting amendments to Form N–MFP and noting that approximately 65% of money market funds that report information on Form N–MFP retain the services of a third party to provide data aggregation and validation services as part of the preparation and filing of reports on Form N–MFP).

[1480] In order to be able to automate the process of communicating data to a third-party service provider so that it can be reported on Form N–PORT, we estimated that it would initially take a fund 60 hours to either procure software and integrate it into its systems or, alternatively, to write its own software. For those funds that already have an automated portfolio reporting process in place, we estimated that they would initially incur the same burden as those funds that license a software solution and file reports on proposed Form N–PORT in house. For these latter funds, however, we used the higher burden hours estimated for using a third party service provider in order to be conservative in our estimates because we lacked data on the number of funds that currently have an automated portfolio reporting process in place. *See supra* footnote 1474 (discussing the burdens associated with licensing a software solution and filing reports on proposed Form N–PORT in house); *see also supra* footnote 1474 (noting that our estimates did not account for economies of scale).

[1481] We anticipated that most of the burden associated with third-party aggregation and validation would be the result of creating an automated process, as discussed above, and thus would be a one-time burden. Accordingly, we estimated approximately 9 hours per fund for subsequent filings. This estimate was based on the 10.5 hours currently estimated for filings on Form N–Q, plus 30% to account for the amount of additional information that would be required to be filed on Form N–PORT, and subtracting 5 hours in recognition of the use of a third-party service provider to assist in the preparation and filing of reports on the form. Additionally, because we believe that the required information is generally maintained by funds pursuant to other regulatory requirements or in the ordinary course of business, estimated the per fund average annual hour burden associated with proposed Form N–PORT for 6,962 funds would be 159 hours for the first year [1482] and 108 hours for each subsequent year.[1483] Amortized over three years, the average aggregate annual hour burden would be 125 hours per fund.[1484]

In sum, we estimated that filing reports on proposed Form N–PORT would impose an average total annual hour burden of 1,537,572 on applicable funds.[1485]

In the Proposing Release, we noted that in addition to the costs associated with the hour burdens discussed above, funds would also incur other external costs in connection with reports on proposed Form N–PORT. Based on our experience with other structured data filings, we estimated that funds that would file reports on proposed Form N–PORT in house would license a third-party software solution to assist in filing their reports at an average cost of $4,805 per fund per year.[1486] In addition, we estimated that funds that would use a service provider to prepare and file reports on proposed Form N–PORT would pay an average fee of $11,440 per fund per year for the services of that third-party provider.[1487] In sum, we estimated that all applicable funds would incur on average, in the aggregate, external annual costs of $97,674,221.[1488]

We received two comments on proposed Form N–PORT's estimated hour and costs burdens. One commenter, who submitted a comment letter on behalf of certain asset management firms focused on alternative investment strategies, stated that the proposed estimates of hours and costs were not realistic.[1489] The commenter stated that, based on its outreach, several firms were currently spending more than 198 hours per year on investment company quarterly reporting. [1490] This commenter additionally noted that Form N–PORT requires more information than current quarterly reports, particularly for funds that implement ''alternative'' strategies, and must be filed monthly. The commenter also indicated that at least one firm they reached out to anticipated hiring one or more full-time equivalents to handle the reporting requirements. We do not agree with the commenter's suggestion that the burden estimates it compiled based on outreach to firms regarding their current time spent on quarterly reporting is necessarily inconsistent with the burden estimates we proposed. We understand that the burden will vary across funds depending on the size of the fund, the size of the fund complex, and the complexity of the portfolio, among other factors. The burden for some funds will exceed our estimate, and the burden for others will be less due to the nature of the fund. Also, while it is true that Form N–PORT will require more frequent reporting and information not currently required for quarterly reporting, not all requirements for quarterly reporting, such as reporting on a T + 0 basis, will be required on Form N–PORT. Thus, the commenter's estimates, which revolved around alternative strategy funds, appear to be within, but on the high end of the Commission's estimates.

Another commenter suggested that complying with Form N–PORT reporting requirements could cost $800,000 to $1,500,000 for the fund complex (of approximately 250 funds).[1491] The commenter specified that the initial burden associated with the proposed requirements would be over 6000 hours in total to conduct analysis, develop and test newly created interfaces between the reporting solution and internal and external data sources in an attempt to automate the collection, aggregation, and validation of data reported on Form N–PORT. The commenter further asserted that ongoing reporting requirements on Form N–PORT may require a support team of up to 10–15 members. The commenter's estimates of initial burden hours are therefore approximately 24 hours, based on a complex of 250 funds, lower than our proposed estimated initial filing burden of 44 hours per fund for fund filers filing in-house, and 60 hours per fund for fund filers retaining a third party service provider. Assuming the support team was 15 members (*i.e.,* the high end of the range set forth by the commenter), and a 2,000 hours work year, the commenter's annual estimated burden to file reports on Form N–PORT would be approximately 120 hours per fund.[1492] This is in the range of our proposed annual estimate of 168 hours per year for fund filers filing in house and 108 hours per year for fund filers retaining a third-party service provider. Finally, assuming that the dollar estimates that the commenter cited of between $800,000 to $1,500,000 were additional external costs of reporting on Form N–PORT, the commenter's estimated external costs would be between $3,200 and $6,000 per fund. These are in the range of our estimated external costs per fund (not including monetization of internal burden hours) of $4,805 per year for fund filers filing in house, and $11,440 per year for fund filers using a service provider.

As discussed above, our adoption includes some modifications from the proposal that address concerns raised by commenters and that are intended, in part, to decrease reporting and implementation burdens relative to the proposal.[1493] We believe that our modifications from the proposal will reduce the estimated initial burden hours associated with implementation of Form N–PORT reporting requirements, relative to the proposal, particularly for funds that will be required to report risk metrics or custom derivatives transactions but will not affect external costs or ongoing burden hours. Based on our review of funds and the new reporting requirements, we

for the purposes of our analysis, we did not ascribe any time to collecting the required information. *See also supra* footnote 1474 (noting that our estimates did not account for economies of scale).

1482 The estimate is based on the following calculation: (1 filing × 60 hours) + (11 filings × 9 hours) = 159 burden hours per year.

1483 The estimate is based on the following calculation: 12 filings × 9 hours = 108.

1484 The estimate is based on the following calculation: (159 + (108 × 2))/3 = 125.

1485 The estimate is based on the following calculation: (3,749 × 178 hours) + (6,962 × 125 hours) = 1,537,572.

1486 We estimated that money market funds that file reports on Form N–MFP in house license a third-party software solution for approximately $3,696 per fund per year. Due to the increased volume and complexity of the information that will be filed in reports pursuant to proposed Form N–PORT, we increased our external cost estimate for funds filing in house on proposed Form N–PORT by 30% (or $1,109).

1487 We estimated that money market funds that file reports on Form N–MFP through a third-party service provider pay approximately $8,800 per fund per year. Due to the increased volume and complexity of the information that will be filed in reports pursuant to proposed Form N–PORT, we increased our estimate for funds filing through a third-party service provider on proposed Form N–PORT by 30% (or $2,640).

1488 This estimate is based on the following calculation: (3,749 funds that will file reports on proposed Form N–PORT in house × $4,809 per fund, per year) + (6,962 funds that will file reports on proposed Form N–PORT using a third-party service provider × $11,440 per fund, per year) = $97,674,221.

1489 *See* Simpson Thacher Comment Letter.

1490 *See id.* The commenter noted that in the Proposing Release that we estimated 198 burden hours in the first year, and 168 hours thereafter ''for each investment company.'' As noted in the proposing release, 168 hours was the Commission's ''per fund'' burden hour estimate for the first year for funds preparing and filing the reports in house, where ''fund'' is a registered management investment company *and any separate series thereof.* It is not clear from the comment letter whether firms that provided estimates to the commenter were providing estimated burdens for quarterly reporting per fund series, per investment company, or per fund complex. For purposes of the PRA, however, we conservatively assume it is per fund series.

1491 *See* Invesco Comment Letter.

1492 15 members × 2000 hours = 30,000 hours. 30,000 hours/250 funds = 120 hours.

1493 *See supra* section III.B.2.

believe that, on average, the initial burden to file reports on Form N–PORT will decrease by 0.5 hours, resulting in an initial burden of 43.5 hours per fund for the 35% of funds that choose to file reports on Form N–PORT in-house, and 59.5 hours for the 65% of funds that choose to retain a third-party service provider.[1494]

We have revised our estimate of the number of funds that will file Form N–PORT upward from 10,710 funds to 11,382 funds to reflect updates to the industry data figures that were utilized in the Proposing Release.[1495] We continue to estimate that 35% of funds (3,984 funds, updated from 3,749 in our proposal) will license a software solution and file reports on Form N–PORT in house, and 65% of funds (7,398 funds, updated from 6,962 funds in our proposal) will retain the services of a third party to provide data aggregation, validation and/or filing services as part of the preparation and filing of reports on Form N–PORT.[1496] The Commission estimates that, on an annual basis, funds generally will incur in the aggregate 1,959,423 burden hours in the first year and an additional 1,468,296 burden hours for filings in subsequent years in order to comply with Form N–PORT filing requirements.[1497] Amortized over three years, the total annual hour burden of filing reports on Form N–PORT will be 1,632,005 hours, with an average annual hour burden of 143 hours per fund.[1498]

We further estimate the total annual external cost burden of compliance with the information collection requirements of Form N–PORT will be $103,787,680, or $9,118 per fund.[1499]

2. Rescission of Form N–Q

In connection with our adoption of Form N–PORT, and as proposed, our reforms will rescind Form N–Q in order to eliminate unnecessarily duplicative reporting requirements. The rescission of Form N–Q will affect all management investment companies required to file reports on the form.

In our proposal, we estimated that each fund requires an average of approximately 21 hours per year to prepare and file two reports on Form N–Q annually, for a total estimated annual burden of 219,513 hours.[1500] We received no comments on this estimate.

We have revised our estimate of the number of funds that would file Form N–Q upward from 10,453 funds to 11,863 funds to reflect updates to the industry data figures that were utilized in the Proposing Release.[1501] Accordingly, we estimate that, in the aggregate, our rescission would eliminate 249,123 annual burden hours that would be associated with filing Form N–Q.[1502] Additionally, we estimate that there are no external costs associated with the certification requirement or with preparation of reports on Form N–Q in general.

B. Census Reporting

1. Form N–CEN

As amended, rule 30a–1 will require all funds to file reports on Form N–CEN with the Commission on an annual basis.[1503] Similar to current Form N–SAR, Form N–CEN requires reporting with the Commission of certain census-type information. However, unlike Form N–SAR, which requires semi-annual reporting for all management investment companies, Form N–CEN requires annual reporting.[1504] Form N–CEN will be a collection of information under the PRA and is designed to facilitate the Commission's oversight of funds and its ability to monitor trends and risks. This new collection of information will be mandatory for all funds, and responses will not be kept confidential.

In the Proposing Release, we estimated that the Commission would receive an average of 3,146 reports per year, based on the number of existing Form N–SAR filers.[1505] We estimated that management investment companies would each spend as much as 13.35 hours annually, preparing and filing reports on proposed Form N–CEN.[1506] The Commission further estimated that UITs, including separate account UITs, would each spend as much as 9.11 hours annually, preparing and filing reports on proposed Form N–CEN, since a UIT would be required to respond to fewer items.[1507]

As discussed below, we estimated that management investment companies each spend as much as 15.35 hours preparing and filing each report on Form N–SAR. We noted that we generally sought with proposed Form N–CEN, where appropriate, to simplify and decrease the census-type reporting burdens placed on registrants by current Form N–SAR. For example, we noted that proposed Form N–CEN would reduce the number of attachments that may need to be filed with the reports and largely eliminate financial statement-type information from the reports. Additionally, we noted our belief that reports in XML on proposed Form N–CEN would be less burdensome to produce than the reports on Form N–SAR currently required to be filed using outdated technology. Accordingly, for management investment companies we believe the estimated hour burden for filing reports on proposed Form N–CEN should be a reduced burden from the hour burden associated with Form N–SAR.[1508] As such, we estimated that the

[1494] *See supra* footnotes 1474 (estimating an initial burden of 44 hours per fund in the Proposing Release for the 35% of funds that choose to file reports on Form N–PORT in-house) and 1480 (estimating an initial burden of 60 hours per fund in the Proposing Release for the 65% of funds that choose to retain a third-party service provider).

[1495] This estimate of 11,382 funds includes 9,039 mutual funds (excluding money market funds), 1,594 ETFs (including eight ETFs organized as UITs and 1,586 ETFs that are management investment companies), and 749 closed-end funds (excluding SBICs). Based on data obtained from the ICI and reports filed by registrants on Form N–SAR. *See supra* footnote 1259 and accompanying and following text; *see also* 2016 ICI Fact Book, *supra* footnote 2, at 22, 176.

[1496] These estimates are based on the following calculations: 3,749 funds = 11,382 funds × 0.35. 7,398 funds = 11,382 funds × 0.65.

[1497] These estimates are based on the following calculations: 1,959,423 hours in the first year = (3,984 funds × 43.5 hours for the first filing for funds filing in-house) + (3,984 funds × 14 hours for each subsequent filing × 11 filings) + (7,398 funds × 59.5 hours for the first filing for funds retaining a third-party service provider) + (7,398 funds × 9 hours for each subsequent filing × 11 filings). 1,468,296 hours in subsequent years = (3,984 funds filing in-house × 14 hours × 12 filings) + (7,398 funds retaining a third-party service provider × 9 hours × 12 filings).

[1498] These estimates are based on the following calculations: 1,632,005 hours amortized over three years = (1,959,423 hours + (1,468,296 hours × 2))/3. 143 hours per fund = 1,632,005 hours/11,382 funds.

[1499] These estimates are based on the following calculations: $103,776,240 = (3,984 funds × $4,805) + 7,398 funds × $11,440). $9,118 per fund = $103,787,680/11,382 funds.

[1500] This estimate is based on the following calculation: 219,513 hours per year = 10,453 funds × 10.5 hours × 2 filings per year. Management investment companies currently are required to file a quarterly report on Form N–Q after the close of the first and third quarters of each fiscal year.

[1501] This estimate of 11,863 funds includes 9,520 mutual funds (including money market funds), 1,594 ETFs, and 749 closed-end funds (excluding SBICs). Based on data obtained from the ICI and reports filed by registrants on Form N–SAR. *See supra* footnote 1259 and accompanying and following text; *see also* 2016 ICI Fact Book, *supra* footnote 2, at 22, 176.

[1502] This estimate is based on the following calculation: 249,123 hours per year = 11,863 funds × 10.5 hours × 2 filings per year.

[1503] For purposes of the PRA analysis, the burdens associated with amended rule 30a–1 are included in the collection of information estimates of Form N–CEN.

[1504] UITs are only required to file Form N–SAR on an annual basis. *See* rule 30a–1.

[1505] This estimate was based on 2,419 management companies and 727 UITs filing reports on Form N–SAR as of December 31, 2014.

[1506] Our estimate included the hourly burden associated with registering/maintaining LEIs for the registrant/funds, which would be required to be included in reports on Form N–CEN.

[1507] *See* Proposing Release, *supra* footnote 7, at 33675.

[1508] We note that reports on Form N–CEN would be filed annually, rather than semi-annually as in the case of reports on Form N–SAR. Thus, while we estimated that the burden associated with each annual hour burden for management companies would be 13.35 per report on proposed Form N–CEN, down from 15.35 hours per report for Form N–SAR.

In the Proposing Release, we also noted that UITs may, however, experience an increase in the hour burden associated with census-type reporting if proposed Form N–CEN were adopted because UITs would be required to respond to more items in the form than they are currently required to respond to under Form N–SAR. For example, UITs would be required to provide certain background information and attachments in their reports on proposed Form N–CEN, which they are not currently required to provide in their reports on Form N–SAR. As a result, we increased the estimated annual hour burden for each UIT from 7.11 hours in the currently approved collection for Form N–SAR to 9.11 hours for proposed Form N–CEN.

We also noted our belief that, in the first year reports on the form are filed, funds may require additional time to prepare and file reports. We estimated that, for the first year, each fund would each require 20 additional hours.[1509] Accordingly, we estimated that management investment companies would each require 33.35 annual burden hours in the first year [1510] and 13.35 annual burden hours in each subsequent year for preparing and filing reports on proposed Form N–CEN. Additionally, we estimated that UITs would each require 29.11 annual burden hours in the first year [1511] and 9.11 annual burden hours in each subsequent year for preparing and filing reports on proposed Form N–CEN.

In the Proposing Release, we further estimated that the average annual hour burden per response for proposed Form N–CEN for the first year would be 32.37 hours [1512] and 12.37 hours in subsequent years.[1513] Amortizing the burden over three years, we estimated that the average annual hour burden per fund per year would be 19.04 [1514] and the total aggregate annual hour burden would be 59,900.[1515]

With respect to the initial filing of a report on Form N–CEN, we estimated an external cost of $220 per fund and, with respect to subsequent filings, we estimated an annual external cost of $120 per fund.[1516] We estimated the amortized annual external cost per fund would be $153.[1517] We also estimated that no external cost burden was associated with Form N–SAR. External costs include the cost of goods and services, which with respect to reports on Form N–CEN, would include the costs of registering and maintaining an LEI for the registrant/funds.[1518] In sum, we estimated that all applicable funds would incur, in the aggregate, external annual costs of $1,748,637.[1519]

One commenter expressed the general belief that requiring census-type data on Form N–CEN on an annual basis, rather than on a semi-annual basis on Form N–SAR, would significantly lessen reporting burdens for funds and lower costs for fund shareholders when compared to the status quo.[1520] We agree and continue to believe the estimated hour and cost burdens associated with Form N–CEN estimated in the Proposing Release reflect this reduction in burdens and costs. With the exception of this comment, we did not receive comments on the estimated hour and costs burdens discussed above associated with reporting census-type information on Form N–CEN.

As discussed above, our adoption of Form N–CEN includes a number of modifications or clarifications from the proposal that address concerns raised by commenters and that are intended, in part, to decrease reporting and implementation burdens relative to the proposal. For example, we have extended the filing period for Form N–CEN from 60 days, as proposed, to 75 days to, in part, respond to commenters' concerns that 60 days would not provide funds the time necessary to collect, verify, and report information on Form N–CEN.[1521] We also have modified the proposal by moving the management's statement regarding a change in independent public accountant originally filed on Form N–SAR from an attachment to Form N–CEN, as proposed, to an exhibit to Form N–CSR, thereby shifting burden associated with this exhibit filing from Form N–CEN to Form N–CSR. However, we recognize a few reporting items and sub-items have been added to the form that were not contemplated in the burden hours and costs we estimated in the Proposing Release. For example, we are adopting a requirement that a fund (other than a money market fund) provide its monthly average net assets during the reporting period,[1522] and we are also requiring the reporting of CRD numbers for directors.[1523]

We believe that certain of the modifications from and clarifications to the proposal that we are adopting today will generally reduce the estimated burden hours and costs associated with implementation of Form N–CEN reporting requirements relative to the proposal, while a few others will increase those estimates. For these reasons, we believe that the net effect of such modifications from the proposal will not have a net impact on the estimated burden hours and costs stated in the Proposing Release. Accordingly, we are not estimating a change to the proposed per-fund estimates as a result of the modifications we have made to the proposed requirements. The Commission, however, has modified the estimated increase in aggregate annual burden hours and external costs that will result from reporting requirements on Form N–CEN in light of updated data regarding the number of management investment companies and UITs.

We have revised our estimate of the number of reports on Form N–CEN per year downward from 3,146 reports to 3,113 reports to reflect updates to the industry data figures that were utilized

---

report on Form N–CEN for management companies would be two hours less than the burden associated with each report on Form N–SAR, we estimated that the annual Form N–CEN burden for management companies would actually be 17.35 hours less than that associated with Form N–SAR. This estimate is based on the following calculation: 15.35 Form N–SAR burden hours × 2 reports) − 13.35 Form N–CEN burden hours = 17.35 hours.

[1509] This additional time may be attributable to, among other things, reviewing and collecting new or revised data pursuant to the Form N–CEN requirements or changing the software currently used to generate reports on Form N–SAR in order to output similar data in a different format.

[1510] This estimate is based on the following calculation: 13.35 hours for each filing + 20 additional hours for the first filing = 33.35 hours.

[1511] This estimate was based on the following calculation: 9.11 hours for each filing + 20 additional hours for the first filing = 29.11 hours.

[1512] This estimate was based on the following calculation: ((2,419 management investment companies × 33.35 hours) + (727 UITs × 29.11 hours)) ÷ 3,146 total funds = 32.37 hours.

[1513] This estimate was based on the following calculation: ((2,419 management investment companies × 13.35 hours) + (727 UITs × 9.11 hours)) ÷ 3,146 total funds = 12.37 hours.

[1514] This estimate was based on the following calculation: (32.37 hours per management company in first year + (12.37 in each year thereafter × 2 years)) ÷ 3 years = 19.04 hours per year.

[1515] This estimate was based on the following calculation: 3,146 funds × 19.04 hours per fund per year = 59,900 hours per year.

[1516] *See* Proposing Release, *supra* footnote 7, at n.766 (discussing the costs associated with registering and maintaining an LEI).

[1517] This estimate was based on the following calculation: ($220 in first year + (2 years × $120 each subsequent year)) ÷ 3 years = $153 per year.

[1518] *See* Item B.1.d and Item C.1.c of Form N–CEN (requiring LEI for the registrant and each series of a management company).

[1519] This estimate was based on the following calculation: $153 per year per fund × 11,429 funds = $1,748,637 per year.

[1520] *See* ICI Comment Letter.

[1521] *See supra* section II.D.3.

[1522] *See supra* footnotes 1016–1021 and accompanying and following text.

[1523] *See supra* footnotes 823–824 and accompanying text.

in the Proposing Release.[1524] We continue to estimate that management investment companies will each spend as much as 13.35 hours annually, preparing and filing reports on Form N–CEN.[1525] The Commission also continues to estimate that UITs, including separate account UITs, will each spend as much as 9.11 hours annually, preparing and filing reports on Form N–CEN, since a UIT will be required to respond to fewer reporting items.[1526]

We continue to estimate that management investment companies currently spend as much as 15.35 hours preparing and filing each report on Form N–SAR, and note that we generally have sought to simplify and decrease the census-type reporting burdens placed on registrants by current Form N–SAR in adopting Form N–CEN. For example, Form N–CEN, as adopted, will reduce the number of attachments that may need to be filed with the reports and largely eliminate financial statement-type information from the reports. Additionally, we continue to believe that reports in XML on Form N–CEN will be less burdensome to produce than the reports on Form N–SAR currently required to be filed using outdated technology. Accordingly, for management investment companies we continue to believe that the estimated hour burden for filing reports on Form N–CEN should be a reduced burden from the hour burden associated with Form N–SAR.[1527] As such, we continue to estimate that the annual hour burden for management companies will be 13.35 per report on Form N–CEN, down from 15.35 hours per report for Form N–SAR.

We continue to believe that UITs may, however, experience an increase in the hour burden associated with census-type reporting on Form N–CEN because UITs will be required to respond to more items in the form than they are currently required to respond to under Form N–SAR. For example, UITs will be required to provide certain background information and attachments in their reports on Form N–CEN, which they are not currently required to provide in their reports on Form N–SAR. As a result, we continue to estimate an increase in the annual hour burden for UITs from 7.11 hours in the currently approved collection for Form N–SAR to 9.11 hours for Form N–CEN.

In addition, we continue to believe that, in the first year reports on the form are filed, funds may require additional time to prepare and file reports. Therefore, we continue to estimate that, for the first year, each fund will require 20 additional hours.[1528] Accordingly, we estimate that each management investment company will require 33.35 annual burden hours in the first year[1529] and 13.35 annual burden hours in each subsequent year for preparing and filing reports on Form N–CEN. Furthermore, we estimate that each UIT will require 29.11 annual burden hours in the first year[1530] and 9.11 annual burden hours in each subsequent year for preparing and filing reports on Form N–CEN.

We also continue to estimate (after rounding to the nearest hundredth of an hour) that the average annual hour burden per response for Form N–CEN for the first year will be 32.37 hours[1531] and 12.37 hours in subsequent years.[1532] Amortizing the burden over three years, we estimate that the average annual hour burden per fund per year will be 19.04 hours[1533] and the total aggregate annual hour burden will be 59,272 hours.[1534]

External costs include the cost of goods and services, which with respect to reports on Form N–CEN, will include the costs of registering and maintaining an LEI for the registrant/funds.[1535] We estimate an external cost of $219, rather than $220 per fund with respect to the initial filing of a report on Form N–CEN, and we estimate an annual external cost of $119, rather than $120 per fund with respect to subsequent filings, reflecting updates to the industry data figures that were utilized in the Proposing Release.[1536] Accordingly, we estimate the amortized annual external cost per registrants and fund will be $152 per year, rather than $153 per year as proposed.[1537] In sum, we estimate that all applicable funds will incur, in the aggregate, external annual costs of $2,088,176, rather than $1,748,637, reflecting updates to the industry data figures that were utilized in the Proposing Release.[1538]

2. Rescission of Form N–SAR

In connection with our adoption of new Form N–CEN, we are rescinding Form N–SAR in order to eliminate unnecessarily duplicative reporting requirements. This rescission will affect all management investment companies and UITs.

We received no comments on the estimates put forward in our proposal. Thus, as proposed, we estimate that the average annual hour burden per response for Form N–SAR is 15.35 hours for a management investment company and 7.11 hours for a UIT, since a UIT is required to answer fewer items.[1539] We have revised our estimate of the weighted average annual burden per response to about 14.27 hours to reflect updates to the industry data figures that were utilized in the Proposing Release.[1540] We therefore

[1524] This estimate is based on 2,392 management companies and 721 UITs filing reports on Form N–SAR as of December 31, 2015.

[1525] Our estimate includes the hourly burden associated with registering/maintaining LEIs for the registrant/funds, which would be required to be included in reports on Form N–CEN.

[1526] *See id.*

[1527] We note that reports on Form N–CEN will be filed annually, rather than semi-annually as in the case of reports on Form N–SAR. Thus, while we estimate that the burden associated with each report on Form N–CEN for management companies will be two hours less than the burden associated with each report on Form N–SAR, we estimate that the annual Form N–CEN burden for management companies will actually be 17.35 hours less than that associated with Form N–SAR. This estimate is based on the following calculation: (15.35 Form N–SAR burden hours per report × 2 reports per year) − 13.35 Form N–CEN burden hours per year = 17.35 hours per year.

[1528] This additional time may be attributable to, among other things, reviewing and collecting new or revised data pursuant to the Form N–CEN requirements or changing the software currently used to generate reports on Form N–SAR in order to output similar data in a different format.

[1529] This estimate is based on the following calculation: 13.35 hours for filings + 20 additional hours for the first filing = 33.35 hours.

[1530] This estimate is based on the following calculation: 9.11 hours for filings + 20 additional hours for the first filing = 29.11 hours.

[1531] This estimate is based on the following calculation: ((2,392 management investment companies × 33.35 hours per management investment company in the first year) + (721 UITs × 29.11 hours per UIT in the first year)) ÷ 3,113 total funds = 32.37 hours in the first year.

[1532] This estimate is based on the following calculation: ((2,392 management investment companies × 13.35 hours per subsequent year) + (721 UITs × 9.11 hours per subsequent year)) ÷ 3,113 total funds = 12.37 hours per subsequent year.

[1533] This estimate is based on the following calculation: (32.37 hours in first year + (12.37 per subsequent year × 2 years)) ÷ 3 years = 19.04 hours per year.

[1534] This estimate is based on the following calculation: 3,113 funds × 19.04 hours per year = 59,272 hours per year.

[1535] *See* Item B.1.d and Item C.1.c of Form N–CEN (requiring LEI for the registrant and each management company).

[1536] *See supra* footnote 63 (discussing the costs associated with registering and maintaining an LEI).

[1537] This estimate is based on the following calculation: ($219 in the first year + ($119 per subsequent year × 2 years)) ÷ 3 years = $152 per year.

[1538] This estimate is based on the following calculation: $152 per registrant or fund per year × (3,113 investment company registrants + 9,039 mutual funds (which reflects the number of mutual fund series, but excludes money market funds, which would have already obtained LEIs pursuant to the requirements of Form N–MFP) + 1,586 ETFs (excluding 8 UITs that are not ETFs)) = $152 per fund per year × 13,738 registrants and funds = $2,088,176 per year.

[1539] *See* Proposing Release, *supra* footnote 7, at n.724.

[1540] This estimate is based on the following calculation: (15.35 hours per management investment company per response × 2,392 management investment companies × 2 responses estimate an aggregate annual hour burden of about 78,561 hours.[1541]

Accordingly, we estimate that, in the aggregate, the rescission will eliminate the 78,561 annual burden hours that would be associated with filing Form N–SAR. Additionally, we estimate that there are no external costs associated with preparation of reports on Form N–SAR.

C. Amendments to Regulation S–X

As discussed above, we are adopting certain amendments to Articles 6 and 12 of Regulation S–X. As outlined in section II.C. above, the amendments would: (1) Require new, standardized disclosures regarding fund holdings in open futures contracts, open forward foreign currency contracts, and open swap contracts, and additional disclosures regarding fund holdings of written and purchased options contracts; (2) update the disclosures for other investments and investments in and advances to affiliates, as well as reorganize the order in which some investments are presented; and (3) amend the rules regarding the general form and content of fund financial statements.[1542]

1. Rule 30e–1

Section 30(e) of the Investment Company Act requires every registered investment company to transmit to its stockholders, at least semiannually, reports containing such information and financial statements or their equivalent, as of a reasonably current date, as the Commission may prescribe by rules and regulations.[1543] Rule 30e–1 generally requires management investment companies to transmit to their shareholders, at least semi-annually, reports containing the information that is required to be included in such reports by the fund's registration statement form under the Investment Company Act.[1544] Pursuant to this rule and Forms N–1A and N–2, management investment companies are required to include the financial statements required by Regulation S–X in their shareholder reports.[1545]

Rule 30e–1 also permits, under certain conditions, delivery of a single shareholder report to investors who share an address (''householding'').[1546] Specifically, rule 30e–1 permits householding of annual and semi-annual reports by management companies to satisfy the transmission requirements of rule 30e–1 if, in addition to the other conditions set forth in the rule, the management company has obtained from each applicable investor written or implied consent to the householding of shareholder reports at such address. The rule requires management companies that wish to household shareholder reports with implied consent to send a notice to each applicable investor stating, among other things, that the investors in the household will receive one report in the future unless the investors provide contrary instructions. In addition, at least once a year, management companies relying on the householding provision must explain to investors who have provided written or implied consent how they can revoke their consent.

Compliance with the disclosure requirements of rule 30e–1 is mandatory. Responses to the disclosure requirements are not kept confidential.

Based on staff conversations with fund representatives, we previously estimated that it takes approximately 84 hours per fund to comply with the collection of information associated with rule 30e–1, including the householding requirements. This time is spent, for example, preparing, reviewing, and certifying the reports. The previously total estimated annual hour burden of responding to rule 30e–1 was approximately 898,968 hours.[1547]

In the Proposing Release, we estimated that 11,230 management companies would have to comply with these amendments.[1548] In addition, we estimated that the amendments would likely increase the time spent preparing, reviewing and certifying reports, if adopted. The extent to which a fund's burden would increase as a result of the proposed amendments would depend on the extent to which the fund invests in the instruments covered by many of the amendments. We estimated that, on an annual basis, funds generally would incur an additional 9 burden hours in the first year[1549] and an additional 3 burden hours for filings in subsequent years in order to comply with the proposed amendments.[1550] Amortized over three years, we estimated that the average annual hour burden associated with the amendments for Regulation S–X would be 5 hours per fund.[1551] Accordingly, we estimated a total annual average hour burden associated with the amendments would be 56,150.[1552]

We also estimated an annual external cost burden of compliance with the information collection requirements of rule 30e–1, which is currently $31,061 per fund, would not change as a result of the proposed amendments to

---

per year + 7.11 hours per UIT per response × 721 UITs) ÷ (2,392 management companies × 2 responses per management company per year + 721 UITs × 1 response per management company per year) = 78,561 hours ÷ 5,505 responses per year = ~14.27 hours per response. The numbers of management investment companies and UITs are based on data obtained from the ICI and reports filed by registrants on Form N–SAR. *See supra* footnotes 2 and 1259 and accompanying and following text; *see also* 2016 ICI Fact Book, *supra* footnote 2, at 22, 176.

[1541] This estimate is based on the following calculation: ~14.27 hours per response × (2,392 management companies × 2 responses per management company per year + 721 UITs × 1 response per management company per year) = ~14.27 hours per response × 5,505 responses per year = ~78,561 hours per year.

[1542] Our amendments would also require prominent placement of disclosures regarding investments in derivatives in a fund's financial statements, rather than allowing such schedules to be placed in the notes to the financial statements. *See supra* section II.C.

[1543] Section 30(e).

[1544] Rule 30e–1.

[1545] *See* Item 27 of Form N–1A; and Item 24 of Form N–2.

[1546] *See* rule 30e–1(f).

[1547] This estimate is based on the following calculation: 84 hours per fund × 10,702 funds (the estimated number of portfolios the last time the rule's information collections were submitted for PRA renewal in 2015) = 898,968 hours.

[1548] *See* Proposing Release, *supra* footnote 7, at n. 777. As noted in the Proposing Release, this estimate included 9,259 mutual funds (including money market funds), 1,403 ETFs (1,411 ETFs − 8 UIT ETFs) and 568 closed-end funds.

[1549] With respect to the amendments to Article 6 of Regulation S–X, we estimated that each fund would spend an average of 5 hours to initially comply with the amendments. For example, amendments to Article 6–07.1 would likely require funds to identify non-cash income and put a process in place to capture it in the financial statements. In addition, some funds would also likely move their schedules from financial statement notes to the financial statements themselves. With respect to the amendments requiring disclosure of the components of a custom basket/index, some funds voluntarily provide this disclosure now, but others do not; we recognized that funds would be affected by this requirement differently depending on their investments.

With respect to the amendments to Article 12 of Regulation S–X, we estimated each fund would spend an average of four hours to initially comply with the amendments. For example, while accounting guidance already requires funds to identify the level of each security (such as Level 3 securities), we estimated there will be an increased burden in adding another note to the financial statements. This increased burden would vary depending on the information already reported by funds in their financial statements. Likewise, while many funds voluntarily identify illiquid securities in their schedule of investments, the funds that do not make this disclosure would bear an initial burden to comply with these amendments.

[1550] With respect to the amendments to Article 6 of Regulation S–X, we estimated each fund would require two hours to comply with the requirements in each subsequent year. We likewise estimated that each fund would require one hour to comply with the requirements of the proposed amendments to Article 12 in each subsequent year.

[1551] Proposing Release, *supra* footnote 7, at n. 780. The estimate was based on the following calculation: (9 hours + (3 hours × 2))/3 = 5.

[1552] *See id.*, at n. 781. The estimate was based on the following calculation: 5 hours × 11,230 management investment companies = 56,150.

Regulation S–X.[1553] We further estimated that the total annual external cost burden for rule 30e–1 would be $348,815,030.[1554] External costs included, for example, the costs for funds to prepare, print, and mail the reports.

We did not receive any comments on the estimated hour and costs burdens relating to our proposed amendments to Regulation S–X. As discussed above, our adoption includes numerous modifications or clarifications from the proposal that address concerns raised by commenters and that are intended, in part, to decrease reporting and implementation burdens relative to the proposal. For example, we are limiting the requirement for nonpublic indexes to require funds to only report the top 50 components of the index or custom basket and any components that represent more than one percent of the notional value of the index or custom basket.[1555] In order to eliminate the unnecessary disclosure of immaterial amounts of non-cash income, we adopted a 5 percent de minimis reporting threshold for reporting non-cash income, such as payment-in-kind interest.[1556] We also eliminated our proposed securities lending disclosures in fund financial statements in favor of disclosures that would be made in a fund's Statement of Additional Information (or, for closed-end funds, reports on Form N–CSR) and in Form N–CEN.[1557] In Article 12 of Regulation S–X, in response to commenter concerns, and as more fully discussed above in section II.C.4, we eliminated proposed disclosure requirements relating to the liquidity of securities and federal income tax basis.[1558] We also eliminated a proposal to require funds to categorize the schedule of securities by type of investment, the related industry, *and* the related country, or geographic region.[1559]

However, for variable rate securities, we are now requiring funds to provide disclosure of both a description of reference rate and spread and the end of period interest rate, rather than just the reference rate that we proposed, which may add additional burdens on funds.[1560]

For these and other reasons, we believe that our modifications from and clarifications to the proposal will, on a net basis, generally reduce the burden hours and costs associated with implementation of Regulations-X's reporting requirements relative to the proposal. However, although we did not receive any comments specifically addressing the burden estimates for our proposed amendments to Regulation S–X, we recognize that several commenters, although they did not provide quantitative estimates, suggested that implementation of the proposed new reporting requirements, generally would be costly.[1561] Based, in part, on the shifting of the securities lending disclosures to the Statement of Additional Information (or, for closed-end funds, reports on Form N–CSR) and Form N–CEN, as well as the other modification discussed above, we estimate that funds will incur a reduction of 2 burden hours in the first year and a reduction of .5 hours for filings in subsequent years from our proposed estimates.

The Commission has also modified the estimated increase in annual burden hours and total time costs that will result from the amendments based on updated industry data. We have revised our estimate of the number of management companies that will have to comply with the amendments to Regulation S–X upward from 11,230 management companies to 11,859 management companies to reflect updates to the industry data figures that were utilized in the Proposing Release.[1562] The Commission now estimates that, on an annual basis, funds generally will incur an additional 7 burden hours in the first year and an additional 2.5 burden hours for filings in subsequent years in order to comply with the proposed amendments. Amortized over three years, the average aggregate annual hour burden associated with the amendments for Regulation S–X will be 4 hours per fund.[1563] We therefore estimate an average total annual hour burden associated with the amendments of 47,436.[1564]

We continue to estimate an annual external cost burden of compliance with the information collection requirements of rule 30e–1, which is currently $31,061 per fund, will not change as a result of the proposed amendments to Regulation S–X.[1565] We further estimate that the total annual external cost burden for rule 30e–1 will be $368,352,399.[1566]

2. Rule 30e–2

Rule 30e–2 requires registered UITs that invest substantially all of their assets in shares of a management investment company to send their unitholders annual and semiannual reports containing financial information on the underlying company.[1567] Specifically, rule 30e–2 requires that the report contain all the applicable information and financial statements or their equivalent, required by rule 30e–1 under the Investment Company Act to be included in reports of the underlying fund for the same fiscal period.[1568] Rule 30e–2 also permits UITs to rely on the householding provision in rule 30e–1 to transmit a single shareholder report to investors who share an address.[1569]

Compliance with the disclosure requirements of rule 30e–2 is mandatory. Responses to the disclosure requirements are not kept confidential.

As noted in the Proposing Release, the Commission previously estimates that the annual burden associated with rule 30e–2, including the householding requirements, was 121 hours per respondent. The Commission further estimated the total annual hour burden was approximately 91,960 hours.[1570]

As discussed above, we are adopting certain amendments to Articles 6 and 12

[1553] Because the proposed amendments would largely reorganize information currently reported by funds in their financial statements, either voluntarily or because it is required, we did not believe the external costs, such as printing and mailing costs, would increase as a result of the amendments.

[1554] *See* Proposing Release, *supra* footnote 7, at n. 783. This estimate was based on the following calculation: 11,230 funds × $31,061 = $348,815,030. The total annual cost burden of rule 30e–1 was $333,905,750, which reflected the higher estimated number of funds subject to rule 30e–1 at the time of the last renewal for the rule.

[1555] *See supra* sections II.C.2.a and II.C.2.d.

[1556] *See supra* section II.C.6

[1557] *Id.*

[1558] *See supra* section II.C.4.

[1559] *See supra* section II.C.3.

[1560] *See id.*

[1561] *See, e.g.,* Simpson Thacher Comment Letter; and Fidelity Comment Letter.

[1562] This estimate included 9,520 mutual funds (including money market funds), 1,589 ETFs (1,594, ETFs − 5 UIT ETFs) and 750 closed-end funds and was based on internal SEC data as well as ICI statistics as of December 31, 2015, *available at http://www.ici.org/research/stats.*

[1563] The estimate is based on the following calculation: (7 hours + (2.5 hours × 2))/3 = 4.

[1564] The estimate is based on the following calculation: 4 hours × 11,859 management investment companies = 47,436.

[1565] We continue to believe that amendments will largely reorganize information currently reported by funds in their financial statements, either voluntarily or because it is required and will therefore not result in an increase of external costs, such as printing and mailing costs.

[1566] This estimate is based on the following calculation: 11,859 funds × $31,061 = $368,352,399.

[1567] Rule 30e–2.

[1568] As discussed above, rule 30e–1 (together with Forms N–1A and N–2) essentially requires management investment companies to transmit to their shareholders, at least semi-annually, reports containing the financial statements required by Regulation S–X.

[1569] *See* rule 30e–2(b); *see also supra* footnote 1546 and accompanying text.

[1570] This estimate is based on the following calculations: 700 UITs (the estimated number of UITs the last time the rule's information collections were submitted for PRA renewal in 2015) × 121 hours per UIT = 84,700.

of Regulation S–X that will increase the time spent preparing, reviewing and certifying reports.[1571] The extent to which a UIT's burden increases as a result of the adopted amendments will depend on the extent to which an underlying fund invests in the instruments covered by many of the amendments.

In the Proposing Release, we estimated that there were 727 UITs that may be subject to the proposed amendments.[1572] We also estimated that, on an annual basis, UITs generally would incur an additional 9 burden hours in the first year and an additional 3 burden hours for filings in subsequent years in order to comply with the proposed amendments. Amortized over three years, we estimated that the average annual hour burden associated with the proposed amendments would be 5 hours per fund.[1573] Accordingly, we estimated that the total average annual hour burden associated with the proposed amendments to Regulation S–X would be 3,635 hours.[1574]

In addition, we estimated that the annual external cost burden of compliance with the information collection requirements of rule 30e–2, which are currently $20,000 per respondent, would not change as a result of the proposed amendments to Regulation S–X.[1575] We further estimated that the total annual external cost burden for rule 30e–2 would be $14,540,000.[1576] External costs include, for example, the costs for the funds to prepare, print, and mail the reports.

We did not receive any comments on the estimated hour and costs burdens. For the reasons discussed above, we now estimate that funds will incur a reduction of 2 burden hours in the first year and a reduction of .5 hours for filings in subsequent years from our proposed costs. The Commission has also modified the estimated increase in annual burden hours and total time costs that will result from the amendments based on updated industry data. We have revised our estimate of the number of UITs that will have to comply with the amendments to Regulation S–X downward from 727 UITs to 721 UITs to reflect updates to the industry data figures that were utilized in the Proposing.[1577] For the reasons discussed above, we now estimate that, on an annual basis, UITs generally will incur an additional 7 burden hours in the first year[1578] and an additional 2.5 burden hours for filings in subsequent years in order to comply with the amendments to Regulation S–X.[1579] Amortized over three years, we now estimate that the average annual hour burden associated with the amendments will be 4 hours per fund.[1580] We therefore estimate a total average annual hour burden associated with the amendments to Regulation S–X will be 2,884 hours.[1581]

In addition, we estimate that the annual external cost burden of compliance with the information collection requirements of rule 30e–2, which are currently $20,000 per respondent, will not change as a result of the amendments to Regulation S–X.[1582] We further estimate that the total annual external cost burden for rule 30e–2 will be $14,420,000.[1583]

D. Amendments to Registration Statement Forms

As discussed above, we are amending Forms N–1A, N–2, N–3, N–4, and N–6.[1584] We are adopting amendments to Forms N–1A and N–3 to require certain disclosures in fund Statements of Additional Information regarding securities lending activities.[1585] We are also amending Forms N–1A, N–2, N–3, N–4, and N–6 to exempt funds from those forms' respective books and records disclosure requirements if the information is provided in a fund's most recent report on Form N–CEN.[1586]

Form N–1A is the form used by open-end management investment companies to register under the Investment Company Act and/or register their securities under the Securities Act. Form N–2 is the form used by closed-end management investment companies to register under the Investment Company act and register their securities under the Securities Act. Form N–3 is the form used by separate accounts offering variable annuity contracts which are organized as management investment companies to register under the Investment Company Act and/or register their securities under the Securities Act. Form N–4 is the form used by insurance company separate accounts organized as unit investment trusts that offer variable annuity contracts to register under the Investment Company Act and/or register their securities under the Securities Act. Form N–6 is the form used by insurance company separate accounts organized as unit investment trusts that offer variable life insurance policies to register under the Investment Company Act and/or register their securities under the Securities Act. Compliance with the disclosure requirements of Forms N–1A, N–2, N–3, N–4, and N–6 is mandatory. Responses to the disclosure requirements are not kept confidential.

Currently, we estimate the following total hour burden for each of the relevant forms:

[1571] As discussed above, the amendments will: (1) Require new, standardized disclosures regarding fund holdings in open futures contracts, open forward foreign currency contracts, and open swap contracts, and additional disclosures regarding fund holdings of written and purchased options contracts; (2) update the disclosures for other investments and investments in and advances to affiliates, as well as reorganize the order in which some investments are presented; and (3) amend the rules regarding the general form and content of fund financial statements. In addition, our amendments will also require prominent placement of disclosures regarding investments in derivatives in a fund's financial statements, rather than allowing such schedules to be placed in the notes to the financial statements.

[1572] *See* Proposing Release, *supra* footnote 7, at n. 789. This estimate was based on the number of UITs that filed Form N–SAR with the Commission as of December 31, 2014.

[1573] The estimate was based on the following calculation: (9 hours + (3 hours × 2))/3 = 5.

[1574] The estimate was based on the following calculation: 5 hours × 727 UITs = 3,635.

[1575] *See supra* footnote 1553.

[1576] This estimate is based on the following calculation: 727 UITs × $20,000 = $14,540,000. The current total annual cost burden of rule 30e–2 is $15,200,000, which reflects the higher estimated number of UITs at the time of the last renewal for the rule. *See supra* footnote 1570.

[1577] This estimate is based on the number of UITs that filed Form N–SAR with the Commission as of December 31, 2015.

[1578] *See supra* footnotes 1562–1563 and accompanying text.

[1579] *See id.*

[1580] The estimate is based on the following calculation: (7 hours + (2.5 hours × 2))/3 = 4.

[1581] The estimate is based on the following calculation: 4 hours × 721 UITs = 2,884.

[1582] *See supra* footnote 1553.

[1583] This estimate is based on the following calculation: 721 UITs × $20,000 = $14,420,000. The current total annual cost burden of rule 30e–2 is $15,200,000, which reflects the higher estimated number of UITs at the time of the last renewal for the rule.

[1584] *See supra* section II.F; footnotes 807–809 and accompanying text.

[1585] *See* Item 19(i) of Form N–1A; Item 21(j) of Form N–3; *see also supra* section II.F. We proposed similar requirements be included in fund financial statements as part of the proposed amendments to Regulation S–X. *See* proposed rule 6–03(m) of Regulation S–X; Proposing Release, *supra* footnote 7, at 33624.

[1586] *See* footnotes 807–809 and accompanying text.

FORM	TOTAL BURDEN HOURS
N-1A	1,579,974
N-2	86,533
N-3	3,104
N-4	343,117
N-6	85,269

In the Proposing Release, we estimated that 11,957 funds would have to comply with the proposed amendments to Regulation S–X, including, among other things, the proposed new disclosure in the notes to financial statements relating to a fund's securities lending activities.[1587]

In the Proposing Release, we estimated that the total hour burden for each respective form would not change as a result of the proposed amendments concerning books and records disclosures.[1588] We estimated, however, that the amendments to Regulation S–X—including the new required disclosures in the notes to the financial statements concerning the fund's securities lending activities, but also a number of other amendments—would result in funds incurring an additional 9 burden hours in the first year and an additional 3 burden hours for filings in subsequent years.[1589] Amortized over three years, the average additional annual hour burden was estimated to be 5 hours per fund.[1590] Accordingly, we estimated that the total annual average hour burden associated with the amendments would be 59,785 hours.[1591] We did not receive any comments on the estimated hour burden.

We continue to estimate no change in burden hours as a result of the books and records disclosures. However, we now estimate that those forms—*viz.,* Forms N–1A and N–3—that include the new disclosure requirements concerning securities lending activities would impose part, but not all, of the additional hour burden previously estimated for Regulation S–X as funds may need to collect, collate, tabulate, present, and review the information in order to prepare the required Statement of Additional Information disclosures. We estimate that 9,502 and 16 funds per year could file registration statements or amendments to registration statements on Forms N–1A and N–3, respectively. We estimate that funds will incur an additional 2 burden hours in the first year and an additional 0.5 hours for filings in subsequent years. Amortized over three years, the average additional annual hour burden will therefore be 1 hour per fund.[1592] Accordingly, we estimate that the total annual average hour burden associated with the amendments to Forms N–1A and N–3 is, respectively, 9,504,[1593] and 16 hours.[1594] For Forms N–4 and N–6, to which the securities lending activity disclosure requirement amendments do not apply, we continue to estimate total annual hour burden of 343,117 hours and 85,269 hours, respectively.

In the Proposing Release, for both the books and records amendments and the Regulation S–X requirement, of which the securities lending requirements were a part, we estimated that there would be no changes to the annual external cost burden per fund as a result of the amendments, and accordingly estimated no change to the current estimated total external cost burden associated with the forms.[1595] We did not receive any comments on the estimated external cost burden. We therefore continue to estimate no change to the external cost burden as a result of the amendments, and so we continue to estimate the total cost burden for each of the respective forms as follows:

FORM	TOTAL COST BURDEN
N-1A	$124,820,197
N-2	$5,488,048
N-3	$205,180
N-4	$36,308,889
N-6	$5,316,892

E. Amendments to Form N–CSR

As previously discussed above, we are adopting, as proposed, the rescission of Form N–Q.[1596] In connection with the rescission of Form N–Q, we also are adopting, as proposed, amendments to Form N–CSR, the reporting form used by management companies to file certified shareholder reports under the Investment Company Act and the Exchange Act.[1597] Form N–Q currently

[1587] We estimated in the Proposing Release that 11,230 management companies would be required to comply with the amendments. Proposing Release, *supra* footnote 7, at 33676. We also estimated that 727 UITs may be subject to the proposed amendments. Proposing Release, *supra* footnote 7, at 33677. 11,230 management companies + 727 UITs = 11,957.

[1588] Proposing Release, *supra* footnote 7, at 33681.

[1589] Proposing Release, *supra* footnote 7, at 33676–77.

[1590] 9 hours in first year + (3 hours per year thereafter × 2 years) = 9 hours + 6 hours = 15 hours total. 15 hours total ÷ 3 years = 5 hours per year.

[1591] 11,957 funds × 5 hours per fund = 59,785.

[1592] 2 hours in first year + (0.5 hours per year thereafter × 2 years) = 2 hours + 1 hour = 3 hours total. 3 hours total ÷ 3 years = 1 hour per year.

[1593] 1 hour per fund × 9,504 funds per year = 9,504 hours per year.

[1594] 1 hour per fund × 16 funds per year = 16 hours per year.

[1595] Proposing Release, *supra* footnote 7, at 33677, 33681.

[1596] *See supra* section III.B.

[1597] *See* Proposing Release, *supra* footnote 7, at section V.E.

requires principal executive and financial officers of the fund to make certifications for the first and third fiscal quarters relating to (1) the accuracy of information reported to the Commission, and (2) disclosure controls and procedures and internal control over financial reporting.[1598] The rescission of Form N–Q adopted today eliminates these certifications.

Form N–CSR requires similar certification with respect to the fund's second and fourth fiscal quarters. As a result of the rescission of Form N–Q adopted today, we are also adopting amendments to the form of certification in Form N–CSR to require each certifying officer to state that he or she has disclosed in the report any change in the registrant's internal control over financial reporting that occurred during the most recent fiscal half-year, rather than the registrant's most recent fiscal quarter as currently required by the form.[1599] Lengthening the look-back of this certification to six months, so that the certifications on Form N–CSR for the semi-annual and annual reports will cover the first and second fiscal quarters and third and fourth fiscal quarters, respectively, will fill the gap in certification coverage that would otherwise occur once the rescission of Form N–Q is effective. As proposed, compliance with the amended certification requirements will be mandatory and responses are not kept confidential.

In addition, as discussed above, we are moving the change in independent public accountant attachment proposed on Form N–CEN to Form N–CSR so that an accountant's letter regarding a change in accountant will become available to the public semi-annually rather than annually.[1600] We are also adopting amendments to require closed-end funds to report on Form N–CSR certain disclosures regarding securities lending activities.[1601]

In the Proposing Release, we estimated that the current annual burden associated with Form N–CSR is 14.42 hours per fund[1602] and that the current total annual time burden for Form N–CSR is 177,799 hours.[1603] We noted that the amount and content of the information contained in the reports filed on Form N–CSR would not change as the result of the proposed amendments to the certification requirements of Form N–CSR and that funds likely already have policies and procedures in place to assist officers in their certifications of this information. Accordingly, we estimated that the proposed amendments to the certification requirements of Form N–CSR would not change the annual hour burden associated with Form N–CSR and, thus, we continued to estimate the annual hour burden associated with Form N–CSR to be 14.42 hours per fund. With respect to the total annual hour burden, however, we estimated 161,937 hours.[1604] We noted that this decrease in the current total annual hour burden was a result of the decrease in the number of funds estimated to file Form N–CSR.

In addition, in the Proposing Release, we also estimated that the current annual cost of outside services associated with Form N–CSR is approximately $129 per fund.[1605] We noted our belief that external costs would include the cost of goods and services purchased to prepare and update filings on Form N–CSR. We also expressed our belief that those costs would not change as a result of the proposed amendments to the certification requirements of Form N–CSR and, thus, continued to estimate a current external cost burden of $129 per fund to file Form N–CSR. In the Proposing Release, we further estimated that the total annual external cost burden for Form N–CSR would be $2,897,340.[1606]

We did not receive any comments on the estimated hour and cost burdens associated with our proposed amendments to the certification requirements of Form N–CSR. As discussed above, we are adopting amendments to modify Form N–CSR so that an accountant's letter regarding a change in accountant will become available to the public semi-annually pursuant to an exhibit filing on Form N–CSR rather than annually as an attachment to Form N–CEN, as proposed.[1607] We believe that this modification from the proposal will increase the hour burden associated with Form N–CSR by one-tenth of an hour[1608] with an additional internal cost burden of $32.40 per fund.[1609] In addition, as noted above, we are adopting an amendment to require closed-end funds include in their annual reports on Form N–CSR information concerning securities lending activities. We estimate that this amendment will increase the hour burden associated with Form N–CSR for closed-end funds by an additional 2 burden hours with an additional internal cost burden of $648 per fund in the first year,[1610] and an additional 0.5 hours with an additional internal cost burden of $162 per fund for filings in subsequent years.[1611] We have modified the estimated increase in annual burden hours and total time costs that will result from amendments to Form N–CSR adopted today in light of these modifications and updated data on industry earnings estimates.

For purposes of the PRA analysis, we estimate that the annual burden associated with Form N–CSR is 14.52 hours per fund.[1612] For closed-end funds, we estimate that the annual burden associated with Form N–CSR is 16.52 hours per fund in the first year and 15.02 for filings in subsequent

[1598] *See supra* footnote 521 and accompanying text.

[1599] *See* Item 11(b) of Form N–CSR; paragraph 5(b) of certification exhibit of Item 11(a)(2) of Form N–CSR.

[1600] *See supra* section II.D.4.b.

[1601] *See* Item 12 of Form N–CSR; *see also supra* footnote 1181 and accompanying text.

[1602] This estimate accounted for two filings per year. In addition, we noted that the estimate did not separately account for the certifications on Form N–CSR.

[1603] This estimate was based on the following calculation: 14.42 hours × 12,330 funds (the estimated number of funds the last time the rule's information collections were submitted for PRA renewal in 2013)).

[1604] This estimate was based on the following calculation: 11,230 funds × 14.42 hours = 161,937. *See supra* footnote 1548 (calculating the estimate for 11,230 funds).

[1605] We estimated that the external costs associated with Form N–CSR would not include the external costs associated with the shareholder report. The external costs associated with the shareholder report are accounted for under the collections of information related to rules 30e–1 and 30e–2 under the Investment Company Act.

[1606] This estimate was based on the following calculation: 11,230 funds × $129 = $1,448,670; $1,448,670 × 2 times per year = $2,897,340. We noted that the current total annual cost burden of Form N–CSR at the time of the Proposing Release was $3,189,771, which reflected the higher estimated number of filers for Form N–CSR at the time of the last renewal for the form. *See supra* footnote 1603.

[1607] *See supra* section III.B.3.

[1608] Paralleling this modification, we believe that the modification to move the change in independent public accountant exhibit from Form N–CEN as proposed to Form N–CSR will also reduce the hour burden requirement associated with Form N–CEN by one-tenth of an hour. *See supra* section IV.B.1.

[1609] This estimate is based on the following calculation: 0.10 hour × $324 (blended hourly rate for compliance attorney ($340) and senior programmer ($308) = $32.40.

[1610] This estimate is based on the following calculation: 2 hours × $324 (blended hourly rate for compliance attorney ($340) and senior programmer ($308) = $648.

[1611] This estimate is based on the following calculation: 0.5 hour × $324 (blended hourly rate for compliance attorney ($340) and senior programmer ($308) = $162.

[1612] This estimate is based on the following calculation: 14.52 = 14.42 + 0.10. This estimate accounts for two filings per year. We note that this estimate does not separately account for the certifications on Form N–CSR or the securities lending activities information annual reporting requirement for closed-end funds on Form N–CSR.

years.[1613] Amortized over three years, the average additional annual hour burden will therefore be 1 hour per closed-end fund.[1614] Accordingly, we estimate that, for closed-end funds, the total annual average hour burden associated with the amendments to Form N–CSR related to securities lending activities is 750 hours.[1615] We have revised our estimate of the total annual hour burden downward from 177,799 hours to 172,899 hours to reflect updates to the industry data figures that were utilized in the Proposing Release as well as the increase in the hour burdens resulting from the amendments.[1616] This decrease in the total annual hour burden is a result of the decrease in the number of funds estimated to file Form N–CSR, from our estimate of 12,330 funds in the Proposing Release to our current estimate of 11,856 funds.

In addition, as stated in the Proposing Release, we continue to estimate that the annual cost of outside services associated with Form N–CSR is approximately $129 per fund.[1617] Based on updated statistics regarding the number of funds, we estimate that the total annual external cost burden for Form N–CSR will be $3,058,848, rather than $2,897,340 as we estimated in the Proposing Release.[1618]

V. Final Regulatory Flexibility Analysis

This Final Regulatory Flexibility Analysis (''FRFA'') has been prepared in accordance with section 4(a) of the Regulatory Flexibility Act (''RFA'').[1619] It relates to new Form N–PORT and new Form N–CEN and amendments to Form N–CSR, amendments to Regulation S–X, the rescission of Forms N–Q and N–SAR, and amendments to Forms N–1A, N–2, N–3, N–4, and N–6. An Initial Regulatory Flexibility Analysis (''IRFA'') was prepared in accordance with the RFA and included in the Proposing Release.[1620]

A. Need for and Objectives of the Forms and Form Amendments and Rules and Rule Amendments

The Commission collects certain information about the funds that it regulates. The Commission is adopting new rules, rule amendments, and new forms and form amendments that will improve the quality of information that funds report to the Commission, benefitting the Commission's risk monitoring and oversight, examination, and enforcement programs.

We believe that these new rules, rule amendments, and new forms and form amendments will improve the information that funds report to their shareholders and the Commission. In addition, the new forms will require reports be filed in a structured data format (XML) to allow for easier collection and analysis of data by Commission staff and the public. This is the format used by Form N–MFP, Form 13F, and Form D, which greatly improves the ability of Commission staff and other potential users to aggregate and analyze the data reported.

The Commission's objective is to gain more timely and useful information about funds' operations and portfolio holdings. The Commission also believes that its risk monitoring and oversight, examination, and enforcement programs will be improved by requiring enhanced information from funds.

B. Significant Issues Raised by Public Comments

In the Proposing Release, we requested comment on every aspect of the IRFA, including the number of small entities that would be affected by the proposed amendments, the existence or nature of the potential impact of the proposals on small entities discussed in the analysis and how to quantify the impact of the proposed rules.

One commenter noted that the rulemaking will place an ''undue work and financial burden'' on small closed-end funds.[1621] The commenter also noted that a closed-end fund that is not listed on an exchange, a small number of assets under management, and limited holdings should be required to file reports on Form N–PORT quarterly, as opposed to monthly.[1622] Commenters also generally noted the high cost of the rulemaking.[1623] Other commenters generally requested more time in order to comply with the new forms, rules, and rule amendments.[1624]

As we noted above,[1625] we believe that, in order to ensure that the Commission and its staff receive timely information, it is appropriate to require that funds file reports on Form N–PORT within 30 days of month-end. Although reports on Form N–MFP are required to be filed within 5 days of month end, we recognize that preparing reports on Form N–PORT will initially require a significant effort by funds.[1626] Therefore, we have determined to require a 30-day filing period for reports on Form N–PORT in order to balance the Commission's need for timely information with the operational burdens of reporting. Moreover, lag times of more than 30 days would make monthly reporting impractical, as reports would overlap with preparation time.[1627] We also note that several commenters noted that reporting on the same basis used to calculate NAV (generally a T+1 basis), which the Form now explicitly requires, as opposed to a T+0 basis, which is used for financial reporting, will reduce the estimated time to gather the information.[1628] As a result, we are adopting our requirement for reports on Form N–PORT to be filed with the Commission within 30 days of month-end.[1629] Moreover, given the nature and frequency of filings on Form

[1613] This estimate is based on the following calculation: 16.52 = 14.52 + 2. 15.02 = 14.52 + 0.5.

[1614] This estimate is based on the following calculation: 2 hours in first year + (0.5 hours per year thereafter × 2 years) = 2 hours + 1 hour = 3 hours total. 3 hours total ÷ 3 years = 1 hour per year.

[1615] This estimate is based on the following calculation: 1 hour per fund × 750 closed-end funds per year = 750 hours per year.

[1616] This estimate is based on the following calculation: 172,899 = (750 hours (closed-end funds)) + (172,149 hours (14.52 hours × (1,594 exchange-traded funds—eight organized as UITs + 750 closed-end funds + 481 money market funds + 9,039 other mutual funds))). *See supra* footnote 1259 and accompanying and following text.

[1617] We estimate that the external costs associated with Form N–CSR will not include the external costs associated with the shareholder report. The external costs associated with the shareholder report are accounted for under the collections of information related to rules 30e–1 and 30e–2 under the Investment Company Act.

[1618] This estimate is based on the following calculation: 11,856 funds × $129 = $1,529,424; $1,529,424 × 2 times per year = $3,058,848. *See supra* footnote 1603.

[1619] 5 U.S.C. 603.

[1620] *See* Proposing Release, *supra* footnote 7, at section VI.

[1621] *See* Carol Singer Comment Letter.

[1622] *Id.; see also* Schnase Comment Letter (noting that monthly reporting on Form N–PORT would be particularly burdensome on smaller funds).

[1623] *See, e.g.,* Schnase Comment Letter (''I am not convinced this is a cost better or more efficiently borne by the fund rather than the data users and sellers, particularly for smaller funds already struggling to meet costly filing requirements.''); Wahh Comment Letter; Carol Singer Comment Letter.

[1624] *See, e.g.,* Simpson Thacher Comment Letter (''With respect to the Commission's proposed compliance dates for the new reporting requirements, we are concerned that the timeline outlined in the Release is too aggressive for smaller investment company complexes.'').

[1625] *See supra* section II.A.3.

[1626] *See supra* section III.B.3.

[1627] Dreyfus Comment Letter (advocating for bi-monthly or quarterly reporting, with 45–60 days to file reports on Form N–PORT).

[1628] *See* Schwab Comment Letter (reporting that converting from T+1 to T+0 accounting would add approximately 6–10 days to the process of compiling data for Form N–PORT). While commenters acknowledged that reporting holdings on a T+1 basis would save time vis a vis compiling data for month-end reporting, they still noted that they would need more than 30 days after month-end to file reports on Form N–PORT. *See* Invesco Comment Letter; *but see* SIFMA Comment Letter I (requesting that funds be given the option to report on either a T+0 or T+1 basis).

[1629] *See* General Instruction A of proposed Form N–PORT.

N–PORT, we are adopting a delayed compliance period for small entities that will file reports on Form N–PORT.[1630] Specifically, for smaller entities (*i.e.,* funds that together with other investment companies in the same ''group of related investment companies'' have net assets of less than $1 billion as of the end of the most recent fiscal year), we are providing for an extra 12 months (or 30 months after the effective date) to comply with the new reporting requirements.

Apart from commenter concerns discussed above regarding the costs and financial burdens associated with the overall rulemaking, commenters did not raise specific concerns about the impact of new Form N–CEN or the rescission of Form N–SAR on small entities. One commenter expressed the belief that annual filings on Form N–CEN would be appropriate but that some of the requested information on the form probably would not be applicable to small closed-end funds with certain characteristics.[1631] As discussed above, Form N–CEN reporting requirements depend on the type of registrant filing the report.[1632] For example, all funds, including small entities, will be required to complete Parts A, B, and G of the form (as applicable), and all management companies, except for SBICs, will be required to complete Part C. On the other hand, only closed-end funds and SBICs will be required to complete Part D and only ETFs and UITs will be required to complete Parts E and F, respectively. Thus, certain reporting requirements on Form N–CEN may or may not be applicable to small entities depending on the type of registrant.

C. Small Entities Subject to the Rule

An investment company is a small entity if, together with other investment companies in the same group of related investment companies, it has net assets of $50 million or less as of the end of its most recent fiscal year.[1633] Commission staff estimates that, as of December 2015, approximately 129 registered investment companies, including 117 open and closed-end funds (including one SBIC) and 12 UITs are small entities. The Commission staff further estimates that, as of December 2015, approximately 34 BDCs are small entities. Since the new forms and form amendments and new rules and rule amendments, pertain to all registered funds (subject to the limitations discussed in section V.D, below), all entities, including small entities, will be subject to the adopted rules. Specific reporting, recordkeeping, and other compliance requirements, in addition to the estimated number of small entities subject to the form and form amendments and rule and rule amendments, are discussed below.

D. Projected Reporting, Recordkeeping, and Other Compliance Requirements

The amendments would create, amend, or eliminate current reporting requirements for small entities.

1. Form N–PORT

Funds currently report portfolio holdings information quarterly on Form N–Q (first and third fiscal quarters) and Form N–CSR (second and fourth fiscal quarters). The Commission is adopting new Form N–PORT on which funds, other than MMFs, UITs, and SBICs, will be required to report portfolio holdings information and information related to liquidity, derivatives, securities lending, purchases and redemptions, and counterparty exposure each month. Funds will be required to file reports on Form N–PORT within 30 days after the end of the monthly period using a structured format. Only information reported for the third month of each quarter will be available to the public and such information would not be made public until 60 days after the end of the third month of the fund's fiscal quarter. For smaller funds and fund groups (*i.e.,* funds that together with other investment companies in the same ''group of related investment companies'' have net assets of less than $1 billion as of the end of the most recent fiscal year), which will include small entities, we are providing an extra 12 months (or 30 months after the effective date) to comply with the new Form N–PORT reporting requirements.

We received no comments on the IRFA analysis of new Form N–PORT or the estimated costs discussed above in sections III.B.3 and IV.A.1. Therefore, based on our experience with other structured data filings, we estimate that funds will prepare and file their reports on proposed Form N–PORT by either (1) licensing a software solution and preparing and filing the reports in house, or (2) retaining a service provider to provide data aggregation and validation services as part of the preparation and filing of reports on Form N–PORT on behalf of the fund. We estimate that approximately 117 open and closed-end funds (other than money market funds and SBICs), are small entities that will file, on a monthly basis, a complete report on Form N–PORT reporting certain information regarding the fund and its portfolio holdings. As discussed above, we estimate, for funds that choose to license a software solution to file reports on Form N–PORT, that completing, reviewing, and filing Form N–PORT will cost $56,682 for each fund, including small entities, in its first year of reporting and $47,465 per year for each subsequent year.[1634] We further estimate, for funds that choose to retain a third-party service provider to provide data aggregation and validation services as part of the preparation and filing of reports on Form N–PORT, that completing, reviewing, and filing Form N–PORT will cost $55,492 for each fund, including small entities, in its first year of reporting, and $39,214 per year for each subsequent year.[1635] We received no comments on the IRFA analysis of Form N–PORT, but discuss in detail comments received on our cost estimates in sections III.B.3 and IV.A.1 above.

2. Rescission of Form N–Q

Our proposal will rescind Form N–Q in order to eliminate unnecessarily duplicative reporting requirements. The rescission of Form N–Q will affect all management investment companies required to file reports on the form. We expect that approximately 117 open and closed-end funds are small entities that will be affected by the rescission of Form N–Q.

We received no comments on the IRFA analysis of the rescission of Form N–Q or the projected costs savings from rescinding Form N–Q. As discussed above, we estimate that the rescission of Form N–Q will save $6,804 per year for each fund, including small entities.[1636]

3. Form N–CEN

Funds currently report census type information relating to the fund's organization, service providers, fees and expenses, portfolio strategies and investments, portfolio transactions, and share transactions on Form N–SAR. Funds file this form semi-annually with the Commission, except for UITs, which must file such reports annually.[1637] The

[1630] *See supra* section II.H.1.

[1631] *See* Carol Singer Comment Letter.

[1632] *See supra* section II.D.2.

[1633] 17 CFR 270.0–10(a).

[1634] *See supra* footnotes 1300–1301 and accompanying text.

[1635] *See supra* footnotes 1302–1303 and accompanying text.

[1636] The estimated cost is based upon the following calculations: ($6,804 = 21 hours/fund × $324/hour compensation for professionals commonly used in preparation of Form N–Q filings.) $324 = $308 per hour for Senior Programmers + $340 per hour for compliance attorneys/2), as we believe these employees would commonly be responsible for completing reports on Form N–Q.

[1637] *See* rule 30b1–1 and rule 30a–1.

utility of the information reported on Form N–SAR has been limited for two reasons. First, the data items funds are required to report on Form N–SAR have not been updated to reflect current Commission staff needs. Second, the technology by which funds file reports on Form N–SAR has not been updated and limits the Commission staff's ability to extract and analyze reported data.

Because of these limitations, the Commission is replacing Form N–SAR with new Form N–CEN. This new form will streamline and update the required data items to reflect current Commission staff needs. Where possible, we have endeavored to exclude items from Form N–CEN that are disclosed or reported pursuant to other Commission forms, or are otherwise available; however, in some limited cases, we are collecting information on Form N–CEN that may be similarly disclosed or reported elsewhere because we believe it will be useful to have such information in a structured format to facilitate comparisons across funds. We also believe this format will allow for easier data analysis and use in the Commission's rulemaking, inspection, and risk monitoring functions and reduce burdens on filers. Finally, the Commission is requiring that funds file reports on Form N–CEN annually, opposed to semi-annually, which is currently required for Form N–SAR (except UITs, which currently must file reports annually).

We received no comments on the IRFA analysis of Form N–CEN, but discuss in detail comments received on our cost estimates in sections III.D.2, III.D.3, and IV.B.1, above. Therefore, we estimate that approximately 129 registered investment companies, including 117 open and closed-end funds (including one SBIC) and 12 UITs, are small entities that will be required to file a complete report on Form N–CEN. Although UITs are required to complete fewer items on Form N–CEN than other registered investment companies, the burden on UITs will increase because UITs will be required to respond to more items in Form N–CEN than they are currently required to respond to under Form N–SAR.

As discussed above, the Commission estimates that Form N–CEN filers, including small entities, would incur additional costs of $14.6 million each year and $20.2 million in one-time costs as a result of the form's reporting requirements.[1638]

4. Rescission of Form N–SAR

Our proposal will rescind Form N–SAR in order to eliminate unnecessarily duplicative reporting requirements. We estimate that approximately 129 registered investment companies that are small entities, including 117 open and closed-end funds (including one SBIC) and 12 UITs would be affected by the rescission of Form N–SAR.

As discussed above, the Commission estimates that rescinding Form N–SAR will save current Form N–SAR filers, including small entities, about $25.5 million per year.[1639] We received no comments on the IRFA analysis of the rescission of Form N–SAR or the projected expense savings from rescinding Form N–SAR.

5. Regulation S–X Amendments

The Commission is also amending Regulation S–X to require new, standardized disclosures regarding fund holdings in open futures contracts, open forward foreign currency contracts, and open swap contracts, and additional disclosures regarding fund holdings of written and purchased options, update the disclosures for other investments with conforming amendments, and amend the rules regarding the form and content of fund financial statements. We believe that the amendments we are adopting today are generally consistent with how many funds are currently reporting investments (including derivatives), and other information according to current industry practices. The Commission believes investors will benefit from our amendments because increased disclosure and standardization of fund holdings will improve comparability among funds including transparency for investors regarding a fund's use of derivatives and the liquidity of certain investments. The Commission also believes that greater clarity will benefit the industry, while any additional burdens will be reduced since similar disclosures will be required on Form N–PORT.

We received no comments on the IRFA analysis of the Regulation S–X amendments, which included the proposed securities lending activity disclosures, or on the estimated costs discussed above in section III.C.3

We therefore expect that approximately 129 registered investment companies, including 117 open and closed-end funds (including one SBIC) and 12 UITs and, approximately 34 BDCs, are small entities that will be affected by the amendments to Regulation S–X. As discussed above, we estimate that amending Regulation S–X will cost $1,911 for each fund, including small entities, in its first year of reporting, and $683 per year for each subsequent year.[1640] As discussed above, we further estimate that amending Regulation S–X will cost $1,911 for each UIT, including small entities, in its first year of reporting, and $683 per year for each subsequent year.[1641]

6. Amendments to Registration Statement Forms

We are amending Forms N–1A, N–2, N–3, N–4, and N–6 to exempt funds from those forms' respective books and records disclosures if the information is provided in a fund's most recent report on Form N–CEN.[1642] The books and records disclosures required by these registration statement forms are not provided in a structured format. We believe that having this information in a structured format will increase our efficiency in preparing for exams as well as our ability to identify current industry trends and practices and, therefore, are requiring that it be reported on Form N–CEN. We are also adopting amendments to Forms N–1A and N–3 to require certain disclosures in fund Statements of Additional Information regarding securities lending activities.[1643] We believe that investors and others will benefit from the additional transparency into the economic effects of fund securities lending activities that these requirements will yield.

As discussed above, in sections III.E and IV.D, we did not receive any comments on the estimated hour and cost burdens or quantitatively estimated economic benefits or costs associated with our amendments to fund registration statement forms, or on their IRFA analysis or our IRFA analysis of securities lending disclosures. We expect that approximately 90 registered investment companies, including 78 open-end funds and 12 UITs, and approximately 34 BDCs, are small entities that would be required to file registration statements on the amended forms. As discussed above, the Commission estimates that Form N–1A and N–3 filers, including small entities, would incur additional costs of $1.3 million each year and $3.9 million in

[1638] *See supra* section III.D.2. However, as discussed below, the annual costs of reporting on Form N–CEN would be offset by the rescission of Form N–SAR. *See id.*

[1639] *See supra* section III.D.2. However, as discussed above, the annual savings from the rescission of Form N–SAR would be partially offset by the reporting requirements of Form N–CEN. *See id.*

[1640] *See supra* section III.C.3.

[1641] *See id.*

[1642] *See supra* footnotes 807–809 and accompanying text.

[1643] *See supra* section II.F.

one-time costs as a result of the amendments to those forms.[1644]

7. Amendments to Form N–CSR

Form N–Q and Form N–CSR currently require a quarterly SOX certification relating to the accuracy of information reported to the Commission and disclosure controls and procedures and internal control over financial reporting. To facilitate the elimination of Form N–Q, we are expanding the SOX certification for Form N–CSR to six months to maintain coverage for the entire fiscal year. As discussed above, in section IV.E, we did not receive any comments on the estimated hour and cost burdens associated with our proposed amendments to the certification requirements of Form N–CSR. In addition, we also are moving the change in independent public accountant attachment proposed on Form N–CEN to Form N–CSR so that an accountant's letter regarding a change in accountant will become available to the public semi-annually rather than annually.[1645]

As discussed above, in sections III.B.3 and IV.E, we did not receive any comments on the estimated hour and cost burdens associated with our amendments to Form N–CSR or its IRFA analysis.

Therefore, we expect that approximately 129 registered investment companies, including 78 open-end funds, 39 closed-end funds (including one SBIC) and 12 UITs, are small entities that will be affected by the amendments to Form N–CSR. As discussed above, the Commission does not believe that the costs associated with reporting on Form N–CSR will change for funds, including small entities, as a result of the amendments to the certification requirements associated with Form N–CSR adopted today.[1646] We do estimate that the annual burden associated with filing reports on Form N–CSR will increase from 14.42 to 14.52 per registrant in light of moving the change in independent public accountant attachment proposed on Form N–CEN to Form N–CSR.[1647] In addition, we estimate that the amendment to require closed-end funds to report on Form N–CSR certain disclosures regarding securities lending activities will increase the hour burden associated with Form N–CSR for closed-end funds by an additional 2 burden hours in the first year and an addition 0.5 hours for filings in subsequent years.[1648]

[1644] *See supra* section III.E.3.

[1645] *See supra* section II.D.4.b.

[1646] *See supra* section III.B.3.

[1647] *See supra* footnote 1612 and accompanying text.

[1648] *See supra* footnote section IV.E.

E. Agency Action To Minimize Effect on Small Entities

The RFA directs the Commission to consider significant alternatives that would accomplish our stated objective, while minimizing any significant economic impact on small entities. The Commission considered the following alternatives for small entities in relation our forms and form amendments and rules and rule amendments: (i) Establishing different reporting requirements or frequency to account for resources available to small entities; (ii) using performance rather than design standards; and (iii) exempting small entities from all or part of the proposal.

Small entities currently follow the same requirements that large entities do when filing reports on Form N–SAR, Form N–CSR, and Form N–Q. The Commission believes that establishing different reporting requirements or frequency for small entities would not be consistent with the Commission's goal of industry oversight and investor protection. However, as discussed above, we are adopting a delayed compliance period for small entities that will file reports on Form N–PORT.

VI. Statutory Authority

We are adopting the rules and forms contained in this document under the authority set forth in the Securities Act, particularly, section 19 thereof [15 U.S.C. *77a et seq.*], the Trust Indenture Act, particularly, section 319 thereof [15 U.S.C. 77aaa *et seq.*], the Exchange Act, particularly, sections 10, 13, 15, 23, and 35A thereof [15 U.S.C. 78a *et seq.*], the Investment Company Act, particularly, sections 8, 30, and 38 thereof [15 U.S.C. 80a *et seq.*], and 44 U.S.C. 3506, 3507.

List of Subjects

■ 3. The authority citation for part 210 continues to read as follows:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77aa(25), 77aa(26), 77nn(25), 77nn(26), 78c, 78j–1, 78*l,* 78m, 78n, 78o(d), 78q, 78u–5, 78w, 78*ll,* 78mm, 80a–8, 80a–20, 80a–29, 80a–30, 80a–31, 80a–37(a), 80b–3, 80b–11, 7202 and 7262, unless otherwise noted.

■ 4. Effective January 17, 2017, revise § 210.6–01 and the undesignated heading preceding it to read as follows:

Registered Investment Companies and Business Development Companies

§ 210.6–01 Application of §§ 210.6–01 to 210.6–10.

Sections 210.6–01 to 210.6–10 shall be applicable to financial statements filed for registered investment companies and business development companies.

■ 5. Effective January 17, 2017, revise § 210.6–03 to read as follows:

§ 210.6–03 Special rules of general application to registered investment companies and business development companies.

The financial statements filed for persons to which §§ 210.6–01 to 210.6–10 are applicable shall be prepared in accordance with the following special rules in addition to the general rules in §§ 210.1–01 to 210.4–10 (Articles 1, 2, 3, and 4). Where the requirements of a special rule differ from those prescribed in a general rule, the requirements of the special rule shall be met.

(a) *Content of financial statements.* The financial statements shall be prepared in accordance with the requirements of this part (Regulation S–X) notwithstanding any provision of the articles of incorporation, trust indenture or other governing legal instruments specifying certain accounting procedures inconsistent with those required in §§ 210.6–01 to 210.6–10.

(b) *Audited financial statements.* Where, under Article 3 of this part, financial statements are required to be audited, the independent accountant shall have been selected and ratified in accordance with section 32 of the Investment Company Act of 1940 (15 U.S.C. 80a–31).

(c) *Consolidated and combined statements.* (1) Consolidated and combined statements filed for registered investment companies and business development companies shall be prepared in accordance with §§ 210.3A–01 to 210.3A–04 (Article 3A) except that:

(i) Statements of the registrant may be consolidated only with the statements of subsidiaries which are investment companies;

(ii) A consolidated statement of the registrant and any of its investment company subsidiaries shall not be filed unless accompanied by a consolidating statement which sets forth the individual statements of each significant subsidiary included in the consolidated statement: *Provided, however,* That a consolidating statement need not be filed if all included subsidiaries are totally held; and

(iii) Consolidated or combined statements filed for subsidiaries not consolidated with the registrant shall not include any investment companies unless accompanied by consolidating or combining statements which set forth the individual statements of each included investment company which is a significant subsidiary.

(2) If consolidating or combining statements are filed, the amounts included under each caption in which financial data pertaining to affiliates is required to be furnished shall be subdivided to show separately the amounts:

(i) Eliminated in consolidation; and

(ii) Not eliminated in consolidation.

(d) *Valuation of investments.* The balance sheets of registered investment companies, other than issuers of face-amount certificates, and business development companies, shall reflect all investments at value, with the aggregate cost of each category of investment reported under §§ 210.6–04.1, 6–04.2, 6–04.3 and 6–04.9 or the aggregate cost of each category of investment reported under § 210.6–05.1 shown parenthetically. State in a note the methods used in determining value of investments. As required by section 28(b) of the Investment Company Act of 1940 (15 U.S.C. 80a–28(b)), *qualified* assets of face-amount certificate companies shall be valued in accordance with certain provisions of the Code of the District of Columbia. For guidance as to valuation of securities, see §§ 404.03 to 404.05 of the Codification of Financial Reporting Policies.

(e) *Qualified assets.* State in a note the nature of any investments and other assets maintained or required to be maintained, by applicable legal instruments, in respect of outstanding face-amount certificates. If the nature of the qualifying assets and amount thereof are not subject to the provisions of section 28 of the Investment Company Act of 1940 (15 U.S.C. 80a–28), a statement to that effect shall be made.

(f) *Restricted securities.* State in a note unless disclosed elsewhere the following information as to investment securities which cannot be offered for public sale without first being registered under the Securities Act of 1933 (15 U.S.C. 77a *et seq.*) (restricted securities):

(1) The policy of the person with regard to acquisition of restricted securities.

(2) The policy of the person with regard to valuation of restricted securities. Specific comments shall be given as to the valuation of an investment in one or more issues of securities of a company or group of affiliated companies if any part of such investment is restricted and the aggregate value of the investment in all

issues of such company or affiliated group exceeds five percent of the value of total assets. (As used in this paragraph, the term *affiliated* shall have the meaning given in § 210.6–02(a).)

(3) A description of the person's rights with regard to demanding registration of any restricted securities held at the date of the latest balance sheet.

(g) *Income recognition.* Dividends shall be included in income on the ex-dividend date; interest shall be accrued on a daily basis. Dividends declared on short positions existing on the record date shall be recorded on the ex-dividend date and included as an expense of the period.

(h) *Federal income taxes.* (1) The company's status as a *regulated investment company* as defined in subtitle A, chapter 1, subchapter M of the Internal Revenue Code, as amended, shall be stated in a note referred to in the appropriate statements. Such note shall also indicate briefly the principal assumptions on which the company relied in making or not making provisions for income taxes. However, a company which retains realized capital gains and designates such gains as a distribution to shareholders in accordance with section 852(b)(3)(D) of the Internal Revenue Code shall, on the last day of its taxable year (and not earlier), make provision for taxes on such undistributed capital gains realized during such year.

(2) State the following amounts based on cost for Federal income tax purposes:

(i) Aggregate gross unrealized appreciation for all investments in which there is an excess of value over tax cost;

(ii) The aggregate gross unrealized depreciation for all investments in which there is an excess of tax cost over value;

(iii) The net unrealized appreciation or depreciation; and

(iv) The aggregate cost of investments for Federal income tax purposes.

(i) *Issuance and repurchase by a registered investment company or business development company of its own securities.* Disclose for each class of the company's securities:

(1) The number of shares, units, or principal amount of bonds sold during the period of report, the amount received therefor, and, in the case of shares sold by closed-end management investment companies, the difference, if any, between the amount received and the net asset value or preference in involuntary liquidation (whichever is appropriate) of securities of the same class prior to such sale; and

(2) The number of shares, units, or principal amount of bonds repurchased during the period of report and the cost thereof. Closed-end management investment companies shall furnish the following additional information as to securities repurchased during the period of report:

(i) As to bonds and preferred shares, the aggregate difference between cost and the face amount or preference in involuntary liquidation and, if applicable net assets taken at value as of the date of repurchase were less than such face amount or preference, the aggregate difference between cost and such net asset value;

(ii) As to common shares, the weighted average discount per share, expressed as a percentage, between cost of repurchase and the net asset value applicable to such shares at the date of repurchases.

Note to paragraphs (h)(2)(i) and (ii): The information required by paragraphs (h)(2)(i) and (ii) of this section may be based on reasonable estimates if it is impracticable to determine the exact amounts involved.

(j) *Series companies.* (1) The information required by this part shall, in the case of a person which in essence is comprised of more than one separate investment company, be given as if each class or series of such investment company were a separate investment company; this shall not prevent the inclusion, at the option of such person, of information applicable to other classes or series of such person on a comparative basis, except as to footnotes which need not be comparative.

(2) If the particular class or series for which information is provided may be affected by other classes or series of such investment company, such as by the offset of realized gains in one series with realized losses in another, or through contingent liabilities, such situation shall be disclosed.

(k) *Certificate reserves.* (1) For companies issuing face-amount certificates subsequent to December 31, 1940 under the provisions of section 28 of the Investment Company Act of 1940 (15 U.S.C. 80a–28), balance sheets shall reflect reserves for outstanding certificates computed in accordance with the provisions of section 28(a) of the Act.

(2) For other companies, balance sheets shall reflect reserves for outstanding certificates determined as follows:

(i) For certificates of the installment type, such amount which, together with the lesser of future payments by certificate holders as and when accumulated at a rate not to exceed 3½ per centum per annum (or such other rate as may be appropriate under the circumstances of a particular case) compounded annually, shall provide the minimum maturity or face amount of the certificate when due.

(ii) For certificates of the fully-paid type, such amount which, as and when accumulated at a rate not to exceed 3½ per centum per annum (or such other rate as may be appropriate under the circumstances of a particular case) compounded annually, shall provide the amount or amounts payable when due.

(iii) Such amount or accrual therefor, as shall have been credited to the account of any certificate holder in the form of any credit, or any dividend, or any interest in addition to the minimum maturity or face amount specified in the certificate, plus any accumulations on any amount so credited or accrued at rates required under the terms of the certificate.

(iv) An amount equal to all advance payments made by certificate holders, plus any accumulations thereon at rates required under the terms of the certificate.

(v) Amounts for other appropriate contingency reserves, for death and disability benefits or for reinstatement rights on any certificate providing for such benefits or rights.

(l) *Inapplicable captions.* Attention is directed to the provisions of §§ 210.4–02 and 210.4–03 which permit the omission of separate captions in financial statements as to which the items and conditions are not present, or the amounts involved not significant. However, amounts involving directors, officers, and affiliates shall nevertheless be separately set forth except as otherwise specifically permitted under a particular caption.

■ 6. Effective January 17, 2017, revise § 210.6–04 to read as follows:

§ 210.6–04 Balance sheets.

This section is applicable to balance sheets filed by registered investment companies and business development companies except for persons who substitute a statement of net assets in accordance with the requirements specified in § 210.6–05, and issuers of face-amount certificates which are subject to the special provisions of § 210.6–06. Balance sheets filed under this rule shall comply with the following provisions:

Assets

1. *Investments in securities of unaffiliated issuers.*

2. *Investments in and advances to affiliates.* State separately investments in and advances to: (a) Controlled companies and (b) other affiliates.

3. *Other investments.* State separately amounts of assets related to (a) variation margin receivable on futures contracts, (b) forward foreign currency contracts; (c) swap contracts; and (d) investments—other than those presented in §§ 210.12–12, 12–12A, 12–12B, 12–13, 12–13A, 12–13B, and 12–13C.

4. *Cash.* Include under this caption cash on hand and demand deposits. Provide in a note to the financial statements the information required under § 210.5–02.1 regarding restrictions and compensating balances.

5. *Receivables.* (a) State separately amounts receivable from (1) sales of investments; (2) subscriptions to capital shares; (3) dividends and interest; (4) directors and officers; and (5) others.

(b) If the aggregate amount of notes receivable exceeds 10 percent of the aggregate amount of receivables, the above information shall be set forth separately, in the balance sheet or in a note thereto, for accounts receivable and notes receivable.

6. *Deposits for securities sold short and other investments.* State separately amounts held by others in connection with: (a) Short sales; (b) open option contracts (c) futures contracts, (d) forward foreign currency contracts; (e) swap contracts; and (f) investments—other than those presented in §§ 210.12–12, 12–12A, 12–12B, 12–13, 12–13A, 12–13B, and 12–13C.

7. *Other assets.* State separately (a) prepaid and deferred expenses; (b) pension and other special funds; (c) organization expenses; and (d) any other significant item not properly classified in another asset caption.

8. *Total assets.*

Liabilities

9. *Other investments.* State separately amounts of liabilities related to: (a) Securities sold short; (b) open option contracts written; (c) variation margin payable on futures contracts, (d) forward foreign currency contracts; (e) swap contracts; and (f) investments—other than those presented in §§ 210.12–12, 12–12A, 12–12B, 12–13, 12–13A, 12–13B, and 12–13C.

10. *Accounts payable and accrued liabilities.* State separately amounts payable for: (a) Other purchases of securities; (b) capital shares redeemed; (c) dividends or other distributions on capital shares; and (d) others. State separately the amount of any other liabilities which are material.

11. *Deposits for securities loaned.* State the value of securities loaned and indicate the nature of the collateral received as security for the loan, including the amount of any cash received.

12. *Other liabilities.* State separately (a) amounts payable for investment advisory, management and service fees; and (b) the total amount payable to: (1) Officers and directors; (2) controlled companies; and (3) other affiliates, excluding any amounts owing to noncontrolled affiliates which arose in the ordinary course of business and which are subject to usual trade terms.

13. *Notes payable, bonds and similar debt.* (a) State separately amounts payable to: (1) Banks or other financial institutions for borrowings; (2) controlled companies; (3) other affiliates; and (4) others, showing for each category amounts payable within one year and amounts payable after one year.

(b) Provide in a note the information required under § 210.5–02.19(b) regarding unused lines of credit for short-term financing and § 210.5–02.22(b) regarding unused commitments for long-term financing arrangements.

14. *Total liabilities.*

15. *Commitments and contingent liabilities.*

Net Assets

16. *Units of capital.* (a) Disclose the title of each class of capital shares or other capital units, the number authorized, the number outstanding, and the dollar amount thereof.

(b) Unit investment trusts, including those which are issuers of periodic payment plan certificates, also shall state in a note to the financial statements: (1) The total cost to the investors of each class of units or shares; (2) the adjustment for market depreciation or appreciation; (3) other deductions from the total cost to the investors for fees, loads and other charges, including an explanation of such deductions; and (4) the net amount applicable to the investors.

17. *Accumulated undistributed income (loss).* Disclose:

(a) The accumulated undistributed investment income-net,

(b) accumulated undistributed net realized gains (losses) on investment transactions, and (c) net unrealized appreciation (depreciation) in value of investments at the balance sheet date.

18. *Other elements of capital.* Disclose any other elements of capital or residual interests appropriate to the capital structure of the reporting entity.

19. *Net assets applicable to outstanding units of capital.* State the net asset value per share.

■ 7. Effective January 17, 2017, revise § 210.6–05 to read as follows:

§ 210.6–05 Statements of net assets.

In lieu of the balance sheet otherwise required by § 210.6–04, persons may substitute a statement of net assets if at least 95 percent of the amount of the person's total assets are represented by investments in securities of unaffiliated issuers. If presented in such instances, a statement of net assets shall consist of the following:

Statements of Net Assets

1. A schedule of investments in securities of unaffiliated issuers as prescribed in § 210.12–12.

2. The excess (or deficiency) of other assets over (under) total liabilities stated in one amount, except that any amounts due from or to officers, directors, controlled persons, or other affiliates, excluding any amounts owing to noncontrolled affiliates which arose in the ordinary course of business and which are subject to usual trade terms, shall be stated separately.

3. Disclosure shall be provided in the notes to the financial statements for any item required under § 210.6–04.3 and §§ 210.6–04.9 to 210.6–04.13.

4. The balance of the amounts captioned as *net assets.* The number of outstanding shares and net asset value per share shall be shown parenthetically.

5. The information required by (i) § 210.6–04.16, (ii) § 210.6–04.17 and (iii) § 210.6–04.18 shall be furnished in a note to the financial statements.

■ 8. Effective January 17, 2017, revise § 210.6–07 to read as follows:

§ 210.6–07 Statements of operations.

Statements of operations filed by registered investment companies, other than issuers of face-amount certificates, subject to the special provisions of § 210.6–08, and business development companies, shall comply with the following provisions:

Statements of Operations

1. *Investment income.* State separately income from: (a) Dividends; (b) interest on securities; and (c) other income. Any other category of income which exceeds five percent of the total shown under this caption (*e.g.* income from non-cash dividends, income from payment-in-kind interest) shall be stated separately. If income from investments in or indebtedness of affiliates is included hereunder, such income shall be segregated under an appropriate caption subdivided to show separately income from: (1) Controlled companies; and (2) other affiliates. If income from non-cash dividends or payment in kind interest are included in income, the bases of recognition and measurement used in

respect to such amounts shall be disclosed.

2. *Expenses.* (a) State separately the total amount of investment advisory, management and service fees, and expenses in connection with research, selection, supervision, and custody of investments. Amounts of expenses incurred from transactions with affiliated persons shall be disclosed together with the identity of and related amount applicable to each such person accounting for five percent or more of the total expenses shown under this caption together with a description of the nature of the affiliation. Expenses incurred within the person's own organization in connection with research, selection and supervision of investments shall be stated separately. Reductions or reimbursements of management or service fees shall be shown as a negative amount or as a reduction of total expenses shown under this caption.

(b) State separately any other expense item the amount of which exceeds five percent of the total expenses shown under this caption.

(c) A note to the financial statements shall include information concerning management and service fees, the rate of fee, and the base and method of computation. State separately the amount and a description of any fee reductions or reimbursements representing: (1) Expense limitation agreements or commitments; and (2) offsets received from broker-dealers showing separately for each amount received or due from (i) unaffiliated persons; and (ii) affiliated persons. If no management or service fees were incurred for a period, state the reason therefor.

(d) If any expenses were paid otherwise than in cash, state the details in a note.

(e) State in a note to the financial statements the amount of brokerage commissions (including dealer markups) paid to affiliated broker-dealers in connection with purchase and sale of investment securities. Open-end management companies shall state in a note the net amounts of sales charges deducted from the proceeds of sale of capital shares which were retained by any affiliated principal underwriter or other affiliated broker-dealer.

(f) State separately all amounts paid in accordance with a plan adopted under 17 CFR 270.12b–1 of this chapter. Reimbursement to the fund of expenses incurred under such plan (12b–1 expense reimbursement) shall be shown as a negative amount and deducted from current 12b–1 expenses. If 12b–1 expense reimbursements exceed current 12b–1 costs, such excess shall be shown as a negative amount used in the calculation of total expenses under this caption.

(g)(1) *Brokerage/Service Arrangements.* If a broker-dealer or an affiliate of the broker-dealer has, in connection with directing the person's brokerage transactions to the broker-dealer, provided, agreed to provide, paid for, or agreed to pay for, in whole or in part, services provided to the person (other than brokerage and research services as those terms are used in section 28(e) of the Securities Exchange Act of 1934 [15 U.S.C. 78bb(e)]), include in the expense items set forth under this caption the amount that would have been incurred by the person for the services had it paid for the services directly in an arms-length transaction.

(2) *Expense Offset Arrangements.* If the person has entered into an agreement with any other person pursuant to which such other person reduces, or pays a third party which reduces, by a specified or reasonably ascertainable amount, its fees for services provided to the person in exchange for use of the person's assets, include in the expense items set forth under this caption the amount of fees that would have been incurred by the person if the person had not entered into the agreement.

(3) *Financial Statement Presentation.* Show the total amount by which expenses are increased pursuant to paragraphs (1) and (2) of this paragraph (2)(g) as a corresponding reduction in total expenses under this caption. In a note to the financial statements, state separately the total amounts by which expenses are increased pursuant to paragraphs (1) and (2) of this paragraph (2)(g), and list each category of expense that is increased by an amount equal to at least 5 percent of total expenses. If applicable, the note should state that the person could have employed the assets used by another person to produce income if it had not entered into an arrangement described in paragraph (2)(g)(2) of this section.

3. *Interest and amortization of debt discount and expense.* Provide in the body of the statements or in the footnotes, the average dollar amount of borrowings and the average interest rate.

4. *Investment income before income tax expense.*

5. *Income tax expense.* Include under this caption only taxes based on income.

6. *Investment income-net.*

7. *Realized and unrealized gain (loss) on investments-net.* (a) State separately the net realized gain or loss from: (1) Transactions in investment securities of unaffiliated issuers, (2) transactions in investment securities of affiliated issuers, (3) expiration or closing of option contracts written, (4) closed short positions in securities, (5) expiration or closing of futures contracts, (6) settlement of forward foreign currency contracts, (7) expiration or closing of swap contracts, and (8) transactions in other investments held during the period.

(b) Distributions of realized gains by other investment companies shall be shown separately under this caption.

(c) State separately the amount of the net increase or decrease during the period in the unrealized appreciation or depreciation in the value of: (1) Investment securities of unaffiliated issuers, (2) investment securities of affiliated issuers, (3) option contracts written, (4) short positions in securities, (5) futures contracts, (6) forward foreign currency contracts, (7) swap contracts, and (8) other investments held at the end of the period.

(d) State separately any: (1) Federal income taxes and (2) other income taxes applicable to realized and unrealized gain (loss) on investments, distinguishing taxes payable currently from deferred income taxes.

8. *Net gain (loss) on investments.*

9. *Net increase (decrease) in net assets resulting from operations.*

■ 9. Effective January 17, 2017, revise § 210.6–10 to read as follows:

§ 210.6–10 What schedules are to be filed.

(a) When information is required in schedules for both the person and its subsidiaries consolidated, it may be presented in the form of a single schedule, provided that items pertaining to the registrant are separately shown and that such single schedule affords a properly summarized presentation of the facts.

(b) The schedules shall be examined by an independent accountant if the related financial statements are so examined.

(c) *Management investment companies.* (1) Except as otherwise provided in the applicable form, the schedules specified in this paragraph shall be filed for management investment companies as of the dates of the most recent audited balance sheet and any subsequent unaudited statement being filed for each person or group.

Schedule I—Investments in securities of unaffiliated issuers. The schedule prescribed by § 210.12–12 shall be filed in support of caption 1 of each balance sheet.

Schedule II—Investments in and advances to affiliates. The schedule prescribed by § 210.12–14 shall be filed in support of caption 2 of each balance sheet.

Schedule III—Investments—securities sold short. The schedule prescribed by § 210.12–12A shall be filed in support of caption 9(a) of each balance sheet.

Schedule IV—Open option contracts written. The schedule prescribed by § 210.12–13 shall be filed in support of caption 9(b) of each balance sheet.

Schedule V—Open futures contracts. The schedule prescribed by § 210.12–13A shall be filed in support of captions 3(a) and 9(c) of each balance sheet.

Schedule VI—Open forward foreign currency contracts. The schedule prescribed by § 210.12–13B shall be filed in support of captions 3(b) and 9(d) of each balance sheet.

Schedule VII—Open swap contracts. The schedule prescribed by § 210.12–13C shall be filed in support of captions 3(c) and 9(e) of each balance sheet.

Schedule VIII—Investments—other than those presented in §§ 210.12–12, 12–12A, 12–12B, 12–13, 12–13A, 12–13B and 12–13C. The schedule prescribed by § 210.12–13D shall be filed in support of captions 3(d) and 9(f) of each balance sheet.

(2) When permitted by the applicable form, the schedule specified in this paragraph may be filed for management investment companies as of the dates of the most recent audited balance sheet and any subsequent unaudited statement being filed for each person or group.

Schedule IX—Summary schedule of investments in securities of unaffiliated issuers. The schedule prescribed by § 210.12–12B may be filed in support of caption 1 of each balance sheet.

(d) *Unit investment trusts.* Except as otherwise provided in the applicable form:

(1) Schedules I and II, specified below in this section, shall be filed for unit investment trusts as of the dates of the most recent audited balance sheet and any subsequent unaudited statement being filed for each person or group.

(2) Schedule III, specified below in this section, shall be filed for unit investment trusts for each period for which a statement of operations is required to be filed for each person or group.

Schedule I—Investment in securities. The schedule prescribed by § 210.12–12 shall be filed in support of caption 1 of each balance sheet (§ 210.6–04).

Schedule II—Allocation of trust assets to series of trust shares. If the trust assets are specifically allocated to different series of trust shares, and if such allocation is not shown in the balance sheet in columnar form or by the filing of separate statements for each series of trust shares, a schedule shall be filed showing the amount of trust assets, indicated by each balance sheet filed, which is applicable to each series of trust shares.

Schedule III—Allocation of trust income and distributable funds to series of trust shares. If the trust income and distributable funds are specifically allocated to different series of trust shares and if such allocation is not shown in the statement of operations in columnar form or by the filing of separate statements for each series of trust shares, a schedule shall be submitted showing the amount of income and distributable funds, indicated by each statement of operations filed, which is applicable to each series of trust shares.

(e) *Face-amount certificate investment companies.* Except as otherwise provided in the applicable form:

(1) Schedules I, V and X, specified below, shall be filed for face-amount certificate investment companies as of the dates of the most recent audited balance sheet and any subsequent unaudited statement being filed for each person or group.

(2) All other schedules specified below in this section shall be filed for face-amount certificate investment companies for each period for which a statement of operations is filed, except as indicated for Schedules III and IV.

Schedule I—Investment in securities of unaffiliated issuers. The schedule prescribed by § 210.12–21 shall be filed in support of caption 1 and, if applicable, caption 5(a) of each balance sheet. Separate schedules shall be furnished in support of each caption, if applicable.

Schedule II—Investments in and advances to affiliates and income thereon. The schedule prescribed by § 210.12–22 shall be filed in support of captions 1 and 5(b) of each balance sheet and caption 1 of each statement of operations. Separate schedules shall be furnished in support of each caption, if applicable.

Schedule III—Mortgage loans on real estate and interest earned on mortgages. The schedule prescribed by § 210.12–23 shall be filed in support of captions 1 and 5(c) of each balance sheet and caption 1 of each statement of operations, except that only the information required by Column G and note 8 of the schedule need be furnished in support of statements of operations for years for which related balance sheets are not required.

Schedule IV—Real estate owned and rental income. The schedule prescribed by § 210.12–24 shall be filed in support of captions 1 and 5(a) of each balance sheet and caption 1 of each statement of operations for rental income included therein, except that only the information required by Columns H, I and J, and item ''Rent from properties sold during the period'' and note 4 of the schedule need be furnished in support of statements of operations for years for which related balance sheets are not required.

Schedule V—Qualified assets on deposit. The schedule prescribed by § 210.12–27 shall be filed in support of the information required by caption 4 of § 210.6–06 as to total amount of qualified assets on deposit.

Schedule VI—Certificate reserves. The schedule prescribed by § 210.12–26 shall be filed in support of caption 7 of each balance sheet.

Schedule VII—Valuation and qualifying accounts. The schedule prescribed by § 210.12–09 shall be filed in support of all other reserves included in the balance sheet.

■ 10. Effective January 17, 2017, revise § 210.12–12 to read as follows:

For Management Investment Companies

§ 210.12–12 Investments in securities of unaffiliated issuers.

[For management investment companies only]

Col. A	Col. B	Col. C
Name of issuer and title of issue [1 2 3 4]	Balance held at close of period. Number of shares—principal amount of bonds and notes [7].	Value of each item at close of period.[5 6 8 9 10]

[1] Each issue shall be listed separately: *Provided,* however, that an amount not exceeding five percent of the total of Column C may be listed in one amount as ''Miscellaneous securities,'' provided the securities so listed are not restricted, have been held for not more than one year prior to the date of the related balance sheet, and have not previously been reported by name to the shareholders of the person for which the schedule is filed or to any exchange, or set forth in any registration statement, application, or annual report or otherwise made available to the public. If any securities are listed as ''Miscellaneous securities,'' briefly explain in a footnote what the term represents.

[2] Categorize the schedule by (i) the type of investment (such as common stocks, preferred stocks, convertible securities, fixed income securities, government securities, options purchased, warrants, loan participations and assignments, commercial paper, bankers' acceptances, certificates of deposit, short-term securities, repurchase agreements, other investment companies, and so forth); and (ii) the related industry, country, or geographic region of the investment. Short-term debt instruments (*i.e.,* debt instruments whose maturities or expiration dates at the time of acquisition are one year or less) of the same issuer may be aggregated, in which case the range of interest rates and maturity dates shall be indicated. For issuers of periodic payment plan certificates and unit investment trusts, list separately: (i) Trust shares in trusts created or serviced by the depositor or sponsor of this trust; (ii) trust shares in other trusts; and (iii) securities of other investment companies. Restricted securities shall not be combined with unrestricted securities of the same issuer. Repurchase agreements shall be stated separately showing for each the name of the party or parties to the agreement, the date of the agreement, the total amount to be received upon repurchase, the repurchase date and description of securities subject to the repurchase agreements.

[3] For options purchased, all information required by § 210.12–13 for options contracts written should be shown. Options on underlying investments where the underlying investment would otherwise be presented in accordance with §§ 210.12–12, 12–13A, 12–13B, 12–13C, or 12–13D should include the description of the underlying investment as would be required by §§ 210.12–12, 12–13A, 12–13B, 12–13C, or 12–13D as part of the description of the option.

[4] Indicate the interest rate or preferential dividend rate and maturity date, as applicable, for preferred stocks, convertible securities, fixed income securities, government securities, loan participations and assignments, commercial paper, bankers' acceptances, certificates of deposit, short-term securities, repurchase agreements, or other instruments with a stated rate of income. For variable rate securities, indicate a description of the reference rate and spread and: (1) The end of period interest rate or (2) disclose the end of period reference rate for each reference rate described in the Schedule in a note to the Schedule. For securities with payment in kind income, disclose the rate paid in kind.

[5] The subtotals for each category of investments, subdivided both by type of investment and industry, country or geographic region, shall be shown together with their percentage value compared to net assets. (§§ 210.6–04.19 or 210.6–05.4.)

[6] Column C shall be totaled. The total of Column C shall agree with the correlative amounts shown on the related balance sheet.

[7] Indicate by an appropriate symbol each issue of securities which is non-income producing. Evidences of indebtedness and preferred shares may be deemed to be income producing if, on the respective last interest payment date or date for the declaration of dividends prior to the date of the related balance sheet, there was only a partial payment of interest or a declaration of only a partial amount of the dividends payable; in such case, however, each such issue shall be indicated by an appropriate symbol referring to a note to the effect that, on the last interest or dividend date, only partial interest was paid or partial dividends declared. If, on such respective last interest or dividend date, no interest was paid or no cash or in kind dividends declared, the issue shall not be deemed to be income producing. Common shares shall not be deemed to be income producing unless, during the last year preceding the date of the related balance sheet, there was at least one dividend paid upon such common shares.

[8] Indicate by an appropriate symbol each issue of restricted securities. State the following in a footnote: (a) As to each such issue: (1) Acquisition date, (2) carrying value per unit of investment at date of related balance sheet, *e.g.,* a percentage of current market value of unrestricted securities of the same issuer, etc., and (3) the cost of such securities; (b) as to each issue acquired during the year preceding the date of the related balance sheet, the carrying value per unit of investment of unrestricted securities of the same issuer at: (1) The day the purchase price was agreed to; and (2) the day on which an enforceable right to acquire such securities was obtained; and (c) the aggregate value of all restricted securities and the percentage which the aggregate value bears to net assets.

[9] Indicate by an appropriate symbol each issue of securities whose value was determined using significant unobservable inputs.

[10] Indicate by an appropriate symbol each issue of securities held in connection with open put or call option contracts, loans for short sales, or where any portion of the issue is on loan.

■ 11. Effective January 17, 2017, revise § 210.12–12A to read as follows:

§ 210.12–12A Investments—securities sold short.

[For management investment companies only]

Col. A	Col. B	Col. C
Name of issuer and title of issue [1 2 3]	Balance of short position at close of period (number of shares).	Value of each open short position [4 5 6]

[1] Each issue shall be listed separately.

[2] Categorize the schedule as required by instruction 2 of § 210.12–12.

[3] Indicate the interest rate or preferential dividend rate and maturity date, as applicable, for preferred stocks, convertible securities, fixed income securities, government securities, loan participations and assignments, commercial paper, bankers' acceptances, certificates of deposit, short-term securities, repurchase agreements, or other instruments with a stated rate of income. For variable rate securities, indicate a description of the reference rate and spread and: (1) The end of period interest rate or (2) disclose the end of period reference rate for each reference rate described in the Schedule in a note to the Schedule. For securities with payment in kind income, disclose the rate paid in kind.

[4] The subtotals for each category of investments, subdivided both by type of investment and industry, country, or geographic region, shall be shown together with their percentage value compared to net assets.

[5] Column C shall be totaled. The total of Column C shall agree with the correlative amounts shown on the related balance sheet.

[6] Indicate by an appropriate symbol each issue of securities whose value was determined using significant unobservable inputs.

■ 12. Effective January 17, 2017, revise § 210.12–12B to read as follows:

§ 210.12–12B Summary schedule of investments in securities of unaffiliated issuers.

Column A	Column B	Column C	Column D
Name of issuer and title of issue [1 3 4 5 6 7 8].	Balance held at close of period. Number of shares—principal amount of bonds and notes [10].	Value of each item at close of period [2 9 11 12 13].	Percentage value compared to net assets.

[1] Categorize the schedule by (a) the type of investment (such as common stocks, preferred stocks, convertible securities, fixed income securities, government securities, options purchased, warrants, loan participations and assignments, commercial paper, bankers' acceptances, certificates of deposit, short-term securities, repurchase agreements, other investment companies, and so forth); and (b) the related industry, country or geographic region of the investment.

[2] The subtotals for each category of investments, subdivided both by type of investment and industry, country, or geographic region, shall be shown together with their percentage value compared to net assets.

[3] Indicate the interest rate or preferential dividend rate and maturity date, as applicable, for preferred stocks, convertible securities, fixed income securities, government securities, loan participations and assignments, commercial paper, bankers' acceptances, certificates of deposit, short-term securities, repurchase agreements, or other instruments with a stated rate of income. For variable rate securities, indicate a description of the reference rate and spread and: (1) The end of period interest rate or (2) disclose the end of period reference rate for each reference rate described in the Schedule in a note to the Schedule. For securities with payment in kind income, disclose the rate paid in kind.

[4] Except as provided in note 6, list separately the 50 largest issues and any other issue the value of which exceeded one percent of net asset value of the registrant as of the close of the period. For purposes of the list (including, in the case of short-term debt instruments, the first sentence of note 4), aggregate and treat as a single issue, respectively, (a) short-term debt instruments (*i.e.,* debt instruments whose maturities or expiration dates at the time of acquisition are one year or less) of the same issuer (indicating the range of interest rates and maturity dates); and (b) fully collateralized repurchase agreements (indicate in a footnote the range of dates of the repurchase agreements, the total purchase price of the securities, the total amount to be received upon repurchase, the range of repurchase dates, and description of securities subject to the repurchase agreements). Restricted and unrestricted securities of the same issue should be aggregated for purposes of determining whether the issue is among the 50 largest issues, but should not be combined in the schedule. For purposes of determining whether the value of an issue exceeds one percent of net asset value, aggregate and treat as a single issue all securities of any one issuer, except that all fully collateralized repurchase agreements shall be aggregated and treated as a single issue. The U.S. Treasury and each agency, instrumentality, or corporation, including each government-sponsored entity, that issues U.S. government securities is a separate issuer.

[5] For options purchased, all information required by § 210.12–13 for options contracts written should be shown. Options on underlying investments where the underlying investment would otherwise be presented in accordance with §§ 210.12–12, 12–13A, 12–13B, 12–13C, or 12–13D should include the description of the underlying investment as would be required by §§ 210.12–12, 12–13A, 12–13B, 12–13C, or 12–13D as part of the description of the option.

[6] If multiple securities of an issuer aggregate to greater than one percent of net asset value, list each issue of the issuer separately (including separate listing of restricted and unrestricted securities of the same issue) except that the following may be aggregated and listed as a single issue: (a) Fixed-income securities of the same issuer which are not among the 50 largest issues and whose value does not exceed one percent of net asset value of the registrant as of the close of the period (indicating the range of interest rates and maturity dates); and (b) U.S. government securities of a single agency, instrumentality, or corporation, which are not among the 50 largest issues and whose value does not exceed one percent of net asset value of the registrant as of the close of the period (indicating the range of interest rates and maturity dates). For each category identified pursuant to note 1, group all issues that are neither separately listed nor included in a group of securities that is listed in the aggregate as a single issue in a sub-category labeled ''Other securities,'' and provide the information for Columns C and D.

[7] Any securities that would be required to be listed separately or included in a group of securities that is listed in the aggregate as a single issue may be listed in one amount as ''Miscellaneous securities,'' provided the securities so listed are eligible to be, and are, categorized as ''Miscellaneous securities'' in the registrant's Schedule of Investments in Securities of Unaffiliated Issuers required under § 210.12–12. However, if any security that is included in ''Miscellaneous securities'' would otherwise be required to be included in a group of securities that is listed in the aggregate as a single issue, the remaining securities of that group must nonetheless be listed as required by notes 4 and 5 even if the remaining securities alone would not otherwise be required to be listed in this manner (*e.g.,* because the combined value of the security listed in ''Miscellaneous securities'' and the remaining securities of the same issuer exceeds one percent of net asset value, but the value of the remaining securities alone does not exceed one percent of net asset value).

[8] If any securities are listed as ''Miscellaneous securities'' pursuant to note 6 or ''Other securities'' pursuant to note 5, briefly explain in a footnote what those terms represent.

[9] Total Column C. The total of Column C should equal the total shown on the related balance sheet for investments in securities of unaffiliated issuers.

[10] Indicate by an appropriate symbol each issue of securities which is non-income producing. Evidences of indebtedness and preferred shares may be deemed to be income producing if, on the respective last interest payment date or date for the declaration of dividends prior to the date of the related balance sheet, there was only a partial payment of interest or a declaration of only a partial amount of the dividends payable; in such case, however, each such issue shall be indicated by an appropriate symbol referring to a note to the effect that, on the last interest or dividend date, only partial interest was paid or partial dividends declared. If, on such respective last interest or dividend date, no interest was paid or no cash or in kind dividends declared, the issue shall not be deemed to be income producing. Common shares shall not be deemed to be income producing unless, during the last year preceding the date of the related balance sheet, there was at least one dividend paid upon such common shares.

[11] Indicate by an appropriate symbol each issue of restricted securities. State the following in a footnote: (a) As to each such issue: (1) Acquisition date, (2) carrying value per unit of investment at date of related balance sheet, *e.g.,* a percentage of current market value of unrestricted securities of the same issuer, etc., and (3) the cost of such securities; (b) as to each issue acquired during the year preceding the date of the related balance sheet, the carrying value per unit of investment of unrestricted securities of the same issuer at: (1) The day the purchase price was agreed to; and (2) the day on which an enforceable right to acquire such securities was obtained; and (c) the aggregate value of all restricted securities and the percentage which the aggregate value bears to net assets.

[12] Indicate by an appropriate symbol each issue of securities whose value was determined using significant unobservable inputs.

[13] Indicate by an appropriate symbol each issue of securities held in connection with open put or call option contracts, loans for short sales, or where any portion of the issue is on loan.

§ 210.12–12C [Removed and Reserved].

■ 13. Effective January 17, 2017, remove and reserve § 210.12–12C.

■ 14. Effective January 17, 2017, revise § 210.12–13 to read as follows:

§ 210.12–13 Open option contracts written.

[For management investment companies only]

Col. A	Col. B	Col. C	Col. D	Col. E	Col. F	Col. G
Description [1 2 3]	Counterparty [4]	Number of contracts [5].	Notional amount	Exercise price	Expiration date	Value.[6 7 8]

[1] Information as to put options shall be shown separately from information as to call options.
[2] Options where descriptions, counterparties, exercise prices or expiration dates differ shall be listed separately.
[3] Options on underlying investments where the underlying investment would otherwise be presented in accordance with §§ 210.12–12, 12–13A, 12–13B, 12–13C, or 12–13D should include the description of the underlying investment as would be required by §§ 210.12–12, 12–13A, 12–13B, 12–13C, or 12–13D as part of the description of the option.
If the underlying investment is an index or basket of investments, and the components are publicly available on a Web site as of the balance sheet date, identify the index or basket. If the underlying investment is an index or basket of investments, the components are not publicly available on a Web site as of the balance sheet date, and the notional amount of the option contract does not exceed one percent of the net asset value of the registrant as of the close of the period, identify the index or basket. If the underlying investment is an index or basket of investments, the components are not publicly available on a Web site as of the balance sheet date, and the notional amount of the option contract exceeds one percent of the net asset value of the registrant as of the close of the period, provide a description of the index or custom basket and list separately: (i) The 50 largest components in the index or custom basket and (ii) any other components where the notional value for that components exceeds 1% of the notional value of the index or custom basket. For each investment separately listed, include the description of the underlying investment as would be required by §§ 210.12–12, 12–13, 12–13A, 12–13B, or 12–13D as part of the description, the quantity held (*e.g.* the number of shares for common stocks, principal amount for fixed income securities), the value at the close of the period, and the percentage value when compared to the custom basket's net assets.
[4] Not required for exchange traded or centrally cleared options.
[5] If the number of shares subject to option is substituted for number of contracts, the column name shall reflect that change.
[6] Indicate by an appropriate symbol each investment which cannot be sold because of restrictions or conditions applicable to the investment.
[7] Indicate by an appropriate symbol each investment whose value was determined using significant unobservable inputs.
[8] Column G shall be totaled and shall agree with the correlative amount shown on the related balance sheet.

■ 15. Effective January 17, 2017, add § 210.12–13A to read as follows:

§ 210.12–13A Open futures contracts.

[For management investment companies only]

Col. A	Col. B	Col. C	Col. D	Col. E	Col. F
Description [1 2 3 4 5]	Number of contracts.	Expiration date	Notional amount [6]	Value	Unrealized appreciation/depreciation.

[1] Information as to long purchases of futures contracts shall be shown separately from information as to futures contracts sold short.
[2] Futures contracts where descriptions or expiration dates differ shall be listed separately.
[3] Description should include the name of the reference asset or index.
[4] Indicate by an appropriate symbol each investment which cannot be sold because of restrictions or conditions applicable to the investment.
[5] Indicate by an appropriate symbol each investment whose value was determined using significant unobservable inputs.
[6] Notional amount shall be the current notional amount at close of period.

■ 16. Effective January 17, 2017, add § 210.12–13B to read as follows:

§ 210.12–13B Open forward foreign currency contracts.

[For management investment companies only]

Col. A	Col. B	Col. C	Col. D	Col. E
Amount and description of currency to be purchased [1].	Amount and description of currency to be sold [1].	Counterparty	Settlement date	Unrealized appreciation/depreciation.[2 3 4]

[1] Forward foreign currency contracts where description of currency purchased, description of currency sold, counterparty, or settlement dates differ shall be listed separately.
[2] Indicate by an appropriate symbol each investment which cannot be sold because of restrictions or conditions applicable to the investment.
[3] Indicate by an appropriate symbol each investment whose value was determined using significant unobservable inputs.
[4] Column E shall be totaled and shall agree with the total of correlative amount(s) shown on the related balance sheet.

■ 17. Effective January 17, 2017, add § 210.12–13C to read as follows:

§ 210.12–13C Open swap contracts.

[For management investment companies only]

Col. A	Col. B	Col. C	Col. D	Col. E	Col. F	Col. G	Col. H
Description and terms of payments to be received from another party [1 2 3].	Description and terms of payments to be paid to another party [1 2 3].	Counterparty [4].	Maturity date.	Notional amount.	Value	Upfront payments/receipts	Unrealized appreciation/depreciation.[5 6 7]

[1] List each major category of swaps by descriptive title (*e.g.,* credit default swaps, interest rate swaps, total return swaps). Credit default swaps where protection is sold shall be listed separately from credit default swaps where protection is purchased.

[2] Swaps where description, counterparty, or maturity dates differ shall be listed separately within each major category.

[3] Description should include information sufficient for a user of financial information to understand the terms of payments to be received and paid. (*e.g.* For a credit default swap, including, among other things, description of reference obligation(s) or index, financing rate to be paid or received, and payment frequency. For an interest rate swap, this may include, among other things, whether floating rate is paid or received, fixed interest rate, floating interest rate, and payment frequency. For a total return swap, this may include, among other things, description of reference asset(s) or index, financing rate, and payment frequency.) If the reference instrument is an index or basket of investments, and the components are publicly available on a Web site as of the balance sheet date, identify the index or basket.If the reference instrument is an index or basket of investments, the components are not publicly available on a Web site as of the balance sheet date, and the notional amount of the swap contract does not exceed one percent of the net asset value of the registrant as of the close of the period, identify the index or basket. If the reference instrument is an index or basket of investments, the components are not publicly available on a Web site as of the balance sheet date, and the notional amount of the swap contract exceeds one percent of the net asset value of the registrant as of the close of the period provide a description of the index or custom basket and list separately: (i) The 50 largest components in the index or custom basket and (ii) any other components where the notional value for that components exceeds 1% of the notional value of the index or custom basket. For each investment separately listed, include the description of the underlying investment as would be required by §§ 210.12–12, 210.12–13, 210.12–13A, 210.12–13B, or 210.12–13D as part of the description, the quantity held (*e.g.*, the number of shares for common stocks, principal amount for fixed income securities), the value at the close of the period, and the percentage value when compared to the custom basket's net assets.

[4] Not required for exchange-traded or centrally cleared swaps.

[5] Indicate by an appropriate symbol each investment which cannot be sold because of restrictions or conditions applicable to the investment.

[6] Indicate by an appropriate symbol each investment whose value was determined using significant unobservable inputs.

[7] Columns G and H shall be totaled and shall agree with the total of correlative amount(s) shown on the related balance sheet.

■ 18. Effective January 17, 2017, add § 210.12–13D to read as follows:

§ 210.12–13D Investments other than those presented in §§ 210.12–12, 12–12A, 12–12B, 12–13, 12–13A, 12–13B, and 12–13C.

[For management investment companies only]

Col. A	Col. B	Col. C
Description [1 2 3]	Balance held at close of period—quantity [4 5] ...	Value of each item at close of period.[6 7 8 9]

[1] Each investment where any portion of the description differs shall be listed separately.

[2] Categorize the schedule by (i) the type of investment (such as real estate, commodities, and so forth); and, as applicable, (ii) the related industry, country, or geographic region of the investment.

[3] Description should include information sufficient for a user of financial information to understand the nature and terms of the investment, which may include, among other things, reference security, asset or index, currency, geographic location, payment terms, payment rates, call or put feature, exercise price, expiration date, and counterparty for non-exchange-traded investments.

[4] If practicable, indicate the quantity or measure in appropriate units.

[5] Indicate by an appropriate symbol each investment which is non-income producing.

[6] Indicate by an appropriate symbol each investment which cannot be sold because of restrictions or conditions applicable to the investment.

[7] Indicate by an appropriate symbol each investment whose value was determined using significant unobservable inputs.

[8] Indicate by an appropriate symbol investment subject to option. State in a footnote: (a) The quantity subject to option, (b) nature of option contract, (c) option price, and (d) dates within which options may be exercised.

[9] Column C shall be totaled and shall agree with the correlative amount shown on the related balance sheet.

■ 19. Effective January 17, 2017, revise § 210.12–14 to read as follows:

§ 210.12–14 Investments in and advances to affiliates.

[For management investment companies only]

Col. A	Col. B	Col. C	Col. D	Col. E	Col. F
Name of issuer and title of issue or nature of indebtedness [1 2 3].	Number of shares—principal amount of bonds, notes and other indebtedness held at close of period.	Net realized gain or loss for the period [4 6].	Net increase or decrease in unrealized appreciation or depreciation for the period [4 6].	Amount of dividends or interest [4 6]. (1) Credited to income. (2) Other	Value of each item at close of period.[4 5 7 8 9]

[1] (a) List each issue separately and group (1) Investments in majority-owned subsidiaries; (2) other controlled companies; and (3) other affiliates. (b) If during the period there has been any increase or decrease in the amount of investment in and advance to any affiliate, state in a footnote (or if there have been changes to numerous affiliates, in a supplementary schedule) (1) name of each issuer and title of issue or nature of indebtedness; (2) balance at beginning of period; (3) gross additions; (4) gross reductions; (5) balance at close of period as shown in Column E. Include in the footnote or schedule comparable information as to affiliates in which there was an investment at any time during the period even though there was no investment at the close of the period of report.

[2] Categorize the schedule as required by instruction 2 of § 210.12–12.

[3] Indicate the interest rate or preferential dividend rate and maturity date, as applicable, for preferred stocks, convertible securities, fixed income securities, government securities, loan participations and assignments, commercial paper, bankers' acceptances, certificates of deposit, short-term securities, repurchase agreements, or other instruments with a stated rate of income. For variable rate securities, indicate a description of the reference rate and spread and: (1) The end of period interest rate or (2) disclose the end of period reference rate for each reference rate described in the Schedule in a note to the Schedule. For securities with payment in kind income, disclose the rate paid in kind.

[4] Columns C, D, E, and F shall be totaled. The totals of Column F shall agree with the correlative amount shown on the related balance sheet.

[5] (a) Indicate by an appropriate symbol each issue of restricted securities. The information required by instruction 8 of § 210.12–12 shall be given in a footnote. (b) Indicate by an appropriate symbol each issue of securities subject to option. The information required by § 210.12–13 shall be given in a footnote.

[6] (a) Include in Column E (1) as to each issue held at the close of the period, the dividends or interest included in caption 1 of the statement of operations. In addition, show as the final item in Column E (1) the aggregate of dividends and interest included in the statement of operations in respect of investments in affiliates not held at the close of the period. The total of this column shall agree with the correlative amount shown on the related statement of operations.

(b) Include in Column E (2) all other dividends and interest. Explain in an appropriate footnote the treatment accorded each item.

(c) Indicate by an appropriate symbol all non-cash dividends and interest and explain the circumstances in a footnote.

(d) Indicate by an appropriate symbol each issue of securities which is non-income producing. Evidences of indebtedness and preferred shares may be deemed to be income producing if, on the respective last interest payment date or date for the declaration of dividends prior to the date of the related balance sheet, there was only a partial payment of interest or a declaration of only a partial amount of the dividends payable; in such case, however, each such issue shall be indicated by an appropriate symbol referring to a note to the effect that, on the last interest or dividend date, only partial interest was paid or partial dividends declared. If, on such respective last interest or dividend date, no interest was paid or no cash or in kind dividends declared, the issue shall not be deemed to be income producing. Common shares shall not be deemed to be income producing unless, during the last year preceding the date of the related balance sheet, there was at least one dividend paid upon such common shares.

(e) Include in Column C (1) as to each issue held at the close of the period, the realized gain or loss included in § 210.6–07.7 of the statement of operations. In addition, show as the final item in Column C (1) the aggregate of realized gain or loss included in the statement of operations in respect of investments in affiliates not held at the close of the period. The total of this column shall agree with the correlative amount shown on the related statement of operations.

(f) Include in Column D (1) as to each issue held at the close of the period, the net increase or decrease in unrealized appreciation or depreciation included in § 210.6–07 .7 of the statement of operations. In addition, show as the final item in Column D (1) the aggregate of increase or decrease in unrealized appreciation or depreciation included in the statement of operations in respect of investments in affiliates not held at the close of the period. The total of this column shall agree with the correlative amount shown on the related statement of operations.

[7] The subtotals for each category of investments, subdivided both by type of investment and industry, country, or geographic region, shall be shown together with their percentage value compared to net assets.

[8] Indicate by an appropriate symbol each issue of securities whose value was determined using significant unobservable inputs.

[9] Indicate by an appropriate symbol each issue of securities held in connection with open put or call option contracts, loans for short sales, or where any portion of the issue is on loan.

PART 232—REGULATION S–T—GENERAL RULES AND REGULATIONS FOR ELECTRONIC FILINGS

■ 20. The authority citation for part 232 continues to read, in part, as follows:

Authority: 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s(a), 77z–3, 77sss(a), 78c(b), 78*l*, 78m, 78n, 78o(d), 78w(a), 78*ll*, 80a–6(c), 80a–8, 80a–29, 80a–30, 80a–37, and 7201 *et seq.;* and 18 U.S.C. 1350, unless otherwise noted.

* * * * *

§ 232.105 [Amended]

■ 21. Effective June 1, 2018, amend § 232.105 by removing and reserving paragraph (a).

§ 232.301 [Amended]

■ 22. Effective June 1, 2018, amend § 232.301 by removing the fourth sentence ''Additional provisions applicable to Form N–SAR filers are set forth in the EDGAR Filer Manual, Volume III: ''N–SAR Supplement,'' Version 5 (September 2015).''

§ 232.401 [Amended]

■ 23. Effective August 1, 2019, amend § 232.401 paragraph (d)(2)(iii) by removing the phrase '', N–CSR (§ 274.128 of this chapter) or N–Q (§ 274.130 of this chapter)'' and adding in its place ''or N–CSR (§ 274.128 of this chapter)''.

PART 239—FORMS PRESCRIBED UNDER THE SECURITIES ACT OF 1933

■ 24. The authority citation for part 239 continues to read, in part, as follows:

Authority: 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77sss, 78c, 78l, 78m, 78n, 78o(d), 78o–7, 78o–7 note, 78u–5, 78w(a), 78*ll*, 78mm, 80a–2(a), 80a–3, 80a–8, 80a–9, 80a–10, 80a–13, 80a–24, 80a–26, 80a–29, 80a–30, 80a–37, and Sec. 71003 and Sec. 84001, Public Law 114–94, 129 Stat. 1312, unless otherwise noted.

* * * * *

§ 239.23 [Amended]

■ 25. Effective January 17, 2017, amend Form N–14 (referenced in § 239.23) Item 14, subpart 1(ii) by removing the phrase ''the following schedules in support of the most recent balance sheet: (A) Columns C and D of Schedule III [17 CFR 210.12–14]; and (B) Schedule IV [17 CFR 210.12–03];'' and adding in its place ''columns C and D of Schedule III [17 CFR 210.12–14] in support of the most recent balance sheet''.

PART 240 — GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

■ 26. The authority citation for part 240 continues to read, in part, as follows:

Authority: 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z–2, 77z–3, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78c–3, 78c–5, 78d, 78e, 78f, 78g, 78i, 78j, 78j–1, 78k, 78k–1, 78*l,* 78m, 78n, 78n–1, 78*o,* 78*o*–4, 78*o*–10, 78p, 78q, 78q–1, 78s, 78u–5, 78w, 78x, 78*ll,* 78mm, 80a–20, 80a–23, 80a–29, 80a–37, 80b–3, 80b–4, 80b–11, 7201 *et seq.* and 8302; 7 U.S.C. 2(c)(2)(E); 12 U.S.C. 5221(e)(3); 18 U.S.C. 1350; Public Law 111–203, 939A, 124 Stat. 1376 (2010); and Public Law 112–106, sec. 503 and 602, 126 Stat. 326 (2012), unless otherwise noted.

* * * * *

§ 240.10A–1 [Amended]

■ 27. Effective June 1, 2018, amend § 240.10A–1 paragraph (a)(4)(i) by removing the phrase ''Form N–SAR, § 274.101'' and adding in its place ''Form N–CSR, § 274.128''.

§ 240.12b–25 [Amended]

■ 28. Effective June 1, 2018, amend § 240.12b–25 by:
■ a. In the section heading, removing ''N–SAR'' and adding in its place ''N–CEN'';
■ b. In paragraph (a), removing ''Form N–SAR'' and adding in its place ''Form N–CEN''; and
■ c. In paragraph (b)(2)(ii), removing ''N–SAR,'' and adding in its place ''N–CEN,''.

§ 240.13a–10 [Amended]

■ 29. Effective June 1, 2018, amend § 240.13a–10 by:
■ a. In paragraph (h), removing the phrase ''Rule 30b1–1 (§ 270.30b1–1 of this chapter)'' and adding in its place ''Rule 30a–1 (§ 270.30a–1 of this chapter)'';
■ b. In Note 1, removing ''§ 270.30b1–1'' and adding in its place ''§ 270.30a–1''.

§ 240.13a–11 [Amended]

■ 30. Effective June 1, 2018, amend § 240.13a–11 paragraph (b) introductory text by removing ''§ 270.30b1–1'' and adding in its place ''§ 270.30a–1''.

§ 240.13a–13 [Amended]

■ 31. Effective June 1, 2018, amend § 240.13a–13 paragraph (b)(1) by removing ''§ 270.30b1–1'' and adding in its place ''§ 270.30a–1 of this chapter''.

§ 240.13a–16 [Amended]

■ 32. Effective June 1, 2018, amend § 240.13a–16 paragraph (a)(1) by removing the phrase ''Rule 30b1–1 (17 CFR 270.30b1–1)'' and adding in its place ''§ 270.30a–1 of this chapter''.

§ 240.15d–10 [Amended]

■ 33. Effective June 1, 2018, amend § 240.15d–10 paragraph (h) by removing the phrase ''Rule 30b1–1 (§ 270.30b1–1 of this chapter)'' and adding in its place ''Rule 30a–1 (§ 270.30a–1 of this chapter)''.

§ 240.15d–11 [Amended]

■ 34. Effective June 1, 2018, amend § 240.15d–11 paragraph (b) introductory text by removing ''§ 270.30b1–1'' and adding in its place ''§ 270.30a–1''.

§ 240.15d–13 [Amended]

■ 35. Effective June 1, 2018, amend § 240.15d–13 paragraph (b)(1) by removing ''§ 270.30b1–1'' and adding in its place ''§ 270.30a–1 of this chapter''.

§ 240.15d–16 [Amended]

■ 36. Effective June 1, 2018, amend § 240.15d–16 paragraph (a)(1) by removing the phrase ''Rule 30b1–1 [17 CFR 270.30b1–1]'' and adding in its place ''§ 270.30a–1 of this chapter''.

PART 249—FORMS, SECURITIES EXCHANGE ACT OF 1934

■ 37. The general authority citation for part 249 continues to read, and effective January 17, 2017, the sectional authority for § 249.330 is revised to read as follows:

Authority: 15 U.S.C. 78a *et seq.* and 7201 *et seq.;* 12 U.S.C. 5461 *et seq.;* and 18 U.S.C. 1350; Sec. 953(b), Public Law 111–203, 124 Stat. 1904; Sec. 102(a)(3), Public Law 112–106, 126 Stat. 309 (2012); Sec. 107, Public Law 112–106, 126 Stat. 313 (2012), and Sec. 72001, Public Law 114–94, 129 Stat. 1312 (2015), unless otherwise noted.

* * * * *

Section 249.330 is also issued under 15 U.S.C. 80a–29(a).

* * * * *

§ 249.322 [Amended]

■ 38. Effective June 1, 2018, amend § 249.322 in the first sentence of paragraph (a) by removing the phrase ''a semi-annual, annual, or transition report on Form N–SAR (§§ 249.330; 274.101) or'' and adding in its place ''an annual report on Form N–CEN (§§ 249.330; 274.101) or a semi-annual or annual report on''.

■ 39. Effective June 1, 2018, § 249.330 is revised to read as follows:

§ 249.330 Form N–CEN, annual report of registered investment companies.

This form shall be used by registered unit investment trusts and small business investment companies for annual reports to be filed pursuant to § 270.30a–1 of this chapter in satisfaction of the requirement of section 30(a) of the Investment Company Act of 1940 (15 U.S.C. 80a–29(a)) that every registered investment company must file annually with the Commission such information, documents, and reports as investment companies having securities registered on a national securities exchange are required to file annually pursuant to section 13(a) of the Securities Exchange Act of 1934 (15 U.S.C. 78m(a)) and the rules and regulations thereunder.

Note: The text of Form N–CEN will not appear in the *Code of Federal Regulations.*

§ 249.332 [Removed and Reserved]

■ 40. Effective August 1, 2019, § 249.332 is removed and reserved.

PART 270—RULES AND REGULATIONS, INVESTMENT COMPANY ACT OF 1940

■ 41. The authority citation for part 270 continues to read, in part, as follows:

Authority: 15 U.S.C. 80a–1 *et seq.,* 80a–34(d), 80a–37, 80a–39, and Public Law 111–203, sec. 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

§ 270.8b–16 [Amended]

■ 42. Effective June 1, 2018, amend § 270.8b–16 paragraph (a) by removing the phrase ''a semi-annual report on Form N–SAR, as prescribed by rule 30b1–1 (17 CFR 270.30b1–1)'' and adding in its place ''an annual report on Form N–CEN, as prescribed by § 270.30a–1 of this chapter''.

§ 270.8b–33 [Amended]

■ 43. Effective August 1, 2019, amend § 270.8b–33 by:
■ a. In the first sentence, removing the phrase '', Form N–CSR (§§ 249.331 and 274.128 of this chapter), or Form N–Q (§§ 249.332 and 274.130 of this chapter)'' and adding in its place the phrase ''or Form N–CSR (§§ 249.331 and 274.128 of this chapter)''; and
■ b. In the third sentence, removing the phrase ''or Form N–Q''.

§ 270.10f–3 [Amended]

■ 44. Effective June 1, 2018, amend § 270.10f–3 by removing and reserving paragraph (c)(9).

■ 45. Effective June 1, 2018, revise § 270.30a–1 to read as follows:

§ 270.30a–1 Annual report for registered investment companies.

Every management investment company must file an annual report on Form N–CEN (§ 274.101 of this chapter) at least every twelve months and not more than seventy-five calendar days after the close of each fiscal year. Every unit investment trust must file an annual report on Form N–CEN (§ 274.101 of this chapter) at least every twelve months and not more than seventy-five calendar days after the close of each calendar year. A registered investment company that has filed a registration statement with the Commission registering its securities for the first time under the Securities Act of 1933 is relieved of this reporting obligation with respect to any reporting period or portion thereof prior to the date on which that registration statement becomes effective or is withdrawn.

§ 270.30a–2 [Amended]

■ 46. Effective August 1, 2019, amend § 270.30a–2 by:

■ a. In the section heading, removing the phrase ''and Form N–Q''; and

■ b. In the first sentence of paragraph (a), removing the phrases ''or Form N–Q (§§ 249.332 and 274.130 of this chapter)'' and ''or Item 3 of Form N–Q, as applicable,''.

§ 270.30a–3 [Amended]

■ 47. Effective August 1, 2019, amend § 270.30a–3 by:

■ a. In paragraph (b), removing the phrase ''and Form N–Q (§§ 249.332 and 274.130 of this chapter)''.

■ b. In the first sentence of paragraph (c), removing the phrase ''and Form N–Q (§§ 249.332 and 274.130 of this chapter)''.

■ c. In the second sentence of paragraph (c), removing the phrase ''and Form N–Q''.

■ 48. Effective June 1, 2018, § 270.30a–4 is added to read as follows:

§ 270.30a–4 Annual report for wholly-owned registered management investment company subsidiary of registered management investment company.

Notwithstanding the provisions of § 270.30a–1, a registered management investment company that is a wholly-owned subsidiary of a registered management investment company need not file an annual report on Form N–CEN if financial information with respect to that subsidiary is reported in the parent's annual report on Form N–CEN.

§ 270.30b1–1 [Removed and Reserved]

■ 49. Effective June 1, 2018, § 270.30b1–1 is removed and reserved.

§ 270.30b1–2 [Removed and Reserved]

■ 50. Effective June 1, 2018, § 270.30b1–2 is removed and reserved.

§ 270.30b1–3 [Removed and Reserved]

■ 51. Effective June 1, 2018, § 270.30b1–3 is removed and reserved.

§ 270.30b1–5 [Removed and Reserved]

■ 52. Effective August 1, 2019, § 270.30b1–5 is removed and reserved.

■ 53. Effective January 17, 2017, § 270.30b1–9 is added to read as follows:

§ 270.30b1–9 Monthly report.

Each registered management investment company or exchange-traded fund organized as a unit investment trust, or series thereof, other than a registered open-end management investment company that is regulated as a money market fund under § 270.2a–7 or a small business investment company registered on Form N–5 (§§ 239.24 and 274.5 of this chapter), must file a monthly report of portfolio holdings on Form N–PORT (§ 274.150 of this chapter), current as of the last business day, or last calendar day, of the month. A registered investment company that has filed a registration statement with the Commission registering its securities for the first time under the Securities Act of 1933 is relieved of this reporting obligation with respect to any reporting period or portion thereof prior to the date on which that registration statement becomes effective or is withdrawn. Reports on Form N–PORT must be filed with the Commission no later than 30 days after the end of each month.

§ 270.30d–1 [Amended]

■ 54. Effective August 1, 2019, amend § 270.30d–1 by removing the phrase ''and Form N–Q (§§ 249.332 and 274.130 of this chapter)''.

■ 55. Effective June 1, 2018, Section 270.30d–1 is further amended by removing the phrase ''Form N–SAR'' and adding in its place ''Form N–CEN''.

* * * * *

PART 274—FORMS PRESCRIBED UNDER THE INVESTMENT COMPANY ACT OF 1940

■ 56. The general authority citation for part 274 continues to read as follows, and effective January 17, 2017, the sectional authorities for §§ 274.101 and 274.130 are removed:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 78c(b), 78*l*, 78m, 78n, 78o(d), 80a–8, 80a–24, 80a–26, 80a–29, and Public Law 111–203, sec. 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

§§ 239.15A and 274.11A [Amended]

■ 57. Effective August 1, 2019, Form N–1A (referenced in §§ 239.15A and 274.11A) is amended as follows:

■ a. In Item 16(f), Instruction 3(b), remove the phrase ''N–Q'' and add in its place ''N–PORT for the last month of the Fund's first or third fiscal quarters''; and

■ b. In Item 27(d)(1), revise Instruction 4.

The additions and revisions read as follows:

NOTE: The text of Form N–1A does not, and this amendment will not, appear in the *Code of Federal Regulations.*

Form N–1A

* * * * *

Item 27. Financial Statements

* * * * *

(d) * * *

(1) * * *

Instructions

* * *

4. ''*Statement Regarding Availability of Quarterly Portfolio Schedule.* A statement that: (i) The Fund files its complete schedule of portfolio holdings with the Commission for the first and third quarters of each fiscal year as an exhibit to its reports on Form N–PORT; (ii) the Fund's Form N–PORT reports are available on the Commission's Web site at *http://www.sec.gov;* and (iii) if the Fund makes the information on Form N–PORT available to shareholders on its Web site or upon request, a description of how the information may be obtained from the Fund.

* * * * *

■ 58. Effective January 17, 2017, Form N–1A (referenced in §§ 239.15A and 274.11A) is further amended as follows:

■ a. In Item 19, add paragraph (i) to Item 19;

■ b. In Item 27(b)(1), Instruction 1, remove the phrase ''Schedule VI'' and adding in its place ''Schedule IX'', and remove the phrase ''[17 CFR 210.12–12C]'' and adding in its place ''[17 CFR 210.12–12B]'';

■ c. In Item 27(b)(1), Instruction 2, removing the phrase ''[17 CFR 210.12–12C]'' and adding in its place ''17 CFR 210.12–12B]''; and

■ d. In Item 33, add an instruction.

The additions and revisions read as follows:

Note: The text of Form N–1A does not, and this amendment will not, appear in the *Code of Federal Regulations.*

Form N–1A

* * * * *

Item 19. Investment Advisory and Other Services

* * * * *

(i) *Securities Lending.*

(1) Provide the following dollar amounts of income and fees/compensation related to the securities lending activities of each Series during its most recent fiscal year:

(i) Gross income from securities lending activities, including income from cash collateral reinvestment;

(ii) All fees and/or compensation for each of the following securities lending activities and related services: Any share of revenue generated by the securities lending program paid to the securities lending agent(s) (''revenue split''); fees paid for cash collateral management services (including fees deducted from a pooled cash collateral reinvestment vehicle) that are not included in the revenue split; administrative fees that are not included in the revenue split; fees for indemnification that are not included in the revenue split; rebates paid to borrowers; and any other fees relating to the securities lending program that are not included in the revenue split, including a description of those other fees;

(iii) The aggregate fees/compensation disclosed pursuant to paragraph (ii); and

(iv) Net income from securities lending activities (*i.e.,* the dollar amount in paragraph (i) minus the dollar amount in paragraph (iii)).

Instruction. If a fee for a service is included in the revenue split, state that the fee is ''included in the revenue split.''

(2) Describe the services provided to the Series by the securities lending agent in the Series' most recent fiscal year.

* * * * *

Item 33. Location of Accounts and Records

* * * * *

Instructions.

* * *

3. A Fund may omit this information to the extent it is provided in its most recent report on Form N–CEN [17 CFR 274.101].

* * * * *

■ 59. Effective August 1, 2019, Form N–2 (referenced in §§ 239.14 and 274.11a–1) is amended by revising paragraph (b) in Item 24, Instruction 6.

The additions and revisions read as follows:

Note: The text of Form N–2 does not, and this amendment will not, appear in the *Code of Federal Regulations.*

Form N–2

* * * * *

Item 31. Location of Accounts and Records

* * * * *

Instruction. The Registrant may omit this information to the extent it is provided in its most recent report on Form N–CEN [17 CFR 274.101].

* * * * *

■ 65. Effective June 1, 2018, § 274.101 is revised to read as follows:

§ 274.101 Form N–CEN, annual report of registered investment companies.

This form shall be used by registered investment companies for annual reports to be filed pursuant to 17 CFR 270.30a–1.

Note: The text of Form N–CEN will not appear in the *Code of Federal Regulations.*

BILLING CODE 8011–01–P

FORM N-CEN

ANNUAL REPORT FOR REGISTERED INVESTMENT COMPANIES

Form N-CEN is to be used by all registered investment companies, other than face-amount certificate companies, to file annual reports with the Commission. Such reports should be filed not later than 75 days after the close of the fiscal year for which the report is being prepared, except that unit investment trusts shall file such reports not later than 75 days after the close of the calendar year for which the report is being prepared, pursuant to rule 30a-1 under the Investment Company Act of 1940 ("Act") (17 CFR 270.30a-1). Face-amount certificate companies should continue to file periodic reports pursuant to section 13 or 15(d) of the Securities Exchange Act of 1934 ("Exchange Act"). The Commission may use the information provided on Form N-CEN in its regulatory, enforcement, examination, disclosure review, inspection, and policymaking roles.

GENERAL INSTRUCTIONS

A. Rule as to Use of Form N-CEN

Form N-CEN is the reporting form that is to be used for annual reports filed pursuant to rule 30a-1 under the Act (17 CFR 270.30a-1) by registered investment companies, other than face-amount certificate companies, under section 30(a) of the Act and, in the case of small business investment companies and registered unit investment trusts, under section 13 or 15(d) of the Exchange Act, if applicable.

Registrants must respond to all items in the relevant Parts of Form N-CEN, as listed below in this General Instruction A. If an item within a required Part is inapplicable, the Registrant should respond "N/A" to that item. Registrants are not, however, required to respond to items in Parts of Form N-CEN that they are not required by this General Instruction A to respond to.

Management investment companies: Management investment companies other than small business investment companies must complete Parts A, B, C, and G of this Form. Management investment companies that offer multiple series must complete Part C as to each series separately, even if some information is the same for two or more series. Closed-end management investment companies also must complete Part D of this Form. Small business investment companies must complete Parts A, B, D, and G of this Form. Management investment companies that are registered on Form N-3 also must complete certain items in Part F of this Form as directed by Item B.6.c.i.

Exchange-traded funds or exchange-traded managed funds: Funds that are exchange-traded funds or exchange-traded managed funds, as defined by this Form, must complete Part E of this Form in addition to any other required Parts.

Unit investment trusts: Unit investment trusts must complete Parts A, B, F, and G of this Form.

B. Application of General Rules and Regulations

The General Rules and Regulations under the Act contain certain general requirements that are applicable to reporting on any form under the Act. These general requirements should be carefully read and observed in the preparation and filing of reports on this Form, except that any provision in the Form or in these instructions shall be controlling.

C. Filing of Report

1. All registered investment companies with shares outstanding (other than shares issued in connection with an initial investment to satisfy section 14(a) of the Act) must file a report on Form N-CEN at least annually. Management investment companies offering multiple series with different fiscal year ends must file a report as of each fiscal year end that responds to (i) Parts A, B, and G, and (ii) Part C and, if applicable, Part E as to only those series with the fiscal year end covered by the report.

   If a Registrant changes its fiscal year, a report filed on Form N-CEN may cover a period shorter than 12 months, but in no event may a report filed on Form N-CEN cover a period longer than 12 months or a period that overlaps with a period covered by a previously filed report. For example, if in 2017 a Registrant with a September 30 fiscal year end changes its fiscal year end to December 31, the Registrant could file a report on this Form for the fiscal period ending September 30, 2017 and a report for the period ending December 31, 2017. A Registrant could not, however, only file a report for the fiscal period ending December 31, 2017 if its last report was filed for the fiscal period ending September 30, 2016.

   An extension of time of up to 15 days for filing the form may be obtained by following the procedures specified in rule l2b-25 under the Exchange Act (17 CFR 240.12b-25).

2. A registrant may file an amendment to a previously filed report at any time, including an amendment to correct a mistake or error in a previously filed report. A registrant that files an amendment to a previously filed report must provide information in response to all required items of Form N-CEN, regardless of why the amendment is filed.

3. Reports must be filed electronically using the Commission's Electronic Data Gathering, Analysis, and Retrieval ("EDGAR") system in accordance with Regulation S-T. Consult the EDGAR Filer Manual and Appendices for EDGAR filing instructions.

D. Paperwork Reduction Act Information

A registrant is required to disclose the information specified by Form N-CEN, and the Commission will make this information public, except for information reported in response to Item B.9.h. A registrant is not required to respond to the collection of information contained in Form N-CEN unless the form displays a currently valid Office of Management and Budget ("OMB") control number. Please direct comments concerning the accuracy of the information collection burden estimate and any suggestions for reducing the burden to the Secretary, Securities and Exchange Commission, Washington, DC 20549. The OMB has reviewed this collection of information under the clearance requirements of 44 U.S.C. 3507.

E. Definitions

Except as defined below or where the context clearly indicates the contrary, terms used in Form N-CEN have meanings as defined in the Act and the rules and regulations thereunder. Unless otherwise indicated, all references in the form or its instructions to statutory sections or to rules are sections of the Act and the rules and regulations thereunder.

In addition, the following definitions apply:

"Class" means a class of shares issued by a Fund that has more than one class that represents interest in the same portfolio of securities under rule 18f-3 under the Act (17 CFR 270.18f-3) or under an order exempting the Fund from provisions of section 18 of the Act (15 U.S.C. 80a-18).

"CRD number" means a central licensing and registration system number issued by the Financial Industry Regulatory Authority.

"Exchange-Traded Fund" means an open-end management investment company (or Series or Class thereof) or unit investment trust (or series thereof), the shares of which are listed and traded on a national securities exchange at market prices, and that has formed and operates under an exemptive order under the Act granted by the Commission or in reliance on an exemptive rule under the Act adopted by the Commission.

"Exchange-Traded Managed Fund" means an open-end management investment company (or Series or Class thereof) or unit investment trust (or series thereof), the shares of which are listed and traded on a national securities exchange at net asset value-based prices, and that has formed and operates under an exemptive order under the Act granted by the Commission or in reliance on an exemptive rule under the Act adopted by the Commission.

"Fund" means the Registrant or a separate Series of the Registrant. When an item of Form N-CEN specifically applies to a Registrant or Series, those terms will be used.

"LEI" means, with respect to any company, the "legal entity identifier" as assigned by a utility endorsed by the Global LEI Regulatory Oversight Committee or accredited by the Global LEI Foundation. In the case of a financial institution, if a "legal entity identifier" has not been assigned, then provide the RSSD ID, if any, assigned by the National Information Center of the Board of Governors of the Federal Reserve System.

"Money Market Fund" means an open-end management investment company registered under the Act, or Series thereof, that is regulated as a money market fund pursuant to rule 2a-7 under the Act (17 CFR 270.2a-7).

"PCAOB number" means the registration number issued to an independent public accountant registered with the Public Company Accounting Oversight Board.

"Registrant" means the investment company filing this report or on whose behalf the report is filed.

"SEC File number" means the number assigned to an entity by the Commission when that entity registered with the Commission in the capacity in which it is named in Form N-CEN.

"Series" means shares offered by a Registrant that represent undivided interests in a portfolio of investments and that are preferred over all other Series of shares for assets specifically allocated to that Series in accordance with rule 18f-2(a) (17 CFR 270.18f-2(a)).

FORM N-CEN
ANNUAL REPORT FOR REGISTERED INVESTMENT COMPANIES

Part A: General Information

Item A.1. Reporting period covered.

a. Report for period ending: [yyyy/mm/dd]

b. Does this report cover a period of less than 12 months? [Y/N]

Part B: Information About the Registrant

Item B.1. Background information.

a. Full name of Registrant: ____

b. Investment Company Act file number (*e.g.*, 811-): ____

c. CIK: ____

d. LEI: ____

Item B.2. Address and telephone number of Registrant.

a. Street: ____

b. City: ____

c. State, if applicable: ____

d. Foreign country, if applicable: ____

e. Zip code and zip code extension, or foreign postal code: ____

f. Telephone number (including country code if foreign): ____

g. Public website, if any: ____

Item B.3. Location of books and records.

a. Name of person (*e.g.*, a custodian of records): ____

b. Street: ____

c. City: ____

d. State, if applicable: ____

e. Foreign country, if applicable: ____

f. Zip code and zip code extension, or foreign postal code: ____

g. Telephone number (including country code if foreign): ____

h. Briefly describe the books and records kept at this location: ____

Instruction. Provide the requested information for each person maintaining physical possession of each account, book, or other document required to be maintained by section 31(a) of the Act (15 U.S.C. 80a-30(a)) and the rules under that section.

Item B.4. Initial or final filings.

a. Is this the first filing on this form by the Registrant? [Y/N]

b. Is this the last filing on this form by the Registrant? [Y/N]

Instruction. Respond "yes" to Item B.4.b only if the Registrant has filed an application to deregister or will file an application to deregister before its next required filing on this form

Item B.5. Family of investment companies.

a. Is the Registrant part of a family of investment companies? [Y/N]

i. Full name of family of investment companies: ____

Instruction. "Family of investment companies" means, except for insurance company separate accounts, any two or more registered investment companies that (i) share the same investment adviser or principal underwriter; and (ii) hold themselves out to investors as related companies for purposes of investment and investor services. In responding to this item, all Registrants in the family of investment companies should report the name of the family of investment companies identically.

Insurance company separate accounts that may not hold themselves out to investors as related companies (products) for purposes of investment and investor services should consider themselves part of the same family if the operational or accounting or control systems under which these entities function are substantially similar.

Item B.6. Organization. Indicate the classification of the Registrant by checking the applicable item below.

a. Open end management investment company registered under the Act on Form N-1A: ____

i. Total number of Series of the Registrant: ____

ii. If a Series of the Registrant with a fiscal year end covered by the report was terminated during the reporting period, provide the following information:

1. Name of the Series: ____
2. Series identification number: ____
3. Date of termination (month/year): ____

b. Closed-end management investment company registered under the Act on Form N-2: ____

c. Separate account offering variable annuity contracts which is registered under the Act as a management investment company on Form N-3: ____

  i. Registrants that indicate they are a management investment company registered under the Act on Form N-3, should respond to Item F.13 through Item F.16 of this Form in addition to the Parts required by General Instruction A of this Form.

d. Separate account offering variable annuity contracts which is registered under the Act as a unit investment trust on Form N-4: ____

e. Small business investment company registered under the Act on Form N-5: ____

f. Separate account offering variable life insurance contracts which is registered under the Act as a unit investment trust on Form N-6: ____

g. Unit investment trust registered under the Act on Form N-8B-2: ____

Instruction. For Item B.6.a.i, the Registrant should include all Series that have been established by the Registrant and have shares outstanding (other than shares issued in connection with an initial investment to satisfy section 14(a) of the Act).

Item B.7. Securities Act registration. Is the Registrant the issuer of a class of securities registered under the Securities Act of 1933 ("Securities Act")? [Y/N]

Item B.8. Directors: Provide the information requested below about each person serving as director of the Registrant (management investment companies only):

a. Full name: ____

b. CRD number, if any: ____

c. Is the person an "interested person" of the Registrant as that term is defined in section 2(a)(19) of the Act (15 U.S.C. 80a-2(a)(19))? [Y/N]

d. Investment Company Act file number of any other registered investment company for which the person also serves as a director (*e.g.,* 811-): ____

Item B.9. Chief compliance officer. Provide the information requested below about each person serving as chief compliance officer of the Registrant for purposes of rule 38a-1 (17 CFR 270.38a-1):

a. Full name: ____

b. CRD number, if any: ____

c. Street: ____

d. City: ____

e. State, if applicable: ____

f. Foreign country, if applicable: ____

g. Zip code and zip code extension, or foreign postal code: ____

h. Telephone number (including country code if foreign): ____

i. Has the chief compliance officer changed since the last filing? [Y/N]

j. If the chief compliance officer is compensated or employed by any person other than the Registrant, or an affiliated person of the Registrant, for providing chief compliance officer services, provide:

   i. Name of the person: ____

   ii. Person's IRS Employer Identification Number: ____

Item B.10. Matters for security holder vote. Were any matters submitted by the Registrant for its security holders' vote during the reporting period? [Y/N]

a. If yes, and to the extent the response relates only to certain series of the Registrant, indicate the series involved:

   i. Series name: _____

   ii. Series identification number: ____

Instruction. Registrants registered on Forms N-3, N-4 or N-6, should respond "yes" to this Item only if security holder votes were solicited on contract-level matters.

Item B.11. Legal proceedings.

a. Have there been any material legal proceedings, other than routine litigation incidental to the business, to which the Registrant or any of its subsidiaries was a party or of which any of their property was the subject during the reporting period? [Y/N] If yes, include the attachment required by Item G.1.a.i.

   i. If yes, and to the extent the response relates only to certain series of the Registrant, indicate the series involved:

      1. Series name: _____

      2. Series identification number: ____

b. Has any proceeding previously reported been terminated? [Y/N] If yes, include the attachment required by Item G.1.a.i.

   i. If yes, and to the extent the response relates only to certain series of the Registrant, indicate the series involved:

      1. Series name: _____

      2. Series identification number: ____

Instruction. For purposes of this Item, the following proceedings should be described: (1) any bankruptcy, receivership or similar proceeding with respect to the Registrant or any of its significant subsidiaries; (2) any proceeding to which any director, officer or other affiliated person of the Registrant is a party adverse to the Registrant or any of its subsidiaries; and (3) any proceeding involving the revocation or suspension of the right of the Registrant to sell securities.

Item B.12. Fidelity bond and insurance (management investment companies only).

a. Were any claims with respect to the Registrant filed under a fidelity bond (including, but not limited to, the fidelity insuring agreement of the bond) during the reporting period? [Y/N]

i. If yes, enter the aggregate dollar amount of claims filed: ____

Item B.13. Directors and officers/errors and omissions insurance (management investment companies only).

a. Are the Registrant's officers or directors covered in their capacities as officers or directors under any directors and officers/errors and omissions insurance policy owned by the Registrant or anyone else? [Y/N]

i. If yes, were any claims filed under the policy during the reporting period with respect to the Registrant? [Y/N]

Item B.14. Provision of financial support. Did an affiliated person, promoter, or principal underwriter of the Registrant, or an affiliated person of such a person, provide any form of financial support to the Registrant during the reporting period? [Y/N] If yes, include the attachment required by Item G.1.a.ii, unless the Registrant is a Money Market Fund.

a. If yes and to the extent the response relates only to certain series of the Registrant, indicate the series involved:

i. Series name: _____

ii. Series identification number: ____

Instruction. For purposes of this Item, a provision of financial support includes any (1) capital contribution, (2) purchase of a security from a Money Market Fund in reliance on rule 17a-9 under the Act (17 CFR 270.17a-9), (3) purchase of any defaulted or devalued security at fair value reasonably intended to increase or stabilize the value or liquidity of the Registrant's portfolio, (4) execution of letter of credit or letter of indemnity, (5) capital support agreement (whether or not the Registrant ultimately received support), (6) performance guarantee, or (7) other similar action reasonably intended to increase or stabilize the value or liquidity of the Registrant's portfolio. Provision of financial support does not include any (1) routine waiver of fees or reimbursement of Registrant's expenses, (2) routine inter-fund lending, (3) routine inter-fund purchases of Registrant's shares, or (4) action that would qualify as financial support as defined above, that the board of directors has otherwise determined not to be reasonably intended to increase or stabilize the value or liquidity of the Registrant's portfolio.

Item B.15. Exemptive orders.

a. During the reporting period, did the Registrant rely on any orders from the Commission granting an exemption from one or more provisions of the Act, Securities Act or Exchange Act? [Y/N]

   i. If yes, provide below the release number for each order: ____

Item B.16. Principal underwriters.

a. Provide the information requested below about each principal underwriter:

   i. Full name: ____

   ii. SEC file number (e.g., 8-): ____

   iii. CRD number: ____

   iv. LEI, if any: ____

   v. State, if applicable: ____

   vi. Foreign country, if applicable: ____

   vii. Is the principal underwriter an affiliated person of the Registrant, or its investment adviser(s) or depositor? [Y/N]

b. Have any principal underwriters been hired or terminated during the reporting period? [Y/N]

Item B.17. Independent public accountant. Provide the following information about each independent public accountant:

a. Full name: ____

b. PCAOB number: ____

c. LEI, if any: ____

d. State, if applicable: ____

e. Foreign country, if applicable: ____

f. Has the independent public accountant changed since the last filing? [Y/N]

Item B.18. Report on internal control (management investment companies only). For the reporting period, did an independent public accountant's report on internal control note any material weaknesses? [Y/N]

Instruction. Small business investment companies are not required to respond to this item.

Item B.19. Audit opinion. For the reporting period, did an independent public accountant issue an opinion other than an unqualified opinion with respect to its audit of the Registrant's financial statements? [Y/N]

a. If yes, and to the extent the response relates only to certain series of the Registrant, indicate the series involved:

i. Series name: _____

ii. Series identification number: ____

Item B.20. Change in valuation methods. Have there been material changes in the method of valuation (e.g., change from use of bid price to mid price for fixed income securities or change in trigger threshold for use of fair value factors on international equity securities) of the Registrant's assets during the reporting period? [Y/N] If yes, provide the following:

a. Date of change: ___

b. Explanation of the change: ____

c. Asset type involved: ____

d. Type of investments involved: ____

e. Statutory or regulatory basis, if any: ____

f. To the extent the response relates only to certain series of the Registrant, indicate the series involved:

i. Series name: _____

ii. Series identification number: ____

Instruction. Responses to this item need not include changes to valuation techniques used for individual securities (*e.g.*, changing from market approach to income approach for a private equity security). In responding to Item B.20.c., provide the applicable "asset type" category specified in Item C.4.a. of Form N-PORT. In responding to Item B.20.d., provide a brief description of the type of investments involved. If the change in valuation methods applies only to certain sub-asset types included in the response to Item B.20.c., please provide the sub-asset types in the response to Item B.20.d. The responses to Item B.20.c. and Item B.20.d. should be identical only if the change in valuation methods applies to all assets within that category.

Item B.21. Change in accounting principles and practices. Have there been any changes in accounting principles or practices, or any change in the method of applying any such accounting principles or practices, which will materially affect the financial statements filed or to be filed for the current year with the Commission and which has not been previously reported? [Y/N] If yes, include the attachment required by Item G.1.a.iv.

Item B.22. Net asset value error corrections (open-end management investment companies only).

a. During the reporting period, were any payments made to shareholders or shareholder accounts reprocessed as a result of an error in calculating the Registrant's net asset value (or net asset value per share)? [Y/N]

i. If yes, and to the extent the response relates only to certain Series of the Registrant, indicate the Series involved:

1. Series name: _____

2. Series identification number: ____

Item B.23. Rule 19a-1 notice (management investment companies only). During the reporting period, did the Registrant pay any dividend or make any distribution in the nature of a dividend payment, required to be accompanied by a written statement pursuant to section 19(a) of the Act (15 U.S.C. 80a-19(a)) and rule 19a-1 thereunder (17 CFR 270.19a-1)? [Y/N]

a. If yes, and to the extent the response relates only to certain Series of the Registrant, indicate the Series involved:

i. Series name: _____

ii. Series identification number: ____

Part C: Additional Questions for Management Investment Companies

Item C.1. Background information.

a. Full name of the Fund: ____

b. Series identification number, if any: ____

c. LEI: ____

d. Is this the first filing on this form by the Fund? [Y/N]

Item C.2. Classes of open-end management investment companies.

a. How many Classes of shares of the Fund (if any) are authorized? ____

b. How many new Classes of shares of the Fund were added during the reporting period? ____

c. How many Classes of shares of the Fund were terminated during the reporting period? ___

d. For each Class with shares outstanding, provide the information requested below:

i. Full name of Class: ____

ii. Class identification number, if any: ____

iii. Ticker symbol, if any: ____

Item C.3. Type of fund. Indicate if the Fund is any one of the types listed below. Check all that apply.

a. Exchange-Traded Fund or Exchange-Traded Managed Fund or offers a Class that itself is an Exchange-Traded Fund or Exchange-Traded Managed Fund:

i. Exchange-Traded Fund: ____

ii. Exchange-Traded Managed Fund: ____

b. Index Fund: ____

i. Is the index whose performance the Fund tracks, constructed:

1. By an affiliated person of the fund? [Y/N]

2. Exclusively for the fund? [Y/N]

ii. Provide the annualized difference between the Fund's total return during the reporting period and the index's return during the reporting period (*i.e.*, the Fund's total return less the index's return):

1. Before Fund fees and expenses: ____

2. After Fund fees and expenses (*i.e.*, net asset value): ____

iii. Provide the annualized standard deviation of the daily difference between the Fund's total return and the index's return during the reporting period:

1. Before Fund fees and expenses: ____

2. After Fund fees and expenses (*i.e.*, net asset value): ____

c. Seeks to achieve performance results that are a multiple of an index or other benchmark, the inverse of an index or other benchmark, or a multiple of the inverse of an index or other benchmark: ____

d. Interval Fund: ____

e. Fund of Funds: ____

f. Master-Feeder Fund: ____

i. If the Registrant is a master fund, then provide the information requested below with respect to each feeder fund:

1. Full name: ____

2. For registered feeder funds:

A. Investment Company Act file number (*e.g.,* 811-): ____

B. Series identification number, if any: ____

C. LEI of feeder fund: ____

3. For unregistered feeder funds:

A. SEC file number of the feeder fund's investment adviser (*e.g.,* 801-): ____

B. LEI of feeder fund, if any: ___

ii. If the Registrant is a feeder fund, then provide the information requested below with respect to a master fund registered under the Act:

1. Full name: ____

2. Investment Company Act file number (*e.g.,* 811-): ____

3. SEC file number of the master fund's investment adviser (*e.g.,* 801-): ___

4. LEI: ___

g. Money Market Fund: ____

h. Target Date Fund: ___

i. Underlying fund to a variable annuity or variable life insurance contract: ____

Instructions.

1. "Fund of Funds" means a fund that acquires securities issued by any other investment company in excess of the amounts permitted under paragraph (A) of section 12(d)(1) of the Act (15 U.S.C. 80a-12(d)(1)(A)), but, for purposes of this Item, does not include a fund that acquires securities issued by another investment company solely in reliance on rule 12d1-1 under the Act (CFR 270.12d1-1).
2. "Index Fund" means an investment company, including an Exchange-Traded Fund, that seeks to track the performance of a specified index.
3. "Interval Fund" means a closed-end management investment company that makes periodic repurchases of its shares pursuant to rule 23c-3 under the Act (17 CFR 270.23c-3).
4. "Master-Feeder Fund" means a two-tiered arrangement in which one or more funds (each a feeder fund) holds shares of a single Fund (the master fund) in accordance with section 12(d)(1)(E) of the Act (15 U.S.C. 80a-12(d)(1)(E)) or pursuant to exemptive relief granted by the Commission.
5. "Target Date Fund" means an investment company that has an investment objective or strategy of providing varying degrees of long-term appreciation and capital preservation through a mix of equity and fixed income exposures that changes over time based on an investor's age, target retirement date, or life expectancy.

Item C.4. Diversification. Does the Fund seek to operate as a "non-diversified company" as such term is defined in section 5(b)(2) of the Act (15 U.S.C. 80a-5(b)(2))? [Y/N]

Item C.5. Investments in certain foreign corporations.

a. Does the fund invest in a controlled foreign corporation for the purpose of investing in certain types of instruments such as, but not limited to, commodities? [Y/N]

b. If yes, provide the following information:

   i. Full name of subsidiary: ___

   ii. LEI of subsidiary, if any: ___

Instruction. "Controlled foreign corporation" has the meaning provided in section 957 of the Internal Revenue Code [26 U.S.C. 957].

Item C.6. Securities lending.

a. Is the Fund authorized to engage in securities lending transactions? [Y/N]

b. Did the Fund lend any of its securities during the reporting period? [Y/N]

   i. If yes, during the reporting period, did any borrower fail to return the loaned securities by the contractual deadline with the result that:

1. The Fund (or its securities lending agent) liquidated collateral pledged to secure the loaned securities? [Y/N]
2. The Fund was otherwise adversely impacted? [Y/N]

Instruction. For purposes of this Item, other adverse impacts would include, for example, (1) a loss to the Fund if collateral and indemnification were not sufficient to replace the loaned securities or their value, (2) the Fund's ineligibility to vote shares in a proxy, or (3) the Fund's ineligibility to receive a direct distribution from the issuer.

c. Provide the information requested below about each securities lending agent, if any, retained by the Fund:

   i. Full name of securities lending agent: ____

   ii. LEI, if any: ____

   iii. Is the securities lending agent an affiliated person, or an affiliated person of an affiliated person, of the Fund? [Y/N]

   iv. Does the securities lending agent or any other entity indemnify the fund against borrower default on loans administered by this agent? [Y/N]

   v. If the entity providing the indemnification is not the securities lending agent, provide the following information:

      1. Name of person providing indemnification: ____
      2. LEI, if any, of person providing indemnification: ____

   vi. Did the Fund exercise its indemnification rights during the reporting period? [Y/N]

d. If a person managing any pooled investment vehicle in which cash collateral is invested in connection with the Fund's securities lending activities (*i.e.*, a cash collateral manager) does not also serve as securities lending agent, provide the following information about each person:

   i. Full name of cash collateral manager: ____

   ii. LEI, if any: ____

   iii. Is the cash collateral manager an affiliated person, or an affiliated person of an affiliated person, of a securities lending agent retained by the Fund? [Y/N]

   iv. Is the cash collateral manager an affiliated person, or an affiliated person of an affiliated person, of the Fund? [Y/N]

e. Types of payments made to one or more securities lending agents and cash collateral managers (check all that apply):

   i. Revenue sharing split: ____

ii. Non-revenue sharing split (other than administrative fee): ____

iii. Administrative fee: ____

iv. Cash collateral reinvestment fee: ____

v. Indemnification fee: ____

vi. Other: _____. If other, describe: ______.

f. Provide the monthly average of the value of portfolio securities on loan during the reporting period. ___

g. Provide the net income from securities lending activities. ____

Item C.7. Reliance on certain rules. Did the Fund rely on any of the following rules under the Act during the reporting period? (check all that apply)

a. Rule 10f-3 (17 CFR 270.10f-3): ____

b. Rule 12d1-1 (17 CFR 270.12d1-1): ____

c. Rule 15a-4 (17 CFR 270.15a-4): ____

d. Rule 17a-6 (17 CFR 270.17a-6): ____

e. Rule 17a-7 (17 CFR 270.17a-7): ____

f. Rule 17a-8 (17 CFR 270.17a-8): ____

g. Rule 17e-1 (17 CFR 270.17e-1): ____

h. Rule 22d-1 (17 CFR 270.22d-1): ____

i. Rule 23c-1 (17 CFR 270.23c-1): ____

j. Rule 32a-4 (17 CFR 270.32a-4): ____

Item C.8. Expense limitations.

a. Did the Fund have an expense limitation arrangement in place during the reporting period? [Y/N]

b. Were any expenses of the Fund reduced or waived pursuant to an expense limitation arrangement during the reporting period? [Y/N]

c. Are the fees waived subject to recoupment? [Y/N]

d. Were any expenses previously waived recouped during the period? [Y/N]

Instruction. Provide information concerning any direct or indirect limitations, waivers or reductions, on the level of expenses incurred by the fund during the reporting period. A limitation, for example, may be applied indirectly (such as when an adviser agrees to accept a reduced fee pursuant to a voluntary fee waiver) or it may apply only for a temporary period such as for a new fund in its start-up phase.

Item C.9. Investment advisers.

a. Provide the following information about each investment adviser (other than a sub-adviser) of the Fund:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: ____

iv. LEI, if any: ____

v. State, if applicable: ____

vi. Foreign country, if applicable: ____

vii. Was the investment adviser hired during the reporting period? [Y/N]

1. If the investment adviser was hired during the reporting period, indicate the investment adviser's start date: ____

b. If an investment adviser (other than a sub-adviser) to the Fund was terminated during the reporting period, provide the following with respect to each investment adviser:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: ____

iv. LEI, if any: ____

v. State, if applicable: ____

vi. Foreign country, if applicable: ____

vii. Termination date: ____

c. For each sub-adviser to the Fund, provide the information requested:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: _____

iv. LEI, if any: _____

v. State, if applicable: ____

vi. Foreign country, if applicable: ____

vii. Is the sub-adviser an affiliated person of the Fund's investment adviser(s)? [Y/N]

viii. Was the sub-adviser hired during the reporting period? [Y/N]

1. If the sub-adviser was hired during the reporting period, indicate the sub-adviser's start date: ____

d. If a sub-adviser was terminated during the reporting period, provide the following with respect to each such sub-adviser:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: ____

iv. LEI, if any: ____

v. State, if applicable: ____

vi. Foreign country, if applicable: ____

vii. Termination date: ____

Item C.10. Transfer agents.

a. Provide the following information about each person providing transfer agency services to the Fund:

i. Full name: ____

ii. SEC file number (e.g., 84- or 85-): ____

iii. LEI, if any: ____

iv. State, if applicable: ____

v. Foreign country, if applicable: ____

vi. Is the transfer agent an affiliated person of the Fund or its investment adviser(s)? [Y/N]

vii. Is the transfer agent a sub-transfer agent? [Y/N]

b. Has a transfer agent been hired or terminated during the reporting period? [Y/N]

Item C.11. Pricing services.

a. Provide the following information about each person that provided pricing services to the Fund during the reporting period:

i. Full name: ____

ii. LEI, if any, or provide and describe other identifying number: ____

iii. State, if applicable: _____

iv. Foreign country, if applicable: ____

v. Is the pricing service an affiliated person of the Fund or its investment adviser(s)? [Y/N]

b. Was a pricing service hired or terminated during the reporting period? [Y/N]

Item C.12. Custodians.

a. Provide the following information about each person that provided custodial services to the Fund during the reporting period:

i. Full name: ____

ii. LEI, if any: ____

iii. State, if applicable: ____

iv. Foreign country, if applicable: ____

v. Is the custodian an affiliated person of the Fund or its investment adviser(s)? [Y/N]

vi. Is the custodian a sub-custodian? [Y/N]

vii. With respect to the custodian, check below to indicate the type of custody:

1. Bank — section 17(f)(1) (15 U.S.C. 80a-17(f)(1)): ____

2. Member national securities exchange — rule 17f-1 (17 CFR 270.17f-1): ____

3. Self — rule 17f-2 (17 CFR 270.17f-2): ____

4. Securities depository — rule 17f-4 (17 CFR 270.17f-4): ____

5. Foreign custodian — rule 17f-5 (17 CFR 270.17f-5): ____

6. Futures commission merchants and commodity clearing organizations — rule 17f-6 (17 CFR 270.17f-6): ____

7. Foreign securities depository — rule 17f-7 (17 CFR 270.17f-7): ____

8. Insurance company sponsor — rule 26a-2 (17 CFR 270.26a-2): ____

9. Other: ____. If other, describe: ______.

b. Has a custodian been hired or terminated during the reporting period? [Y/N]

Item C.13. Shareholder servicing agents.

a. Provide the following information about each shareholder servicing agent of the Fund:

i. Full name: ____

ii. LEI, if any, or provide and describe other identifying number: ____

iii. State, if applicable: _____

iv. Foreign country, if applicable: ____

v. Is the shareholder servicing agent an affiliated person of the Fund or its investment adviser(s)? [Y/N]

vi. Is the shareholder servicing agent a sub-shareholder servicing agent? [Y/N]

b. Has a shareholder servicing agent been hired or terminated during the reporting period? [Y/N]

Item C.14. Administrators.

a. Provide the following information about each administrator of the Fund:

i. Full name: ____

ii. LEI, if any, or provide and describe other identifying number: ____

iii. State, if applicable: _____

iv. Foreign country, if applicable: ___

v. Is the administrator an affiliated person of the Fund or its investment adviser(s)? [Y/N]

vi. Is the administrator a sub-administrator? [Y/N]

b. Has an administrator been hired or terminated during the reporting period? [Y/N]

Item C.15. Affiliated broker-dealers. Provide the following information about each affiliated broker-dealer:

a. Full name: ____

b. SEC file number: ____

c. CRD number: ____

d. LEI, if any: ____

e. State, if applicable: _____

f. Foreign country, if applicable: ____

g. Total commissions paid to the affiliated broker-dealer for the reporting period: ____

Item C.16. Brokers.

a. For each of the ten brokers that received the largest dollar amount of brokerage commissions (excluding dealer concessions in underwritings) by virtue of direct or indirect participation in the Fund's portfolio transactions, provide the information below:

i. Full name of broker: ____

ii. SEC file number: ____

iii. CRD number: ____

iv. LEI, if any: ____

v. State, if applicable: _____

vi. Foreign country, if applicable: ____

vii. Gross commissions paid by the Fund for the reporting period: ____

b. Aggregate brokerage commissions paid by Fund during the reporting period: ____

Item C.17. Principal transactions.

a. For each of the ten entities acting as principals with which the Fund did the largest dollar amount of principal transactions (include all short-term obligations, and U.S. government and tax-free securities) in both the secondary market and in underwritten offerings, provide the information below:

i. Full name of dealer: ____

ii. SEC file number: ____

iii. CRD number: ____

iv. LEI, if any: ____

v. State, if applicable: _____

vi. Foreign country, if applicable: ____

vii. Total value of purchases and sales (excluding maturing securities) with Fund: ____

b. Aggregate value of principal purchase/sale transactions of Fund during the reporting period: ____

Instructions to Item C.16 and Item C.17.

To help Registrants distinguish between agency and principal transactions, and to promote consistent reporting of the information required by these items, the following criteria should be used:

1. If a security is purchased or sold in a transaction for which the confirmation specifies the amount of the commission to be paid by the Registrant, the transaction should be considered an agency transaction and included in determining the answers to Item C.16.

2. If a security is purchased or sold in a transaction for which the confirmation specifies only the net amount to be paid or received by the Registrant and such net amount is equal to the market value of the security at the time of the transaction, the transaction should be considered a principal transaction and included in determining the amounts in Item C.17.

3. If a security is purchased by the Registrant in an underwritten offering, the acquisition should be considered a principal transaction and included in answering Item C.17 even though the Registrant has knowledge of the amount the underwriters are receiving from the issuer.
4. If a security is sold by the Registrant in a tender offer, the sale should be considered a principal transaction and included in answering Item C.17 even though the Registrant has knowledge of the amount the offeror is paying to soliciting brokers or dealers.
5. If a security is purchased directly from the issuer (such as a bank CD), the purchase should be considered a principal transaction and included in answering Item C.17.
6. The value of called or maturing securities should not be counted in either agency or principal transactions and should not be included in determining the amounts shown in Item C.16 and Item C.17. This means that the acquisition of a security may be included, but it is possible that its disposition may not be included. Disposition of a repurchase agreement at its expiration date should not be included.
7. The purchase or sales of securities in transactions not described in paragraphs (1) through (6) above should be evaluated by the Fund based upon the guidelines established in those paragraphs and classified accordingly. The agents considered in Item C.16 may be persons or companies not registered under the Exchange Act as securities brokers. The persons or companies from whom the investment company purchased or to whom it sold portfolio instruments on a principal basis may be persons or entities not registered under the Exchange Act as securities dealers.

Item C.18. Payments for brokerage and research. During the reporting period, did the Fund pay commissions to broker-dealers for "brokerage and research services" within the meaning of section 28(e) of the Exchange Act (15 U.S.C. 78bb)? [Y/N]

Item C.19. Average net assets.

a. Provide the Fund's (other than a money market fund's) monthly average net assets during the reporting period: ___

b. Provide the money market fund's daily average net assets during the reporting period: ___

Part D: Additional Questions for Closed-End Management Investment Companies and Small Business Investment Companies

Item D.1. Securities issued by Registrant. Indicate by checking below which of the following securities have been issued by the Registrant. Indicate all that apply.

a. Common stock: ____

i. Title of class: ____

ii. Exchange where listed: ____

iii. Ticker symbol: ____

b. Preferred stock: ____

i. Title of class: ____

ii. Exchange where listed: ____

iii. Ticker symbol: ____

c. Warrants: ____

i. Title of class: ____

ii. Exchange where listed: ____

iii. Ticker symbol: ____

d. Convertible securities: ____

i. Title of class: ____

ii. Exchange where listed: ____

iii. Ticker symbol: ____

e. Bonds: ____

i. Title of class: ____

ii. Exchange where listed: ____

iii. Ticker symbol: ____

f. Other: ____. If other, describe: ______.

i. Title of class: ____

ii. Exchange where listed: ____

iii. Ticker symbol: ____

Instruction. For any security issued by the Fund that is not listed on a securities exchange but that has a ticker symbol, provide that ticker symbol.

Item D.2. Rights offerings.

a. Did the Fund make a rights offering with respect to any type of security during the reporting period? [Y/N] If yes, answer the following as to each rights offering made by the Fund:

b. Type of security.

i. Common stock: ____

ii. Preferred stock: ____

iii. Warrants: ____

iv. Convertible securities: ____

v. Bonds: ____

vi. Other: ____. If other, describe: ______.

c. Percentage of participation in primary rights offering: ___

Instruction. For Item D.2.c., the "percentage of participation in primary rights offering" is calculated as the percentage of subscriptions exercised during the primary rights offering relative to the amount of securities available for primary subscription.

Item D.3. Secondary offerings.

a. Did the Fund make a secondary offering during the reporting period? [Y/N]

b. If yes, indicate by checking below the type(s) of security. Indicate all that apply.

i. Common stock: ____

ii. Preferred stock: ____

iii. Warrants: ____

iv. Convertible securities: ____

v. Bonds: ____

vi. Other: ____. If other, describe: ______.

Item D.4. Repurchases.

a. Did the Fund repurchase any outstanding securities issued by the Fund during the reporting period? [Y/N]

b. If yes, indicate by checking below the type(s) of security. Indicate all that apply:

i. Common stock: ____

ii. Preferred stock: ___

iii. Warrants: ____

iv. Convertible securities: ____

v. Bonds: ____

vi. Other: ____. If other, describe: ______.

Item D.5. Default on long-term debt.

a. Were any issues of the Fund's long-term debt in default at the close of the reporting period with respect to the payment of principal, interest, or amortization? [Y/N] If yes, provide the following:

i. Nature of default: ____

ii. Date of default: ____

iii. Amount of default per $1,000 face amount: ____

iv. Total amount of default: ____

Instruction. The term "long-term debt" means debt with a period of time from date of initial issuance to maturity of one year or greater.

Item D.6. Dividends in arrears.

a. Were any accumulated dividends in arrears on securities issued by the Fund at the close of the reporting period? [Y/N] If yes, provide the following:

i. Title of issue: ____

ii. Amount per share in arrears: ____

Instruction. The term "dividends in arrears" means dividends that have not been declared by the board of directors or other governing body of the Fund at the end of each relevant dividend period set forth in the constituent instruments establishing the rights of the stockholders.

Item D.7. Modification of securities. Have the terms of any constituent instruments defining the rights of the holders of any class of the Registrant's securities been materially modified? [Y/N] If yes, provide the attachment required by Item G.1.b.ii.

Item D.8. Management fee (closed-end companies only). Provide the Fund's advisory fee as of the end of the reporting period as a percentage of net assets: ____

Instruction. Base the percentage on amounts incurred during the reporting period.

Item D.9. Net annual operating expenses. Provide the Fund's net annual operating expenses as of the end of the reporting period (net of any waivers or reimbursements) as a percentage of net assets: ____

Item D.10. Market price. Market price per share at end of reporting period: ____

Instruction. Respond to this item with respect to common stock issued by the Registrant only.

Item D.11. Net asset value. Net asset value per share at end of reporting period: ____

Instruction. Respond to this item with respect to common stock issued by the Registrant only.

Item D.12. Investment advisers (small business investment companies only).

a. Provide the following information about each investment adviser (other than a sub-adviser) of the Fund:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: _____

iv. LEI, if any: _____

v. State, if applicable: _____

vi. Foreign country, if applicable: ____

vii. Was the investment adviser hired during the reporting period? [Y/N]

1. If the investment adviser was hired during the reporting period, indicate the investment adviser's start date: ____

b. If an investment adviser (other than a sub-adviser) to the Fund was terminated during the reporting period, provide the following with respect to each investment adviser:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: ____

iv. LEI, if any: ____

v. State, if applicable: _____

vi. Foreign country, if applicable: ____

vii. Termination date: ____

c. For each sub-adviser to the Fund, provide the information requested:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: _____

iv. LEI, if any: _____

v. State, if applicable: _____

vi. Foreign country, if applicable: ____

vii. Is the sub-adviser an affiliated person of the Fund's investment adviser(s)? [Y/N]

viii. Was the sub-adviser hired during the reporting period? [Y/N]

1. If the sub-adviser was hired during the reporting period, indicate the sub-adviser's start date: ____

d. If a sub-adviser was terminated during the reporting period, provide the following with respect to each such sub-adviser:

i. Full name: ____

ii. SEC file number (*e.g.*, 801-): ____

iii. CRD number: ____

iv. LEI, if any: ____

v. State, if applicable: _____

vi. Foreign country, if applicable: ____

vii. Termination date: ____

Item D.13. Transfer agents (small business investment companies only).

a. Provide the following information about each person providing transfer agency services to the Fund:

i. Full name: ____

ii. SEC file number (e.g., 84- or 85-): ____

iii. LEI, if any: ____

iv. State, if applicable: ____

v. Foreign country, if applicable: ____

vi. Is the transfer agent an affiliated person of the Fund or its investment adviser(s)? [Y/N]

vii. Is the transfer agent a sub-transfer agent? [Y/N]

b. Has a transfer agent been hired or terminated during the reporting period? [Y/N]

Item D.14. Custodians (small business investment companies only).

a. Provide the following information about each person that provided custodial services to the Fund during the reporting period:

i. Full name: ____

ii. LEI, if any: ____

iii. State, if applicable: ____

iv. Foreign country, if applicable: ____

v. Is the custodian an affiliated person of the Fund or its investment adviser(s)? [Y/N]

vi. Is the custodian a sub-custodian? [Y/N]

vii. With respect to the custodian, check below to indicate the type of custody:

1. Bank — section 17(f)(1) (15 U.S.C. 80a-17(f)(1)): ____
2. Member national securities exchange — rule 17f-1 (17 CFR 270.17f-1): ____
3. Self — rule 17f-2 (17 CFR 270.17f-2): ____
4. Securities depository — rule 17f-4 (17 CFR 270.17f-4): ____
5. Foreign custodian — rule 17f-5 (17 CFR 270.17f-5): ____
6. Futures commission merchants and commodity clearing organizations — rule 17f-6 (17 CFR 270.17f-6): ____
7. Foreign securities depository — rule 17f-7 (17 CFR 270.17f-7): ____
8. Insurance company sponsor — rule 26a-2 (17 CFR 270.26a-2): ____
9. Other: ____. If other, describe: ______.

b. Has a custodian been hired or terminated during the reporting period? [Y/N]

Part E: Additional Questions for Exchange-Traded Funds and Exchange-Traded Managed Funds

Item E.1. Exchange.

a. Exchange where listed. Provide the name of the national securities exchange on which the Fund's shares are listed: ____

b. Ticker. Provide the Fund's ticker symbol: ____

Item E.2. Authorized participants. For each authorized participant of the Fund, provide the following information:

a. Full name: ____

b. SEC file number: ____

c. CRD number: ____

d. LEI, if any: ____

e. The dollar value of the Fund shares the authorized participant purchased from the Fund during the reporting period: ____

f. The dollar value of the Fund shares the authorized participant redeemed during the reporting period: ____

g. Did the Fund require that an authorized participant post collateral to the Fund or any of its designated service providers in connection with the purchase or redemption of Fund shares during the reporting period? [Y/N]

Instruction. The term "authorized participant" means a broker-dealer that is also a member of a clearing agency registered with the Commission or a DTC Participant, and which has a written agreement with the Exchange-Traded Fund or Exchange-Traded Managed Fund or one of its designated service providers that allows the authorized participant to place orders to purchase or redeem creation units of the Exchange-Traded Fund or Exchange-Traded Managed Fund.

Item E.3. Creation units.

a. Number of Fund shares required to form a creation unit as of the last business day of the reporting period: ____

b. Based on the dollar value paid for each creation unit purchased by authorized participants during the reporting period, provide:

i. The average percentage of that value composed of cash: ___%

ii. The standard deviation of the percentage of that value composed of cash: ___%

iii. The average percentage of that value composed of non-cash assets and other positions exchanged on an "in-kind" basis: ___%

iv. The standard deviation of the percentage of that value composed of non-cash assets and other positions exchanged on an "in-kind" basis: ___%

c. Based on the dollar value paid for creation units redeemed by authorized participants during the reporting period, provide:

i. The average percentage of that value composed of cash: ___%

ii. The standard deviation of the percentage of that value composed of cash: ___%

iii. The average percentage of that value composed of non-cash assets and other positions exchanged on an "in-kind" basis: ___%

iv. The standard deviation of the percentage of that value composed of non-cash assets and other positions exchanged on an "in-kind" basis: ___%

d. For creation units purchased by authorized participants during the reporting period, provide:

i. The average transaction fee charged to an authorized participant for transacting in the creation units, expressed as:

1. Dollars per creation unit, if charged on that basis: $___

2. Dollars for one or more creation units purchased on the same day, if charged on that basis: $___

3. A percentage of the value of each creation unit, if charged on that basis: $___

ii. The average transaction fee charged to an authorized participant for transacting in those creation units the consideration for which was fully or partially composed of cash, expressed as:

1. Dollars per creation unit, if charged on that basis: $___
2. Dollars for one or more creation units purchased on the same day, if charged on that basis: $___
3. A percentage of the cash in each creation unit, if charged on that basis: ___%

e. For creation units redeemed by authorized participants during the reporting period, provide:

i. The average transaction fee charged to an authorized participant for transacting in the creation units, expressed as:

1. Dollars per creation unit, if charged on that basis: $___
2. Dollars for one or more creation units redeemed on the same day, if charged on that basis: $___
3. A percentage of the value of each creation unit, if charged on that basis: $___

ii. The average transaction fee charged to an authorized participant for transacting in those creation units the consideration for which was fully or partially composed of cash, expressed as:

1. Dollars per creation unit, if charged on that basis: $___
2. Dollars for one or more creation units redeemed on the same day, if charged on that basis: $___
3. A percentage of the cash in each creation unit, if charged on that basis: ___%

Instruction. The term "creation unit" means a specified number of Exchange-Traded Fund or Exchange-Traded Managed Fund shares that the fund will issue to (or redeem from) an authorized participant in exchange for the deposit (or delivery) of specified securities, cash, and other assets or positions.

Item E.4. Benchmark return difference (unit investment trusts only).

a. If the Fund is an Index Fund as defined in Item C.3 of this Form, provide the following information:

i. Is the index whose performance the Fund tracks, constructed:

1. By an affiliated person of the fund? [Y/N]
2. Exclusively for the fund? [Y/N]

ii. The annualized difference between the Fund's total return during the reporting period and the index's return during the reporting period (i.e., the Fund's total return less the index's return):

1. Before Fund fees and expenses: ____

2. After Fund fees and expenses (*i.e.*, net asset value): ____

iii. The annualized standard deviation of the daily difference between the Fund's total return and the index's return during the reporting period:

1. Before Fund fees and expenses: ____

2. After Fund fees and expenses (*i.e.*, net asset value): ____

Part F: Additional Questions for Unit Investment Trusts

Item F.1. Depositor. Provide the following information about each depositor:

a. Full name: ____

b. CRD number, if any: ____

c. LEI, if any: ____

d. State, if applicable: ____

e. Foreign country, if applicable: ____

f. Full name of ultimate parent of depositor: ____

Item F.2. Administrators.

a. Provide the following information about each administrator of the Fund:

i. Full name: ____

ii. LEI, if any, or provide and describe other identifying number: ____

iii. State, if applicable: ____

iv. Foreign country, if applicable: ____

v. Is the administrator an affiliated person of the Fund or depositor? [Y/N]

vi. Is the administrator a sub-administrator? [Y/N]

b. Has an administrator been hired or terminated during the reporting period? [Y/N]

Item F.3. Insurance company separate accounts. Is the Registrant a separate account of an insurance company? [Y/N]

Instruction. If the answer to Item F.3 is yes, respond to Item F.12 through Item F.17. If the answer to Item F.3 is no, respond to Item F.4 through Item F.11, and Item F.17.

Item F.4. Sponsor. Provide the following information about each sponsor:

a. Full name: ____

b. CRD number, if any: ____

c. LEI, if any: ____

d. State, if applicable: ____

e. Foreign country, if applicable: ____

Item F.5. Trustees. Provide the following information about each trustee:

a. Full name: ____

b. State, if applicable: ____

c. Foreign country, if applicable: ____

Item F.6. Securities Act registration.

a. Provide the number of series existing at the end of the reporting period that had outstanding securities registered under the Securities Act: ____

b. Provide the CIK for each of these existing series: ____

Item F.7. New series.

a. Number of new series for which registration statements under the Securities Act became effective during the reporting period: ____

b. Total aggregate value of the portfolio securities on the date of deposit for the new series: ____

Item F.8. Series with a current prospectus. Number of series for which a current prospectus was in existence at the end of the reporting period: _____

Item F.9. Number of existing series for which additional units were registered under the Securities Act.

a. Number of existing series for which additional units were registered under the Securities Act during the reporting period: ____

b. Total value of additional units: ____

Item F.10. Value of units placed in portfolios of subsequent series. Total value of units of prior series that were placed in the portfolios of subsequent series during the reporting period (the value of these units is to be measured on the date they were placed in the subsequent series): ____

Item F.11. Assets. Provide the total assets of all series of the Registrant combined as of the end of the reporting period: ____

Item F.12. Series ID of separate account. Series identification number: ____

Item F.13. Number of contracts. For each security that has a contract identification number assigned pursuant to rule 313 of Regulation S-T (17 CFR 232.313), provide the number of individual contracts that are in force at the end of the reporting period: ____

Instruction. In the case of group contracts, each participant certificate should be counted as an individual contract.

Item F.14. Information on the security issued through the separate account. For each security that has a contract identification number assigned pursuant to rule 313 of Regulation S-T (17 CFR 232.313), provide the following information as of the end of the reporting period:

a. Full name of the security: ____

b. Contract identification number: ____

c. Total assets attributable to the security: ____

d. Number of contracts sold during the reporting period: ____

e. Gross premiums received during the reporting period: ____

f. Gross premiums received pursuant to section 1035 exchanges: ____

g. Number of contracts affected in connection with premiums paid in pursuant to section 1035 exchanges: ____

h. Amount of contract value redeemed during the reporting period: ____

i. Amount of contract value redeemed pursuant to section 1035 exchanges: ____

j. Number of contracts affected in connection with contract value redeemed pursuant to section 1035 exchanges: ____

Instruction. In the case of group contracts, each participant certificate should be counted as an individual contract.

Item F.15. Reliance on rule 6c-7. Did the Registrant rely on rule 6c-7 under the Act (17 CFR 270.6c-7) during the reporting period? [Y/N]

Item F.16. Reliance on rule 11a-2. Did the Registrant rely on rule 11a-2 under the Act (17 CFR 270.11a-2) during the reporting period? [Y/N]

Item F.17. Divestments under section 13(c) of the Act.

a. If the Registrant has divested itself of securities in accordance with section 13(c) of the Act (15 U.S.C. 80a-13(c)) since the end of the reporting period immediately prior to the current reporting period and before filing of the current report, disclose the information requested below for each such divested security:

   i. Full name of the issuer: ____

ii. Ticker symbol: ____

iii. CUSIP number: ____

iv. Total number of shares or, for debt securities, principal amount divested: ____

v. Date that the securities were divested: ____

vi. Name of the statute that added the provision of section 13(c) in accordance with which the securities were divested: ____

b. If the Registrant holds any securities of the issuer on the date of the filing, provide the information requested below:

i. Ticker symbol: ____

ii. CUSIP number: ____

iii. Total number of shares or, for debt securities, principal amount held on the date of the filing: ____

Instructions.

This item may be used by a unit investment trust that divested itself of securities in accordance with section 13(c). A unit investment trust is not required to include disclosure under this item; however, the limitation on civil, criminal, and administrative actions under section 13(c) does not apply with respect to a divestment that is not disclosed under this item.

If a unit investment trust divests itself of securities in accordance with section 13(c) during the period that begins on the fifth business day before the date of filing a report on Form N-CEN and ends on the date of filing, the unit investment trust may disclose the divestment in either the report or an amendment thereto that is filed not later than five business days after the date of filing the report.

For purposes of determining when a divestment should be reported under this item, if a unit investment trust divests its holdings in a particular security in a related series of transactions, the unit investment trust may deem the divestment to occur at the time of the final transaction in the series. In that case, the unit investment trust should report each transaction in the series on a single report on Form N-CEN, but should separately state each date on which securities were divested and the total number of shares or, for debt securities, principal amount divested, on each such date.

Item F.17 shall terminate one year after the first date on which all statutory provisions that underlie section 13(c) have terminated.

Part G: Attachments

Item G.1. Attachments.

a. Attachments applicable to all Registrants. All Registrants shall file the following attachments, as applicable, with the current report. Indicate the attachments filed with the current report by checking the applicable items below:

i. Legal proceedings: ____

ii. Provision of financial support: ____

iii. Independent public accountant's report on internal control (management investment companies other than small business investment companies only): ____

iv. Change in accounting principles and practices: ____

v. Information required to be filed pursuant to exemptive orders: ____

vi. Other information required to be included as an attachment pursuant to Commission rules and regulations: ____

Instructions.

1. Item G.1.a.i. Legal proceedings.

(a) If the Registrant responded "YES" to Item B.11.a., provide a brief description of the proceedings. As part of the description, provide the case or docket number (if any), and the full names of the principal parties to the proceeding.

(b) If the Registrant responded "YES" to Item B.11.b., identify the proceeding and give its date of termination.

2. Item G.1.a.ii. Provision of financial support. If the Registrant responded "YES" to Item B.14., provide the following information (unless the Registrant is a Money Market Fund):

(a) Description of nature of support.

(b) Person providing support.

(c) Brief description of relationship between the person providing support and the Registrant.

(d) Date support provided.

(e) Amount of support.

(f) Security supported (if applicable). Disclose the full name of the issuer, the title of the issue (including coupon or yield, if applicable) and at least two identifiers, if available (*e.g.*, CIK, CUSIP, ISIN, LEI).

(g) Value of security supported on date support was initiated (if applicable).

(h) Brief description of reason for support.

(i) Term of support.

(j) Brief description of any contractual restrictions relating to support.

3. Item G.1.a.iii. Independent public accountant's report on internal control (management investment companies other than small business investment companies only). Each management investment company shall furnish a report of its independent public accountant on the company's system of internal accounting controls. The accountant's report shall be based on the review, study and evaluation of the accounting system, internal accounting controls, and procedures for safeguarding securities made during the audit of the financial statements for the reporting period. The report should disclose any material weaknesses in: (a) the accounting system; (b) system of internal accounting control; or (c) procedures for safeguarding securities which exist as of the end of the Registrant's fiscal year. The accountant's report shall be furnished as an exhibit to the form and shall: (1) be addressed to the Registrant's shareholders and board of directors; (2) be dated; (3) be signed manually; and (4) indicate the city and state where issued.

   Attachments that include a report that discloses a material weakness should include an indication by the Registrant of any corrective action taken or proposed.

   The fact that an accountant's report is attached to this form shall not be regarded as acknowledging any review of this form by the independent public accountant.

4. Item G.1.a.iv. Change in accounting principles and practices. If the Registrant responded "YES" to Item B.21, provide an attachment that describes the change in accounting principles or practices, or the change in the method of applying any such accounting principles or practices. State the date of the change and the reasons therefor. A letter from the Registrant's independent accountants, approving or otherwise commenting on the change, shall accompany the description.

5. Item G.1.a.v. Information required to be filed pursuant to exemptive orders. File as an attachment any information required to be reported on Form N-CEN or any predecessor form to Form N-CEN (e.g., Form N-SAR) pursuant to exemptive orders issued by the Commission and relied on by the Registrant.

6. Item G.1.a.vi. Other information required to be included as an attachment pursuant to Commission rules and regulations. File as an attachment any other information required to be included as an attachment pursuant to Commission rules and regulations.

b. Attachments to be filed by closed-end management investment companies and small business investment companies. Registrants shall file the following attachments, as applicable, with the current report. Indicate the attachments filed with the current report by checking the applicable items below.

i. Material amendments to organizational documents: ____

ii. Instruments defining the rights of the holders of any new or amended class of securities: ____

iii. New or amended investment advisory contracts: ____

iv. Information called for by Item 405 of Regulation S-K: ____

v. Code of ethics (small business investment companies only): ____

Instructions.

7. Item G.1.b.i. Material amendments to organizational documents. Provide copies of all material amendments to the Registrant's charters, by-laws, or other similar organizational documents that occurred during the reporting period.

8. Item G.1.b.ii. Instruments defining the rights of the holders of any new or amended class of securities. Provide copies of all constituent instruments defining the rights of the holders of any new or amended class of securities for the current reporting period. If the Registrant has issued a new class of securities other than short-term paper, furnish a description of the class called for by the applicable item of Form N-2. If the constituent instruments defining the rights of the holders of any class of the Registrant's securities have been materially modified during the reporting period, give the title of the class involved and state briefly the general effect of the modification upon the rights of the holders of such securities.

9. Item G.1.b.iii. New or amended investment advisory contracts. Provide copies of any new or amended investment advisory contracts that became effective during the reporting period.

10. Item G.1.b.iv. Information called for by Item 405 of Regulation S-K. Provide the information called for by Item 405 of Regulation S-K concerning failure of certain closed-end management investment company and small business investment company shareholders to file certain ownership reports.

11. Item G.1.b.v. Code of ethics (small business investment companies only).

(a) (1) Disclose whether, as of the end of the period covered by the report, the Registrant has adopted a code of ethics that applies to the Registrant's principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions, regardless of whether these individuals are employed by the Registrant or a third party. If the Registrant has not adopted such a code of ethics, explain why it has not done so.

(2) For purposes of this instruction, the term "code of ethics" means written standards that are reasonably designed to deter wrongdoing and to promote: (i) honest and ethical conduct, including the ethical handling of actual or apparent conflicts of interest between personal and professional relationships; (ii) full, fair, accurate, timely, and understandable disclosure in reports and documents that a Registrant files with, or submits to, the Commission and in other public communications made by the Registrant; (iii) compliance with applicable governmental laws, rules, and regulations; (iv) the prompt internal reporting of violations of the code to an appropriate person or persons identified in the code; and (v) accountability for adherence to the code.

(3) The Registrant must briefly describe the nature of any amendment, during the period covered by the report, to a provision of its code of ethics that applies to the Registrant's principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions, regardless of whether these individuals are employed by the Registrant or a third party, and that relates to any element of the code of ethics definition enumerated in paragraph (a)(2) of this instruction. The Registrant must file a copy of any such amendment as an exhibit to this report on Form N-CEN, unless the Registrant has elected to satisfy paragraph (a)(6) of this instruction by posting its code of ethics on its website pursuant to paragraph (a)(6)(ii) of this Instruction, or by undertaking to provide its code of ethics to any person without charge, upon request, pursuant to paragraph (a)(6)(iii) of this instruction.

(4) If the Registrant has, during the period covered by the report, granted a waiver, including an implicit waiver, from a provision of the code of ethics to the Registrant's principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions, regardless of whether these individuals are employed by the Registrant or a third party, that relates to one or more of the items set forth in paragraph (a)(2) of this instruction, the Registrant must briefly describe the nature of the waiver, the name of the person to whom the waiver was granted, and the date of the waiver.

(5) If the Registrant intends to satisfy the disclosure requirement under paragraph (a)(3) or (4) of this instruction regarding an amendment to, or a waiver from, a provision of its code of ethics that applies to the Registrant's principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions and that relates to any element of the code of ethics definition enumerated in paragraph (a)(2) of this instruction by posting such information on its Internet website, disclose the Registrant's Internet address and such intention.

(6) The Registrant must: (i) file with the Commission a copy of its code of ethics that applies to the Registrant's principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions, as an exhibit to its report on this Form N-CEN; (ii) post the text of such code of ethics on its Internet website and disclose, in its most recent report on this Form N-CEN, its Internet address and the fact that it has posted such code of ethics on its Internet website; or (iii) undertake in its most recent report on this Form N-CEN to provide to any person without charge, upon request, a copy of such code of ethics and explain the manner in which such request may be made.

(7) A Registrant may have separate codes of ethics for different types of officers. Furthermore, a "code of ethics" within the meaning of paragraph (a)(2) of this instruction may be a portion of a broader document that addresses additional topics or that applies to more persons than those specified in paragraph (a)(1) of this instruction. In satisfying the requirements of paragraph (a)(6) of this instruction, a Registrant need only file, post, or provide the portions of a broader document that constitutes a "code of ethics" as defined in paragraph (a)(2) of this instruction and that apply to the persons specified in paragraph (a)(1) of this instruction.

(8) If a Registrant elects to satisfy paragraph (a)(6) of this instruction by posting its code of ethics on its Internet website pursuant to paragraph (a)(6)(ii), the code of ethics must remain accessible on its website for as long as the Registrant remains subject to the requirements of this instruction and chooses to comply with this instruction by posting its code on its Internet website pursuant to paragraph (a)(6)(ii).

(9) The Registrant does not need to provide any information pursuant to paragraphs (a)(3) and (4) of this instruction if it discloses the required information on its Internet website within five business days following the date of the amendment or waiver and the Registrant has disclosed in its most recently filed report on this Form N-CEN its Internet website address and intention to provide disclosure in this manner. If the amendment or waiver occurs on a Saturday, Sunday, or holiday on which the Commission is not open for business, then the five business day period shall begin to run on and include the first business day thereafter. If the Registrant elects to disclose this information through its website, such information must remain available on the website for at least a 12-month period. The Registrant must retain the information for a period of not less than six years following the end of the fiscal year in which the amendment or waiver occurred. Upon request, the Registrant must furnish to the Commission or its staff a copy of any or all information retained pursuant to this requirement.

(10) The Registrant does not need to disclose technical, administrative, or other non-substantive amendments to its code of ethics.

(11) For purposes of this instruction: (i) the term "waiver" means the approval by the Registrant of a material departure from a provision of the code of ethics; and (ii) the term "implicit waiver" means the Registrant's failure to take action within a reasonable period of time regarding a material departure from a provision of the code of ethics that has been made known to an executive officer, as defined in rule 3b-7 under the Exchange Act (17 CFR 240.3b-7), of the Registrant.

(b) (1) Disclose that the Registrant's board of directors has determined that the Registrant either: (i) has at least one audit committee financial expert serving on its audit committee; or (ii) does not have an audit committee financial expert serving on its audit committee.

(2) If the Registrant provides the disclosure required by paragraph (b)(1)(i) of this instruction, it must disclose the name of the audit committee financial expert and whether that person is "independent." In order to be considered "independent" for purposes of this instruction, a member of an audit committee may not, other than in his or her capacity as a member of the audit committee, the board of directors, or any other board committee: (i) accept directly or indirectly any consulting, advisory, or other compensatory fee from the issuer; or (ii) be an "interested person" of the investment company as defined in Section 2(a)(19) of the Act (15 U.S.C. 80a-2(a)(19)).

(3) If the Registrant provides the disclosure required by paragraph (b)(1)(ii) of this instruction, it must explain why it does not have an audit committee financial expert.

(4) If the Registrant's board of directors has determined that the Registrant has more than one audit committee financial expert serving on its audit committee, the Registrant may, but is not required to, disclose the names of those additional persons. A Registrant choosing to identify such persons must indicate whether they are independent pursuant to paragraph (b)(2) of this instruction.

(5) For purposes of this instruction, an "audit committee financial expert" means a person who has the following attributes: (i) an understanding of generally accepted accounting principles and financial statements; (ii) the ability to assess the general application of such principles in connection with the accounting for estimates, accruals, and reserves; (iii) experience preparing, auditing, analyzing, or evaluating financial statements that present a breadth and level of complexity of accounting issues that are generally comparable to the breadth and complexity of issues that can reasonably be expected to be raised by the Registrant's financial statements, or experience actively supervising one or more persons engaged in such activities; (iv) an understanding of internal controls and procedures for financial reporting; and (v) an understanding of audit committee functions.

(6) A person shall have acquired such attributes through: (i) education and experience as a principal financial officer, principal accounting officer, controller, public accountant, or auditor or experience in one or more positions that involve the performance of similar functions; (ii) experience actively supervising a principal financial officer, principal accounting officer, controller, public accountant, auditor, or person performing similar functions; (iii) experience overseeing or assessing the performance of companies or public accountants with respect to the preparation, auditing, or evaluation of financial statements; or (iv) other relevant experience.

(7) (i) A person who is determined to be an audit committee financial expert will not be deemed an "expert" for any purpose, including without limitation for purposes of Section 11 of the Securities Act (15 U.S.C. 77k), as a result of being designated or identified as an audit committee financial expert pursuant to this instruction; (ii) the designation or identification of a person as an audit committee financial expert pursuant to this instruction does not impose on such person any duties, obligations, or liability that are greater than the duties, obligations, and liability imposed on such person as a member of the audit committee and board of directors in the absence of such designation or identification; (iii) the designation or identification of a person as an audit committee financial expert pursuant to this instruction does not affect the duties, obligations, or liability of any other member of the audit committee or board of directors.

(8) If a person qualifies as an audit committee financial expert by means of having held a position described in paragraph (b)(6)(iv) of this Instruction, the Registrant shall provide a brief listing of that person's relevant experience.

SIGNATURES

Pursuant to the requirements of the Investment Company Act of 1940, the Registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

BILLING CODE 8011–01–P

■ 66. Effective January 17, 2017, Form N–CSR (referenced in § 274.128) is amended as follows:

■ a. In Item 2(c) and 2(f), remove the phrase ''Item 12(a)(1)'' and add in its place ''Item 13(a)(1)'';

■ b. In Item 11(b), remove the phrase ''the second fiscal quarter of'';

■ c. Revise the instruction to Item 11(b);

■ d. Redesignate Item 12 as Item 13;

■ e. Add new Item 12;

■ f. In paragraph 4(d) of the certification exhibits listed in Item 13, remove the phrase ''the second fiscal quarter of the'';

■ g. In Item 13, revise the instruction to paragraph (a)(2);

■ h. In Item 13, add paragraph (a)(4).

The additions and revisions read as follows:

Note: The text of Form N–CSR does not, and these amendments will not, appear in the *Code of Federal Regulations.*

Form N–CSR

* * * * *

Item 11. Controls and Procedures.

(b) * * *

Instruction to paragraph (b). Until the date that the registrant has filed its first report on Form N–PORT [17 CFR 270.150], the registrant's disclosures required by this Item are limited to any change in the registrant's internal control over financial reporting that occurred during the registrant's last fiscal quarter that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting.

* * * * *

Item 12. Disclosure of Securities Lending Activities for Closed-End Management Investment Companies

(a) If the registrant is a closed-end management investment company, provide the following dollar amounts of income and fees/compensation related to the securities lending activities of the registrant during its most recent fiscal year:

(1) Gross income from securities lending activities;

(2) All fees and/or compensation for each of the following securities lending activities and related services: Any share of revenue generated by the securities lending program paid to the securities lending agent(s) (''revenue split''); fees paid for cash collateral management services (including fees deducted from a pooled cash collateral reinvestment vehicle) that are not included in the revenue split; administrative fees that are not included in the revenue split; fees for indemnification that are not included in the revenue split; rebates paid to borrowers; and any other fees relating to the securities lending program that are not included in the revenue split, including a description of those other fees;

(3) The aggregate fees/compensation disclosed pursuant to paragraph (2); and

(4) Net income from securities lending activities (*i.e.,* the dollar amount in paragraph (1) minus the dollar amount in paragraph (3)).

Instruction to paragraph (a). If a fee for a service is included in the revenue split, state that the fee is ''included in the revenue split.''

(b) If the registrant is a closed-end management investment company, describe the services provided to the registrant by the securities lending agent in the registrant's most recent fiscal year.

* * * * *

Item 13. Exhibits.

(a) * * *

(2) * * *

Instruction to paragraph (a)(2). Until the date that the registrant has filed its first report on Form N–PORT [17 CFR 270.150], in the certification required by Item 13(a)(2), the registrant's certifying officers must certify that they have disclosed in the report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting.

* * * * *

(4) Change in the registrant's independent public accountant. Provide the information called for by Item 4 of Form 8–K under the Exchange Act (17 CFR 249.308). Unless otherwise specified by Item 4, or related to and necessary for a complete understanding of information not previously disclosed, the information should relate to events occurring during the reporting period.

§ 274.130 [Removed and Reserved]

■ 67. Effective August 1, 2019, § 274.130 is removed and reserved.

■ 68. Effective January 17, 2017, § 274.150 is added to read as follows:

§ 274.150 Form N–PORT, Monthly portfolio holdings report.

(a) Except as provided in paragraph (b) of this section, this form shall be used by registered management investment companies or exchange-traded funds organized as unit investment trusts, or series thereof, to file reports pursuant to § 270.30b1–9 of this chapter not later than 30 days after the end of each month.

(b) Form N–PORT shall not be filed by a registered open-end management investment company that is regulated as a money market fund under § 270.2a–7 of this chapter or a small business investment company registered on Form N–5 (§§ 239.24 and 274.5 of this chapter), or series thereof.

Note: The text of Form N–PORT will not appear in the *Code of Federal Regulations.*

FORM N-PORT
MONTHLY PORTFOLIO INVESTMENTS REPORT

Form N-PORT is to be used by a registered management investment company, or an exchange-traded fund organized as a unit investment trust, or series thereof ("Fund"), other than a Fund that is regulated as a money market fund ("money market fund") under rule 2a-7 under the Investment Company Act of 1940 [15 U.S.C. 80a] ("Act") (17 CFR 270.2a-7) or a small business investment company ("SBIC") registered on Form N-5 (17 CFR 239.24 and 274.5), to file monthly portfolio holdings reports pursuant to rule 30b1-9 under the Act (17 CFR 270.30b1-9). The Commission may use the information provided on Form N-PORT in its regulatory, enforcement, examination, disclosure review, inspection, and policymaking roles.

GENERAL INSTRUCTIONS

A. Rule as to Use of Form N-PORT

Form N-PORT is the reporting form that is to be used for monthly reports of Funds other than money market funds and SBICs under section 30(b) of the Act, as required by rule 30b1-9 under the Act (17 CFR 270.30b1-9). Funds must report information about their portfolios and each of their portfolio holdings as of the last business day, or last calendar day, of the month. A registered investment company that has filed a registration statement with the Commission registering its securities for the first time under the Securities Act of 1933 is relieved of this reporting obligation with respect to any reporting period or portion thereof prior to the date on which that registration statement becomes effective or is withdrawn.

If the due date falls on a weekend or holiday, the filing deadline will be the next business day. Reports on Form N-PORT must disclose portfolio information as calculated by the fund for the reporting period's ending net asset value (commonly, and as permitted by rule 2a-4, the first business day following the trade date). Reports on Form N-PORT must be filed with the Commission no later than 30 days after the end of each month. Each Fund is required to file a separate report.

A Fund may file an amendment to a previously filed report at any time, including an amendment to correct a mistake or error in a previously filed report. A Fund that files an amendment to a previously filed report must provide information in response to all items of Form N-PORT, regardless of why the amendment is filed.

B. Application of General Rules and Regulations

The General Rules and Regulations under the Act contain certain general requirements that are applicable to reporting on any form under the Act. These general requirements shall be carefully read and observed in the preparation and filing of reports on this Form, except that any provision in the Form or in these instructions shall be controlling.

C. Filing of Reports

Reports must be filed electronically using the Commission's Electronic Data Gathering, Analysis, and Retrieval ("EDGAR") system in accordance with Regulation S-T. Consult the EDGAR Filer Manual and Appendices for EDGAR filing instructions.

D. Paperwork Reduction Act Information

A Fund is not required to respond to the collection of information contained in Form N-PORT unless the form displays a currently valid Office of Management and Budget ("OMB") control number. Please direct comments concerning the accuracy of the information collection burden estimate and any suggestions for reducing the burden to the Secretary, Securities and Exchange Commission, Washington, DC 20549. OMB has reviewed this collection of information under the clearance requirements of 44 U.S.C. 3507.

E. Definitions

References to sections and rules in this Form N-PORT are to the Act, unless otherwise indicated. Terms used in this Form N-PORT have the same meanings as in the Act or related rules, unless otherwise indicated.

As used in this Form N-PORT, the terms set out below have the following meanings:

"Class" means a class of shares issued by a Fund that has more than one class that represents interests in the same portfolio of securities under rule 18f-3 [17 CFR 270.18f-3] or under an order exempting the Fund from provisions of section 18 of the Act [15 U.S.C. 80a-18].

"Controlled Foreign Corporation" has the meaning provided in section 957 of the Internal Revenue Code [26 U.S.C. 957].

"Exchange-Traded Fund" means an open-end management investment company (or Series or Class thereof) or unit investment trust (or series thereof), the shares of which are listed and traded on a national securities exchange at market prices, and that has formed and operates under an exemptive order under the Act granted by the Commission or in reliance on an exemptive rule under the Act adopted by the Commission.

"Fund" means the Registrant or a separate Series of the Registrant. When an item of Form N-PORT specifically applies to a Registrant or a Series, those terms will be used.

"ISIN" means, with respect to any security, the "international securities identification number" assigned by a national numbering agency, partner, or substitute agency that is coordinated by the Association of National Numbering Agencies.

"LEI" means, with respect to any company, the "legal entity identifier" as assigned by a utility endorsed by the Global LEI Regulatory Oversight Committee or accredited by the Global LEI Foundation. In the case of a financial institution, if a "legal entity identifier" has not been assigned, then provide the RSSD ID, if any, assigned by the National Information Center of the Board of Governors of the Federal Reserve System.

"Multiple Class Fund" means a Fund that has more than one Class.

"Registrant" means a management investment company, or an Exchange-Traded Fund organized as a unit investment trust, registered under the Act.

"Restricted Security" has the meaning defined in rule 144(a)(3) under the Securities Act of 1933 [17 CFR 230.144(a)(3)].

"Series" means shares offered by a Registrant that represent undivided interests in a portfolio of investments and that are preferred over all other series of shares for assets specifically allocated to that series in accordance with rule 18f-2(a) [17 CFR 270.18f-2(a)].

"Swap" means either a "security-based swap" or a "swap" as defined in sections 3(a)(68) and (69) of the Securities Exchange Act of 1934 [15 U.S.C. 78c(a)(68) and (69)] and any rules, regulations, or interpretations of the Commission with respect to such instruments.

F. Public Availability

Information reported on Form N-PORT for the third month of each Fund's fiscal quarter will be made publicly available 60 days after the end of the Fund's fiscal quarter.

The SEC does not intend to make public the information reported on Form N-PORT for the first and second months of each Fund's fiscal quarter that is identifiable to any particular fund or adviser, or any information reported with regards to country of risk and economic exposure (Item C.5.b of this Form), delta (Items C.9.f.v, C.11.c.vii, or C.11.g.iv), or miscellaneous securities (Part D of this Form), or explanatory notes related to any of those topics (Part E) that is identifiable to any particular fund or adviser. However, the SEC may use information reported on this Form in its regulatory programs, including examinations, investigations, and enforcement actions.

G. Responses to Questions

In responding to the items on this Form, the following guidelines apply unless otherwise specifically indicated:

- Funds may respond to this Form using their own internal methodologies and the conventions of their service providers, provided the information is consistent with information that they report internally and to current and prospective investors. However, the methodologies and conventions must be consistently applied and the Fund's responses must be consistent with any instructions or other guidance relating to this Form. A Fund may explain any of its methodologies, including related assumptions, in Part E.
- A Fund is not required to respond to an item that is wholly inapplicable (for example, no response would be required for Item C.11 when reporting information about an

investment that is not a derivative). If a sub-item requests information that is not applicable (for example, an LEI for a counterparty that does not have an LEI), respond N/A;

- If an item requests the name of an entity, provide the full name to the extent known, and do not use abbreviations (other than abbreviations that are part of the full name);
- If an item requests information expressed as a percentage, enter the response as a percentage (not a decimal), (*e.g.,* 5.27%);
- For currencies other than U.S. dollars, also report the applicable three-letter alphabetic currency code pursuant to the International Organization for Standardization ("ISO") 4217 standard;
- If an item requests a unique identifier, such an identifier may be internally generated by the Fund or provided by a third party, but should be consistently used across the Fund's filings for reporting that investment so that the Commission, investors, and other users of the information can track the investment from report to report;
- If an item requests a date, provide information in yyyy/mm/dd format; and
- If an item requests information regarding a "holding" or "investment," separately report information as to each holding or investment that is recorded in the Fund's books as part of a larger transaction. For example, two or more partially offsetting legs of a transaction entered into with the same counterparty under a common master agreement shall each be separately reported.

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549

FORM N-PORT
MONTHLY SCHEDULE OF PORTFOLIO INVESTMENTS

Part A: General Information

Item A.1. Information about the Registrant.

a. Name of Registrant.

b. Investment Company Act file number for Registrant: (*e.g.,* 811-__________).

c. CIK number of Registrant.

d. LEI of Registrant.

e. Address and telephone number of Registrant.

Item A.2. Information about the Series.

a. Name of Series.

b. EDGAR series identifier (if any).

c. LEI of Series.

Item A.3. Reporting period.

a. Date of fiscal year-end.

b. Date as of which information is reported.

Item A.4. Does the Fund anticipate that this will be its final filing on Form N-PORT? [Y/N]

Part B: Information About the Fund

Report the following information for the Fund and its consolidated subsidiaries.

Item B.1. Assets and liabilities. Report amounts in U.S. dollars.

a. Total assets, including assets attributable to miscellaneous securities reported in Part D.

b. Total liabilities.

c. Net assets.

Item B.2. Certain assets and liabilities. Report amounts in U.S. dollars.

a. Assets attributable to miscellaneous securities reported in Part D.

b. Assets invested in a Controlled Foreign Corporation for the purpose of investing in certain types of instruments such as, but not limited to, commodities.

c. Borrowings attributable to amounts payable for notes payable, bonds, and similar debt, as reported pursuant to rule 6-04(13)(a) of Regulation S-X [17 CFR 210.6-04(13)(a)].

d. Payables for investments purchased either (i) on a delayed delivery, when-issued, or other firm commitment basis, or (ii) on a standby commitment basis.

e. Liquidation preference of outstanding preferred stock issued by the Fund.

Item B.3. Portfolio level risk metrics. If the average value of the Fund's debt securities positions for the previous three months, in the aggregate, exceeds 25% or more of the Fund's net asset value, provide:

a. Interest Rate Risk (DV01). For each currency for which the Fund had a value of 1% or more of the Fund's net asset value, provide the change in value of the portfolio resulting from a 1 basis point change in interest rates, for each of the following maturities: 3 month, 1 year, 5 years, 10 years, and 30 years.

b. Interest Rate Risk (DV100). For each currency for which the Fund had a value of 1% or more of the Fund's net asset value, provide the change in value of the portfolio resulting from a 100 basis point change in interest rates, for each of the following maturities: 3 month, 1 year, 5 years, 10 years, and 30 years.

c. Credit Spread Risk (SDV01, CR01 or CS01). Provide the change in value of the portfolio resulting from a 1 basis point change in credit spreads where the shift is applied to the option adjusted spread, aggregated by investment grade and non-investment grade exposures, for each of the following maturities: 3 month, 1 year, 5 years, 10 years, and 30 years.

For purposes of Item B.3., calculate value as the sum of the absolute values of: (i) the value of each debt security, (ii) the notional value of each swap, including, but not limited to, total return swaps, interest rate swaps, and credit default swaps, for which the underlying reference asset or assets are debt securities or an interest rate; (iii) the notional value of each futures contract for which the underlying reference asset or assets are debt securities or an interest rate; and (iv) the delta-adjusted notional value of any option for which the underlying reference asset is an asset described in clause (i),(ii), or (iii). Report zero for maturities to which the Fund has no exposure. For exposures that fall between any of the listed maturities in (a) and (b), use linear interpolation to approximate exposure to each maturity listed above. For exposures outside of the range of maturities listed above, include those exposures in the nearest maturity.

Item B.4. Securities lending.

a. For each borrower in any securities lending transaction, provide the following information:

   i. Name of borrower.

   ii. LEI (if any) of borrower.

   iii. Aggregate value of all securities on loan to the borrower.

b. Did any securities lending counterparty provide any non-cash collateral? [Y/N] If yes, unless the non-cash collateral is included in the Schedule of Portfolio Investments in Part C, provide the following information for each category of non-cash collateral received for loaned securities:

   i. Aggregate principal amount.

   ii. Aggregate value of collateral.

   iii. Category of investments that most closely represents the collateral, selected from among the following (asset-backed securities; agency collateralized mortgage obligations; agency debentures and agency strips; agency mortgage-backed securities; U.S. Treasuries (including strips); other instrument). If "other instrument," include a brief description, including, if applicable, whether it is an irrevocable letter of credit.

Item B.5. Return information.

a. Monthly total returns of the Fund for each of the preceding three months. If the Fund is a Multiple Class Fund, report returns for each Class. Such returns shall be calculated in accordance with the methodologies outlined in Item 26(b)(1) of Form N-1A, Instruction 13 to sub-Item 1 of Item 4 of Form N-2, or Item 26(b)(i) of Form N-3, as applicable.

b. Class identification number(s) (if any) of the Class(es) for which returns are reported.

c. For each of the preceding three months, monthly net realized gain (loss) and net change in unrealized appreciation (or depreciation) attributable to derivatives for each of the following asset categories: commodity contracts, credit contracts, equity contracts, foreign exchange contracts, interest rate contracts, and other contracts. Within each such asset category, further report the same information for each of the following types of derivatives instrument: forward, future, option, swaption, swap, warrant, and other. Report in U.S. dollars. Losses and depreciation shall be reported as negative numbers.

d. For each of the preceding three months, monthly net realized gain (loss) and net change in unrealized appreciation (or depreciation) attributable to investments other than derivatives. Report in U.S. dollars. Losses and depreciation shall be reported as negative numbers.

Item B.6. Flow information. Provide the aggregate dollar amounts for sales and redemptions/repurchases of Fund shares during each of the preceding three months. If shares of the Fund are held in omnibus accounts, for purposes of calculating the Fund's sales, redemptions, and repurchases, use net sales or redemptions/repurchases from such omnibus accounts. The amounts to be reported under this Item should be after any front-end sales load has been deducted and before any deferred or contingent deferred sales load or charge has been deducted. Shares sold shall include shares sold by the Fund to a registered unit investment trust. For mergers and other acquisitions, include in the value of shares sold any transaction in which the Fund acquired the assets of another investment company or of a personal holding company in exchange for its own shares. For liquidations, include in the value of shares redeemed any transaction in which the Fund liquidated all or part of its assets. Exchanges are defined as the redemption or repurchase of shares of one Fund or series and the investment of all or part of the proceeds in shares of another Fund or series in the same family of investment companies.

a. Total net asset value of shares sold (including exchanges but excluding reinvestment of dividends and distributions).

b. Total net asset value of shares sold in connection with reinvestments of dividends and distributions.

c. Total net asset value of shares redeemed or repurchased, including exchanges.

Item B.7. [Reserved]

Part C: Schedule of Portfolio Investments

For each investment held by the Fund and its consolidated subsidiaries, disclose the information requested in Part C. A Fund may report information for securities in an aggregate amount not exceeding five percent of its total assets as miscellaneous securities in Part D in lieu of reporting those securities in Part C, provided that the securities so listed are not restricted, have been held for not more than one year prior to the end of the reporting period covered by this report, and have not been previously reported by name to the shareholders of the Fund or to any exchange, or set forth in any registration statement, application, or report to shareholders or otherwise made available to the public.

Item C.1. Identification of investment.

a. Name of issuer (if any).

b. LEI (if any) of issuer. In the case of a holding in a fund that is a series of a series trust, report the LEI of the series.

c. Title of the issue or description of the investment.

d. CUSIP (if any).

e. At least one of the following other identifiers:

i. ISIN.

ii. Ticker (if ISIN is not available).

iii. Other unique identifier (if ticker and ISIN are not available). Indicate the type of identifier used.

Item C.2. Amount of each investment.

a. Balance. Indicate whether amount is expressed in number of shares, principal amount, or other units. For derivatives contracts, as applicable, provide the number of contracts.

b. Currency. Indicate the currency in which the investment is denominated.

c. Value. Report values in U.S. dollars. If currency of investment is not denominated in U.S. dollars, provide the exchange rate used to calculate value.

d. Percentage value compared to net assets of the Fund.

Item C.3. Indicate payoff profile among the following categories (long, short, N/A). For derivatives, respond N/A to this Item and respond to the relevant payoff profile question in Item C.11.

Item C.4. Asset and issuer type. Select the category that most closely identifies the instrument among each of the following:

a. Asset type (short-term investment vehicle (*e.g.,* money market fund, liquidity pool, or other cash management vehicle), repurchase agreement, equity-common, equity-preferred, debt, derivative-commodity, derivative-credit, derivative-equity, derivative-foreign exchange, derivative-interest rate, derivatives-other, structured note, loan, ABS-mortgage backed security, ABS-asset backed commercial paper, ABS-collateralized bond/debt obligation, ABS-other, commodity, real estate, other). If "other," provide a brief description.

b. Issuer type (corporate, U.S. Treasury, U.S. government agency, U.S. government sponsored entity, municipal, non-U.S. sovereign, private fund, registered fund, other). If "other," provide a brief description.

Item C.5. Country of investment or issuer.

a. Report the ISO country code that corresponds to the country where the issuer is organized.

b. If different from the country where the issuer is organized, also report the ISO country code that corresponds to the country of investment or issuer based on the concentrations of the risk and economic exposure of the investments.

Item C.6. Is the investment a Restricted Security? [Y/N]

Item C.7. [Reserved]

Item C.8. Indicate the level within the fair value hierarchy in which the fair value measurements fall pursuant to U.S. Generally Accepted Accounting Principles (ASC 820, Fair Value Measurement). [1/2/3] Report "N/A" if the investment does not have a level associated with it (i.e., net asset value used as the practical expedient).

Item C.9. For debt securities, also provide:

a. Maturity date.

b. Coupon.

  i. Select the category that most closely reflects the coupon type among the following (fixed, floating, variable, none).

  ii. Annualized rate.

c. Currently in default? [Y/N]

d. Are there any interest payments in arrears or have any coupon payments been legally deferred by the issuer? [Y/N]

e. Is any portion of the interest paid in kind? [Y/N] Enter "N" if the interest may be paid in kind but is not actually paid in kind or if the Fund has the option of electing in-kind payment and has elected to be paid in-kind.

f. For convertible securities, also provide:

  i. Mandatory convertible? [Y/N]

  ii. Contingent convertible? [Y/N]

  iii. Description of the reference instrument, including the name of issuer, title of issue, and currency in which denominated, as well as CUSIP of reference instrument, ISIN (if CUSIP is not available), ticker (if CUSIP and ISIN are not available), or other identifier (if CUSIP, ISIN, and ticker are not available). If other identifier provided, indicate the type of identifier used.

iv. Conversion ratio per US$1000 notional, or, if bond currency is not in U.S. dollars, per 1000 units of the relevant currency, indicating the relevant currency. If there is more than one conversion ratio, provide each conversion ratio.

v. Delta (if applicable).

Item C.10. For repurchase and reverse repurchase agreements, also provide:

a. Select the category that reflects the transaction (repurchase, reverse repurchase). Select “repurchase agreement” if the Fund is the cash lender and receives collateral. Select “reverse repurchase agreement” if the Fund is the cash borrower and posts collateral.

b. Counterparty.

i. Cleared by central counterparty? [Y/N] If Y, provide the name of the central counterparty.

ii. If N, provide the name and LEI (if any) of counterparty.

c. Tri-party? [Y/N]

d. Repurchase rate.

e. Maturity date.

f. Provide the following information concerning the securities subject to the repurchase agreement (*i.e.,* collateral). If multiple securities of an issuer are subject to the repurchase agreement, those securities may be aggregated in responding to Items C.10.f.i-iii.

i. Principal amount.

ii. Value of collateral.

iii. Category of investments that most closely represents the collateral, selected from among the following (asset-backed securities; agency collateralized mortgage obligations; agency debentures and agency strips; agency mortgage-backed securities; private label collateralized mortgage obligations; corporate debt securities; equities; money market; U.S. Treasuries (including strips); other instrument). If “other instrument,” include a brief description, including, if applicable, whether it is a collateralized debt obligation, municipal debt, whole loan, or international debt.

Item C.11. For derivatives, also provide:

a. Type of derivative instrument that most closely represents the investment, selected from among the following (forward, future, option, swaption, swap (including but not limited to total return swaps, credit default swaps, and interest rate swaps), warrant, other). If “other,” provide a brief description.

b. Counterparty.

   i. Provide the name and LEI (if any) of counterparty (including a central counterparty).

c. For options and warrants, including options on a derivative (*e.g.*, swaptions) provide:

   i. Type, selected from among the following (put, call). Respond call for warrants.

   ii. Payoff profile, selected from among the following (written, purchased). Respond purchased for warrants.

   iii. Description of reference instrument.

      1. If the reference instrument is a derivative, indicate the category of derivative from among the categories listed in sub-Item C.11.a. and provide all information required to be reported on this Form for that category.

      2. If the reference instrument is an index or custom basket, and if the index's or custom basket's components are publicly available on a website and are updated on that website no less frequently than quarterly, identify the index and provide the index identifier, if any. If the index's or custom basket's components are not publicly available in that manner, and the notional amount of the derivative represents 1% or less of the net asset value of the Fund, provide a narrative description of the index. If the index's or custom basket's components are not publicly available in that manner, and the notional amount of the derivative represents more than 5% of the net asset value of the Fund, provide the (i) name, (ii) identifier, (iii) number of shares or notional amount or contract value as of the trade date (all of which would be reported as negative for short positions), and (iv) value of every component in the index or custom basket. The identifier shall include CUSIP of the index's or custom basket's components, ISIN (if CUSIP is not available), ticker (if CUSIP and ISIN are not available), or other identifier (if CUSIP, ISIN, and ticker are not available). If other identifier provided, indicate the type of identifier used.

         If the index's or custom basket's components are not publicly available in that manner, and the notional amount of the derivative represents greater than 1%, but 5% or less, of the net asset value of the Fund, Funds shall report the required component information described above, but may limit reporting to the (i) 50 largest components in the index and (ii) any other components where the notional value for that components is over 1% of the notional value of the index or custom basket.

      3. If the reference instrument is neither a derivative, an index, or a custom basket, the description of the reference instrument shall include the name of issuer and title of issue, as well as CUSIP of reference instrument, ISIN (if

CUSIP is not available), ticker (if CUSIP and ISIN are not available), or other identifier (if CUSIP, ISIN, and ticker are not available). If other identifier provided, indicate the type of identifier used.

iv. Number of shares or principal amount of underlying reference instrument per contract.

v. Exercise price or rate.

vi. Expiration date.

vii. Delta.

viii. Unrealized appreciation or depreciation. Depreciation shall be reported as a negative number.

d. For futures and forwards (other than forward foreign currency contracts), provide:

i. Payoff profile, selected from among the following (long, short).

ii. Description of reference instrument, as required by sub-Item C.11.c.iii.

iii. Expiration date.

iv. Aggregate notional amount or contract value on trade date.

v. Unrealized appreciation or depreciation. Depreciation shall be reported as a negative number.

e. For forward foreign currency contracts and foreign currency swaps, provide:

i. Amount and description of currency sold.

ii. Amount and description of currency purchased.

iii. Settlement date.

iv. Unrealized appreciation or depreciation. Depreciation shall be reported as a negative number.

f. For swaps (other than foreign exchange swaps), provide:

i. Description and terms of payments necessary for a user of financial information to understand the terms of payments to be paid and received, including, as applicable, description of the reference instrument, obligation, or index (including the information required by sub-Item C.11.c.iii), financing rate, floating coupon rate, fixed coupon rate, and payment frequency.

1. Description and terms of payments to be received from another party.

2. Description and terms of payments to be paid to another party.

ii. Termination or maturity date.

iii. Upfront payments or receipts.

iv. Notional amount.

v. Unrealized appreciation or depreciation. Depreciation shall be reported as a negative number.

g. For other derivatives, provide:

i. Description of information sufficient for a user of financial information to understand the nature and terms of the investment, including as applicable, among other things, currency, payment terms, payment rates, call or put feature, exercise price, and information required by sub-Item C.11.c.iii.

ii. Termination or maturity (if any).

iii. Notional amount(s).

iv. Delta (if applicable).

v. Unrealized appreciation or depreciation. Depreciation shall be reported as a negative number.

Item C.12. Securities lending.

a. Does any amount of this investment represent reinvestment of cash collateral received for loaned securities? [Y/N] If Yes, provide the value of the investment representing cash collateral.

b. Does any portion of this investment represent non-cash collateral that is treated as a Fund asset and received for loaned securities? [Y/N] If yes, provide the value of the securities representing non-cash collateral.

c. Is any portion of this investment on loan by the Fund? [Y/N] If Yes, provide the value of the securities on loan.

Part D: Miscellaneous Securities

For reports filed for the last month of each fiscal quarter, report miscellaneous securities, if any, using the same Item numbers and reporting the same information that would be reported for each investment in Part C if it were not a miscellaneous security. Information reported in this Item will be nonpublic.

Part E: Explanatory Notes (if any)

The Fund may provide any information it believes would be helpful in understanding the information reported in response to any Item of this Form. The Fund may also explain any assumptions that it made in responding to any Item of this Form. To the extent responses relate to a particular Item, provide the Item number(s), as applicable.

Part F: Exhibits

For reports filed for the end of the first and third quarters of the Fund's fiscal year, attach no later than 60 days after the end of the reporting period the Fund's complete portfolio holdings as of the close of the period covered by the report. These portfolio holdings must be presented in accordance with the schedules set forth in §§210.12-12 – 12-14 of Regulation S-X [17 CFR 210.12-12 – 12-13D].

[Release Nos. 33–10234; IC–32316; File No. S7–16–15]

RIN 3235–AL61

Investment Company Swing Pricing

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Securities and Exchange Commission is adopting amendments to rule 22c–1 under the Investment Company Act to permit a registered open-end management investment company (''open-end fund'' or ''fund'') (except a money market fund or exchange-traded fund), under certain circumstances, to use ''swing pricing,'' the process of adjusting the fund's net asset value (''NAV'') per share to effectively pass on the costs stemming from shareholder purchase or redemption activity to the shareholders associated with that activity, and amendments to rule 31a–2 to require funds to preserve certain records related to swing pricing. The Commission is also adopting amendments to Form N–1A and Regulation S–X and a new item in Form N–CEN, all of which address a fund's use of swing pricing.

DATES: *Effective Date:* November 19, 2018.

Compliance Dates: See section II.C.

FOR FURTHER INFORMATION CONTACT: Zeena Abdul-Rahman, John Foley, Andrea Ottomanelli Magovern, Naseem Nixon, Amanda Hollander Wagner, Senior Counsels; Thoreau Bartmann, Melissa Gainor, Senior Special Counsels; or Kathleen Joaquin, Senior Financial Analyst, Investment Company Rulemaking Office, at (202) 551–6792; Ryan Moore, Assistant Chief Accountant, or Matt Giordano, Chief Accountant, Office of the Chief Accountant, at (202) 551–6918, Division of Investment Management, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–8549.

SUPPLEMENTARY INFORMATION: The Securities and Exchange Commission (the ''Commission'') is adopting amendments to rules 22c–1 [17 CFR 270.22c–1] and 31a–2 [17 CFR 270.31a–2] under the Investment Company Act of 1940 [15 U.S.C. 80a–1 *et seq.*] (''Investment Company Act'' or ''Act''); amendments to Form N–1A [referenced in 17 CFR 274.11A] under the Investment Company Act and the Securities Act of 1933 (''Securities Act'') [15 U.S.C. 77a *et seq.*]; amendments to Article 6 [17 CFR 210.6–01 *et seq.*] of Regulation S–X [17 CFR 210]; and adopting a new item in Form N–CEN [referenced in 17 CFR 274.101] under the Investment Company Act.[1]

Table of Contents

I. Introduction

Avoiding shareholder dilution is a key concern of the Investment Company Act.[2] In particular, section 22(c) gives the Commission broad powers to regulate the pricing of redeemable securities for the purpose of eliminating or reducing so far as reasonably practicable any dilution of the value of outstanding fund shares.[3] Under rule 22c–1 under the Investment Company Act, fund shareholders purchase and redeem fund shares at a price based on the current NAV next computed after the receipt of an order to purchase or redeem (the ''forward price'').[4] Forward pricing addresses, in part, the risk of shareholder dilution posed by the ''backward pricing'' method used by funds prior to the adoption of the forward pricing rule.[5] However, under rule 22c–1, the NAV price that a purchasing or redeeming shareholder receives when transacting shares typically does not take into account the transaction costs (including trading costs and changes in market prices) that may arise when the fund buys portfolio investments to invest proceeds from purchasing shareholders or sells portfolio investments to meet shareholder redemptions.[6]

[1] Unless otherwise noted, all references to statutory sections are to the Investment Company Act, and all references to rules under the Investment Company Act are to Title 17, Part 270 of the Code of Federal Regulations [17 CFR part 270].

[2] *See* Investment Trusts and Investment Companies Investment Trusts and Investment Companies: Hearings on S. 3580 before a Subcomm. of the Senate Comm. on Banking and Currency, 76th Cong., 3d Sess. (1940), at 37, 137–145 (stating that, among the abuses that served as a backdrop for the Act, were ''practices which resulted in substantial dilution of investors' interests'', including backward pricing by fund insiders to increase investment in the fund and thus enhance management fees, but causing dilution of existing investors in the fund).

[3] Section 22(a) of the Act authorizes securities associations registered under section 15A of the Securities Exchange Act of 1934 (the ''Exchange Act'') to prescribe rules related to the method of computing purchase and redemption prices of redeemable securities and the minimum time period that must elapse after the sale or issue of such securities before any resale or redemption may occur, for the purpose of ''eliminating or reducing so far as reasonably practicable any dilution of the value of other outstanding securities of such company or any other result of such purchase, redemption, or sale which is unfair to holders of such other outstanding securities.''

Section 22(c) of the Act authorizes the Commission to make rules and regulations applicable to registered investment companies and to principal underwriters of, and dealers in, the redeemable securities of any registered investment company, whether or not members of any securities association, to the same extent, covering the same subject matter, and for the accomplishment of the same ends as are prescribed in section 22(a) in respect of the rules which may be made by a registered securities association governing its members.

[4] *See* rule 22c–1(a). Prior to adoption of rule 22c–1, investor orders to purchase and redeem could be executed at a price computed before receipt of the order, allowing investors to lock-in a low price in a rising market and a higher price in a falling market. The forward pricing provision of rule 22c–1 was designed to eliminate these trading practices and the dilution to fund shareholders that occurred as a result of backward pricing. *See* Pricing of Redeemable Securities for Distribution, Redemption, and Repurchase, Investment Company Act Release No. 14244 (Nov. 21, 1984) [49 FR 46558 (Nov. 27, 1984)], at text following n.2.

[5] *See* Pricing of Redeemable Securities for Distribution, Redemption and Repurchase and Time-Stamping of Orders by Dealers, Investment Company Act Release No. 5519 (Oct. 16, 1968) [33 FR 16331 (Nov. 7, 1968)] (''Rule 22c–1 Adopting Release''), at 2 (''One purpose of [rule 22c–1] is to eliminate or reduce so far as reasonably practicable any dilution of the value of outstanding redeemable securities of registered investment companies through (i) the sale of such securities at a price below their net asset value or (ii) the redemption or repurchase of such securities at a price above their net asset value. Dilution through the sale of redeemable securities at a price below their net asset value may occur, for example, through the practice of selling securities for a certain period of time at a price based upon a previously established net asset value. This practice permits a potential investor to take advantage of an upswing in the market and an accompanying increase in the net asset value of investment company shares by purchasing such shares at a price which does not reflect the increase.'').

[6] *See* Open-End Fund Liquidity Risk Management Programs; Swing Pricing; Re-Opening of Comment

We sought to address the risk of shareholder dilution that can result from such transaction costs, along with the risk that a fund would be unable to meet its obligations to redeeming shareholders or other obligations under applicable law (while mitigating investor dilution) as a result of liquidity risk, with the proposal on fund liquidity risk management that we published in 2015.[7] In order to provide funds with a tool to mitigate potential dilution and to manage fund liquidity, the proposal included amendments to rule 22c–1 under the Act to permit funds (except money market funds and exchange-traded funds (''ETFs'')) to use ''swing pricing,'' a process of adjusting the fund's NAV to effectively pass on more of the costs stemming from shareholder transaction flows into and out of the fund to shareholders associated with that activity.

We received more than 70 comment letters on the proposal,[8] many of which addressed the swing pricing amendments.[9] Today, we are adopting new rule 22c–1(a)(3) permitting funds (other than money market funds and ETFs) to engage in swing pricing substantially as proposed, with certain modifications to respond to commenters' suggestions and concerns.[10] We believe swing pricing could be an effective tool to assist U.S. registered funds in mitigating potential shareholder dilution. We also believe that swing pricing may be an additional tool to manage a fund's liquidity risk.

We are also adopting amendments to rule 31a–2 to require funds to maintain records evidencing and supporting each computation of an adjustment to the fund's NAV based on the fund's swing pricing policies and procedures. Finally, we are adopting amendments to Form N–1A and Regulation S–X and adopting a new item in Form N–CEN to require a fund to publicly disclose certain information regarding its use of swing pricing.[11] We anticipate that this information will facilitate the Commission's ability to monitor and assess compliance with rule 22c–1 as amended and may assist investors in making more informed investment choices.

II. Discussion

A. Swing Pricing

1. Background

Under rule 22c–1, all investors who submit requests to redeem from an open-end fund on any particular day must receive the NAV next calculated by the fund after receipt of such redemption request.[12] As most funds, with the exception of money market funds, calculate their NAV only once a day, this means that redemption requests submitted during the day receive the end of day NAV, typically calculated as of 4 p.m. Eastern time.[13] When calculating a fund's NAV, however, rule 2a–4 requires funds to reflect changes in holdings of portfolio securities and changes in the number of outstanding shares resulting from distributions, redemptions, and repurchases no later than the first business day following the trade date.[14] We allow this calculation method to provide funds with additional time and flexibility to incorporate last-minute portfolio transactions into their NAV calculations on the business day following the trade date, rather than on the trade date.[15] As a practical matter, this calculation method also gave broker-dealers, retirement plan administrators, and other intermediaries additional time to transmit transactions submitted before the cut-off time on the trade date, which then may be reflected in computation of the fund's NAV on the business day following the trade date.[16]

Nevertheless, we recognize that trading activity and other changes in portfolio holdings associated with meeting redemptions may occur over multiple business days following the redemption request. If these activities occur (and their associated costs are reflected in NAV) in days following redemption requests, the costs of providing liquidity to redeeming investors could be borne by the remaining investors in the fund, thus potentially diluting the interests of non-redeeming shareholders.[17] The less liquid the fund's portfolio holdings, the greater these liquidity costs can become.[18] The significant growth in the assets managed by funds with strategies that focus on holding relatively less liquid investments (such as fixed income funds, including emerging

Period for Investment Company Reporting Modernization Release, Investment Company Act Release No. 31835 (Sept. 22, 2015) [80 FR 62273 (Oct. 15, 2015)] (''Proposing Release''), at section III.F, 184–187. However, going forward, in a fund that swing prices, the NAV of the fund would reflect such costs, which would be borne by redeeming and purchasing shareholders.

[8] The comment letters on the Proposing Release (File No. S7–16–15) are *available at http://www.sec.gov/comments/s7-16-15/s71615.shtml.* We are adopting requirements for funds to adopt liquidity risk management programs today in a companion release. *See* Investment Company Liquidity Risk Management Programs, Investment Company Act Release No. 32315 (Oct. 13, 2106) (''Liquidity Risk Management Programs Adopting Release'').

[9] *See, e.g.,* Comment Letter of the Mutual Fund Directors Forum (Jan. 13, 2016) (''MFDF Comment Letter'') (recommending that the Commission consider issuing a separate proposal for swing pricing due to the difficult operational issues of swing pricing); Comment Letter of Investment Company Institute (Jan. 13, 2016) (''ICI Comment Letter I'') (arguing that, for funds to adopt swing pricing, there must be widespread changes in market practices and significant reengineering of fund operations). *But see* Comment Letter of Eaton Vance Corp. (June 13, 2016) (''Eaton Vance Comment Letter'') (expressing that there are investor protection concerns associated with the implementation of swing pricing, but acknowledging the significant costs to existing shareholders as a result of purchase and redemption activity).

[10] If any provision of these rules, or the application thereof to any person or circumstance, is held to be invalid, such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application.

[11] We are adopting Form N–CEN today in a companion release. *See* Investment Company Reporting Modernization, Investment Company Act Release No. 32314 (Oct. 13, 2016) (''Investment Company Reporting Modernization Adopting Release'').

[12] The process of calculating or ''striking'' the NAV of the fund's shares on any given trading day is based on several factors, including the market value of portfolio securities, fund liabilities, and the number of outstanding fund shares, among others.

[13] Commission rules do not require that a fund calculate its NAV at a specific time of day. Current NAV must be computed at least once daily, subject to limited exceptions, Monday through Friday, at the specific time or times set by the board of directors. *See* rule 22c–1(b)(1).

[14] Rule 2a–4(a)(2)–(3).

[15] *See* Adoption of Rule 2a–4 Defining the Term ''Current Net Asset Value'' in Reference to Redeemable Securities Issued by a Registered Investment Company, Investment Company Act Release No. 4105 (Dec. 22, 1964) [29 FR 19100 (Dec. 30, 1964)].

[16] *See infra* footnote 195. These redemptions are effected at the trade date's NAV.

[17] The transaction costs associated with redemptions can vary significantly, with some costs having a more immediate impact on shareholders than others. For example, during times of heightened market volatility and wider bid-ask spreads for the fund's underlying holdings, selling the fund's investments to meet redemptions will necessarily result in costs to the fund, which in turn may negatively impact investors who chose to redeem in the days immediately following the stress event. The impact of such costs on the remaining fund investors can vary depending on when a shareholder choses to redeem. *See, e.g.,* Comment Letter of Mutual Fund Directors Forum on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015), at 6.

[18] *See, e.g.* Comment Letter of Morningstar, Inc. (Jan. 13, 2016) (''Morningstar Comment Letter''). *See also* Proposing Release, *supra* footnote 6, at n.45 and accompanying text. We discuss the extent to which swing pricing could effectively pass on to redeeming shareholders more of the costs stemming from their trading activity, as opposed to being borne by non-redeeming shareholders, in *infra* section II.A.2. Furthermore, because shareholders' purchase activity would provide liquidity to a fund, which could reduce the fund's costs in meeting shareholders' redemption requests that day, investors who purchase shares on a day that the fund adjusts its NAV downward would not create dilution for non-redeeming shareholders. *See infra* at text following footnote 123.

market debt funds, open-end funds with alternative strategies, and emerging market equity funds), which could incur significant trading costs, could give rise to increased dilution effects from redeeming and subscribing shareholders in those funds.[19]

As we discuss more broadly in the Liquidity Risk Management Programs Adopting Release, these factors in fund redemptions can create incentives, at least in theory, in times of liquidity stress in the markets for shareholders to redeem quickly to avoid further losses (or a ''first-mover advantage'').[20] If shareholder redemptions are motivated by this first-mover advantage, they can lead to increasing outflows, and as the level of outflows from a fund increases, the incentive for remaining shareholders to redeem may also increase.[21] Additionally, a fund experiencing large outflows as a result of redemptions may be exposed to predatory trading activity in the securities it holds.[22] Regardless of whether investor redemptions are motivated by a first-mover advantage or other factors, there can be significant adverse consequences to remaining investors in a fund in these circumstances, including material dilution of remaining investors' interests in the fund.[23]

As a means of addressing potential shareholder dilution from redemptions, the Commission adopted in 2005 rule 22c–2 under the Investment Company Act, which permits funds to impose redemption fees under certain circumstances.[24] Although the Commission adopted the redemption fee rule to allow funds to recoup some of the direct and indirect costs incurred as a result of short-term trading strategies, such as market timing, rule 22c–2 is not limited to the context of market timing and expressly contemplates that a fund board of directors may approve a redemption fee in order to ''eliminate or reduce so far as practicable any dilution of the value of the outstanding securities issued by the fund,'' and thus the rule can also be used to mitigate dilution arising from shareholder transaction activity generally.[25] In adopting rule 22c–2, the Commission stated that the amount of the redemption fee under rule 22c–2 may include indirect costs associated with transactions in fund shares, such as liquidity costs.[26]

Fund boards have flexibility under rule 22c–2 to adopt redemption fees that address the needs of their funds.[27] Rule 22c–2 provides discretion for fund boards to structure redemption fees in way that ''in its judgment, is necessary or appropriate'' to achieve the anti-dilution purposes of the rule.[28] For example, we believe that a fund board, consistent with its obligations under 22c–2, may determine that it is appropriate to approve a redemption fee that would apply for an indefinite time period after purchase of the security—that is, whenever an investor redeems from the fund—in order to reduce dilution.[29] In addition, a fund board might determine it appropriate to impose a redemption fee only on a subset of such redemptions that the board determines are most likely to result in such costs or dilution, such as all redemptions exceeding a certain size (*e.g.* over $100,000 or $250,000) or on such large redemptions if advance notice is not provided.[30] The details of the redemption fee and the circumstances under which it would (and would not) be imposed, as well as

[25] *See* Redemption Fees Adopting Release, *supra* footnote 24, at section II.A. (''Rule 22c–2 requires that each fund's board of directors (including a majority of independent directors) either (i) approve a redemption fee that in its judgment is necessary or appropriate to recoup costs the fund may incur as a result of redemptions, or to otherwise eliminate or reduce dilution of the fund's outstanding securities, or (ii) determine that imposition of a redemption fee is not necessary or appropriate.'') (internal citation omitted). *See also* Comment Letter of Federated Investors, Inc. (Jan. 13, 2016) (''Federated Comment Letter'') (stating that redemption fees currently permitted under rule 22c–2 may be an effective anti-dilution tool and presenting an illustrative redemption fee structure assessed in an amount equal to expected transaction costs, up to two percent, for transactions over a certain dollar amount).

[26] *See* Redemption Fees Adopting Release, *supra* footnote 24.

[27] *See id.,* at section II. (''[Rule 22c–2] permits each board to take steps it concludes are necessary to protect its investors, and provides the board flexibility to tailor the redemption fee to meet the needs of the fund.''); and Mutual Fund Redemption Fees, Investment Company Act Release No. 27504 (Sept. 27, 2006) [71 FR 58257 (Oct. 3, 2001)], at section II.C (''[T]he terms of redemption fee policies are a matter for fund boards to determine.'').

[28] Rule 22c–2.

[29] While rule 22c–2 provides a minimum seven day ''time period'' during which a redemption fee, if imposed, must apply, (*i.e.* a fee may not apply only to shares redeemed in three days or less after purchase, but must capture shares redeemed within at least a seven-day period after purchase), it does not impose a maximum duration of such a time period, and thus redemption fees may be imposed on shares redeemed within a month, three months, or even longer periods, depending on the duration deemed appropriate by the fund board. *See* rule 22c–2(a)(1)(i).

[30] Redemption fees imposed for an indefinite time period after purchase but only on redemptions exceeding a certain size—like redemption fees imposed on all shares redeemed within a certain time period—might potentially implicate the senior security concerns of section 18(f)(1), but we note that in adopting rule 22c–2 we explicitly provided exemptive relief from section 18(f)(1) for redemption fees imposed under rule 22c–2. *See* Redemption Fees Adopting Release, *supra* footnote 24, at n.30 (''By adopting the rule, we are providing an exemption from . . . the Act's prohibition against the issuance of a senior security.'').

exceptions or waivers must be disclosed to fund investors.[31]

While we believe redemption fees may be an effective anti-dilution tool, we acknowledge that these fees are viewed as unpopular with investors and intermediaries [32] and entail their own operational complexities.[33] As a result, redemption fees have not become prevalent as a means of addressing dilution due to shareholder transaction activity, and thus are used by a limited number of funds.[34]

Funds may also attempt to address potential shareholder dilution by reserving the right to redeem in kind instead of with cash.[35] In-kind redemptions may reduce transaction costs by reducing the need for cash transactions, but they raise challenges of their own.[36] There are often logistical and operational issues associated with paying in-kind redemptions, and this limits the availability of in-kind redemptions under many circumstances.[37] For instance, in-kind redemptions could entail operational difficulties that result in manual processes, which would be imposed on both the fund and on investors receiving portfolio securities.[38] Moreover, some shareholders are generally unable or unwilling to receive in-kind redemptions.[39]

Funds may still mitigate shareholder dilution using redemption fees and redemptions in kind, but each has downsides (as described above) and they are not broadly utilized by funds. Therefore, for the reasons discussed throughout this section, we believe that providing funds the option to use swing pricing as another anti-dilution tool is likely to benefit investors and may complement or be an alternative to the tools currently available to funds.

Finding efficient and cost-effective ways to protect fund shareholders from the dilutive impacts of trading activity and related costs is challenging, and many tools have been used in different jurisdictions to address these issues.[40] As discussed in detail in the Proposing Release, one particularly successful tool, which has been applied in the Luxembourg fund industry for over 15 years, is swing pricing.[41] Swing pricing is regarded abroad as an efficient mechanism to protect non-transacting shareholders from dilution, as well as an additional tool to help funds manage liquidity risks.[42] Asset managers have

[31] *See id.,* at n.32 (''The details of the redemption fee, the circumstances under which it would (and would not) be imposed, and the specific exceptions to imposition of the fee are currently disclosed to fund investors when they decide to invest in a fund, and may include exceptions for particular transactions.''). *See also* Item 11(c) of Form N–1A.

[32] *See* Eaton Vance Comment Letter (''Even investors who understand that transaction fees accrue to the benefit of the fund (and thus, indirectly, to fund shareholders) often react negatively when confronted with having to pay them.'').

[33] For example, we recognize the compliance burdens and operational challenges certain types of redemption fees place on intermediaries, who would be required to track various fund policies for such fees by share class that may include varying fee rates, applicability and waiver policies. Such data also would require daily updating as it is sourced by systems that support both front-end (customer facing) and back-end transaction processing to ensure fees are accurately assessed. *See* Proposing Release, *supra* footnote 6 at text accompanying n.724 (acknowledging potential operational complexity that could accompany the use of redemption fees). We acknowledge that these operational challenges may be particularly acute in circumstances where a fund's policies assess redemption fees only in circumstances where the fund is experiencing heavy redemptions or particular market stresses or where a fund assesses redemption fees that may vary in size each time they are applied.

[34] *See* Eaton Vance Comment Letter (''Given a choice, most investors appear to prefer funds that do not charge transactions fees over funds that do. This creates a competitive disadvantage for funds that impose transaction fees, accounting for their limited use.'').

[35] *See, e.g.,* Adoption of (1) Rule 18f–1 Under the Investment Company Act of 1940 to Permit Registered Open-End Investment Companies Which Have the Right to Redeem In Kind to Elect to Make Only Cash Redemptions and (2) Form N–18F–1, Investment Company Act Release No. 6561 (June 14, 1971) [36 FR 11919 (June 23, 1971)] (''Rule 18f–1 and Form N–18F–1 Adopting Release'') (stating that the definition of ''redeemable security'' in section 2(a)(32) of the Investment Company Act ''has traditionally been interpreted as giving the issuer the option of redeeming its securities in cash or in kind.'').

[36] Mutual funds that reserve the right to redeem their shares in kind may use such redemptions to manage liquidity risk under exceptional circumstances. *See* Karen Damato, *'Redemptions in Kind' Become Effective for Tax Management,* Wall Street Journal (Mar. 10, 1999), *available at http://www.wsj.com/articles/SB921028092685519084* (''`Redemptions in kind' are typically viewed by fund managers as an emergency measure, a step they could take to meet massive redemptions in the midst of a market meltdown.''). Funds may also use in-kind redemptions for other reasons. For example, funds may wish to redeem certain investors (particularly, large, institutional investors) in kind, because in-kind redemptions could have a lower tax impact on the fund than selling portfolio securities in order to pay redemptions in cash. This, in turn, could benefit the remaining shareholders in the fund. *See, e.g., id. See also* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8, at section III.F.

[39] *See* Comment Letter of BlackRock Inc. (Jan. 13, 2016) (''BlackRock Comment Letter'') (''[R]edemptions in-kind are not practical for retail investors, as retail investors may lack the proper custodial accounts to hold a particular security and they may be less likely to have the necessary expertise and/or the operational ability to trade the securities that could be held in a fund. For example, a retail investor may not have a custodial account set up to hold a security that is traded in another country, nor the sophistication to be able to trade such a security.''). *See also* Comment Letter of Invesco Ltd. (Jan. 13, 2016) (''Invesco Comment Letter'') (''The primary problem with using redemptions in-kind to meet large redemptions is the willingness and ability of the redeeming entity to receive securities instead of cash.''); Peter Fortune, *Mutual Funds, Part I: Reshaping the American Financial System,* New England Econ. Rev. (July/Aug. 1997), at 47, *available at http://www.bostonfed.org/economic/neer/neer1997/neer497d.htm.* (''A fund redeeming in kind does so at the risk of its reputation and future business . . .''). In the context of money market funds, we requested comment on whether we should require redemptions in kind for redemptions in excess of a certain size threshold, to ease liquidity strains on the fund and reduce the risks and unfairness posed by significant sudden redemptions. *See* Money Market Fund Reform; Proposed Rule, Investment Company Act Release No. 28807 (June 30, 2009) [74 FR 32688 (July 8, 2009)] (''2009 Money Market Fund Reform Proposing Release''), at section III.B. Commenters generally opposed this type of reform for a variety of reasons, all of which likely would apply equally to funds other than money market funds. For example, most commenters stated that in-kind redemptions would be technically unworkable due to complex valuation and operational issues that would be imposed on both the fund and on investors receiving the in-kind distribution. *See* 2013 Money Market Fund Reform Proposing Release, *supra* footnote 38, at section III.B.9.c.

[40] *See* Proposing Release, *supra* footnote 6, at text preceding n.423 (''While redemption fees (or purchase fees) could mitigate dilution arising from shareholder transaction activity, implementing a fee requires coordination with the fund's service providers, which could entail operational complexity.''); *see also id.,* at text accompanying and following n.445 (''In considering the swing pricing proposal, we considered proposing a rule that would permit `dual pricing' as opposed to swing pricing. We understand that certain foreign funds use dual pricing as an alternative means of mitigating potential dilution arising from shareholder transaction activity. A fund using dual pricing would not adjust the fund's NAV by a swing factor when it faces high levels of net purchases or net redemptions, but instead would quote two prices—one for incoming shareholders (reflecting the cost of buying portfolio securities at the ask price in the market), and one for outgoing shareholders (reflecting the proceeds the fund would receive from selling portfolio securities at the bid price in the market). While we believe that dual pricing also could mitigate potential dilution, we believe that swing pricing is a preferable alternative because we believe it would be simpler to implement and for investors to understand.'') (internal citation omitted).

[41] *See* Proposing Release *supra* footnote 6, at n.418 and accompanying text. Luxembourg is a significant jurisdiction for the organization of UCITS funds in Europe.

[42] *See, e.g.,* Association of the Luxembourg Fund Industry, Swing Pricing Update 2015 (Dec. 2015) (''ALFI Survey 2015''), at 21, *available at http://www.alfi.lu/sites/alfi.lu/files/ALFI-Swing-Pricing-*

Continued

implemented swing pricing for a range of fund types and asset classes, including equity, fixed income and multi-asset funds.[43] A number of other jurisdictions also permit the use of swing pricing within their domestic markets, or are considering allowing its use.[44] Although swing pricing may be more or less widely implemented in different jurisdictions (due to a particular home market's regulatory regime, investor profiles and operational infrastructure), when implemented it has been shown to provide performance benefits to funds,[45] which is consistent with a reduction in dilution attributable to the transactions costs associated with shareholder activity.[46]

Against this background, today we are adopting amendments to rule 22c–1 that will enable funds to choose to use ''swing pricing'' as a tool to mitigate shareholder dilution. After further consideration and after evaluating comments, we have modified several aspects of the final rule from the proposal, including eliminating the consideration of ''market impact'' when setting a fund's swing factor; requiring funds to establish and disclose an upper limit on the fund's swing factor, which may not exceed two percent of the fund's NAV per share; and refining certain financial statement and performance reporting requirements related to swing pricing. The amendments as adopted also incorporate certain modifications to the board's approval and oversight role associated with swing pricing. The fund's board does not have to specifically approve changes to the fund's swing pricing policies and procedures. However, under the final rule, the fund's board will be required to approve the fund's swing pricing policies and procedures and periodically review a written report prepared by the persons responsible for administering swing pricing that describes, among other things, the swing pricing administrator's review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution. This report also must describe the administrator's review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations. The board-approved policies and procedures must specify the process for setting the swing threshold, swing factor, and swing factor upper limit. In addition, the board will be required to approve the swing threshold(s) and the upper limit on the swing factor(s) used by the fund, and any changes thereto. We are also providing for an extended effective date to help alleviate concerns raised by commenters regarding operational changes that will be necessary before this new pricing method becomes available in the marketplace, because we believe that efficient, coordinated efforts to implement such operational changes will ultimately benefit investors. We have directed our staff to review, two years after the rule's effective date, market practices associated with funds' use of swing pricing under rule 22c–1(a)(3) to mitigate dilution and to provide the Commission with the results of this review.

2. Overview of Swing Pricing Proposal and Comments Received

We proposed amendments to rule 22c–1 that would permit a registered open-end fund (but not a money market fund or ETF) to choose to establish and implement swing pricing.[47] Under the proposal, a fund that chooses to use swing pricing would need to have policies and procedures that would require the fund to adjust its NAV per share by an amount known as the ''swing factor'' once the level of net purchases or net redemptions has exceeded a set, specified percentage of the fund's NAV, known as the ''swing threshold.'' A fund would be required to consider certain factors in determining its swing threshold, and the fund's board would be required to approve the swing threshold. Likewise, a fund would have to consider certain factors in determining the ''swing factor,'' which is the amount that the funds NAV would swing in response to the costs associated with the shareholder purchase and redemption activity, and the board would have to approve any swing factor upper limit.

Nearly all commenters supported the goals of swing pricing, and the ability of swing pricing in theory to achieve these goals.[48] However, commenters also highlighted a variety of concerns, many stemming from operational hurdles to implementing swing pricing in the United States that would require significant changes to fund processing infrastructure and systems.[49] Several commenters urged the Commission to assist the industry in addressing the operational challenges before swing pricing is implemented,[50] by seeking input from industry participants and other regulators about what could be done to make swing pricing a viable option in the U.S.[51] Commenters indicated that funds, intermediaries and service providers will have different levels of operational changes and burdens to consider, and certain funds may have the ability to implement swing pricing sooner than other funds (*e.g.,* some fund complexes have experience with implementing swing pricing in other jurisdictions, or are larger and may have more resources available to implement swing pricing, or are otherwise in a better position to be able to receive sufficient information to allow them to reasonably estimate whether they have crossed a swing threshold with high confidence). Commenters noted that such disparities could allow some funds to implement swing pricing faster than others, and that allowing time to work through operational issues in an efficient manner for all funds should help facilitate its implementation.[52]

Survey-2015-FINAL.pdf (noting that it is ''increasingly evident . . . that swing pricing is an accepted and well established anti-dilution standard in the marketplace and has become the most commonly practiced form of anti-dilution protection''); and *id.,* at 17 (noting that a significant percentage of survey respondents indicated that ''there is potential to apply swing pricing as part of a range of measures to assist with fund liquidity issues'').

[52] *See, e.g.,* BlackRock Comment Letter; Comment Letter of Capital Research and Management Company (Jan. 13, 2016) (''CRMC Comment

In response to commenters' concerns regarding swing pricing's operational challenges and costs and to help facilitate efficient implementation of swing pricing, the Commission is adopting amendments to rule 22c–1 permitting swing pricing with a two-year extended effective date. Delaying the effective date should provide funds, intermediaries, and service providers a reasonable amount of time to evaluate and implement in an orderly and more cost-effective manner the necessary operational changes to conduct swing pricing, regardless of the unique operational hurdles a particular entity may face.[53] Providing this extended effective date may result in long-term benefits for many funds and investors as it may allow the industry to develop and implement standardized operations solutions for swing pricing that likely would result in lower costs, processing efficiencies and reduced operational risks that ultimately benefit investors.[54] We also appreciate the extent of operational changes that will be necessary for many funds to conduct swing pricing and that these changes may still be costly to implement, but we were not persuaded by commenters who argued that these changes are insurmountable, and indeed one stated that despite these challenges ''the long-term benefits of enabling swing pricing for U.S. open-end mutual funds outweigh the one-time costs related to implementation for industry participants.'' [55] These issues are discussed in detail below.

As discussed in section II.A.3.b. below, commenters highlighted the various benefits of swing pricing for investors, including how the tool may be used to address the dilutive effect of shareholder transaction activity effectively and efficiently, and with observable performance benefits to the non-transacting shareholders in such funds.[56] Also, as discussed in section II.A.3.b. below, commenters raised overarching concerns regarding swing pricing generally, including shareholder fairness, alternatives to swing pricing such as redemption fees or redemptions in kind, the impacts swing pricing will have on the current NAV and potential performance volatility, and transparency, disclosure, and potential gaming behavior concerns.

With respect to the more detailed elements of the proposed swing pricing rules, multiple commenters raised various additional concerns, and in some cases provided suggestions on the processes for determining the swing threshold, calculating the swing factor, estimating net shareholder flows, pricing errors and materiality, impacts on financial statement presentation and other disclosures, and board approval and oversight, all of which are discussed in the sections below.

3. Discussion of Final Swing Pricing Rules

a. Scope of New Swing Pricing Rules

Under the final rule, all registered open-end management investment companies, with the exception of money market funds and ETFs, may choose to use swing pricing.[57] Although rule 22c–1(a) generally applies to all registered investment companies issuing redeemable securities,[58] we believe money market funds, while potentially susceptible to the risk of dilution, already have extensive tools at their disposal to mitigate potential shareholder dilution, and ETFs, because they redeem directly only with authorized participants, are generally able to utilize transaction fees to pass on certain costs associated with redemptions.

A fund may decide to adopt swing pricing policies and procedures as part of the liquidity risk management program it is required to implement under rule 22e–4.[59] Some fund complexes may decide to use swing pricing for certain funds within the complex but not others, or establish different swing thresholds for different funds within the complex.[60] As discussed below, funds utilizing swing pricing are required to exclude any purchases and redemptions that are made in kind in determining whether the fund's level of net purchases or net redemptions has exceeded the fund's swing threshold.[61] We are not permitting closed-end investment companies (''closed-end funds''), unit investment trusts (''UITs''), ETFs and money market funds to use swing pricing under the final rule, as discussed in more detail below.

Closed-End Funds

Closed-end funds do not issue redeemable securities and therefore do not incur the same costs as open-end funds, associated with shareholder purchase and redemption activity, that swing pricing is intended to address.[62] One commenter suggested that swing pricing should be permitted for closed-end funds, indicating that certain closed-end funds (*e.g.,* those that rely on rule 23c–3) may incur transaction costs that may be mitigated by swing pricing.[63] The same commenter

Letter''); Comment Letter of Fidelity Management & Research Company (Jan. 13, 2016) (''Fidelity Comment Letter''); ICI Comment Letter I (suggesting that the SEC consider a delayed effective date (of two years or 30 months) to permit funds and intermediaries to work through operational issues, and to reduce potential competitive disadvantages that may result for funds that may be less ready to adopt swing pricing).

[53] *Id.*

[54] *See infra* footnote 212 and accompanying paragraph. We note that providing an extended effective date to address such operational changes may also, consequently, alleviate some of the competitive concerns raised by commenters regarding certain funds being in a better position than others to rapidly implement swing pricing.

[55] GARP Comment Letter.

[56] *See infra* footnote 88 and accompanying text.

[57] For purposes of the new amendments to rule 22c–1, ''exchange-traded fund'' includes an exchange-traded managed fund (''ETMF''). *See* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8 at n.30 and accompanying text (discussing ETMFs in greater detail).

[58] Rule 2a–7 provides exemptions from rule 22c–1 for money market funds to permit certain money market funds to use the amortized cost method and/or the penny-rounding method to calculate its NAV, and to permit a money market fund to impose liquidity fees and temporarily suspend redemptions. *See* rule 2a–7(c)(1)(i); rule 2a–7(c)(2).

[59] *See* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8. Under rule 22e–4, each open-end fund, including open-end ETFs but not including money market funds, is required to adopt and implement a written liquidity risk management program reasonably designed to assess and manage the fund's liquidity risk. *See id.*

[60] Outside the U.S., it is a common industry practice for funds within a fund complex each to have an individual swing threshold, or for some funds within a complex to use swing pricing while others do not. *See, e.g.,* BlackRock Fund Structures Paper, *supra* footnote 46; and J.P. Morgan Asset Management, *Swing Pricing: The J.P. Morgan Asset Management Approach in the Luxembourg Domiciled SICAVs* (June 2014), *available at http://www.jpmorganassetmanagement.de/DE/dms/Swing%20Pricing%20%5bMKR%5d%20%5bIP_EN%5d.pdf* (''J.P. Morgan Asset Management Swing Pricing Paper'').

[61] We note that although redemptions in kind are excluded from the swing threshold, any such redemptions would still receive the swung NAV if the fund were to swing price on that day. This is because the swung NAV would apply to all redemption transactions on that day, regardless of how the proceeds are paid. We recognize that funds have discretion in determining whether to satisfy redemptions in kind, and that a fund that does satisfy redemptions in kind is less likely to cross its swing threshold. As a result, a fund can control how much it engages in swing pricing through its use of redemptions in kind. We believe this flexibility is appropriate, however, because funds have discretion on whether to use swing pricing, and redemptions in kind reduce dilution, which lessens the need for swing pricing.

[62] *See* section 2(a)(32) (defining ''redeemable security'') and section 5(a)(1)–(2) (defining ''open-end company'' and ''closed-end company'') of the Act.

[63] *See* Comment Letter of Simpson Thacher & Bartlett LLP (Jan. 14, 2016) (''[A] closed-end fund that continuously offers its shares may determine that the subscribing shareholders should bear the costs of the fund investing the new cash. In such situations, a fund and its board may determine that the use of the swing-pricing mechanism is appropriate. Accordingly, there may be potential benefits in allowing closed-end funds the option to use swing pricing.'').

Certain closed-end funds (''closed-end interval funds'') do elect to repurchase their shares at

Continued

conceded, however, that the ''the risk of investor dilution in connection with any offering or tender process is low for closed-end funds,'' that ''the goals of the 'swing-pricing' option for open-end funds are already met for closed-end funds through existing mechanisms,'' and that the commenter would not expect many closed-end funds to utilize swing pricing. Because closed-end funds do not issue redeemable securities,[64] and therefore are much less likely to encounter much of the dilution that swing pricing is intended to address,[65] we agree that the goals of swing pricing are already met for closed-end funds and, as proposed, we are not permitting closed-end funds to utilize swing pricing.[66]

UITs

Although UITs issue redeemable securities, we are not permitting UITs to utilize swing pricing for a number of reasons. First, most assets currently held in UITs serve as separate account vehicles used to fund variable annuity and variable life insurance products, and these UITs essentially function as pass-through vehicles, investing principally in securities of one or more open-end funds that could implement swing pricing.[67] UITs are not actively managed, and their portfolios are not actively traded. Unlike an open-end fund, a UIT generally does not have personnel available to actively manage the UIT's liquidity level. Because of the lack of a manager, we do not believe it would be feasible for a UIT to engage in the active administration of the swing pricing threshold and factor required by the rule. Also, UITs whose sponsor maintains a secondary market for the purchase and sale of units do not incur the dilutive transaction costs that swing pricing targets. Finally, we are not permitting UITs that are ETFs to utilize swing pricing for the reasons discussed in the ETFs section immediately below.

We did not receive any comments on the Proposing Release indicating that UITs should be permitted to utilize swing pricing.

ETFs

As proposed, we are not permitting ETFs to use swing pricing because, unlike mutual funds, which typically internalize the costs associated with purchases and redemptions of shares, ETFs typically externalize these costs by redeeming in kind and by charging a fixed and/or variable fee to authorized participants who purchase creation units from, and sell creation units to, an ETF to cover liquidity and transaction costs.[68] We also are not including ETFs within the scope of rule 22c–1(a)(3) because we believe that swing pricing could impede the effective functioning of an ETF's arbitrage mechanism.[69] The effective functioning of the arbitrage mechanism is necessary in order for an ETF's shares to trade at a price that is at or close to the NAV of the ETF.[70] If an ETF were to adopt swing pricing policies and procedures, an authorized participant would not know whether the ETF's NAV would be adjusted by a swing factor on any given day and therefore may not be able to assess whether an arbitrage opportunity exists.[71] The Commission historically has considered the effective functioning of the arbitrage mechanism to be central to the principle that all shareholders be treated equitably when buying and selling their fund shares (*i.e.,* that shareholders would not transact in shares of an ETF at market prices significantly diverging from the ETF's NAV).[72] Therefore, we believe that the implementation of swing pricing by an ETF could raise concerns about the equitable treatment of shareholders, to the extent that swing pricing could impede the effective functioning of the arbitrage mechanism. No commenters disagreed with our proposal not to allow ETFs to use swing pricing. We are, as proposed, not permitting ETFs to utilize swing pricing.

Money Market Funds

Under the final rule, like under the proposal, money market funds would not be able to use swing pricing. No commenters suggested that money market funds be allowed to use swing pricing. Money market funds are subject to extensive requirements concerning the liquidity of their portfolio investments. Also, a money market fund is permitted to impose a liquidity fee on redemptions if its weekly liquid investments fall below a certain threshold, and these fees serve a similar purpose as the NAV adjustments contemplated by swing pricing.[73] That is, money market fund liquidity fees allocate at least some of the costs of providing liquidity to redeeming rather

periodic intervals pursuant to rule 23c–3 under the Investment Company Act. *See* Liquidity Risk Management Program Adopting Release, *supra* footnote 8, at n.145.

[64] If a closed-end fund were to repurchase shares, it would have control over the timing and amount of any such repurchases (subject to the requirements of rule 23c–3, in the case of interval funds), and thus would not face the same liquidity pressures as open-end funds.

[65] *See supra* section I.

[66] We believe that the risk of investor dilution targeted by swing pricing is already sufficiently mitigated for closed-end interval funds by the requirements in rule 23c–3 and, therefore, it would not be appropriate to permit such funds to utilize swing pricing.

[67] *See* Proposing Release, *supra* footnote 6, at n.139 and accompanying text. We currently estimate that approximately 92.9% of UITs serve as separate account vehicles (based on data as of December 31, 2015).

[68] The fixed and/or variable fees are imposed to offset both transfer and other transaction costs that may be incurred by the ETF (or its service providers), as well as brokerage, tax-related, foreign exchange, execution, market impact and other costs and expenses related to the execution of trades resulting from such transaction. The amount of these fixed and variable fees typically depends on whether the authorized participant effects transactions in kind or with cash and is related to the costs and expenses associated with transactions effected in kind versus in cash. When an authorized participant redeems ETF shares by selling a creation unit to the ETF, for example, the fees imposed by the ETF defray the costs of the liquidity that the redeeming authorized participant receives, which in turn mitigates the risk that dilution of non-redeeming authorized participants would result when an ETF redeems its shares. *See* Invesco Comment Letter (''When an authorized participant redeems in cash, the variable transaction fee that an ETF may impose to offset transaction costs should address both dilution and liquidity concerns.'').

[69] ETMF market makers would not engage in the same kind of arbitrage as ETF market makers because all trading prices of ETMF shares are linked to NAV. *See* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8, at n.834 and accompanying text. ETMFs would charge transaction fees that mitigate the risk of dilution, however, and therefore we do not include ETMFs within the scope of rule 22c–1(a)(3).

[70] By this we mean that, and we generally expect that, each day and over time an ETF's shares will trade at or close to the ETF's intraday value. *See* Request for Comment on Exchange-Traded Products, Securities Exchange Act Release No. 75165 (June 12, 2015) [80 FR 34729 (June 17, 2015)] (''2015 ETP Request for Comment'') (''When providing exemptive or no-action relief under the Exchange Act, the Commission and its staff have analyzed and relied upon the representations from ETP issuers regarding the continuing existence of effective and efficient arbitrage to help ensure that the secondary market prices of ETP Securities do not vary substantially from the value of their underlying portfolio or reference assets.''). *See also* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8 at n.844. Because an ETF does not determine its NAV in real time throughout the trading day, in assessing whether this expectation is met, one looks to the difference between the ETF shares' closing market price and the ETF's end-of-day net asset value (*i.e.,* its ''premium'' or ''discount''). *See* 2015 ETP Request for Comment.

[71] *See infra* paragraph accompanying footnote 128 (noting that a fund is not required to disclose its swing threshold under the final rule).

[72] *See, e.g.,* Spruce ETF Trust, *et al.,* Investment Company Act Release No. 31301 (Oct. 21, 2014) [79 FR 63964 (Oct. 27, 2014)] (''ETFs require various exemptions from the provisions of the [Investment Company Act] and the rules thereunder. Critically, in granting such exemptions to date, the Commission has required that a mechanism exist to ensure that ETF shares would trade at a price that is at or close to the NAV per share of the ETF.''); and Precidian ETFs Trust, *et al.,* Investment Company Act Release No. 31300 (Oct. 21, 2014) [79 FR 63971 (Oct. 27, 2014)] (notice of application).

[73] *See* rule 2a–7(c)(2); *see also* 2014 Money Market Fund Reform Adopting Release, *supra* footnote 38, at section III.A.

than non-transacting shareholders,[74] and generate additional liquidity to meet redemption requests.[75] We therefore believe that money market funds already have liquidity risk management tools at their disposal that could accomplish comparable goals to the swing pricing permitted for other funds under rule 22c–1(a)(3).

We also believe that the liquidity fee regime permitted under rule 2a–7 is a more appropriate tool for money market funds to manage the allocation of liquidity costs than swing pricing.[76] Money market funds also have unique minimum liquid investment requirements, and we believe the use of liquidity fees is appropriately tied to those requirements. We also anticipate that open-end funds that adopt swing pricing policies and procedures may be required under such procedures to adjust their NAV from time to time (whenever the fund's net purchases or net redemptions exceed the fund's swing threshold). In contrast, money market fund investors (particularly, investors in stable-NAV money market funds) are particularly sensitive to price volatility,[77] and we anticipate liquidity fees will be used only in times of stress when money market funds' internal liquidity has been partially depleted.

We note that some foreign jurisdictions have a similar conception of liquidity fees as a distinct tool separate from swing pricing. For example, in Europe, UCITS may use swing pricing and apply ''dilution levies,'' which are in many respects similar to liquidity fees.[78] While many UCITS use swing pricing as a matter of normal course, dilution levies may be considered a liquidity risk management tool that is used in connection with stressed conditions.[79]

b. General Considerations Relating to Swing Pricing

As highlighted above, most commenters expressed general support for the goals of swing pricing, as well as the ability of swing pricing to achieve these goals if successfully implemented.[80] These commenters highlighted the value of swing pricing for investors, and noted that the tool may address the dilutive effect of shareholder transaction activity effectively and through a more efficient means than many other tools.[81]

Several commenters suggested that, in addition to mitigating potential dilution arising from purchase and redemption activity, swing pricing also could help deter redemptions motivated by any first-mover advantage.[82] That is, if non-transacting shareholders understood that redeeming shareholders—especially shareholders seeking to redeem large holdings—would bear the estimated costs of their redemption activity, it would reduce shareholders' incentive to redeem large holdings quickly because there would be less risk that non-transacting shareholders would bear the costs of other shareholders' redemption activity. We agree that this may be an additional useful effect of swing pricing for the funds that choose to use it.

As discussed in more detail in section II.A.3.d. below, swing pricing would require a fund, in determining whether the fund's level of net purchases or net redemptions has exceeded the swing threshold, to make such a determination based on receipt of sufficient information about the fund's net shareholder flows to allow the fund to reasonably estimate whether it has crossed the swing threshold with high confidence. We understand that, to the extent that funds engage in swing pricing, funds may be able to use the earlier receipt of net flow information in other ways, in particular, receiving net flow data earlier than current practice may provide valuable and improved information to fund managers for portfolio management and liquidity risk management, allowing them to better manage the portfolio. For example, the receipt of earlier net flow data will enable a more timely analysis of potential portfolio adjustments.[83] Even on days where a fund does not meet the swing threshold, the shareholder flow data that the fund receives may be useful, allowing portfolio managers to better manage the fund's portfolio in response to expected shareholder transaction activity.[84]

Some commenters also suggested that swing pricing and redemption fees can accomplish many of the same goals.[85] Although swing pricing has similar anti-dilutive effects as redemption or liquidity fees, swing pricing has the benefit of not requiring transfer agents or intermediaries to process, reconcile, and remit to funds the additional fees charged on shareholder transactions. The swing pricing adjustment would be applied when a fund calculates its NAV, thus potentially allowing for a more efficient and cost-effective tool.[86] We agree with commenters that swing pricing may have significant anti-dilutive benefits for the funds that choose to utilize it, and that it may be more advantageous to use in many respects than other potential tools designed to address the same concern, such as dual pricing.[87]

[74] *See, e.g.,* 2014 Money Market Fund Reform Adopting Release, *supra* footnote 38, at n.139 and accompanying text.

[75] *See id.,* at n.120.

[76] While funds may adopt swing pricing policies and procedures at their discretion, rule 2a–7 requires a money market fund under certain circumstances to impose a one percent liquidity fee on each shareholder's redemption, unless the fund's board of directors (including a majority of its independent directors) determines that such fee is not in the best interests of the fund, or determines that a lower or higher fee (not to exceed two percent) is in the best interests of the fund. *See* rule 2a–7(c)(2)(ii).

[77] For example, retail and government money market funds are permitted to maintain a stable NAV, reflecting in part our understanding that investors in these products have a low tolerance for NAV volatility. *See* 2014 Money Market Fund Reform Adopting Release, *supra* footnote 38, at section III.B.3.c. Investors in floating NAV money market funds also could be sensitive to principal volatility, as we recognized in adopting requirements that all money market funds disclose their daily net asset value (rounded to the fourth decimal place) on their Web sites, and as we discussed in the economic analysis of the 2014 Money Market Fund Reform Adopting Release. *See id.,* at section III.E.9 and section III.K.

[78] *See, e.g.,* BlackRock Fund Structures Paper, *supra* footnote 46, at 6; *see also supra* footnote 24 and accompanying and following text (discussing redemption fees that are currently permitted under rule 22c–2).

[79] *See* BlackRock Fund Structures Paper, *supra* footnote 46, at 6.

[80] *See, e.g.,* GARP Comment Letter; Comment Letter of J.P. Morgan Asset Management (Jan. 13, 2016) (''J.P. Morgan Comment Letter''); SIFMA Comment Letter II.

[81] Some of these commenters noted investor and intermediary omnibus account issues, as well as systems and operational disadvantages associated with alternative tools, such as redemption fees, dual pricing and redemptions in kind. *See, e.g.,* Comment Letter of Charles Schwab Investment Management (Jan. 13, 2016) (''Charles Schwab Comment Letter''); Federated Comment Letter; Comment Letter of HSBC Global Asset Management (Jan. 13, 2016) (''HSBC Comment Letter'').

[82] *See, e.g.,* BlackRock Comment Letter; Comment Letter of CFA Institute (Jan. 12, 2016) (''CFA Comment Letter''); GARP Comment Letter.

[83] It is our understanding that most portfolio securities trading occurs early morning (when markets open) or close to the end of the trading day. Thus the best market prices may be missed if net flow information is not received by the fund until, for example, late morning on T+1 as often happens today with respect to some funds. *See* GARP Comment Letter.

[84] We recognize that not all funds would be in a position to implement swing pricing quickly but note that such earlier receipt of shareholder flow data may provide an additional incentive for funds to adopt swing pricing beyond the anti-dilutive benefits it may provide.

[85] *See* Federated Comment Letter; Eaton Vance Comment Letter.

[86] However, as discussed in greater detail in section II.A.3.d. below, operational changes will need to be made in order to accurately apply the swing pricing factor. Funds would need to receive timely daily net shareholder flow information from intermediaries prior to the calculation of the NAV, in order to determine whether the swing threshold has been exceeded, and the NAV requires adjustment in accordance with the fund's policies and procedures.

[87] *See* HSBC Comment Letter: Charles Schwab Comment Letter. *See also supra* footnote 24 and accompanying and following text (discussing rule 22c–2 and redemption fees).

We have noted that performance benefits have been identified in UCITs that use swing pricing, which suggests that it is consistent with swing pricing having the effect of mitigating dilution costs for the non-transacting shareholders in some funds, thus providing observable benefits to those investors.[88] One commenter disputed this notion, indicating that ''the aggregate returns of fund shareholders, before expenses, are exactly the same whether or not a fund uses swing pricing'' because ''the observed improvement in fund pricing is sourced from, and equally offset by, the net transaction costs paid by buyers and sellers of fund shares. . . .'' [89] We believe the commenter's analysis fails to take into account the value that the fund and its non-transacting shareholders realize by reallocating such costs to transacting shareholders (*i.e.,* we believe the commenter is disregarding the value of better aligning transaction costs to transacting, rather than non-transacting, shareholders).[90]

A few commenters advocated for the Commission to require all funds to adopt swing pricing policies and procedures.[91] These commenters suggested that swing pricing has significant benefits for investors, and that if left permissive, rather than mandatory, few funds would be likely to undertake the operational costs and challenges of implementing it.[92] However, the majority of commenters argued that, if the Commission were to adopt swing-pricing rules, it should maintain the proposal's permissive (not mandatory) approach.[93] These commenters agreed that although swing pricing could mitigate potential shareholder dilution on days when a fund experiences heavy redemptions or purchases [94] and could help deter redemptions motivated by any first-mover advantage, it does so at a cost that may be significant for some funds.[95] They also argued that swing pricing may not necessarily be appropriate for all funds, as some funds may be more susceptible to significant and costly shareholder transaction activity than others, and thus requiring all funds to implement swing pricing and bear its associated costs is not justified. They argued that funds would be best situated to determine whether the benefits of swing pricing outweigh the costs.

We appreciate the commenters' concerns that swing pricing may have costs that, for some funds, may not be justified by the benefits.[96] We believe that as funds begin to implement swing pricing, they will be able to better evaluate the benefits and costs, and determine whether swing pricing is appropriate for each particular fund. Accordingly, we believe that the use of swing pricing by funds as an anti-dilution tool at this time should be optional rather than mandatory, and are adopting this permissive approach as proposed.

While most commenters supported swing pricing in concept, a few opposed swing pricing outright, arguing that it may have negative effects on certain shareholders and may add to fund performance volatility.[97] Many commenters who expressed general support for swing pricing also raised other concerns and challenges, many of which were also discussed in the Proposing Release.

Operational Challenges

Commenters raised a variety of operational challenges with respect to the implementation of swing pricing.[98] As discussed in greater detail in section II.A.3.d. below, it is critical that funds obtain sufficient data about shareholder purchase and redemption activity from intermediaries in a timely manner in order to reasonably estimate with high confidence whether a fund should use swing pricing on any given day; this process presents operational challenges at the present time, particularly for some funds.

Several commenters noted that many current systems for processing fund orders are not set up to provide data on shareholder flows until well after a fund's NAV has already been struck, and that some of these systems depend on receiving the fund's NAV before the processing of shareholder purchase and redemptions transactions can begin.[99] Commenters pointed to systems issues and processing issues associated with swing pricing as their greatest concern, and suggested that few funds may adopt swing pricing immediately if the rule was effective upon adoption. Commenters suggested a variety of approaches to addressing these issues, including delayed effective dates for swing pricing to allow for systems changes and industry coordination efforts to be completed,[100] delaying the striking of a fund's NAV to allow more time for shareholder flow data to reach funds,[101] and potential regulatory action

[88] *See* Association of the Luxembourg Fund Industry, Swing Pricing Guidelines (Dec. 2015) (''ALFI Swing Pricing Guidelines 2015''), at 6, *available at http://www.alfi.lu/sites/alfi.lu/files/Swing-Pricing-guidelines-final.pdf* (''Funds that apply swing pricing show superior performance over time compared to funds (with identical investment strategies and trading patterns) that do not employ anti-dilution measures. Swing pricing helps preserve investment returns.''). We are not aware of differences between UCITs and US mutual funds or swing pricing practices that would cause performance benefits in U.S. mutual funds to be dissimilar, as swing pricing in UCITs regimes is also designed to reduce dilution and recapture the costs imposed by purchasing and redeeming shareholders on the fund. As discussed previously, commenters noting differences in the US and UCITs regimes largely pointed to differences in operational practice that made swing pricing easier to implement, and did not suggest that the benefits of swing pricing, once implemented, would differ.

[89] *See* Eaton Vance Comment Letter.

[90] We note that ETFs operating as open-end funds already externalize much of their transaction costs to their authorized participants.

[91] *See* Comment Letter of Chris Barnard (Nov. 30, 2015) (''Barnard Comment Letter''); Invesco Comment Letter.

[92] *See* Invesco Comment Letter (''Partial swing pricing must be mandatory across open-end mutual funds if it is to be used effectively . . . Making implementation optional would enable gaming and permit conflicts of interest.'').

[96] *See infra* section III.

[97] *See* Comment Letter of Anonymous (Sept. 23, 2015); Eaton Vance Comment Letter (discussing a study it conducted that concludes that shareholder capital activity does not meaningfully impact the performance of most mutual funds); ETF Consultants Comment Letter; Voya Comment Letter.

[98] *See, e.g.,* CRMC Comment Letter; Dechert Comment Letter; PIMCO Comment Letter; Comment Letter of Securities Industry and Financial Markets Association (Jan. 13, 2016) (Comments on Proposal to Require Liquidity Risk Management Programs and Related Liquidity Disclosures) (''SIFMA Comment Letter I'').

[99] *See, e.g.,* Eaton Vance Comment Letter; GARP Comment Letter; ICI Comment Letter I; Comment Letter of LPL Financial (Jan. 13, 2016) (''LPL Comment Letter''). Commenters noted that certain platforms of third-party distributors (*e.g.,* retirement plan record keepers, insurance companies, trust companies) require that actual fund NAVs are received before making trade allocations and processing transactions across accounts. For example, once orders in a retirement plan are created, investor transactions must be evaluated against the retirement plan's rules for determining a valid transaction, and the amounts invested are percentage allocations, using the NAV for each applicable fund when calculating the final transaction order. It was also noted that for some funds, a large percentage of purchases and redemptions are from the retirement channel (*e.g.,* approximately 30%)). *See* ICI Comment Letter I.

[100] *See, e.g.,* BlackRock Comment Letter; CRMC Comment Letter; Fidelity Comment Letter; ICI Comment Letter I. *See also infra* footnote 212 and accompanying paragraph (discussing competitive concerns and an extended effective date).

[101] *See* GARP Comment Letter; J.P. Morgan Comment Letter (also discussing potentially delaying NAV publication time from 6 p.m. ET to 8 p.m. ET, and generally concurring with GARP discussion of operational challenges).

to require intermediaries to assist in providing necessary data to funds.[102]

We recognize that most current systems for funds and intermediaries are not set up to accommodate swing pricing, and that certain changes would need to be made before swing pricing can be adopted in the U.S. We also anticipate that certain funds are better positioned to reasonably estimate their net flows, and thus could be ready to implement swing pricing sooner than other funds.[103] As discussed in greater detail in section II.A.3.d. below, we believe that the challenges to implementing swing pricing can be addressed by the fund industry and overcome. Two commenters also noted that the aggregate long-term benefits to both shareholders and to the stability of the overall financial system from swing pricing should be significant, likely outweighing the transition costs.[104] Although funds and intermediaries may incur costs in changing operational systems and developing new processes, because swing pricing is optional (not mandatory) these costs would only be incurred if funds elect to adopt swing pricing.

As mentioned above, the operational difficulties associated with swing pricing are not uniform among all funds. Certain funds that may have more direct relationships with shareholders, instead of being heavily intermediated, and funds that may have more transparency into shareholder flows due to different shareholder bases, or affiliate relationships, or more up-to-date systems may be more easily able to implement swing pricing. We believe, however, that an extended effective date can help ease the overall burden incurred by funds, intermediaries and service providers (and ultimately, the burden incurred by investors) by allowing sufficient time for the development and implementation of efficient and cost effective industry-wide operational solutions.[105] Further, we believe that even if only a limited number of funds adopt swing pricing immediately following the extended effective date, as funds begin to gain familiarity with the process, more funds may choose to adopt it over time.[106] In addition, once a few funds have adopted swing pricing, it may pave the way for other funds to leverage broader industry solutions implemented by intermediaries and service providers in support of swing pricing.[107] Finally, we are adopting swing pricing as a permissive tool, with no expectation that funds will utilize swing pricing by a certain date. This means that as funds, service providers and intermediaries upgrade systems over time, they may re-evaluate their ability to use swing pricing, or build the necessary changes into new systems, allowing more funds to use it in the future, even if they do not make immediate changes in response to our final rule by the extended effective date.

Impacts on Current NAV and Performance Volatility

Several commenters voiced reservations about whether the swung NAV could appropriately be viewed as a fund's current NAV (particularly in light of the use of estimates to determine whether the fund has crossed the swing threshold and the swing factor) and may raise questions about the accuracy of the fund's NAV.[108] Although reasonable high-confidence estimates may be used to implement swing pricing, we believe the standards and guidance provided in this Release for establishing these estimates, as well as processes and procedures that funds may implement (including back-testing and adjusting estimates used based on actual or final data related to flows and transaction costs associated with subsequent portfolio trades), should mitigate concerns regarding the impact of using estimates for swing pricing on current NAVs.[109] We note that current NAV calculation processes already include subjective judgments and estimates, including, for example, fair-value determinations for assets that lack readily available market quotations. Additionally, we believe a swung NAV can reflect a more appropriate allocation of transaction costs to the redeeming shareholders whose redemptions caused these costs for those funds.

Commenters also noted concerns that swing pricing could lead to increased performance volatility.[110] The swing pricing requirements adopted today under rule 22c–1 aim to minimize NAV volatility (and related tracking error) associated with swing pricing to the extent possible. Swing pricing could increase the volatility of a fund's NAV in the short-term because NAV adjustments would occur when the fund's net purchases or net redemptions pass the fund's swing threshold. Thus, the fund's day-to-day NAV would show greater fluctuation than would be the case in the absence of swing pricing. This volatility might increase short-term tracking error (*i.e.,* the difference in return based on the swung NAV compared to the fund's benchmark)[111] during the daily period of NAV adjustment, and could make a fund's short-term performance deviate from the fund's benchmark to a greater degree than if swing pricing had not been used, especially if the NAV is swung on the first or last day of a performance measurement period.[112] However, swing pricing may also result in reduced tracking error over time, as benchmarks typically do not take into account transaction costs associated with responding to daily transactions, and if swing pricing recoups such costs, it may result in a fund that implements swing pricing better matching its benchmark on a long-term basis.

We recognize the desire to balance performance volatility with a fairer allocation of transaction costs. We believe that the use of swing pricing above a swing threshold, which we are permitting as proposed, may reduce the performance volatility potentially

[102] *See, e.g.,* CRMC Comment Letter; GARP Comment Letter; Invesco Comment Letter; T. Rowe Comment Letter.

[103] For example, we understand that some funds may have larger retail shareholder bases that transact directly with the fund's transfer agent or may be primarily distributed through affiliates or broker-dealers (that could potentially provide timely flow data) and/or do not have a substantial number of investors transacting in retirement plans or insurance products, where it may be more challenging to obtain timely estimates. Such funds may also have a high confidence in reasonable estimates used by back-testing their estimated flow information to actual trade flows.

[104] *See* BlackRock Comment Letter; GARP Comment Letter.

[105] *See infra* at footnotes 212–214 and accompanying text.

[106] *See, e.g.,* ALFI Survey 2015, *supra* footnote 42, at *6–7 (noting the trend observed in 2011 towards greater adoption of swing pricing in the Luxembourg fund industry has continued*).

[107] We believe that the extended effective date for swing pricing mitigates competitive concerns by allowing time for funds that choose to implement swing pricing to confront the operational hurdles of doing so. This does not preclude, however, the possibility that certain funds will find it advantageous to wait until swing pricing is more widely established in the market before choosing to implement swing pricing.

[108] *See* Eaton Vance Comment Letter (''In our view, the provisions of the Swing Pricing Proposal that would require funds adopting swing pricing to refer to their adjusted transaction prices as NAV are inconsistent with Chair White's recent statement emphasizing the importance of NAV accuracy.''); *see also* ETF Consultants Comment Letter; ICI Comment Letter I; MFDF Comment Letter.

[109] *See infra* footnote 187 and accompanying paragraph for further discussion on the nature of these estimates.

[110] *See* Federated Comment Letter; HSBC Comment Letter; Voya Comment Letter; Eaton Vance Comment Letter.

[111] We note that tracking error created by allocating some liquidity costs to transacting investors is inevitable for an open-end fund conducting swing pricing just as it is for any fund whose transactions create liquidity costs.

[112] *See* Proposing Release, *supra* footnote 6, at 196–198.

associated with swing pricing.[113] In addition, we are not aware of investors in funds that utilize swing pricing in Europe negatively reacting to funds that swing price because of concerns related to performance volatility or tracking error.[114] Taking these considerations into account, we do not believe that potential volatility and tracking error will necessarily make funds conclude that the potential concerns about swing pricing outweigh its benefits, and thus we continue to believe that we should make this anti-dilution tool available to funds that choose to use it.

Shareholder Fairness Concerns

A number of commenters suggested that swing pricing could raise shareholder fairness concerns, as the proposed swing pricing rules would apply a single adjusted NAV per share to all shareholder orders, regardless of order size. These commenters maintained that swing pricing could thus penalize certain investors disproportionately or give other investors inappropriate ''windfalls.'' [115] As noted in our proposal, we recognize that there are a variety of trade-offs that a fund would have to consider in determining to implement swing pricing.[116] These concerns, however, are partially mitigated by the fact that shareholders could be assured that the threshold level(s) of net purchase or net redemption activity (as included in a fund's swing pricing policies and procedures) would consistently trigger the use of swing pricing when applicable. A board is subject to duties of loyalty and care in the approval of policies and procedures implementing swing pricing, and the fund's adviser is subject to a fiduciary duty to the fund. We believe that such policies, procedures, and controls, as well as board oversight, should help mitigate concerns raised by one commenter of potential fraud and abuses by unscrupulous fund managers and market timers.[117] Moreover, the final rule requires that the swing factor used must be reasonable in relationship to the near-term costs expected to be incurred by the fund as a result of net purchases or net redemptions that occur on the day the swing factor is used. It also requires that the board approve policies and procedures specifying the process for how the swing threshold(s), swing factor(s), and swing factor upper limit are determined,[118] and that the board review at least annually a report reviewing the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution.[119] This report also must describe the swing pricing administrator's review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations.[120] In addition, shareholders will have transparency into a fund's use of swing pricing because a fund will be required to establish and disclose a board-approved upper limit on the swing factor(s) used by the fund, which may not be greater than two percent of the fund's NAV per share.[121] All of these changes are designed to enhance the fair treatment of shareholders in any use of swing pricing and to prevent any abusive practices.

We also observe that transaction costs of purchasing and redeeming investors are today allocated to all non-transacting investors in a mutual fund, and as a result, long-term investors may incur a more substantial burden of such costs than purchasing and redeeming shareholders.[122] However, partial swing pricing would allow funds to more closely align such transactions costs with purchasing and redeeming shareholders, and non-transacting investors would not be paying for the trading activity of such shareholders, which, as some commenters indicated, enhances shareholder fairness overall.[123] Furthermore, we believe that investors who purchase shares on a day that a fund adjusts its NAV downward would not create dilution for non-redeeming shareholders (even though the purchasing shareholders may be receiving a lower price than would be the case if the NAV was not adjusted downward). Under these circumstances, shareholders' purchase activity would provide liquidity to the fund, which could reduce the fund's costs in meeting shareholders' redemptions requests that day. We also note that in circumstances where the flows of purchases and redemptions are fairly balanced, it is unlikely that a fund will cross its swing threshold. Thus, purchasing shareholders are only likely to receive a NAV that is adjusted downward when the fund experiences substantial outflows. After considering the comments received, we believe it is appropriate to apply the swung NAV equally to all transacting shareholders in the fund.

Swing Pricing Transparency and Disclosures

Several commenters raised concerns regarding investor confusion to the extent that a fund's swing threshold and swing factor are not made transparent.[124] We agree that an adequate level of transparency about swing pricing is critical for investors to understand the risks associated with investing in a particular fund. However, we do not believe disclosure of a fund's swing threshold or swing factor is required to provide such transparency. As discussed in greater detail below, we are adopting, with some changes from the proposal, disclosure and reporting requirements regarding swing pricing to assist shareholders in understanding whether a particular fund has implemented swing pricing policies and procedures and whether the fund has utilized swing pricing.[125] As part of the disclosure changes, a fund will be required to disclose the fund's swing factor upper limit and include a description of the effects of swing pricing on a fund's performance.

Other commenters expressed concern that swing pricing could give rise to gaming behavior if certain shareholders were to attempt to time their trading activity to avoid (or take advantage of) pricing adjustments.[126] Requiring a fund

[126] *See* CFA Comment Letter; Federated Comment Letter; HSBC Comment Letter; Invesco Comment Letter.

to publicly disclose its swing threshold could create the potential for shareholder gaming behavior because a fund's shareholders could attempt to time their purchases and redemptions based on the likelihood that a fund would or would not adjust its NAV. One commenter suggested, for example, that certain vendors may have access to fund flow information through non-fund sources (such as by observing intermediary trading behavior) and that market timers may try to use any such information to detect patterns in swing pricing by funds, suggesting that those market timers might seek to transact on days when there is an advantageous change in the fund's NAV.[127]

For a shareholder to effectively game swing pricing, the shareholder would have to know the fund's swing threshold and net flow information on the day that the shareholder was purchasing or redeeming and that flow information would have to not materially change after the shareholder placed its order. Accordingly, without disclosure of this information, it will be difficult for shareholders to determine when the fund's net purchases or net redemptions exceed the swing threshold. After weighing these considerations, we are not requiring a fund to disclose its swing threshold or swing factor under the final rule, and we believe that a fund generally should not disclose its swing threshold unless it has determined that it is in the best interests of the fund to do so. In making this assessment, the fund should consider the nature of the fund's shareholders and whether disclosure of the swing threshold would result in significant shareholder harm. We note that, to the extent a fund does decide to disclose its swing threshold, we believe it would not be appropriate for a fund to disclose it selectively to certain investors (*e.g.,* to only disclose the fund's swing threshold to institutional investors), as we believe this could assist certain groups of shareholders in strategically timing purchases and redemptions of fund shares, potentially disadvantaging shareholders who do not know the fund's swing threshold.[128]

With respect to market timing concerns, we note that a fund's market timing policies and procedures should address and seek to resolve such issues for a fund that uses swing pricing. We note that funds have a variety of tools to prevent any such market timing should it occur, such as redemption fees, purchase blocks, and roundtrip restrictions, which we believe should mitigate this risk. In addition, investors will not be able to purposefully take advantage of swing pricing to obtain a better price without knowledge of contemporaneous intraday flows and a fund's swing thresholds, neither of which funds are required to publicly disclose under the rule.

c. Swing Threshold

Under the final rule, as under the proposed rule, a fund's swing pricing policies and procedures must provide that the fund is required to adjust its NAV once the level of net purchases or net redemptions from the fund has exceeded a set, specified percentage of the fund's net asset value known as the ''swing threshold.'' [129] A fund must adopt policies and procedures that specify the process for how the fund's swing threshold is determined,[130] and the policies and procedures must be approved by the fund's board of directors.[131] In addition, the fund board will review a periodic report that describes, among other things, a review and assessment of the fund's swing threshold.[132] Finally, the fund board will be required to approve the fund's swing threshold and any changes thereto.[133]

In determining whether the fund's level of net purchases or net redemptions has exceeded the swing threshold, the person(s) responsible for administering the fund's swing pricing policies and procedures will be permitted to make this determination based on receipt of sufficient information about the fund shareholders' daily purchase and redemption activity to allow the fund to reasonably estimate whether it has crossed the swing threshold with high confidence.[134] This shareholder flow information may be individual, aggregated, or netted orders, may include reasonable estimates where necessary, and shall exclude any purchases or redemptions that are made in kind and not in cash.[135] The fund's policies and procedures should describe how such determinations will be made.[136] We are adopting a requirement that, in specifying the process for how the swing threshold is determined, a fund consider:

- The size, frequency, and volatility of historical net purchases or net redemptions of fund shares during normal and stressed periods;
- The fund's investment strategy and the liquidity of the fund's portfolio investments;
- The fund's holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources; and
- The costs associated with transactions in the markets in which the fund invests.[137]

We requested comment on the process a fund would use to determine its swing threshold, including the factors that a fund would be required to consider, and also requested comment on whether there were certain procedures that we should require a fund to use when reviewing its swing threshold. Commenters on the proposed rule expressed a variety of views regarding the factors a fund must consider in specifying the fund's swing threshold. Some commenters indicated that the Commission should be less prescriptive in establishing the factors, arguing that not all of the factors are equally applicable to all funds, that requiring funds to consider all these factors may lead funds to create overly mechanistic checklists, and that a principles-based approach would better allow funds to

[127] *See* Eaton Vance Comment Letter.

[128] The Commission has brought enforcement actions against fund managers for selective disclosure. *See* In the Matter of Evergreen Investment Management Company, LLC and Evergreen Investment Services, Inc., Investment Company Act Release No. 28759 (June 8, 2009) (settled order) (''Evergreen Order''); In the Matter of Alliance Capital Management, L.P., Investment Company Act Release No. 26312 (Dec. 18, 2003) (settled order).

[129] Rule 22c–1(a)(3)(i)(A). Under the rule, ''swing threshold'' is defined as ''the amount of net purchases into or net redemptions from a fund, expressed as a percentage of the fund's net asset value, that triggers the initiation of swing pricing.'' Rule 22c–1(a)(3)(v)(D).

[130] Rule 22c–1(a)(3)(i)(B).

[131] Rule 22c–1(a)(3)(ii)(A).

[132] Rule 22c–1(a)(3)(ii)(D).

[133] Rule 22c–1(a)(3)(ii)(B).

[134] Rule 22c–1(a)(3)(i)(A).

[135] *Id.* As noted in the Proposing Release, when a fund investor purchases or redeems shares of a fund in kind as opposed to in cash, this does not necessarily cause the fund to trade any of its portfolio assets. The risk of dilution as a result of shareholder purchase and redemption activity, therefore, is lower with respect to in-kind purchases and in-kind redemptions, and thus swing pricing would not be permitted unless a fund's net purchases or net redemptions that are made in cash (and not in kind) exceed the fund's swing threshold. *See* Proposing Release, *supra* footnote 6, at n.439 and accompanying paragraph.

[136] *See infra* footnote 179.

[137] Rule 22c–1(a)(3)(i)(B).

These factors overlap significantly with factors that we understand are commonly considered by funds that use swing pricing in other jurisdictions, in order to determine a fund's swing threshold. For example, the Luxembourg Swing Pricing Survey, Reports & Guidelines provides that factors influencing the determination of the swing threshold ordinarily include: (i) Fund size; (ii) type and liquidity of securities in which the fund invests; (iii) costs (and hence, the dilution impact) associated with the markets in which the fund invests; and (iv) investment manager's investment policy and the extent to which the fund can retain cash (or near cash) as opposed to always being fully invested). *See* ALFI Survey 2015, *supra* footnote 42, at 14.

tailor their swing pricing processes to their unique circumstances.[138] Other commenters indicated that the rule's factors as proposed grant ''excessive'' discretion concerning the threshold for swing pricing,[139] and expressed concern that ''fund shareholders will frequently bear swing pricing transaction costs that have little or no relation to the actual impact of their transaction on the fund and its continuing shareholders.''[140] One commenter stated that the factors are in line with the commenter's expectations.[141]

We recognize the potential dangers of being overly prescriptive in this area, but believe that the factors reflect common areas that a fund would consider in establishing its swing pricing process and are consistent with factors that are considered by funds that use swing pricing in other jurisdictions.[142] In addition, we note that the rule does not preclude a fund from considering other factors that the fund believes may be relevant.[143] Similarly, we recognize the potential dangers of providing complete discretion in this area, but note that further constraining funds' decision-making processes in setting the swing threshold may unduly restrict the ability of each fund to select an appropriate threshold that best suits the particular needs of the fund. Both extremes present a risk that transacting shareholders will bear swing pricing costs via the swing factor that are divorced from the fund's transaction costs. After considering commenters' concerns, therefore, we are adopting the factors related to setting a fund's swing threshold as proposed.

We continue to believe that evaluating all four factors will assist a fund in determining what level of net purchases or net redemptions would generally lead to the trading of portfolio assets that would result in material costs to the fund, and thus they are relevant to setting a fund's swing threshold.[144] Two of the factors a fund is required to consider in specifying the fund's swing threshold, relating to a fund's investment strategy and cash holdings, are similar (investment strategy factor) or the same (cash holdings factor) as two of the factors a fund is required to consider in assessing its liquidity risk under rule 22e–4.[145] Overlap between the factors is not surprising, because evaluating a fund's liquidity risk may be relevant to determining the fund's swing threshold (*i.e.,* determining the appropriate circumstances under which the fund should employ swing pricing to combat shareholder dilution).[146] Such overlap may also lead to efficiencies in both analyses, as funds become more familiar with the interaction between the factors, the risk of dilution, and efforts to combat dilution. A third factor (the size, frequency, and volatility of historical net purchases or net redemptions of fund shares during normal and stressed periods) is a consideration in determining how frequently a fund may expect a specified swing threshold to be exceeded.[147] The fourth factor, the costs associated with transactions in the markets in which the fund invests, is a consideration in determining whether costs of responding to shareholder transaction activity are significant enough at a specified threshold level that the fund should utilize swing pricing to address their dilutive impact.[148]

In order to effectively mitigate possible dilution arising in connection with shareholder purchase and redemption activity, a fund's swing threshold should generally reflect the estimated point at which net purchases or net redemptions would trigger the fund's investment adviser to trade portfolio assets in the near term, to a degree or of a type that may generate material liquidity or transaction costs for the fund. We believe that a consideration of the factors set forth above will promote a fund estimating this threshold point.[149]

Full Swing Pricing vs. Swing Pricing Above a Threshold

Like the proposal, the final rule does not impose a minimum ''floor'' for a fund's swing threshold. We believe that different levels of net purchases and net redemptions would create different risks of dilution for funds with different strategies, shareholder bases, and other liquidity-related characteristics, and thus we do not believe that it would be appropriate to determine a single swing threshold floor to apply to all funds that elect to use swing pricing.[150] Rather, we believe it is appropriate to constrain the swing threshold through the factors that a fund must consider in setting the

[138] *See* ICI Comment Letter I; J.P. Morgan Comment Letter; Charles Schwab Comment Letter.

[139] *See* AFR Comment Letter.

[140] *See* Eaton Vance Comment Letter.

[141] *See* HSBC Comment Letter.

[142] *See supra* footnote 137.

[143] In contrast, we have given more limited discretion to funds when setting a fund's swing factor(s), but are not requiring board approval of the fund's swing factors. *See* rule 22(c)–1(a)(3)(i)(C) (providing that the person(s) responsible for administering swing pricing may take into account only the near-term costs expected to be incurred by the fund as a result of net purchases or net redemptions that occur on the day the swing factor(s) is used). Together, these modifications are designed to enhance the fair treatment of shareholders in the use of swing pricing and to prevent abusive practices, while also providing funds with the ability to tailor a fund's use of swing pricing after consideration of the swing threshold factors. *See also* AFR Comment Letter (expressing concern regarding the degree of discretion afforded to funds in setting both the swing threshold and swing factor).

[144] Assessing the size, frequency, and volatility of historical net purchases and net redemptions of fund shares will permit a fund to determine its typical levels of net purchases and net redemptions and the levels the fund could expect to encounter during periods of unusual market stress, as well as the frequency with which the fund could expect to see periods of unusually high purchases or redemptions. We continue to believe that comparing the fund's historical flow patterns with the fund's investment strategy, the liquidity of the fund's portfolio holdings, the fund's holdings of cash and cash equivalents and borrowing arrangements and other funding sources, and the costs associated with transactions in the markets in which the fund invests will allow a fund to predict what levels of purchases and redemptions would result in material costs under a variety of scenarios.

[145] *See* rule 22e–4(b)(2)(ii)(A) (requiring a fund to consider, in assessing its liquidity risk, the fund's ''investment strategy and liquidity of portfolio investments during both normal and reasonably foreseeable stressed conditions (including whether the investment strategy is appropriate for an open-end fund, the extent to which the strategy involves a relatively concentrated portfolio or large positions in particular issuers, and the use of borrowings for investment purposes and derivatives)''; and rule 22e–4(b)(2)(ii)(C) (requiring a fund to consider, in assessing its liquidity risk, the fund's ''holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources''). *See also* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8.

[146] *See* rule 22e–4(a)(11) (defining liquidity risk). We note that, in the Proposing Release, three of the factors a fund would have been required to consider in specifying the fund's swing threshold aligned with factors a fund is required to consider in assessing its liquidity risk. The change from three to two overlapping factors is due to a change in the liquidity risk assessment factors. *See* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8, at section III.B.2.

[147] This factor is similar to a factor for assessing liquidity risk, however, it has been tailored to be a more precise consideration for setting the swing threshold. *See id.*

[148] As discussed in the Proposing Release, a fund may wish to consider, as applicable, market impact costs and spread costs that the fund typically incurs when it trades its portfolio assets (or assets with comparable characteristics if data concerning a particular portfolio asset is not available to the fund). A fund also may wish to consider, as applicable, the transaction fees and charges that the fund typically is required to pay when it trades portfolio assets. These could include brokerage commissions and custody fees, as well as other charges, fees, and taxes associated with portfolio asset purchases or sales (for example, transfer taxes and repatriation costs for certain foreign securities, or transaction fees associated with portfolio investments in other investment companies).

[149] In circumstances where fund purchases and redemptions are fairly balanced, we believe that it is unlikely that the purchases or redemptions would trigger the fund's investment adviser to trade portfolio assets in the near term, to a degree or of a type that may generate material liquidity or transaction costs for the fund.

[150] We note that, in Europe, there are no across-the-board swing threshold floors applicable to UCITS that use swing pricing.

swing threshold, which are designed to prevent a fund from setting a swing threshold that is inappropriate and does not reflect the size and nature of the liquidity costs likely to be incurred by the fund. We believe that the consideration of the swing threshold factors would lead a fund to set a threshold at a level that would trigger the fund's investment adviser to trade portfolio assets in the near term to a degree or of a type that may generate material liquidity or transaction costs for the fund. We further believe that, after considering the swing threshold factors, a fund would be unable to set the swing threshold at zero.

Commenters generally supported the approach taken under the proposal of not setting a minimum threshold for swing pricing. Some commenters indicated that the Commission should permit full swing pricing because a fund may find it more appropriate for its particular circumstances [151] and would mitigate any potential first-mover advantage inadvertently caused by swing pricing.[152] One commenter also suggested that full swing pricing is more transparent and easier to understand than partial swing pricing.[153] On the other hand, some commenters stated that the Commission should permit only partial swing pricing, arguing that the tracking error and volatility associated with full swing pricing would outweigh its benefits.[154]

On balance, we continue to believe that setting a minimum threshold for all funds would not be appropriate, and that funds should be provided the flexibility to implement swing pricing at a threshold level that best fits their particular circumstances based on the required factors and the guidance set forth herein. We expect that as part of the process of determining whether the benefits of implementing swing pricing are justified given the costs, funds will evaluate the appropriate threshold level and select a level that is suitable for the fund, considering the required factors. We believe that this approach strikes an appropriate balance between competing considerations by allowing tailored choices to be made for each fund but constrained by the factors that the fund must consider in setting the threshold. Therefore, we are adopting the threshold requirements as proposed.

Board Approval of Swing Threshold

We are also requiring the fund's board to approve a fund's swing threshold as proposed. Several commenters opposed the proposed requirement for a fund's board to approve the fund's swing threshold, stating that the determination of swing thresholds is more appropriately a management function.[155] One commenter noted that the determination of a fund's swing threshold would likely be a highly technical analysis ''that requires intimate familiarity with the fund's daily operations.'' [156] Additionally, one commenter questioned whether the board should be required to approve changes to a fund's swing threshold(s), arguing that board approval could be detrimental to a fund's ability to respond quickly to changing market conditions.[157] One commenter, on the other hand, supported requiring that a fund's board, including a majority of independent directors, approve the swing threshold as ''independent perspectives may more fully focus on shareholder interests.'' [158] Another commenter suggested that the proposed swing threshold requirements granted excessive discretion to fund managers notwithstanding the proposed board approval requirement.[159] As discussed in more detail below, several commenters also supported the idea that a fund's board should be given visibility into the process by which the swing threshold was determined via written reports.[160]

After considering commenters' concerns, we believe that board approval of a fund's swing threshold (and any changes thereto) is an important element of board oversight of a fund's swing pricing process. A fund's swing threshold(s) represents the trigger point at which the fund's NAV will be adjusted and thus the point at which swing pricing begins to affect fund shareholders. We believe board review and approval of this determination will help ensure that the fund's swing threshold(s)—and the point at which swing pricing begins to affect shareholders in the fund—is in the best interests of fund shareholders. While requiring board approval of changes to a fund's swing threshold may constrain a fund's ability to immediately or frequently change a fund's swing threshold, we believe that this requirement acts as an important check on the discretion afforded to the fund's swing pricing administrator. Moreover, under the final rule, a fund is permitted to set multiple swing threshold(s), which we believe may allow a fund to prepare for some changes in market conditions.

As described further below, we are also requiring that the board be provided with a written report from the fund's swing pricing administrator that describes, among other things, the administrator's review and assessment of the fund's swing threshold(s), including information and data supporting this determination.[161] We believe that the information provided in this report will help the board in overseeing this important element of the fund's swing pricing process, thereby addressing the concern some commenters expressed that the board may not have the necessary information or expertise to approve the swing threshold (and changes to the threshold).[162] At the same time, we believe that requiring board approval of a fund's swing threshold (and any changes to the threshold), combined with the board review requirement, serves to address concerns about granting excessive discretion to the swing pricing administrator.

Application of Swing Pricing to Purchases and Redemptions

Under the proposal, a fund that adopted swing pricing policies and procedures would have been required to adjust the fund's NAV whenever net redemptions or net subscriptions exceeded the swing threshold. In other words, a fund could not apply swing pricing only when it received net redemptions beyond the threshold. The

[151] *See* Dechert Comment Letter. Full swing pricing is the process of adjusting the fund's NAV whenever there is any level of net purchases or net redemptions, instead of swing pricing above a threshold (*i.e.,* partial swing pricing).

[152] *See* Federated Comment Letter.

[153] *See* HSBC Comment Letter (noting advantages of full swing pricing but also acknowledging benefits of partial swing pricing, such as ''a lower impact on net asset value volatility, tracking error and fund performance.'').

[154] *See* AFR Comment Letter (''We understand that full swing pricing—allowing NAV adjustments anytime there are net purchases or redemptions—may increase volatility, tracking errors, and investor misperceptions about funds' performance that could lead to market distortions. Instead, we support the proposed partial swing pricing that would allow NAV adjustments only when net purchases or redemptions exceed an established threshold. We agree that this approach will result in lower volatility than full swing pricing, while still reducing dilution on assets. To that end, we do not support an option allowing funds to choose to use full swing pricing.''). *See also* MFS Comment Letter.

[155] *See, e.g.,* BlackRock Comment (''Mutual fund boards should not be required to approval all swing thresholds.''); Dechert Comment Letter (stating that board approval of the swing threshold ''should instead be a management function, subject to board oversight'').

[156] Dechert Comment Letter.

[157] Charles Schwab Comment Letter.

[158] CFA Institute Comment Letter (''We also support the requirements that fund boards approve initial swing thresholds and any material changes to it. . .'').

[159] AFR Comment Letter.

[160] *See infra* footnote 276 and accompanying text.

[161] *See infra* section II.A.3.f.

[162] *See id.*

proposal solicited comment on whether a fund should be permitted to apply swing pricing only when the fund's level of net redemptions exceeds the swing threshold. Commenters requested that the Commission permit funds the flexibility to adjust their NAV *only* when net redemptions (as opposed to both net subscriptions or net redemptions) exceed the swing threshold,[163] and permit a fund to set different swing thresholds for net redemptions versus net subscriptions.[164] Commenters argued that this additional flexibility was important because the dilution risks associated with net redemptions may be significantly different from the risks associated with net subscriptions, as funds may be able to manage inflows more effectively over time without as much cost.[165] For this reason, they argued that funds may wish to only use swing pricing for net redemptions, and not subscriptions, or set differing thresholds for subscriptions versus redemptions.

While we agree with commenters that the impact of subscriptions may be different from that of redemptions and that funds have other tools to manage inflows over time,[166] the final rule continues to require a fund to adjust its NAV whenever net purchases or net redemptions exceed the swing threshold. Both purchases and redemptions may cause shareholder dilution in certain circumstances. Accordingly, we believe swing pricing will be a useful tool in mitigating shareholder dilution associated with shareholder purchase activity as well as shareholder redemption activity.

Multiple Swing Thresholds

In response to a comment request in the Proposing Release, a number of commenters suggested that we should permit a fund to set multiple escalating swing thresholds (wherein each threshold could be associated with a different swing factor) instead of only a single threshold.[167] Commenters argued that permitting multiple thresholds may allow funds to more effectively mitigate shareholder dilution, because the costs of managing shareholder activity may increase as redemptions increase, and would allow swing pricing to more precisely reflect different levels of costs associated with different levels of shareholder activity.[168]

We agree that permitting such multiple thresholds may allow funds to more precisely target the costs of managing shareholder activity and better mitigate shareholder dilution effects of such transactions. Accordingly, the final rule permits (but does not require) a fund to set multiple escalating swing thresholds, each associated with a different swing factor.[169] Whichever threshold is triggered on a given day would then determine the single swing factor that would be used to adjust the fund's NAV on that day. If a fund has more than one threshold, each should be established using the same factors discussed above, and if it has multiple swing factors, each should be set taking into account the same considerations discussed in section II.A.2.e. below.

Review Requirement

The proposed rule would have required a fund's swing pricing policies and procedures to provide for a periodic review, no less frequently than annually, of the fund's swing threshold. Beyond specifying certain factors that a fund would be required to consider in reviewing its swing threshold, the proposed rule did not include prescribed review procedures, nor did it specify the changes in a fund's circumstances over the course of the review period that a fund must consider as part of its review. One commenter suggested that the final rule make clear that the required review should be similar in nature to the review that led to the determination of a fund's swing threshold in the first place.[170] Another commenter suggested that the proposal provided little guidance to fund sponsors and boards in how to balance conflicting interests of shareholders in setting appropriate swing thresholds.[171] As discussed in more detail below, several commenters also supported the idea that a fund's board should be given visibility into the process by which the swing threshold was determined via written reports.[172]

We agree that the review requirement should be more robust, and instead of requiring a fund to periodically review the fund's swing threshold, we have adopted in the final rule a requirement that the fund's board of directors, must review, no less frequently than annually, a written report prepared by the person(s) responsible for administering swing pricing for a fund that describes, among other things: (i) The swing pricing administrator's review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution; and (ii) its review and assessment of the swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements in rule 22c–1(a)(3)(i)(B) and (C), including the information and data supporting these determinations.[173] We are also requiring, as proposed, that the fund board approve the fund's swing pricing policies and procedures, which must specify the process for how the fund's swing threshold is determined.[174] Finally, as discussed above, we are requiring that the fund board approve any changes to the fund's swing threshold as proposed. We believe that the written report requirement, which specifies certain information that must be provided to the board, provides additional guidance regarding the information that may be useful in assessing the fund's swing threshold.

A fund may consider whether to review and assess its swing threshold more frequently than annually (*e.g.,* semi-annually or monthly), and/or

[163] *See* Dechert Comment Letter (''[A] fund should be permitted to apply swing pricing to net *redemptions* only, as opposed to applying it equally to net redemptions and net purchases, which would be the case under the proposed rule amendments.'') (emphasis in original).

[164] *See* BlackRock Comment Letter (''[T]he Commission should clarify that funds are permitted to create an 'asymmetric' swing threshold where the threshold for inflows is different than the threshold for outflows.'') (internal citation omitted).

[165] Unlike the requirement that funds meet redemptions within 7 days, there is no requirement for funds to immediately invest cash inflows. *See* ICI Comment Letter I (''[R]eceipt of new cash in a portfolio may not be as disruptive or problematic as large net redemptions.''); Dechert Comment Letter (noting that there may be more significant issues regarding potential dilution for non-redeeming shareholders in connection with shareholder redemptions).

[166] We note that a fund is not obligated to accept subscriptions, and so thus may be able to better manage dilution due to purchases.

[167] *See, e.g.,* ICI Comment Letter I (''[F]unds may wish to apply more than one threshold to net redemptions (or purchases), and apply different swing factors depending on which threshold the net redemption (or purchases) exceeds. This could enhance the precision of a swing pricing methodology, allowing a fund to make larger downward adjustments to its NAV when it experiences larger net outflows.'') (internal citation omitted).

[168] *See* BlackRock Comment Letter (''Funds should also be permitted to set multiple swing threshold levels for a given fund, where each threshold could be associated with different swing factors. Such a sliding swing threshold would allow partial swing pricing to more precisely reflect different levels of costs associated with the disposition (purchase) of securities for different trade sizes.'') (internal citation omitted).

[169] As discussed in more detail below, however, a fund's swing factor(s) may not exceed two percent of NAV per share. *See infra* section II.A.3.e.

[170] *See* Comment Letter of the Federal Regulation of Securities Committee of the Section of Business Law of the American Bar Association (Feb. 11, 2016).

[171] *See* Eaton Vance Comment Letter.

[172] *See infra* footnote 276 and accompanying text.

[173] Rule 22c–1(a)(3)(ii)(D). *See also infra* section II.A.3.f. (discussing the board review requirements).

[174] *See infra* section II.A.3.f.

specify any circumstances that would prompt ad hoc review of the fund's swing threshold in addition to the periodic review required by the rule (as well as the process for conducting any ad-hoc reviews). We believe that funds should generally consider evaluating both market-wide and fund-specific developments affecting each of the rule 22c–1(a)(3)(i)(B) factors in developing comprehensive procedures for reviewing a fund's swing threshold.

Swing Threshold Considerations for Multiple Share Classes

The net purchase or net redemption activity of all share classes of a fund with multiple share classes is part of the determination of whether a fund has crossed its swing threshold. If a fund were to only include the transaction activity of a single share class, and were to swing one share class and not another, this would have the effect of having one share class pay transaction expenses incurred in the management of the fund's portfolio as a whole, expenses that are borne by all share classes and thus would generally be inconsistent with rule 18f–3.[175] Accordingly, a fund with multiple share classes may not selectively swing the NAV of certain share classes but not others.[176] Like a fund with only one share class, the purchase or redemption activity of certain shareholders (or a class of shareholders) within a multi-share-class fund could dilute the value of all shareholders' interests in the fund.[177] Further, because the economic activity causing dilution occurs at the fund level, it would not be appropriate to employ swing pricing at the share class level to target such dilution. We also note that because all share classes must utilize the same swing factor and ETFs cannot utilize swing pricing, funds structured to include ETFs as a share class would not be able to utilize swing pricing.[178]

d. Investor Flow Information

Critically important to the adoption of swing pricing is a fund's ability to obtain sufficient information about purchase and redemption activity that took place prior to striking the fund's NAV on a particular day in order to reasonably estimate whether it has crossed the swing threshold with high confidence, to determine whether swing pricing should be in effect that day. If the fund's applicable swing factor varies depending on the level of its net investor flows, sufficient investor flow information is also needed to determine the applicable swing factor that the fund will use to adjust its NAV. A fund using swing pricing will need to obtain reasonable estimates of investor flows daily, or the aggregate flows of money being invested in and redeemed out of the fund, for purposes of reasonably estimating with high confidence whether the fund's net purchases or net redemptions have crossed the swing threshold, thus resulting in an NAV adjustment under its swing pricing policies and procedures.[179]

We understand that the deadline by which a fund must strike its NAV may precede the time that a fund (or its pricing agent) receives final information concerning daily net investor transaction flows from the fund's transfer agent. As a result, funds engaging in swing pricing will likely need to develop processes and procedures to gather sufficient investor flow information from transfer agents that include transactions being conducted by intermediaries on behalf of fund investors.[180] This information could include actual transaction orders received by the transfer agent, as well as estimates of investor flows, which funds can use to reasonably estimate its aggregate daily net investor flows for swing pricing purposes.[181]

Reasonable Estimates

Several commenters asked for additional guidance regarding a fund's use of estimates in determining its net flows in order to determine whether a fund has crossed its swing threshold.[182] We acknowledge that full information about shareholder flows is not likely to be available to funds by the time such funds need to make the decision as to whether the swing threshold has been crossed,[183] but we do not believe that complete information is necessary to make a reasonable high confidence estimate.[184] Instead, a fund may determine its shareholder flows have crossed the swing threshold based on receipt of sufficient information about the fund shareholders' daily purchase and redemption transaction activity to allow the fund to reasonably estimate, with high confidence, whether it has crossed the swing threshold. The shareholder flow information used by funds may be individual, aggregated or netted orders and may include reasonable estimates where

[175] *See* rule 18f–3(a)(1)(ii) (stating that allocation of expenses related to the management of a fund's assets may not differ among a fund's share classes).

[176] One commenter indicated that ''swing pricing can be used successfully by the conventional share classes of a fund that also operates an ETF as a share class.'' *See* Vanguard Comment Letter. Because of the aforementioned 18f–3 concerns and the inability of ETFs to utilize swing pricing, we disagree. A swing pricing adjustment applied to certain share classes of a fund, but not applied to the ETF share class of that fund, would impermissibly allocate expenses related to the management of the fund's assets.

[177] *See* ALFI Survey 2015, *supra* footnote 42, at 4 (''If swing pricing is applied, all share classes of a fund swing in the same direction (and typically by the same basis point amount), as dilution occurs at the fund level rather than at the share class level.'').

[178] *See* section 18 of the Act.

[179] We have previously stated that a fund should adopt compliance policies and procedures that provide for monitoring shareholder trades or flows of money in and out of the fund for purposes of detecting market timing activity. *See* Compliance Programs of Investment Companies and Investment Advisers, Investment Company Act Release No. 26299 (Dec. 17, 2003) [68 FR 74714 (Dec. 24, 2003)] (''Rule 38a–1 Adopting Release''), at nn.66–69 and accompanying text. We also note the requirement that funds have shareholder information agreements under rule 22c–2 that require financial intermediaries to provide certain shareholder transaction data to funds upon their request, which may be helpful in estimating flows in some respects. *See* rule 22c–2.

[180] As indicated in the proposal, a fund may wish to implement formal or informal policies and procedures regarding the timely receipt of shareholder flow information, and to establish effective communication between the persons charged with implementing the fund's swing pricing policies and procedures, the fund's investment professionals, personnel charged with the calculating the fund's daily NAV, and the fund's transfer agent. *See* Proposing Release, *supra* footnote 6, at section III.F.2.a.

[181] Under the current system, redemption and subscription orders from shareholders are typically accepted by funds and their intermediaries on any given trading day up until 4 p.m. Eastern time. Intermediaries typically begin processing, aggregating and submitting transaction orders to fund transfer agents (where transactions are not NAV dependent) in the late afternoon. Funds generally publish their NAVs between 6 and 8 p.m. Eastern time (''ET''). Following the publication and delivery of such NAVs, both intermediaries and fund transfer agents complete their transaction processing and conduct their nightly processing cycles, which update applicable recordkeeping systems for the day's activities. *See* rule 2a–4 (allowing the adjustment in outstanding fund shares as a result of purchase and redemption activity to be reflected on T+1).

[182] *See* BlackRock Comment Letter; ICI Comment Letter I (noting that swing pricing in the U.S. will likely involve the use of estimates with respect to current day net flows (as well as when determining factors) and that the Commission should further clarify that it is comfortable with fund managers and their administrators using such estimates in a disciplined and documented manner when employing swing pricing). Similarly, another commenter asked the Commission to clarify that there is an element of estimation in evaluating whether a fund has crossed its threshold, inherent in the proposed reasonable inquiry standard. *See* SIFMA Comment Letter II.

[183] The deadline by which a fund must strike its NAV may precede the time that a fund receives final information concerning daily net flows from the fund's transfer agent or principal underwriter.

[184] A fund should not employ swing pricing if the fund is unable to obtain sufficient information about the fund shareholders' daily purchase and redemption activity on the relevant date at the time it calculates the fund's NAV. *See supra* section II.A.3.c. We understand that many funds in Europe that use swing pricing may typically receive as much as 90% of net purchase/redemption data prior to deciding whether to adjust the fund's NAV by a swing factor.

necessary[185] (made by funds and their intermediaries) and should exclude any purchases or redemptions that are made in kind and not in cash.[186]

As discussed below, we recognize in some cases, it may not currently be feasible for certain intermediaries to provide their actual orders (even in an aggregated or netted format) promptly enough for the fund to conduct swing pricing. However, we understand that a fund's reasonably estimated shareholder flows could include estimates for certain intermediary flows that are based on actual transaction orders received from investors prior to the fund's cut-off time, which would subsequently be submitted by intermediaries to the fund's principal underwriter and/or transfer agent for processing after receipt of the fund's final NAV. For example, in the European fund sector, swing pricing is feasible operationally as ''actual'' trade flows based on estimated prices (typically the prior day's NAV) and orders occurring on the trade date are available on a timely basis. Trading platforms collect all of that day's activity and supply it to the fund's transfer agent. An estimated fund price is then applied to generate estimated trade values for that trading day. We also note that where transaction orders are NAV dependent, the application of estimated fund prices (such as the prior day's NAV) to the current day's orders to derive estimated shareholder flow information could be conducted by intermediaries or fund transfer agents.[187] Additionally, a fund may require different levels or types of information from each of its intermediaries depending on a variety of factors.[188]

Funds should consider utilizing policies and procedures to make the necessary estimates.[189] Such policies and procedures could describe the process by which the fund obtains shareholder flow information (including flows obtained from intermediaries), as well as the amount and kind of transaction data that the fund believes necessary to obtain before making its estimate of total net flows in order to determine whether the swing threshold has been exceeded, and applying swing pricing that day.[190] Funds (and their intermediaries) may also wish to consider regular back-tests of their daily estimated net flows used in determining whether a swing threshold has been crossed based on complete or final data obtained later, and then update their estimation process over time based on the results of such back-tests. A fund may wish to consider whether having a process to back-test data, which would allow a fund to review whether the fund is appropriately considering and weighing the factors and, over time, may potentially improve the accuracy of the fund's estimation process. Back-testing data is a commonly utilized practice in the fund industry (and other industries) to continuously improve the quality of processes involving subjective judgments or estimates, and its use has been discussed in the context of swing pricing in Europe.[191]

We recognize that funds may take different approaches in determining whether they have sufficient flow data to make a reasonable high confidence estimate,[192] and that the completeness of data (such as the percentage of actual versus estimated net flow data), as well as the nature and types of estimates used may vary based on the particular circumstances of the fund. For example, a fund whose redemption levels have been very consistent in the past, and that has a large direct shareholder base that is made up of primarily small retail positions, may be better positioned to make a high confidence estimate of flows with less effort, than a fund that is primarily distributed through intermediaries, who has experienced volatile purchases and redemptions and has a mix of distribution partners and institutional and retail shareholders. Because many funds are primarily distributed through intermediaries, they will need to obtain sufficient information about shareholder flows (whether actual orders or estimated flows) in a timely manner to reasonably estimate with high confidence whether a fund should use swing pricing on a given day.

Operational Issues

Many commenters on the swing pricing proposal discussed the operational difficulties that exist today for funds in obtaining timely enough information from intermediaries about shareholder flow data to determine whether or not a swing threshold has been crossed.[193] These commenters discussed operational challenges to implementing swing pricing in the United States as compared to Europe, where many funds have successfully implemented swing pricing.[194] Commenters noted that omnibus account structures and existing processing arrangements with intermediaries limit the ability of many funds to receive sufficient flow information prior to the time that the fund's NAV must be calculated, thus impeding the use of swing pricing as an anti-dilution tool currently in the U.S.[195] These commenters also highlighted that certain intermediaries

[185] We understand that most intermediaries submit aggregated and/or netted transactions orders to funds. Such orders represent the transactions of underlying investors whose shares are held in omnibus accounts registered in the name of intermediaries (such as a broker-dealer, retirement plan record keeper, bank or trust) for the benefit of such shareholders on transfer agent recordkeeping systems for each share class in a fund. Intermediaries typically aggregate their individual customer daily transaction orders and also may net the total purchase and redemption orders, which are periodically transmitted for processing to fund transfer agents. *See* Investment Company Institute, *Navigating Intermediary Relationships,* (2009), at nn.3, 6–7, *available at https://www.ici.org/pdf/ppr_09_nav_relationships.pdf.*

[186] *See* rule 22c–1(a)(3)(i)(A).

[187] *See* GARP Comment Letter.

[188] Such factors might include the size of flows that ordinarily come through a particular intermediary, the nature of such orders (*i.e.,* subscriptions, redemptions, exchange transactions), or certain characteristics or additional information about the redeeming or purchasing shareholders and intermediaries conducting transaction processing (*e.g.,* large trade notifications). A fund may also choose to request flow data only from certain of its intermediaries if it determines that it can make a high confidence determination to swing its price with flow information provided by only a subset of its intermediaries (for example, if there are intermediaries that typically only conduct a very small volume of transaction activity with the fund).

[189] One commenter requested that we ''recognize that certain components of the swing pricing process will be based on estimates'' and suggested that we ''provide a safe harbor from liability for differences between estimates and what is observed ex-post if swing pricing procedures are followed properly.'' BlackRock Comment Letter. We decline to provide such a safe harbor given the facts and circumstances nature of this determination.

[190] As discussed in section II.A.3.g. below, if a fund, pursuant to reasonably designed policies and procedures, determined with reasonable high confidence that it should apply swing pricing based on estimated information obtained after reasonable inquiry, the fund would not need to treat the application of swing pricing as a pricing error if it turned out, after the fact based on final data, that the swing threshold had not been crossed; similarly, the fund would not need to treat the failure to apply swing pricing as a pricing error if it turned out, after the fact based on final data, that the swing threshold had been crossed.

[191] *See, e.g.,* ALFI Swing Pricing Guidelines 2015, *supra* footnote 88 (discussing the value of back-testing).

[192] *See infra* footnote 205.

[193] *See, e.g.,* CRMC Comment Letter; Invesco Comment Letter; ICI Comment Letter I; GARP Comment Letter.

[194] *See* CRMC Comment Letter; Dechert Comment Letter; ICI Comment Letter I; IDC Comment Letter.

[195] *See, e.g.,* BlackRock Comment Letter; Comment Letter of Financial Services Roundtable (Jan. 13, 2016) (''FSR Comment Letter''); J.P. Morgan Comment Letter; SIFMA Comment Letter II. Commenters also stated that the fund's agent (either the transfer agent or intermediaries authorized to distribute or transact fund shares) will take orders from shareholders for execution; typically until the fund's cut-off time (which is 4 p.m. ET for most U.S. funds). Thus, a large amount of flow information from intermediaries is currently provided to some funds after the close of business in the later evening hours, or the next business day after the investor transaction occurs (typically early morning on T+1), which is generally after a fund strikes its NAV. *Id.*

(*e.g.,* retirement plan record keepers and insurance companies) typically require the receipt of actual fund prices (NAVs) to initiate the processing of fund trades, thus posing difficulties in getting final actual orders from these distribution channels to funds before the NAV has been struck.[196] Some commenters expressed concerns regarding funds' ability to obtain estimated shareholder flow information if requested from intermediaries.[197] Several commenters also suggested that large fund complexes with more influence over their distribution partners could be more successful than small complexes in obtaining such information.[198] In addition, funds also expressed concerns that intermediaries may choose not to offer funds that choose to implement swing pricing, due to the increased processing and technology burdens that swing pricing would impose on intermediaries, a consideration that funds will evaluate as they determine whether to adopt swing pricing. Several commenters stated that, although swing pricing is used relatively widely in European jurisdictions, certain differences between U.S. and European fund operations make swing pricing easier to implement in Europe than in the U.S.[199]

Some commenters provided specific ideas about initiatives the Commission could pursue to mitigate operational challenges and help facilitate implementation of swing pricing for funds and investors. For example, they stated that the Commission could require (or encourage) intermediaries to provide shareholder flow estimates prior to the deadline by which a fund must strike its NAV.[200] Some commenters stated that the Commission also could require (or encourage) funds and intermediaries to implement earlier cut-off times to buy and sell fund shares, but many acknowledged the downsides associated with this option, including limiting investors' ability to transact in funds up until the close of the U.S. equity markets.[201] One commenter representing a group of asset management risk professionals suggested a detailed roadmap to altering current fund and intermediary processes that they suggested may represent a feasible approach to implementing swing pricing in the U.S.[202] Many commenters suggested that the Commission should address the operational challenges to swing pricing before it is implemented in the U.S and suggested delaying the effective date and/or implementation date of such new rules to allow the industry to work together to make the necessary changes to their infrastructure to resolve these concerns.[203]

The Commission acknowledges the operational challenges noted by commenters that will need to be addressed by industry participants. Because of these concerns, we believe the adoption of swing pricing in the U.S. as a new (optional) anti-dilution tool will likely require considerable lead time for many funds that will need to coordinate and implement the necessary operational changes with intermediaries and service providers in order to effectively conduct swing pricing for new or existing funds. Additionally, as noted by commenters, we understand that certain funds, intermediaries and service providers may incur substantial costs in doing so.[204]

We recognize that U.S. fund complexes differ widely in terms of their size, the types of funds they offer, the types of investors they serve (*e.g.,* retail and/or institutional), and their distribution models. Thus, we anticipate that there may be certain funds that could make the necessary adjustments and prepare to implement swing pricing sooner than other funds, because they have or may be able to more easily obtain sufficient net flow information. For example, we understand that certain funds with investors that primarily transact directly with the fund's principal underwriter or transfer agent, or that are primarily distributed through affiliates or broker-dealers (that could potentially provide timely flow data),[205] and/or do not have a substantial number of investors transacting in retirement plans or insurance products could more easily obtain sufficient net flow information. In addition, larger fund complexes with the ability to more easily get net flow information from their intermediaries, including those that have established large trade

[196] *See* Eaton Vance Comment Letter; GARP Comment Letter; ICI Comment Letter I; LPL Comment Letter; Charles Schwab Comment Letter; Comment Letter of Wells Fargo Funds Management, LLC (Jan. 13, 2016) (''Wells Fargo Comment Letter''). Commenters also pointed to the constraints of older (legacy) technology systems used by some service providers, which limit the ability of these intermediaries to deliver fund flow information prior to the time a fund strikes its NAV. *See* Dechert Comment Letter; Federated Comment Letter; GARP Comment Letter; SIFMA Comment Letter II. According to these commenters, these older systems batch process daily transactions received from fund investors throughout the evening, versus newer real-time or continuous and automatic systems that process and submit transactions to fund transfer agents throughout the day.

[197] *See, e.g.,* ICI Comment Letter I; Comment Letter of T. Rowe Price (Jan. 13, 2016) (''T. Rowe Comment Letter'') (expressing concerns regarding (i) funds' need to rely on estimated flows from intermediaries, (ii) the costs and burdens to provide sufficient estimated flows to allow a fund to accurately determine whether a swing threshold has been exceeded, and (iii) the potential for NAV errors). These issues are discussed throughout this section. As discussed below, commenters also encouraged the Commission to consider what changes to the regulatory framework are necessary to require intermediaries to provide accurate estimates of shareholder flows prior to funds striking their NAVs so that swing pricing can be an effective tool to mitigate potential dilution for shareholders.

[198] *See* CRMC Comment Letter; Dechert Comment Letter; ICI Comment Letter I; Comment Letter of Independent Directors Council (Jan. 13, 2016) (''IDC Comment Letter'').

[199] *See, e.g.,* BlackRock Comment Letter; GARP Comment Letter; Eaton Vance Comment Letter; ICI Comment Letter I. In particular, commenters maintained that European funds are better able to receive timely flow information than U.S. funds because there are multiple or earlier trading cut-off times in Europe and that there is greater use of currency-based orders in Europe, which contributes to confidence in the accuracy of fund flows.

[200] *See* CRMC Comment Letter; GARP Comment Letter; Invesco Comment Letter; T. Rowe Comment Letter.

[201] *See* GARP Comment Letter; PIMCO Comment Letter; Charles Schwab Comment Letter; SIFMA Comment Letter II. Some commenters noted that funds could be put at a competitive disadvantage to other types of investment products (*e.g.,* hedge funds and collective trusts) that continue to accept trades throughout the day, and others stressed the fact that there is a long history in the U.S. mutual fund market of providing investors with flexibility to submit redemption and subscription requests until 4 p.m. ET. *See, e.g.,* ICI Comment Letter I; GARP Comment Letter; Wells Fargo Comment Letter.

[202] *See* GARP Comment Letter. This roadmap involved action by funds and intermediaries to solve swing pricing operational issues by: (1) Maintaining the dealing (intermediary and transfer agent) cut-off time for fund redemptions and subscriptions at 4 p.m. ET, as is current market practice; (2) requiring funds' NAV publication time to be shifted from 6 p.m. ET to 8 p.m. ET; (3) requiring providers of fund flows to provide ''estimated'' trading flows occurring each day by 6 p.m. ET, which would be used to determine whether to adjust the fund's NAV per share and calculate the adjusted NAV. *Id.*

[203] *See, e.g.,* Blackrock Comment Letter; Dodge & Cox Comment Letter; SIFMA Comment Letter I; Vanguard Comment Letter.

[204] *See, e.g.,* ICI Comment Letter I (''Building and maintaining additional systems would be quite costly, and even assuming that intermediaries at large would rework their systems to support swing pricing, they can be expected to seek the substantial costs of doing so from funds.''); *see infra* section III discussing the potential costs and benefits. *See also* discussion throughout this section regarding funds' deliberative process in determining whether the costs and drawbacks of implementing swing pricing, including managing such operational challenges and any cost sharing requested by intermediaries, are justified by the anti-dilution and other benefits that may result as a consequence of implementing swing pricing.

[205] We understand through staff outreach, and based on the time transaction order volumes are received and processed through the National Securities Clearing Corporation (''NSCC''), that many broker-dealer firms would have the ability to submit most of their actual transaction orders within a relatively short timeframe after the fund's order cut-off time (typically 4 p.m. ET). *See* Division of Investment Management, Memorandum re: Meeting with Representatives of SIFMA (June 13, 2016) *available at https://www.sec.gov/comments/s7-16-15/s71615-152.pdf.*

notification processes,[206] may have the leverage to negotiate operational solutions and the resources to implement swing pricing sooner for certain funds, which may result in inefficient one-off solutions rather than coordinated industry-wide operational solutions that may reduce costs for investors overall.[207]

We understand that in order to implement swing pricing in an efficient manner, many funds will need time to develop the infrastructure needed to obtain shareholder flow information for investors transacting through intermediaries (including banks, broker-dealers, retirement plan administrators, or insurance companies or platforms), whose shares are held in omnibus accounts registered in the name of such intermediaries on fund transfer agent recordkeeping systems.[208] We also recognize that because intermediaries allow customer trades to take place up until the 4 p.m. cut-off time, and because of the limitations of many current systems,[209] many fund transfer agents do not currently have sufficient information to reasonably estimate net shareholder flow activity for funds without changes to current processes and systems to facilitate timely receipt of such information to conduct swing pricing.[210]

As noted above, we recognize that because the fund industry is diverse, it may take longer for certain funds to implement swing pricing than others. We also acknowledge that funds, intermediaries, and service providers use complex, integrated systems and technology, which supports the daily processing of shareholder transactions. We expect that implementing swing pricing will lead to process and systems changes to accommodate the additional processing that will be needed to support the provision of estimated shareholder flows to funds where necessary, and that such improvements may require additional capital investments to permit the implementation of swing pricing for funds that may choose to use it.[211] Importantly, we believe that an extended effective date, as discussed below, will allow most funds that may wish to implement swing pricing to work together with intermediaries and service providers in implementing efficient, cost effective, solutions to the operational challenges swing pricing presents that will assist in reducing overall costs and operational risks for industry participants, including funds and their investors.

Extended Effective Date

As discussed above, a number of commenters requested that we provide a delayed effective date of two years for implementation of swing pricing, to allow the industry to address the necessary changes to operations and systems and, as a consequence, help alleviate competitive concerns by allowing all funds time to become familiar with swing pricing.[212] These commenters explained that, with a delayed effective date, all funds would have the opportunity to develop swing pricing capabilities in an orderly manner, and it would provide time for efficient operational solutions to be developed to help mitigate the challenges of implementing swing pricing.

We acknowledge that, if swing pricing were to be effective immediately, a limited number of funds might have the ability (*e.g.,* based on level of resources and leverage with intermediaries) to implement swing pricing sooner than others, and that as a result potential benefits could be provided to long-term investors in such funds. However, as noted above, most commenters requested a two-year extended effective date to coordinate the implementation of industry-wide operational changes to conduct swing pricing, which would provide time for funds, service providers and the NSCC to develop and implement standardized processing solutions that could be leveraged more broadly by the industry. This would be in contrast to certain funds proceeding immediately with one-off solutions to receive shareholder flow information directly from intermediaries, which could be a more costly, less efficient and less secure processing solution over the long-term. We believe that the benefits to investors that likely would result from a coordinated industry effort, as suggested by commenters,[213] including

[206] It is our understanding that today many [larger] fund complexes require their intermediaries to provide advance notification of ''large trades'' (*e.g.,* such as for asset allocation or wrap product rebalancing transactions) several days in advance of such trades so funds may anticipate and plan for sizable redemptions and so the shareholder can avoid receiving a redemption in kind. We further understand that such large trade notification processes between funds and intermediaries are voluntary or may be specified in agreements. The industry is seeking to automate and standardized these communications, which are non-standard (often faxed) communications. *See BNY Mellon Automates Process for Brokers-Dealers to Notify Mutual Fund Complexes of Upcoming Large Trades,* PR Newswire (Oct. 13, 2015), *available at http://www.prnewswire.com/news-releases/bny-mellon-automates-process-for-broker-dealers-to-notify-mutual-fund-complexes-of-upcoming-large-trades-300158615.html.* Such large trade notification requirements are generally disclosed in a fund's statement of additional information pursuant to Item 23.

[207] We understand that such funds likely would negotiate receipt of actual orders or make arrangements to receive estimated shareholder flow information from intermediaries (for investor orders received by intermediaries in accordance with the funds' applicable end-of-day cut-off times) prior to the striking of the funds' NAVs.

[208] *See, e.g.,* GARP Comment Letter; ICI Comment Letter I; Charles Schwab Comment Letter; SIFMA Comment Letter II.

[209] *See, e.g.,* Dechert Comment Letter; GARP Comment Letter. We understand that the industry primarily utilizes batch processing to execute shareholder transaction orders received by intermediaries with funds or their transfer agents though the NSCC's Wealth Management Services platform. Such fund orders are typically transmitted (grouped together and processed) through one of many NSCC ''batch'' order cycles throughout the day and evening. Batch processing systems are also used by funds, intermediaries and service providers for processing and keeping records of shareholder details, including number of shares, on transfer agency, sub-transfer agency and intermediary recordkeeping systems.

[210] In Europe earlier trade cut-off times have evolved and fund transaction orders must be received by the fund administrator/transfer agent by the earlier cut-off time. This factor eases the burdens of estimating net flows for European funds that swing price. *See* ALFI Survey 2015, *supra* footnote 42, at 7 (''In terms of the operational process for partial swing, nine promoters stated that their decision to swing the NAV was based on estimated shareholder activity. Three promoters were able to rely on final shareholder activity. An organization's ability to rely on confirmed activity depended to a large extent on the cut off times of the transfer agent in relation to the valuation point of the fund.''); *see also e.g.,* BlackRock Comment Letter; GARP Comment Letter; Eaton Vance Comment Letter; ICI Comment Letter I.

[211] However, we note that the provision of such data likely would be facilitated through the industry fund transaction processing utility (the NSCC), and that once shareholder flow enhancements are established, any new NSCC capabilities, as well as those of service providers supporting funds' (and their intermediaries') swing pricing processes could be used by other funds that may be interested in implementing swing pricing.

[212] *See, e.g.,* Invesco Comment Letter; BlackRock Comment Letter; GARP Comment letter (each suggesting a delayed effective date of two years); *see also* SIFMA Comment Letter I; T. Rowe Comment Letter (each requesting a delayed effective date and noting that ''some fund managers already have extensive experience with swing pricing, while other fund managers will be approaching swing pricing for the first time and, hence, be at a disadvantage'').

[213] *See* BlackRock Comment Letter; GARP Comment Letter (each recommending that ''the Commission set the effective date of the swing pricing provisions to at least two years after the final rule is adopted'' because it ''will permit an orderly and industry-wide process to make the necessary changes''); *see also* Fidelity Comment Letter (encouraging ''industry-wide solutions'' to operational challenges associated with swing pricing); Vanguard Comment Letter (''[C]ertain operational hurdles common across the industry currently prevent funds from effectively implementing swing pricing . . . We believe that any potential solution to this problem will result from increased collaboration and communication between funds, their service providers, and intermediaries. However, any industry solution will necessarily take time to develop. Therefore, the Commission should delay implementation of the swing pricing rule until such time as intermediaries can demonstrate an ability to transmit accurate and complete order information to funds in a reliable, cost-effective, and timely manner. Once the

the mitigation of operational risks associated with non-standardized processing and the promotion of more reliable and secure transmission of standardized data in an efficient and cost-effective manner, would likely outweigh short-term benefits that could be provided to a limited number of investors if we did not implement an extended effective date.

As discussed above and in section II.C. below, we agree with these commenters and believe it is appropriate to adopt an extended effective date for swing pricing. We expect that the extended effective date will allow funds, intermediaries and service providers to work towards orderly, efficient, industry-wide solutions to the operational challenges swing pricing presents,[214] mitigating the costs of such solutions to funds and their investors as compared to the development (and possible eventual reconciliation) of numerous, disparate solutions to swing pricing's operational challenges that might be implemented, if swing pricing were to be effective immediately, by a small number of funds potentially seeking to be among the first to engage in swing pricing. We are persuaded by commenters that two years should provide sufficient time to develop such solutions in an efficient manner. We expect that our staff will keep us informed of the industry's progress by engaging with market participants (*e.g.,* fund complexes, intermediaries, and service providers) on the implementation of swing pricing in the U.S.

Potential Further Commission Action To Facilitate Swing Pricing

As discussed above, a number of commenters pointed to a variety of competitive concerns and operational challenges in implementing swing pricing, and several suggested that the Commission take additional actions to facilitate its adoption. We recognize the challenges associated with implementing swing pricing in the U.S., but continue to believe that swing pricing may provide significant benefits to investors for funds that choose to use it. As discussed above, some commenters urged the Commission to adopt rules that would require intermediaries to provide timely estimates of shareholder flows to funds that chose to implement swing pricing, or to encourage such action through non-regulatory means.[215] However, commenters did not provide details as to the form such a regulatory requirement would take, and some noted that any such requirement would likely have to extend to certain entities not typically subject to regulation by the Commission.[216] Any such regulatory requirement would also be limited by the economic reality that intermediaries are free to choose whether or not to sell fund shares to their customers, and a requirement that intermediaries provide shareholder flow data to funds may have the unintended consequence of leading certain intermediaries to choose to no longer sell funds that use swing pricing.

Other commenters suggested that the Commission could take action to require funds and intermediaries to implement earlier cut-off times to buy and sell fund shares (either through adoption of new rules or other means).[217] However many commenters recognized the significant downsides of such an approach, in that it would limit investors' ability to trade mutual funds until the markets close (a long-held expectation of mutual fund investors), and could put mutual funds at a competitive disadvantage with other investment products.[218] Still others took the approach of suggesting that the Commission seek input from industry or other regulators about what could be done to help facilitate adoption of swing pricing in the U.S. before taking further action.[219] Our staff has previously engaged in significant outreach to funds, intermediaries, and other regulators as we developed the swing pricing rule proposal, and we expect that such active dialogue will continue as swing pricing begins to be implemented.

Considering the diverse and varied recommendations on potential Commission action that we might take, as well as the potential limitations and downsides of the approaches that have been suggested to us, we are not proposing any further regulatory requirements to facilitate implementation of swing pricing at this time. As discussed previously, on balance, we believe that it is appropriate to permit usage of swing pricing as an optional tool subject to a two-year extended effective date at this time. We believe permitting this optional tool to be implemented for those funds that choose to do so may result in benefits for those funds and their investors if they believe the challenges of implementing swing pricing can be overcome and are justified by the resulting anti-dilution and other benefits associated with swing pricing. In addition, permitting the use of swing pricing encourages funds to begin working with intermediaries to overcome the operational challenges associated with swing pricing and may spur the development of efficient solutions that might not otherwise be created if swing pricing were not allowed.

e. The Swing Factor

We are adopting a requirement that a fund's swing pricing policies and procedures provide that, once the fund's level of net purchases or net redemptions has exceeded a swing threshold, the fund must adjust its NAV by an amount designated as the ''swing factor'' for that threshold.[220] ''Swing factor'' is defined as ''the amount, expressed as a percentage of the fund's net asset value and determined pursuant to the fund's swing pricing procedures, by which a fund adjusts its net asset value per share when the level of net purchases into or net redemptions from the fund has exceeded the fund's applicable swing threshold.'' [221] A fund's swing pricing policies and

industry is able to implement swing pricing effectively, we believe that swing pricing will be a valuable tool funds may use to supplement the liquidity risk management practices that we propose above.'').

[214] *See id.*

[215] *See* CRMC Comment Letter (''In order to create a level playing field for all funds, we instead urge the Commission to adopt rules requiring intermediaries to provide cash flow information prior to the deadline by which a fund is required to strike its NAV.''); *see also* GARP Comment Letter (''SEC swing pricing provisions should incorporate additional requirements for financial intermediaries (as defined in rule 22c–2) . . . to provide, at the request of a fund, timely estimates of the net purchase or redemption activity to support the fund's reasonable inquiry.''); Invesco Comment Letter (''We request that the Commission create a regulatory obligation that intermediaries provide trade information to fund sponsors on a time-table that allows all funds to use swing price. . . . The industry and our intermediaries are unlikely to make these changes voluntarily.''); T. Rowe Comment Letter (''we strongly encourage the SEC to consider what changes are necessary to its regulatory framework to require (or otherwise provide funds with the ability to influence) intermediaries to provide accurate estimates of purchase and redemption information prior to funds striking their NAVs so that swing pricing can be an effective tool to mitigate potential dilution.'').

[216] *See, e.g.,* ICI Comment Letter I. In addition, unless only newly organized funds chose to implement swing pricing, any such regulatory requirement would require provisions to deal with intermediaries that were unable or unwilling to provide such flow data, which might lead to situations where shareholders owning fund shares through such intermediaries would either need to switch intermediaries or redeem their shares (both of which may have negative consequences for investors) or allow such intermediaries to continue to keep shareholders in a fund that swing prices, which may result in funds being unable to implement swing pricing effectively.

[220] Rule 22c–1(a)(3)(i)(A).

[221] Rule 22c–1(a)(3)(v)(B).

procedures are required to specify the process for how the swing factor will be determined.[222] In determining the swing factor, the person(s) responsible for administering swing pricing may take into account only the near-term costs expected to be incurred by the fund as a result of net purchases or net redemptions that occur on the day the swing factor is used, including spread costs, transaction fees and charges arising from asset purchases or asset sales to satisfy those purchases or redemptions, and borrowing-related costs associated with satisfying redemptions.[223]

A fund's swing pricing policies and procedures also must include an upper limit on the swing factor used, which may not exceed two percent of the fund's NAV per share.[224] The fund would be required to take into account certain considerations when determining the swing factor upper limit.[225] The swing factor upper limit is subject to new oversight provisions under the final rule, as further described below.

The policies and procedures shall also include the determination that the swing factor(s) used are reasonable in relationship to the fund's costs in meeting net shareholder subscriptions and redemptions.[226] We anticipate that, because these considerations could vary depending on facts and circumstances, the swing factor that funds will determine appropriate to use in adjusting its NAV also could vary.[227] A fund's policies and procedures for determining the swing factor should discuss how each of the considerations a fund is required to take into account under the rule will be used in determining the swing factor.

Setting the Swing Factor

Under the proposal, when setting its swing factor a fund would have been required to take into account two specific sets of considerations. Under the final rule amendments, a fund must take into account only one set of considerations in determining its swing factor(s), which has been modified in response to commenters. Under the final rule, the swing pricing administrator must take into account only the near-term costs expected to be incurred by the fund as a result of net purchases or net redemptions that occur on the day the swing factor is used, including spread costs, transaction fees and charges arising from asset purchases or asset sales to satisfy those purchases or redemptions, and borrowing-related costs associated with satisfying redemptions when determining the fund's swing factor(s).[228] As discussed below, the person(s) responsible for administering swing pricing must also determine that the swing factor used is reasonable in relationship to these costs. We have eliminated the consideration of market impact costs or changes in the value of assets purchased or sold as a result of net purchases or net redemptions. The required considerations are intended to limit a fund's ability to estimate the costs associated with purchase and redemption activity that could dilute the value of non-transacting shareholders' interests in the fund.[229]

i. Required Consideration of Certain Near-Term Costs

As noted above, as originally proposed, both sets of considerations were mandatory for setting a swing factor. In the Proposing Release, we requested comment on each of the considerations that a fund would be required to take into account in determining the swing factor, and specifically requested comment on whether any aspect of the proposed considerations should not be required. In response, some commenters argued that the proposed considerations for calculating a fund's swing factor should be guidance only.[230] On the other hand, one commenter expressed concern that the proposed rules would grant funds too much discretion in calculating the swing factor.[231]

We continue to believe that mandating funds to take into account certain near-term costs when setting the swing factor strikes an appropriate balance between providing funds an appropriate amount of discretion and requiring that relevant costs be considered when setting the swing factor. However, in response to commenter concerns, we have eliminated certain of the proposed considerations and have clarified that a fund may only take into account those considerations set forth in the rule.

The final rule specifies that the determination of a fund's swing factor must take into account only the *near-term* costs expected to be incurred by the fund as a result of net purchases or net redemptions that occur on the day the swing factor is used (emphasis added). The phrase "near-term" is meant to reflect that investing proceeds from net purchases or satisfying net redemptions could involve costs that may not be incurred by the fund for several days. The rule text specifies that the costs to be considered are those that are expected to be incurred by the fund as a result of the net purchase or net redemption activity that occurred on the day the swing factor is used; this specification is designed to help ensure that the only costs to be taken into account are those that are directly related to the purchases or redemptions at issue. Thus, while the term "near-term costs" does not envision a precise number of days, we believe that, in context, this term would not likely encompass costs that are significantly

[222] Rule 22c–1(a)(3)(i)(C).

[223] *Id.*

[224] Rule 22c–1(a)(3)(i)(C).

[225] *Id.*

[226] *Id.*

[227] As discussed previously in section II.A.3.c. above, under the final rule a fund could also have more than one swing threshold, with varying swing factors associated with each threshold. In determining multiple swing factors, the fund would take into account the same factors it would use in establishing a single swing factor, but evaluate them based on the relevant swing threshold.

[228] Rule 22c–1(a)(3)(i)(C).

[229] The costs that a fund would be required consider in determining its swing factor overlap significantly with costs that we understand funds that use swing pricing in other jurisdictions commonly consider when determining their swing factor. For example, the Luxembourg Swing Pricing Survey, Reports & Guidelines provides that the following should be considered when determining the swing factor: (i) The bid-offer spread of a fund's underlying portfolio assets; (ii) net broker commissions paid by the fund; (iii) custody transaction charges; (iv) fiscal charges (*e.g.,* stamp duty and sales tax); (v) any initial charges or exit fees applied to trades in underlying investment funds; and (vi) any swing factors or dilution amounts or spreads applied to underlying investment funds or derivative instruments. *See* ALFI Survey 2015, *supra* footnote 42, at 7, 15–16.

[230] *See* Dechert Comment Letter ("Generally, we believe that requiring funds to consider specific factors as part of the swing threshold and swing factor determinations is too rigid and prescriptive . . . Instead, we believe a better approach would be to outline in conceptual guidance the appropriate principles and factors a fund could consider in making the swing factor determinations."); *see also* ICI Comment Letter I ("[T]he SEC should permit funds to build their own methodologies, shaped broadly by SEC guidance within the adopting release."); Invesco Comment Letter (stating that, if a cost reflected in one of the proposed factors cannot be reasonably estimated, a fund should be able to exclude it from the swing factor calculation).

[231] *See* AFR Comment Letter ("The proposal includes substantial discretion concerning the threshold for swing pricing and the actual level of the swing pricing adjustment. We believe this discretion is excessive. If SEC oversight of swing pricing is lax, this discretionary process holds the risk of near-arbitrary redemption fees charged to investors, fees that could become effectively a form of gating during periods of market stress."). We believe that requiring funds to set a swing factor pursuant to board-approved policies and procedures that are administered by an investment adviser subject to a fiduciary duty, and requiring that the policies and procedures provide that the swing factor(s) used must be reasonable in relationship to these costs, serve as a counterbalance to allowing funds to set the swing factor, and should help mitigate the risk that a fund sets a punitive or arbitrary swing factor that would inappropriately disadvantage redeeming shareholders.

removed in time from the purchases or redemptions at issue.

The near-term costs required to be considered are limited to spread costs,[232] transaction fees and charges arising from purchasing or selling assets,[233] and borrowing-related costs associated with satisfying redemptions. We anticipate that the particular transaction fees and charges that a fund would likely consider, for example, would include mark-ups and mark-downs, brokerage commissions and custody fees, as well as other charges, fees, and taxes associated with portfolio asset purchases or sales (for example, transfer taxes and repatriation costs for certain foreign securities, or transaction fees associated with portfolio investments in other investment companies). A fund also must consider borrowing-related costs associated with satisfying redemptions, such as the interest charges or other costs paid if a fund were to draw on a line of credit or engage in interfund borrowing in order to pay redemptions. These borrowing costs, like the specific transaction costs associated with purchasing and selling portfolio assets, could dilute the value of the shares held by non-transacting shareholders, and also can leverage the fund.[234] A fund should consider near-term costs in developing its policies and procedures for determining a swing factor. The rule as adopted thus requires funds to incorporate an assessment of multiple sources of potential dilution when setting the swing factor.

ii. Elimination of Consideration of Market Impact Costs

Under the proposal, the costs a fund would have been required to consider would have included market impact costs [235] associated with the fund trading portfolio assets.[236] Many commenters addressing the proposed cost considerations indicated that we should not require a fund to consider market impact costs in determining its swing factor.[237] These commenters indicated that estimating market impact costs can be very difficult and requires an exercise of judgment that fund managers may not be comfortable undertaking. These commenters also noted that few funds in other jurisdictions that use swing pricing include market impact costs in their swing factors and indicated that estimated market impact costs would reduce swing factor precision.[238] We understand the difficulties in estimating market impact costs in other jurisdictions may also apply for some U.S. funds were we to require consideration of market impact costs when applying swing pricing here.[239] In light of concerns that many funds may not be able to readily estimate market impact costs, as well as concerns that subjective estimates of market impact costs could grant excessive discretion in the determination of a swing factor,[240] we have eliminated the consideration of market impact costs in setting the swing factor under the final rule. In making this determination, we have balanced our concerns regarding potential abusive practices against the fact that funds using swing pricing potentially may not capture all the costs that are likely to result from shareholder transactions on the trade date.

iii. Elimination of Consideration of Value of Assets Purchased or Sold

Under the proposed rule, a fund's policies and procedures for determining the swing factor would have been required to consider information about the value of assets purchased or sold by the fund as a result of the net purchases or net redemptions that occur on the day the swing factor is used to adjust the fund's NAV, if that information would not be reflected in the current NAV of the fund computed that day.[241] One commenter noted that obtaining this information on a timely basis may be difficult.[242] Another commenter objected to including this consideration, arguing that it is unclear and does not correspond to common swing pricing practices in Europe.[243] The commenter also suggested that taken literally, this consideration appears to reflect changes in prices attributable to a specific day, which is in tension with the proposal's treatment of a swing factor being allowed to be determined on a periodic basis.[244]

This consideration was meant to reflect the fact that a fund's NAV will generally not reflect changes in holdings of the fund's portfolio assets and changes in the number of the fund's outstanding shares until the first business day following the fund's receipt of the shareholder's purchase or redemption requests.[245] Thus, the price that a shareholder receives for his or her purchase or sale of fund shares customarily does not take into account market-related costs that arise even when the fund trades portfolio assets on the same day in order to meet shareholder purchases or redemptions. However, we recognize that requiring inclusion of such information may imply a level of precision in setting the swing factor tied to changes that occur each day that would undercut funds being able to set a swing factor on a periodic basis, with adjustments for more significant market movements or other more significant cost changes. Accordingly, we believe requiring consideration of such costs in setting the swing factor would be inappropriate at this time. In making this determination, we have balanced these concerns against the fact that funds using swing pricing potentially may not capture all the costs that are likely to

[232] *See* Proposing Release, *supra* footnote 6, at n.416 (defining "spread costs" as those "incurred indirectly when a fund buys a security from a dealer at the 'asked' price (slightly above current value) or sells a security to a dealer at the 'bid' price (slightly below current value). The difference between the bid price and the asked price is known as the 'spread.' ").

[233] "Transaction fees and charges" are defined in rule 22c–1(a)(3) to mean "brokerage commissions, custody fees, and any other charges, fees, and taxes associated with portfolio asset purchases and sales." Rule 22c–1(a)(3)(v)(E).

[234] *See* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8, at section III.B.2.c for discussion regarding lines of credit.

[235] *See* Proposing Release, *supra* footnote 6, at n.415 (defining "market impact costs" as those costs "incurred when the price of a security changes as a result of the effort to purchase or sell the security. Stated formally, market impacts are the price concessions (amounts added to the purchase price or subtracted from the selling price) that are required to find the opposite side of the trade and complete the transaction. Market impact cost cannot be calculated directly. It can be roughly estimated by comparing the actual price at which a trade was executed to prices that were present in the market at or near the time of the trade.").

[236] The proposed rule would have required a fund's policies and procedures for determining the swing factor to take into account all near-term costs that are expected to be incurred as a result of net purchases or net redemptions that occur on the day the swing factor is used to adjust the fund's NAV, including any market impact costs, spread costs, and transaction fees and charges arising from asset purchases or asset sales in connection with those purchases or redemptions, as well as any borrowing-related costs associated with satisfying those redemptions. *See* proposed rule 22c–1(a)(3)(i)(D)(1).

[237] *See, e.g.,* ICI Comment Letter I; Invesco Comment Letter; J.P. Morgan Comment Letter; T. Rowe Comment Letter.

[238] *Id. See also* ALFI Survey 2015, *supra* footnote 42, at 10 (indicating that 10% of survey respondents consider market impact costs).

[239] We note that some fund complexes may utilize technological tools, such as best execution systems, that estimate trading cost information, including market impact, but that not all funds may have access to these tools and the quality of these estimation systems may vary.

[240] *See* AFR Comment Letter (questioning the degree of discretion afforded to funds in setting the swing factor adjustment under the proposal).

result from shareholder transactions on the trade date.

Reasonable in Relation to Costs

The final rule now includes an explicit requirement that any swing factor used be reasonable in relation to the costs incurred by the fund. One commenter objected that as proposed, the swing pricing rule did not assign an explicit duty to fund sponsors or boards to limit NAV adjustments to amounts that are reasonable in relation to the estimated fund costs associated with the capital activity giving rise to the adjustment.[246] Another commenter was concerned that the substantial discretion provided in setting the swing factor could lead to potential abuse, and if set arbitrarily, could effectively serve as a form of gating.[247]

We believe that as required under the proposal, by requiring the swing factor be set based on the considerations discussed above, funds would have necessarily been evaluating the reasonableness of the swing factor and its relationship to costs (and their boards will provide oversight over this process, including through the approval of swing pricing policies and procedures).[248] We agree, however, that this requirement should be made explicit. Accordingly, we are requiring in the final rule to require that swing pricing policies and procedures include a requirement that the relationship between the swing pricing factor(s) used and the fund costs associated with the capital activity giving rise to the adjustment be reasonable in relationship to these costs.[249] We believe that requiring such an explicit requirement that a swing factor be reasonably related to the costs incurred by the fund should serve to address concerns of arbitrariness or potential abuse in the setting of a swing factor.

Upper Limit on Swing Factor

Under the final rule, the fund must establish an upper limit for the fund's swing factor, which may not exceed two percent of NAV per share. This swing factor upper limit (and any changes thereto) must be approved by the fund's board of directors. The proposal did not prescribe an upper limit or ''cap'' on the swing factor that a fund would be permitted to use, nor did it mandate that funds' swing policies and procedures establish such an upper limit. Instead, the proposed rule would have permitted a fund to adopt an upper limit on the swing factor as part of its swing pricing policies and procedures, and the fund's board would have been required to approve any such upper limit. We requested comment on whether the Commission should require an upper limit on the swing factor that a fund would be permitted to use and whether two percent or some other limit would be appropriate.

Commenter responses in this area were mixed. One commenter agreed that it was appropriate for the proposed swing pricing rules to permit, but not require, funds to adopt a swing factor cap.[250] Another commenter stated that the Commission had appropriately not prescribed an upper limit in the proposal.[251] Other commenters, however, expressed investor protection-related concerns regarding the proposed swing pricing rules, indicating that the rules lacked sufficient transparency regarding swing factors and/or that the rules ignored economic incentives that would cause funds to employ swing pricing overly aggressively.[252] One of these commenters argued that the discretion provided to funds in setting the swing factor ''could effectively form a gating during periods of market stress'' and that ''such de facto gating could harm investors.'' [253]

We are persuaded that the final rule must allow enough flexibility in the determination of a swing factor to keep the factor reasonably related to transaction costs. At the same time, however, we believe that it is appropriate to limit the swing factor that may be used to avoid placing an undue restriction or de facto gate on shareholders' ability to redeem their shares and to prevent potentially unfair treatment of shareholders and abusive practices. The Commission has limited redemption fees under rule 22c–2 to no more than two percent of the amount redeemed,[254] and in the context of money market funds, the Commission has given a money market fund's board the ability to impose a liquidity fee of no more than two percent.[255] In those cases, we sought to balance the fees imposed with shareholders' need to redeem without incurring disproportionate costs. In the context of swing pricing, placing an upper limit on the swing factor also provides transparency regarding the maximum amount that a shareholder could expect the share price that he or she receives upon purchase or redemption to be adjusted on account of swing pricing, even though it may result in a fund not recouping all of the transaction costs the fund may incur in connection with shareholder capital activity and thus not mitigating all dilution that may result from such activity. Additionally, an upper limit on the amount a fund adjusts its NAV could mitigate volatility and tracking error issues that could arise from the use of swing pricing.

Based on these considerations, we believe it is appropriate for the Commission to set a maximum amount for the swing factor, as we have done with redemption fees on funds and liquidity fees on money market funds, given our desire to balance the fair allocation of fund costs created by shareholder transaction activity with the redeemable nature of open-end funds. Nevertheless, we still consider it appropriate to require funds to establish an upper limit on the swing factor(s) the fund will use as part of their swing pricing policies and procedures, within the two percent of NAV per share confines, because for some funds a swing factor upper limit of less than two percent may be appropriate given that fund's redemption history and investment strategy.[256] Indeed, many funds may consider two percent of NAV per share to be a form of a ''default'' limit, but where the fund (with the approval of its board) can find that a lower limit is in the fund's best interest,

[247] *See* AFR Comment Letter.

[248] *See supra* footnote 231 and accompanying paragraph.

[249] *See* rule 22c–1(a)(3)(i)(C).

[250] *See* HSBC Comment Letter (stating that a disclosed upper limit may provide useful guidance to investors, but arguing that ''[i]n periods of market stress, spreads and swing factors may widen and a hardcoded regulatory limit could be detrimental to existing investors.'').

[251] *See* Invesco Comment Letter.

[252] *See, e.g.,* AFR Comment Letter (arguing that the proposed swing pricing included excessive discretion regarding the level of the swing pricing adjustment); Eaton Vance Comment Letter (arguing that ''buyers and sellers would never know, or be able to reasonably estimate, even the approximate impact of swing pricing on their transaction prices'' and stating that ''[e]xposing transacting shareholders to undisclosed and uncapped transaction costs that may bear little or no relation to the associated fund costs does not strike us as a fair deal.'') (emphasis omitted).

[253] *See* AFR Comment Letter.

[254] *See* Redemption Fees Adopting Release, *supra* footnote 24, at 12 (stating that redemption fees in excess of two percent ''could harm ordinary shareholders who make an unexpected redemption as a result of a financial emergency'' and ''would in our judgment impose an undue restriction on the redeemability of shares required by the Act.'').

[255] *See* 2014 Money Market Fund Reform Adopting Release, *supra* footnote 38, at 95 (''[W]e are limiting the maximum liquidity fee that may be imposed by a fund to 2%. As with the default fee, we seek to balance the need for liquidity costs to be allocated to redemptions with shareholders' need to redeem absent disproportionate costs. We also believe setting a limit on the level of a liquidity fee provides notice to investors about the extent to which a liquidity fee could impact their investment. In addition, as recognized by at least one commenter, the staff has noted in the past that fees greater than 2% raise questions regarding whether a fund's securities remain 'redeemable.' '') (internal citation omitted).

[256] *See* rule 22c–1(a)(3)(i)(C).

similar to the approach we took regarding money market fund liquidity fees.[257] Because the upper limit would affect the swing factor a fund would use to adjust its NAV when net purchases or net redemptions exceed the fund's swing threshold, the fund is required to take into account the swing factor considerations when establishing a swing factor upper limit (while staying within the two percent maximum limit).[258]

We acknowledge that certain foreign jurisdictions that permit swing pricing do not place an upper limit on the swing factor that a fund may set. Instead, funds that use swing pricing within those jurisdictions may voluntarily limit the level of the swing factor to be applied, with such limits generally ranging from 1%–3%.[259] We also acknowledge that certain funds, particularly funds that invest in asset classes with higher spreads and other associated transaction costs, may be unable to recoup all transaction costs or mitigate all potential dilution associated with shareholders' capital activity if the maximum upper limit is set at two percent. However, we believe that capping the maximum swing factor upper limit at two percent will permit funds to pass on some of the transaction costs to purchasing and redeeming shareholders without imposing an undue restriction on the redeemability of shares required by the Act.

The final rule requires the fund's board to approve the fund's swing factor upper limit and any changes thereto.[260] A number of commenters objected to the proposed requirement that, if the fund set a swing factor upper limit, the board must approve the upper limit. These commenters argued that the fund adviser is best suited for setting any cap, because it requires in-depth knowledge of the day-to-day management and administration of the fund—activities performed by the adviser and other service providers and not the board.[261] On the other hand, one commenter stated that the proposal granted excessively broad discretion to fund managers to design the swing pricing procedures, and excessive discretion in setting the swing factor. This commenter feared that excessive discretion could result in unequal treatment of investors that was not fully justified by differences in the market impact of their fund transactions.[262]

After considering comments, we believe board approval of a fund's swing factor upper limit (and any changes thereto), combined with required review of a written report from the administrator describing, among other things, the administrator's review and assessment of the fund's swing factor upper limit, including information and data supporting this determination, will serve to limit the degree of discretion granted to fund management, while providing management with the flexibility to manage the day-to-day administration of swing pricing. Obtaining board oversight of the swing factor upper limit will help ensure that a fund establishes a swing factor upper limit that is in the best interests of the fund's shareholders. We also believe it is appropriate for the fund board to approve the fund's specific upper limit given the important balancing that it effects between the redeemable nature of the fund's shares against the fair allocation of fund costs from shareholder transaction activity—a balance between various shareholder interests that we believe the board is best situated to judge. Requiring board oversight of the swing factor upper limit is also consistent with the approach the Commission took in rule 22c–2 under the Act, where the fund board is required to approve any redemption fee that the fund establishes.[263] We further believe that the board review requirement serves to address the concerns of those commenters that suggested the board may not have the necessary information or expertise to approve the swing factor upper limit (and changes to the swing factor upper limit).[264]

Finally, we are also requiring funds to disclose the swing factor upper limit on Form N–1A and Form N–CEN. We believe that an adequate level of transparency about swing pricing is critical for investors to understand the risks associated with investing in a particular fund, and that requiring disclosure of a fund's swing factor upper limit will provide important transparency to fund shareholders regarding the maximum amount that a shareholder could expect the share price to be adjusted on account of swing pricing. We also believe that this transparency could serve as a check on funds that may seek to employ swing pricing overly aggressively.[265] Foreign domiciled funds that voluntarily limit the level of the swing factor to be applied typically disclose the swing factor upper limit in the fund's offering documents.[266]

Additional Considerations

A fund could take a variety of approaches to determining its swing factor, so long as the fund's process for how the swing factor is determined includes the considerations set forth in rule 22c–1(a)(3)(i)(C). For example, a fund may wish to set a ''base'' swing factor, and adjust it as appropriate if certain aspects required to be considered in determining the swing factor deviate from a range of pre-determined norms (for example, if spread costs generally exceed a certain pre-determined level). Alternatively or additionally, a fund that uses swing pricing may wish to incorporate into its policies and procedures a formula or algorithm that includes the required considerations for determining the swing factor.

With respect to the process for determining the swing factor, one commenter opined that the swing factor must be ''quantitative and automatable,'' [267] and another similarly suggested that the Commission should make clear that the swing factor may be determined on a periodic basis, rather than calculated anew each day that the swing factor is applied.[268] We agree that a swing factor could generally be determined on a periodic basis, as long as developments such as significant market developments prompt a quicker re-evaluation. We believe that these aspects of swing factor determination should be addressed by funds when designing their policies and procedures relating to swing pricing, and are reflected in the final rule.

[257] *See* rule 2a–7(c)(2)(ii) (if a money market fund's weekly liquid assets fall below ten percent of its total assets, the fund must institute a liquidity fee of 1% of value of shares redeemed, unless the fund's board of directors, including a majority of the directors who are not interested persons of the fund, determines that imposing the fee is not in the best interests of the fund or that a higher (not to exceed 2%) or lower fee level is in the best interest of the fund).

[258] Rule 22c–1(a)(3)(i)(C).

[259] ALFI Survey 2015, *supra* footnote 42 at 7 (noting, however, that approximately half of respondents that use swing pricing cap the level of the swing factor applied on certain asset classes, with equity, fixed income and multi-asset funds most commonly capped at two percent).

f. Governance, Oversight and Other Considerations

Although the final rule requires a fund that uses swing pricing to obtain approval of its swing pricing policies and procedures from the fund's board, including a majority of independent directors, in a change from the proposal, the final rule does not require the board to approve material changes to the policies and procedures. The rule provides that a fund's board-approved swing pricing policies and procedures must specify the process for how the fund's swing threshold(s), swing factor(s), and swing factor upper limit are determined. In addition, the final rule requires that the fund board approve the fund's swing threshold(s) and the upper limit on the swing factor(s) used by the fund, as well as any changes thereto. The rule requires that a fund's board designate the fund's investment adviser, officer or officers responsible for administering the fund's swing pricing policies and procedures.[269] Similar to the proposal, the final rule provides administration of the swing pricing policies and procedures must be reasonably segregated from portfolio management of the fund and may not include portfolio managers (although portfolio managers may provide data or other input used by those responsible for administering the policies and procedures). Finally, the fund board must also review a periodic written report prepared by the fund's swing pricing administrator that includes certain required information and the fund must meet certain recordkeeping requirements related to its swing pricing policies and procedures, as described below.

Board Role

As described above, consistent with the proposal, a fund's board of directors must approve two core elements of a fund's swing pricing program—the swing threshold(s) and the swing factor upper limit. The swing threshold establishes the point at which swing pricing begins to affect fund shareholders, and thus involves an important balancing of various shareholder interests. Similarly, the swing factor upper limit reflects a balancing of the redeemable nature of the fund's shares against the fair allocation of fund costs from shareholder transaction activity. In both cases, the board has an important role in balancing shareholder interests. This is consistent with the board's role in other contexts under the Act. For example, a fund's board has significant responsibility regarding valuation- and pricing-related matters.[270]

In addition, we believe that ongoing oversight of a fund's swing pricing program, which necessarily involves addressing a diverse range of issues, some technical, requires a calibrated balance between the role of the board and the role of management. Accordingly, under the final rule, a fund's board of directors must approve the fund's initial swing pricing policies and procedures, as proposed. However, in a change from the proposal, instead of the board approving any material changes to the swing pricing policies and procedures and instead of the fund performing a periodic review of the fund's swing threshold,[271] the board will provide its ongoing oversight of the fund's swing pricing by reviewing, no less frequently than annually, a written report prepared by the person(s) responsible for administering the fund's swing pricing policies and procedures. This written report must describe: (i) The swing pricing administrator's review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution; (ii) material changes to the policies and procedures since the date of the last report; and (iii) the swing pricing administrator's review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including a review and assessment of information and data supporting these determinations.[272]

In the proposal, we asked comment on the extent to which the board oversight requirements we proposed would ensure that a fund establishes policies and procedures that are in the interest of all fund shareholders.[273] A number of commenters believed that appropriate board oversight of swing pricing is key to ensuring proper administration of swing pricing in the interest of fund shareholders,[274] and many generally supported the proposed requirement for a fund's board to approve its swing pricing policies and procedures.[275] Several commenters suggested, in particular, that regular reports on the administration of swing pricing would help the board in its oversight role, and facilitate the appropriate use of swing pricing.[276] Another commenter suggested that the board should periodically review whether adjustments should be made to swing pricing policies and procedures.[277]

However, a number of commenters objected to the particular methods we proposed for ongoing board oversight of swing pricing, including the proposed requirement that the board specifically approve the fund's swing threshold and any swing factor cap that that the fund adopts.[278] These commenters argued that the fund adviser, rather than the board, is best suited for setting these parameters, because it requires in-depth knowledge of the day-to-day management and administration of the fund—activities performed by the adviser and other service providers and not the board. Commenters also argued that fund boards should not be required to approve material changes to a fund's policies and procedures, as obtaining approval from fund boards may unnecessarily constrain management, considering the infrequency of board meetings and the significant changes in markets that may occur between them.[279] On the other hand, one commenter stated that the proposal

granted excessively broad discretion to fund managers to design the swing pricing procedures, and excessive discretion in setting the swing pricing threshold and factor, which this commenter feared could result in unequal treatment of investors not fully justified by differences in the market impact of their fund transactions.[280]

As discussed above, after considering comments, we believe requiring the board to approve a fund's swing threshold(s) and swing factor upper limit (and any changes thereto) is an important, targeted means to help ensure that a fund's swing pricing policies and procedures are in the best interests of fund shareholders. In addition, with respect to oversight beyond these discrete elements, we believe that board approval of swing pricing policies and procedures combined with required review of a report laying out information and analyses supporting how the important components of swing pricing are determined—the swing factor(s), swing threshold(s), and swing factor upper limit—appropriately balances the concerns of some commenters that the board should not be involved in the day-to-day administration of swing pricing with the concerns of other commenters that the rule should prevent excessive discretion granted to fund management and inappropriate treatment of fund shareholders. Although we consider the adviser better suited to administering the fund's swing pricing policies and procedures, we believe that requiring board approval of the policies and procedures and requiring board review of the administrator's report that includes certain required information are integral to an effective ongoing assessment of swing pricing. We also believe these requirements will help ensure that a fund establishes and implements swing pricing policies and procedures that are in the best interests of the fund's shareholders. As noted above, a fund's board has significant responsibility regarding valuation- and pricing-related matters,[281] and it is required to approve valuation and compliance-related policies and procedures.[282] Additionally, in the past we have stated that a fund's compliance policies and procedures, which must be approved by the fund's board (including a majority of independent directors), should include procedures for the pricing of portfolio securities and fund shares.[283] In particular, we note that rule 38a–1 requires that a board receive a written report on the operation of the policies and procedures that the fund has adopted that are reasonably designed to prevent violation of the federal securities laws, which would include rule 22c–1.

The report the board must review contains several important elements. These elements are designed to provide the board with the types of information that the board would consider relevant and likely request if required to approve material changes to the fund's swing pricing policies and procedures. As noted above, in light of comments, we are replacing the proposed requirement that the board approve all material changes to the swing pricing policies and procedures and the proposed requirement of a fund review of the swing threshold with required board review of the swing pricing administrator's report. First, the report must describe the swing pricing administrator's review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution. This will help the board satisfy its fiduciary role that the fund pricing process is operating in the best interest of fund shareholders. It also is similar to the requirements of rule 38a–1 [284] and thus should be a familiar process for funds and their boards. Second, the report must describe any material changes to the fund's swing pricing policies and procedures since the last report. Because the board is not required to approve these changes before they take effect, it is important that they nevertheless be informed of these changes to provide effective oversight of swing pricing. Finally, the final rule provides that a fund's swing pricing policies and procedures must specify the process used by the fund to determine the fund's swing threshold(s), swing factor(s), and swing factor upper limit, and that the swing pricing administrator's report must describe the administrator's review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including a review and assessment of information and data supporting these determinations. The swing threshold(s), swing factor(s), and swing factor upper limit are the key features of swing pricing practices and ultimately drive the prices at which fund shareholders will transact. Accordingly, providing boards with information on how these essential parameters are determined, and a review and assessment of how well these processes are leading to the right parameters, is important in enabling boards to satisfy their oversight role. In particular, this information may assist the board in its consideration of any recommended changes to the fund's swing threshold(s) or swing factor upper limit. These elements of the report—and the related board oversight—are also intended to address commenter concerns that the proposed swing pricing framework granted fund manager's excessive discretion in setting the swing threshold and swing factor, particularly given conflicting interests that fund personnel may have.[285] The board has traditionally provided oversight when there are potential conflicts at the fund.

We note that this report must include an assessment of the information and data supporting the fund's swing threshold(s), swing factor(s), and swing factor upper limit. We believe that the inclusion of this information in the board report should help provide the board sufficient information about the inputs used in swing pricing to provide proper oversight of the fund's swing pricing processes and further address the concerns of commenters noted

[284] *See* rule 38a–1(a)(3) and rule 38a–1(a)(4)(iii) (requiring that the fund's chief compliance officer provide a report to the fund's board, at least annually, covering certain specified matters relating to the fund's compliance program and requiring an annual review of the adequacy of the fund's compliance policies and procedures and the effectiveness of their implementation).

[285] Eaton Vance Comment Letter (''While the proposed rule specifies the factors that must be considered in establishing a fund's swing threshold and swing factor, it provides little guidance to fund sponsors and fund boards on how to balance the conflicting interests of continuing shareholders (benefiting from low swing thresholds and high swing factors) versus transacting shareholders (benefiting from high swing thresholds and low swing factors) in setting appropriate swing thresholds and applying reasonable swing factor adjustments each day that the swing threshold is exceeded.''); AFR Comment Letter (stating that ''[t]he proposal includes substantial discretion concerning the threshold for swing pricing and the actual level of the swing pricing adjustment. We believe this discretion is excessive.'').

above. The information and data supporting these determinations may take a variety of forms, such as reviews or back-tests of shareholder flows and transaction costs in relation to the swing threshold(s), swing factor(s), and swing factor upper limit used by the fund. Back-testing of swing thresholds and factors, for example, is used in swing pricing practices in Europe,[286] and we expect it may enhance the accuracy and effectiveness of swing pricing as a tool to mitigate potential shareholder dilution.

Overall, we believe that the board approval and oversight requirements in the final rule will help a fund establish and implement swing pricing policies and procedures that are in the best interests of the fund and its shareholders. Because fund directors have an obligation to act in the best interests of the fund,[287] approving policies and procedures that are designed to disadvantage shareholders would not be consistent with their fiduciary duties. In fulfilling these duties, while the board bears ultimate responsibility for meeting its obligations under its fiduciary duty and our rules, the board may choose, where consistent with the prudent discharge of its fiduciary duties, to make its determinations while relying on reports it receives under this rule and such other information and data as it determines appropriate from the person(s) administering the swing pricing program.[288]

Designation of Administrator

As under the proposal, the board will be required to designate the fund's adviser, officer, or officers responsible for the administration of the fund's swing pricing policies and procedures. As discussed above, multiple commenters supported the proposal's approach that the fund's board should not be required to administer the fund's swing pricing policies and procedures,[289] and instead should designate a swing pricing administrator.[290] One commenter, however, suggested that the fund's adviser, not the board, should be responsible for designating the person responsible for administering the fund's swing pricing policies and procedures.[291] We believe that it is appropriate and consistent with the board's historical role and its responsibilities under other of our rules for the board to be responsible for designating the administrator. We believe that having the board approve the administrator should help enhance board oversight of swing pricing and allow for boards to better understand who is responsible for administering it. Accordingly, we are retaining this requirement in the final rule.

We note that it is currently common industry practice for foreign domiciled funds that use swing pricing to appoint a committee to administer the fund's swing pricing operations.[292] A fund's board may wish to consider requiring the fund's swing pricing policies and procedures to be administered by a committee, and to specify the officers or functional areas that comprise the committee (taking into account any possible conflicts for the fund and the adviser related to swing pricing). The persons or committee tasked with swing pricing oversight may wish to meet periodically to determine the swing factor(s) the fund would use in a variety of circumstances, taking into account the considerations discussed above in section II.A.3.e. A fund may wish to consider delineating the frequency with which these persons would meet in its policies and procedures; for example, a fund's policies and procedures might specify that these persons shall meet periodically, such as monthly or quarterly, and more frequently if market conditions require.

Segregation From Portfolio Management Function

As proposed, the swing pricing rule would have required that the determination of the swing factor must be reasonably segregated from the portfolio management function of the fund. The final rule as adopted, is similar to the proposed requirement; however, it has been modified to provide that administration of a fund's swing pricing policies and procedures must be reasonably segregated from portfolio management of the fund and "may not include portfolio managers."[293] We noted in the Proposing Release that portfolio managers may have conflicts of interest with respect to setting the swing factor, and therefore did not believe that they should be involved in setting the swing factor. We believe that requiring segregation of functions (and clarifying in the rule text that portfolio managers may not be involved) with respect to the administration of swing pricing generally, and not just with respect to setting the factor, will provide better clarity of roles and reduce the possibility of conflicts of interest in the administration of swing pricing.

We believe that, because of the potential conflict of interest that a portfolio manager who may be compensated based on fund performance may have if they are involved in setting the swing factor (which if not set properly, may have the effect of increasing fund performance inappropriately rather than recouping the transaction costs associated with purchasing and redeeming shareholders' capital activity), portfolio managers should not be a part of the swing pricing administration.[294] For example, a fund's portfolio manager could have an incentive to determine a swing factor that is as low as possible, because the portfolio manager could be reluctant for the fund's short-term performance to deviate from the fund's benchmark or lag its peers; or set a swing factor that is too high to enhance the fund's performance relative to its benchmark or peers.[295]

Several commenters expressed support for the determination of the swing factor being reasonably segregated

[293] We recognize that smaller fund complexes may have different personnel choices available when determining who would be responsible for administering their funds' swing pricing policies and procedures. *See infra* section III.

[294] We recognize that this approach differs from that taken in the administration of rule 22e–4 (as it did in the proposal) and believe this difference is justified by the higher potential for conflicts of interest in regards to portfolio managers and swing pricing as compared to liquidity risk management generally. *See* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8 at section III.H.1.

[295] *See supra* section II.A.2.g (discussing performance reporting); *see also* Evergreen Order, *supra* footnote 128 (Commission found that a fund's portfolio management team withheld relevant negative information about certain fund holdings from a valuation committee, resulting in the fund substantially overstating its NAV for over one year).

from a fund's portfolio management function, which as described in the Proposing Release, would exclude portfolio managers from administration of swing pricing factor.[296] Accordingly, we are adopting the requirements summarized above. We recognize that it would be appropriate for a committee tasked with the administration of a fund's swing pricing policies and procedures, including the determination of the swing factor(s) the fund would use in a variety of circumstances, to obtain appropriate inputs from the fund's portfolio manager, which could be used by that committee in determining the swing factor. However, portfolio managers could not be members of the committee, nor could they decide how their inputs would be employed in the swing factor determination.

Fund Merger Considerations

We stated in the Proposing Release that, when funds merge, and at least one of the merging funds uses swing pricing, there are a number of considerations relating to swing pricing that the funds generally should consider when determining the terms of the merger.[297] Commenters did not address these views, which we reiterate here. The boards of merging funds should consider whether a swing factor should be used to adjust the value of the absorbed fund's assets, if the absorbing fund uses swing pricing and it is applied on the day of the merger.[298] Although the manager of the absorbing fund may need to sell certain of the assets of the absorbed fund following the merger (*e.g.,* for consistency with the absorbing fund's investment strategy, or to comply with certain regulatory requirements), we do not believe that the NAV of either the absorbing fund or the absorbed fund should be adjusted to counter any dilution resulting from these sales, because costs associated with these sales would result from the merger and would not be caused by shareholders' purchase or redemption activity. In light of potential complications arising when funds using swing pricing merge, the boards of merging funds may want to consider whether to temporarily suspend a fund's swing pricing policies and procedures ahead of the merger.[299] Similarly, the swing threshold of the absorbing fund generally should be reviewed following a merger, and the persons in charge of administering the absorbing fund's swing pricing policies and procedures should consider the effects of the merger when considering what swing factor would be appropriate to use if the fund's swing threshold is exceeded following the merger.[300]

Recordkeeping Requirements

Like under the proposal, the final rule requires a fund to maintain the swing pricing policies and procedures adopted by the fund that are in effect, or at any time within the past six years were in effect, in an easily accessible place.[301] Additionally, as proposed, we are expanding current rule 31a–2(a)(2), which requires a fund to keep records evidencing and supporting each computation of the fund's NAV,[302] to reflect the NAV adjustments based on a fund's swing pricing policies and procedures. Specifically, a fund that adopts swing pricing policies and procedures will be required to preserve records evidencing and supporting each computation of an adjustment to the fund's NAV based on the fund's swing pricing policies and procedures.[303] For each NAV adjustment, such records should generally include, at a minimum, the fund's unswung NAV, the level of net purchases or net redemptions that the fund encountered (and estimated) that triggered the application of swing pricing, the swing factor that was used to adjust the fund's NAV, relevant data supporting the calculation of the swing factor, and any back-testing data used by the fund in assessing the swing factor (and its relationship to near term costs expected to be incurred by the fund as a result of net purchases or net redemptions that occur on the day the swing factor(s) is used). The records required under the amendments to rule 31a–2(a)(2) are required to be preserved for at least six years from the date that the NAV adjustment occurred, the first two years in an easily accessible place.[304] The six-year period for a fund to maintain a copy of its swing pricing policies and procedures in rule 22c–1(a)(3) corresponds to the six-year recordkeeping period currently incorporated in rule 31a–2(a)(2). We believe that consistency in these retention periods is appropriate in order to permit a fund or Commission staff to review historical instances of NAV adjustments effected pursuant to the fund's swing pricing policies and procedures in light of the policies and procedures that were in place at the time the NAV adjustments occurred. Commenters generally found these proposed requirements appropriate, and we are adopting them as proposed.[305]

In addition, and based on the same rationale as that of the other aforementioned swing pricing-related recordkeeping requirements, the final rule requires a fund to maintain all written periodic reports provided to the board under rule 22c–1(a)(3)(ii)(D) relating to swing pricing for six years, the first two years in an easily accessible place.[306]

g. Impacts on Financial Statements, Performance Reporting, and Pricing Errors

The application of swing pricing will impact a fund's financial statements and disclosures in a number of areas, including a fund's statement of assets and liabilities, statement of changes in net assets, financial highlights, and the notes to the financial statements. While commenters were generally supportive of the swing pricing disclosures in the notes to the financial statements required by the proposal,[307] commenters did ask for clarification and suggested the Commission also consider the impact swing pricing disclosures

[296] *See* CRMC Comment Letter; CFA Comment Letter; HSBC Comment Letter.

[297] *See* Proposing Release, *supra* footnote 6, at n.533 and accompanying text.

[298] Directors overseeing fund mergers must take into account rule 17a–8 under the Act (which sets forth requirements for mergers of affiliated investment companies), if applicable, as well as any relevant state law requirements. Rule 17a–8 requires a board, including a majority of the independent directors, to consider the relevant facts and circumstances with respect to a merger of affiliated funds and determine that the merger is in the best interests of each of the merging funds and that the interests of the shareholders of both the fund being acquired and the acquiring fund are not being diluted. The board may want to consider the swing pricing policies and procedures of the merging funds including any appropriate modifications.

will have on other aspects of financial statement reporting,[308] which we address below.

Statement of Assets and Liabilities

Today we are clarifying, after consideration of the comments received, that for funds that utilize swing pricing the statement of assets and liabilities would continue to be presented as currently required by Regulation S–X rule 6–04.19 [309] and U.S. Generally Accepted Accounting Principles or ''GAAP.'' Under Regulation S–X and GAAP, funds are required to state on the statement of assets and liabilities their NAV per share, which is defined as ''the amount of net assets attributable to each share of capital stock outstanding at the close of the period,'' [310] and which we refer herein to as the ''GAAP'' NAV. We proposed to amend rule 6–04.19 to require presentation of the NAV per share as adjusted pursuant to its swing pricing policies and procedures (if applicable), the ''Swung NAV,'' on the statement of assets and liabilities.[311] However, commenters questioned how the effects of swing pricing are captured within the financial reporting process and interact with the normal trade date reporting adjustments that go into a GAAP NAV.[312] Commenters also pointed out that a user of the financial statements would not be able to divide the net assets of the fund (or class) by the shares outstanding to arrive at the Swung NAV per share and that there was no proposed reconciliation of these amounts.[313] Generally, commenters suggested consideration of whether the GAAP NAV per share should be presented in addition to or in lieu of the Swung NAV, as proposed,[314] and asked for further clarification on how swing pricing would impact the financial highlights, including the total return calculations.[315]

One commenter also noted that, under the proposal, there would be a difference between the Swung NAV per share disclosed in accordance with proposed rule 6–04.19 and the GAAP NAV per share.[316] For a fund that chooses to implement swing pricing, the GAAP NAV would include both the effects of swing pricing throughout the period, if applicable, as well as any trade date financial reporting adjustments for portfolio transactions (including any related income, expense, gain and loss) and capital share transactions occurring on the balance sheet date. The Swung NAV would be the NAV that investors transacted at on the last day of the financial reporting period and would not include the GAAP trade date adjustments.[317] For funds that adopt swing pricing, if the NAV is swung on the last day of the reporting period it could be higher or lower than the GAAP NAV presented in the financial statements, depending on the direction of the swing. For example, as one commenter noted, if a fund on the last day of the financial reporting period (when considering subscriptions or redemptions that day) in calculating its daily NAV made a determination to adjust or swing the NAV according to its swing pricing policies and procedures, and applied the swing pricing factor to its unswung NAV of $10.00, which resulted in a Swung NAV of $9.90 (as a result of large redemptions), shareholder redemption (and subscription) transactions would be processed at the Swung NAV of $9.90 on the last day of the reporting period.[318] Assuming that the effect of processing transactions at $9.90 increases the fund's NAV to $10.01, and there were no other financial reporting trade date adjustments, the GAAP NAV would be $10.01.

To further clarify, for funds that implement swing pricing, the GAAP NAV would include any of the effects of swing pricing throughout the entire period (if applicable), and the Swung NAV (if it swings at period end) would represent the transactional NAV on the last day of the period, which has been adjusted by the swing factor.

Commenters questioned whether the GAAP NAV per share or the Swung NAV per share would be more meaningful to users of the financial statements.[319] After consideration of the concerns raised above, we believe that disclosure of the GAAP NAV per share (which will reflect the effects of swing pricing throughout the reporting period, if applicable), continues to be the appropriate disclosure on the statement of assets and liabilities as it allows users of the financial statements to understand the actual amount of net assets attributable to the fund's remaining shareholders at period end. The population of investors that typically transact as of the financial reporting date is generally less than those investors that do not transact and are still invested in the fund as of the financial reporting date. Therefore, we believe that the GAAP NAV is likely to be more meaningful to a larger population of shareholders.

Furthermore, users of the financial statements can easily recalculate the GAAP NAV per share on the statement of assets and liabilities by dividing the net assets of the fund (or share class) by the outstanding shares of the fund (or share class) as presented on the statement of assets and liabilities. As proposed, users of the financial statements would not have been able to recalculate the Swung NAV disclosed based on the information on the statement of assets and liabilities. Therefore, we are not adopting the proposed amendment to Regulation S–X rule 6–04.19 to require funds to disclose the Swung NAV on the Statement of Assets and Liabilities in lieu of or in addition to the GAAP NAV on the balance sheet, and funds will continue to disclose the GAAP NAV as currently required.

However, as we discuss below in the financial highlights section, we believe that transparency of the Swung NAV is still meaningful for investors and should be disclosed in the financial highlights section of the financial statements in addition to the GAAP NAV. Furthermore, while we are not

[312] *See* KPMG Comment Letter; EY Comment Letter; PwC Comment Letter. *See also* EY Comment Letter; PwC Comment Letter (on whether the NAV should be adjusted for trade date activity). Rule 2a–4 of the Act permits registered investment companies to record security transactions as of one day after the trade date for purposes of determining net asset value. However, FASB ASC 946–320–25–1 notes that for financial reporting purposes, security transactions should be recorded on trade date. Consistent with current practice, trade date adjustments for portfolio transactions or capital share transactions occurring on the balance sheet date (otherwise known as ''as of'' adjustments) are included in the GAAP NAV per share.

[313] *See* KPMG Comment Letter.

[314] *See* Proposing Release, *supra* footnote 6, at section III.F.1.g.

[315] *See* EY Comment Letter; KPMG Comment Letter.

[316] *See* KPMG Comment Letter.

[317] We also note that today, without the use of swing pricing, there could be differences between the GAAP NAV and the transactional NAV calculated and used by funds to process investor orders, due to the fact that GAAP NAV is calculated as of T+0 for financial statement purposes (*i.e.,* includes trade date adjustments for portfolio investments and capital share activity as noted above) and fund complexes generally calculate NAV and transact on a T+1 basis in accordance with rule 2a–4. Thus, some of the adjustments between the GAAP NAV and the transactional NAV that currently exist are due to, among other things, the financial reporting adjustments for trade date (T+0) activity.

[318] *See* KPMG Comment Letter.

[319] *See* EY Comment Letter; KPMG Comment Letter.

requiring funds to present the Swung NAV on the balance sheet, this does not preclude funds or preparers of financial statements from including the Swung NAV on the balance sheet or elsewhere in the financial statements if funds believe such disclosures are beneficial for investors and provided there is an explanation of the differences between the Swung NAV and the GAAP NAV as presented.

Statement of Changes in Net Assets

As we noted in the Proposing Release, swing pricing also impacts disclosures of capital share transactions included in a fund's statement of changes in net assets.[320] A fund using swing pricing to adjust its NAV makes payments for shares redeemed and receives payments for shares purchased net of the swing pricing adjustment. Using the example above, if a fund had an unswung NAV of $10.00 on a given day before considering swing pricing and the Swung NAV after applying the swing factor pursuant to the fund's swing pricing policies and procedures was $9.90, shareholders would transact at $9.90 multiplied by the number of shares purchased or redeemed. The $0.10 difference between the swung and unswung NAV would be retained by the fund for its net redemptions to offset transaction and liquidity costs. This $0.10 difference per share should be accounted for as a capital transaction and not included as income to the fund, because it is an adjustment made to offset the near-term transactional and liquidity costs incurred as a result of satisfying shareholder transactions. Funds are required by Regulation S–X rule 6–09.4(b) to disclose the number of shares and dollar amounts received for shares sold and paid for shares redeemed.[321] Thus, for funds that implement swing pricing (and in the example above where transactions were processed using the swung NAV of $9.90 per share), Regulation S–X would require the dollar amount disclosed to be based on the transactional NAVs used to process investor subscriptions and redemptions, including those processed using Swung NAVs during the reporting period. Commenters generally agreed with this approach and noted that the statement of changes in net assets should reflect the actual amounts that would be received by the fund and that would be paid to its shareholders.[322]

Financial Highlights

We continue to believe, as we discussed in the proposal,[323] that a fund should include the impact of swing pricing in its financial highlights,[324] and the per share impact of amounts retained by the fund due to swing pricing should be included in the fund's disclosures of per share operating performance.[325] However, commenters also asked for clarification on how to present the cumulative impact of swing pricing on NAV throughout the year as opposed to the impact of swing pricing as of the financial reporting period end date. In response to these concerns, we are modifying our proposal and amending Item 13 of N–1A[326] to require disclosure of the Swung NAV per share, if applicable, as a separate line item below the ending GAAP NAV per share on the financial highlights.[327] We are also amending, as proposed, Item 13 of Form N–1A to specifically require that the per share impact of amounts related to swing pricing be disclosed below the total distributions line in a fund's financial highlights.[328] We are also requiring a general description of the effects of swing pricing on the fund's financial statements.[329] This presentation addresses commenters' questions around the impact of swing pricing throughout the year and as of the period end date, as the cumulative impact of swing pricing during the period will be presented within the financial highlight's GAAP NAV per share roll-forward as a separate line item under total distributions, and the impact of swing pricing as of the period end date, if any, would be disclosed by presenting the Swung NAV. One commenter noted that presenting two NAVs is conceptually consistent with the current requirement for closed-end funds.[330] Item 4 of Form N–2 requires closed-end funds to present both the net asset value at the end of the period as well as the per-share market value at the end of the period, which is a transaction price, in the per-share operating performance.

Performance Reporting

We proposed to require funds to calculate total return within the financial highlights and performance information based on the Swung NAV.[331] Commenters questioned whether total return should be based on other measures such as the GAAP NAV, which as clarified above, would include the cumulative effect of swing pricing along with financial reporting adjustments, or an unadjusted NAV, which would not include any of the effects of swing pricing.[332] Commenters had mixed responses on what total return was more meaningful to users of the financial statements. Some commenters agreed with the proposed approach of presenting total return using only the Swung NAV as it was consistent with how funds in Europe present total return, while acknowledging that it would require investor education in the U.S.[333] We note that certain European funds disclose both the swung and unswung[334] total returns for financial statement purposes. Other commenters pointed out that presenting total return based only on the Swung NAV introduced volatility unrelated to fund performance, and felt that performance benefits of swing pricing could lead to manipulation by managers and lead them to adopt aggressive swing policies.[335] Along the same lines, some commenters felt that total return based on an unadjusted NAV (that excludes the effects of swing pricing) may provide useful information for comparative purposes with other funds and benchmarks that do not use swing pricing.[336] Some commenters noted that total return calculated based on the GAAP NAV may also be meaningful for shareholders that remain in the fund and that did not transact or redeem shares during the year,[337] similar to the logic supporting presenting the GAAP NAV on the balance sheet.

After further consideration, we still believe that it is important for investors to understand the impact of swing pricing on the return they would have

[337] *See* EY Comment Letter.

received for the period presented in the fund's financial statements, but we think this is best represented by the GAAP NAV, which does incorporate the effects of swing pricing if applicable throughout the period. Presenting a total return based on the transactional, or Swung NAV could introduce elements of variability depending on whether or not the fund had swung the NAV as of the last or first day in the reporting period. Thus, along the same lines for not requiring the Swung NAV on the balance sheet, we do not believe the total return based on the Swung NAV, if applicable, would provide any additional significant information to shareholders. Even those investors transacting as of the last day in the period would not receive the total return based on the Swung NAV for the period, except in a rare circumstance in which they had bought into the fund on the first day of the period and sold out of the fund on the last day of the period and swing pricing was implemented on those days.

Therefore, we believe presenting the total return based on the GAAP NAV in the financial highlights, which will include the cumulative effects of swing pricing, if applicable, is more meaningful to shareholders that remain in the fund as of the end of the reporting period. Thus, we are not adopting the proposed amendments to Form N–1A with respect to the calculation of total return within Instructions 3(a) and 3(d) to Item 13, and to Item 26, which also would have required disclosure of the total return based on the Swung NAV.

However, we are including an additional disclosure requirement related to performance data presented in the prospectus, if a fund's swing pricing policies and procedures were applied during any of the periods presented. This new disclosure would require a fund to include a general description of the effects of swing pricing on a fund's annual and average total returns for the applicable periods presented in a footnote.[338] We requested comment in the Proposing Release on whether funds should be required to disclose additional information regarding swing pricing on Form N–1A and, if so, what information should be disclosed. We also requested comment on whether we should require disclosure of more information on amounts retained by the fund because of swing pricing and certain additional information that would highlight the effect of swing pricing on the fund's returns. Several commenters recommended that the Commission require additional transparency regarding a fund's use of swing pricing.[339] The additional disclosure would provide transparency to investors by highlighting that the cumulative effect of swing pricing, where applicable, is reflected in the performance data presented for the fund.

Furthermore, while we are not requiring total return to be presented based on the Swung NAV within the financial statements, we are not prohibiting funds from disclosing the total return based on the Swung NAV outside of the financial statements in other performance information. We also acknowledge that presenting total return based on an unadjusted NAV could be useful for comparative purposes, but we note that it is a hypothetical measure not derived from the NAV that shareholders would have transacted at or the GAAP NAV as presented in the financial statements which is attributable to the fund's remaining shareholders. Therefore, while we do not believe an unadjusted NAV should be disclosed in the audited financial statements, we are not prohibiting funds from disclosing an unadjusted NAV outside of the financial statements in other performance information.[340]

Financial Statement Footnote Disclosure

Commenters were generally supportive of the swing pricing disclosures in the notes to the fund's financial statements that would have been required by the proposal.[341] We are adopting the requirement, as proposed, for a fund that adopts swing pricing policies and procedures to disclose in a footnote to its financial statements: (i) The general methods used in determining whether the fund's net asset value per share will swing, (ii) whether the fund's net asset value per share has swung during the period, and (iii) a general description of the effects of swing pricing on the fund's financial statements.[342] This would include a description of the differences between the ending US GAAP NAV and ending NAV adjusted for its swing policies and procedures, if applicable, as presented in the financial highlights included in the financial statements. Based on comments received as noted above, we continue to believe that this information will be useful in understanding the impact of swing pricing on a fund.

NAV Pricing Errors

Commenters noted that certain components of the swing pricing process will be based on estimates. Commenters were concerned that swing pricing could introduce a new source of pricing errors and potentially cause a fund to misstate its NAV if these estimates were materially incorrect. These concerns primarily relate to estimating daily net investor transaction flows that would be used to determine whether a fund's swing threshold has been exceeded, which would require adjusting the fund's NAV in accordance with the fund's swing pricing policies and procedures.[343] Certain commenters called for additional Commission guidance regarding circumstances that would constitute pricing errors under the swing pricing rules, as proposed.[344] Other commenters suggested that the Commission provide guidance and/or adopt a ''safe harbor'' or a standard of liability with respect to any pricing errors that could result from a fund's use of flow estimates to determine whether to adjust the fund's NAV for swing pricing.[345] Several commenters also noted that certain components of the swing pricing process, such as thresholds and factors, will incorporate some degree of estimation in determining when transaction costs (incurred as a result of the disposition or purchase of fund assets associated with net flows) will have a material impact on the fund.[346]

We believe fund management with oversight by the fund's board of directors is in the best position to tailor and oversee any error correction policies that may relate to conducting swing pricing for a fund. Accordingly, we believe funds should consider how their error correction policies and procedures will address swing pricing to the extent necessary to address the use of reasonable estimates related to swing pricing,[347] including appropriate

[338] Item 4(b)(2)(ii) and Item 4(b)(2)(iv)(E) of Form N–1A.

[339] *See* Eaton Vance Comment Letter; AFR Comment Letter.

[340] Item 26 (b)(6) of Form N–1A, *Non-Standardized Performance Quotation,* notes that a fund may calculate performance using any other, non-standardized historical measure of performance (not subject to any prescribed method of computation) if the measurement reflects all elements of return. Funds should consider this provision when contemplating presentation of a total return based on an unadjusted NAV that does not reflect the effects of swing pricing for the period presented.

[342] *See supra* footnote 315; *see also* rule 6–03(n) of Regulation S–X.

[343] *See* BlackRock Comment Letter.

[344] *See, e.g.,* Dechert Comment Letter.

[345] *See, e.g.,* BlackRock Comment Letter; MFS Comment Letter; Charles Schwab Comment Letter; SIFMA Comment Letter III.

[346] *Id.*

[347] *See supra* section II.A.3.d. (discussing the use of reasonable estimates in determining net transaction flows for swing pricing). The rule as adopted permits the person(s) responsible for administering the fund's swing pricing policies and

parameters around what constitutes an error with respect to their swing pricing policies and procedures.

Funds should consider making any estimates with respect to the different swing pricing components (*e.g.,* net flows, thresholds and factors) utilizing reasonable processes and procedures. Such estimates generally should be based on sufficient and appropriate information.[348] We recognize that funds may take different approaches in determining such estimates, based on the particular circumstances of the fund and in developing formal or informal policies and procedures. Funds also may wish to conduct back-testing of estimated fund flows and other estimates using complete or final data to refine their estimation processes as appropriate over time and help ensure that estimates utilized for swing pricing are reasonable.

We acknowledge the concerns expressed above about the use of estimates, including that a fund following its swing pricing policies and procedures could gather sufficient information in order to make a reasonable estimate of investor flows in good faith in determining whether or not it has crossed the swing threshold with high confidence, which subsequently is determined to differ from its actual fund flows. For example, differences in actual versus estimated net flows could arise from adjustments subsequently made to certain transactions processed, or because certain fund flows were not included in the estimates received at the point the fund decided to swing or not swing the fund's NAV, or by using the prior day's NAV to estimate certain price-dependent transaction orders.[349] We believe that as long as the fund has followed reasonable practices, policies and procedures in gathering sufficient information in determining whether net investor flows (which may include reasonable estimates) have exceeded the applicable threshold used for swing pricing, such differences would not in and of itself result in a determination of a NAV pricing error requiring reprocessing of transactions or a financial statement adjustment to the fund's NAV.

A fund should follow its error correction policies, which likely would include a quantitative and qualitative analysis of the facts and circumstances of a particular scenario to determine whether a pricing error has occurred. In the context of swing pricing, such errors may result from inputs used, or the application of the decision to swing price or not, or when applying a factor in calculating the swung NAV. For example, differences in estimated net investor flows versus final flow data could result from a processing error, such as inadvertent exclusion of significant estimated flow data provided to the fund's transfer agent by an intermediary, impacting the fund's decision to swing or not on a particular day (or days). Or an error could occur in applying an incorrect swing factor to a fund's NAV, for example, if a fund's swing pricing policies and procedures incorporate multiple thresholds and factors. As with any other NAV calculation or processing error, the fund generally should consider these types of errors and whether it would be appropriate to adjust the fund's NAV and reprocess in accordance with their error correction policies.

Auditor's Role in Examining the Use of Swing Pricing

Certain commenters also expressed concerns with the auditor's role in evaluating the application of swing pricing, including that auditors do not have the expertise to assess the reasonableness of the swing threshold and the swing factor that are being used by a fund.[350] We agree that assessing the reasonableness of the swing threshold and the swing factor is the responsibility of the swing pricing administrator overseen by the board of directors. We do not believe the auditor should have the responsibility to assess the reasonableness of the swing threshold and swing factor provided there is no indication of noncompliance with the Commission's rule.[351] However, we believe that verifying that the swing policies and procedures have been approved by the fund's board and have been consistently applied, in all material respects, by the fund throughout the period, including as of the balance sheet date, is within the scope of an auditor's engagement and expertise.

B. Disclosure and Reporting Requirements Regarding Swing Pricing

Receiving relevant information about the operations of a fund and its principal investment risks is important to investors in choosing the appropriate fund for their risk tolerances. We are adopting, substantially as proposed, with some modifications in response to comments, amendments to Form N–1A that require funds that use swing pricing to provide an explanation of the fund's use of swing pricing; including what it is, the circumstances under which the fund will use swing pricing, and the effects of using swing pricing.[352] A fund that uses swing pricing will also be required to disclose the upper limit the fund has set on the swing factor.[353] These form amendments are in addition to amendments to Form N–1A and Regulation S–X discussed above regarding financial and performance reporting related to swing pricing.[354] We are also adopting a requirement that a fund report on Form N–CEN information regarding the use of swing pricing, including a fund's swing factor upper limit.[355]

1. Amendments to Form N–1A

Form N–1A is used by open-end funds, including money market funds and ETFs, to register under the Investment Company Act and to register offerings of their securities under the Securities Act. Form N–1A currently requires a fund to describe its procedures for pricing fund shares, including an explanation that the price of fund shares is based on the fund's NAV and the method used to value fund shares.[356] If the fund is an ETF, an explanation that the price of fund shares is based on market price is required.[357] As discussed above, under rule 22c–1(a)(3), a fund (with the exception of a money market fund or ETF) is permitted, under certain circumstances, to use swing pricing to adjust its current NAV as an additional tool to lessen dilution of the value of outstanding redeemable securities through

procedures, in determining whether the fund's level of net purchase or net redemptions has exceed the applicable threshold, to make a determination based on receipt of sufficient information about a fund's daily shareholder flows to allow the fund to reasonably estimate whether it has crossed the swing threshold(s) with high confidence, and may include reasonable estimates where necessary.

[348] *See id.*

[349] *See id.*

[350] *See* EY Comment Letter; KPMG Comment Letter.

[351] However, in evaluating the application of swing pricing the auditor must still comply with applicable professional standards (*e.g.,* PCAOB Auditing Standard (''AS'') No. 8, *Audit Risk,* AU sec. 316, *Consideration of Fraud in a Financial Statement Audit,* and AU sec. 317, *Illegal Acts by Clients*). This includes considering and addressing instances of noncompliance of which the auditor becomes aware, which includes but is not limited to indications of potential fraudulent practices.

[352] *See* Item 6(d) of Form N–1A.

[353] *See id.*

[354] *See* Item 4(b)(2)(ii); Item 4(b)(2)(iv)(E); Item 6(d); and Instructions to Item 13 of Form N–1A; *see also* rule 6–02(n); and rule 6–04.19 of Regulation S–X. We are also amending rule 6–02(e) of Regulation S–X to define the term ''swing pricing'' to have the meaning given in rule 22c–1(a)(3)(v)(C).

[355] *See* Item C.21 of Form N–CEN.

[356] *See* Item 11(a)(1) of Form N–1A.

[357] *Id.*

shareholder purchase and redemption activity.[358]

We are adopting, with some modifications from what was proposed, amendments to Item 6 of Form N–1A to account for this swing pricing procedure. Specifically, Item 6, as amended, requires a fund that uses swing pricing to explain the fund's use of swing pricing; including its meaning, the circumstances under which the fund will use it, and the effects of swing pricing on the fund and investors. Item 6, as amended, will also require a fund that uses swing pricing to disclose the swing factor upper limit it has set with respect to the fund's use of swing pricing.[359] For a fund that invests in other funds (*e.g.,* a fund-of-funds, a master-feeder fund) and those other funds use swing pricing, the fund is required to include a statement that its NAV is calculated based on the NAVs of the funds in which the fund invests, and that the prospectuses for those funds explain the circumstances under which those funds will use swing pricing and the effects of using swing pricing.

Together with the changes described above regarding financial and performance reporting on Form N–1A,[360] we believe these disclosures will improve public understanding regarding a fund's use of swing pricing as well as the potential advantages and disadvantages of using swing pricing to manage dilution arising from shareholder purchase and redemption activity. In particular, the disclosure regarding a fund's swing factor upper limit will provide transparency regarding the maximum amount that a shareholder could expect the share price that he or she receives upon purchase or redemption to be adjusted on account of swing pricing.

Some commenters expressed general support for the proposed swing pricing prospectus disclosure requirements, explaining that swing pricing disclosures would provide investors with important general information about why and under what circumstances a fund would adjust its NAV and would complement existing Form N–1A disclosure requirements on how fund shares are priced.[361] One of these commenters, however, recommended that the Commission clarify what statements concerning swing pricing should be included in a fund's prospectus and require any additional information about swing pricing be disclosed in a fund's statement of additional information.[362] Other commenters, however, supported swing pricing disclosure requirements, as proposed, without any request for additional guidance from the Commission.[363] In response to these comments, we have modified the proposed Item 6 disclosure to require a fund that uses swing pricing to provide *an explanation of swing pricing* as well as its effects.[364] We agree with commenters that these requirements will provide investors with important general information about swing pricing.[365] Existing disclosure requirements in the prospectus and statement of additional information related to the pricing of fund shares, would apply to a fund's use of swing pricing.[366]

As we proposed, we have determined not to require funds to disclose their swing pricing threshold or swing factor in their prospectus disclosures on Form N–1A. Some commenters supported this determination and, for example, expressed concerns that public disclosures of a fund's swing pricing threshold or swing factor could result in unfair trading practices, thereby creating a new type of material non-public information (*i.e.,* the trading intent of other shareholders).[367] One commenter recommended that the Commission prohibit funds from selectively disclosing swing thresholds to certain investors to prevent potential gaming where, for example, larger shareholders may attempt to take advantage of pricing adjustments when a swing threshold is crossed.[368] We share commenters' concerns regarding unfair trading, gaming, and other negative fund and market impacts that could occur if swing pricing thresholds were shared with the public and recommend that a fund consider these concerns (and determine that disclosure of a fund's swing threshold is in the best interests of the fund) before disclosing this information in its prospectus or elsewhere. Indeed, funds and advisers to funds generally should take into consideration the potential for gaming into account and any other potential consequences before making any such disclosure.[369] As noted above, we are requiring a fund to disclose the swing factor upper limit to provide shareholders with additional transparency regarding a fund's use of swing pricing and the potential impact of that usage.

2. New Item in Form N–CEN

We proposed a new reporting item under Part C of Form N–CEN to allow the Commission and other users to track a fund's use of swing pricing.[370] We are adopting this reporting requirement substantially as proposed but with a modification to require funds to disclose the fund's swing factor upper limit.[371] Specifically, a fund, other than a money market fund or ETF, is required to disclose whether it engaged in swing pricing during the reporting period, and if so, the swing factor upper limit set by the fund.[372] This disclosure will inform our staff and potential users about

[358] *See supra* section II.B.

[359] *See* Item 6(d) of Form N–1A.

[368] *See* CFA Comment Letter.

[369] *See, e.g.,* In re Alliance Capital Management, L.P., Investment Advisers Act Release No. 2205A (Jan. 15, 2004) (settled action) (finding a mutual fund adviser willfully violated section 204A of the Advisers Act by failing to establish, maintain, and enforce written policies and procedures reasonably designed to prevent the misuse of material, nonpublic information by releasing material, nonpublic information about the portfolio holdings of certain mutual funds to select market timers in those funds and thereby defrauding mutual fund investors).

[370] *See* Proposing Release, *supra* footnote 6, at section III.G.3.

[371] *See* Item C.21 of Form N–CEN. Under the proposal, questions regarding swing pricing were included as part of proposed Item C.44 of Form N–CEN. *See id.* We have modified the numbering convention for items within Form N–CEN from the proposal to be consistent with Form N–CEN as adopted in the Investment Company Reporting Modernization Adopting Release. *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 11. Reporting requirements regarding lines of credit, interfund lending, and interfund borrowing (which were included in the same item as swing pricing in the proposal), are now part of Item C.20 of Form N–CEN. *See* Liquidity Risk Management Programs Adopting Release, *supra* footnote 8, at section III.M.3.a.

[372] Item C.21 of Form N–CEN.

whether funds use swing pricing as a tool to mitigate dilution of the value of outstanding redeemable securities through shareholder purchase and redemption activity and the potential maximum amount the fund's price may be swung. While several commenters expressed general support for the Form N–CEN reporting requirements included in the proposal,[373] we received no comments on this aspect of the proposal.

C. Effective and Compliance Dates

1. Swing Pricing Rule

Rule 22c–1(a)(3) permits (but does not require) a fund (with the exception of a money market fund or ETF) to adopt swing pricing policies and procedures. The Commission is delaying the effective date of rule 22c–1(a)(3) until 24 months after the date this release is published in the **Federal Register**. In the Proposing Release, the Commission stated that a fund could rely on the rule as soon as the fund could comply with the rule and related records, financial reporting, and prospectus disclosure requirements.[374] As discussed in section II.A.3. above, we agree with the commenters who suggested that funds, service providers and intermediaries may need to work through operational issues,[375] and believe that delaying the effectiveness of swing pricing may allow for the creation of industry-wide operational solutions in a more efficient manner and that therefore providing an extended effective date may more effectively facilitate the adoption of swing pricing. In light of the extended effective date and discretionary nature of swing pricing, we believe that a compliance period is unnecessary.

2. Amendments to Form N–1A and Regulation S–X and New Item in Form N–CEN

In the Proposing Release, the Commission expected to require all initial registration statements on Form N–1A, and all post-effective amendments that are annual updates to effective registration statements on Form N–1A, filed six months or more after the effective date, to comply with the proposed amendments to Form N–1A.[376] Few commenters discussed the Form N–1A amendments. One commenter agreed that 6 months was sufficient to comply with the amendments;[377] another commenter requested 30 months to comply.[378] Because we do not expect that funds will require significant amounts of time to prepare the additional disclosures regarding swing pricing,[379] and we believe that a fund should disclose the use of swing pricing to investors before it is used, the compliance date for the amendments to Form N–1A discussed herein is the same as the effective date for rule 22c–1(a)(3). Likewise, we believe the additional disclosures regarding swing pricing within the financial statements related to the Regulation S–X amendments discussed above should be included in any financial statements in which swing pricing is implemented on or after the effective date. We note that only funds using swing pricing are required to provide the Form N–1A and financial statement disclosure amendments we are adopting today as part of this Release.

For Form N–CEN, we proposed a compliance date of 18 months after the effective date to comply with the new reporting requirements.[380] No commenters specifically addressed the compliance date for the reporting requirements applicable to swing pricing, but several commenters expressed concerns about operational limitations and requested 30 months for all entities to comply with the new reporting requirements on Form N–CEN.[381] As with the amendments to Form N–1A, the compliance date for the new reporting requirements related to swing pricing on Form N–CEN will be the same as the effective date for rule 22c–1(a)(3).

III. Economic Analysis

A. Introduction and Primary Goals of Regulation

1. Introduction

As discussed above, the Commission is adopting regulatory changes to permit funds to use swing pricing under rule 22c–1(a)(3) and to require new disclosures regarding swing pricing (collectively, the "swing pricing regulations"). In summary, and as discussed in greater detail in section II above, the swing pricing regulations include:

- Final rule 22c–1(a)(3) will permit (but not require) a fund (except a money market fund or ETF) to establish and implement swing pricing policies and procedures that would, under certain circumstances, require the fund to use swing pricing to adjust its current NAV to lessen potential dilution of the value of outstanding redeemable securities caused by shareholder purchase and redemption activity. A fund that engages in swing pricing will be subject to certain disclosure and reporting requirements. Relative to the proposed rule, the final rule provides funds greater flexibility in setting multiple swing thresholds and threshold-specific swing factors, but imposes certain additional conditions, primarily a cap for the swing factor and limitations on how the swing factor can be set.
- Amendments to Form N–1A and Regulation S–X and an item on new Form N–CEN will require enhanced fund disclosure and reporting regarding swing pricing.
- Amendments to rule 31a–2 will require a fund that chooses to use swing pricing to create and maintain a record of support for each computation of an adjustment to the NAV of the fund's shares based on the fund's swing policies and procedures.

The Commission is sensitive to the economic effects of the swing pricing regulations, including the benefits and costs as well as the effects on efficiency, competition, and capital formation. The economic effects are discussed below in the context of the primary goals of the swing pricing regulations.

2. Primary Goals

The primary goals of the swing pricing regulations are to promote investor protection by allowing a fund, if it chooses, to use swing pricing to mitigate potential dilution of non-transacting shareholders' interests that could occur when the fund incurs costs as a result of other investors' purchase or redemption activity.[382] To the extent that such costs are not borne by redeeming or subscribing shareholders when exiting or entering a fund, such shareholders have no incentive to consider transaction costs that occur when the fund needs to sell or buy

[381] *See* Cohen & Steers Comment Letter; Fidelity Comment Letter; ICI Comment Letter I; Vanguard Comment Letter.

[382] We use the term "non-transacting shareholder" to reference shareholders that either remain in the fund or are already in the fund as opposed to redeeming or subscribing shareholders.

assets because they can do so at the daily NAV. Swing pricing allows a fund to address this dilution effect by allocating certain of the fund's anticipated transaction costs to redeeming and subscribing shareholders. Furthermore, because redeeming shareholders do not bear the cost of exiting a fund, shareholders might have an incentive for early redemptions in times of liquidity stress because of a first-mover advantage, which could result in further dilution of non-transacting shareholders' interests.[383] To the extent that such a first-mover advantage triggers the sale of less liquid portfolio investments at discounted or even fire sale prices, correlated investments and funds and other investors holding these and correlated investments will be negatively impacted.[384] For reasons discussed in detail below, we believe that the ability for a fund to adopt swing pricing policies and procedures should mitigate the risk of potential shareholder dilution and decrease the incentive for early redemption in times of liquidity stress.

Swing pricing regulations also are meant to address the significant growth in the assets managed by funds with strategies that focus on holding relatively less liquid investments (such as fixed income funds, including emerging market debt funds, open-end funds with alternative strategies, and emerging market equity funds), which could incur significant trading costs and hence could give rise to increased dilution effects from redeeming and subscribing shareholders in those funds.[385] Furthermore, there has also been considerable growth in assets managed by funds that exhibit characteristics, for example high investor flow volatility, that also could give rise to increased dilution effects.[386] Collectively, these industry trends emphasize the importance of allowing funds to choose to use swing pricing.

B. Economic Baseline

The swing pricing regulations will affect, directly or indirectly, all funds and their investors, investment advisers and other service providers, all issuers of the portfolio securities in which funds invest, and other market participants potentially affected by fund and investor behavior. The economic baseline of the swing pricing regulations includes funds' current practices regarding swing pricing as well as the recent development of the fund industry.

1. Funds' Current Practices Regarding Swing Pricing

Commission rules and guidance do not currently address the ability of an open-end fund to use swing pricing to mitigate potential dilution of fund shareholders, and U.S. registered funds do not currently use swing pricing. However, as discussed above, certain foreign funds currently do use swing pricing.[387] We understand that some fund complexes that include U.S. registered funds also include foreign-domiciled funds that currently use swing pricing.

2. Fund Industry Developments Related to Swing Pricing

a. Overview

Below we discuss the size and growth of the U.S. fund industry generally, as well as the growth of various investment strategies within the industry. We show that the fund industry has grown significantly in the past two decades, and, during this period, funds with international strategies, fixed income funds, and funds with alternative strategies have grown particularly quickly. Generally, funds with these strategies are more likely to invest in assets that are less liquid, for example, when compared to domestic large capitalization equity, and therefore redeeming and subscribing investors are more likely to dilute non-transacting investors' interests. We also examine trends regarding the volatility of fund flows, discussing in particular those types of funds that demonstrate notably volatile flows. Because funds with larger flow volatility can experience higher levels of redemptions and subscriptions, which can dilute the interests of non-transacting shareholders, assessing trends regarding flow volatility can provide information about sectors of the fund industry that could be particularly susceptible to dilution effects.

b. Size and Growth of the U.S. Fund Industry and Various Investment Strategies Within the Industry

Open-end funds and ETFs manage a significant and growing amount of assets in U.S. financial markets. As of the end of 2015, there were 10,633 open-end funds (excluding money market funds, but including ETFs), as compared to 5,279 at the end of 1996.[388] The assets of these funds were $15.0 trillion in 2015, having grown from about $2.63 trillion in 1996.[389]

U.S. equity funds represent the greatest percentage of U.S. open-end fund industry assets.[390] As of the end of 2015, excluding ETFs, money market funds and variable annuities, open-end U.S. equity funds held 44.7% of U.S. fund industry assets. The investment strategies with the next-highest percentages of U.S. fund industry assets are foreign equity funds (16.7%), general bond funds (13.2%), and mixed strategy funds (12.3%).[391] Funds with alternative strategies [392] only represent a small percentage of the U.S. fund industry assets, but as discussed below, the number of alternative strategy funds and the assets of this sector have grown considerably in recent years.[393]

While the overall growth rate of funds' assets has been generally high (about 7.2% per year, between the years 2000 and 2015 [394]), it has varied significantly by investment strategy.[395] U.S. equity funds' assets grew substantially in terms of dollars from the end of 2000 to 2015,[396] but this sector's assets as a percentage of total U.S. fund industry assets decreased from about 65% to about 45% during

[394] *Id.,* at Table 2.

[395] The figures in this paragraph and the following paragraph, discussing the variance in growth rate of funds' assets by investment strategy, exclude ETF assets.

[396] U.S. equity funds held about $5.6 trillion as the end of 2015, compared to about $2.9 trillion at the end of 2000. DERA Study, *supra* footnote 385, at Table 2.

that same period.[397] Like U.S. equity funds, the assets of U.S. corporate bond funds, government bond funds, and municipal bond funds also increased in terms of dollars from 2000 to 2015, but each of these sectors' assets as a percentage of the fund industry decreased during this period.[398] On the other hand, the assets of foreign equity funds, general bond funds, and foreign bond funds increased steadily and substantially as a percentage of the fund industry over the same period.[399] For example, foreign equity funds increased steadily from 10.6% of total industry assets in 2000 to 16.7% in 2015. And within these three investment strategies, certain investment subclasses (emerging market debt and emerging market equity) have grown particularly quickly from 2000 to 2015.[400] The overall growth rate of funds' assets between the years 2000 and 2015 was greater for index funds (12.3%) than actively managed funds (4.9%).[401]

The assets of funds with alternative strategies [402] also have grown rapidly in recent years. From 2005 to 2015, the assets of alternative strategy funds grew from $366 million to $310 billion, and from the end of 2011 to the end of 2013, the assets of alternative strategy funds grew by an average rate of almost 80% each year. However, as discussed above, funds with alternative strategies remain a relatively small portion of the U.S. fund industry as a percentage of total assets.[403]

c. Significance of Fund Industry Developments

The industry developments discussed above are notable for several reasons. The growth of funds generally over the past few decades demonstrates that investors have increasingly come to rely on investments in funds to meet their financial needs.[404] These trends also demonstrate growth in particular types of funds that may entail increased concerns about dilution of non-transacting shareholder interests. In particular, there has been significant growth in high-yield bond funds, emerging market debt funds, and funds with alternative strategies, which generally invest in less liquid assets. Commissioners and Commission staff have previously spoken about the need to focus on potential liquidity risks relating to fixed income assets and fixed income funds,[405] and within this sector, funds that invest in high-yield bonds could be subject to greater liquidity risk as they invest in lower-rated bonds that tend to be less liquid than investment grade fixed income securities.[406] Similarly, emerging market debt funds may invest in relatively illiquid securities with lengthy settlement periods.[407] Likewise, funds with alternative strategies may hold portfolio investments that are relatively illiquid.[408] Moreover, Commission staff economists have found that both foreign bond funds (including emerging market debt funds) and alternative strategy funds have historically experienced relatively more volatile flows than the average mutual fund,[409] which would indicate the possibility of increased dilution effects from redeeming and subscribing shareholders in these funds.

One commenter has argued that flow volatility, which staff economists have used as a measure of liquidity risk, does not necessarily translate into liquidity risk.[410] While we agree that flow volatility is not the sole determinant of liquidity risk for a fund, flow volatility reflects flows out of and into funds and hence is associated with transactions in fund investment assets, which can dilute non-transacting shareholders' interest.

C. Benefits and Costs, and Effects on Efficiency, Competition, and Capital Formation

Taking into account the goals of the final swing pricing regulations and the economic baseline, as discussed above, this section discusses the benefits and costs of the swing pricing regulations, as well as the potential effects of the swing pricing regulations on efficiency, competition, and capital formation. This section also discusses the disclosure,

---

[397] *Id.,* at Table 2.

[398] *Id.* U.S. corporate bond funds held about $95 billion at the end of 2015, as opposed to $66 billion in 2000; these funds' assets as a percentage of the U.S. fund industry decreased from 1.5% in 2000 to 0.8% in 2015. U.S. government bond funds held about $174 billion at the end of 2015, as opposed to $91 billion in 2000; these funds' assets as a percentage of the U.S. fund industry decreased from 2.1% in 2000 to 1.4% in 2015. U.S. municipal bond funds held about $592 billion at the end of 2015, as opposed to $278 billion in 2000; these funds' assets as a percentage of the U.S. fund industry decreased from 6.3% in 2000 to 4.7% in 2015.

[399] *Id.* Foreign equity funds held about $2.1 trillion in 2015, as opposed to $465 billion in 2000. U.S. general bond funds held about $1.7 trillion at the end of 2015, as opposed to $240 billion in 2000; these funds' assets as a percentage of the U.S. fund industry increased from 5.4% in 2000 to 13.2% in 2015. Foreign bond funds held about $244 billion at the end of 2015, as opposed to $19 billion in 2000; these funds' assets as a percentage of the U.S. fund industry increased from 0.4% in 2000 to 1.9% in 2015.

[400] *Id.,* at 9. Emerging market debt and emerging market equity funds held about $289 billion at the end of 2015, as opposed to $20 billion in 2000. The assets of emerging market debt funds and emerging market equity funds grew by an average of 18.1% and 19.8%, respectively, each year from 2000 through 2015.

These investment subclasses represent a small portion of the U.S. mutual fund industry (the combined assets of these investment subclasses as a percentage of the U.S. fund industry was 2.3% at the end of 2015).

[401] *See* 2016 ICI Fact Book, *supra* footnote 388, at 174, 218.

[402] While there is no clear definition of ''alternative'' in the mutual fund space, an alternative mutual fund is generally understood to be a fund whose primary investment strategy falls into one or more of the three following buckets: (i) Non-traditional asset classes (for example, currencies or managed futures funds); (ii) non-traditional strategies (such as long/short equity, event driven); and/or (iii) less liquid assets (such as private debt). Their investment strategies often seek to produce positive risk-adjusted returns that are not closely correlated to traditional investments or benchmarks, in contrast to traditional mutual funds that historically have pursued long-only strategies in traditional asset classes.

[410] Comment Letter of Investment Company Institute (May 17, 2016).

reporting, and recordkeeping requirements regarding swing pricing and reasonable alternatives to rule 22c–1(a)(3).

1. Requirements of Rule 22c–1(a)(3)

Under rule 22c–1(a)(3), a fund (with the exception of a money market fund or ETF) would be permitted to establish and implement swing pricing policies and procedures that would, under certain circumstances, require the fund to use swing pricing to adjust its current NAV as an additional tool to lessen potential dilution of the value of outstanding redeemable securities caused by shareholder purchase or redemption activity. In order to use swing pricing under the rule, a fund would be required to establish and implement swing pricing policies and procedures.[411] These policies and procedures must: (i) Provide that the fund will adjust its NAV by amounts designated as the ''swing factor(s)'' once the level of net purchases or net redemptions from the fund has exceeded specified strictly positive percentage(s) of the fund's net asset value known as the ''swing threshold(s)''; [412] (ii) specify the process for how the fund's swing threshold(s) are determined, considering certain specified factors; [413] and (iii) specify the process for how the swing factor(s) are determined, which must include the establishment of an upper limit on the swing factor(s) used, taking into account certain considerations and not exceeding a maximum of two percent of the fund's NAV per share.[414]

A fund's board, including a majority of the fund's independent directors, will be required to approve the fund's swing pricing policies and procedures, which policies and procedures must specify the process for setting swing thresholds, swing factor(s), and swing factor upper limits.[415] In addition, the board must approve the fund's swing threshold(s) and swing factor upper limit (including any changes thereto).[416] The board also will be required to designate the fund's investment adviser or officers responsible for administration of the fund's swing pricing policies and procedures.[417] Additionally, the board will be required to review, no less frequently than annually, a written report prepared by the swing pricing administrator that describes: (i) Its review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution; (ii) any material changes to the fund's swing pricing policies and procedures since the date of the last report; and (iii) its review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations.[418]

A fund that adopts swing pricing policies and procedures will be required to keep certain records, including its swing pricing policies and procedures and a written copy of the periodic report provided to the board,[419] as well as records of support for each computation of an adjustment to the fund's NAV based on the fund's swing pricing policies and procedures.[420] A fund that engages in swing pricing will be required to make certain disclosures, including disclosure of the fund's swing factor upper limit, on Form N–1A and Form N–CEN.[421] A fund that uses swing pricing will also be required to reflect its use of swing pricing in its financial statements and on Form N–1A.[422]

The final rule modifies the proposal's swing pricing provisions in several ways that may have economic consequences, including: (1) Funds may establish multiple swing thresholds, each with a separate corresponding swing factor, and these factors can differ for subscriptions and redemptions; (2) a fund's board is still required to approve the fund's swing pricing policies and procedures, but the final rule also requires that the policies and procedures specify the process for determining a swing threshold(s), factor(s), and swing factor upper limit; (3) funds must report the upper limit of the swing factor(s)—but not swing factor(s) or threshold(s)—on Form N–CEN and in their prospectus, along with disclosure of the effects of swing pricing; (4) the fund board must approve the fund's swing threshold(s) and an upper limit on the swing factor(s) that are used by a fund (which may not exceed two percent of NAV per share), and any changes to the swing threshold or swing factor upper limit; and (5) the board must periodically review a written report from the swing pricing administrator that describes: (a) The swing pricing administrator's review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution; (b) any material changes to the fund's swing pricing policies and procedures since the date of the last report; and (c) the swing pricing administrator's review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations.

a. Benefits

We believe rule 22c–1(a)(3) will promote investor protection by providing funds with a tool to reduce the potentially dilutive effects of shareholder purchase or redemption activity. Rule 22c–1 under the Investment Company Act, the ''forward pricing'' rule, requires a fund to price its shares based on the current market prices of its portfolio assets next computed after receipt of an order to buy or redeem shares.[423] Swing pricing may allow funds to more fairly distribute transactions costs, resulting from either subscriptions or redemptions, to the investors who initiate those transactions. For example, net redemptions may require a fund to sell a portion of its assets. Any difference between the sale price of these assets (which may occur on or after the redemption date depending on when fund flows are received) and the price at which they are valued when the fund's NAV is struck on the redemption date (which may not yet reflect transactions executed on that date under rule 2a–4) is shared across all fund shareholders. Non-transacting shareholders may benefit or suffer depending on this difference, but on average are likely to experience dilution because of the trading costs incurred when assets are sold. Similarly, while net subscriptions do not require a fund to purchase assets immediately, non-transacting shareholders will share the costs of investing the subscription proceeds if and when that occurs, and these costs will not be reflected in the NAV on the subscription date.

While swing pricing does not eliminate non-transacting investors' exposure to this dilution risk—for example, it is possible the swung adjusted NAV on a given day under or overestimates the costs incurred by the fund, or that the fund would not be able to swing in an amount sufficient to recoup all transactions costs because of

[422] *See* Item 13 of Form N–1A and amendments to Regulation S–X.

[423] *See* rule 22c–1(a).

the swing factor upper limit, or that costs related to redemptions or subscriptions other than the costs permitted to be considered in setting the swing factor are incurred—to the extent that funds are able to effectively calibrate their swing factors, non-transacting investors should, on average, pay a reduced share of the trading costs imposed on the fund by redeeming and subscribing investors on days when swing pricing is triggered. Swing pricing provides funds with an additional tool to pass estimated near-term costs stemming from shareholder purchase or redemption activity on to the shareholders associated with that activity, and could therefore lessen dilution of non-transacting shareholders and limit any possible redemptions motivated by a potential first-mover advantage.

Commission rules and guidance do not currently address the ability of a fund to use swing pricing to mitigate potential dilution of fund shareholders, and the Commission's current valuation guidance could raise questions about making such a NAV adjustment. The swing pricing rule provides the regulatory framework that a fund can optionally apply to adjust its NAV in order to effectively pass on estimated trading costs to purchasing or redeeming shareholders, and requires a fund that conducts swing pricing to do so in accordance with policies, procedures, and other restrictions designed to promote all shareholders' interests. Because we cannot prospectively measure the extent to which the swing pricing policies and procedures that a fund may adopt would mitigate potential dilution, we are unable to quantify the total potential benefits discussed in this section.[424] However, analysis by fund groups of their funds domiciled in regions that allow swing pricing indicates that return performance is significantly improved for funds that use swing pricing,[425] which is consistent with a reduction in dilution, though some commenters did point out that swing pricing can lead to an improvement in fund performance even if the swing pricing policy is unrelated to costs incurred by the fund.[426]

Relative to the proposal, the final rule's additional flexibility in defining swing pricing policies—the options to employ multiple swing thresholds with attendant swing factors—should allow a fund to more accurately reflect its estimated trading costs when the fund chooses to swing its NAV, and may encourage funds that otherwise would not have employed swing pricing to use it, potentially reducing investor dilution further.

Requiring the fund to set an upper limit (which may not exceed two percent of NAV per share) on the swing factor(s), as the final rule does, could reduce the benefits of swing pricing to non-transacting investors in that funds are less able to use swing pricing to reallocate all of the costs of transactions to redeeming or subscribing shareholders, because costs would exceed the upper limit. However, transacting investors could benefit from an upper limit (and the required disclosure of an upper limit), in that there would be a maximum cost that they could face were they to purchase or redeem shares on a day when the fund swings its NAV and hence reduce some of the uncertainty when making the decision to enter or exit a fund.

The final rule's limitation on the types of costs that can be considered in setting a swing factor has similar trade-offs: The benefits of swing pricing to non-transacting shareholders are constrained, given that certain costs that are incurred as a result of the redemption or subscription activity could not be allocated to transacting investors. However, transacting shareholders could benefit from the limitation, in that the fund would have less flexibility to allocate to transacting investors costs that are less directly related to the fund's actual transaction costs. Constraining a fund's flexibility in this manner could limit potential abusive uses of swing pricing (*e.g.,* swinging in an amount greater than the costs of redemptions or subscriptions in order to artificially enhance fund returns). The final rule's express requirement that the swing factor reasonably relate to the cost of meeting subscriptions or redemptions could similarly help protect transacting investors against potential abusive uses of swing pricing.

Finally, investors should benefit from the increased accountability that the final rule provides in requiring a fund's board to approve swing pricing policies and procedures, approve the fund's swing factor upper limit (which may not exceed two percent of NAV per share), approve the fund's swing threshold(s), and approve any changes to a fund's swing factor upper limit or swing threshold(s). The final rule also requires the fund board to periodically review a written report from the swing pricing administrator describing: (i) Its review of the adequacy of the swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution; (ii) any material changes to the fund's swing pricing policies and procedures since the date of the last report; and (iii) its review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations. Given that our rule permits the use of swing pricing for the first time in the U.S., additional board attention to the fund's swing pricing practices could be beneficial. Similarly, board review of a report that reviews and assesses the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations, could raise the quality and rigor of funds' formulating these important determinations, which also benefits investors.

Commenters generally agreed with the proposal's assessment of swing pricing's potential benefits, but they also brought up technological and operational hurdles that could impede its implementation by most funds, which we discuss below. Without a change in industry practice, the operational issues cited by commenters may prevent the benefits of swing pricing from being achieved by some funds, but it is still likely that a small fraction of funds will be able to implement it, and the rule does not require funds to use swing pricing (it is a discretionary tool). Additionally, sufficiently high investor demand for implementing swing pricing after the rule is adopted may spur market-wide operational innovations which reduce these operational hurdles.

One commenter stated that the nature by which swing pricing reallocates costs was a ''zero-sum game'' across different investors (subscribing, redeeming, and non-transacting) and that in aggregate swing pricing reduces shareholder value after incurring the costs of operating the policy.[427] While it is true that swing pricing does transfer costs across different investors, the goal of swing pricing is to allow for a more fair allocation of these costs. Swing pricing is optional, so funds can decide whether a more fair allocation of costs justifies

[424] There is no database currently available that identifies whether a foreign-domiciled fund uses swing pricing or the structure of a fund's swing pricing program (*e.g.,* full swing pricing versus partial swing pricing).

[425] *See* BlackRock Fund Structures Paper, *supra* footnote 46. The study does not show the extent to which the costs assessed to transacting investors via swing pricing accurately reflect realized trading costs.

[426] Eaton Vance Comment Letter.

[427] Eaton Vance Comment Letter.

the operational costs associated with implementing swing pricing. The same commenter also suggested that depending on the ratio of purchases to redemptions for a given net fund flow, swing pricing does not allow non-transacting shareholders to capture all of the proceeds recovered from transacting shareholders when the NAV is swung, and shows using its own historical fund flows that this reduction can be significant (ranging as high as 91% when a swing threshold of zero was used). We acknowledge that swing pricing may not allow all of the costs assessed to transacting shareholders to be returned to the fund, though any reallocation of costs from transacting to non-transacting shareholders reduces dilution. Because swing pricing is optional, funds can determine whether this type of benefit reduction is likely given their historical fund flow patterns and whether the net reduction in shareholder dilution is expected to justify the costs of implementing swing pricing.

b. Costs

Generally, implementing swing pricing may increase a fund's return volatility and could increase the tracking error relative to a fund's benchmark. However, the impact of swing pricing on volatility and tracking error should decrease as a function of the time over which returns and tracking errors are measured: For example, the impact of swing pricing on daily return volatility and tracking error will likely be much greater than the impact on monthly volatility and tracking error. Enabling funds to have multiple swing thresholds and factors, as well as limiting swing factors to be at most 2% of the funds NAV, also potentially lessens swing pricing's impact on volatility and tracking error.

In addition, swing pricing exposes transacting investors to additional uncertainty about the price at which their fund shares will ultimately be purchased or redeemed relative to the economic baseline. For example, under existing regulations, investors who submit purchase or redemption orders on a given date face uncertainty about the price they will transact at until the NAV is next struck. Under the adopted rule, investors face an additional source of uncertainty surrounding the eventual price they will transact at because this price will also depend on net fund flows on the trade date and any resultant NAV adjustment via swing pricing protocols. They may end up transacting at a better (*e.g.,* if they are subscribing on a day the NAV is adjusted downwards) or worse (*e.g.,* if they are redeeming on a day the NAV is adjusted downwards) price, but they are facing an additional source of uncertainty relative to current practices. This uncertainty is limited in that investors will know the fund's swing factor upper limit. Investors will not be able to purposefully take advantage of swing pricing to obtain a better price without knowledge of contemporaneous intraday flows and a fund's swing thresholds, neither of which funds are required to publicly disclose and will not be required to disclose under the rule.

If a fund's swing threshold(s) and factor(s) are accurately calibrated to reflect the costs incurred as a result of significant net subscriptions and redemptions, the increased execution price risk faced by investors who transact in a fund should be offset by a decrease in the dilution that non-transacting investors would otherwise face if the fund's NAV was never adjusted. The rule's limitation on a swing factor's maximum size may reduce the extent to which funds that face higher trading costs are able to reflect those costs in their swing factor(s), but it also reduces the execution risk faced by investors who transact in these funds. We acknowledge commenter concerns that estimating the trading costs associated with various redemption levels is not trivial, and swing pricing programs are unlikely to anticipate trading costs perfectly, so a given fund's swing factor may overstate or understate the expected transaction costs associated with a given transaction.[428] For example, the rule requires a fund to apply a swing factor when its net flows cross a certain threshold, but the actual costs to be incurred will vary with other factors such as the fund's portfolio on the date the NAV is swung, the trades they decide to execute to meet a given redemption, or any macroeconomic factors that affect bid-ask spreads. If a swing factor underestimates or is unable to capture the true trading costs for a fund, non-transacting shareholders of the fund will still benefit from swing pricing, but to a lesser extent. If a fund overestimates its swing factor, non-transacting shareholders will be enriched by its swing pricing program (and the fund's NAV will reflect it), but this increase in wealth will be at the expense of transacting shareholders, who are paying more than the true cost of their transactions. To the extent that a fund cannot perfectly estimate the swing factors appropriate for it, the fund may have an incentive to overestimate these factors because it will increase observed fund performance. Given the limited swing pricing disclosures a fund must make, it may also be difficult for investors to determine if the swing factor has charged them in excess of true trading costs, and may make it difficult for investors to disentangle true fund performance from swing pricing effects.

Several of the provisions of the final rule could mitigate any incentive a fund has to overestimate its swing factor: (i) Requiring board approval of a fund's swing pricing policies and procedures, which must specify the processes used to determine the swing threshold(s), swing factor(s), and swing factor upper limit; (ii) requiring board approval of the swing threshold(s) and swing factor upper limit, as well as any changes to these quantities; (iii) adding an express requirement that swing factors be reasonably related to the near-term costs resulting from subscriptions and redemptions and limiting the near-term costs that may be considered in determining the swing factor(s); (iv) requiring the establishment of an upper limit on the swing factor(s) used, which may not exceed two percent of NAV per share; (v) requiring that the investment adviser, officer, or officers responsible for administrating a fund's swing pricing policies and procedures must be reasonably segregated from portfolio management of the fund, and may not include portfolio managers; and (vi) requiring the board to periodically review a written report prepared by the swing pricing administrator that describes: (a) Its review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution; (b) any material changes to the fund's swing pricing policies and procedures since the date of the last report; and (c) its review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations.

Each fund that chooses to adopt swing pricing policies and procedures pursuant to rule 22c–1(a)(3) will incur one-time costs to develop and implement the policies and procedures, as well as ongoing costs relating to administration of the policies and procedures, as will intermediaries and third party service providers. To the extent that fund advisers, intermediaries, and other service providers are able to pass their costs along to funds, we believe it is likely that these costs will also be passed on,

[428] Eaton Vance Comment Letter.

at least in part, to fund investors.[429] As discussed above, while U.S. registered funds do not currently use swing pricing to mitigate potential dilution, certain foreign funds affiliated with U.S. fund families currently do use swing pricing.[430] In the proposal, we stated that U.S. registered funds in fund complexes that also include foreign-domiciled funds that use swing pricing may incur relatively lower costs to implement swing pricing policies and procedures pursuant to the rule. However, several commenters pointed out that fundamental differences exist between fund operations in the U.S. and Europe, including the more timely arrival of flow information in Europe due to earlier trading cut-off times, a higher portion of direct-sold funds in Europe, and the more prevalent use of currency-based orders in Europe (which removes the need for flow estimation cycles).[431] We acknowledge that these differences mean that it is less likely funds will be able to leverage preexisting systems from other jurisdictions, though they may still be able to leverage their general expertise with swing pricing in other countries in developing appropriate policies and procedures. They are still likely to face the same operational hurdles as other funds in obtaining timely fund flow information in the U.S.

Commenters also expressed concern that the analysis of costs did not consider the substantial costs and technology and operational hurdles that must be resolved for intermediaries to provide the net flow information necessary to perform swing pricing.[432] We agree that there may be significant costs for many fund complexes and intermediaries to implement swing pricing and have revised our estimates of the implementation costs discussed below to incorporate commenter suggestions. At the same time, commenters also suggested ways that funds, intermediaries, and other third parties could coordinate to make the implementation of swing pricing feasible, and stated that they believed the long-term benefits of swing pricing outweighed the one-time costs of enabling swing pricing in the U.S.[433]

The final rule's swing pricing provisions are being adopted with a two-year extended effective date, which, as discussed above, several commenters requested. With respect to costs, the extended effective date may result in more efficient industry-wide approaches to providing funds with timely flow estimates in determining whether and by how much their NAVs will be adjusted on a given date. For example, if funds and intermediaries are able to coordinate with each other to develop standards and timing conventions for how data is transmitted to enable the timely estimation of flows instead of developing ad-hoc individual processes, the aggregate costs of implementing swing pricing are likely to be lower on a per fund basis. However, to the extent individual funds or intermediaries do not participate on a coordinated approach, progress on a more efficient collective solution to swing pricing's operational challenges may be hindered and the extended effective date may simply postpone the adoption of swing pricing relative to an immediate effective date. On the other hand, if swing pricing were made effective immediately and a significant portion of funds wanted to adopt it, market pressures could spur industry-wide solutions and innovations that reduce implementation costs and make swing pricing operationally feasible for a broader group of funds.

The costs of implementing swing pricing policies and procedures could vary depending on the level of liquidity risk facing the fund, as well as the sources of the fund's liquidity risk. To determine a fund's swing threshold, rule 22c–1(a)(3) would require a fund to consider certain of the factors required to be considered as part of the liquidity risk assessment required under rule 22e–4.[434] Therefore, the costs associated with developing policies and procedures for determining the swing threshold could also vary according to similar factors that could cause differences in the costs to funds associated with rule 22e–4.[435]

As noted above, commenters suggested the proposal underestimated the activities required for a fund, in conjunction with its intermediaries, to implement swing pricing. We acknowledge that the adoption of swing pricing could cause significant costs to be incurred by intermediaries (which are discussed below) and by funds in terms of the systems and processes they need to develop to receive timely flow data from intermediaries. A fund that adopts swing pricing will incur costs associated with the following activities: (i) Developing swing pricing policies and procedures that include all of the elements required under the rule,[436] as well as policies and procedures relating to the recordkeeping requirements associated with swing pricing;[437] (ii) planning, coding, testing, and installing any system modifications for receiving, estimating, aggregating and transmitting sufficient shareholder flow information for the fund's transfer agent and pricing agent, in order to determine if the fund's NAV should be adjusted pursuant to the fund's swing pricing policies and procedures; (iii) integrating and implementing the fund's swing pricing policies and procedures, as well as policies and procedures relating to the financial reporting and recordkeeping requirements associated with swing pricing; (iv) developing any relevant compliance, control and testing procedures; (v) establishing procedures for the periodic review and back-testing of swing threshold(s), swing factor(s), swing factor upper limit, and flow estimates; (vi) preparing training materials and administering training sessions for staff in affected areas; (vii) board approval of the fund's swing pricing policies and procedures, which specify the processes used to determine the swing threshold(s), swing factor(s), and swing factor upper limit; (viii) board approval of the fund's swing threshold(s) and swing factor upper limit, and any changes to the swing threshold(s) and swing factor upper limit; and (ix) board periodic review of the written report prepared by the swing pricing administrator.

The proposal estimated the one-time costs of implementing a swing pricing program as being in the range of $1.3 million to $2.25 million per fund complex by assuming costs were similar to those associated with the fees and

[437] Rule 22c–1(a)(3)(iii); rule 31a–2(a)(2).

gates provision of the Commission's 2014 money market reform rule. The only alternative estimate of swing pricing implementation costs came from a commenter who stated that its experience complying with the money market reform rule suggested those estimates were severely understated, and that it believed that implementing a swing pricing program would be four to five times more costly than the proposal's estimate.[438] We extrapolate from this commenter's estimate to obtain estimates for all fund complexes, producing estimated one-time costs ranging from $2.4 million to $48.5 million per fund complex to implement swing pricing, with an average cost per fund complex of $3.4 million.[439] These costs estimates should be considered an upper bound for two reasons: (1) They assume a fund complex implements swing pricing for all of its funds; (2) they assume a fund develops all systems and processes associated with swing pricing in-house, but if third-party solutions become available funds may be able to reduce some of their swing pricing implementation costs.

In the proposal, we estimated that the ongoing costs of adopting a swing policy would range from 5% to 15% of the one-time costs. We recognize that, relative to our discussion of costs in the proposal, funds will have to maintain substantial systems and procedures to estimate fund flows, and believe it's reasonable to increase this range from 5% to 32.5%.[440] Again using the fund-by-fund cost approach above based on a commenter's estimate of the one-time costs, we estimate that ongoing costs to fund complexes would range from $120,000 to $15.8 million, with the average fund having costs in the range of $170,000 to $1.1 million. The low end of the range might be achieved by small complexes that are direct-sold, whereas the high end of the range could correspond to very large fund complexes that primarily distribute their funds through a wide variety of intermediaries and use swing pricing for many of their funds. These estimated costs are attributable to the following activities, as applicable to each of the funds within the complex that adopts swing pricing policies and procedures: (i) Costs associated with monitoring whether the fund's net purchases or net redemptions cross the swing threshold (which could include costs associated with obtaining shareholder flows from its transfer agent, including sufficient information on flows from the funds intermediaries, in order to reasonably estimate its daily net flows) (implicated by rule 22c–1(a)(3)(i)(A)); (ii) adjusting the fund's NAV when the fund's net purchases or net redemptions cross the swing thresholds, including costs associated with determining the swing factors that would be used to adjust the fund's NAV when the fund's swing thresholds are exceeded (rule 22c–1(a)(3)(i)(A), rule 22c–1(a)(3)(i)(C)); (iii) periodic review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution, as well as periodic review of fund's swing threshold(s), swing factor(s) and swing factor upper limit, and related board reporting requirements (rule 22c–1(a)(3)(ii)(D)); (iv) systems maintenance; (v) compliance costs and the back-testing of flow estimation procedures; (vi) additional staff training; and (vii) recordkeeping (rule 22c–1(a)(3)(iii), amendments to rule 31a–2(a)(2)).[441] Funds would also incur costs if they began distributing their fund through new intermediaries, as they would need to integrate that intermediary into the systems used to determine if fund flows have exceeded a swing threshold. We note that for purposes of our PRA analysis, we estimate that, relative to the proposal, half as many fund complexes (84 fund complexes) will implement swing pricing.[442] Based on this estimate and our estimate of the average per fund complex cost above, we estimate that the aggregate cost to implement swing pricing will be $286 million.[443]

While the proposal incorporated the costs to intermediaries and other third-party service providers into its estimates at the fund complex level, we recognize, based on the operational issues raised by commenters, that these parties will incur significant separate costs to make swing pricing feasible. Specifically, new processes and procedures will need to be established across a wide variety of intermediaries and service providers to gather and transmit sufficient flow information prior to the striking of the fund's NAV. Costs will be incurred by fund transfer agents, pricing agents, intermediaries and service providers to facilitate the movement of flow data to funds earlier in the evening. This will include new estimated flow data that will need to be generated by retirement plans and third-party administrators as intermediaries that will likely be sent via new files and processing cycles through the NSCC. Further changes to transaction processing and nightly processing may occur if the delivery of fund NAVs is pushed to later in the evening to accommodate swing pricing. Compressing processing times could increase risk and costs if there is less time for intermediaries to confirm transactions with funds and update shareholder records on a timely basis.

Commenters did not provide estimates for the costs that swing pricing will cause intermediaries to incur, which are likely to vary widely depending on the specific role each intermediary plays in the process of providing funds with the flow information swing pricing policies are dependent upon. For example, a small retirement plan that only needs to transmit data in a more timely fashion as a result of swing pricing might incur one-time costs in the tens of thousands of dollars to upgrade its systems, while a central fund transaction processing utility such as the NSCC might incur costs similar in magnitude to the largest fund complexes (in the tens of millions of dollars) to build systems that reliably process flow data for a broad range of their participants. Intermediaries such as broker-dealers and retirement plan administrators that use the services of the utility may incur costs in the middle of this range (in the hundreds of thousands to the millions of dollars) to enable the processing of flow data from any smaller intermediaries or clients they service in addition to any share of

[438] Charles Schwab Comment Letter.

[439] The commenter, Charles Schwab Investment Management, has 52 funds. A multiple of 4–5 times the proposals estimate produces a range of $5.2 million to $11.25 million, and we assume the commenter's costs are in the middle of that range at $8 million. Assuming a fixed cost of 30%, and that costs beyond that scale with the number of funds, we arrive at an estimated one-time costs for each fund complex, and calculate the minimum, maximum, and average across those fund complexes.

[440] *See* Invesco Comment Letter. The commenter estimated that the asset classification requirement of proposed rule 22e–4 would involve one-time costs of $2 million and ongoing costs of $650,000. This ongoing cost estimate represents 32.5% of the one-time cost estimate associated with that proposed requirement. *See also* Investment Company Liquidity Risk Management Programs, *supra* footnote 8, at n. 1097 and surrounding discussion. We assume swing pricing programs will, at the high end, involve on-going costs that are the same proportion of one-time costs (32.5%).

[441] We anticipate that, depending on the personnel (and/or third-party service providers) involved in the activities associated with administering a fund's swing pricing policies and procedures, certain of the estimated ongoing costs associated with these activities could be borne by the fund, and others could be borne by the adviser.

[442] *See infra* footnote 489 and surrounding discussion regarding the revision to the number of funds expected to implement swing pricing in the PRA analysis.

[443] *See supra* footnote 439 and surrounding discussion regarding cost estimates on a per fund complex basis. The aggregate cost is estimated as 84 fund complexes × $3.4 million = $286 million.

NSCC costs they pay.[444] Similarly, we would expect ongoing costs for a given entity to be a percentage of the entity's one-time costs, in the range of 10% to 25%.[445] To the extent intermediaries are able to pass on these costs to funds, it is likely that investors will ultimately pay some share of the expenses intermediaries incur in the form of higher operating expenses or management fees. Given these additional costs, each fund will need to determine whether the higher operational costs of swing pricing—including both external costs passed on from intermediaries and internal costs associated with their own systems, policies, and procedures—are justified by swing pricing's anti-dilutive benefits.

Commenters also emphasized that those costs went beyond needing to create systems, policies, and procedures. They suggested that total costs include potential damage to investors, investment advisers, and service providers that would occur if operational requirements are not able to be effectively implemented because of current practices in the U.S. fund market.[446] We recognize that if funds use inaccurate estimates of daily flows because actual values are not available before funds must strike their NAV, then a fund may swing its price unnecessarily or fail to swing its price when necessary. Under the final rule, a fund is required to ''reasonably estimate whether it has crossed the swing threshold with high confidence,'' which should reduce the probability that a fund swings its NAV based on inaccurate flow information and, in cases where this does happen, does not require the fund to consider it a NAV error as long as the flow estimates used were of ''high confidence.''

Relative to the proposal, the final rule also changes the role of a fund's board in its oversight of any swing pricing program. Under the final rule, the board is required to approve the swing pricing policies and procedures, which must specify the process for determining swing threshold(s), swing factor(s) and their upper limits, but is not required to approve all material changes to the fund's swing pricing policies and procedures. The fund board is also required to approve a fund's swing factor upper limit and its swing threshold(s). In order to facilitate these obligations, the final rule also requires the board to periodically review a written report prepared by the swing pricing administrator that includes certain required information. The revised cost estimates above use a commenter's cost estimates of adopting swing pricing under the proposal, which we assume included the board's obligations to approve swing threshold(s), any swing factor upper limit, swing pricing policies and procedures, and any material changes to those policies and procedures. The final rule's inclusion of a requirement that the fund's board periodically review a written report from the swing pricing administrator will impose certain additional costs: (i) The costs incurred by the administrator in performing the analysis underlying the written report, including a review of the reasonableness of the swing threshold(s), swing factor(s), and upper limit; (ii) the cost of preparing the report itself; and (iii) the cost of the board's time to review the written report. While these activities are more explicitly required by the final rule, some of their associated costs, such as those associated with any analysis and document preparation as part of the proposal's periodic review requirements, as well as any time associated with board review of material changes, would have been incurred under the proposal. In addition, the final rule does not require board approval of all material changes to a fund's swing pricing policies and procedures, reducing costs relative to the proposal. On balance, we therefore believe that the revised costs estimates of the proposal above, which incorporate commenter feedback, are still reasonable estimates of the final rule's costs.

c. Effects on Efficiency, Competition, and Capital Formation

Rule 22c–1(a)(3) permits a fund, under certain circumstances, to adjust its NAV to effectively pass on the estimated costs stemming from shareholder purchase or redemption activity to the shareholders associated with that activity. Adjusting a fund's NAV in this way could reduce dilution to non-transacting shareholders arising from trading costs. We therefore believe that the rule could increase the efficiency of cost allocation among shareholders of funds that adopt swing pricing policies and procedures, provided that a fund's swing thresholds and swing factors are appropriately calculated.

If investors believe swing pricing to be valuable, funds that decide to implement swing pricing will be at a competitive advantage. Fund complexes currently using swing pricing in other jurisdictions may be at a slight advantage due to their familiarity with swing pricing procedures, but, as noted above, they will still face the same operational hurdles as other funds in obtaining timely fund flow information in the U.S. Similarly, funds that are predominantly sold directly or primarily through an affiliated broker-dealer may not be as impacted by these operational difficulties, and may be able to implement swing pricing more quickly. In addition, some funds may decide to forgo using swing pricing due to concerns that some intermediaries will not offer their funds due to the increased operational burden swing pricing places on those intermediaries.

The extended effective date reduces these competitive effects and provides funds not currently using swing pricing in other jurisdictions and funds that are not sold directly sufficient time to develop and implement their own swing pricing programs in conjunction with any broad industry efforts to provide fund flow data on a timely basis. Alternatively, if the rule's swing pricing provisions became effective immediately, while some funds would have an initial competitive advantage, if a significant portion of funds wanted to adopt swing pricing, market pressures could spur innovations that made swing pricing feasible for a broader groups of funds. We are unable to assess the relative likelihoods of these two potential outcomes.

Commenters also suggested that smaller fund complexes are less likely to have the resources necessary to implement swing pricing, may have less leverage in obtaining flow information from their distribution partners, and that if investors prefer funds that use swing pricing, smaller fund complexes would be at a competitive disadvantage.[447] We acknowledge that small funds (as well as other types of funds such as those that are not primarily sold directly or through an affiliated broker-dealer) may be at an

[444] The low end of this estimate, which is more likely to apply to broker-dealers than retirement plan administrators, is of the same order of magnitude as the costs to intermediaries associated with processing and reporting transactions in other SEC rulemakings. *See, e.g.* Regulation SBSR—Reporting and Dissemination of Security-Based Swap Information, Exchange Act Release No. 74245 (Feb. 11, 2015) [80 FR 14739 (Mar. 19, 2015)] (estimating the one-time costs for trade execution platforms and registered clearing agencies to develop transaction processing systems and report transaction-level information to swap data repositories).

[445] There could also be additional costs incurred by more ancillary parties. For example, data providers that disseminate or third parties that analyze fund NAV may have to update their operations.

[446] Dechert Comment Letter; Federated Comment Letter; ICI Comment Letter I; IDC Comment Letter; J.P. Morgan Comment Letter.

[447] Dechert Comment Letter; ICI Comment Letter I; IDC Comment Letter; Charles Schwab Comment Letter; T. Rowe Comment Letter.

initial disadvantage, and note that the delayed extended effective date should provide some fund complexes sufficient time and resources to overcome their initial competitive disadvantage before any fund can actually use swing pricing. For example, the extended effective date could provide third parties with time to develop tools to help smaller fund complexes perform swing pricing. However, it is possible that some fund complexes will not be able to effectively implement swing pricing, and to the extent investors prefer funds that use swing pricing, those fund complexes will be at a competitive disadvantage.

We anticipate that rule 22c–1(a)(3) could indirectly foster capital formation by bolstering investor confidence. Investors may be more inclined to invest in funds if they understand that funds will be able to use swing pricing to prevent the purchase or redemption activity of certain investors from diluting the interests of other investors (particularly long-term investors, who represent the majority of fund shareholders). To the extent that swing pricing increases investment returns to investors, particularly long-term investors, this could incentivize investment in funds that use swing pricing. If rule 22c–1(a)(3) enhances investor confidence in funds, investors are more likely to invest in funds, so to the extent that investors are not already invested in the capital markets (*e.g.,* via direct ownership of stocks or bonds), the rule could make additional assets available for investment in the capital markets.

To the extent that investors care about short-term volatility, they may be discouraged from investing in funds that use swing pricing because it will generally increase daily volatility and benchmark tracking error on those days when the NAV is swung. However, if a fund's swing thresholds and factors are properly calibrated, long-term tracking error relative to the fund's benchmark should improve. Additionally, as discussed above, investors might be slightly less inclined to transact in funds that use swing pricing because of the additional uncertainty it introduces surrounding the NAV at which their shares will ultimately be purchased or redeemed, as this NAV now depends on that day's net fund flows in addition to variations in the prices of the fund's portfolio positions. Investors also may be less inclined to invest in funds that use swing pricing if they are not confident that the fund's swing factors and thresholds appropriately reflect costs associated with transacting in the fund; specifically, a fund that uses a swing pricing program which overstates trading costs will effectively impose the equivalent of hidden purchase and redemption fees on transacting investors, which will increase the fund's NAV and benefit non-transacting shareholders at their expense. Investors will not be able to directly evaluate whether a fund's swing pricing policy is reasonably linked to its costs, and will only be able to determine how much of a fund's performance is attributable to swing pricing if funds voluntarily choose to publicly disclose both their swung and unswung NAVs on a daily basis. However, the additional restrictions in the final rule that are designed to reduce the ability of funds to overestimate swing factors to increase observed fund performance, should reduce such concerns and have a positive effect on capital formation. Because we do not have the information necessary to determine how investors will perceive swing pricing, or how they will evaluate the relative benefits or detriments of investing in funds that use swing pricing, we are unable to draw conclusions about the precise effects of rule 22c–1(a)(3) on capital formation. Moreover, the requirement for funds that use swing pricing to disclose the swing factor upper limit will provide transparency to investors regarding the maximum amount that a shareholder could expect the share price that he or she receives upon purchase or redemption to be adjusted on account of swing pricing.

The final rule enables funds to use multiple swing thresholds, and allows for different swing factors corresponding to each threshold, subject to a swing factor upper limit that may not exceed two percent of NAV per share, which increases a fund's ability to tailor swing pricing to the specific trading costs it anticipates incurring when facing significant net fund flows. To the extent that funds accurately reflect these costs in their swing pricing programs, and that the expense of operating a swing pricing program does not significantly increase fund expenses, this should improve the efficiency of trading cost allocation between transacting and non-transacting investors. The final rule's increased flexibility could, at the margin, lead to an increase in the use of swing pricing by funds that would not have otherwise employed it under the proposed rule's provisions; to the extent that investors perceive swing pricing as being a desirable feature of certain funds, and the extent to which they have assets that are not already invested in the capital markets, this could enhance capital formation relative to the proposed rule.

2. Disclosure and Reporting Requirements Regarding Swing Pricing

a. Disclosure and Reporting Requirements

We are adopting amendments to Form N–1A and Regulation S–X as well as adopting a new item to Form N–CEN to enhance fund disclosure and reporting regarding swing pricing. Specifically, amendments to Form N–1A will require a fund to explain the fund's use of swing pricing, including an explanation of what swing pricing is, the circumstances under which it will use swing pricing, and the effects of using swing pricing.[448] A fund that uses swing pricing will also be required to disclose the swing factor upper limit,[449] and include a general description of the effects of swing pricing on a fund's annual and average total returns for the applicable periods.[450] The GAAP NAV reported on the balance sheet of a fund's financial statements will include the effects of swing pricing throughout the reporting period, but it will not explicitly reveal instances where the fund NAV was adjusted or the magnitudes of those adjustments.[451] A new item on Form N–CEN will require a fund to report whether the fund engages in swing pricing and, if so, the fund's swing factor upper limit.[452]

The final form amendments differ from the proposal in several ways that may have potential economic consequences. Specifically, funds that use swing pricing will be required to disclose the swing factor upper limit on

[448] Item 6(d) of Form N–1A.

[449] *Id.*

[450] Item 4(b)(2)(ii) and Item 4(b)(2)(iv)(E) of Form N–1A.

[451] Form N–1A as amended requires a fund to disclose both its GAAP NAV as well as its Swung NAV (if it swings at period end) in the financial highlights section of the fund's financial statements and the financial highlights information in the fund's registration statement. *See* Item 13(a) of Form N–1A. The financial highlights section, which details per share operating performance (by share class), rolls forward the GAAP NAV per share from beginning to end of period. The roll forward will require disclosure of the per share cumulative impact of amounts related to swing pricing (during the period) as a separate line item below the total distributions line in the roll forward. Funds also are required to disclose whether the fund's net asset value per share has swung during the period in the notes to the financial statements. Investors will not be able to fully disentangle the effects of swing pricing on fund performance from these figures, but Commission staff will have access to complete records of daily NAV adjustments and could look at the effects of swing pricing as part of the examination process. As noted above, the Commission is not prohibiting funds from disclosing an unadjusted NAV outside of the financial statements in other performance information, which may be useful information in understanding the impact of swing pricing on a fund.

[452] Item C.21 of Form N–CEN.

Form N–1A and Form N–CEN, and will be required to include a general description of the effects of swing pricing on a fund's annual and average total returns for the applicable periods on Form N–1A. Any significant economic effects of these changes are discussed below.

b. Benefits

The disclosure and reporting requirements will increase shareholders' understanding of particular funds' swing pricing policies, which should assist investors in making investment choices that better match their risk tolerances. For example, disclosure of the swing factor upper limit will inform investors as to the maximum amount of costs they could be charged if they were to redeem or subscribe on a day where the fund is swinging its NAV in response to redemptions or subscriptions, respectively. Similarly, disclosures about the effects of swing pricing on a fund's annual and average total returns should help investors understand the extent to which fund performance may have been impacted by the fund's use of swing pricing. However, as discussed above, while we are not requiring disclosure in the financial statements of the fund's total return based on the Swung NAV, we are not prohibiting funds from disclosing this information along with the total return based on the unswung NAV outside of the financial statements.[453] Finally, the presumption against disclosure of the swing factor or threshold should help protect against harm to investors that could potentially result from gaming of the fund's swing pricing, although as discussed above, the likelihood of gaming is mitigated by the lack of public availability of real-time flow data.

Because we cannot predict the extent to which the requirements will enhance investors' awareness of funds' swing pricing and its impact on investors, we are unable to quantify the potential benefits discussed in this section.

c. Costs

Funds will incur costs to comply with the disclosure and reporting requirements regarding swing pricing. Commenters' responses to the estimates of these costs are discussed in the PRA discussion below, and we have updated all estimates in this section to reflect changes in the PRA.[454]

We estimate that the one-time costs to comply with the amendments to Form N–1A for funds that choose to employ swing pricing will be approximately $648 per fund (plus printing costs).[455] Based on this estimate we further estimate that the total one-time costs for funds that chose to employ swing pricing will be approximately $307,152 for all funds.[456] We estimate that each of these funds will incur an ongoing cost associated with compliance with the amendments to Form N–1A of approximately $324 each year to review and update the disclosure regarding swing pricing.[457] Based on these estimates we further estimate that the total ongoing annual costs for funds that chose to employ swing pricing will be approximately $153,576 for all funds.[458] In addition, we expect that there will be minor costs associated with the related amendments to Regulation S–X, which are discussed above.

We estimate compliance with the new item of Form N–CEN related to swing pricing will involve an annual hourly burden which is discussed in the PRA discussion below.[459] We estimate that 10,633 funds will be required to file responses on Form N–CEN.[460] We estimate that 9,039 funds will be required to file responses to Item C.21 of Form N–CEN regarding swing pricing.[461] We estimate an average annual hourly burden associated with providing additional responses to Form N–CEN as a result of the additional reporting requirement will be approximately .5 hours per fund, for a total average annual burden of 4,519.5 hours.[462] We do not estimate any change to the external costs associated with the proposed Form N–CEN

d. Effects on Efficiency, Competition, and Capital Formation

We believe the disclosure and reporting requirements on Form N–1A and Form N–CEN could increase informational efficiency by providing additional information about a fund's use of swing pricing. To the extent that investors better understand a fund's swing pricing, including the upper limit of the swing factor, they can trade off the benefit from dilution protection with the increase in return volatility, as discussed above, when deciding on investing in a fund that choses to use swing pricing. To the extent that investors invest in funds that adopt swing pricing because of these disclosure and reporting requirements, the new disclosure and reporting requirements will also increase capital formation. However, we do not believe that this effect will be significant because such investors are more likely already investing in other funds and hence any reallocation will be a ''zero-sum game.''

Increased investor awareness of funds' swing pricing policies, including swing factor upper limits, improve the investors' ability to compare funds that elect to use swing pricing with each other as well as with funds that do not elect to implement swing pricing. Such a comparison could improve competition among funds, which could benefit investors. While this competition could unintentionally increase incentives for funds to overestimate the swing factors to improve and compete on performance, the additional safeguards required by the final rule should prevent such a negative impact.

D. Reasonable Alternatives

The following discussion addresses significant alternatives to the final swing pricing regulations. More detailed alternatives to the individual elements of the swing pricing regulations are discussed in detail above.[463]

Instead of permitting, but not requiring, funds to adopt swing pricing policies and procedures under rule 22c–1(a)(3), the Commission could have

[453] See *infra* section II.A.iii.g.

[454] *See infra* section IV.

[455] This estimate is based on the following calculation: 2 hours (2 hour to update registration statement to include swing pricing-related disclosure statements) × $324 (blended rate for a compliance attorney ($340) and a senior programmer ($308)) = $648. This figure incorporates the costs we estimated for each fund to update its registration statement to include the required disclosure about the fund's use of swing pricing, including an explanation of what swing pricing is, an explanation of the circumstances under which it will use swing pricing, the effects of using swing pricing; the fund's swing factor upper limit; and disclosures about the effects of swing pricing on a fund's annual and average total returns. The costs associated with these activities are all paperwork-related costs and are discussed in more detail *infra* at section IV.E.

[456] This estimate is based on the following calculation: 948 hours × $324 (blended rate for a compliance attorney ($340) and a senior programmer ($308)) = $307,152. The costs associated with these activities are all paperwork-related costs and are discussed in more detail *infra* at section IV.E.

[457] This estimate is based on the following calculations: 1 hours × $324 (blended hourly rate for a compliance attorney ($340) and a senior programmer ($308)) = $324. The costs associated with these activities are all paperwork-related costs and are discussed in more detail *infra* at section IV.E.

[458] This estimate is based on the following calculation: 474 hours × $324 (blended hourly rate for a compliance attorney ($340) and a senior programmer ($308)) = $153,576. The costs associated with these activities are all paperwork-related costs and are discussed in more detail *infra* at section IV.E.

[459] *See infra* section IV.

[460] *See* 2016 ICI Fact Book, *supra* footnote 388, at 22, 176, 183.

[461] *See supra* footnote 388.

[462] This estimate is based on the following calculation: 9,039 funds × .5 hour = 4,519.5 hours.

[463] *See supra* sections II.A and II.B.

adopted a rule that would require all funds, or funds with certain strategies, to adopt swing pricing policies and procedures. This alternative approach would have the benefit of establishing a uniform regulatory framework to prevent potential shareholder dilution, and might lower the per fund cost of implementing swing pricing due to economies of scale. But because funds differ notably in terms of their particular circumstances and risks, as well as with respect to the tools funds use to manage risks relating to liquidity and shareholder purchases and redemptions, we decided to adopt a rule that would permit swing pricing as a voluntary tool for funds. The adopted approach will allow funds to weigh the advantages of swing pricing (*e.g.,* improved allocation of trading costs) against potential disadvantages (*e.g.,* the potential for swing pricing to increase the volatility of a fund's NAV in the short term and its operational costs). Some commenters advocated for the Commission to require all funds to adopt swing pricing policies and procedures,[464] but most commenters supported the permissive (not mandatory) approach.[465]

While rule 22c–1(a)(3) enables partial swing pricing (that is, a NAV adjustment would not be permitted unless net purchases or redemptions exceed a positive threshold set by the fund), the Commission instead could have adopted a rule that would permit full swing pricing (that is, a NAV adjustment would occur any time the fund experiences net purchases or net redemptions, or equivalently allowed zero percent thresholds). Full swing pricing would result in *any* estimated costs associated with purchases or redemptions being passed along to the shareholders whose actions created those costs, whereas the partial swing pricing contemplated by the rule will only allocate costs related to purchase and redemption activity to purchasing or redeeming shareholders when net purchases or net redemptions exceed the fund's positive swing threshold. Most commenters supported permitting only ''partial'' swing pricing,[466] but some commenters did suggest that funds should have the option to use full swing pricing.[467] Nevertheless, we believe that the partial swing pricing policy choice is, on balance, preferable to the full swing pricing option. We expect that partial swing pricing, as opposed to full swing pricing, will reduce any performance volatility potentially associated with swing pricing and could reduce operational costs associated with swinging a fund's NAV (*e.g.,* record keeping requirements) when fund flows are not significant enough to cause significant shareholder dilution. Also, the use of partial swing pricing recognizes that purchases or redemptions below a certain threshold are less likely to require a fund to trade portfolio assets, and therefore a NAV adjustment might be less appropriate if purchases or redemptions might not result in costs associated with asset purchases or sales (in which case, a NAV adjustment could unfairly penalize purchasing or redeeming shareholders).

We considered permitting funds to use swing pricing only to adjust their NAV downward in the event that net redemptions exceeded a particular threshold, as there may be more significant issues regarding potential dilution for non-transacting shareholders in connection with shareholder redemptions, because funds are obligated to satisfy redemption requests pursuant to section 22(e) of the Act. In this regard, we note that unlike redemptions, funds may reserve the right to decline purchase requests. For example, a fund may decline purchase requests from shareholders who engaged in frequent trading, and it also may decline large purchase requests that would negatively impact the fund. However, the final rule contemplates that funds will use swing pricing to adjust their NAV upward or downward because we believe that swing pricing could be a useful tool in mitigating dilution associated with shareholder purchase activity as well as shareholder redemption activity.

We considered exempting investors with small investments in a fund from the NAV adjustments permitted under rule 22c–1(a)(3). However, we believe that the costs of exempting those investors from the NAV adjustment could be significant, particularly the operational costs that could result from the relatively complex process of applying the NAV adjustment only to some investors and not to others. Exempting small investors from the NAV adjustment also may not be beneficial to a fund because such exemption could lead to large investors engaging in gaming behavior—that is, structuring their investments in funds using multiple small accounts—in order to use the exemption. This could contravene the purpose of the exemption and be costly for funds to detect. In addition, while small investors' trading activity might not incur significant costs individually, their aggregate trading in the fund could incur costs, just as it would if they were trading directly in, for example, the stock market, and it would not be fair to impose those collectively generated costs on non-transacting shareholders.

Some commenters suggested that redemption fees may have a better combination of potential cost and benefits compared to swing pricing.[468] Redemption fees are already permissible under existing rules, subject to certain conditions, so swing pricing is an alternative tool funds can use to mitigate dilution.[469] To the extent they are permissible under existing rules, purchase fees allow funds to recoup the costs associated with fund subscriptions in the same way redemption fees recoup costs associated with fund redemptions. Both swing pricing and purchase and redemption fees can pass on trading-related costs to transacting shareholders, but they accomplish this in different ways. The specific implementation of a redemption fee can vary—funds can impose a constant fee that applies to all redemptions or can apply it more selectively to transactions of a given size in order to reduce dilution of the fund's outstanding shares. In theory, purchase fees can be applied in a similar manner.

The key characteristic of a redemption or purchase fee, relative to swing pricing, is that it is imposed on a given investor's transaction independent of other investors' transactions in a fund, which means, for example, that investors may pay a fee even when their transactions do not result in significant net flows or any corresponding dilution for the fund's non-transacting investors. On the other hand, swing pricing allows funds to condition when they recover costs from transacting investors on the net flows to their fund on a given trading date, which could allow funds to more fairly allocate the actual costs created by investor flows and prevent shareholder dilution. As with redemption and purchase fees, it is still possible that investors pay a cost via the swing factor that ends up being larger

[468] ICI Comment Letter I; PIMCO Comment Letter.

[469] As discussed above, funds are currently permitted under rule 22c–2 to impose redemption fees under certain circumstances. *See also* Redemption Fees Adopting Release, *supra* footnote 24.

than the costs they impose on the fund—for example, if the discount at which assets are sold to cover redemptions turn out to be smaller than what was anticipated on the redemption date—but if funds are able to properly calibrate their swing factors, investors should end up paying the ex-ante expected cost associated with a given level of fund flows. The extent to which swing pricing is able to recover the expected costs associated with a given transaction is limited by the maximum swing factor size of 2% of a fund's NAV, but redemption fees are subject to the same limitation. Purchase fees and redemption fees, relative to swing pricing, have the benefit of being simple for investors to understand, they do not produce the same short-term volatility and tracking error concerns as swing pricing, and they provide more transparency to potential investors regarding the expected performance impact of anti-dilutive measures on a fund's NAV (the proceeds from both redemption fees and swing pricing eventually make their way into the NAV).

If purchase or redemption fees are made contingent on the size of a transaction, a fund may be able to tailor these fees to transactions that are more likely to impose costs on non-transacting investors. For example, a large redemption may make it more likely that a fund experiences significant net redemptions on a given day. Targeting purchase and redemption fees in this manner could allow a fund to achieve some of the benefits of swing pricing without its potentially redistributive effects.[470] For example, if a fund experiences gross subscriptions of 10 shares and gross redemptions of 20 shares on a given day, and recovers trading costs from redeeming investors via swing pricing, roughly half of those proceeds will be returned to non-transacting shareholders in the fund (the other half goes to subscribers), and some dilution will still occur. To the extent that fund flows on that day are driven by large redemptions, a targeted redemption fee may allow a fund to assess estimated costs to redeeming investors while returning all proceeds to the fund.

In terms of direct costs, redemption fees may require more coordination with a fund's service providers because these fees need to be imposed on an investor-by-investor basis—which may be particularly difficult with respect to omnibus accounts. While there are funds that currently utilize redemption fees and have built systems to support them, these redemption fees are generally constant fees that are not tailored to the costs of a given redemption. Swing pricing, on the other hand, will require some funds and intermediaries to create new systems and operational procedures (discussed above), but once those are in place swing pricing will be incorporated in the process by which a fund strikes its NAV, and will not require any additional investor-specific infrastructure to assess trading costs to them.

Finally, a closely related alternative to swing pricing that the Commission could have adopted would be to permit funds to employ dual pricing, which has been used in certain European funds.[471] Instead of swinging the NAV in one direction based on net flows and establishing a single price at which investors transact, dual pricing would allow the fund to set a ''spread'' around the fund's true NAV: A bid price at which the fund redeems shares and an offer price at which the fund issues new shares. This spread could be set in a manner similar to the rule's swing factor (*e.g.,* based on a threshold of net flows), or on an ad-hoc basis based on the fund's portfolio and any relevant market conditions on the trade date. Dual pricing is an alternative that shares many costs and benefits with the rule's swing pricing component. The major benefit of dual pricing relative to the rule is that it does not allow one type of fund investor to benefit at the expense of another. For example, under swing pricing, if the NAV is adjusted downwards when a fund experiences net redemptions, any subscribing investors are able to purchase the fund at a discount at the expense of some of the redeeming investors, and this reduces the proceeds that are recovered by non-transacting shareholders in the fund. Under the same scenario with dual pricing, subscribers do not receive a discount (if anything, they may pay a premium which benefits non-transacting shareholders), and all of the proceeds from redeeming investors are returned to the fund. The primary cost of dual pricing relative to the rule is that it may impose additional requirements and risks on fund intermediaries, service providers, and other third parties as they now need to handle two NAVs on each trade date. Furthermore, to the extent that dual pricing is implemented using a constant spread around a fund's NAV, it may not be able to reflect the costs associated with fund redemptions or subscriptions on a given day as well as swing pricing.

IV. Paperwork Reduction Act Analysis

A. Introduction

The amendments to rule 22c–1 contain ''collections of information'' within the meaning of the Paperwork Reduction Act of 1995 (''PRA'').[472] In addition, the amendments to rule 31a–2, Regulation S–X and Form N–1A will impact the collections of information burden under those rules and form.[473] The new reporting requirements on Form N–CEN will impact the collections of information burden associated with the form described in the Investment Company Reporting Modernization Adopting Release.[474]

The titles for the existing collections of information are: ''Rule 31a–2 Records to be preserved by registered investment companies, certain majority-owned subsidiaries thereof, and other persons having transactions with registered investment companies'' (OMB Control No. 3235–0179); and ''Form N–1A under the Securities Act of 1933 and under the Investment Company Act of 1940, Registration Statement of Open-End Management Investment Companies'' (OMB Control No. 3235–0307). In the Investment Company Reporting Modernization Adopting Release, we submitted new collections of information for Form N–CEN.[475] The title for the new collections of information is: ''Form N–CEN Under the Investment Company Act, Annual Report for Registered Investment Companies.''

We are submitting new collections of information for the amendments to rule 22c–1 under the Investment Company Act of 1940. The title for the new collections of information will be: ''Rule 22c–1 Under the Investment Company Act of 1940, Pricing of redeemable securities for distribution, redemption and repurchase.'' The Commission is submitting these collections of information to the OMB for review in accordance with 44 U.S.C. 3507(d) and 5 CFR 1320.11. An agency may not conduct or sponsor, and a person is not

[470] *See supra* footnote 427 and related discussion on distributional issues with swing pricing.

[471] *See* BlackRock Fund Structures Paper, *supra* footnote 46 for a high level comparison of some of the differences between dual pricing and swing pricing.

[472] 44 U.S.C. 3501 through 3521.

[473] The paperwork burden from Regulation S–X is imposed by the rules and forms that relate to Regulation S–X and, thus, is reflected in the analysis of those rules and forms. To avoid a PRA inventory reflecting duplicative burdens and for administrative convenience, we have previously assigned a one-hour burden to Regulation S–X.

[474] *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 11, at section IV.A.

[475] *See id.*

required to respond to, a collection of information unless it displays a currently valid control number.

The Commission is adopting amendments to rule 22c–1, rule 31a–2, Regulation S–X, and Form N–1A. The Commission also is adopting a new item to Form N–CEN. The amendments are designed to prevent potential dilution of interests of fund shareholders in light of shareholder purchase and redemption activity and enhance disclosure and Commission oversight of funds' use of swing pricing. We discuss below the collection of information burdens associated with these reforms. In the Proposing Release, the Commission solicited comment on the collection of information requirements and the accuracy of the Commission's statements in the Proposing Release.

B. Rule 22c–1

We are adopting, largely as proposed, amendments to rule 22c–1 that will enable a fund (with the exception of a money market fund or ETF) to choose to use ''swing pricing'' as a tool to mitigate shareholder dilution.[476] This will be a new collection of information under the PRA. We believe that rule 22c–1 will promote investor protection by providing funds with an additional tool to mitigate the potentially dilutive effects of shareholder purchase or redemption activity and provide a set of operational standards that will allow funds to gain comfort using swing pricing as a new means of mitigating potential dilution.[477]

In order to use swing pricing under rule 22c–1, as amended, a fund is required to establish and implement swing pricing policies and procedures that meet certain requirements.[478] The policies and procedures must specify the process for how the fund's swing threshold(s) and swing factor(s) are determined, which must include the establishment of an upper limit on the swing factor(s) used (which may not exceed two percent of NAV per share).[479] The amendments require a fund's board of directors to approve the fund's swing pricing policies and procedures, as well as the fund's swing threshold and swing factor upper limit (and any changes to the swing threshold or swing factor upper limit).[480] The fund's board is also required to review, no less frequently than annually, a written report prepared by the persons responsible for administering swing pricing that describes: (i) Its review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution; (ii) any material changes to the fund's swing pricing policies and procedures since the date of the last report; and (iii) its review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of the rule, including the information and data supporting these determinations.[481] A fund is required to maintain the fund's swing pricing policies and procedures and a written copy of the periodic report provided to the board.[482] The requirements that funds adopt policies and procedures, obtain board approval and periodic review, provide a written report to the board, and retain certain records related to swing pricing are collections of information under the PRA. The respondents to amended rule 22c–1 will be open-end management investment companies (other than money market funds or ETFs) that engage in swing pricing. Compliance with rule 22c–1(a)(3) will be mandatory for any fund that chooses to use swing pricing to adjust its NAV in reliance on the amendments. The information required under rule 22c–1 regarding swing pricing when provided to the Commission in connection with staff examinations and investigations and oversight programs will be kept confidential subject to the provisions of applicable law.

In the Proposing Release, we estimated that 167 fund complexes include funds that would adopt swing pricing policies and procedures pursuant to the rule.[483] For purposes of the PRA analysis, we estimated that each fund complex would incur a one-time average burden of 24 hours to document swing pricing policies and procedures. Under the proposal, rule 22c–1 would have required fund boards initially to approve the swing pricing policies and procedures (including the swing threshold) and any material changes to them, and we estimated a one-time burden of five hours per fund complex associated with the fund board's review and approval of swing pricing policies and procedures. Amortized over a 3-year period, we estimated that this would be an annual burden per fund complex of about 10 hours. Accordingly, we estimated that the total burden associated with the preparation and approval of swing pricing policies and procedures by those fund complexes that we believed would use swing pricing would be 4,843 hours.[484] We also estimated that it would cost a fund complex $21,710 to document, review and initially approve these policies and procedures, for a total cost of $3,625,570.[485]

As discussed above, many commenters expressed general concerns about the operational and technology costs associated with swing pricing and recommended that the Commission consider the substantial costs and technology challenges that need to be overcome to implement swing pricing.[486] One commenter expressed the belief that the Commission significantly underestimated the costs associated with developing and implementing the systems and procedures necessary to comply with rule 22c–1 swing pricing requirements and stated that its implementation costs for swing pricing would likely be four or five times more costly than the Commission's estimates in the proposal.[487] We appreciate the information provided by the commenter and, in consideration of their comment, have extrapolated from this commenter's estimate increased cost estimates for the amendments to rule 22c–1 adopted today.[488]

[476] *See supra* section II.A. *See also* rule 22c–1(a)(3).

[477] *See supra* section II.A.

[478] *See* rule 22c–1(a)(3)(i).

[479] *See* rule 22c–1(a)(3)(i)(B) and (C).

[480] *See* rule 22c–1(a)(3)(ii)(A) and (B).

[481] *See* rule 22c–1(a)(3)(ii)(D).

[482] *See* rule 22c–1(a)(3)(iii).

[483] *See* Proposing Release, *supra* footnote 6, at n. 766 and accompanying text.

[484] This estimate was based on the following calculation: (24 + 5) hours × 167 fund complexes = 4,843 hours.

[485] These estimates were based on the following calculations: 12 hours × $198 (hourly rate for a senior accountant) = $2,376; 12 hours × $455.5 (blended hourly rate for assistant general counsel ($426) and chief compliance officer ($485)) = $5,466; 3 hours × $4,400 (hourly rate for a board of 8 directors) = $13,200; 2 hours (for a fund attorney's time to prepare materials for the board's determinations) × $334 (hourly rate for a compliance attorney) = $668; ($2,376 + $5,466 + $13,200 + $668) = $21,710; $21,710 × 167 fund complexes = $3,625,570. The hourly wages used were from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead. *See also infra* footnote 492 (discussing basis for estimated hourly rate for a board of directors).

[486] *See supra* section II.A.2. *See also e.g.,* Dechert Comment Letter; Eaton Vance Comment Letter; ICI Comment Letter I; IDC Comment Letter; Invesco Comment Letter; J.P. Morgan Comment Letter; Charles Schwab Comment Letter; T. Rowe Comment Letter.

[487] *See* Charles Schwab Comment Letter (stating that the Commission based its estimated costs to establish and implement swing pricing policies and procedures in part on the costs associated with implementing the fees and gates provisions of the 2014 money market fund reform rule and that, in the commenter's experience, the implementation costs for the money market fund reform rule were severely understated).

[488] *See supra* section III.C.1.b.

The Commission has modified the estimated increase in burden hours associated with a fund documenting its swing pricing policies and procedures in consideration of commenters' concerns that such burdens were underestimated as well as modifications made to the proposal and updates to data figures that were utilized in the Proposing Release. We estimate that 84 fund complexes, rather than 167 fund complexes (half as many fund complexes as estimated in the proposal), include funds that will adopt swing pricing policies and procedures pursuant to the rule.[489] While one commenter suggested that the burden to comply with the amendments to rule 22c–1 would be four or five times more costly than in the proposal, we believe that with respect to the PRA analysis, the estimated burdens for documenting swing pricing procedures will not be as high as the commenter's estimate of the costs associated with the entire implementation of swing pricing policies and procedures. Based on our review of the adopted requirements, we estimate that each fund complex will incur a one-time average burden of 48 hours, rather than 24 hours, to document swing pricing policies and procedures. We further estimate that each fund complex will spend 2 hours, on average, preparing the required written report to the board. Since a fund board will approve the fund's swing pricing policies and procedures, swing threshold, and swing factor upper limit as well as review, no less frequently than annually, a written report that includes certain required information, we estimate a one-time burden of 7 hours, rather than 5 hours per fund complex associated with the fund board's review and approval of swing pricing policies and procedures.

Amortized over a 3-year period, we estimate that this will be an annual burden per fund complex of about 19 hours, rather than 10 hours.[490] Accordingly, we estimate that the total burden associated with the preparation and approval of swing pricing policies and procedures by those fund complexes that we believe will use swing pricing will be 4,788 hours, rather than 4,843 hours.[491] We also estimate that it will cost a fund complex $35,496, rather than $21,710, to document, review and initially approve these policies and procedures, for a total cost of $2,981,664, rather than $3,625,570.[492]

We are adopting, as proposed, amendments to rule 22c–1 to require a fund that uses swing pricing to maintain the fund's swing policies and procedures that are in effect, or at any time within the past six years were in effect, in an easily accessible place.[493] In a modification to the proposal, we also are requiring a fund to retain a written copy of the periodic report provided to the board prepared by the swing pricing administrator that describes, among other things, the swing pricing administrator's review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution and any back-testing performed.[494] The retention of these records is necessary to allow the staff during examinations of funds to determine whether a fund is in compliance with its swing pricing policies and procedures and with rule 22c–1, as amended.

In the Proposing Release, we estimated that the burden would be three hours per fund complex to retain the proposed swing pricing records, with 1.5 hours spent by a general clerk and 1.5 hours spent by a senior computer operator. We estimated a time cost per fund complex of $216.[495] We estimated that the total for recordkeeping related to swing pricing would be 501 hours, at an aggregate cost of $36,072 for all fund complexes that we believe include funds that would adopt swing pricing policies and procedures.[496] Amortized over a three-year period, we believed that the hour burdens and time costs associated with the proposed amendments to rule 22c–1, including the burden associated with the requirements that funds adopt policies and procedures, obtain board approval and retain certain records related to swing pricing, would result in an average aggregate annual burden of 2,115 hours and average aggregate time costs of $1,244,595.[497] We estimated that there were no external costs associated with this collection of information.

We did not receive any comments on the estimated hour and cost burdens for this record retention requirement. The Commission has modified the estimated increase in annual burden hours and total time costs that will result from the amendments based on the modification to the proposal to require funds to retain a written copy of the annual report provided to the board from the swing pricing administrator. We have also modified the estimated increase in annual burden hours and total time costs in light of updated data concerning funds and fund personnel salaries. We estimate that the burden will be four hours, rather than three hours, per fund complex to retain these records, with 2 hours, rather than 1.5 hours, spent by a general clerk and 2 hours, rather than 1.5 hours, spent by a senior computer operator. Based on updates to the industry data figures that were utilized in the Proposing Release, we estimate a time cost per fund complex of $292, rather than $216.[498] We estimate that the total for recordkeeping related to swing pricing will be 336 hours, rather than 501 hours, at an aggregate cost of $24,528, rather than $36,072, for all fund complexes that we believe include

[489] *See supra* section III.C.1.b. As we discussed in section III.C.1.b, commenters noted a variety of challenges associated with the immediate implementation of swing pricing. Accordingly, we have revised our estimated number of fund complexes that will implement swing pricing within the three-year period discussed below. Additionally, the two-year extended effective date means that no fund may implement swing pricing until the third year, which will likely further reduce the number of funds for purposes of this estimate.

[490] This estimate is based on the following calculations: 48 hours + 2 hours + 7 hours ÷ 3 = 19 hours.

[491] This estimate is based on the following calculation: (48 + 2 + 7) hours × 84 fund complexes = 4,788 hours.

[492] These estimates are based on the following calculations: 24 hours × $201 (hourly rate for a senior accountant) = $4,824; 24 hours × $463 (blended hourly rate for assistant general counsel ($433) and chief compliance officer ($493)) = $11,112; 4 hours × $4,465 (hourly rate for a board of 8 directors) = $17,860; 5 hours (for a fund attorney's time to prepare materials for the board's determinations) × $340 (hourly rate for a compliance attorney) = $1,700; ($4,824 + $11,112 + $17,860 + $1,700) = $35,496; $35,496 × 84 fund complexes = $2,981,664. The hourly wages used are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead. The staff previously estimated in 2009 that the average cost of board of director time was $4,000 per hour for the board as a whole, based on information received from funds and their counsel. Adjusting for inflation, the staff estimates that the current average cost of board of director time is approximately $4,465.

[493] *See* rule 22c–1(a)(3)(iii).

[494] *See id.*

[495] This estimate was based on the following calculations: 1.5 hours × $57 (hourly rate for a general clerk) = $85.5; 1.5 hours × $87 (hourly rate for a senior computer operator) = $130.5. $85.5 + $130.5 = $216.

[496] These estimates were based on the following calculations: 3 hours × 167 fund complexes = 501 hours. 167 fund complexes × $216 = $36,072.

[497] These estimates were based on the following calculations: 4,843 hours (year 1) + (3 × 501 hours) (years 1, 2 and 3) ÷ 3 = 2,115 hours; $3,625,570 (year 1) + (3 × $36,072) (years 1, 2 and 3) ÷ 3 = $1,244,595.

[498] This estimate is based on the following calculations: 2 hours × $58 (hourly rate for a general clerk) = $116; 2 hours × $88 (hourly rate for a senior computer operator) = $176. $116 + $176 = $292.

funds that would adopt swing pricing policies and procedures.[499]

Amortized over a three-year period, we believe that the hour burdens and time costs associated with the amendments to rule 22c–1, including the burden associated with the requirements that funds adopt policies and procedures, obtain board approval, and periodic review of an annual written report from the swing pricing administrator, and retain certain records and written reports related to swing pricing, will result in an average aggregate annual burden of 1,932 hours, rather than 2,115 hours, and average aggregate time costs of $1,018,416, rather than $1,244,595.[500] We continue to estimate that there are no external costs associated with this collection of information.

C. Rule 31a–2

Section 31(a)(1) of the Investment Company Act requires registered investment companies and certain of their majority-owned subsidiaries to maintain and preserve records as prescribed by Commission rules. Rule 31a–1 under the Act specifies the books and records that must be maintained. Rule 31a–2 under the Act specifies the time periods that entities must retain certain books and records, including those required to be maintained under rule 31a–1. The retention of records, as required by rule 31a–2, is necessary to ensure access by Commission staff to material business and financial information about funds and certain related entities. This information is used by the staff to evaluate fund compliance with the Investment Company Act and regulations thereunder. The Commission currently estimates that the annual burden associated with rule 31a–2 is 220 hours per fund, with 110 hours spent by a general clerk at a rate of $52 per hour and 110 hours spent by a senior computer operator at a rate of $81 per hour.[501] The current estimate of the total annual burden for all funds to comply with rule 31a–2 is approximately 766,480 hours at an estimated cost of $50,970,920.[502]

We are adopting amendments to rule 31a–2 to require a fund that chooses to use swing pricing to create and maintain a record of support for each computation of an adjustment to the NAV of the fund's shares based on the fund's swing policies and procedures.[503] This collection of information requirement is mandatory for any fund that chooses to use swing pricing to adjust its NAV in reliance on the adopted amendments to rule 22c–1. To the extent that the Commission receives confidential information in connection with staff examinations and investigations and oversight programs pursuant to this collection of information, such information will be kept confidential, subject to the provisions of applicable law.

In the proposal, we estimated that approximately 947 funds would use swing pricing and that each fund that uses swing pricing generally would incur an additional burden of 1 hour per year in order to comply with the proposed amendments to rule 31a–2.[504] Accordingly, we estimated that the total average annual hour burden associated with the proposed amendments to rule 31a–2 would have been an additional 947 hours at a cost of $68,169.[505]

Based on updates to industry data figures that were utilized in the Proposing Release and the reduction in our estimate of the number of funds in fund complexes that will choose to use swing pricing, for purposes of the PRA analysis, we estimate that approximately 474 funds (half as many funds as proposed) will use swing pricing.[506] In light of the concerns expressed by commenters that the Commission underestimated the operational costs associated with swing pricing discussed above,[507] we estimate that each fund that uses swing pricing generally will incur an additional burden of 3 hours, rather than 1 hour per year in order to comply with the amendments to rule 31a–2. Accordingly, we estimate that the total average annual hour burden associated with the amendments to rule 31a–2 will be an additional 1,422 hours, rather than 947 hours, at a cost of $103,806, rather than $68,169.[508]

The Commission currently estimates that the average external cost of preserving books and records required by rule 31a–2 is approximately $70,000 per fund at a total cost of approximately $243,880,000 per year,[509] but that funds would already spend approximately half this amount to preserve these same books and records, as they are also necessary to prepare financial statements, meet various state reporting requirements, and prepare their annual federal and state income tax returns. Therefore, the Commission estimated that the total annual cost burden for all funds as a result of compliance with rule 31a–2 is approximately $121,940,000.[510] In the proposal, we estimated that the annual external cost burden of compliance with the information collection requirements of rule 31a–2 would increase by $300 per fund that engages in swing pricing, for an increase in the total annual cost burden of $284,100.[511] We are modifying this figure in response to commenters' general concerns that the Commission as underestimated the operational costs associated with swing pricing and the reduction in the number of funds we estimate will use swing pricing, as discussed above. We estimate that the annual external cost burden of compliance with the information collection requirements of rule 31a–2 would increase by $600 per fund, rather than $300 per fund that engages in swing pricing, for an increase in the total annual cost burden of $284,400, rather than $284,100.[512]

D. Form N–CEN

On May 20, 2015, we proposed to amend rule 30a–1 to require all funds to file reports with certain census-type

[499] These estimates are based on the following calculations: 4 hours × 84 fund complexes = 336 hours. 84 fund complexes × $292 = $24,528.

[500] These estimates are based on the following calculations: (4,788 hours (year 1) + (3 × 336 hours) (years 1, 2 and 3)) ÷ 3 = 1,932 hours; ($2,981,664 (year 1) + (3 × $24,528) (years 1, 2 and 3)) ÷ 3 = $1,018,416.

[501] The estimated salary rates were derived from SIFMA's Office Salaries in the Securities Industry 2011, modified to account for an 1800-hour work-year and multiplied by 2.93 to account for bonuses, firm size, employee benefits, and overhead.

[502] These estimates were based on the following calculations: 220 hours × 3,484 funds (the estimated number of funds the last time the rule's information collections were submitted for PRA renewal in 2012) = 766,480 total hours; 776,480 hours ÷ 2 = 383,240 hours; 383,240 × $52/hour for a clerk = $19,928,480; 383,240 × $81 rate per hour for a computer operator = $31,042,440; $19,928,480 + $31,042,440 = $50,970,920 total cost.

[503] Proposed amendment to rule 31a–2(a)(2).

[504] *See* Proposing Release, *supra* footnote 6, at section V.D.

[505] These estimates were based on the following calculations: 1 hour × 947 funds = 947 total hours; 474 hours × $57 rate per hour for a general clerk = $27,018; 473 hours × $87 rate per hour for a senior computer operator = $41,151; $27,018 + $41,151 = $68,169 total cost.

[506] *See also, supra* footnote 489 and accompanying text.

[507] *See, e.g.,* Dechert Comment Letter; Eaton Vance Comment Letter; J.P. Morgan Comment Letter; T. Rowe Comment Letter.

[508] These estimates are based on the following calculations: 3 hour × 474 funds = 1,422 total hours; 711 hours × $58 rate per hour for a general clerk = $41,238; 711 hours × $88 rate per hour for a senior computer operator = $62,568; $41,238 + $62,568 = $103,806 total cost.

[509] This estimate is based on the following calculation: 3,484 funds (the estimated number of funds the last time the rule's information collections were submitted for PRA renewal in 2012) × $70,000 = $243,880,000.

[510] *See* Submission of OMB Review; and Comment Request, Extension: Rule 31a–2, OMB Control No. 3235–0179, Securities and Exchange Commission, 77 FR 66885 (Nov. 7, 2012).

[511] This estimate was based on the following calculation: 947 funds × $300 = $284,100.

[512] This estimate is based on the following calculation: 474 funds × $600 = $284,400.

information on proposed Form N–CEN with the Commission on an annual basis. Proposed Form N–CEN would have been a collection of information under the PRA, and was designed to facilitate the Commission's oversight of funds and its ability to monitor trends and risks. The collection of information under Form N–CEN would be mandatory for all funds, and responses would not be kept confidential.

In the Investment Company Reporting Modernization Proposing Release, we estimated that the average annual hour burden per response for proposed Form N–CEN for the first year would be 32.37 hours and 12.37 hours in subsequent years.[513] Amortizing the burden over three years, we estimated that the average annual hour burden per fund per year would be 19.04 and the total average annual hour burden would be 59,900 hours.[514] We also estimated that all applicable funds would incur, in the aggregate, external annual costs of $1,748,637, which would include the costs of registering and maintaining LEIs for funds.[515]

We are adopting, substantially as proposed, a new reporting item on Form N–CEN to require funds to report information regarding swing pricing.[516] Specifically, the new item on Form N–CEN will require funds (other than money market funds and ETFs) to report whether they used swing pricing during the reporting period and, if so, the fund's swing factor upper limit.[517]

In the Proposing Release, we estimated that 8,734 funds would be required to file responses on Form N–CEN. We estimated that the average annual hour burden per additional response to Form N–CEN as a result of the proposed new reporting requirements would be 0.5 hour per fund per year for a total average annual hour burden of 4,367 hours.[518] We did not estimate any change to the external costs associated with proposed Form N–CEN.

We did not receive any comments on these estimated hour and cost burdens. The Commission has modified the estimated increase in annual burden hours and total time costs based on the modification to the proposal to address separately in this Release the requirement to report whether a fund used swing pricing during the reporting period and require funds report the swing factor upper limit if swing pricing was used during the reporting period. The estimated increase in annual burden hours and total time costs also has been modified in light of updated data concerning funds and fund personnel salaries. We estimate that 9,039 funds will be required to file responses to Item C.21 of Form N–CEN regarding swing pricing.[519] For these funds, we estimate that the average annual hour burden per additional response to Form N–CEN as a result of the adopted swing pricing-related additions to Form N–CEN will be 0.5 hour per fund per year for a total average annual hour burden of 4,519.5 hours.[520] We do not estimate any change to the external costs associated with proposed Form N–CEN.

E. Form N–1A

Form N–1A is the registration form used by open-end investment companies. The respondents to the amendments to Form N–1A adopted today are open-end management investment companies registered or registering with the Commission. Compliance with the disclosure requirements of Form N–1A is mandatory, and the responses to the disclosure requirements are not confidential. We currently estimate for Form N–1A a total hour burden of 1,579,974 hours, and the total annual external cost burden is $124,820,197.[521]

We are adopting amendments to Form N–1A that require funds that use swing pricing to disclose that they use swing pricing, and, if applicable, an explanation of what swing pricing is, the circumstances under which swing pricing is used, and the effects of using swing pricing.[522] Funds that use swing pricing will also be required to disclose the swing factor upper limit.[523] We also are adopting amendments to Form N–1A that require funds to include, if applicable, a footnote that describes the effects of swing pricing on the fund's annual total return bar chart and average annual total returns table, and additional disclosures in the prospectus financial highlights with respect to the per share impact of amounts related to swing pricing in the NAV per-share roll-forward, as well as the Swung NAV per share.[524] [525]

We believe that requiring funds to provide this additional disclosure regarding swing pricing will provide Commission staff, investors, and market participants with improved information about the conditions under which swing pricing procedures will be used to mitigate the effects of dilution as a result of shareholder purchase or redemption activity.

Form N–1A generally imposes two types of reporting burdens on investment companies: (i) The burden of preparing and filing the initial registration statement; and (ii) the burden of preparing and filing post-effective amendments to a previously effective registration statement (including post-effective amendments filed pursuant to rule 485(a) or 485(b) under the Securities Act, as applicable). In the Proposing Release, we estimated that each fund would incur a one-time burden of an additional 2 hours,[526] at a time cost of an additional $637,[527] to draft and finalize the required disclosure and amend its registration statement in response to the proposed Form N–1A disclosure requirements. In aggregate, we estimated that funds would incur a one-time burden of an

[513] Investment Company Reporting Modernization Proposing Release, *supra* footnote 11, at n.762 and accompanying text.

[514] *Id.* at n.765 and accompanying text.

[515] In the Investment Company Reporting Modernization Adopting Release, we continue to estimate that the average annual hour burden per response for Form N–CEN for the first year will be 32.37 hours and 12.37 hours in subsequent years. Amortizing the burden over three years, we continue to estimate that the average annual burden per fund year will be 19.04 hours but that the total aggregate annual hour burden will be 59,272 hours, rather than 59,900 in light of updates to the industry data figures that were utilized in the Investment Company Reporting Modernization Proposing Release. *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 11, at section IV.B.1.

[516] In the Proposing Release, we also proposed to add to Form N–CEN a requirement for funds to report information concerning lines of credit, interfund lending, and interfund borrowing. We are adopting those reporting requirements and discuss related PRA burdens and costs in the Liquidity Risk Management Programs Adopting Release. *See supra* footnote 8, at section V.G.

[517] *See* Item C.21 of Form N–CEN.

[518] This estimate was based on the following calculation: 8,734 funds × 0.5 hours = 4,367 hours.

[519] *See supra* footnote 388.

[520] This estimate is based on the following calculation: 9,039 funds × .5 hour = 4,519.5 hours.

[521] These estimates are based on the last time the rule's information collections were submitted for PRA renewal in 2014.

[522] *See* Item 6(d) of Form N–1A.

[523] *See id.*

[524] *See supra* section II.B. *See also* Item 4(b)(2)(ii); Item 4(b)(2)(iv)(E); Item 13(a); and Instructions 2(d) and (e) of Item 13(a).

[525] *See supra* section II.B. In the Proposing Release, we also proposed to amend Form N–1A to require funds to disclose additional information concerning the procedures for redeeming a fund's shares. We are adopting those disclosure requirements and discuss related PRA burdens and costs in the Liquidity Risk Management Programs Adopting Release. *See supra* footnote 8, at section V.H.

[526] This estimate was based on the following calculation: 1 hour to update registration statement to include swing pricing-related disclosure statements + 1 hour to update registration statement disclosure about redemption procedures = 2 hours.

[527] This estimate was based on the following calculation: 2 hours × $318.5 (blended rate for a compliance attorney ($334) and a senior programmer ($303)) = $637.

additional 17,468 hours,[528] at a time cost of an additional $5,563,558,[529] to comply with the Form N–1A disclosure requirements originally proposed. We estimated that amortizing the one-time burden over a three-year period would result in an average annual burden of an additional 5,823 hours at a time cost of an additional $1,854,519.[530]

In the Proposing Release, we also estimated that each fund would incur an ongoing burden of an additional 0.25 hours, at a time cost of an additional $80,[531] each year to review and update the proposed disclosure in response to Item 11 and Item 28 of Form N–1A regarding the pricing and redemption of fund shares and the inclusion of credit agreements as exhibits, respectively. In aggregate, we estimated that funds would incur an annual burden of an additional 2,184 hours,[532] at a time cost of an additional $695,604,[533] to comply with the proposed Form N–1A disclosure requirements.

In the Proposing Release, we further estimated that amortizing these one-time and ongoing hour and cost burdens over three years would result in an average annual increased burden of approximately 0.50 hours per fund,[534] at a time cost of $265.42 per fund.[535]

In total, we estimated in the Proposing Release that funds would incur an average annual increased burden of approximately 8,007 hours,[536] at a time cost of approximately $2,550,123,[537] to comply with the proposed Form N–1A disclosure requirements. We did not estimate any change to the external costs associated with the proposed amendments to Form N–1A.

One commenter stated that the cost estimates under the proposal were overly optimistic, including as an example our estimated $637 cost per fund to implement the proposed Form N–1A disclosure requirements.[538] As discussed above, the amendments to Form N–1A, discussed in this Release, concern disclosure requirements related to swing pricing only. We recognize that certain disclosure requirements related to swing pricing have been modified from the proposal and that these disclosure requirements were not contemplated in the burden hours and costs we estimated in the Proposing Release. For example, we are adopting a requirement that a fund include in its financial highlights presentation in Form N–1A two NAV calculations (*i.e.,* the Net Asset Value adjusted for GAAP and the Net Asset Value adjusted pursuant to Swing Pricing, End of Period) rather than a single Swung NAV as proposed.[539] We are also adopting a requirement that funds include a general description of the effects of swing pricing on the fund's annual total returns bar chart and average annual total returns table if swing pricing policies and procedures were applied during any of the periods represented.[540] We are also requiring funds that use swing pricing to disclose the swing factor upper limit.[541] In addition, we recognize that one commenter suggested that we had understated the cost estimates associated with amendments to Form N–1A although they did not provide alternative quantitative estimates.[542]

The Commission has modified the estimated increase in annual burden hours and total time costs that will result from the amendments to Form N–1A based on the modifications to the proposal discussed in this Release. Furthermore, we have considered the concern expressed by one commenter that the burdens and costs estimated in the proposal were overly optimistic. We also have estimated an increase in the aggregate annual burden hours that will result from the amendments to Form N–1A in light of updated data regarding the number of funds subject to the disclosure requirements.

In the Proposing Release, we estimated that approximately 947 funds would use swing pricing.[543] Based on updates to industry data figures that were utilized in the Proposing Release and the reduction in our estimate of the number of funds in fund complexes that will choose to use swing pricing, for purposes of the PRA analysis, we estimate that approximately 474 funds (half as many funds as proposed) will use swing pricing.[544] We estimate that each fund will incur a one-time burden of an additional 2 hours, rather than 1 hour, to draft and finalize the required swing pricing-related disclosures and amend its registration statement accordingly,[545] but at a time cost of an additional $648, rather than $637,[546] based on updated data concerning funds and fund personnel salaries. In aggregate, we estimate that funds will incur a one-time burden of an additional 948 hours,[547] rather than 17,468 hours, at a time cost of an additional $307,152,[548] rather than $5,563,558, to comply with the Form N–1A disclosure requirements as adopted. We estimate that amortizing the one-time burden over a three-year period will result in an average annual burden of an additional 316 hours, rather than 5,823 hours at a time cost of an additional $102,384, rather than $1,854,519.[549]

In addition, we estimate that each fund will incur an ongoing burden of an additional one hour, but at a time cost of an additional $324,[550] each year to review and update disclosures required in response to the amendments to Form N–1A related to swing pricing. In

[528] This estimate was based on the following calculations: 2 hours × 8,734 funds = 17,468 hours.

[529] This estimate was based on the following calculation: 17,468 hours × $318.50 (blended rate for a compliance attorney ($334) and a senior programmer ($303)) = $5,563,558.

[530] This estimate was based on the following calculation: 17,468 hours ÷ 3 = 5,823 average annual burden hours; $5,563,558 burden costs ÷ 3 = $1,854,519 average annual burden cost.

[531] This estimate was based on the following calculations: 0.25 hours × $318.50 (blended hourly rate for a compliance attorney ($334) and a senior programmer ($303)) = $79.63.

[532] This estimate was based on the following calculation: 0.25 hours × 8,734 funds = 2,183.5 hours.

[533] This estimate was based on the following calculation: 2,184 hours × $318.50 (blended hourly rate for a compliance attorney ($334) and a senior programmer ($303)) = $695,604.

[534] This estimate was based on the following calculation: 1 burden hour (year 1) + 0.25 burden hour (year 2) + 0.25 burden hour (year 3) ÷ 3 = 0.50 hours.

[535] This estimate was based on the following calculation: $637 (year 1 monetized burden hours) + $79.63 (year 2 monetized burden hours) + $79.63 (year 3 monetized burden hours) ÷ 3 = $265.42.

[536] This estimate was based on the following calculation: 5,823 hours + 2,184 hours = 8,007 hours.

[537] This estimate was based on the following calculation: $1,854,519 + $695,604 = $2,550,123.

[538] *See* FSR Comment Letter (noting that changes to a fund's disclosure typically involve a number of stakeholders and several rounds of drafting and review, such that costs associated with even modest changes to fund disclosure can have a serious cost component). With the exception of this comment, we did not receive comments on the estimated hour and costs burdens associated with the disclosure amendments to Form N–1A under the proposal.

[539] *See* Item 13 of Form N–1A. *See also supra* section II.B.

[540] *See* Item 4(b)(2)(ii) and Item 4(b)(2)(iv)(E) of Form N–1A.

[541] *See* Item 6(d) of Form N–1A.

[542] *See* FSR Comment Letter.

[543] *See* Proposing Release, *supra* footnote 6, at section V.D.

[544] *See supra* footnote 489.

[545] This estimate is based on the following calculation: 2 hours to update registration statement to include swing pricing-related disclosure statements.

[546] This estimate is based on the following calculation: 2 hours × $324 (blended rate for a compliance attorney ($340) and a senior programmer ($308)) = $648.

[547] This estimate was based on the following calculations: 2 hours × 474 funds) = 948 hours.

[548] This estimate is based on the following calculation: 948 hours × $324 (blended rate for a compliance attorney ($340) and a senior programmer ($308)) = $307,152.

[549] This estimate is based on the following calculation: 948 hours ÷ 3 = 316 average annual burden hours; $307,152 burden costs ÷ 3 = $102,384 average annual burden cost.

[550] This estimate is based on the following calculations: 1 hour × $324 (blended hourly rate for a compliance attorney ($340) and a senior programmer ($308)) = $324.

aggregate, we estimate that funds will incur an annual burden of an additional 474 hours,[551] at a time cost of an additional $153,576,[552] to comply with the Form N–1A disclosure requirements related to swing pricing adopted today.

Furthermore, we estimate that amortizing these one-time and ongoing hour and cost burdens over three years will result in an average annual increased burden of approximately 1.33 hours per fund,[553] but at a time cost of $432 per fund.[554]

In total, we estimate that funds will incur an average annual increased burden of approximately 790 hours,[555] at a time cost of approximately $255,960,[556] to comply with the Form N–1A disclosure requirements related to swing pricing adopted today. We do not estimate any change to the external costs associated with these amendments to Form N–1A.

V. Final Regulatory Flexibility Act Analysis

This Final Regulatory Flexibility Analysis has been prepared in accordance with section 3 of the Regulatory Flexibility Act (''RFA'').[557] It relates to amendments to rule 22c–1, rule 31a–2, Form N–1A, and Form N–CEN. We prepared an Initial Regulatory Flexibility Analysis (''IRFA'') in conjunction with the Proposing Release in September 2015.[558] The Proposing Release included, and solicited comment, on the IRFA.

A. Need for the Rule

Under current pricing methods, shareholder purchase and redemption activity could dilute the value of non-transacting shareholders' interests in some funds. The Commission is adopting amendments to rule 22c–1 to permit a fund to use ''swing pricing,'' the process of adjusting a fund's NAV to effectively pass on to purchasing and redeeming shareholders more of the costs stemming from their trading activity. We believe that rule 22c–1 will promote investor protection by providing funds with an additional tool to mitigate the potentially dilutive effects of shareholder purchase or redemption activity and provide a set of operational standards that will allow funds to gain comfort using swing pricing as a new means of mitigating potential dilution. Swing pricing may also provide funds with an additional tool to manage liquidity risks. In addition, the Commission is adopting related recordkeeping and disclosure requirements to enhance disclosure and Commission oversight of funds' use of swing pricing. Each of these objectives is discussed in detail in section III above.

B. Significant Issues Raised by Public Comment

In the Proposing Release, we requested comment on the IRFA, requesting in particular comment on the number of small entities that would be subject to the proposed swing pricing rules and whether the proposed swing pricing rules would have any effects that have not been discussed. We requested that commenters describe the nature of any effects on small entities subject to the proposed swing pricing rules and provide empirical data to support the nature and extent of such effects. We also requested comment on the estimated compliance burdens of the proposed swing pricing rules and how they would affect small entities. We received a number of comments related to the impact of our proposal on small entities, with some commenters expressing concern that certain large fund complexes with more influence over their distribution partners (or with more resources/internal processes in place to support swing pricing) would be more successful than small fund complexes in obtaining intraday flow information and implementing swing pricing.[559] We believe this effect on small fund complexes may be mitigated if fund service providers implement the operational changes necessary to support swing pricing for all funds that they service. Based on staff outreach, we understand that fund service providers are more likely to implement operational changes in this manner than they are to implement operational changes selectively for certain funds. We also note that funds will be permitted, but will not be required, to implement swing pricing.

C. Small Entities Subject to the Rule

An investment company is a small entity if, together with other investment companies in the same group of related investment companies, it has net assets of $50 million or less as of the end of its most recent fiscal year.[560] Commission staff estimates that, as of December 31, 2015, there were 78 small open-end investment companies (within 76 fund complexes) that would be considered small entities; this number includes open-end ETFs.

D. Projected Reporting, Recordkeeping, and Other Compliance Requirements

1. Swing Pricing

Amendments to rule 22c–1 permit, but do not require, all registered open-end funds (except money market funds and ETFs), including small entities, to use swing pricing, provided that it adopts policies and procedures that include certain elements and are approved by the fund's board.[561] A fund's swing pricing policies and procedures must provide that the fund is required to adjust its NAV per share by an amount known as the ''swing factor'' once the level of net purchases or net redemptions has exceeded a set, specified percentage of the fund's NAV known as the ''swing threshold.''[562] A fund is required to consider certain factors in determining its swing threshold,[563] and to take into account certain considerations in determining the swing factor.[564] In addition, a fund is required to establish an upper limit on the swing factor(s) used, which may not exceed two percent of NAV per share. The fund's board is required to approve the fund's swing pricing policies and procedures, as well as the fund's swing factor upper limit and swing threshold(s) and any changes to the upper limit or threshold(s). The fund's board is also required to periodically review a written report prepared by the persons responsible for administering swing pricing that includes certain required information.[565] A fund that adopts swing pricing policies and procedures also would be subject to certain recordkeeping requirements under proposed amendments to each of rule 22c–1 and rule 31a–2. We estimate that the annual external cost burden of

[551] This estimate is based on the following calculation: 1 hour × 474 funds = 474 hours.

[552] This estimate is based on the following calculation: 474 hours × $324 (blended hourly rate for a compliance attorney ($340) and a senior programmer ($308)) = $153,576.

[553] This estimate is based on the following calculation: 2 burden hours (year 1) + 1 burden hour (year 2) + 1 burden hour (year 3) ÷ 3 = 1.33 hours.

[554] This estimate is based on the following calculation: $648 (year 1 monetized burden hours) + $324 (year 2 monetized burden hours) + $324 (year 3 monetized burden hours) ÷ 3 = $432.

[555] This estimate is based on the following calculation: 316 hours + 474 hours = 790 hours.

[556] This estimate is based on the following calculation: $102,384 + $153,576= $255,960.

[557] 5 U.S.C. 604.

[558] *See* Proposing Release, *supra* footnote 6, at section VI.

[559] *See* CRMC Comment Letter; Dechert Comment Letter; ICI Comment Letter I; IDC Comment Letter.

[560] *See* rule 0–10(a) under the Act.

[561] *See supra* section II.A.

[562] A fund may have multiple, escalating swing factors, with each factor associated with a different swing threshold, subject to the two percent upper limit. *See supra* section II.A.3.c.

[563] *Id.*

[564] *See supra* section II.A.3.e.

[565] *See supra* section II.A.3.f.

compliance with these recordkeeping requirements would increase by $600 per fund that engages in swing pricing.[566] Because the amendments permit, but do not require a fund to adopt swing pricing policies and procedures, there is no compliance date associated with this rule. We are providing a two-year effective date for the new swing pricing amendments, however, to provide time for funds, their intermediaries and service providers to make any operational changes necessary to implement swing pricing.[567] By providing a uniform extended effective date, all eligible funds will have time to develop swing pricing capabilities (should they choose to do so) and competitive advantages among funds may be mitigated.

As discussed above, we estimate that, on average, a fund complex would incur one-time costs ranging from $2.4 million to $48.5 million, depending on the fund complex's particular circumstances, to adopt swing pricing policies and procedures and comply with related record retention requirements, as well as ongoing annual costs ranging from $120,000 to $15.8 million per year associated with the new swing pricing (and related recordkeeping) regulations.[568] We estimate that 12 small fund complexes, rather than 24 small fund complexes (half as many small fund complexes as estimated in the proposal), include funds that will adopt swing pricing policies and procedures pursuant to the rule.[569] We further estimate that these small fund complexes would incur one-time and ongoing costs on the low end of the estimated range as compared to the high end of the estimated range (one-time costs of approximately $2.4 million and ongoing costs of approximately $120,000 per year for each small fund complex).

2. Disclosure and Reporting Requirements Regarding Swing Pricing

The swing pricing rules include amendments to Form N–1A and additions to Form N–CEN that are intended to enhance fund disclosure and reporting regarding a fund's use of swing pricing. In particular, the amendments to Form N–1A require funds that use swing pricing to disclose that they use swing pricing, and, if applicable, an explanation of what swing pricing is, the circumstances under which swing pricing is used, the effects of using swing pricing, and the upper limit the fund has set on the swing factor.[570] The amendments to Form N–1A also require funds to disclose on their balance sheet the NAV as adjusted pursuant to swing pricing policies and procedures.[571] The amendments to Regulation S–X requires a fund to disclose both its GAAP NAV per share and the Swung NAV per share as adjusted pursuant to the fund's swing pricing policies and procedures (if applicable). The new item in Form N–CEN requires disclosure regarding whether a fund engaged in swing pricing during the reporting period and, if so, the fund's swing factor upper limit. We estimate that 78 funds are small entities that would be required to comply with the proposed disclosure and reporting requirements.[572]

As discussed above, we estimate that each fund, including funds that are small entities, will incur a one-time burden of an additional 2 hours,[573] at a time cost of an additional $648 (plus printing costs), to comply with the amendments to Form N–1A.[574] We also estimate that each fund, including small entities, will incur an ongoing burden of an additional 1 hour, at a time cost of approximately an additional $324 each year associated with compliance with the amendments to Form N–1A.[575] We do not estimate any change to the external costs associated with the amendments to Form N–1A.

As discussed above, we also estimate that the average annual hour burden per additional response to Form N–CEN as a result of the adopted swing pricing additions to Form N–CEN will be 0.5 hour per fund per year.[576] We do not estimate any change to the external costs associated with Form N–CEN.[577]

E. Agency Action To Minimize Effect on Small Entities

The Regulatory Flexibility Act directs the Commission to consider significant alternatives that would accomplish the stated objective, while minimizing any significant impact on small entities. Alternatives in this category would include: (i) Establishing different compliance or reporting standards that take into account the resources available to small entities; (ii) clarifying, consolidating, or simplifying the compliance requirements under the rules and amendments for small entities; (iii) using performance rather than design standards; and (iv) exempting small entities from coverage of the rules and amendments, or any part of the rules and amendments.

The Commission does not presently believe that the swing pricing rules would require the establishment of special compliance requirements or timetables for small entities. The swing pricing rules are specifically designed to reduce any unnecessary burdens on all funds (including small funds). To establish special compliance requirements or timetables for small entities may in fact disadvantage small entities by encouraging larger market participants to focus primarily on the needs of larger entities when making the operational changes envisioned by the swing pricing rules, and possibly ignoring the needs of smaller funds.

With respect to further clarifying, consolidating, or simplifying the compliance requirements of the swing pricing rules, using performance rather than design standards, and exempting small entities from coverage of the swing pricing rules or any part of the swing pricing rules, we believe additional such changes would be impracticable. Small entities are as vulnerable to the risk of dilution of the interests of fund shareholders as larger funds. We believe that the swing pricing rules are necessary to help mitigate these risks. Exempting small funds from coverage under the swing pricing rules or any part of the swing pricing rules could compromise the effectiveness of the swing pricing rules or any part of the swing pricing rules.

VI. Statutory Authority and Text of Amendments

The Commission is adopting amendments to rule 22c–1 under the authority set forth in sections 22(c) and 38(a) of the Investment Company Act [15 U.S.C. 80a–22(c) and 80a–37(a)]. The Commission is adopting amendments to rule 31a–2 under the authority set forth in section 31(a) of the Investment Company Act [15 U.S.C. 80a–31(a)]. The Commission is adopting amendments to Form N–1A, Regulation S–X, and proposed Form N–CEN under the authority set forth in the Securities Act, particularly section 19 thereof [15 U.S.C. 77a *et seq.*], the Trust Indenture Act, particularly, section 19 thereof [15 U.S.C. 77aaa *et seq.*], the Exchange Act, particularly sections 10, 13, 15, and 23, and 35A thereof [15 U.S.C. 78a *et seq.*],

[566] *See supra* footnote 512 and accompanying text.

[567] *See supra* section II.A.1.

and the Investment Company Act, particularly, sections 8, 30, and 38 thereof [15 U.S.C. 80a *et seq.*].

Text of Rules and Forms

List of Subjects

17 CFR Part 210

Accounting, Investment companies, Reporting and recordkeeping requirements, Securities.

17 CFR Parts 270 and 274

Investment companies, Reporting and recordkeeping requirements, Securities.

For the reasons set out in the preamble, title 17, chapter II of the Code of Federal Regulations is amended as follows:

PART 210—FORM AND CONTENT OF AND REQUIREMENTS FOR FINANCIAL STATEMENTS, SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934, INVESTMENT COMPANY ACT OF 1940, INVESTMENT ADVISERS ACT OF 1940, AND ENERGY POLICY AND CONSERVATION ACT OF 1975

■ 1. The authority citation for part 210 continues to read as follows:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77aa(25), 77aa(26), 77nn(25), 77nn(26), 78c, 78j–1, 78*l,* 78m, 78n, 78o(d), 78q, 78u–5, 78w, 78*ll,* 78mm, 80a–8, 80a–20, 80a–29, 80a–30, 80a–31, 80a–37(a), 80b–3, 80b–11, 7202 and 7262, unless otherwise noted.

■ 2. Amend § 210.6–02 by adding paragraph (e) to read as follows:

§ 210.6–02 Definition of certain terms.

* * * * *

(e) *Swing pricing.* The term *swing pricing* shall have the meaning given in § 270.22c–1(a)(3)(v)(C) of this chapter.

■ 3. Section 210.6–03, as revised elsewhere in this issue of the **Federal Register**, is further amended by adding paragraph (m) to read as follows:

§ 210.6–03 Special rules of general application to registered investment companies and business development companies.

* * * * *

(m) *Swing pricing.* For a registered investment company that has adopted swing pricing policies and procedures, state in a note to the company's financial statements:

(1) The general methods used in determining whether the company's net asset value per share will swing;

(2) Whether the company's net asset value per share has swung during the year; and

(3) A general description of the effects of swing pricing.

PART 270—RULES AND REGULATIONS, INVESTMENT COMPANY ACT OF 1940

■ 4. The authority citation for part 270 continues to read, in part, as follows:

Authority: 15 U.S.C. 80a–1 *et seq.,* 80a–34(d), 80a–37, 80a–39, and Pub. L. 111–203, sec. 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

■ 5. Amend § 270.22c–1 by adding paragraph (a)(3) to read as follows:

§ 270.22c–1 Pricing of redeemable securities for distribution, redemption and repurchase.

(a) * * *

(3) Notwithstanding this paragraph (a), a registered open-end management investment company (but not a registered open-end management investment company that is regulated as a money market fund under § 270.2a–7 or an exchange-traded fund as defined in paragraph (a)(3)(v)(A) of this section) (a ''fund'') may use swing pricing to adjust its current net asset value per share to mitigate dilution of the value of its outstanding redeemable securities as a result of shareholder purchase or redemption activity, provided that it has established and implemented swing pricing policies and procedures in compliance with the paragraphs (a)(3)(i) through (v) of this section.

(i) The fund's swing pricing policies and procedures must:

(A) Provide that the fund must adjust its net asset value per share by a single swing factor or multiple factors that may vary based on the swing threshold(s) crossed once the level of net purchases into or net redemptions from such fund has exceeded the applicable swing threshold for the fund. In determining whether the fund's level of net purchases or net redemptions has exceeded the applicable swing threshold(s), the person(s) responsible for administering swing pricing shall be permitted to make such determination based on receipt of sufficient information about the fund investors' daily purchase and redemption activity (''investor flow'') to allow the fund to reasonably estimate whether it has crossed the swing threshold(s) with high confidence, and shall exclude any purchases or redemptions that are made in kind and not in cash. This investor flow information may consist of individual, aggregated, or netted orders, and may include reasonable estimates where necessary.

(B) Specify the process for how the fund's swing threshold(s) shall be determined, considering:

(1) The size, frequency, and volatility of historical net purchases or net redemptions of fund shares during normal and stressed periods;

(2) The fund's investment strategy and the liquidity of the fund's portfolio investments;

(3) The fund's holdings of cash and cash equivalents, and borrowing arrangements and other funding sources; and

(4) The costs associated with transactions in the markets in which the fund invests.

(C) Specify the process for how the swing factor(s) shall be determined, which must include: The establishment of an upper limit on the swing factor(s) used, which may not exceed two percent of net asset value per share; and the determination that the factor(s) used are reasonable in relationship to the costs discussed in this paragraph. In determining the swing factor(s) and the upper limit, the person(s) responsible for administering swing pricing may take into account only the near-term costs expected to be incurred by the fund as a result of net purchases or net redemptions that occur on the day the swing factor(s) is used, including spread costs, transaction fees and charges arising from asset purchases or asset sales resulting from those purchases or redemptions, and borrowing-related costs associated with satisfying redemptions.

(ii) The fund's board of directors, including a majority of directors who are not interested persons of the fund must:

(A) Approve the fund's swing pricing policies and procedures;

(B) Approve the fund's swing threshold(s) and the upper limit on the swing factor(s) used, and any changes to the swing threshold(s) or the upper limit on the swing factor(s) used;

(C) Designate the fund's investment adviser, officer, or officers responsible for administering the swing pricing policies and procedures (''person(s) responsible for administering swing pricing''). The administration of swing pricing must be reasonably segregated from portfolio management of the fund and may not include portfolio managers; and

(D) Review, no less frequently than annually, a written report prepared by the person(s) responsible for administering swing pricing that describes:

(*1*) Its review of the adequacy of the fund's swing pricing policies and procedures and the effectiveness of their implementation, including the impact on mitigating dilution;

(2) Any material changes to the fund's swing pricing policies and procedures since the date of the last report; and

(*3*) Its review and assessment of the fund's swing threshold(s), swing factor(s), and swing factor upper limit considering the requirements of paragraphs (a)(3)(i)(B) and (C) of this section, including the information and data supporting the determination of the swing threshold(s), swing factor(s), and swing factor upper limit.

(iii) The fund shall maintain the policies and procedures adopted by the fund under this paragraph (a)(3) that are in effect, or at any time within the past six years were in effect, in an easily accessible place, and shall maintain a written copy of the report provided to the board under paragraph (a)(3)(ii)(C) of this section for six years, the first two in an easily accessible place.

(iv) Any fund (a ''feeder fund'') that invests, pursuant to section 12(d)(1)(E) of the Act (15 U.S.C. 80a–12(d)(1)(E)), in another fund (a ''master fund'') may not use swing pricing to adjust the feeder fund's net asset value per share; however, a master fund may use swing pricing to adjust the master fund's net asset value per share, pursuant to the requirements set forth in this paragraph (a)(3).

(v) For purposes of this paragraph (a)(3):

(A) *Exchange-traded fund* means an open-end management investment company (or series or class thereof), the shares of which are listed and traded on a national securities exchange, and that has formed and operates under an exemptive order under the Act granted by the Commission or in reliance on an exemptive rule adopted by the Commission.

(B) *Swing factor* means the amount, expressed as a percentage of the fund's net asset value and determined pursuant to the fund's swing pricing policies and procedures, by which a fund adjusts its net asset value per share once a fund's applicable swing threshold has been exceeded.

(C) *Swing pricing* means the process of adjusting a fund's current net asset value per share to mitigate dilution of the value of its outstanding redeemable securities as a result of shareholder purchase and redemption activity, pursuant to the requirements set forth in this paragraph (a)(3).

(D) *Swing threshold* means an amount of net purchases or net redemptions, expressed as a percentage of the fund's net asset value, that triggers the application of swing pricing.

(E) *Transaction fees and charges* means brokerage commissions, custody fees, and any other charges, fees, and taxes associated with portfolio asset purchases and sales.

* * * * *

■ 6. Section 270.31a–2 is amended by revising paragraph (a)(2) to read as follows:

§ 270.31a–2 Records to be preserved by registered investment companies, certain majority-owned subsidiaries thereof, and other persons having transactions with registered investment companies.

(a) * * *

(2) Preserve for a period not less than six years from the end of the fiscal year in which any transactions occurred, the first two years in an easily accessible place, all books and records required to be made pursuant to paragraphs (b)(5) through (12) of § 270.31a–1 and all vouchers, memoranda, correspondence, checkbooks, bank statements, cancelled checks, cash reconciliations, cancelled stock certificates, and all schedules evidencing and supporting each computation of net asset value of the investment company shares, including schedules evidencing and supporting each computation of an adjustment to net asset value of the investment company shares based on swing pricing policies and procedures established and implemented pursuant to § 270.22c–1(a)(3), and other documents required to be maintained by § 270.31a–1(a) and not enumerated in § 270.31a–1(b).

* * * * *

PART 274—FORMS PRESCRIBED UNDER THE INVESTMENT COMPANY ACT OF 1940

■ 7. The general authority citation for part 274 continues to read, in part, as follows, and the sectional authorities for §§ 274.101 and 274.130 are removed:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 78c(b), 78*l*, 78m, 78n, 78o(d), 80a–8, 80a–24, 80a–26, 80a–29, and Pub. L. 111–203, sec. 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

§ 274.11A [Amended]

■ 8. Amend Form N–1A (referenced in § 274.11A) by:

■ a. In Item 4(b)(2)(ii) adding a sentence regarding the effects of swing pricing and in Item 4(b)(2)(iv) adding paragraph (E)

■ b. In Item 6 adding paragraph (d);

■ c. In Item 13, adding ''Capital Adjustments Due to Swing Pricing'' after ''Total Distributions'' to the list in paragraph (a);

■ d. In Item 13, adding ''Net Asset Value, adjusted pursuant to swing pricing, End of Period'' after ''Net Asset Value, End of Period''.

■ e. In Item 13, Instruction 2., adding paragraphs (d) and (e).

The additions read as follows:

Note: The text of Form N–1A does not, and this amendment will not, appear in the Code of Federal Regulations.

Form N–1A

* * * * *

Item 4. Risk/Return Summary: Investments, Risks, and Performance

* * * * *

(b) * * *

(2) * * *

(ii) If swing pricing policies and procedures were applied during any of the periods, include a general description of the effects of swing pricing on the Fund's annual total returns for the applicable period(s) presented in a footnote to the bar chart.

* * * * *

(b) * * *

(2) * * *

(iv) * * *

(E) If swing pricing policies and procedures were applied during any of the periods, include a general description of the effects of swing pricing on the Fund's average annual total returns for the applicable period(s) presented.

Item 6. Purchase and Sale of Fund Shares

* * * * *

(d) If the Fund uses swing pricing, explain the Fund's use of swing pricing; including what swing pricing is, the circumstances under which the Fund will use it, the effects of swing pricing on the Fund and investors, and provide the upper limit it has set on the swing factor. With respect to any portion of a Fund's assets that is invested in one or more open-end management investment companies that are registered under the Investment Company Act, the Fund shall include a statement that the Fund's net asset value is calculated based upon the net asset values of the registered open-end management investment companies in which the Fund invests, and, if applicable, state that the prospectuses for those companies explain the circumstances under which they will use swing pricing and the effects of using swing pricing.

* * * * *

Item 13. Financial Highlights Information

* * * * *

Instructions * * *

2. *Per Share Operating Performance.* * * *

* * * * *

(d) The amount shown at the Capital Adjustments Due to Swing Pricing caption should include the per share impact of any amounts retained by the Fund pursuant to its swing pricing policies and procedures, if applicable.

(e) The amounts shown at the Net Asset Value, as adjusted pursuant to swing pricing, End of Period caption should be the Fund's net asset value per share as adjusted pursuant to its swing pricing policies and procedures on the last day of the reporting period, if applicable.

* * * * *

§ 274.101 [Amended]

■ 9. Form N–CEN (referenced in § 274.101), as revised elsewhere in this issue of the **Federal Register**, is further amended by:

■ a. In Part C, adding Item C.21.

The addition read as follows:

Form N–CEN

Annual Report for Registered Investment Companies

* * * * *

Part C. Additional Questions for Management Investment Companies

* * * * *

Item C.21. Swing pricing. For open-end management investment companies, respond to the following:

d. Did the Fund (if not a Money Market Fund, Exchange-Traded Fund, or Exchange-Traded Managed Fund) engage in swing pricing? [Yes/No]

i. If so, what was the swing factor upper limit?

* * * * *

By the Commission.

Dated: October 13, 2016.

Investment Company Liquidity Risk Management Programs; Final Rule

SECURITIES AND EXCHANGE COMMISSION

17 CFR Parts 270 and 274

[Release Nos. 33–10233; IC–32315; File No. S7–16–15]

RIN 3235–AL61

Investment Company Liquidity Risk Management Programs

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Securities and Exchange Commission is adopting new rules, a new form and amendments to a rule and forms designed to promote effective liquidity risk management throughout the open-end investment company industry, thereby reducing the risk that funds will be unable to meet their redemption obligations and mitigating dilution of the interests of fund shareholders. The amendments also seek to enhance disclosure regarding fund liquidity and redemption practices. The Commission is adopting new rule 22e–4, which requires each registered open-end management investment company, including open-end exchange-traded funds (''ETFs'') but not including money market funds, to establish a liquidity risk management program. Rule 22e–4 also requires principal underwriters and depositors of unit investment trusts (''UITs'') to engage in a limited liquidity review. The Commission is also adopting amendments to Form N–1A regarding the disclosure of fund policies concerning the redemption of fund shares. The Commission also is adopting new rule 30b1–10 and Form N–LIQUID that generally will require a fund to confidentially notify the Commission when the fund's level of illiquid investments that are assets exceeds 15% of its net assets or when its highly liquid investments that are assets fall below its minimum for more than a specified period of time. The Commission also is adopting certain sections of Forms N–PORT and N–CEN that will require disclosure of certain information regarding the liquidity of a fund's holdings and the fund's liquidity risk management practices.

DATES: *Effective Dates:* This rule is effective January 17, 2017 except for the amendments to Form N–CEN (referenced in 17 CFR 274.101) which are effective June 1, 2018.

Compliance Dates: The applicable compliance dates are discussed in section III.M. of this final rule.

FOR FURTHER INFORMATION CONTACT: Zeena Abdul-Rahman, John Foley, Andrea Ottomanelli Magovern, Naseem Nixon, Amanda Hollander Wagner, Senior Counsels; Thoreau Bartmann, Melissa Gainor, Senior Special Counsels; or Kathleen Joaquin, Senior Financial Analyst, Investment Company Rulemaking Office, at (202) 551–6792, Ryan Moore, Assistant Chief Accountant, or Matt Giordano, Chief Accountant at (202) 551–6918, Office of the Chief Accountant, Division of Investment Management, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–8549.

SUPPLEMENTARY INFORMATION: The Securities and Exchange Commission (the ''Commission'') is adopting new rules 22e–4 [17 CFR 270.22e–4] and 30b1–10 [17 CFR 270.223], under the Investment Company Act of 1940 [15 U.S.C. 80a–1 *et seq.*] (''Investment Company Act'' or ''Act''); new Form–N–LIQUID [referenced in 17 CFR 274.30b1–10] under the Investment Company Act; amendments to Form–N–1A [referenced in 17 CFR 274.11A] under the Investment Company Act and the Securities Act of 1933 (''Securities Act'') [15 U.S.C. 77a *et seq.*]; and adopting sections to Form N–PORT [referenced in 17 CFR 274.150] and Form N–CEN [referenced in 17 CFR 274.101] under the Investment Company Act.[1]

Table of Contents

I. Introduction

Redeemability is a defining feature of open-end investment companies.[2] At the time the Act was adopted, this feature was recognized as unique to open-end investment companies,[3] and the Act's classification of management investment companies as either open-end (''open-end funds'' or ''funds'')[4] or

[1] Unless otherwise noted, all references to statutory sections are to the Investment Company Act, and all references to rules under the Investment Company Act are to Title 17, Part 270 of the Code of Federal Regulations [17 CFR 270].

[2] *See* Investment Trusts and Investment Companies: Letter from the Acting Chairman of the SEC, A Report on Abuses and Deficiencies in the Organization and Operation of Investment Trusts and Investment Companies (1939), at n.206 (''[T]he salient characteristic of the open-end investment company . . . was that the investor was given a right of redemption so that he could liquidate his investment at or about asset value at any time that he was dissatisfied with the management or for any other reason.''). An open-end investment company is required by law to redeem its securities on demand from shareholders at a price approximating their proportionate share of the fund's net asset value (''NAV'') next calculated by the fund after receipt of such redemption request.

[3] *See* Investment Trusts and Investment Companies: Hearings on S. 3580 before a Subcomm. of the Senate Comm. on Banking and Currency, 76th Cong., 3d Sess. (1940) (''1940 Senate Hearings Transcript''), at 453 (Statement of Mahlon E. Traylor) (''Open-end companies are unlike any other type of investment company, principally because of the highly important distinguishing feature that their shareholders can, by contract right, withdraw their proportionate interest at will simply by surrendering their shares to the company for redemption at liquidating value.'').

[4] In-Kind ETFs (as defined below) are included when we refer to ''funds'' or ''open-end funds'' throughout this Release, except in the sections discussing classifying the liquidity of a fund's portfolio positions and the highly liquid investment minimum requirement, from which In-Kind ETFs are excepted. We have done this for conciseness

closed-end, upon which several of the Act's other provisions depend, turns on whether the investment company's shareholders have the right to redeem their shares on demand. When the Investment Company Act was enacted, it was understood that redeemability meant that an open-end fund had to have a liquid portfolio.[5] Since the 1940s, the Commission has stated that open-end funds should maintain highly liquid portfolios and recognized that this may limit their ability to participate in certain transactions in the capital markets.[6] Section 22(e) of the Act enforces the shareholder's right of prompt redemption in open-end funds by compelling such funds to make payment on shareholder redemption requests within seven days of receiving the request. Potential dilution of shareholders' interests in open-end funds also was a significant concern of Congress when drafting the Act and was among the noted abuses that led to the enactment of the Act, as reflected in sections 22(a) and (c).[7]

Although the Investment Company Act provides funds with a seven-day window to pay proceeds upon an investor's redemption, the settlement period for open-end fund redemptions has shortened considerably over the years. There are several reasons for shorter settlement periods, including broker-dealer settlement cycle requirements,[8] evolving industry standards, and technological advances in the settlement infrastructure.[9] In addition, many funds state in their prospectuses that investors can ordinarily expect to receive redemption proceeds in shorter periods than seven days.[10] At the same time, open-end funds have experienced significant growth,[11] markets have grown more complex, and funds pursue more complex investment strategies, including fixed income and alternative investment strategies focused on less liquid asset classes. These trends have made the role of fund liquidity and liquidity management more important than ever in reducing the risk that a fund will be unable to meet its obligations to redeeming shareholders or other obligations under applicable law, while also minimizing the impact of those redemptions on the fund (*i.e.,* mitigating investor dilution). Furthermore, recent events have demonstrated the significant adverse consequences to remaining investors in a fund when it fails to adequately manage liquidity.[12]

We remain committed, as the primary regulator of open-end funds, to designing regulatory programs that respond to the risks associated with the increasingly complex portfolio composition and operations of the asset management industry. In developing the proposed rules, Commission staff engaged with large and small fund complexes to better understand funds' management of liquidity risk. Through these outreach efforts our staff has learned that, while some funds and their managers have developed extensive liquidity risk management programs, others have dedicated significantly fewer resources, attention and focus to managing liquidity risk in a formalized way. We believe that it is in the interest of funds and fund investors to create a regulatory framework that would reduce the risk that a fund will be unable to meet its redemption obligations and minimize dilution of shareholder interests by promoting stronger and more effective liquidity risk management across open-end funds.

We sought to address these goals with the proposal on fund liquidity risk management that we published in late 2015.[13] This proposal would have required funds to: establish liquidity risk management programs, including classifying and monitoring each portfolio asset's level of liquidity and designating a minimum amount of highly liquid investments; provide additional reporting to us; and enhance disclosure to investors regarding the liquidity of fund portfolios and how funds manage liquidity risk and redemption obligations. In order to

and we recognize that these naming conventions differ from the text of rule 22e–4. Additionally, while a money market fund is an open-end management investment company, money market funds are not subject to the rules and amendments we are adopting (except certain amendments to Form N–CEN and Form N–1A) and thus are not included when we refer to ''funds'' or ''open-end funds'' in this Release except where specified.

[5] *See* Investment Trusts and Investment Companies: Hearings on H.R. 10065 before a Subcomm. of the House Comm. on Interstate and Foreign Commerce, 76th Cong., 3d Sess. 112 (1940), at 57 (Statement of Robert E. Healy) (''due to the right of the stockholder to come in and demand a redemption, the [open-end fund] has to keep itself in a very liquid position. That is, it has to be able to turn its securities into money on very short notice.'').

[6] *See* Investment Trusts and Investment Companies: Report of the Securities and Exchange Commission (1942), at 76 (''Open-end investment companies, because of their security holders' right to compel redemption of their shares by the company at any time, are compelled to invest their funds predominantly in readily marketable securities. Individual open-end investment companies, therefore, as presently constituted, could participate in the financing of small enterprises and new ventures only to a very limited extent.'').

[7] *See* 1940 Senate Hearings Transcript, *supra* footnote 3, at 37, 137–145 (stating that, among the abuses that served as a backdrop for the Act, were ''practices which resulted in substantial dilution of investors' interests'', including backward pricing by fund insiders to increase investment in the fund and thus enhance management fees, but causing dilution of existing investors in the fund).

[8] Open-end funds that are redeemed through broker-dealers must meet redemption requests within three business days because broker-dealers are subject to rule 15c6–1 under the Securities Exchange Act of 1934 (the ''Exchange Act''), which establishes a three-day (T + 3) settlement period for security trades effected by a broker or a dealer.

[9] Generally, settlement time frames for mutual fund shares have been shortening for decades. *See* Open-End Fund Liquidity Risk Management Programs; Swing Pricing; Re-Opening of Comment Period for Investment Company Reporting Modernization Release, Investment Company Act Release No. 31835 (Sept. 22, 2015) [80 FR 62274 (Oct. 15, 2015)] (''Proposing Release''), at section II.C.2. *See also, e.g.,* T+2 Industry Steering Committee, Shortening the Settlement Cycle: The Move to T+2 (2015), at n.18, *available at http://www.ust2.com/pdfs/ssc.pdf* (''In today's environment . . . open-end mutual funds settle through NSCC generally on a T+1 basis (excluding certain retail trades which typically settle on T+3).''). *See also* Amendment to Securities Transaction Settlement Cycle, Securities Exchange Act Release No. 34–78962 (September 29, 2016) [81 FR 69240 (October 05, 2016)].

[10] *See, e.g.,* Fidelity Commonwealth Trust rule 485(b) Registration Statement (June 29, 2016), *available at https://www.sec.gov/Archives/edgar/data/205323/000137949116004602/filing776.htm* (''Normally, redemptions will be processed by the next business day, but it may take up to seven days to pay the redemption proceeds if making immediate payment would adversely affect the fund.''); PIMCO Funds rule 485(b) Registration Statement (Feb. 26, 2016), *available at https://www.sec.gov/Archives/edgar/data/810893/000119312516481663/d149399d485bpos.htm#chapter_7_3686* (''Redemption proceeds will normally be mailed to the redeeming shareholder within three calendar days . . . [but] may take up to seven days.'').

[11] As of the end of 2015, there were 10,633 open-end funds (excluding money market funds, but including ETFs), as compared to 5,279 at the end of 1996. *See* Investment Company Institute, 2016 Investment Company Fact Book (2016) *(''2016 ICI Fact Book''), available at https://www.ici.org/pdf/2016_factbook.pdf.*

[12] For example, during the pendency of our proposal, the Third Avenue Focused Credit Fund, a non-diversified open-end fund, adopted a plan of liquidation, and requested and obtained exemptive relief to suspend shareholder redemptions, following a period of heavy redemption requests that the fund stated reduced the fund's portfolio liquidity. The Third Avenue Focused Credit Fund has yet to complete the liquidation of fund assets. Additionally, the fund reported that, as a result of the continuous liquidation of securities without reinvestment, the fund became increasingly more concentrated, which negatively impacted performance. *See* Third Avenue Trust and Third Avenue Management LLC, Investment Company Act Release No. 31943 (Dec. 16, 2015) (''Third Avenue Temporary Order''); Third Avenue Focused Credit Fund Semi-Annual Report to Shareholders (April 30, 2016), *available at: http://thirdave.com/wp-content/uploads/2016/06/Q2-2016-TFCIX-Semi-Annual-Report.pdf* (''The Fund is considerably more concentrated than it has ever been. As we have been liquidating securities and not recycling the cash, the top 10 holdings have increased from 32.6% at March 31, 2015 to approximately 67% of the Fund. We are increasingly dependent on the top 10 names to drive performance.''). *See also infra* footnotes 81–84 and accompanying text.

[13] *See* Proposing Release, *supra* footnote 9.

provide funds with an additional tool to mitigate potential dilution and to manage fund liquidity, the proposal included amendments to rule 22c–1 under the Act to permit funds (except money market funds and ETFs) to use ''swing pricing,'' a process of adjusting the NAV of a fund's shares to pass on to purchasing or redeeming shareholders more of the costs associated with their trading activity.[14]

We received more than 70 comment letters on the proposal.[15] The majority of commenters generally supported a requirement that funds adopt a formal, written liquidity risk management program that is risk oriented and principles based, although many provided suggestions and alternatives for us to consider.[16] Many commenters objected to certain aspects of the proposal, particularly the liquidity classification requirement, the three-day liquid asset minimum, and the requirement that funds publicly disclose the liquidity of each portfolio position.[17] Several commenters specifically supported applying the liquidity risk management requirements to all open-end funds, with the exception of money market funds.[18] Others expressed concerns with regard to ETFs, and recommended that the Commission exclude ETFs that primarily satisfy purchase and redemption orders in kind from the liquidity risk management requirements or develop a more tailored liquidity risk management program applicable to ETFs.[19]

Today, after consideration of the many comments we received, we are adopting the proposal with a number of modifications to enhance the effectiveness and workability of the rule's liquidity risk management requirements. The Commission is adopting new rule 22e–4, which will require each fund to adopt and implement a written liquidity risk management program designed to assess and manage the fund's liquidity risk, which will be overseen by the fund's board. As discussed in more detail below, the Commission is modifying from the proposal some of the liquidity risk management program elements, including reducing the liquidity classification categories from six to four, providing tailored program requirements for ETFs, and revising the fund board oversight requirements.

The new rule contains a highly liquid investment minimum requirement, which is similar to the proposed three-day liquid asset minimum. However, instead of barring a fund from purchasing securities other than highly liquid investments if the fund falls below its minimum as proposed for the three-day liquid asset minimum, under the adopted rules, if the fund falls below its highly liquid investment minimum, it would: (1) Report that occurrence to the fund board at its next scheduled meeting; (2) if it is below the minimum for more than a brief period of time, report the occurrence to the board and, on Form N–LIQUID, to the Commission within one business day; and (3) develop and provide to the board a plan for restoring the minimum within a reasonable period of time.

We also are adopting a 15% limitation on funds' purchases of illiquid investments, largely as proposed, but the definition of investments considered illiquid and subject to this 15% limit has been enhanced and substantially harmonized with the classification system we are adopting today. Additionally, the Commission is adopting new reporting Form N–LIQUID, which will require a fund to confidentially notify the Commission within one business day if the fund's illiquid investment holdings exceed 15% of its net assets or if its highly liquid investments fall below its minimum for more than a brief period of time. Furthermore, much as proposed, the Commission is adopting reporting and disclosure requirements under Form N–CEN, Form N–PORT, and Form N–1A regarding liquidity risk and liquidity risk management. In response to commenters' concerns, a number of the additional reporting items on Form N–PORT will be non-public.[20]

Taken together, these reforms are designed to provide investors with increased protection regarding how liquidity in their open-end funds is managed, thereby reducing the risk that funds will be unable to meet redemption or other legal obligations, and mitigating dilution of the interests of fund shareholders. These reforms also are intended to give investors better information to make investment decisions, and to give the Commission better information to conduct comprehensive monitoring and oversight of an ever-evolving fund industry.

II. Background

A. Open-End Funds

As we discussed in the Proposing Release, individual and institutional investors increasingly have come to rely on investments in open-end funds to meet their financial needs and access the capital markets. At the end of 2015, 54.9 million households, or 44.1 percent of all U.S. households owned funds.[21] Funds allow investors to pool their investments with those of other investors so that they may together benefit from fund features such as professional investment management, diversification, and liquidity. Fund shareholders share the gains and losses of the fund, and also share its costs.[22]

[14] We note that we are adopting swing pricing, and associated changes to Form N–PORT and N–CEN in a companion release. *See* Investment Company Swing Pricing, Investment Company Act Release No. 32316 (Oct. 13, 2016) (''Swing Pricing Adopting Release''). All comments on the proposed swing pricing rules and associated issues are discussed in that release.

[15] The comment letters on the Proposing Release (File No. S7–16–15) are *available at http://www.sec.gov/comments/s7-16-15/s71615.shtml.*

[16] *See, e.g.,* Comment Letter of Investment Company Institute (Jan. 13, 2016) (''ICI Comment Letter I''); Comment Letter of BlackRock Inc. (Jan. 13, 2016) (''BlackRock Comment Letter''); Comment Letter of Charles Schwab Investment Management (Jan. 13, 2016) (''Charles Schwab Comment Letter'').

[17] *See, e.g.,* ICI Comment Letter I (arguing that the six-category asset classification scheme and three-day liquid asset minimum are problematic and encourage a ''one-size-fits-all'' approach rather than a risk-based approach to liquidity management); Charles Schwab Comment Letter (arguing that public disclosure of the liquidity of each portfolio position may confuse and mislead investors).

[18] *See, e.g.,* Comment Letter of HSBC Global Asset Management (Jan. 13, 2016) (''HSBC Comment Letter'') (supporting the exclusion of closed-end funds and money market funds from the liquidity risk management requirements); Charles Schwab Comment Letter (supporting the application of the risk management requirements to ETFs).

[19] *See, e.g.,* ICI Comment Letter I; BlackRock Comment Letter (suggesting that the Commission should develop a separate and comprehensive rule addressing the different types of ETFs and their respective risks). The comments we received addressing exchange-traded managed funds (''ETMFs'') suggested that the Commission treat ETMFs in the same manner as ETFs and did not recommend any further unique treatment of ETMFs. *See* Comment Letter of the American Bar Association (Feb. 11, 2016); Comment Letter of Financial Services Roundtable (Jan. 13, 2016) (''FSR Comment Letter'').

[20] If any provision of these rules, or the application thereof to any person or circumstance, is held to be invalid, such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application.

[21] *See* 2016 ICI Fact Book, *supra* footnote 11, at 12.

[22] There are currently four primary kinds of open-end funds: Money market funds, mutual funds other than money market funds, ETFs, and ETMFs. Money market funds are a special kind of mutual fund that complies with the requirements of rule 2a–7 under the Act. ETFs registered with the Commission are organized either as open-end management investment companies or unit investment trusts. *See* section 4(2) of the Act (defining ''unit investment trust'' as an investment company which (A) is organized under a trust indenture, contract of custodianship or agency, or similar instrument, (B) does not have a board of directors, and (C) issues only redeemable securities, each of which represents an undivided interest in a unit of specified securities, but does not include a voting trust). Most ETFs are organized as open-end management investment companies and, except

As noted above, investors in mutual funds can redeem their shares on each business day and, by law, must receive approximately their *pro rata* share of the fund's net assets (or its cash value) within seven calendar days after receipt of a redemption request.[23] Under the Act's definition of redeemable security, open-end funds have the right to redeem shareholders in cash or in kind (that is, by delivering certain assets from the fund's portfolio, rather than cash, to a redeeming shareholder).[24] However, while funds often reserve the right to redeem in kind for certain redemption requests, the majority of mutual funds redeem only in cash for a variety of reasons, including the limited ability and/or unwillingness of fund shareholders to receive securities rather than cash.[25]

ETFs also offer investors an undivided interest in a pool of assets.[26] ETF shares, similar to listed stocks, are bought and sold throughout the day by investors on an exchange through a broker-dealer.[27] In addition, like mutual funds, ETFs provide redemption rights on a daily basis, but, pursuant to exemptive orders, such redemption rights may be exercised only by certain large market participants—typically broker-dealers—called ''authorized participants.'' [28] When an authorized participant transacts with an ETF to purchase and sell ETF shares, these share transactions are structured in large blocks called ''creation units.'' Most ETFs are structured so that an authorized participant will purchase a creation unit with a ''portfolio deposit,'' which is a basket of assets (and sometimes cash) that generally reflects the composition of the ETF's portfolio.[29] After purchasing a creation unit, an authorized participant may hold the ETF shares or sell (or lend) some or all of them to investors in the secondary market. Similarly, for most ETFs, when an authorized participant wishes to redeem ETF shares, it presents a creation unit of ETF shares to the ETF for redemption and receives in return a ''redemption basket,'' the contents of which are publicly declared by the ETF before the beginning of the trading day.[30]

ETMFs are a hybrid between a traditional mutual fund and an ETF.[31] Like ETFs, ETMFs have shares listed and traded on a national securities exchange; directly issue and redeem shares in creation units only; impose fees on creation units issued and redeemed to authorized participants to offset the related costs to the ETMFs; and primarily utilize in-kind transfers of portfolio deposits in issuing and redeeming creation units. Like mutual funds, ETMFs are bought and sold at prices linked to NAV and seek to maintain the confidentiality of their current portfolio positions.

B. The Role of Liquidity in Open-End Funds

1. Introduction

A hallmark of open-end funds is that they must be able to convert some portion of their portfolio holdings into cash on a frequent basis because they issue redeemable securities, and are required by section 22(e) of the Investment Company Act to make payment to shareholders for securities tendered for redemption within seven days of their tender (although some funds may reserve the right to make redemptions in kind for certain redemption requests). As a practical matter, many investors expect to receive redemption proceeds in fewer than seven days as some mutual funds represent in their prospectuses that they will generally pay redemption proceeds on a next business day basis.[32] Given the statutory and regulatory requirements for meeting redemption requests, as well as any potential liability for representations made to investors regarding payment of redemption proceeds, a mutual fund must adequately manage the liquidity of its portfolio so that redemption requests can be satisfied in a timely manner.

Sufficient liquidity of ETF portfolio positions also is important. Many ETFs typically make in-kind redemptions of creation units, which can mitigate the need for ETFs to maintain cash compared to mutual funds, particularly if the in-kind redemptions are of a representative basket of the ETF's

---

where specified, when we refer to ETFs in this Release, we are referring to ETFs that are organized as open-end management investment companies.

[23] *See* section 2(a)(32) of the Act (defining a ''redeemable security'' as any security, other than short-term paper, that entitles its holder to receive approximately his proportionate share of the issuer's current net assets, or the cash equivalent thereof), and section 22(e) of the Act (providing, in part, that no registered investment company shall suspend the right of redemption, or postpone the date of payment upon redemption of any redeemable security in accordance with its terms for more than seven days after tender of the security absent specified unusual circumstances). *See also* rule 22c–1 (requiring that redeemable securities be transacted ''at a price based on the current net asset value of such security which is next computed after receipt of a tender of such security for redemption or of an order to purchase or sell such security'').

[24] Prior to the adoption of the Act, open-end funds largely redeemed fund shares in cash and, as such, a redeemable security was generally understood to mean a security that was redeemable for cash. *See, e.g.,* Investment Trusts and Investment Companies: Senate Report 1775 on S. 4108, 76th Cong., 3d Sess. (1940), at 2 (''[a redeemable security] is, a security which provides that the holder may tender it to the company at any time and *receive a sum of money* approximating the current market value of his proportionate interest in the company's assets.''[emphasis added]). However, section 2(a)(32) has traditionally been interpreted to give funds the option of redeeming their shares in cash or in kind. *See, e.g.,* Investment Trusts and Investment Companies: Report of the Securities and Exchange Commission Part I (1939) at 21 (''A company is of the 'open-end' type if a shareholder has the right to require the company to purchase or redeem or cause the purchase or redemption of the shares representing his proportionate interest in the company's properties, or the cash equivalent of such interest.''); *see also* Adoption of (1) Rule 18f–1 Under the Investment Company Act of 1940 to Permit Registered Open-End Investment Companies Which Have the Right to Redeem In Kind to Elect to Make Only Cash Redemptions and (2) Form–N–18F–1, Investment Company Act Release No. 6561 (June 14, 1971) [36 FR 11919 (June 23, 1971)] (''Rule 18f–1 and Form N–18F–1 Adopting Release'') (stating that the definition of ''redeemable security'' in section 2(a)(32) of the Investment Company Act ''has traditionally been interpreted as giving the issuer the option of redeeming its securities in cash or in kind.'').

[25] *See* Comment Letter of Invesco Advisers, Inc. (Jan. 13, 2016) (''Invesco Comment Letter'') (''The primary problem with using redemptions in kind to meet large redemptions is the willingness and ability of the redeeming entity to receive securities instead of cash.''). *See also* Money Market Fund Reform; Amendments to Form PF, Investment Company Act Release No. 30551 (June 5, 2013) [78 FR 36834, (June 19, 2013)] (''2013 Money Market Fund Reform Proposing Release''), at n.473 and accompanying text (stating that ''[m]any commenters believed that requiring in-kind redemptions would be technically unworkable due to complex valuation and operational issues that would be imposed on both the fund and on investors receiving portfolio securities.'').

[26] Since 2003, the number of ETFs traded in U.S. markets has increased by more than 2,200 funds, and the assets held by ETFs have increased from $151 billion at the end of 2003 to $2.1 trillion at the end of 2015. *See* 2016 ICI Fact Book, *supra* footnote 11, at 60.

[27] *See* Exchange-Traded Funds, Investment Company Act Release No. 28193 (Mar. 11, 2008) [73 FR 14618 (Mar. 18, 2008)] (''ETF Proposing Release'').

[28] Authorized participants may purchase and redeem ETF shares at the ETF's NAV from the ETF.

[29] The ETF publicly declares the contents of the portfolio deposit before the beginning of the trading day. *See* Request for Comment on Exchange-Traded Products, Securities Exchange Act Release No. 75165 (June 12, 2015) [80 FR 34729 (June 17, 2015)] (''2015 ETP Request for Comment''), at nn.19–20 and accompanying text.

[30] *See* ETF Proposing Release, *supra* footnote 27, at n.24 and accompanying text.

[31] The Commission approved ETMFs in 2014 and the first ETMFs have since been launched. *See* Eaton Vance Management, *et al.,* Investment Company Act Release No. 31333 (Nov. 6, 2014) (notice of application) (''ETMF Notice'') and In the Matter of Eaton Vance Management, *et al.,* Investment Company Act Release No. 31361 (Dec. 2, 2014) (order) (''ETMF Order''). Given the similarities between ETFs and ETMFs and that the new requirements will apply to ETMFs as they do to ETFs, this Release generally includes ETMFs in the term ''ETF'' and separately mentions ETMFs only if appropriate. *See supra* footnote 19.

[32] *See supra* footnote 10; *see also supra* footnote 8 (noting that open-end funds that are redeemed through broker-dealers must meet redemption requests within three business days due to the application of rule 15c6–1 under the Exchange Act).

portfolio assets that do not alter the ETF's liquidity profile. However, transferring illiquid or less liquid instruments to the redeeming authorized participants could result in a liquidity cost to the authorized participants or other market participants, which could increase the cost of their participation and interfere with their role in the ETF arbitrage mechanism, resulting in the ETF trading at increased bid-ask spreads and/or a premium or discount to its NAV and ultimately impacting investors.[33] Declining liquidity in an ETF's basket assets also could affect the ability of an authorized participant or other market participants to readily assemble the basket for purchases of creation units and to sell securities received upon redemption of creation units.

In addition, all ETFs reserve the right to satisfy redemption requests in cash rather than in kind, but the extent to which ETFs satisfy redemption requests in cash varies. While many ETFs redeem in cash only rarely, some ETFs ordinarily redeem authorized participants in cash. ETFs that elect to redeem authorized participants in cash in more than a *de minimis* amount, like mutual funds, would need to ensure that they have adequate portfolio liquidity (in conjunction with any other liquidity sources) to meet shareholder redemptions.

As noted above, ETMFs have features of both mutual funds and ETFs. As ETMFs would redeem their shares on a daily basis from authorized participants, ETMFs would need to hold sufficiently liquid assets to meet such redemptions to the extent that the ETMFs satisfy the redemption requests in cash. As with ETFs, however, the ETMFs' practice of making in-kind redemptions could mitigate the need to maintain cash. Further, as ETMF market makers would not engage in the same kind of arbitrage as ETF market makers because the pricing of the ETMF shares is linked to the fund's NAV (subject to execution costs), the liquidity of an ETMF's portfolio is more relevant to an ETMF's ability to meet redemptions and the amount of execution costs than to an arbitrage function.

2. Statutory and Regulatory Requirements

An open-end fund's failure to maintain sufficiently liquid assets or otherwise manage liquidity implicates multiple provisions of the Act, as well as other federal securities laws and regulations. Section 2(a)(32) of the Act,[34] when read together with sections 4(2) and 5(a),[35] creates an obligation on open-end funds and UITs to provide shareholders with approximately their proportionate share of NAV upon the presentation of a redemption request. Section 22(e) of the Act provides in turn that the right of redemption may not be suspended and payment of redemption proceeds may not be postponed for more than seven days after tender of a redeemable security absent specified unusual circumstances.[36]

For decades, the Commission has recognized that because open-end funds hold themselves out at all times as being prepared to meet these statutory redemption requirements, they have a responsibility to manage the liquidity of their investment portfolios in a manner consistent with those obligations and any other related representations.[37] Thus, long-standing Commission guidelines contain a liquidity standard that generally limits an open-end fund's aggregate holdings of ''illiquid assets'' to no more than 15% of the fund's net assets (the ''15% guideline'').[38] Under the 15% guideline, a portfolio security or other asset is considered illiquid if it cannot be sold or disposed of in the ordinary course of business within seven days at approximately the value at which the fund has valued the investment.[39] The 15% guideline has generally caused funds to limit their exposures to particular types of securities that cannot be sold within seven days and that the Commission and staff have indicated may be illiquid, depending on the facts and circumstances, such as private equity securities and certain other privately placed or restricted securities[40] as well as certain instruments or transactions not maturing in seven days or less, including term repurchase agreements.[41]

---

[33] A significant amount of illiquid securities in an ETF's portfolio can make arbitrage opportunities more difficult to evaluate because it would be difficult for market makers to price, trade, and hedge their exposure to the ETF. *See infra* footnote 843 and accompanying text. Commenters noted that the effective functioning of this arbitrage mechanism has been pivotal to the operation of ETFs. *See* ICI Comment Letter I.

[34] *See supra* footnote 23.

[35] Section 4(2) of the Act defines a ''unit investment trust'' as an investment company which, among other things, ''issues only redeemable securities.'' Section 5(a) of the Act defines an ''open-end company'' as a ''management company which is offering for sale or has outstanding any redeemable security of which it is the issuer''.

[36] Section 22(e) of the Act permits open-end funds to suspend redemptions and postpone payment for redemptions already tendered for any period during which the New York Stock Exchange (''NYSE'') is closed (other than customary weekend and holiday closings) and in three additional situations if the Commission has made certain determinations. First, a fund may suspend redemptions for any period during which trading on the NYSE is restricted, as determined by the Commission. Second, a fund may suspend redemptions for any period during which an emergency exists, as determined by the Commission, as a result of which it is not reasonably practicable for the fund to: (i) Liquidate its portfolio securities, or (ii) fairly determine the value of its net assets. Third, a fund may suspend redemptions for such other periods as the Commission may by order permit for the protection of fund shareholders. The Commission has rarely issued orders permitting the suspension of redemptions for periods of restricted trading or emergency circumstances but has issued orders ''for such other periods'' under section 22(e)(3) on a few occasions. *See, e.g.,* In the Matter of The Reserve Fund, on behalf of two of its series, the Primary Fund and the U.S. Government Fund, Investment Company Act Release No. 28386 (Sept. 22, 2008) [73 FR 55572 (Sept. 25, 2008)]; In the Matter of Municipal Lease Securities Fund, Inc., Investment Company Act Release No. 17245 (Nov. 29, 1989); Third Avenue Temporary Order, *supra* footnote 12. Money market funds are able to suspend redemptions in certain limited circumstances. *See* rule 22e–3 under the Act; *see also* the Proposing Release, *supra* footnote 9, at n.155.

[41] *See* Periodic Repurchases by Closed-End Management Investment Companies; Redemptions by Open-End Management Investment Companies

Relatedly, the Commission has recognized that the liquidity management practices of open-end funds implicate certain antifraud provisions of the securities laws.[42] For example, section 34(b) of the Act makes it unlawful for any person to make any untrue statement of a material fact in any document filed with the Commission or transmitted pursuant to the Act, or the keeping of which is required by section 31(a) of the Act, or to omit to state any fact necessary in order to prevent the statements made therein, in light of the circumstances under which they were made, from being materially misleading.[43]

In addition, section 206(4)[44] of the Investment Advisers Act of 1940 (''Advisers Act'') and rule 206(4)–8 thereunder make it unlawful for any adviser to an investment fund to engage in any act, practice, or course of business which is fraudulent, deceptive, or manipulative.[45] Additionally, section 10(b) of the Exchange Act and rule 10b–5 thereunder make it unlawful, among other things, for any person, in connection with the purchase or sale of securities, to employ any device, scheme, or artifice to defraud or to make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made not misleading, or engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any persons. Finally, section 17(a) of the Securities Act similarly makes it unlawful for any person in the offer or sale of any securities or any security-based swap agreement by the use of any means or instruments of transportation or communication in interstate commerce or by use of the mails, directly or indirectly, to employ any device, scheme, or artifice to defraud, to obtain money or property by means of any untrue statement of a material fact or any omission to state a material fact necessary in order to make the statements made, in light of the circumstances under which they were made, not misleading, or to engage in any transaction, practice, or course of business which operates or would operate as a fraud or deceit upon the purchaser.[46]

As the Commission has previously noted, an open-end fund ''represents to investors, in its prospectus, that it will, as required by section 22(e) of the Act, redeem its securities at approximate net asset value within seven days after tender.''[47] Similarly, an open-end fund that is redeemed through broker-dealers generally represents to investors that it will redeem its securities within three days, as required by rule 15c6–1.[48] Failure by a fund to maintain a sufficiently liquid portfolio or to otherwise manage liquidity risk calls into question the fund's ability to fulfill the representations (explicit or implicit) made in its prospectus regarding its ability to meet its redemption obligations, as well as its status as an open-end fund. Such failure thus potentially exposes the fund, the investment adviser that manages the fund, and the persons responsible for the sale of the fund's securities to the possible application of the antifraud

and Registered Separate Accounts at Periodic Intervals or with Extended Payment, Investment Company Act Release No. 18869 (July 28, 1992) [57 FR 34701 (Aug. 6, 1992)] (''Interval Fund Proposing Release''). The Commission has not established a set of required factors that must be considered when assessing the liquidity of these or other types of securities under the 15% guideline. However, in the context of rule 144A securities, the Commission had provided ''examples of factors that would be reasonable for a [fund's] board of directors to take into account'' but which would not necessarily be determinative. *See* Rule 144A Release, *supra* footnote 37. These factors include: The frequency of trades and quotations for the security; the number of dealers willing to purchase or sell the security and the number of other potential purchasers; dealer undertakings to make a market in the security; and the nature of the security and the nature of the marketplace in which it trades, including the time needed to dispose of the security, the method of soliciting offers, and the mechanics of transfer.

[42] *See* Restricted Securities Release, *supra* footnote 37 (''To the extent a material percentage of the assets of an open-end company consist of restricted securities which cannot publicly be sold without registration under the Securities Act, the ability of the company to comply with the provisions of the Investment Company Act relating to redemption, and to fulfill the implicit representations made in its prospectus with respect thereto, may be adversely affected. In any such situation, the investment company concerned and the persons responsible for the sale of its securities should give careful consideration to the possible application of the provisions of section 10(b) of the Exchange Act and Rule 10b–5 thereunder.''); *see also* Money Market Funds Release, *supra* footnote 39 (explaining that because ''most money market funds promise investors that they will receive proceeds much sooner'' than seven days and ''experience a greater and perhaps less predictable volume of redemption transactions than do other investment companies,'' they ''must have sufficient liquidity to meet redemption requests on a more immediate basis''). The Commission has considered the failure to take risk-limiting measures in other contexts to implicate antifraud provisions as well. *See* Adoption of Revisions to Rules Regulating Money Market Funds, Investment Company Act Release No. 18005 (Feb. 20, 1991) (''The Commission believes that there is a significant danger of misleading investors if an investment company holds itself out as a money market fund when it engages in investment strategies not consistent with the risk-limiting conditions of rule 2a–7. It is therefore necessary and appropriate in the public interest and for the protection of investors for the Commission to adopt a new paragraph (b) of rule 2a–7 prohibiting an investment company from holding itself out as a 'money market fund' unless it meets the risk-limited conditions of rule 2a–7.'').

[43] Exercising authority under section 34(b) and sections 9(b), 38(a), and 42 of the Act, the Commission adopted paragraph (b) of rule 2a–7 in 1997, which provides that ''it shall be an untrue statement of a material fact within the meaning of section 34(b) of the Act for a registered investment company . . . to hold itself out to investors as a money market fund or the equivalent of a money market fund'' unless the fund complies with rule 2a–7. Under rule 2a–7, money market funds must maintain sufficient liquidity to meet reasonably foreseeable redemptions, generally must invest at least 10% of their portfolios in assets that can provide daily liquidity and at least 30% of their portfolios in assets that can provide weekly liquidity, and may not acquire any illiquid security if, immediately after the acquisition, the money market fund would have invested more than 5% of its total assets in illiquid securities. Rule 2a–7. Additionally, the Commission adopted amendments to rule 2a–7 in 2014 that, among other things: (i) Give boards of directors of money market funds discretion to impose a liquidity fee or temporarily suspend the right of redemption if a fund's weekly liquidity level falls below the required regulatory threshold; and (ii) require all non-government money market funds to impose a liquidity fee if the fund's weekly liquidity level falls below a designated threshold of 10%, unless the fund's board determines that imposing such a fee is not in the best interests of the fund. *See* Money Market Fund Reform; Amendments to Form PF, Investment Company Act Release No. 31166 (July 23, 2014) [79 FR 47736 (Aug. 14, 2014)] (''2014 Money Market Fund Reform Adopting Release'').

[44] Section 206(4) of the Advisers Act grants the Commission authority, by rules and regulations, to define and prescribe means reasonably designed to prevent such acts, practices, and courses of business as are fraudulent, deceptive, or manipulative.

[45] Additionally, section 206(1) of the Advisers Act makes it unlawful for an adviser to employ any device, scheme or artifice to defraud any client or prospective client, and section 206(2) makes it unlawful for an adviser to engage in any transaction, practice or course of business which operates as a fraud or deceit upon any client or prospective client. *See* Prohibition of Fraud by Advisers to Certain Pooled Investment Vehicles, Investment Advisers Act Release No. 2628 (August 3, 2007) [72 FR 44756 (August 9, 2007)], at n.3 and accompanying text.

[46] *See* In the Matter of Evergreen Investment Management Company, LLC and Evergreen Investment Services, Inc., Investment Company Act Release No. 28759 (June 8, 2009) (settled order) (''Evergreen Order'') (settlement of allegations that a mutual fund and its underwriter violated, and its adviser aided and abetted violations of, section 22(c) of the Act and rule 22c–1(a) through purchases and redemptions at materially overstated NAV. The order found that the fund's adviser materially misrepresented the fund's performance and NAV in reviewing and approving the fund's prospectus in violation of section 34(b) of the Act.).

[47] Restricted Securities Release, *supra* footnote 37.

[48] *See also* Proposing Release, *supra* footnote 9, at II.C.2 (''We also have observed that some open-end funds disclose in their prospectuses that they generally will satisfy redemption requests in even shorter periods of time than T + 3, including on a next-business-day basis.''). As the Commission has previously noted, most money market funds disclose that they will pay redemptions even more quickly, often on the same day that the request is received by the fund, and thus ''must have sufficient liquidity to meet redemption requests on a more immediate basis.'' Money Market Funds Release, *supra* footnote 39.

provisions of the securities laws referenced above.[49]

In addition to the foregoing concerns, an insufficiently liquid portfolio implicates provisions of the Act and regulations thereunder concerning fund valuation.[50] A fund's ability to properly value its portfolio securities is important, primarily because, under the Act, fund shareholders are entitled to their proportionate share of the fund's NAV upon redemption. Section 2(a)(41) of the Act and rule 2a–4 thereunder provide that in determining NAV, funds must value ''securities for which market quotations are readily available'' at current market value, and must value all other securities and assets at ''fair value as determined in good faith by the board of directors.'' Illiquid or less liquid assets are less likely to have readily available market quotations, and thus are more likely to require a fair value determination. Determining the fair value of illiquid or less liquid assets consistent with section 2(a)(41) and rule 2a–4 can pose a number of challenges, some of which the Commission has previously described in the context of the acquisition of restricted securities,[51] and improper valuation of such assets could result in liability under the antifraud provisions.[52] The difficulties valuing illiquid or less liquid securities also implicate section 22(c) and rule 22c–1, which requires the use of the next-determined NAV for pricing purchases and redemptions. Transactions in such securities are more likely to be effected at prices that differ from fair value and, therefore, may result in increasing risk of investor dilution.[53]

A separate and independent issue arising from the failure to maintain a sufficiently liquid portfolio is the risk of shareholder dilution associated with improper fund pricing. Thus, section 22(a),[54] when read together with section 22(c),[55] gives the Commission broad powers to regulate the pricing of redeemable securities for the purpose of eliminating or reducing so far as reasonably practicable any dilution of the value of the outstanding fund shares. In its 1969 guidance on restricted securities, the Commission observed that a fund with significant holdings of restricted securities may have to engage in private sales on short notice to meet redemption obligations, which could result in the fund ''receiving less than its carrying value of the restricted securities.''[56] That, in turn, would ''result in a preference in favor of the redeeming shareholders and a diminution of the NAV per share of shareholders who have not redeemed,'' further highlighting the need for funds to maintain ''a high degree of liquidity'' given the unpredictability of redemption demands or other exigencies.[57] Similarly, here, as a general matter, to the extent a fund's portfolio is made up of a large amount of illiquid or less liquid securities, the fund may face difficulties meeting shareholder redemption requests while at the same time protecting the value of the shares of existing shareholders from dilution. Limited liquidity may hinder the portfolio manager's ability to defensively reposition the fund in anticipation of shifting or volatile markets because asset sales necessary to effectuate those shifts can be executed only with substantial liquidity costs. If limited liquidity in the fund's portfolio limits which assets the fund can sell to meet redemptions, such limited liquidity also could even result in the fund straying from its investment objective. Accordingly, a fund that does not effectively manage its liquidity risk may become constrained in its portfolio management, to the detriment of its investors and contrary to the way the fund represents its investment strategy to the public.[58] Therefore, when constructing a fund's portfolio of securities, it is essential for the fund to take into account the importance of maintaining a portfolio that is liquid enough to fulfill the fund's obligations under these provisions.[59]

As previously discussed, in addition to the seven-day redemption requirement in section 22(e), rule 15c6–1 under the Exchange Act also affects the timing of open-end fund redemptions because the rule requires broker-dealers to settle securities transactions, including transactions in open-end fund shares, within three business days after the trade date. Furthermore, rule 22c–1 under the Act, the ''forward pricing'' rule, requires funds, their principal underwriters, and dealers to sell and redeem fund shares

[49] *See* Restricted Securities Release, *supra* footnote 37; Proposing Release, *supra* footnote 9, at n.77 (''Disclosures by open-end funds are subject to the antifraud provisions of the federal securities laws. Therefore there may be liability under these provisions if a fund fails to meet redemptions with seven days or any shorter time disclosed in the fund's prospectus or advertising materials.'') (citing section 17(a) of the Securities Act, section 10(b) of the Exchange Act and rule 10b–5 under the Exchange Act, and section 34(b) of the Exchange Act); *id.* at n.109 (''[F]unds' redemption obligations are also governed by any disclosure to shareholders that a fund has made about the time within which it will meet redemption requests, as disclosures by open-end funds are subject to the antifraud provisions of the federal securities laws.''); *id.* at III.C (''We believe that assessing and managing liquidity risk in a comprehensive manner is critical to a fund's ability to honor redemption requests within the seven-day period required under section 22(e) . . . as well as within any shorter time period disclosed in the fund's prospectus or advertising materials or required for purposes of rule 15c6–1.''); *id.* at III.C.3.d (requesting public comment on whether liquid asset minimum requirements tighter than three days may be warranted ''given that there may be liability under the antifraud provisions of the federal securities laws if a fund fails to meet redemptions within any shorter time disclosed in the fund's prospectus or advertising materials.'').

[50] *See* Restricted Securities Release, *supra* footnote 37 (describing the ''serious problems of valuation'' arising from fund acquisition of restricted securities); Guidelines Release, *supra* footnote 38 (noting that a fund ''must maintain a high degree of portfolio liquidity'' to meet the requirements under section 22(e), rule 22c–1(a) and rule 2a–4).

[51] *See* Restricted Securities Release, *supra* footnote 37 at n.1 and accompanying text for a discussion of the various valuation challenges facing purchasers and sellers of restricted securities.

[52] *See* Restricted Securities Release, *supra* footnote 37. As the Commission explained there, ''[t]he offering price of securities issued by a management investment company is premised upon the net asset value of such shares as determined pursuant to [section 2(a)(41)] of the Act and Rule 2a–4 thereunder and is so represented in its prospectus.'' Consequently, ''the improper valuation of restricted securities held by such a company would distort the net asset value of the shares being offered or, in the case of an open-end company, redeemed, and would therefore constitute a fraud and deceit within the meaning of section 10(b) and Rule 10b–5.'' *See also infra* footnote 66.

[53] *See* Restricted Securities Release, *supra* footnote 37, at n.1 (''the valuation of restricted securities by reference to the market price for unrestricted securities of the same class assumes that the market price for unrestricted securities of the same class is representative of the fair value of the securities. This may not be the case when the market for the unrestricted securities is very thin, *i.e.,* only a limited volume of shares are available for trading.'').

[54] Section 22(a) authorizes securities associations registered under section 15A of the Exchange Act to prescribe rules related to the method of computing purchase and redemption prices of redeemable securities and the minimum time period that must elapse after the sale or issue of such securities before any resale or redemption may occur, for the purpose of ''eliminating or reducing so far as reasonably practicable any dilution of the value of other outstanding securities of such company or any other result of such purchase, redemption, or sale which is unfair to holders of such other outstanding securities.''

[55] Section 22(c) authorizes the Commission to make rules and regulations applicable to registered investment companies and to principal underwriters of, and dealers in, the redeemable securities of any registered investment company, whether or not members of any securities association, to the same extent, covering the same subject matter, and for the accomplishment of the same ends as are prescribed in section 22(a) in respect of the rules which may be made by a registered securities association governing its members.

[56] *See* Restricted Securities Release, *supra* footnote 37.

[57] *Id.*

[58] *See* Restricted Securities Release, *supra* footnote 37 (''It is desirable that an open-end company retain maximum flexibility in the choice of portfolio securities which, on the basis of their relative investment merits, could best be sold where necessary to meet redemptions.'').

[59] *Id.*

at a price based on the current NAV next computed after receipt of an order to purchase or redeem fund shares, even though fund assets may be sold in subsequent days in order to meet redemption obligations.[60]

With the exception of money market funds subject to rule 2a–7 under the Act,[61] the Commission has not promulgated rules requiring open-end funds to invest in a minimum level of liquid assets.[62] As discussed above, the Commission has historically taken the position that, in order to comply with section 22(e) and other applicable legal provisions, open-end funds should maintain a high degree of portfolio liquidity to ensure that their portfolio securities and other assets can be sold and the proceeds used to satisfy redemptions in a timely manner.[63] In addition to a fund's ''general responsibility to maintain a level of portfolio liquidity that is appropriate under the circumstances,'' the Commission has stated that open-end funds must engage in ongoing portfolio liquidity monitoring to determine whether an adequate level of portfolio liquidity is being maintained in light of their redemption obligations.[64]

Registered investment companies and their investment advisers are subject to rules under the Act and the Advisers Act requiring them to adopt and implement written compliance policies and procedures reasonably designed to prevent various violations of laws and regulations. Rule 38a–1 under the Act requires registered investment companies to adopt and implement written policies and procedures reasonably designed to prevent violations of the federal securities laws by the fund, including policies and procedures that provide for the oversight of compliance by certain of the fund's service providers, including the fund's investment adviser; the rule also requires board approval and review of the service providers' compliance policies and procedures. Additionally, rule 206(4)–7 under the Advisers Act requires registered investment advisers to adopt and implement written compliance policies and procedures reasonably designed to prevent violations of the Advisers Act and the rules thereunder by the adviser or any of its supervised persons. Such compliance policies and procedures should be appropriately tailored to reflect each firm's particular compliance risks.[65] For example, an open-end fund holding a significant portion of its assets in securities with long settlement periods or that trade infrequently may be subject to relatively greater liquidity risks than other open-end funds, and should appropriately tailor its policies and procedures in light of its particular risks and circumstances. The Commission has brought enforcement actions under the compliance rules against funds and their advisers for failures to adopt and/or implement policies and procedures reasonably designed to prevent violations relating to, for example, disclosure, valuation, and pricing for assets with limited liquidity.[66]

Thus, funds and their advisers already are required to adopt and implement written compliance policies and procedures reasonably designed to prevent violations of various provisions implicated by fund liquidity, including those provisions identified above. The liquidity risk management program requirements of rule 22e–4, which we are adopting here, in effect will provide more specific and enhanced requirements in certain areas already generally covered by the compliance program rules.

In short, there are a number of statutory and regulatory provisions across the federal securities laws that bear on redemptions and the potential dilution of shareholders' interests. New rule 22e–4 advances the purposes of the Act by enhancing the ability of funds to meet their redemption obligations, reducing the risk of shareholder dilution, and reducing the potential for antifraud violations.[67]

[60] *See infra* footnotes 73–76 and accompanying text for a discussion of why this calculation method is permitted under rule 22c–1 and rule 2a–4.

[61] *See supra* footnote 43.

[62] However, the Commission has issued guidelines concerning funds' portfolio liquidity. *See supra* footnote 38 and accompanying text.

[63] *See* Restricted Securities Release, *supra* footnote 37; *see also* Rule 144A Release, *supra* footnote 37.

[64] Guidelines Release, *supra* footnote 38, at n.11 (''[T]he Commission expects funds to monitor portfolio liquidity on an ongoing basis to determine whether, in light of current circumstances, an adequate level of liquidity is being maintained. For example, an equity fund that begins to experience a net outflow of assets because investors increasingly shift their money from equity to income funds should consider reducing its holdings of illiquid securities in an orderly fashion in order to maintain adequate liquidity.''). Therefore, under current SEC guidance, a fund experiencing net outflows may wish to consider managing its illiquid asset holdings to maintain adequate liquidity. Similarly, a fund may need to determine whether it is appropriate to take certain actions when the fund has determined that a previously liquid holding has become illiquid due to changed circumstances. *See also* Rule 144A Release, *supra* footnote 37, at n.61.

[65] In the compliance rules adopting release, the Commission highlighted certain, non-exclusive examples of particular areas to be addressed in funds' and advisers' policies and procedures. For example, it stated that funds or advisers should adopt policies and procedures regarding valuation and the pricing of portfolio securities and fund shares, as well as the processing of fund shareholder transactions in accordance with rule 22c–1. *See* Compliance Programs of Investment Companies and Investment Advisers, Investment Company Act Release No. 26299 (Dec. 17, 2003) [68 FR 74714 (Dec. 24, 2003)] (''Rule 38a–1 Adopting Release'') (''These pricing requirements are critical to ensuring fund shares are purchased and redeemed at fair prices and that shareholder interests are not diluted.''). The Commission also identified ''portfolio management processes'' as an issue that should be covered in the compliance policies and procedures of a fund or its adviser and indicated that each fund should tailor its policies and procedures to address the fund's particular compliance risks. *See id.,* at n.82 (noting that the chief compliance officer's annual report should discuss the fund's particular compliance risks and any changes that were made to the policies and procedures to address newly identified risks). The Commission further identified ''the accuracy of disclosures made to investors, clients, and regulators'' as an issue to be covered.

[66] *See* In re Citigroup Alternative Investments LLC & Citigroup Glob. Markets Inc., Investment Advisers Act Release No. 4174 (Aug. 17, 2015) (settled order) (hedge fund adviser failed to adopt policies and procedures to prevent misrepresentations to private fund investors about fund performance and liquidity and violated rule 206(4)–7); In re J. Kenneth Alderman, CPA, *et al.,* Investment Company Act Release No. 30557 (Jun. 13, 2013) (settled order) (respondent directors failed to exercise their responsibilities with respect to adoption and implementation of valuation policies and procedures by mutual funds holding securities with reduced liquidity and caused funds' violations of rule 38a–1); In re UBS Glob. Asset Mgmt. (Americas) Inc., Investment Company Act Release No. 29920 (Jan. 17, 2012) (settled order) (mutual fund adviser failed to implement fair value pricing procedures with respect to subordinated fixed income securities without an active market and violated rule 38a–1); In re Morgan Asset Mgmt., Inc., *et al.,* Investment Company Act Release No. 29704 (June 22, 2011) (settled order) (mutual fund adviser failed to implement valuation procedures in pricing fixed income securities backed by subprime mortgages and violated rule 38a–1).

[67] One commenter argued that the Commission lacks the statutory authority to issue rule 22e–4. Comment Letter of Justin Banks (Jan. 13, 2016) (''Banks Comment Letter'') (considering the authority conferred by sections 22(c), 22(e), and 38 of the Act, although we note that in referring to our authority under section 38, the commenter actually quoted and addressed the text of section 39 of the Act.). We disagree. The Commission has ample authority under the Act, including sections 22(c), 22(e), and 38(a), as well as under the antifraud provisions of the federal securities laws, to require that open-end funds maintain adequate liquidity and adopt responsible liquidity risk management policies and procedures. *See supra* section II.B.2. Section 38(a), in particular, gives the Commission authority to issue rules, regulations, and orders ''as are necessary or appropriate to the exercise of the powers conferred upon the Commission elsewhere in this title.'' As discussed above, the liquidity risk management program required under rule 22e–4 is necessary and appropriate to reduce the risk that funds will be unable to meet their redemption obligations, to improve industry-wide liquidity risk management practices, to mitigate potential dilution of the interests of non-redeeming shareholders, and to increase the likelihood that funds are able to fulfill representations made in their prospectuses and advertising materials and implicit in their open-end status.

3. Liquidity Management by Open-End Funds

Portfolio managers consider a variety of factors in addition to liquidity when constructing a fund's portfolio, including but not limited to the fund's investment strategies, economic and market trends, portfolio asset credit quality, and tax considerations. Nevertheless, meeting redemption obligations is fundamental for open-end funds, and funds must manage liquidity in order to meet these obligations.[68] Several factors influence how liquidity management by open-end funds affects the equitable treatment of investors in a fund, investor redemption behavior, and potentially the orderly operation of the markets when fulfilling redemption obligations.

First, it is important to consider how a fund meets redemptions. When a fund receives redemption requests from shareholders, and the fund does not have cash on hand to meet those redemptions,[69] the fund may sell portfolio assets to generate cash to meet the redemptions and generally has the discretion to determine which assets will be sold.[70] It is possible that a fund would choose to sell its most liquid assets first. This method of selling is limited to some degree by the investment strategies of the fund, and a fund pursuing this method of meeting redemptions to any significant degree may need to adjust its portfolio so that the fund continues to follow its investment strategies. A fund that chooses to sell its most liquid assets to meet fund redemptions may minimize the effect of the redemptions on short-term fund performance for redeeming and remaining shareholders, but may leave remaining shareholders in a potentially less liquid and riskier fund until the fund adjusts the portfolio.[71] An ETF redeeming in kind with its most liquid assets first would similarly leave remaining shareholders in a potentially less liquid and riskier fund. In contrast to meeting redemptions by selling its most liquid assets first, a fund alternatively could choose to meet redemptions by selling, to the best of its ability, a ''strip'' of the fund's portfolio (*i.e.,* a cross-section or representative selection of the fund's portfolio assets).[72] Funds also could choose to meet redemptions by selling a range of assets in between its most liquid, on one end of the spectrum, and a perfect *pro rata* strip of assets, on the other end of the spectrum. Similarly, an ETF redeeming in kind could use a *pro rata* strip of assets. Additionally, funds could choose to opportunistically pare back or eliminate holdings in a particular asset or sector to meet redemptions.

Second, the effect of redemptions on shareholders is determined by how and when those redemptions affect the price of the fund's shares. Under rule 22c–1, all investors who redeem from an open-end fund on any particular day must receive the NAV next calculated by the fund after receipt of such redemption request.[73] As most funds, with the exception of money market funds, calculate their NAV only once a day, this means that redemption requests received during the day receive the end of day NAV, typically calculated as of 4 p.m. Eastern time.[74] When calculating a fund's NAV, however, rule 2a–4 requires funds to reflect changes in holdings of portfolio securities and changes in the number of outstanding shares resulting from distributions, redemptions, and repurchases no later than the first business day following the trade date.[75] We allowed this calculation method to provide funds with additional time and flexibility to incorporate last-minute portfolio transactions into their NAV calculations on the business day following the trade date, rather than on the trade date.[76] As a practical matter, this calculation method also gave broker-dealers, retirement plan administrators, and other intermediaries additional time to receive transactions submitted before the cut-off time on the trade date, which then may be reflected in the fund's NAV on the business day following the trade date.

Nevertheless, we recognize that trading activity and other changes in portfolio holdings associated with meeting redemptions may occur over multiple business days following the redemption request. If these activities occur (and their associated costs are reflected in NAV) in days following redemption requests, the costs of providing liquidity to redeeming investors could be borne by the remaining investors in the fund, thus potentially diluting the interests of non-redeeming shareholders.[77] The less liquid the fund's portfolio holdings, the greater these liquidity costs can become.[78]

There can be significant adverse consequences to remaining investors in a fund that does not adequately manage liquidity.[79] As noted above, the

[68] See Comment Letter of Investment Company Institute on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001(''FSOC Notice'') (Mar. 25, 2015) (''ICI FSOC Notice Comment Letter'') (''For mutual funds, the central importance of meeting redemptions means that liquidity management is a key element of regulatory compliance, investment risk management, and portfolio management—and a constant area of focus. Even before launching a mutual fund, the fund manager and fund board consider whether the fund's proposed investments and strategies are suitable for the mutual fund structure, including whether it will be able to satisfy applicable regulatory requirements on an ongoing basis. If not, the manager may decide to offer that strategy through a different vehicle (*e.g.,* a closed-end fund or a private fund).''). *See also supra* footnotes 2, 3, and 5–7.

[69] A fund can have cash on hand to meet redemptions from cash held in the fund's portfolio, cash received from investor purchases of fund shares, interest payments and dividends on portfolio securities, or maturing bonds. *See, e.g.,* Comment Letter of Fidelity Investments on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015) (''Fidelity FSOC Notice Comment Letter''), at n.17 (''[S]ecurities do not need to be sold every time a redemption order is placed. Sale of fund assets is necessary only when gross redemptions significantly exceed net inflows.'').

[70] A fund may also obtain cash by other available means such as bank lines of credit, but funds infrequently utilize this method to meet redemptions. *See* Proposing Release, *supra* footnote 9, at n.35 and accompanying text. *See also infra* footnote 262 and accompanying text for a discussion of the use of interfund lending as an alternative source of cash for funds.

[71] *See* Proposing Release, *supra* footnote 9, at n.37 and accompanying text.

[72] There are practical limitations on a fund's ability to sell a *pro rata* slice of its portfolio, such as minimum trade sizes, transfer restrictions, illiquid assets, tax complications from certain sales, and avoidance of odd lot positions.

[73] The process of calculating or ''striking'' the NAV of the fund's shares on any given trading day is based on several factors, including the market value of portfolio securities, fund liabilities, and the number of outstanding fund shares, among others.

[74] Commission rules do not require that a fund calculate its NAV at a specific time of day. Current NAV must be computed at least once daily, subject to limited exceptions, Monday through Friday, at the specific time or times set by the board of directors. *See* rule 22c–1(b)(1).

[75] Rule 2a–4(a)(2)–(3).

[76] *See* Adoption of Rule 2a–4 Defining the Term ''Current Net Asset Value'' in Reference to Redeemable Securities Issued by a Registered Investment Company, Investment Company Act Release No. 4105 (Dec. 22, 1964) [29 FR 19100 (Dec. 30, 1964)].

[77] The transaction costs associated with redemptions can vary significantly, with some costs having a more immediate impact on shareholders than others. For example, during times of heightened market volatility and wider bid-ask spreads for the fund's underlying holdings, selling the fund's investments to meet redemptions will necessarily result in costs to the fund, which in turn may negatively impact investors who chose to redeem in the days immediately following the stress event. The impact of such costs on the remaining fund investors can vary depending on when a shareholder chooses to redeem. *See, e.g.,* Comment Letter of Mutual Fund Directors Forum on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015), at 6.

[78] *See, e.g.* Comment Letter of Morningstar, Inc. (Jan. 13, 2016) (''Morningstar Comment Letter''). *See also* Proposing Release, *supra* footnote 9, at n.45 and accompanying text.

[79] *See, e.g.,* Jason Greene & Charles Hodges, *The Dilution Impact of Daily Fund Flows on Open-end Mutual Funds,* 65 J. of Fin. Econ. 131 (2002)

proportion of illiquid assets held by a fund can increase if the fund sells its more liquid portfolio assets to meet redemptions. This in turn could adversely affect the fund's risk profile and cause the fund to have difficulty meeting future shareholder redemptions.[80] For example, during the pendency of our proposal, the Third Avenue Focused Credit Fund, a non-diversified open-end fund, adopted a plan of liquidation, and requested and obtained exemptive relief to suspend shareholder redemptions.[81] The Commission noted that the fund represented that, at the time the fund and its investment adviser requested exemptive relief, it had experienced a significant level of redemption requests over the prior six-month period that reduced the fund's portfolio liquidity, as well as a significant decline in its NAV.[82] The fund's board authorized the plan of liquidation after it determined that additional redemptions would have to be made at prices that would unfairly disadvantage the fund's remaining shareholders.[83] This event highlights the extent to which shareholders can be harmed when a fund holding portfolio assets that entail significant liquidity risk does not adequately anticipate the effects of market deterioration and increased shareholder redemptions.[84] Furthermore, if a fund finds that it can sell portfolio assets only at prices that incorporate a significant discount to the assets' stated value, the discounted sale prices can materially affect the fund's NAV.

These factors in fund redemptions—either individually or in combination—can create incentives in times of liquidity stress in the markets for shareholders to redeem quickly to avoid further losses (or a ''first-mover advantage'').[85] If shareholder redemptions are motivated by this first-mover advantage, they can lead to increasing outflows, and as the level of outflows from a fund increases, the incentive for remaining shareholders to redeem may also increase. Additionally, a fund experiencing large outflows as a result of redemptions may be exposed to predatory trading activity in the securities it holds.[86] Regardless of whether investor redemptions are motivated by a first-mover advantage or other factors, there can be significant adverse consequences to remaining investors in a fund when it fails to adequately manage liquidity.[87] This underlines the importance of fund liquidity management for advancing investor protection by reducing the risk that a fund would be unable to meet redemption obligations without significant dilution of remaining investors' interests in the fund.

There also is a potential for adverse effects on the markets when open-end funds fail to adequately manage

(''Greene & Hodges'') (''Active trading of open-end funds has a meaningful economic impact on the returns of passive, nontrading shareholders, particularly in U.S.-based international funds. The overall sample of domestic equity funds shows no dilution impact, but we find an annualized negative impact of 0.48% in international funds (and nearly 1% for a subsample of funds whose daily flows are particularly large).'').

[80] *See, e.g.,* In re Heartland Advisors, Inc., *et al.,* Investment Company Act Release No. 28136 (Jan. 25, 2008) (''Heartland Release'') (settled order) (finding that certain high-yield bond funds experienced liquidity problems (caused in part by adviser's unwillingness to sell bond holdings at prices below which the funds had valued them) and, as a result, the funds borrowed heavily against a line of credit to meet fund redemption requests, and investors redeemed fund shares at prices that benefited redeeming shareholders at the expense of remaining and new investors).

[81] *See* Third Avenue Temporary Order, *supra* footnote 12. *But see infra* footnote 209 and accompanying text. We note that there is no assurance that the Commission would grant similar relief in the future. *See also* ICI Comment Letter I (''Third Avenue Focused Credit Fund experienced a significant level of redemption requests and an ongoing reduction in the liquidity of its portfolio securities, which consisted largely of junk bonds . . . The SEC granted a temporary order under section 22(e)(3) after expressing concerns with a board-approved plan of liquidation that provided for distribution to shareholders of the fund's remaining net cash and a separate transfer of the fund's other assets into a liquidating trust.''); BlackRock Comment Letter (''[A]s recently demonstrated by the issues meeting redemption requests that were experienced by the Third Avenue Focused Credit Fund, a small and highly concentrated portfolio can present its own liquidity challenges.''); *see also infra* footnote 84.

[82] Third Avenue Temporary Order, *supra* footnote 12. At the time that the fund adopted its plan of liquidation, the fund had experienced $1.1 billion in estimated net outflows for the year to date through December 9, 2015, which was more than 145% of the fund's total net assets as of that date. Furthermore, in November 2015, the fund experienced a total of $317 million in estimated net redemptions and the fund's retail class NAV per share fell from $7.82 to $7.09.

[83] *Id. See also* Third Avenue Management, Press Release: Third Avenue Management Obtains Exemptive Relief for Focused Credit Fund (Dec. 16, 2015), *available at: http://thirdave.com/news/press-release-third-avenue-management-obtains-exemptive-relief-for-focused-credit-fund/* (''As a result of the [SEC] exemptive order, redemptions are suspended for all shareholders, and . . . the [fund's adviser] will be able to conduct an orderly liquidation without having to resort to forced selling of securities at reduced or disadvantaged prices.'').

[84] *See* Comment Letter of Americans for Financial Reform (Jan. 13, 2016) (''AFR Comment Letter'') (''By all accounts, Third Avenue was holding the great majority of its assets in illiquid distressed debt and had very limited cash reserves, a strategy that can increase returns but at the price of greatly increased risks for investors . . . While the Third Avenue fund may be an outlier in terms of the sheer volume of illiquid assets it holds, evidence also indicates that larger and more significant funds are also testing the bounds of previous SEC guidance on liquidity, and are holding a large fraction of potentially illiquid assets. If such funds come under selling pressure, the need to dispose of such assets could add to market stress in ways that have a negative impact on corporate credit and the real economy, as well as potentially harming investors.''); *see also* Heartland Release, *supra* footnote 80.

[85] *See infra* footnotes 1086–1088 and accompanying text for a discussion of the first-mover advantage and its negative consequences. *But see* Comment Letter of Nuveen Investments on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015) (''Nuveen FSOC Notice Comment Letter''), at 10 (stating that there is no evidence that shareholders are actually motivated by a first-mover advantage); Comment Letter of BlackRock on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015) (''BlackRock FSOC Notice Comment Letter''), at 17 (stating that although incentives to redeem may exist, this does not necessarily imply that investors will in fact redeem *en masse* in times of market stress, but also noting that a well-structured fund ''should seek to avoid features that could create a 'first-mover advantage' in which one investor has an incentive to leave'' before others); Comment Letter of Association of Institutional Investors on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015), at 10–11 (''The empirical evidence of historical redemption activity, even during times of market stress, supports the view that either (i) there are not 'incentives to redeem' that are sufficient to overcome the asset owner's asset allocation decision or (ii) that there are disincentives, such as not triggering a taxable event, that outweigh the hypothesized 'incentives to redeem.' ''); Comment Letter of The Capital Group Companies on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015), at 8 (''We also do not believe that the mutualization of fund trading costs creates any first mover advantage.''); ICI FSOC Notice Comment Letter, *supra* footnote 68, at 7 (''Investor behavior provides evidence that any mutualized trading costs must not be sufficiently large to drive investor flows. We consistently observe that investor outflows are modest and investors continue to purchase shares in most funds even during periods of market stress.''). *See also* discussion of the potential first-mover advantage in the Proposing Release, *supra* footnote 9, at n.49.

[86] *See, e.g.,* Joshua Coval & Erik Stafford, *Asset Fire Sales (and Purchases) in Equity Markets,* 86 J. Fin. Econ. 479 (2007) (''Coval & Stafford'') (''Funds experiencing large outflows tend to decrease existing positions, which creates price pressure in the securities held in common by distressed funds. Similarly, the tendency among funds experiencing large inflows to expand existing positions creates positive price pressure in overlapping holdings. Investors who trade against constrained mutual funds earn significant returns for providing liquidity. In addition, future flow-driven transactions are predictable, creating an incentive to front-run the anticipated forced trades by funds experiencing extreme capital flows.''); Teodor Dyakov & Marno Verbeek, *Front-Running of Mutual Fund Fire-Sales,* 37 J. of Bank. and Fin. 4931 (2013) (''Dyakov & Verbeek'') (''We show that a real-time trading strategy which front-runs the anticipated forced sales by mutual funds experiencing extreme capital outflows generates an alpha of 0.5% per month during the 1990–2010 period . . . Our results suggest that publicly available information of fund flows and holdings exposes mutual funds in distress to predatory trading.''). *See* discussion of predatory trading concerns in the Proposing Release, *supra* footnote 9, at nn.805–809 and accompanying text.

[87] *See* Proposing Release, *supra* footnote 9, at n.37.

liquidity.[88] For example, if liquid asset levels are insufficient to meet redemptions, funds may sell less-liquid portfolio assets at discounted or even fire sale prices. These sales can produce significant negative price pressure on those assets and correlated assets. Accordingly, redemptions and funds' liquidity risk management can affect not just the remaining investors in the fund, but any other investors holding these assets. Depending on the asset and the level of stress, such liquidity stress on the assets held in the fund has the potential to transmit stress to other funds or portions of the market as well.[89]

C. Recent Developments in the Open-End Fund Industry

Recent industry developments have underlined our focus on the importance of sufficient liquidity and liquidity risk management practices in open-end funds.[90] These developments include significant growth in assets of, and shareholder inflows into, open-end funds with fixed income strategies and alternative strategies since 2008 and the evolution of settlement periods and redemption practices utilized by open-end funds. We will discuss each of these developments in turn.

1. Fixed Income Funds and Alternative Funds

We have observed significant growth in cash flows into, and assets of, fixed income mutual funds and fixed income ETFs (excluding ETMFs).[91] As growth in fixed income fund assets was occurring, we increased our focus on fixed income market structure, publishing a report on the municipal securities markets in 2012 and holding a roundtable focused on the fixed income markets in 2013.[92] In addition, Commissioners and Commission staff have spoken about the need to focus on potential risks relating to the fixed income markets and their underlying liquidity.[93] Commission staff also has focused on the nature of liquidity risk management in fixed income funds, including by selecting fixed income funds as an examination priority in 2014, 2015, and 2016.[94]

We also have observed significant growth in alternative mutual funds over the last decade.[95] Although the assets of open-end funds pursuing alternative strategies accounted for a relatively small percentage of the mutual fund market as of December 2014, the growth of assets in these funds has been substantial. Assets of open-end funds with alternative strategies grew from approximately $365 million at the end of 2005 to approximately $334 billion at the end of 2014.[96]

Unlike alternative mutual funds and ETFs, private funds (such as hedge funds and private equity funds) and closed-end funds pursuing similar alternative strategies can invest in portfolio assets that are relatively illiquid without generating the same degree of redemption risk for the fund because investor redemption rights are often limited.[97] In addition, investor expectations of private funds' redemption rights differ from the redemption expectations of typical retail investors in open-end funds.[98] For example, investors in private equity funds typically commit their capital for the life of the fund.[99]

In contrast, alternative strategy mutual funds and ETFs have no such ability to tailor investor redemption rights based on the liquidity profile of the funds' portfolios. Yet some of these funds seek to pursue similar investment strategies as hedge funds and other private funds, while still being bound

[88] *See, e.g.,* See Comment Letter of Americans for Financial Reform on the FSOC Notice (Mar. 27, 2015) (''AFR FSOC Notice Comment Letter'') (citing evidence that ''bond fire sales by mutual funds during the financial crisis created direct economic harm to real economy companies, reducing investment and profitability over a period of years.''); Fidelity FSOC Notice Comment Letter, *supra* footnote 69, at 18 (''Managing liquidity levels to fulfill [a fund adviser's] fiduciary obligations benefits [redeeming and remaining] shareholders as well as the broader financial markets.'').

[89] *See* Proposing Release, *supra* footnote 9, at n.54.

[90] We note that, up until 1970, open-end funds had limited investments in the bond market. *See* Protecting Investors: A Half Century of Investment Regulation (May 1992) for a discussion of the regulatory and market developments that occurred between 1940 and 1992.

[91] Assets in these funds grew from $1.5 trillion at the end of 2008 to $3.6 trillion at the end of 2015, with net inflows exceeding $1.4 trillion during that period. These figures were obtained from staff analysis of Morningstar Direct data, and are based on fund categories defined by Morningstar. While mutual funds holding U.S. equities continue to make up the largest category of funds in terms of fund assets, their share of the total industry assets has declined from 65.2% in 2000 to 44.7% in 2015. DERA Study, *infra* footnote 95, at Table 2. The statistics in the DERA Study were calculated through the end of 2014. Commission staff used the CRSP US Mutual Fund Database to update them as of the end of 2015.

[93] *See* Proposing Release, *supra* footnote 9, at n.62.

[94] *See, e.g.,* IM Guidance Update No. 2014–01, Risk Management in Changing Fixed Income Market Conditions (Jan. 2014) (''2014 Fixed Income Guidance Update''), *available at https://www.sec.gov/divisions/investment/guidance/im-guidance-2014-1.pdf*; National Exam Program, Office of Compliance Inspections and Examinations, Examination Priorities for 2016 (2016), *available at https://www.sec.gov/about/offices/ocie/national-examination-program-priorities-2016.pdf* (''Amidst the changes in fixed income markets over the past several years, we will examine advisers to mutual funds, ETFs, and private funds that have exposure to potentially illiquid fixed income securities. We will also examine registered broker-dealers that have become new or expanding liquidity providers in the marketplace. These examinations will include a review of various controls in these firms' expanded business areas, such as controls over market risk management, valuation, liquidity management, trading activity, and regulatory capital''); National Exam Program, Office of Compliance Inspections and Examinations, Examination Priorities for 2015 (2015) (''National Exam Program 2015 Examination Priorities''), *available at http://www.sec.gov/about/offices/ocie/national-examination-program-priorities-2015.pdf* (''With interest rates expected to rise at some point in the future, we will review whether mutual funds with significant exposure to interest rate increases have implemented compliance policies and procedures and investment and trading controls sufficient to ensure that their funds' disclosures are not misleading and that their investments and liquidity profiles are consistent with those disclosures.''); National Exam Program, Office of Compliance Inspections and Examinations, Examination Priorities for 2014 (2014), *available at http://www.sec.gov/about/offices/ocie/national-examination-program-priorities-2014.pdf* (''The staff will monitor the risks associated with a changing interest rate environment and the impact this may have on bond funds and related disclosures of risks to investors.'').

[95] Paul Hanouna, Jon Novak, Tim Riley & Christof Stahel, *Liquidity and Flows of U.S. Mutual Funds,* Division of Economic and Risk Analysis White Paper (Sept. 2015) (''DERA Study''), at 7–8, *available at https://www.sec.gov/dera/staff-papers/white-papers/liquidity-white-paper-09-2015.pdf* . While there is no clear definition of ''alternative'' in the mutual fund space, an alternative mutual fund is generally understood to be a fund whose primary investment strategy falls into one or more of the three following buckets: (i) Non-traditional asset classes (for example, currencies or managed futures funds); (ii) non-traditional strategies (such as long/short equity, event driven); and/or (iii) less liquid assets (such as private debt). Their investment strategies often seek to produce positive risk-adjusted returns that are not closely correlated to traditional investments or benchmarks, in contrast to traditional mutual funds that historically have pursued long-only strategies in traditional asset classes.

[96] *See* Proposing Release, *supra* footnote 9 at nn.64–66 and accompanying text. *See also id.*

[97] A private fund is an issuer that would be an investment company, as defined in section 3 of the Investment Company Act, but for the exclusion from the definition of ''investment company'' in section 3(c)(1) or 3(c)(7) of the Act. Section 202(a)(29) of the Advisers Act.

[98] Hedge Funds often contain ''lock-up'' provisions and impose gates, suspensions of redemptions, and side pockets to manage liquidity stress. *See* Proposing Release, *supra* footnote 9, at n.69 and accompanying text.

[99] *See* Comment Letter of the Private Equity Growth Capital Council on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015).

by the redemption obligations applicable to open-end funds. Accordingly, our staff has been focused on the liquidity of alternative strategy mutual funds and ETFs (excluding ETMFs), as well as the nature of liquidity and redemption risks faced by investors in these funds given their legal right to be paid the proceeds of any redemption request within seven days and a fund's representations about payment in less than seven days.[100] Certain observations by the Commission's Division of Economic and Risk Analysis (''DERA'') have lent further support to our focus on liquidity risk management practices in this industry segment, as DERA's analysis has shown that alternative strategy mutual funds demonstrate cash flows that are significantly more volatile than other strategies, indicating that these funds may face higher levels of redemptions, and thus higher liquidity risk.[101] Volatility in flows places additional importance on liquidity risk management to prevent some of the consequences from a failure to adequately manage liquidity discussed in section II.B.2 above. The final rules and rule amendments build off of many of the observations we and our staff have made through efforts examining the growth in funds and ETFs with fixed income strategies and alternative strategies.

2. Evolution of Settlement Periods and Redemption Practices

Practices relating to securities trade settlement periods and the timing of the payment of redemption proceeds to investors also have evolved considerably over the decades since the Commission last addressed liquidity needs in open-end funds.[102] Due to the adoption of rule 15c6–1 under the Exchange Act in 1993, the standard settlement time frame declined from five business days (T+5) to three business days (T+3).[103] Furthermore, while standard settlement periods for securities trades in many markets have tended to fall significantly over the last several decades—and investor expectations that redemption proceeds will be paid promptly after redemption requests have risen—settlement periods for other securities held in large amounts by certain funds have not fallen correspondingly. For example, some bank loan funds do not consider most of their portfolio holdings to be illiquid and generally represent in their disclosures that they comply with the Commission's current guidelines,[104] even though the settlement periods associated with some bank loans and participations may extend beyond the period of time the fund would be required to meet shareholder redemptions. This creates a potential mismatch between the timing of the receipt of cash upon sale of these assets and the payment of cash for shareholder redemptions.[105]

Overall, the evolution of the market towards shorter settlement periods—and corresponding fund disclosures—combined with open-end funds holding certain securities with longer settlement periods have raised concerns for us about whether fund portfolios are sufficiently liquid to support a fund's ability to meet its redemption and other legal obligations.

D. Overview of Current Practices

Over the last several years, Commission staff has observed through a variety of different events the current liquidity risk management practices at a cross-section of fund complexes with varied investment strategies. The staff has observed that liquidity risk management techniques may vary across funds, including funds within the same fund complex, in light of unique fund characteristics, including, for example, the nature of a fund's investment objectives or strategies, the composition of the fund's investor base, and historical fund flows. These observations collectively have shown the staff that, even with various unique characteristics, many open-end funds and fund complexes have implemented procedures for assessing and managing the liquidity of their portfolio assets.[106]

Specifically, some of the funds observed by the staff assess their ability to sell particular assets within various time periods (typically focusing on one-, three-, and/or seven-day periods).[107] In conducting this analysis, these funds may take into account relevant market, trading, and other factors, and monitor whether their initial liquidity determination should be changed based on changed market conditions. This process helps these funds determine their ability to meet redemption requests without significant dilution in various market conditions within the disclosed period for payment of redemption proceeds.

Funds observed by the staff that have implemented procedures for assessing the liquidity of their portfolio assets also often have developed controls to manage fund portfolio liquidity risk and the risk of changing levels of shareholder redemptions, such as holding certain amounts of the fund's portfolio in highly liquid investments, setting minimum cash reserves, and establishing committed back-up lines of credit or interfund lending facilities.[108] A few of the funds observed by staff conduct stress testing relating to the availability of liquid assets to cover possible levels of redemptions.[109] Some of these funds' advisers also have periodic discussions with their boards of directors about how the funds approach liquidity risk management and what emerging risks they are observing relating to liquidity risk. The staff has observed that some of the funds with the more thorough liquidity risk management practices have appeared to be able to better meet periods of higher than typical redemptions without significantly altering their risk profile or materially affecting their performance, and thus with less dilutive impacts.

Conversely, the Commission is concerned that some funds employ liquidity risk management practices that are substantially less rigorous. Some funds observed by the staff do not take different market conditions into account when evaluating portfolio asset liquidity, and do not conduct any ongoing liquidity monitoring. Some funds do not incorporate any independent oversight of fund liquidity risk management outside of the portfolio management process.[110] Staff has observed that some of these funds, when faced with higher than normal redemptions, experienced particularly

[100] *See* Proposing Release, *supra* footnote 9, at n.72.

[101] *See* DERA Study, *supra* footnote 95.

[102] *See supra* footnotes 7–9 and accompanying text.

[103] The decline in the securities trading settlement period from T+5 to T+3 prompted funds that were sold through broker-dealers to satisfy redemption requests within three business days. *See supra* footnote 32.

[104] *See supra* section II.B.3.

[105] *See* discussion of this timing mismatch of the Proposing Release, *supra* footnote 9, at n.79 and accompanying text.

[106] There are varying degrees of formality in the adoption and implementation of these procedures. Several commenters also discussed existing liquidity risk management practices. *See, e.g.,* Blackrock Comment Letter; ICI Comment Letter I; Comment Letter of Vanguard (Jan. 6, 2016) (''Vanguard Comment Letter'').

[107] *See* 2014 Fixed Income Guidance Update, *supra* footnote 94 (noting that fund advisers ''generally assess overall fund liquidity and funds' ability to meet potential redemptions over a number of periods'' and discussing certain steps that fund advisers may consider taking given potential fixed income market volatility); *see also* Proposing Release, *supra* footnote 9, at n.151 and accompanying text.

[108] *See* Proposing Release, *supra* footnote 9, at n.100 and accompanying text.

[109] *See* Proposing Release, *supra* footnote 9, at n.101.

[110] *See* Proposing Release, *supra* footnote 9, at n.102.

poor performance compared with their benchmark and some even experienced an adverse change in the fund's risk profile, each of which can increase the risk of investor dilution as well as the risk that the fund will be unable to meet those redemptions.

Finally, the Commission learned through staff outreach that many funds treat their risk management process for assessing the liquidity profile of portfolio assets, and the incorporation of market and trading information, as entirely separate from their assessment of assets under the 15% guideline. The former process is typically conducted on an ongoing basis through the fund's risk management function, through the fund's portfolio management function, or through the fund's trading function (or a combination of the foregoing), while assessment of assets under the 15% guideline is more typically conducted upon purchase of an asset through the fund's compliance or ''back-office'' functions, with little indication that information generated from the risk management or trading functions informs the compliance determinations. This functional divide may be a by-product of the limitations of the 15% guideline as a stand-alone method for comprehensive liquidity risk management, a situation that our final liquidity risk management program framework is meant to address.[111]

Overall, our staff outreach has increased our understanding of some of the valuable liquidity risk management practices employed by some firms as a matter of prudent risk management. This outreach also has shown us the great diversity in liquidity risk management practices that raises concerns regarding various funds' ability to meet their redemption and other legal obligations and minimize the effects of dilution under certain conditions. Collectively, these observations have informed our understanding of the need for an enhanced minimum baseline requirement for fund management of liquidity risk.

E. Rulemaking Adoption Overview

Against this background, today we are adopting a set of reforms designed to promote effective liquidity risk management throughout the open-end fund industry and thereby reduce the risk that funds will not be able to meet redemption or other legal obligations and mitigate potential dilution of the interests of fund shareholders. We believe that limitations on illiquid holdings and more effective liquidity risk management among funds would, in turn, result in significant investor protection benefits and enhance the fair and orderly operation of the markets.[112] The final amendments also seek to enhance reporting and disclosure regarding fund liquidity and redemption practices.

First, we are adopting new rule 22e–4, which requires each registered open-end fund, including open-end ETFs but not including money market funds, to adopt and implement a written liquidity risk management program reasonably designed to assess and manage the fund's liquidity risk.[113] The new rule requires a fund's liquidity risk management program to incorporate certain specified elements. These include: (i) Assessment, management, and periodic review of the fund's liquidity risk; (ii) classification of the liquidity of each of the fund's portfolio investments,[114] as well as at-least-monthly reviews of the fund's liquidity classifications; (iii) determining and periodically reviewing a highly liquid investment minimum—the percentage of its net assets that the fund invests in highly liquid investments that are assets; (iv) limiting the fund's investment in illiquid investments that are assets to no more than 15% of the fund's net assets; and (v) for funds that engage in, or reserve the right to engage in, redemptions in kind, the establishment of policies and procedures regarding how they will engage in such redemptions in kind.

The liquidity risk assessment requirement generally provides a broad, principles-based foundational framework for a fund's liquidity risk management program, including a requirement that the fund assess whether its investment strategy is appropriate for an open-end fund. The final rule also provides for a tailored program for ETFs, requiring them to consider additional factors as part of their liquidity risk assessment and management that reflect potential liquidity-related concerns that could arise from the structure and operation of ETFs, and excepting ETFs that redeem in kind (''In-Kind ETFs'') from the classification and highly liquid investment minimum requirements.[115] The final rule also provides that funds whose assets primarily consist of highly liquid investments need not adopt a highly liquid investment minimum.[116] Additionally, rule 22e–4 will not apply to closed-end funds, and will apply to principal underwriters and depositors of UITs only to a limited degree, as discussed further below. The classification requirement will provide important liquidity profile information to the Commission and investors and reflects that liquidity may be viewed as falling on a spectrum rather than a binary conclusion that an investment is either ''liquid'' or ''illiquid.''[117] The highly liquid investment minimum requirement is aimed at decreasing the

[111] *See supra* section II.B.2 for a discussion of the limitations of the 15% guideline.

[112] *See infra* section IV.C.

[113] *See* rule 22e–4(b). Rule 22e–4, as adopted today, defines ''liquidity risk'' as the risk that a fund could not meet requests to redeem shares issued by the fund without significant dilution of remaining investors' interests in the fund.

[114] As discussed in more detail below, rule 22e–4 as adopted requires a fund to classify each of the fund's portfolio *investments,* including investments that are liabilities of the fund (*e.g.,* certain out-of-the-money derivatives transactions). *See infra* footnote 480 and accompanying text. As proposed rule 22e–4 would have required each fund to classify the liquidity of its portfolio positions (or portions of a position in a particular asset), but did not specifically address the treatment of a fund's holdings that are liabilities. Thus, in this Release, we use the term ''assets'' when referring to the proposed classification requirement and comments on the proposed requirement, and the term ''investments'' when referring to the adopted classification requirement.

[115] Under the final rule, each ''In-Kind ETF,'' or an ETF that meets redemptions through in-kind transfers of securities, positions, and assets other than a *de minimis* amount of cash, will be subject to the tailored program requirement. *See* rule 22e–4(a)(9) (definition of ''In-Kind Exchange Traded Fund'' or ''In-Kind ETF''); rule 22e–4(b)(1)(i)(D) (incorporating additional factors that an ETF would be required to consider as applicable as part of its liquidity risk assessment and management that reflect liquidity-related risks that could be particularly relevant to the ETF). Under rule 22e–4(a)(5), the term ''fund'' is defined to exclude an In-Kind ETF. As a result, rule 22e–4(b)(1)(ii) and rule 22e–4(b)(1)(iii), which apply to funds as defined in rule 22e–4(a)(5), exclude In-Kind ETFs from the classification and highly liquid investment minimum requirements, respectively.

[116] *See* rule 22e–4(b)(1)(iii) (applying the highly liquid investment minimum requirement only to a fund that does not primarily hold assets that are highly liquid investments).

[117] The Commission is adopting a classification framework consisting of four liquidity categories based on the number of days within which it is determined that the investment is reasonably expected to be convertible to cash (or, in the case of the least-liquid categories, sold or disposed of) without the conversion (or, in the case of the least-liquid categories, sale or disposition) significantly changing the market value of the investment. More specifically, as discussed below, rule 22e–4 would require a fund to classify each of its portfolio investments into one of the following liquidity categories: *Highly liquid* investments (category based on fund's reasonable expectation that an investment can be converted to cash within three business days); *moderately liquid* investments (category based on fund's reasonable expectation that an investment can be converted to cash within four to seven calendar days); *less liquid* investments (category based on fund's reasonable expectation that an investment can be sold or disposed of in seven calendar days but the settlement is reasonably expected to be greater than seven calendar days); and *illiquid* investments (category based on fund's reasonable expectation that an investment cannot be sold or disposed of within seven calendar days).

likelihood that funds would be unable to meet their redemption obligations.

Rule 22e–4 includes board oversight provisions related to the liquidity risk management program. Specifically, a fund's board will approve, but not design, the fund's liquidity risk management program, as well as the fund's designation of the fund's investment adviser or officers as responsible for administering the day-to-day aspects of the fund's liquidity risk management program.[118] A fund also will be subject to board reporting requirements to the extent that its investments in assets that are highly liquid investments fall below its minimum or its assets that are illiquid investments rise above 15% of its net assets.[119] We anticipate that the new program requirement will result in investor protection benefits, as improved liquidity risk management could decrease the chance that a fund could meet its redemption obligations only with significant dilution of remaining investors' interests or changes to the fund's risk profile.

Rule 22e–4, by requiring funds to limit illiquidity and manage liquidity, should reduce the potential likelihood and extent of dilution of non-transacting shareholders that otherwise could result from redemptions effected at prices determined in accordance with rules 22c–1 and 2a–4. Thus, rule 22e–4, although it is numbered with reference to section 22(e), has a broader scope and also should separately help rule 22c–1 operate so as to reduce dilution, as contemplated by sections 22(a) and (c).

Second, we are adopting certain public disclosure- and confidential reporting-related rules and amendments to provide shareholders and other users with additional information with respect to funds' liquidity risk profile as well as assist the Commission in its monitoring efforts. Specifically, we are adopting reporting requirements on Form N–PORT that will require a fund to report monthly position-level liquidity classification information and its highly liquid investment minimum to the Commission on a confidential basis.[120] Form N–PORT will also require a fund to publicly disclose the aggregated percentage of its portfolio representing each of the four classification categories adopted by the Commission as of the end of each of its fiscal quarters.[121]

We are adopting new rule 30b1–10 and Form N–LIQUID to require a fund to confidentially notify the Commission when the fund's illiquid investment holdings exceed 15% of its net assets or if its amount of highly liquid investments declines below its highly liquid investment minimum for more than a brief period of time. We also are adopting amendments to Form N–1A to require a fund to publicly disclose certain information regarding the fund's redemption procedures. Finally, we are adopting requirements for funds to provide information on Form N–CEN about funds' use of lines of credit and interfund lending.

We anticipate that these new requirements will facilitate the Commission's risk and compliance monitoring efforts by providing greater transparency regarding the liquidity characteristics of fund portfolio holdings, as well as its ability to monitor and assess compliance with rule 22e–4. While Form N–PORT and Form N–CEN are primarily designed to assist the Commission, we believe that the requirements to publicly disclose certain information will also help investors and other potential users utilize information on particular funds' liquidity-related risks and redemption policies, which in turn may assist investors in making more informed investment choices.[122] As further discussed below, we believe that these reporting requirements strike the right balance between protecting the funds from certain adverse effects that could arise from public disclosure of detailed portfolio liquidity information with the need to provide shareholders and other users with improved information about funds' liquidity risk profile.

III. Discussion

A. Program Requirement and Scope of Rule 22e–4

Today the Commission is adopting rule 22e–4 under the Investment Company Act. This rule will require each registered open-end management investment company, including open-end ETFs but not including money market funds, to establish a written liquidity risk management program. Rule 22e–4 will not apply to closed-end funds, and will apply to UITs only to a limited degree, as discussed further below.

1. Liquidity Risk Management Program

Rule 22e–4 generally will require each registered open-end management investment company to establish a written liquidity risk management program. The majority of commenters generally supported the proposed requirement for each fund to adopt a formal, written liquidity risk management program,[123] although many commenters objected to certain aspects of the proposal and suggested modifications to certain proposed program elements, as discussed in more detail below. Other commenters opposed the proposed written program requirement, asserting that funds have a history of successfully managing their liquidity and that the proposed requirement was thus unnecessary.[124] We continue to believe, as discussed in the Proposing Release, that the program requirement will produce significant investor protection benefits, in light of the fact that funds are not currently subject to specific requirements under

[118] Rule 22e–4(b)(2).

[119] Rule 22e–4(b)(1)(iii)(A)(3) and rule 22e–4(b)(1)(iv).

[120] We are adopting Form N–PORT today in a companion release. *See* Investment Company Reporting Modernization, Investment Company Act Release No. 32314 (October 13, 2016) (''Investment Company Reporting Modernization Adopting Release'') We discuss the Form N–PORT reporting requirements related to rule 22e–4 in this Release, including the requirements that a fund report: (i) The liquidity classification assigned to each portfolio position (which may be based on asset type to the extent discussed below); (ii) the asset type label that the fund has assigned to each portfolio position, using any asset type labeling scheme the fund employs in its own portfolio management systems; and (iii) the fund's highly liquid investment minimum.

[121] This information will be reported monthly on Form N–PORT, but it will be disclosed to the public only for the third month of each fiscal quarter with a 60-day delay.

[122] *See, e.g.,* Comment Letter of Markit on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015) (''[W]e believe that liquidity and redemption risk contained in asset management products can be mitigated by providing risk managers or investors of pooled investment vehicles better information about the liquidity risk associated with pool investments so that they can price it more accurately. This could be done through, among other things, disclosures of the 'prudent valuation' (accounting for pricing uncertainty) of the fund's investments and the implementation of appropriate liquidity risk management policies and procedures.'').

[123] *See, e.g.,* Comment Letter of Alternative Investment Management Association (Jan. 13, 2016) (''AIMA Comment Letter''); Comment Letter of Capital Research and Management Company (Jan. 13, 2016) (''CRMC Comment Letter''); Comment Letter of Cohen & Steers (Jan. 13, 2016) (''Cohen & Steers Comment Letter''); Comment Letter of Dechert LLP (Jan. 13, 2016) (''Dechert Comment Letter''); Comment Letter of Fidelity Management & Research Company (Jan. 13, 2016) (''Fidelity Comment Letter''); Comment Letter of Association of the Bar of the City of New York (Jan. 13, 2016) (''NYC Bar Comment Letter''); Comment Letter of Securities Industry and Financial Markets Association (Jan. 13, 2016) (Comments on Proposal to Require Liquidity Risk Management Programs and Related Liquidity Disclosures) (''SIFMA Comment Letter I''); Comment Letter of T. Rowe Price (Jan. 13, 2016) (''T. Rowe Comment Letter'').

[124] *See* Comment Letter of Cove Street Capital (Oct. 8, 2015) (''Cove Street Comment Letter''); Comment Letter of Jim H. Francis (Nov. 4, 2015); Comment Letter of Jordana Keefer (Jan. 7, 2016) (''Keefer Comment Letter''); Comment Letter of Don G. Powell (Oct. 5, 2015); Comment Letter of John Wahh (Oct. 1, 2015) (''Wahh Comment Letter'').

the federal securities laws or Commission rules obliging them to manage their liquidity risk. Outreach by Commission staff has identified practices at some funds that raise concerns regarding funds' ability to meet their redemption obligations and lessen the effects of dilution.[125] The Commission is thus adopting, as proposed, a requirement for each fund to adopt and implement a written liquidity risk management program.[126] However, we note that the program requirement we are adopting incorporates modifications to most of the proposed program elements.[127]

A fund may, as it determines appropriate, expand its liquidity risk management procedures and related disclosure concerning liquidity risk beyond the required program elements.[128] While a fund would be required to adhere to certain requirements—such as the requirement to classify the liquidity of a fund's portfolio investments and determine a highly liquid investment minimum[129]—in other respects, the proposed program requirements would permit each fund to tailor its liquidity risk management program to the fund's particular risks and circumstances. Commenters stressed that many funds are currently engaged in operational practices that are designed to support fund liquidity and the redeemability of fund shares.[130] Commenters also noted that funds' approaches to liquidity risk management should, and currently do, differ markedly depending on their individual risks.[131] We believe that the program requirement will permit funds that already have programs that satisfy the rule requirements to continue to engage in the liquidity risk management practices that they have found to be effective. However, the program requirement's common obligations should strengthen liquidity risk management across the fund industry, while also providing important transparency into funds' liquidity profiles and risk management practices.

2. Scope of Rule 22e–4 and Related Disclosure and Reporting Requirements

The liquidity risk management program requirements of rule 22e–4, as well as related disclosure and reporting requirements, will apply to all registered open-end funds, except money market funds.[132] Rule 22e–4 will apply to open-end ETFs, but incorporates tailored program requirements to reflect their particular liquidity-related risks.[133] The final rule also excludes from the highly liquid investment minimum requirement funds whose portfolios consist primarily of highly liquid investments. Closed-end funds are excluded from the scope of rule 22e–4,[134] and UITs are not subject to the rule's general program requirement, although each UIT's principal underwriter or depositor will be required to determine, on or before the date of the initial deposit of portfolio securities into the UIT, that the portion of illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues.[135] We discuss these scope determinations in more detail below.

a. Inclusion of Funds With All Investment Strategies and Inclusion of ETFs Within the Scope of Rule 22e–4

We are not excluding funds with any particular strategies from the scope of rule 22e–4.[136] We proposed to apply rule 22e–4 to all open-end funds (except money market funds) regardless of the fund's investment strategy, stating that even funds with investment strategies that have historically entailed little liquidity risk could experience liquidity stresses in certain environments.[137] We also stated that different types of funds within the same broad investment strategy could demonstrate different levels of liquidity and relatedly, different levels of liquidity risk.

Some commenters expressed concern about the costs of some of the proposed requirements relative to the liquidity risks typically associated with certain investment strategies,[138] as well as concerns about burdensome effects of some particular requirements for certain strategies.[139] Other commenters, however, generally supported a program requirement that applies to all registered open-end funds, regardless of the fund's investment strategy.[140] We believe the modifications to the proposal we are adopting (in particular, changes to the classification requirement and the proposed three-day liquid asset minimum requirement) appropriately address commenters' concerns and reflect support that some commenters provided for a program requirement that applies to all registered open-end funds.

As noted above, rule 22e–4 will apply to open-end ETFs, although we are adopting certain tailored program requirements for ETFs.[141] Some commenters objected to all or certain proposed program requirements applying to ETFs.[142] We respond in detail to these comments in section III.J below. We note, however, that while ETFs' liquidity risks can differ from the liquidity risks faced by other open-end funds, ETFs still have liquidity-related risks that could affect their shareholders, as well as the broader markets in which they operate. The tailored requirements that we are

[125] *See* Proposing Release, *supra* footnote 9, at section IV.C.1.b.

[126] *See* rule 22e–4(b).

[127] As discussed throughout this Release, we believe that these modifications respond appropriately to specific concerns noted by commenters and help to increase the effectiveness of the program requirement in advancing the Commission's goals, while at the same time reducing associated burdens.

[128] *See supra* footnotes 113–115 and accompanying text for a description of the required program elements.

[129] In-Kind ETFs are excepted from the classification and highly liquid investment minimum requirements. *See infra* section III.J. In addition, funds whose portfolios consist primarily of highly liquid investments would not be required to determine a highly liquid investment minimum. *See infra* section III.D.5.

[130] *See, e.g.,* ICI Comment Letter I; BlackRock Comment Letter; Invesco Comment Letter; Vanguard Comment Letter.

[131] *See, e.g.,* ICI Comment Letter I; Dechert Comment Letter; Vanguard Comment Letter.

[132] Although money market funds are excluded from the scope of rule 22e–4, they will be subject to the amendments to Form N–1A and Form N–CEN. *See infra* section III.A.2.a (''Inclusion of Funds with All Investment Strategies and Inclusion of ETFs within the Scope of Rule 22e–4''); section III.A.2.b (''Inclusion of Funds of All Sizes within the Scope of Rule 22e–4''); and section III.A.2.e (''Exclusion of Money Market Funds from the Scope of Rule 22e–4'').

[133] *See infra* section III.J.

[134] *See infra* section III.A.2.c (''Exclusion of Closed-End Funds from the Scope of Rule 22e–4'').

[135] *See infra* section III.K.

[136] *But see infra* section III.D.5 (discussing exclusion of In-Kind ETFs as well as funds that primarily hold highly liquid investments from the highly liquid investment minimum requirement).

[137] *See* Proposing Release, *supra* footnote 9, at nn.123–125 and accompanying text.

[138] *See, e.g., infra* footnote 1107 and accompanying text.

[139] For example, some commenters expressed concerns about the extent to which the proposed liquidity classification factors were applicable to certain investment strategies, particularly funds that invest in fixed income or other OTC assets (*see, e.g.,* Comment Letter of Federated Investors, Inc. (Jan. 13, 2016) (''Federated Comment Letter''); Comment Letter of Government Finance Officers Association (Jan. 13, 2016) (''GFOA Comment Letter''); Comment Letter of Nuveen Fund Advisors, LLC (Jan. 13, 2016) (''Nuveen Comment Letter''); Comment Letter of OppenheimerFunds (Jan. 13, 2016) (''Oppenheimer Comment Letter'')). Commenters also expressed concerns about the extent to which a three-day liquid asset minimum requirement could impede an index fund's ability to track its index (*see, e.g.,* BlackRock Comment Letter; HSBC Comment Letter; Invesco Comment Letter; SIFMA Comment Letter I).

[140] *See, e.g.,* CRMC Comment Letter; Comment Letter of Eaton Vance Investment Managers (Jan. 13, 2016) (''Eaton Vance Comment Letter I'').

[141] We note that rule 22e–4 only applies to ETFs that are structured as open-end funds. For ease of reference, however, unless indicated otherwise, when we refer to ETFs we mean open-end ETFs only.

[142] *See infra* footnotes 839–841 and accompanying text.

adopting for ETFs respond to commenters' suggestions that the Commission tie these funds' liquidity risk management obligations to the particular risks that they face, as well as our assessment of how these funds' risks could most appropriately be addressed.[143]

b. Inclusion of Funds of All Sizes Within the Scope of Rule 22e–4

Also, as proposed, we are not excluding any fund from the scope of rule 22e–4 on the basis of size or adopting different liquidity requirements for relatively small funds. As discussed in the Economic Analysis section below, smaller funds tend to demonstrate relatively high flow volatility, and thus we believe they should be subject to the same liquidity risk management requirements as other funds.[144] Conversely, some commenters argued that the proposed classification requirement could unduly burden larger funds by inappropriately making these funds appear to be less liquid than they actually are, and we have incorporated certain modifications to the proposed classification requirement that we believe respond to these concerns, as discussed below.[145]

c. Exclusion of Closed-End Funds From the Scope of Rule 22e–4

As proposed, rule 22e–4 would have excluded closed-end investment companies from the scope of rule 22e–4. As discussed in detail in the Proposing Release, closed-end funds' liquidity needs are different from those of open-end funds, because closed-end funds generally do not issue redeemable securities and are not subject to sections 22(c) and 22(e) of the Investment Company Act.[146] Although closed-end interval funds do have to comply with certain liquidity standards under rule 23c–3 and therefore must manage their liquidity risk, we are not subjecting them to rule 22e–4 because they are already required to adopt written liquidity procedures under rule 23c–3(b)(10)(iii).[147] Closed-end interval funds may be better able to anticipate their liquidity needs than open-end funds because closed-end interval funds do not permit daily redeemability, closed-end interval funds must limit the size and timing of repurchase offers, and rule 23c–3 requires shareholders who wish to tender their shares pursuant to a repurchase offer to provide advance notice thereof to such funds.[148] Commenters uniformly agreed that closed-end funds should be excluded from the scope of rule 22e–4 and we continue to believe that closed-end funds (including closed-end interval funds) should be excluded from the rule's scope.

d. Separate Requirements for UITs Under Rule 22e–4

As proposed, the scope of rule 22e–4 did not include UITs.[149] As adopted today, the rule will require a limited liquidity review under which the UIT's principal underwriter or depositor determines, on or before the date of the initial deposit of portfolio securities into the UIT, that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues.[150] UITs and their principal underwriters and depositors will not, however, be subject to any of the rule's other liquidity risk management program requirements.

While one commenter supported excluding UITs from the scope of rule 22e–4,[151] several other commenters argued that ETFs structured as UITs should be subject to the same rule requirements as ETFs structured as open-end funds.[152] We respond in detail to these comments in section III.K below, including discussing how we believe the requirement to determine that a UIT's illiquid investment holdings are consistent with the redeemable nature of the UIT's securities responds to commenters' concerns.

e. Exclusion of Money Market Funds From the Scope of Rule 22e–4

Finally, as proposed, money market funds are excluded from the scope of rule 22e–4. Money market funds are currently subject to extensive requirements concerning the liquidity of their portfolio assets that are more stringent in many respects than the requirements of rule 22e–4, due to the historical redemption patterns of money market fund investors and the characteristics of the assets held by money market funds.[153] Money market funds also are already subject to broad liquidity-related disclosure and reporting requirements,[154] and they have certain tools at their disposal to manage heavy redemptions that are not available to other open-end funds.[155] For these reasons, we did not include money market funds within the scope of the proposed rule, and commenters uniformly agreed that money market funds should be excluded from the rule's scope.[156] We continue to believe that money market funds should be excluded from the scope of rule 22e–4.

B. Assessment, Management, and Review of Liquidity Risk

Section 22(e) of the Investment Company Act requires a registered investment company[157] to make payment to shareholders for securities tendered for redemption within seven days of their tender.[158] The legislative history of the Act indicates that shareholder dilution was a significant concern of the Act's framers.[159] An open-end fund's ability to pay redeeming shareholders within this seven-day period without significant dilution is directly related to its liquidity. Thus, assessing and managing liquidity risk in a comprehensive manner is critical to an open-end fund's capacity to honor redemption requests within this seven-day period, as well as within any shorter time period disclosed in the fund's prospectus or advertising materials, while mitigating dilution.

Today we are adopting a new liquidity risk assessment and management framework for funds. Specifically, rule 22e–4 requires a fund to assess, manage, and periodically review its liquidity risk, considering certain factors as applicable. As discussed in more detail below, the requirements we are adopting incorporate a definition of ''liquidity risk'' that focuses on whether a fund can meet redemption requests without significant dilution of remaining investors' interests rather than, as proposed, whether the fund can meet redemption requests without materially

[143] *See infra* section III.J.

[144] *See infra* footnote 1160 and accompanying text.

[145] *See infra* section III.C.3.b.

[146] *See* Proposing Release, *supra* footnote 9, at nn.132–135 and accompanying text. Certain closed-end funds (''closed-end interval funds'') do elect to repurchase their shares at periodic intervals pursuant to rule 23c–3 under the Investment Company Act.

[147] *See* Proposing Release, *supra* footnote 9, at n.134.

[154] *See id.,* at nn.151–152 and accompanying text.

[155] *See id.,* at nn.153–155 and accompanying text.

[156] *See, e.g.,* CRMC Comment Letter; Eaton Vance Comment Letter I; ICI Comment Letter I; Comment Letter of Voya Investment Management (Jan. 12, 2016) (''Voya Comment Letter'').

[157] *See supra* footnote 4 and accompanying text.

[158] *See supra* footnote 36.

[159] *See supra* footnote 7 and accompanying text.

affecting the fund's NAV.[160] We are also adopting certain changes to the proposed factors that a fund would consider in assessing and managing its liquidity risk. These changes aim to simplify and streamline the proposed liquidity risk assessment and management factors, and reflect additional considerations that the Commission, along with certain commenters, believes could entail heightened liquidity risk. Notably, the proposed requirement to consider a fund's investment strategy and portfolio liquidity in assessing and managing liquidity risk now incorporates the instruction that this consideration includes whether the investment strategy is appropriate for an open-end fund, as well as whether the strategy involves a relatively concentrated portfolio or large positions in particular issuers.[161] Additionally, the proposed requirement to consider a fund's short-term and long-term cash flow projections has been simplified to eliminate the five separate sub-considerations relevant to this factor that were incorporated in the proposed rule, but which now are discussed as guidance in this Release.[162]

We proposed liquidity risk assessment and management program requirements with the primary goals of reducing the risk that funds would be unable to meet redemption and other legal obligations, minimizing dilution, and elevating the overall quality of liquidity risk management across the fund industry while at the same time providing funds with reasonable flexibility to adopt policies and procedures that would be most appropriate to assess and manage their liquidity risk.[163] As we discuss throughout this section, we believe that the modified requirements we are adopting today continue to reflect these goals, while promoting a more efficient and workable framework.

1. Definition of ''Liquidity Risk''

Rule 22e–4, as adopted today, defines ''liquidity risk'' as the risk that a fund could not meet requests to redeem shares issued by the fund without significant dilution of remaining investors' interests in the fund.[164] This definition is largely similar to the proposed definition of ''liquidity risk,'' that is, the risk that a fund could not meet requests to redeem shares issued by the fund that are expected under normal conditions, or are reasonably foreseeable under stressed conditions, without materially affecting the fund's NAV.[165] However, in response to comments, the revised definition substitutes the phrase ''without significant dilution of remaining investors' interests in the fund'' for the phrase ''without materially affecting the fund's net asset value.'' The definition also does not include references to redemption requests that are expected under normal conditions or reasonably foreseeable under stressed conditions. Instead, the final definition simply refers to ''requests to redeem.'' We believe our modifications to the liquidity risk factors used to assess a fund's liquidity risk, as discussed below, make any reference to market conditions within the definition of liquidity risk unnecessary, confusing, and duplicative.[166]

a. Evaluating Risk of Significant Dilution of Remaining Investors' Interests

Multiple commenters objected to the proposed inclusion of any NAV-impact standard in the definition of ''liquidity risk.'' One commenter argued that including the concept of ''without materially affecting the fund's net asset value'' in the definition of liquidity risk would inappropriately merge liquidity and valuation, which are subject to different regulatory and compliance controls.[167] Many commenters also objected that including such a price concept in the definition of ''liquidity risk'' would incorrectly indicate that market impact can be accurately identified and measured separate from market price movements generally.[168] These commenters argued that many factors (including market volatility, portfolio composition, and trade execution and activity) influence the price at which a fund transacts in a security as well as the levels of cash the fund holds, and thus it is difficult to identify the effects of the fund's transaction activity on the fund's NAV. Finally, some commenters argued that the inclusion of a NAV-impact standard in the definition of ''liquidity risk'' could lead investors to believe that appropriate liquidity risk management will protect their investments from declining in value.[169]

While we agree that liquidity and valuation are distinct concepts, we consider these concepts as having certain inter-relationships. First, liquidity risk in an open-end fund inherently involves an assessment of the liquidity of the fund's investments. Common definitions of investment liquidity include consideration of the value impact or costs from trading that investment.[170] Second, our staff has observed in its outreach many occasions when a fund was unwilling to transact

[160] *See infra* section III.B.1.a.

[161] *See infra* section III.B.2.a.

[162] *See infra* section III.B.2.b.

[163] *See* Proposing Release, *supra* footnote 9, at paragraph following n.261.

[164] When determining whether a fund's liquidity risk will cause significant dilution for purposes of this definition, a fund should consider the impact of liquidity risk on the total net assets of the fund and the adverse consequences such dilution will have on all the fund's remaining shareholders. Furthermore, as discussed above, a fund's inability to meet redemption requests may cause harm to shareholders. *See, e.g., supra* footnotes 81–84 and accompanying text for a discussion of the suspension of shareholder redemptions in the Third Avenue Focused Credit Fund following a period of heavy redemptions that the fund stated reduced the fund's portfolio liquidity.

[166] *See* rule 22e–4(b)(1)(i).

[167] *See* SIFMA Comment Letter I.

[168] *See, e.g.,* Comment Letter of Credit Suisse (Jan. 13, 2016) (''Credit Suisse Comment Letter''); Comment Letter of Dodge & Cox (Jan. 21, 2016) (''Dodge & Cox Comment Letter''); Comment Letter of MFS Investment Management (Jan. 13, 2016) (''MFS Comment Letter''); SIFMA Comment Letter I; Comment Letter of Investment Company Institute (May 17, 2016) (''ICI Comment Letter III'') (encouraging the Commission to adopt a definition of liquidity risk that incorporates language related directly to dilution rather than value impact on the NAV).

[169] *See, e.g.,* ICI Comment Letter I; MFS Comment Letter; SIFMA Comment Letter I.

[170] *See, e.g.,* Radhakrishnan Gopalan, *et al., Asset Liquidity and Stock Liquidity,* 47 J. Fin & Quant. Anal. 333 (2012), *available at http://apps.olin.wustl.edu/faculty/gopalan/asset_stock_liquidity.pdf* (''An asset is liquid if it can be converted into cash quickly and at a low cost.''); Yakov Amihud & Haim Mendelson, *Liquidity, Asset Prices, and Financial Policy, 47 Fin. Anal. J.* 56 (1991), *available at http://www.jstor.org/stable/4479488?seq=1#page_scan_tab_contents* (''An asset is liquid if it can be bought or sold at the current market price quickly and at low cost.'').

In addition, we note that many funds disclose liquidity risk as a principal investment risk in their prospectuses, and these disclosures often reference possible adverse value impacts from selling fund investments under certain conditions. *See, e.g.,* Schwab Strategic Trust rule 485(b) Registration Statement (June 30, 2016), *available at https://www.sec.gov/Archives/edgar/data/1454889/000119312516632635/d203200d485bpos.htm* (''Liquidity Risk. The fund may be unable to sell certain securities, such as illiquid securities, readily at a favorable time or price, or the fund may have to sell them at a loss.''); Voya Variable Funds rule 485(b) Registration Statement (May 1, 2016), *available at https://www.sec.gov/Archives/edgar/data/2664/000119312516562669/d124096d485bpos.htm* (''Liquidity: If a security is illiquid, the [fund] might be unable to sell the security at a time when the [fund's] manager might wish to sell, or at all. Further, the lack of an established secondary market may make it more difficult to value illiquid securities, exposing the [fund] to the risk that the price at which it sells illiquid securities will be less than the price at which they were valued when held by the [fund]. The prices of illiquid securities may be more volatile than more liquid investments. The risks associated with illiquid securities may be greater in times of financial stress. The [fund] could lose money if it cannot sell a security at the time and price that would be most beneficial to the Portfolio.'').

in certain portfolio investments when such sales would yield a price that the fund considered unacceptable.[171] This relationship is clear in the Commission guidelines limiting a fund's investment in illiquid investments. These guidelines specify that an illiquid investment is one that cannot be sold or disposed of within seven days *at approximately the value at which the fund has valued the investment*'' (emphasis added).[172] We continue to believe that the inclusion of a conceptual relationship between liquidity and sale price in the definition of ''liquidity risk'' is appropriate.[173] Such a relationship indicates that liquidity risk involves the risk that a fund will not be able to meet redemption requests under any circumstances, as well as the risk that a fund could meet redemption requests, but only in a manner that adversely affects the fund's non-redeeming shareholders through significant dilution.[174]

We believe a definition of ''liquidity risk'' that includes a reference to the value impact from trading portfolio investments should not imply that mutual fund shareholders are guaranteed a protected NAV or that the fund cannot sell investments at a loss due to market risk, credit deterioration, or liquidity risk. Indeed, funds' narrative risk disclosure in their registration statements and other shareholder communications generally should make clear those risks that could adversely affect the fund's NAV, yield, and total return, including liquidity-related risks.[175] However, we believe defining liquidity risk clarifies what funds must manage under rule 22e–4, and, for the reasons discussed above, we believe impacts on valuation may play a significant role in evaluating the ability to effectively meet shareholder redemptions while lessening the effects of dilution.

Nonetheless, we agree with commenters that using the proposed specific standard of ''materially affecting the fund's NAV'' may pose certain challenges. We recognize that it may be difficult to calculate the particular market impact that a fund's transactions in an investment will have on that investment's price, which some commenters suggested was inherent to the proposed standard. There could be other reasons for a fund's NAV fluctuating, separate from the fund's sales of portfolio investments to meet redemption requests as well.

Accordingly, in the final rule we have modified the NAV-impact standard in the definition of ''liquidity risk'' to substitute the phrase ''without significant dilution of remaining investors' interests in the fund'' for the phrase ''without materially affecting the fund's net asset value.'' This revised standard more directly corresponds to the concerns of the Act[176] and rule 22e–4 by focusing on meeting investor redemptions without dilution.

We also note that commenter interpretations of the term ''materially'' varied, with some commenters adopting very narrow interpretations[177] of the term and others taking a more broad view.[178] We note that, for purposes of this definition, the term ''significant'' is not meant to reference slight NAV movements, the causes of which may not be easily distinguishable, nor is it limited only to fire-sale situations. Instead, a fund's liquidity risk management program should focus on the fund's ability to meet redemptions in a manner that does not harm shareholders.[179] In particular, ''significant'' dilution of remaining investors' interests in the fund can occur at much lower levels of dilution than what would occur in a fire sale situation. We believe ''significant'' conveys more effectively than ''materially'' that the definition is not meant to reference slight NAV movements, while avoiding the confusion around the term ''materially'' evident in the comment letters and better focusing the rule on the level of dilution that would harm remaining investors' interests even in the absence of a fire sale.

Under rule 22e–4, a fund would be required to adopt a liquidity risk management program that is ''reasonably designed to assess and manage the fund's liquidity risk.'' A fund's liquidity risk management program should be appropriately tailored to reflect that fund's particular liquidity risks. Therefore, while a fund is required to consider certain liquidity risk factors specified in rule 22e–4 as applicable, a fund may also, as it determines appropriate, expand its liquidity risk management program beyond the required program elements, and must do so to the extent it would be necessary to effectively assess and manage its liquidity risk.[180] This

[171] That is, the price that a portfolio manager could realistically receive for certain portfolio investments could, in effect, render such investments de facto illiquid if these pricing considerations cause the portfolio manager to refrain from selling them. *See, e.g.,* Third Avenue Temporary Order, *supra* footnote 12 (''On December 9, 2015, after considering the environment the Fund was in and the likelihood that incremental sales of portfolio securities to satisfy additional redemptions would have to be made at prices that would unfairly disadvantage all remaining shareholders, the Board determined that the fairest action on behalf of all shareholders would be to adopt a plan of liquidation.'').

[172] *See supra* footnote 39 and accompanying text.

[173] We also note that several commenters favorably discussed foreign and international regulators' liquidity risk management regimes, including ones that define the concepts of liquid (or illiquid) portfolio assets, as well as funds' liquidity risk, with reference to value impact or a discount that the fund may incur upon sale. *See, e.g.,* Dechert Comment Letter (favorably discussing certain liquidity risk management requirements, including the definition of ''liquidity risk,'' under the UCITS Directive); ICI Comment Letter I (noting that the Commission could look to other jurisdictions, including the European Union, for support for a principles-based program rule); Invesco Comment Letter (also noting that the UCITS Directive provides a framework for a principles-based liquidity risk management program requirement); *see also* Commission Directive 2010/43/EU, OJ L 176 (2010), at Ch. 1, Art. 3(8) (defining ''liquidity risk'' as ''the risk that a position in the UCITS portfolio cannot be sold, liquidated or closed at limited cost in an adequately short time frame and that the ability of the UCITS to comply at any time with its redemption obligation is thereby compromised''); Ontario Securities Commission, Report on Staff's Continuous Disclosure Review of Mutual Fund Practices Relating to Portfolio Liquidity, OSC Staff Notice 81–727 (June 25, 2015) (definition of ''illiquid asset'' refers to the ''ability to readily dispose of a portfolio asset through a market facility on which public quotations are available at a price that approximates the amount at which the portfolio asset is valued'').

We note as well that U.S. banking regulators have defined ''liquidity'' as ''a financial institution's capacity to meet its cash and collateral obligations at a reasonable cost.'' Interagency Policy Statement on Funding and Liquidity Risk Management, 75 FR 13656 (Mar. 22, 2010), *available at http://www.occ.gov/news-issuances/federal-register/75fr13656.pdf.*

[174] *See supra* footnote 79 and accompanying text.

[175] *See, e.g.,* Item 4(b) of Form N–1A.

[176] *See supra* footnote 32and accompanying text for a discussion of the liquidity concerns of the Act.

[177] *See* Comment Letter of Interactive Data Pricing and Reference Data (Dec. 18, 2015) (''Interactive Data Comment Letter'') (noting that there are several possible interpretations of the term, including an NAV price impact based on a one penny movement, among others.).

[178] *See* SIFMA Comment Letter I (proposing the Commission substitute the phrase ''assuming no fire-sale discounting'' for the phrase ''without materially affecting the fund's net assets'' and arguing that a fire-sale standard is a more appropriate outer boundary for price movements.). We believe that adopting a fire-sale standard as the outer boundary for price movements would be inappropriate because such an extreme outer boundary would fail to capture a fund's liquidity risk exposure during normal and stressed conditions and would, thus, inadequately address the liquidity risk management concerns of rule 22e–4.

[179] The classification requirements under rule 22e–4 include a value impact standard as well, which is based on the number of days within which it is determined that an investment would be convertible to cash (or, in the case of the less-liquid and illiquid categories, sold or disposed of) without the conversion (or, in the case of the less-liquid and illiquid categories, sale or disposition) significantly changing the market value of the investment. *See infra* section III.C and accompanying text.

[180] Rule 22e–4(b) requires that a fund ''adopt and implement a written liquidity risk management program that is reasonably designed to assess and

Continued

requirement, however, requires a fund to assess and *manage* liquidity risk and does not require a fund to eliminate all adverse impacts of liquidity risk, which would be incompatible with an investment product such as a mutual fund or ETF, whose NAV may fluctuate for a variety of reasons, including changing liquidity conditions.

b. Expected and Reasonably Foreseeable Redemption Requests

As proposed, the definition of ''liquidity risk'' would have required funds to consider redemption requests that are expected under normal conditions, as well as those that are reasonably foreseeable under stressed conditions. Some commenters stated that the concept of redemption requests that are reasonably foreseeable under stressed conditions was vague and could subject funds to ex-post second guessing.[181] One commenter suggested that the Commission clarify: (i) Whether funds should address both normal and reasonably foreseeable stressed conditions (or select one set of conditions) in assessing liquidity risk; and (ii) the level of market stress that funds should assume in conducting a liquidity risk assessment.[182]

The final definition of liquidity risk eliminates references to redemption requests that are expected under normal conditions or reasonably foreseeable under stressed conditions. The final definition simply refers to ''requests to redeem.'' We believe our modifications to the liquidity risk factors used to assess a fund's liquidity risk, including the clarification that a fund must consider certain liquidity risk factors both during normal and reasonably foreseeable stressed conditions, makes any reference to market conditions within the definition of liquidity risk unnecessary, confusing and duplicative. We believe the revised definition also addresses commenters' concerns that the proposed definition was unclear. We have provided guidance below regarding each liquidity risk factor and the need to consider normal and reasonably foreseeable stressed market conditions.

2. Liquidity Risk Factors

Rule 22e–4 will require each fund to assess, manage, and periodically review (with such review occurring no less frequently than annually) its liquidity risk, considering the following factors as applicable:

- Investment strategy and liquidity of portfolio investments during both normal and reasonably foreseeable stressed conditions (including whether the investment strategy is appropriate for an open-end fund, the extent to which the strategy involves a relatively concentrated portfolio or large positions in particular issuers, and the use of borrowings for investment purposes and derivatives);
- Short-term and long-term cash flow projections during both normal and reasonably foreseeable stressed conditions; and
- Holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources.[183]

A fund may incorporate other considerations, in addition to these factors, in evaluating its liquidity risk.

Like the rule we are adopting today, rule 22e–4 as proposed would have required each fund to assess its liquidity risk, taking certain specified factors into account.[184] Specifically, the proposed rule would have required each fund to take the following factors into account in assessing the fund's liquidity risk: (i) Short-term and long-term cash flow projections, considering size, frequency, and volatility of historical purchases and redemptions of fund shares during normal and stressed periods; the fund's redemption policies; the fund's shareholder ownership concentration; the fund's distribution channels; and the degree of certainty associated with the fund's short-term and long-term cash flow projections; (ii) the fund's investment strategy and liquidity of portfolio investments; (iii) use of borrowings and derivatives for investment purposes; and (iv) holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources.[185] The person(s) designated to administer the liquidity risk management program must also conduct reviews of the adequacy and effectiveness of the implementation of the liquidity risk management program, and such reviews must occur no less frequently than annually.[186] Commenters generally supported the requirement for a fund to assess its liquidity risk.[187] Additionally, some commenters expressed support for the proposed liquidity risk factors, as well as the proposed requirement to consider these factors in assessing liquidity risk.[188] However, several commenters objected to the proposed requirement for a fund to consider certain specified factors and suggested instead that consideration of the factors be permissive instead of mandatory.[189]

We continue to believe that the factors are central to evaluating and managing a fund's liquidity risk and that requiring each fund to consider, as a baseline, a standard set of factors for assessing and managing liquidity risk would promote effective and thorough liquidity risk management across the fund industry. However, we recognize that some of the proposed factors may not be applicable in assessing and managing the liquidity risk of certain funds or types of funds.[190] One commenter requested that we clarify that a fund only needs to consider factors relevant to its operations, which may include some or all of the factors outlined in rule 22e–4, and others not enumerated.[191] We agree, and to the extent any liquidity risk factor specified in rule 22e–4 is not applicable to a particular fund, the fund will not be required to consider it in assessing and managing its liquidity risk. We have therefore added the words ''as applicable'' in the rule's instruction to consider the specified factors.[192] For example, a fund will not be required to consider the use of borrowings for investment purposes and derivatives, as specified under rule 22e–4(b)(1)(i)(A), if that fund does not engage in borrowing

manage its liquidity risk,'' and identifies certain specific elements that a fund must consider in doing so.

[181] *See* Federated Comment Letter; NYC Bar Comment Letter.

[182] *See* AFR Comment Letter.

[183] *See* rule 22e–4(b)(1)(i). We note that rule 22e–4 as adopted also includes two additional factors that an ETF will have to consider as applicable in assessing, managing, and periodically reviewing its liquidity risk, which reflect potential liquidity-related concerns that could arise from the structure and operation of ETFs (including In-Kind ETFs). These are: (i) The relationship between the ETF's portfolio liquidity and the way in which, and the prices and spreads at which, ETF shares trade, including, the efficiency of the arbitrage function and the level of active participation by market participants (including authorized participants); and (ii) the effect of the composition of baskets on the overall liquidity of the ETF's portfolio. These factors are discussed in more detail below. *See infra* section III.J.

[189] *See, e.g.,* CFA Comment Letter; MFS Comment Letter; Voya Comment Letter.

[190] *See* Proposing Release, *supra* footnote 9, at section III.C.1.

[191] *See* ICI Comment Letter I.

[192] *See* rule 22e–4(b)(1)(i) (requiring a fund to consider, ''as applicable,'' certain factors); *see also* FSR Comment Letter (supporting the proposed liquidity risk assessment requirement and agreeing with the Commission's position in the proposal that a fund would not be required to consider those factors that are not applicable to that particular fund).

or use derivatives. Similarly, a fund that maintains borrowing sources for investment purposes will be required to consider the use of borrowings for investment purposes as specified under the rule. We also believe that condensing and simplifying the proposed factors helps respond to commenters' concerns that the proposed factors were overly complex [193] and potentially inapplicable to certain funds.[194]

As noted above, this list of liquidity risk factors is not meant to be exhaustive. In assessing, managing, and periodically reviewing its liquidity risk, a fund may take into account considerations in addition to the factors set forth in rule 22e–4 and must do so to the extent necessary to adequately assess and manage the fund's liquidity risk.[195] For example, as discussed in the Proposing Release, if a fund elects to conduct stress testing to determine whether it has sufficient liquid investments to cover different levels of redemptions, a fund may wish to incorporate the results of this stress testing into its liquidity risk assessment and management.[196] We continue to believe that stress tests that analyze the proposed factors could be particularly useful to a fund in evaluating its liquidity risk.

Below we provide guidance on specific issues associated with each of the liquidity risk factors and also discuss the Commission's decision to adopt each of these factors (some with modifications).

a. Investment Strategy and Portfolio Liquidity

We are adopting the proposed requirement for a fund to consider its investment strategy and portfolio liquidity in assessing, managing, and periodically reviewing its liquidity risk, but with certain modifications in response to commenters.[197] The principal changes include a requirement to consider whether the investment strategy is appropriate for an open-end fund, as well as the extent the strategy involves a relatively concentrated portfolio or large positions in particular issuers, and a clarification that this factor should be assessed both during normal and reasonably foreseeable stressed conditions.

We continue to believe that various aspects of a fund's investment strategy—including whether the fund is actively or passively managed [198] and a fund's portfolio management decisions that are meant in part to decrease an undesirable tax impact on the fund [199]— could significantly affect the fund's liquidity risk. Also the extent to which the fund is diversified, including a fund's status as a regulated investment company under Subchapter M of the Internal Revenue Code, as well as its principal investment strategies as disclosed in its prospectus, could affect its liquidity risk in that the fund could be limited by its diversification obligations in its ability to sell certain portfolio securities.[200] We note, for example, that the Third Avenue Focused Credit Fund stated that its status as a regulated investment company under Subchapter M limited the fund's ability to return cash to its shareholders after it suspended redemptions because of its need to comply with certain asset diversification tests to maintain its regulated investment company status.[201] As discussed in the Proposing Release, we also continue to caution that while a fund's investment strategy is an important factor in evaluating a fund's liquidity risk, different types of funds within the same broad investment strategy may demonstrate different levels of liquidity, (and thus, presumably, different levels of liquidity risk).[202]

Consideration of Strategy Appropriateness for Open-End Fund Structure

We are adopting several modifications to the proposed requirement to consider a fund's investment strategy and portfolio liquidity in assessing, managing, and periodically reviewing its liquidity risk. First, we clarify in final rule 22e–4 that consideration of investment strategy must take into account whether the fund's strategy is appropriate for an open-end fund. This clarification reflects several commenters' suggestions that a fund's liquidity risk management program could (or should) involve a consideration of whether the fund's investment strategy and permissible holdings are suitable for the open-end structure.[203]

We agree with this suggestion raised by commenters. As discussed above, all open-end funds are subject to section 22(e) of the Investment Company Act, which requires a fund to pay redemption proceeds within seven days after receipt of a redemption request, and hold themselves out at all times as being able to meet redemptions (in many cases within an even shorter period of time).[204] To the extent that a fund's investment strategy involves investing in securities whose liquidity is limited, or otherwise entails a significant degree of liquidity risk, the fund may not be able to meet its redemption and other legal obligations, or may not meet redemptions without diluting its shareholders' interests in the fund. We understand that it is a common best practice for a fund and its management to consider the appropriateness of a fund's investment strategy in the context of launching an open-end fund, and then for an open-end fund to continue to manage its liquidity risk such that its strategy and holdings remain appropriate for the open-end structure. However, not all funds appear to consider this. Also, as we have observed funds beginning to pursue more complex investment

[197] *See* rule 22e–4(b)(1)(i)(A).

[198] *See* Proposing Release, *supra* footnote 9, at paragraph accompanying nn.292–295 (discussing factors that could increase or decrease the liquidity risk associated with index-based strategies versus actively-managed strategies).

[199] *See* Proposing Release, *supra* footnote 9, at paragraph accompanying n.299 (detailing the ways in which a fund's tax management strategy could make its portfolio managers unwilling to sell certain portfolio assets in order to meet redemptions, which could in turn increase the fund's liquidity risk compared to a similarly situated fund).

[200] *See* Proposing Release, *supra* footnote 9, at paragraph accompanying nn.296–298 (discussing the extent to which a fund's portfolio is diversified (or, relatedly, a fund's concentration in certain types of portfolio assets) could have ramifications on the fund's potential liquidity risk, including the ways that various diversification requirements could constrain its ability to sell certain portfolio securities in order to meet redemptions).

[201] *See* Third Avenue Focused Credit Fund Update (Mar. 8, 2016), *available at http://thirdave.com/wp-content/uploads/2016/04/03-09-16-FCF-Call-Transcript-1.pdf* (noting that, because one of the diversification tests under Subchapter M would require the fund to have less than 50% of its assets in concentrated positions, the fund needed to retain cash in order not to violate this test, in light of the manner in which it chose to manage the fund's liquidation of its other assets).

[202] *See* Proposing Release, *supra* footnote 9, at n.301 and accompanying text.

[203] *See* BlackRock Comment Letter (''[W]e recommend that the Commission consider whether funds should be required to explicitly address the level of position concentration that is appropriate for the fund's investment strategy and investor profile in [liquidity risk management] policies and procedures''); ICI Comment Letter I (''A risk-based liquidity management program could require a fund manager, when launching a new mutual fund, to assess whether the fund's investment strategy and permissible holdings are suitable for the open-end structure in light of [its] liquidity characteristics.''); *see also* CRMC Comment Letter (encouraging the Commission to consider whether certain funds may be inappropriate for the open-end fund structure).

[204] *See supra* footnotes 34–36, 42–47 and accompanying text.

strategies,[205] we believe it is appropriate to require that each open-end fund consider whether it has a liquidity risk management framework in place that corresponds with the liquidity risks inherent in its strategy and its structure as a fund that offers redeemable securities.

We believe that specifically requiring an open-end fund to consider whether its investment strategy is appropriate for the open-end structure would supplement existing practices and provide an important additional layer of shareholder protection. For example, this requirement will likely cause funds to evaluate the suitability of investment strategies that will be permitted under the 15% illiquid investment requirement, but still could entail significant liquidity risk—such as strategies involving highly concentrated portfolios, or strategies involving investment in portfolio investments that are so sensitive to stressed conditions that funds may not be able to find purchasers for those investments during stressed periods.[206] Furthermore, funds that have significant holdings of securities with extended settlement periods may face challenges operating as open-end funds and should take these holdings into account when determining whether the fund's portfolio is appropriate for an open-end fund.[207] For example, primarily holding securities with extended settlement periods beyond seven days may not be appropriate for an open-end fund, as primarily having such extended settlement holdings may raise concerns with the fund's ability to meet redemptions within seven days, particularly if the fund has not established adequate other sources of liquidity.

Because a fund will be required to consider the liquidity risk factors (as applicable) in periodically reviewing its liquidity risk, the final rule requires a fund's periodic liquidity risk review to include a consideration of whether the fund's investment strategy is appropriate for an open-end fund.[208] For example, if a fund's illiquid investments exceed 15% of net assets, this could indicate that the fund is encountering liquidity pressures that could significantly impair the fund's ability to meet its redemption and other legal obligations. In this case, we believe it would be appropriate for a fund to review and potentially update its liquidity risk management procedures for handling the fund's high levels of illiquid investment holdings. In circumstances in which it appears unlikely that the fund will be able to reduce its illiquid investment holdings to or below 15% within a period of time commensurate with its redemption obligations, a fund's periodic liquidity risk review could lead the fund to reconsider its continued operation as an open-end fund.[209]

Consideration of Portfolio Concentration, and Holdings of Large Portfolio Positions

We also are adopting a modification to the proposed liquidity risk factors to clarify that consideration of a fund's investment strategy must include an evaluation of whether the strategy involves a relatively concentrated portfolio or large positions in particular issuers. Some commenters suggested that funds with extraordinarily concentrated portfolios may have particular liquidity risks that could make redeemability from these funds especially challenging.[210] Our evaluation of these comments, together with recent events discussed below, have led us to revise the proposed ''investment strategy'' liquidity risk factor to focus on fund concentration issues.

We believe that this component of a fund's investment strategy is a particularly significant factor in evaluating the extent to which investment strategy contributes to liquidity risk. As we noted in the Proposing Release, while a fund with a relatively more diversified portfolio that needs to sell portfolio investments to build liquidity may be able to select investments for sale based on whether the markets for those investments are favorable, a relatively less diversified fund may have fewer options (*i.e.,* because it has less choice of investments to sell or because the markets for its portfolio investments are uniform or correlated) and could thus be compelled to transact in unfavorable markets.[211] In addition, as discussed below, holding a large portion of a particular issue could adversely affect a fund's ability to convert the position to cash without a value impact, and this can hamper a fund's portfolio management flexibility due to the higher liquidity risk in its positions.[212] Thus, we believe that investment strategies that involve holding large portions of a particular issue—particularly if the market for these securities is thinly traded[213] or if the fund's strategy involves investment in a relatively small number of holdings—could notably increase a fund's liquidity risk. As discussed above, the recent suspension of redemptions by Third Avenue Focused Credit Fund, which had a concentrated portfolio and large holdings of particular issues, illustrates how these methods of concentration directly affect liquidity risk, which in turn could adversely affect shareholders to the extent that they are not able to redeem their shares, or redeem their shares only at a significant discount.[214]

Use of Borrowings for Investment Purposes and Derivatives

We have incorporated the proposed requirement to consider a fund's use of borrowings for investment purposes and derivatives within the requirement to consider investment strategy in assessing, managing, and periodically reviewing a fund's liquidity risk.[215] As

[205] *See supra* footnote 11 and accompanying text.

[206] We note that, when a fund files its initial registration statement and post-effective amendments thereto with the Commission's Division of Investment Management for review, Commission staff could request information from the fund regarding the fund's basis for determining that its investment strategy is appropriate for the open-end structure, just as staff currently may request information from a fund to support its disclosure reflecting the fund's compliance with various provisions of the Investment Company Act and rules thereunder.

[207] *See infra* footnote 378 and accompanying text.

[208] *See infra* section III.B.3.

[209] Moreover, we note that actions that either directly or indirectly extinguish the rights of shareholders to redeem their shares could, depending on the facts and circumstances, involve violations of section 22(e) and other provisions of the Act, such as section 48(a) (prohibiting a person from doing indirectly, through another person, what that person is prohibited by the Act from doing directly).

However, as also discussed above, the extent to which a fund is required to be diversified, including a fund's status as a regulated investment company under Subchapter M of the Internal Revenue Code, could affect its liquidity risk in that the fund could be limited by its diversification obligations in its ability to sell certain portfolio securities. *See supra* footnotes 200–201 and accompanying text.

[215] *See* proposed rule 22e–4(b)(2)(iii)(C); rule 22e–4(b)(1)(i)(A).

proposed, this consideration was not included within the investment strategy factor, but instead was a stand-alone liquidity risk factor. However, we believe that including this consideration within the general investment strategy factor is clearer, because a fund's use of borrowings for investment purposes and derivatives may be viewed as a component of its investment strategy. We note that we have also revised the phrase ''use of borrowings and derivatives for investment purposes'' that was used in the Proposing Release, and instead are using the term, ''use of borrowings for investment purposes and derivatives'' in the final rule. We have made this revision in order to clarify that funds should consider all derivatives, including those used for hedging purposes. As proposed, this provision could potentially have been read to exclude the consideration of derivatives used for hedging, which was not the intent of the proposed requirement. We believe this clarification will make clear that the requirement is for a fund to consider both use of borrowings for investment purposes and use of derivatives in general. One commenter stated that it agreed that funds should consider the use of derivatives when assessing liquidity risk, including the extent and types of derivatives used, as well as the structure and terms of a fund's derivatives transactions.[216] No commenters suggested that a fund's use of borrowings for investment purposes and derivatives is inapplicable to a fund's liquidity risk (provided that the fund engages in borrowing or uses derivatives [217]).

We continue to believe that the potential effects of the use of borrowings for investment purposes and derivatives are relevant to assessing, managing, and periodically reviewing a fund's liquidity risk.[218] As we noted in the Proposing Release, borrowing for investment purposes, whether from a bank [219] or through financing transactions such as reverse repurchase agreements and short sales,[220] may affect a fund's liquidity risk.[221] Similarly, a fund's use of derivatives such as futures, forwards, swaps and written options may affect a fund's liquidity risk as well.[222] We note that in addition to the liquidity of the derivatives positions themselves, assessing, managing, and periodically reviewing liquidity risk generally may include an evaluation of the potential liquidity demands that may be imposed on the fund in connection with its use of derivatives, including any variation margin or collateral calls the fund may be required to meet.[223] To the extent the fund is required to make payments to a derivatives counterparty, those assets would not be available to meet shareholder redemptions.

Consideration of Investment Strategy and Portfolio Liquidity During Normal and Reasonably Foreseeable Stressed Conditions

Finally, we also are modifying the proposed liquidity risk assessment requirement to clarify that certain liquidity risk factors must be considered during both normal and reasonably foreseeable stressed conditions. As proposed, rule 22e–4 did not specify whether a consideration of these factors should consider normal conditions, stressed conditions, or both. One commenter stated that the proposed rule's treatment of stressed conditions was unclear,[224] and another said that the proposed rule was unclear about what needed to be considered in assessing ''stress.'' [225] For those liquidity risk factors that could vary depending on market conditions (*i.e.,* a fund's portfolio liquidity and cash flow projections), we believe that it is appropriate to require a fund to evaluate those factors in normal and reasonably foreseeable stressed conditions. Thus, if a fund's portfolio strategy involves investing in securities whose liquidity is likely to decline in stressed conditions, a fund should take this into account in determining how its portfolio liquidity could contribute to its overall liquidity risk. For example, a fund's portfolio liquidity could decrease in stressed conditions if such conditions led to market participants pulling back on transacting in the fund's portfolio securities, or if stressed conditions affecting other assets or asset classes were to have correlated effects on the fund's portfolio securities. In considering normal and reasonably foreseeable stressed conditions, funds should consider historical experience but should recognize that such

[216] *See* CFA Comment Letter.

[217] *See supra* footnotes 191–192 and accompanying text (clarifying that, to the extent one of the factors specified in rule 22e–4(b)(1)(i) is not applicable to a particular fund, the fund would not be required to consider that factor in assessing its liquidity risk).

[218] *See* Proposing Release, *supra* footnote 9, at section III.C.1.c.

[219] *See id.,* at n.303 and accompanying text (noting that, in addition to the asset coverage limitations imposed by section 18 of the Investment Company Act, any borrowing from a bank would be subject to the terms agreed between a fund and the bank, including terms relating to the maturity date of the borrowing and any circumstances under which the borrowing may be required to be repaid).

[220] *See id.,* at nn.304–305 and accompanying text (noting that funds that borrow for investment purposes, for example through financing transactions such as reverse repurchase agreements and short sales, generally do so in reliance on certain Commission guidance, under which funds cover their obligations under such transactions by segregating certain liquid assets, and discussing the effects of asset segregation on funds' liquidity risk).

Segregated assets are considered to be unavailable for sale or disposition, including for redemptions, unless replaced by other appropriate non-segregated assets of equal value. *See* Securities Trading Practices of Registered Investment Companies, Investment Company Act Release No. 10666 (Apr. 18, 1979) [44 FR 25128 (Apr. 27, 1979)] (''Release 10666''). This means that a fund that receives significant redemption requests may need to exit a portion of its financing transactions in order make more liquid investments available for sale to fulfill such requests. Furthermore, if a fund seeks to exit its financing transactions in a declining market, it may need to dispose of a greater amount of its more liquid holdings in order to repay its borrowings, thereby reducing the amount of liquid investments it has available to meet redemptions. Consequently, a fund's assessment and management of its liquidity risk must include an evaluation of the nature and extent of its borrowings and the potential impact of borrowings on the fund's overall liquidity profile.

[221] We note that borrowings for investment purposes pose a variety of liquidity risks, including the risk that redemptions may require the sale of securities in amounts exceeding the amount of the redemption, resulting in a reduction of the fund's borrowings. Additionally, even without redemptions, the fund may need to sell securities and reduce borrowings if its investment values decline, which may have negative effects on the fund's liquidity.

[222] *See* Proposing Release, *supra* footnote 9, at paragraph accompanying nn.306–307 (discussing how the use of derivatives may affect a fund's liquidity risk). Funds that use derivatives under which they have an obligation to pay typically do so in reliance on the guidance we provided in Release 10666 and in related no-action letters issued by our staff, and therefore segregate liquid assets in respect of their obligations under derivatives transactions. *See generally* Use of Derivatives by Investment Companies under the Investment Company Act of 1940, Investment Company Act Release No. 29776 (Aug. 31, 2011) [76 FR 55237 (Sept. 7, 2011)], at 13–17; *see also* Use of Derivatives by Registered Investment Companies and Business Development Companies, Investment Company Act Release No. 31933 (Dec. 1, 2015) [80 FR 80884 (Dec. 28, 2015)] (''2015 Derivatives Proposing Release''), at n.47 and accompanying text; *see also supra* footnote 220. Derivatives may therefore raise concerns that are similar to those discussed at footnote 220 in the context of borrowings. Funds also may be required to dispose of assets in order to post required margin with respect to their short sale transactions. In addition, some derivatives transactions— particularly those that are complex or entered into OTC—may be less liquid, have longer settlement periods, or be more difficult to price than other types of investments, which potentially increases the amount of time required to exit such transactions.

[223] *See* In re OppenheimerFunds, Inc., *et al.,* Investment Company Act Release No. 30099 (June 6, 2012) (settled action) (''OppenheimerFunds Release'') (alleging the adviser made misleading statements regarding two fixed income mutual funds that suffered significant losses during the 2008 financial crisis primarily due to their use of total return swaps to obtain exposure to commercial mortgage-backed securities and noting that the funds ''had to raise cash for anticipated [total return swap] contract payments by selling depressed bonds into an increasingly illiquid market.'').

[224] *See* BlackRock Comment Letter.

[225] *See* AFR Comment Letter.

experience may not necessarily be indicative of future outcomes, depending on changes in market conditions and the fund's particular circumstances.

We note that ''stressed'' conditions will likely entail different scenarios for different types of funds. For example, differing levels of changes in interest rates and/or interest rates' implied volatility could affect two bond funds very differently, depending on factors such as the maturity, coupon rates and other characteristics of the funds' portfolio holdings. Assessment of stressed conditions also should take into account stresses originating outside of market stress. For example, certain funds could be significantly affected by geopolitical stresses, such as an emerging markets debt fund whose holdings' liquidity is affected by factors such as economic uncertainty in the holdings' countries of issuance. The extent to which stressed conditions are reasonably foreseeable will vary depending on the fund's facts and circumstances.

b. Cash Flow Projections

We are adopting the requirement for a fund to consider its short-term and long-term cash flow projections, during both normal and reasonably foreseeable stressed conditions, in assessing and managing its liquidity risk.[226] The proposed rule also included the requirement for a fund to consider its cash flow projections in assessing its liquidity risk. However, we are adopting some modifications to this proposed requirement. Most significantly, although the proposed rule specified five separate considerations a fund would have to take into account in evaluating the extent to which its cash flow projections contribute to its liquidity risk, rule 22e–4 as adopted today does not enumerate these five considerations. Instead, we are discussing these five considerations as guidance that funds should generally take into account in evaluating their cash flow projections, as discussed in more detail below.

We continue to believe, as discussed in the Proposing Release, that understanding a fund's cash flows is important in determining whether the fund will have sufficient cash to satisfy redemption requests.[227] We also continue to believe that the better a fund's portfolio and risk managers are able to predict the fund's net flows, the better they will be able to measure and manage the fund's liquidity risk.[228] Predictability about whether periods of market stress or declines in fund performance generally lead to increased redemptions of fund shares is particularly significant, as careful liquidity risk management during these periods could prevent the need to sell less-liquid portfolio assets under unfavorable circumstances. This type of selling, in turn, could create significant negative price pressure on the assets and, to the extent the fund continues to hold a portion of those assets, decrease the value of the assets still held by the fund at least temporarily.[229] To the extent a fund understands the composition of its shareholder base (for example, among retirement investors, other individual investors, or discretionary accounts), it may be able to better predict fund flows in response to market events or fund performance.

Consideration of Cash Flow Projections During Normal and Reasonably Foreseeable Stressed Periods

We also are revising the rule to require a fund to consider its short-term and long-term cash flow projections during both normal and reasonably foreseeable stressed conditions.[230] As discussed above, proposed rule 22e–4 would have required a fund, in evaluating short-term and long-term cash flow projections, to consider the size, frequency, and volatility of historical purchases and redemptions of fund shares during normal and stressed periods.[231] Although we are not including a specific requirement for a fund to consider historical purchases and redemptions in considering its cash flow projections, we believe continuing to incorporate the concept of normal and reasonably foreseeable stressed conditions within the requirement to consider cash flow projections is critical for a fund to obtain a complete picture of how its cash flows may affect its liquidity risk, particularly because greater, more frequent, or more volatile outflows during stressed conditions could exacerbate a fund's liquidity risk.[232] A fund and its portfolio and/or risk managers should review the guidance we provide below regarding funds' evaluation of the size, frequency, and volatility of historical purchases and redemptions of fund shares during normal and reasonably foreseeable stressed circumstances, as well as similar funds' purchases and redemptions, in determining how normal and reasonably foreseeable stressed market conditions could affect a fund's cash flows and contribute to the fund's liquidity risk.[233]

Guidance on Evaluating a Fund's Cash Flow Projections

As discussed above, rule 22e–4 as adopted today requires a fund to consider its short-term and long-term cash flow projections during both normal and reasonably foreseeable stressed conditions in assessing, managing, and periodically reviewing liquidity risk. This liquidity risk factor simplifies the rule as proposed, which would have codified five separate considerations that would comprise a fund's consideration of its cash flow projections—namely, (i) the size, frequency, and volatility of historical purchases and redemptions of fund shares during normal and reasonably foreseeable stressed periods, (ii) the fund's redemption policies, (iii) the fund's shareholder ownership concentration, (iv) the fund's distribution channels, and (v) the degree of certainty associated with the fund's short-term and long-term cash flow projections. Instead of enumerating these five considerations in the text of rule 22e–4, we are discussing each of them as guidance in this Release (together, the ''cash flow guidance considerations'').

We are not codifying the cash flow guidance considerations to simplify the rule 22e–4 liquidity risk factors and to alleviate certain commenter concerns about the complexity of the proposed factors. Commenters argued that the requirement to consider a specified list of multiple liquidity risk factors is overly complex—making compliance more difficult for funds, and oversight more difficult for the Commission.[234] Commenters discussed the dangers of an analysis that mandates consideration of multiple factors becoming a generic ''checklist'' approach to liquidity risk management that does not fully capture

[226] *See* rule 22e–4(b)(1)(i)(B).

[228] *See id.,* at n.269 and accompanying text. *See also* Fidelity Comment Letter (noting that the predictability of fund cash flows varies depending on the predictability of the redemption behavior of the fund's shareholder base. ''[F]unds whose shareholders include investors who purchased shares distributed through a retirement program or other planned savings program may exhibit redemption patterns that are relatively more predictable.''); BlackRock Comment Letter (noting that funds may need additional data from their distributors and transfer agents regarding shareholder redemption activity to allow funds to make short-term and long-term cash projections).

[229] *See* Proposing Release, *supra* footnote 9, at n.270 and accompanying text.

[230] *See* rule 22e–4(b)(1)(i)(B).

[231] *See* proposed rule 22e–4(b)(2)(iii)(A)*(1).*

[232] *See* Proposing Release, *supra* footnote 9, at text accompanying and following n.273.

[233] *See infra* footnotes 236–239 and accompanying text.

[234] *See, e.g.,* Better Markets Comment Letter.

the business practices, strategies, and risks that are germane to certain funds.[235] We agree that requiring an overly complex liquidity risk assessment analysis could lead to this result, to the detriment of investors. Such procedures could appear to be robust, but in actuality may not reflect (or may underweight) a fund's most significant risk factors because of the perceived requirement to focus on enumerated factors that may not be particularly important to a fund's operations and risks. Thus, we believe that simplifying the cash flow liquidity risk factor in rule 22e–4 will benefit funds and their shareholders and continue to advance the Commission's goal of promoting meaningful liquidity risk analysis.

With respect to the size, frequency, and volatility of historical purchases and redemptions of fund shares, we continue to believe, as discussed in the Proposing Release, that funds whose historical net flows are relatively less volatile in terms of size and frequency will likely entail less liquidity risk than similar funds with more volatile net flows.[236] A fund should generally review historical purchases and redemptions of fund shares across a variety of market conditions in order to determine how the fund's flows may differ during normal and reasonably foreseeable stressed periods (keeping in mind that historical experience may not necessarily be indicative of future outcomes).[237] In addition to considering its own historical flow data, a fund, particularly a fund without substantial operating history, should consider purchase and redemption activity in funds with similar investment strategies.[238] A fund may wish to evaluate whether the size, frequency, and volatility of its shareholder flows follow any discernible patterns (for example, patterns relating to seasonality, shareholder tax considerations, fund advertising, changes in fund performance ratings provided by third-party rating agencies, and the fund's investment strategy and size).[239]

We also continue to believe that a fund generally should consider its normal redemption policies and practices in evaluating the extent to which its cash flow projections may contribute to its liquidity risk. Specifically, as discussed in the Proposing Release, a fund should generally consider its disclosed or advertised time period for paying (or endeavoring to pay) redemption proceeds and whether this time period varies based on the payment method the fund employs.[240] For example, a fund whose policies require it to typically pay redeeming shareholders on a next-day basis may have fewer options for managing high levels of redemptions than a fund whose policies require it to typically pay redeeming shareholders on a T + 3 basis.[241]

A fund's shareholder ownership concentration also could affect its cash flow projections, as a fund that has a concentrated set of beneficial owners could experience considerable cash outflows from redemptions by a single or small number of shareholders, or by the decisions of an intermediary that has discretionary power over a significant number of shareholder accounts.[242] This in turn could hamper a fund's management of liquidity risk if the fund does not have procedures in place to manage large redemptions. For these reasons, we believe a fund should consider the extent to which its shareholder concentration affects its liquidity risk, particularly taking into account other factors that could magnify shareholder concentration-related liquidity risk (*e.g.,* if a fund has an investment strategy that attracts shareholders who trade based on short-term price movements).

We also continue to believe that a fund should consider how its distribution channels could affect its cash flows, including the predictability of its cash flows. For example, a fund may wish to consider the extent to which its redemption practices could depend on its distribution channels,[243] as well as whether its distribution channels (particularly, whether the fund's shares are held through omnibus accounts) could make it difficult for a fund to be fully aware of the composition of its underlying investor base,[244] including investor characteristics that could affect the fund's short-term and long-term flows.[245] A fund's distribution channels could affect its cash flow predictions because certain distribution channels are generally correlated with particular purchase and redemption patterns.[246] Additionally, we note that investors in mutual funds distributed through certain channels also may have similar purchase and redemption characteristics relating to their financial and tax-related needs.[247]

---

[235] *See, e.g.,* MFS Comment Letter.

[236] *See* Proposing Release, *supra* footnote 9, at nn.272 and accompanying text.

[237] *See supra* footnotes 230–233 and accompanying text. A fund may find it instructive to understand when its highest, lowest, most frequent, and most volatile purchases and redemptions occurred within various time horizons, such as the past one, five, ten, and twenty years (as applicable, considering the fund's operating history).

[238] *See* Proposing Release, *supra* footnote 9, at text following n.273. We note that consideration of similar funds' purchases and redemptions could show whether the fund's historical flows are typical or aberrant compared to those seen in similar funds and assist new funds in predicting flow patterns.

[239] *See* Proposing Release, *supra* footnote 9, at nn.274–279 and accompanying text (discussing how a fund's investment strategy could contribute to its shareholder flows and noting that smaller funds may experience greater flow volatility). For instance, we understand that certain investors tend to trade in and out of ETFs with index-based strategies frequently because they invest in these ETFs for hedging and/or short-term trading purposes.

[240] *See* Item 6(b) of Form N–1A (requiring a fund to briefly identify the procedures for redeeming shares); *infra* section III.M.1 (discussing amendments to Item 11 of Form N–1A).

[241] To illustrate, when a fund that pays redemption proceeds within one day receives a large redemption request and a fund that pays redemption proceeds within three business days receives a redemption request of the same size, the first fund must satisfy the full request within one day, whereas the second fund has more time to satisfy the redemption request. Even though the shareholder flows of the first and second fund are identical, the redemption policies of the first fund magnify its liquidity risks by requiring that the fund pay redemptions quickly. *See, e.g.,* Proposing Release, *supra* footnote 9, at n.270.

[242] We note that a relatively concentrated fund shareholder base may make it easier for funds to communicate with those shareholders or intermediaries about anticipated future redemptions, and thus plan liquidity demands. However, those shareholders are under no legal obligation to forewarn the fund of their redemptions and, particularly in times of stress, may not do so.

[243] For example, mutual funds that are sold through broker-dealers will generally have to meet redemption requests within three business days, because rule 15c6–1 under the Exchange Act effectively establishes a T+3 settlement period for purchases and sales of securities (other than certain types of securities exempted by the rule) effected by a broker or dealer, unless a different settlement period is expressly agreed to by the parties at the time of the transaction.

[244] *See, e.g.,* Comment Letter of Coalition of Mutual Fund Investors (Jan. 18, 2016) (''CMFI Comment Letter'') (raising concerns regarding omnibus account transparency).

[245] These investor characteristics could include whether ownership in the mutual fund is relatively concentrated, as well as whether the types of underlying investors in the fund typically share common investment goals affecting redemption frequency and timing.

[246] For instance, investors in mutual funds distributed through a retirement plan channel or other planned savings channel (such as a qualified tuition plan authorized by section 529 of the Internal Revenue Code) may be more likely to be long-term investors who do not trade based on short-term price movements, and their purchase and redemption patterns thus may be relatively predictable compared to those of other investors.

[247] For example, taxable investors who are considering purchasing mutual fund shares around capital gains distribution dates have an incentive to delay their purchases until after the distribution, but non-taxable shareholders (such as those who invest through IRAs and other tax-deferred accounts) face no such incentive for delaying purchases. *See* Woodrow T. Johnson & James M. Poterba, *Taxes and Mutual Fund Inflows around*

Continued

Finally, we continue to believe that a fund should consider the degree of certainty surrounding its short-term and long-term cash flow projections. A fund could consider the length of its operating history (including the fund's experience during points of market instability, illiquidity, or volatility) and any purchase and redemption patterns. A fund may use ranges in considering cash flow projections and their relationship to liquidity risk. If a fund has implemented policies to encourage certain shareholders (*e.g.,* large shareholders or institutional shareholders) to provide advance notification of their intent to redeem a significant number of shares of the fund, this could increase the degree of probability surrounding its cash flow projections.[248]

c. Holdings of Cash and Cash Equivalents, Borrowing Arrangements, and Other Funding Sources

We are adopting the requirement for a fund to consider its holdings of cash and cash equivalents, as well as its borrowing arrangements and other funding sources, in assessing, managing, and periodically reviewing its liquidity risk, as proposed.[249] As discussed in the Proposing Release, current U.S. Generally Accepted Accounting Principles (''GAAP'') define cash equivalents as short-term, highly liquid investments that are readily convertible to known amounts of cash and that are so near their maturity that they present insignificant risk of changes in value because of changes in interest rates.[250] While we understand based on staff outreach and the comments we received on the proposal that many asset managers establish minimum cash and cash equivalent targets as part of their liquidity risk management practices,[251] commenters stated that significant cash and cash equivalent holdings are not necessarily appropriate for all funds and as a stand-alone tool do not necessarily entirely mitigate liquidity risk.[252] We agree with commenters that the amount of cash and cash equivalent holdings appropriate for liquidity risk management depends on a particular fund's facts and circumstances. Similarly, we agree with commenters that significant holdings of cash and cash equivalents could still be insufficient to protect a fund with large holdings of illiquid investments (or investments whose liquidity decreases significantly during stressed periods) if the fund were faced with heavy redemptions.[253] But we continue to believe that holdings of cash and cash equivalents can be a valuable liquidity risk management tool because these holdings tend to remain very liquid under nearly all market conditions.[254] Thus, a fund could use its cash and cash equivalent holdings in normal and stressed conditions to meet some redemption requests without significant dilution of remaining investors' interests. Holdings of cash and cash equivalents also could provide a fund's portfolio manager with flexibility to readjust its portfolio as it deems advantageous (either in terms of performance or risk management) under changing market circumstances. We therefore believe it is appropriate for a fund to consider its holdings of cash and cash equivalents as part of its liquidity risk assessment.

Several commenters discussed the extent to which a fund's borrowing arrangements and other funding sources could shape the fund's liquidity risk. Some commenters strongly supported the use of borrowing arrangements to help mitigate liquidity risk, asserting that funds historically have generally succeeded in managing liquidity risk, partly due to lines of credit and interfund lending.[255] Commenters also asserted that obtaining access to backup sources of liquidity like lines of credit, interfund lending arrangements, and repurchase agreements should be considered beneficial as the flexibility to use these liquidity sources has value to a fund's shareholders.[256] However, another commenter argued that asset managers should not meet redemptions through the use of borrowing facilities other than to meet short-term settlement mismatches, as this could potentially disadvantage non-redeeming investors.[257]

We continue to believe that entering into borrowing or other funding arrangements could assist a fund in meeting redemption requests in certain cases (for example, by bridging any timing mismatches between when a fund is required to pay redeeming shareholders and when any asset sales that the fund has executed in order to pay redemptions will settle).[258] However, we have concerns that, in some situations, borrowing arrangements may not be beneficial to a fund's liquidity risk management to the extent that the fund's use of borrowings to meet redemptions leverages the fund at the expense of non-redeeming investors. In such a case, non-redeeming shareholders would effectively bear the costs of borrowing and the increased risk to the fund created by leverage.[259] Thus, we believe that funds should consider the likely overall benefits and risks in including such borrowing or other funding arrangements within a liquidity risk management program.

In evaluating the extent to which a fund's borrowing arrangements could help the fund manage its liquidity risk, a fund may wish to consider any aspects of those arrangements that could limit the fund's ability to borrow. For instance, a fund generally may wish to consider the terms of the credit facility (*e.g.* whether the credit facility is committed or uncommitted), as well as the financial health of the institution(s) providing the facility. A fund also generally should consider whether a credit facility would be shared among multiple funds within a fund family.

Distribution Dates, NBER Working Paper 13884 (Mar. 2006, rev'd Mar. 2008), *available at http://economics.mit.edu/files/2512*; *see also supra* footnote 239 and accompanying text (discussing seasonality in mutual fund flows).

[248] We understand, based on staff outreach, that advance notification procedures are a relatively common liquidity risk management tool that funds currently employ. *See* Comment Letter of Invesco on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015), at 11 (''Invesco FSOC Notice Comment Letter'') (noting that Invesco has advance notification arrangements regarding anticipated redemptions above certain levels in place with certain distribution partners).

[249] *See* rule 22e–4(b)(1)(i)(C).

[250] *See* Proposing Release, *supra* footnote 9, at n.311 and accompanying text.

[251] *See, e.g.,* Comment Letter of Pacific Investment Management Company LLC (Jan. 13, 2016) (''PIMCO Comment Letter'').

[252] *See, e.g.,* ICI Comment Letter I (noting that fund complexes that specialize in U.S. equity funds, especially those focusing on large-cap stocks, are likely to be able to meet redemptions with only modest holdings of cash or cash equivalents because the U.S. equity market is so liquid); *see also infra* footnote 662 and accompanying text (discussing commenters' concerns that the proposed three-day liquid asset minimum requirement would be construed to require a fund specifically to hold cash and cash equivalents, which commenters argued could prevent funds from meeting their principal investment strategies and could give investors a false sense of security that cash buffers will eliminate liquidity risk).

[253] We also note that a substantial investment in cash and cash equivalents could decrease a fund's total return and/or cause the fund to diverge from its investment strategy, and thus a fund may wish to calibrate its holdings of these instruments to manage its liquidity risk while taking these concerns into consideration.

[254] We note that cash and cash equivalent holdings and borrowing arrangements are just two of several liquidity management tools that are at a fund's disposal. Though we are requiring funds to consider these tools, the rule neither creates a substantive obligation on funds to maintain specific levels of cash and cash equivalents nor requires funds to procure any specific borrowing arrangements.

[258] *See* Proposing Release, *supra* footnote 9, at n.314 and accompanying text.

[259] *See* Heartland Release, *supra* footnote 80.

When a credit facility is shared, a fund should assess the extent the facility mitigates its liquidity risk given the liquidity risk associated with the other funds sharing the facility.[260] Similarly, with respect to interfund lending within a family of funds, the terms of an interfund lending arrangement and any conditions required under exemptive relief permitting the arrangement[261] (including limitations on the circumstances in which interfund lending may be used) will shape the role that interfund lending has in a fund's overall liquidity risk management.[262]

3. Periodic Review of a Fund's Liquidity Risk

Rule 22e–4 as adopted includes the requirement for a fund to periodically review the fund's liquidity risk, taking into account the same liquidity risk factors a fund would have to consider in initially assessing and managing its liquidity risk.[263] The proposed rule also included the requirement for a fund to periodically review its liquidity risk, considering those factors it would evaluate in initially assessing its liquidity risk.[264] Commenters generally supported the proposed liquidity risk review requirement.[265] Specifically, some commenters agreed that this requirement will help further the Commission's goals,[266] expressed support for the proposed liquidity risk review factors,[267] and agreed with the Commission's general approach of permitting funds to develop their own policies and procedures for conducting periodic liquidity risk reviews.[268] Other commenters objected to the requirement for a fund to consider certain specified liquidity risk review factors and suggested instead that consideration of the factors be made permissive instead of mandatory.[269] Still another commenter argued that the proposed liquidity risk review approach gives funds too much discretion and recommended that the Commission adopt a baseline standard for the frequency of funds' liquidity risk reviews (*i.e.,* adopt an annual or quarterly review requirement).[270]

We are adopting a periodic review requirement substantially as proposed. As discussed above, we have revised the liquidity risk factors that a fund must consider in assessing, managing, and periodically reviewing its liquidity risk. A fund will not have to consider any factor that is not applicable to a particular fund.[271] This requirement is principles-based, and thus each fund may develop and adopt procedures to review the fund's liquidity risk tailored as appropriate to reflect the fund's particular facts and circumstances.

After evaluating commenters' concerns about the liquidity risk assessment factors, we continue to believe that these factors, modified as discussed above, are central to reviewing a fund's liquidity risk. We also continue to believe that requiring each fund to consider a baseline set of factors, as applicable, in reviewing liquidity risk would promote effective liquidity risk management across the fund industry. As discussed above,[272] we believe that our changes to the proposed liquidity risk factors—which highlight particular risks but also condense and simplify some proposed factors—strike an appropriate balance between promoting consistency in funds' consideration of a standard set of liquidity risk factors and easing burdens associated with this analysis.

We considered a commenter's suggestion that the Commission adopt a minimum frequency for funds' liquidity risk review, and we have modified the proposed rule to clarify that a fund's periodic review of its liquidity risk must occur no less frequently than annually.[273] As discussed below, we are adopting a requirement that a fund periodically review, no less frequently than annually its highly liquid investment minimum (as determined considering the same factors that a fund would reference in periodically reviewing its liquidity risk).[274] Because this review of a fund's highly liquid investment minimum would, de facto, necessitate a fund's review of its liquidity risk, we believe it is appropriate to align the minimum periods for these reviews. Similarly, as discussed further below, we also are adopting a requirement that a fund's board must review, no less frequently than annually, a written report that describes a review of the adequacy of the fund's liquidity risk management program.[275] Accordingly, the minimum period for the liquidity risk review will be aligned with the period in which this report will be presented to the fund's board, creating further synergies. We note, however, that a fund may determine that it is appropriate for its liquidity risk to be reviewed more frequently than annually, depending on the extent to which the required review factors could vary based on market- or sector-wide developments, as well as changes to the fund's operations or other fund-specific circumstances.

C. Classifying the Liquidity of a Fund's Portfolio Investments, and Disclosure and Reporting Requirements Regarding Portfolio Investments' Liquidity Classifications

Today we are adopting requirements for each fund, with the exception of In-Kind ETFs, to classify the liquidity of its portfolio investments. Rule 22e–4 as adopted today requires a fund to classify the liquidity of each portfolio investment based on the number of days within which it determined that it reasonably expects an investment would be convertible to cash (or, in the case of the less-liquid and illiquid categories, sold or disposed of) without the conversion (or, in the case of the less-

[260] *See* Proposing Release, *supra* footnote 9, at paragraph accompanying nn.314–317.

[261] *See, e.g.,* Nationwide Mutual Fund, *et al.,* Investment Company Act Release No. 32115 (May 16, 2016) [81 FR 31988 (May 20, 2016)] (notice of application) (''Nationwide Exemptive Relief''); TCW Alternative Funds, *et al.,* Investment Company Act Release No. 32113 (May 11, 2016) [81 FR 30585 (May 17, 2016)] (notice of application) (''TCW Exemptive Relief''); *see also* Proposing Release, *supra* footnote 9, at paragraph accompanying nn.318–319.

[262] For example, it is common for such exemptive orders to permit interfund lending in circumstances in which there is a timing mismatch between when a fund is required to pay redeeming shareholders and when any asset sales that the fund has executed in order to pay redemptions will settle (*e.g.,* a fund may be required to pay redeeming shareholders within three business days, but the portfolio transactions the fund has executed in order to pay these shareholders may not settle for seven days). A fund can reasonably predict that it will repay borrowed money relatively quickly and reliably under these circumstances. Under these conditions, this type of borrowing would tend to be low risk, and thus entail less liquidity risk than borrowing money to pay redemptions without already having secured a price at which the assets used to cover the borrowing will be sold.

Funds may only engage in interfund lending when it is in the best interests of both the lending and the borrowing fund. The exemptive relief anticipates a fund family's interfund lending arrangements include an assessment of: (i) If the fund participates as a lender, any effect its participation may have on the fund's liquidity risk; and (ii) if the fund participates as a borrower, whether the fund's portfolio liquidity is sufficient to satisfy its obligation to repay the loan along with its other liquidity needs. *See* Nationwide Exemptive Relief, *supra* footnote 261; TCW Exemptive Relief, *supra* footnote 261. For example, the relief is not intended to permit a fund to act as lender of last resort to a borrowing fund.

[274] *See infra* section III.D.4.

[275] *See infra* section III.H.2.

liquid and illiquid categories, sale or disposition) significantly changing the market value of the investment. Specifically, rule 22e–4 will require a fund to classify each of its portfolio investments, including its derivatives transactions,[276] into one of four liquidity categories:

- *Highly liquid investments,* defined as cash and any investment reasonably expected to be convertible to cash in current market conditions in *three business days* or less without the conversion to cash significantly changing the market value of the investment.
- *Moderately liquid investments,* defined as any investment reasonably expected to be convertible to cash in current market conditions in more than *three calendar days but in seven calendar days or less* without the conversion to cash significantly changing the market value of the investment.
- *Less liquid investments,* defined as any investment reasonably expected to be sold or disposed of in current market conditions in *seven calendar days or less* without the sale or disposition significantly changing the market value of the investment, but where the sale or disposition is reasonably expected to settle in more than seven calendar days.
- *Illiquid investments,* defined as any investment that may not reasonably be expected to be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment.

This determination must be based on information obtained after reasonable inquiry; the term ''convertible to cash'' in the category definitions refers to the ability to be sold, with the sale settled. The final rule requires a fund to take into account relevant ''market, trading, and investment-specific considerations'' in classifying its portfolio investments' liquidity, but the rule does not detail a list of factors comprising these considerations.[277] This Release does include, however, guidance on certain considerations that a fund may wish to evaluate in taking into account relevant market, trading, and investment-specific considerations when classifying the liquidity of its portfolio investments.[278] The fund may classify portfolio investments based on asset class, so long as the fund or its adviser,[279] after reasonable inquiry, does not have information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of an investment that would suggest a different classification for that investment.[280] As discussed in more detail below, the fund also must consider the investment's market depth in classifying the investment.[281] The fund also must review its portfolio investments' classifications at least monthly and more frequently if changes in relevant market, trading, and investment-specific considerations are reasonably expected to materially affect one or more of its investments' classifications.[282] Finally, the fund must take into account certain considerations for highly liquid investments that it has segregated to cover certain derivatives transactions.[283]

Rule 22e–4 as proposed would have required each fund to classify the liquidity of its portfolio positions (or portions of a position in a particular asset) and review the liquidity classification of each position on an ongoing basis.[284] In classifying and reviewing the liquidity of portfolio assets, proposed rule 22e–4 would have required a fund to consider the number of days within which a fund's position in a portfolio asset (or portions of a position in a particular asset) would be convertible to cash at a price that does not materially affect the value of that asset immediately prior to sale.[285] Based on this determination, made using information obtained after reasonable inquiry, the proposed rule would have required a fund to classify each of its positions in a portfolio asset (or portions thereof) into one of six liquidity categories: (i) Convertible to cash within 1 business day; (ii) convertible to cash within 2–3 business days; (iii) convertible to cash within 4–7 calendar days; (iv) convertible to cash within 8–15 calendar days; (v) convertible to cash within 16–30 calendar days; and (vi) convertible to cash in more than 30 calendar days.[286] The proposed rule would have required a fund to consider certain specified factors, to the extent applicable, in determining the time period in which a portfolio position (or portion thereof) would be convertible to cash.[287]

Although some commenters acknowledged potential benefits to the proposed classification requirement, most commenters were generally opposed to the proposed six-category liquidity classification framework. As discussed further below, commenters' primary objections were concerns that the proposed classification framework would: (i) Not reflect current liquidity risk management practices or industry ''best practices''; (ii) require funds to make overly subjective projections about asset liquidity, particularly to the extent that they would have to project a fund's ability to sell and settle a position well into the future; (iii) place undue reliance on third-party data vendors and analysts; (iv) incorporate a materiality standard that is unclear and impractical to apply; and (v) inappropriately require funds to take position size and settlement timing into account when classifying the liquidity of a portfolio position.

Commenters suggested many alternatives to the proposed classification requirement—both changes to the structure of the proposed classification requirement, as well as suggestions about more granular aspects of the proposed requirement. Although the details vary, commenters raised three primary structural alternatives to the proposed classification requirement: (i) A ''principles-based'' liquidity classification approach, where each fund would have to classify the liquidity of its portfolio assets, but the Commission would not require any

[276] *See* rule 22e–4(b)(1)(ii). The final rule requires a fund to classify all portfolio investments, including investments that are liabilities of the fund. *See infra* section III.C.3.c.

[277] *See* rule 22e–4(b)(1)(ii).

[278] *See infra* section III.C.4.

[279] The term ''adviser'' as used in this Release and rule 22e–4 generally refers to any person, including a sub-adviser, that is an ''investment adviser'' of an investment company as that term is defined in section 2(a)(20) of the Investment Company Act. *See infra* paragraph accompanying footnote 818 (discussing the coordination of liquidity risk management efforts undertaken by various service providers, including a fund's sub-adviser(s)).

[280] *See* rule 22e–4(b)(1)(ii)(A).

[281] More specifically, the fund must determine whether trading varying portions of a position in a particular investment, in sizes that the fund would reasonably anticipate trading, is reasonably expected to significantly affect the liquidity of that investment, and if so, the fund must take this determination into account when classifying the liquidity of that investment. *See* rule 22e–4(b)(1)(ii)(B).

[282] *See* rule 22e–4(b)(1)(ii); *see also* rule 22e–4(b)(1)(i) (imposing an ongoing responsibility on the fund to assess and manage its liquidity risk).

[283] More specifically, with respect to the fund's derivatives transactions that it has classified as moderately liquid investments, less liquid investments, and illiquid investments, it must identify the percentage of the fund's highly liquid investments that it has segregated to cover, or pledged to satisfy margin requirements in connection with, derivatives transactions in each of these classification categories. *See* rule 22e–4(b)(1)(ii)(C); *see also* rule 22e–4(b)(1)(iii)(B) (addressing such percentage of highly liquid investments in connection with determining whether a fund primarily holds highly liquid investments).

[284] *See* Proposing Release, *supra* footnote 9, at section III.B.

[285] Proposed rule 22e–4(b)(2)(i).

[286] Proposed rule 22e–4(b)(2)(i).

[287] Proposed rule 22e–4(b)(2)(ii); *see also infra* section III.C.4.

specific classification scheme;[288] (ii) a simplified version of the proposed classification system, with fewer classification categories based on shorter time projections than the proposal;[289] and (iii) an approach with new classification categories based on qualitative distinctions in the market- and trading-related characteristics of different asset classes under different market conditions, which generally would rely on the Commission mapping different asset classes to each of these new classification categories.[290]

Our adopted liquidity classification requirement most closely resembles the second alternative described above and is designed to respond to commenters' concerns while also continuing to advance the Commission's goals. As discussed in the Proposing Release, we understand that funds today employ different practices for assessing the liquidity of their portfolios.[291] After considering comments, however, we continue to believe that a liquidity classification framework based on a days-to-cash determination, with certain modifications from the proposal, is an effective approach to further our goals of creating a meaningful, uniform framework for reporting to the Commission and providing public disclosure about funds' liquidity profiles. To achieve this goal, we believe the rule must provide a consistent methodology for assessing portfolio liquidity. This methodology also will form the basis for the highly liquid investment minimum and illiquid investment limit, each of which we believe will play an important role in fund liquidity risk management, as discussed in detail below. We also believe this classification system maintains the benefits of a spectrum-based liquidity analysis while responding to concerns about the burden and level of precision implied by the proposed approach.

While we agree that the suggested ''principles-based'' alternative approach would have benefits in terms of flexibility and funds' ability to leverage their existing procedures for assessing portfolio liquidity,[292] this approach would not provide a uniform methodology for funds' liquidity assessment procedures. It thus would not meaningfully advance our goal of establishing a foundation for reasonably comparable reporting to the Commission and disclosure to the public about funds' portfolio liquidity.[293] In particular, this approach would not permit detailed reporting about funds' portfolio investments' liquidity in a structured data format, as with reports on Form N–PORT, and thus would not provide an efficient basis for the Commission and its staff to monitor funds' portfolio liquidity and liquidity risk.

We likewise believe the third alternative classification system, based on liquidity characteristics of different asset classes—as opposed to a days-to-cash framework—may not provide clear distinctions between each liquidity category without the Commission assigning specific asset classes to each classification category. Given the size of the fund industry and the wide variety and types of asset classes held by funds, we believe that it would be impractical for the Commission or its staff to attempt to prescriptively categorize every asset class by liquidity. Further, the classification requirement is designed to provide information regarding the liquidity of portfolio investments under *current market conditions.* We are concerned that a classification system by which the Commission assigns specific asset classes to specific liquidity categories would not be sufficiently flexible to account for the impact changing market conditions may have on the liquidity of fund investments.

Relatedly, some commenters suggested an alternative classification system could be based on notions of liquidity other than ''days-to-cash,'' including, in whole or in part, on the fraction of average daily trading volume that each position size corresponds to, the expected behavior of bid-ask spreads in a given asset, or more qualitative liquidity buckets (*e.g.* ''converted to cash quickly under most circumstances'').[294] Other commenters suggested that all of the classification categories be defined based on a days-to-cash or days-to-trade determination,[295] while some recommended that only certain of the categories (generally, the relatively more liquid categories) be defined based on a days-to-cash or days-to-trade determination.[296] After considering comments, we have chosen to adopt a classification system that most closely resembles the second alternative raised by commenters and includes days-to-cash determinations for the more liquid categories. As noted below, some of the more specific criteria suggested by commenters in place of days-to-cash may not be appropriate for all asset classes, while more qualitative criteria make it more difficult to compare classifications across funds relative to the days-to-cash approach in the rule.[297]

1. Primary Elements of Classification Framework

a. Consolidation of Proposed Classification Categories

Similar to the proposed classification requirement, the final classification requirement is generally based on a framework that would require a fund to determine the number of days in which each portfolio investment is convertible to cash. However, the final classification framework reduces the number of classification categories from six (as proposed) to four. In addition, a fund may classify portfolio investments based on asset class under the final classification requirement, so long as the fund or its adviser does not have information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of an investment and that would require a different classification for that investment. When we proposed the rule 22e–4 classification requirement, we noted that the framework was meant to promote a more nuanced approach than a classification requirement under which a fund would simply designate assets as liquid or illiquid.[298] The proposed approach also was meant to provide the basis for detailed reporting and disclosure about the liquidity of funds' portfolio positions in a structured data format, as the six liquidity categories described above would be incorporated

into the fund's portfolio holdings reported on proposed Form N–PORT.[299]

Multiple commenters expressed concerns about the proposed six-category classification framework. Many argued that the proposed classification method would require funds to make overly subjective projections about asset liquidity because predicting the time to liquidate a position for cash at a given price—particularly well into the future—is limited by required assumptions and market data availability, even for sophisticated asset managers.[300] They stated that making relatively subjective liquidity determinations would render liquidity assessments inconsistent across funds, and any appearance of objectivity and comparability among funds' liquidity assessments thus would be false.[301] Relatedly, commenters also maintained that the proposed liquidity classification categories were overly granular and therefore could present a false appearance of precision about portfolio assets' liquidity.[302] For example, commenters argued that determining whether an asset can be converted to cash in 15 calendar days versus 16 calendar days (that is, distinguishing between the fourth and fifth proposed classification categories) cannot realistically be known or predicted with accuracy.[303] Some commenters advocated reducing the number of classification categories[304] and expressed concern that the proposal would entail overly subjective classification analysis, which would give funds too much discretion to determine which assets are relatively liquid and thus make enforcement difficult and hinder meaningful risk mitigation.[305] Finally, commenters also predicted that the complexity of analyses inherent in the proposed six-category classification framework, and related operational burdens, could cause many funds to either shift their classification obligations to third-party analysts entirely, or to rely heavily on data provided by third-party vendors to help simplify funds' own classification analyses.[306]

After considering these comments, we agree that the level of precision implied by the proposed six-category classification system could have unintended negative consequences. We also agree that the six liquidity classification categories that we proposed could lead to varying liquidity assessments and could give rise to an appearance of a level of precision about liquidity determinations that may not be achievable for some funds or asset classes. However, we continue to believe that a classification approach that involves funds evaluating investments' liquidity across a liquidity spectrum (as opposed to making a binary determination of whether an investment is liquid or illiquid) provides a basis for more meaningful reporting and disclosure about funds' portfolio liquidity. Our opinion corresponds with many commenters' views that there are significant benefits associated with evaluating portfolio assets' liquidity across a spectrum.[307]

We believe that condensing the six proposed categories into four categories should decrease the variability in funds' liquidity assessments, since funds will not be required to make liquidity distinctions that are as detailed as would have been required under the proposal. The adopted categories also should reduce inconsistency in funds' liquidity assessments because the new categories do not include time periods in the least-liquid categories that are as granular or projected as far in the future as under the proposal. Furthermore, we believe that the adopted categories could decrease variability in some funds' liquidity assessments because we understand that the four adopted categories may correspond more closely than the proposed categories with classification methods and categories that some funds currently use in evaluating their portfolio liquidity.[308] For example, the time frames referenced in the moderately liquid, less liquid, and illiquid classification categories are tied to the seven-calendar-day period in which funds are required to pay redeeming shareholders under section 22(e) of the Investment Company Act. We understand through staff outreach conducted prior to the proposal that certain funds already classify their portfolios across a number of liquidity categories, taking into account days-to-cash determinations and focusing on assets that can be used to meet redemptions in the short- and medium-term.[309] Certain commenters likewise acknowledged that some asset managers may currently classify portfolio positions with categories that take days-to-cash or days-to-trade determinations into account, although not at the level of detail suggested by the proposal or for all classes of portfolio assets.[310]

We recognize that, although we are providing a uniform classification framework, different funds may still classify the liquidity of similar investments differently, based on the facts and circumstances informing their analyses. This simply reflects the fact that different funds likely have different views on liquidity based on considerations such as their assessment of various market, trading, and investment-specific factors, and the size of their position in a particular investment. We acknowledge that liquidity can be difficult to estimate and that there is no agreed-upon measure of liquidity for all asset classes.[311] Nevertheless, we believe the reporting of the liquidity classification information to us, and aggregated information to the public, will provide important information about fund liquidity.

b. Market, Trading, and Investment-Specific Considerations

Rule 22e–4 as adopted today requires a fund to take into account ''relevant market, trading, and investment-specific considerations'' in classifying and reviewing its portfolio investments' liquidity.[312] Rule 22e–4 as proposed did not include this requirement but instead included an enumerated list of nine separate factors that a fund would be specifically required to consider, as applicable, in classifying and reviewing the liquidity of its portfolio assets.[313]

[311] Indeed our recognition of these facts is part of what has lead us to adopt requirements that the more detailed liquidity classification of each individual portfolio investment be reported to us confidentially, with only the aggregated fund liquidity profile reported publicly, as discussed in section III.C.6 below.

[312] *See* rule 22e–4(b)(1)(ii).

[313] Rule 22e–4 as proposed would have required a fund to take into account the following nine factors, to the extent applicable, when classifying

The Proposing Release requested comment generally on whether the Commission should codify the proposed list of nine liquidity classification factors. While one commenter agreed that the factors should be codified,[314] most opposed codification and stated that funds should be permitted, but not required, to consider the factors.[315] Commenters stated that codifying the proposed factors would mandate a classification process that would be overly burdensome on funds' resources [316] and could limit portfolio managers' ability to rely on industry expertise in evaluating portfolio assets' liquidity.[317] One commenter specifically expressed concern that ''the scope and complexity of the required analysis may excessively burden fund boards of directors and may actually act to distract fund managers and directors from the assessment of liquidity and redemption risk, which we view as the more important analysis.'' [318] Commenters also argued that a codified list of liquidity assessment factors could create a presumption that a fund must consider each factor in evaluating each portfolio holding, even if certain factors would not be useful or relevant to evaluating certain portfolio assets' liquidity.[319] Some commenters also stated that a codified list of factors could lead funds to place undue reliance on third-party data vendors,[320] and such reliance could result in these vendors being viewed as ''rating agencies'' for liquidity, which could lead to potential systemic risk issues.[321] In addition, they expressed more granular concerns about certain of the proposed factors, which are discussed in detail in section III.C.4 below.

After considering commenters' suggestions and concerns, we are not including the classification factors in the rule as proposed because we are concerned that including this list in rule 22e–4 could lead funds to focus too heavily on evaluating certain factors that may not be particularly relevant to the liquidity of a specific fund's portfolio investments, the evaluation of which may not help produce meaningful outcomes in terms of effective classification. This could operate to the detriment of efficient and appropriate liquidity assessments that focus on the liquidity characteristics most directly affecting a particular asset class or investment.

We are instead adopting a principles-based requirement that a fund take into account relevant market, trading, and investment-specific considerations in classifying its portfolio investments. We understand based on staff outreach that it is common for some funds, in assessing the liquidity of their portfolio investments, to look only at basic structural characteristics of an investment (such as asset class or restrictions on transfer) and not to supplement this analysis with market information or other potentially relevant factors.[322] This could lead to circumstances in which a fund's liquidity classifications do not reflect a fund's actual ability to sell its portfolio investments without significant dilution to meet redemptions within a given time period, or do not otherwise result in an accurate picture of a fund's liquidity profile. Thus, we believe that the classification requirement must require funds to evaluate relevant considerations in making liquidity determinations. We believe the requirement to take into account relevant market, trading, and investment-specific considerations achieves this goal and is broad and flexible enough to be relevant for all investment strategies and fund risk profiles. In addition, we continue to believe that the proposed classification factors could help funds in evaluating relevant market, trading, and investment-specific considerations, and thus we have included guidance on many of these areas in section III.C.4 of this Release that may be relevant to a fund's assessment of portfolio investments' liquidity characteristics.

We understand that some third-party service providers currently provide data and analyses assessing the relative liquidity of a fund's portfolio investments, and that many of these service providers assess certain market, trading, and investment-specific considerations in doing so. We believe that a fund could appropriately use this type of data to inform or supplement its own consideration of the liquidity of an asset class or investment. However, a fund would not be required to do so.[323] Also, we generally believe that a fund should consider having the person(s) at the fund or investment adviser designated to administer the fund's liquidity risk management program review the quality of any data received from third parties, as well as the particular methodologies used and metrics analyzed by third parties, to determine whether this data would effectively inform or supplement the fund's consideration of its portfolio holdings' liquidity characteristics. This review could include an assessment of whether modifications to an ''off-the-shelf'' product are necessary to accurately reflect the liquidity characteristics of the fund's portfolio holdings. As discussed above, certain commenters expressed concern that the proposed six-category classification framework, including the proposed codification of certain factors that a fund would be required to consider (as applicable) in classifying its portfolio holdings, would place undue reliance on data vendors and analysts, and that such reliance could produce potential systemic risk issues.[324] We believe that our decisions to simplify the proposed classification framework and not to include the proposed classification

the liquidity of each portfolio position in a particular asset: (1) Existence of an active market for the asset, including whether the asset is listed on an exchange, as well as the number, diversity, and quality of market participants; (2) frequency of trades or quotes for the asset and average daily trading volume of the asset (regardless of whether the asset is a security traded on an exchange); (3) volatility of trading prices for the asset; (4) bid-ask spreads for the asset; (5) whether the asset has a relatively standardized and simple structure; (6) for fixed income securities, maturity and date of issue; (7) restrictions on trading of the asset and limitations on transfer of the asset; (8) the size of the fund's position in the asset relative to the asset's average daily trading volume and, as applicable, the number of units of the asset outstanding; and (9) relationship of the asset to another portfolio asset. *See* proposed rule 22e–4(b)(2)(ii). These proposed factors are discussed in more detail in *infra* section III.C.4.

factors as part of rule 22e–4, together with the guidance on the appropriate use of data vendors discussed in this paragraph, should largely mitigate these concerns.

c. Value Impact Standard

As discussed further below, in a modification to the proposed standard, each of the liquidity categories included in the classification requirement we are adopting requires a fund to determine the time period in which an investment would be reasonably expected to be converted to cash (or in some cases, sold or disposed of) in current market conditions without the conversion to cash (or in some cases, sale or disposition) significantly changing the market value of the investment.[325] This modification highlights that the standard does not require a fund to actually re-value or re-price the investment for classification purposes, nor does the standard require the fund to incorporate general market movements in liquidity determinations or estimate market impact to a precise degree.

Many commenters opposed the value impact standard incorporated in the proposed liquidity classification requirement—that the asset was convertible to cash ''at a price that does not materially affect the value of that asset immediately prior to sale.'' [326] Many suggested that the value impact component of the proposed standard was inappropriate for liquidity analyses [327] and should be eliminated from the classification requirement.[328] Commenters particularly were concerned that a ''materiality'' standard could be difficult and impractical to apply because they argued any sale of an asset could impact its market value to some degree.[329] They stated that it is difficult to separate and quantify the market impact of a fund's trades in a particular asset from other reasons that an asset's price could move (such as market events), particularly in dynamic markets, and that projections of future market impact are difficult to make.[330] Furthermore, they stated that without further guidance from the Commission funds may not know what ''material'' should mean in the context of the proposed classification requirement.[331] Some commenters specifically noted that the proposed value impact standard differed from the value impact standard incorporated in the Commission's guidelines limiting funds' illiquid asset holdings, which is based on whether a fund could sell an asset at approximately the value at which the fund has valued it, and that conflicting standards could raise confusion and operational difficulties.[332] Finally, several commenters argued that the inclusion of the value impact standard in the proposed classification categories could give fund shareholders the false impression that the fund guarantees a protected NAV.[333]

As we noted when discussing the definition of ''liquidity risk,'' we continue to believe that incorporating a value impact analysis into liquidity considerations is appropriate because it indicates that liquidity risk for a fund captures not just the risk of being unable to meet redemption requests, but also the risk that a fund could only meet redemption requests in a manner that significantly dilutes the funds' non-redeeming shareholders. Separately, as we noted above, the inclusion of some consideration of value impact is common in regulators' characterization of portfolio liquidity and fund liquidity risk.[334] Because we believe that the liquidity of portfolio investments is a significant component of a fund's overall liquidity risk,[335] we continue to believe that the inclusion of a value impact standard in the rule 22e–4 classification categories is appropriate. We also understand that many current trade order management systems estimate value impacts that may result from trades, which may assist funds in making these estimates.

Nevertheless, we have determined that certain modifications to the proposed value impact standard are warranted to address certain concerns raised by commenters. First, we recognize that in complying with the value impact standard, funds will be making assessments about the trading behavior of certain asset classes (and individual investments, for investments that need to be treated on an exception basis in the final classification framework we are adopting today). Accordingly, funds should be able to rely on their reasonable expectations at the time they make these assessments, and we do not expect them to estimate to a precise degree the market impact of trading that investment or the value of that investment as the trades occur.[336] As a result, we have modified the final rule to provide that an investment's classification be based a fund's *reasonable expectations* in *current* market conditions (emphasis added).[337] We also expect that the consolidation of the liquidity classification categories into ones that only require days-to-cash projections out to seven days should also mitigate commenters' concerns about the uncertainty involved in these value impact projections because the consolidated categories do not involve projections as far into the future as the proposed categories.

We also changed the standard to capture only value impacts that *significantly change* the investment's market value, rather than the proposed standard that focused on *materially affecting* the value of the asset immediately prior to sale (emphasis added). We believe that funds will be less likely to interpret *significant changes* in market value as capturing very small movements in price, and

[325] *See* rule 22e–4(a)(6); 22e–4(a)(8); 22e–4(a)(10); and 22e–4(a)(12). We note the term ''market value'' as used in the value impact standard includes the value of investments that are fair valued.

[332] *See, e.g.,* Interactive Data Comment Letter; NYC Bar Comment Letter; *see also infra* text accompanying footnotes 341–342 (discussing the harmonization of the value impact standard incorporated in the definition of ''illiquid asset'' that we are adopting with the standard incorporated in the rule 22e–4 classification requirement generally).

[333] *See, e.g.,* BlackRock Comment Letter; ICI Comment Letter III; PIMCO Comment Letter; SIFMA Comment Letter I.

[334] *See supra* footnote 173.

[335] *See* rule 22e–4(b)(1)(i)(A) (requiring a fund to consider its portfolio investments' liquidity in assessing its liquidity risk).

[336] In the proposal, we noted that the proposed term ''immediately prior to sale'' was not meant to require a fund to anticipate and determine in advance the precise current value of an asset at the moment before the fund would sell the asset. We believe that the alterations to the final value impact standard reinforce this intent. *See* Proposing Release, *supra* footnote 9, at text following n.170

[337] A fund's reasonable expectations pertain to each aspect of the definition of highly liquid investments, moderately liquid investments, less liquid investments, and illiquid investments—*i.e.,* a fund may rely on its reasonable expectations as to the fund's ability to convert the investment to cash (or, in some cases, sell or dispose of the investment) in current market conditions in a certain number of days and a fund may rely on its reasonable expectations as to whether the conversion to cash (or, in some cases, sale or disposition) of the investment can be done without significantly changing the market value of the investment.

thus this change should address commenters' concern that the proposal would create a value impact standard that is impractical to apply because any sale of an investment could affect its market value to some degree. We also believe that a fund's classification policies and procedures should address what it would consider to be a significant change in market value. Common alternatives that commenters suggested in place of the proposed value impact standard included an ''assuming no fire sale discounting'' (or similar) standard [338] or various quantitative materiality standards.[339] We believe a standard based on fire sale discounting would be too high of a value impact threshold, whereas suggested quantitative standards would be too precise and require burdensome calculations. However, we believe that the final value impact standard of ''without the conversion to cash (or in some cases, sale or disposition) *significantly changing* the market value'' appropriately balances our desire to capture the risk of dilution in cases of inadequate liquidity, while not also requiring funds to account for every possible value movement.

Finally, we note that the final value impact standard does not require the fund to incorporate general market movements in liquidity determinations. We recognize that there can be many reasons for the market value of a particular investment to fluctuate, separate from the fund's transactions in those investments. We do not intend for the value impact standard to capture movements in an investment's value due to market events. For this reason, we are not adopting a value impact standard based on the fund's most recent valuation of that investment as suggested by some commenters.[340] This type of standard may have required a fund to compare the investment's traded price with the fund's prior day valuation of the investment—such a comparison likely would reflect the effects of general market movements. The value impact standard we are adopting today only requires a fund to consider the market value impact of a hypothetical sale of an investment.

We recognize that the value impact standard incorporated in the ''illiquid investment'' definition is slightly different from the standard used in the definition of ''illiquid asset'' under the Commission's current guidelines, as the latter is based on whether a fund could sell an asset at ''approximately the value at which the fund has valued the investment.'' [341] We believe the revised value impact standard in the illiquid investment definition is preferable both because it prevents confusion by harmonizing the value impact standards within the classification framework and because, as just discussed, it removes any confusion that the value impact standard incorporates general market movements that would occur between when a fund strikes its NAV and when it trades the investment.[342]

With respect to commenters' concerns that the inclusion of a value impact standard in the rule 22e–4 classification categories could give fund shareholders the false impression that the fund guarantees a protected NAV, we do not believe that the final rule's classification categories imply a protected NAV. As noted in our discussion of the rule 22e–4 definition of ''liquidity risk,'' we believe that funds' narrative risk disclosure in their registration statements and other shareholder communications generally should make clear those risks that could adversely affect the fund's NAV, yield, and total return, including liquidity-related risks. All open-end funds are required to disclose that loss of money is a risk of investing in the fund.[343]

d. Consideration of Current Market Conditions

The definition of each liquidity category in the classification requirement we are adopting today specifically requires a fund to consider the time period in which an investment can be converted to cash (or, in some cases, sold or disposed of) in current market conditions.[344] The ''current market conditions'' specification is a change from the proposed classification requirement, which did not explicitly require that a fund consider current market conditions in making liquidity classification determinations.[345] The proposal, however, did require a fund to ''engage in an ongoing review'' of the liquidity of each of its portfolio positions.[346] The Commission suggested in the Proposing Release that a fund's policies and procedures for reviewing the liquidity of its portfolio positions generally should include procedures for assessing market-wide developments, as well as security- and asset-class-specific developments that could demonstrate a need to change the liquidity classification of a portfolio position.[347] The proposal's ongoing review standard (as opposed to the at-least-monthly review standard we are adopting today [348]) thus would have implicitly required that a fund's liquidity determinations reflect current market conditions.

Multiple commenters requested guidance and provided suggestions regarding the market conditions a fund should consider in classifying its portfolio assets' liquidity. Some commenters requested clarity on whether a fund would be required to classify the liquidity of its portfolio assets based on an assessment of normal market conditions or stressed market conditions.[349] One commenter suggested that the Commission provide additional guidance on how to assess the value impact that a fund's sale of portfolio assets could have under future stressed market conditions.[350] Additionally, one commenter suggested that any final liquidity classification framework should incorporate an assessment of reasonably foreseeable stressed conditions instead of current market conditions.[351]

In addition to the commenters who requested clarification or made suggestions about the market conditions referenced in the proposed liquidity classification framework, multiple commenters suggested alternative classification schemes that would more explicitly define liquidity categories based on distinctions in how a particular asset would trade under normal versus stressed market

[338] *See, e.g.,* SIFMA Comment Letter I; T. Rowe Comment Letter; *see also* AFR Comment Letter (suggesting standard should be that an asset could be sold at a price that does not create harm to fund shareholders due to the fund being forced to accept disadvantageous terms of sale in order to find a buyer).

[339] *See, e.g.,* Interactive Data Comment Letter (asset could be sold at a price that has a less than 5% impact on the value of that asset; asset could be sold at a price that does not create a 1 penny or more impact on the fund's NAV; fund could use volatility measures to determine security-specific materiality thresholds).

[351] *See* AFR Comment Letter.

conditions.[352] One commenter suggested that this alternative method of defining liquidity classification categories would reflect directly the extent to which assets' liquidity can dynamically change as market conditions evolve.[353]

After considering commenters' suggestions and concerns, we are adopting liquidity classification categories that reflect current market conditions. We appreciate commenters' concerns that liquidity classifications based on current market conditions capture only a moment-in-time picture of a fund's portfolio liquidity, which may not accurately reflect liquidity in changing market conditions. We also appreciate commenters' concerns that investments that are relatively liquid under normal conditions may exhibit significantly reduced liquidity during times of stress.[354] However, we are concerned that requiring a fund to predict how an investment *may* trade in stressed market conditions would introduce an additional layer of subjectivity into the classification process. Specifically, we are concerned that funds would likely assume varying levels of stress when classifying the liquidity of their portfolio investments. We believe that liquidity categories requiring consideration of stressed conditions thus could impede our goals of promoting consistency in funds' processes for assessing portfolio investments' liquidity and enhancing the data quality of funds' liquidity-related reporting and disclosure. Conversely, we believe the requirement to assess current market conditions would increase consistency among funds' liquidity determinations by limiting the number of variables informing funds' classification determinations. Although we understand that the adopted classification scheme may not produce absolute consistency in how funds classify the liquidity of their portfolio investments as funds' assumptions and individual facts and circumstances may differ,[355] classifying based on current market conditions will result in all funds' classifications at a given time reflecting the same market conditions.

We believe that it would be informative to Commission staff to understand how the same set of market conditions could disparately affect different funds' assessments of their liquidity and that of different asset classes. Also, we note that, to the extent that the markets in which funds' portfolio investments trade are currently stressed, consideration of current market conditions would de facto reflect consideration of stressed market conditions. Therefore, the requirement to consider current market conditions, along with the requirement for funds to review the liquidity of their portfolio investments at least monthly[356] and the Form N–PORT reporting requirements concerning funds' liquidity classifications,[357] will provide data that will help the staff evaluate the role of changing market conditions on funds' liquidity by comparing liquidity data across different sets of current market conditions over time. We believe this liquidity data would be more useful than data based on projected stressed market conditions, because it would reflect funds' assessments in light of actual, not anticipated, market stresses.

Finally, we note that while we are not incorporating a requirement to evaluate potential future stressed market conditions in the portfolio investment liquidity *classification* requirement, we continue to believe that it is appropriate to require funds to consider reasonably foreseeable stressed conditions as part of the liquidity risk *assessment* and *management* requirements.[358] We believe that funds' liquidity risk assessment should inform the extent to which funds are prepared to manage their liquidity under both normal and reasonably foreseeable stressed conditions—particularly because, for many asset classes, liquidity is adversely affected by market stress and funds need to have a liquidity risk management program that is resilient under all market conditions. Thus, as discussed throughout this Release, a fund must establish liquidity risk management policies and procedures appropriate in light of both normal and reasonably foreseeable stressed market conditions.

2. Discussion of Specific Classification Categories

a. Highly Liquid Investments

The classification requirement we are adopting today requires a fund to identify its ''highly liquid investments,'' that is, cash held by a fund and investments that the fund reasonably expects to be convertible to cash in current market conditions in three business days or less without the conversion to cash significantly changing the market value of the investment. This category condenses the first two liquidity classification categories in the proposed classification requirement (assets convertible to cash within one business day, as well as two-to-three business days) to simplify the proposed classification framework. Multiple commenters who suggested simplified alternatives to the proposed approach suggested including a classification category based on portfolio assets' convertibility to cash within three days.[359] One such commenter suggested that ''highly liquid assets'' should include cash and any asset that can be converted to cash in the ordinary course of business within three business days.[360] Additionally, another commenter agreed that, given current redemption practices, funds should assess how much liquidity they may need over a three-day period.[361]

We continue to believe, as discussed in the Proposing Release, that it is important for funds to determine what percentage of their portfolio is convertible to cash—that is, available to meet redemptions—within the relatively short term. We understand that most funds typically pay redemption proceeds within a fairly short period (typically, one to three days) after receiving a shareholder's redemption request, even though a fund may disclose that it reserves the right to delay payment for up to seven calendar days, as permitted by section 22(e) of the Act.[362] Likewise, funds may find it useful to identify portfolio investments

[352] *See, e.g.,* BlackRock Comment Letter; J.P. Morgan Comment Letter; SIFMA Comment Letter III; T. Rowe Comment Letter.

[353] *See* BlackRock Comment Letter. This commenter also noted that ''the time needed to liquidate a position at a given price in a normal market environment will not be reflective of the market impact incurred when liquidating positions during stressed markets.''

[354] *See generally* MFS Comment Letter; NYC Bar Comment Letter.

[355] As discussed above, we recognize that funds are likely to make different assumptions in classifying the liquidity of their portfolio investments depending on the facts and circumstances relating to funds and their trading practices. *See supra* paragraph accompanying footnote 311.

[356] *See infra* section III.C.5.

[357] *See infra* section III.C.6.b.

[358] *See supra* section III.B. In discussing funds' liquidity risk assessment obligations under rule 22e–4, we note above that if a fund conducts stress testing to determine whether it has sufficient liquid investments to cover different levels of redemptions, a fund should incorporate the results of this stress testing into its liquidity risk assessment. *See supra* footnote 196.

[359] *See, e.g.,* Federated Comment Letter; Fidelity Comment Letter; SIFMA Comment Letter I; Vanguard Comment Letter.

[360] *See* Vanguard Comment Letter.

[361] *See* MFDF Comment Letter (stating in the context of the proposed three-day liquid asset minimum, that ''[g]iven current redemption practices in the industry, we agree with the Commission that funds should assess how much liquidity they may need, both in normal and stressed market conditions, over a three-day period to effectively meet anticipated redemption requests.'').

[362] *See supra* footnote 9 and accompanying text.

that may be converted to cash quickly in order to meet unexpected or unusually high redemption requests, or to rebalance or otherwise adjust a portfolio's composition in all market conditions.

We also understand that funds often consider which portfolio investments can be sold and settled on a T + 1 to T + 3 basis when determining their very liquid investments.[363] While such an analysis may be useful, our decision to define highly liquid investments to include any investment that the fund reasonably expects to be convertible into cash in current market conditions in three business days or less is founded in our belief that funds should understand what portion of their investments are convertible to cash in a short period of time taking into account current market conditions, not solely on which asset transactions can be settled in three days or less from the trade date. An investment that takes two days to sell but one day to settle, for example, would be convertible to cash in a short period of time. Conversely, an asset that may settle two days after trade date, but which is reasonably expected to take at least three days to trade, would not be available in a short period of time. Accordingly, we believe we have appropriately defined ''highly liquid investments'' under rule 22e–4 notwithstanding initiatives to shorten the standard settlement cycle for most broker-dealer transactions from T + 3 to T + 2.[364]

In addition, we emphasize that the highly liquid investment category (and the related highly liquid investment minimum) should not be interpreted as the Commission suggesting that a fund should, as a matter of routine practice, meet redemptions first by selling its highly liquid investments. Rather, we believe part of a thorough understanding of a fund's liquidity profile includes an understanding of the nature and level of the fund's highly liquid holdings.[365] As noted above, we understand that funds currently place significance on understanding the portion of their portfolio representing very liquid investments, as it is not unusual for funds to determine the percentage of their portfolio that can be liquidated in the short-to-medium term.[366] We anticipate that a fund could determine that a broad variety of investments within different asset classes could be classified as highly liquid investments, depending on facts and circumstances.[367]

We note that, as with the proposal, the highly liquid investment category measures the time period in which an investment could be converted to cash in business days, as opposed to the other liquidity categories, which use calendar days. Some commenters suggested that, instead of the references to both business days and calendar days, the categories that the Commission adopts should only reference business days.[368] One commenter stated that basing all classification categories on business days instead of calendar days would be ''preferable from a consistency standpoint, and reasonable given the lack of expectations around receiving cash flows on non-business days.''[369] Other commenters suggested alternative liquidity classification categories that, like the proposed categories, would reference both business days and calendar days.[370]

After considering these comments, we are continuing to reference business days in the highly liquid investment definition we are adopting, while referencing calendar days in the other liquidity classification categories. We appreciate commenters' concerns that classification categories that reference both business days and calendar days could add some complexity in the assumptions and models that funds may use in classifying the liquidity of their portfolio investments. However, as discussed below, we believe it is important to tie the time frames referenced in the moderately liquid, less liquid, and illiquid classification categories to the seven-calendar-day period in which funds are required to pay redeeming shareholders under section 22(e) of the Investment Company Act.[371] Although we could have referenced calendar days instead of business days in the highly liquid investment definition to help standardize the time periods referenced in all of the classification categories, we continue to reference business days in this classification category for several reasons. First, for short time periods, a calendar day standard could be unworkable and create absurd results if the time period were to encompass weekends or holidays, during which trading cannot be expected to occur. Second, many of the alternate classification categories that commenters suggested incorporated categories that referenced a three-business-day period,[372] and we understand from these comments and staff outreach that this is a workable (and, for some fund complexes, currently-used) period for a fund to consider in assessing the liquidity of its portfolio investments.[373]

b. Moderately Liquid Investments

A fund also will be required to identify its ''moderately liquid investments,'' that is, those investments the fund reasonably expects to be convertible into cash in current market conditions in more than three calendar days, but in seven calendar days or less, without the conversion to cash significantly changing the market value of the investment. These investments are those that are not immediately or very quickly convertible to cash, but that nevertheless may be converted to cash in a time frame that would permit funds to pay redeeming shareholders within the seven-day period established by section 22(e) of the Investment Company Act. We expect that this classification category will be an important component of the Form N–PORT reporting obligations because it will provide the Commission with information regarding the portion of a fund's portfolio that is not on the most liquid end of the spectrum, but still is sufficiently liquid to meet redemption requests within the statutory seven-day period without causing significant dilution. We also anticipate that the public will have an interest in gaining transparency into this information on an aggregate basis.[374] Several commenters who suggested simplified alternatives to the proposed classification approach

[363] *See supra* footnote 309.

[364] *See supra* footnote 9.

[365] *See infra* footnote 374 and accompanying text (discussing the use of moderately liquid assets to meet redemption requests).

[366] *See supra* footnote 363 and accompanying text.

[367] *See infra* section III.D.

[368] *See, e.g.,* Interactive Data Comment Letter; Nuveen Comment Letter.

[369] *See* Interactive Data Comment Letter; *see also* ICI Comment Letter I; T. Rowe Comment Letter (noting that the proposed classification categories could require a fund to make difficult distinctions in determining which assets can be converted to cash in three business days versus four calendar days). The note to rule 22e–4(b)(1)(ii) addresses situations where the period to convert an investment to cash depends on the calendar or business day convention. *See infra* footnotes 376 and accompanying text.

[370] *See, e.g.,* Markit Comment Letter; PIMCO Comment Letter.

[371] *See infra* sections III.C.2.b–d.

[372] *See, e.g.,* Fidelity Comment Letter; Invesco Comment Letter; T. Rowe Comment Letter; Vanguard Comment Letter.

[373] We also note that rule 15c6–1 under the Exchange Act, which was adopted in 1993 and became effective in 1995, established three business days as the standard settlement period for securities trades effected by a broker-dealer. Thus, we understand that many funds pay redemption proceeds within three business days after receiving a redemption request, because a broker or dealer will be involved in the redemption process. *See supra* footnote 32 and accompanying text. *See also supra* footnote 366.

[374] *See infra* section III.C.6.c.

recommended including a classification category based on portfolio investments' convertibility to cash within seven days.[375]

We understand that circumstances could arise in which the sale and settlement period for a particular portfolio position could be viewed as within three business days or four-to-seven calendar days. For example, if a sale were to occur on a Thursday and be settled on a Monday, the sale and settlement period could be viewed either as within three business days or four calendar days. This situation could cause ambiguity for reporting purposes. Thus, rule 22e–4, similar to the proposed rule, includes a note stating that a fund should classify the portfolio position based on the shorter period (*i.e.,* as a highly liquid investment).[376]

c. Less Liquid Investments

Additionally, a fund will be required to identify its ''less liquid investments,'' that is, those investments that the fund reasonably expects to be able to sell or dispose of in current market conditions in seven calendar days or less a without the sale or disposition significantly changing the market value of the investment, but where the sale or disposition is reasonably expected to settle in more than seven calendar days. Thus, the less liquid investments category focuses on investments whose sale cannot be settled quickly. For example, transactions in certain types of securities—such as certain foreign securities [377] and U.S. bank loan participations [378]—have historically entailed settlement periods that are longer than standard settlement periods in the broader securities markets. If a fund were to determine that securities within these asset classes, or other asset classes with longer-than-standard settlement periods, were able to be sold within seven calendar days, but could not be settled within this period, the fund should classify these securities as less liquid investments. As an example, certain foreign securities may be able to be sold in seven calendar days or less, but may be subject to capital controls that would limit the extent to which the foreign currency could be repatriated or converted to dollars within this time frame. Thus, these securities would be considered to be less liquid investments because they would be reasonably expected to settle in more than seven calendar days. We note that trades in certain investments, however, may take an extended period of time to settle.[379] In the event of an extended settlement period, at some point, a fund may need to consider re-classifying such an investment as illiquid.[380] We also note that if a fund holds a forward contract on a security, such as a forward in a transaction in the ''To-Be-Announced'' (''TBA'') market,[381] the convert to cash determination for that instrument may be based on the forward contract and not on the underlying securities to be received.[382]

The ''less liquid investments'' category, like the ''moderately liquid investments'' category and the ''illiquid investments'' category, directly reflects the statutorily required seven-day period for meeting redemption requests. The ''less liquid investments'' category is meant to identify for the Commission and its staff, as well as investors and other potential users, the portion of a fund's portfolio investments that may be available to meet redemption requests within seven days, but only to the extent that the fund addresses the lengthier settlement period associated with these investments. Because less liquid investments are those that may be sold, but not settled, within seven days, a fund generally could use less liquid investments to meet redemptions within seven days only if the fund obtained an additional source of financing (for example, a line of credit) to bridge the period until the sales would settle, or if the fund used its cash holdings to meet the redemptions while simultaneously selling the less liquid investment and then replenishing its cash holdings upon settlement.

Transparency regarding the portion of a fund's portfolio held in less liquid investments also could demonstrate those investments that could be liquidated in order to meet redemptions that would occur more than a week in the future, if a fund were to enter into a period of extended redemptions that it anticipates would last for multiple days. Because an open-end fund has an obligation to meet redemption requests within seven days, we believe it is important for funds to identify those investments that could pose certain challenges in being used to meet redemption requests within that time period, for purposes of the fund's own liquidity risk assessment and management,[383] as well as to provide transparency into certain funds or strategies that could have relatively limited liquidity compared to peer funds.

d. Illiquid Investments

A fund also will be required to identify those investments that it

[381] In the TBA market, lenders enter into forward contracts to sell agency mortgage-backed securities and agree to deliver such securities on a settlement date in the future. The specific agency mortgage-backed securities that will be delivered in the future may not yet be created at the time the forward contract is entered into. The purchaser will contract to acquire a specified dollar amount of mortgage-backed securities, which may be satisfied when the seller delivers one or more mortgage-backed securities pools at settlement. For a discussion of the TBA market, *see* Task Force on Mortgage-Backed Securities Disclosure, Staff Report: Enhancing Disclosure in the Mortgage-Backed Securities Markets (Jan. 2003), at section II.E.2, *available at http://www.sec.gov/news/studies/mortgagebacked.htm.*

[382] *See* ICI Comment Letter I (noting that the ''TBA market is similar to the futures market, in which physically-settled futures contracts may trade continuously (*e.g.,* daily) but the underlying reference assets are delivered at a later date (*e.g.,* once every 3 months).'').

[383] For example, a fund's holdings of less liquid investments typically would be a relevant consideration when assessing whether its strategy is appropriate for an open-end fund and determining its highly liquid investment minimum. *See supra* section III.B; *see also infra* section III.D.2.

considers to be ''illiquid investments.'' Rule 22e–4 as adopted today defines an illiquid investment as any investment that a fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment. Like the ''less liquid investments'' and ''moderately liquid investments'' category, the ''illiquid investments'' category references the statutorily required seven-day period for meeting redemption requests. However, while the ''less liquid investments'' and ''moderately liquid investments'' categories are based on the time period in which investments are convertible to cash—that is, sold with the sale settled—the ''illiquid investments'' category only reflects the period for selling (or otherwise disposing of) an investment and does not also consider settlement timing.

Rule 22e–4 as proposed would have included a limit on funds' ability to acquire ''15% standard assets,'' or any asset that may not be sold or disposed of in the ordinary course of business within seven calendar days at approximately the value ascribed to it by the fund.[384] Under the proposal, 15% standard assets were not a category in the classification framework. In determining whether an asset was a 15% standard asset, a fund would not have been required to take into account any specific market or other factors, or assess position size as it could reflect market depth, in determining whether it could sell the asset within seven days without the specified value impact.[385] The proposed limit was intended to be consistent with the Commission's guidelines limiting funds' holdings of illiquid assets to 15% of net assets[386] and most commenters supported the proposed 15% limit.[387]

We understand, however, that funds have engaged in a variety of practices in determining the illiquidity of investments. It has been our staff's experience that some of these practices are less robust than others. We believe that the definition of illiquid investments we are adopting today will provide a clear standard for determining the illiquidity of investments and will better ensure that all funds are determining the illiquidity of investments more consistently. We recognize, however, that as a result of this new definition, some funds may take into account relevant market, trading, and investment-specific considerations, as well as market depth, for the first time and therefore, as discussed below, some funds may determine that a greater percentage of holdings are illiquid.[388]

We note that some commenters suggested strengthening the current illiquid asset guidelines.[389] Many commenters also suggested that these assets continue to be referred to as ''illiquid assets'' (not 15% standard assets) and be harmonized with any classification system that the Commission ultimately adopts.[390] Additionally, commenters requesting such a harmonization also stated that value impact standards should be consistent between the 15% standard asset definition and the categories used in the classification.[391]

We have determined to incorporate an illiquid investment category into rule 22e–4's broader classification requirement for several reasons. Specifically, harmonizing funds' illiquid investment determinations with the general liquidity classification framework will create consistency in the value impact standards across liquidity categories.[392] As noted above, the illiquid investment value impact standard in final rule 22e–4 has been changed from whether a fund could sell an investment at ''approximately the value at which the fund has valued the investment,'' to whether a fund could sell the investment ''without the sale or disposition significantly changing the market value of the investment.''[393] We are adopting this new value impact standard for illiquid investment determinations in part as a response to commenters' concerns about confusion that could arise from conflicting standards. Accordingly, the value impact standard for illiquid investments is substantially identical to the value impact standard for all other classification categories.[394] As discussed in more detail above, the final classification value impact standard highlights that: (i) The standard does not require a fund to actually re-value or re-price an investment for classification purposes; and (ii) the standard does not require the fund to incorporate general market movements in liquidity determinations or estimate market impact to a precise degree.[395]

Significantly, in harmonizing features of the illiquid investment category with other categories in the liquidity classification framework, we also are replacing existing Commission guidance on identifying illiquid assets with new regulatory requirements regarding the process for determining that certain investments are illiquid.[396] In the Proposing Release, we noted that we were proposing to withdraw Commission guidance because we believed the proposal would provide ''a more comprehensive framework for funds to evaluate the liquidity of their assets.''[397] We also requested comment on whether additional guidance is needed in connection with the proposed codification of the Commission's illiquid asset guidelines. Although many commenters supported the proposed codification of the Commission's guidelines on illiquid assets,[398] most did not specifically comment on the Commission's proposal to withdraw the guidance associated with its illiquid asset guidelines. However, certain commenters suggested that stronger requirements and guidance regarding assets subject to the 15% limit could be appropriate.[399] One commenter expressed concern that the Commission's guidelines today are having only a ''limited impact on fund behavior'' and that the current 15% limit ''applies to an inappropriately narrow range of assets and is therefore ineffective as an investor protection mechanism.''[400] This commenter suggested that the limit should encompass not only those assets that are not able to be sold within seven days at approximately the value ascribed by the fund, but also those assets that cannot be converted to cash (that is, sold with the sale settled) within this same period, taking into account this same value impact standard.[401]

We agree with those commenters that suggested the Commission's current guidelines, together with many funds' interpretation of these guidelines today,

may result in funds only focusing on certain largely structural features that can lessen the liquidity of an investment (such as transfer restrictions and trading halts) rather than more market- and trading-based features. This can result in funds considering only an artificially narrow set of portfolio investments to be illiquid. As we discussed in the Proposing Release, we understand that today it is common—even for complexes with generally robust liquidity risk management procedures—to treat the process for determining whether an investment is illiquid under the current Commission guidelines as a compliance or ''back-office'' function, with little indication that information generated from the risk or portfolio management functions informs the compliance determinations. Thus, we understand that some funds currently may determine that an investment is liquid, rather than illiquid, primarily based on certain structural characteristics of the investment without assessing market or trading information or other potentially relevant factors. Such investments include private equity securities and certain other privately placed or restricted securities,[402] as well as certain instruments or transactions that by their structure do not mature and are not readily transferable in seven days or less, including term repurchase agreements.[403] While a focus on structural features alone may be appropriate in some circumstances (for example, an across-the-board assumption that all securities with a trading halt are illiquid, without an additional assessment of market or trading factors), in other circumstances the failure to consider market, trading, and other relevant information could result in a fund considering an investment to be liquid even if the fund cannot reasonably expect to sell amounts it reasonably anticipates trading without the sale or disposition significantly changing the market value of the investment within seven calendar days.

For these reasons, rule 22e–4 as adopted today, requires a fund to incorporate certain additional considerations in determining whether an investment is illiquid. We are withdrawing existing guidance and replacing it with new regulatory requirements and guidance regarding the process for determining whether a portfolio investment is illiquid.[404] A fund would have to take into account ''relevant market, trading, and investment-specific considerations'' when determining whether an investment is an illiquid investment.[405]

The guidance the Commission provides below on matters funds might consider in assessing market, trading, and investment-specific considerations reflects factors that the Commission has previously said are reasonable examples of factors to evaluate in determining whether a rule 144A security is liquid and makes them more generally applicable to assessing liquidity of other investments.[406] Thus, this guidance draws on past Commission guidance for evaluating whether a certain type of investment is liquid or illiquid, and extends this process to a fund's liquidity determinations regarding all types of investments. We recognize that the guidance in the Rule 144A Release anticipates that fund boards will determine whether certain securities are liquid or illiquid.[407] While we have considered the specific guidance factors discussed in the Rule 144A Release in the context of the guidance we provide herein with respect to classifying the liquidity of portfolio investments, neither our guidance nor the final rule places the responsibility for determining whether a specific security is liquid or illiquid on the fund's board. The board would, however, be responsible for approving the fund's liquidity risk management program, which provides the framework for evaluating the liquidity of the fund's investments, and for reviewing (at least annually) a written report that describes a review of the program's adequacy and the effectiveness of its implementation. Overall, a fund must classify its investments by focusing on those market, trading, and investment-specific considerations that are relevant to its portfolio. We believe that this principles-based approach should result in funds making realistic and well-informed determinations about investments' liquidity (or illiquidity) based on analysis beyond simple decisions solely about structural features of an asset class.

As with other liquidity classification categories and as discussed in more detail in section III.C.3.a below, funds can determine illiquid investments on an asset-class basis, with exceptions for investments whose liquidity characteristics significantly differ from the class. For example, a fund could employ procedures whereby certain asset classes are initially considered liquid, and then further evaluated to decide whether relevant market, trading, and investment-specific considerations should result in a particular investment being treated as an exception and a change to the initial liquidity determination.[408] A fund could use the specific guidance factors we discuss in section III.C.4 below as part of its process for taking into account relevant market, trading, and investment-specific considerations in determining whether an investment is illiquid. For example, a fund that generally considers certain high-yield bonds *not* to be illiquid (for instance, a fund that typically considers high-yield domestic corporate bonds to be moderately liquid investments) could determine that certain securities within this class are actually illiquid investments, based on restrictions on trading that could occur if one of these bonds' issuers were to enter bankruptcy and the debt were to become distressed. Conversely, a fund that generally considers certain investments to be illiquid (such as rule 144A securities) could determine that some of these investments should be included in another liquidity category based on relevant market, trading, and investment-specific considerations.[409]

We also understand, based on staff outreach, that some fund complexes make determinations of whether a portfolio investment is liquid (or illiquid) under the current Commission guidelines based on whether a single trading lot for the investment can be sold within seven days under normal market circumstances. Certain funds interpret this to allow them to declare an entire holding to be liquid even if they could only sell a very small portion of it without a significant value impact. Staff has observed that these fund practices and interpretations of current

[407] *See* Rule 144A Release, *supra* footnote 37 (stating that ''determination of the liquidity of Rule 144A securities in the portfolio of an investment company issuing redeemable securities is a question of fact for the board of directors to determine, based upon the trading markets for the specific security.'').

[408] *See infra* section III.C.3.a (discussing that, under rule 22e–4, a fund would generally be permitted to classify its portfolio investments according to their asset class, but if it has information that a particular investment has different liquidity characteristics than other investments within the same asset class, it would need to treat that investment as an exception to the way that the fund classifies its other holdings within the same asset class).

[409] *See* rule 22e–4(b)(ii). *See also* section III.C (discussing the various considerations required when classifying the liquidity of fund securities).

Commission guidelines may result in a fund determining that very few, if any, portfolio investments are illiquid under the current guidelines, even in situations in which the liquidity of a large portion of a fund's portfolio is fairly limited.

Given the practices described above when funds did not consider market depth in making liquidity determinations and considering the comments discussed above regarding the proposed illiquid asset limit, under the final rule, a fund will be required to consider market depth in determining whether to classify portfolio investments as illiquid investments. To the extent that the fund determines that trading varying portions of a position is reasonably expected to significantly affect the liquidity characteristics of that investment—that is, the market depth for the investment is reasonably expected to significantly affect its liquidity—the fund would need to take this into account in classifying the investment as illiquid.[410] These are the same market depth considerations a fund would have to take into account in classifying the liquidity of its portfolio investments generally, as discussed in detail below.[411]

Members of the fund industry have argued that because a fund will not likely need to sell its entire position in a particular investment under normal market circumstances, liquidity determinations should be based on the sale of a single trading lot for that investment, except in unusual circumstances.[412] However, a fund could encounter situations in which it needs to liquidate larger portions than one trading lot of its positions in order to meet redemption requests, but cannot do so within the seven-day time period required under section 22(e). As discussed below, we believe that the market depth considerations required by the final classification requirement will appropriately require a fund to consider situations in which the size of a fund's holdings could significantly affect those holdings' liquidity and impact the fund's ability to manage its liquidity risk—that is, when portfolio liquidity may be significantly constrained by the fund's ability to trade meaningful sizes of its portfolio holdings. We believe this assessment of market depth will assist in illiquidity determinations incorporating a realistic analysis of a fund's ability to meet redemption requests without significant dilution, and thus in funds better managing liquidity risk.

As discussed above, one commenter suggested extending the definition of illiquid assets to encompass not only those assets that are not able to be sold within seven days at approximately the value ascribed by the fund, but also those assets where the sale cannot be settled within this same period, taking into account the same value impact standard.[413] After considering this suggestion, we have ultimately decided that the ''illiquid investments'' category under rule 22e–4 should reflect only the period for selling or disposing of an investment and not also consider settlement timing. Instead, the ''less liquid'' category reflects those investments that could be sold, but not settled, within seven days without a significant value impact. Investments that *cannot be sold* within seven days without a significant value impact (illiquid investments, under rule 22e–4) have different liquidity characteristics and are essentially less liquid than investments that *can be sold* within seven days without a significant value impact, but whose sale cannot be settled within this period (less liquid investments, under rule 22e–4).[414] As discussed above, less liquid investments could still be considered a limited source of liquidity for meeting redemptions within the seven-day period specified under section 22(e) of the Act, with the caveat that a fund may have to address certain challenges associated with their settlement, whereas a fund's illiquid investments are structurally or as a matter of market dynamics less liquid and a fund may be unable to use them to meet redemptions within seven days.[415]

However, we note that trades in certain investments may take an extended period of time to settle. Trades in some low quality loans, for example, may not settle for a number of months.[416] A fund that holds less liquid investments with extended settlement periods must develop a liquidity risk management program that takes into account the liquidity risks associated with extended settlement periods.[417] These policies and procedures could include limits on the amount of less liquid investments with extended settlement periods a fund will hold or more frequent liquidity classification reviews for this type of holding. Such a fund may also wish to consider the circumstances in which it would seek to obtain expedited settlement (where possible) and establish tailored policies and procedures regarding how and when it would seek expedited settlement. Funds may also wish to consider whether to obtain an additional source of financing (for example, a committed line of credit dedicated to that fund) to bridge the period until the sales would settle.

We believe that the new requirement to take into account market, trading, and investment-specific considerations, as well as to consider market depth, in identifying illiquid investments responds to the concern that the way illiquid investments are currently defined has only limited effects on funds' liquidity risk management and the liquidity of their portfolios.[418] We understand that, to the extent a fund is not currently taking into account market, trading, and investment-specific considerations or market depth when assessing the illiquidity of its investments, the new regulatory requirements regarding the process for determining that certain investments are illiquid under the rule are likely to result in the fund determining that a greater percentage of its holdings are illiquid than under the guidelines. In extreme circumstances, this—in combination with the limitation on funds' illiquid investment holdings to 15% of its net assets discussed at section III.E below—could cause certain funds to have to modify their investment strategies or reconsider their structure as open-end funds. We also understand that these requirements will entail additional operational costs, to

[410] Rule 22e–4(b)(1)(ii).

[413] *See supra* footnote 401 and accompanying text.

[414] When a fund sells an asset (even if the transaction has not yet settled), the fund has a receivable on its books, and any potential loss from the sale of that asset will be reflected in the fund's NAV. If the fund has an asset it cannot sell, however, the fund continues to be exposed to the risk of unknown potential loss until the asset can be sold.

[415] *See supra* paragraph accompanying footnote 383 (discussing less liquid investments and the extent to which less liquid investments may be available to meet redemption requests within seven days if a fund addresses certain challenges associated with their sale and settlement).

[416] *See e.g.,* Michael Mackenzie and Tracy Alloway, *Lengthy US loan settlements prompt liquidity fears,* Financial Times (May 1, 2014), *available at http://www.ft.com/cms/s/0/32181cb6-d096-11e3-9a81-00144feabdc0.html#axzz4HQiQv5wj* (noting that a quarter of new loans being issued were taking more than 30 days to settle).

[417] Such extended settlement period securities have the potential to pose heightened liquidity risks for funds, and thus policies and procedures that are reasonably designed to assess and manage the liquidity risk of a fund that holds such securities would take into account the particular liquidity risks raised by such holdings. *See* rule 22e–4(b)(1)(i).

[418] *See supra* footnote 400 and accompanying text.

the extent that funds today do not generally take into account relevant market, trading, and investment-specific considerations, or market depth, in determining whether their portfolio investments are illiquid. However, as discussed in detail in the Economic Analysis section below, we believe that these costs are justified by the investor protection benefits that we believe will result from better portfolio liquidity assessments.[419]

3. Required Classification Procedures

a. Classification Based on Asset Class

Rule 22e–4, as adopted today, generally permits a fund to, as a starting point, classify the liquidity of its portfolio investments according to their asset class.[420] Notwithstanding this general approach, a fund will be required to separately classify any investment if the fund or its adviser, after reasonable inquiry, has information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of that investment as compared to the fund's other portfolio holdings within that asset class.[421] For example, if the fund or its adviser were to know that particular large-capitalization equity was affected by adverse events at the issuer that caused it to have different liquidity characteristics than the asset class as a whole, it would be required to treat that investment as an exception and classify it separately. As another example, a fund could decide that high credit quality corporate bonds generally fall into a particular liquidity category, but if the fund or its adviser had information that certain bonds' bid-ask spreads are significantly wider or more volatile than those of their peers, it would be required under rule 22e–4 to separately assess these bonds and potentially classify them into a less-liquid category than the fund's other holdings within the same asset class. We expect that, based on a fund's responsibility under the rule to classify each of its investments after reasonable inquiry and taking into account relevant market, trading, and investment-specific considerations, there are some asset classes, such as those encompassing some bespoke complex derivatives or complex structured securities,[422] that have such a range of liquidity characteristics that each position would need to be classified individually.

Rule 22e–4 as proposed would not have allowed a fund to, as a starting point, classify its portfolio investments according to asset class. The proposed rule instead would have required a fund to classify each of its positions in a portfolio asset (or portions of a position) according to the liquidity categories included in the rule.[423] In the Proposing Release, we requested comment on whether the proposed classification requirement and associated liquidity categories reflected the manner in which funds currently assess and categorize the liquidity of their portfolio holdings as part of their portfolio and risk management.

Many commenters objected to the proposed position-level classification requirement, arguing that it does not reflect recognized liquidity risk management practices and does not reflect industry best practices.[424] Commenters likewise maintained that, instead of assessing portfolio liquidity on a position-by-position basis, asset managers tend to focus on the liquidity of certain asset classes and/or generally view liquidity at the portfolio level based on a ''top-down'' analysis.[425] On the other hand, some commenters acknowledged that certain asset managers may classify the liquidity of individual portfolio positions within a range of categories, albeit not at the level of detail suggested by the proposal, or for all classes of portfolio assets.[426]

Commenters stated that considering portfolio liquidity on the basis of asset class, at least as a starting point, has practical, operational, and conceptual benefits compared to considering the liquidity of each portfolio position individually.[427] Commenters stated that assets with certain similar characteristics are often ''highly comparable and substitutable from a liquidity perspective,'' [428] and liquidity assessments based on asset class would permit a fund manager to account for differences in market structure and portfolio management objectives among asset classes.[429] Commenters also argued that evaluating and classifying each portfolio asset individually would be ''overly burdensome and near-impossible to manage,'' as a fund complex may collectively hold hundreds of thousands of individual portfolio assets,[430] and the data required to classify each asset individually may not be readily available for all asset types (particularly for fixed income or other OTC assets).

Relatedly, multiple commenters suggested alternative liquidity classification schemes that would be based on an ''asset-type mapping with exceptions'' analysis.[431] These alternatives used an approach where a fund's portfolio assets' liquidity generally would be classified by asset class—with exceptions to the extent a particular portfolio asset demonstrates liquidity characteristics that differ from the liquidity of its asset class generally and that are deemed to make the position substantially more or less liquid.[432] Assets treated on an exception basis could be placed in a different liquidity category than the rest of their asset class, which could be either higher or lower.[433] The asset class analysis provisions of final rule 22e–4 generally take this approach. The primary difference between commenters' ''asset-type mapping with exceptions'' suggested approaches and the approach incorporated in final rule 22e–4 is that commenters' suggested approaches would rely on the Commission (or an industry group) assigning default liquidity categories to each asset class, whereas the approach we are adopting would depend on each fund performing this exercise based on its adviser's individual experience in the markets.

We believe that this approach strikes an appropriate balance between lessening operational burdens associated with classification and recognizing that many investments within an asset class may be considered interchangeable from a liquidity perspective, on one hand, and providing reasonably precise liquidity classifications that appropriately reflect investments' liquidity characteristics, on the other hand. This approach also should leverage fund managers' current practices to a greater degree than under the proposal. A fund's asset-class-based classification procedures should incorporate sufficient detail to meaningfully distinguish between asset

[433] *Id.*

classes and sub-classes. For example, a fund may wish to distinguish how it classifies its equity securities based on factors such as the market(s) in which the security's issuer is based, market capitalization, and whether the security is common or preferred stock. As another example, a fund may wish to distinguish its fixed income securities based on factors such as issuer type, the market(s) in which the issuer is based, seniority, age, and credit quality, and to distinguish its holdings of structured products based on tranche seniority and credit quality. We do not consider it appropriate for a fund to use very general asset class categories (*e.g.,* ''equities,'' ''fixed income,'' and ''other'') in classifying the liquidity of its portfolio investments, as these broad categories would likely not permit a fund to identify investments with fungible liquidity characteristics. A fund's asset-class-based classification procedures also should include procedures for updating default asset-class liquidity classifications as relevant market, trading, and investment-specific considerations warrant.[434]

A fund would be required to separately classify any investment within an asset class if the fund or its adviser were to have information about any market, trading, or investment specific considerations that are reasonably expected to significantly affect the liquidity characteristics of that investment as compared to the fund's other portfolio holdings within that asset class (its ''exception processes'').[435] Rule 22e–4 does not specify precisely how a fund must identify investments that should be classified separately as part of its exception processes. However, reasonably designed policies and procedures would likely include specifying the sources of inputs that inform its exception processes (for example, inputs from the fund's portfolio management, risk management, and/or trading functions), as well as particular variables that could affect the fund's classification of certain investments. For example, a fund could determine that a particular investment should be classified differently than other investments within its asset class if the market for that particular investment were exceptional in terms of size, breadth, or depth, or if the investment's typical bid-ask spreads were generally wider, narrower, or more volatile than the bid-ask spreads of other assets within the asset class. A fund could incorporate an assessment of the liquidity classification guidance factors discussed below, as the fund determines appropriate, in its exception processes.[436]

b. Required Procedures for Considering Market Depth

Under rule 22e–4 as adopted today, a fund would be required to determine whether trading varying portions of a position in a particular portfolio investment, in sizes that the fund would reasonably anticipate trading, is reasonably expected to significantly affect the liquidity characteristics of that investment.[437] To the extent that the fund determines that trading varying portions of a position *is* reasonably expected to significantly affect the liquidity characteristics of that investment—that is, the market depth for the investment is reasonably expected to significantly affect its liquidity—the fund would need to take this into account in classifying the liquidity of that investment.[438] As discussed in more detail below, this requirement would have a fund consider portions of a portfolio position that are larger than a single trading lot, but not necessarily the position's full size, in assessing its portfolio investments' liquidity.

These market depth-related requirements are meant to substitute for, and modify, the language of proposed rule 22e–4 that would have effectively required a fund to consider position size in classifying the liquidity of its portfolio investments. As discussed above, proposed rule 22e–4 would have had a fund consider, for each portfolio position, the amount of time it would take to convert the entire position, or portions thereof, to cash.[439] Under this proposed requirement, if a fund were to conclude that it would take the fund longer to convert its entire position in an asset to cash, it could determine, for example, that 50% of the position should be classified in one liquidity category, and the remaining 50% should be classified in another category.

This aspect of the proposed requirement arose from our belief that a fund should consider its ability to trade larger portions of a portfolio asset than a single trading lot in assessing its portfolio investments' liquidity. The ability to quickly trade larger portions of a particular position is a reflection of market depth for a particular asset, which is a well-recognized aspect of assessing liquidity.[440] In the Proposing Release, we responded to arguments that because a fund will not likely need to sell its entire position in a particular asset under normal market conditions, liquidity determinations should be based on the sale of a single trading lot for that asset, except in unusual circumstances.[441] We noted that, although we agreed that a fund not being able to convert its entire position in an asset to cash at a price that does not materially affect the value of that asset should not, by itself, be dispositive of a portfolio asset's liquidity, assessing liquidity only on the basis of the ability to sell and receive cash for a single trading lot of an asset ignores the fact that a fund may need to sell all (or a significant portion) of its position.[442]

Multiple commenters expressed concern about the proposed requirement to consider full position size in classifying the liquidity of a fund's portfolio assets.[443] Commenters argued that many industry participants currently assess asset liquidity by trading lot (as opposed to evaluating whether a fund can exit an entire position within a certain time period), reflecting that a fund generally would not need to liquidate an entire large position unexpectedly.[444] Commenters also contended that this aspect of the proposal could result in large funds' portfolio liquidity appearing artificially low compared to smaller funds because large funds are more likely to hold larger positions and determine that they could not quickly liquidate these positions entirely without a value impact.[445] Commenters argued that it could be misleading for large funds to

[434] *See* rule 22e–4(b)(1)(ii) (requiring funds to classify their investments taking into account relevant market, trading, and investment-specific considerations and to review their portfolio investments' classifications if changes in these considerations are reasonably expected to materially affect one or more of their investments' classifications).

[442] *See id.,* at paragraph accompanying n.177. For example, a fund needing to sell certain assets in order to meet redemptions may need to sell more than one trading lot of a particular asset. In addition, a fund may determine to dispose of an entire position because of deteriorating credit quality or other portfolio management factors. Similarly, an index fund may need to sell an entire position in an asset if that asset falls out of the tracked index.

appear to be less liquid than smaller funds, because large funds' portfolios might actually entail less liquidity risk compared to smaller funds (because each position, while large in absolute size, is a smaller portion of the overall portfolio than may be the case in smaller funds), and large funds may have greater resources than smaller funds to manage liquidity effectively.[446] For example, one commenter stated that large funds often have more diversified holdings than smaller funds and may wield more negotiating power with broker-dealers.[447]

The market depth approach we are adopting takes commenters' concerns into account, although as discussed above we continue to believe that an investment strategy involving large positions in particular issuers—particularly if the fund's portfolio is relatively concentrated—is relevant to assessing liquidity risk.[448] We appreciate that, in many cases, a fund may not have to trade large portions of its portfolio holdings in relatively short time periods in order to meet redemptions, or to otherwise manage its liquidity risk. For example, a fund may not need to often quickly convert large portions of its portfolio investments to cash, based on its cash flow projections (*e.g.,* if the fund's investors are known to be primarily long-term investors) and other liquidity risk assessment factors.[449] We also recognize that there could be situations in which the requirement to consider entire position size in classifying a fund's portfolio investments, regardless of the size of trades a fund typically engages in, could make a fund appear to be less liquid than the fund's actual trading experiences in light of its portfolio investments' market depth. This could be misleading if the fund were actually able to trade a large percentage of its holdings fairly quickly without the fund's trades significantly moving the investments' prices. We believe that the required market depth considerations incorporated into the final classification requirement will permit a fund to more realistically assess the liquidity of its portfolio investments because they allow a fund to classify and review its portfolio investments taking into account position sizes that the fund would reasonably anticipate trading.

We believe that if a fund reasonably anticipates trading sizeable portions of its portfolio positions, the fund's portfolio liquidity could be adversely affected by a lack of market depth for its portfolio investments. A fund could reasonably anticipate trading sizeable portions of its portfolio positions if it often trades relatively large portions of its portfolio positions. Likewise, a fund may not trade larger portions of its portfolio positions on a regular basis, but could reasonably anticipate, based on past flow patterns or current market conditions that it could encounter larger-than-typical redemptions that would necessitate larger portfolio trades. In both of these examples, such a fund could conclude that it may be difficult to find trading partners for a particular portfolio investment, or may be difficult to sell the investment within a particular time frame without this sale causing a significant value impact. For this reason, rule 22e–4 requires a fund to consider the sizes of a particular investment that the fund would reasonably anticipate trading and whether trading in such sizes could significantly affect the investment's liquidity. If so, the fund would be required to take this into account in classifying the liquidity of that portfolio investment.[450] If the fund determined, after conducting the required market depth analysis, that a downward adjustment in the liquidity classification of a particular investment is appropriate, the new liquidity classification that the fund assigns to this investment would apply to the entirety of the fund's position in that investment (not, as proposed, to portions of that position). This approach is meant to lessen burdens on funds, as well as respond to commenters' concerns, by focusing a fund's market depth considerations on circumstances in which a fund's practices in trading varying portions of its portfolio positions could have a disproportionate effect on its portfolio investments' liquidity.

Rule 22e–4 directs a fund to consider sizes that the fund would reasonably anticipate trading in assessing the impact of market depth on an investment's liquidity.[451] Depending on the liquidity risk factors that a fund must consider under rule 22e–4(b)(1)(i), as well as other factors including the fund's size, a fund could reasonably anticipate selling various portions of its position in a particular portfolio investment, or various dollar amounts or block sizes of a particular portfolio investment.[452] For example, it may be appropriate for a fund with a highly liquid portfolio, with very stable and minimal cash flow projections and significant cash holdings and operating in very stable market conditions, to adopt policies and procedures that consider whether trading relatively small fractions of each of the fund's portfolio holdings would result in significant liquidity impacts. On the other hand, we would generally consider it appropriate for a fund whose holdings are relatively illiquid and/or fairly concentrated, with unpredictable cash flow projections or deteriorating market conditions in the markets in which it invests, to consider whether trading larger portions of its portfolio holdings would result in significant liquidity impacts.

c. Classification Issues Arising With Respect to Derivatives Transactions

Rule 22e–4 requires that the liquidity classification and review requirements cover each of the fund's investments, including derivatives transactions, and that a fund take into account relevant market, trading, and investment-specific considerations in classifying the liquidity of its investments.[453] The rule also states that for derivatives transactions that a fund has classified as moderately liquid investments, less liquid investments, and illiquid investments, the fund must identify the percentage of its highly liquid investments that are segregated to cover, or pledged to satisfy margin requirements in connection with, derivatives transactions in each of these classification categories.[454] A fund also will be required to disclose these percentages on its Form N–PORT filings.[455] We believe a fund's disclosure of this percentage will permit

[453] Rule 22e–4(b)(1)(ii).

[454] Rule 22e–4(b)(1)(ii)(C). Because, as discussed below, a fund generally will segregate certain liquid assets in order to cover the fund's obligations under its derivatives transactions, rule 22e–4 assumes that a fund would not segregate any of its assets identified as illiquid investments to cover its derivatives transactions. *See infra* footnote 462 and accompanying text.

[455] *See infra* section III.C.6.b.

the Commission and its staff to understand what percentage of a fund's highly liquid investment minimum is composed of encumbered assets, and will allow the public to better understand that a certain percentage of a fund's highly liquid investments may not be immediately available for liquidity risk management purposes. The final rule does not require the fund to determine or disclose the percentage of the fund's moderately liquid investments or less liquid investments that the fund has segregated to cover, or pledged in connection with, its derivatives transactions, because we understand that funds are less likely to post moderately or less liquid investments as margin or collateral. We also expect that investors and others will find most valuable information regarding the extent to which the fund's highly liquid investments are segregated or pledged in connection with derivatives transactions because understanding that percentage may give investors a better understanding of whether such assets are truly available to make redemptions.

These requirements replace the proposed requirement for a fund to consider the ''relationship of [an] asset to another portfolio asset'' in classifying and reviewing the liquidity of its portfolio assets,[456] as well as the derivatives-focused guidance that the Commission provided in the Proposing Release regarding this proposed classification factor.[457] The Commission's guidance was meant to give direction to funds' liquidity classification of derivatives transactions and the assets that a fund may segregate to cover its obligations under these transactions.[458] As discussed below, we are not adopting the proposed factors that a fund would have had to consider in classifying the liquidity of its portfolio holdings, including the ''relationship of [an] asset to another portfolio asset'' factor.[459] However, we are adopting new classification provisions in rule 22e–4 that will apply to derivatives transactions[460] as well as a provision that will address assets segregated to cover derivatives transactions[461] so that funds consistently consider certain unique aspects of these transactions, and also to respond to commenters' concerns stemming from the treatment of derivatives under the proposal.

In the Proposing Release, we noted that when funds enter into certain transactions that implicate section 18 of the Investment Company Act, they generally will maintain, in a segregated account, certain liquid assets in order to ''cover'' the fund's obligation under the transactions.[462] We applied this framework to certain financing transactions in Release 10666, issued in 1979,[463] and also understand that funds today apply this framework to certain derivatives, based on the guidance we provided in Release 10666 and on no-action letters issued by our staff.[464] We explained in Release 10666 that ''[a] segregated account freezes certain assets of the investment company and renders such assets unavailable for sale or other disposition.''[465] We also stated in Release 10666 that only certain types of liquid assets should be placed in a segregated account.

Thus, we noted in the Proposing Release that, although assets used by a fund to cover derivatives and other transactions should be liquid when considered in isolation, when evaluating their liquidity for purposes of proposed rule 22e–4, the fund would have to consider that they are being used to cover other transactions and, consistent with our position in Release 10666, are ''frozen'' and ''unavailable for sale or other disposition.''[466] We stated that because these assets are only available for sale to meet redemptions once the related derivatives position is disposed of or unwound, a fund should classify the liquidity of these segregated assets using the liquidity of the derivative instruments they are covering. We also provided guidance that, when a formerly segregated asset is no longer segregated, a fund generally should assess, as part of the proposed ongoing liquidity classification review requirement, whether the liquidity classification given to the portfolio asset when it was segregated continues to be appropriate. Finally, we noted in the Proposing Release that in addition to the liquidity of a fund's derivatives positions themselves, assessing a fund's liquidity risk generally may include an evaluation of the potential liquidity demands that may be imposed on the fund in connection with its use of derivatives, including any variation margin or collateral calls the fund may be required to meet.[467]

The Proposing Release included a request for comment on the proposed ''relationship of [an] asset to another portfolio asset'' liquidity classification factor, which included asking whether rule 22e–4 should explicitly require a fund to classify the liquidity of a position (or portions of a position in a particular asset) used to cover a derivative position using the same liquidity classification category as it assigned to the derivative, and whether the Commission should provide additional guidance regarding the circumstances in which a fund should consider the liquidity of a particular portfolio asset in relation to the liquidity of another asset.[468] Multiple commenters raised concerns about the proposed ''relationship of [an] asset to another portfolio asset'' liquidity classification factor and accompanying guidance in the Proposing Release.[469] Many stated that the Commission's guidance as to classifying segregated assets using the liquidity of the derivative instrument they are covering would be unworkable and would raise costly operational burdens, because funds currently do not identify individual liquid assets to cover specific derivatives transactions.[470] Instead,

Continued

commenters noted that it is common in the fund industry for a fund to review its outstanding obligations under its derivatives positions on a portfolio basis and determine an aggregate amount of liquid assets that must be segregated in connection with the transactions requiring coverage.[471] One commenter suggested that, instead of the proposed ''relationship of [an] asset to another portfolio asset'' liquidity classification factor, the Commission alternatively could require funds to assign liquidity classifications to cover assets on an aggregate portfolio basis in amounts corresponding to the aggregate amount of derivatives exposure in each liquidity category.[472]

Some commenters also argued that the guidance provided in the proposal could make an otherwise liquid but segregated asset appear to be less liquid than it actually is when considered in isolation.[473] For example, if a cash equivalent security were used to cover a derivative that the fund determined to be convertible to cash within 8–15 days, under the Commission's guidance, the cash equivalent also would be classified as an asset that could be converted to cash within 8–15 days. However, the fund would be able to replace the cash equivalent as a coverage asset with another liquid asset at any time, which would immediately unencumber the cash equivalent (but would encumber other liquid assets with the same value).

Finally, commenters generally discussed features of derivatives transactions informing the way that their liquidity would be classified under proposed rule 22e–4. One commenter noted that the proposal seemed to suggest that derivatives are inherently more risky and present greater liquidity risk than other, more traditional assets.[474] This commenter maintained that, in some situations, derivatives may be more liquid than more traditional assets. Another commenter stated that, while the liquidity of a derivatives transaction depends on the derivative's underlying reference asset to some degree, its liquidity also largely stems from the needs of other market participants for that kind of derivative.[475]

The requirements in rule 22e–4 regarding the classification of a fund's derivatives transactions are meant to clarify and simplify the application of the classification requirements to derivatives transactions and respond to commenters' concerns. First, rule 22e–4 specifies that the liquidity classification and review requirements apply to each of the fund's investment transactions (including derivatives) and requires a fund to take into account relevant market, trading, and investment-specific considerations in classifying derivatives' liquidity.[476] In addition, we have modified rule 22e–4 from the proposal to require a fund to classify each of the fund's portfolio *investments*.[477] We have made this change to clarify that the classification requirement (and the other requirements of rule 22e–4) applies to all of a fund's investment positions, regardless of whether they are assets or liabilities, as the proposal intended.[478] The proposed classification requirement, which would have required each fund to classify the liquidity of its portfolio positions (or portions of a position in a particular asset), could potentially have been read to exclude certain derivatives and other transactions that are classified as liabilities on the fund's balance sheet.[479] Final rule 22e–4 thus requires the liquidity of all derivatives transactions to be classified, regardless of if they are classified as assets or liabilities on a fund's balance sheet, for the sake of operational simplicity, completeness (*e.g.,* to help reduce confusion regarding a fund's liquidity profile as disclosed on Form N–PORT), and because all derivatives transactions could implicate portfolio liquidity insofar as other assets are segregated to cover these derivatives and derivatives in a liability position involve transactions for which a fund would be required to pay fund assets to exit the transaction.[480]

Besides specifying that the liquidity of a derivatives transaction must be classified taking into account relevant market, trading, and investment-specific considerations, rule 22e–4 provides no derivatives-specific factors that a fund would have to evaluate in classifying a derivatives transactions' liquidity. We generally agree with commenters' suggestions that the liquidity of a derivatives transaction may depend on market demand for that kind of derivative, as well as the liquidity of the derivative's underlying reference asset.[481] Whether a derivatives transaction is centrally cleared also could indicate that the transaction is more liquid than an equivalent transaction that is not cleared.[482] In classifying and reviewing the liquidity of a derivatives transaction, like classifying the liquidity of any portfolio investment, a fund should consider the guidance factors discussed in this Release, to the extent the factors are applicable and the fund deems their

---

within seven days (and thus the derivative would be classified as ''illiquid'' under the commenter's recommended approach) also would be considered to be ''illiquid'' under that approach).

[471] *See* Dechert Comment Letter.

[472] *See id.; see also* ICI Comment Letter I (suggesting that the Commission add an item to Form N–PORT's Schedule of Portfolio Investments that permits a fund to note whether an asset (or portion thereof) is encumbered or linked to other assets as of the reporting date, without separately tying to or identifying a ''linked'' asset).

[473] *See* ICI Comment Letter I; T. Rowe Comment Letter.

[474] *See* T. Rowe Comment Letter.

[475] *See* Milliman Comment Letter.

[476] Rule 22e–4(b)(1)(ii). As with other portfolio investments, funds may classify derivatives transactions by asset class, so long as the fund or its adviser does not have information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of a particular derivative that would require a different classification for that derivative. Rule 22e–4(b)(1)(ii)(A).

[477] We note that in the Proposing Release, we requested comment on whether the rule should ''focus not just on the liquidity of the fund's assets but also more specifically and prominently on its liabilities, such as derivatives obligations, that may affect the liquidity of the fund.'' *See* Proposing Release, *supra* footnote 9, at text following n.155.

[478] We note that use of the term ''investments'' is consistent with other reporting requirements on Form N–PORT, and reflects the proposal's discussions of the classification requirement applying to all of a fund's portfolio positions, not just those that are assets. *See, e.g., id.,* at section III.B. (''[W]e are proposing new requirements for classifying and monitoring the liquidity of funds' *portfolio positions*.''; ''The proposed liquidity categorization process would be in addition to the existing 15% guideline (which would be retained, as discussed below) and would require a fund to assess the liquidity of its *portfolio positions* individually, as well as the liquidity profile of the fund as a whole.'' [emphasis added]). *See also* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[479] We note, however, that no commenters suggested that the proposal's use of the terms ''assets'' and ''positions'' interchangeably would lead to derivatives or other investments that are liabilities not being subject to the rule, and that many commenters discussed the impact of the classification requirement on a variety of derivatives and other transactions that could be liabilities. *See, e.g.,* ICI Comment Letter (discussing classifications of derivatives and TBA transactions); HSBC Comment Letter (noting that ''[T]o the extent that this is possible, Asset Managers should attempt to take all liabilities into account when trying to calculate liquidity for a given fund.''). Nonetheless, to eliminate any potential confusion, we are changing the term ''assets'' to ''investments'' throughout rule 22e–4, related reporting items and definitions on Form N–PORT and Form N–LIQUID.

[480] *See* rule 22e–4(b)(1)(ii) (requiring funds to classify each of the portfolio investments, including each of the fund's derivatives transactions). We have made corresponding changes to each of the liquidity categories to account for the classification of all portfolio investments (*i.e.,* the liquidity categories under rule 22e–4 as adopted are highly liquid investments, moderately liquid investments, less liquid investments, and illiquid investments).

[481] *See supra* footnotes 474–475 and accompanying text.

[482] *See, e.g.,* Deutsche Bank Research, *Liquidity Is Key for the Central Clearing of Derivatives* (Mar. 12, 2015), *available at https://www.dbresearch.com/PROD/DBR_INTERNET_EN-PROD/PROD0000000000352403/Liquidity_is_key_for_the_central_clearing_of_deriv.pdf*; *see also infra* footnote 552.

consideration to be appropriate.[483] The provision in rule 22e–4 stating that a fund may generally classify its portfolio investments according to their asset class applies to the fund's derivatives transactions,[484] as do the rule's market depth provisions.[485] The definitions of ''highly liquid investment,'' ''moderately liquid investment,'' and ''less liquid investment'' that refer to the ability to convert an investment to cash or dispose of an investment within a specified period, with respect to derivatives transactions that the fund classifies as liabilities on its balance sheet,[486] should be read to refer to the time period in which the fund reasonably expects to be able to exit a transaction.

Along with classifying the liquidity of each of its derivative transactions, final rule 22e–4 requires a fund to identify, for derivatives transactions that a fund has classified as moderately liquid investments, less liquid investments, and illiquid investments, the percentage of the fund's highly liquid investments that are segregated to cover, or pledged to satisfy margin requirements in connection with, the transactions in each of these classification categories.[487] When a fund's assets are segregated or pledged in connection with derivatives transactions, they are only available for sale to meet redemptions once the related derivatives position is disposed of or unwound (or if other assets are segregated or pledged in their place). Thus, even if the segregated or pledged assets would, on their own, be considered extremely liquid, they would effectively not be able to be used to meet redemption requests or to rebalance or otherwise adjust a portfolio's composition in order to manage liquidity risk. As discussed below, we believe that it is important, for purposes of transparency regarding a fund's portfolio liquidity, to provide clarity that certain percentages of a fund's investments may not be functionally available to meet redemptions or for other liquidity risk management purposes.[488]

We believe that requiring a fund to determine the percentage of highly liquid investments that are segregated to cover, or pledged to satisfy margin requirements in connection with, its derivatives transactions classified in each of the ''moderately liquid,'' ''less liquid,'' and ''illiquid'' classification categories strikes an appropriate balance between providing this transparency and reducing burdens on funds. Under this approach, a fund generally would not need to specifically identify particular assets that are segregated or pledged to cover specific derivatives transactions, but instead a fund will calculate the percentage of highly liquid investments segregated or pledged to cover derivatives transactions that include derivatives transactions classified in each of the other three classification categories. For purposes of calculating these percentages, a fund that has segregated or pledged non-highly liquid investments as well as highly liquid investments to cover derivatives transactions, should first use segregated or pledged assets that are highly liquid investments to cover derivatives transactions classified in the three lower liquidity classification categories.[489] This approach should promote consistency and comparability across funds. In the absence of such an instruction, some funds might instead take the opposite approach, and assume that segregated non-highly liquid investments first cover these less liquid derivatives transactions, creating inconsistencies between funds.

The approach in the final rule responds to commenters' concerns that funds rarely identify and segregate a specific liquid asset against an individual derivative on a one-for-one relationship,[490] and would reduce burdens that could result if the Commission's liquidity classification rules were to require a fund to do so. It also responds to commenters' concerns that linking the liquidity of specific segregated assets to the liquidity of a fund's derivatives transactions could understate the liquidity of those segregated assets, since a fund may be able to readily substitute another liquid asset for the segregated asset.[491] However, the Commission's approach also would provide the basis for needed transparency for the Commission, its staff, and the public into the way that a fund's segregated or pledged assets may affect the fund's overall portfolio liquidity. Rule 22e–4, which requires a fund only to determine percentages of segregated or pledged assets comprising the fund's highly liquid investments, reflects our belief that this transparency is especially important with respect to funds' highly liquid investments. As noted above, a fund's disclosure of percentages of its highly liquid investments that are segregated or pledged assets would permit the Commission and its staff to understand what percentage of a fund's highly liquid investment minimum is composed of encumbered assets, and would allow the public to better understand that a certain percentage of a fund's highly liquid investments may not be immediately available for liquidity risk management purposes.

While a fund will not need to identify which of its particular assets are segregated in connection with particular derivatives transactions, it will need to identify the percentage of its highly liquid investments that are segregated or pledged with respect to derivatives transactions classified in each of the moderately liquid, less liquid, and illiquid classification categories. We recognize that these requirements will likely entail additional evaluation of the liquidity character of a fund's segregated assets compared to what a fund might do today as part of its current asset segregation procedures.[492] We believe these burdens are justified, however, by the important transparency benefits of identifying the percentages of highly liquid investments that are segregated or pledged assets.

We also note that these burdens are further reduced because under the rule a fund need not identify the percentage of segregated or pledged assets covering derivatives that are highly liquid investments, or the percentage of segregated or pledged assets that are moderately liquid investments or less liquid investments.[493] A fund would be permitted to exclude its derivatives transactions that are classified as highly liquid investments in determining the percentages of highly liquid investments that are segregated or pledged assets since the fund could dispose of or exit these derivatives transactions within three business days and the segregated or pledged assets also would be available to the fund for liquidity risk management purposes within three business days. Furthermore, as described in the preceding paragraph, the rule's requirement to identify the percentages of a fund's highly liquid investments that are also segregated or

[483] *See infra* section III.C.4.

[488] *See infra* section III.C.6.

[489] *See* note to rule 22e–4(b)(1)(ii)(C). However, if a fund has specifically identified individual assets that are not highly liquid investments as being segregated to cover such derivatives transactions, the fund may match those specific segregated assets to specific derivatives transactions and need not assume that segregated highly liquid assets cover those derivatives.

[490] *See supra* footnote 470 and accompanying text.

[491] *See supra* footnote 473 and accompanying paragraph. We note, however, that the ability to substitute may not improve the overall liquidity of the portfolio.

[492] *See infra* section IV.C.1.

[493] *See* rule 22e–4(b)(1)(ii)(C).

pledged assets reflects our belief that asset segregation or margin transparency is most important with respect to a fund's highly liquid investments.

4. Guidance on Liquidity Classification Factors

Unlike rule 22e–4 as proposed, final rule 22e–4 does not include an enumerated list of factors that a fund would be specifically required to consider in classifying and reviewing the liquidity of its portfolio investments. The rule instead generally requires a fund to take into account ''relevant market, trading, and investment-specific considerations'' in classifying and reviewing its portfolio investments' liquidity.[494] In contrast, under the proposed rule a fund would have been required to take the following nine factors into account, to the extent applicable, when classifying the liquidity of each portfolio position in a particular asset:

- Existence of an active market for the asset, including whether the asset is listed on an exchange, as well as the number, diversity, and quality of market participants;
- Frequency of trades or quotes for the asset and average daily trading volume of the asset (regardless of whether the asset is a security traded on an exchange);
- Volatility of trading prices for the asset;
- Bid-ask spreads for the asset;
- Whether the asset has a relatively standardized and simple structure;
- For fixed income securities, maturity and date of issue;
- Restrictions on trading of the asset and limitations on transfer of the asset;
- The size of the fund's position in the asset relative to the asset's average daily trading volume and, as applicable, the number of units of the asset outstanding; and
- Relationship of the asset to another portfolio asset.[495]

The Proposing Release requested comment generally on whether the Commission should codify a list of liquidity classification factors (as discussed above)[496] and also requested comments relating to the usefulness of the proposed factors generally, as well as specific comments on the proposed factors.[497] With respect to the general usefulness of the proposed factors, multiple commenters suggested that the proposed factors would be largely informative in assessing assets' relative liquidity,[498] but others advised that the proposed factors would not be useful in assisting fund management in making liquidity determinations.[499] Some who objected to the proposed factors argued that their usefulness would be limited by the fact that they would be based on backward-looking data and thus may not reflect future conditions.[500] Some commenters also argued that some of the proposed factors (*e.g.,* frequency of trades or quotes for an asset and average daily trading volume of an asset) are generally more appropriate for assessing the liquidity of exchange-traded securities than securities that are traded over-the-counter (''OTC'') and that evaluating certain OTC securities using the proposed factors may make these securities appear to be less liquid than they actually are.[501] For example, multiple commenters contended that certain fixed income securities tend to trade infrequently on any given day, but these securities' liquidity is nevertheless quite high because a fund would generally be able to sell them fairly quickly.[502] As discussed specifically below, commenters also expressed more granular concerns about certain of the proposed factors (specifically, frequency of trades or quotes for an asset, trading price volatility, position size, and relationship of an asset to another portfolio asset[503]).

As discussed above, we are not codifying the proposed factors in part because we understand that certain factors would be more informative to some funds than others, depending on the fund's investment strategy and liquidity risk profile. We also are concerned that codifying the factors, particularly if applied in a ''check-the-box'' fashion, could lead funds to adopt classification processes that do not reflect the extent of a fund's ability to sell its portfolio investments to meet redemptions within a given time period without a market impact, or do not otherwise result in an accurate picture of a fund's liquidity profile.[504] However, we continue to believe that the proposed classification factors could be useful and relevant as aspects of the general market, trading, and investment-specific considerations that a fund must take into account under the final rule. Thus, in this section III.C.4, we discuss each of the factors that funds could consider in evaluating portfolio investments' liquidity characteristics and managing liquidity risk.[505] Based on staff outreach across the fund industry, we understand that certain of these factors reflect certain common considerations that funds often take into account in evaluating their portfolio investments' liquidity.[506] Moreover, as discussed above, multiple commenters stated that the proposed rule included factors that, largely, are useful for assessing a fund's assets' relative liquidity.[507] For example, some

[494] *See supra* section III.C.1.b.

[495] Proposed rule 22e–4(b)(2)(ii).

[496] *See supra* section III.C.1.b.

[497] *See* Proposing Release, *supra* footnote 9, at section III.B.2.j.

[498] *See, e.g.,* CRMC Comment Letter; ICI Comment Letter I; J.P. Morgan Comment Letter; Nuveen Comment Letter.

[499] *See, e.g.,* Cove Street Comment; GFOA Comment Letter; MFS Comment Letter; Vanguard Comment Letter.

[500] *See, e.g.,* Cove Street Comment; Dodge & Cox Comment Letter; Vanguard Comment Letter.

[501] *See, e.g.,* Banks Comment Letter; LSTA Comment Letter; Milliman Comment Letter; Wells Fargo Comment Letter.

[502] *See, e.g.,* GFOA Comment Letter; MFS Comment Letter; T. Rowe Comment Letter; Vanguard Comment Letter.

[503] For a discussion of commenters' concerns about this proposed factor in the context of derivatives transactions, *see supra* section III.C.3.c.

Commenters also expressed concerns about this proposed factor in the context of assets used for hedging or risk mitigation purposes. In the Proposing Release, we stated that, when a fund purchases an asset (a ''hedging asset'') in order to hedge or mitigate the risks associated with another asset (a ''hedged asset''), the fund should consider the liquidity of the hedged asset when evaluating the liquidity of the hedging asset. Commenters stated that current industry practice often involves hedging aggregate portfolio exposures, not specific securities. *See, e.g.,* ICI Comment Letter I; Milliman Comment Letter; Oppenheimer Comment Letter; T. Rowe Comment Letter. These commenters argued that the Commission's guidance instructing a fund to classify the liquidity of hedging assets in consideration of the hedged asset's liquidity classification would therefore be unworkable and would raise costly operational burdens, because funds do not currently link hedging assets and hedged assets on a one-for-one basis.

Unlike in the context of derivatives transactions, in which we have stated that a fund must segregate assets to cover derivatives transactions, and this renders the segregated assets ''frozen'' and ''unavailable for sale or other disposition'' (*see supra* footnote 465 and accompanying text), we have not previously stated that purchasing assets with the intent to hedge or mitigate the risks associated with another asset makes those hedging assets unavailable for sale. We thus do not view the linkages between hedging and hedged assets to be directly analogous with the linkages between derivatives transactions and assets segregated to cover those derivatives transactions, and we are not stating in this Release the guidance we included in the Proposing Release regarding the proposed ''relationship of an asset to another portfolio asset'' in the context of assets used for hedging or risk mitigation purposes.

[504] *Cf. supra* paragraph accompanying footnote 322.

[505] Our discussion of factors that could be considered by funds does not include the proposed ''relationship of [an] asset to another portfolio asset'' factor because guidance on this factor, as discussed above, has been replaced by requirements in rule 22e–4 regarding classification issues that arise with respect to derivatives transactions. *See supra* footnotes 456–461 and accompanying text; *see also supra* footnote 503 (discussing this proposed factor in the context of assets used for hedging or risk mitigation purposes).

[506] *See* Proposing Release, *supra* footnote 9, at text preceding n.200.

[507] *See supra* footnote 498 and accompanying text.

commenters agreed that factors such as those incorporated in the proposal are generally relevant considerations to use when evaluating asset liquidity and would help promote effective liquidity risk assessments,[508] and that portfolio assets' liquidity should be evaluated using a variety of inputs such as those that the proposed factors represent.[509] Some suggested that the Commission discuss the factors as guidance accompanying its adoption of rule 22e–4.[510] Overall, we believe this approach provides flexibility that should facilitate meaningful liquidity analyses, and encourages funds to consider relevant information.

We acknowledge, as stated by some commenters, that certain of these factors may involve consideration of backward-looking data and thus may not account for ways in which changing market conditions could affect the liquidity of certain asset classes or investments.[511] But we believe analyzing past data, while considering how that data may change in the future, is an inherent aspect of all risk management and does not render such analysis fruitless. In addition, the review requirements embedded in the classification framework, when combined with the liquidity risk assessment requirement to consider portfolio liquidity during normal and reasonably foreseeable stressed periods, further responds to this critique. We also are cognizant that, for certain fixed income or other OTC assets or asset classes, certain of the proposed liquidity classification factors, if considered standing alone, may appear to make these assets or classes to appear less liquid than they actually are. In the guidance below, we discuss special concerns that may be relevant to funds' consideration of the liquidity characteristics of fixed income or other OTC assets.[512]

As discussed above, a fund generally is permitted to classify the liquidity of its portfolio investments according to their asset class. Thus, a fund may wish to consider the guidance discussed below in assessing the general liquidity characteristics of the asset classes in which it invests. For investments that the fund determines must be treated as an ''exception'' and classified separate from their asset class,[513] the guidance provided below could assist funds in identifying and classifying those investments that may demonstrate liquidity characteristics that are distinct from the fund's other portfolio holdings within that same asset class.

The guidance we provide below is not meant to cover an exhaustive list of considerations that a fund may take into account in evaluating its portfolio investments' liquidity. Also, we recognize that specific liquidity concerns appropriate for consideration could vary depending on the issuer and the particular investment.[514] Even if a fund's liquidity classification policies and procedures were to incorporate all of the guidance factors discussed below, a fund may decide that it is appropriate to focus more heavily on certain factors and less on others in evaluating its portfolio investments' liquidity.

In the following sections, we discuss certain factors that a fund could consider in assessing the liquidity of its portfolio investments and provide guidance on specific issues associated with each of these factors. We also discuss comments we received on the proposed classification factors.

a. Existence of Active Market for an Asset Class or Investment; Exchange-Traded Nature of an Asset Class or Investment

We continue to believe that the manner in which a fund may sell an asset class (or particular portfolio investment), including whether an asset class or investment is generally listed on an exchange, may affect the liquidity of that asset class or investment.[515] While in general, being listed on a developed and recognized exchange may increase an investment's liquidity,[516] we note, as certain commenters mentioned,[517] the fact that an investment is exchange-traded does not necessarily mean that a fund would be able to sell or convert that investment to cash within a relatively short period.[518] For example, a small-cap equity stock might be listed on an exchange but trade quite infrequently, which would tend to decrease its relative liquidity. Conversely, as commenters discuss, we agree that certain securities that are traditionally traded in OTC markets, such as corporate bonds, may not typically be designed to be traded frequently and instead are more often ''bought and held,'' but certain of these securities nevertheless may be readily saleable without the conversion to cash (or in some cases, sale or disposition) significantly changing their market value.[519] Additionally, securities issued (or guaranteed as to principal and interest) by the U.S. government do not trade on exchanges, but are typically considered to be quite liquid.[520]

In assessing the effect that being traded on an exchange could have on an asset class's or investment's liquidity, a fund generally should evaluate how this consideration informs the liquidity characteristics of any ETF shares in which it invests. We understand that certain funds, particularly funds with

[511] *See supra* footnote 500 and accompanying text.

[512] *See, e.g.,* text accompanying *infra* footnotes 536–538 and 545–558.

[513] *See* rule 22e–4(b)(1)(ii)(A).

[514] *See, e.g.,* Fidelity Comment Letter; LSTA Comment Letter; Nuveen Comment Letter; T. Rowe Comment Letter (each suggesting that the Commission clarify that not every factor is required to be considered to evaluate the liquidity of each of a fund's portfolio assets).

[515] *See* Proposing Release, *supra* footnote 9, at section III.B.2.a (discussing the proposed requirement for a fund to consider, to the extent applicable, the existence of an active market for an asset, including whether the asset is listed on an exchange, as well as the number, diversity, and quality of market participants, in classifying the liquidity of each portfolio position in a particular asset).

[516] *See, e.g.,* Basel Committee on Banking Supervision, *Basel III: The Liquidity Coverage Ratio and Liquidity Risk Monitoring Tools* (Jan. 2013), at part 1, section II.A.1, *available at http://www.bis.org/publ/bcbs238.pdf*; *see also* Nuveen FSOC Notice Comment Letter, *supra* footnote 85 (''While securities that trade on exchanges . . . or in deep principal/over-the–counter (''OTC'') markets (*e.g.,* U.S. Treasuries) are generally liquid even in stressed markets, other securities that trade on an OTC basis . . . have faced increasing liquidity challenges in normal markets and can be subject to insufficient quality bids in times of stress as market makers pull back their capital. This can make it not only more difficult to sell these securities, but also to accurately value those assets that are retained.'').

[517] *See, e.g.,* ICI Comment Letter I.

[518] We note that in certain cases the exchange on which an investment is listed may not be the primary market for that security. For example, we understand that certain bonds that are exchange listed trade predominantly in the OTC markets. *See, e.g.,* Types of Bonds, How Big Is the Market, and Who Buys?, *available at http://www.investinginbonds.com/learnmore.asp?catid=5&subcatid=18&id=174* (''[T]he vast majority of bond transactions, even those involving exchange-listed issues, take place in [OTC] market.'').

[519] See id.

[520] *See* rule 15c3–1(c)(2)(vi)(A)(1) under the Exchange Act (describing securities haircuts for securities issued or guaranteed as to principal or interest by the United States or any agency thereof); *see also* Liquidity Coverage Ratio: Liquidity Risk Measurement Standards (Sept. 9, 2014) [79 FR 61440 (Oct. 10, 2014)] (''Liquidity Coverage Ratio Release'') (in liquidity coverage ratio rule adopted by the Office of the Comptroller of the Currency, Board of Governors of the Federal Reserve System, and the Federal Deposit Insurance Corporation, ''Level 1 Liquid Assets'' are described as securities issued or unconditionally guaranteed as to timely payment of principal and interest by the U.S. Department of the Treasury, and liquid and readily-marketable securities issued or unconditionally guaranteed as to the timely payment of principal and interest by any other U.S. government agency (provided that its obligations are fully and explicitly guaranteed by the full faith and credit of the U.S. government)).

investment strategies involving relatively less liquid portfolio securities (such as micro-cap equity funds, high-yield bond funds, and bank loan funds), may invest a portion of their assets in ETFs with strategies similar to the fund's investment strategy because they view ETF shares as having characteristics that enhance the liquidity of the fund's portfolio.[521] Specifically, in discussions with Commission staff, funds that invest in ETF shares have suggested that they find that these shares are more readily tradable, are less expensive to trade, and have shorter settlement periods than other types of portfolio investments.[522] In addition, unlike investments in cash, cash equivalents, and other highly liquid instruments, funds also have suggested to Commission staff that investing in ETFs with the same (or a similar) strategy as the fund's investment strategy permits the fund to remain fully invested in assets that reflect the fund's investment concentrations, risks, and performance potential.[523]

While we appreciate that ETFs' exchange-traded nature could make these instruments useful to funds in managing purchases and redemptions under certain conditions (for example, ETFs' settlement times could more closely reflect the time in which a fund has disclosed that it will typically redeem fund shares), funds should consider the extent to which relying substantially on ETFs to manage liquidity risk is appropriate. The liquidity of an ETF, particularly in times of declining market liquidity, is limited by the liquidity of the market for the ETF's underlying securities and, in fact, may be impaired based on factors not directly related to the liquidity of the underlying securities.[524] Thus, shares of an ETF whose underlying securities are relatively less liquid may not be able to be counted on to provide liquidity to a fund investing in these shares during times of stress. In the case of a significant decline in market liquidity, if authorized participants were unwilling or unable to trade ETF shares in the primary market, and the majority of trading took place among investors in the secondary market, the ETF's shares could trade continuously at a premium or a discount to the value of the ETF's underlying portfolio securities. This could frustrate the expectations of secondary market participants who count on the creation and redemption process to align the prices of ETF shares and their underlying portfolio securities. We therefore encourage funds to assess the liquidity characteristics of an ETF's underlying securities, as well as the characteristics of the ETF shares themselves, in classifying the liquidity of ETF shares under rule 22e–4(b)(1)(ii).

Other Trading Mechanism Considerations

The means of trading a particular asset class or investment can affect its liquidity regardless of whether the investment is a security traded on an exchange. For example, whether an asset class or investment is generally traded in a bilateral transaction with a single dealer, or through an electronic auction mechanism where a trader can simultaneously contact multiple counterparties, can have different effects on its liquidity.[525] The liquidity effects associated with choice of trading mechanism may differ depending on the asset class or investment being traded and other market conditions, and therefore it is difficult to make general statements regarding the correlation between a particular trading mechanism and the liquidity of the asset class or investment being traded. For this reason, a fund may wish to consider past experience in using different trading mechanisms to sell a certain asset class or investment.

Diversity and Quality of Market Participants

In addition, the diversity and quality of market participants for a particular asset class or investment also could contribute to the liquidity of that asset class or investment. A fund may wish to consider the number of market makers on both the buying and selling sides of transactions. A fund also may wish to consider the quality of market participants purchasing and selling a particular asset class or investment, and may wish to assess, in particular: The market participant's capitalization; the reliability of the market participant's trading platform(s); and the market participant's experience and reputation transacting in various types of assets. We believe that the diversity and quality of market participants may be meaningful in assessing a portfolio investment's liquidity because it is common for relatively liquid asset classes and investments to have active sale or repurchase markets at all times with diverse market participants.[526] The presence of multiple active market makers may be a sign that a market is liquid.[527] Diversity of market participants, on both the buying and selling sides of transactions, may also be a significant point for a fund to consider because it tends to reduce market concentration and may facilitate a

The spread changes are larger in magnitude for issues with few market makers; however, even for issues with a large number of market makers, substantial changes in quoted spreads take place.'').

market remaining liquid during periods of stress.[528]

b. Frequency of Trades or Quotes; Average Daily Trading Volume

In general, we continue to believe that a high frequency of trades or quotes for a particular asset class or investment tends to indicate that a particular asset class or investment has relatively high liquidity.[529] However, as many commenters raised and as discussed below, low trading frequency and trading volume does not necessarily indicate low liquidity, particularly for asset classes and investments that are not exchange-traded.[530] Also, we note that the frequency of trades or quotes for a particular asset class or investment is not a perfect or complete measure of liquidity, and a fund may wish to also consider trade size in assessing the relationship between trade frequency and liquidity.[531] In evaluating the frequency of trades (and bid and ask quotes) for an asset class or investment, a fund may wish to generally consider, among other relevant factors, the number of dealers quoting prices for that asset class or investment, the number of other potential purchasers and sellers, and dealer undertakings to make a market in the asset class or investment.

High average trading volume also tends to be correlated with greater liquidity, particularly for exchange-traded asset classes and investment. In general, high average daily trading volume for a particular asset class or investment indicates a deep market for that asset class or investment, which in turn indicates that a fund may be able to convert its holdings in that asset class or investment to cash without the conversion (or in some cases, sale or disposition) significantly changing the market value.[532] Especially for exchange-traded asset classes or investments, a fund may wish to consider the number of days of zero or very low trading volume during the prior month, year, or other relevant period, as this could indicate particularly limited liquidity. As one commenter suggested, and we agree, a fund may wish to consider not only the historical average trading volume of the asset class or assets in which its invests, but also whether trading volume is likely to change under different or stressed market conditions.[533] High trading volume is not always indicative of available liquidity for a particular asset class or investment, however. For example, high trading volumes might be associated with high selling pressure on the asset class or investment, and trades at that time may have a high value impact.[534] Also, as one commenter suggested, even if a particular asset class or investment were to exhibit high trading volume, the ability to convert the asset class or investment to cash without the conversion (or in some cases, sale or disposition) significantly changing the market value may also depend on other factors such as investors' appetite for risk and the perceived ''safety'' of specific securities in ''risk-off'' flight-to-quality market conditions.[535]

Multiple commenters stressed that, particularly for fixed income and other typically OTC asset classes and assets, relatively low trading volume does not necessarily correlate with low liquidity. For example, many commenters discussed the low turnover of the corporate bond market, which is driven by factors such as the buy-and-hold nature of bond investing, the distribution of an issuer's borrowing across many different bond issues, and the fact that portfolio managers may deem many bonds to be substitutes for one another based on common characteristics such as issuer, sector, credit quality, and maturity.[536] Commenters argued that, despite the relatively low turnover that is typical in the corporate bond market, these assets are commonly considered to be readily tradable at market-clearing prices.[537] Commenters made similar arguments about the dynamics of the municipal bond market, noting that municipal securities' trading volume is not normally high, particularly during stable financial periods, but municipal securities (especially those that are investment grade) are commonly considered to be easily saleable.[538] We generally agree with commenters' concerns that the consideration of trading volume as a liquidity indicator should not by itself imply that low trading volume necessarily indicates low liquidity. Rather, it may indicate that other information needs to be assessed to make a liquidity determination. For asset classes and investments that typically demonstrate low trading volume, funds may wish to consider how the other liquidity characteristics of those asset classes and investments, including but not limited to other guidance factors discussed in this Release, may affect the time period and value impact associated with the class's or investment's ability to be converted to cash. Analysis of capital structure and credit quality of a particular asset class or investment, as well as bid-ask spreads and maturity/date of issue, may be particularly useful in considering the liquidity of investments whose trading volume is normally low.

[528] *See, e.g.,* Amir Rubin, *Ownership Level, Ownership Concentration, and Liquidity,* 10 J. Fin. Markets 219 (Aug. 2007), *available at http://www.sciencedirect.com/science/article/pii/S1386418107000134* (''We examine the link between the liquidity of a firm's stock and its ownership structure, specifically, how much of the firm's stock is owned by insiders and institutions, and how concentrated is their ownership. We find that the liquidity-ownership relation is mostly driven by institutional ownership rather than insider ownership. Importantly, liquidity is positively related to total institutional holdings but negatively related to institutional block holdings.'').

[529] *See* Proposing Release, *supra* footnote 9, at section III.B.2.b (discussing the proposed requirement for a fund to consider, to the extent applicable, the frequency of trades or quotes for a particular asset, as well as the asset's average daily trading volume (regardless of whether the asset is a security traded on an exchange), in classifying the liquidity of each portfolio position in a particular asset).

[530] *See infra* footnotes 536–538 and accompanying text.

[531] For example, 100 trades at $100 might or might not signify greater liquidity than 50 trades at $200, although they are likely to suggest better liquidity than one trade at $10,000. *See* Erik Banks, *Liquidity Risk: Managing Funding and Asset Risk* (2nd ed. 2013), at 169.

[532] *See id.; see also* Fidelity FSOC Notice Comment Letter, *supra* footnote 69 (''Liquidity management is linked to portfolio managers' attention to market risks indicated by . . . shrinking transaction volumes which exacerbate the impact cost for additional trading'').

We note that double-counting of trades is a potential issue to consider when assessing average trading volume. Double-counting occurs because of differences between dealer and auction markets. In a dealer market, trades are ''double-counted'' because the dealer buys from person A and then sells to person B. In an auction market, person A and B trade directly. *See, e.g.,* Anne M. Anderson & Edward A. Dyl, *Trading Volume: NASDAQ and the NYSE,* 63 Fin. Analysts J. 79 (May/June 2007), *available at http://www.cfapubs.org/doi/abs/10.2469/faj.v63.n3.4693.*

[533] *See* Interactive Data Comment Letter (suggesting that the Commission consider requiring a fund to consider the *potential* daily trading volume of its portfolio assets instead of, as proposed, the *average* daily trading volume of its assets).

[534] *See, e.g.,* HSBC Comment Letter; *see also e.g.,* Jennifer Huang & Jiang Wang, *Liquidity and Market Crashes,* 22 Rev. of Fin. Stud. 2607 (2009), *available at http://rfs.oxfordjournals.org/content/22/7/2607.full* (discussing how there can be high selling pressure (and high volume) along with low liquidity and how this can create market crashes); Mark Carlson, *A Brief History of the 1987 Stock Market Crash with a Discussion of the Federal Reserve Response,* Federal Reserve Board Working Paper 2007–13 (Nov. 2006), *available at http://www.federalreserve.gov/pubs/feds/2007/200713/200713pap.pdf* (discussing how the 1987 stock market crash had both high volume and low liquidity).

[537] *See, e.g.,* Nuveen Comment Letter; Vanguard Comment Letter.

[538] *See, e.g.,* GFOA Comment Letter; Nuveen Comment Letter.

c. Volatility of Trading Prices

We continue to believe that trading price volatility is potentially a valuable metric to consider in evaluating an asset class's or investment's liquidity.[539] In general, there is an inverse relationship between liquidity and volatility,[540] as lack of liquidity in a particular investment tends to amplify price volatility for that asset.[541] Additionally, the Commission understands that certain funds and fund groups have historically experienced liquidity disruptions during periods of extreme market volatility, such as the June 2013 ''taper tantrum'' [542] and the October 2014 ''flash crash.'' [543] As one commenter suggested, and we agree, if a fund holds asset classes or investments that are thinly traded, the fund may wish to consider volatility of evaluated pricing information in assessing the liquidity of those asset classes or investments.[544]

d. Bid-Ask Spreads

Bid-ask spreads—the difference between bid and offer prices for a particular investment—have historically been viewed as a useful measure for assessing the liquidity of assets,[545] and we continue to believe that a fund may consider this factor useful in classifying the liquidity of a particular asset class or investment.[546] The bid-ask spread of a particular investment is related to the riskiness of that investment, as well as the length of time that a broker-dealer believes it will have to hold the investment before selling it.[547] In general, high bid-ask spreads for a particular asset class or investment correlate with a lack of liquidity in that asset class or investment. For example, when liquidity was significantly constricted during the 2007–2009 financial crisis, bid-ask spreads on U.S. investment grade bonds were notably elevated.[548] However, bid-ask spreads alone do not necessarily provide a comprehensive understanding of an investment's liquidity. For instance, bid-ask spreads are often constrained by the increments in which prices are quoted.[549] Additionally, as one commenter noted, bid-ask spreads do not take into account the volume and scale of a portfolio manager's intended buy and sell transactions.[550]

e. Standardization and Simplicity of Asset Class's or Investment's Structure

We continue to believe that whether an asset class or investment has a relatively standardized and simple structure is generally relevant to a fund's evaluation of an asset class's or investment's liquidity.[551] Investments that trade OTC with terms set at issuance such as sizes, maturities, coupons, and payment dates may be relatively more liquid compared to similarly situated investments without standardized terms. Standardization can increase liquidity by simplifying the ability to quote and trade securities, enhancing operational efficiency to execute and settle trades, and improving secondary market transparency. Some types of OTC-traded securities exhibit a relatively high level of standardization, such as government and agency bonds, futures contracts, and certain swap contracts. Central clearing of certain OTC-traded securities, which generally requires the terms of these securities to be highly standardized, has been associated with an increase in these investments' liquidity, as measured by factors such as the bid-ask spreads for these investments and the number of dealers providing quotes for these

[539] *See* Proposing Release, *supra* footnote 9, at section III.B.2.c (discussing the proposed requirement for a fund to consider, to the extent applicable, the volatility of trading prices for its portfolio assets, in classifying the liquidity of each portfolio asset).

[540] *See, e.g.,* Tarun Chordia, Asani Sarkar & Avanidhar Subrahmanyam, *An Empirical Analysis of Stock and Bond Market Liquidity,* Federal Reserve Bank of New York Staff Reports, No. 164 (Mar. 2003), *available at http://www.newyorkfed.org/research/staff_reports/sr164.pdf* (finding that unexpected liquidity and volatility shocks are positively and significantly correlated across stock and bond markets).

[541] *See, e.g.,* Prachi Deuskar, *Extrapolative Expectation: Implications for Volatility and Liquidity* (Aug. 2007), *available at https://business.illinois.edu/pdeuskar/Deuskar_Extrapolative_Liquidity_Volatility.pdf* (''Illiquidity amplifies supply shocks, increasing realized volatility of prices, which feeds into subsequent volatility forecasts.''); *see also* Fidelity FSOC Notice Comment Letter, *supra* footnote 69, at 21 (''Liquidity management is linked to portfolio managers' attention to market risks indicated by . . . increasing market- and security-specific volatility.'').

[542] In May 2013, Ben Bernanke, then Chairman of the Federal Reserve Board, announced that the Federal Reserve may start scaling back its asset purchase program—in which the Federal Reserve purchased approximately $85 billion worth of bonds and mortgage-backed securities each month—sooner than investors expected. This caused interests rates on fixed income products to spike, and bond prices to fall dramatically. This market dislocation came to be known as the ''taper tantrum. *See* Christopher Condon & Jeff Kearns, *Fed Worried About Triggering Another 'Taper Tantrum',* Bloomberg (Oct. 8, 2014), *available at http://www.bloomberg.com/news/articles/2014-10-08/fed-worried-about-triggering-another-taper-tantrum-.*

[543] *See* Joint Staff Report: The U.S. Treasury Market on October 15, 2014 (July, 13, 2015), *available at https://www.treasury.gov/press-center/press-releases/Documents/Joint_Staff_Report_Treasury_10-15-2015.pdf* (''On October 15, 2014, the market for U.S. Treasury securities, futures, and other closely related financial markets experienced an unusually high level of volatility and a very rapid round-trip in prices. Although trading volumes were high and the market continued to function, liquidity conditions became significantly strained.'').

[544] *See* Interactive Data Comment Letter (suggesting that the Commission consider replacing the proposed ''volatility of trading prices for the asset'' classification factor with ''volatility of traded or evaluated pricing information,'' to make this proposed factor more applicable to fixed income assets and other asset classes that may be thinly traded).

[545] *See, e.g.,* Michael J. Fleming, *Measuring Treasury Market Liquidity,* Federal Reserve Bank of New York Economic Policy Review (Sept. 2003), *available at https://www.newyorkfed.org/medialibrary/media/research/epr/03v09n3/0309flempdf.pdf* (providing a literature review of studies analyzing bid-ask spreads in relation to Treasury market liquidity); *see also* Fidelity FSOC Notice Comment Letter, *supra* footnote 69, at 21 (''Liquidity management is linked to portfolio managers' attention to market risks indicated by . . . heightened market impact costs (as indicated by widening bid/ask spreads)'').

[548] *See, e.g.,* Got Liquidity?, *supra* footnote 452, at 7; *see also* Rich Estabrook, *Diminished Liquidity in the Corporate Bond Market: Implications for Fixed Income Investors,* Oppenheimer (Mar. 16, 2015), at 1, *available at http://www.opco.com/trend-analysis/final_liquidity_report-031615.pdf.*

[549] *See, e.g.,* Michael A. Goldstein & Kenneth A. Kavajecz, *Eighths, Sixteenths, and Market Depth: Changes in Tick Size and Liquidity Provision on the NYSE,* 56 J. Fin. Econ. 125 (2000), *available at https://www.researchgate.net/publication/4978467_Eighths_Sixteenths_and_Market_Depth_Changes_in_Tick_Size_and_Liquidity_Provision_on_the_Nyse* (''Using limit order data provided by the NYSE, we investigate the impact of reducing the minimum tick size on the liquidity of the market. While both spreads and depths (quoted and on the limit order book) declined after the NYSE's change from eighths to sixteenths, depth declined throughout the entire limit order book as well. The combined effect of smaller spreads and reduced cumulative limit order book depth has made liquidity demanders trading small orders better off; however, traders who submitted larger orders in lower volume stocks did not benefit, especially if those stocks were low priced.''); Hendrik Bessembinder, *Tick Size, Spreads, and Liquidity: An Analysis of Nasdaq Securities Trading Near Ten Dollars,* 9 J. of Fin. Intermediation 213 (July 2000), *available at http://www.acsu.buffalo.edu/~keechung/MGF743/Readings/G4.pdf* (''There is no evidence of a reduction in liquidity with the smaller tick size. The largest spread reductions occur for stocks whose market makers avoid odd-eighth quotes. This finding provides support for models implying that changes in the tick size can affect equilibrium spreads on a dealer market and indicates that the relation between tick size and market quality is more complex than the imposition of a constraint on minimum spread widths.'').

[550] *See* HSBC Comment Letter.

[551] *See* Proposing Release, *supra* footnote 9, at section III.B.2.e (discussing the proposed requirement for a fund to consider, to the extent applicable, the standardization and simplicity of structure of its portfolio assets when assessing its portfolio assets' liquidity).

investments.[552] However, standardization alone may not be indicative of an investment's liquidity. For example, corporate bond issuers commonly have large numbers of bonds outstanding, and trading can be fragmented among that universe of bonds.[553] However, as discussed above, we understand that market participants may consider many corporate bonds to be highly comparable and substitutable from a liquidity perspective, to the extent that they share common characteristics such as issuer, sector, credit quality, and maturity.[554]

f. Maturity and Date of Issue of Fixed Income Securities

We continue to believe that, with respect to the fixed income investments a fund holds in its portfolio, those investments' maturity, as well as their date of issue, are significant indicators of their liquidity.[555] In general, a fixed income asset trades most frequently in the time directly following issuance, and its trading volume decreases in the asset's remaining time to maturity.[556] Thus ''on-the-run'' securities (that is, bonds or notes of a particular maturity that were most recently issued) tend to trade significantly more frequently than their ''off-the-run'' counterparts (that is, bonds or notes issued before the most recently issued bond or note of a particular maturity).[557] Because high trading volume generally suggests relatively high liquidity,[558] a fixed income asset's date of issuance and maturity, which in turn are generally correlated with the trading volume of a fixed income asset, together are important liquidity indicators. We understand, based on staff outreach and industry knowledge, that remaining time to maturity is a key factor that fixed income funds commonly consider in assessing the liquidity of their portfolio positions.

g. Restrictions on Trading; Limitations on Transfer

We continue to believe that restrictions on trading certain investments, as well as limitations on an investment's transfer, may adversely affect those investments' liquidity.[559] For example, although we are replacing existing Commission guidance on identifying illiquid assets (including the specific factors listed in the Rule 144A Release regarding the liquidity of a rule 144A security)[560] with new regulatory requirements regarding the process for determining that certain investments are illiquid, we believe that the restricted nature of a rule 144A security is one factor that generally should be considered by a fund in evaluating the liquidity of a rule 144A security.[561] Regardless of whether a portfolio investment is a restricted security, it may nevertheless be subject to other limitations on transfer. For example, for securities that are traded in certain foreign markets, government approval may be required for the repatriation of investment income, capital, or the proceeds of sales of securities by foreign investors.[562] Portfolio investments furthermore may be subject to certain contractual limitations on transfer.[563] Securities subject to transfer limitations in general are less liquid than securities without such limitations.

[552] See, *e.g.,* Yee Cheng Loon & Zhaodong (Ken) Zhong, The Impact of Central Clearing on Counterparty Risk, Liquidity, and Trading: Evidence from the Credit Default Swap Market, 112 J. of Fin. Econ. 91 (Apr. 2014), *available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2176561* (analyzing the impact of central clearing on credit default swaps and finding that cleared reference entities experience an improvement in both liquidity and trading activity relative to non-cleared entities); Joshua Slive, Jonathan Witmer & Elizabeth Woodman, Liquidity and Central Clearing: Evidence from the CDS Market, Bank of Canada Working Paper 2012–38 (Dec. 2012), *available at http://www.bankofcanada.ca/wp-content/uploads/2012/12/wp2012-38.pdf* (analyzing ''the relationship between liquidity and central clearing using information on credit default swap clearing at ICE Trust and ICE Clear Europe,'' and finding that ''the introduction of central clearing is associated with a slight increase in the liquidity of a contract'' (but noting that the effects of central clearing on liquidity must be viewed in light of the fact that the central counterparty chooses the most liquid contracts for central clearing, consistent with liquidity characteristics being important in determining the safety and efficiency of clearing)). *But see* Manmohan Singh, Collateral, Netting and Systemic Risk in the OTC Derivatives Market, IMF Working Paper 10/99 (Apr. 1, 2010), *available at https://www.imf.org/external/pubs/cat/longres.cfm?sk=23741.0* (arguing that large increases in collateral posted for the centrally cleared trades negatively affect market liquidity given that most large banks will be reluctant to offload their positions to central counterparties).

[553] For example, while each of the top ten largest issuers in the United States had one common equity security outstanding as of April 2014, these issuers collectively had more than 9,000 bonds outstanding. *See* BlackRock, *Corporate Bond Market Structure: The Time for Reform Is Now,* Viewpoint (Sept. 2014), at 7, *available at https://www.blackrock.com/corporate/en-mx/literature/whitepaper/viewpoint-corporate-bond-market-structure-september-2014.pdf.*

[554] *See supra* footnote 536 and accompanying text.

[555] *See* Proposing Release, *supra* footnote 9, at section III.B.2.f (discussing the proposed requirement for a fund to consider, with respect to fixed income assets, these assets' maturity and date of issue when assessing their liquidity).

[561] *See id.* While we are withdrawing the guidance in the Rule 144A Release, including the guidance that boards are responsible for determining if a security is liquid or illiquid, we note that the guidance factors discussed in the Rule 144A Release are consistent with certain of the guidance factors discussed in this Release.

[562] *See, e.g.,* HSBC Comment Letter; HSBC Global Research, Emerging Markets Currency Guide 2012 (Dec. 2011), *available at https://www.hsbcnet.com/gbm/attachments/rise-of-the-rmb/currency-guide-2012.pdf?WT.ac=CIBM_gbm_pro_rmbrise_pbx01_On; see also* Liquidity Coverage Ratio Release, *supra* footnote 520, at section II.B.3.iv (discouraging banking entities from holding a disproportionate amount of their eligible highly qualified liquid assets in locations outside the United States where unforeseen impediments may prevent timely repatriation of such assets during a liquidity crisis).

[563] *See, e.g.,* Stephen H. Bier, Julien Bourgeois & Joseph McClain, *Mutual Funds and Loan Investments,* The Investment Lawyer: Covering Legal and Regulatory Issues of Asset Management, Vol. 22, No. 3 (Mar. 2015), at 2, *available at http://www.dechert.com/files/Uploads/Documents/FSG/Mutual%20Funds%20and%20Loan%20Investments%20-%20The%20Investment%20Lawyer.pdf* (''[M]any loans and assignment trades remain bespoke transactions that require consents from borrowers or key syndicate members, and loan documents are still negotiated written documents that require human review. As a result . . . the mechanics of loan trades and certain trade settlement times cause funds to carefully monitor liquidity considerations surrounding loan investments. . . . [In making such determinations, funds] typically consider factors common to general liquidity determinations, as well as factors specific to the loan markets, which can include: (i) The legal limitations on the transferability or sale of a loan including the requirement to obtain consents from borrowers or syndicate agents and members prior to assignment; (ii) the existence of a trading market for the loans and the estimated depth of the market; (iii) the frequency of trades or quotes for the loan; (iv) the estimated length of the settlement period; and (v) the borrower's health.'').

5. Liquidity Classification Review Requirement

Under rule 22e–4 as adopted today, a fund would be required to review its portfolio investments' classifications at least monthly in connection with reporting the liquidity classification for each portfolio investment on Form N–PORT, as well as more frequently if changes in relevant market, trading, and investment-specific considerations are reasonably expected to materially affect one or more of its investments' classifications.[564] A fund generally could classify and review the liquidity classifications of its portfolio investments according to their asset class; however, the fund must separately classify and review any investment within an asset class if the fund or its adviser, after reasonable inquiry, has information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of that investment as compared to other securities within that asset class.[565]

As discussed in the Proposing Release, the Commission has previously stated that it ''expects funds to monitor portfolio liquidity on an ongoing basis to determine whether, in light of current circumstances, an adequate level of liquidity is being maintained.'' [566] Some have interpreted this statement to mean that the Commission does not intend for a fund to reassess the liquidity status of *individual* securities on an ongoing basis, but instead to monitor whether a fund *portfolio's* overall liquidity profile is appropriate in light of its redemption obligations.[567] While we agree that a fund should monitor the liquidity of its portfolio holistically, we note that the decreased liquidity of individual portfolio components can directly affect the ability of a fund to meet its redemption obligations without significant dilution of remaining investors' interests in the fund.[568] We thus believe that specifically requiring a fund to review the classifications of its portfolio investments made under rule 22e–4 would reduce the risk that a fund would be unable to meet its redemption obligations without significant investor dilution.

As proposed, rule 22e–4 would have required a fund to review its liquidity classifications on an ongoing basis.[569] Also, like the proposed classification requirement, the proposed review requirement would have required a fund to take into account a list of specified factors, as the fund determines applicable, in reviewing its portfolio assets' liquidity.[570] In the Proposing Release, we stated that a fund may wish to determine the frequency of ongoing review of portfolio positions' liquidity classifications based in part on the liquidity of its portfolio holdings, as well as the timing of its portfolio acquisitions and turnover.[571] In addition, we noted in the Proposing Release that, at a minimum, a fund would review its liquidity classifications at least monthly in order to accurately report this information on proposed Form N–PORT.[572] Proposed rule 22e–4 did not include provisions that would permit a fund to review its portfolio assets' liquidity on an asset-class basis.

We sought comment in the Proposing Release about the proposed ongoing review requirement. Several commenters suggested that the Commission adopt a general liquidity classification review requirement, without incorporating specific factors that a fund would be required to consider during the course of its review.[573] One commenter argued that the frequency of the proposed review requirement was unclear and recommended that the Commission adopt more specific standards associated with review frequency.[574] Multiple commenters expressed concerns about the potential burden associated with an ''ongoing'' review requirement [575] and suggested that these concerns could be mitigated by replacing the proposed requirement to classify the liquidity of each portfolio position with a ''top-down'' requirement permitting funds to classify their portfolio assets' liquidity on an asset-class basis.[576]

We believe that the review requirement we are adopting, together with the rule provision specifying that a fund would generally be permitted to review its liquidity classifications with reference to its holdings' asset classes, advances our goal of requiring funds to appropriately re-evaluate the liquidity of their portfolio holdings, while responding to commenters' concerns. As discussed in the Proposing Release, we understand that some funds currently may not review the liquidity of their portfolio investments on a continuing basis after they are acquired.[577] In particular, we understand that certain funds may initially determine that certain investments are liquid or illiquid but will not regularly re-evaluate these initial classifications, even in light of changing market conditions. We understand that some funds, on the other hand, currently reassess the liquidity of their portfolio investment regularly based on market-wide developments, as well as events affecting particular securities or asset classes.[578]

Rule 22e–4 as adopted requires a fund to review its liquidity classifications at least monthly, in connection with reporting its liquidity classifications monthly on Form N–PORT.[579] This requirement responds to the recommendation that the Commission adopt more specific standards associated with review frequency. Moreover, in order to determine whether its holdings are consistent with the fund's highly liquid investment minimum, as well as the rule 22e–4 limitation on illiquid investments, a fund would have to determine whether its initial classification determinations have changed based on market conditions or other developments. Therefore, rule 22e–4 also includes the requirement for a fund to review its liquidity classifications more frequently than monthly if changes in relevant market, trading, and investment-specific considerations are reasonably expected to materially affect one or more of its investment classifications.[580] For example, relevant market-wide developments could include changes in interest rates or other macroeconomic events, market-wide volatility, market-wide flow changes, dealer inventory or capacity changes, and extraordinary

[580] *See id.*

events such as natural disasters or political upheaval.[581] Asset-class and investment-specific developments that a fund may wish to consider include, among others, regulatory changes affecting certain asset classes and corporate events (such as bankruptcy, default, pending restructuring, or delisting, as well as reputational events). We believe that the rule's requirement that a fund review its liquidity classifications at least monthly, as well as more frequently in light of market-related and other changes that could materially affect a fund's investment classifications, will provide funds with more direction as to the frequency of their classification reviews, as well as circumstances that could lead to a classification review, than the proposed ongoing review requirement.

We believe that the review requirement we are adopting, as opposed to the proposed ongoing review requirement, permits funds to tailor their review of liquidity classifications in light of the liquidity character of a fund's portfolio investments. The modifications to rule 22e–4 clarify that we do not expect a fund to constantly reassess all of its portfolio investments' liquidity. Also, the review requirement that we are adopting would not require a fund to consider a detailed list of specific factors in the course of conducting its liquidity classification reviews. Instead, as discussed above, it would require a fund to take into account ''relevant market, trading, and investment-specific considerations'' in reviewing its investments' liquidity.[582]

Finally, the review requirement that we are adopting, like the rule 22e–4 classification requirement, would permit a fund to generally review its portfolio investments' liquidity according to their asset class (provided that the fund must identify, and separately review, any investment within an asset class that the fund determines should be reviewed separately based on its liquidity characteristics).[583] We believe that this approach will permit funds to increase their efficiency in classifying and reviewing portfolio investments' liquidity.

6. Liquidity Classification Reporting and Disclosure Requirements

In connection with the liquidity classification requirement of rule 22e–4, we are requiring, largely as proposed and with certain modifications in response to comments, a fund to report the liquidity classification assigned to each of the fund's portfolio investments on Form N–PORT.[584] Position-level liquidity classification information will be reported to the Commission in a structured data format on a confidential basis rather than released every three months to the public.[585] Under the final rules, a fund will also be required to publicly report on Form N–PORT the aggregated percentage of its portfolio investments that falls into each of the four liquidity classification categories outlined above.[586] This aggregate information will be disclosed to the public only for the third month of each fiscal quarter with a 60-day delay. While we acknowledge that liquidity classification determinations may be to some extent subjective and that such information reported on Form N–PORT may be non-standardized, we believe that, on balance, our staff, investors, and other potential users would benefit from the information that will be reported on Form N–PORT that currently may not be reported or disclosed by funds. We believe that this greater transparency about liquidity at the fund-level will provide our staff, investors, and other potential users with a helpful picture of the general liquidity characteristics of funds and help them better understand the liquidity risks associated with a particular fund. We also believe that this information will help investors make more informed investment decisions.

As part of this public disclosure, a fund would publicly disclose the percentages of its highly liquid investments that are segregated to cover, or pledged to satisfy margin requirements in connection with, the fund's derivatives transactions that the fund has classified in the moderately liquid, less liquid, and illiquid investments classification categories in light of the requirement in rule 22e–4 that the liquidity classification cover each of the fund's derivatives transactions, discussed above.[587] This derivatives transactions information will also be made public for the third month of each fiscal quarter with a 60-day delay.

Most commenters opposed the proposed Form N–PORT reporting requirement, and particularly objected to having position-level liquidity information reported on Form N–PORT made public.[588] We believe that the additions to Form N–PORT adopted today in this Release address many of these concerns. We discuss these additions, the comments we received on the proposal, as well as modifications we made to the proposal in response to comments, in more detail below.

a. Reporting Liquidity Classification of Portfolio Investments

We proposed to require a fund to report on Form N–PORT the liquidity classification of each of the fund's positions (or portions of a position) in a portfolio asset using the proposed classification system of rule 22e–4.[589] As discussed above, most commenters opposed the proposed classification regime, and many offered varied classification alternatives for fund liquidity risk management and reporting purposes. As discussed previously, we are today adopting a liquidity classification requirement under rule 22e–4 based on a ''days-to-cash'' framework as proposed, but with a number of modifications informed by commenter recommendations that we believe address many commenters' concerns about the classification process itself.

A number of commenters supported reporting liquidity classifications to the Commission on Form N–PORT, provided that it was not publicly disclosed.[590] For example, one

[581] *See, e.g.,* 2014 Fixed Income Guidance Update, *supra* footnote 94.

[582] *See* rule 22e–4(b)(1)(ii).

[583] *See* rule 22e–4(b)(1)(ii)(A).

[584] Rather than report the liquidity classification among six categories as under the proposal, funds will be required to report liquidity classifications among four liquidity categories, which may be based on asset type to the extent discussed above. *See* Item C.7. of Form N–PORT. We have modified the numbering convention for items within Form N–PORT from the proposal to be consistent with Form N–PORT as adopted in the Investment Company Reporting Modernization Adopting Release.

[585] *See* General Instruction F of Form N–PORT.

[586] Item B.8.a. of Form N–PORT. We note that such reporting is designed to serve as a snapshot of a fund's liquidity on the last business or calendar day of the month. *See* rule 30b1–9 under the Investment Company Act (requiring reporting on Form N–PORT to be current as of the last business day, or last calendar day, of the month). Accordingly, the aggregate percentage of portfolio investments in each of the four liquidity classification categories need not reflect pending transactions, but instead should reflect the balance of investments in each category on the last business or calendar day of the month.

[587] Item B.8.b. of Form N–PORT. This derivatives transactions reporting requirement corresponds to the modification in rule 22e–4(b)(1)(ii)(C), discussed above.

[588] *See, e.g.,* Cohen & Steers Comment Letter; NYC Bar Comment Letter; SIFMA Comment Letter I; Wellington Comment Letter.

[589] *See* Proposing Release, *supra* footnote 9, at section III.G.2.a.

[590] *See, e.g.,* Dechert Comment Letter; Interactive Data Comment Letter; J.P. Morgan Comment Letter; Nuveen Comment Letter. Some commenters suggested that the Commission evaluate reported classification data for a period of time to determine whether the information is appropriate for public disclosure. *See* BlackRock Comment Letter; Fidelity Comment Letter; SIFMA Comment Letter III.

commenter expressed support for reporting position-level liquidity classifications to the Commission, noting that the Commission should have the data it needs to monitor fund holdings and liquidity determinations, examine potential outliers, and, if an unexpected market event occurs (*e.g.,* the default of a significant institution), quickly assess the potential impact on mutual funds it supervises.[591] Another commenter expressed the belief that the proposed liquidity classifications data could be appropriate for Commission oversight purposes.[592]

On the other hand, a few commenters objected to reporting liquidity classifications, as proposed, even if such information is disclosed only to the Commission.[593] Some commenters stated that there is limited utility in the proposed classification information for the Commission since the information would be subjective and methodology-specific, which would lead to results that would preclude comparisons across funds, limiting the utility of this information for the Commission's monitoring of industry-wide data.[594] In addition, one commenter expressed concerns about the security of sensitive information filed with the Commission due to recent high-profile cybersecurity breaches both in the governmental and private sectors.[595]

We continue to believe that requiring funds to report the liquidity classification of their portfolio investments is vital to our ongoing monitoring and oversight efforts. A key goal of the rulemaking is to allow us to monitor funds' liquidity profiles (both on a fund-by-fund basis and across funds) over time, and respond as appropriate. Absent the required reporting on Form N–PORT, our ability to engage in such efforts would be limited and less efficient. We believe that the changes made to the classification system discussed above should serve to mitigate commenters' concerns about the difficulties of making comparisons across the industry, in light of the reduced number of categories for classification. We recognize that there is still likely to be variation between funds in how they classify certain asset classes and investments, and believe that despite any variations, this liquidity information will be useful and valuable to us. We will be able to identify different fund liquidity classification practices, and use that information to gain insight into how different funds view liquidity in the market, and whether there are any identifiable liquidity concerns. We also note that despite any concerns about variation of practices across funds limiting comparability, we expect that the reported information will allow us to generally monitor specific funds' liquidity on a consistent basis across time, and identify how their views of the liquidity of their investments change.

We believe that such information will assist us in better assessing liquidity risk in the open-end fund industry, which can inform our policy and guidance. We also believe that this information will assist us in monitoring for compliance with rule 22e–4 and identifying potential outliers in fund liquidity classifications for further inquiry, as appropriate. We recognize that liquidity classifications, similar to valuation- and pricing-related matters, inherently involve judgment and estimations by funds. We also understand that the liquidity classification of an asset class or investments may vary across funds depending on the facts and circumstances relating to the funds and their trading practices.[596] We do not believe that data based on estimations of market conditions on a fund-by-fund basis is uninformative or of limited utility because of the information's sometimes fund-specific, subjective nature.[597] Rather, we believe that even with potential variances in determinations, the liquidity information reported will be informative to the Commission. Furthermore, we believe that members of the fund industry are generally in the best position to provide current information on the conditions of fund liquidity since they are in the markets every day trading securities and observe how markets are evolving and related liquidity characteristics are changing.

In sum, we believe that the modified reporting requirements on Form N–PORT will provide the Commission with meaningful data concerning the liquidity of portfolio investments across the fund industry and at the same time lessen burdens on funds classifying and reporting liquidity information (compared to the proposal). Accordingly, we are adopting the requirement for funds to report the liquidity classification of their portfolio investments to the Commission.

b. Non-Public Disclosure of Liquidity Classification Information Reported on Form N–PORT

We proposed that liquidity classification information reported on Form N–PORT at the portfolio position level be disclosed to the public for the third month of each fiscal quarter with a 60-day delay. One commenter expressed general support for regulatory initiatives aimed at improving transparency.[598] Several commenters expressed support for public disclosure of liquidity information if the framework for classification was modified from the proposed six-category liquidity classification framework to alternative frameworks proposed by commenters that generally measured the liquidity of portfolio positions based on asset type and included less classification categories.[599]

On the other hand, most commenters opposed the proposed public disclosure of the liquidity classification. Some commenters expressed concerns that the value to the public of the position-level liquidity classification information on Form N–PORT, as proposed, would be limited.[600] Many other commenters expressed concerns that the public disclosure of the position-level liquidity classification information could be potentially misleading to investors for various reasons. For example, many commenters contended that, while the position-by-position information reported would be subjective, the numeric days-to-settlement presentation proposed on Form N–PORT could imply a false sense of precision of the data to

[599] *See, e.g.,* Charles Schwab Comment Letter; FSR Comment Letter; Nuveen Comment Letter; Vanguard Comment Letter.

[600] *See, e.g.,* Better Markets Comment Letter (expressing concerns that the proposal's three-day liquid asset minimum and 15% standard assets are determined by the fund and that the liquidity classifications reported on Form N–PORT would be stale information for the public); Morningstar Comment Letter (also stating concerns that the information available to the public under the proposal would be stale and expressing the belief that investors could find it difficult to compare the liquidity characteristics of portfolios from different funds).

fund investors.[601] Many of these commenters also argued that providing subjective, position-level liquidity classification information to the public could potentially result in misleading comparisons across funds,[602] with some commenters noting that such comparisons could disadvantage certain funds over others.[603] While reports on Form N–PORT would be submitted to the Commission within 30 days after month end, some commenters voiced concerns that the liquidity data presented on Form N–PORT would be stale for the public given that the reports, as proposed, would be available every third month of a fund's fiscal quarter with a 60-day delay, adding to the risk of misleading investors about the real-time state of a portfolio's liquidity.[604]

Many commenters also expressed concerns that public disclosure of the proposed position-level liquidity classification information would ultimately harm fund shareholders and the fund market for a variety of reasons. Some commenters argued that public reporting would facilitate predatory trading practices, particularly during periods of liquidity stress, ultimately harming fund investors.[605] Commenters expressed the belief that public reporting of liquidity classifications at the position-level exacerbates these concerns, noting, for example, that in the event a fund experiences a liquidity issue, public information about its portfolio-level liquidity classifications may expose the fund to predatory trading.[606] In addition, several commenters expressed concern that public reporting of position-level liquidity classifications could be harmful to the fund market, arguing that such reporting would incentivize homogenized liquidity determinations and comparative liquidity ''ratings'' from third-party service providers,[607] as well as ''window dressing'' at period ends prior to disclosure, increasing the potential for systemic risks in the fund industry. [608] Other commenters suggested that the Commission evaluate reported classification data for a period of time to determine whether the information is appropriate for public disclosure.[609]

While many of these commenters objected to the proposed position-level public disclosure of liquidity classifications, several commenters did not object to making more aggregated portfolio-level disclosure of liquidity data available to the public.[610] These commenters suggested that, while position-level liquidity data may pose concerns as discussed above, providing the public a portfolio-level ''roll up'' of the liquidity levels of the fund may provide useful data and would be unlikely to raise the same kind of issues.[611]

We recognize that the level of position-level detail necessary for the Commission and our staff to effectively monitor fund liquidity may not be necessary for other users. We understand that some data collectors would prefer to use information reported on Form N–PORT proposed under the Investment Company Reporting Modernization proposal (which we are adopting concurrently), such as monthly portfolio holdings data, rather than the classification information proposed in the liquidity proposal.[612] Furthermore, we understand that for many investors, the proposed specific position-level liquidity data would be likely unnecessarily detailed, and that aggregated or ''rolled up'' portfolio-level information about fund liquidity may be more easily understandable and usable. As discussed below, such aggregated information will likely result in more user friendly and digestible portrayals of fund liquidity, and at the same time we expect will avoid many of the potential harms suggested by commenters that might result from position-level disclosure to the public. Such a layered reporting and disclosure regime should allow the Commission and investors each to access the liquidity information likely most useful for their purposes.

We also appreciate the limitations and subjectivity of the liquidity classification process, and thus understand the risks of investors potentially giving too much weight to a fund manager's individual liquidity classification choices. The classification of portfolio investments at the position-level under the days-to-cash framework involves a number of assumptions and methodologies that could result in classifications that vary from fund to fund. As a result, the liquidity classification information reported for the same or similar asset classes and investments could vary because of complex differences in methodologies and assumptions that may not be reported on Form N–PORT nor easily explained to investors but would be available to the Commission in inspections.[613]

We appreciate the concerns raised by commenters that reporting publicly position-level data could imply a false sense of precision about the liquidity profile of a fund and that, given the delay in the public reporting of portfolio-level classification information (60 days after quarter-end), the position-level information will likely be out of date when reviewed by investors. While we can take these potential variances in liquidity classifications of assets into account in evaluating and using the data for the Commission's purposes in observing potential trends in liquidity profiles across the fund industry, it may be more difficult to explain them to investors. Furthermore, the Commission would receive portfolio-level classification information within 30 days of month-end, thereby increasing the utility of the classification information for Commission purposes. We expect that providing only aggregated liquidity classification information on the funds' portfolio assets publicly may mitigate some of these concerns. This level of detail should appropriately focus investors on the fund's general liquidity profile and general trends in fund liquidity rather than individual security-level liquidity decisions, in light of the concerns discussed above.

Some commenters also raised concerns that public reporting of

[613] A fund has the option of providing explanatory notes related to its filing to explain any of its methodologies, including related assumptions, in Part E of Form N–PORT. *See* Instruction G to Form N–PORT.

liquidity classifications at the position level could potentially expose investors to harm, including, for example, potentially exposing a fund to predatory trading, particularly during periods of liquidity stress.[614] We believe, however, that the aggregated public disclosure on Form N–PORT once each quarter with a 60-day lag would alleviate these predatory trading concerns given that those engaged in predatory trading would not have information about a fund's own assessment of its liquidity characteristics in real-time and would not have the detailed position-level information in real time necessary to pursue such strategies.

For these reasons, we find that it is neither necessary nor appropriate in the public interest or for the protection of investors to make liquidity classification information for each portfolio investment publicly available.[615] We also are adopting amendments to Form N–PORT to require a fund to publicly disclose the aggregated percentage of its portfolio assets representing each of the four classification categories outlined in Form N–PORT and related rule 22e–4,[616] as discussed in more detail below. We believe that providing liquidity classification data attributable to each portfolio investment to the Commission and fund-level data to investors is an efficient approach to present liquidity information in a manner that both satisfies the Commission's need for position-level liquidity data for its regulatory oversight purposes and provides useful fund liquidity information to investors.

In addition, the Commission recognizes the importance of sound data security practices and protocols for non-public information, including information that may be competitively sensitive. The Commission has substantial experience with storage and use of non-public information reported on Form PF and delayed public disclosure of information on Form N–MFP (although the Commission no longer delays public disclosure of reports on Form N–MFP), as well as other non-public information that the Commission handles in its ordinary course of business. Commission staff is carefully evaluating the data security protocols that will apply to non-public data reported on Form N–PORT in light of the specific recommendations and concerns raised by commenters. Drawing on its experience, the staff is working to design controls and systems for the use and handling of Form N–PORT data in a manner that reflects the sensitivity of the data and is consistent with the maintenance of its confidentiality.[617] In advance of the compliance date, we expect that the staff will have reviewed the controls and systems in place for the use and handling of non-public information reported on Form N–PORT.

c. Public Fund-Level Aggregate Liquidity Profile Reporting

As previously discussed, we are adopting, with modifications, the proposed requirement that funds report to the Commission on a non-public basis the liquidity classification assigned to each portfolio position on Form N–PORT. Some commenters expressed concerns that the value to the public of the position-level liquidity classification information on Form N–PORT, as proposed, would be limited.[618] Other commenters recommended that, as an alternative to the proposal, the Commission make available to the public a general assessment of the liquidity of the portfolio at the fund level, rather than the individual security level,[619] with more detailed information, including the fund's assessment of the liquidity of each asset at the individual security level, provided to the Commission but kept confidential.[620]

We appreciate these comments and recognize that position-level liquidity classification data, while valuable for Commission purposes, may be of limited use for everyday investors. We find persuasive commenters' recommendations to provide the public with a general assessment of the liquidity of a portfolio at the fund level as an approach to provide everyday investors useful information on fund liquidity. As a result, we are adopting amendments to Form N–PORT to require a fund to publicly report for the third month of each fiscal quarter with a 60-day delay the aggregate percentage of its portfolio representing each of the four classification categories outlined in Form N–PORT and related rule 22e–4.[621] For purposes of this reporting item, a fund would report the aggregate percentage of investments that are assets in each liquidity category compared to total portfolio investments that are assets (not including liabilities) of the fund.[622]

In order to avoid misleading investors about the actual availability of highly liquid investments to meet redemptions, a fund also will be required to publicly report on Form N–PORT the percentage of its highly liquid investments that it has segregated to cover, or pledged to satisfy margin requirements in connection with, derivatives transactions that are classified as moderately liquid, less liquid, or illiquid investments.[623] As discussed above, we proposed to require a fund to consider the relationship of an asset to another portfolio asset in classifying the liquidity of its portfolio assets reported on Form N–PORT and to consider guidance that a fund should classify the liquidity of assets segregated to cover derivatives obligations using the liquidity of the derivative instruments such assets are covering.[624] One commenter suggested that the Commission add an item to the Schedule of Portfolio Investments on Form N–PORT that permits a fund to note whether an asset (or portion thereof) is encumbered or linked to other assets as of the reporting date.[625] Another commenter suggested that the Commission require funds to assign liquidity classifications to cover assets on an aggregate portfolio basis in amounts corresponding to the aggregate amount of derivatives exposure in each liquidity category.[626]

In consideration of the commenters' recommendations, we believe that our modification to the proposal to require a fund to report publicly the percentage of the fund's highly liquid investments that are segregated to cover, or pledged to satisfy margin requirements in connection with, the fund's derivatives

transactions that are classified in each liquidity category strikes an appropriate balance between providing investors with useful information about the impact of derivatives coverage obligations on the percentage of a fund's highly liquid investments and lessening operational burdens associated with classifying investments. Since the public will only receive asset liquidity classification information on an aggregate level and only the Commission will receive liquidity classifications on an investment-by-investment basis, we believe that the suggested alternative to add an item to the Schedule of Portfolio Investments on Form N–PORT linking an asset encumbered to other assets in connection with derivatives transactions would not be a helpful means to inform investors about the connection between derivatives obligations and the availability of highly liquid investments to meet redemptions. We believe that without public reporting of the percentage of a fund's highly liquid investments that are segregated to cover, or pledged to satisfy margin requirements in connection with, a fund's derivatives transactions that are not themselves highly liquid investments, the reported percentage of a fund's highly liquid investments could be potentially misleading to investors if a portion of highly liquid investments are not available to meet redemptions due to derivatives transactions obligations.

Overall, we continue to believe that investors currently have limited information about the liquidity of fund investments and would benefit from enhanced information to evaluate funds and assess the potential for returns and risks of a particular fund. We expect that many investors will use liquidity reporting information to better understand the liquidity risks associated with a particular fund for purposes of making more informed investment decisions and will benefit from aggregate information about a fund's overall liquidity. Moreover, we believe that requiring a fund to publicly disclose only the aggregate percentage of its portfolio assets representing each of the four classification categories balances commenters' concerns about certain adverse effects that could arise from public reporting of detailed portfolio liquidity information with investors' need for improved information about funds' liquidity risk profiles.

d. Illiquid Investments

As discussed above, rule 22e–4, as adopted, combines a fund's illiquid investment determinations with the general liquidity classification framework reported on Form N–PORT.[627] In the Proposing Release, in connection with the codification of the 15% guideline that an open-end fund may not invest in the aggregate more than 15% of its net assets in ''illiquid securities,'' we proposed to require funds to report on Form N–PORT whether each portfolio asset is a ''15% standard asset,'' as defined under the proposal,[628] in addition to reporting the liquidity of each of the fund's positions (or portions of a position) in a portfolio asset using six proposed categories.[629] One commenter opposed requiring reporting of the 15% standard asset at the individual portfolio asset level, raising concerns that public disclosure could have adverse effects on funds.[630] Another commenter opposed reporting of the 15% standard asset at the individual portfolio asset level if publicly disclosed in addition to the proposed six liquidity classification categories, stating that the distinction between the two pieces of data would make sense to industry experts but would be confusing and potentially misleading to typical investors.[631]

After considering these comments, we agree that presenting to the public liquidity classification information and the 15% standard asset designation separately could potentially confuse investors. As discussed in more detail in section III.C previously, we believe that it is more appropriate to harmonize the rule 22e–4 limit on illiquid investments, referred to as 15% standard assets under the proposal, with the rule's broader liquidity classification requirement by incorporating an illiquid investment category into the classification requirement. Likewise, we believe that this harmonization should be reflected in reports on Form N–PORT. Thus, we are adopting, modified from the proposal, an illiquid investment category into Form N–PORT that corresponds with rule 22e–4's broader classification requirement.[632] By doing this, a fund's exposure to illiquid investments may be viewed as part of the fund's overall liquidity profile in a more clear and concise manner. Furthermore, we are persuaded by some of the concerns raised by commenters regarding the unintended adverse effects that public disclosure of illiquid investment information on the portfolio position level could have on funds and fund investors. As adopted, liquidity classification information reported on the portfolio position level will be non-public on Form N–PORT, as discussed in more detail above.

We expect to use this information to monitor fund compliance with the prohibition of acquiring illiquid investments if the fund would have invested more than 15% of its net assets in illiquid investments that are assets and analyze liquidity trends in the fund industry. Overall, we believe that maintaining this information on illiquid investments as part of the liquidity classification information reported on Form N–PORT will provide the Commission with meaningful data, including information regarding exposure to illiquid investments across the fund industry.

D. Highly Liquid Investment Minimum

Today we are adopting a requirement that each fund determine its ''highly liquid investment minimum,'' or the minimum amount of the fund's net assets that the fund invests in highly liquid investments that are assets.[633] In determining its highly liquid investment minimum, a fund will be required to consider the factors the fund also has to consider, as applicable, in assessing its liquidity risk under rule 22e–4.[634] Additionally, in determining whether a fund is meeting its highly liquid investment minimum, the fund will look only to its investments that are assets of the fund.[635] Rule 22e–4 as adopted today also requires a fund to adopt and implement policies and procedures for responding to a shortfall in a fund's highly liquid investments below its highly liquid investment minimum.[636] These policies and procedures must include reporting to the fund's board of directors, no later than the board's next regularly scheduled meeting, regarding any shortfall of the fund's highly liquid investments compared to its minimum. A fund is required to report to its board

[627] *See supra* section III.C.2.d.

[628] *See* Proposing Release, *supra* footnote 9, at section III.G.2.b.

[629] *See* Proposing Release, *supra* footnote 9, at section III.G.2.a.

[630] *See* Cohen & Steers Comment Letter.

[631] *See* Federated Comment Letter.

[632] *See* Item C.7. of Form N–PORT.

[633] Rule 22e–4(a)(7). Rule 22e–4(a)(7) refers to highly liquid investments that are ''assets'' to make clear that when evaluating whether a fund is meeting its highly liquid investment minimum, the fund should look to its investments with positive values. Highly liquid investments that have negative values should not be netted against highly liquid investments that have positive values when calculating whether the fund is meeting its highly liquid investment minimum. Thus, only highly liquid investments that have positive values (*i.e.*, ''assets'') should be used in the numerator. *Cf. infra* footnote 744 (discussing the use of the term ''assets'' in the 15% limit on illiquid investments).

[634] Rule 22e–4(b)(1)(iii)(A)(1).

[635] Rule 22e–4(a)(7).

[636] Rule 22e–4(b)(1)(iii)(A)(3).

within one business day, and submit a non-public report to the Commission, if its highly liquid investment minimum shortfall lasts more than seven consecutive calendar days.[637] A fund's board of directors is not normally required to specifically approve the fund's highly liquid investment minimum, although during a time that a fund's highly liquid investments are below the fund's determined minimum level, a fund's highly liquid investment minimum can be changed only with board approval.[638] Additionally, a discussion of the fund's minimum must be included in the written annual report to the board on the adequacy and effectiveness of the fund's liquidity risk management program. Funds whose portfolio assets consist primarily of highly liquid investments, as well as In-Kind ETFs, are not subject to the highly liquid investment minimum requirement.[639]

As described in more detail below, this requirement is a modification of the proposed ''three-day liquid asset minimum,'' which also would have required a fund to determine the percentage of the fund's net assets to be invested in relatively liquid assets (under the proposal, ''three-day liquid assets,'' or cash and any asset convertible to cash within three business days at a price that does not materially affect the value of that asset immediately prior to sale).[640] In determining its three-day liquid asset minimum, the proposed rule would have required a fund to consider the factors the fund would have to consider, as applicable, in assessing its liquidity risk under rule 22e–4.[641] Under the proposal, a fund would have been prohibited from acquiring any asset other than a three-day liquid asset if, after acquisition, the fund would hold fewer three-day liquid assets than the percentage specified under its three-day liquid asset minimum.[642] Also under the proposal, a fund's board would have had to approve the fund's three-day liquid asset minimum and any changes thereto.[643]

The goal of the proposed three-day liquid asset minimum requirement was to increase the likelihood that a fund would hold adequate liquid assets to meet redemption requests without materially affecting the fund's NAV.[644] The proposed three-day liquid asset minimum also was intended to be structured in a way that would foster consistency in funds' consideration of relevant liquidity risk factors, while permitting flexibility in implementing this liquidity risk management tool as appropriate given the diverse range of funds it would cover.[645] It was intended to work together with other aspects of the proposed liquidity risk management program designed to help ensure that while funds would consider the spectrum of liquidity in their portfolios (in part through the proposed classification requirement), they would pay particular attention to the most liquid and least liquid ends of this spectrum.[646]

Many commenters agreed that a requirement for a fund to determine a minimum—or, per some commenters' suggestions, a target—amount of relatively liquid assets would assist funds in effectively meeting redemption requests under a variety of market conditions.[647] Some, on the other hand, suggested that a minimum or target requirement would not necessarily enhance a fund's ability to meet shareholder redemptions because the amount of liquid assets a fund may need is dynamic and unpredictable, and in extraordinary stressed market conditions no particular amount of liquid assets may end up being sufficient to meet redemptions.[648] Commenters also objected to the structure of the proposed minimum requirement, particularly the fact that the requirement would not permit a fund to acquire relatively less liquid assets if the fund were to fall below its minimum, arguing that the requirement could actually increase shareholder redemptions during times of stress.[649] In addition, commenters expressed concerns that the proposed requirement could prevent funds from meeting their principal investment strategies[650] and that it could effectively prevent funds from holding or acquiring favorable, but relatively less liquid, assets under certain circumstances, which could intensify market stress as well as adversely affect a fund's NAV.[651] Finally, some commenters expressed concerns about the potential operational burdens associated with the proposed three-day liquid asset minimum requirement.[652]

Some commenters also suggested alternatives to the proposed three-day liquid asset minimum. As discussed further below, a number of commenters suggested requiring funds to maintain a ''target'' or threshold amount of certain liquid assets.[653] Other commenters suggested requiring funds to consider whether to maintain a target amount of liquid assets[654] or to adopt policies and procedures to address shareholder redemptions, which could include targets or ranges.[655] As discussed below, we believe the highly liquid investment minimum requirement we are adopting strikes an appropriate balance in promoting the benefits intended by the proposed three-day liquid asset minimum requirement, including consistency in funds' consideration of certain factors relevant to their liquidity risk management procedures, while at the same time lessening the likelihood of certain adverse consequences identified by commenters.

1. Anticipated Benefits of Highly Liquid Investment Minimum

Like the proposed three-day liquid asset requirement, we believe that the highly liquid investment minimum requirement will increase the likelihood that a fund would be prepared to meet redemption requests without significant dilution of remaining investors' interests in the fund. Some commenters noted that it is common for funds to assess how much liquidity they may need under various market conditions in order to meet redemptions over a relatively short time horizon and suggested that targeting a certain level of relatively liquid assets is an appropriate way for a fund to manage its liquidity

risk.[656] To the extent that a fund already aims to invest a specified portion of its portfolio in relatively liquid assets, we anticipate that such funds may already be substantially in compliance with the highly liquid investment minimum requirement we are adopting today. More importantly, it would require those funds that do not currently consider what an appropriate baseline level of liquidity might be to do so.

As with the proposal, we believe that the final highly liquid investment minimum requirement will help encourage consistency in funds' consideration of certain factors relevant to their liquidity risk management procedures. This is an important benefit compared to some commenters' suggestions that funds simply be required to have policies and procedures to address shareholder redemptions (which could include liquid asset minimums or targets), but not to specify any particular procedures within this general requirement.[657] As with the proposal, we believe that the approach we are adopting appropriately encourages regularity and thoroughness in funds' consideration of certain risk factors, while at the same time promoting flexibility in funds' management of this risk. Under rule 22e–4 as adopted, a fund will be able to determine its own highly liquid investment minimum, as well as (within a fairly broad range) the assets it will hold to satisfy its minimum.[658] We believe that the requirement we are adopting provides important additional flexibility to funds' liquidity risk management practices in that a fund will be required to adopt policies and procedures, but would be permitted to design them as appropriate to respond to shortfalls in highly liquid investments relative to the fund's minimum.

As noted above, some commenters suggested that a minimum requirement would not necessarily enhance funds' ability to meet shareholder redemptions. We agree that the highly liquid investment minimum requirement we are adopting, standing alone, may not be a sufficient safeguard for funds to manage liquidity risk under all market conditions. However, we believe that, together with the rest of the liquidity risk management program requirements we are adopting, it is a central tool to help put a fund in a solid position to meet redemption requests without significant dilution of remaining investors' interests. The highly liquid investment minimum requirement, together with the classification requirement and the 15% limitation on a fund's investments in illiquid investments that are assets, is meant to be a primary component of a fund's overall approach to liquidity risk management. While the classification requirement would illustrate the spectrum of a fund's portfolio liquidity, the highly liquid investment minimum requirement and the 15% limitation on illiquid investments would focus the fund's attention on each end of that liquidity spectrum—the fund's most liquid and least liquid investments, respectively.

Based on a fund's liquidity risk assessment, the fund could determine what additional liquidity risk management tools, if any, together with the highly liquid investment minimum requirement and the 15% limitation on illiquid investments, would best permit the fund to meet redemptions and help prevent significant investor dilution. We also believe that the highly liquid investment minimum requirement will be a useful liquidity risk management tool because we understand, based on staff outreach and comments that we received on the proposal, that the requirement we are adopting is similar to liquidity risk management strategies that many funds currently use.[659]

While certain commenters expressed concern that the proposed three-day liquid asset minimum requirement could unduly encourage funds to use only their most liquid assets in meeting redemptions (which commenters argued could lead to additional redemptions from funds in stressed periods),[660] we note that the minimum requirement—both as proposed and as adopted—was never meant to suggest that a fund should only, or primarily, use its most liquid investments to meet shareholder redemptions.[661] Nor is it meant, as commenters argued, to suggest that funds should hold cash-like buffers that investors may inappropriately assume will eliminate funds' liquidity risk.[662] Indeed, we noted in the Proposing Release that assets eligible for inclusion in a fund's three-day liquid asset minimum holdings could include a broad variety of securities, as well as cash and cash equivalents.[663] Moreover, because the final highly liquid investment minimum requirement would not prohibit a fund from acquiring investments other than highly liquid investments if a fund were to fall below its minimum, we believe that the final requirement may convey more effectively than the proposal that a fund is not guaranteed to hold a certain level of cash or highly liquid investments at all times.

As with the proposed three-day liquid asset minimum requirement, we believe an important feature of the highly liquid investment minimum requirement we are adopting is the flexibility it provides for a fund to determine an appropriate highly liquid investment minimum considering its particular risk factors, as well as (within a fairly broad range) the assets it will hold to satisfy its minimum. We acknowledge that, for certain funds that currently have relatively less liquid portfolios, the highly liquid investment minimum requirement could cause a fund to modify its investment strategy if, after consideration of the required factors, the fund were to determine it is appropriate to invest in higher amounts of highly liquid investments. In these circumstances, we believe such a modification would be appropriate. We discuss the costs associated with any modifications to funds' investment strategies that could result from the final highly liquid investment minimum requirement in the Economic Analysis section below.

2. Consideration of Liquidity Risk Factors

Rule 22e–4 requires a fund to consider the liquidity risk factors set forth in the rule, as applicable, in determining its highly liquid investment minimum.[664] Under the proposed rule, a fund likewise would have been required to consider the proposed rule's liquidity risk assessment factors in determining its three-day liquid asset minimum.[665] Several commenters suggested that these factors should be guidance that funds *may* consider in setting a minimum or target for relatively liquid assets, but should not be mandatory considerations a fund would be required to assess.[666] Commenters also objected to the requirement that funds determine their three-day liquid asset minimum based

on liquidity risk under both normal and reasonably foreseeable stressed conditions, arguing that this requirement would result in funds being forced to maintain artificially high levels of three-day liquid assets.[667] Some commenters also discussed more granular objections to certain of the proposed factors to be used in determining a fund's three-day liquid asset minimum, such as certain aspects of the proposed requirements to consider a fund's shareholder concentration[668] and borrowing arrangements.[669]

We continue to believe it is appropriate for a fund to be required—not only permitted—to consider a specified set of liquidity risk factors in determining its highly liquid investment minimum. We believe requiring every fund to consider multiple aspects of its history, policies, strategy, and operations in determining its highly liquid investment minimum will lead to a general industry-wide baseline for the minimum requirement. However, we are making certain modifications to the proposed liquidity risk factors, including only requiring funds to consider applicable factors, to respond to commenters' concerns about this aspect of the requirement.

a. Modifications to Proposed Requirement To Consider Liquidity Risk Factors

As discussed above, the liquidity risk factors we are adopting today incorporate certain modifications to the proposed factors,[670] and thus these modifications flow through with respect to a fund's consideration of these factors in determining its highly liquid investment minimum. We believe that the guidance that we provide in section III.B.2 regarding a fund's consideration of these factors in assessing its liquidity risk also is appropriate for a fund to take into account when determining its highly liquid investment minimum. With the exception of the recommendations about specific factors or guidance discussed below, we did not receive comments on the proposed factors or the guidance provided in the Proposing Release regarding these factors.

Some commenters recommended that the Commission confirm that funds may consider and weigh the factors as they deem appropriate and relevant for purposes of the proposed minimum requirement,[671] and we agree that a fund should give the most weight to the factors that it deems most relevant for determining its highly liquid investment minimum. Moreover, to the extent any liquidity risk assessment factor is not applicable to a particular fund, the fund would not be required to consider that factor in determining its highly liquid investment minimum. We have therefore added the words ''as applicable'' in the rule,[672] and we note that, in this context, the phrase ''as applicable'' is meant to refer to those factors that are relevant to a fund's particular facts and circumstances. For example, a fund would not be required to consider the use of borrowings for investment purposes, as specified under rule 22e–4(b)(1)(i)(A), if that fund does not engage in borrowing.[673] Conversely, however, a fund that maintains borrowing sources for investment purposes would be required to consider the use of borrowings for investment purposes as specified under the rule. The addition of ''as applicable'' should help respond to commenters' concerns that codifying a list of required factors as a provision of the proposed minimum requirement would ''create an overly rigid structure and a one-size-fits-all approach that may result in unnecessary focus on factors that are irrelevant to certain funds.''[674]

We continue to believe that a fund should consider both normal and reasonably foreseeable stressed conditions in determining the amount of highly liquid investments it will hold, based on the liquidity risk assessment factors. However, in a change from the proposal, the rule specifies that only those stressed conditions that are reasonably foreseeable *during the period until the next review of the highly liquid investment minimum* (emphasis added) should be considered when a fund determines its highly liquid investment minimum.[675] As discussed above, some commenters expressed concern that the requirement for funds to consider normal and reasonably foreseeable stressed conditions in determining their three-day liquid asset minimum could suggest that all funds should hold a high level of cash or other highly liquid assets at all times, which could in turn encourage funds to maintain portfolio liquidity levels that are disproportionate relative to their liquidity risk.[676] We believe that requiring consideration of only those stressed conditions that are reasonably foreseeable during the period until the next review of the highly liquid investment minimum should address commenters' concerns and should help ensure that the highly liquid investment minimum requirement leads funds to hold levels of portfolio liquidity that are appropriate in light of their reasonably anticipated liquidity risk.

This change also responds to commenters' concerns about perceived ambiguity in the length of time over which the proposed rule would have required funds to forecast the effect of stressed conditions on the liquidity risk factors.[677] Under the final rule, funds are required to periodically review, no less frequently than annually, their highly liquid investment minimum. Thus, the requirement to consider stressed conditions only to the extent they are reasonably foreseeable *during the period until the next review of the highly liquid investment minimum,* limits consideration of stressed conditions to whatever time frame the fund has determined for review of its highly liquid investment minimum, but no longer than one year. We note that if a fund encounters extremely stressed market conditions, beyond those that were reasonably foreseeable during the period until the next review of the highly liquid investment minimum, that could increase its liquidity risk to unusual levels, the fund should consider adjusting its highly liquid investment minimum at that time, and indeed a fund should generally review its highly liquid investment minimum more frequently than annually if circumstances warrant.

[675] *See* rule 22e–4(b)(1)(iii)(A)(1); *see also* rule 22e–4(b)(1)(iii)(A)(2) (requiring funds to periodically review, no less frequently than annually, the highly liquid investment minimum).

[676] *See supra* footnote 667 and accompanying text. Commenters argued that this, in turn, could lead to declines in fund performance, which shareholders would experience in the form of lower returns. *See, e.g.,* Fidelity Comment Letter; Invesco Comment Letter; J.P. Morgan Comment Letter; Wells Fargo Comment Letter.

[677] *See, e.g.,* MFS Comment Letter (noting that the proposal fails to indicate the period of time over which the estimate of foreseeable redemptions is to be calculated); *see also* SIFMA Comment Letter I (''We do not agree, however, that in making their Highly Liquid Asset Target determinations, funds should be required to forecast the timing, severity or potential impact of stressed market conditions or other events affecting the fund that have occurred in the past but for which there is no reasonable way to accurately predict their recurrence.'').

b. Role of Liquidity Risk Factors in Determining the Highly Liquid Investment Minimum

As noted above, rule 22e–4 requires a fund to consider the liquidity risk factors set forth in the rule, as applicable, in determining its highly liquid investment minimum. In summary, a fund must consider, as applicable, its: (i) Investment strategy and portfolio liquidity during normal conditions, and during stressed conditions to the extent such conditions are reasonably foreseeable during the period until the next review of the highly liquid investment minimum; (ii) short-term and long-term cash flow projections during normal conditions, and during stressed conditions to the extent such conditions are reasonably foreseeable during the period until the next review of the highly liquid investment minimum; and (iii) holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources.[678] In addition to these factors, an ETF also must consider, as applicable: (i) The relationship between the ETF's portfolio liquidity and the way in which, and the prices and spreads at which, ETF shares trade, including the efficiency of the arbitrage function and the level of active participation by market participants (including authorized participants); and (ii) the effect of the composition of baskets on the overall liquidity of the ETF's portfolio.[679]

With respect to a fund's consideration of its investment strategy and portfolio liquidity in determining its highly liquid investment minimum, we continue to believe that the less liquid a fund's overall portfolio investments are, the higher a fund may want to establish its highly liquid investment minimum. Similarly, funds with certain investment strategies that typically have had greater volatility of flows than other investment strategies—such as alternative funds and emerging market debt funds—would generally need highly liquid investment minimums that are higher than funds whose strategies tend to entail less flow volatility. For funds that use borrowings for investment purposes and derivatives, we continue to believe that, all else equal, a fund with a leveraged strategy (*e.g.,* a fund with leverage through bank borrowings or that has significant fixed obligations to derivatives counterparties) generally would need a highly liquid investment minimum that is higher than a fund that does not.[680] Similarly, when setting the fund's highly liquid investment minimum, we believe a fund that has or expects to have a significant amount of highly liquid investments segregated to cover derivatives transactions or pledged to satisfy margin requirements in connection with derivatives transactions should take into account the fact that such segregated or pledged highly liquid investments may not be available to meet redemptions. However, this guidance is not meant to suggest that a fund should only, or primarily, use highly liquid investments to meet shareholder redemptions. Rather, in the examples provided in this paragraph, we believe that holding a relatively high level of assets that are highly liquid investments would *both* support a fund in meeting redemption requests in a manner that does not dilute non-redeeming shareholders, and assist the fund in readjusting its portfolio as necessary to handle stressed conditions, weathering periods of heightened volatility, and managing its obligations to derivatives counterparties.

Regarding a fund's cash flow projections, we continue to believe that the Commission's cash flow guidance considerations could be useful to a fund in setting its highly liquid investment minimum.[681] We generally expect that a fund would evaluate the Commission's guidance on these considerations and determine whether each would be useful and relevant in setting the fund's highly liquid investment minimum. In addition, a fund may wish to consider employing some form of stress testing[682] or consider specific historical redemption scenarios in determining its highly liquid investment minimum.

Each of the cash flow guidance considerations—either standing alone, but especially viewed in combination with one another—are potentially significant features that could materially affect the risk of significant redemptions and thus could influence a fund's determination of its highly liquid investment minimum. For example, a fund with a concentrated shareholder base has a high risk that only one or two shareholders deciding to redeem can cause the fund to sell a significant amount of assets, which depending on the liquidity of the fund's portfolio and how it meets those redemptions, can dilute remaining shareholders. Similarly, a fund whose redemption policy is to satisfy all redemptions on a next business day basis (T + 1) or that is sold through distribution channels that historically attract investors with more volatile and/or unpredictable flows also should consider setting a higher minimum level for its assets that are highly liquid investments than a fund that, all else equal, does not face these risks.

In setting a highly liquid investment minimum, a fund should consider the degree of certainty associated with the fund's short-term and long-term cash flow projections. Projections may only be as good as the extent and quality of information that informs them. For example, if a fund does not have substantial visibility into its shareholder base (*e.g.,* because the fund's shares are principally sold through intermediaries that do not provide shareholder transparency) or if a fund is uncertain about changing market conditions which are likely to materially affect the fund's level of net redemptions, it may make projections but be quite uncertain about the reliability of those projections. In these circumstances, a fund should consider setting its highly liquid investment minimum to reflect this uncertainty, for example, by providing a cushion or multiple of its cash flow projections in the event realized net redemptions are significantly higher.

One commenter objected that shareholder ownership concentration, which is discussed in this Release as a guidance factor that could be used in evaluating cash flows (but in the proposal would have been *required* to be considered in analyzing a fund's cash flow projections), should not be a

[678] Rule 22e–4(b)(1)(i)(A)–(C); rule 22e–4(b)(1)(iii)(A)(1).

[679] Rule 22e–4(b)(1)(i)(D); rule 22e–4(b)(1)(iii)(A)(1); *see also infra* section III.J. (discussing liquidity risk management program elements tailored to ETFs).

[680] *See* Proposing Release, *supra* footnote 9, at paragraphs accompanying n.339. As discussed in the Proposing Release, we believe that a leveraged fund has an increased risk that it will be unable to meet redemptions and an increased risk of investor dilution compared to an equivalent fund with no leverage. For example, a fund with leverage through bank borrowings may have to meet margin calls if a security the fund provided to the bank to secure the loan declines in value. Such margin calls can render highly liquid portfolio assets unavailable to meet investor redemptions, which can increase dilution and the risk the fund will be unable to meet redemptions.

Similarly, a fund that has significant fixed obligations to derivatives counterparties (for example, from a total return swap or writing credit default swaps) must pay out on these obligations when due, even if it means selling the fund's more liquid, high quality assets to raise cash. *See, e.g.,* OppenheimerFunds Release, *supra* footnote 223.

[681] *See supra* section III.B.2.b. These five guidance considerations include: (i) The size, frequency, and volatility of historical purchases and redemptions of fund shares during normal and reasonably foreseeable stressed periods; (ii) the fund's redemption policies; (iii) the fund's shareholder ownership concentration; (iv) the fund's distribution channels; and (v) the degree of certainty associated with the fund's short-term and long-term cash flow projections.

[682] *See supra* footnote 196 and accompanying text.

determinative consideration for a fund in establishing its appropriate level of relatively liquid assets.[683] This commenter expressed concern that ''accentuating the significance of this sub-factor in the context of new or recently launched funds, which may have a small number of shareholders relative to more established funds, could have a severe anti-competitive effect and create an unwarranted barrier to the introduction of new funds.'' We agree that emphasizing shareholder concentration could lead new funds to increase their holdings of relatively liquid investments. However, we note that substantial shareholder concentration, even for new or recently launched funds, could give rise to significant liquidity risk, and thus this consideration should not be discounted when a fund whose investor base is significantly concentrated determines its highly liquid investment minimum.[684] New or recently launched funds that have a concentrated shareholder base should consider disclosing the risk of redemption by one or more such shareholders in the fund's prospectus.[685] To the extent that a new fund's shareholder base becomes significantly less concentrated as the fund matures, the fund may wish to take this into consideration in reviewing its highly liquid investment minimum and adjusting it as it determines appropriate.

With respect to a fund's consideration of its holdings of cash and cash equivalents in determining its highly liquid investment minimum, we continue to believe that these holdings may provide funds with important flexibility to manage their liquidity risks. Our staff has observed that it is relatively common for fund complexes to target a minimum amount of cash or cash equivalent holdings in the fund, with the assumption that cash and cash equivalent holdings would allow the fund to meet redemptions in a stressed period without realizing significant discounts to its holdings' carrying values when they are sold. Holding cash or cash equivalents also could readily permit funds to rebalance or otherwise adjust a portfolio's composition in order to manage liquidity risk. Similarly, the availability of a line of credit or other funding sources to meet redemptions could assist a fund in managing liquidity risk, although as discussed below, depending on the nature of use, the use of a line of credit could raise other issues.[686] To the extent that a fund determines that any of these considerations could indicate decreased liquidity risk, these considerations could provide important inputs regarding the level that the fund deems appropriate for its highly liquid investment minimum.

Certain commenters indicated that the Commission should permit a fund to reduce its required holdings of relatively liquid assets by the amount of other sources of liquidity available to the fund, such as a committed line of credit.[687] Under these commenters' views, if a fund were to determine that its highly liquid investment minimum would typically be x% of the fund's net assets, a fund with a committed line of credit representing y% of the fund's net assets should be able to reduce its highly liquid investment minimum to x% minus y% of the fund's net assets. We disagree with this approach for several reasons. First, we believe that a mechanical subtraction of the amount of a credit line available to a fund from the fund's highly liquid investment minimum is inappropriate under circumstances in which all or part of the line of credit is not guaranteed to be available to a fund—for example, because it is a committed line of credit that may be shared among other members of the fund family. Even if the credit facility was committed just to the fund, the amount ultimately available could depend on the financial health of the institution providing the facility, as well as the terms and conditions of the facility. Finally, as discussed in the Proposing Release, while a line of credit can facilitate a fund's ability to meet unexpected redemptions and can be taken into consideration when determining its highly liquid investment minimum, we continue to believe that liquidity risk management is better conducted primarily through construction of a fund's portfolio.[688]

As with the proposed three-day liquid asset minimum requirement, a fund would be required to maintain a written record of how its highly liquid investment minimum was determined, including an assessment of each of the factors.[689] This would permit our examination staff to ascertain that funds are indeed considering the required factors, as applicable. As discussed in the Proposing Release, we continue to generally believe that it would be extremely difficult to conclude, based on the factors that a fund would be required to consider, that a highly liquid investment minimum of zero would be appropriate.[690]

3. Highly Liquid Investment Minimum Shortfall Policies and Procedures

Under rule 22e–4, a fund will be required to adopt specific policies and procedures for responding to a shortfall in the fund's assets that are highly liquid investments below its highly liquid investment minimum (for purposes of this section, a fund's ''shortfall policies and procedures''). A fund's shortfall policies and procedures, as described in more detail below, must include reporting to the fund's board of directors no later than the board's next regularly scheduled meeting with a brief explanation of the causes of the shortfall, the extent of the shortfall, and any actions taken in response.[691] Also, a fund's shortfall policies and procedures must include reporting within one business day to the fund's board if a shortfall lasts more than seven consecutive calendar days, including an explanation of how the fund plans to restore its minimum within a reasonable period of time.[692]

a. Shortfall Policies and Procedures Requirement

Rule 22e–4 as proposed did not include the requirement for a fund to adopt shortfall policies and procedures. This requirement replaces the proposed prohibition against acquiring any asset

[683] *See* SIFMA Comment Letter I.

[684] As discussed above, a fund may also take into account the types of shareholders in the fund and whether those shareholders share common investment goals affecting redemption frequency and timing. Additionally, a fund may take into account other liquidity risk management tools available to it, such as redemption fees, when determining its highly liquid investment minimum.

[685] *See* SIFMA Comment Letter I (suggesting that the Commission encourage such prospectus disclosure). We recognize that other factors, such as the size of a fund's positions and the liquidity of those positions, could impact the extent to which this risk could affect the fund.

[686] *See infra* footnote 688 and accompanying text.

[687] *See, e.g.,* Cohen & Steers Comment Letter; Oppenheimer Comment Letter.

[688] *See* Proposing Release, *supra* footnote 9, at section III.C.3; *see also, e.g.,* HSBC Comment Letter (''The degree to which a fund employs leverage can have a material impact on its liquidity demands, particularly during periods of market stress. As such, attempts to model liquidity risk should incorporate an assessment of leverage and the extent to which this might intensify liquidity demands for a given fund during different scenarios compared to unleveraged funds.''); Nuveen FSOC Notice Comment Letter, *supra* footnote 85 (''Funds without credit lines face the possibility of not being able to sell sufficient assets to raise cash to fund redemption requests, or having to sell assets at significantly discounted values. To the extent that a fund draws on a credit line to meet net redemptions (and thus temporarily leverages itself), it increases its market risk at a time when markets are stressed. While this can be potentially beneficial to long-term performance if the asset class recovers, it increases the risk of loss to remaining shareholders if markets continue to weaken.'').

[692] See id.

other than a three-day liquid asset if a fund's holdings of three-day liquid assets were to drop below its three-day liquid asset minimum (for purposes of this section, the ''proposed acquisition limit'').[693] As discussed above, commenters expressed concerns that the proposed acquisition limit could have adverse effects on funds, their shareholders, and the markets in which funds operate. Specifically, commenters cautioned that shareholder redemptions could increase if shareholders observe that a large redemption has taken place and assume that the fund will not be able to effectively employ its investment strategy due to the proposed prohibition on acquiring any assets that are not three-day liquid assets.[694] Commenters suggested that this, in turn, could incentivize shareholders to redeem quickly in times of stress, which could spark additional redemptions from funds in stressed periods. Some commenters also argued that the proposed acquisition limit could lead index funds to hold a level of relatively liquid assets that causes them to deviate from the construction of their indices[695] and could cause funds that are managed relative to a benchmark to experience higher tracking error.[696] Commenters also maintained that the proposed acquisition limit could impair actively managed funds to the extent that it could limit portfolio managers' discretion to purchase assets that they believe would maximize funds' returns.[697]

In addition, commenters argued that the proposed acquisition limit could effectively prevent funds from holding or acquiring favorable, but relatively less liquid, assets under certain circumstances, which could intensify market stress as well as adversely affect a fund's NAV.[698] For example, some commenters suggested that a fund whose three-day liquid asset holdings were to fall below its minimum could feel pressure to sell less liquid assets in order to replenish its three-day liquid assets, which could lead to excessive sales of less liquid assets during times of market stress that could adversely affect the fund's NAV.[699] Relatedly, commenters suggested that the proposed acquisition limit could produce harmful market effects if it were to significantly increase the demand for relatively liquid assets, which could conversely decrease demand for other asset types (making them less liquid) and exacerbate market volatility.[700] Commenters expressed concern that any ''herding'' behavior that could result from the proposed acquisition limit could become especially pronounced during stressed periods.[701] Commenters also argued that the proposed acquisition limit could prevent a fund manager from purchasing certain investments that it views as undervalued in a downturn, when the fund's holdings of three-day liquid assets are at or below the fund's minimum.[702] They contended that this in turn could reduce the fund's universe of potential investments and ability to invest in contrarian and countercyclical ways,[703] which could eliminate a potential pool of buyers and thus could exacerbate an already stressed environment.[704]

A significant number of commenters suggested that the Commission adopt a liquid asset target in lieu of the proposed three-day liquid asset minimum requirement—indeed, this was the most common alternative suggestion to the proposed three-day liquid asset minimum requirement.[705] One primary distinction between the target requirements that commenters recommended and the proposed three-day liquid asset minimum requirement is that a target requirement would not prohibit a fund from acquiring certain assets if a fund's holdings of relatively liquid assets were to fall below the target. Instead, some commenters stated that a fund should have a reasonable period to respond to a shortfall of relatively liquid assets below the fund's target, and/or that any such shortfalls must be reported to the fund's board.[706]

We continue to believe that fund shareholders' interests are generally best served when the percentage of a fund's assets invested in relatively liquid investments is at (or above) the level deemed appropriate by the fund.[707] The highly liquid investment minimum requirement we are adopting would not prohibit a fund from acquiring assets other than highly liquid investments when a fund's highly liquid investments fall below its minimum. However, we believe that the shortfall policies and procedures requirement we are adopting—which replaces the proposed acquisition limit—provides flexibility while also promoting effective liquidity management practices. We believe this requirement also responds to concerns about a flat prohibition against purchasing certain assets when the fund's assets that are highly liquid investments drop below a certain level.

Additionally, we believe that the shortfall policies and procedures requirement responds appropriately to commenters' concerns that there could be appropriate reasons for a fund to acquire an investment other than a highly liquid investment if a fund were to fall below its minimum. The final highly liquid investment minimum requirement will require that funds determine a level of assets that are highly liquid investments designed to help them manage the fund through stressed conditions or opportunistically readjust their portfolios, while permitting a fund's portfolio liquidity to fall below this level when determined appropriate from a risk management perspective or on account of extenuating circumstances. The shortfall policies and procedures requirement, including the reporting requirement, is meant to foster discussion among the fund's management (and board) if its assets that are highly liquid investments fall below the level the fund determined to be an appropriate minimum. We further believe that the final highly liquid investment minimum requirement appropriately responds to commenters' concerns that the proposed acquisition limit could restrict funds' ability to meet their principal investment strategies, to the detriment of fund investors. The final requirement provides fund managers more leeway than the proposed requirement to structure and modify their portfolios because—as would be the case in the target requirement commenters suggested—fund managers would not be prevented from purchasing certain assets when a fund's holdings of assets that are highly liquid investments drop below its highly liquid investment minimum.

The highly liquid investment minimum requirement we are adopting, together with the shortfall policies and

procedures requirement, also responds to commenters' concerns that the proposed acquisition limit could exacerbate potential market stresses and lead to other harmful market effects. Under the final rule, a fund that falls below its highly liquid investment minimum would not be restricted to acquiring only highly liquid investments, if acquiring other investments were consistent with the fund's shortfall policies and procedures. Also, as discussed above, the requirement that a fund determine its highly liquid investment minimum taking into account only those stressed conditions that are reasonably foreseeable during the period until the next review of the highly liquid investment minimum should decrease the probability that a fund could overweight its assets that are highly liquid investments relative to its liquidity risk. This also, in turn, should lessen demand for highly liquid investments compared to the possible market effects of the proposed requirement.

Finally, we believe that the final highly liquid investment minimum requirement, in conjunction with the shortfall policies and procedures requirement, will help to mitigate some of the operational burdens that commenters argued would accompany the proposal,[708] while continuing to advance the Commission's goals. We note that the highly liquid investment minimum requirement will involve monitoring a fund's portfolio investments' liquidity for compliance. We recognize that this monitoring may result in operational costs, which could be greater for funds with multiple sub-advisers to the extent that these funds would need to build or otherwise implement systems to coordinate portfolio liquidity information provided by each sub-adviser.[709] However, we expect that the operational costs associated with the final highly liquid investment minimum requirement would be significantly less compared to the proposal, which would have entailed the additional costs of building systems that would bar the purchase of less liquid investments if the fund were to fall below its minimum. We understand that some fund complexes today already track a liquid asset minimum or target, and for these funds, operational costs associated with the final minimum requirement would only entail adjustments to their current processes and not the costs of an entirely new systems build-out.

b. Operation of Shortfall Policies and Procedures Requirement

Rule 22e–4 provides flexibility as to the particular shortfall policies and procedures a fund may adopt because we believe that different facts and circumstances could result in different funds taking different approaches to address a decline in assets that are highly liquid investments.[710] We also recognize that it may be difficult to contemplate or specify all appropriate factors to consider (or their weighting) in advance of a shortfall, and that part of the decision process requires an evaluation of the current stress event and a determination of whether it is likely to persist (and for how long). Nonetheless, a fund's shortfall policies and procedures could specify some of the actions that a fund could consider taking to respond to a highly liquid investment minimum shortfall under different conditions, as well as market- and fund-specific circumstances that could shape a fund's response to a particular shortfall occasion. For example, the policies and procedures could outline some of the circumstances under which it could be appropriate for a fund to purchase assets that are *not* highly liquid investments, despite being below its minimum. If, for example, the fund reasonably expected inflows in the near future (*e.g.,* from a retirement plan platform), it may determine it is acceptable to pursue an attractive buying opportunity despite a decline below the fund's highly liquid investment minimum that it expects to be short-term. It also could be appropriate, for example, for a fund to consider selling certain relatively less liquid holdings over a period of time and investing some of the proceeds in highly liquid investments.

Similarly, as part of its shortfall policies and procedures, a fund could set forth how it would set out a time frame by which it plans to bring its assets that are highly liquid investments back up to the level of its highly liquid investment minimum.[711] If a fund encounters highly liquid investment minimum shortfalls regularly, a fund's liquidity risk management program administrator, potentially together with the fund's broader risk management function, should consider whether the fund's risk management policies and procedures should be modified. We note that a fund's shortfall policies and procedures could, but will not be required to, specify the persons who will typically determine how, if at all, to respond to a shortfall (for example, the person designated by the board to administer the fund's liquidity risk management program, in conjunction with the fund's risk managers and portfolio managers).

As discussed below, although we are not requiring a fund's board to specifically approve its highly liquid investment minimum, we continue to believe that the board should play an oversight role with respect to the minimum.[712] A requirement to inform the board when a fund drops below its highly liquid investment minimum, as well as the circumstances leading to the fund's highly liquid investment minimum shortfall and actions taken in response, will permit the board better to understand circumstances that may give rise to heightened liquidity risk. It also will provide important context for the board in evaluating the effectiveness of the fund's highly liquid investment minimum and the fund's liquidity risk management program generally. Many commenters suggested that the Commission should adopt a board reporting requirement when a fund's holdings of relatively liquid assets drop below the level that the fund has generally targeted as appropriate.[713] Rule 22e–4 as adopted generally reflects these suggestions.

As fund boards are charged with oversight and not day-to-day management of funds' liquidity risk, we

[708] *See, e.g.,* Federated Comment Letter (suggesting that the proposed requirement could present significant operational and technological challenges because a fund's trade order management system would need to maintain the liquidity classification for each security in order to accurately monitor compliance with the fund's three-day liquid asset minimum); ICI Comment Letter I (noting that the proposed requirement would raise operational difficulties for funds with multiple sub-advisers because compliance would necessitate consideration of portfolio assets' liquidity at the fund level, and thus the proposal would require a significant amount of coordination among sub-advisers).

[709] *See also infra* paragraph accompanying footnote 818 (discussing the coordination of liquidity risk management efforts undertaken by various service providers, including a fund's sub-adviser(s)).

[710] For example, a fund may handle a shortfall due to changes in market conditions differently than a shortfall due to increased redemptions.

[711] If a fund's highly liquid investment minimum shortfall lasts more than seven consecutive calendar days, reporting to the fund's board within one business day is required, including an explanation of how the fund plans to restore its minimum within a reasonable period of time. *See* rule 22e–4(b)(1)(iii)(A)(3).

[712] *See infra* section III.H.3.

[713] *See, e.g.,* J.P. Morgan Comment Letter (suggesting a breach would necessitate a report to the board); SIFMA I Comment Letter (suggesting a ''highly liquid asset target'' and noting that ''[i]nstances where a fund dipped below its target percentage [could] be reported to the fund board with an explanation from management as to why the fund dipped below its target and any resulting impact on the fund's liquidity risk profile''); Invesco Comment Letter; Dechert Comment Letter.

believe that it is appropriate not to require that the fund's board be informed that the fund has dropped below its highly liquid investment minimum immediately when this occurs. Thus, rule 22e–4 requires that a fund's board be informed of a highly liquid investment minimum shortfall at the board's next regularly scheduled meeting.[714] If a fund were to drop below its highly liquid investment minimum multiple times prior to the next regularly scheduled board meeting, fund management could provide a single report to the board at that meeting discussing each of these occurrences.

However, we believe that when a fund's assets that are highly liquid investments are below its minimum for an extended period of time, this could indicate especially heightened liquidity risk, and thus under these circumstances it is appropriate to report a highly liquid investment minimum shortfall to the board within a shorter time frame. We are therefore adopting the requirement for a fund to report to its board of directors within one business day if its shortfall lasts longer than seven consecutive calendar days. Rule 22e–4 requires that this accelerated reporting include an explanation of how the fund plans to restore the fund's highly liquid investment minimum within a ''reasonable'' period of time. Fund management generally should take into account the fund's level of liquidity risk, as well as the facts and circumstances leading to the highly liquid investment minimum shortfall, in determining a reasonable time for returning the fund's assets that are highly liquid investments to the fund's minimum level.

4. Periodic Review of Highly Liquid Investment Minimum

Rule 22e–4 requires a fund to periodically review, no less frequently than annually, the fund's highly liquid investment minimum.[715] The proposed rule also included a periodic review requirement with respect to the proposed three-day liquid asset minimum, but instead of an annual minimum review requirement, the proposed rule would have required that the periodic review be conducted at least semi-annually.[716] We requested comment on this proposed review requirement generally, including the proposed minimum frequency of a fund's review. We received few comments on the proposed review requirement separate from general comments on the proposed three-day liquid asset minimum, although we received general support for a review requirement concerning a fund's target level of liquid assets.[717]

We continue to believe, as discussed in the Proposing Release, that a periodic review is a central component of the highly liquid investment minimum requirement we are adopting.[718] Although we proposed a minimum semi-annual review requirement, we are adopting a minimum annual review requirement primarily in order to correlate the minimum period for a fund's highly liquid investment minimum review with the minimum period in which a fund's board would be required to review a written report describing the adequacy of the fund's liquidity risk management program, as described in more detail below.[719] The minimum annual review period also would correlate with the requirement for a fund to review its liquidity risk periodically, but no less frequently than annually.[720] We believe that correlating the time periods for each review requirement in rule 22e–4 will reduce compliance burdens and mitigate potential confusion that could arise from disparate review periods.

We also do not believe that extending the highly liquid investment minimum review period from a minimum of semi-annually to annually will adversely affect funds or investors as a fund generally should review its highly liquid investment minimum more frequently if circumstances warrant. Additionally, as discussed above, a fund's board will be regularly informed of any highly liquid investment minimum shortfalls. Thus, the board will be aware of any liquidity risk management issues that might warrant reconsideration of the fund's risk management procedures or its highly liquid investment minimum.

Like the requirement for a fund to periodically review its liquidity risk, the highly liquid investment minimum review requirement will permit each fund to develop and adopt its own procedures for conducting this review, taking into account the fund's particular facts and circumstances. Additionally, we believe that in developing comprehensive review procedures, a fund should generally consider including procedures for evaluating regulatory, market-wide, and fund-specific developments affecting the fund's liquidity risk. A fund also may wish to adopt procedures specifying any circumstances that would prompt more frequent review of the fund's highly liquid investment minimum in addition to the annual minimum review required by the rule (as well as the process for conducting more frequent reviews).[721]

5. Exclusion for Funds Primarily Holding Assets That Are Highly Liquid Investments

Rule 22e–4, as adopted, excludes a fund that primarily holds assets that are highly liquid investments (a ''primarily highly liquid fund'') from the requirements to determine and review a highly liquid investment minimum, and to adopt shortfall policies and procedures.[722] We sought comment in the Proposing Release about whether we should exclude certain funds from the proposed three-day liquid asset minimum, such as funds that only invest in three-day liquid assets. Commenters argued that a requirement for a fund to determine a minimum portion of assets that it will invest in relatively liquid assets is not suitable for funds that primarily invest in highly liquid investment classes, given that a significant portion of the fund's portfolio would be composed of such assets, and thus the benefits associated with the three-day liquid asset minimum requirement would not justify the burdens.[723] After considering these comments and reevaluating the costs and benefits of the proposal, we agree that a primarily highly liquid fund should not be required to determine and review a highly liquid investment minimum, or adopt shortfall policies and procedures. We agree with commenters that the benefits associated with these requirements as applied to

[720] *See supra* section III.B.3.

[721] *See, e.g., supra* footnote 273 and accompanying paragraph; *see also supra* section III.D.2.a.

[722] *See* rule 22e–4(b)(1)(iii)(A).

[723] *See, e.g.,* FSR Comment Letter (''[T]he Commission should consider alternative regulatory approaches for index funds that seek to track the performance of indices that are comprised of highly liquid assets . . . .''); Dechert Comment Letter (citing Statement on Open-End Fund Liquidity Risk Management Programs and Swing Pricing, Commissioner Daniel M. Gallagher, Securities and Exchange Commission (Sept. 22, 2015) (''Furthermore, for funds that invest solely in assets that can be settled in three days or less—for example, a fund that limits its investments to equity securities of S&P 500 companies—the 'three-day bucket' has no functional value. Requiring such a fund to set its three-day bucket—whether it be at 1%, or 20% or even 90%—would be a meaningless exercise given that the entire portfolio would be comprised of assets settled in three days or less.'')).

primarily highly liquid funds would not justify the associated burdens.[724]

Under rule 22e–4, a fund whose portfolio consists primarily of assets that are highly liquid investments would be excluded from the highly liquid investment minimum requirement.[725] Thus, we anticipate that a primarily highly liquid fund would address in its liquidity risk management program how it determines that it primarily holds assets that are highly liquid investments, including, for example, how it defines ''primarily.''[726] If a fund were to modify its investment strategy or encounter strategy ''drift'' such that it no longer primarily held assets that were highly liquid investments, it would be required to adopt and review a highly liquid investment minimum, as well as adopt and implement policies and procedures for responding to a shortfall of the fund's assets that are highly liquid investments below its minimum. We therefore believe that if a fund's investment strategy is such that it cannot generally be predicted whether the fund would primarily hold assets that are highly liquid investments (for example, if the strategy were to entail a significant amount of volatility in terms of the fund's portfolio liquidity), it would be difficult for the fund's management to conclude that the fund should appropriately be excluded from the highly liquid investment minimum requirement.

For purposes of determining whether a fund primarily holds assets that are highly liquid investments, a fund must exclude from its calculations the percentage of the fund's assets that are highly liquid investments that it has segregated to cover derivatives transactions that the fund has classified as moderately liquid investments, less liquid investments, and illiquid investments, or pledged to satisfy margin requirements in connection with those derivatives transactions, as determined pursuant to rule 22e–4(b)(1)(ii)(C).[727] As discussed above, when a fund's assets are segregated or pledged in connection with derivatives transactions, they may not be immediately available for liquidity risk management purposes.[728] Thus, a fund whose assets that are highly liquid investments that are segregated or pledged in connection with derivatives transactions may not have the same level of liquidity risk management flexibility as a fund whose assets are highly liquid investments that are not similarly segregated or pledged. While we believe that the benefits associated with the highly liquid investment minimum requirements as applied to primarily highly liquid funds would not justify associated burdens,[729] we believe that this consideration is appropriate only to the extent a fund primarily holds assets that are highly liquid investments that are not segregated or pledged in connection with derivatives transactions. As an extreme example, if a fund were to hold only assets that were highly liquid investments that were segregated or pledged in connection with derivatives transactions and that were not themselves classified as highly liquid investments, none of its assets that were highly liquid investments would be available to meet redemptions or otherwise manage liquidity risk. Thus, we believe that such fund's assets that were highly liquid investments would likely not be commensurate with its liquidity risk profile as determined with reference to the liquidity risk factors it would be required to consider under rule 22e–4.[730]

6. Highly Liquid Investment Minimum Reporting and Disclosure Requirements

We proposed to amend Form N–PORT to add a new item that would require each fund to disclose its three-day liquid asset minimum, as such term was proposed to be defined in proposed rule 22e–4. One commenter supported reporting the three-day liquid asset minimum in a structured data format to the public as proposed.[731] Certain other commenters supported reporting the three-day liquid asset minimum in a structured data format as proposed but to the Commission only.[732] One commenter did not support public disclosure of a fund's three-day liquid asset minimum, as proposed, but said it would support public disclosure of a fund's three-day liquid asset minimum if the Commission adopted a recommended alternative to such definition.[733]

Some commenters, however, opposed public disclosure of both the three-day liquid asset minimum as proposed and recommended alternatives to the three-day liquid asset minimum. Commenters expressed concerns that public disclosure could be misleading to investors, arguing that any minimum reported on Form N–PORT would be subjective, presented without context, and may not reflect a fund's actual portfolio management approach at the time the data is being relied upon by investors.[734] Other commenters contended that public disclosure could interfere with a fund's investment strategy and promote unwarranted, and potentially destabilizing, redemption activity by fund shareholders, especially during times of stress.[735] One commenter stated that public disclosure of a liquidity minimum would also give undue emphasis to a single element of a fund's liquidity risk management program and could potentially encourage third parties to use a single numerical figure as a basis for comparing funds, further encouraging undue reliance on the liquidity minimum figure by investors.[736] Certain other commenters expressed concern that public disclosure could potentially expose a fund to predatory trading activity if the fund is seen as vulnerable to liquidity risks or is under stress.[737] In addition, one commenter contended that comparisons of three-day liquid asset minimums could result in competitive pressures for relatively

[724] For more discussion about the costs and burdens associated with the highly liquid investment minimum requirement, *see infra* section IV.C.

[725] *See* rule 22e–4(b)(1)(iii)(A). Money market funds and In-Kind ETFs also would be excluded from the highly liquid investment minimum requirement. *See* rule 22e–4(a)(5) (defining ''fund,'' for purposes of the rule as excluding money market funds and In-Kind ETFs).

[726] As noted by commenters, a highly liquid index fund would be one example of a fund whose portfolio consists primarily (in the case of these index funds, almost entirely) of assets that are highly liquid investments. *See supra* footnote 723. In our view, if a fund held less than 50% of its assets in highly liquid investments it would be unlikely to qualify as ''primarily'' holding assets that are highly liquid investments.

[727] Rule 22e–4(b)(1)(iii)(B). As described above, a fund would be permitted to exclude its derivatives transactions that are classified as highly liquid investments in determining the percentage of highly liquid investments that are segregated or pledged assets because, since the fund could dispose of or exit these derivatives transactions within three business days, the associated segregated or pledged assets also would be available to the fund for liquidity risk management purposes within three business days. *See supra* text following footnote 493.

[728] *See supra* section III.C.3.c.

[729] *See supra* footnote 724 and accompanying text.

[730] *See supra* section III.D.2 (discussing the rule 22e–4 requirement for a fund to consider certain liquidity risk factors in determining its highly liquid investment minimum).

[731] *See* Charles Schwab Comment Letter (noting that information about the fund's liquidity risk management program will be particularly helpful to investors, as will disclosure of a fund's overall liquidity picture and a fund's three-day liquid asset minimum).

[732] *See, e.g.,* CFA Comment Letter; Voya Comment Letter.

[733] *See* Vanguard Comment Letter.

[734] *See, e.g.,* Eaton Vance Comment Letter I; J.P. Morgan Comment Letter; NYC Bar Comment Letter; Voya Comment Letter.

[735] *See, e.g.,* Eaton Vance Comment Letter I; J.P. Morgan Comment Letter; Wells Fargo Comment Letter.

[736] *See* SIFMA Comment Letter I.

[737] *See, e.g.,* Eaton Vance Comment Letter I; SIFMA Comment Letter.

uniform minimums among funds with similar investment strategies, ultimately harming fund investors.[738]

We are persuaded by some of the concerns expressed by commenters regarding the potential risks to funds and fund investors of public reporting of a fund's three-day liquid asset minimum, as proposed, or any alternative formulation, including a fund's highly liquid investment minimum, as adopted today. In response to comments, we are adopting amendments to require a fund to report its highly liquid investment minimum on Form N–PORT to the Commission on a non-public basis.[739] We believe that the requirement that a fund report to its board when the fund's assets that are highly liquid investments fall below the fund's highly liquid investment minimum, discussed above, is a more appropriate tool to assist fund boards in their oversight of fund liquidity risks, thereby ultimately protecting shareholder interests in the fund.[740]

In light of the changes we are making to the way the highly liquid investment minimum is established, the final modifications to Form N–PORT require that if a fund's minimum has changed during the reporting period, any prior minimums established by the fund during the reporting period also be reported.[741] Because, as discussed previously, we are not requiring the fund's board to approve changes to the highly liquid asset minimum, we believe it is important that any changes to the minimum during a reporting period be included in Form N–PORT to help mitigate the possibility of window dressing a fund's highly liquid asset minimum at the end of the reporting period, and allow us to monitor for changes to a fund's minimum. In addition, considering the changes we have made to the way the minimum works from the proposal, and consistent with the board and Commission reporting requirements we are adopting relating to shortfalls of a fund's minimum, the final amendments to Form N–PORT also require that if a fund is below its minimum during the reporting period, a fund needs to report the number of days it is below its minimum during the reporting period.[742] We believe that this reporting requirement will enhance our monitoring of fund's compliance with the minimum and the board and Commission reporting requirements contained elsewhere in rule 22e–4. These additional reporting requirements also would be non-public, for the same reasons discussed above.

Overall, we believe that such board oversight together with confidential reporting to the Commission is a regulatory approach that balances commenters' concerns about certain adverse effects that could arise from public reporting of liquid investment minimums with the need for enhanced investor protections and meaningful information for Commission regulatory oversight responsibilities. We believe that it is neither necessary nor appropriate in the public interest or for the protection of investors to make information regarding a fund's highly liquid investment minimum publicly available at this time.[743]

E. Limitation on Funds' Illiquid Investments

Rule 22e–4 includes a limit on a fund's ability to acquire illiquid investments. Specifically, the rule prohibits a fund from acquiring any illiquid investment if, immediately after the acquisition, the fund would have invested more than 15% of its net assets in illiquid investments that are assets.[744] The rule's 15% limit on funds' illiquid investments applies to all funds (including In-Kind ETFs).[745] Additionally, as discussed below, a fund will be required to notify its board, and confidentially the Commission, when its illiquid investments that are assets exceed 15% of its net assets. Moreover, the person(s) designated to administer the liquidity risk management program must explain in a report to the board the extent and causes of the occurrence, and how the fund plans to bring its illiquid investments that are assets to or below 15% of its net assets within a reasonable period of time.[746] If the amount of the fund's illiquid investments that are assets is still above 15% of its net assets 30 days from the occurrence (and at each consecutive 30 day period thereafter), the board of directors, including a majority of its independent directors,[747] must assess whether the plan presented to it continues to be in the best interest of the fund.

The limitation on funds' illiquid investments is similar to the limitation on ''15% standard assets'' in proposed rule 22e–4,[748] in that both requirements would limit the acquisition of assets that cannot be sold or disposed of within seven days. However, there are several key differences between the proposed and adopted requirements. Specifically, the proposed rule would have had a fund identify 15% standard assets in a process separate from the requirement to classify portfolio assets' liquidity, whereas rule 22e–4 as adopted today generally incorporates classification of portfolio investments as illiquid into the process for classifying the liquidity of a fund's portfolio investments generally. As discussed in sections III.C.1.b and III.C.3.b above, a fund is required to take into account ''relevant market, trading, and investment-specific considerations,'' and also is required to consider market depth, in classifying an investment as illiquid. Also as discussed above in section III.C.2.d, rule 22e–4 incorporates a modified value impact standard in the definition of ''illiquid investment'' from the value impact standard reflected in

738 *See* NYC Bar Comment Letter.

739 *See* General Instruction F of Form N–PORT.

740 *See supra* section III.D.3.

741 *See* Item B.7.c. of Form N–PORT.

742 *See* Item B.7.b. of Form N–PORT.

743 *See* section 45 of the Act, which provides, in summary, that the information contained in any report or other document filed with the Commission pursuant to the Act shall be made available to the public, unless by rules and regulations upon its own motion, or by order upon application, the Commission finds that public disclosure is ''neither necessary nor appropriate in the public interest or for the protection of investors.''

744 Rule 22e–4(b)(1)(iv). Rule 22e–4(b)(1)(iv) refers to investments that are ''assets'' to make clear that the 15% limit on illiquid investments applies to investments with positive values. Illiquid investments that have negative values should not be netted against illiquid investments that have positive values when calculating compliance with the 15% limit. Thus, only illiquid investments that have positive values (*i.e.,* ''assets'') should be used in the numerator.

745 *See id.; see also* rule 22e–4(a)(5) and (9) (defining the terms ''fund'' and ''In-Kind ETF'' for purposes of the rule).

746 Rule 22e–4(b)(1)(iv)(A).

747 ''Independent directors'' as used herein refers to directors who are not ''interested persons'' of a fund or In-Kind ETF, as applicable, as that term is defined in section 2(a)(19) of the Investment Company Act.

748 *See* Proposing Release, *supra* footnote 9, at section III.C.4. Under the proposed rule, ''15% standard asset'' was defined as ''an asset that may not be sold or disposed of in the ordinary course of business within seven calendar days at approximately the value ascribed to it by the fund.'' Proposed rule 22e–4(a)(4). For purposes of this definition, a fund would not have needed to consider the size of the fund's position in the asset or the number of days associated with receipt of proceeds of sale or disposition of the asset. *Id.*

We note that, as proposed, the text of rule 22e–4 would have limited the acquisition of 15% standard assets if, immediately after the acquisition, the fund would have invested more than 15% of its *total assets* (as opposed to *net assets*) in 15% standard assets. *See* proposed rule 22e–4(b)(2)(iv)(D). This reference to ''total assets'' in the proposed rule text was intended to read ''net assets,'' as was evident in the discussion of this rule provision in Proposing Release, section III.C.4 (and elsewhere in the Proposing Release), which consistently discussed the provision as limiting a fund's acquisition of 15% standard assets if, immediately after the acquisition, the fund would have invested more than 15% of its net assets in 15% standard assets. Rule 22e–4 as adopted refers to ''net assets'' instead of ''total assets.''

the proposed definition of ''15% standard asset.''

The majority of commenters supported the codification of the Commission's 15% guideline as proposed. Many commenters stated that the 15% guideline is an important investor protection measure and posited that the guideline has proven to be a highly effective safeguard against liquidity risk.[749] One commenter specifically noted that assets of open-end funds should be predominantly liquid and replacing the guideline with a formal regulatory mandate would promote investor protection.[750] Another commenter viewed the 15% guideline as a clear safeguard against liquidity risk that has the benefits of simplicity, clarity, and easy administration.[751] One commenter stated that setting reasonable controls on, and monitoring the use of, illiquid asset classes to ensure that they do not compromise the liquidity offered to investors within the fund is an important element of properly managing open-end funds.[752] Finally, one commenter suggested that the proposed codification of the 15% guideline would both increase the likelihood that funds hold adequate liquid assets to meet redemption requests without significant dilution and increase the likelihood that a fund's portfolio is not concentrated in assets whose liquidity is limited.[753]

In addition, several commenters supported a limit on the amount of illiquid assets that can be held by a fund generally, but suggested alternatives to how the 15% standard would operate or the proposed definition of 15% standard assets.[754] In fact, most commenters who expressed concerns regarding the proposed 15% limit did so in the context of suggesting alternatives to the proposal or the proposed definition of ''15% standard asset.'' Multiple commenters who discussed the proposed limit suggested that the Commission should harmonize its codification of the existing 15% guideline with the proposed requirement for a fund to classify the liquidity of its portfolio assets generally (*i.e.,* they suggested that illiquid assets be the least liquid classification category).[755] Some commenters suggested that any limit on illiquid assets should not just limit the acquisition of illiquid assets, but also should require the fund to adjust its portfolio if it exceeds the 15% limit.[756] Finally, some commenters suggested that a fund be required to notify its board and the Commission if it exceeds the 15% limit.[757] All other comments on the proposed limit were comments regarding the definition of ''15% standard asset'' and are discussed above in section III.C.2.d.

We agree with commenters who stated that codifying a limit on funds' illiquid investments should be a central element of managing open-end funds' liquidity risk, which in turn would further the protection of investors. While we believe that the highly liquid investment minimum requirement will increase the likelihood that each fund holds adequate liquid assets to meet redemption requests without significant dilution of remaining investors' interests in the fund, the limit on illiquid investments also should increase the likelihood that a fund's portfolio is not concentrated in investments whose liquidity is extremely limited, and thus will serve as an across-the-board limit on fund illiquidity. As discussed above, the Commission and staff have in the past provided guidance in connection with the 15% guideline. Today we are withdrawing this guidance along with the 15% guideline and replacing it with new requirements for determining that an investment is illiquid, as well as new guidance in this Release regarding these requirements. We believe that the limit on illiquid investments that are assets that we are adopting, together with the new definition of ''illiquid investments'' that encompasses additional elements for determining that an investment is illiquid,[758] provides a more comprehensive framework for funds to evaluate the liquidity of their investments.

We also agree, as discussed in more detail in section III.C.2.d above, that it is appropriate to harmonize the rule 22e–4 limit on illiquid investments with the rule's broader liquidity classification requirement by incorporating an illiquid investment category into the classification requirement. We believe that this harmonization will reduce confusion that could arise if we were to adopt requirements for identifying illiquid investments that differed from the requirements for classifying the liquidity of investments that are not illiquid.[759] Additionally, we believe the harmonization responds to commenter concerns that, in practice, many funds believe very few of their portfolio investments are subject to the 15% limit on illiquid securities, since funds will be required to take into account ''relevant market, trading, and investment-specific considerations'' in identifying illiquid investments and incorporate market depth considerations as part of the rule's liquidity classification requirement.[760] A fund also will be required to consider a modified value impact standard in determining if an investment is illiquid, which as discussed above, we believe will help funds make more accurate liquidity assessments, particularly for asset classes or investments that are subject to intra-day price volatility.

One commenter suggested that, if the Commission adopts requirements that would expand the set of assets that is subject to the 15% limit on illiquid assets, it could consider extending the limit beyond 15%, or extending the time-to-sale period associated with the definition of ''illiquid asset'' beyond seven days, in order to limit market disruptions.[761] We have considered this suggestion and have decided that it is not necessary.[762] We continue to believe that 15% is an appropriate limit on illiquid investments that are assets. The compliance period we are adopting for rule 22e–4 will permit funds to come into compliance with the revised 15% illiquid investment limit while minimizing market disruptions.[763]

In the proposal, we requested comment as to whether we should require a fund to divest its assets in excess of the 15% limit or whether we should limit the time period in which a fund can exceed the 15% limit. As noted above, some commenters suggested that the 15% limit should be a maintenance test, rather than an acquisition test, requiring the fund to adjust its portfolio if it exceeds the 15%

[763] *See infra* section III.M.1.

limit.[764] Another commenter argued that imposing a fixed time period in which holdings above the 15% threshold must be divested would not be appropriate because it may force sales at depressed prices to the detriment of investors.[765] In addition, one commenter noted the importance of ensuring oversight once a fund breaches the 15% limit and that efforts are made to reduce the fund's illiquid asset holdings (when possible).[766]

We believe that *requiring* a fund to divest illiquid investments if the fund's holdings of illiquid investments that are assets exceed 15% of net assets—which, as suggested by a commenter, could result in the fund needing to sell the illiquid investments at prices that incorporate a significant discount to the investments' stated value, or even at fire sale prices—could adversely affect shareholders and could potentially negate the liquidity risk management benefits of the illiquid investment limit. Therefore, under the final rule, a fund will be prohibited from *acquiring* any illiquid investment if, immediately after the acquisition, its illiquid investments that are assets would exceed 15% of its net assets.[767]

We further believe, however, that a fund should not be permitted to exceed the 15% limit on illiquid investments for an extended period of time without board oversight. Therefore, because we believe that if a fund's illiquid investments that are assets exceed the 15% limit it could indicate that the fund is encountering harmful liquidity pressures, the final rule requires, as suggested by commenters,[768] that a fund promptly report such occurrence to its board and the Commission.[769] Specifically, the final rule requires funds that hold more than 15% of their net assets in illiquid investments that are assets to report such an occurrence to their boards of directors within one business day, including an explanation of the extent and causes of the occurrence and how they plan to bring their illiquid investments that are assets to or below 15% of their net assets within a reasonable period of time.[770] We also anticipate that if a fund exceeds the 15% limit on illiquid investments that are assets at any point during the year, the written report to the board of directors regarding the adequacy and effectiveness of the liquidity risk management program would discuss the breach of the limit and, if the fund is still breaching the 15% limit at the time of the report, the plan to bring the fund's illiquid investments that are assets to or below 15% of its net assets within a reasonable period of time.[771] In addition, if the amount of the fund's illiquid investments that are assets is still above 15% of its net assets 30 days from the occurrence (and at each consecutive 30 day period thereafter), the fund's board of directors, including a majority of directors who are not interested persons of the fund, must assess whether the plan presented to it, as described above, continues to be in the best interest of the fund or in kind ETF.[772] We believe these requirements appropriately balance our concerns regarding the overall liquidity of the fund's portfolio with the potential adverse effects that the forced sale of illiquid investments could have on a fund and its shareholders. These requirements should not result in funds selling their illiquid investments at fire sale prices or at inopportune times because such a sale would likely not be in the best interests of a fund and its shareholders. However, we believe that board oversight is important when a fund's illiquid investments exceed 15% of its net assets for an extended period of time.

We acknowledge that requiring a board assessment of the appropriateness of the fund's plan to decrease its level of illiquid investments every 30 days a fund holds illiquid assets in excess of 15% of its net assets may impose burdens on boards and funds. Nonetheless, we believe that such a requirement is appropriate in light of the serious consequences that can result when a fund's liquidity becomes impaired or further deteriorates, particularly for extended periods of time.[773] We expect that this requirement will appropriately focus boards and funds on resolving liquidity impairments in a reasonable period of time and in the best interests of the fund and its shareholders. In light of the risks attendant in holding larger proportions of illiquid investments, we believe it is important that the board is provided sufficient information and regular updates so that it can make an informed judgment. Accordingly, we believe this periodic reassessment requirement in the rule is appropriate.

Additionally, as discussed in section III.M.2 below, a fund will be required to confidentially notify the Commission when its illiquid investments that are assets exceed 15% of its net assets. As discussed below, reporting of this information will assist Commission staff in its monitoring efforts of liquidity, including monitoring not only the reporting fund but also funds that may have comparable characteristics to the reporting fund and may be similarly affected by market events. The percentage of the fund's holdings invested in illiquid investments that are assets also will be disclosed on Form N–PORT to the public on a quarterly basis, with a 60-day delay, as discussed in section III.C.6 above, which will lead to increased transparency of the fund's profile regarding holdings of illiquid investments at particular points in time.

F. Policies and Procedures Regarding Redemptions in Kind

Many funds reserve the right to redeem their shares in-kind instead of with cash.[774] Mutual funds that reserve the right to redeem in kind may use such redemptions to manage liquidity risk under exceptional circumstances.[775] While many funds

[764] *See supra* footnote 756 and accompanying text.

[765] *See* HSBC Comment Letter.

[766] *See* BlackRock Comment Letter; *cf.* PIMCO Comment Letter (suggesting that, with respect to the proposed three day liquid asset minimum, if a fund breaches the minimum, its manager should be afforded a reasonable period of time to reposition the portfolio).

[767] We recognize that some index funds currently implement their strategies by using a full replication technique—*i.e.,* by investing in all of the component securities of an index. To the extent an index tracked by an index fund would require a fund using a full replication technique to invest more than 15% of its net assets in illiquid investments that are assets, such fund could not make those investments and would need to consider whether it should continue to seek to track the performance of such index or whether it should use a different investment technique, such as sampling, to track the index.

[775] *See* Karen Damato, *'Redemptions in Kind' Become Effective for Tax Management,* Wall Street Journal (Mar. 10, 1999), *available at http://www.wsj.com/articles/SB921028092685519084* ('''Redemptions in kind' are typically viewed by fund managers as an emergency measure, a step they could take to meet massive redemptions in the midst of a market meltdown.''). Besides using in-kind redemptions as an emergency measure to manage liquidity risk, funds may also use in-kind redemptions for other reasons. For example, funds may wish to redeem certain investors (particularly, large, institutional investors) in kind, because in-kind redemptions could have a lower tax impact on the fund than selling portfolio securities in order to pay redemptions in cash. This, in turn, could

Continued

disclose that they have reserved the right to redeem in kind, most funds often consider redemptions in kind to be a last resort or emergency measure, and thus many do not have specific policies or procedures in place governing such in-kind redemptions.[776] Like the proposal, the final rule requires a fund that engages in or reserves the right to engage in in-kind redemptions to adopt and implement written policies and procedures regarding in-kind redemptions as part of the management of its liquidity risk.[777] These policies and procedures generally should address the process for redeeming in kind, as well as the circumstances under which the fund would consider redeeming in kind.

Multiple commenters welcomed efforts by the Commission to facilitate funds' ability to use redemptions in kind and stated that they considered redemptions in kind an important liquidity risk management tool for allocating the cost of selling securities to meet redemptions to redeeming investors.[778] These commenters also generally agreed that as part of a fund's management of its liquidity risk, a fund should adopt and implement written policies and procedures regarding in-kind redemptions.[779] Commenters noted that there are often logistical issues associated with paying in-kind redemptions, and that this limits the availability of in-kind redemptions under many circumstances.[780] Commenters also noted that some shareholders are generally unable or unwilling to receive in-kind redemptions, which may limit its utility.[781] These commenters agreed that requiring funds to implement policies and procedures on in-kind redemptions in advance would promote a focus on addressing any legal or operations issues before the fund's use of redemptions in kind, thus making such redemptions a more practical and effective liquidity management tool.[782]

Commenters also suggested that the Commission provide guidance on the appropriate use of in-kind redemptions for funds.[783] We expect that effective fund policies and procedures on in-kind redemptions would contemplate a variety of issues and circumstances. Well-designed policies and procedures would likely address the particular circumstances in which a fund might employ in-kind redemptions, for example, detailing whether a fund would use in-kind redemptions at all times, or only under stress, and what types of events may lead the fund to use them. Such policies and procedures would also likely address whether a fund would use in-kind redemptions for all redemption requests or only for requests over a certain size.[784]

Funds may also wish to consider having policies and procedures that address the ability of investors to receive in-kind redemptions, potentially including different procedures for different shareholder types. For example, the policies and procedures might provide that retail shareholders (who may not be operationally equipped to receive in-kind redemptions) may be provided cash redemptions, but that institutional investors who may be able to receive such securities, would be paid out in-kind under certain circumstances. These procedures may also consider whether holdings through omnibus accounts pose any unique issues that should be addressed. Well-designed policies and procedures would likely also address potential operational issues with providing in-kind redemptions to various kinds of investors, and plan out methods for addressing such operational issues. These might include notifying large shareholders that may be subject to redemptions in kind and setting up securities transfer processes for those shareholders in advance.

Effective policies and procedures would also likely address how the fund would determine which securities it would use in an in-kind redemption (for example would it use illiquid or restricted securities), or whether it plans to redeem securities in kind as a *pro rata* ratio of the fund's securities holdings, or whether it would redeem in a non-*pro rata* manner. For a fund that redeems *pro rata,* policies and procedures might address how the fund plans in-kind redemptions of odd lots or small lots of securities, and if a fund were to do such odd lot transactions, how to process such transactions. They may also consider how they would accomplish in-kind redemptions of illiquid securities or securities that have restrictions on their transferability, and the extent to which these securities would not be redeemed in kind.

If a fund chooses not to redeem in a *pro rata* manner, effective policies and procedures would likely address that securities redeemed are selected and distributed in a manner that is fair and does not disadvantage either the redeeming shareholder or the remaining investors in the fund. We caution that if a fund redeems an investor's interests in a fund by transferring an unrepresentative set of securities to the investor, this may raise questions of shareholder discrimination and unfairness (as well as potentially cherry picking and favoritism), which should be addressed in the fund's policies and procedures. For example, policies and procedures could address how to ensure that any securities that are redeemed in kind in a non-*pro rata* manner are valued properly, to ensure that the securities transferred represent the proportionate share of the fund NAV.[785] They might also address how the fund would determine that shareholders are treated fairly, and are not redeemed with securities the fund deems undesirable or securities that have significant tax consequences. Relatedly, the policies and procedures may also address how the fund evaluates the tax consequences to the fund and the redeeming shareholder of distributing certain securities, for example, whether distributing certain securities that have significant capital gains or losses built in would have inequitable results.

Because the management and personnel capacity of funds facing heavy redemptions and other liquidity stresses will likely be strained as funds attempt to manage these pressures, the Commission believes that requiring funds to have policies and procedures

---

benefit the remaining shareholders in the fund. *See, e.g., id.* (''If a fund has to sell appreciated stocks to pay a redeeming shareholder, it realizes capital gains. Unless the fund has offsetting capital losses, those gains are distributed as taxable income to all remaining fund holders. By contrast, when funds distribute stocks from their portfolios, there is no tax event for the continuing holders.'').

dictating how fund's will implement in-kind redemptions will increase the likelihood that in-kind redemptions will be a feasible risk management tool, and may address any potential fund or shareholder inequities. Accordingly, we are adopting this requirement largely as proposed.[786]

G. Cross-Trades

Today, under rule 17a–7, funds may make certain affiliated securities transactions between funds and certain affiliates (''cross trades''), provided they meet certain protective conditions.[787] Rule 17a–7 includes conditions that limit the portfolio assets that may be cross-traded, and, as discussed below, cross-trades involving certain less liquid assets may not be eligible to rely on the rule. As discussed in the Proposing Release, some funds may consider engaging in cross-trades to be a useful liquidity risk management tool. Cross-trading can benefit funds and their shareholders by allowing funds that are mutually interested in a securities transaction that is consistent with the investment strategies of each fund to conduct the transaction without incurring transaction costs and without generating a market impact.[788] However, cross-trades also have significant potential for abuse. For example, as the Commission has previously stated, ''an unscrupulous investment adviser might 'dump' undesirable securities on a registered investment company or transfer desirable securities from a registered investment company to another more favored advisory client in the complex. Moreover the transaction could be effected at a price which is disadvantageous to the registered investment company.'' [789] Cross-trade transactions also may be inconsistent with the investment objectives, investment strategies, or risk profiles of participating investment companies and other advisory clients.[790]

Accordingly, rule 17a–7 requires that any cross-trades satisfy certain conditions designed to prevent such abuses, including the requirement that market quotations be readily available for each traded security and that if the security is only traded over the counter, the cross-trade be conducted at the average of the highest current independent bid and lowest current independent offer determined on the basis of reasonable inquiry.[791] In requiring market quotations for cross-traded securities, the Commission has stated that ''[r]eliance upon such market quotations provides an independent basis for determining that the terms of the transaction are fair and reasonable to each participating investment company or other advisory client and do not involve overreaching.'' [792] Rule 17a–7 also requires that a cross-trade transaction be ''consistent with the policy of each registered investment company and separate series of a registered investment company participating in the transaction, as recited in its registration statement and reports filed under the Act.'' [793]

We noted in the Proposing Release that less liquid assets are less likely to satisfy rule 17a–7 than highly liquid investments.[794] Some commenters expressed concern that this assertion would prohibit funds from, or create a presumption against, cross-trading any assets deemed less liquid,[795] or directly incorporate liquidity classification decisions into rule 17a–7 eligibility determinations.[796] One commenter, disagreeing with the assertion that less liquid assets are less likely to satisfy rule 17a–7 than highly liquid assets, stated ''a less actively traded security may be less liquid, but nonetheless have readily available market quotations, and a fund may determine that independent bid and offer prices are available in the market. The relative illiquidity of the security itself will not alone be determinative of whether prices are available for Rule 17a–7 purposes.'' [797]

We note that less liquid assets, by definition, are less likely to trade in highly active markets that produce readily available market quotations, which may make it more difficult to ensure that the terms of a cross-trade transaction are fair and reasonable to each participating investment company or other advisory client and do not involve overreaching. As one commenter noted, ''rule 17a–7 broadly requires the availability of accurate valuation information with respect to any security proposed to be traded from one adviser-directed account to another. This effectively requires such securities to be relatively liquid.'' [798] Moreover, the absence of highly active markets for less liquid assets may exacerbate the concern discussed above relating to ''dumping'' undesirable securities, because limited markets for such assets indicates that there are fewer alternate options for disposing of the assets. Similarly, the absence of highly active markets for less liquid assets may exacerbate the concern relating to a transfer of assets that is inconsistent with the investment objective, investment strategies, or risk profile of each participating investment company or other advisory client.

We agree that an assessment of an asset's liquidity, without more, would not determine whether the asset is eligible for a cross-trade transaction under rule 17a–7. However, as noted above, we believe that any assets used in a cross-trade transaction should be scrutinized to ensure that they satisfy all of rule 17a–7's requirements. Due to the particular risks associated with cross-trading less liquid assets, it may be

[786] The rule text has been slightly modified to make clear that redemption in kind policies and procedures must address not just how the fund will engage in redemptions in kind, but also when it will do so. Rule 22e–4(b)(1)(v).

[787] Section 17 of the Act restricts transactions between an ''affiliated person of a registered investment company or an affiliated person of such affiliated person'' and that investment company—for example, transactions between a fund and another fund managed by the same adviser. A fund must therefore obtain exemptive relief from the Commission before entering into purchase or sale transactions with an affiliated fund, or execute such transactions subject to the provisions of rule 17a–7 under the Investment Company Act (permitting purchase and sale transactions among affiliated funds and other accounts, under certain circumstances).

[788] As noted above, rule 17a–7 requires that each cross-trade be consistent with the policy of each fund participating in the transaction and that no brokerage commissions, fees or other remuneration be paid in connection with the transaction. Because cross-trades are conducted privately between funds, they are not transparent to market trading reporting systems and thus are unlikely to generate a market impact.

[789] Exemption of Certain Purchase or Sale Transactions Between a Registered Investment Company and Certain Affiliated Persons Thereof, Investment Company Act Release No. 11136 (Apr. 21, 1980) [45 FR 29067 (May 1, 1980)]. *See also* Evergreen Order, *supra* footnote 46 (fund's adviser failed to seek best execution in trading fund securities and favored one client over another, thereby engaging in transactions that operated as a fraud or deceit upon its client in violation of section 206(2) of the Advisers Act).

[790] A fund that provided a non-*pro rata* distribution of cash, securities or other property to a shareholder that owns 5% or more of the fund and/or gives any election to the shareholder about which assets to receive may also raise affiliated transaction concerns under section 17(a) and rule 17a–5, as such a transaction would fall outside the exemption provided by rule 17a–5 and thus might be viewed as a sale to or purchase from the fund by an affiliated person.

[791] *See* rule 17a–7(b).

[792] Exemption of Certain Purchase or Sale Transactions Between a Registered Investment Company and Certain Affiliated Persons Thereof, Investment Company Act Release No. 11676 (Mar. 10, 1981) [45 FR 17011 (Mar. 17, 1981)]. The Commission has historically declined to expand rule 17a–7 to cross-trades for which market quotations were not readily available and where independent current market prices were not available because these conditions increase the potential for abuse through cross-trades. *See id.*

[793] *See* rule 17a–7(c).

[794] *See* Proposing Release, *supra* footnote 9, at n.396 and accompanying text.

[795] *See* ICI Comment Letter I.

[796] *See* Comment Letter of Simpson Thacher & Bartlett LLP (Jan. 14, 2016) (''Simpson Thacher Comment Letter'').

[797] *See* Fidelity Comment Letter.

[798] See id.

prudent for advisers to subject less liquid assets to careful review (and potentially even a heightened review compared to other more liquid assets) before engaging in such transactions.

We note that cross trading also implicates a fund's adviser's duty to seek best execution for each fund or other advisory client, as well as its duty of loyalty to each fund or other advisory client.[799] An adviser should not cause funds or other clients to enter into a cross-trade unless doing so would be in the best interests of each fund or other client participating in the transaction. Advisers should be particularly sensitive to the possibility of heightened conflicts when one or both of the clients is experiencing stress at the time of consideration of a cross trade.

Under rule 38a–1, a fund's compliance policies and procedures related to rule 17a–7 generally should contemplate how the fund meets the rule's requirements with regard to less liquid assets. For example, as part of these policies and procedures, a fund might consider conducting a review of less liquid assets before cross-trading them to ensure that ''market quotations are readily available,'' that a ''current market price'' is available, that the transaction is in line with each participating investment company's or other advisory client's investment objective, investment strategies and risk profile, and that the cross-trade satisfies all other requirements set forth in rule 17a–7. Reasonably designed policies and procedures thus would likely specifically address how a fund would determine that such less liquid securities are appropriately used when meeting the requirements of rule 17a–7. The specific review of a less liquid asset would likely vary depending on the characteristics of the market or markets in which the asset transacts, the characteristics of the asset itself, and the nature of the funds potentially involved in the cross trade.

In crafting policies and procedures reasonably designed to address the particular risks of cross-trading less liquid assets, a fund could consider specifying the sources of the readily available market quotations to be used to value the assets and establish specific criteria for determining whether market quotations are current and readily available, and include potential back-up sources if the primary sources are not available. Funds should consider including in their policies and procedures periodic reviews of the continuing appropriateness of those sources of readily available market quotations.

In addition, a fund's policies and procedures might also provide for assessing the quality of quotations provided by dealers. The quality of dealer quotations may vary depending upon, among other things, the extent to which a dealer makes a market in or retains an inventory in the particular security, or in similar securities, such that the dealer maintains an awareness of changes in market factors affecting the value of the security.[800] ''Indications of interest'' and ''accommodation quotes,'' may not necessarily reflect the current market values of the securities and thus are not ''market quotations'' or ''market values'' for the purposes of rule 17a–7.[801]

In addition, reasonably designed policies and procedures likely would also include compliance monitoring to help ensure that the investment objective, investment strategies and risk profile of each participating investment company or other advisory client are scrutinized in conjunction with the characteristics of any cross-traded asset to evaluate whether the asset transfer is not in line with any objective or strategy or inappropriately shifts risk from one investment company or other advisory client to another. Whether a cross-trade is in the best interest of an investment company or other client purchasing an asset may depend, in part, on the relative liquidity of the purchaser's existing portfolio assets and the level of redemptions that may be reasonably anticipated by the purchaser.

H. Board Approval and Designation of Program Administrative Responsibilities

Directors, and particularly independent directors, play a critical role in overseeing fund operations, although they generally may delegate day-to-day management to a fund's adviser.[802] As discussed below, we are adopting as proposed the requirement for a fund's board of directors to approve the investment adviser, officer, or officers who are responsible for administering the program and to approve the fund's written liquidity risk management program. However, in a change from the proposal, the board will not be required to specifically approve the fund's highly liquid investment minimum (except in the limited circumstances that a fund below its minimum seeks to change it) or to approve material changes to the program. Instead, similar to rule 38a–1, the board will be required to review, no less than annually, a written report prepared by the investment adviser, officer, or officers designated to administer the liquidity risk management program that describes a review of the program's adequacy and effectiveness, including, if applicable, the operation of the highly liquid investment minimum, and any material changes to the program.[803] As discussed in detail below, the final rule retains a role for the board in overseeing the fund's liquidity risk management program, but in response to commenters, eliminates certain of the more specific and detailed approval requirements.

We believe the role of the board under the rule is one of general oversight, and consistent with that obligation we expect that directors will exercise their reasonable business judgment in overseeing the program on behalf of the fund's investors. As discussed in the Proposing Release, directors may satisfy their obligations with respect to this initial approval by reviewing summaries of the liquidity risk management program prepared by the fund's investment adviser, officer, or officers administering the program, legal counsel, or other persons familiar with the liquidity risk management

[799] *See, e.g.,* In re Western Asset Management Co., Investment Company Act Release No. 30893 (Jan. 27, 2014) (settled action) (stating that the adviser to funds and other advisory clients engaging in cross-trading ''has a fiduciary duty of loyalty to its clients and also must seek to obtain best execution for both its buying and selling clients'' and finding that the adviser aided and abetted and caused violations of section 17(a) and violated Advisers Act section 206).

[800] Dealers do not necessarily purport to provide quotations for securities that reflect their current market values. Some dealers may provide only ''indications of interest,'' *i.e.,* non-firm expressions of interest to trade that do not constitute quotations or ''accommodation quotes''. *See, e.g.,* Regulation NMS, Securities Exchange Act Release No. 49325 (Feb. 26, 2004) [69 FR 11126 (Mar. 9, 2004)], at n.257. *Cf.* Rules 600(b)(8) and (62) under Regulation NMS [17 CFR 242.600(b)(8) and 242.600(b)(62)] (defining ''bid or offer'' as ''the bid price or the offer price communicated by a member of a national securities exchange or member of a national securities association to any broker or dealer, or to any customer, at which it is willing to buy or sell one or more round lots of an NMS security, as either principal or agent, but shall not include indications of interest,'' and defining ''quotation'' as ''a bid or an offer'').

[801] *Id.* We also note that evaluated prices provided by pricing services are not, by themselves, readily available market quotations. *See* 2014 Money Market Fund Reform Adopting Release, *supra* footnote 43, at n.895 and accompanying text.

program.[804] The summaries should familiarize directors with the salient features of the program and provide them with an understanding of how the liquidity risk management program addresses the required assessment of the fund's liquidity risk.

Many commenters expressed general support for board oversight of the liquidity risk management program, although several objected to certain of the board's specific responsibilities required under the rule, in particular their approval of the three-day highly liquid asset minimum and of material changes to the program.[805] Given the board of directors' historical oversight role, the Commission continues to believe it is appropriate to require a fund's board to oversee the fund's liquidity risk management program. The rule's requirements are designed to facilitate the board's oversight of the adequacy and effectiveness of the fund's liquidity risk management program.

Several commenters asked that the final rule include an express standard of care (*i.e.,* the business judgment rule) to which the Commission would hold a fund's board accountable in this area.[806] One commenter requested that the final rule provide fund boards with a safe harbor in approving specific elements of the program and clarification that a board is not required to consider all of the enumerated factors (specifically, any non-applicable factors) when setting and adjusting the three-day liquid asset minimum.[807] We believe that the changes made to the board oversight role from the proposal should largely address the commenters' concerns. In addition, we believe that the board oversight role here is substantially similar to its role and responsibilities in other contexts under the Investment Company Act, and that providing a different standard of care for board action here would not be appropriate.[808]

1. Designation of Administrative Responsibilities to Fund Investment Adviser, Officer, or Officers

We are adopting substantially as proposed the requirements that the fund's board of directors approve the designation of the fund's investment adviser, officer, or officers (which could not be solely portfolio managers of the fund) responsible for administering the fund's liquidity risk management program.[809] We are also adopting, substantially as proposed, the requirement that the administrator of the program provide the board with a written report on the adequacy of the fund's liquidity risk management program, including the highly liquid investment minimum, and the effectiveness of its implementation, at least annually.[810] The Commission continues to believe this approach properly tasks the person(s) who are in a position to manage the fund's liquidity risks on a real-time basis with responsibility for administration of the liquidity risk management program. Designating the fund's investment adviser, officer, or officers responsible for the administration of the fund's liquidity risk management program, subject to board approval, is consistent with the way the Commission understands most funds manage liquidity.[811]

We received little comment on this aspect of the proposal. A few commenters agreed with the proposal that the board's responsibilities should include approval of the program's administrator.[812] We continue to believe that requiring that the board approve the designation of the administrator of the liquidity risk program is an important step in board oversight of the program. We believe that having the board approve the administrator should help enhance board oversight of the program and allow for boards to better understand who is responsible for administering it.

One commenter argued that portfolio managers should administer the program, contending that liquidity risk management requires investment skills and swiftness during stress to manage redemptions.[813] This commenter believed that if a program administrator were independent from portfolio management, then liquidity assessment might become divorced from the investment process, which the commenter argued would be disadvantageous to the fund and investors. We agree that portfolio management provides valuable input into the liquidity risk management process. However, we are concerned that if only portfolio managers run the program, the program might not be administered with sufficient independence to accomplish the goal of managing the risk of the fund's liquidity. We believe that a fund generally should consider the extent of influence portfolio managers may have on administration of the program, and seek to provide independent voices and administration of the program as a check on any potential conflicts of interest to the extent appropriate. However, as the proposal noted, although the fund's portfolio managers cannot be solely responsible for administering the program, the administrator of the program might wish to consult with the fund's portfolio manager, traders, risk managers, and others as necessary or appropriate in administering a fund's liquidity risk management program.[814] Portfolio managers may also be a part of any committee or group designated to administer the program, if more than one person is so designated. The Commission understands that some funds currently employ a dedicated risk management officer who consults with the fund's portfolio management team. One commenter noted, and we agree, that portfolio managers should provide day-to-day management of funds, with an additional layer of oversight provided by the risk and compliance framework.[815] After review of the comments received, we continue to believe that requiring the officer or officers responsible for administering the fund's liquidity risk management program not to be solely portfolio managers strikes the appropriate balance between independence and expertise.

The Commission recognizes that, in certain circumstances, a fund's service providers might assist a fund and its investment adviser by providing information relevant to a fund's assessing and managing liquidity

[815] BlackRock Comment Letter.

risk.[816] We note, however, that the primary parties responsible for a fund's liquidity risk management are the fund itself and any parties to whom the fund has delegated responsibility for administering the fund's liquidity risk management program.

One commenter requested further guidance on what responsibilities the administrator could delegate and to what extent the administrator could rely upon third parties.[817] The Proposing Release provided two examples of when a fund's service providers could assist a fund and its investment adviser in monitoring factors relevant to a fund's liquidity risk and managing the fund's liquidity risk: Third parties could provide data relevant to assessing fund flows, and a sub-adviser necessarily would be responsible for investing a fund's assets in accordance with the fund's three-day liquid asset minimum and any other liquidity-related portfolio requirements adopted by the fund.[818] As proposed, the final rules require a fund to oversee any liquidity risk monitoring or risk management activities undertaken by the fund's service providers. We encourage the fund to communicate regularly with its service providers as a part of its oversight and to coordinate the liquidity risk management efforts undertaken by various parties.

2. Oversight of the Liquidity Risk Management Program

Under the final rule, a fund will be required to obtain initial approval of its written liquidity risk management program from the fund's board of directors, including a majority of its independent directors.[819] Additionally, the fund's board will be required to review a written report from the administrator of the fund's liquidity risk management program, provided no less frequently than annually, that addresses the operation of the program and assesses its adequacy and effectiveness of implementation.[820] In a change from the proposal, a fund will not be required to obtain approval of any material changes to the fund's liquidity risk management program from the fund's board of directors, but instead such material changes will be described in the report.[821]

Commenters raised concerns that the proposed rule imposed management responsibilities on the fund's board of directors and suggested that the Commission clarify that the board's role is to provide oversight through approval of policies and procedures, whereas management's role is to devise the specific details of the program.[822] Commenters contended that the final rule should mirror rule 38a–1, requiring fund managers to explain material changes to the program (including changes to the three-day liquid asset minimum) in an annual report to the board, not to submit those changes for prior board approval.[823] These commenters felt that a requirement to discuss material changes to the liquidity risk management program in an annual update to the fund's board would strike an appropriate balance between allowing the fund manager the flexibility to make changes to liquidity risk management as market conditions might require, while also keeping the fund's board informed.[824]

We agree with commenters that requiring funds to obtain approval from fund boards before making material changes to a liquidity risk management program risks the program becoming stale and outdated as market changes occur, and is not consistent with the approach taken under rule 38a–1. Accordingly, the final rule does not require prior approval of material changes to the fund's liquidity risk management program from the fund's board of directors. However, under the final rule, the board is still required to approve the program initially and to provide oversight of it, as well as review a report on the adequacy and effectiveness of the program's implementation, which must include a description of any material changes made to the program during the period. We believe that this oversight role is consistent with the board's historical responsibilities with respect to overseeing fund operations.

3. Oversight of the Highly Liquid Investment Minimum

In a change from the proposal, under the final rule, boards will not be required to approve the highly liquid investment minimum, nor approve changes to it, except in the limited circumstances where a fund seeks to change the minimum while the fund is below the pre-established minimum. Commenters argued that because liquidity risk management, including management of three day-liquid assets, is both technical and fact-intensive and often requires day-to-day judgments, fund managers should develop and administer the program, subject to board review.[825] Commenters were concerned that the requirement for a fund to obtain board approval for setting and changing the three-day minimum may cause delay that might harm fund shareholders.[826] For example, one commenter argued that requiring board approval, which might be difficult to obtain on a timely basis, could cause a fund to stand idle as market conditions changed, missing opportunities as board approval was sought.[827]

We agree with commenters that requiring boards to approve the highly liquid investment minimum may reduce its utility, as the minimum may need to be revised on a more timely basis so that it can best reflect the liquidity management needs of the fund under current market conditions. In addition, we understand commenters' concerns that requiring mutual fund boards to make day-to-day determinations regarding the minimum amount of cash or liquid assets the fund should hold may lead to a more detailed managerial role for the board.

However, in the limited circumstances where the program administrator seeks to change the fund's highly liquid investment minimum while the fund is below the pre-established minimum, the final rules require the board to approve such a change. In the absence of such a requirement, the administrator could simply change the minimum if the fund dropped below it, avoiding the accountability of the board approval requirements as well as reducing the minimum's utility as a liquidity risk management tool. The final rule also requires the board to receive a report whenever the fund falls below its highly liquid investment minimum at its next regularly scheduled meeting and a report of such a shortfall if the fund is below its highly liquid investment minimum for more than 7 consecutive calendar days, within one business day thereafter. The Commission believes these requirements properly balance the ability of funds to move quickly in response to shifting environments with

[827] Dechert Comment Letter.

the boards' oversight of the liquidity risk management program.

4. Oversight of Illiquid Investment Limit

In a change from the proposal, the final rule will also require that a fund board be informed within one business day if the fund's holdings of illiquid investments exceed 15% of its net assets. In the proposal, we requested comment as to whether additional aspects of a fund's liquidity management program should be reported to a fund's board. For the reasons discussed in the section on Form N–LIQUID, if a fund's holdings of illiquid investments exceed 15% for any reason (for example, if a fund experiences net redemptions leading to increased holdings of illiquid investments) it may raise significant concerns regarding the fund's management of its liquidity and ability to continue to meet its redemption obligations. Accordingly, we believe that such an event should be reported to the board immediately, as it may have significant impacts on the ability of the fund to meet its redemption obligations, and may compromise its liquidity risk management.

As discussed in the section on Form N–LIQUID below, a number of commenters also expressed support for the addition of an early warning notification provision, under which funds would be required to notify the Commission (or take other action) when illiquid investments held at the end of a business day exceed 15% of net assets and continue to exceed 15% of net assets three business days after the threshold was first exceeded.[828] As discussed in the section on Form N–LIQUID, we are adopting a requirement that a fund report to the Commission within one business day if the fund's holdings of illiquid investments exceed 15% percent of its net assets. One commenter suggested that such a requirement would impose greater discipline on the oversight of fund holdings of illiquid assets, and that a fund would likely consult with the fund board in developing how to proceed in response.[829] We agree, and believe that if a fund were to file Form N–LIQUID because the fund's holdings of illiquid investments exceeded 15% of its net assets, a fund board should be informed, and should be informed quickly, so that the board can provide oversight as the fund determines how to address the level of illiquidity in the fund's portfolio. Accordingly, as a complement to this new N–LIQUID requirement, the final rules require that if a fund's holdings of illiquid investments exceed 15% of its net assets, the fund board be informed of that fact within one business day after the occurrence, with an explanation of the extent and causes of the occurrence and how the fund plans to bring its illiquid investments that are assets to or below 15% of its net assets within a reasonable period of time.

I. Recordkeeping Requirements

Under the final rules, and as we proposed, each fund will be required to maintain a written copy of the policies and procedures adopted as part of its liquidity risk management program for five years, in an easily accessible place.[830] Additionally, each fund will be required to maintain copies of any materials provided to its board in connection with the board's initial approval of the fund's liquidity risk management program, and copies of written reports provided to the board on the adequacy of the fund's liquidity risk management program, including the fund's highly liquid investment minimum, and the effectiveness of its implementation for at least five years after the end of the fiscal year in which the documents were provided to the board, the first two years in an easily accessible place.[831] In a change from the proposal, funds would also need to keep records of any materials provided to the board related to the fund dropping below its highly liquid investment minimum. As with the proposal, the final rules also require each fund to keep a written record of how its highly liquid investment minimum, and any adjustments thereto, were determined, including the fund's assessment and periodic review of its liquidity risk for a period of not less than five years, the first two years in an easily accessible place, following the determination of, and each change to, the fund's highly liquid investment minimum.[832]

One commenter found the recordkeeping requirements consistent with similar recordkeeping requirements that funds are currently required to maintain.[833] The recordkeeping requirement is designed to provide our examination staff with a basis to evaluate a fund's compliance with the requirements of rule 22e–4. We also anticipate that these records would assist our staff in identifying weaknesses in a fund's liquidity risk management. The five-year retention period is also consistent with the period provided in rule 38a–1(d) under the Act. We believe consistency in these retention periods is appropriate because funds currently have compliance program-related recordkeeping procedures in place incorporating a five-year retention period, which we believe lessen the compliance burden to funds, compared to choosing a different retention period, such as the six-year recordkeeping retention period under rule 31a–2 of the Act.

The Commission continues to believe that the rule appropriately balances recordkeeping-related burdens on funds and our examination staff's ability to evaluate a fund's liquidity risk management program in light of the requirements of rule 22e–4. We are therefore adopting this aspect of the rule substantially as proposed.

J. ETFs

We are adopting certain tailored liquidity risk management program requirements for ETFs.[834] In assessing, managing, and periodically reviewing its liquidity risk, an ETF will be required to consider certain additional factors, as applicable, that take into account its unique operation, as discussed further below.[835] Like all funds, each ETF also will be required to limit its investments in illiquid investments to no more than 15% of its net assets and obtain certain board approvals regarding the program. Certain ETFs that qualify as ''In-Kind ETFs,'' [836] (generally ETFs that redeem shares in kind except to a *de minimis* extent and that publish their holdings daily) however, will not be required to classify their portfolio investments or comply with the highly liquid investment minimum requirement.[837]

[828] *See, e.g.,* ICI Comment Letter III; SIFMA Comment Letter III (noting that this early warning notification could respond to concerns raised by the Third Avenue Fund liquidation); *see also* Third Avenue Temporary Order, *supra* footnote 12.

[829] *See* ICI Comment Letter III.

[830] *See* rule 22e–4(b)(3)(i). These policies and procedures would include any shortfall policies and procedures adopted by a fund. *See id.*

[831] *See* rule 22e–4(b)(3)(ii).

[832] *See* rule 22e–4(b)(3)(iii).

[833] CFA Comment Letter.

[834] References to ETFs in this section are to both in-kind and other open-end ETFs, but not UIT ETFs (which are not subject to the liquidity risk management program requirements), except where specifically indicated otherwise. *See infra* section III.K for a discussion of limited liquidity review requirements for principal underwriters and depositors of UITs.

[835] *See* rule 22e–4(b)(1)(i).

[836] References to ''In-Kind ETFs'' include both ETFs and ETMFs that meet the requirements in rule 22e–4(a)(9)) (defining an ''In-Kind ETF''). *See infra* footnote 851 and accompanying text (discussing a requirement that ETFs report their status as an ''In-Kind ETF,'' when applicable, on Form N–CEN).

[837] ETFs that redeem in cash, or that do not qualify otherwise as ''In-Kind ETFs'' (as defined in rule 22e–4(a)(9)) will be subject to the full set of liquidity risk management program elements, including the classification and highly liquid investment minimum requirements. *See* rule 22e–

Continued

We believe these adjusted program requirements recognize and appropriately require management of the unique liquidity risks found in ETFs, and in particular In-Kind ETFs.

A number of commenters on the proposal highlighted how ETFs differ from mutual funds, and stated in particular that In-Kind ETFs do not present the same type of liquidity risks as other funds.[838] These commenters suggested that the Commission: (i) Exempt either ETFs or In-Kind ETFs entirely from proposed rule 22e–4;[839] (ii) exempt either ETFs or In-Kind ETFs from certain requirements of proposed rule 22e–4 (notably the portfolio liquidity classification and three-day liquid asset requirements);[840] or (iii) develop a more tailored liquidity risk management program applicable to ETFs.[841]

As noted above, we believe that ETFs, like mutual funds, face liquidity risks.[842] But we agree that In-Kind ETFs have different liquidity risks than funds (including ETFs) that redeem in cash. This is particularly the case because the redeeming shareholder (*i.e.,* authorized participant or its customer), rather than the ETF, typically will bear the direct costs associated with its liquidity needs, given that if that authorized participant (or its customer) wants cash, it must sell the in-kind assets and bear the costs of doing so. Therefore, after further analysis, including carefully considering the comments received, we are adopting tailored liquidity risk management program requirements for ETFs as discussed further below.

We decline to exempt all ETFs from the rule entirely, because we believe ETFs that redeem more than a *de minimis* amount in cash can have substantially similar liquidity risks as mutual funds, and we believe that all ETFs have certain unique additional risks discussed below. In addition, while we agree that the classification and highly liquid investment minimum components of the liquidity risk management program we are adopting for other funds are not necessary for In-Kind ETFs, we believe that In-Kind ETFs must maintain sufficient liquidity and assess liquidity-related risks that could affect their shareholders. In this regard, the liquidity of an ETF's portfolio positions is a factor that may contribute to the bid-ask spread, the effective functioning of the ETF's arbitrage mechanism and the ETF's shares trading at a price that is at or close to NAV.[843] For example, if an ETF holds illiquid or less liquid investments, this will be reflected in the redemption basket transferred to a redeeming authorized participant (or its customer), which might result in a liquidity cost to the authorized participant (or its customer or other market participants). This increased cost could alter the authorized participant's decisions regarding exactly when or whether to create or redeem the ETF's creation units, possibly resulting in the ETF trading at increased spreads and/or a price that deviates significantly from its NAV and ultimately adversely impacting the ETF's investors.

Over the years, the Commission and staff have explored the structural and operational differences between ETFs (including those that redeem in kind) and other open-end funds (that redeem in cash), solicited public comment, including on issues related to the potential effects of illiquidity on the operation of ETFs and evaluated the trading of ETFs in times of market stress.[844] In 2015, the Commission solicited public comment on topics related to the listing and trading of exchange-traded investment products (''ETPs'') on national securities exchanges and sales of these products by broker-dealers.[845] Of relevance here, the Commission sought comment on all aspects of the arbitrage mechanism for ETPs (including ETFs), including what characteristics of an ETP would facilitate or hinder the alignment of secondary market share prices with the value of the underlying portfolio reference assets and how arbitrage mechanisms work in the case of ETPs with less-liquid underlying or reference assets. The questions posed in this Release, as well as the comments received, demonstrate the importance of assessing liquidity risks and liquidity needs for all ETFs, including In-Kind ETFs. We considered the comments received on the 2015 ETP Request for Comment in formulating the proposed rule and the final rule we are adopting today.

1. Definitions

Under the final rule, all ETFs must consider certain additional liquidity risk assessment factors, if applicable, but only In-Kind ETFs will be excluded from the classification and highly liquid investment minimum requirements.[846] We are defining an exchange-traded

4(b)(1)(i)–(iii). Throughout the discussion of liquidity risk management programs in this Release, references to ''funds'' include ETFs that redeem in cash, except where specifically indicated otherwise.

[838] *See, e.g.,* ICI Comment Letter; BlackRock Comment Letter; Invesco Comment Letter; SIFMA Comment Letter I.

[839] *See, e.g.,* Invesco Comment Letter (suggesting an exemption for all ETFs); FSR Comment Letter (suggesting an exemption for In-Kind ETFs); SIFMA Comment Letter I (suggesting an exemption for In-Kind ETFs).

[840] *See, e.g.,* State Street Comment Letter (suggesting an exemption for In-Kind ETFs from the portfolio liquidity classification and three-day liquid asset requirements); Dechert Comment Letter (suggesting an exemption for all ETFs from the three-day liquid asset requirements); ICI Comment Letter I (suggesting an exemption for In-Kind ETFs from the three-day liquid asset requirements); BlackRock Comment Letter (stating that the days-to-cash framework in the portfolio liquidity classification requirements is irrelevant for ETFs and suggesting an exemption for at least In-Kind ETFs from the three-day liquid asset requirements).

[841] *See* BlackRock Comment Letter; FSR Comment Letter.

[842] We note, as discussed previously, that ETFs will be subject to the requirement to implement an overall liquidity risk management program, including the requirement that the fund determine whether its investment strategy is appropriate for an open-end fund.

[843] By this we mean that, and we generally expect that, each day and over time an ETF's shares will trade at or close to the ETF's intraday value. *See* 2015 ETP Request for Comment, *supra* footnote 29 (''When providing exemptive or no-action relief under the Exchange Act, the Commission and its staff have analyzed and relied upon the representations from ETP issuers regarding the continuing existence of effective and efficient arbitrage to help ensure that the secondary market prices of ETP Securities do not vary substantially from the value of their underlying portfolio or reference assets.''); *infra* footnote 857. Because an ETF does not determine its NAV in real time throughout the trading day, in assessing whether this expectation is met, one looks to the difference between the ETF shares' closing market price and the ETF's end-of-day net asset value (*i.e.,* its ''premium'' or ''discount''). *See* 2015 ETP Request for Comment, *supra* footnote 29. With regard to ETMFs, as noted in the Proposing Release, ETMF market makers would not engage in the same kind of arbitrage as ETF market makers because all trading prices of ETMF shares are linked to NAV. *See* Proposing Release, *supra* footnote 9, at n.458.

[844] *See, e.g.,* ETF Proposing Release, *supra* footnote 27; Staff of the Office of Analytics and Research, Division of Trading and Markets, Research Note: Equity Market Volatility on August 24, 2015 (Dec. 2015) (''August 24 Staff Report''), *available at https://www.sec.gov/marketstructure/research/equity_market_volatility.pdf.*

[845] *See* 2015 ETP Request for Comment, *supra* footnote 29 at n.10. The 2015 ETP Request for Comment did not address ETMFs' listing and trading given that, at the time, no ETMFs were listed or traded on an exchange.

[846] We note that an in-kind ETF may not be able to avail itself of the tailored liquidity risk management program where the in-kind ETF operates as a class of a fund that also has mutual fund classes. In such a case, for example, the liquidity classification requirement would apply to the entire portfolio, thus applying to both in-kind ETFs and other funds (*e.g.,* mutual funds). UITs, including ETFs structured as UITs, will not be subject to the majority of the liquidity risk management program requirements. *See supra* section III.A.2.d and *infra* section III.K (discussing rule 22e–4(c), that requires, on or before the date of initial deposit of portfolio securities into a registered UIT (including ETF UITs), the principal underwriter or depositor to determine that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues and maintain a record of that determination for the life of the UIT and for five years thereafter).

fund or ''ETF'' as ''an open-end management investment company (or series or class thereof), the shares of which are listed and traded on a national securities exchange, and that has formed and operates under an exemptive order under the Act granted by the Commission or in reliance on an exemptive rule adopted by the Commission.'' [847] We are defining an ''In-Kind ETF'' to mean an ETF that meets redemptions through in-kind transfers of securities, positions, and assets other than a *de minimis* amount of cash and that publishes its portfolio holdings daily.[848] The definition of ''In-Kind ETF'' is intended to distinguish this type of ETF, which, as described throughout this Release, has a unique structure and raises different liquidity risks than other open-end funds (that in most cases redeem shares in cash). As discussed below, we believe that this definition of an In-Kind ETF facilitates this distinction by limiting an ETF's redemption basket to in-kind securities and other assets, and no more than a *de minimis* amount of cash. In addition, the definition requires that an In-Kind ETF publish the ETF's holdings daily.[849] This daily publishing of ETF holdings (or ''daily transparency'') is a condition of many of our ETF orders, and we understand that even for ETFs not subject to that condition, most provide this daily transparency as a matter of course.[850] We believe that requiring this daily transparency will permit the sophisticated authorized participants that directly interact with the ETF to effectively evaluate the liquidity of the ETF's holdings. We also note that we are requiring an ETF to report publicly to the Commission on Form N–CEN its designation as an In-Kind ETF as defined in the final rule so that there is clarity on which ETFs meet this definition and are thus subject to the tailored liquidity risk management program.[851]

Consistent with our exemptive orders, we recognize that there may be circumstances under which an In-Kind ETF may use cash to meet redemptions (in addition to securities and other non-cash assets). For example, today an ETF that typically redeems in-kind may use cash to: (i) Make up any difference between the NAV attributable to a creation unit and the aggregate market value of the creation basket exchanged for the creation unit (generally referred to as the ''balancing amount'' in an ETF's exemptive order); (ii) correspond to uninvested cash in the fund's portfolio (which, to the extent that this amount of cash equals the fund's cash position in the portfolio, would be an ''in-kind'' redemption); or (iii) substitute for a portfolio position or asset that is not eligible to be transferred in kind (*e.g.,* a derivative instrument that, pursuant to contract, is not transferrable).[852] By their nature, ''balancing amounts'' are small amounts and thus would be *de minimis.* Accordingly, there are a number of reasons, including those described above, why an In-Kind ETF may find it prudent or necessary to use a *de minimis* amount of cash to meet redemptions. However, if an In-Kind ETF were to use more than a *de minimis* amount of cash (as determined in accordance with its written policies and procedures) to meet redemptions (for any of the reasons discussed above or otherwise), it would not qualify as an In-Kind ETF and would need to comply with the liquidity risk management program requirements applicable to other ETFs.[853] By way of example, an ETF that normally redeems in-kind, but delivers all cash to a single authorized participant that elects to receive cash, would not be an ETF that uses a *de minimis* amount of cash. However, depending on the circumstances, an ETF that delivers cash only on one occasion may be able to conclude that it qualifies as an In-Kind ETF in later years if such circumstances are not repeated.

An In-Kind ETF generally should describe in its written policies and procedures for its liquidity risk management program,[854] to the extent applicable, how the fund analyzes the ability of the ETF to redeem in-kind in all market conditions such that it is unlikely to suddenly fail to continue to qualify for this exception to the classification and highly liquid investment minimum requirements, the circumstances in which the In-Kind ETF may use a *de minimis* amount of cash to meet a redemption, and what amount of cash would qualify as such. As part of its policies and procedures, an In-Kind ETF generally should also describe how the ETF will manage and/or approve any portion of a redemption that is paid in cash and document the ETF's determination that such a cash amount is *de minimis.* In making these determinations, an In-Kind ETF may consider, if applicable: (i) The amount (both in dollars and as a percentage of the entire redemption basket) and frequency with which cash is used to meet redemptions; and (ii) the circumstances and rationale for using cash to meet redemptions.

As discussed above, in-kind redemptions mitigate certain liquidity risks, but only to the extent that the fund can use in-kind redemptions. This factor is particularly important for an In-Kind ETF because such a fund may only include in its redemption basket a *de minimis* amount of cash if it wants to qualify for the exclusion from the classification and highly liquid investment minimum requirements. If, for example, market conditions change and the fund can no longer meet redemptions without more than a *de minimis* amount of cash, the fund would no longer qualify as an In-Kind ETF. As a result, the ETF would be required to comply with additional requirements under its liquidity risk management program (including liquidity portfolio classifications and highly liquid investment minimum).

[847] *See* rule 22e–4(a)(4). We note that this definition is substantially the same as the definition of ETF that we had proposed as amendments to rule 22c–1. We also note that this definition is substantially the same as the definition in Form N–1A.

[848] *See* rule 22e–4(a)(9). Cash means cash held in U.S. dollars, and would not include, for example, cash equivalents or foreign currency.

[849] Today, such daily publishing of ETF holdings involves posting on the ETF's Web site on each day that the national securities exchange on which the fund's shares are listed is open for business, before commencement of trading of fund shares on the exchange, the identities and quantities of the securities, assets or other positions held by the fund, or its respective master fund, that will form the basis for the fund's calculation of net asset value at the end of the business day.

[850] *See, e.g.,* Foreside ETF Trust, *et al.,* Investment Company Act Release No. 32284 (Sep. 26, 2016) [81 FR 68079 (Oct. 3, 2016)] (notice of application). We note that ETMFs are not required to provide such daily transparency under their orders, and thus would need to choose to provide such daily transparency if they wished to take advantage if this provision.

[851] *See* Item E.5 of Form N–CEN (''Is the Fund an 'In-Kind Exchange-Traded Fund' as defined in rule 22e–4 under the Act?''). In addition, ETFs (including In-Kind ETFs) will be required to report on Form N–CEN the average percentage value of creation units purchased and redeemed both with in-kind securities and assets and with cash, during the reporting period. *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[852] We note that depending on the size of the position being substituted for, such a transaction may not always be *de minimis,* and thus the ETF may no longer be eligible to qualify for this provision.

[853] In-Kind ETFs are subject to rule 22e–4, including the obligation to establish written policies and procedures for a liquidity risk management program. As part of these written policies and procedures, we would expect that an In-Kind ETF would determine the amount of cash and the types of transactions that it will treat as *de minimis.* If for any reason, an In-Kind ETF was not able to meet redemptions with more than a *de minimis* amount of cash consistent with those policies and procedures, such a fund would no longer qualify as an In-Kind ETF and would thus no longer be eligible to rely on this provision. *See* rule 22e–4(b)(1)(ii).

[854] Rule 22e–4 requires that an In-Kind ETF adopt and implement a written liquidity risk management program reasonably designed to assess and manage the fund's liquidity risk. *See* rule 22e–4(b).

2. Tailored Program Elements for ETFs

By adopting certain tailored liquidity risk management program requirements for ETFs, we recognize, consistent with comments received, that both ETFs that redeem in cash and In-Kind ETFs present unique liquidity risks as compared to other funds. Some of these unique risks were not specifically addressed in the generally applicable liquidity risk management program as proposed, while still other aspects of the general program were less applicable to the actual operation of In-Kind ETFs, particularly those that offer daily transparency of holdings. Our final rule is designed to address both issues. Accordingly, an ETF will be required to adopt and implement a tailored liquidity risk management program that has the unique elements discussed below, in addition to the elements discussed elsewhere in this Release.

Liquidity Risk Assessment

An ETF, like other open-end funds, will be required to assess and manage the fund's ''liquidity risk''—defined as the risk that a fund could not meet requests to redeem shares issued by the fund without significant dilution of remaining investors' interests in the fund.[855] As discussed above, we believe that this definition, modified from the proposal as informed by commenter input, is appropriate for all open-end funds, whether the fund redeems in cash or in kind and whether the fund is a mutual fund or an ETF.[856]

Illiquidity in an ETF's portfolio or its basket assets can adversely impact investors by imposing costs on market participants that could then potentially be reflected in a widening of the bid-ask spread of the ETF shares. This widening could result in shareholders transacting in an ETF's shares at market prices that do not maintain a ''close tie'' to the NAV per share of the ETF. As we have previously stated, a close tie between ETF share market prices and the ETF's NAV per share is important because section 22(d) and rule 22c–1 under the Act are designed to require that all fund shareholders be treated equitably.[857] In addition, declining liquidity in an ETF's portfolio also could affect a market maker's ability or willingness to make a market in the product because arbitrage opportunities would be more difficult to evaluate.[858] This, in turn, could affect the liquidity of the ETF shares, making it difficult for market participants to price, trade and hedge.

Under the final rule, ETFs will be required to assess, manage, and periodically review the fund's liquidity risk and needs, taking into account, as applicable, the liquidity risk factors for all funds (as modified from the proposal) discussed previously.[859] ETFs also must consider the following additional factors, as applicable, that are specific to the structure and operation of ETFs:

- The relationship between the ETF's portfolio liquidity and the way in which, and the prices and spreads at which, ETF shares trade, including the efficiency of the arbitrage function and the level of active participation by market participants (including authorized participants);[860] and
- The effect of the composition of baskets on the overall liquidity of the ETF's portfolio.

We considered, in establishing these factors, comments received on the Proposing Release and the 2015 ETP Request for Comment, as well as the unique structure and operation of ETFs. We discuss these factors in more detail below. As we noted with regard to other open-end funds, the list of liquidity risk assessment factors for ETFs is not meant to be exhaustive. Rather, an ETF generally should incorporate other considerations in assessing its liquidity risk that it considers appropriate.

ETF Trading—Arbitrage Function and Level of Activity of Market Participants

As discussed above, the ETF structure permits only authorized participants to purchase or redeem shares from an ETF and to transact in the ETF's shares at the NAV per share. The combination of the creation and redemption process with secondary market trading in ETF shares provides arbitrage opportunities that, if effective, keep the market price of the ETF's shares at or close to the NAV per share of the ETF.[861] If an ETF has a significant amount of illiquid securities in its portfolio, market participants may find it more difficult to evaluate opportunities and ultimately participate in the arbitrage process (because of challenges in pricing, trading, and hedging their exposure to the ETF). If the arbitrage function fails to operate efficiently, investors could buy and sell the ETF shares at prices that are not at or close to the NAV per share of the ETF, which may raise concerns relating to section 22(d) of and rule 22c–1 under the Act regarding whether all fund shareholders (authorized participants and retail investors) are being treated equitably.[862] We discussed in the Proposing Release how the effective functioning of this arbitrage mechanism has been pivotal to the operation of ETFs (and to the Commission's approval of exemptions that allow their operation) and how the liquidity of the ETF's portfolio positions is a factor that contributes to the effective functioning of this arbitrage mechanism.[863]

Commenters to the 2015 ETP Request for Comment also highlighted the importance of portfolio liquidity on the efficiency of the ETF arbitrage mechanism. During an extraordinary period of market volatility on August 24, 2015 (''the August 24th Market Events''), for example, many ETFs traded at prices materially different from the NAV of the funds' underlying

[855] *See* rule 22e–4(a)(11) (defining liquidity risk); rule 22e–4(b) (requiring each fund and in-kind ETF to adopt and implement a written liquidity risk management program).

[856] *See supra* section III.B.1 for a discussion of the definition of liquidity risk, including comments received and modifications made from the proposal.

[857] *See generally* H.R. REP. NO. 2639, 76th Cong., 3d Sess., 8 (1940). *See also* Investment Trusts and Investment Companies: Report of the Securities and Exchange Commission, H.R. Doc. No. 279, 76th Cong., 1st Sess., pt. 3, at 860–874 (1939); Spruce ETF Trust, *et al.,* Investment Company Act Release No. 31301 (Oct. 21, 2014) [79 FR 63964 (Oct. 27, 2014)] (notice of application) (to the extent that investors would have to exit at a price substantially below the NAV of the ETF, this would be ''contrary to the foundational principle underlying section 22(d) and rule 22c–1 under the Act that all shareholders be treated equitably when buying and selling their fund shares''); Precidian ETFs Trust, *et al.,* Investment Company Act Release No. 31300 (Oct. 21, 2014) [79 FR 63971 (Oct. 27, 2014)] (notice of application) (''A close tie between market price and NAV per share of the ETF is the foundation for why the prices at which retail investors buy and sell ETF shares are similar to the prices at which Authorized Participants are able to buy and redeem shares directly from the ETF at NAV. This close tie between prices paid by retail investors and Authorized Participants is important because section 22(d) and rule 22c–1 under the Act are designed to require that all fund shareholders be treated equitably when buying and selling their fund shares.'').

[858] *See supra* footnote 843 and accompanying text.

[859] *See supra* section III.B.2 (discussing the factors as proposed and how the factors have been amended in the final rule to address commenter concerns). We recognize that not all of these factors may be applicable to all ETFs (and that some mutual funds would not need to consider certain factors relevant only to ETFs).

[860] We note that this factor will not be applicable to ETMFs to the same extent it applies to ETFs. ETMF market makers will not engage in the same kind of arbitrage as ETF market makers and will assume no intraday market risk with their positions in ETMF shares as all trading prices are linked to NAV. *See* ETMF Notice, *supra* at note 31 at n.21 and accompanying text.

[861] We recognize that an ETF is not as likely as a mutual fund to sell or in-kind transfer its portfolio holdings in order to meet redemptions because an authorized participant generally will not seek to create or redeem a basket with the ETF until there is a sufficient deviation between the ETF shares' market price and the ETF's NAV. As discussed previously, ETMF market makers would not engage in the same kind of arbitrage as ETF market makers because all trading prices of ETMF shares are linked to NAV. *See supra* footnote 836.

[862] *See supra* footnote 857.

[863] *See* Proposing Release, *supra* footnote 9, at nn.23–30 and accompanying text.

portfolio assets.[864] One commenter on the 2015 ETP Request for Comment, in observing the August 24th Market Events, noted that there are many reasons an ETF may trade at a substantial difference from the NAV of its underlying constituent stocks, including a lack of liquidity in the ETF constituents and a lack of liquidity in the ETF shares themselves.[865] Another commenter suggested that, where the market for an underlying asset is illiquid, no amount of arbitrage will be sufficient to equalize market discrepancies between underlying assets and the fund's price, especially during times of market stress.[866] In addition, the level of active participation by market participants, including market makers and authorized participants, in the trading of ETF shares is important to the way in which, and the prices and spreads at which, shares trade. As one commenter on the 2015 ETP Request for Comment noted, the more authorized participants that are active in the market, the more opportunities there are to trade and provide liquidity.[867] For these reasons, we are requiring that an ETF consider the relationship between the liquidity of its portfolio and the arbitrage function in assessing its liquidity risk (where applicable).

Basket Composition

In-Kind ETFs create and redeem using baskets of securities and other assets. These baskets may be highly correlated to the ETF's overall portfolio. As we noted in the Proposing Release, the composition of the basket can affect the liquidity of the ETF's portfolio.[868] For example, an ETF whose basket does not reflect a *pro rata* share of the fund's portfolio may alter the liquidity profile of the ETF's portfolio and may adversely affect the fund's future ability to meet cash redemptions or mitigate shareholder dilution.[869] We recognize that certain market incentives exist to mitigate the likelihood of significant or frequent divergence between an ETF's basket and the fund's portfolio. For example, if an ETF's basket is not correlated with the fund's portfolio, the ETF likely will develop a higher tracking error. Nonetheless, such divergence may occur, with potentially adverse consequences to the remaining shareholders in the fund. Accordingly, we are requiring an ETF to consider the effect of its basket composition on the fund's overall portfolio liquidity (even if an ETF's creation and redemption baskets reflect a *pro rata* share of the ETF's portfolio).[870]

A few commenters also suggested that increasing ETF basket flexibility and eliminating the two percent limitation on redemption fees for ETFs would help enhance ETF liquidity and the orderly and efficient operation of the arbitrage function.[871] We are not addressing these issues here because they are beyond the scope of this rulemaking.

Portfolio Liquidity Classification

Under the final rule, an open-end fund (other than an In-Kind ETF) will be required to classify each of the fund's portfolio investments (generally by asset class) into one of four categories: Highly liquid investments; moderately liquid investments; less liquid investments; and illiquid investments. A number of commenters noted, as the Commission recognized in the Proposing Release and as we reiterate above, that an open-end fund (including an open-end ETF) that redeems in cash has a different nature of liquidity risk than an ETF that redeems through in-kind transfers of securities, positions, and other assets.[872]

We note, for example, that when a mutual fund experiences daily net redemptions, the fund will likely be required to sell its portfolio holdings in order to generate cash to meet redemptions. To the extent that a fund must sell a less liquid security in order to generate the cash proceeds required, there is enhanced liquidity risk—that is, risk that a fund cannot meet redemptions without significant dilution of remaining investors. Therefore, we believe that it is appropriate for such a fund to assess its liquidity risk by analyzing the amount of time it will take, in current market conditions, to convert its portfolio assets (without the conversion (or in some cases, sale or disposition) significantly changing the market value of the investments).

As discussed above, an In-Kind ETF's liquidity risk is different from the liquidity risk of a fund that generally meets redemptions in cash. Rather than liquidity risk affecting investors directly in their ability to receive cash redemption proceeds, illiquidity in an ETF's portfolio or its basket assets can adversely impact investors by contributing to a widening of the bid-ask spread of the ETF shares. This widening could result in shareholders transacting in an ETF's shares at market prices that do not maintain a ''close tie'' to the NAV per share of the ETF. The declining liquidity in an ETF's portfolio also could affect the arbitrage function related to the ETF, as discussed above.

Despite our concern about the specific liquidity-related risks in ETFs described above, we view the liquidity classification information for In-Kind ETFs as less necessary for the Commission, investors, and other potential users of this information because, unlike for mutual funds, the daily identity and weightings of ETF portfolio holdings are well known to authorized participants and other ETF liquidity providers, and would be required to be disclosed daily under our final rules to qualify for the exemption from the classification requirement.[873]

[868] *See* Proposing Release, *supra* footnote 9, at nn.23–24, 156–157 and accompanying text.

[869] Under limited circumstances, an index ETF's redemption basket also may differ from the portfolio deposit made by the authorized participant.

[870] One commenter on the 2015 ETP Request for Comment, discussing the potential effects of basket composition on an ETF's overall liquidity, noted that an ETF whose basket reflects a *pro rata* share of the ETF's portfolio will have a larger number of securities in the basket, with the size of each individual position potentially being smaller. This commenter suggested that, as a result: (i) The smaller lots can be more difficult for an authorized participant to trade efficiently, thereby increasing the bid/ask spreads of the ETF; and (ii) the *pro rata* basket is more likely to include less liquid or even illiquid securities that an ETF not subject to the *pro rata* requirement can exclude. *See* Comment Letter of Charles Schwab & Co. on the on 2015 ETP Request for Comment (Aug. 17, 2015), *available at https://www.sec.gov/comments/s7-11-15/s71115-28.pdf*.

[873] *See* rule 22e–4(a)(9). *See also,* Precidian ETFs Trust, *et al.,* Investment Company Act Release No. 31300 (Oct. 21, 2014) [79 FR 63971 (Oct. 27, 2014)] (notice of application) (''The Commission therefore has granted such exemptive relief to date only to those actively managed ETFs that have provided daily transparency of their portfolio holdings.''). The identity and weightings of the constituents of affiliated indices are required by exemptive application condition to be made publicly available on a daily basis. *See, e.g.,* Columbia ETF Trust I, et. al., Investment Company Act Release No. 32134 (May 31, 2016) (order) (related application with conditions *available at: https://www.sec.gov/Archives/edgar/data/1233991/000119312516578039/d194333d40appa.htm*). The identity and weightings of the constituents of non-affiliated indexes are not required to be made publicly available on a daily basis. However, because: (1) These index compositions are generally broadly available to liquidity providers either publicly, by subscription or by license; and (2) index-based ETFs publish their purchase and redemption baskets daily, and those baskets generally are tracking baskets that represent either

Continued

Authorized participants are the only shareholders that are permitted to transact with the ETF at NAV, and these sophisticated broker-dealers are more likely to be able to readily discern the ETF's liquidity profile from this daily portfolio information.

We continue to believe that it is important that an In-Kind ETF maintain sufficient liquidity in its portfolio. Accordingly, the final rule requires that an In-Kind ETF, in assessing liquidity risk, take into account certain factors that are more tailored to the way in which such funds operate and the resulting liquidity risks. For example, those factors include considering the relationship between portfolio liquidity and the arbitrage function, as well as the effect of the composition of in-kind baskets on the overall liquidity of the fund's portfolio. However, given the more limited utility of this classification information for the reasons described above, and considering the burdens of tracking and reporting it to us, we do not believe that it is appropriate to require an In-Kind ETF to classify its portfolio investments into liquidity categories based on a ''days-to-cash'' framework and report that information to the Commission.[874]

Highly Liquid Investment Minimum

Under the final rule, an open-end fund (other than an In-Kind ETF) will be required to determine a percentage of the fund's net assets that it will invest in assets that are highly liquid investments. The fund will determine its highly liquid investment minimum using the first category in the liquidity classification requirement (*i.e.,* cash and assets convertible into cash within three business days). The fund also will be required to take certain actions when the fund's highly liquid investments fall below its minimum.[875]

In determining to adopt a highly liquid investment minimum for certain open-end funds, we considered comments received on proposed rule 22e–4, which would have required a ''three-day liquid asset minimum.''[876] Multiple commenters suggested that the concept of a three-day liquid asset minimum does not take into account the unique structural aspects of ETFs.[877] One commenter suggested that the concept of ''convertible into cash within three business days'' has little relevance to an ETF that does not liquidate securities to meet cash redemptions.[878]

Consistent with the comments received, we are not requiring that an In-Kind ETF adopt a highly liquid investment minimum. First, an open-end fund will be required to establish its highly liquid investment minimum using its ''highly liquid investment'' portfolio classification. As discussed earlier, we have determined that it is not necessary to require that an In-Kind ETF classify its portfolio liquidity (*e.g.,* into ''highly liquid investment,'' or ''moderately liquid investment''). The portfolio liquidity classifications incorporate a ''convertible to cash'' concept that is generally not relevant for an In-Kind ETF (except in managing cash holdings to no greater than a *de minimis* amount of cash). Because the highly liquid investment minimum incorporates the same ''convertible to cash'' concept as the portfolio liquidity classifications (which, for the reasons discussed above, we are not requiring for In-Kind ETFs), we do not believe it is appropriate to require that an In-Kind ETF establish a highly liquid investment minimum.

Second, the highly liquid investment minimum, as discussed above, is intended to increase the likelihood that an open-end fund meets redemption requests without significant dilution of remaining investors. Open-end funds that redeem in cash and In-Kind ETFs operate differently, and therefore evaluate liquidity risk differently. We believe, for example, that it is necessary for an open-end fund that meets redemptions in cash (including an ETF) to manage its liquidity risk by establishing a minimum amount of highly liquid investments that, as defined in the final rule, are quickly convertible to cash (within 3 business days). In this way, the highly liquid investment minimum increases the likelihood that the fund will be able to meet redemption requests in cash without significant dilution of remaining investors. Conversely, we believe, for example, that it is more appropriate for an In-Kind ETF that meets redemptions through in-kind transfers of securities, positions, and other assets (and no more than a *de minimis* amount of cash) to, among other things, assess its liquidity risk through consideration of the factors we have discussed above (*e.g.,* assessing the relationship between portfolio liquidity and the arbitrage function). For these reasons, we are excluding In-Kind ETFs from the highly liquid investment minimum requirement in rule 22e4.

We discussed above the requirement that funds (including ETFs) other than In-Kind ETFs establish a highly liquid investment minimum.[879] One commenter noted that the three-day liquid asset minimum might increase tracking error, or force an ETF to either violate the terms of its exemptive order,[880] or refuse in-kind purchase requests from authorized participants, thus interfering with the arbitrage mechanism that keeps ETF market prices close to their underlying NAV.[881] An ETF that does not qualify as an In-Kind ETF necessarily meets redemptions through more than a *de minimis* amount of cash. For the reasons discussed above, we believe that it is appropriate to require a fund that meets redemptions, at least partially in cash, to comply with the liquidity classification and highly liquid investment minimum requirements.[882] With regard to tracking error, an ETF with an index-based strategy, like other open-end funds, needs to balance its implementation of its investment strategy with the need for appropriate liquidity risk management given its obligation to meet redemptions without significant dilution. We recognize that this balancing may result in tracking error, and such a fund may wish to address and manage this risk through appropriately designed policies and procedures. This concern, along with the concerns regarding potentially violating an exemptive order, or

a *pro rata* replication of the index or a sampling of the index, authorized participants and other ETF liquidity providers should nonetheless be able to determine the liquidity profile of a non-affiliated, index-based ETF on a daily basis. Unlike ETFs, ETMF are only required to provide the same disclosure about the identity and weightings of their portfolio holdings as mutual funds.

[874] In the Proposing Release, we proposed to apply the portfolio liquidity classification requirement to open-end ETFs (in addition to other open-end funds), in part, because, ETFs permit authorized participants to redeem in cash (even if these funds typically redeem in kind). *See* Proposing Release, *supra* footnote 9, at n. 129 and accompanying text. Accordingly, we determined that it was appropriate to require that all ETFs classify their portfolio liquidity by assessing the fund's ability to convert portfolio positions into cash. The final rule, however, establishes a more tailored regulatory regime for In-Kind ETFs, that, by definition, do not meet redemptions through more than a *de minimis* amount of cash. Thus, under the final rule, we do not believe it is necessary to require that In-Kind ETFs be subject to the portfolio liquidity classification requirement (which is based on a ''days-to-cash'' or ''days-to-sell'' framework).

[880] *See* ICI Comment Letter I (noting that if an ETF was prohibited from accepting a less liquid asset, the ETF may violate a requirement that that all creation baskets correspond *pro rata* to the ETF's portfolio positions).

[881] *Id.*

[882] An ETF that does not qualify as an In-Kind ETF would not be required to determine and periodically review a highly liquid investment minimum if it holds primarily highly liquid investments. *See supra* section III.D.

refusing an in-kind purchase request from an authorized participant, are also mitigated by the additional flexibility provided for in the final rule. Under the final rule (as compared with the proposal), a fund that breaches its highly liquid investment minimum will be subject to certain board reporting requirements, but will not be barred from purchasing non-conforming assets (as would have been required as proposed).[883] Under the final rule, therefore, a fund will have flexibility to address potentially adverse situations, including tracking error, that may arise as a result of complying with the highly liquid investment minimum.

K. Limitation on Unit Investment Trusts' Investments in Illiquid Investments

As noted above, the proposed scope of rule 22e4 did not include UITs, although we requested comment on whether UITs should be included within its scope, and whether we should include specific limitations on UIT's holdings of illiquid assets at inception.[884] As adopted today, UITs remain excluded from the rule's liquidity risk management program requirements. However, as suggested by some commenters, we are now requiring a limited liquidity review for UITs. Under the final rules, the UIT's principal underwriter or depositor must determine, on or before the initial deposit of portfolio securities into the UIT, that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues.[885]

As discussed in detail in the Proposing Release, most UITs serve as separate account vehicles used to fund variable annuity and variable life insurance contracts,[886] and these UITs essentially function as pass-through vehicles, investing principally in securities of one or more open-end investment companies that would be subject to rule 22e–4.[887] Also, UITs are not actively managed, and thus certain provisions of rule 22e–4 that require a fund's board to approve and oversee the fund's liquidity risk management program and the fund's adviser, officer, or officers to administer it are inapposite to the management structure of a UIT.[888]

Several commenters argued (in the context of ETFs organized as UITs) that UITs may be subject to liquidity risk comparable to other funds.[889] As discussed previously, in recognition of the different unmanaged organizational structure of UITs, we continue to believe that including UITs within the scope of rule 22e–4's liquidity risk management program requirements (or even the tailored program requirements for ETFs that redeem in kind) would not be feasible. However, we recognize that UITs may in some circumstances be subject to liquidity risk (particularly where the UIT is not a pass-through vehicle and the sponsor does not maintain an active secondary market for UIT shares) as investor redemption requests may lead to dissipation of UIT assets, forcing a UIT to sell securities that it holds to meet redemptions.

Accordingly, today we are adopting a limited liquidity review requirement for UITs to require that a UIT's principal underwriter or depositor determine upon initial deposit of a registered UIT that the level of illiquid investments it will hold is consistent with the redeemable nature of the securities it issues.[890] Though commenters focused their discussion on UITs that are ETFs, we believe it is appropriate for the principal underwriter or depositor of any registered UIT to conduct the initial liquidity assessment described above on or before the date of the initial deposit of securities into the UIT. The securities that the UIT is expected to hold should be examined so that they are consistent with the ability of a UIT to issue redeemable securities, much as an open-end fund will be required to evaluate whether its investment strategy and the securities it holds is appropriate for an open-end fund under the final liquidity risk management program.[891] Though UITs are not actively managed and do not have a board of directors, corporate officers, or an investment adviser to render advice during the life of the trust, making active liquidity risk management inapposite to the management structure of a UIT, we believe that this requirement of a tailored, one-time, initial liquidity risk management requirement for UITs is in line with the unmanaged structure of a UIT and its liquidity risk.[892]

We expect that this initial review requirement would in many respects be similar to the process for determining whether a fund's holding of illiquid investments is consistent with rule 22e–4's 15% limitation on illiquid investments, taking into account the unique structure and purpose of UITs. If a UIT were to hold or planned to hold more than 15% of its investments in illiquid investments at the time of initial deposit, such a level of illiquid investments is unlikely to be consistent with the nature of the redeemable securities it issues. Thus, if a UIT planned to hold significant amounts of illiquid securities (in excess of 15%), its principal underwriter or depositor would be unlikely to be able to make the determination that its investment's liquidity is consistent with its issuance of redeemable securities.

Due to the unmanaged structure of UITs and the fixed nature of their portfolios, it would be inconsistent with their structure and portfolios to require UITs to re-evaluate the securities they hold based on their liquidity characteristics and change their investments accordingly over time. Therefore, the requirement only applies at the time of the UIT's creation. Although this is a one-time determination at the time of the UIT's initial deposit, it should take into

[883] *See supra* section III.D.

[884] *See supra* section III.A.2.d; Proposing Release, *supra* footnote 9 at section III.A.3 and comment requests following n 156 (''alternatively, should we require UITs to meet certain minimum liquidity requirements at the time of deposit of the securities . . .'').

[885] *See* rule 22e–4(c). The rule also requires UITs to maintain a record of that determination for the life of the UIT and for five years thereafter. *See also* Rule 144A Release *supra* footnote 37 at n.61 (discussing liquidity requirements for UITs prior to the adoption of rule 22e–4).

[886] *See* Proposing Release, *supra* footnote 9, at n.139 and accompanying text. We currently estimate that approximately 92.9% of UITs serve as separate account vehicles (based on data as of December 31, 2015).

[887] *See id.,* at nn.139–140 and accompanying text.

[888] *See id.,* at nn.141–143 and accompanying text.

[889] *See* Anonymous Comment Letter I; BlackRock Comment Letter. One of these commenters also observed that, while there are few ETFs that are UITs, some of the largest ETFs in the world (by volume/value traded) are UIT ETFs, and thus any liquidity risks faced by these UIT ETFs could lead to significant adverse market consequences. The commenter also expressed concern that excluding UIT ETFs from the scope of rule 22e–4 may prompt more ETF sponsors to structure ETFs as UITs rather than open-end funds to avoid being subject to the liquidity risk management program requirement. *See* Anonymous Comment Letter I. We recognize the risks of excluding UIT's from 22e–4, and thus are adopting the liquidity review requirement discussed in this section, as a tailored approach that fits the unique unmanaged structure of UITs, including ETFs that are structured as UITs. (ETMFs are not structured as UITs because, as they are structured today, they are actively managed and thus cannot operate as UITs.)

[890] *See supra* footnote 885 and accompanying text.

[891] As noted above, all UITs are subject to the requirements of section 22(e) and therefore must meet redemptions within seven days. *See also* section 4(2).

[892] With regard to UITs structured as ETFs in particular, we agree with commenters' concerns that UIT ETFs' liquidity risks may be comparable to those faced by other ETFs and that the relatively large size of certain UIT ETFs could lead to significant market consequences if these UIT ETFs were to encounter liquidity issues. However, because UIT ETFs are unmanaged and must fully replicate their underlying indices, we believe that a one-time determination regarding liquidity concerns at the commencement of the offering of a registered UIT is the appropriate manner to mitigate such concerns.

account the planned structure of the UIT's holdings. In particular, if the UIT tracks an index, the determination should consider the index design and whether the index design is likely to lead to the UIT holding an amount of illiquid assets that is inconsistent with the redeemable nature of the securities it issues.

As discussed above, because of the unmanaged nature of an UIT, we recognize that depending on its particular circumstances, after initial deposit, an UIT might potentially hold a higher level of illiquid investments due to redemptions or changes in the liquidity of the investments it holds. Nonetheless, we expect that the requirement for the depositor or principal underwriter to determine that the liquidity of the investments the UIT holds is consistent with the nature of the redeemable securities it issues at the time of initial deposit should help enhance UIT liquidity.

L. Disclosure and Reporting Requirements Regarding Liquidity Risk and Liquidity Risk Management

Receiving relevant information about the operations of a fund and its principal investment risks is important to investors in choosing the appropriate fund for their risk tolerances. Investors in open-end funds generally expect funds to pay redemption proceeds promptly following their redemption requests based, in part, on representations made by funds in their disclosure documents. Currently, funds are not expressly required to disclose how they manage the liquidity of their investments, and limited information is available regarding fund liquidity and whether the liquidity of a fund's portfolio securities corresponds with its anticipated liquidity needs.

We are adopting, substantially as proposed with some modifications in response to comment, amendments to Form N–1A that will require a fund to further describe its procedures for redeeming the fund's shares including the number of days following receipt of shareholder redemption requests in which the fund typically expects to pay redemption proceeds to redeeming shareholders and the methods the fund typically uses to meet redemption requests, including whether those methods are used regularly or only in stressed market conditions.[893] We also are adopting an amendment to General Instruction A of Form N–1A to conform the definition of ''exchange-traded fund'' to the definition of ETF adopted today in connection with rule 22e–4 and the adoption of Form N–CEN in the Investment Company Reporting Modernization Adopting Release.[894]

In addition, we are adopting new Form N–LIQUID to incorporate information that would have previously been reported on Form N–PORT under the proposal concerning a fund's investments in illiquid investments, but with some modifications in response to comments. Under this new reporting form, a fund is required to notify the Commission when more than 15% of the fund's net assets are, or become, illiquid investments that are assets as defined in rule 22e–4 and report information about the investments affected.[895] A fund also is required to report on Form N–LIQUID if the fund's illiquid investments that are assets previously exceeded 15% of net assets and the fund determines that its illiquid investments that are assets have changed to be less than or equal to 15% of net assets.[896] In addition, under the new form, a fund is required to notify the Commission if the fund's holdings in highly liquid investments that are assets fall below the fund's highly liquid investment minimum for more than 7 consecutive calendar days.[897] Information reported on Form N–LIQUID will be non-public.

We are adopting, as proposed, the requirement that a fund report on Form N–CEN information regarding the use of lines of credit, interfund lending, and interfund borrowing.[898] In addition, we are adopting a new requirement that a fund report on Form N–CEN whether the fund is an ''In-Kind Exchange-Traded Fund'' as defined in rule 22e–4.[899]

Many commenters expressed general support for enhanced disclosures regarding fund liquidity risk management practices.[900] Some commenters noted that understanding the liquidity dynamics of an investment strategy employed by a fund would be beneficial to investors[901] and that enhanced information could assist the Commission in its role as the primary regulator of investment companies and help investors make more informed investing decisions by providing more transparency into fund investment practices.[902] Other commenters expressed concerns with specific disclosure and reporting requirements outlined in the proposal, which are discussed in detail below.

1. Amendments to Form N–1A

Form N–1A is used by open-end funds, including money market funds and ETFs, to register under the Investment Company Act and to register offerings of their securities under the Securities Act. We are adopting, substantially as proposed, amendments to Form N–1A that will require a fund to further describe its procedures for redeeming the fund's shares including the number of days following receipt of shareholder redemption requests in which the fund typically expects to pay redemption proceeds to redeeming shareholders.[903] A fund also will be required to describe the methods the fund typically expects to use to meet redemption requests in stressed and non-stressed market conditions.[904] Funds will not be required, however, to file as exhibits to their registration statements credit agreements as we proposed. We note that these amendments will apply to all open-end funds, including money market funds and ETFs.[905]

In addition, we are adopting an amendment to General Instruction A of Form N–1A to conform the definition of ''exchange-traded fund,'' which currently defines an ETF to mean, in part, a fund or class, ''the shares of which are *traded* on a national securities exchange'' to the definition of ETF adopted today in connection with rule /–4 and the adoption of Form N–PORT and Form N–CEN in the Investment Company Reporting Modernization Adopting Release, which both define an ETF, in part, to mean a fund or class, ''the shares of which are *listed and traded* on a national securities exchange.''[906]

Many commenters generally supported enhancing prospectus disclosure requirements,[907] noting, for example, that enhanced disclosures will improve shareholder and market participant knowledge regarding fund redemption procedures and liquidity risk management.[908] Several commenters expressed concerns with the proposed requirements to disclose the number of days or the methods in which a fund will pay redemption proceeds[909] and include lines of credit agreements as exhibits to the fund registration statement.[910] We discuss the comments received in response to the proposal, as well as the amendments to Form N–1A and modifications to the proposal, in more detail below.

a. Timing of the Redemption of Fund Shares

Form N–1A requires funds to describe their procedures for redeeming fund shares.[911] Disclosure regarding other important redemption information, such as the timing of payment of redemption proceeds to fund shareholders, varies across funds as today there are no specific requirements for this disclosure under the form. Some funds disclose that they will redeem shares at a price based on the next calculation of net asset value after the order is placed but may delay payment for up to seven days (consistent with section 22(e) of the Act), and others provide no specific time periods for the payment. Some funds disclose differences in the timing of payment of redemption proceeds based on the distribution channel or payment method through which the fund shares are redeemed, while others do not.

We proposed amendments to Item 11 of Form N–1A that would require a fund to disclose the number of days in which the fund would pay redemption proceeds to redeeming shareholders.[912] Under the proposal, if the number of days in which the fund would pay redemption proceeds differed by distribution channel, the fund also would be required to disclose the number of days for each distribution channel.[913] We also proposed amendments to Item 11 that would require a fund to disclose the methods that the fund uses to meet redemption requests.[914] Under the proposal, funds would have been required to disclose whether they use the methods regularly to meet redemptions or only in stressed market conditions.

Some commenters expressed general support for these new disclosure requirements under the proposal, stating that this information will improve shareholder and market participant knowledge regarding fund redemption procedures and liquidity risk management[915] and provide meaningful information about the general time taken to meet redemptions and the fund's approaches to liquidity risk management.[916]

Some commenters also expressed concerns with the proposed requirement that funds disclose the number of days in which a fund will pay redemption proceeds for each distribution channel, stating that the disclosure could present undue complexity to the prospectus and may lead to shareholder confusion.[917] In addition, commenters argued that a fund does not always have a direct contractual relationship with the ultimate beneficial owners of its shares, as there are often multiple intermediaries between the mutual fund and its shareholder, and that a fund is not in the best position to disclose to its shareholders a precise timeframe in which an intermediary will transmit the proceeds of a shareholder's redemption.[918]

We understand that in most cases, the distribution channel through which a shareholder transacts in fund shares is unlikely to have a material effect on the timing of the payment of redemption proceeds, but instead that the choice of *method* of payment of redemption proceeds will have the most significant effect on when an investor receives proceeds. For example, we understand that the industry's central fund transaction processing utility (the NSCC), typically debits or credits the cash accounts of users of the utility (such as funds or their transfer agents on one side of the transaction, and intermediaries on behalf of beneficial owners, on the other side of the transaction) regarding net purchase or redemption activities in shares of a fund on T+1 (and to a lesser extent with respect to certain funds on T+3). Such intermediary users of the utility would in turn update their account records, including the beneficial owner's activity, on that date regardless of the type of book entry securities, account structure, or intermediary that the beneficial owner holds through. However, if the beneficial owner wishes to receive remittance of redemption proceeds via check (for example, instead of reinvesting them in another investment), it may take a certain number of days for the intermediary (or fund, as applicable) to process and mail the check to the customer. Accordingly, in a change from the proposal, the final form amendments do not require disclosure on timing of redemption proceeds based on distribution channel, but instead only require a fund to disclose typical expected payout times based on the payment method chosen

Reporting Modernization Adopting Release, *supra* footnote 120. For purposes of reporting on proposed Form N–CEN, we proposed to define (i) ''exchange-traded fund'' as an open-end management investment company (or series or class thereof) or UIT, the shares of which are listed and traded on a national securities exchange at market prices, and that has formed and operates under an exemptive order under the Investment Company Act granted by the Commission or in reliance on an exemptive rule under the Act adopted by the Commission and (ii) ''exchange-traded managed fund'' as an open-end management investment company (or series or class thereof) or UIT, the shares of which are listed and traded on a national securities exchange at NAV-based prices, and that has formed and operates under an exemptive order under the Investment Company Act granted by the Commission or in reliance on an exemptive rule under the Act adopted by the Commission. *See* Investment Company Reporting Modernization, Investment Company Act Release No. 31610 (May 20, 2015) [80 FR 33590 (June 12, 2015)] (''Investment Company Reporting Modernization Proposing Release''), at n.446 and accompanying text. In the Investment Company Reporting Modernization Proposing Release, we requested comment on whether the definitions of the type of funds listed in proposed Form N–CEN were appropriate and if any different definitions should be used. We did not receive any comments on the proposed definitions of ETF and ETMF in proposed Form N–CEN, and are adopting the definitions of ETF and ETMF, as proposed. *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[918] *See* Fidelity Comment Letter.

by the investor (*e.g.,* check, wire, automated clearing house).[919]

Thus, under the final amendments, if the number of days a fund expects to pay redemption proceeds differs by method of payment (*e.g.,* check, wire, automated clearing house), then the fund is required to disclose the typical number of days *or estimated range of days* that the fund expects it will take to pay out redemption proceeds for each method used.[920] This requirement focuses on disclosing when the fund expects to *make the payment,* not when the shareholder should expect to *receive* the proceeds, because receipt of proceeds is unlikely to be in the fund's control (for example, a fund cannot predict how long a mailed check will take to arrive). We believe narrowing the disclosure requirement to the effects of payment methods rather than the effects of all types of distribution channels addresses comments. We also believe that this modification will increase the quality of information provided to fund shareholders about the timing of their redemption proceeds and, at the same time, reduce the likelihood that disclosures regarding such timing will be overly granular and complex for investors and overly burdensome for registrants.[921]

Other commenters expressed concerns about specific aspects of the proposed disclosure amendments. For example, some commenters stated that requiring funds to disclose the number of days in which the fund will pay redemption proceeds to redeeming shareholders would pressure funds to disclose shorter redemption payment periods, thereby limiting funds from exercising discretion in stressed markets.[922] Other commenters opposed a requirement to disclose the number of days or methods used to pay redemption proceeds,[923] arguing, for example, that the disclosure requirement would inappropriately limit the flexibility of a fund to meet redemptions to timing and methods previously disclosed in its prospectus[924] or would cause generic disclosures because of the variety of methods available to funds to meet redemptions.[925] One commenter recommended that the Commission narrow the scope of the amendments to only the ''typical'' number of days, methods, and funding sources used for meeting redemption requests.[926]

In consideration of these comments, and in a modification to the proposal, we are adopting amendments to Item 11 of Form N–1A to require a fund to disclose the number of days following receipt of shareholder redemption requests in which the fund *typically expects* to pay redemption proceeds to redeeming shareholders,[927] rather than the number of days in which the fund will pay redemption proceeds as proposed. Funds may wish to consider also disclosing whether payment of redemption proceeds may take longer than the number of days that the fund typically expects and may take up to seven days as provided in the Investment Company Act.

We appreciate commenters' concerns, and believe that this adjustment to the language in Form N–1A will give funds flexibility to provide disclosures about redemption procedures that do not inappropriately limit a fund's ability to meet redemptions to the exact timing previously disclosed in its prospectus. We continue to believe that requiring this disclosure will inform the public about a critical aspect of a shareholder's relationship with a fund—when the shareholder can expect redemption proceeds. Funds generally should disclose timing that reflects their actual operational procedures for meeting redemption rather than generic disclosures about fund redemptions, regardless of what other funds in the industry may disclose. We continue to believe that it is in the public interest to inform investors on the timing of when fund shareholders should expect redemption proceeds. We believe that this disclosure requirement will also enhance consistency in fund disclosures regarding the timing in which a fund will pay redemption proceeds, thereby improving the information provided to shareholders and the ability of investors to compare redemption procedures across funds.

b. Methods Used To Meet Shareholder Redemption Obligations

As noted above, some commenters opposed a requirement to disclose the methods used (and number of days) to pay redemption proceeds, arguing, for example, that the disclosure requirement would inappropriately limit the flexibility of a fund to meet redemptions to timing and methods previously disclosed in its prospectus or would cause generic disclosures because of the variety of methods available to funds to meet redemptions.[928] Some commenters generally opposed requirements for funds to disclose the methods used to meet redemption requests, stating, for example, that it does not serve a purpose for investors to know precisely how the fund meets their redemption requests—so long as they receive their redemption proceeds within the period prescribed by regulation.[929] As noted above, one commenter suggested that we narrow the scope of the disclosure requirement to only the ''typical'' methods funds use for meeting redemption requests.[930]

In light of these comments, in a modification to the proposal, we are adopting amendments to Item 11 of Form N–1A to require a fund to disclose the methods that the fund *typically expects* to use to meet redemption requests, and whether those methods are used regularly, or only in stressed market conditions.[931] We believe requiring that the description of the procedures for redeeming fund shares include a description of the methods a fund typically expects to use to meet redemption requests will improve disclosure about another critical aspect of a shareholder's relationship with a fund—how a shareholder can expect to receive redemption proceeds. We appreciate the concerns expressed by commenters and believe that the modified language in the form provides some needed flexibility for funds while at the same time providing investors with improved information concerning redemption procedures. Furthermore, this disclosure requirement will increase consistency in fund disclosure documents regarding fund redemption practices and improve the comparability of such information across funds. Absent this amendment, disclosures concerning the methods funds use to pay redemption proceeds will continue to vary across funds.

We believe that requiring specific disclosure on the methods a fund uses to pay redemption proceeds could improve investor knowledge on how a fund manages liquidity and its redemption obligations to shareholders. At the foundation of the prospectus

[931] *See* Item 11(c)(8) of Form N–1A (emphasis added).

disclosure framework is the provision to all investors of user-friendly information that is key to an investment decision.[932] Additionally, given the increase in open-end funds pursuing alternative and fixed income strategies with varied liquidity risks,[933] the sources of liquidity and methods used to meet shareholder redemptions are key information that investors need.

Methods to meet redemption obligations may include, for example, sales of portfolio assets, holdings of cash or cash equivalents, the use of lines of credit and/or interfund lending, and in-kind redemptions.[934] Funds may also use redemption fees to help mitigate dilution and address transaction costs associated with shareholder activity. We also believe that requiring this disclosure could encourage funds to consider their operations and ensure that the methods they may use to meet shareholder redemption obligations in normal and reasonably foreseeable stressed markets are viable.

As noted above, Form N–1A requires funds to disclose whether they reserve the right to redeem their shares in kind instead of in cash and to describe the procedures for such redemptions.[935] As proposed, we are amending Form N–1A to incorporate this disclosure requirement into Item 11(c)(8) discussed above. We understand that the use of in-kind redemptions (outside of the ETF context) historically has been rare and that many funds reserve the right to redeem in kind only as a tool to manage liquidity risk under emergency circumstances or to manage the redemption activity of a fund's large institutional investors.[936] We also are aware that there are often logistical issues associated with redemptions in kind and that these issues can limit the availability of in-kind redemptions as a practical matter. A fund should consider whether adding relevant detail to its disclosure regarding in-kind redemptions, including, for example, whether redemptions in kind will be pro-rata slices of the fund's portfolio or individual securities or a representative basket of securities, or revising its disclosure if the fund would be practically limited in its ability to redeem its shares in kind, would provide more accurate information to investors.

One commenter expressed concerns that the proposed additional disclosure requirements in Form N–1A runs against the Commission's goal of clear and concise, user-friendly disclosures.[937] We believe that the amendments adopted today in this Release, including specific modifications in response to commenters, respond appropriately to this commenter's concern and are designed to provide disclosures to investors with key information in a clear, concise, and understandable manner. We believe that investors in an open-end fund should have information on how the fund expects to meet redemptions and in what time period they expect to pay redemption proceeds.

c. Credit Agreements Exhibit

We also proposed to amend Item 28 of Form N–1A to require a fund to file as an exhibit to its registration statement any agreements related to lines of credit for the benefit of the fund to increase Commission, investor, and market participant knowledge concerning the arrangements funds have made in order to strengthen their ability to meet shareholder redemption requests and manage liquidity risk and the terms of those arrangements.[938] In light of concerns expressed by commenters, we are not adopting amendments to Form N–1A to require the filing of credit agreements as exhibits to a fund's registration agreement.

Many commenters objected to the credit agreements exhibit requirement,[939] with some arguing, for example, that credit agreements are often extremely lengthy documents that are not user-friendly,[940] the disclosure of which would be unnecessary in light of the lines of credit reporting requirements in Form N–CEN as well as information concerning lines of credit disclosed in a fund's statement of additional information and financial statements.[941] Other commenters expressed concern that public disclosure of line of credit agreements in a fund's registration statement could ultimately harm fund shareholders, noting that public disclosure could (1) disrupt and weaken a fund's ability to negotiate credit terms; [942] (2) make public proprietary and competitive information (*e.g.,* certain representations and warranties) that lenders and funds may wish to keep confidential and are not easily redacted; [943] and (3) ultimately discourage lending banks from granting lending terms to funds out of a concern that terms granted would become standard in other lending agreements.[944]

Rather than include line of credit agreements as exhibits, other commenters suggested including a narrative discussion of lines of credit information, similar to the data required to be disclosed in Form N–CEN, in a fund's statement of additional information.[945] Some commenters did not oppose requiring the filing of line of credit agreements as an exhibit to a fund's registration statement if, in addition to redacting fees as proposed, certain other portions of the agreement were permitted to be redacted.[946]

We find the concerns expressed by commenters persuasive and have determined to not adopt this amendment to Form N–1A. We acknowledge that credit agreements can be lengthy, complex documents that may be of limited value to retail investors and that the information provided in the proposed exhibits could be, in part, duplicative of information provided in a fund's statement of additional information and financial statements. We believe that requiring funds to report the use of lines of credit in response to reporting requirements in Form N–CEN is an appropriate means to increase Commission, investor, and market participant knowledge concerning the arrangements funds have made in order to strengthen their ability to meet shareholder redemption

requests and manage liquidity risk and the terms of those arrangements.

d. Additional Disclosure Requirements

Some commenters recommended that the Commission require additional disclosures in a fund's registration statement about a fund's specific liquidity risk management policies and procedures [947] and the market impact costs associated with redemption activity.[948] For example, one commenter recommended requiring a fund to disclose a narrative of its liquidity risk management program in its statement of additional information as well as a statement in the fund prospectus about the liquidity risk appetite of each fund.[949] Another commenter expressed support for the Commission requiring funds to include a discussion of their liquidity risk management policies and procedures, similar to what is currently required on Form N–1A for policies and procedures regarding proxy voting (Items 17 and 27) and valuation procedures (Item 23), among others.[950] In addition, one commenter recommended that we consider requiring a fund to also disclose the level of ''position concentration'' that is appropriate for the fund in terms of portfolio liquidity in light of the fund's investment strategy and investor profile.[951] While another commenter recommended that, at a minimum, funds be required to provide disclosures noting the possibility of suspending redemptions and how the fund will handle redemption requests in that situation.[952]

We support commenters' goals of providing useful information about a fund's liquidity risk management practices to investors but also remain committed to encouraging statutory prospectuses that are simple, clear, and useful to investors [953] and registration statements that provide useful information, rather than boilerplate legal representations. In the interest of balancing these two goals, we are adopting the proposed amendments to Form N–1A substantially as proposed without including these specific additional disclosure requirements suggested by commenters in the text of the form. We note, however, that nothing in Form N–1A prohibits disclosures about the features of a fund's liquidity risk management program where relevant to understanding disclosures under existing reporting requirements.

2. New Form N–LIQUID

We are also adopting a new requirement that open-end investment companies, including In-Kind ETFs to the extent applicable [954] but not including money market funds (*i.e.,* registrants), file on a non-public basis a current report to the Commission on new Form N–LIQUID when certain significant events related to a fund's liquidity occur.[955] This requirement will be implemented through our adoption of new rule 30b1–10, which requires funds to file a report on new Form N–LIQUID in certain circumstances. The content of this report is similar to the information that we proposed to be reported on Form N–PORT under the proposal concerning a fund's investments in illiquid assets, but with some modifications in response to comments. A report on Form N–LIQUID is required to be filed, as applicable, within one business day of the occurrence of one or more of the events specified in the form.[956] Form N–LIQUID will be non-public. For the same reasons discussed previously regarding our determination to keep information regarding a fund's highly liquid investment minimum and specific position level disclosure of illiquid investments non-public, we find that it is neither necessary nor appropriate in the public interest or for the protection of investors to make the information filed on Form N–LIQUID publicly available.[957]

First, a registrant is required to file Form N–LIQUID within one business day when more than 15% of its net assets are, or become, illiquid investments that are assets as defined in rule 22e–4.[958] If this occurs, the registrant will be required to report on Form N–LIQUID general information about the registrant as well as (1) the date(s) of the event, (2) the current percentage of the registrant's net assets that are illiquid investments that are assets, and (3) identification information about the illiquid investments.[959]

Second, if a registrant whose illiquid investments that are assets previously exceeded 15% of net assets determines that its holdings in illiquid investments that are assets have changed to be less than or equal to 15% of the registrant's net assets, then the registrant also is required to report within one business day (1) the date(s) on which its illiquid investments that are assets fell to or below 15% of net assets and (2) the current percentage of the registrant's net assets that are illiquid investments that are assets.[960]

Lastly, a registrant also is required to notify the Commission on Form N–LIQUID within one business day if its holdings in highly liquid investments that are assets fall to or below the registrant's highly liquid investment minimum for more than 7 consecutive calendar days.[961] If this occurs, a fund is required to report the date(s) on which the fund's holdings in liquid investments that are assets fell below the fund's highly liquid investment minimum.[962]

As discussed above, we are modifying the 15% standard asset-reporting requirement originally proposed by incorporating this information into the fourth ''illiquid investment'' classification category reported on Form N–PORT.[963] Under the proposal, Form N–PORT would have required a fund to report, for each portfolio asset, whether the asset is a 15% standard asset in order to allow our staff and other interested parties to track the extent that funds are holding 15% standard assets and to discern the nature of those holdings and assist these groups in tracking the fund's exposure to liquidity risk.[964]

Some commenters recommended that the Commission require more detailed reporting data from funds that hold a larger percentage of securities that are

947 *See, e.g.,* Invesco Comment Letter; J.P. Morgan Comment Letter.

948 *See* BlackRock Comment Letter.

949 *See* Invesco Comment Letter.

950 *See* J.P. Morgan Comment Letter.

951 *See* BlackRock Comment Letter.

952 *See* CFA Comment Letter.

953 *See* N–1A Release, *supra* footnote 932.

954 As discussed below, some of the events required to be reported on Form N–LIQUID are in connection with the breach of a fund's highly liquid investment minimum. *See* Part D of Form N–LIQUID. Because In-Kind ETFs are not subject to the highly liquid investment minimum requirement under rule 22e–4(b)(1)(iii), they would not be subject to this Part D reporting requirement on Form N–LIQUID.

955 *See* rule 30b1–10.

956 Form N–LIQUID will also require a fund to report the following general information: (1) The date of the report; (2) the registrant's central index key (''CIK'') number; (3) the EDGAR series identifier; (4) the Securities Act file number; and (v) the name, email address, and telephone number of the person authorized to receive information and respond to questions about the filing. *See* Part A of Form N–LIQUID.

957 *See supra* footnote 615 and accompanying text and footnote 743 and accompanying text. Section 45(a) of the Investment Company Act requires information in reports filed with the Commission pursuant to the Investment Company Act to be made available to the public, unless we find that public disclosure is neither necessary nor appropriate in the public interest or for the protection of investors.

958 *See* Part A and Part B of Form N–LIQUID.

959 *See* Items A.1—A.5 and Items B.1—B.3 of Form N–LIQUID.

960 *See* Item C.1 and Item C.2 of Form N–LIQUID.

961 *See* Part D of Form N–LIQUID.

962 *See* Item D.1 of Form N–LIQUID.

963 *See* Item C.7 Form N–PORT; *see also supra* section III.C.6.

964 *See* Proposing Release, *supra* footnote 9, at section II.G.2.b.

less liquid or illiquid and that funds should notify the Commission more promptly than the Form N–PORT filing deadline when a fund's illiquid assets exceed 15% of net assets, or if the fund otherwise encounters indications of increased liquidity risk.[965] Other commenters expressed support for the addition of an early warning notification provision, under which funds would be required to notify the Commission when illiquid assets held at the end of a business day exceed 15% of net assets and continue to exceed 15% of net assets three business days after the threshold was first exceeded.[966] Another commenter expressed the belief that the sheer scale of Americans' reliance on open-end funds as an investment instrument and the potential for systemic contagion that arises when funds confront liquidity challenges must inform any consideration of the Commission's proposal.[967] In the commenter's view, the reporting requirements under the proposal with underlying factor-based analysis was largely discretionary and lacked mandatory requirements, and thereby failed to adequately account for the potential systemic threat to the nation's financial stability posed by liquidity risk.[968]

We appreciate the concerns and suggestions raised by commenters and agree that the Commission should be notified promptly when a fund encounters indications of increased liquidity risk and believe that new Form N–LIQUID addresses some concerns expressed by commenters that certain liquidity events that could affect the liquidity of a particular fund and/or indicate potential liquidity risks across the fund industry require particular attention by Commission staff. Pursuant to Part B of Form N–LIQUID, registrants will now be required to report to the Commission within one business day of when their percentage of illiquid investments that are assets exceeds (and subsequently falls to or below) 15% of their net assets.[969] Providing this information more promptly than monthly reporting on Form N–PORT, as proposed, will be the ''early warning notification'' that some commenters recommended[970] and will inform the Commission of potential liquidity stress events at the earliest possible juncture. Similarly, requiring a registrant to report when its holdings in highly liquid investments that are assets fall below the registrant's highly liquid investment minimum will add to this early warning system and ensure the Commission is made aware of such breaches promptly, rather than later in reports filed on Form N–PORT.[971] We believe that the information reported on Form N–LIQUID will assist Commission staff in its monitoring efforts of liquidity, including monitoring of not only the reporting fund but also funds that may have comparable characteristics to the reporting fund and could be similarly affected by market events.

Form N–LIQUID also includes general filing and reporting instructions, as well as definitions of specific terms referenced in the form.[972] These instructions and definitions are intended to provide clarity to funds and to assist them in filing reports on Form N–LIQUID.

3. Amendments to Form N–CEN

We proposed several reporting items under Part C of Form N–CEN to allow the Commission and other users to track certain liquidity risk management practices that we expect funds to use on a less frequent basis than the day-to-day portfolio construction techniques captured by Form N–PORT.[973] We are adopting these reporting requirements substantially as proposed. Where we have received comments on specific reporting requirements, we discuss them in more detail below.

a. Lines of Credit, Interfund Lending, and Interfund Borrowing

We are adopting, largely as proposed, but with a modification in response to comment, the requirement in Form N–CEN that a management company report information regarding the use of lines of credit, interfund lending, and interfund borrowing.[974] Several commenters expressed general support for these reporting requirements on Form N–CEN.[975] In a modification to the proposal, if a fund reports that it has access to a line of credit, for each line of credit the fund will be required to report whether the line of credit is a committed or *uncommitted* line of credit.[976] The fund will be required to report information concerning the size of the line of credit in U.S. dollars, the name of the institution(s) with which the fund has the line of credit, and whether the line of credit is for that fund alone or is shared among multiple funds.[977] If the line of credit is shared among multiple funds, the fund is required to disclose the names and SEC File numbers of the other funds (including any series) that may use the line of credit.[978] If the fund responds affirmatively to having available a line of credit, the fund is required to disclose whether it drew on the line of credit during the reporting period.[979] If the fund drew on that line of credit during the reporting period, the fund is required to disclose the average dollar amount outstanding when the line of credit was in use and the number of days that line of credit was in use.[980]

The Proposing Release included a request for comment on whether funds should be required to report information on uncommitted lines of credit on Form N–CEN.[981] In general, a committed line of credit represents a bank's obligation, in exchange for a fee, to make a loan to a fund subject to specified conditions. For uncommitted or standby lines of credit, however, a bank indicates a willingness, but no obligation, to lend to a fund.[982] As one commenter noted, funds may have certain tools like lines of credit from banks for temporary liquidity management purposes ''when more typical means (*e.g.,* use of new or existing cash or sales of portfolio holdings) are unavailable or otherwise

[965] *See, e.g.,* Charles Schwab Comment Letter (noting that this proposed approach could be similar to the Commission's 2015 Derivatives Proposing Release, which has proposed to enhance requirements for funds whose aggregate exposure to derivatives exceeds 50% of its net assets); *see also, e.g.,* SIFMA Comment Letter III.

[966] *See, e.g.,* SIFMA Comment Letter III (noting that this early warning notification could respond to concerns raised by the Third Avenue Fund liquidation); *see also* Third Avenue Temporary Order, *supra* footnote 12.

[982] *See* Fortune, *supra* footnote 781 at 47.

sub-optimal.'' [983] One commenter suggested that funds report the availability of uncommitted lines of credit in addition to committed lines of credit in Form N–CEN.[984]

In consideration of these comments, we are including in Form N–CEN a requirement for funds to report the availability and use of committed and uncommitted lines of credit.[985] We believe that this information will allow our staff and other potential users to assess what sources of external liquidity are available to funds and to what extent funds rely on dedicated external sources of liquidity, rather than relying on the liquidity of fund portfolio investments alone, for liquidity risk management. In addition, we believe that if funds make substantial use of uncommitted lines of credit, the reporting of that reliance could flag potential vulnerabilities in a fund or the fund industry, particularly in the event of a market crisis when uncommitted lines of credit might become unavailable. Furthermore, having funds report information on lines of credit will also allow monitoring of whether lines of credit are concentrated in particular financial institutions.

We are adopting, as proposed, the requirement that a fund report whether it engaged in interfund lending or interfund borrowing during the reporting period, and, if so, the average amount of the interfund loan when the loan was outstanding and the number of days that the interfund loan was outstanding.[986] This information will provide some transparency regarding the extent to which funds use interfund lending or interfund borrowing. We understand that one reason that funds have sought exemptive relief to engage in interfund lending and borrowing is to meet redemption obligations if necessary.[987]

b. Additional Information Concerning ETFs

In a modification to the proposal, we are requiring that each ETF that complies with rule 22e–4 as an ''In-Kind ETF'' under the rule, identify itself accordingly in reports on Form N–CEN.[988] As discussed above, we are adopting certain tailored liquidity risk management program requirements for ETFs, and certain ETFs that qualify as In-Kind ETFs will not be required to classify their portfolio investments or comply with the highly liquid investment minimum requirement of rule 22e–4.[989] We believe that the In-Kind ETF information reported on Form N–CEN will be helpful in understanding the volume of ETFs that identify as In-Kind ETFs and thus are not required to classify their portfolio investments or comply with the highly liquid investment minimum requirement of rule 22e–4.[990]

4. Safe Harbors

Some commenters suggested that the Commission should include a safe harbor and/or protection from liability as part of the final rule for proposed liquidity-related disclosures.[991] One commenter recommended that the Commission provide a safe harbor for ''forward-looking statements'' given the speculative nature of the proposed disclosures.[992] Another commenter recommended that the Commission implement measures to shield from liability funds that in good faith make forward-looking assessments of liquidity at either the asset or portfolio level that subsequently turn out to materially differ from actual liquidity.[993] One commenter further suggested that the Commission should include a provision stating that funds and their affiliates will not face liability for errors in classification or otherwise in implementing their liquidity risk management programs, and related reports and (if applicable) disclosures, unless (i) the error is material and (ii) the fund or affiliate acted knowingly or recklessly. Commenters argued that any safe harbor provision should also make clear that funds and managers would not face liability for violation of rule 22e–4 based on second-guessing, either by the Commission or by fund shareholders, of the design of the liquidity risk management program.[994] One commenter expressed concern that, even if a safe harbor provision were established that protected funds and directors from Commission enforcement actions, funds and directors could still be subject to private litigation.[995] We decline to provide such a safe harbor.

M. Effective and Compliance Dates

We are adopting the following effective and compliance dates, as set forth below.

1. Liquidity Risk Management Program

The compliance date for our liquidity risk management program requirement is December 1, 2018 for larger entities, and June 1, 2019 for smaller entities. Thus all registered open-end management investment companies, including open-end ETFs, that are not smaller entities, will be required to adopt and implement a written liquidity risk management program, approved by a fund's board of directors on December 1, 2018, while smaller entities will be required to do so six months later, on June 1, 2019.[996]

In the Proposing Release, the Commission stated that it expected to provide a tiered set of compliance dates based on asset size.[997] The Commission expected that 18 months after the effective date would provide an adequate period of time for larger entities to prepare internal processes, policies, and procedures and implement liquidity risk management programs that would meet the requirements of the rule.[998] We believed that smaller entities would benefit from having an additional 12 months to establish and implement a written liquidity risk management program.[999]

Most of the commenters who discussed the proposed liquidity risk management program compliance

[983] ICI Comment Letter I.

[984] *See* Federated Comment Letter.

[985] *See* Item C.20.a.(i) of Form N–CEN.

[986] *See* Items C.20.b and c of Form N–CEN.

[987] For example, we understand that funds may engage in interfund lending and borrowing to pay out redemption proceeds same-day or T+1 while the fund awaits proceeds from sales of non-traded securities.

[988] *See* Item E.5 of Form N–CEN; *see also supra* section III.J regarding the definition and treatment of ''In-Kind ETFs'' under rule 22e–4.

[989] *Id.*

[990] ETFs that redeem in cash, or that do not qualify otherwise as ''In-Kind ETFs'' (as defined in rule 22e–4(a)(9)) will be subject to the full set of liquidity risk management program elements, including the classification and highly liquid investment minimum requirements. *See* rule 22e–4(b)(1)(i)–(iii).

[991] *See, e.g.,* ICI Comment Letter I; LSTA Comment Letter; SIFMA Comment Letter II; T. Rowe Comment Letter.

[992] *See* FSR Comment Letter.

[993] *See* ICI Comment Letter I (noting that the Commission has precedent for using its authority to shield from potential liability certain forward-looking information that registrants are required to provide (*see, e.g.,* rule 175 under the Securities Act; rule 3b–6 under the Exchange Act; Item 303(c) of Reg. S–K; and Disclosure in Management's Discussion and Analysis about Off-Balance Sheet Arrangements and Aggregate Contractual Obligations, Securities Act Release No. 33–8182 (Feb. 5, 2003) (regarding MD&A disclosures)).

[994] *See* SIFMA Comment Letter II.

[995] *See* Federated Comment Letter.

[996] The compliance date in the section applies to rule 22e–4, rule 30b1–10, and Form N–LIQUID.

[997] *See* Proposing Release, *supra* footnote 9, at section III.H. Specifically, for larger entities—namely, funds that together with other investment companies in the same ''group of related investment companies'' have net assets of $1 billion or more as of the end of the most recent fiscal year—the Commission proposed a compliance date of 18 months after the effective date to comply with the Proposed Rule. For smaller entities (*i.e.,* funds that together with other investment companies in the same ''group of related investment companies'' have net assets of less than $1 billion as of the end of the most recent fiscal year), the proposal provided for an extra 12 months (or 30 months after the effective date) to comply with proposed rule 22e–4.

[998] *Id.*

[999] *Id.*

date(s) opposed tiered compliance and requested at least 30 months to comply. Some argued larger funds would need at least 30 months to comply because of their size: More funds and a greater number and variety of investments to classify would require more time.[1000] Others cited operational limitations: A need of adequate time for (1) all funds to properly prepare processes, policies and procedures; (2) managers to adjust operations and develop reporting capabilities; and (3) mutual fund boards to review, approve, and implement the program.[1001] The only commenter that supported tiered compliance requested lengthier compliance dates for both larger and smaller entities.[1002]

After evaluating the comments received, we believe that larger entities would benefit from an additional period of time to come into compliance with the rules over the 18 months that was proposed. Therefore, we are providing an additional 6 months for these entities, for a total of 24 months (*i.e.,* December 1, 2018) to come into compliance. We continue to believe that smaller entities may face additional or different challenges in coming into compliance with the rules quickly, and are therefore providing an extended compliance period of a total of 30 months (*i.e.,* June 1, 2019) for such smaller entities.

2. Amendments to Form N–1A, Form N–PORT, and Form N–CEN

In the Proposing Release, the Commission expected to require all initial registration statements on Form N–1A, and all post-effective amendments that are annual updates to effective registration statements on Form N–1A, filed six months or more after the effective date, to comply with the proposed amendments to Form N–1A.[1003] Few commenters discussed the Form N–1A amendments. One commenter agreed that 6 months was sufficient to comply with the amendments;[1004] another commenter requested 30 months to comply.[1005] Because we do not expect that funds will require significant amounts of time to prepare these additional disclosures,[1006] we are adopting a compliance date for our amendments to Form N–1A of June 1, 2017. This will provide a six month compliance period for these amendments, as proposed.

Similar to the tiered compliance dates for the liquidity classification requirements (discussed above), we are providing a tiered set of compliance dates based on asset size for the additions to Form N–PORT and Form N–CEN.[1007] In the Proposing Release, for larger entities, we expected that 18 months would provide an adequate period of time for funds, intermediaries, and other service providers to conduct the requisite operational changes to their systems and to establish internal processes to prepare, validate, and file reports containing the additional information requested by the proposed amendments to Form N–PORT. Further, we believed that smaller entities would benefit from extra time to comply and from the lessons learned by larger investment companies during the adoption period for Form N–PORT. For Form N–CEN, we proposed a compliance date of 18 months after the effective date to comply with the new reporting requirements.[1008] We expected that 18 months would provide an adequate period of time for funds, intermediaries, and other service providers to conduct the requisite operational changes to their systems and to establish internal processes to prepare, validate, and file reports containing the additional information requested by the proposed amendments to Form N–CEN. Multiple commenters, restating their concerns about operational limitations, requested 30 months for all entities to comply with the Form N–PORT and Form N–CEN amendments.[1009]

As discussed above, we are persuaded that larger entities would benefit from extra time to comply and are therefore providing a compliance date of December 1, 2018 for larger entities to come into compliance with the additional liquidity-related reporting requirements of Form N–PORT and Form N–CEN. This will result in larger funds filing their first reports with additional liquidity-related information on Form N–PORT, reflecting data as of December 31, no later than January 31. For smaller entities, the compliance date will be June 1, 2019. This will provide smaller entities an additional six months to comply with the new liquidity-related reporting requirements.

IV. Economic Analysis

A. Introduction and Primary Goals of Regulation

1. Introduction

As discussed above, the Commission is adopting regulatory changes to require a liquidity risk management program, and to require new disclosures regarding liquidity risk and liquidity risk management (collectively, the ''final liquidity regulations''). Because of the significant diversity in liquidity risk management practices that we have observed in the fund industry, there exists the need for enhanced comprehensive baseline regulations instead of only guidance for fund liquidity risk management. In summary, and as discussed in greater detail in section III above, the final liquidity regulations include the following:

- New rule 22e–4 will require that each fund stablish a written liquidity risk management program. A fund's liquidity risk management program broadly requires a fund to assess, manage and review the fund's liquidity risk; to classify the liquidity of each of the fund's portfolio investments; to determine a highly liquid investment minimum (except for funds that hold primarily highly liquid investments); and to limit illiquid investments to 15% of fund investments. The final rule also provides for a tailored program for all ETFs, but offers some exemptions for In-Kind ETFs. Finally, the rule requires for board oversight of the liquidity risk management program.
- Amendments to Form N–1A and additional elements of new Form N–PORT and Form N–CEN will require enhanced fund disclosure and reporting regarding position liquidity and shareholder redemption practices. New Form N–LIQUID will require more prompt, non-public notification to the Commission when a fund's holdings of assets that are illiquid investments exceed 15% of net assets, or when a fund's holdings of highly liquid investments that are assets fall below the fund's highly liquid investment minimum for more than 7 consecutive calendar days.

The Commission is sensitive to the economic effects of the final liquidity regulations, including the benefits and costs as well as the effects on efficiency, competition, and capital formation. The economic effects are discussed below in the context of the primary goals of the final liquidity regulations.

2. Primary Goals

The primary goals of the final liquidity regulations are to promote

[1000] *See, e.g.,* Fidelity Comment Letter; FSR Comment Letter; ICI Comment Letter I; Invesco Comment Letter.

[1009] *See* Cohen & Steers Comment Letter; Fidelity Comment Letter; ICI Comment Letter I; Vanguard Comment Letter.

investor protection by reducing the risk that funds will be unable to meet their redemption obligations, elevate the overall quality of liquidity risk management across the fund industry, increase transparency of funds' liquidity risks and risk management practices, and mitigate potential dilution of non-transacting shareholders' interests. Funds are not currently subject to requirements under the federal securities laws or Commission rules that specifically require them to maintain a minimum level of portfolio liquidity (with the exception of money market funds), and follow Commission guidelines (not rules) that generally limit their investment in illiquid assets.[1010] Additionally, a fund today is only subject to limited disclosure requirements concerning the fund's liquidity risk and risk management.[1011] As discussed in the Proposing Release, staff outreach has shown that funds today engage in a variety of different practices—ranging from comprehensive and rigorous to minimal and basic—for assessing the liquidity of their portfolios, managing liquidity risk, and disclosing information about their liquidity risk, redemption practices, and liquidity risk management practices to investors.[1012] We believe that the enhanced requirements for funds' assessment, management, and disclosure of liquidity risk and enhanced limits on illiquid investment holdings could decrease the chance that funds would be unable to meet their redemption obligations and mitigate potential dilution of non-redeeming shareholders' interests.

The final liquidity regulations are also intended to lessen the possibility of early redemption incentives (and investor dilution) created by insufficient liquidity risk management, as well as the possibility that investors' share value will be diluted by costs incurred by a fund as a result of other investors' purchase or redemption activity. When a fund experiences significant redemption requests, it may sell portfolio securities or borrow funds in order to obtain sufficient cash to meet redemptions.[1013] However, sales of a fund's portfolio investments conducted in order to meet shareholder redemptions could result in significant adverse consequences to non-redeeming shareholders when a fund fails to adequately manage liquidity. For example, if a fund sells portfolio investments under unfavorable circumstances, this could create dilution for non-redeeming shareholders.[1014] Funds also may borrow from a bank or use interfund lending facilities to meet redemption requests, but there are costs (such as interest rates) associated with such borrowings. Both selling of portfolio investments and borrowing to meet redemption requests could cause funds to incur costs that would be borne mainly by non-redeeming shareholders.[1015] These factors could result in dilution of the value of non-redeeming shareholders' interests in a fund,[1016] which could create incentives for early redemptions in times of liquidity stress, and result in further dilution of non-redeeming shareholders' interests.[1017] There also is a potential for adverse effects on the markets when open-end funds fail to adequately manage liquidity. For example, the sale of less liquid portfolio investments at discounted or even fire sale prices when a fund is facing redemption pressures can produce significant negative price pressure on those investments and correlated investments, which can impact other investors holding these investments and may transmit stress to other funds or portions of the markets.[1018] For reasons discussed in detail below, we believe that the liquidity risk management program requirement, including the enhanced restrictions on holdings of assets that are illiquid investments, should mitigate the risk of potential shareholder dilution and decrease the incentive for early redemption in times of liquidity stress.

Finally, the final liquidity regulations are meant to address recent industry developments that have underscored the significance of funds' liquidity risk management practices. In recent years, there has been significant growth in the assets managed by funds with strategies that focus on holding relatively less liquid investments, such as fixed income funds (including emerging market debt funds), open-end funds with alternative strategies, and emerging market equity funds.[1019] There also has been considerable growth in assets managed by funds that exhibit characteristics that could give rise to increased liquidity risk, such as relatively high investor flow volatility.[1020] Additionally, as discussed in detail above, standard fund redemption and securities settlement periods have tended to become significantly shorter over the last several decades, which has caused funds to satisfy redemption requests within relatively short time periods (*e.g.,* within T + 3, T + 2, and next-day periods).[1021] But while fund redemption periods have become shorter, certain funds, for example, certain bank loan funds and emerging market debt funds, have increased their holdings of portfolio securities with relatively long settlement periods, which could result in a liquidity mismatch between when a fund plans or is required to pay redeeming shareholders, and when any asset sales that the fund has executed in order to pay redemptions will settle.[1022] Collectively, these industry trends have emphasized the importance of effective liquidity risk management among funds and enhanced disclosure regarding liquidity risk and risk management.

B. Economic Baseline

The final liquidity regulations will affect all funds and their investors, investment advisers and other service providers, all issuers of the portfolio securities in which funds invest, and other market participants potentially affected by fund and investor behavior. The economic baseline of the final liquidity regulations includes funds' current practices regarding liquidity risk management and liquidity risk disclosure, as well as the economic attributes of funds that affect their portfolio liquidity and liquidity risk. These economic attributes include industry-wide trends regarding funds' liquidity and liquidity risk management, as well as industry developments highlighting the importance of robust liquidity risk management by funds.

1. Funds' Current Practices Regarding Liquidity Risk Management and Liquidity Risk Disclosure

a. Funds' Current Liquidity Risk Management Requirements and Practices

Under section 22(e) of the Investment Company Act, a registered investment company is required to make payment to shareholders for redeemable securities tendered for redemption within seven days of their tender.[1023] In addition to the seven-day redemption requirement in section 22(e), registered investment companies that are sold through broker-dealers are required as a practical matter to meet redemption requests within three business days because broker-dealers are subject to rule 15c6–1 under the Exchange Act, which establishes a three-day (T + 3) settlement period for purchases and sales of securities (other than certain types of securities exempted by the rule) effected by a broker or a dealer, unless a different settlement period is expressly agreed to by the parties at the time of the transaction. Furthermore, rule 22c–1 under the Act, the ''forward pricing'' rule, requires funds, their principal underwriters, and dealers to sell and redeem fund shares at a price based on the current NAV next computed after receipt of an order to purchase or redeem fund shares, even though cash proceeds from purchases may be invested or fund investments may be sold in subsequent days in order to satisfy purchase requests or meet redemption obligations.

With the exception of money market funds subject to rule 2a–7 under the Act, the Commission has not promulgated rules requiring open-end funds to hold a minimum level of liquid investments.[1024] The Commission historically has taken the position that open-end funds should maintain a high degree of portfolio liquidity to ensure that their portfolio securities and other assets can be sold and the proceeds used to satisfy redemptions in a timely manner in order to comply with section 22(e) and their other obligations.[1025] The Commission also has stated that open-end funds have a ''general responsibility to maintain a level of portfolio liquidity that is appropriate under the circumstances,'' and to engage in ongoing portfolio liquidity monitoring to determine whether an adequate level of portfolio liquidity is being maintained in light of the fund's redemption obligations.[1026] Open-end funds are also required by rule 38a–1 under the Act to adopt and implement written compliance policies and procedures reasonably designed to prevent violations of the federal securities laws, including policies and procedures that provide for the oversight of compliance by certain of the fund's service providers, and such policies and procedures should be appropriately tailored to reflect each fund's particular compliance risks; the rule also requires board approval and review of the service providers' compliance policies and procedures.[1027] An open-end fund that holds a significant portion of its assets in securities with long settlement periods or with infrequent trading, or an open-end fund that represents it will pay redemptions in fewer than seven days, for instance, may be subject to relatively greater liquidity risks than other open-end funds.

Additionally, long-standing Commission guidelines generally limit an open-end fund's aggregate investment in ''illiquid assets'' to no more than 15% of the fund's net assets (the ''15% guideline'').[1028] Under the 15% guideline, a portfolio security or other asset is considered illiquid if it cannot be sold or disposed of in the ordinary course of business within seven days at approximately the value at which the fund has valued the investment.[1029] The 15% guideline has generally limited funds' exposure to particular types of securities that cannot be sold within seven days and that the Commission and staff have indicated may be illiquid, depending on the facts and circumstances. Depositors of UITs are currently required to consider which of their restricted securities are illiquid.[1030]

As noted in the Proposing Release, staff outreach has shown that funds currently employ a diversity of practices with respect to assessing portfolio investments' liquidity, as well as managing liquidity risk. Section II.D.3 above provides an overview of these practices, which include, among others: Assessing the ability to sell particular investments within various time periods, taking into account relevant market, trading, and other factors; monitoring initial liquidity determinations for portfolio investments (and modifying these determinations, as appropriate); holding certain amounts of the fund's portfolio in highly liquid investments or cash equivalents; establishing committed back-up lines of credit or interfund lending facilities; and conducting stress testing relating to the extent the fund has liquid investments to cover possible levels of redemptions.[1031] Some commenters indicated that they view in-kind redemptions as an important liquidity risk management tool.[1032] Another commenter noted that ETFs are often used to help manage liquidity risk because they can allow funds to maintain market exposure while ensuring sufficient liquidity.[1033] As noted in the Proposing Release, the staff has observed that some of the funds with relatively more thorough liquidity risk management practices have appeared to be able to meet periods of high redemptions without significantly altering the risk profile of the fund or materially affecting the fund's performance, and thus with few dilutive impacts. It therefore appears that these funds have generally aligned their portfolio liquidity with their liquidity needs, and that their liquidity risk management permits them to efficiently meet redemption requests. Other funds, however, employ portfolio investment liquidity assessment and liquidity risk management practices that are substantially less rigorous.[1034] As discussed above in section II.D.3, some funds do not take different market conditions into account when

[1023] *See* section 22(e) of the Act. Section 22(e) of the Act provides, in part, that no registered investment company shall suspend the right of redemption or postpone the date of payment upon redemption of any redeemable security in accordance with its terms for more than seven days after tender of the security absent specified unusual circumstances.

[1032] *See* BlackRock Comment Letter; Invesco Comment Letter.

[1033] *See* BlackRock Comment Letter.

[1034] *See infra* section IV.C.1.b, where the potential consequences of less rigorous liquidity risk management are discussed in the context of risk management program benefits.

evaluating portfolio investment liquidity, and do not conduct ongoing liquidity monitoring. Likewise, some funds do not have independent oversight of their liquidity risk management outside of the portfolio management process. As a result, funds' procedures for assessing the liquidity of their portfolio securities, as well as the comprehensiveness and independence of their liquidity risk management, vary significantly.

A fund may meet redemption requests in a variety of ways, including by using cash, borrowing under a line of credit, or by selling portfolio investments. The fund's portfolio liquidity as well as its value will be affected by the choice of which investments are sold. Subsequent portfolio transactions after redemptions are met will also affect portfolio liquidity and value. For example, a fund facing a large redemption request might lessen the impact on portfolio value of selling investments by selling the most liquid portion of the portfolio or using some of its cash or a line of credit.[1035] That choice benefits non-redeeming investors by minimizing transaction costs and the loss in fund value due to the price impact of selling, but it also could increase the liquidity risk of the fund portfolio and the fund may incur transaction costs if it subsequently engages in portfolio transactions such as rebalancing towards its previous portfolio allocation.[1036] If the fund instead were to sell a ''strip'' of the portfolio (*i.e.,* a cross-section or representative selection of the fund's portfolio investments), the immediate impact on fund value may be greater, but the liquidity of the fund portfolio would be unchanged as a result of the sale. Funds also could choose to meet redemptions by selling a range of investments in between their most liquid, on one end of the spectrum, and a perfect *pro rata* strip of investments, on the other end of the spectrum.[1037]

All of the above ways by which a fund may meet redemptions potentially occur in conjunction with other strategic portfolio management decisions, such as opportunistically paring back or eliminating holdings in a particular investment or sector while meeting redemptions.

Staff analysis of the impact of large redemptions on U.S. equity fund portfolio liquidity is consistent with the hypothesis that the average U.S. equity fund does not sell a strip of its portfolio investments to meet large redemptions, but instead appears—based on changes in funds' portfolio liquidity following net outflows—to disproportionately sell the more liquid portion of its portfolio for this purpose.[1038] Similarly, staff analysis shows that after a U.S. municipal bond fund encounters net outflows, the typical U.S. municipal bond fund will experience an increase in its holdings of municipal bonds (and a decrease in its holdings of cash and cash equivalents), potentially decreasing the fund's overall portfolio liquidity.[1039]

b. Funds' Current Liquidity Risk Disclosure Requirements and Practices

Items 4 and 9 of Form N–1A require a fund to disclose the principal risks of investing in the fund.[1040] A fund currently must disclose the risks to which the fund's portfolio as a whole is expected to be subject and the circumstances reasonably likely to adversely affect the fund's NAV, yield, or total return.[1041] Some funds currently disclose that liquidity risk is a principal risk of investing in the fund, but often do so in a generic way.

Item 11 of Form N–1A requires a fund to describe its procedure for redeeming fund shares, including restrictions on redemptions, any redemption charges, and whether the fund has reserved the right to redeem in kind.[1042] Disclosure regarding other redemption information, such as the timing of payment of redemption proceeds to fund shareholders, varies across funds as there are currently no specific requirements for this disclosure. Some funds disclose that they will redeem shares within a specific number of days after receiving a redemption request, other funds disclose that they will honor such requests within seven days (as required by section 22(e) of the Act), and others provide no specific time periods. Additionally, some funds disclose differences in the timing of payment of redemption proceeds based on the payment method by which the fund shares are redeemed, while others do not.

Funds are not currently required to disclose information about the liquidity of their portfolio investments. However, some funds voluntarily disclose in their registration statements any specific limitations applicable to the fund's investment in 15% guideline assets, as well as types of assets considered by the fund to be subject to the 15% guideline.

Form N–1A does not currently require funds to disclose information about liquidity risk management practices such as the establishment (or use) of committed back-up lines of credit. A fund is, however, required to disclose information regarding the amount and terms of unused lines of credit for short-term financing, as well as information regarding related party transactions in its financial statements or notes thereto.[1043]

2. Fund Industry Developments Regarding Funds' Liquidity Risk Management

a. Overview

Below we discuss the size and growth of the U.S. fund industry generally, as well as the growth of various investment strategies within the industry. We show that the fund industry has grown significantly in the past two decades, and during this period, funds with international strategies, fixed income funds, and funds with alternative strategies have grown particularly quickly. We also determine the types of funds that demonstrate notably volatile and unpredictable flows. Because volatility and predictability in a fund's flows can affect the extent to which the fund is able to meet expected and reasonably foreseeable redemption requests without diluting the interests of fund shareholders, assessing trends regarding these factors can provide information about sectors of the fund industry that could be particularly susceptible to liquidity risk.

While we believe that these trends are relevant from the perspective of addressing potential liquidity risk in the fund industry (and in funds' underlying portfolio investments), we emphasize

[1035] We note that in some instances, selling only the most liquid investments to meet a large redemption could be inconsistent with the fund's investment mandate. For example, if a fund's investment mandate required it to hold a certain percentage of its portfolio in equities, the fund might not be able to sell a large portion of its equity holdings to meet redemption requests and still hold the required percentage of its portfolio in equities.

[1036] *See, e.g., supra* footnote 71 (discussing recent circumstances in which, during a year of heavy redemptions that caused a high yield bond fund's assets to shrink 33% in this period, the fund's holdings of lower quality bonds grew to 47% of assets, from 35% before the redemptions).

[1037] *See, e.g.,* Hao Jiang, Dan Li, and Ashley Wang, *Dynamic Liquidity Management by Corporate Bond Mutual Funds* (May 6, 2016) (unpublished working paper), *available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2776829.* The study presents preliminary evidence consistent with the notion that corporate bond funds tend to sell proportional ''strips'' of their portfolios during periods of high market volatility and disproportionately sell more liquid assets during periods of lower market volatility.

[1038] DERA Study, *supra* footnote 95, at 43–46. The DERA Study analyzes U.S. equity mutual fund liquidity management trends using the Amihud liquidity measure. *See* Proposing Release, *supra* footnote 9, at n.621. We respond to comments on this result and other aspects of the DERA study in section IV.C.1.f.

[1039] DERA Study, *supra* footnote 95, at 47–49.

[1040] Item 4(b)(1)(i) and Item 9(c) of Form N–1A.

[1041] *Id.*

[1042] Item 11(c) of Form N–1A.

[1043] *See* §§ 210.5–02.19(b) and 210.4–08(k) of Regulation S–X.

that liquidity risk is not confined to certain types of funds or investment strategies. Although we recognize that certain fund characteristics could make a fund relatively more prone to liquidity risk, we believe that all types of funds entail liquidity risk to some extent.[1044] Thus, while in this section we discuss certain types of funds and strategies that are generally considered to exhibit increased liquidity risk, we are not asserting that *only* these types of funds and strategies involve liquidity risk, or that a fund of the type and with the strategy discussed below necessarily demonstrates greater liquidity risk than a fund that does not have these same characteristics.

b. Size and Growth of the U.S. Fund Industry and Various Investment Strategies Within the Industry

Open-end funds and ETFs manage a significant and growing amount of assets in U.S. financial markets. As of the end of 2015, there were 10,633 open-end funds (excluding money market funds, but including ETFs), as compared to 5,279 at the end of 1996.[1045] The assets of these funds were approximately $15.0 trillion in 2015, having grown from about $2.63 trillion in 1996.[1046] Within these figures, the number of ETFs and ETFs' assets have increased notably in the past decade. There were 1,594 ETFs in 2015, as opposed to a mere 119 in 2003, and ETFs' assets have increased from $151 billion in 2003 to $2.1 trillion in 2015.[1047]

U.S. equity funds represent the greatest percentage of U.S. open-end fund industry assets.[1048] Open-end U.S. equity funds, excluding ETFs, money market funds and variable annuities, held 44.7% of U.S. fund industry assets as of the end of 2015. The investment strategies with the next-highest percentages of U.S. fund industry assets are foreign equity funds (16.7%), general bond funds (13.2%), and mixed strategy funds (12.3%).[1049] Funds with alternative strategies[1050] only represent a small percentage of the U.S. fund industry assets, but as discussed below, the number of alternative strategy funds and the assets of this sector have grown considerably in recent years.[1051]

While the overall growth rate of funds' assets has been generally high (about 7.2% per year, between the years 2000 and 2015[1052]), it has varied significantly by investment strategy.[1053] U.S. equity funds' assets grew substantially in terms of dollars from the end of 2000 to 2015,[1054] but this sector's assets as a percentage of total U.S. fund industry assets decreased from about 65% to about 45% during that same period.[1055] Like U.S. equity funds, the assets of U.S. corporate bond funds, government bond funds, and municipal bond funds also increased in terms of dollars from 2000 to 2015, but each of these sectors' assets as a percentage of the fund industry decreased during this period.[1056] On the other hand, the assets of foreign equity funds, general bond funds, and foreign bond funds increased steadily and substantially as a percentage of the fund industry over the same period.[1057] For example, foreign equity funds increased steadily from 10.6% of total industry assets in 2000 to 16.7% in 2015. And within these three investment strategies, certain investment subclasses (emerging market debt and emerging market equity) have grown particularly quickly from 2000 to 2015.[1058] The overall growth rate of funds' assets between the years 2000 and 2015 was greater for index funds (12.3%) than actively managed funds (4.9%).[1059]

The assets of funds with alternative strategies[1060] also have grown rapidly in recent years. From 2005 to 2015, the assets of alternative strategy funds grew from $366 million to $310 billion, and from the end of 2011 to the end of 2013, the assets of alternative strategy funds grew by an average rate of almost 80% each year. However, as discussed above, funds with alternative strategies remain a relatively small portion of the U.S. fund industry as a percentage of total assets.[1061]

c. Significance of Fund Industry Developments

The industry developments discussed above are notable for several reasons. The growth of funds generally over the past few decades demonstrates that investors have increasingly come to rely on investments in funds to meet their financial needs.[1062] These trends also demonstrate growth in particular types of funds that may entail increased liquidity risk. In particular, there has been significant growth in high-yield bond funds, emerging market debt funds, and funds with alternative strategies. Commissioners and Commission staff have previously spoken about the need to focus on potential liquidity risks relating to fixed income assets and fixed income funds,[1063] and within this sector, funds that invest in high-yield bonds could be subject to greater liquidity risk as they invest in lower-rated bonds that tend to be less liquid than investment grade

[1044] *See supra* section III.A.2.

[1045] *See* 2016 ICI Fact Book, *supra* footnote 11, at 22, 176, 183. Specifically, as of the end of 2015, there were 9,039 open-end mutual funds (including funds that invest in other funds) and 1,594 ETFs. There were approximately 50 ETFs that invest in other ETFs, which are not included in our figures.

[1046] *See* 2016 ICI Fact Book, *supra* footnote 11, at 174, 182.

[1047] *See* 2016 ICI Fact Book, *supra* footnote 11, at 182, 183.

[1048] DERA Study, *supra* footnote 95, at Table 1.

[1049] *Id.* The figure for general bond funds does not include assets attributable to foreign bond funds (1.9%), U.S. corporate bond funds (0.8%), U.S. government bond funds (1.4%), and U.S. municipal bond funds (4.7%). The figure for mixed strategy funds includes assets of, among others, target date funds, convertible securities funds, and flexible portfolio funds.

[1050] Alternative funds are funds that seek total returns through the use of alternative investment strategies, including but not limited to equity market neutral, long/short equity, global macro, event driven, credit focus strategies.

[1051] DERA Study, *supra* footnote 95, at 7–8.

[1052] DERA Study, *supra* footnote 95, at Table 2.

[1053] The figures in this paragraph and the following paragraph, discussing the variance in growth rate of funds' assets by investment strategy, exclude ETF assets.

[1054] U.S. equity funds held about $5.6 trillion as the end of 2015, compared to about $2.9 trillion at the end of 2000. DERA Study, *supra* footnote 95, at Table 2.

[1055] DERA Study, *supra* footnote 95, at Table 2.

[1056] *Id.* U.S. corporate bond funds held about $95 billion at the end of 2015, as opposed to $66 billion in 2000; these funds' assets as a percentage of the U.S. fund industry decreased from 1.5% in 2000 to 0.8% in 2015. U.S. government bond funds held about $174 billion at the end of 2015, as opposed to $91 billion in 2000; these funds' assets as a percentage of the U.S. fund industry decreased from 2.1% in 2000 to 1.4% in 2015. U.S. municipal bond funds held about $592 billion at the end of 2015, as opposed to $278 billion in 2000; these funds' assets as a percentage of the U.S. fund industry decreased from 6.3% in 2000 to 4.7% in 2015.

[1057] *Id.* Foreign equity funds held about $2.1 trillion in 2015, as opposed to $465 billion in 2000. U.S. general bond funds held about $1.7 trillion at the end of 2015, as opposed to $240 billion in 2000; these funds' assets as a percentage of the U.S. fund industry increased from 5.4% in 2000 to 13.2% in 2015. Foreign bond funds held about $244 billion at the end of 2015, as opposed to $19 billion in 2000; these funds' assets as a percentage of the U.S. fund industry increased from 0.4% in 2000 to 1.9% in 2015.

[1058] DERA Study, *supra* footnote 95, at 9. Emerging market debt and emerging market equity funds held about $289 billion at the end of 2015, as opposed to $20 billion in 2000. The assets of emerging market debt funds and emerging market equity funds grew by an average of 18.1% and 19.8%, respectively, each year from 2000 through 2015.

These investment subclasses represent a small portion of the U.S. mutual fund industry (the combined assets of these investment subclasses as a percentage of the U.S. fund industry was 2.3% at the end of 2015).

[1059] *See* 2016 ICI Fact Book, *supra* footnote 11, at 174, 218.

[1060] *See supra* footnote 95 for a discussion of the primary investment strategies practiced by ''alternative strategy'' funds.

[1061] *See supra* footnote 1051 and accompanying text.

[1062] *See supra* footnote 21 and accompanying text.

[1063] *See supra* footnote 93 and accompanying text.

fixed income securities.[1064] Emerging market debt funds may invest in relatively illiquid securities with lengthy settlement periods.[1065] Likewise, funds with alternative strategies may hold portfolio investments that are relatively illiquid.[1066] Moreover, Commission staff economists have found that both foreign bond funds (including emerging market debt funds) and alternative strategy funds have historically experienced relatively more volatile and unpredictable flows than the average mutual fund,[1067] which could increase these funds' liquidity risks by making it more likely that a fund may need to sell portfolio investments in a manner that creates a market impact in order to pay redeeming shareholders.
